CORNELL UNIVERSITY

Courses of Study 1996-1997
# Cornell University Calendar

## Fall Semester
- **Residence halls open**: Friday, August 23
- **Freshman orientation begins**: Friday, August 23
- **New-student orientation begins**: Friday, August 23
- **Registration-course exchange**: Tuesday-Wednesday, August 27–28
- **Instruction begins**
- **Physical education classes begin**
- **Fall break: instruction suspended**: Monday, September 9
- **Instruction resumes**
- **Pre-course enrollment for spring**
- **Family Weekend**
- **Homecoming weekend**
- **Thanksgiving recess**: Wednesday, November 27
- **Instruction resumes**
- **Pre-course enrollment for spring**

## Winter Session Period Begins
- **Three-week classes begin**: Thursday, December 26
- **Winter session period ends**

## Spring Semester
- **Residence halls open for continuing students**: Sunday, January 12
- **Residence halls open for new students**: Monday, January 13
- **Registration-course exchange**
- **Instruction begins**
- **Physical education classes begin**
- **Spring break: instruction suspended**
- **Instruction resumes**
- **Pre-course enrollment for fall**
- **Instruction ends**
- **Study period**
- **Final examinations begin**
- **Final examinations end**
- **Residence halls close (students who are graduating may stay through Commencement Day)**
- **Senior Week**
- **Commencement**

## Summer Session
- **Three-week session**: Wednesday, June 4
- **Eight-week session**: Monday, June 16
- **Six-week session**: Monday, June 30

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media Services at Cornell University.
Cornell University Executive Officers

Hunter R. Rawlings III, president
Don M. Randel, provost
Carl Nathan, acting provost for medical affairs
Winnie Taylor, associate provost
Frederick A. Rogers, senior vice president and chief financial officer
Harold D. Craft Jr., vice president for facilities and campus services
Henrik N. Dullea, vice president for university relations
James J. Mingle, university counsel and secretary of the corporation
Ronald G. Ehrenberg, vice president for academic programs, planning and budgeting
H. David Lambert, vice president for information technologies
Susan H. Murphy, vice president for student and academic services
Inge T. Reichenbach, vice president for alumni affairs and development
Norman R. Scott, vice president for research and advanced studies

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell’s Title IX coordinator (assistant director, gender equity) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853–2801 (telephone: 607 255-3976; TDD: 607 255–7665).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853–2801. Other questions or requests for special assistance may also be directed to that office.

Courses with names and descriptions enclosed in brackets—[ ]—are not offered fall 1996 and spring 1997.
Introduction

Courses of Study contains information primarily concerned with academic resources and procedures, college and department programs, interdisciplinary programs, and undergraduate and graduate course offerings of the university. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. A student handbook describing life at Cornell will be distributed to all new incoming students. In addition, each new student receives the Policy Notebook, which summarizes pertinent university policy. Students should consult with their college's advising office for specific information on academic policies and procedures, degree programs and requirements.

Student responsibility and regulations. The Campus Code of Conduct describes the regulations and policies for maintaining public order on campus. The Code of Academic Integrity and other statements of student responsibility are set forth in the Policy Notebook. Publications are available for viewing on CUNINFO, on the World Wide Web, the university's electronic information system, and in print at the various university libraries, the Student Life Union, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

The following is a list of offices and information sources for admission information:

Undergraduate admissions. Information pertinent to prospective applicants is available from the Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

Graduate School. Information pertaining to admission to the Graduate School may be obtained by contacting the Graduate School Office, B2 Caldwell Hall, Ithaca, NY 14853-2602, 607-255-4884.

College of Veterinary Medicine. Admission information is available from the Admissions Office, Schurman Hall, Cornell University, Ithaca, NY 14853-6401, 607-255-7000.

Medical College and Graduate School of Medical Sciences. Information regarding admissions is available from the Office of Admissions, 1300 York Avenue, New York, NY 10021, 212-746-1067.

CUNINFO ON THE WORLD WIDE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUNINFO, Cornell's electronic information system, and in the Course and Room Roster and the Course and Time Roster, published each semester by the Office of the University Registrar. You may access CUNINFO through the World Wide Web. The URL is: http://www.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS

The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students

200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites

300-level course—upper-division course, open to juniors and seniors, prerequisites

400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent

500-level course—professional level (e.g., management, law, veterinary medicine)

600-level course—graduate-level course, open to upper-division students

700-level course—graduate-level course

800-level course—master's level, thesis, research

900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences

Architecture, Art, and Planning

Arts and Sciences

Biological Sciences

Engineering

Hotel Administration

Human Ecology

Industrial and Labor Relations

Nutritional Sciences

Officer Education

Group 2: Graduate professional divisions

Law

Management

Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the department. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. Requests to review documentation supporting its accreditation should be addressed to Michael Matier, Institutional Planning and Research, Cornell University, 440 Day Hall, Ithaca, NY 14853-2801, mmw5@cornell.edu.

Advanced Placement

CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

a. Achieving the requisite score on a departmental examination at Cornell (usually given during orientation week) or from the Advanced Placement Examinations from the College Entrance Examination Board (CEEB). The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 7.

b. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

ACADEMIC INTEGRITY
Credit for international credentials is evaluated individually (see below).

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript. Students who have taken such courses may, however, take the appropriate Advanced Placement Examination offered by the College Entrance Examination Board in Princeton, New Jersey, to qualify for credit as in paragraph a above.

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement and recommends AP credit for those who meet the standards. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

Advanced placement examinations. Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school office (see below, “Forwarding of scores and transcripts”).

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of departmental examinations are shown on page 7.

Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college's or school's professional and academic goals, students should consult their college or school office to determine how they may use such credit.

Foreign credentials. Information regarding Cornell's advanced standing policy for foreign credentials may be obtained by contacting the Associate Director of International Admissions, Cornell University, 410 Thurston Avenue, Ithaca, New York 14850-2488, U.S.A. Students holding foreign credentials who feel they may be eligible for advanced standing consideration should contact the International Students and Scholars Office before enrollment for clarification of the advanced standing policy.

Written inquiries. Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.

Forwarding of scores and transcripts. Entering freshmen should have their advanced placement test scores sent to their school or college registrar's office.

- **College of Agriculture and Life Sciences**: 177 Roberts Hall
- **College of Architecture, Art, and Planning**: B2 West Sibley Hall
- **College of Arts and Sciences**: M46 Goldwin Smith Hall
- **College of Engineering**: 170 Olin Hall
- **School of Hotel Administration**: 138 Statler Hall
- **College of Human Ecology**: N101 Van Rensselaer Hall
- **School of Industrial and Labor Relations**: 101 Ives Hall

**DETERMINATION OF CREDIT AND PLACEMENT**

The table on page 7 provides information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

**Biological Sciences**

The Division of Biological Sciences grants advanced placement credits and exemption from introductory biology courses based on superior performance on the CEEB Advanced Placement Examination in biology. Any student who earns a score of 5 on this examination may elect to receive eight credits and be permitted exemption from all introductory biology courses. Students not majoring in biological sciences who score a 4 or 5 may receive, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement for biological sciences for students in the College of Human Ecology and a portion of the group B distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, credits may be applied to the Group 1 distribution area in accordance with regulations stipulated by the college.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101/103, 102/104, or 103-104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the Biological Sciences 101-104 course office (1140 Comstock Hall) and in the Biology Center (216 Uris Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

**Chemistry**

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207-208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215-216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination, students must sign up beforehand with Mrs. Virginia Marcus, in 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 138 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215-216 and should consult the Chemistry 215 instructor.

**Classics**

For advanced placement and credit in Latin and Greek, students should consult the Department of Classics, 120 Goldwin Smith Hall.

**Latin**

Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course will be given six advanced placement credits.

**Greek and Modern Greek**

Credit and placement are determined on the basis of a departmental examination. For Ancient Greek, a student who is permitted to register in a 300-level course will be given six advanced placement credits. For Modern Greek, a student who is permitted to register in a 300-level course will be given six advanced placement credits.

**Computer Science**

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the computer programming for students in the College of Engineering or half the distribution requirement in mathematics for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100. †Cornell Advanced Standing Examination. Contact the Department of Modern Languages, 203 Morrill Hall.
students are strongly urged to take the departmental placement test. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

**English**

The English department will grant 3 credits to students who score 4 or 5 on the CEEB Advanced Placement Examination. The credits are granted automatically: no application to the department is required. Students who receive scores of 700 or better on the CEEB SAT II examination in English composition are granted 3 credits on the CEEB SAT II examination in literature, or 4 or 5 on the CEEB Advanced Placement Examination are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

Advanced placement credits may not be used to fulfill requirements of the English major or distribution requirements of the College of Arts and Sciences.

**Mathematics**

The Cornell calculus sequences discussed below are described under "Basic Sequences" in the Department of Mathematics section of this catalog. The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB's two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year. The following rules do not apply to students being admitted to the College of Engineering. See the college's brochure for a detailed statement.

Students with a grade of 4 or 5 on the BC examination may take the appropriate second-semester course (Mathematics 213, 221, or 293), but students entering Mathematics 293 may have to make up some material on partial differentiation. Students with a 3 on the BC examination or a 4 or 5 on the AB examination may take the appropriate second-semester course (Mathematics 112, 122, or 192). Students with a 2 on the BC examination or a 3 on the AB examination may take one of the second-semester courses (Mathematics 112 or 192). Advanced placement credit will be awarded appropriately; however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A grade of 3 or higher on the BC examination satisfies the distribution requirement in mathematics for students in the College of Arts and Sciences.

Note, however, that the grade of 3 is not sufficient for a full year of advanced placement credit in mathematics.

The placement examination in mathematics is offered at Cornell only during orientation week and should be taken by students who

1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;

2) have received a 2 on the BC examination or a 3 on the AB examination and want to enter the upper sequence; or

3) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their case.

Students are strongly urged to take the departmental placement test even if they feel that their grasp of the material is uncertain. The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary.

**Modern Languages**

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. In cases where no placement test exists for a particular language, the Department of Modern Languages designates a professor to handle placement for that language; students should contact Prof. Carol Rosen, director of undergraduate studies, at 255-0722. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be entered on a student's record as follows:

1) For students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, three credits are granted, and they are eligible to take Cornell's Advanced Placement Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

2) Students who achieve a minimum score of 65 on the language placement test given during orientation week are eligible to take Cornell's Advanced Placement Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.

4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language.

Information about times and places to take placement tests is available in the orientation booklet, from Academic and Career Counseling Services, and from the Department of Modern Languages. For more information, see the College of Arts and Sciences section on language course placement, or contact the Department of Modern Languages, 203 Morrill Hall.

**Music**

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor F. Murray, 311 Lincoln Hall (telephone: 607/255-4675). Inquiries may be directed to the Department of Music, 104 Lincoln Hall (telephone: 607/255-4097).

**Physics**

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, Professor R. S. Galik, 101 Clark Hall, or the department chair.

Physics B. Students earning a score of 4 or 5 may receive eight credits for Physics 101 and 102. Those earning a score of 5 in physics B with a score of 4 or 5 in calculus BC may choose to accept four credits in Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207, or placement into Physics 116 with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may choose four credits for Physics 213, or placement into Physics 217 with no AP credit. A student planning a major in Physics or Applied and Engineering Physics and who is eligible for credit from the physics C exams should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrollment. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from Professor R. S. Galik, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

**ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS**

Following are the policies currently in effect for G.C.E. "A" Level Examinations and International Baccalaureate Higher Level Examinations. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week. Students requiring further information concerning advanced standing credit for foreign credentials may contact the Associate Director, Undergraduate International Admissions.

**General Certificate of Education (GCE)**

Advanced (*A*) Level Examination passes are awarded advanced standing and credit. Students must present the original or a
University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (instructor, department staff member or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

*Consult the college office for special considerations and requirements.

†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.
AUDITING COURSES
Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS
A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return. A student may withdraw from the university at the student’s discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted and processed through University Health Services.

Internal Transfer Division
Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division’s director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4386).

The amount, time, and manner of payment of tuition fees, or other charges may be changed at any time without notice.

*Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $50 application fee when submitting an application for admission. The graduate application fee is $60. Application to the Johnson Graduate School of Management costs $85 (domestic), $110 (international).

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 30 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to ID validation day. All
other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill. If the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student's application for admission.

**Payments**

An individual who has outstanding indebtedness to the university will not be allowed to register* or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy prohibits the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-2336; fax: 607/255-6442).

*For specific exceptions, see “Bursar and CornellCard Procedures,” published by the Office of the Bursar, 260 Day Hall.

**STUDENT HEALTH INSURANCE**

It is a Cornell University policy, by a university board of trustees decision, that all full-time students have health insurance coverage while enrolled at Cornell.

The student health plan offers extensive coverage at a reasonable cost for students and their eligible Dependents. Plan benefit information will be mailed to all registered students (including students registered in absentia) in their July bursar bill. If you decide that you have adequate coverage and want to waive the student health plan, a waiver form with proof of other coverage must be submitted to the student insurance office before the September 25 deadline. All full-time registered students, including students registered in absentia, will be automatically billed and enrolled in the student health plan if a completed waiver is not received by the deadline. Because of policy restrictions, the plan is nonrefundable after the deadline (except for dependents who no longer meet eligibility requirements).

Students enrolled in the student health plan may also enroll their eligible dependents for an additional charge. Enrollment deadline is September 25.

A five-month graduate plan is available for those students who finish their degree requirements before the start of the spring semester. The deadline for application is prior to the start of the spring semester.

To obtain additional information about the Cornell University health plan, please contact the student insurance office at the Gannett Health Center, 10 Central Avenue, Ithaca, NY 14853 or (607) 255-6363. (e-mail: jb58@cornell.edu)

**Class Attendance, Meeting Times, and Examinations**

**CLASS ATTENDANCE AND ABSENCES**

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

**Absences because of religious beliefs.** In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up an examination, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

2 HR 25 MIN 07:30 AM 09:55 AM
3 HR 08:00 AM 11:00 AM
01:25 PM 04:25 PM
07:30 PM 10:30 PM

No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.
FINAL EXAMINATIONS
Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

General Rules Governing Final Examinations
Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently in advance that the student did not have to spend a significant segment of the regular term and should not be required to be submitted during study period but rather well into the examination period.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

- Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation or conference) be conducted or due during the period set aside for final examinations.

- Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if the course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.

- Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS
The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines
The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A + to D-, F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- A = 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- D- = 0.7
- F = 0.0

This is how a term average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry 103</td>
<td>B+</td>
<td>3.3 x 3 = 9.9</td>
</tr>
<tr>
<td>English 151</td>
<td>C-</td>
<td>1.7 x 3 = 5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B</td>
<td>3.0 x 4 = 12.0</td>
</tr>
<tr>
<td>CEH 100</td>
<td>B</td>
<td>3.0 x 3 = 9.0</td>
</tr>
<tr>
<td>DEA 111</td>
<td>C</td>
<td>2.0 x 3 = 6.0</td>
</tr>
</tbody>
</table>

Total: 16 x 42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.65.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES
On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D, D-, or failure.

B. S-U options be chosen by the student during the first three weeks of the term.

C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.

D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."
A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion. While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any. It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES
Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS
An official transcript is one that bears the original grade. It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

University Requirements for Graduation
The university has only two requirements for graduation that must be fulfilled: the swim test and physical education. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

PHYSICAL EDUCATION
Classes
All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. Transfer students whose requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating in an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postenrollments are granted, until the requirement is satisfied. Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test
The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES
Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific requirements for each course and to complete them satisfactorily. Students must register for the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any. It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

University Records Policy
Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to...
a) inspect and review their education records;
b) challenge contents of education records;
c) a hearing if the challenge is unsatisfactory;
d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;
e) prevent disclosure of personally identifiable information*;
f) secure a copy of the institutional policy which includes the location of all education records**; and
g) file complaints with the Department of Education concerning institutional failure to comply with the act.

*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration each academic year. Students may rescind their no release request at any time in writing to the office of the university registrar.

POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university’s policy on student educational records, and the U.S. Department of Education’s Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

- Student social security number
- Student identification number
- Courses elected
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing
- Academic and disciplinary actions
- Student or administrative committees
- The most recent student educational records from previous educational agency or institution
- Financial arrangements between the student and the university
- Any other education record containing personally identifiable information

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy including the Policy Notebook, available free of charge from the office of the dean of students.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects. Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee’s Executive Secretary, 120 Day Hall (255-5014). The guidelines are also available on CUNYFO under OSP (Office of Sponsored Programs), and at the World Wide Web address www.osp.cornell.edu.

USE OF ANIMALS FOR COURSES

The Cornell University Institutional Animal Care and Use Committee has made the following statement on the use of animals for courses: “In certain courses the use of vertebrate animals serves as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used. A set of university guidelines on the use of vertebrate animals in teaching for faculty and students is available from departments in which the courses are offered. A student who is reluctant to voice his or her concerns about animal use in a particular course, or who thinks these concerns have not received proper attention, may seek assistance from the director of the Cornell Center for Research Animal Resources (255-3516).”

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE
PROFESSORS-AT-LARGE

G4 Van Rensselaer Hall (255-0832).

The program has its origins in Cornell’s early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of “contributing to the intellectual and cultural life of the university.” Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 1996

Lloyd, Geoffrey E. R., Professor of Ancient Philosophy and Science and Master of Darwin College, Cambridge University
Myers, Norman, consultant scientist on conservation and management of tropical diversity
Rowlinson, John Shipley, chemical engineer

Term Ending in 1997

Delano, Jack, artist and film maker
Kuspit, Donald, art critic
Nasser, Seyyed Hossein, Islam

Term Ending in 1998

Diaconis, Persi, mathematical statistician
Levertov, Denise, poet and critical writer

Term Ending in 1999

Mitchell, Juliet, psychoanalyst and feminist theorist
Moos, George, historian
Press, Frank, geophysicist, science and technology adviser
Seeger, Anthony, ethnomusicologist

Term Ending in 2000

Berry, Michael, physicist
Wilson, William Julius, sociologist

Term Ending in 2001

Pingree, David, historian of science

Term Ending in 2002

Chartier, Roger, cultural historian
Ernst, Richard R., physical chemist
Goodall, Jane, primatologist
Tobias, Phillip V., paleoanthropologist

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4355)

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics.
The graduate field of environmental toxicology offers a multidisciplinary science program leading to a Ph.D. or M.S. degree. The three major areas of concentration in the program are: cellular and molecular toxicology; food and nutritional toxicology; and ecotoxicology and environmental health. The graduate program prepares students for professional opportunities in academia, industry and private research institutes and governmental agencies. Page 22 lists the courses and describes the program in more detail.

In response to a demand for individuals who can bridge the gap between the technical, social, and managerial aspects of environmental problems, plans are in progress for a new multidisciplinary Master of Professional Studies degree program in environmental management. In this curriculum, students with undergraduate preparation in the fields of Natural Resources, Agricultural Economics; Soil, Crop, and Atmospheric Sciences; Agricultural and Biological Engineering; and Development Sociology will be eligible to undertake a concentration in environmental management. Students in this program will be expected to take courses that will enhance or build upon their undergraduate education and in addition will enroll in a common core of courses in the field of environmental control; organizations; environmental economics and accounting; environmental regulation; and an intensive field project. These core courses are intended to provide students with the knowledge, skills and insights that will enable them to function effectively as managers at various levels in the private, public, and voluntary sectors.

A new program in the Science of Earth Systems, available to students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering, highlights study of the Earth as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The curriculum coalesces Cornell's strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of the Earth system. The program is described in more detail on page 21.

Student employment opportunities are available through programs in the Center for the Environment. The institutional-based programs include the Water Resources Institute; the Institute for Comparative and Environmental Toxicology; the Cornell Waste Management Institute; and the Institute for Resource Information Systems. The faculty-based programs of the Center include the Cornell Institute for Research in Chemical Ecology; the Watershed Science and Management Initiative; the Cornell Program in Environmental Sciences for Educators and Youth; the Climate Change Research Program; the Cornell Urban Environment Program; the Work and Environment Initiative; the Cornell Local Government Program; the Ocean Resources and Ecosystems Program; and the Cornell Program on Environmental Conflict Management.

Students interested in the environment will also find many organizations, resources, and activities beyond the classroom setting at Cornell. The CFES sponsors guest lecturers and co-hosts conferences with a variety of departments across the campus. Providing a forum for the diversity of environmental interests and perspectives, the student-produced publication, URUS: The Cornell Forum for Environmental Issues, seeks to promote the sharing of environmental information within and around the Cornell community. Other organizations on campus include, but are not limited to, the Compost Club, Cornell Greens, Cornell Laboratory of Ornithology, Earthrise Committee (Ecology House), and Eco-Justice.

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies was established in 1961 to encourage, coordinate, and support comparative and interdisciplinary research on international subjects and was named for its founder in 1991. It is one of the largest and most diverse centers in the United States. Currently it oversees six Title VI National Resource Centers (East Asia, Latin American Studies, Slavic and East European Studies Program, South Asia, Southeast Asia, and Western Societies) as well as sixteen topical programs and the university study-abroad program. More than 500 faculty members voluntarily collaborate in the center's programs and well over 300 graduate students are involved directly in its international programs.

Undergraduate concentrations in International Relations and Modern European Societies serve 285 students.

Cornell is committed to the application and expansion of its resources to study the global community in all its complexity. These resources include a faculty of preeminent scholars and teachers, excellent research facilities, ability to teach forty-five languages, and a library system with more than 2,500,000 volumes on topics related to international and comparative studies.

As the world changes, Cornell's international programs change to study those developments. In addition to its core international studies, these programs focus on topics as varied and vital as international marketing, agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. These areas and topics change as interest, demand, and potential warrant. As one program gains enough momentum and recognition to attract its own resources, the center applies its resources to another pilot activity that brings faculty and students together across customary professional and departmental boundaries.

In addition, the Einaudi Center was recently given responsibility by the university to redesign and expand foreign study options for Cornellians, which has resulted in our Cornell Abroad Program. The center also encourages

Phys 563 Statistical Physics
Phys 651 Advanced Quantum Mechanics
Phys 652 Quantum Field Theory

CENTER FOR THE ENVIRONMENT
Rice Hall (255-7535)
The Cornell Center for the Environment (CFE) is committed to research, teaching, and outreach focused on environmental issues, with the goals of enhancing the quality of life, encouraging economic vitality, and promoting the conservation of natural resources for a sustainable future. The Center serves as a clearinghouse for environmental information; initiates environmental courses and curricula at both the graduate and undergraduate levels; facilitates interdisciplinary environmental research; and coordinates outreach programs that assist state, federal, and local government, private organizations, businesses, and individuals in assessing and solving environmental problems.

Programs of Study

Various departments, centers, and institutes across the campus are involved in teaching and research of potential interest to students wishing to pursue environmental studies. A brochure listing undergraduate environmental course offerings is available from the Center (telephone: 255-7535, or email: cufe@cornell.edu). Students with this interest most often study in one of the following areas:

- Agricultural and Biological Engineering
- Agricultural, Resource, and Managerial Economics
- Architecture
- Biology and Society
- City and Regional Planning
- Civil and Environmental Engineering
- Design and Environmental Analysis
- Development Sociology
- Ecology and Evolutionary Biology
- Environmental Toxicology
- Natural Resources
- Plant Pathology
- Regional Science
- Rural Sociology
- Science and Technology Studies
- Soil, Crop, and Atmospheric Sciences

Program options for focusing on environmental issues are offered in a number of departments:

(1) ecosystems science through the Section of Ecology and Systematics; and the Department of Natural Resources; (2) remote sensing through the Departments of Civil and Environmental Engineering; and Soil, Crop, and Atmospheric Sciences; (3) water resources primarily through the Department of Agricultural and Biological Engineering; (4) waste management through the Departments of Environmental Engineering, Agricultural and Biological Engineering; and Agricultural, Resource and Managerial Economics; (5) environmental policy through Toxicology, Natural Resources, and City and Regional Planning; (6) and biological resources through the Division of Biological Sciences.
Program in International Nutrition:  
Jere Haas, co-director  
Jean Pierre Habicht, co-director  
218 Savage Hall

Program on Comparative Economic Development:  
Erik Thorbecke, director  
458 Ursus Hall

Program for Near East Studies:  
Shibley Telhami, director  
104 McGraw Hall

Cornell International Institute for Food, Agriculture, and Development:  
Norman Uphoff, director  
B31 Warren Hall

Gender and Global Change:  
N'Dri Assie-Lumumba, director  
310 Triphammer Rd.

Cornell Food and Nutrition Policy Program:  
David Sahn, director  
308 Savage Hall

Current programs coordinated by the Einaudi Center include the following:  
Master of Professional Studies in International Development:  
Norman Uphoff, field representative  
B31 Warren Hall

A program intended for midcareer practitioners is sponsored by the center and leads to a Master of Professional Studies in International Development. Interested individuals should apply through the Graduate School.

Program on International Relations:  
Peter Katzenstein  
Walter S. Carpenter Professor of International Studies  
160 Ursus Hall

Undergraduates interested in an international relations concentration should see Professor Katzenstein.

Cornell Abroad:  
Ben DeWinter, director  
474 Ursus Hall

International Students and Scholars:  
Jerry Wilcox, director  
BSO Caldwell Hall

COGNITIVE STUDIES

273A Ursus Hall (255-6431) (cogst@cornell.edu)

Cognitive studies is a rapidly growing field of study that focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—
theoretical, experimental, and computational—while the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive studies has drawn primarily from the disciplines of computer science, linguistics, philosophy, and psychology. In the College of Arts and Sciences the field of cognitive studies is primarily represented by faculty in these departments, as well as in mathematics. It is also represented by faculty in the Department of Human Development and Family Studies (College of Human Ecology), in the Section of Neurobiology and Behavior (Division of Biological Sciences), in the Department of Education (College of Agriculture and Life Sciences), and in the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Sue Wurster: 255-6431 or cogst@cornell.edu.

Graduate Programs

At the graduate level Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each student, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such departments as Philosophy, Computer Science, Modern Languages and Linguistics, or Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Barbara Lust, graduate field representative, NG28 Van Rensselaer Hall (telephone: 607/255-0829), or 273A Ursus Hall, Office of Cognitive Studies, 255-6431, cogst@cornell.edu.

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies."

CORNELL ABROAD

474 Ursus Hall 607/255-6524, fax 607/255-8700, e-mail: CUA abroad@cornell.edu
WWW home page: http://www.einaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a broad range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree, at a cost that is generally no greater than for study on campus.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.
LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study abroad in approximately 40 countries. The following list includes those programs chosen most frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
- Botswana, Cameroon, Kenya: School for International Training;
- Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);
- Kenya: East Africa Program (Friends World Program), Kenya Semester Program (St. Lawrence University);

ASIA
- China: Peking and Nanjing Universities through CIEE;
- Hong Kong: Chinese University of Hong Kong;
- Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);
- Japan: Kyoto Center for Japanese Studies;
- Korea: Yonsei University;
- Nepal: Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;
- Thailand: Khon Kaen University (CIEE);
- Vietnam: University of Hanoi (CIEE);

AUSTRALIA
- Australia National University, Canberra; University of New England, Armidale; The University of Wollongong; University of Western Australia, Perth; School for International Training;

EUROPE
- Denmark: Denmark's International Study Program (DIS);
- France: EDUCO (Cornell and Duke in Paris) at Universite de Paris VII, Paris I, Institut d'Etudes Politiques de Paris (Sciences Po); Critical Students Program at the University of Paris (CIEE);
- Germany: spring engineering semester at the Technical University of Hamburg, Harburg; various university-based study abroad programs;
- Greece: College Year in Athens;
- Ireland: University of Limerick; Trinity College, Dublin;
- Italy: Cornell College of Art, Architecture and Planning Program in Rome; Intercollegiate Center for Classical Studies in Rome;
- Russia: St. Petersburg University (CIEE);
- Spain: Cornell-Michigan-Penn program at the University of Seville;
- Sweden: Agricultural College of Sweden, Upsala; The Swedish Program at the University of Stockholm;
- Switzerland: Cornell program at the University of Geneva and affiliated institutions;
- United Kingdom: University of Bath; University of Birmingham; University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Lancaster; University of Manchester; University of Nottingham; Oxford University; University of Reading; University of St. Andrews; University of Sussex; University of Warwick; University of York; University of London; King's College; University College, Imperial College of Science and Technology; and the London School of Economics and Political Science, School of Oriental and African Studies, School of Slavonic and East European Studies.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN
- Costa Rica: School for Field Study;
- Ecuador and Jamaica: Partnership for Service Learning;
- Honduras: Escuela Agrícola Panamericana (Zamorano);
- Mexico: Instituto Tecnológico y de Estudios Superiores de Monterrey, Universidad de las Americas-Puebla (UDLA), Universidad Iberoamericana;
- MIDDLE EAST
- Egypt: American University in Cairo;
- Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;
- Morocco: School for International Training

Other Locations
Cornell students are not limited to the locations listed above. In recent years, they have also studied in Argentina, Austria, Brazil, Colombia, Czech Republic, Dominican Republic, India, New Zealand, the Philippines, Poland, Puerto Rico, Turkey, Venezuela, and elsewhere.

Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad, they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least sixty hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count student abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended, especially for students enrolling in non-English speaking universities.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions in this country and abroad—are available in the Cornell Abroad Office, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials and to ask preliminary questions of the staff. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a one-page written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both college study abroad and faculty advisers and are returned to the Cornell Abroad office, with the exception of Human Ecology and Industrial and Labor Relations students whose applications are submitted to their college for forwarding to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary.

All students who wish to receive academic credit for study abroad must apply through Cornell Abroad and their undergraduate college.

The deadline for study abroad in the spring 1997 semester is October 15, 1996; for all programs except Cornell's programs in Nepal, Geneva, Paris, and Seville, for which the deadline is November 1. For study abroad at Oxford and Cambridge during the 1997–98 academic year, the deadline is also November 1. For study abroad during the fall 1997 semester and academic year, the deadline for other programs is February 15, with the exception of the Cornell programs, for which the deadline is March 1. Many universities and programs admit on a rolling basis after these dates; for some, earlier application may be advisable. In all cases, it is a good idea to check with Cornell Abroad.

Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a full load of courses abroad, according to the standards of the foreign institution and normally receive 30 credits per year or 12 to 20 credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the credits earned, and the grades received. The foreign grades are not translated into the Cornell/ American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level
Nothing is as important as student security. The decision to study in a particular region of the world must be made by each student and his or her family in light of their own needs. Students are advised to consult with their college and school advisors about the type of language preparation, whether or not to withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions’ policies regarding the completion of academic work and the potential financial implications of premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies that contain a prorated formula.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad (474 Uris Hall): Urban J. DeWinter, adjunct associate professor of romance studies, director; Beatrice T. Szekely Ph.D., associate director; Elizabeth R. Okihoro, student services; Kathy Lynch, assistant director. The Cornell Abroad library contains an extensive collection of university catalogs, study abroad program brochures, course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. In the early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings that are announced in the Cornell Daily Sun. Please consult our World Wide Web home page through Academic Life on CU Info or at the address given above.

College Study Abroad Advisers
Agriculture and Life Sciences: Bonnie Shelley, assistant director of Counseling and Advising, 140 Roberts Hall, Architecture, Art, and Planning: Phyllis Thibodeau, executive assistant (Rome Program), 129 Sibley, Arts and Sciences: advising office, 55 Goldwin Smith Hall, History: Professor Richard Lance, 322 Thusten Hall, Hotel Administration: Professor Russell Bell, 545C Statler Hall; Human Ecology: Dr. Mary Rhodes, registrar, N101 Martha Van Rensselaer; Industrial and Labor Relations: Laura Lewis, student development specialist, 301 Ives Hall.

CORNELL-IN-WASHINGTON PROGRAM
471 Hollister Hall (255-4090)
Cornell-in-Washington is a program that offers students from all colleges within the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. Students are registered as full-time students, pay full tuition, and earn Cornell credit, pay full tuition, and remain eligible for financial aid.

The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and 2) studies in the American experience. Students take courses with Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2140 O Street, N.W., Washington, D.C. 20037. The academic and administrative space is located on the first floor, twenty-seven residential units for students and faculty are on the upper floors.

The Cornell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, natural resources, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing
Apartments are rented at the Cornell Center during the academic year and during the summer. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency apartment, which consists of one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

Applications
Application forms are available from the Cornell-in-Washington office at 471 Hollister Hall. Applications should be submitted the semester prior to participation.

Information
Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 471 Hollister Hall (607) 255-4090 or in Washington at the Cornell Center, 2140 O Street, N.W., Washington, DC 20037, (202) 466-2184.
CORNELL INSTITUTE FOR PUBLIC AFFAIRS
473 Hollister Hall (255-8018)

The Cornell Institute for Public Affairs (CIPA) is a university-wide institute that offers a two-year graduate professional program leading to a Master of Public Administration. Its mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. At CIPA, we use Cornell's cutting-edge strengths as a major research university to understand rapidly evolving national interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Cornell's extraordinary depth of sectoral resources including but not confined to science and technology; health, education, and social services administration; agricultural policy; nutrition; international development; environmental studies; peace studies; labor relations; city and regional planning; and ethics in public life provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's Colleges as well as the Cornell Law School and the Johnson Graduate School of Management.

The CIPA program has been developed to offer both a sound foundation in the principles, tools, and techniques for a career and leadership in public policy either in the public or private sector. CIPA also offers the flexibility to accommodate and encourage the special interests of its students as they enter this new policy and career environment.

The curriculum is structured into three parts: four required core courses taken by all CIPA Fellows; area requirements focused on developing the wide variety of skills necessary for the public policy professional; and sectoral specialties, focused on the particular interest of the Fellow and leading to a thesis.

The Core Courses

These courses have been developed especially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 720) This course is designed to give students the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

CIPA II: Public Political Economy (ECON 539) Techniques of economic analysis are used to understand the need for various public programs, to estimate the value of new programs and policies, to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621) This course is focused on the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (SOC 526) This course incorporates the study of analytic methods, especially the use of statistics and simulation models, in order to study the structure of public programs and to assess their consequences.

The Area Requirements

In addition to the four core courses, Fellows must also complete satisfactorily a series of foundation, subject or area requirements that are essential to the training of public policy professionals. These areas are: methodologies, politics and policy, economics, math and statistics, finance, regulation, ethics, and public law.

The Sectoral Specialty

At least three courses taken by individual Fellows will be in their sectoral specialty or "concentration." These are widely divergent and depend on the unique interests and background of the individual student.

The CIPA Thesis

Each Fellow must complete a thesis, which applies the conceptual tools, theories, and analytical techniques to a problem in the Fellow's area of sectoral expertise.

Additional Requirements

All M.P.A. candidates must spend four semesters in residence to complete the degree.

Financial Support. As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any student full support. Therefore, applicants are encouraged to explore and exploit all available sources of external funding. Students requesting aid must submit applications by February 15 for consideration.

Application. Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. For an application or more information, contact Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: sb27@cornell.edu).

CORNELL PLANTATIONS
One Plantations Road (255-3020)
e-mail: cu_plantations@cornell.edu

A place of exceptional diversity and opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its nearly 5,000 acres include the woodlands and gorges bordering campus, as well as specialized gardens and the 100-acre arboretum that features a field flower meadow and trees and shrubs native to New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines that include agronomy, biology, ecology and systematics, entomology, floriculture and ornamental horticulture, fruit and vegetable science, geology, landscape architecture, natural resources, plant breeding, and plant pathology.

While much of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Cornell Plantations.

For those seeking less-strenuous experiences, Cornell Plantations offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe; the intimate gardens shelter you. Visitors may discover surprises and learn something new in the gardens, which feature herbs, flowers, heritage and modern vegetables, international crops, weeds, alpine and rock garden plants, peonies, poisonous plants, groundcovers, rhododendrons, and plants native to the Cayuga Lake Basin.

Students are encouraged to volunteer as photographers, authors, tour guides, and gardeners. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Noncredit courses in horticulture, plant science, geology, free-hand drawing, and other natural history topics are offered throughout the year.

PROGRAM ON ETHICS & PUBLIC LIFE
119 Simeon Hall (255-8515)

The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics & Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing anything of their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics & Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims, not to create yet another specialized department, but to enrich existing departments with courses that are intellectu-
ally serious and practically fruitful at the same time.

**EPL Core Courses**

PHIL 247 Ethics and Public Life
PHIL 294/GOVT 294 Global Thinking
PHIL 342 Law, Society, and Morality
PHIL 343 Political Obligation and Civil Disobedience
GOVT 469/Phil 569 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation
GOVT 466/Womms 466/Law 648 Feminism and Gender Discrimination
GOVT 468/Phil 568 Global Climate and Global Health
GOVT 491/691 Normative Elements of International Relations

**Related Courses**

CEH 356 Economics of Welfare Policy
CRP 549 Ethics and Practical Judgment in Planning Practice
ENGR 360/SKTS 360 Engineering Ethics
ILHR 360 Working at Work
ILRRC 401 My Brother's Keeper
LAW 718 Ethnic Conflict and International Law
PHIL 246 Ethics and the Environment

Henry Shue, director, 119 Stimson Hall, 255-8515; Henry Shue, Wyn and William Y. Hutchinson Professor of Ethics & Public Life; Kathryn Abrams, Associate Professor of Ethics & Public Life and Professor of Law.

**PROGRAM IN REAL ESTATE**

219 West Sibley Hall (255–1748)

The two-year Master of Professional Studies (MPS) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating, organizational unit for financial management and administration of academic real estate activities on and off campus. The *Field of Real Estate* is a committee of faculty members from five different colleges (Architecture, Engineering, Hotel, Human Ecology, and Management) that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professions also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work needed to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Core courses in financial management, economics, real estate finance and investment, market analysis, project development, housing economics, regulation, and environmental issues will be required during the first year of study. During the second year, students take additional core courses and elective courses in their areas of concentration. Many concentra-

**Admissions**

Admissions procedures for the MPS (Real Estate) program are supervised by the Graduate School of Real Estate Field. Applicants to the program must have completed a bachelor's degree with a good academic record. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student's academic and professional work must be submitted. There is no work experience requirement for admission. Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores.

For more information, contact Professor Robert Abrams, director of the Program in Real Estate (607–255–1748) or Professor Matthew Drennan, director of graduate studies (607–257–7276).

**SCIENCE OF EARTH SYSTEMS: AN INTER-COLLEGE PROGRAM**

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

A new program, Science of Earth Systems (SES), is now available for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across the earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

The program described below has been proposed as an inter-college major. Students can currently enter the program as Independent Major in the College of Arts and Sciences, as a General Studies Major in the College of Agriculture and Life Sciences, and in the College of Engineering's College Program.

**The SES Curriculum**

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In addition, students take a two-credit SES Core Seminar, which is designed to inform students about the field and to provide a sense of community for SES students and faculty from the several colleges. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The SES program provides a strong preparation for graduate school in any one of the Earth systems sciences and related engineering fields, in addition to preparing students for a wide variety of careers in environmental work with the College of Agriculture and Life Sciences B.S. degree. An alternate track could be designed for students who are interested in entering fields such as environmental law and policy with a strong scientific understanding of the environment, or who are interested in teaching.

The requirements for the program are summarized as follows:

1. MATH 191, 192, 293, 294 (or MATH 111, 112, 221, 222);
2. Four courses in chemistry and physics:
   - Option A: Three calculus-based physics courses plus one chemistry course (e.g., PHYS 112-213-214 and CHEM 211), or
   - Option B: Two calculus-based physics courses plus two chemistry courses (e.g., PHYS 207-208 and CHEM 207-208);
3. Three biology courses: (e.g., BIO G 101/102-
4. Colloquium in the Science of Earth Systems (SES 101 or 102);
5. Four core courses in the Science of Earth Systems (SES 301, 302, 401, and 402);
6. Four intermediate to advanced-level courses approved by the SES Curriculum Committee. These courses should build on the core sequence and include upper-level courses with prerequisites in the basic sciences and mathematics. The selection of these courses can be used to prepare for careers or graduate study in specific environmental science disciplines such as geology, hydrological sciences, biogeochemistry, ecology, oceanography, and atmospheric sciences. Effective combinations of these disciplines are also possible.

**SES Course Descriptions**

Note: Class meeting times are accurate at the time of publication. If changes are necessary, new information will be provided as soon as possible.

**SES 101-102 Science of Earth Systems Colloquium (also ABEN 120-121, GEOL 123-124, and SCAS 101-102)**

101, fall; 102, spring. 2 credits each term.

S-U grade only. 101 is not prerequisite for 102. One lecture, one recitation. T 1:25.

Staff.

Weekly seminars and discussions of current topics in the study of the earth system. Introduces the student to scientific issues relating to understanding our planet and managing the environment. (http://www.ees.cornell.edu/ees/SES102.html)
The purpose of this course is to develop a physical understanding of the climate system. Processes that determine climate and contribute to its change are discussed, including comparisons with the climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

The co-evolution of life and the earth system over three time scales: origin of the earth and life; and earth's early history; plate tectonics, continental drift and climate changes during the past billion years; and mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting the paleontological, geological, and tectonic information preserved in the rock record.

The many different programs available to graduate students within the field of statistics or to one of the other graduate programs at Cornell. The student should contact the director of the Statistics Center, 610 Rhodes Hall.

The many different programs available to graduate students within the field of statistics can be broadly grouped as follows: biometry, biostatistics, economics, and social statistics, operations research, probability theory, sampling theory, statistical computing, statistical design, statistical theory, and stochastic processes and their applications.

The following list contains selected courses in statistics and probability of interest to graduate students in the Cornell Program in Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.
Graduate Studies
The major in the graduate Field of Environmental Toxicology promotes training leading to the M.S. or Ph.D. degrees. It provides both breadth and depth in environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Specialization tracks include cellular and biochemical toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry; and risk assessment, management, and public policy. Research of the faculty associated with the program is focused on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) and with the ecosystems with which these organisms are associated.

Courses
Courses in environmental toxicology are cosponsored by the university academic departments and are open to all graduate students and to those undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below, and details of course content are provided elsewhere in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the graduate faculty representative, 213 Rice Hall (telephone: 255-8008).

Examples of courses include:

- Tox 370 Pesticides and the Environment
- Tox 437 Oncogenic Cancer Viruses
- Tox 528 Pharmacology
- Tox 607 Ecotoxicology
- Tox 610 Introductory Chemical and Environmental Toxicology
- Tox 611 Molecular Toxicology
- Tox 621 Clinical Veterinary Toxicology
- Tox 650 Principles of Toxicological Pathology
- Tox 660 Safety Evaluation in Public Health
- Tox 680 Hazardous Waste Toxicology
- Tox 690 Insect Toxicology and Insecticidal Chemistry
- Tox 698 Current Topics in Environmental Toxicology
- Tox 702 Seminar in Toxicology
- Tox 751 Professional Responsibilities of Toxicologists
- Tox 899 Master's Thesis Research
- Tox 999 Doctoral Thesis Research

VISUAL STUDIES
Studio G, 726 University Ave. (255-6770) or Sb20A Center for Theatre Arts (254-2782)

Visual Studies as a distinct area of intellectual activity comprehends the analysis of visual forms, especially symbolic visual forms, from a range of historical, scientific, sociological, and aesthetic points of view. Images can be analyzed within a variety of contexts and by means of a variety of methods, and their study is therefore ideally conceived of in interdisciplinary terms. And since the creation of images has an important bearing on their analysis, visual studies concerns itself with practice as well as theory.

In addition to the courses listed below, which represent only a sampling of formal curricular offerings permitted to visual studies, interested students should note the extensive offerings in Art, Architecture, Communications, Computer Science, History of Art, Design and Environmental Analysis, Theatre Arts, and the annual listings of offerings in the Society for the Humanities. For additional information, contact Marilyn Rivchin (Theatre Arts).

Courses
Some of these courses may not be taught in 1995-96. For information about availability consult the appropriate departmental listings.

An Introduction to Architecture (Architecture 132)
Art and Politics in Twentieth-Century Latin America (History 424)
Art and Visual Thinking (Textiles and Apparel 125)

The Visual System (Neurobiology and Behavior 326)

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, consumer economics and housing (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and business management. This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management.
principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales and marketing. Areas of specialization include business management and marketing, farm business management and finance, and food industry management.

**Economics.** This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

**Engineering.** This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

**Hotel administration.** The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

**Consumer economics and housing.** Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

**Industrial and labor relations** focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but also the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers, negotiation and conflict resolution, and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employee.

**Sociology.** The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

**Related Areas**

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Asian Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

**Combined Degree Programs**

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-register program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology leads to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests, help cultivate a wider appreciation of literature, art, and music, and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences. It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a first-year seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as
There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admission to the College of Veterinary Medicine at Cornell, obtained by writing to the Office of Student Services, College of Veterinary Medicine, Cornell University, G-106 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell University Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. This is not a traditional "seven year program"; separate application to the Medical College is required. Further information about this procedure is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York, 14853-1601.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

ADMINISTRATION
Daryl B. Lund, dean
Brian F. Chabot, associate dean
Rebecca Tseng Smith, assistant dean for public affairs
H. Dean Sutphin, associate dean and director of academic programs
Donald R. Viands, associate director of academic programs
W. Ronnie Coffman, associate dean and director of research
Anthony M. Shelton, associate director of research
William B. Lacy, associate dean and director of cooperative extension
R. David Smith, associate director of cooperative extension
Norman T. Uphoff, director of international agriculture
James E. Haldeman, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Mary Milks, Patricia Austic, Carol Lucas, Leora Tripodi
Admissions: Randy Stewart, Bonnie Cornella, Laurie Gillespie, Jody Sanford
Career development: William Alberta, Amy Benedict-Martin, Sheri Mahaney
Minority programs: Catherine Thompson

Department Chairs
Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall
Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall
Animal science: H. F. Hintz, Morrison Hall
Communication: D. H. Monk, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Floriculture and ornamental horticulture: G. L. Good, Plant Science Building
Food science: D. Miller, Stocking Hall
Food science technology: E. D. Earle, Emerson Hall
Plant breeding and biometry: S. A. Slack, Plant Science Building
Plant pathology: S. A. Slack, Plant Science Building
Rural sociology: D. L. Brown, Warren Hall
Soil, crop and atmospheric sciences: J. M. Duxbury, Emerson Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills. The college's programs fall into three major areas:
- Science and technology
- Management
- Communication and education

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:
- Agriculture (production and marketing)
- Biological Sciences
- Community, Human and Rural Resources
- Environment
- Food and Nutrition
- International

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. The college is divided into the Office of Academic Programs, the Office of Admissions, the Office of Career Development, the Office of Counseling and Advising, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)], H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering, J. A. Bartsch, Riley-Robb Hall
Agricultural Economics, R. N. Boisvert, Warren Hall
Animal Breeding, E. J. Pollak, Morrison Hall
Animal Science, R. L. Quaas, Morrison Hall
Biochemistry, Molecular and Cell Biology, G. W. Feigenson, Biotechnology Building
Biometry, N. S. Altman, Warren Hall
Communication, M. A. Shapiro, Kennedy Hall
Development Sociology, P. McMichael, Warren Hall
Ecology and Evolutionary Biology, R. B. Root, Corson Hall
Education [also M.A.T.], J. D. Deshler, Kennedy Hall
Entomology, J. G. Scott, Comstock Hall
Environmental Toxicology, A. Yen, Rice Hall
Floriculture and Ornamental Horticulture, N. L. Bassuk, Plant Science Building
Food Science and Technology, J. H. Hotchkiss, Stocking Hall
Genetics and Development, M. F. Wolfner, Biotechnology Building
International Agriculture and Rural Development [M.P.S. (Agr.)], R. W. Blake, Morrison Hall
International Development, N. T. Uphoff, Caldwell Hall
Landscape Architecture [M.L.A.], L. J. Mirin, W. Sibley Hall
Microbiology, V. J. Stewart, Wing Hall
Natural Resources, M. E. Krasny, Fernow Hall
AGRICULTURE AND LIFE SCIENCES - 1996-1997

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120
   b. Minimum with letter grade: 100 (number with S-U grades pro-rated for transfer students)
   c. Maximum independent study, teaching experience, internships: 15 (pro-rated for transfer students)
   d. Minimum from College of Agriculture and Life Sciences: 55
   e. Maximum from endowed colleges without additional charge: 55. Payment must be made for each credit taken in excess of the 55 allowed, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.
   f. Maximum transferred in: 60, minimum at Cornell: 60

Transfer credit will not be accepted for the Project Advance Programs. If a student is enrolled in a college/university course, during his/her high school years, transfer credit will be given only if certain criteria are met:
1. Course must be a standard course taught by a post-secondary institution.
2. High school must be a satellite location, one of several options available to all students taking the course.
3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
4. Students must be enrolled for college credit and pay college tuition.
5. Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met no transfer credit will be given. Written verification may be necessary.

Note: Credits received for physical education and for certain other courses, such as Mathematics 109, Education 005 and LSC courses, do not count toward the 120 hours but are included on the transcript and in the grade-point average.

2. Residence
   a. Normally, eight full-time semesters
   b. Seven semesters, if all other degree requirements are met, with a grade-point average of 2.0
   c. Minimum of 12 credits per semester
   d. Minimum of two semesters, including the final semester prior to graduation, in the College of Agriculture and Life Sciences (residency in the Internal Transfer Division (ITD) does not count toward residency in the college)
   e. Students who have completed 8 semesters in residence at Cornell, including two in the college, and who have 8 or fewer credits remaining for graduation may petition for approval to complete this work elsewhere.

3. Physical Education (see note at 1D)
   a. Completion of university requirement for two terms of work
   b. Transfer students may be exempt from part or all of the requirement

Note: Requests for exemption should be made in writing to the University Faculty Committee on Physical Education. Requests for postponement should be referred to Alan Gantert, Teagle Hall (255-4286). Medical postponement requests must go through Gannett Clinic.

4. Grade-Point Average (GPA)
   a. Cumulative GPA: 1.7 or above must be maintained
   b. Final semester GPA: 1.7 on a minimum of 12 credits in final term before graduation.

Note: Only grades earned at Cornell and while registered in the college are included.

5. Distribution

The purpose of the distribution requirement is to provide a broad educational background and acquaint students with a broad range of subject matter. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe; through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will impact their work and role in society. Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, or work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline such as Education 005, will not be counted.

Group A: Physical Sciences. 9 credits of 100- or 200-level courses, in at least two disciplines, including at least one course in chemistry or physics.

Chemistry
Physics
Mathematics (excluding Education 005, Mathematics 101 and 109)
Education 115
Soil, Crop and Atmospheric Sciences 131
Biometry
Astronomy
Geology
Statistics

*The college mathematics requirement is described below.

Group B: Biological Sciences. 9 credits, including 6 of introductory biological science.

Biological Sciences (except 152, 160, 200 unless permission of associate director of the division of Biological Sciences is obtained), 202, 205, 206, 208, 209, 301 or 367
Animal Sciences 100, 221, 300, 301
Entomology 212
Nutritional Sciences 262
Plant Breeding 201, 225
Plant Pathology 309, 401
Group C: Social Sciences and Humanities. 12 credits (6 in each of the following two categories):

- Social Sciences. 100- through 400-level courses in the following departments (excluding Freshman Seminars):
  - Anthropology
  - Archaeology
  - CHE 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)
  - Communication 418, 422
  - Economics (except Agricultural Economics)
  - Education 271, 311, 317, 370, 378
  - Government
  - HDPS 150 (cannot receive credit for this course and Soc 243)
  - LA/CRP 261, 360, 363
  - LA/ARKEO 365
  - Psychology
  - Sociology (including Rural Sociology except RS 100, 175, 318, 442)

- Humanities. 100- through 400-level courses in the following departments (excluding Freshman Seminars and languages courses):
  - Africana Studies (literature and history)
  - Asian American Studies
  - Asian American Studies
  - Native American Studies (history and literature)
  - Classics
  - Comparative Literature
  - English (literature only)
  - French, German,Italian, Russian, and Spanish (literature only)
  - History
  - History of Art/History of Architecture
  - LA 282
  - Music and Theatre Arts (theory, literature, and history only)
  - Natural Resources 411
  - Philosophy (also Natural Resources 407)
  - Religious Studies
  - Rural Sociology 100, 175, 318, 442
  - WOMNS/S&TS 444

Group D: Written and Oral Expression. 9 credits, of which at least 6 must be in written expression, selected from the following:

- Freshman Seminars
- Communication 201, 350, 352, 360, 363, 365
- English 280-281, 288-289, 382-385, 388-389

6. Mathematics

The faculty requires minimum competency in mathematics as a requisite to satisfactory completion of a degree. As a measure of their competency in mathematics, all entering undergraduates, including those presenting advanced placement or transfer credit in college calculus, must take the college's math proficiency test. The test is administered free of charge prior to registration each semester. No student may repeat the proficiency test. It consists of 50 sample questions from arithmetic, algebra, geometry, trigonometry, and basic calculus.

The score on the math test has two components and will place each student in one of three groups, defined by the score of each component of the math test.

Mathematics requirements for each group

**Group I**

- Students in this group are exempt from the math requirement. If further math is needed for the major area of study, they should consider taking calculus (MATH 111 or MATH 191).

**Group II**

- Students in this group must complete one math course at Cornell usable in Group A. The recommended math course is EDUC 115 or MATH 105. BTRY 101 is also acceptable.

**Group III**

- Students in this group must take remedial math and are automatically registered in EDUC 005 and must also complete one math course at Cornell usable in Group A.

Transfer credit for mathematics

Most college-level math courses in a transfer student's record will be transferred (limit 6 hours into Group A of the college distribution), and the student will be held for the results of the math test and must satisfy the college's math requirement.

Students entering with A-P calculus credit will also be held for the results of the math test, and must satisfy the college's math requirement.

- 7. Faculty Adviser
  - a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study and enroll in courses appropriate to the degree programs offered by the college.
  - b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CourseEnroll on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or advisor key, is obtained from the faculty adviser after approval of the choice of courses.
  - c. All academic plans, such as acceleration and graduate study, should be made in consultation with the faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

8. Progress toward the Degree

- a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a summary of record form.
- b. Students who have been in residence for at least one semester and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent prior to the graduation date. A student who wishes to continue study after graduation must apply for admission as a special student.
- c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduate) or September 15th (for January graduate). The adviser signs the application after verifying that the requirements of the major have been completed. The college registrar signs it after verifying that the college requirements have been met.

STUDENTS

Undergraduate enrollment is approximately 3,000, with about 56 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 transfer students are enrolled. Students entering with A-P calculus credit will also be held for the results of the math test, and must satisfy the college's math requirement.

- a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a summary of record form.
- b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CourseEnroll on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or advisor key, is obtained from the faculty adviser after approval of the choice of courses.
- c. All academic plans, such as acceleration and graduate study, should be made in consultation with the faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

8. Progress toward the Degree

- a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a summary of record form.
- b. Students who have been in residence for at least one semester and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent prior to the graduation date. A student who wishes to continue study after graduation must apply for admission as a special student.
- c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduate) or September 15th (for January graduate). The adviser signs the application after verifying that the requirements of the major have been completed. The college registrar signs it after verifying that the college requirements have been met.

Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree. A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request and submitting a letter explaining reasons for making the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year.

In some cases a student may be referred to the Internal Transfer Division to study for one semester before entering the college. A second semester is considered under unusual circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students

A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience and a list of the courses they want to take. For more information, students should contact the Admissions Office, 177 Roberts Hall.
Part-time Students
All students in the College of Agriculture and Life Sciences are expected to be enrolled as full-time students in a registered program of study. Part-time students must register in the Division of Summer Session, Extramural Courses, and Related Programs. The Continuing Education Information Service, B-20 Day Hall, provides information, counseling, and special programs for mature students throughout the university.

Off-Campus Students
Programs in which students study off campus must enroll for Cornell credit include SEA teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses
Students in CALS are to be registered for at least twelve (12) hours of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full time student at Cornell will be the joint enrollment agreements between Cornell and Ithaca College and Wells college. Other exceptions would be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee would approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell.

Enrolling in a course at another college to be help with problems of a general nature relating to personal matters and campus life. Counseling and Advising provides a variety of services for undergraduates in the College of Agriculture and Life Sciences. The staff is available to counsel and advise students with academic, social, and personal concerns. In addition, tutoring is offered, at no charge, by the college honors society, Ho-Nun-De-Kah. Assistance is also available for students submitting petitions for waiver of college regulations and for students considering study abroad.

The Counseling and Advising office is located at 140 Roberts Hall, and appointments are not necessary. Questions regarding services and information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members believe that they can and should be an important source of information and advice on both academic and personal matters. Thus they consider advising to be an important and integral part of the undergraduate program.

The Counseling and Advising office has overall responsibility for coordinating the college advising and academic counseling program. Each student enrolled in the college is assigned to a faculty adviser in the major field of study for aid in developing a program of study, and peer advisers are available to help with problems of a general nature relating to personal matters and campus life.

Leaves of Absence
A student considering taking a leave of absence from the university should contact the Counseling and Advising office in the Office of Academic Programs. A petition must be filed when requesting a voluntary leave of a semester or more. Students returning from a voluntary leave of absence do not need to reapply for admission; but students on a restricted leave must request permission from the Committee on Academic Achievement and Petitions. Petitions and information are available from the Counseling and Advising office.

Withdrawal
A student who finds it necessary to leave the university permanently should file a petition for withdrawal. Such petitions are approved if the student is in good standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

Graduation
Graduating seniors must complete the "Application to Graduate." They are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field, graduates return to the Ag Quad to obtain their diplomas.

ADVISING AND COUNSELING SERVICES
Faculty members in the College of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members believe that they can and should be an important source of information and advice on both academic and personal matters. Thus they consider advising to be an important and integral part of the undergraduate program.

4) Faculty members fulfill their responsibility to:
- maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
- make clear the conditions under which examinations are to be given
- make clear the consequences of violating any aspects of the code
- provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
- state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
- approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
- monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students' submitted work must be their own and no one else's

Cornell's Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides for informal resolution of most perceived violations through a primary hearing between the faculty member and the student involved. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a nonvoting record keeper. Professor D. Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records
The college registrar maintains for each student a complete record of academic achievement. A permanent record card is on file for each matriculated student and is updated whenever new information becomes available. Staff members are available in Roberts Hall to consult with students regarding the assignment of credit toward meeting distribution and elective requirements and to verify the official summary of record. The Committee on Academic Achievement and Petitions is a standing committee of six college faculty members and two students. On behalf of the faculty and subject to its review, the committee:
- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readdress missions from persons whose previous enrollment was terminated by the committee
- notifies the petitioner in writing of the action taken by the committee

Good academic standing means a student is eligible for, or has been allowed to register and enroll in, academic work for the current semester. Whether an individual student is in good academic standing is determined by the college registrar and the Committee on Academic Achievement and Petitions. A petition to be exempt from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising office, 140 Roberts Hall.

A petition is usually prepared with the assistance of a student's faculty adviser, whose signature is required; it indicates the adviser's awareness of the petition. The adviser's recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Registration Procedures
All students must register with the university and "check-in" with this college at the beginning of each semester. Registration materials are available in 140 Roberts Hall at a time and place announced each term by the Office of the College Registrar.

Course Enrollment Procedures
To enroll in courses, students will receive information from the university registrar: plan a schedule in consultation with their adviser; and pre-enroll by computer, through CourseEnroll in "Just the Facts" on the Bear Access menu. Pre-enrollment is not valid until entering the student's individual course, or adviser key, into the computer. Adviser keys change each semester and are obtained from the adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college. Requests for course changes are approved only when the members of the faculty and the instructor are satisfied with the student's progress. Students may drop courses until the end of the seventh week of classes, after the end of the seventh week of classes, and a W (for "withdrawal") is recorded on the transcript.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. Students must not enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed, and the instructor files an incomplete make-up form or manual grade form to assign the grade. An incomplete not made up by the end of two successive semesters of registration reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an A at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the two grades for the same course.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on an official form provided for that purpose.

Add/ Drop/ Changes are made by filing properly signed forms in the Registrar's Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to add or to drop a course.

Students may add courses and change grading options or credit hours where applicable during the first three weeks of the term and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition the college Committee on Academic Achievement and Petitions. A form is available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester.

If the petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

Grade Reports
Grade reports for the fall term are included in the spring term check-in materials; grade reports for the spring term are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

Academic Deficiency Policies
At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persist-
tentily fail to attend classes. In case of students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings to students, placing them on probation, suspending them, decreeing that they may not reregister, granting them leaves of absence, and advising them to withdraw.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college or administrative unit

HONORS PROGRAM

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.

Interested students must make written application no later than the end of the third week of the second semester of their senior year, or at any time during the last semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student’s grade-point average, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with honors.

Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, P. A. Johnson, E. A. Matashashvili

The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the honors committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

Biological Sciences

Students interested in the honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Applications and details pertaining to the program requirements may be obtained from the division’s Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall.

Entomology

Faculty committee: B. L. Peckarsky, chair

An honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for honors study. Cornell’s diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for honors study.

The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser is needed to assist in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members’ areas of expertise.)
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology honors committee no later than the end of the third week of the first semester of the senior year. Earlier submission is encouraged.
- Submit a brief progress report, approved by the project supervisor, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Jugatae seminar) in the last semester of the senior year.
- Submit two copies of the final project report (honors thesis) to the chair of the entomology area honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to
the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

Natural Resources
Faculty committee: M. E. Krasny, chair; B. A. Knuth, J. P. Lassoie, E. L. Mills

The honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes; (2) fish and wildlife biology and management; and (3) resource policy, management, and human dimensions. The subject matter and nature of the research experience may be quite varied in this program but require the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen. In addition to meeting requirements of the college, the student is expected to do the following:

• Register for the honors program in the junior year or earlier.
• Select a faculty adviser who will help identify and formulate a research problem.
• Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
• Describe and summarize the work in the format of a conventional master's thesis or in the form of a scientific paper ready for journal submission. About half of the theses have been published.
• Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department's honors program committee.
• Take the lead role for meeting each of the above expectations.

Nutritional Sciences
Faculty committee: M. N. Kazarinoff, R. S. Parker

The honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for honors they need to consult with their faculty advisor to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors research credits for spring semester junior year and both semesters senior year are designated LET, individual mentors may choose the R grade for work in progress until the project has been fully completed. An outline of activities for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

Fall Semester
Course No: NS 398 (1 credit, 5-U).

The semester outcome will be to conclude most of the hands-on research/data acquisition.

Spring Semester
Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made and orientation to supportive services available through DNS are made. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research
2. to develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

Senior Year
Fall Semester
Students will register under the number NS 499 (2-4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research early in the fall semester at the latest. The objective for the semester will be to conclude most of the honors thesis.

Several important deadlines should be noted.

1. First to second week of May: A draft of the thesis is handed to the supervisor evaluating the research and, if necessary, reviewed and corrected according to reviewers' comments. A suitably revised version must be submitted to the Plant Sciences Honors Committee a project proposal (2-3 pages) which includes a title, a brief background to the problem, a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment, supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that it completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report has been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research, and, if appropriate, recommending graduation with honors.

The honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the Director of Academic Programs and to the College
Registrar that the student be graduated with honors. One copy of the accepted report will be returned to the student with review comments from the committee. The other copy will be shelved in Mann Library.

Social Sciences

Faculty committee: B. V. Lewenstein, chair; K. A. Strike, M. J. Pfeffer, W. H. Lesser

Acceptance into the social sciences honors program of the College of Agriculture and Life Sciences is contingent on meeting all the criteria described above, on information in the student's written application, and on a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the junior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the first semester of the junior year. The purpose of the proposal is twofold: First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal must be 5-10 typed, double-spaced pages in length and include the following sections:

- **Research Topic:** This section should contain a statement of the problem to be studied or the topic of interest. The relevant literature should be briefly reviewed, and a background of the problem or topic discussed; a more extensive bibliography should be included.

- **Research Questions/Empirical Hypotheses:** This section should contain specific questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.

- **Research Methods:** This section should contain a discussion of models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.

- **Expected Significance:** What new knowledge or information is likely to be forthcoming and why is it important?

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision. Exceptions will be granted pending petition to the social science honors committee. Students may register for independent study directed by the faculty adviser in conjunction with an honors project.

Honors degrees are awarded upon approval of the honors thesis by the social science honors committee. The research should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal within the appropriate field. Four copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the department supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

**INTERCOLLEGE PROGRAMS**

The College of Agriculture and Life Sciences does not participate in any dual-degree programs. Study for the Bachelor of Science is the only undergraduate degree program offered.

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management upon completion of the B.S. degree in Agriculture and Life Sciences may take a program of management courses in their senior year if it is approved by their college faculty adviser as part of their undergraduate program. In certain cases an "upset" tuition charge, equal to the endowed undergraduate tuition rate, will be applied for undergraduate transition college students taking excess credit hours from endowed colleges and schools. Inquiries should be directed to the university bursar.

Students in the Field Program in Agricultural and Biological Engineering are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years. They are enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition in the junior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

The Program in Landscape Architecture is cosponsored by the Department of Floriculture and Ornamental Horticulture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning. The program offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program.

**The Division of Nutritional Sciences** is an academic unit that engages in general studies in agriculture to include a human nutrition component.

The Department of Science and Technology Studies is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. The program draws its students, faculty, and research staff from the various divisions of the university, including the College of Agriculture and Life Sciences. It offers an interdisciplinary undergraduate major in Biology and Society. A concentration in general studies in the agriculture major may be planned in consultation with a faculty adviser to include a biology and society component. Further information, including a list of courses, may be obtained from the undergraduate office, 275 Clark Hall.

The American Indian Program (AIP) is a multidisciplinary intercollege program with instructional, research, and extension components. The instructional core consists of courses focusing on American Indian life with emphasis on the Iroquois and other Indians of the Northeast. A description of the program and general information is available from the director of the American Indian Program, Caldwell Hall.

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 16 Fernow Hall.

The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEARS) is an interdisciplinary intercollege center with teaching, research, and extension components affiliated with the College of Agriculture and Life Sciences and the School of Civil and Environmental Engineering. A description of the program and general information is available from the director through the CLEARS office in Hollister Hall.

**OFF-CAMPUS STUDY PROGRAMS**

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus study. An Intent to Study Off Campus form should be filed with the college registrar before leaving campus. Tuition may be reduced. In some cases stipends or cost of living allowances are provided. Students should consult with the Office of Financial Aid if receiving financial aid and clear all accounts with the bursar prior to departure.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEARS) is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director through the ICET office, 16 Fernow Hall.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.
Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three-two-credit components and offered by professors. In addition, an internship experience, supervised by an internship committee, provides up to six academic credits. Independent study and research courses offered by the various departments in ALS and/or courses offered by academic institutions in the Albany area may be elected.

Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.

Applicants are screened by the ALS Internship Committee into assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Seniors should note that the last term average must be 1.7 or above.

All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The paper required in each section constitutes an independent study project to be directed and evaluated by a Cornell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-L-U grade.

Information and applications are available in the Career Development Office, 177 Roberts Hall.

Cornell-in-Washington

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: 1) studies in public policy, and 2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, Congress, and other governmental and non-governmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington Program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 19 or inquire at 471 Hollister Hall, 255-4090.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is twelve weeks in length. Six weeks spent on the R/V Westward, or the R/V Corwith Granger. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall. ALS students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Division of Biological Sciences, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluating student performance.

For internships not governed by an established internship program, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study Research, Teaching, or Internship form, available in the Registrar’s Office, 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The 6-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the location of the work and in evaluating a student’s work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit nor in cases where the student has received financial remuneration.

All students enrolling for an internship must file an Independent Study, Research, Teaching, or Internship form with the Office of the College Registrar. If the study is to take place off campus, the Intent to Study Off Campus form should also be filed with the college registrar.

Overseas Academic Programs

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

The Cornell Abroad program is open to students in all colleges of the university. Students in the College of Agriculture and Life Sciences should consult with their faculty adviser and the college registrar to ensure that credit received for academic work abroad will meet requirements for graduation. The Counseling and Advising office, 140 Roberts Hall, has information and application forms.

The Swedish exchange program is operated in cooperation with the Agricultural College of Sweden at Uppsala. The ALS student selected to participate in the Swedish exchange spends the junior year at Uppsala. All essential expenses in Sweden, including a living allowance, are provided by a student group there. Round-trip air transportation must be paid by the student. An exchange student from Uppsala spends the junior year at Cornell, supported by the college and the Cornell student in Sweden. A similar program is operated in cooperation with ITESM in Monterrey, Mexico.

INTERDISCIPLINARY PROGRAMS

American Indian Studies

The American Indian Program (AIP) is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students’ understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereignty of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program’s instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the...
perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, literature, and the arts, and cultural preservation. Their research topics, which are highly relevant to Indian communities, will be of interest to Indian and non-Indian graduate students. Extension and outreach efforts within the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program publishes its own multidisciplinary journal, *Native Americas*, and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwe:kon, the American Indian Residence Hall, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with the three other colleges of Cornell University. The concentration will be earned upon completion of five courses: Rural Sociology 100 (Introduction to American Indian Studies) and Rural Sociology 175 (Issues in Contemporary American Indian Societies), plus three other courses selected from the following: ANTHR 230, ANTHR 665, ENGL 260, ENGL 269, ENGL 278, ENGL 659, ENGL 669, ENGL 667, HIST 209, HIST 277, HIST 429, HIST 524, R SOC 100, R SOC 175, R SOC 318, R SOC 440, R SOC 442, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 300 Caldwell Hall or consult with K. Shanley, associate director of academic development, American Indian Program, 300 Caldwell Hall, 255-8402.

### Science of Earth Systems

A new program in the Science of Earth Systems (SES) is now available for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program emphasizes the rigorous, objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The program, described in more detail in the introductory section of the catalog under "Interdisciplinary Centers, Programs, and Studies," coalesces Cornell's teaching and research strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for understanding the complex, highly interactive earth. The program is being proposed as an inter-college major. At present, students may complete the program as general studies majors or within another compatible field.

The curriculum includes a freshman/sophomore emphasis on strong preparation in mathematics, physics, chemistry, and biology. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. Students wishing to explore the new field are encouraged to enroll in the SES Colloquium (register for ABEN 120, 121, GEOL 123/124, SCAS 101/102) and one or both of the upper-level core courses offered during the 1996/1997 academic year. These courses are Climate Dynamics (register for SCAS 331, ASTRO 331) and Evolution of the Earth System (register for GEOL 302 or SCAS 332), and Mechanics in the Earth and Environmental Sciences (register for ABEN 385).

A broad range of interdisciplinary tracks is available through course offerings throughout the three colleges. This tracking is accomplished through the selection of courses beyond the core sequence. These courses should build on the core sequence and generally include junior and senior level courses with prerequisites in the basic sciences and mathematics. Effective tracks can be designed to prepare students for careers or graduate study in specific environmental science disciplines including atmospheric sciences, hydrology, biogeochemistry, ecology, oceanography, and geophysics. Meaningful and effective combinations of these disciplines are also possible. The selection of the course sequences must be approved by the SES Coordinating Committee to ensure that depth as well as breadth is attained.

The SES curriculum is described in more detail in the Interdisciplinary Programs section. For more information, contact K. H. Cook in SCAS (255-5123), J. Parfange in ABEN (255-2476), or R. Howarth in BioSci (255-6175).

### MAJOR FIELDS OF STUDY

The college curriculum emphasizes the biological and physical sciences and the technology basic to the study of agriculture and life sciences. The sixteen major program areas reflect the departmental academic effort in the college. Faculty curriculum committees in each major identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide a coherent and integrated approach to the study of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.

### Agricultural and Biological Engineering

Agricultural and biological engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population, protecting and remediating the world's natural resources, including water, soil, air, and energy; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate Engineering Program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a joint Bachelor of Science degree from the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in agricultural and biological engineering are offered: environmental systems engineering, biological engineering, and agricultural engineering. All of these students take courses in mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, materials, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include bioengineering, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select an option in the College of Engineering that reflect their concentration, such as environmental engineering or biomedical engineering. Students planning for medical school also take organic chemistry. They choose courses in the social sciences to be placed on communications and team work skills. Specific course requirements and other information for the Agricultural and Biological Engineering (joint program) are in the section of the Catalog of Engineering in this same publication.

The department also offers two technology programs: environmental systems technology and agricultural systems technology. The two technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic sciences and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies.

The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser, and may have an informal minor in an area such as communication, business, education, or international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and governmental agencies, and include engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international agriculture.

The living world is all around us, and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who understand biology and science skills, who can communicate effectively, and who appreciate the challenges facing society. Agricultural and biological engineering is training the next generation of engineers to meet these challenges. The
Agricultural and applied economics provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sector.

Business management and marketing applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. Market analysis, sales, banking, merchandising, production management, and general business management are careers for which students may prepare.

Environmental and resource economics provides training for students interested in applying economic concepts to problems of the environment and resource use. A good option for those wishing to take positions as analysts with agencies that have environmental responsibility or facing environmental regulations.

Farm business management and finance is intended for students who are interested in farming or in preparing for work in farm management or farm finance, in such positions as Agricultural Lenders, Extensions Specialists, or Consultants.

Food-industry management is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry.

All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own unique set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of each individual student.

Biology Sciences

Biology is a popular subject at many universities for a variety of reasons: It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services in the division's Office for Academic Affairs and the Behrman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal biochemistry; cell biology; ecology and evolutionary biology; general biology; genetics and development; microbiology; neurobiology and behavior; and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

Biometry and Statistics

Biometry is the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in applications will find this a rewarding and challenging major.

The work of a statistician or biometrical can encompass research, testing, consulting, and computing in almost any mix and in a wide...
variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent. While satisfying course requirements for a major in biometry and statistics, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation. Students majoring in this area are required to take at least two computer science courses (e.g., Computer Science 100 and 211), mathematics courses (at least three semesters of calculus), and Biometry and Statistics 101, 102, 200, 215, 408–409, 417, 601–602, and 607, and Industrial and Labor Relations 310. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Steven J. Schwager for information.

Communication
A generation ago, college graduates were thought to be equipped with the knowledge and skills needed to carry them through their entire career. Today we know that the single most important thing we can prepare you for is change. Upon graduation you will face a world vastly different from the world you lived in when you entered Cornell. The public understanding of our most basic and essential processes such as the production of food and fiber and the development and protection of a sustainable environment becomes more difficult each day. The amount of information we receive and are expected to understand is increasing exponentially.

The public also has become more and more distrustful of science, technology, corporations, and policy makers. It’s clear that communication is taking a more central role in all of these areas. Increasingly, government, industry, and special interest groups are relying upon communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information accessible to the general public, to special groups, and to decision-makers in organizations. Effective information management requires a thorough understanding of the communication process. Students need to understand that “what we know” is partially determined by “how we found out.”

When you graduate from our department, you will have polished the basic communication skills of speaking, writing, and listening. Additionally, you will be prepared for dealing with the changing public climate in many other ways. You will come to understand and be able to communicate, analyze, and synthesize information about the growing complexities of science, agriculture, the environment and health, and public policy.

As a communication major you also will learn about:

- how communication systems work in our society and in others
- how to apply this understanding of communication to solving problems in government, industry, and education

The communication major is a program with a strong core of contemporary communication knowledge, theory, and practice. Core courses are taken in the freshman and sophomore years (8 courses) and are followed by courses in one or more of the four focus areas of the department. The series of freshman required courses include:

Comm 120 Contemporary Mass Communication
Comm 116 Communication in Social Relationships
Comm 117 Writing about Communication
Comm 121 Investigating Communication

This series of courses will provide you with a basic understanding of communication and the communication process. The course will also provide a unique opportunity to link practical application (such as writing and critical thinking) with up-to-date research and knowledge about communication.

During the sophomore year communication majors will take:

Comm 201 Oral Communication
Comm 230 Visual Communication
Comm 253 Information Gathering and Writing
Comm 282 Applying Communication Knowledge and Methods

After completion of the 8 courses in the core curriculum, you can choose to concentrate your study in one of four focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science and agricultural issues, as well as public perceptions of risk.)
- Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)
- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and learning how to evaluate the success of these plans.)
- Communication as a Social Science. (Study of communication research and methods with emphasis on communication as a new social science discipline.)

The department requires that all majors take a 3-credit course in one of the focus areas and an additional 15 credits. Further information on the distribution of these 15 credits will be provided to students in fall 1996.

In designing the communication major, the faculty of the department has kept in mind the necessity for students to understand contemporary research-based knowledge about communication and the need to be competent communicators in the workplace and within society at large. Both are critical to successful careers and enlightened citizenship in the 21st century. For students who have specific careers in mind, the department will have available “pathways,” which advisers and students will use to identify courses within and outside the department. The pathways will help guide students toward selected communication careers.

Education
The focus in the Department of Education is on how teaching and learning take place in school and nonschool settings, as well as on the role of education in our society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Students in the program area take a core curriculum:

- A course in general psychology (e.g., Psychology 101)
- A course in educational psychology (e.g., Education 311, 317)
- A course in the social and philosophical foundations of education (e.g., Education 271, 370, 378, 472)
- A field experience (e.g., Education 420, 430, 498)

Three specializations and two teacher certification programs are available at the undergraduate level.

Agricultural, extension, and adult education.
Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture/biotechnology in public schools, Cooperative Extension and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. Students take a college program that includes a balance of courses in education as well as courses in a technical area of agriculture/biotechnology, community, economic development, natural resources, human ecology, and communication. Education courses in issues in education, teaching and learning, methodology, and instructional applications of microcomputers prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on one or more of these areas: agricultural education, extension education, or adult education. As an alternative, students may elect to major in one of the college’s technical departments and co-advice to prepare in one or more of the three areas of agricultural, extension, and adult education. Further information is available from the agricultural extension and adult education coordinator, Kennedy Hall (Tel: 607-255-2198).

Educational psychology. Studies in educational psychology have traditionally focused on teaching and learning in schools. Yet schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises, broadly defined.

While graduate study is required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions.
Teacher Education in Science and Mathematics (TESM) is a university program jointly conducted by the departments of Education and Mathematics. TESM students who begin the program as juniors or seniors complete their undergraduate major and/or five-education courses. TESM students come from a number of different majors offered at Cornell, including Animal Science, Biometry and Statistics, and Engineering.

In a fifth year of study, TESM students do student teaching and take additional science and/or mathematics courses. Students earn the Master of Arts in teaching degree for this graduate study. Students who complete the TESM program and pass the required New York State tests are eligible for provisional certification in New York State. The master's degree is required for permanent certification in New York State. Students can also begin the TESM program at the graduate level.

For more information, contact the TESM Student Support Specialist at (607) 255-9255 or the program coordinator, D. J. Trumbull (607) 255-3108.

**Entomology**

The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis in the study of insects. Majors may pursue graduate entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of integrated pest management. Because of this diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisers.

### Specific Requirements

**Basic Sciences**

- College mathematics, including a course in calculus
- A year of physics
- Chemistry 103-104 or 207-208
- Chemistry 253 (organic)

**General Biology**

- Introductory Biology
- Biological Sciences 281, Genetics, or Plant Breeding 225, Plant Genetics
- A choice of one: Biological Sciences 261, Principles of Ecology or Biological Sciences 330 or 331, Principles of Biochemistry or Biological Sciences 378, Evolutionary Biology

**Entomology**

- Entomology 212, Insect Biology
- Entomology 322, Insect Morphology
- Entomology 331, Introductory Insect Systematics
- Entomology 483, Insect Physiology

It is strongly recommended that students who wish to undertake graduate training in entomology include course work beyond the minimum in their program, including enrollment in more than one of the general biology courses; i.e., ecology, biochemistry, and evolutionary biology. Students interested in pest management may include courses such as Entomology 241, Applied Entomology, Entomology 444, Integrated Pest Management, or other appropriate specialized courses.

**Food Science**

The mission of the Food Science Program is to educate students for careers in food science and technology. Graduates are prepared for entry level positions in industry, government, and research organizations. The program focuses on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition.

The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles, Unit Operations in Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, Food Microbiology, and statistics. Students study the full range of courses to satisfy college distribution requirements and individual interests.

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summers. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for undergraduate research on campus. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available on campus for training, research, and employment.

**Landscape Architecture Program**

The Landscape Architecture Program focuses on the art of landscape design as an expression of cultural values combined with natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, architecture, and city and regional planning. The program is co-sponsored by the colleges of Agriculture and Life Sciences and Architecture, Art, and Planning.

The program offers a course of study that prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic and design tools: basic and advanced design methods, landscape history, plant materials, construction technology,
### Summary of credit requirements

### Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

### Study Abroad

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

The Landscape
+LA 282 The American Landscape (3 cr)

Electives (choose three):
+LA 261 Urban Archaeology (3 cr)
+LA 262 Laboratory in Landscape Archaeology
+LA 360 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years [1995–96/1997–98]
LA 363 American Indians, Planners, and Public Policy (3 cr)
LANAR 521 History of American Landscape Architecture (3 cr)
LA 569 Archaeology in Site Design and Planning (3 cr) offered alternative years [1996–97]

+Distribution Elective

Natural Resources
The undergraduate curriculum is designed to provide an enduring and broadly applicable education. The focus of study is on the systems that yield our renewable natural resources (water, forests, fish, and wildlife) and includes emphasis on both the ecological and human dimensions of resource management. Students are encouraged to understand the scientific, ethical, and societal basis for the protection and management of renewable resources through the application of ecological principles and knowledge of social needs.

Required Core Curriculum
Students who desire to graduate with a specialization in Natural Resources are expected to complete, as a minimum, the courses specified in the following two-part Core Curriculum. First is a broad group of courses taken primarily outside the department, which, as their presentation suggests (Groups A-D), also fulfill this college’s course distribution requirements described on page 30.

Group A - Physical Sciences
Mathematics - 2 courses 6-8
Chemistry - 2 courses 7-8

Group B - Biological Sciences
Introductory biology - 8 cr. hours 8
General ecology - 1 course 4

Group C - Social Sciences
3 credits in addition to 3 credits in economics 6

Humanities
6 credits in addition to a course in "nomnate" ethics (NTRES 407, or PHIL 241, 246, or 247) 9

Group D - Written and Oral Expression
Freshman Writing Seminars - 2 courses 6
Oral communications - 1 course 3

Courses outside the Distribution Groups
Statistics - 1 course 3
Computer applications or programming - 1 course 3

The Core Curriculum’s second portion is composed entirely of courses offered by the Department of Natural Resources; a minimum of 19 hours in department courses is required.

Total Credit Hours (3 min) (3 min) (9 minimum total)

Students pursuing this specialization have remaining approximately 40 credit hours available to develop one or more concentrations of their choice within or outside this field.
Students who wish to do so may specialize further in natural resource ecology and management (including wildlife, fishery, forest, and aquatic ecosystems), or natural resource policy, management, and human dimensions.

Opportunities for field-oriented studies are available at Cornell's nearby Earth, and Research Forest, the Cornell Biological Field Station on Oneida Lake near Syracuse, as well as on numerous natural areas near campus.

Students should seek relevant work experience to complement their academic studies.

**Nutrition, Food, and Agriculture**

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships between human nutrition and the agricultural and life sciences.

Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and natural sociology.

Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutrition. NS 115 Nutrition and Health Concepts and Controversies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 351 Physiological and Biochemical Bases of Nutrition, and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, and the life sciences.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in Martha Van Rensselaer Hall is used by students for study and small group discussion. The center contains class materials, audiovisual aids and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture programs, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628.

**Plant Sciences**

Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture, and fruit and vegetable science.

Students with well-defined interests upon arrival at Cornell can specialize in one of these programs beginning as freshmen. Others may prefer to start in the general plant sciences curriculum and specialize after exploring the program offerings.

Plant sciences is a multidisciplinary program, sponsored by the Department of Plant Breeding in Emerson Hall, and the Departments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, Plant Pathology, and the Section of Plant Biology, all located in the Plant Science Building.

**General plant science** is intended for students whose interest in studying plants has not yet centered on any one of the specializations within the area. Students may continue with this option throughout their undergraduates, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension agents, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in other departments. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture, food science, or agricultural, resource, and business management.

Undergraduates are encouraged to obtain practical experience, which may involve internship and research. Under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

**Floriculture and ornamental horticulture** applies principles of plant science and business management to the production and marketing of florist, nursery, and turfgrass crops, as well as to the selection and management of plants for both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, botanical gardens and arboreta, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:

- BIO G 109 and 110. Biological Principles or an equivalent course
- CHEM 103 and 104 or 207 and 208 or an equivalent course
- HORT 101. Introduction to Horticultural Science
- HORT 102. General Horticulture
- HORT 230. Woody Plant Materials
- HORT 243. (BIO PL 243). Taxonomy of Cultivated Plants
- HORT 300 and 301. Garden and Interior Plants I and II
- HORT 400. Principles of Plant Propagation
- BIOPL 241. Plant Biology (Introductory Botany)
- BIOPL 242. Plant Physiology (lecture)
- BIOPL 244. Plant Physiology (Laboratory)
- SCAS 260. Introduction to Soil Science
- ENTOM 241. Applied Entomology
- PLPA 241. Plant Diseases and Disease Management or PL PA 401. Basic Plant Pathology

Although mastery of these subject areas is considered essential for students planning to enter a floriculture or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser.

With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell. No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 142, 202, 315, 316, 317, 318, 410, 480, 491. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either floriculture or landscape horticulture, or they may study generally across the specialization. Concentration in floriculture prepares students for careers in management of florist and greenhouse crop production, crops in controlled environment agriculture, and wholesale- and retail-florist marketing. Specialization in landscape horticulture trains...
students for careers in nursery-crop production, turfgrass management, exterior and interior landscape contracting and service, retail and wholesale marketing of nurseries and products and services, public and botanical garden and arboretum management, urban horticulture, and related areas. Some students choose to pursue a general program in floriculture and landscape horticulture including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study in horticultural science may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from departmental advisers and from the undergraduate program coordinator.

Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, horticultural business management, and general horticultural science. A core of management courses also is strongly recommended for students planning horticultural business careers. Students are also encouraged to take courses in these areas, complemented by general liberal arts education, and to develop special skills and interests through laboratory work, field trips, research work, and the like. Students may pursue study in the humanities and in other areas of special interest to the student is encouraged. Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent study courses, small-group study, special internships, and work experience programs.

Questions concerning the undergraduate curriculum, advising, and related matters should be addressed to Professor Carl F. Green, Undergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 23 Plant Science Building, Ithaca, New York 14853-9008 (telephone: 607-255-1787).

The department’s office is in 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building, greenhouse and laboratory facilities at the Kent Hall, the Turfgrass Research Field and Laboratory, landscape architecture studios on the fourth floor of the Roberts Hall, and Student and Faculty adviser in the Mann library.

Plant biology provides undergraduates with preparation for graduate study in the plant sciences that stresses basic, rather than applied, research. In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied areas that seem appropriate. Options include molecular biology, plant physiology, plant biology, genetics, cytology, organic chemistry, biochemistry, anatomy, taxonomy, ecology and evolution, and statistics. A core of courses, including mathematics, plant biology and physiology, and cytology, is strongly suggested. However, different specialties within plant biology afford a flexible curriculum.

Plant genetics and breeding provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics and (2) preparation for work in producing and marketing plant varieties and making varietal recommendations, for positions in seed analysis, regulation, and quality control, and for work in biotechnology laboratories.

In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from departmental advisers and from the undergraduate program coordinator.

Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, horticultural business management, and general horticultural science. resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources. The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories for research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through courses and work utilizing the many resources available in the College of Agriculture and Life Sciences.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture and by taking advantage strong ties with the technical fields in the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asian Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their course work by electing courses in these other departments and programs, thereby rounding out their educations by acquiring different perspectives.

The courses offered in rural sociology can be grouped in three broad categories: development sociology, population, environment, and society; and social data and policy analysis. All students majoring in Rural Sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213 or 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

The focus area in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries, and students are required to select a set of elective courses in which either domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes in nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the sociological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the development with course work in the history and economics of development, area studies, and the policy sciences.

Courses in the population, environment, and society focus area provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the demographic transition and population distribution and population characteristics in the United States and the developing world, (3) the relationships between social structure and the biophysical environment, (4) the relationship between climate change and natural resource utilization in development, and (5) impacts of public policy interventions on population size, growth and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the major in such a way as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide (1) knowledge of research methodology, statistics, and computer applications, and processes of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states; and (5) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population studies).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Soil, Crop, and Atmospheric Sciences

The Department of Soil, Crop, and Atmospheric Sciences provides instruction in five specializations: atmospheric science, agronomy, crop science, science of earth systems, and soil science. Employment opportunities are increased with practical experience, and the department and the Career Development office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in some of these specializations.

Atmospheric science is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic processes that control the atmosphere. All students are required to complete a minimum of five semesters of calculus; two semesters of physics; a semester each of chemistry, computer science, and statistics; and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in specialized areas of meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science.

Students are encouraged to choose additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.

Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming.

Graduate school can also follow a well-planned program. The student should take at
least 12 credits of crops and 12 credits of soils and design the remainder of his or her curriculum to meet specific interests and goals. Some students pursue a double major in agronomy and international agriculture.

**Crop science** is the application of basic biological and ecological science to the improvement of crops, especially plants, crops, livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor’s degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

**Science of Earth Systems** integrates atmospheric and soil science as well as other earth studies to develop a scientific basis for managing the resources of the planet. This is an interdisciplinary program described in detail elsewhere (see index).

**Soil science** is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 18 credits in soil science, including 4 credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as 6 credits of crop science to satisfy the major.

**Special Programs in Agriculture and Life Sciences**

Some students are interested in pursuing a general education in the agricultural sciences. Others are uncertain about career objectives in agriculture and the life sciences. The opportunity to develop an independent major in general studies in agriculture and the life sciences is available for such students. In consultation with a faculty adviser, they may plan a course of study suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include an additional concentration in courses in one or several academic units of the university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters. A course of study for a special major must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising office, 140 Roberts Hall.

**General studies** includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, and social sciences. Additional courses may be selected in those and other areas of individual interest or career aspiration.

**International Agriculture** provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socio-economic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and with various world areas for which study programs exist. Competence in a foreign language is required.

In addition to the college distribution requirement of 39 credits, students majoring in International Agriculture must take a minimum of 30 credits. A minimum of 7 credits in International Agriculture and 8 credits (or equivalent competence) in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to acquaint students with the many facets of agricultural development in low-income countries.

Students are encouraged to take additional specialized courses in one of the other program areas of the college.

**ACADEMIC HONORS**

The college encourages high academic achievement and recognizes outstanding students in several ways:

**Dean’s List.** Each semester, students are recognized for academic excellence by inclusion in the Dean’s List. The criteria are subject to change from semester to semester, and can be obtained from the College Registrar’s Office in 140 Roberts Hall.

**Bachelor of Science with Distinction.** Students who rank in the top 10 percent of the college’s graduates on the basis of the GPA for the last 60 credits completed at Cornell will be graduated with distinction.

**Bachelor of Science with Honors.** Students will graduate with a bachelor of science degree with honors when, in addition to having completed all the graduation requirements, they have satisfactorily completed the honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Honors Program.

**Ho-Nun-De-Kah.** Founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

**Gamma Sigma Delta** is an honor society of the faculty in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life based on "agriculture and the related sciences." The Cornell Chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated.

**Phi Kappa Phi** is an honor society that recognizes outstanding scholarship in all academic disciplines. Members are nominated from among seniors, graduate students, and faculty. Seniors must be in the top 10 percent of their class, and juniors in the top 5 percent of their class to be eligible.

**Sigma Xi** is an honor society that recognizes outstanding achievements in research. It was founded at Cornell University in 1886. Its membership is selected mostly from graduate students, faculty, and alumni who have made "noteworthy achievement as an original investigator in a field of pure or applied science." Members who have demonstrated research aptitude with publishable independent investigations are also eligible for associate membership.

**DESCRIPTION OF COURSES**

Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Divisions of Biological Sciences and Nutritional Sciences.

Descriptions of courses, both undergraduate and graduate, are given by department, arranged in alphabetical order. Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

**NONDEPARTMENTAL COURSES**

**ALS 400 Internship**

Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant’s Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.
AL500 Politics and Policy: Theory, Research, and Practice (also HSS 404 and GOVT 500)
Students in the College of Agriculture and Life Sciences must register for ALS 500.
S. Jackson and staff.
This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy use as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 471 Hollister Hall.

ALS 661 Environmental Policy (also Biology and Society 461 and BIOES 661)
This course uses an interdisciplinary approach to focus on complex environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

AGRICULTURAL AND BIOENGINEERING

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ABEN 102 Introduction to Microcomputer Applications
Fall. 3 credits. S-U grades optional. Each lab section limited to 14 students. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance to a laboratory section. Lect., T 12:20-1:15; lab, M W 1:25-2:25 or 1:20-2:20 p.m. Fee, $15. 1 evening prelim. T. J. Cook.

ABEN 104 Introduction to Programming using Pascal plus C++ or FORTRAN

ABEN 200 Undergraduate Seminar
Spring. 1 credit. S-U grades optional. Lect., T 1:30. A forum to discuss the curriculum requirements of the academic programs in the agriculture and biological engineering department and the contemporary and future role of agricultural and biological engineering in society. A required course for freshmen in agricultural and Biological Engineering academic programs. A series of seminars will be given by practicing engineers, Cornell faculty members, alumni of the department, and students. Students are expected to develop personalized, written career plans and select future courses to meet their career goals.

ABEN 221 Plane Surveying

ABEN 250 Engineering Applications in Biological Systems
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. Lect., M W F 8:00-8:50; lab, R 8:00 or 9:05. (lecture-recitation-project work). Lees, T R 11:15-12:15; lab M W F 12:20. L. P. Walker.

Course studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental problems, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ABEN 301 Introduction to Energy Systems

Introduction to energy systems with emphasis on quantifying costs and alternative systems for conversion of environmental inputs into useful forms of energy. Course will cover solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances, energy crops, and the public policy implications of alternatives. Use of spreadsheets will be extensive.

ABEN 305 Principles of Navigation (also NAV S 305)
Fall. 4 credits. Four classes each week (lecture-recitation-project work). Lects., M W F 8:00-8:50; lab, R 8:00 or 9:05. W. W. Gunke.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections,
Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, ground water, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, computer programs, and laboratory courses foster an understanding of concepts and principles of hydrologic processes. This course satisfies the capstone design experience requirement.

**ABEN 385 Mechanics in the Earth and Environmental Sciences**

The study of the earth and the environment requires an understanding of transport and other physical processes within and at the surface of the earth. This course encourages the students to develop a broad working knowledge of mechanics and its application to the earth and environmental sciences, providing the background necessary to study the professional literature.

**ABEN 396 Fundamentals of Engineering Design**

Fall. 3 credits. Lecs, T R 12:20-sec, T 1:25. S. G. Capps.

Fundamentals of design course for junior-level students. Topics and skills discussed will include time and team management, salesmanship and motivation, design constraints, design problem definition and specification, project scheduling, materials selection, cost analysis, ethics, and design evaluation.

**ABEN 435 Principles of Aquaculture**

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon an undergraduate's previous course background and interests. Supervised "hands-on" laboratory experiences. An ABEN 496 capstone design project can also be taken in conjunction with this course.

**ABEN 450 Instrument Design: Signal Processing and Data Acquisition**

Fall. 3 or 4 credits. 3 Prerequisites: Linear Differential Equations, physics or electrical science, computer programming and use of spreadsheets. Lec, W M F 9:05-9:55; lab, M W 2:00-4:25. D. J. Aneshansley.

An introduction to static and dynamic characteristics of electronic sensors, transducers, digital and analog signal conditioning circuits and conversion techniques, data acquisition and instrumentation design, with personal computers are considered. Biological and agricultural examples of instrument problems and designs are used. A capstone design project is an option with this course, see instructor for details. An ABEN 496 capstone design project can also be taken in conjunction with this course.

**ABEN 451 Biomass Conversion Processes for Energy and Chemicals**

Spring. 3 credits. Prerequisites: ABEN 250 and 350, MATH 294, Thermodynamics (co-registration permissible), and CHEM 211. Lecs, M W F 9:05. L. P. Walker.

A variety of physical and biological processes are available for converting plants and other biomass resources into fuels, industrial chemicals, and foods. The design of these processes is accomplished through fusing concepts from biochemistry, microbiology, and plant biology with the concepts and methods of engineering. There are five major components to this course: plant biology, biochemical resources, heat and mass transfer, enzyme catalysis, fermentation kinetics, and biological filtration with plants. The last four components are concluded with case studies that demonstrate how these conceptual engineering concepts are used to design a biomass conversion process. This course does not satisfy the capstone design experience requirement.
ABEN 471 Geohydrology (also Civil and Environmental Engineering 431 and Geology 445)
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202. Lec, 1 disc, lecture, W. Brutsaert, L. M. Cathles, J. Y. Parlane, T. S. Steenhuis. Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, hydraulics, soil water, and solute transport. This course does not satisfy the capstone design experience requirement.

ABEN 473 Watershed Engineering
Fall. 3 credits. Prerequisite: Fluid Mechanics or Hydrology. Lecs, T R 9:05; disc, R 1:25-4:30. M. F. Walters. Engineering principles are applied to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and conservation and small-scale design for soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, irrigation, and water supply. This course satisfies the capstone design experience.

ABEN 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: Fluid Mechanics or Hydrology. Lecs, M W F 12:20. T. S. Steenhuis and L. D. Geohring. This course will focus on design of drainage and irrigation systems for agriculture and non-agricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the capstone design experience requirement.

ABEN 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Lecs, M W F 1:25-2:15. D. A. Haith. Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, dynamic programming, and separable programming) to evaluate management alternatives. Applications include pollution control and resource management problems. This course does not satisfy the capstone design experience requirement.

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lecs, M W F 1:25. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction, collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; hazardous waste management. Emphasis on quantitative analyses. This course does not satisfy the capstone design experience requirement.

ABEN 477 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisites: One environmental science course and at least junior-level standing; or permission of instructor. Lecs, M W F 10:10. W. J. Jewell. Overview of pollution problems in agriculture, legal restrictions, and technologies used to control pollution. Biological, physical, and chemical processes are applied to solve problems associated with animal wastes, food production, and food and fiber processing. This course does not satisfy the capstone design experience requirement.

ABEN 478 Ecological Engineering
Spring. 3 credits. Prerequisite: Junior-level environmental quality engineering course or equivalent. Lecs, T R 2:30-3:45. W. J. Jewell. Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, hydroponic applications of plants, wastewater farm, and industrial residue application to land, soil restoration, bioremediation of toxins, and biofilters for air purification are examples of pollution control systems that depend on natural processes. Pollution control mechanisms in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

ABEN 481 Design of Wood Structures
Spring. 3 credits. Prerequisite: ENG 202. Lecs, M W F 10:10. K. G. Gebremedhin. Two evening prelims. Computer-aided and manual computation procedures of engineering wood structures. Topics include national design codes, estimation of design loads (dead, live, wind, snow, and seismic loads); mechanical properties of materials; designs of beams, columns, trusses, frames, arches, shear walls, horizontal diaphragms of post-frame buildings, connections, and special (glue-laminated) structure systems. Engineering judgment and individual responsibility in engineering design are also emphasized. This course satisfies the capstone design experience requirement.

ABEN 482 Bioenvironmental Engineering
Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent. Lecs, T R 11:15; lab, W 1:25-4:25. L. D. Albright. Analysis and design of structures to modify the thermal and aerial environment of animals and plants. Environmental requirements of animals and plants, and the design of buildings to act as buffers between biological systems and climate. Heat flow, air flow, psychrometrics, energy balances, temperature biology, animal and plant models, thermal modeling, meteorology, and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

ABEN 491 Highway Engineering (also Civil and Environmental Engineering 362)
Fall. 3 credits. Prerequisites: Junior standing in engineering, Fluid mechanics, and soil mechanics (may be taken concurrently). Lecs, F 1:25-4:25; lab, M 1:25-4:25. L. H. Irwin. An introduction to highway engineering with an emphasis on design. Students will work in teams to apply the current standards and design criteria used in professional practice to several highway design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors, and policy on hydrology and drainage design, highway materials, pavement design, and maintenance. This course satisfies the capstone design experience requirement.

ABEN 494 Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 496 Senior Design in Agricultural and Biological Engineering
Fall and spring. 1-3 credits. Prerequisite: ABEN 396 or co-registration, and senior standing in ABEN 347 or instructor permission or co-registration. Note: Completing an independent study form is required to register. Hours to be arranged. Staff. Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN course (for an approved ABEN course, see ABEN Undergraduate Program publication).

ABEN 497 Individual Study in Agricultural and Biological Engineering
Fall and spring. 1-4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided, in the latter case, that adequate facilities can be obtained.

ABEN 498 Undergraduate Teaching
Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

ABEN 499 Undergraduate Research
Fall and spring. 1-3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed. Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

The course encompasses the full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternately with Civil and Environmental Engineering 653—a complementary, but not identical, course.

ABEN 672 Drainage
Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are designed for hands-on experience with measuring soil properties and for actual drainage design. This course satisfies the capstone design experience requirement.

ABEN 677 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisite: permission of instructor. Lec, T R 2:30-3:45. W. J. Jewell.
Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are used in design problems with animal wastes, food production, and fiber and food processing. A semester-long design project is required. This course satisfies the capstone design experience requirement.

ABEN 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&M 310 or permission of instructor. Lec, M W F 11:15. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. ABEN graduate faculty.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 750 Orientation for Research
Fall. 1 credit. Limited to newly joining graduate students. Lec, R 3:35-4:25; remainder to be announced. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

ABEN 754 Sociotechnical Aspects of Watershed Development (also ARME 754 and Government 644)
Examines watershed development and its relation to agriculture, irrigation and other activities within its boundaries. Emphasis on social, technical and economic processes within watersheds, including political and administrative aspects. Provides an opportunity to examine systematically the interaction of various aspects of watershed management and design in developing countries.
ARME 310 Introductory Statistics
Fall or spring. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Lecs, M W F 1:25-2:15; sec T 10:10-12:05, 12:20-2:15, or 2:30-4:25 (2 secs); or R 12:20-2:15 or 2:30-4:25 (2 secs). 3 evening prelims. C. van Es.

An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

ARME 313 Information Systems and Decision Models
Fall. 3 credits. Limited to juniors and seniors. Prerequisites: ABEN 102 or equivalent, ECON 101 or equivalent, and ARME 310. Lecs, M W F 10:10-11; lab, M 12:20-2:15, 4:35-6:30, or 7:30-9:25 p.m.; Rec 12:20-2:15, 4:35-6:30 or 4:35-6:30. Staff. The focus of the course is on information systems and the quantitative approaches used in business decision making. The computer models presented enable the student to appreciate information systems, identify problems that can be analyzed with business decision making techniques, examine problems using analytical techniques, and gain a perspective for critiquing the decision making process.

ARME 320 Business Law I
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lecs, M W F 9:05-9:55. 1 evening prelim. D. A. Grosman. Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, property, and the landlord-tenant relationship.

ARME 321 Business Law II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: a course in business law. Lecs, T R 8:30-9:55. D. A. Grosman.

The first portion of this course examines legal issues related to the operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, like employment discrimination, secured transactions, product liability, unfair competition, and computer law.

ARME 322 Managerial Accounting
Fall. 3 credits. Prerequisite: ARME 221 or equivalent. Lecs, M W F 12:20-1:10; disc, R 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); or F 10:10-12:05 or 12:20-2:15 (2 secs). 2 evening prelims, a third exam, weekly homework, one written case study, and one project on an electronic spreadsheet. M. J. Hubbert.

An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocations (budgeting), variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Limited use of electronic spreadsheets.

ARME 324 Financial Management
Spring. 4 credits. Prerequisite: ARME 220 or equivalent. Recommended: ARME 221 and 310 or equivalents. Lecs, M W F 9:05-9:55, disc, W 2:30-4:25 or R 9:05-11, 12:20-2:15, or 2:30-4:25, or F 10:10-12:05 or 12:20-2:15. 2 evening prelims. B. L. Anderson.

Focuses on three major questions facing management: how to evaluate capital investment decisions, how to project the capital to finance the firm, and how to generate sufficient cash flows to meet the firm's cash obligations. Major topics include methods to analyze investment decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt, and equity, capital structure, leverage, and working capital management. Microcomputers are used for analyzing financial problems. Previous computer experience is preferred, but optional instruction offered.

ARME 335 Personal Enterprise and Small Business Management
Spring. 3 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting.

Lecs, T R 12:20-1:35, or 2:30-3:45.

D. Streeter.

Acquaints students with the challenging role of small business in the global economy. Special emphasis on the problems of planning, starting, and managing new business, including strategic planning, marketing, financing, and managing growth. Term project, development of a business plan, is done in teams of no fewer than three. Case studies and visiting entrepreneurs illustrate various small business issues.

ARME 340 Futures and Options Trading

Staff.

The focus of the course is on the use of agricultural futures and options as marketing and management tools. A primary objective is to understand how companies, financial institutions, and farm businesses can employ hedging strategies to manage risk. Students will participate in a simulated trading exercise in which they will use real-time price and market information and input from industry experts to manage a hedge position.

ARME 342 Marketing Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: ARME 240 and ECON 101-102. Lecs, M W F 10:10-11; disc, R 12:20-1:10 (2 secs) or 2:30-3:20 (2 secs); F 10:10-11 (2 secs), or 12:20-1:10 (2 secs). In weeks discs are held, there will be no F lecture.

R. D. Christ.

Deals with the central link between marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the management aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public policy and ethical dimensions of marketing are examined.

ARME 348 Dairy Markets and Policy

A survey of the structural and institutional characteristics of dairy markets and the analysis of policy issues, pricing systems, and government programs, including marketing orders, price supports, and import policies.

ARME 347 Marketing Fruits, Vegetables, and Ornamental Products
Fall. 3 credits. S-U grades optional. A mandatory 2-day field trip. Estimated cost of field trip, $50.

Lecs, M W F 12:20-1:10.

E. E. Figueroa.

A study of fruits, vegetables, and ornamental product marketing, including seasonal variations. Role of market intermediaries, role of government agencies, and the price discovery process. Discussion and description of horticultural product market orders in the U.S. The emerging importance of interregional and international markets.

ARME 380 Independent Honors Research in Social Science
Fall or spring. 1-4 credits.

Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog.

Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.

ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving
Fall. 3 credits. 6 half-day field trips. On days field trips are taken, class ends at 5:30. Prerequisite: ARME 302 or equivalent. Lecs, T R 12:20-1:10; disc, R 1:25-4:25.

G. J. Connemann.

A seminar/workshop designed for seniors who plan to return to the family business or homestead or to take positions in banking, credit, or agribusiness, as well as those who wish to establish entrepreneurial businesses. The objective of the course is to pull together interdisciplinary knowledge and apply it in a problem-solving/critical-thinking management context.

ARME 403 Farm Management Study Trip
Spring. 1 credit. Prerequisite: ARME 302.

Open by application only. Secs, arranged.

W. A. Knoblauch.

A special program to study production and management systems in diverse agricultural regions of the U.S. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further applies the type of marketing encountered, is a requirement for completing the course.

ARME 404 Advanced Agricultural Finance Seminar
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W 3:35-5:30.

F. L. LaDue.
A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Farm Credit Banks of Springfield, one week in Farm Credit Association offices, a field trip to observe FHA financing during fall term, a four-day trip to financial institutions in New York City during intersession, and an actual farm consulting and credit analysis in the spring term.

ARME 405 Farm Finance
Spring. 4 credits. Prerequisite: ARME 302 or equivalent. Lecs, M W F 9:05-9:55; disc, T 1:25—3-20. E. L. LaDue
The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, finance entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

ARME 406 Farm and Rural Real Estate Appraisal
Spring, weeks 7-15. 2 credits. Limited to 40 students. Prerequisites: ARME 302 or equivalent and permission of instructor. Lec, R 11:15—12:55; 6 half-day field trips, 1 all-day field trip. G. J. Connerman.
The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.

ARME 410 Business Statistics
Spring. 3 credits. Prerequisite: ARME 310 or equivalent. Lecs, M W F 10:10-11. C. van Es.
This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. The course will involve a research project designed to give experience in collecting and interpreting data.

ARME 411 Introduction to Ecomometrics
Spring. 3 credits. Prerequisite: ARME 310 or equivalent. Lecs, T R 10:10—11:25. J. E. Pratt.
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed and simultaneous equation models are introduced. Students are required to specify, estimate, and report the results of an empirical model using econometric methods.

ARME 412 Introduction to Mathematical Programming
Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: ARME 310 or equivalent. Lecs, T R 12:20-1:35. J. E. Pratt.
This is a course in applied linear programming. Following a review of linear algebra, the emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of economic problems. Standard LP problems such as work scheduling, blending, resource allocation, capital budgeting, transportation and financial planning, inventory management, etc., will be studied. Integer and nonlinear programming will be introduced, if time permits.

ARME 415 Price Analysis
Fall. 3 credits. Prerequisites: ECON 313 or CEH 210 or equivalent, ARME 310 or equivalent. Lecs, M W F 9:05-9:55. H. M. Kaiser.
The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

ARME 422 Estate Planning
Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. Lecs, M 3:35—4:25. D. A. Grossman.
Fourteen sessions on the various aspects of estate-planning techniques. The law and uses of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

ARME 424 Business Policy
Fall. 3 credits. Limited to seniors majoring in business management and marketing. T R 9:05-10:15, 11:15-12:45 or 2:30-4:00. R. D. Appley.
An integrating course that examines business policy formulation and implementation from the standpoint of the general manager of an organization, focusing on decision making and leadership. The course is built around a series of cases. Several guest executives. Emphasizes improving oral and written communication skills.

ARME 425 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: ARME 325 or NBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. Lecs, M W 2:30—4:25. D. Streeter.
Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

ARME 426 Cooperative Management and Strategies
Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, $50. Lecs, M W F 12:20-1:10. 2 day field trip required. B. L. Anderson.
Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of corporate strategies, management, financing, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture although alternative types of cooperative organizations are studied such as: credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

ARME 428 Technology: Management and Economic Issues
Designed to acquaint students with the role of technology in modern society, business, and education. Emphasis is placed on the context for managerial analysis and decision with respect to technological adoption. Topics include the historical influence of technology on economic structure and activity, contemporary technological trends, implications for business managers, adoption and diffusion, public acceptance, implications for future structural and spatial organization of economic activity, impediments to technological advancement, and public policy considerations.

ARME 430 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 101—102 or equivalents. Lecs, T R 12:20—1:35. Optional disc to be arranged. D. R. Lee.
This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

ARME 431 Food and Agricultural Policies
The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

ARME 432 Economics of the Public Sector
Spring. 3 credits. Prerequisite: ECON 313 or CEH 210 or equivalent. Not offered 1996—97. Staff.
The application of economic concepts to the evaluation of the structure and performance of the public sectors of the economy. Emphasis on microeconomic analysis of public finance and public resource allocation. Principal topics: market failure, articulation of public choice and interests, evaluation of public decisions, and current public policy.

ARME 433 Food-Industry Management
Fall. 4 credits. Limited to juniors and seniors. Prerequisite: ARME 448 or 342 or permission of instructor. Lecs, T R 10:10—11:25; sec T 1:25—2:40. G. A. German.
A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday session.
ARME 446 Food Marketing Colloquium  
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of instructors. S-U grades only. R 3:35–5. G. A. German, E. W. McLaughlin, and D. J. Perosio. ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intercession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

ARME 447 Food Marketing Colloquium  
Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of instructors. S-U grades only. R 3:35–5. G. A. German, E. W. McLaughlin, and D. J. Perosio. ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intercession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

ARME 448 Food Merchandising  
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. Lecs, T R 12:20–1:35. G. A. German and D. J. Perosio. Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

ARME 449 Global Marketing Strategy  
Fall. 3 credits. Prerequisite: ARME 542. S-U grades optional. T R 1:25–2:40. W. H. Lesser. This course will examine the marketing environment, opportunities, and challenges in the rapidly changing global marketplace. We will explore what factors are predictive of business success in various national markets and the means by which these factors can be incorporated into firm strategy. The focus of the course will be kept practical and managerial through liberal use of actual case studies.

ARME 450 Resource Economics  
Fall. 3 credits. Prerequisites: MATH 111 and ECON 313. Lecs, M W F 2:30–3:20. J. M. Conrad. Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

ARME 451 Environmental Economics and Policy  
Spring. 3 credits. Prerequisite: ECON 313; ARME 250 recommended. S-U grades optional. Lecs, M W F 2:35–4:10. Staff. This course applies economic concepts to public decision making about environmental commoditites and natural resources. Two economic paradigms of allocating public goods will be blended into a conventional economic approach, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of non-market valuation techniques; and a property rights/institutional perspective.

ARME 464 Economics of Agricultural Development  
Spring. 3 credits. Prerequisites: ECON 101–102, or permission of instructor. Lecs, T R 12:20–1:35. R. D. Christy. This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. The areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics  
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advised by the department.

ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics  
Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. To be used for special projects designed by faculty members.

ARME 498 Supervised Teaching Experience  
Fall or spring. 1–3 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 499 Undergraduate Research  
Fall, spring, or summer. 1–4 credits. Limited to students with grade-point averages of at least 2.7. Prerequisite: written permission of the staff member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

ARME 605 Agricultural Finance and Capital Management  
Fall. 3 credits. Prerequisite: ARME 405 or equivalent. Offered alternate years. Offered fall 1996 and fall 1998, not offered fall 1997. $25 charge for reading materials; no text. T R 8:40–9:55. E. L. LuDue and L. W. Tauer. Advanced topics in capital management and financing of agriculture. Special emphasis on current issues. Example topics: farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, firm growth, inflation, loan evaluation, and selected topics on financing agriculture in developing countries.

ARME 608 Production Economics  
Fall. 3 credits. Prerequisites: ECON 313 and MATH 111 or equivalents. Lecs, M W F 10:10–11. L. W. Tauer. The theory of production economics with emphasis on applications to agriculture. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade  
Spring. 4 credits. Prerequisites: ARME 608 or CE&H 603, ECON 313, or equivalent intermediate microeconomic theory, incorporating calculus. Lecs, T R 8:8–9:55. H. de Gorter and staff. The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare, equity, and equity measures. The compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optimality. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

ARME 640 Analysis of Agricultural Markets  
Fall, weeks 1–7 (ends Oct. 17). 2 credits. Prerequisites: ARME 411 and 415 or equivalents. Lecs, T R 2:30–4:25. W. G. Tomek. This course is about agricultural product markets. Focus is placed on their distinguishing characteristics, criteria for evaluating performance, models of price determination, and selected public-policy issues related to market performance.
This course is primarily about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on cash and futures markets including relationships among prices. These principles provide a foundation for understanding hedging, speculation, and public-policy issues.

ARME 651 Environmental and Resource Economics

Spring. 4 credits. Limited to graduate students. Lecs, T R 10:10-11:25.
W. D. Schulze.

Applied welfare economics with specific applications to environmental and resource issues. Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and cost— including property value and wage hedonic approaches, travel models and contingent valuation—are covered. Survey/data collection methods are described in detail. Expenditures for resolving public good, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. ARME 651 is a core course for the Environmental Management concentration/option.

ARME 652 Land Economics Problems (co-listed with Civil and Environmental Engineering 529)

Fall or spring. 1 or more credits. Limited to graduate students. Prerequisites: permission of instructor. S-U grades optional. Hours to be arranged.
D. J. Alle.

Special work on any subject in the field of land and resource economics.

ARME 660 The World's Food

Spring. 5 credits. S-U grades optional. Lecs, M W 2:30-3:40 T T Poleman.

Designed to introduce first-year graduate students to food economics, the world food situation, and the linkages between food, population, and employment in developing countries. Among the topics considered are the extent of hunger, income and dietary change, control of population growth, and the outlook for feeding an eventual population of 10-12 billion.

ARME 665 Food and Nutrition Policy (also Nutritional Sciences 685)

Spring. 3 credits. Introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lecs, M W 2:30-3:40. D. Sahm and P. Dorosh.

For description, see NS 685.

ARME 666 Economics of Development

Spring. 3 credits. Prerequisites: ECON 313 and 314 or permission of instructor. S-U grades optional. Lecs, T R 10-10-11-25. S. C. Kyle.

The course is designed as an introduction to the study of development at the graduate level. The course will be split into two major sections, the first dealing with the microeconomics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal will be to illuminate the particular features of low-income countries which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.

ARME 694 Graduate Special Topics in Agricultural, Resource, and Managerial Economics

Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

ARME 698 Supervised Graduate Teaching Experience

Fall or spring. 1-3 credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Open only to graduate students. Undergraduates should enroll in ARME 498. S-U grade optional. Prerequisites: permission of instructor. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 699 M.P.S. Research

1-6 credits. Prerequisites: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

ARME 700 Individual Study in Agricultural, Resource, and Managerial Economics

Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

[ARME 708 Advanced Production Economics]

Fall. 3 credits. Prerequisite: ARME 608, 710, or equivalents; ECON 509 is highly recommended. Offered alternate years. Not offered fall 1996 and 1998. Next offered fall 1997. Hours to be arranged.
R. N. Boisvert.

Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economics, technical change, factor substitution. Developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

ARME 710 Econometrics I

Spring. 4 credits. Prerequisite: matrix algebra and statistics at the level of BTRY 417 and 601 (BTRY 408-409 preferred). Undergraduates must have permission of instructor. Lecs, T R 2:30-4:25.
W. G. Tomek.

This intermediate-level course covers selected statistical models and associated estimators used in econometric, dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous equation models, and models with nonspherical error terms and specification errors. Students should have an introduction to econometrics take ARME 611.

ARME 711 Econometrics II

Fall. 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended.
Lecs, M W 10-12-05. T. D. Mount.

Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating non-sample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooled data, stochastic coefficients, limited dependent variables and latent variables.

ARME 712 Quantitative Methods I

Fall. 4 credits. Prerequisite: some formal training in mathematics. A course at the level of BTRY 417 is highly recommended.
Lecs, M W 8-9-55, sec, F 8-9-55.
R. N. Boisvert.

A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

ARME 713 Quantitative Methods II

Spring. 4 credits. Prerequisites: ECON 509 and ARME 710. Lecs, M W 9-10-11.

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of numerical and economic analysis, and (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

ARME 714 Experimental Economics

Lecs, T R 10-10-11-25. W. D. Schulze.

The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods, externalities, and voting; Informing, information and uncertainty; and economic anomalies. Students must design, implement, and write a
paper describing their own experiment testing an economic theory.)

ARME 717 Research Methods in Agricultural Economics
Spring. 2 credits. Limited to graduate students. R. N. Boisvert. Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

[ARME 730 Seminar on International Trade Policy: Agriculture, Resources and Development
Spring. 3 credits. Limited to graduate students. Prerequisites: ARME 630 or equivalent. Offered alternate years. Not offered spring 1997. Next offered spring 1998. Hours to be arranged. D. R. Lee. This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change, agricultural trade policy, and agricultural trade and development.]

ARME 731 Seminar on Agricultural Policy
Fall. 3 credits. Limited to graduate students. Offered alternate years. Offered fall 1996 and 1998. Not offered fall 1997. T R 12:00—1:50. H. de Gorter. A review of the professional literature relating to agricultural policy issues and techniques appropriate to the analysis of such issues.

ARME 740 Agricultural Markets and Public Policy
Spring, weeks 1–7. 2 credits. Limited to graduate students. Prerequisite: Familiarity with multiple regression techniques at the ARME 411 level or higher. Recommended: ARME 640. T R 12:20–2:15. W. H. Lesser. Develops the concepts and methodology for analyzing and applying the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include survey of institutional organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics can be adjusted to students' interests.

ARME 741 Space, Trade, and Commodity Analysis
Spring, weeks 8–14. 2 credits. Limited to graduate students. Recommended: ARME 412 or equivalent and ARME 640. T R 12:20–2:15. J. E. Pratt. Principal topics are spatial micro-economics of the firm, spatial pricing and location decisions, the forms of spatial competition, and quantitative methods for spatial analyses, which include techniques for finding spatial equilibria and selected network optimization algorithms.

ARME 750 Resource Economics
Spring. 4 credits. Prerequisites: ECON 509 and 518, or ARME 713. Lecs, T R 2:30—4:20. J. M. Conrad. Optimal control and other methods of dynamic optimization will be used to study the allocation and management of natural resources.

ARME 751 Environmental Economics
Fall. 4 credits. Prerequisites: ECON 509 and 518, or ARME 713. S-U grades optional. Lecs, T R 2:30—4:20. J. M. Conrad and L. D. Chapman. Economic theory will be applied to the problems of managing environmental quality. Static and dynamic models of externality, decisions to introduce nuisance, environmental, and methods of valuation will be presented.

ARME 754 Sociotechnical Aspects of Watershed Development (also Agricultural and Biological Engineering 754, and Government 644)
Spring. 2 or 3 credits. S-U grades optional. W 7:30—9:30 p.m. T. Steenhus, M. Walter, N. Uphoff, and staff. For description, see ABEN 754.

ARME 763 Macro Policy in Developing Countries
Spring. 3 credits. Prerequisites: ECON 509, 510, 513 (may be taken concurrently), or permission of instructor. Offered alternate years. Offered spring 1997; not offered spring 1998. Lect, T 2:45–4:25. S. C. Kyle. This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.

ANIMAL SCIENCE

Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; sec, T W or R 2:45–4:25. W. B. Currie, M. L. Thonney, and staff. An introduction to the science of raising animals in the context of commercial animal production. Lectures and labs address the biology of economically important species (morphology, anatomy, and physiology) and application of the biology to the management of animals within major livestock industries. Topics covered include fundamentals of anatomy, regulatory mechanisms, vital systems, digestion, and metabolism. Students care for small numbers of cattle, sheep, pigs, and chickens in different phases of their life cycle to maximize hands-on contact. Living animals will be used noninvasively, and fresh organs and tissues from dead animals will be used in laboratories.

AN SC 105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20. R. C. Gorewit and D. J. Chemey. A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 120 Animal Domestication and Behavior
Fall. 3 credits. T R 8:40—9:55. E. A. Oltenacu. This Freshman Writing Seminar will explore the relationship between humans and their domestic animals. Students will study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

AN SC 150 Domestic Animal Biology II
Spring. 4 credits. S-U grades optional. Lecs, M W F 9:05; lab, M T W R or F 12:25–2:45. W. R. Butler and staff. Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens will be used in laboratories, exercises, and demonstrations.

AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 104 or 208. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M T W R or F 12:25–4:25. A. W. Bell. An introduction to animal nutrition, including digestive physiology and metabolism of livestock and other species; nutrient properties and requirements for different aspects of animal production; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

AN SC 213 Nutrition of Companion Animals
Spring, weeks 1–7. 1 credit. Prerequisite: AN SC 212 or equivalent. Offered alternate years. Next offered spring 1997, 1999. Lees W 7:30—9:25 p.m. H. F. Hintz. Nutrition of companion animals, with emphasis on the dog and cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease. [AN SC 214 Nutrition of Exotic Animals
Spring, weeks 1–7. 1 credit. Prerequisite: AN SC 212. Offered alternate years. Offered spring 1998. Lees, W 7:30–9:25 p.m. H. F. Hintz. Principles of nutrition for exotic animals including birds and fish. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.]
AN SC 215 Exotic Avian Husbandry and Propagation
Spring. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or Bio G 103, 104 or equivalent. Lect. M 2:30-4:30. J. P. Parks and D. Muscarella. Natural history, care, management, health and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: AN SC 215 or equivalent and one year of introductory biology. Lecs, T R 11:15; lab, M 10-12; F 2-4:25. E. J. Pollak. An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 230 Poultry Biology
Spring. 3 credits. Prerequisites: AN SC 100 and 150 or introductory biology. Offered alternate years. Not offered spring 1998; next offered spring 1999. Lects, T R 11:15; lab, M 2:4-4:25. R. E. Austic. A course designed to acquaint the student with principles of avian biology and their application in the various aspects of poultry production. Some laboratory sessions involve dissection and/or the handling of live birds.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grade optional. Lecs, T R 10:10; lab, W or R 2-4:25. D. M. Galton and T. Batchelder. Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 351 and AN SC 455.

AN SC 251 Dairy Cattle Selection
Spring. 2 credits. Prerequisite: AN SC 250 or equivalent. S-U grades optional. Lect, W 1:25-2:15; lab, W 2:15-4:25. D. M. Galton. Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Spring. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lect, T R 10:10; lab, R 1:25-4:25. C. Colyer. Selection, management, feeding, breeding, and training of light horses.

AN SC 290 Meat Science (also Food Science 290)
Fall. 2 or 3 credits. Lects, T R 11:15; lab, M or R 12:20-3:20. D. H. Beermann and staff. Lecture only, 2 credits; lecture plus lab, 3 credits. An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, current market trends and quality control. An all-day field trip to commercial meat plants is taken.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year of introductory biology. Lecs, M W F 10-10. J. E. Parks. Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W or F 1:25-4:25. Each lab limited to 30 students. J. E. Parks. Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: introductory course in animal physiology; at least one animal production course or equivalent experience is recommended. S-U grades optional. Lect, T R 11:15. F. A. Oltenacu and K. A. Houpt. The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 312 Applied Cattle Nutrition
Spring. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent) Dairy Fellows enroll during senior year after AN SC 455. Lecs, M W F 10-10; lab, M or T 1:25-4:25. M. E. Van Amburgh. An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for advanced juniors, seniors, and entering graduate students.

AN SC 315 Applied Animal Genetics
Spring. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lect, M 9:05. P. A. Oltenacu and E. J. Pollak. Topics of interest related to the genetic definition, inheritance and control of qualitative and quantitative traits in various species of animals are presented. Current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture discussion-type format.

AN SC 322 Applied Animal Genetics-Laboratory
Spring. 1 credit. Prerequisite: concurrent registration in AN SC 321 or instructor's permission. S-U grades only. M 2-4:25. P. A. Oltenacu and E. J. Pollak. Many genetic concepts addressed in AN SC 321 are explored in depth using a computer-assisted instruction environment. Mendelian inheritance of qualitative traits, detection of carriers of recessive genes, artificial selection, inbreeding and heterosis, and design and evaluation of genetic improvement and conservation programs, and role of population size are among the topics considered.

AN SC 330 Commercial Poultry Production
Spring. 2 credits. Prerequisites: AN SC 100, 150, and 250 or permission of instructor. Offered alternate years. Not offered 1997. Next offered spring 1998. Lect, F 2-4 (occasional field trips run past 4 p.m.) K. Keshavarz. The course emphasizes production and business management aspects of commercial poultry farms operated as a business and is designed to acquaint the student with current technology involved in commercial poultry production.

AN SC 341 Physiology of Lactation
Spring. 3 credits. Prerequisite: AN SC 150 or AN SC 300 or equivalent. Lects, T R 9:05; lab R 2-4:25. Staff. The physiology of milk production is covered with emphasis on milk components and their roles in milk secretion, and the biosynthesis of milk constituents. The dairy cow serves as the model system, but all livestock species are considered.

AN SC 351 Dairy Herd Management
Spring. 4 credits. Prerequisites: AN SC 250 or permission of instructor. Recommended: ARME 302. Lects, M W F 11:15; labs, M or T 1:25-4:25; and F (alternate weeks) 1:25-4:25. D. M. Galton and staff. Application of scientific principles to practical herd management with consideration of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 360 Beef Cattle Management
Spring. 3 credits. Limited to 32 students. Lects, T R 10:10; lab, W 2-4:25. M. L. Thonnen. Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with the management skills through computerized simulations and working directly with cattle. Students are required to spend several days during the semester feeding and caring for cattle and observing calving.

AN SC 370 Swine Nutrition and Management
This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

AN SC 380 Sheep
The breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved practices.

AN SC 392 Animal Growth Biology
Fall. 2 credits. Not open to freshmen; sophomores by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology. AN SC 212 and 221. Lec. R 1:25-3:20; sec, F 1:25-2:15. D. H. Beermann and staff.
A detailed discussion of the morphological and physiological aspects of growth of domestic animals. Overview of the cell cycle and early embryo growth regulation, differentiation and cellular aspects of tissue development and growth, maternal influences on fetal growth and allometric patterns of postnatal growth are discussed. Endocrine, genetic and nutritional influences on protein and lipid metabolism, nutrient requirements and composition of growth will be emphasized.

AN SC 400 Tropical Livestock Production
An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.

AN SC 401 Dairy Production Seminar
Spring. 1 credit. Limited to juniors and seniors. Disc, M 7 p.m. D. E. Bauman.
Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences
Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

AN SC 403 Tropical Forages
An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value forages and crop residues; physiology of digestion of ruminants that affects feeding behavior of various species; problems of chemical inhibitors in plants; and utilization of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. E. Austic and D. F. Bauman.
A fundamental approach to nutrition focusing on the metabolic rate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 414 Ethics in Animal Science
Fall. 2 credits. Enrollment limited to 40. Juniors and seniors only. If enrollment exceeds 40, preference will be given to seniors. Lecs, M 12:20; disc, W or F 12:20-110. One evening movie (7-9 pm, Oct. 2): Susceptible to Kindness, Miss Ever's Boys. The Tuskegee Syphilis Study. One Saturday mandatory farm tour (9 am-1 pm, Sept. 28). D. J. Cherry and A. Van Tienhoven.
Exploration of the place of humans in the biological world, the origin and development of ethics and morality and to what extent human rights should be extended to nonhuman animals. Active participation in discussions, and the performance of a task (selected from four options) will be the basis for the grade earned.

AN SC 415 Poultry Nutrition
A practical consideration of principles of nutrition applied to feeding poultry, including use of linear programming techniques in diet formulation.

AN SC 420 Quantitative Animal Genetics
Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. Offered alternate years. Lecs, T 11:15; sec, R 2-4:25. F. J. Pollak.
A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra program for problem solving.

AN SC 425 Gamete Physiology and Fertilization
Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Not offered fall 1996; next offered fall 1997. Lecs, R 2:30-4:25. J. E. Parks.
Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts, and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and demonstration of selected aspects of gamete physiology and in vitro technologies such as oocyte maturation and fertilization.

AN SC 427 Fundamentals of Endocrinology
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson.
Physiology and regulation of endocrine secretions. Neuroendocrinology, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 455 Dairy Nutrition and Health
Fall. 3 credits. Prerequisite: AN SC 351 and permission of instructor. S-U grades optional. Lecs, T R 11:15; lab, M or T 1:25-4:25, and F (alternative weeks) 1:25-4:25. D. M. Galton, L. E. Chase and T. Batchelder.
Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 456 Dairy Management Fellowship
Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 455, and permission of instructor. Hours to be arranged. D. M. Galton and T. Batchelder.
The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 457 Livestock Fellowship
Spring. 2 credits. Prerequisite: permission of instructor. Not offered spring 1997. S-U grades only. Lec, F 1:00-4:25. A program for students with particular interests in meat animal production, beef cattle, sheep, and swine. Objectives are to gain a more thorough understanding of the production of these species and their integration in various farm management situations. Students will participate in extension education programs and have contact with representative livestock producers as well as the agencies important to livestock production.

AN SC 490 Commercial Meat Processing
Spring. 2 or 3 credits. Prerequisite: AN SC 290 or permission of instructor. Offered alternate years. Not offered spring 1997. Next offered spring 1998. Lecs, T R 9:05; lab, T 1:25-4:25. Lecture only. 2 credits; lecture and lab, 3 credits. Field trip to commercial meat processing plants. D. H. Beermann.
A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat products.
AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: Undergraduate standing. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 496 Animal Sciences Honors Seminar
Fall weeks 1-8. 1 credit. S-U grades only. Students must be accepted into the Animal Sciences Honors Program. Disc, M 2:30-4:00. W. B. Currie. The course is designed to provide information and guidance for students enrolled in the honors program in animal sciences and expecting to complete an honors thesis. The following topics will be presented and discussed: requirements and expectations of the honors program, formulating hypotheses, the scientific method, literature search techniques ethics in science, and scientific communication. Students are required to make verbal presentations.

AN SC 497 Individual Study in Animal Science
Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: Permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2 or 3 credits; limited to two experiences during undergraduate career. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 601 Amino Acids (also NS 601)

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)
Fall. 2 credits. Prerequisites: Biochemistry, physiology, and nutrition. Offered alternate years. Next offered fall 1996. Lec, M W 10:10. X. G. Lei and G. F. Combs Jr. A revised course emphasizing the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression, regulation, and mammal health disorders associated with individual elements. Methodology and facility of mineral research is also discussed.

AN SC 604 Vitamins
Fall. 2 credits. Lec, T R 10:10. G. F. Combs, Jr. The biochemical, physiological, and clinical aspects of the vitamins presented in an interactive discussion-based format.

AN SC 610 Seminar
Fall and spring. 1 credit. S-U grades only.

AN SC 619 Field of Nutrition Seminar
Fall and spring. No credit. No grades given.

AN SC 620 Seminar in Animal Breeding
Fall or spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours to be arranged.

AN SC 621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: Permission of instructor. Registration limited to graduate students. S-U grades only. Lec, W 4:00. W. R. Butler and staff. Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 625 Nutritional Toxicology

AN SC 630 Bioenergetics/Nutritional Physiology
Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 1997, 1999. Lec, M W F 10:10. A. W. Bell and D. E. Baum.

An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

AN SC 640 Individual Study in Animal Science
Fall or spring. 1 or more credits. S-U grades optional. Hours to be arranged. Staff. Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

AN SC 650 Molecular Techniques for Animal Biologists
Spring. 4 credits. Prerequisites: BIOBM 330 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Enrollment limited to 15 students. Lec, T 11:15; labs, T and R 1:25-4:25. Y. Boisclair and S. Quirk. A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on techniques used in conducting research in nutrition and physiology (e.g., subcloning, mutagenesis of DNA, RT-PCR, DNA sequencing and analysis, analysis of gene expression, protein expression). Animal science and mammalian biology provide the context to the experiments. Lectures will introduce laboratory exercises, supplement laboratory topics, and discuss selected readings from the literature. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

AN SC 694 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: Graduate standing; S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 720 Advanced Quantitative Genetics

AN SC 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged, maximum 12 credits. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students admitted specifically to a Master's program.
BIOMETRY AND STATISTICS

Introductory Animal Physiology (BIOAP 311)
Introductory Animal Physiology Laboratory (BIOAP 319)
Milk Quality (FOOD 351)
Agriculture in the Developing Nations (INTAG 602)
Lipids (NS 602)
Basic Immunology, Lectures (BIOBM 305)
Basic Immunology, Laboratory (BIOBM 307)

BTRY 101 Introduction to Biometry I
Fall. 4 credits. S-U grades optional. Prerequisites: A1S 115 or equivalent.
An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

BTRY 102 Introduction to Biometry II
Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 1 or equivalent.
This course is the continuation of Biometry 101 (formerly 102). It provides a more in-depth view of the use of mathematics, computing, probability and statistics in the biological sciences. Topics covered include discrete and continuous models, applications of differential and integral calculus, optimization methods, matrix algebra, and Markov models.

BTRY 200 Statistics and the World We Live In
Spring. 3 credits. Prerequisites: MATH 112, BTRY 408, or equivalent. Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

BTRY 215 Introduction to Statistical Methods
Fall. 3 credits. Prerequisite: BTRY 200 is recommended for students with no prior experience in data collection and interpretation. Statistical methods are developed and used to analyze data arising from the biological sciences. Topics include point and confidence interval estimation, hypothesis testing, t-tests, correlation, simple linear regression, and analysis of variance and multiple regression. Statistical computing is taught and used throughout the course. Emphasis is on proper use of statistical methodology and interpretation of statistical analyses.

BTRY 400 Biometry Seminar
Fall and spring. 1 credit. S-U grades only. Students will attend weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor.

BTRY 408 Theory of Probability
Fall. 4 credits. Prerequisite: MATH 112, 122, or 192, or permission of instructor. An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

BTRY 409 Theory of Statistics
Spring. 4 credits. Prerequisite: BTRY 408 or equivalent. The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider BTRY 601-602 or BTRY 215.

BTRY 417 Matrix Algebra
Fall. 3 credits. Prerequisite: precalculus mathematics and statistics. Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Rank, linear dependence, canonical forms, linear equations, generalized inverses and eigenroots and vectors. Emphasis is on understanding basic ideas and on developing skills for applying matrix algebra.

BTRY 451 Mathematical Modeling of Populations
Fall. 3 credits. S-U grades optional. Prerequisites: MATH 112, BTRY 408, or equivalent. Offered alternate years. Not offered 1992 or 1993. This course will emphasize stochastic and deterministic models relevant to population genetics and population biology. Computer simulations and use of mathematical packages will be an integral part of the course.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495 Statistical Consulting
Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: BTRY 409 and 602 and permission of instructor. Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

BTRY 497 Undergraduate Individual Study in Biometry and Statistics
Fall or spring. 1–3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 498 Undergraduate Supervised Teaching
Fall or spring. 2 credits. S-U grades only. Students must register with an Independent Study form (available in 140 Roberts Hall). Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

BTRY 499 Undergraduate Research
Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

BTRY 600 Statistics and the World We Live In
Fall and spring. 4 credits. Limited to graduate students; others by permission of instructor. Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

BTRY 601 Statistical Methods I
Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor. Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

BTRY 602 Statistical Methods II
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent. A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis,
analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points; goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split-plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

**BTRY 603  Statistical Methods III**
Fall or spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1997-98; offered Spring 1997. Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

**BTRY 604  Statistical Methods IV: Applied Design**
Fall or spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1996-97, next offered fall 1997. Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

**BTRY 606  Sampling Biological Populations**
Fall, 1/3 of the term. 1 credit. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1996-97. Standard methods of sample-survey design and estimation are presented, including stratified random sampling, cluster sampling, double sampling, and variable probability sampling. Special emphasis given to methods of particular utility or specifically designed for biological sampling. Examples are taken from forestry, fisheries, and other biological areas.

**BTRY 607  Nonparametric and Distribution-Free Statistical Methods**
Spring, 1/3 of the term. 1 credit. S-U grades optional. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1996-97. Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented: sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs; comparisons among several means; correlation and regression; goodness-of-fit; and tests based on randomization of the data.

**BTRY 639  Epidemiology Seminar**
Spring. 1 credit, variable. S-U grades only. Permission of instructor.
This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**BTRY 662  Mathematical Ecology**
Fall. 3 credits. S-U grades optional. Prerequisite: a year of calculus and a course in statistics. Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

**BTRY 672  Topics in Environmental Statistics (also OR&IE 672)**
Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.
This course is a group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

**BTRY 682  Statistical Methods for Molecular Biology**
Spring. 2 credits. S-U only. Prerequisite: Permission of instructor.
Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary. The course may be repeated for credit.

**BTRY 694  Graduate Special Topics in Biometry and Statistics**
Fall or spring. 1-3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 697  Individual Graduate Study in Biometry and Statistics**
Fall, spring, or summer. 1-3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

**BTRY 717  Linear Models**
Spring. 3 credits. S-U grades only. Prerequisites: BTRY 409 or equivalent and BTRY 417 and 602. Offered alternate years. Not offered 1996-97. Analysis of variance and estimation procedures for unequal-subclass-numbers data. Cell means models for the 1-way classification, nested classifications, and the 2-way crossed classification, both with and without interactions, introduction to multinormal variables and the distribution of quadratic forms. The general linear model (in matrix and vector form), estimable functions, and testable hypotheses. Overparameterized models, restricted models, multiple factor cases, covariates, computing.

**BTRY 718  Variance Components**
Spring. 3 credits. S-U grades only. Prerequisite: BTRY 717. Offered alternate years. Not offered 1996-97. Several methods of estimating variance components are explained and compared: for balanced data (equal subclass numbers), the analysis of variance method; for unbalanced data (unequal subclass numbers), the three Henderson methods and the methods of maximum likelihood, restricted maximum likelihood, and minimum norm quadratic unbiasedness. Also included: estimation from mixed models, prediction of random variables, the dispersion-mean model, and computer package output for variance component estimation.

**BTRY 795  Statistical Consulting**
Fall and spring. 2 credits. S-U grades only. Limited to graduate students. Participation in the Biometrics Unit consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

**BTRY 800  Master's Level Thesis Research**
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the M.S. level.

**BTRY 900  Graduate Level Dissertation Research**
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned. Research at the Ph.D. level.

**BTRY 901  Doctoral Level Dissertation Research**
Fall or spring. Credit to be arranged. S-U grades only.

**COMMUNICATION**

**COMM 116  Communication in Social Relationships**
Spring or summer. 3 credits. Not open to first-semester freshmen. Spring:lec,s., M W F 1:25-2:15. Staff.
An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in various contexts such as friendship, small groups, organizations, and health care settings.

**COMM 117  Writing About Communication**
Students develop skills in writing in various styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, to analyze information, to integrate ideas about
COMM 120 Contemporary Mass Communication
Fall. Lecs, M W 12:20–1:10; disc, R 10:10–11:00, 11:15–12:05 or 1:25–2:15 or F 10:10–11:00. 4 credits. Prerequisite: jr. or sr. status. The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 121 Investigating Communication
Fall. 3 credits. Students must be enrolled concurrently in COMM 120. Lecs, T R 8:40–9:55, 10:10–11:25, 11:40–12:55 or 1:25–2:40. R. Ostman. An examination of research methods in communication, with particular emphasis on the mass communication process. Exercises in writing, speaking, and working in small groups focus on theories such as gender depictions, violence in the media, and social roles.

COMM 191 Topics In Communication
Summer. 1–3 credits. Hours to be arranged. Staff. Study of topics in communication at lower-division level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

COMM 201 Oral Communication
Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. B. Earle. M. Koročk, T. Russo, R. Thompson, and staff. Through theory and practice students develop self-confidence and presence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate
Fall. 3 credits. T R 10:10–11:25. P. Stepp. The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and what it means to speak in a logical, persuasive manner.

COMM 204 Effective Listening
Fall and spring. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes. Lecs, M 2:55–4:10; sec, M 2:55–4:10; R 1:25–2:40, 2:55–4:10. R. Thompson. Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 220 Visual Communication
Fall. 3 credits. Lecs, T R 9:05–9:55, lab, T 2:30–4:25, W 10:10–12:05, 12:20–2:15 or 2:30–4:25. C. Scherer. An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 222 Art of Publication
Fall and spring. 3 credits. Each lab limited to 24 nonfreshman students. Students missing the first two classes without university excuse are dropped so others may register. Project materials cost $75–$100. Lecs, M W 10:10–11:00 or 11:15–12:05; labs M 2:30–4:25; W 2:30–4:25. M. Too. A basic course designed to explore visual concepts that increase communication effectiveness through the printed word. The importance of selecting and coordinating format, layout, typography, and illustrations is stressed. Lectures, in-class laboratory assignments, and outside projects examine opportunities and problems in publication design and desktop publishing.

COMM 250 Newswriting for Newspapers
Fall, spring, or summer. 3 credits. Limited to 25 students. Prerequisite: Major in communication, or permission of instructor. Keyboarding ability essential. Students missing the first two classes without university excuse are dropped so others may register. Lecs, M W 9:05–9:55; labs, R 2:30–4:25 or F 9:05–11:00. Staff. Writing and analyzing news stories. A study of the elements that make news, news sources, news interviews, news style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

COMM 272 Principles of Public Relations and Advertising
Summer. 3 credits. Not open to freshmen. Staff. Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 273 Communication Institutions
Spring. 3 credits. Letter only. T R 11:40–12:55. J. Shanahan. A survey of the history, organization, and social importance of communication institutions. Institutions to be analyzed include advertising, public relations, newsgathering, and political communication, news/journalism, and new technologies. Cases and examples will be drawn from areas relevant to CALS programs, including environment, agricultural policy and land use. Communication 116 or 120 are suggested but not required.

COMM 280 Thinking and Communication
Spring. 3 credits. Prerequisite: COMM 110 or 120, and at least one writing or oral communication course. Communication majors only. Not open to freshmen. Communication sophomores given priority. Lec 01, T R 11:40–12:55; Lec 02, T R 10:10–11:25; Lec 03, M W 8:40–9:55. R. Ostman and staff. Expanding upon conceptual knowledge gained in introductory communication courses, students will learn critical thinking in the context of communication topics, issues, problems, and questions selected annually by individual instructors. After learning, discussing, and practicing critical thinking, students will have an enhanced ability to create and sustain responsible dialogue, as well as to evaluate implications and applications of thought.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55–4:10. L. Van Buskirk. The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences
Spring. 3 credits. M W 2:55–4:10. B. Lewenstein. Environmental problems...public health issues...scientific research. In each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the World Wide Web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking
Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors and seniors during fall and spring. Lec, M W 11:15–12:05; sec, T 2:30–4:25; W 12:20–2:15, R 10:10–12:05. B. Earle. The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentional skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10–15 Program in Speech and Debate members only; permission of instructor and completion of one-year trial basis. Hours to be arranged. Staff. Students will learn preparation for practice in CEDAS (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided
into four groups according to level of experience; therefore it may be repeated to a maximum of 8 credits.

**COMM 315 Introduction to Health Communication**
Fall. 3 credits. Prerequisite: COMM 116 or COMM 120 or permission of instructor. Juniors and seniors only. T R 1:25–2:40. A Marshall. An overview of health communication, examining topics such as physician-patient relationships, the role of support groups, communication in health care organizations, cultural differences in health beliefs and communication, and public health campaigns. Instruction techniques include class discussion, presentations, and group projects.

**COMM 342 Electronic Media**
Spring or summer. 3 credits. Limited to 21 communication majors. Prerequisite: Junior standing. T. Russo. The process of audio and video message design and production is explored. Emphasis is on development of skills needed for the creation of effective audio/video production. Students complete exercises designed to develop specific competencies and work on productions from conception through completion.

**COMM 348 Video as a Communication Tool**
Fall. 3 credits. Prerequisites: permission of instructor. Prerequisites: COMM 120. Lect. T R 10:10–11:00, lab, R 1:25–4:25, S. White. This course explores video as a non-broadcast communication tool utilizing organizational and theoretical foundations. An overview of video applications, visual thinking, and team building in employing participatory approaches to constructing messages. Covers basics of interactive media and issues of changing communication technologies. Hands-on team project integrates knowledge, theory, and practice. Students have access to camcorders and editing equipment.

**COMM 350 Writing for Magazines**
Fall or spring. 3 credits. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 1:25–2:45, spring: T R 12:20–1:50, W. Ward and staff. A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and the student is expected to rewrite and submit to a magazine.

**COMM 352 Science Writing for the Mass Media**
Fall. 3 credits. Not open to freshmen. Prerequisite: one college-level writing course. Lecs. M W 9:05; lab, W 12:20–2:15, 2:30–4:25. L. Cowdery. How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

**COMM 360 Scientific Writing for Public Information**
Fall and spring. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: any college-level writing course. Fall: Lec. 01, M W F 9:05–9:55; Spring: Lec. 01, M W F 9:05–9:55, Lec. 02, M W F 10:10–11:00. L. Cowdery. An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media, or writing for scientists.

**COMM 363 Organizational Writing**
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lec. 01, M F 11:15–12:15; Sec. M 12:20–2:15; W 10:10–12:05. L. Van Buskirk and staff. Students write as members of different organizations, in the position of supervisor, subordinate, colleague, and representative of business, government, community, and other organizations. Emphasis on adapting tone to the audience and the purpose of the message. Weekly writing assignments include various kinds of internal and external reports, memoranda, proposals, and letters. Assignments based on the Exxon Valdez oil spill and other case studies.

**COMM 368 Editing**
Fall. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: any college-level writing course. Lec. COMM 250, 350, 352, or 360. M W F 12:20–1:10. L. Cowdery. Students will follow the process that takes a manuscript from final draft to publication. Emphasis will be on copy editing, proofreading, fitting copy, working with authors, making editorial decisions, and developing skill in critical reading. Appropriate for any student who expects to work with manuscripts or do editorial work.

**COMM 376 Planning Communication Campaigns**
Spring. 3 credits. Limited to 20 juniors and seniors. Prerequisite: COMM 116 or 120 or permission of instructor. T R 10:10–11:25. M. Shapiro. Overview of theory that guides and influences social change efforts. Research techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

**COMM 380 Independent Honors Research in Social Science**
Fall or spring. 1–6 credits. Limited to undergraduates who have met the requirements for the honors program. B. Lewenstein.

**COMM 382 Methods of Communication Research**

**COMM 405 Community Service Practicum**
Fall and spring. 2 credits. May be repeated for credit. Limited to 10–15 Program in Spanish and Debate members; permission of instructor required. Hours to be arranged. F. Stepp. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

**COMM 410 Organizational Behavior and Communication**
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or COMM 116 or COMM 120 or COMM 120 or permission of instructor. Lee, M W 11:15–12:05, Sec. M 12:20–1:10, W 10:10–12:05. L. Van Buskirk and staff. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks; and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 510; graduate students should enroll in COMM 510.

**COMM 411 Leadership from a Communication Perspective**
Fall. 3 credits. Limited to 30 students. Lect. T R 1:25–2:40. P. Smith. Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

**COMM 418 Communication and Persuasion**
Spring. 3 credits. Prerequisite: COMM 116 and 120 or introductory psychology or social psychology. Lab. M W 2:55–4:10 (one evening mid-semester prelim). M. Shapiro. The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. These theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/ public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

**COMM 420 Public Opinion and Social Processes**
Fall. 3 credits. Lec. T R 10:10–11:25. C. Glynn. The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and
COMM 421 Communication and the Environment
Spring. 3 credits. Limited to 20 junior, senior, or graduate students or permission of the instructor. Lect, T R 2:55–4:10. J. Shanahan.

Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television
Fall. 3 credits. Prerequisites: Introductory psychology and COMM 120. M W F 12:20–1:10 (one evening midterm session in mid-semester). M. M. Shachtman.

A survey of knowledge about the psychological influence of television and other audio-visual communication technologies. Topics may include: the history of concerns about television and who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

COMM 424 Communication in the Developing Nations

The role of communication in development programs, particularly in Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and consumer development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

COMM 426 Impact of Communication Technologies

Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 626; graduate students should enroll in COMM 626.

COMM 428 Communication Law
Spring. 3 credits. Limited to junior, senior, and graduate students; others by permission of the instructor. Lect, M W F 11:15–12:05. D. Grossman.

A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regulation, access, electronic media and other issues of current interest.

COMM 439 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lect, T R 11:15–12:05; lab T 12:20–2:15. G. Gay.

An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.

COMM 440 Social Design of Communications Systems

Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people's perceptions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 460 Video Communication I: Basic Concepts and Theory, Planning, and Participatory Production
Summer only. 2 credits. Fee: $50.00. T R 9:00–4:00. S. White and staff.

The course focuses on understanding video as a tool in development communication. Hands-on instruction covers use of the video portapak and editing systems. Participants produce videotapes emphasizing the power of images, video for individual feedback, group process observation, and process intervention for individual and community development.

COMM 461 Video Communication II: Video for Development/Social Intervention
Summer only. 3 credits. Prerequisites: COMM 460 and/or permission of instructor. M W F 10:10–1:00. S. White and staff.

Explores the use of video in the context of development. Covers advanced visualization concepts and techniques and issues relevant to appropriate application of video technologies. Participants develop and implement proposals for creating a videotape designed to meet specific communication objectives.

COMM 466 Public Communication of Science and Technology
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. M W 2:55–4:10. B. Lewenstein.

Explores the structure, meanings, and implications of "public communication of science and technology" (PCST). Explore the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, and analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 486 Risk Communication
Spring. 3 credits. T R 1:25–2:40. C. Scherer.

An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.

COMM 487 Communication, Mood, and Emotion
Fall. 3 credits. Prerequisites: COMM 382 or equivalent. M W F 1:25–2:15. D. McDonald.

An examination of theory and research on communication and emotion. The course consists of the following seven areas: defining mood and emotion, tactics for investigation, emotion and cognition, mood and emotion as communication effects, communication as consequence, communication and mood management, and enduring issues.

COMM 494 Special Topics in Communication
Fall, spring, or summer. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496 Internship
Fall, spring, summer, and intersession. 1–3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: Limited to communication juniors or seniors. 3.0 average in communication courses and approval of academic advisor. S-U grades only.

Structured, on-the-job learning experience under supervision of communication professionals in a local or distant organization. Maximum of 6 credits total may be earned; no more than 3 per internship but flexibility allows 6 for 1 credit each, 3 for 2 credits each, or 2 for 3 credits each. Internships must be approved in advance by the student's academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1–3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Group or individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.
COMM 498 Communication Teaching Experience
Fall or spring. 1–3 credits. May be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching and skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (Available in 140 Roberts Hall).
Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1–3 credits. May be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (Available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Behavior and Communication
Fall. 3 credits. Not offered 1996-97. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context; case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 610 Seminar in Organizational Communication
Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Lect, M W 11:15-12:05, F 12:20-12:05. A. Schwartz.
Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory psychology or social psychology or introductory research methods course. Lect, M W 2:55-4:10. M. Shapiro.
The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418.

COMM 620 Public Opinion and Social Processes
Fall. 3 credits. T R 10:10–11:25. C. Glynn.
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychology are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 420; graduate students should enroll in COMM 620.

COMM 622 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research methods course. Lect, M W 12:20–1:10. M. Shapiro.
A survey of knowledge about the psychological influences for reaching and other audio-visual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

COMM 624 Communication in the Developing Nations
The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 625 Communication for Social Change
Summer only. 3 credits. T R 9:00–1:00. Staff.
A survey of international communication problems and perspectives on social change, with a special focus on the Third World. Concentration on critical issues of communication policy and planning at local, national, and international levels, and the impact of new communication technologies.

COMM 626 Impact of Communication Technologies
Examine emerging technologies of communication, such as computer based information systems and satellites and their potential for influencing communication processes and social systems. Also, some of the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 426; graduate students enroll in COMM 626.

COMM 639 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lect, T R 11:15–12:05; lab, T 12:20–2:15. G. Goy.
An overview of multimedia technologies (videodisk, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representation, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.

COMM 640 Social Design of Communication Systems
Spring. 3 credits. Prerequisite: permission of instructor. Lect, T R 11:15–12:05; lab, T 12:20–2:15. G. Goy.
Course will focus on the design of interfaces and software from the user's point of view. The goal is to teach user interface designers that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues.

COMM 676 Planning Communication Campaigns
Overview of theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into an integrated communication plan.

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W 9:05–11:00. D. McDonald.
A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Seminar in Psychology of Communication
Spring. 3 credits. Prerequisite: graduate students in communication; others by permission of instructor. Not offered 1996-97. M. Shapiro.
An introduction to theory and research in the mental processes of the communicating individual. Discussions and readings may include how individuals process and remember communication information, how communication information is used in decision processes, how motivation influences processing of mass communication information, and how attitudes form and change.

COMM 682 Methods of Communication Research
An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of statistical software (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lec, M W 10:10-11:00; Lab, T R 1:25-2:40. D. McDonald. Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 684 Qualitative Methods in Communication Research
Spring. 3 credits. T R 10:10-11:25. B. Lewenstein. This course explores the nature of communication research and the place of qualitative methods in that research. Through readings, discussions, and papers, students will examine the various techniques of qualitative research, gaining both an introduction to those methods and an appreciation of when those methods are appropriate for addressing particular issues in communication.

COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)
Spring. 4 credits. S-U grades optional. Charge for materials, $45. F 9:05-12:05; Lab to be arranged. Not offered 1996-97. R. Colle, D. Deshler, and M. Ewert. Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

COMM 686 Risk Communication
Spring. 3 credits. T R 1:25-2:40. C. Scherer. An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 687 Communication, Mood and Emotion
Fall. 3 credits. Prerequisites: COMM 382 or equivalent. Not offered 1996-97. D. McDonald. An examination of theory and research on communication and emotion. The course consists of the following seven areas: defining mood and emotion, tactics for investigation, emotion and cognition, mood and emotion as communication effects, communication as consequence, communication and mood management, and enduring issues. Lectures concurrent with COMM 487; graduate students should enroll in COMM 687.

COMM 688 Participatory Communication for Research and Development
Summer only. 3 credits. Prerequisites: Qualitative Research, 1.25-2.40 or graduate-level communication course and/or permission of instructor. Lecs, T R 1:00-5:00; disc, arranged 2 hours/week. S. White. Conceptual framework and theoretic rationale for utilizing participatory approaches in communication and research for rural development and social action. Case examples and video documentation from India, Africa, Latin America. Focus is on problem-solving approaches in communication and use of video as a communication tool for enhancing people's participation in the development context.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Hours to be arranged. Staff. Some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Staff. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 700 MPS Project Research
Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. Prerequisite: permission of committee chair. Project research for Master of Professional Studies (Communication) students.

COMM 748 Seminar in Communication Issues
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. Small group study of topica issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1-3 credits each semester. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

COMM 799 Graduate Research
Fall, spring, or summer. 1-3 credits. Prerequisite: appropriate communication graduate course work or permission of instructor. Small-group or individual research based on original, empirical, data-based designs regarding topical issues in communication not otherwise examined in a graduate field course.

COMM 800 Master's-Level Thesis Research
Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. Prerequisite: permission of committee chair. Thesis research for Master of Science (Communication) students.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1-9 credits. May be repeated for a maximum of 9 credits. Prerequisites: completion of "A" exam; permission of committee chair. Dissertation research for doctoral candidates.

EDUCATION

EDUC 005 Basic Review Mathematics
Fall or spring. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lecs, M W F 8:00 or 9:05. S. C. Piliero. Review of concepts necessary for success in EDUC 115 and basic statistics courses. Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and right-triangle trigonometry. Considerable emphasis is placed on learning mathematics for understanding and on solving word problems.

EDUC 101 Introduction to Education
Fall. 3 credits. T R 11:40-12:55. G. J. Posner and staff. Education 101 explores three current issues in education in depth in order to introduce students to the field of education. The social-historical, psychological, and pedagogical foundations, and current proposals addressing each issue are considered.

EDUC 115 Introductory College Mathematics
Fall or spring. 4 credits. S. C. Piliero. Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. This course offers a nontraditional approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical and symbolic
EDUC 120 Education for Empowerment  
Spring. 1-3 credits. T R 2:30-4:00. Staff.  
A modular course, with each module spanning 5 credits. Common topics running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 210 Psychology of Learning and Memory  
Fall. 3 credits. Prerequisite: introductory psychology. Not offered fall 1997.  
J. A. Dunn.  
This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.

EDUC 212 Psychological Foundations of Education  
Spring. 2-3 credits. S-U option available.  
Prerequisite: introductory psychology. W 2-4:25 plus times to be arranged.  
J. A. Dunn.  
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 240 The Art of Teaching  
Fall and spring. 3 credits. Fall: M 8-9:55 or T 10:10-12:05 or 2:30-4:25.  
G. J. Posner and staff.  
The course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from group to group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 247 Instructional/Informational Application of Microcomputers and Related Technologies  
Fall and spring. 2-3 credits. Not available to students who have completed ABEN 102 or NR 107. Lec, R 2:30-3:20, lab to be arranged. D. D. Peasley.  
The primary goal of the course is to develop conceptual understandings of instructional/informational applications of microcomputers and teach introductory to intermediate-level skills. Class instruction will relate to microcomputer and networked applications in both formal and informal educational/training settings. Independent study project required for third credit.

EDUC 271 Sociology of Education  
An introduction to the sociological study of schooling and education. Topics include the effects of cultural, social, economic, and political factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

EDUC 311 Educational Psychology  
Fall. 3 credits. Prerequisite: introductory psychology. M W F 11:15-12:05. D. E. Schrader.  
This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, content and context in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. The course is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.

[EDUC 312 Learning to Learn  
Spring. 3 credits. Prerequisite: one or more courses in psychology or educational psychology. T R 9:05. Not offered 1996-97. Staff.  
This course is intended for persons interested in the improvement of their learning strategies and the application of new ideas and methods to improve educational programs. Lectures and discussions are based on assigned readings and the contributions of class members. The major focus of the course is how and why concepts play a central role in human learning. Concept mapping and other strategies for educating will be used. Students will apply principles and methodologies in a project related to their interest.]  

EDUC 317 Psychology of Adolescence  
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05; Friday section to be arranged. D. E. Schrader.  
This course comprises a study of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education  
Fall. 1-3 credits. Letter grade only. M 2:00-4:25. J. D. Deshler and D. E. Foster.  
This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in Formal and Non-formal Education  
Spring. 3 credits. W F 3:35-5:15. Staff. Selection, practice, and evaluation of methods in formal and non-formal education will be stressed. The course will focus on both general teaching strategies and methodology unique to teaching in schools and non-formal settings. Course activities include micro-teaching and field experience during arranged times.

EDUC 335 Youth Organizations  
Spring. 3 credits. T R 10:10-11:00; lab to be arranged.  
The role of selected youth organizations in providing educational experiences for youth. Factors affecting membership, purposes, design, operation, and administration are surveyed, emphasizing the roles an adult volunteer leader may play. The course is designed to give students an in-depth, learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

EDUC 352 Reading Statistics  
Fall. 1 credit. T 12:20-1:10. J. Millman.  
An introduction to a statistical vocabulary and symbolism frequently used in reporting empirical research in education and other social sciences. Students are taught how to comprehend statistical terminology and results.

EDUC 370 Issues in Educational Policy  
An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity, student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

EDUC 378 Political Economy of Education  
A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of educational settings will be examined including higher education and non-formal education.

EDUC 380 Independent Honors Research in Social Science  
Fall or spring. 1-6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

EDUC 401 Our Physical Environment  
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 12:25-4:25. V. N. Rockcastle.  
A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding
and techniques for teaching. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

EDUC 402 Knowing and Learning in Science and Mathematics
Fall. A critical- examination in science and math certification program or permission of instructor. M W 2:30-4:00. D. J. Trumbull.
Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours a week in an appropriate educational setting.

EDUC 403 Observing and Teaching Science and Math
Spring. Prerequisites: Enrollment in a Cornell teacher education program or permission of the instructor. W 3:35-5:15. W. S. Carlsen.
Designed for prospective secondary teachers, this course provides a multi-perspective orientation to the culture of schools and the work of teaching science and mathematics. Students spend 6-8 hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions concern models of instruction, teacher knowledge, educational equity and tracking, and classroom language.

EDUC 411 Introduction to Educational Measurement
Fall. 3 credits. Not offered 1996-97. J. Millman.
 Presents practices and theories of the measurement of human knowledge and performance. Students will be expected to acquire the practical skills of planning and constructing tests for a variety of purposes, interpreting and using test results, evaluating commercially available instruments, and the like. Students will also be expected to discuss intelligently a myriad of social, ethical, legal, and technical issues associated with educational testing. One course in statistics or concurrent registration in Education 352 is recommended but is not required.

EDUC 413 Psychology of Human Interaction
Fall. 3 credits. Enrollment limited. Prerequisites: permission of instructor. M T W Th 10-12:05. D. E. Hedlund.
 Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

EDUC 414 Counseling Psychology
Spring. 4 credits. Limited to 30 students.
The processes of counseling are examined from various theoretical perspectives. Typical adult counseling issues are examined, and implications are drawn for counseling strategies with an adult population, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

EDUC 420 Field Experience
Fall or spring. 1-3 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.
Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate the field experience.

EDUC 430 Special Problems in Agricultural Education
Fall, spring, or summer. 1-3 credits. S-U grades optional. W 12:20-1:10. R. E. Steele.
An opportunity to study individually selected problems in agricultural education.

EDUC 432 Teaching Agriculture: Methods, Materials, Practice
Fall. 9 credits. Prerequisites: EDUC 332 and concurrent registration in EDUC 430 and 497. M T W R F 8:00-3:00. R. E. Steele.
Directed participation in teaching agriculture at the secondary school level. Program includes a five-day intensive on-campus period and periodic seminars addressing selected methods and materials in teaching agriculture, combined with a 14-week period in an off-campus student teaching center. Includes evaluation of area resources, instructional materials and facilities, planning and executing instruction, directing work experience, and advising youth organizations.

EDUC 445 Curriculum Design Workshop
A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centered on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

EDUC 472 Philosophy of Education
Fall. 3 credits. T 2:30-4:25. K. A. Strike.
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

EDUC 475 Epistemology and Teaching
Spring. 3 credits.

EDUC 478 Law and Educational Policy
Fall. 3 credits. M 2:30-4:25. K. A. Strike.
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

EDUC 481 Educating for Community Action
The design and execution of educational aspects of community-action and nonformal education programs. Deals with the identification and statement of educational goals, selection of teaching strategies, and evaluation of outcomes.

EDUC 483 Comparative Studies in Adult Education
Spring. 3 credits. S-U grades optional. T R 3:35-5:00. J. D. Deshler.
Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

EDUC 494 Special Topics in Education
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged.
Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

EDUC 497 Individual Study in Education
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged.
Staff.
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged.
Staff.
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion leader, section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.
**EDUC 499 Undergraduate Research**
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff. Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

**EDUC 501 Communication Workshop**
Summer and intersession. 2-3 credits. S-U grades optional. M. D. Glock. The course focuses on skills enabling individuals to cope with such concerns as managing personal or difficult persons, criticizing productively, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings. The course necessitates intensive participation over a period of time, not provided by regularly scheduled fifty-minute class periods. Additional autotutorial lab time is scheduled. Appropriate for anyone who works with people.

**EDUC 507 Science and Environment for Teachers**
Summer. 3 credits. S-U option. Prerequisite: contact instructor for details. W. S. Carlsten. This three-week interservice program for secondary and middle school science teachers focuses on biological, chemical, and hydrological methods of water monitoring and watershed dynamics. Participants also use remote sensing; work with computers; investigate topics in science, technology and society; learn pedagogical techniques that are consistent with science reform initiatives; and discuss and develop new types of assessment.

**EDUC 513 Interpersonal Interaction**
Summer. 1–2 credits. D. E. Hedlund. Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources. A workshop design is required for the second credit. Participants must bring a tape recorder to class.

**EDUC 547 Improvement of College Teaching**
Summer. 2 credits. Staff. Concepts of teaching, learning, curriculum, and governance are used to guide practical activities that enhance faculty competence. Recent studies of concept mapping and learning, structure of knowledge, science teaching, adult learning, and evaluation provide a conceptual basis for improving teaching.

**EDUC 548 Effective College Teaching**
Spring. 1–3 credits. S-U grade option. Hours to be arranged. H. D. Sutphin, D. M. Ewert, and D. J. Trumbull. This course is designed to help participants become more effective college teachers. It will examine the basic principle of learning, identify different learning styles, and explore a variety of teaching techniques, methods, and technologies. Participants will also learn how to design a course and improve their effectiveness as teachers.

**EDUC 601 Secondary Science and Mathematics Teaching Practicum**
Fall or spring. 6 credits. Undergraduate permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics program. M T W R F 8:00–12:00. W. S. Carlsten, G. J. Posner, A. Solomon, M. S. Slack, and D. J. Trumbull. Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

**EDUC 602 Teaching Science/Mathematics: Methods, Materials, Practice**
Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R F 9:00–12:00. W. S. Carlsten and staff. The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the term require students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

**EDUC 603 Teaching Mathematics**
Fall. 3 credits. Offered alternate years. Not offered 1996–97. T R 10:10–11:25. J. Confrey. Current research in mathematics education will be examined in order to develop a picture of the mathematics classroom that integrates subject matter, student conceptions, affective variables, and issues in the social context of learning mathematics. Special topics will include research on problem solving, women and mathematics, misconception, and research on teaching.

**EDUC 604 Seminar in Science and Mathematics Education**
Fall. 1 credit. S-U grades only. T 4:30–5:30. J. Confrey. Explores topics in science and mathematics education. The focus of the seminar changes each year.

**EDUC 605 Educational Ethnography**
Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. M W 2:30–4:00. Not offered spring 1997, next offered spring 1998. D. J. Trumbull. The course will study educational ethnography as a form of interpretive research, a perspective that attends to the complex interactions between researcher, researched, and context and accepts the centrality of meaning-making in the conduct of human affairs. Students will examine some of the philosophical debates about research approaches and will discuss research methods as they relate to the aims and assumptions of interpretive research. Students will conduct a joint research project during the course of the semester.

**EDUC 611 Educational Psychology**
Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15–12:05. R. E. Ripple. A basic survey course for graduate students. Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any developmental setting for learning. A lifespan developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

**EDUC 614 Epistemological Development and Reflective Thought**
Fall. 3 credits. S-U grades optional. M 12:30–1:15. D. E. Schrader. Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

**EDUC 615 Self and Interpersonal Development and Education**

**EDUC 620 Internship in Education**
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff. An opportunity for practical experience in educational professions development.

**EDUC 621 Work-Experience Coordinator Certification Course I**
Summer. 3 credits. S-U grades optional. Staff. The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation with JTPA and YESID. Field interviews are required. A prerequisite for Course II, EDUC 622.

**EDUC 622 Work-Experience Coordinator Certification Course II**
Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Coordinator Certification Course I. Staff. The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.
EDUC 630 Special Problems in Agricultural Education
Fall or spring; may also be offered in summer. 1-3 credits. S-U grades optional. Hours to be announced. Staff.
The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural and occupational education. Designed for experienced teachers.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Spring. Prerequisite: an introductory course in teaching methods or permission of instructor. M 8:00-10:00.
Staff.
The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education
Fall. 3 credits. Field trip. Lec: T 2:00-4:30; lab, to be announced. B. E. Steele.
Current social and economic conditions affecting agricultural extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.

EDUC 644 Curriculum Theory and Analysis
Spring. 3 credits. M 2:30-5:00.
G. J. Posner and W. S. Carlsen.
An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 647 Instructional Technologies: Analysis and Practices
Fall. 2-4 credits. Prerequisite: skills in statistics and research design. Letter grade only. Lec: R 2:30-3:20; lab and seminar to be announced. D. D. Peasley.
Current research and literature on instructional computing and related technologies in the public and private sectors will be examined. Students complete a group research project on educational technologies and meet for five seminar sessions to earn 2 credits. The research experience includes design, data collection, input, analysis, and synthesis. Concurrent attendance in ED 247 Modules A and B is required (2 credits); or the modules may be taken as a prerequisite.

EDUC 650 Methods of Educational Inquiry
Fall. 1 credit. J. Milliman.
A survey of approaches to inquiry in the social sciences, including experimental and comparative designs, survey research, case study, philosophical and historical inquiry, content analysis, and secondary data analysis. The course is intended to broaden the student's views of appropriate methods of disciplined inquiry.

EDUC 651 Writing a Thesis Proposal
Fall. 1 credit. S-U grades only. T 3:35-4:25. J. Milliman.
Procedures for developing and writing a master's or doctoral thesis proposal. Emphasis will be given to identifying a significant topic, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided ample assistance in constructing a brief thesis proposal of their own.

EDUC 659 Special Topics in Research Methods
Spring. 2-3 credits. Prerequisite: permission of instructor. S-U grades only. Hours to be arranged. J. Milliman.
Consideration of new techniques and current topics in educational research design, measurement, or evaluation of programs, products, and personnel.

EDUC 661 Administration of Educational Organizations
Fall. 3 credits. W 3:35-6:00. E. J. Haller.
Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their applicability to public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of schools as organizations.

EDUC 664 Educational Finance
An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

EDUC 665 Administrative Decision Making
An introduction to decision making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and non-formal education.

EDUC 680 Foundations of Extension Adult Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. F 9:05-12:05. J. D. Deshler.
An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

EDUC 682 Community Education and Development
An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685)
Spring. 4 credits. S-U grades optional. Charge for materials $45. F 9:05-12:05; lab to be arranged. R. D. Colle and J. D. Deshler.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

EDUC 690 Research Seminar
Fall and/or spring. No credit. G. J. Posner and staff.
Presentation of current research in the field of education by graduate students and staff. Opportunities to discuss methodology, findings, and other aspects of research.

EDUC 694 Special Topics in Education
Fall. spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. Staff.
Topics to be announced.

[EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. 2-3 credits. Fall: M 11:15. J. Dunn. Spring: hours to be arranged. R. E. Ripple.
This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.]

EDUC 714 Moral Development and Education
This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-spans perspective; however, special emphasis will be placed on development from adolescence through adulthood.
EDUC 715 Seminar in Psychology and Education
Fall. Variable credit. Prerequisite: permission of instructor. W 1:25-3:25. E. J. Haller.
Selected topics focusing on the interaction of theoretical and research developments in psychology and education.

EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:30-5:00. E. R. Ripple and J. D. Deslattes.
Deals with adult development and learning behavior from points of view of educational psychology, and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education
Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 739 Evaluating Programs in Agricultural, Extension, and Adult Education
Spring. 3 credits. Field trip. Staff.
This course examines objectives, criteria, and strategies for evaluating programs of agricultural, extension, and adult education. Evaluation models, case studies, and evaluation as a function of program planning are considered. Participants examine the roles of supervision in evaluation and have an opportunity to develop and apply evaluation instruments. Field trips and resource persons provide opportunities to observe actual evaluation problems and procedures.

EDUC 745 Seminar in Curriculum Theory and Research
Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. T 2:30-5:00. Not offered 1996-97. G. J. Posner.
Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.

EDUC 762 Research in Educational Administration
Spring. 3 credits. Prerequisite: one course in elementary statistics or permission of instructor. S-U grades only. E. E. Haller.
For students interested in learning about the process of formulating and carrying out a piece of empirical research. Studies will focus on policy and administrative issues concerning public education. Seminar participants will have access to large, nationally representative data sets that will permit them to conduct high-quality, publishable studies of U.S. schools, students, teachers, and parents. In the process they will learn some of the costs and benefits of secondary data analysis and gain some familiarity with statistical analyses on a Cornell mainframe computer.

EDUC 772 Seminar in Philosophy of Education
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 9:00-10:15. D. M. Ewert.
Topics to be announced.

EDUC 783 Comparative Extension Education Systems
Summer. 3 credits. S-U option. D. M. Ewert.
Extension education in the developing nations is studied using, as an analytical frame of reference, a historical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, training and research-extension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

EDUC 784 Educational Technology-Transfer and Decision Making
Fall. 3 credits. Offered odd years only. Not offered 1996-97. H. D. Sutphin and J. J. McGonigal.
The educational and program management decisions involved in the adoption of educational technology in extension, rural development, and nonformal education programs are reviewed, and a variety of decision-making education. Seminar participants will explore the overall problem-solving method with case study illustrations used. Consideration is given to structure and operating style of the educational organization, as well as to the characteristics of the technology under consideration. The course makes use of recent literature and continuously updated files on current developments in technology applications.

EDUC 800 Master’s-Level Thesis Research
Fall or spring. Credit to be arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

EDUC 900 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

ENTOMOLOGY

Courses by Subject
Agiculture: 260, 264
Behavior: 215, 471, 662
Ecology: 452, 455, 456, 470, 471, 672
Introductory courses: 201, 212, 215

Medical entomology and veterinary entomology: 352
Morphology: 322
Pathology: 465
Pest management: 241, 441, 444, 477, 640
Physiology and toxicology: 370, 483, 490, 685
Systematics: 351, 453, 631, 632, 634

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ENTOM 201 Six-legged Science
Fascinating, frightening, innocuous, injurious, dainty and ethereal, abundant and essential. Visit the amazing world of the insects. Lectures will explore aspects of the wonders of the insects, and their interactions with humans. We will offer opportunities to investigate insects in the field and laboratory.

ENTOM 212 Insect Biology
Fall. 4 credits. Prerequisite: BIO G 101-102 (may be taken concurrently) or equivalent. Lecs, W F 10:10-11:00; labs, T, W or R 1:25-4:25. J. K. Liebhart.
Introduces the science of entomology by focusing on basic principles of systematic, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral and taxonomic categories is required.

ENTOM 215 Spider Biology: Life on a Silken Thread
Fall. 2 credits. Prerequisite: Introductory biology or permission of instructor. S-U grades optional. Lecs, M W 1:25-2:15. L. S. Rayor.
An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin from a modern perspective. Topics include identification of major spider families, spiders’ unique use of silk, risky courtship, predatory behavior, diverse styles of sensory physiology, and potential use in IPM.

ENTOM 241 Applied Entomology
Spring. 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, T R 9:05; labs, M W 12:20-3:15. W. M. Tingey.
Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

ENTOM 260 Introductory Beekeeping
Fall. 2 credits. Lecs, T R 11:15. T. A. Morse.
Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

[ENTOM 477 Biological Control]  
Approach and procedures in biological control of arthropod pests and weeds. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.  

[ENTOM 495 Insect Physiology]  
Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Offered alternate years. Not offered fall 1997; next offered fall 1996 and 1998. Lecs, M W F 11:15; lab W 1:25—4:25. C. Gilbert.  
An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.  

[ENTOM 490 Toxicology of Insecticides (Also Systematic Toxicology 490)]  
The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insect control with biotechnology will be discussed.  

[ENTOM 494 Special Topics in Entomology]  
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.  

[ENTOM 497 Individual Study in Entomology]  
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.  

[ENTOM 498 Undergraduate Teaching]  
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.  
Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and to regularly discuss teaching objectives, techniques, and subject matter with the professor in charge.  

[ENTOM 631 Systematics of the Coleoptera]  
Summer. 3 credits. Max enrollment 18 students. 3 week summer session.  
Prerequisites: an introductory course in insect taxonomy and permission of instructor. Offered alternate years. Not offered summer 1998; next offered summer 1997 and 1999. Lab, M T W R F 9–4; Saturday field trips. Q. D. Wheeler.  
A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.  

[ENTOM 632 Advanced Coleopterology]  
An advanced course on the phylogeny and classification of selected subclades of Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.  

[ENTOM 634 Special Topics in Systematic Entomology]  
Fall or spring; taught on demand. 2–4 credits. Prerequisite: permission of instructor. Staff.  
Lectures on the classification, evolution, and bionomics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.  

[ENTOM 640 Applied Ecology and Pest Management]  
Theory and quantitative methods for characterizing arthropod population dynamics for research and pest management purposes. Course evaluates biological and climatic factors influencing population numbers, development, dispersal, and plant response to arthropod pests. Special topics include development of sampling methodology and simulation modeling.  

[ENTOM 662 Insect Behavior Seminar]  
Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Not offered spring 1998; next offered spring 1997 and 1999. Hours to be arranged. M. J. Tauber.  

[ENTOM 672 Seminar in Aquatic Ecology]  
Spring. 1 credit. Prerequisites: permission of instructor and either ENTOM 456, 471 or BIOES 261, 462. S-U grades optional. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Hours to be arranged. B. L. Peckarsky.  
Discussion and analysis of current topics in the ecology of streams, lakes and marine ecosystems, including student-generated synthesis of key papers in the literature.  

[ENTOM 685 Seminar in Insect Physiology]  
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. Hours to be arranged. C. Gilbert.  

[ENTOM 694 Special Topics in Entomology]  
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.  
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.  

[ENTOM 707 Individual Study for Graduate Students]  
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research. Staff.  

[ENTOM 708 Teaching Entomology]  
Credit to be arranged. Staff. Teaching entomology or for extension training.  

[ENTOM 800 Master's-Level Thesis Research]  
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.  

[ENTOM 900 Doctoral-Level Thesis Research]  
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.  

Jugate Seminar  
Fall and spring. A seminar conducted by Jugate, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.  

FLORICULTURE AND ORNAMENTAL HORTICULTURE  
Floriculture and Ornamental Horticulture courses are listed under Horticultural Sciences.  

Freehand Drawing and Scientific Illustration  
Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture. Courses are described in the section "Freehand Drawing and Scientific Illustration."  

Landscape Architecture  
The Landscape Architecture Program at Cornell is sponsored by the College of Agriculture and Life Sciences through the Department of Floriculture and Ornamental Horticulture, and the College of Architecture, Art, and Planning. For course descriptions, see Landscape Architecture.
FOOD SCIENCE

Note: class meeting times are accurate at the time of publication. Changes are necessary, the department will provide new information as soon as possible.

FOOD 101 Science and Technology of Foods
Fall. 1 credit. S/U grades only. M 1:25–2:15. J. H. Hotchkiss and staff.
This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice will be given.

FOOD 102 Contemporary Perspectives in Food Science
Spring. 1 credit. S/U grades only. S 12:20. Three field trips, 2 on F 1:25–5:00 and one on F 7:30 a.m.–5:30.
A series of seminars dealing with current technological, regulatory, and international developments in food science. Field trips to four or five commercial food plants will be used to illustrate the application of current technologies.

FOOD 150 Food Choices and Issues
This course provides Cornell students with the knowledge needed to make healthy food choices. A systematic or holistic approach to food production, processing, distribution, and consumption will be presented. Topics include relationships between food, diet and health, food processing; food safety; and discussions of contemporary issues relating to food quality, safety, and nutritional value.

FOOD 200 Introductory Food Science
Fall. 3 credits. Prerequisite: one course each in chemistry and biology. M W F 11:15–12:05. J. H. Hotchkiss.
A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods; nutritional significance; food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and nutritional needs. Interrelationships between the chemical, physical, nutritional and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis
Introduces tests used by food analysts for fats, proteins, carbohydrates, and selected minor nutrients. Emphasis is on understanding and use of good analytical techniques, including gravimetric, chromatographic, and spectrophotometric methods. A special project for the total analysis of a complex food provides experience in technique selection, work scheduling, and arithmetic.

FOOD 250 Kosher and Halal Food Regulations
Spring. 2 credits. Sophomore standing and above. M 7:30–9:35 p.m. J. M. Regenstein.
A comprehensive introduction to the application of the kosher and halal food laws in the American food industry. The kosher food laws, their origin, and their application in modern food processing will be examined. The nature of the kosher and halal supervision industries in American will be described. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions striking down laws in the state of New York and the City of Baltimore. Some aspects of ethnic foods will also be considered.

FOOD 290 Meat Science (also Animal Science 290)
Fall. 2 or 3 credits. Lecs, T R 11:15–12:05 p.m.; lab, M or R 12:20–3:20. D. H. Beermann.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

FOOD 311 Milk and Frozen Desserts
Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting it.

FOOD 321 Food Engineering Principles
Fall. 3 credits. Prerequisites: FOOD 200 and Introductory Physics. M W F 9:05–9:55. S. S. H. Rizvi.
Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, and heat and mass transport.

FOOD 322 Food Engineering Laboratory
Spring. 2 credits. Prerequisite: FOOD 321. Lab, T or W 1:25–4:00; lec, T 12:20. S. S. H. Rizvi.
Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration and psychrometry.

FOOD 351 Milk Quality
Fall. 1 credit. Prerequisite: AN SCI 350 or equivalent or permission of instructor. F 12:20. D. K. Bandler.
Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storlable dairy products.

FOOD 394 Food Microbiology Lectures
Fall. 2 credits. Prerequisites: BIOMI 290 and 291. M W 12:20–1:10. R. A. Ledford.
The major families of microorganisms of importance in foods are studied, with emphasis on the roles of those organisms in food preservation, food fermentations, and public health.

FOOD 395 Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 291. Graduate students must have permission of the instructor. M W 2:00–4:25. J. M. Brown.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods.

FOOD 396 Food Safety Assurance
This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on Hazard Analysis Critical Control Point (HACCP) programs, total quality management, and the application of current technologies in reducing the incidence of foodborne illness. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

FOOD 400 Senior Seminar in Food Science and Technology
Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 401 Concepts of Product Development
A discussion of the sequence of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Food Waste Management
Introduction to the principles and practices related to managing wastes from food plants through reduction, reuse, recycling, and composting. Some broader areas of waste management impacting the food industry will also be discussed. Includes field trips which may take all afternoon.
[FOOD 406] Cheese and Other Fermented Foods

[FOOD 409] Food Chemistry
Spring. 3 credits. Prerequisite: BIOBM 330 or 351 and 55 or 55N, or consent of instructor. Staff. The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

[FOOD 410] Sensory Evaluations of Foods
Fall. 3 credits. Prerequisite: statistics. M W F 10:10-11:00. H. T. Lawless. Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, statistical methods for analyzing results, and establishing a full-service sensory evaluation program.

[FOOD 415] Principles of Food Packaging
Spring. 3 credits. Offered alternate years. Not offered 1996-97; next offered spring 1998 and 2000. M W F 9:05-9:55. J. H. Hotchkiss. The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

[FOOD 417] Sensory Analysis of Dairy Products
Spring. 1 credit. S-U grades optional. Offered alternate years. Not offered 1996-97; next offered spring 1998 and 2000. H. T. Lawless. A survey of the traditional quality grading techniques used for sensory evaluation of dairy products, and a comparison of those techniques to alternative sensory evaluation procedures. Students will prepare samples for one or two demonstrations of classical dairy defects such as lipid oxidation or hydrolytic rancidity. Tasting and practice in identifying defects will be given in class. Primary attention will be given to sensory quality factors in fluid milk, cheddar cheese, cottage cheese, and ice cream.

[FOOD 419] Food Chemistry Laboratory
Spring. 2 credits. Prerequisites: BIOBM 330 or 351 and concurrent registration in FOOD 409. W 12:20-4:30. D. D. Miller and J. M. Brown. A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

[FOOD 423] Unit Operations in Food Manufacturing
Fall. 4 credits. Intended for seniors and food science majors. Lab, T R 11:15-12:05, lab, T 12:20-4:25. S. J. Mivane and S. S. H. Rizvi. An integrated approach to understanding food manufacturing components. Topics include major unit operations used for thermalization, freezing and dehydration of foods. Emphasis is placed on the interplay between engineering design of processes and the physical and chemical transformations that occur as food is produced from various commodities. The impact of process conditions on product safety, overall quality, and storage stability are also considered.

[FOOD 430] Understanding Wine
Spring. 3 credits. Prerequisites: Introductory biology and chemistry or permission of instructor. T R 2:30-4:25. T. Henick-Kling, T. E. Acree, and H. T. Lawless. An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical characteristics that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that produced them. Topics will include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; and the sensory properties of wines from different grape varieties, viticultural practices, and wine making techniques.

[FOOD 447] International Postharvest Science
Fall or spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

[FOOD 450] Fundamentals of Food Law
Spring. 2 credits. Offered alternate years. Not offered 1997-98; next offered spring 1997 and 1999. J. M. Regenstein. An introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also will refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system.

[FOOD 490] Commercial Meat Processing
(also Animal Science 490)
Spring. 2 or 3 credits. Lect. T R 9:05; lab 1:25-4:25. Field trip to commercial meat processing plants. D. H. Beermann. A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meats and nonmeat ingredients; functional properties; various processing methodologies; microbiology; packaging, handling, and storage, and quality assurance are discussed.

[FOOD 494] Special Topics in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[FOOD 497] Individual Study in Food Science
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

[FOOD 498] Undergraduate Teaching Experience
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only. Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor.

[FOOD 499] Undergraduate Research in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Students conduct original research directed by a food science faculty member.
of analysis, uses and interactions in food
perspectives of chemical structures, methods
volatile flavors, and trigeminal stimuli from the
with human food perception and consump-
tion.

FOOD 600 Seminar
Fall or spring. 1 credit. Required of all food
science graduate students. S-U grades only. T 4:30-5:20.

FOOD 604 Chemistry of Dairy Products
Fall. 2 credits. Limited to 16 students.
Prerequisites: organic chemistry, biochem-
istry, knowledge of dairy-product manufacturing
procedures, and permission of instructor. Offered alternate years.
A detailed study of milk constituents and their
properties. Properties of various milk
constituents are related to observed physical and
chemical changes that occur in dairy products during and after processing.
This course will emphasize current research in
dairy chemistry.

FOOD 605 Physical Chemistry of Food Components
Fall. 3 credits. Prerequisite: an under-
graduate course in physical chemistry.
Offered alternate years. Not offered 1997-
This course will cover the physical properties of food molecules and their
behavior on the molecular basis of structural characteristics;
colloidal properties; molecular interactions; foams, gels; and water binding of
foods.

[FOOD 607 Advanced Food Microbiology]
Spring. 2 credits. Prerequisites: food microbiology, genetics (preferred).
Offered alternate years. Not offered 1996-
There have been great advances in applying
the modern tools of molecular biology to the
detection of microorganisms and their
metabolites. The primary emphasis of this
course will be to review the recent develop-
ments in the theory and application of nucleic
acid and antibody-based detection systems,
especially as they relate to food safety.
In addition, other approaches, including
measurement of impendence, ATP, and
endotoxins, will be discussed.

FOOD 610 Electroanalytical Chemistry
A descriptive, largely non-mathematical
course, focusing on electrochemical principles and
methods, will provide a basic survey of the
instrumentation, applications, advantages and
limitations of the diverse arsenal of
potentiometric and amperometric methods of
analysis. Applications to analytical problems in
environmental and food science will be
emphasized.

FOOD 616 Flavor—Analysis and Applications
Spring. 2 credits. S-U grades optional.
Offered alternate years. Not offered 1997-
98; next offered spring 1997 and 1999.
An advanced course in sensory and instru-
tional analysis of flavors, flavor chemistry,
and flavor applications in foods for food
scientists and those in related fields concerned with
human food perception and consump-
tion. The course will survey taste, aroma and
volatile flavors, and trigeminal stimuli from the
perspectives of chemical structures, methods
of analysis, uses and interactions in food
systems, and consumer acceptance.

[FOOD 620 Food Carbohydrates (also Nutritional Science 620)]
Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequi-
A consideration of the chemistry of carbohydrates,
including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food
processing and storage.

FOOD 665 Engineering Properties of Foods
Spring. 2 credits. Prerequisite: course in transport processes or unit operations as
Theories and methods of measurement and prediction of rheological, thermal, and mass
transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical
basis of measurement as well as the
prediction processes. Examples of appropri-
ate use of these properties in engineering
design and analysis of food processes will also
be provided.

FOOD 694 Special Topics in Food Science
Fall or spring. 4 credits maximum. S-U
grades optional. Staff.
The department teaches "trial" courses under this
number. Offerings vary by semester, and
will be advertised by the department. Courses
offered under the number will be approved by
the department curriculum committee, and
the same course will not be offered more than
twice under this number.

FOOD 698 Graduate Teaching Experience
Fall or spring. 1 to 3 credits. S-U grades only. Staff.
Designed to give graduate students teaching experience through involvement in planning and
teaching courses under the supervision of
field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laborato-
 ries; and tutoring. There will be assigned
readings and discussion sessions on educa-
tional theory and practice throughout the
term.

FOOD 800 Masters-Level Thesis
Research
Fall or spring. Credit to be arranged.
Maximum credit, 12. Prerequisite: limited to master's candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 900 Graduate-Level Thesis
Research
Fall or spring. Credit to be arranged.
Maximum credit, 12. Prerequisite: limited
to doctoral students who have not passed the "A" exam; permission of Special Commit-
tee Chair. S-U grades only. Graduate faculty.

FOOD 901 Doctoral-Level Thesis
Research
Fall or spring. Credit to be arranged.
Maximum credit, 12. Prerequisite: limited
to doctoral students who have passed the "A" exam; permission of Special Commit-
tee Chair. S-U grades only. Graduate faculty.

Related Courses in Other Departments

FREEHAND DRAWING AND
SCIENTIFIC ILLUSTRATION

Freehand Drawing is a program within the
Department of Horticulture and Ornamental
Horticulture. Other courses offered by the
department are listed under Horticultural
Sciences and Landscape Architecture.

FR DR 109 Nature Drawing
Fall. 3 credits. Limited to 25 students.
S-U grades optional. Permission of instructor required. M W F 10:10-12:05.
R. J. Lambert.
A beginning course with emphasis on the
drawing of natural forms: plants, animals, and
landscapes. Of particular interest to students
in floriculture and ornamental horticulture,
landscape architecture, biological sciences,
nature education, or similar fields. Outside
field notebook assignments.

FR DR 210 Sketching in Watercolor
Summer. 3 credits. S-U grades optional.
M T W R F 11:30-12:45. R. J. Lambert.
Practice in outdoor sketching, primarily in
watercolor, but including pen and ink, pencil,
and colored pencil. Studio will develop
working sketches into complete paintings.
Principles of perspective are taught and
applied. For any student who wishes to
develop skill in handling watercolor. Outside-
of-class sketchbook work required.

FR DR 211 Freehand Drawing and
Illustration
Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R F.
R. J. Lambert.
Progression to the organization of complete
illustrations. Subject matter largely from
sketchbooks, still life, and imagination.
Composition, perspective, and ways of
rendering in different media are considered.

FR DR 214 Watercolor
Spring. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R F.
R. J. Lambert.
A survey of watercolor techniques. Subject
matter largely stay in sketchbook, and on-
the-spot outdoor painting.

FR DR 316 Advanced Drawing
Fall or spring. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 6 hours to be
arranged. R. J. Lambert.
For students who want to attain proficiency in
a particular type of illustration or technique.
Agriculture and Life Sciences - 1996-1997

FR DR 417 Scientific Illustration
Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered 1996-97.
A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE
See Horticultural Sciences.

HORTICULTURAL SCIENCES
Horticultural science courses at Cornell are taught by the faculty of the Department of Floriculture and Ornamental Horticulture and the Department of Fruit and Vegetable Science.

Floriculture and Ornamental Horticulture

Courses by Subject:
General horticulture: 101, 102
Crop production: 145
Controlled Environment Agriculture: 410, 411, 412, 413
Fruit: 200, 442, 444, 445, 450
Greenhouse: 410, 412, 413
Nursery: 400, 420
Turfgrass: 330, 475
Vegetable: 225, 456, 460
Extension education: 629
Horticultural physiology: 400, 450, 455, 456, 460, 615, 620
Independent study, research, and teaching: 470, 495, 496, 497, 498, 499, 500, 605, 700, 800, 900
Internships: 496
Landscape architecture (professionally accredited program): 435, 440, 491
Landscape architecture: 141, 142, 261, 282, 315, 316, 317, 318, 360, 430, 410, 412-480, 483, 486, 487, 496
Plant materials: 230, 243, 300, 301, 335, 430
Plant propagation: 400
Postharvest physiology: 325, 625, 630
Sales and service in businesses: 425
Seminars: 495, 602, 630, 656
Special topics: 470, 494, 629, 630, 635, 694
Turfgrass management: 330, 475
Vegetable types and varieties: 220, 465

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HORT 101 Introduction to Horticultural Science
Fall. 4 credits. Lecs, M W F 10:10; lab W 1:25-4:25. C. F. Gottzick.
An introduction to horticulture in all of its components: floriculture, nursery, landscape horticulture, turfgrass management, fruit and vegetable science, urban horticulture, and related professional and commercial fields. A survey of the component fields of plant science also is provided. Emphasis is on the history, geography, and literature of the field; the structure and organization of the component industries, institutions, and professions; and the role of science and technology in the continuing development of horticultural practice. Field trips, including one three-day field trip (cost approximately $130.00), are taken to horticultural firms, institutions, and historic sites.

HORT 102 General Horticulture
Spring. 4 credits. Each lab limited to 25 students. Lecs, M W F 10:10; lab M T or W 2-4:25. L. D. Topoleski.
Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plants, flowers, fruits, and vegetable growing and gardening techniques.

HORT 200 Introductory Pomology
Fall. 3 credits. S-U grades optional. Lecs, T R 10:10; lab, T 1:25-4:25. I. A. Merwin.
A survey of fruit science, emphasizing the natural history, botany, physiology, and production of edible fruits in temperate-climate areas. Topics include varietal breeding and propagation, environmental and sustainability issues, and practical methods of fruit production. Labs and field trips will provide hands-on experience and tours of regional orchards.

HORT 220 Vegetable Types and Identification
Fall. 2 credits. T 2-4:25. L. Topoleski.
Acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases and insects of vegetables, identification of vegetable and weed seeds, seedlings, nutrient deficiencies, vegetable judging, grading, and grade defects.

HORT 225 Vegetable Production
Fall. 4 credits. Lecs, M W F 11:15; lab, W 2-4:25. 1 S fieldtrip and 3 fieldtrips (September). W 11:15-6:00. L. A. Ellerbroke.
Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience growing vegetables in the laboratory are included.

HORT 230 Woody Plant Materials
A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on wood identification and values for use as landscape material.

HORT 243 Taxonomy of Cultivated Plants (also BIOL 243)
Fall. 3 credits. Prerequisite: One year of introductory biology or written permission of instructor. May not be taken for credit after BIOL 248. Offered 1996-97; next offered 1998-99. Lecs, M W 10:10-11:00; lab, W 2-4:25. M. A. Luckow.
A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

HORT 300 Garden and Interior Plants I
A study of ornamental plants used in garden and interior situations. The first seven weeks cover primarily herbaceous annuals and perennials, with the laboratory devoted to various practical gardening activities. The remainder of the semester covers the major kinds of foliage and flowering plants used in the home and in other interior landscape situations. Emphasis is on identification, use, and general cultural requirements.

HORT 301 Garden and Interior Plants II
Spring. 3 credits. Prerequisite: HORT 300 or permission of instructor. Fee for lecture-laboratory manual: $35. Lecs, M W 11:15; lab, M T or W 2—4:25. R. G. Mower.
A continuation of Horticultural Sciences 300. The first seven weeks are devoted to a further study of interior plants, with emphasis on specialized groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants, such as tulips, daffodils, crocuses, and irises, as well as other spring-blooming bulbs and perennial plants.

Outdoor laboratories emphasize practical gardening activities appropriate to the spring season.

HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops
A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticultural crops are covered.
HORT 330 Turfgrass Management
A. M. Petrovic.
Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

HORT 355 Woody Plant Materials for Landscape Use
A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

HORT 400 Principles of Plant Propagation
Fall, 4 credits. Prerequisites: BIOPH 242 and 244 or another course in plant physiology. Lecs, T R 9:05; lab, R 1:25-4:25. K. W. Mudge.
Sexual (seed) propagation and asexual (vegetative) propagation, including cuttage; graftage, tissue culture, layering and specialized vegetative reproductive structure. Physiological, environmental, and anatomical principles are stressed in lecture and hands-on experience. Examples include both temperate as well as tropical horticulture, agronomic, and forestry crops.

HORT 410 Principles of Controlled Environment Agriculture (CEA)
Spring. 3 credits. Prerequisite: permission of instructor. Letter grade only. 3-day field trip required. Cost of field trip: $80. Lecs, T R 10:10-12:05. T. C. Weller and staff.
Basics and issues related to managing agricultural production in environmentally optimized facilities. Survey of CEA as an agricultural alternative, technology basics, systems and practices, world centers of production, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilization and irrigation, environmental stewardship, integrated pest management, business management, and human resource management.

HORT 411 Principles of Crop Production in Controlled Environments
Spring. 3 credits. Prerequisites or corequisite: HORT 410. Letter grade only. Two afternoon field trips required. Lecs, W F 8:00; lab R 2-4:25. T. C. Weller.
Study of several controlled-environment agriculture (CEA) crops, including cut, pot and bedding ornamentals; vegetables and fruits briefly covered; emphasis on predictive harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops.

HORT 412 Case Studies of Controlled Environment Agriculture (CEA)
Spring. 1 credit. Prerequisite or corequisite: HORT 410. Lab 3 hours per week as scheduled. R. W. Langhans, J. D. Novak and G. R. White.
Analysis of actual CEA enterprises regarding adoption of technology, crop culture, operations management, and/or marketing.

HORT 413 Computer-Assisted Management in Controlled Environment Agriculture (CEA)
Spring. 1 credit. Prerequisite or corequisite: HORT 410. Lab 3 hours per week as scheduled. R. W. Langhans.
Application of computer software to operations management and environmental management of a CEA facility—including specifications for facilities, optimization of resource inputs (e.g., energy, fertilizer), crop programming, efficient space use, labor efficiency (time and motion), and inventory management.

HORT 415 Principles and Practices of Agroforestry (also NTRES 415)
Spring. 2 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lecs, W 10:10; lab, M W 1:25-4:25. J. P. Lassoie.
An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement).

HORT 420 Principles of Nursery-Crop Production
Fall. 4 credits. Prerequisite: HORT 400. Lecs, M W F 9:05; lab, M W 2-4:25. Field trips. G. L. Good.
Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

HORT 425 Horticultural Sales and Service Businesses
Spring. 4 credits. Fee for course manual $35. Prerequisites: ARME 240 or other course in plant business management, and/or marketing. Lecs, M W F 10:10; lab, M W F 11:10-1:10. I. A. Merwin.
A study of the application of horticultural, marketing, and management principles and practices in many of the various horticultural sales and service firms, e.g., garden centers, retail florist and nursery stores, wholesale marketing operations, mail-order businesses, mass markets, interior and outdoor landscape-service and related firms.

HORT 430 Special Topics in Ornamental Plants
Fall or spring. Credit and hours to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: HORT 230, 300, 301, 335, or the equivalent, and permission of instructor. R. W. Mower.
Topical subjects in ornamental horticulture. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.

HORT 435 Landscape Management
A study of the practices involved in the planting and maintenance of woody ornamental plants in the landscape. The major emphases will be on planting and post-planting techniques, water and fertilization management, pruning, and general tree care. The lectures will focus on the physiological bases for essential management principles. Labs have a hands-on focus.

HORT 440 Restoration Ecology
Fall. Offered odd years; next offered 1997. Weeks 1-10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lecs, T R 10:10; lab, F 1:25-4:25. T. H. Whitlow.
An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

HORT 442 Berry Crops: Culture and Management
Fall. 3 credits. Offered even years. Lecs, M W 9:05; lab, M 1:25-4:25. M. P. Pritts.
A study of the evolution, breeding history, and physiology of strawberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed. Frequent field trips enhance classroom activities.

HORT 444 Applied Viticulture
Fall. 3 credits. Not offered fall 1996. Lecs, T R 9:05; lab, R 2-4:25. L. L. Creasy.
Grape production and post-production practices with emphasis on the Great Lakes and Finger Lakes regions. We will examine grape varieties, site selection, and vine management as affected by geography, meteorology, and vine anatomy/physiology. Protection of vines and grapes from injury by cultural, chemical, and natural means will also be explored. Laboratory exercises and field trips offer hands-on experience in vineyard practices, marketing and processing.

HORT 445 Orchard Management
The science of tree fruit production in temperate climates, including site evaluation and improvement, fruit variety and rootstock
selection, tree propagation, planting, pruning, and training systems, the physiology of flowering and fruit development, dormancy and cold hardiness, tree nutrition and water relations, fruit harvesting and storage, and integrated pest management. Emphasis is on agroecological principles and hands-on practice in orchard lab-sessions and field trips.

**HORT 450 Soil Management and Nutrition of Perennial Crops**
Fall. 3 credits. Not offered 1996. Lecs, M W 8; lab, M 2-4:25; C. S. Siles. Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Mineral nutrition aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient requirements for optimizing crop performance. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized.

**HORT 455 Fertility Management and Nutrition of Vegetable Crops**
Fall. 3 credits. Prerequisite: any college-level chemistry course. Lecs, M W 10:10; lab/disc, M 2-4:25. Not offered fall 1996. The course deals with both major, secondary and minor elements including fertilization programs, interpretation of tissue and soil analyses, nutrient interactions, induced deficiencies, toxicities as well as the effects of organic matter, crop residues, and specific crop sequences. The course emphasizes hands-on field and greenhouse experiments and small group discussions.

**HORT 460 Plant-Plant Interactions**
Spring. weeks 1–6. 2 credits. Prerequisite: any crop production course or permission of instructor. Lecs, M W F 10:10; lab, M 2-4:25; disc, R or F 1, 2, or 3 (1 hr.). H. C. Wien. The manner in which plants interfere or positively interact is examined for the management of cropping systems. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Examples will be taken from both temperate and tropical monoculture and intercropping systems.

**HORT 462 Vegetable Crop Physiology**
Spring, weeks 7–14. 3 credits. Prerequisites: HORT 225 and BIOL 242. Lecs, M W F 10:10; lab, M 2-4:25; disc, R or F 1, 2, or 3 (1 hr.). H. C. Wien. Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yield. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and weekly small-group discussions.

**HORT 465 Vegetable Varieties and Their Evaluation**
Fall, weeks 1–7. 2 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades only. Lecs, W F 8; lab, F 1:25–4:25. Not offered fall 1996. D. W. Wolfe and H. C. Wien. Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

**HORT 470 Special Topics in Pomology**
Spring. 3 credits. Open to undergraduates by permission. Hours to be arranged. Staff. Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from year to year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

**HORT 475 Golf Course Management**
Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Offered odd years; fall 1997, fall 1999. Lecs to be arranged. A. M. Petrie. Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management and financial operations. Analysis of a central New York golf course will provide the basis for discussion.

**HORT 491 Planting Design and Establishment (also LA 491)**
Fall. 3 credits. Prerequisites: HORT 230 or 335 or permission of instructor. Lecs, T R 12:20; studio, R 1:25–4:25. N. L. Bassuk and P. J. Trowbridge. This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. Students will learn about the principles and practices of plant establishment both in the ground and in contained environments. Design followed by specifications and graphic analysis of soils, vegetation, and site assessment.

**HORT 494 Special Topics in Horticulture**
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. 

**Section 01,** Fruit and vegetable science; 

**Section 02** Floriculture. Staff. The departments teach "trial" courses under this number. Offerings vary by semester, and will be advertised by the departments. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

**HORT 495 Undergraduate Seminar**
Undergraduate participation in weekly departmental seminar series. May be taken four times for one credit per semester. S-U grades only.

**Section 01** Current topics in Floriculture and Ornamental Horticulture. Fall or spring. 1 credit. R. 4. I. A. Merwin. Graduate students should enroll in HORT 602.

**Section 02** Current topics in Floriculture and Ornamental Horticulture. Fall. 1 credit. R 12:20. T. C. Weller. Graduate students should enroll in HORT 636 (Section 02).

**HORT 496 Internship in Horticultural Sciences**
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser in advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours to be arranged. Staff.

**HORT 497 Independent Study in Horticultural Sciences**
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall). Independent study in horticultural sciences under the direction of one or more faculty members. Hours to be arranged. Staff.

**HORT 498 Undergraduate Teaching Experience**
Fall or spring. Credit variable. S-U grades optional. Prerequisite: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sessions, preparing, assisting in, or teaching laboratories; and tutoring.

**HORT 499 Undergraduate Research**
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff. Undergraduate research projects in horticultural sciences.

**HORT 500 Master of Professional Studies (Agriculture) Project**
Fall or spring. 1–6 credits. (6 credits maximum toward MPS [Agriculture] degree). S-U grades optional. Staff. A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Masters of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

**HORT 600 Professional Colloquium Series/FOH**
Spring. 1 credit. Prerequisite: Primarily for graduate students in final year of studies; written permission from instructor required for undergraduates. Lec, M 12:20. D. J. Tennessee. Graduate students join distinguished visitors and Cornell staff members for weekly professional seminars on current teaching, research, and extension in floriculture and ornamental horticulture. Students will present a seminar based on their work. Often students use the presentations as part of their thesis defense and in preparation for job interviews.
Horticulture

HORT 602 Seminar in Fruit and Vegetable Science
Fall or spring. 1 credit. S-U grades only. R 4:00. I. A. Merwin.
Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and industry. Required of graduate students majoring or minoring in pomology or vegetable crops. Undergraduate students register under HORT 495 Sec 1.

HORT 615 Quantitative Methods in Horticultural Research
Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.

HORT 620 Woody Plant Physiology
Spring. 4 credits. BIOL, BIOM 331, CHEM 357, or equivalent, or permission of instructor. Offered in spring 1997. Letter grade only. Lecs, T R 8:40-9:55. T. H. Whitlow.
A detailed study of physiological processes in woody plants and how these processes influence crop production practices. Topics will include shoot and root growth, phytotoxicity, dormancy, photoperiodism, photosynthesis, respiration, carbon and nitrogen metabolism, water relations, and fruiting. Several faculty members participate in teaching.

HORT 625 Advanced Postharvest Physiology of Horticultural Crops
Spring. 3 credits. Prerequisite: BIOL 242 and/or HORT 325. Offered alternate years. Not offered spring 1997. Lecture, T R 10:10-11:25, disc, to be arranged. P. M. Ludford.
Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.

HORT 629 Special Topics in Plant Science Extension (also Plant Breeding 629)
Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

HORT 630 Current Topics in Postharvest Horticulture
Spring. 1 credit. Prerequisite: permission of instructor. Hours to be arranged. Staff. Graduate students write project study and report and discuss current topics in postharvest biology and technology of horticultural crops.

HORT 635 Tools for Thought
Fall. 1 credit. Open to graduate students only. S-U grades only. 1 hour per week, to be arranged. T. H. Whitlow.
A survey of the philosophy of science, hypothesis testing, approaches to experimental design, experimental hierarchies, methods of data reduction, the interaction between basic and applied research and the role of reductionism in the applied plant sciences. This course is intended to assist newer graduate students make the intellectual transition from prescribed courses to conducting independent original research. Readings include Kuhn’s 'The Structure of Scientific Revolutions'. Discussion and critiques of assigned readings.

HORT 636 Current Topics in Horticulture
1 credit. S-U grades only.
Section 01: Fruit and Vegetable Science. Staff. Fall or spring. 1 hour per week, to be arranged. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one paper based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

Section 02: Floriculture and Ornamental Horticulture. T. C. Weiler and staff. Fall or spring. 1 hour per week, to be arranged. Graduate students only. Undergraduates should enroll in HORT 495 (Section 02). Each week a staff member will develop a dialogue with students on a topic of current mutual interest. Topics and discussion leaders change by week and semester; topics may encompass planting design, exterior and interior landscape management, turfgrass management, urban horticulture, nursery management, plant materials, stress physiology, weed science, root zone ecology, horticultural sales and service business operation, and controlled environment agriculture. Brief reading assignments may be distributed for completion by the next class.

HORT 694 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Sec 01, Floriculture, Sec 02, Fruit and Vegetable Science. Staff. The department teaches “trial” courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

HORT 700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science
Fall or spring. Credit to be arranged. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit to be arranged. S-U grades only.

INTERNATIONAL AGRICULTURE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. F 1:25-3:20. E. Erickson.
A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 402 Agriculture in Tropical America
Fall. 2 credits. Prerequisite: Upper class or graduate standing. F 1:25-3:20. H. D. Thurston and staff.
A preparatory course for participation in International Agriculture 602. Physical, resources, vegetation, history, crop and animal production, and various social and economic aspects of agriculture in tropical America will be discussed.

INTAG 403 Traditional Agriculture in Developing Countries
Today, perhaps over half of the world’s arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

INTAG 414 Cultivation and Improvement of Cereal Crops
Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years. Not offered 1997-98; next offered 1996-97 and 1998-99. M W F 11:15. M. E. Smith and staff.
An introduction to characteristics, culture, and improvement of important cereal crops of the tropics and subtropics, including agronomic, economic, and social aspects. Emphasizes maize and rice. Lectures feature slides and other illustrative material based on experiences in the tropics and discussion of current issues relating to tropical cereal crops. This is the first of three 1-credit offerings, including INTAG 416 and INTAG 418, each taught for one-third of the semester.

INTAG 416 Cultivation and Improvement of Root, Tuber, and Plantain Crops
Spring. 1 credit. Prerequisite: An introductory biology or crops course (BIO 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years. Not offered 1997-98; next offered 1996-97 and 1998-99. M W F 10:10. Staff.
An introduction to tropical root, tuber, and plantain crops, their importance, their culture, and their food, feed, and industrial uses. The cultural and socio-economic role of these crops in tropical societies will be considered, as well as the negative and positive aspects of their production and utilization. This is one of three 1-credit modules, including INTAG 414 and INTAG 418, each taught for one-third of the semester.

INTAG 418 Horticultural Crops in the Tropics
Spring 1 credit. Prerequisite: An introductory biology or crops course (BIO G 101, HORT 102, SCAS 311 or equivalent) and SCAS/BIO G 473. Offered alternate years. Not offered 1997–98; next offered 1996–97 and 1998–99. M W F 11:15. I. Merwin, E. Figueroa, and C. Wien. A survey of fruit and vegetable crops of economic and/or dietary importance in the tropics. The natural history of horticultural crops, major regions and methods of production, domestic and export marketing systems, and various technological, ecological, and social factors that affect tropical fruit and vegetable production will be emphasized. This is one of three 1-credit modules, including INTAG 414 and INTAG 416, each taught for one-third of the semester.

INTAG 599 International Agriculture and Rural Development Project Paper
Fall and spring. 1–6 credits. Limited to M.P.S. candidates in the fields of International Agriculture and Rural Development (IARD) and International Development (ID). S-U grades only. Staff. Fall or spring. 1–3 credits. Staff.

INTAG 602 Agriculture in the Developing Nations
Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenses. T R 2:30–4:25 until midterm only. R. W. Blake and staff. Offered to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among students and staff. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also Graduate 692)*
Spring. 4 credits. M 2:30–5:00. N. T. Uphoff and staff. An intercollege course designed to provide graduate students with a multidisciplinary perspective and to prepare them for administrative, research, and extension work in developing countries. The course is oriented to students trained in agricultural or social sciences who are likely to have administrative responsibilities during their professional careers.

INTAG 650 Special Topics in International Agricultural and Rural Development
Fall or spring. 1–3 credits. Staff. A seminar for new themes of agricultural and rural development. Offered occasionally. Specific content varies.

INTAG 655 Training and Development: Theory and Practice (also Communication 485, Education 655 and Industrial and Labor Relations 658)
Spring and summer. 4 credits. S-U grades optional. Charges for materials $45. Lec. F 9:05–12:05, lab. 1 hour per week, to be arranged. At Communication Graduate Center. R. Colle, M. Ewert, D. Deshler. Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

INTAG 703 Seminar for Special Projects in Agricultural and Rural Development
Fall and spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development; others with permission of the program director. S-U grades only. M 12:20–2:15. R. W. Blake and staff. The seminar provides the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

LANDSCAPE ARCHITECTURE

LA 141 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 25 students. S-U grades optional. Developing ability in freehand observation drawing. Freehand still life, landscape, figure, and perspective drawing will be included. Weekly sketchbook assignments.

LA 142 Grounding in Landscape Architecture Studio
Spring. 4 credits. Limited to approximately 20 students; freshmen landscape architecture majors or permission of instructor. Cost of basic drafting equipment and supplies, about $200. Fundamentals of landscape design applied to residential and other small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

LA 201 Medium of the Landscape
Fall. 6 credits. Limited to landscape architecture majors. Cost of basic drafting equipment and supplies, about $200; expenses for field trip, about $250. This course provides a foundation in design theory, contemporary and historic case studies, two-dimensional pattern design, three dimensional modelling, measured drawing, sketch and constructed representations, concepts in landform and landscape materials including vegetation. Lecture, seminar but primarily studio practice will be used to introduce course participants to skill development necessary for design within the discipline. Theory related to proportion, distance, size, color, light and time will be fundamental to this course. However, life experience, memory and culture will be highly valued.

LA 202 Medium of the Landscape
Spring. 6 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies, about $200; expenses for field trip, about $250. Understanding the role of basic design, design theory, and design languages in landscape architectural projects.
LA 261 Urban Archaeology (also CRP 261)
Fall. 3 credits.
Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban communities evolved beneath today's cities, and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

LA 262 Laboratory in Landscape Archaeology
Spring. 3 credits. Prerequisites: LA 261 or CRP 261 or permission of instructor.
Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 282 The American Landscape
Spring. 3 credits.
An interdisciplinary survey of the cultural history of the American landscape, including perceptions of landscape as expressed in paintings, photography, and literature. Landscape values, the relation of landscape to culture, landscape use, and the history of regional and national landscapes are general topics, all seen within the context of the history of the environment.

LA 301 Integration of Realities
Fall. 6 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies, about $200; expenses for field trip, about $250.
Course participants will be engaged in the art and science of site-scaled design. This includes gardens, parks, and residential projects, their design and technical solutions.

LA 302 Integration of Realities
Spring. 6 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies, about $200; expenses for field trip, about $250.

LA 315 Site Engineering I
Spring (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.
Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

LA 316 Site Engineering II
Fall (2nd seven weeks of semester). 2 credits. Prerequisite: LA 315.
Lectures and studio projects dealing with earthwork estimating; storm-water management, site surveys, site layout, site irrigation and horizontal and vertical road alignment.

LA 317 Site Construction I
Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.
The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio projects, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detail material prototypes and models and have the option of developing computer-generated drawings.

LA 318 Site Construction II
Spring (2nd seven weeks of semester). 2 credits. Prerequisite: permission of instructor.
Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students will develop a site survey and measured drawings as necessary to develop the comprehensive project.

LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360)
Fall. 3 credits. Not offered 1996-97; next offered 1997-98.
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in its own unique way as they created their own built environments.

LA 363/547 American Indians, Planners, and Public Policy (also CRP 363/547)
Spring. 3 credits.
Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

LA 401 Advanced Synthesis: Project Design
Fall. 6 credits. Prerequisite: LA 302 with a grade of C or better. Cost of supplies and reproductions, about $200; basic expenses for field trips, about $200. Site design and construction projects introduced as an evaluation of each student's professional competency in landscape architecture.

LA 402 Advanced Synthesis: Project Design
Spring. 6 credits. Prerequisites: completion of LA 401 or the study abroad option with a grade of C or better. Cost of supplies, about $200; basic expenses for field trip, about $250.
A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-di computer modeling and digital design media as tools for shaping the form of the city.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.
This course is designed to develop a working knowledge of various computer software applications (AutoCAD, Landcad, GIS, etc.) with emphasis on AutoCAD and Landcad. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

LA 412 Professional Practice
Spring. 1 credit.
Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.

LA 480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481 and 581)
Fall. 3 credits.
A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

LA 483 Design Criticism
Fall. 3 credits.
A practicum in writing environmental design criticism. Emphasis on impressionistic writing, on analytical descriptions and interpretations or works, and on the critique of current or environmental design discourse.

LA 486 Community Design Workshop
Spring. 3 credits. Permission of instructor. S-U grades optional.
This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects including parks, greenways, public spaces, playgrounds, gardens and urban design. This course will enable students to both study and experience design and implementation skills at all levels of the design process. Community design and workshop series. Students will learn skills related to community design in a series of workshops and work on a real project with a community.

LA 487 Experiential Community Design
Fall. 5 credits. Permission of instructor. S-U grades optional.
This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects including parks, greenways, public spaces, playgrounds, gardens and urban design. This course will enable students to both study and experience design and implementation skills at all levels of the design process Community Build and Implementation. Students will be engaged in the community-build phase of the community design project initiated the previous spring semester.

LA 491 Planting Design and Establishment (also HORT 491)
Fall. 3 credits. Prerequisites: FOH 230 or permission of instructor.
This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate species, trees, shrubs, and ground covers for a given site, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design followed by
specifications and graphic details will be produced to implement these practices. Techniques for tree preservation and land reclamation/vegetation will also be discussed. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

LA 494 Special Topics in Landscape Architecture
Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 497 Individual Study in Landscape Architecture
Fall or spring. 1-5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching
Fall or spring. 1-5 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grade optional. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

LA 501 Composition and Theory
Fall. 6 credits. Limited to graduate students. Cost of drafting supplies about $200. Field trip about $250. Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthenform.

LA 502 Composition and Theory
Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about $200; expenses for field trip, about $250. The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505 Graphic Communication I
Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor. Basic skills in graphic presentation, including pencil-and-ink drawing and drafting techniques applicable to landscape architecture projects. Basic design in freehand drawing, orthographic projection, axonometric projection, and lettering are covered in the course.

LA 506 Graphic Communication II
Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor. Course will focus on modes of landscape representation from ideation to presentation. Projects will in many cases correspond with LA 502 design projects. Representation modes will include for example: freehand, analysis and orthographic drawing, concept modelling, composite drawings, visual books.

LANAR 520 Contemporary Issues in Landscape Architecture*
Fall. 2 credits. Offered through the College of Architecture, Art, and Planning.

LANAR 524 History of European Landscape Architecture*
Spring. 3 credits. Offered through the College of Architecture, Art, and Planning.

LANAR 525 History of American Landscape Architecture*
Fall. 3 credits. Offered through the College of Architecture, Art, and Planning.

LA 569 Archaeology on Preservation Planning and Landscape (also CRP 569)
Fall. 3 credits. Offered alternate years. Next offered 1998-99. In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed for independent semester-long review projects and historic landscape plans.

LA 590 Theory Seminar
Fall. 3 credits. For graduate students in their last year of study. Seminar in research methods and landscape knowledge, culminating in a thesis proposal.

LA 601 Context and Landscape/Integration of Reality
Fall. 6 credits. Limited to graduate students. Cost of supplies, about $200; expenses for field trip, about $250. Design theory and process as applied to larger scale, site-specific projects while incorporating skills and techniques from site engineering.

LA 602 Natural Systems and Planting Design Studio
Spring. 6 credits. Limited to graduate students. Cost of drafting supplies, about $200; expenses for field trip, about $250. The studio focuses upon site-scaled projects that have as a primary concern natural systems and the ecology of a site. Projects will have nature-like design expressions inherent in the studio exercises. Design knowledge of hydrology, soils, plant associates, culture, geography, history and microclimate are necessary to engage studio projects. Studio participants are expected to have a mastery of communication skills including oral presentation and graphic representation.

LA 615 Site Engineering I
Spring. (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the development of a working knowledge of site grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

LA 616 Site Engineering II
Fall. (2nd seven weeks of semester). 2 credits. Prerequisites: LA 615. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, site irrigation and horizontal and vertical road alignment.

LA 617 Site Construction I
Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detail materials, prototypes and models and have the option of developing computer-generated drawings.

LA 618 Site Construction II
Spring. (2nd seven weeks of semester). 2 credits. Prerequisite: permission of instructor. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a site survey and measured drawings as necessary to develop the comprehensive project.

LA 619 Advanced Site Grading
Spring (2nd seven weeks of semester). 2 credits. Limited to 10 students. Prerequisite: LA 515 or LA 615. Grading skills and knowledge applied as a design component of site planning projects.

[LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)]
Fall. 3 credits. Offered alternate years. Not offered 1996-97; next offered 1997-98. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

LA 694 Special Topics in Landscape Architecture
Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 701 Urban Design and Planning (also CRP 655)
Fall. 6 credits. Limited to graduate students. Cost of supplies, about $200; expenses for field trip, about $250. Application of urban-design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-d computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.
### Natural Resources

**NTRES 100 Principles of Conservation**
- Fall: 3 credits. Limited to students specializing in natural resources or with permission of instructor. Letter grade only. M W F 9:05; 1 hr disc to be arranged.
- Staff.

  The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

**NTRES 104 Natural History Information Management Concepts**
- Spring. 1 credit. Letter grade only. T 9:05. A. N. Moen.

  Natural history information management concepts using electronic technology to provide global access to information resources will be introduced. Students will learn how to access and prepare hypertext and multimedia files of natural history information.

**NTRES 105 Natural History Information Management Applications**
- Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 104 (or concurrent registration). A. N. Moen.

  Natural history information will be used to learn computer-based information management skills and to introduce information resources for use in other courses in the Department of Natural Resources. Sections will include: (1) Natural History of Plants; (2) Natural History of Animals; and (3) Decision Aids for Laboratory and Field Identification.

**NTRES 200 Natural Resource Modeling Concepts**
- Spring. 1 credit. Letter grade only. R 9:05. Prerequisite: NTRES 104 or permission of instructor. A. N. Moen.

  Basic concepts underlying computer modeling in natural resources are introduced, and selected models illustrate specific biophysical, population, and simulation models.

**NTRES 205 Natural Resource Modeling Applications**
- Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 204 (or concurrent registration) and one course in computer programming. A. N. Moen.

  Students may enroll for variable credits in biophysical modeling, population modeling, and simulation modeling sections. Original programs are designed by the students and become part of the information resources in the Cooperative Learning Center. Sections will include: (1) Biophysical Modeling in Natural Resources; (2) Simulation Modeling in Natural Resources; and (3) Population Modeling in Natural Resources.

**NTRES 210 Introductory Field Biology**
- Fall: 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 1 hr disc to be arranged. B. L. Bedford.

  An overview of Earth's environmental problems. Lectures are presented by a series of Cornell's most distinguished authorities and by visiting experts. A major theme of the course is that environmental problems, and their solutions, are not isolated technical problems, but rather are interrelated social, political, ethical, ecological and economic problems.

**NTRES 230 Environment and Society**
- Spring: 3 credits. Prerequisites: introductory courses in biology and ecology. Lec M W 10:10–11:00; lab, T, W or F 2:30–4:00 or R 12:20–2:15. J. B. Yavitt.

  The application of ecological principles to renewable resource and environmental problems. The perspective is the interactions of species within the ecosystem, which is the basic unit of study. Topics include fisheries, forests, the conservation and management of wild species, and pollution. The discussion section emphasizes quantitative analysis and the use of microcomputers.

**NTRES 270 Conservation of Birds**
- Spring or summer. 2 credits. G. R. Smith.

  A course for majors and nonmajors, focusing on bird conservation and management at the organism, population, community, and landscape levels. Current resource management issues relevant to birds will be explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change and the economic importance of bird study as an outdoor recreational activity.

**NTRES 271 Conservation of Birds Laboratory**
- Spring or summer. 1 credit. Concurrent enrollment in NTRES 270 required. Limited to NTRES majors.

  A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs, calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other aids to bird identification; procedures for taking and organizing field notes; and the relationships of birds to their habitats and to other birds, and the methods and procedures for censusing and surveying songbird populations. Students are required to provide their own binoculars for field use.

**NTRES 280 Environmental Disruption and Regulation**
- Summer, 3-week session. 3 credits. Open to high school students. Optional field trips. M W 6:15–9:30 p.m. M. Heiman.

  The physical and social context of human-environmental interrelations in advanced industrial societies. Interest-group positions and the United States regulatory response on air and water pollution; toxic, nuclear, and solid waste management; and workplace hazards. The conflicts and compatibility of economic growth, social justice, and environmental quality.

**NTRES 285 Applied Ecology and Ecosystem Management**
- Spring. 3 credits. Prerequisites: introductory courses in biology and ecology. Lec M W 10:10–11:00; lab, T, W or F 2:30–4:00 or R 12:20–2:15. J. B. Yavitt.

  The application of ecological principles to renewable resource and environmental problems. The perspective is the interactions of species within the ecosystem, which is the basic unit of study. Topics include fisheries, forests, the conservation and management of wild species, and pollution. The discussion section emphasizes quantitative analysis and the use of microcomputers.

**NTRES 286 Environmental Disruption and Regulation**
- Summer, 3-week session. 3 credits. Open to high school students. Optional field trips. M W 6:15–9:30 p.m. M. Heiman.

  The physical and social context of human-environmental interrelations in advanced industrial societies. Interest-group positions and the United States regulatory response on air and water pollution; toxic, nuclear, and solid waste management; and workplace hazards. The conflicts and compatibility of economic growth, social justice, and environmental quality.
NTRES 300 International Environmental Issues
Fall. 3 credits. Junior standing or above. T R 9:05-9:55; 1 hr disc sec to be arranged. R. J. McNeil.
Lectures will survey international environmental issues, with some attention to causes and solutions. Case studies will include such subjects as whales and whaling, tropical deforestation, endangered species and biodiversity, Law of the Sea, Antarctica, ozone depletion, global warming. Institutions such as treaties, development banks, international law, and trade agreements will be examined. Perspectives will include primarily ecology, secondarily ethics, economics, law.

NTRES 301 Forest Ecology
Fall. 3 credits. Prerequisite: Introductory Biology. M W F 11:15. T. J. Fahey.
A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, ecophysiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

NTRES 302 Forest Ecology Laboratory
Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

NTRES 303 Forest and Woodlot Management
Fall. 3 credits. Letter grades only. Lec, T R 10:10-11:00; lab R 12:20-4:25. T. J. Fahey.
A practical, field-oriented course emphasizing multiple purpose management of small nonindustrial private forestland in the northeastern United States.

NTRES 304 Wildlife Ecology Concepts
Spring. 1 credit. Letter grade only. M W F 11:15. (1st 1/3 of the semester). A. N. Moen.
The main concepts underlying wildlife behavior, physiology, nutrition, and energetics are discussed in an ecological context as a basis for further study in the NTRES 305 sections associated with this course.

NTRES 305 Wildlife Ecology Applications
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 304 (or concurrent registration).
Field research and computer simulations provide in-depth study in wildlife behavior, physiology, nutrition, and energetics sections in cooperative learning environment. All students publish their findings on the information system in the Cooperative Learning Center. Sections will include: (1) Wildlife Behavior; (2) Wildlife Physiology; (3) Wildlife Nutrition; and (4) Wildlife Energetics.

NTRES 306 Coastal and Oceanic Law and Policy
Summer. 3 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simson Hall. Estimated cost (includes tuition, room, board, and ferry transportation). $950.
Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

NTRES 308 Natural Resources Management
Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. B. A. Knuth.
Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate organizational, environmental, social and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 309 Land and Culture: Systems of Native American Resource Management
Summer. 3 credits. Prerequisite: none required; one course each in Natural Resources and American Indian Program recommended. S. M. Penningroth.
This course presents a cross-cultural examination of natural resource management on land inhabited by indigenous peoples, with an emphasis on the United States. Topics include Native religions, technologies, and science; the political and legal basis of tribal sovereignty; and "cultural economics," defined as the tension between traditional Native uses of natural resources and tribal economic development.

NTRES 350 Ecological Dimensions of Global Change
Fall. 3 credits. Prerequisites: college-level courses in biology and chemistry. T R 2:30-3:20, disc sec. T or R 3:35-4:25. J. B. Yavitt.
A course for students in any major examining how human-induced changes in the biosphere (e.g., land-use and climatic change) affect resources. Lectures present a comprehensive understanding of our climatic system. Discussions consider the response of biosphere to different scenarios of climatic change and some of the policy intended to mitigate the effects of changes.

NTRES 400 International Environmental Issues
Fall. 4 credits. Limited to about 35 students. Prerequisite: junior standing or above. Not offered fall 1996.
Internship experiences in preservation and development of environmental and natural resources. Concepts include development, resource ownership, exploitation, compensation, and preservation. Cultural differences in attitudes and behavior toward environment. Management practices under different cultural, economic, and political systems. Will cover current issues such as acid precipitation, management of migratory whales, fish, and waterfowl; Antarctic development; global climate and energy issues; and preservation of tropical rainforests and endangered species. Lecture and discussion, term paper, and examinations. Priority to: seniors, a few graduate students, others providing best mix of backgrounds, others with special needs, natural resources majors.

NTRES 401 Environmental and Natural Resources Policies
Fall or spring. 3 credits. Prerequisites: junior standing and participation in Cornell-in-Washington Program. Concepts and principles fundamental to the environmental policy process and central to decision making in the natural resources arena, particularly at the national and international levels. Role of the legal system in the policy process; roles of citizen organizations, lobbyists, bureaucrats, legislators. Case studies, interviews with Washington officials, short papers, one exam. A fourth credit available requires a more extensive written assignment and an oral presentation.

NTRES 402 Natural Resources Policy, Planning, and Politics
Spring. 3 credits. Prerequisites: junior standing and permission of instructor. Lec, January two-week intersession; two 2 hr orientation sessions in December and four 2 hr sessions in January and February.
An introduction to the environmental policy process and its conceptual framework. Recognition of phenomena identified as natural resources or environmental problems and issues; steps leading to legislation or regulations to solve problems; implementation and evaluation stages; role of the legal system; roles of citizens, lobbyists, government actors. Case studies, presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Washington before and after intensive January session in Washington.

NTRES 404 Wildlife Populations Ecology
Spring. 1 credit. Letter grade only.
Prerequisites: NTRES 204 or permission of instructor. M W F 11:15. (second 1/3 of the semester). A. N. Moen.
The main concepts underlying population dynamics of free-ranging species are discussed in an ecological context as a basis for further study in the NTRES 405 sections associated with this course. The emphasis is on analytical population models rather than descriptive population parameters.

NTRES 405 Wildlife Population Applications
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 404 (or concurrent registration).
Population estimating techniques, simulation models, and reconstruction models provide in-depth experience in these population application sections. Students may reregister for the sections in order to complete model development. Sections will include: (1) Wildlife Population Estimating Techniques; (2) Wildlife Population Simulation Models; and (3) Wildlife Population Reconstruction Models.
NTRES 406 Ecology Risk Assessment
Spring. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. Offered alternate odd years. Next offered spring 1997 and spring 1999. M W F 11:15-12:05. D. L. Gillett.

This course strives to develop understanding of and competence in the different types of ecological (non human health) risk assessments. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances. The proposed USEPA approach under development will serve as the working model.

NTRES 407 Religion, Ethics, and the Environment
Spring. 4 credits. For juniors, seniors, and graduate students, others by permission only. S-U grades optional. T R 9:05-9:55, a hr disc to be arranged. R. A. Baer.

A study of how religion (mainly Christianity and Judaism), philosophy, and ethics contribute to our understanding and treatment of nature. Topics include religion, value, knowledge, nature, and the public interest are examined in detail. Particular themes include the structure of modern science, the nature of moral claims, character and moral development, and the role of moral concepts, doctrines, and remedies in fostering environmentally responsible behavior. Also, animal rights; responsibility to future generations; anthropocentric, biocentric, and theocentric views of human beings and nature.

NTRES 408 Resource Management and Environmental Law
Fall. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. T R 10:10-12:05. Staff.

A senior-level course that introduces the use of legal concepts, doctrines, and remedies in natural resources and environmental management. For a variety of living resources and their habitats, it explores the common law and regulatory processes available for resolving conflicts between exploitation and protection and advanced an understanding of how public and private values, economic considerations, and constitutional limitations affect management techniques and objectives.

NTRES 410 Wildlife Management Concepts and Applications
Spring. 3 credits. Prerequisites: broad background in biology, NTRES 304 (Wildlife Species Ecology) or NTRES 404 (Wildlife Populations Ecology). This course is open to seniors and graduate students. M W F 9:05-9:55. A. Moen.

In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, management information systems, and preparation of computer-based landscape files. Local field trips are taken.

NTRES 411 Seminar In Environmental Ethics
Fall. 3 credits. For graduate students, seniors, and juniors. S-U grades optional. W 1:25-3:50.

More concerns to relative to agriculture and/or the environment. In successive years, the seminar will focus on such topics as (1) animal rights and animal welfare, (2) natural resources management and the concept of the public interest, (3) doing environmental ethics in a democratic and pluralistic society, and (4) land use ethics.

NTRES 415 Principles and Practices of Agroforestry (also Hort 415)
Spring. 2 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, W 10:10-11:00; lab, W 12:25-3:40. J. Lassoe and K. Mudge.

An introduction to modern and traditional agroforestry systems, involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforests will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement).

NTRES 417 Wetland Resources
Summer. 2 credits. Prerequisite: one year of college biology. An 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $950.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

NTRES 418 Wetland Ecology and Management-Lecture
Fall. 3 credits. (Students may not receive credit for NTRES 418 and NTRES 417 Wetland Resources, Shoals Marine Laboratory summer course.) T R 12:20-1:35. B. L. Bedford.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 419 Wetland Ecology and Management-Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20-1:45. One weekend fieldtrip required.

An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the flora, fauna, soils, and hydrology of wetlands within the region; (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification and delineation. Some exercises will require written reports.

NTRES 430 Fishery Management

Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and specialized topics, including setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

NTRES 442 Techniques in Fishery Science
Fall. 5 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than $30. Offered alternate odd years. Next offered fall 1997 and fall 1999. T R 12:25-4:45, 1 or more weekend field trips. C. C. Krueger.

Emphasis is on methods for collecting data from fish populations and their habitat. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.

NTRES 450 Conservation Biology
Fall. 3 credits. Prerequisite: a reasonable biology background. Lec, T 10:10-12:05; disc, R 10:10 or 11:15. T. A. Gavir.

Biological topics important to the maintenance of biological diversity will be emphasized. Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students will gain thorough familiarity with these topics, and study their potential application through lectures, discussion, and use of computer models.

NTRES 471 Management of Terrestrial Habitats
Spring or summer. 4 credits. Prerequisites: NTRES 210, 304, statistics recommended; junior standing or above. Lec/lab, W 1:25-4:25. C. R. Smith.

A landscape ecological approach will be used to introduce students to habitat concepts and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats. Consideration will be given to a variety of temporal and spatial scales. Field trips will be taken to areas managed by both public and private land management organizations. An introduction to use of Global Positioning Systems (GPS) is included.

NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions
Fall or spring. 4 credits maximum. Prerequisites: broad background in biology, NTRES 304 (Wildlife Species Ecology) or NTRES 404 (Wildlife Populations Ecology). This course is open to seniors and graduate students. M W F 9:05-9:55. A. Moen.

In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, management information systems, and preparation of computer-based landscape files. Local field trips are taken.

NTRES 494 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and
will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 495 Individual Study in Fish and Wildlife Biology and Management
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. M. Bain, T. Gavin, C. Krueger, M. Krasny, E. Mills, A. Moen, M. Richmmond, L. Rutdum, C. Smith. Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 496 Individual Study in Ecology and of Landscapes
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, T. Fahey, M. Krasny, J. Lassoie, J. Schelhas, R. Schneider, J. Yavitt. Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 498 Teaching in Natural Resources
Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insights into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 500 Professional Projects—M.P.S.
Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.

NTRES 601 Seminar on Selected Topics in Fishery Biology
Fall or spring. 1 credit. S-U grades only. R 3:30-5:00.

NTRES 604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades optional. M 3:00-4:30. Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

NTRES 607 Ecotoxicology (Toxicology 607)
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. Not offered spring 1997. M W F 11:15. Lectures, readings, and special guest focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

NTRES 610 Introduction to Chemical and Environmental Toxicology
Fall. 3 credits. Prerequisites: biochemistry and microbial physiology. Letter grade only. M W F 11:15-12:05. Introduction to the basic concepts of toxicology, exposure and biological responses to toxicants, methods of assessing toxicity, and the role of chemicals in ecosystems. The chemical and biological factors that affect toxicity and specific sources of toxicants, including air pollution, agriculture, industrial and commercial processes, natural occurring toxicants, and social poisons will be presented. Regulation of toxic materials will be introduced.

NTRES 612 Wildlife Science Seminar
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Discussion of individual research or current problems in wildlife science.

NTRES 615 Case Studies and Special Topics in Agroforestry
Fall. 2 credits. Prerequisites: NTRES/HORT 415 or permission of instructor. S-U only. Hours to be arranged. Interdisciplinary groups of students examine case study examples of agroforestry practices in developed and developing countries. Specific topical areas are examined in depth, leading to development of a team-written report and a class presentation. Extensive library research and participation in small group discussions are required.

NTRES 616 Forest Science and Management Seminar
Fall/spring. 1 credit. Permission of instructor. Selected readings and discussions of research and/or current problems in forest science and management.

NTRES 618 Critical Issues in Conservation and Sustainable Development
Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30-4:25. J. Schelhas. Establishes a theoretical foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and the development for human needs. Students will work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

NTRES 619 Field Practicum in Conservation and Sustainable Development
Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes two-week field study trip to a Latin American country in January. J. Schelhas.

An interdisciplinary study of a conservation and development problem in Costa Rica or the Dominican Republic. The course will use an interdisciplinary research methodology that includes group problem identification, individual or small group research projects, and synthesis of group work to identify key conservation issues and research priorities for a selected site.

NTRES 694 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 695 Special Topics: Environmental Toxicology
Fall. 1-3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

NTRES 696 Graduate Individual Study in Natural Resources
Fall or spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.

NTRES 900 Master's Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.

NTRES 900 Graduate-Level Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students in a Ph.D. program only before the 'A' exam has been passed. S-U grades only.

NTRES 901 Doctoral-Level Thesis Research
Fall and spring. Credit to be arranged. For students admitted to candidacy after the 'A' exam has been passed. S-U grades only.

Public Policy and Politics (GOVT 427, 428; BIO & SOC 461; CEE 529)
PLANT BREEDING

Biometry courses are listed under “Biometry and Statistics.”

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production
Spring. 2 credits. Prerequisite: one year of introductory biology or permission of instructor. Lects, T R 11:15.
S. R. McCouch

This course provides an introduction to Plant Breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B - Biological Sciences.

PL BR 225 Plant Genetics
Spring. 4 credits. Prerequisite: one year of introductory biology or permission of instructor. Limited to 50 students. Lecs, M W F 9:05; lab, T or W 1:25, lab section assignments at first lecture. Labs start first week. M. A. Mutschler.

An overview of classical and modern genetic principles using examples from a variety of ornamental, horticultural, and agronomic plant species. Labs provide hands-on experience and an independent project with Brassica campestris. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B - Biological Sciences.

PL BR 401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor. Lects, T R 10:10.
E. D. Earle.

Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed. Six written assignments and a term paper are required.

PL BR 402 Plant Tissue Culture Laboratory
Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) and permission of instructor. W 1:25-4:25 (alternate weeks) plus 1 hr to be arranged. E. D. Earle.

Laboratory exercises complementing Plant Breeding 401. Techniques for establishing, evaluating, and utilizing plant organ, tissue and cell cultures will be covered. Experiments will use a broad range of plant materials.

[PL BR 446 Plant Cytogenetics Laboratory
Spring. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 or PL BR 225. Lab, M 1:25-4:30.
K. N. Watanabe.

This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis will be on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Specific topics will be covered by invited lecturers.]

PL BR 494 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the course will not be offered more than twice under this number.

PL BR 496 Internship in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff.

On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

PL BR 497 Individual Study in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

PL BR 498 Undergraduate Teaching
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Each student's research projects in plant breeding.

PL BR 603 Methods of Plant Breeding
Fall. 3 credits. Prerequisites: BIOGD 281 or PL BR 225 or equivalent and an introductory course in crop production. W M F 9:05.
M. E. Smith.

A comprehensive examination of plant breeding methods, including inbreeding and population improvement methods. Operational details and practical limitations for each method will be considered, as well as its suitability for specific breeding objectives (agronomically in characteristics, quality, and biotic and abiotic stress tolerance). The goal is to familiarize students with tools available to plant breeders, criteria for choosing among them, and options for creatively modifying them for specific situations.

PL BR 604 Methods of Plant Breeding Laboratory
Fall. 2 credits. Prerequisite: PL BR 603 or equivalent (may be taken concurrently). T R 1:25-4:15.
M. E. Sorrells and R. E. Anderson.

Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

PL BR 606 Advanced Plant Genetics
Spring. 3 credits. S-U grades optional. Prerequisites: BIOGD 281, PL BR 225, or equivalent. Lecs, M W F 11:15-12:05.
M. M. Kyle.

This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytogenetics, mating behavior and barriers, and aspects of population and quantitative genetics.

PL BR 622 Seminar
Fall or spring. 1 credit. S-U grades only. T 12:20. Staff and graduate students.

PL BR 629 Special Topics in Plant Science Extension
Spring. 2 credits. F 1:25-4:25.
W. D. Pardee.

Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

PL BR 650 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

PL BR 653.1 Concepts and Techniques in Plant Molecular Biology
Fall. 1 credit. S-U grades optional. Prerequisite: BIOGD 281 and BIOMB 332 or 330 or their equivalent. Recommended: BIOMB 331. Lecs, M W F 10:10-11:00 (12 lecs). Sect. 4-Sept. 30. D. Stern and J. Steffens.
A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

PL BR 653.2 Plant Biotechnology (also Plant Pathology 663 and BIO PL 653.2)
Fall. 1 credit. S-U grades optional
Prerequisite: BIO PL 653.1 or permission of instructor. E. D. Earle and M. Zaitlin. Lecs. M W F 10:10-11:00 (12 lecs) Sept. 4-Sept. 30.
This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues related to plant biotechnology are discussed.

PL BR 653.3 Plant Genome Organization
This course will cover the origins and measurement of nuclear DNA variation in plants as well as the development and exploitation of molecular markers for breeding as well as the isolation of genes underlying interesting phenotypes.

PL BR 694 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum.
S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 716 Perspectives in Plant Breeding Strategies
Spring. 3 credits. S-U grades optional.
Emphasis is on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required.

PL BR 717 Quantitative Genetics in Plant Breeding
Spring. 3 credits. S-U grades only.
Prerequisites: PL BR 603 and BTRY 601. Offered even years; next offered 1997-98. T R 8:30-9:55. D. R. Viands.
Discussion of quantitative genetics to help make decisions for more efficient plant breeding. Specific topics include components of variance (estimated from mating designs), gene pool development, linkage, heritability, phenotypic and genotypic correlation coefficients, and theoretical gain from selection. During one period, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.

PL BR 718 Breeding for Pest Resistance
Spring. 3 credits. Prerequisites: BIOGD 281 or PL BR 225, and PL BR 603 required. An introductory course in Plant Pathology and/or Entomology also highly recommended. Lec. T R 10:10-11:30. M. A. Mutschler.
A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, prerequisites of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance stability of genetic resistance mechanisms, and the use of biochemical/physiological/molecular tools in breeding for pest resistance.

PL BR 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students working on a master's thesis.

PL BR 900 Graduate-Level Dissertation Research
Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only. The "A" exam has been passed.

PL BR 901 Doctoral-Level Dissertation Research
Fall or spring. Credit to be arranged.
Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

PLANT PATHOLOGY
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL PA 101 Freshman Writing Seminar: Pesticidal Strategies
Fall. 3 credits. Limited to 17 students.
Lecs. M W F 8:00. P. A. Arneson. This seminar will examine the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachael Carson's classic Silent Spring, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

PL PA 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Climate
Spring. 3 credits. Limited to 17 students.
Lecs. T R 11:40. J. A. Laurence. This seminar provides an opportunity to learn more about the biological, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at levels of single sentences to term papers.

PL PA 201 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S-U optional.
Lecs. T R 11:15. C. W. Hudler. A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decomposers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals will be emphasized.

PL PA 241 Plant Diseases and Disease Management
Spring. 4 credits. Prerequisite: one year of biology. Lecs. M W F 11:15; lab, T or W 1:25. W. E. Fry. An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungal, viral, nematode, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

PL PA 247 Nature of Sensing and Response
Fall. 1 credit. Prerequisites: Biol. 101-104 or equivalent. Lec, R 1:25-2:15. T. P. Delaney. The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their environment and communicate sensing into appropriate responses. A variety of responses will be explored to show both the unique features and similar processes that are utilized by widely divergent organisms. Examples will be portrayed of plant and animal mechanisms for light sensing, control of development and responses to disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed in certain diseases.

PL PA 309 Introductory Mycology
An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

PL PA 319 Field Mycology
Fall. 1 credit. Prerequisite: permission of instructor. R. P. Korf. Study of mushrooms and other fungi on 7 field excursions followed by 7 evening labs devoted to identification of various collections under the microscope. Emphasis on ecology, biology, and means of identification.
PL PA 401 Basic Plant Pathology
Fall. 4 credits. Prerequisite: one year of biology and BIO S 241 or equivalent. Recommended: general microbiology, plant physiology. Lecs, T R 11:10; lab, T or W 1:25. W. A. Sinclair. Principles and practice of plant pathology. Lectures and labs are coordinated to consider types of plant pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack and plant defense, vector relationships, epidemiology, diagnosis, testing, assessment, and disease control. This course prepares students for graduate-level work in plant pathology.

PL PA 411 Plant Disease Diagnosis
Fall. 3 credits. For senior undergraduates specializing in plant pathology or pest management and for graduate students with a major or minor in plant pathology or plant protection. Limited to 20 students. Prerequisites: PL PA 241 or equivalent and permission of instructor. Not offered 1996-97. Lec, M 11:15; lab, M W 1:25-4:25. G. W. Hudler. A method for diagnosis of plant disease is presented with emphasis on contemporary laboratory techniques and effective use of the literature.

PL PA 443 Pathology of Trees and Shrubs
Fall. 3 credits. Prerequisites: PL PA 241 or equivalents. Lecs, M W 11:15; labs, F 1:25-4:25. G. W. Hudler. For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases of trees and shrubs. Forest, shade, and ornamental plants are considered.

PL PA 444 Integrated Pest Management
Fall. 4 credits. Prerequisites: BIO ES 261, ENTom 212 or 241, or PL PA 301 or their equivalents or permission of instructor. P. A. Ameson. Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

PL PA 448 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL PA 498 Teaching Experience
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 499 Undergraduate Research
Fall or spring. 3–5 credits. Students must register with an independent Study form (available in 140 Roberts Hall). S-U grades optional. An opportunity for research experience under the direction of a faculty member.

PL PA 642-661 Special Topics Series
Unless otherwise indicated, the following description applies to courses 642-661. Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to read current literature and to present oral and written reports.

PL PA 642 Plant Disease Epidemiology
Spring. TBA. M. G. Milgroom.

PL PA 644 Ecology of Soil-Borne Pathogens

PL PA 645 Plant Virology

PL PA 647 Bacterial Plant Diseases
Fall and spring. M 9:05. S. V. Beer. Emphasizes reports of current research in phytophacteriology undertaken in laboratories at Cornell.

PL PA 648 Molecular Plant Pathology

PL PA 649 Mycology Conferences
Fall. 1 credit. R. P. Korf.

PL PA 650 Diseases of Vegetable Crops
Fall. TBA. Hours to be arranged. J. W. Lorbeer and T. A. Zitter.

PL PA 652 Field Crop Pathology
Spring. W 8:00. G. C. Bergstrom.

PL PA 654 Diseases of Florist Crops

PL PA 655 Plant Diseases in Tropical Agriculture

PL PA 661 Diagnostic Lab Experience
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. Hours to be arranged. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students will work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. coursework or experience in diagnostic techniques is strongly advised. Priority will be given to graduate students in plant pathology and plant protection.

PL PA 662 Molecular Plant-Pathogen Interactions
Spring. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOMI 653.1. Lecs, M W F 9:10 (12 lecs) Jan. 22–Feb. 17. T. P. Delaney, A. R. Colmer, O. C. Yoder. An examination of the molecular properties that control the development of host-parasite interactions in both organisms (fungi and higher plants). Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

PL PA 663 Plant Biotechnology (PL BR 653.2)
Fall. 1 credit. Prerequisites: BIOGD 281, BIOBM 330 or 331, and BIOMI 653.1. Lecs, M W F 10:10 (12 lecs) Sept. 4-Sept. 30. M. Zaitlin, E. D. Earle.

PL PA 681 Plant Pathology Seminar
Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12:00-1:10.

PL PA 694 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL PA 701 Concepts of Plant Pathology: Organismal Aspects
Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 401 or equivalent and permission of instructor. Lecs, T R 9:05; lab/disc, T R 4:25. A. R. Colmer. Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems will be considered. Historical perspectives and recent research will be reviewed and analyzed. Students prepare and review mock grant proposals.

PL PA 702 Concepts of Plant Pathology: Population Aspects
Fall. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisite: PL PA 401 or permission of instructor. Some background in statistics is recommended. Lab = discussion section. Lec, T R 10:10; disc, T 2:45. M. G. Milgroom. Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, and population genetics of pathogens. The discussion section will be used for examining current plant pathology literature and other exercises complementary to lecture material.

PL PA 705 Phytophthora
Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. Offered alternate years. M. Zaitlin. This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.
dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity), the mitotic and meiotic cell cycles, and conidium formation is described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigation of recently developed plant pathogenic fungi such as Cochliobolus heteroapthus and Magnaporthe grisea and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

PL PA 739 Advanced Mycology
Fall. 4 credits. Prerequisites: PL PA 309 or equivalent, a course in genetics, and permission of instructor. Offered alternate years. Not offered 1996-97. R. P. Korf. A detailed study of the taxonomy, nomenclature, and biology of four major groups of fungi (rusts, smuts, peronosporales, and fungi imperfecti.)

PL PA 788 Research in Molecular Plant Pathology
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor. S-U grades only. S. V. Beer. Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PL PA 797 Special Topics
Fall or spring. 1-5 credits. S-U grades optional. An opportunity for independent study of a special topic.

PL PA 798 Graduate Teaching Experience
Fall or spring. 1-5 credits. S-U grades. Hours to be arranged. Staff. Graduate teaching assistant in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800 Master’s-Level Thesis Research
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty. For student’s working on a master’s degree.

PL PA 900 Graduate-Level Thesis Research
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty. For students in a Ph.D. program who have not passed the "A" exam.

PL PA 901 Doctoral-Level Thesis Research
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty. For doctoral candidates who have passed the "A" exam.

RURAL SOCIOLOGY
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 100 American Indian Studies: An Introduction
Fall. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables. This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell’s staff and the Indian communities and media presentations.

R SOC 101 Introduction to Sociology
Fall or spring. 3 credits. Lect, T R 10:10-11:00; sec, various times. C. C. Geisler and staff. A survey of concepts and theories in sociology and an examination of social forces and institutions shaping modern societies. The major topics include culture and socialization, social stratification and social class, age, race, ethnic and gender inequality, deviance and social control, religious, education, and occupation organizations, urbanization and demographic change, social change and social movements, bureaucracy, environmentalism, and the uses of sociology.

R SOC 175 Issues in Contemporary American Indian Societies
Spring. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables. Early American Indian history and the postcontact period will be reviewed with an emphasis given to developments since 1789. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered, with guest lecturers and media presentations.

R SOC 200 Social Problems
Fall. 3 credits. S-U grades optional. M W F 9:05-9:55. T. A. Hirschl. This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyses of a variety of social problems, and these may vary semester to semester. Examples of social problems are homelessness, teenage pregnancy, deindustrialization, and homicide, among others. Emphasis in the course will be given to how social problems are measured, and students will be given an opportunity to test theories with data analysis.
R SOC 201 Population Dynamics
Spring. 3 credits. S-U grades optional.
ALSO: students must register for this course as R SOC 201. T R 8:40-9:55.
L. B. Williams.
This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and migration) and social and economic issues. Discussion will cover special topics related to population growth and distribution, including migration and fertility, labor force participation, urban growth and urbanization resource allocation, and the environment.

R SOC 205 International Development
Spring. 3 credits. M W F 10:10-11:00.
P. D. McMichael.
New questions concerning development model in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecology, class, gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multinational institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grassroots activism.

R SOC 206 Gender and Society also Women's Studies 206
Spring. 3 credits. Lec. M W 11:15-12:05; sec. various times. N. Glasgow.
Course will familiarize students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Objectives will be met through lectures, readings, films, participant observation and personal experiences.

R SOC 208 Technology and Society
C. C. Geisler.
The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

R SOC 213 Research Methods for the Social Sciences
Fall. 3 credits. T R 11:40-12:55.
L. B. Williams.
A survey of approaches to conducting research in sociology will be presented. Definitions of social indicators will be devised and issues of data management and analysis will be demonstrated. Illustrations will be provided from data on both developed and developing countries.

R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also Latino Studies Program 220)
Discusses the health status of Latinos in the United States. Specifically, it will explore intragroup diversity such as migration, economic status and the influence of culture and the environment on health status and access to health care. Although focus is on Latino population, discussion encompasses other minorities who face similar problems.

R SOC 301 Theories of Society
Fall. 3 credits. Prerequisite: S-U grades optional. M W F 11:15-12:05.
P. R. Ehren.
An introduction to the "classical" sociological theorists for seniors, and beginning graduate students. Emphasis on (1) the central concepts of the sociological tradition, (2) major classical theorists (Durkheim, Weber) and contemporary counterparts. The relevance of these theories to society to current events and social problems will be stressed.

R SOC 318 Ethnohistory of the Northern Iroquois
R. W. Venables.
The development of Iroquois (Haudenosaunee) history and culture is traced to the present day.

R SOC 324 Environment and Society (also Science and Technology 324)
Spring. 3 credits. M W F 1:25-2:15.
M. J. Pfeffer.
The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, environmental sociology, and environmentalism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships between substantive and philosophical/theoretical issues.

R SOC 321 Demographic Analysis in Business and Government
Spring. 3 credits. S-U with permission of instructor. Prerequisite: R SOC 213 or a statistics course. M W F 1:25-2:15.
W. Brown.
An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines and career orientations. Students will work on problems drawn from consumer marketing, education, housing and real estate development, human resources, health services.

R SOC 336 Rural Areas in Metropolitan Society
This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity; increased social and interdependence; and the social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group projects in rural communities.

R SOC 370 Comparative Issues in Social Stratification
Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40.
A. Lyson.
This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

R SOC 380 Independent Honors Research in Social Science
Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program.
Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the end of the third week of the semester of their senior year to the departmental honors committee representative, M. Pfeffer.

R SOC 408 Human Fertility in Developing Nations
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

R SOC 416 Population Policy
The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.

R SOC 425 Gender Relations, Gender Ideologies, and Social Change
Drawing on feminist and sociological theory and methods, within a comparative and global framework, the course examines gender ideologies, work-family linkages, and the transformation of the labor process as these reconfigure gender relations, state capacities, and cultural practices.

[R SOC 430 Migration and Population Redistribution] Fall. 3 credits. Prerequisite: undergraduates, one demography course or permission of instructor. Offered alternate years.
T R 8:40-9:55.
D. L. Brown.
This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic inter-relationships are emphasized as are implications of changes in local and regional population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relatedness are investigated.
Techniques and measurement issues associated with the analysis of migration and population distribution are discussed.

[R SOC 431 Social Demography of Minorities] Spring. 3 credits. S-U option.
M W 8:40-9:55.
D. T. Gurak.
Ethnic conflict and accommodation is examined in diverse settings (societies and historical periods). Demographic indicators (such as residential segregation, marital patterns, mortality and fertility differentials, and occupational mobility) of underlying social conditions serve as the principal vehicle for evaluating the status of ethnic relations.

[R SOC 437 Aging and Aging Social Policy in the 1990s] Fall. 3 credits. Prerequisite: R SOC 101 or its equivalent.
Not offered fall 1996; next offered fall 1997.
T R 11:40-12:55.
N. Glasgow.
An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution. Examines the issues behind basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements by the elderly.

[R SOC 438 Social Demography] Fall. 3 credits.
M W 8:40-9:55.
D. T. Gurak.
This course surveys the methods, theories, and problems of population studies. Attention is directed to the social, economic, and cultural determinants and consequences of population growth, distribution, and change. The core areas of demography, fertility, mortality, and migration are studied.
Comparisons are made between developed and developing areas and between Africa, Asia, and Latin America.

[R SOC 440 The Social Impact of Reproductive Technology] Spring. 3 credits.
S-U grades optional.
Offered alternate years.
Not offered spring 1996.
C. C. Geisler.
Social Impact Assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and a decision tool for mitigation.
The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.

[R SOC 442 American Indian Philosophies: Selected Topics] Spring. 3 credits. S-U grades optional.
Prerequisite: Permission of instructor.
Not offered 1996-97.
T 1:25-4:25.
R. W. Venables.
This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

[R SOC 490 Society and Survival] Fall. 3 credits. Prerequisite: introductory sociology course or permission of instructor.
Not offered 1996-97.
T R 2:55-4:10.
D. T. Gurak.
Course surveys existing theories, methodological techniques, and research results relating to how social, economic and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policies in different societies is assessed.
Attention is given to the problems associated with imputing causality in morbidity and mortality data.

Not offered 1996-97.
M 1:25-2:15.
P. D. McMichael.
Pacific Rim dynamics challenge U.S. supremacy, Western conceptions of modernization, and "Third World" unity. We relate these trends to regional political, economic, and cultural forces, including the Japanese model, the "Newly Industrializing Countries" (e.g., South Korea, Taiwan), the "third tier" countries (e.g., Indonesia, the Philippines), and emerging Chinese markets.

[R SOC 494 Special Topics in Rural Sociology] Fall or spring. 4 credits maximum.
S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.
Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[R SOC 495 Population, Environment, and Development in Sub-Saharan Africa] Fall. 3 credits.
Offered alternate years.
J. M. Stycos.
In the past three decades, countries in sub-Saharan Africa have experienced rapid population growth, weak economic growth, and growing environmental problems. This course examines how these problems are interrelated and looks at possible solutions.
After reviewing trends in population, environment and development within the region, the course focuses on specific problems, including, urbanization, health and survival, population pressure and sustainable agriculture, refugees, and gender/family/community structures.

[R SOC 497 Independent Study in Rural Sociology] Fall or spring. 3 credits variable (may be repeated for credit).
Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional.
Informal study may include a reading course, research experience, or public service experience.

[R SOC 603 Classical Sociological Theory] Fall. 4 credits.
Offered alternate years.
Not offered fall 1998; next offered fall 1999.
S-U grades optional.
Prerequisites: open to graduate students and undergraduates with permission of instructor.
T R 2:55-4:10.
M. J. Pfeffer.
Students will review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, and Marx.
Course materials include original texts and secondary literature, used to examine the concepts, methods and explanation in classical sociological thought. Important objectives of the course will be to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical theories to contemporary social change and development.

[R SOC 604 Theories of Social Change] Spring. 3 credits.
S-U grades optional.
Not offered 1996-97.
T R 2:55-4:10.
P. D. McMichael.
This course surveys major twentieth-century social theories, focusing on lineages from classical theory and on theories relevant to understanding the processes of social change.
Major topics covered will include mid-century functionalism, conflict theories, neo-Marxism, neo-Weberianism, substantive economic sociology, and world-systems theory. Other topics, such as the "new sociology of culture," critical theory, structuration theory, neo-functionalism, the new methodological individualism, and the macro-micro link, will be covered briefly.

[R SOC 606 Contemporary Sociological Theories of Development] Spring.
3 credits.
S-U grades optional.
Staff.
Development is now understood to include life expectancy, health and education in addition to material well-being, and it remains a problem everywhere, in both the rich and poor countries, and within them, for regions and communities.
Sociological explanations of development have recently crystallized around three competing positions: political economy, rational choice institutionalism, and sociological structuralism.
The course will focus on these theories, their antecedents and close cousins, and their research and policy implications.

3 credits.
T R 10:10-11:25.
J. M. Stycos.
A voluminous new literature is emerging, attempting to trace the connections between population dynamics and environmental change.
The seminar will be devoted to a critical examination of this literature, stressing population change both as cause and consequence of environmental factors.
In addition, the social and economic forces that mediate the population-environment relation will be examined.

AGRICULTURE AND LIFE SCIENCES - 1996-1997
R SOC 618 Research Design I  
Fall. 4 credits. Prerequisite: a statistics course. Offered alternate years.  

The first part of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

R SOC 619 Research Design II  
Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. Offered alternate years.  

The second part of the two-semester sequence in introductory graduate methods, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

R SOC 651 Politics and Economics of Rural and Regional Development  
Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Offered every other year. Not offered fall 1996 and 1998; next offered fall 1997.  

A survey of social, political, and economic factors in regional development. Theories of regional development and underdevelopment are explored. The neoclassical paradigm is offered as a benchmark against which other more "structural" alternatives can be compared. The politics of rural and regional development are explored through sets of readings dealing with industrial policy.

R SOC 643 Land Reform Old and New  

Land reform continues to be a major concern of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its nature and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.

R SOC 645 Rural Economy and Society  
Fall. 3 credits. Offered alternate years. Not offered 1996-97.  

The structure and dynamics of rural communities are examined in a comparative historical framework focusing on continuities and divergences among advanced and post-colonial settings. Major topics include classical theories of rural social organization and their retheorization in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.

R SOC 655 Advanced Techniques of Demographic Analysis  
Spring. 3 credits. Prerequisites: CEH 606, graduate standing or permission of instructor. M 7:30-10:30 p.m.  
D. T. Gurak.

An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics to be covered.

R SOC 661 Sustainable Agriculture and Ecology  

This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, and the political and policy contexts of more sustainable agricultural systems.

R SOC 671 Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also Women's Studies 671)  
Spring. 3 credits. Offered alternate years.  

Employing a sociology of knowledge perspective and comparative approach within the social sciences, this course will review and analyze contemporary themes in the feminist epistemological critique of sociological methods. It will begin by identifying what constitutes mainstream explanations within the social sciences, introduce early feminist challenges to androcentric paradigms, move to examine the philosophical and post-modern challenge, and outline issues critical to "doing fieldwork." We will examine studies which address issues of class, race ethnicity, and constructions of otherness.

R SOC 675 Global Patterns of International Migration  
Fall. 3 credits. Offered alternate years.  
M 7:30-10:30 p.m. M. M. Kritz.

International migration to the United States and other countries has increased in recent decades. What accounts for that trend in an era when large-scale international migration is supposed to have ended? And what are the implications of immigration for receiving countries? Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspectives. Several migration systems are covered, including those of North America and the European Community. Policies shaping immigration are also reviewed.

R SOC 694 Special Topics in Rural Sociology  
Fall or spring. 4 credits maximum.  
S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and
will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

R SOC 715 Comparative Research Methods
Fall. 3 credits. Offered alternate years. M. J. Naughton. T. A. Lyson. This seminar focuses on the comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

R SOC 718 Multidimensional Measurement and Classification
Fall. 4 credits. Prerequisite: previous course work in statistics and sociology. Offered alternate years. Not offered fall 1996 and 1998; next offered fall 1997. T. E. Pratt. An advanced course in measurement and scaling, building upon work by Thurstone. Guttman and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factorizing design, factorizing techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.

R SOC 719 Logistic and Log Linear Models
Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. Offered alternate years. Not offered spring 1997 and 1999; next offered spring 1998. T. R. S. Robinson. J. D. Francis. The focus of this course revises multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then moving from a view of regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.

R SOC 721 Sociology of Environment and Development
Fall. 3 credits. Offered alternate years. S-U optional. W. 10:10-12:35. M. J. Pfeffer. This course examines society/environment relations in the contemporary environmental discourse and in sociology. Students evaluate such topics as sustainability, science and ethics, and the definition of nature. The central objective is to evaluate sociological theories' treatment of the problems of environmentalism. Subsidiary objectives include the identification of key sociological issues in contemporary environmentalism and review of environmental themes in sociological theory.

R SOC 725 The Sociology of "Third World" States
Fall. 3 credits. Offered alternate years. T. 1:25-4:25. S. Feldman. This course examines how processes of political and economic restructuring have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization and trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism and fundamentalism as these reconfigure national and regional alliances and practices.

R SOC 730 Sociology of the World Economy
Spring. 3 credits. S-U grades optional. Offered alternate years. W. 1:25-4:25. P. D. McMichael. Analyses of social change and development are increasingly sensitive to global context, including the sociology of the world economy as a multi-layered entity, anchored in an evolving division of world labor and interstate system. The analysis of transnational economic and cultural processes (such as food regimes, commodity chains, and international labor complexes), has substantive and methodological dimensions, considering a variety of levels and kinds of analysis of global processes. This includes global theories (and their limits), and methods of situating local processes within their world-historical context.

R SOC 741 Community Development and Local Control
Spring. 3 credits. Offered alternate years. Not offered 1996-97 W. 1:25-4:25. C. C. Geiger. Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."

R SOC 771 Special Seminar
Fall or spring. Credit to be arranged. Limited to graduate students; others by permission of instructor.

R SOC 791 Teaching Experience
Fall or spring. 1-3 credits. Limited to graduate students. S-U grades only. Participation in the ongoing teaching program of the department.

R SOC 792 Public Service Experience
Fall or spring. Credit to be arranged. Limited to graduate students. S-U grades optional. Participation in the ongoing public service activities of the department.

R SOC 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

R SOC 801 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

Related Courses in Other Departments
(Others may be added)
Introduction to Sociology (SOC 101)
Population Dynamics (SOC 205)
Social Analysis of Ecological Change (S&T&S 660 and B&SOC 460)
Population Policy (B SOC 414)
Gender Relations, Gender Ideologies, and Social Change (WMNS 554)

Summer Session Courses
Introduction to Sociology (6-week session)
Environment and Society (3-week session)
Successful Aging: Today and Tomorrow (3-week session)

SOIL, CROP, AND ATMOSPHERIC SCIENCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject
Crop Science: 311, 312, 314, 315, 317, 608, 610, 612, 613, 614, 642, 690, 691, 820, 920, 921
Environmental Information and Analysis: 420, 461, 620, 660, 675
This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes management concepts that conserve or renew those resources for continuing benefit to society. The information is of general value for non-majors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the World Wide Web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

SCAS 498 Special Topics in Soil, Crop, and Atmospheric Sciences (undergraduate level)
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 497 Individual Study in Soil, Crop, and Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

SCAS 498 Teaching Experience in Soil Science, Crop Science, and Atmospheric Science
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form. The topics in soil science or crop science or atmospheric science are arranged in the instruction of a departmental course.

SCAS 499 Undergraduate Research
Fall or spring. Credit to be arranged. Students must register with an Independent Study form. The topics in soil science or crop science or atmospheric science are arranged in the instruction of a departmental course.

SCAS 695 Planning and Reporting Research
Spring. 2 credits. Prerequisite: graduate student status or permission of the instructor. Limited to 10 students. Lec to be announced. G. W. Fick.
This course is designed to prepare students in the SCAS Department and closely related fields for planning their research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either thesis proposals, grant proposals, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

SCAS 695 Planning and Reporting Research
Spring. 2 credits. Prerequisite: graduate student status or permission of the instructor. Limited to 10 students. Lec to be announced. G. W. Fick.
This course is designed to prepare students in the SCAS Department and closely related fields for planning their research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either thesis proposals, grant proposals, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

SCAS 101/102 Science of Earth Systems Colloquium (also ABEN 120/121, GEOI 123/124)
Fall and spring. 2 credits. Lec, T 1:25-4:10; K. H. Cook. Weekly one-our seminars followed by discussion of current topics in the study of the earth system. Introduces the student to scientific issues relating to understanding our planet and managing the environment. See "Interdisciplinary Centers, Programs, and Studies." in the introductory section of the catalog for a complete description of a new program in the Science of Earth Systems.

SCAS 131 Basic Principles of Meteorology
Fall. 3 credits. Lecs, T R 11:15; lab, T W or R 1:25-4:25 and M W 7:00-9:30 p.m. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

SCAS 240 Statistical Methods
Fall. 4 credits. Prerequisites: one year of calculus and one semester of physics. M W F 10:10-11:05. W. W. Knapp.
Introduction to atmospheric dynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

SCAS 332 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 10:10-11:05. W. W. Knapp.
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

SCAS 333 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lecs, M W F 11:15-12:05; disc, R 1:25. K. H. Cook, P. J. Gierasch.
Processes that determine climate and contribute to its change are discussed, including comparisons with climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonia deforestation.
SCAS 435 Statistical Methods In Meteorology  
FALL 3 credits  Prerequisite: an introductory course in statistics (e.g., BTRY 215 or ARME 310) and calculus. T R 10:10-11:25. D. S. Wilks.  
Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

SCAS 444 Tropical Meteorology  
Structure and dynamics of the tropical atmosphere on a wide range of time and space scales ranging from meso-scale convective systems to planetary waves. Topics include hurricanes, monsoon circulation, and El Nino.

SCAS 446 Modeling the Earth System  
Project-oriented exploration of aspects of the Earth System through computer modeling. Intended primarily for science majors with computing experience, preferably in FORTRAN. Lectures focus on facilitating student projects, discussing basic concepts governing the Earth system dynamics, and evaluating complex models. Students develop a model on a topic of their choice.

SCAS 447 Physical Meteorology  
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

SCAS 451 Synoptic Meteorology II  
Structure and dynamics of large-scale mid-latitude weather systems, such as cyclones, anticyclones and waves, from the perspective of a quasi-geostrophic model of the atmosphere.

SCAS 456 Mesoscale Meteorology  
SPRING 3 credits  Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. Offered alternate years. Not offered spring 1997; next offered spring 1998. T R 12:20-1:35. S. J. Colucci.  
Structure and dynamics of mid-latitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.

SCAS 457 Atmospheric Air Pollution  
FALL 3 credits  Prerequisites: SCAS 341 or one course in Thermodynamics and one semester of chemistry or permission of instructor. Offered alternate years. Offered 1996-97. M. W. F 11:15-12:05. M. W. Wysocki.  
Course will examine sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

SCAS 635 Advanced Statistical Meteorology  
FALL 3 credits  Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. Lec., T R 10:10-11:25, R 11:35-12:05. D. S. Wilks.  
Lectures and topics concurrent with SCAS 435, plus an extra 30-minute session per week in which selected topics from SCAS 435 are treated in more depth, and additional topics are covered which may vary from year to year according to student interest. Term project required.

SCAS 646 Modeling the Earth System  
Lectures concurrent with SCAS 446 (see description). Graduate students have different problem sets and more sophisticated projects.

SCAS 652 Advanced Atmospheric Dynamics  
SPRING 3 credits  Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. Offered alternate years. Offered spring 1997. M. W. F 11:15-12:05. S. J. Colucci.  
Quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

SCAS 662 Special Topics in Atmospheric Sciences  
FALL or spring 1-6 credits  S-U grades optional.  
Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 650 Master's-Level Thesis Research in Atmospheric Sciences  
FALL or spring 1-6 credits  Credit by arrangement.  
S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

SCAS 655 Graduate-Level Dissertation Research in Atmospheric Sciences  
FALL or spring 1-6 credits  Credit by arrangement.  
S-U grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

SCAS 631 Grain Crops  
SPRING 4 credits  Prerequisite: SCAS 260 or BIOPH 241. Lec., M. W. F 10:10; lab, M 1:25-4:25. 1 or 2 field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf.  
Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, liming and mineral nutrition, weed control, cropping sequences, management systems, and crop improvement are considered. Grain, protein, oil, fiber, and sugar crops are emphasized. Laboratory utilizes living plant material, extensive crop garden, and computer simulation.

SCAS 312 Forage Crops  
SPRING 4 credits  Prerequisites: SCAS 260 or BIOPH 241 or equivalent. Recommended: AN SC 212. Lec., M. W. F 11:15; lab, M or T 1:25-4:25. G. W. Pick.  
The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and com are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

SCAS 314 Production of Tropical Crops  
SPRING 3 credits  Offered 1996. Hours to be announced. E. C. Fernandes.  
An introduction to major tropical cropping systems, their characteristics and management for sustainability.

SCAS 315 Weed Science  
FALL 3 credits  Prerequisite: introductory course in biology or botany. Lec., T R 9:05; lab, T W 2:45-4:25. Staff.  
Principles of weed science are examined. Emphasis is on (a) weed ecology, (b) chemistry of herbicides in relation to effects on the environment and plant growth, and (c) control of weeds in crops. Laboratory covers weed identification and ecology, herbicide selectivity, symptomology, and behavior in soil.

SCAS 317 Seed Science and Technology  
FALL 3 credits  Prerequisite: BIOPH 241 or equivalent. Offered alternate years. Not offered fall 1996; next offered fall 1997. Lec., T R 11:15; lab, R 1:25-4:25. 2 all-day field trips will be scheduled during the semester. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)  
The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

SCAS 306 Water Status in Plants and Soils  
FALL 1 credit  Prerequisite: permission of instructor. S-U grades only. Offered alternate years. Offered fall 1996. Lec. 1 hour to be arranged; lab, R 1:25-4:25 or as arranged. T. L. Setter.  
Techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.
SCAS 610 Physiology of Environmental Stresses
A study of the responses of plants to environmental stresses, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

SCAS 612 Seed Physiology
Spring. 3 credits. Prerequisite: plant physiology. Not offered spring 1997. Lec: T R 8:30-9:55. R. L. Obendorf. Morphology, physiology, and biochemistry of cereal, legume, and oil-seed formation, composition, storage, and germination. Emphasis is on the deposition of seed reserves during seed formation, stabilization of reserves during storage, and mobilization of reserves during germination. Topics range from on-farm problems to molecular mechanisms.

SCAS 613 Physiology and Ecology of Yield

SCAS 614 Research Methods in Weed Physiology
Spring. 2 credits. Prerequisite: SCAS 315 or equivalent. Offered alternate years. Not offered spring 1997. Staff. Examination of a variety of modern techniques used to study herbicide absorption, translocation, metabolism, mode of action, and mechanism of resistance. Experiments will also be designed to study herbicide behavior and detection in soils. Laboratories will be accompanied by short lectures pertinent to experimental topics.

SCAS 642 Plant Mineral Nutrition (ALSO BIO PL 642)
Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Offered alternate years. Offered spring 1997. Lecs. M W F 10-11. J. V. Kochian, R. M. Welch. A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements will be emphasized to illustrate the above topics.

SCAS 690 Root-Soil Interactions
Fall or spring. 1-2 credits. S-U grades optional. Hours to be arranged. R. W. Zobel. A topic dealing with root-soil interaction will be selected during the first meeting of the term. Students will prepare one or two seminars based on published work on the topic. Possible topics include root genetics, root morphology, conservation tillage, and soil temperature.

SCAS 691 Special Topics in Crop Science
Fall or spring. 1-6 credits. S-U grades optional. Hours to be arranged. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests.

SCAS 620 Master's-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

SCAS 620 Graduate-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted for candidacy after the "A" exam has been passed.

Environmental Information and Analysis
SCAS 420 Geographic Information Systems
Fall. 3 credits. Prerequisite: instructor's approval. Lecs. T R 9:05-9:55; lab, M T W 1:25-4:25. S. D. DeGloria. Principles and applications of geographic information systems used for environmental assessment and economic development programs. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, database design and maintenance, data transformations, and map accuracy assessment are considered.

SCAS 461 Resource Inventory Methods (also Civil and Environmental Engineering 411)
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1996-97. S. D. DeGloria. A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

SCAS 620 Spatial Modeling and Analysis
Spring. 3 credits. Prerequisites: SCAS 420 or permission of instructor. Lecs. T R 9:05-9:55; lab, T 1:25-4:25. S. D. DeGloria. Theory and practice in the development, integration, and scientific visualization of spatial data for environmental process modeling, land classification and evaluation, and resource inventory and analysis. Application and evaluation of spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

SCAS 660 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)
Fall. 3 credits. Prerequisite: permission of instructor. Lecs. T R 12:20-1:10, lab, R 1:25-3:20. W. D. Philpot. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

SCAS 675 Application of Soil-Plant-Airmosphere Models
Spring. 3 credits. Prerequisite: SCAS 483 or equivalent and COM S 100 or equivalent. Offered alternate years. Not offered spring 1997; next offered spring 1998. Lecs. T R 1:25-2:45. S. J. Riha, J. L. Husson. Introduction to selection and use of soil-plant-atmosphere models. Topics covered will include problem analysis, general and specific types of models in current use, how to obtain and process data required to parameterize and drive models, and how to critically evaluate and present model output. The course will use a case study approach in which different models are used to address a number of current agricultural and environmental problems. Strengths and weaknesses in the use of soil-plant-atmosphere models for teaching, research, extension and policy formation will be discussed.

Soil Science
SCAS 260 Introduction to Soil Science
A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application to solving soil management problems. The laboratory exercises stress quantitative measurement of soil properties.

SCAS 321 Soil and Water Management
Spring. 3 credits. Prerequisites: SCAS 190 or 260. S-U grades optional. Lecs. T R 11:15-12:05; lab, R 2:30-3:30. H. M. van Es.
Course intended to introduce students to the principles of soil and water interaction and to the effects of human intervention in these processes. Aspects of soil and water management, including hydrology, soil erosion, water management, contaminant movement, tillage, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

SCAS 362 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R 1:25-4:25. All day field trip required. R. B. Bryant and J. M. Galbraith. The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.
SCAS 363 Intermediate Soil Science I: Genesis, Classification, and Survey
Fall, weeks 1-7. 2 credits. Prerequisite: SCAS 260. Lecs, M W F 10:10; lab, W 1:25-4:25. One all day field trip is required. R. B. Bryant. Factors and processes of soil formation. Principles of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Course ends at mid-semester and is part of a sequence of three Intermediate Soil Science courses.

SCAS 364 Intermediate Soil Science II: Physics
Fall, weeks 8-14. 2 credits. Prerequisite: SCAS 260, one year of calculus and consent of instructor. Lecs, M W F 10:10; lab, W 1:25-4:25. P. C. Baveye. Description and measurement of the status of water in soils. Theory of water, solute, and heat transport. Infiltration, drainage, and redistribution. Weekly laboratory and problem-solving sessions illustrate the concepts introduced in class. Course starts at mid-semester and is part of a sequence of three intermediate Soil Science courses.

SCAS 365 Intermediate Soil Science III: Chemistry and Microbiology
Spring, 2 credits. Prerequisite: SCAS 260. T R 10:10-11:30. M. B. McBride and M. Alexander. The chemical properties and microorganisms of soil and the chemical reactions and transformations occurring in soil. This course is part of a sequence of three intermediate Soil Science courses.

SCAS 371 Hydrology and the Environment (also ABEN 371 and GEOL 204)
Spring. 3 credits. Students enrolled in the statutory colleges must enroll in ABEN 371 or SCAS 371. Prerequisite: 1 course in calculus. Lecs, T R 9:05; lab, F 1:25-3:20. T. S. Steenhuis, J.-Y. Parlange, M. F. Walter, L. M. Cathles, P. C. Baveye. An introduction to hydrology as a description of the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river routing, flood, and droughts. Case studies, short field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.

SCAS 372 Soil Fertility Management
Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor. S-U grades optional. M W F 10:05. D. R. Bouldin. An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and manure in crop production.

SCAS 373 Soil, Water, and Aquatic Plants
Fall. 3 credits. Prerequisites: SCAS 260, BIO G 101-102, and CHEM 103-104 or equivalents. Lecs, T R 11:15; lab, R 1:25-4:25. J. H. Pevery. The success or failure of soil and water management is manifested in streams, wetlands, lakes, and aquifers. Chemical and biological changes downstream are studied and related to agricultural management techniques upstream. Basic chemical and physiological processes are presented and used to suggest appropriate responses to water management problems.

SCAS 385 Biogeochemical Cycles, Agriculture, and the Environment
Spring. 2 credits. Prerequisites: CHEM 103 or 207, SCAS 260 or equivalent. Lecs, T R 11:15-12:45. J. M. Duxbury. The impact of agriculture on aspects of the global biogeochemical cycles of carbon, nitrogen, sulfur, and phosphorus is discussed and illustrated with current agricultural and environmental issues. Topics include sustainable agriculture, effects of nitrogen fixation, acid rain, global warming, and land disposal of wastes.

SCAS 471 Properties and Appraisal of Soils of the Tropics
Spring. 3 credits. Prerequisite. SCAS 260 or equivalent. S-U grades optional. No audits accepted. Offered alternate years. Not offered spring 1999; next offered spring 1998. Lecs, T R 12:20; disc, W 1:25-2:45. A. Van Wambeke. The course examines soils in which soils form, and considers ecological, geological, and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties are described, and methods to alleviate the constraints to crop production examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes through a series of case studies. Topics include the most recent sources of information generated in tropical countries and published in Latin-American, Francophone, and English journals. The last part of the course gives special attention to soil-affected soils, paddy rice cultivation and the characteristics of acid-sulfate soils.

SCAS 473 Ecology of Agricultural Systems (also BIOES 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years. Lecs, F 10:00; disc, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. A. G. Power and staff. Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

SCAS 483 Environmental Biophysics
Fall, 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor. Lecs, M W F 11:15. S. J. Riba. Introduction to basic principles of energy and water transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, and water dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

SCAS 663 Pedology
Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Textbook recommended, not required. Offered odd spring semesters. R. B. Bryant. Weathering, reactions, and processes of soil genesis. Principles of soil classification and the rationale and utilization of soil taxonomy. Development and significance of major groups of soils of the world.

SCAS 666 Advanced Soil Microbiology
Fall. 1 credit. Prerequisite: SCAS 365 or permission of instructor. S-U grades only for graduate students. T 12:20.

A detailed study of measurement processes and of the hydrosystems of aquatic ecosystems. Discussion of current topics in special areas of soil microbiology. Particular attention is given to biodegradation, bioremediation and fate of chemicals.

SCAS 667 Advanced Soil Physics
Spring. 3 credits. Prerequisites. One year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Offered alternate years. Not offered spring 1997. Hours to be arranged. P. C. Baveye. A detailed study of measurement processes and of the hydrosystems of aquatic ecosystems. Discussion of current topics in special areas of soil microbiology. Particular attention is given to biodegradation, bioremediation and fate of chemicals.
SCAS 693 Special Topics in Soil Science
Fall or spring. 1-6 credits. S-U grades optional. Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 880 Master's-Level Thesis
Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

SCAS 980 Graduate-Level Dissertation
Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy for a Ph.D. program only before the "A" exam has been passed.

SCAS 981 Doctoral-Level Dissertation
Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

VEGETABLE CROPS
See Horticultural Sciences.

FACULTY ROSTER
Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology (Geneva)

ACCRE, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)

Agnew, Arthur M., Ph.D., North Carolina State U. Assoc. Prof., Entomology (Geneva)

Ahler, Beth A., Ph.D., Massachusetts Institute of Technology. Asst. Prof., Agricultural and Biological Engineering

Aist, James R., Ph.D., U. of Wisconsin. Prof., Plant Pathology

Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering

Aldwinckle, Herbert S., Ph.D., U. of London (England). Prof., Plant Pathology (Geneva)

Alexander, Martin, Ph.D., U. of Wisconsin. Prof., Soil, Crop, and Atmospheric Sciences

Allee, David J., Ph.D., Cornell U. Prof., Agricultural, Resource, and Managerial Economics

Alman, Naomi S., Ph.D., Stanford U. Assoc. Prof., Plant Breeding and Biometry

Andersen, Robert L., Ph.D., U. of Minnesota. Prof., Horticultural Sciences (Geneva)

Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering

Apgar, Barbara J., Ph.D., Cornell U. Assoc. Prof., Animal Science

Arneson, Phil A., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Pathology

Austic, Richard E., Ph.D., U. of California at Davis. Prof., Animal Science

Baer, Richard A., Ph.D., Harvard U. Prof., Natural Resources

Bain, Mark B., Ph.D., U. of Massachusetts. Assoc. Prof., Natural Resources

Bandler, David K., M.P.S., Cornell U. Prof., Food Science

Barbano, David M., Ph.D., Cornell U. Prof., Food Science

Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering

Bassuk, Nina L. Ph.D., U. of London (England). Prof., Floriculture and Ornamental Horticulture

Batt, Carl A., Ph.D., Rutgers U. Assoc. Prof., Food Science

Baugh, Sherene, Ph.D., SUNY Stonybrook. Asst. Prof., Landscape Architecture

Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science

Baveye, Philippe C., Ph.D., U. of California at Riverside. Assoc. Prof., Soil, Crop, and Atmospheric Sciences

Becker, Steven V., Ph.D., U. of California at Davis. Assoc. Prof., Plant Pathology

Beermann, Donald H., Ph.D., U. of Wisconsin. Prof., Animal Science

Bell, Alan W., Ph.D., U. of Glasgow (Scotland). Prof., Animal Science

Bellinder, Robin R., Ph.D., Virginia Polytechnic Inst. and State U. Assoc. Prof., Fruit and Vegetable Science

Bergstrom, Gary C., Ph.D., U. of Kentucky. Prof., Plant Pathology

Bjorkman, Thomas N., Ph.D., Cornell U. Assoc. Prof., Horticultural Sciences (Geneva)

Blake, Robert W., Ph.D., North Carolina State U. Prof., Animal Science

Botsclair, Yves R., Ph.D., Cornell U. Asst. Prof., Animal Science

Bosco, Richard N., Ph.D., U. of Minnesota. Prof., Agricultural, Resource, and Managerial Economics

Boo, Kathryn J., Ph.D., U. of California at Davis. Assoc. Prof., Food Science

Brady, John W., Jr., Ph.D., SUNY at Stonybrook. Assoc. Prof., Food Science

Brake, John R., Ph.D., North Carolina State U. Prof., Agricultural, Resource, and Managerial Economics

Broadway, Ronrose M., Ph.D., U. of California at Davis. Assoc. Prof., Entomology (Geneva)

Brown, Dan L., Ph.D., Cornell U. Assoc. Prof., Animal Science

Brown, David L., Ph.D., U. of Wisconsin. Professor, Rural Sociology

Brown, Susan K., Ph.D., U. of California at Davis. Assoc. Prof., Horticultural Sciences (Geneva)

Bryant, Ray B., Ph.D., Purdue U. Assoc. Prof., Soil, Crop, and Atmospheric Sciences

Burr, Thomas J., Ph.D., U. of California at Berkeley. Prof., Plant Pathology (Geneva)

Butler, Walter R., Ph.D., Purdue U. Prof., Animal Science

Calderone, Nicholas W., Ph.D., Ohio State U. Assoc. Prof., Entomology

Carlson, William S., Ph.D., Stanford U. Assoc. Prof., Education

Casella, George F., Ph.D., Purdue U. Prof., Plant Breeding and Biometry

Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin. Assoc. Prof., Plant Breeding and Biometry

Chapman, Lewis D., Ph.D., U. of California at Berkeley. Prof., Agricultural, Resource, and Managerial Economics

Chase, Larry E., Ph.D., Pennsylvania State U. Assoc. Prof., Animal Science

Cherney, Jerome H., Ph.D., U. of Minnesota. Prof., Soil, Crop, and Atmospheric Sciences

Christy, Ralph D., Ph.D., Michigan State U. Prof., Agricultural, Resource, and Managerial Economics

Coffman, W. Ronnie, Ph.D., Cornell U. Prof., Plant Breeding and Biometry

Collie, Royal D., Ph.D., Cornell U. Prof., Communication

Colliner, Alan R., Ph.D., Cornell U. Prof., Plant Pathology

FACULTY ADVISORS
Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

First-year students in the fine arts department are assigned faculty advisers for the first year. Students may then choose advisers in their major area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:
- Kent L. Hubbell, chair, Department of Architecture
- Purn Odjaydewala, chair, Department of City and Regional Planning
- Roberto Benina, chair, Department of Art

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, and the Foundry. Facilities for architecture, and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library are located in Sibley Hall. The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the basement of Sibley Hall. The college has three darkrooms that are available for general use by students in the college and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

NOTE: anticipated renovations of the college buildings will temporarily relocate some of the aforementioned facilities. More information on the current location of college facilities can be obtained by contacting the individual departments.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries

The Fine Arts Library, in Sibley Hall, serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning and landscape architecture. The library, with more than 12,500 books, is capable of dealing with undergraduate, graduate, and research programs. Some 1,900 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, in Sibley Hall contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 760,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to the academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall.

Rome Program

The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the famous Palazzo Massimo in the center of the historical city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.
The program in Rome offers components for students majoring in liberal arts, architecture, fine arts, and planning. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Hall gallery and the John Hartell Gallery. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have a weighted average for the term of not less than C (2.0). The record of each student who fails below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning: means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) Final Warning: indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) Required leave of absence: Academic Deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the Student Records Committee. The student must submit evidence that his or her time has been well used, and, if employed, must submit a letter from an immediate superior. If a student chooses to register for courses, either extramurally at Cornell or at another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average. Readmission to the college is at the discretion of the Student Records Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. Refer to the Architecture, Art & Planning Handbook (Whitebook) for further information regarding required leave of absence.

4) Required withdrawal: May Not Reregister, College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient. A cumulative average of at least C- (1.7) is required for graduation.

ARCHITECTURE

Professional Degree Program
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence of courses in design, consisting of studio work, provides an opportunity to establish a foundation in the history of architecture and cities, culture and society, visual studies, environmental science, structures, and building technology provide a base for the work in design.

In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through detailed further studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

Overlap Program
For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute Arch 601-602 or 603-604 for Arch 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field secretary for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including Arch 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

### Alternative Programs

**Bachelor of Fine Arts**

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic back-
Admission requirements. Two years of undergraduate study, Arch 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

Procedure. Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective transfer students. Before applying, all prospective internal transfer students meet with a member of the architecture faculty to discuss scheduling for the program.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, 135 East Sibley Hall, Ithaca, New York 14853-6701.

Curriculum. A student entering the program is assigned an advisor from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: Arch 380 through Arch 399
2) 12 credits in 600-level architectural history seminars: Arch 681 through Arch 699; or 8 credits in a 600-level seminar plus Arch 499, offered for honors candidates only
3) One 300-, 400-, or 600-level course in architectural theory
4) 24 credits in electives selected in consultation with the student's adviser
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A- in all history of architecture courses taken at the 300 level, and have completed an honors thesis (Arch 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.Arch. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree, with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, including thesis, are offered at first- through fifth-year levels in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program. At the graduate level participation in the summer program cannot be undertaken without the consent of the student's Special Committee.

Furniture design, architectural structures, and computer visualization may be offered as elective courses, contingent upon student interest and faculty availability.

The department offers a Career Discovery Program in Architecture for high school students and undergraduates interested in exploring the possibility of a career in architecture.

Architectural Design

Courses in brackets are not offered this year.

A studio fee of $65 is charged each semester for every design course (these fees are subject to change).

Sequence Courses

ARCH 101 Design I
Fall. 6 credits. Limited to department students.
An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102 Design II
Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201-202 Design III and IV
Fall and spring. 6 credits each term. Coregistration in Architecture 231-232 and completion of Architecture 151-152 required. Limited to department students.
Prerequisite for Architecture 201 is Architecture 102 and Architecture 152. Prerequisite for Architecture 202 is Architecture 201.

ARCH 301-302 Design V and VI
Fall and spring. 6 credits each term. Limited to department students.
Prerequisite for Architecture 301 is Architecture 202. Prerequisite for Architecture 302 is Architecture 301.

ARCH 401-402 Design VII and VIII
Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 401 is Architecture 302. Prerequisite for Architecture 402 is Architecture 401.

Programs in architectural design, urban design, or architectural technology and environmental science, etc.

ARCH 501 Design IX
Fall or spring. 6 credits. Limited to department students. Prerequisite: Architecture 402.

Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis is followed by tutorial work with the student's advisory committee.

ARCH 502 Design X—Thesis
Fall or spring. 8 credits. Prerequisites: Architecture 501 or Architecture 500 and Architecture 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

ARCH 601-602 Special Program in Architectural Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

ARCH 603-604 Special Program in Urban Design
Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

Graduate Courses

ARCH 701-702 Problems in Architectural Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703-704 Problems in Urban Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: Architecture 701 and Architecture 702. Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: Architecture 703 and Architecture 704. Second-year design course for graduate students whose major concentration is regional design.
Elective Design Courses
ARCH 103-104 Elective Design Studio
103, fall, 104, spring. 6 credits each term.
Limited to students from outside the department. Prerequisite for Architecture 103: permission of instructor required. Prerequisite for Architecture 104: Architecture 103 and permission of instructor.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Prerequisite for Architecture 500 is Architecture 402.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. Independent study.

Related Courses and Seminars
ARCH 110 Introduction to Architecture: Design Studio
Summer session. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 311 An Introduction to Architectural Design
Fall or spring. 4 credits. Open to out-of-department students only. Not offered 1996-97.

An introduction to architectural design as a conceptual discipline. Exercises will develop an understanding of architectural space and its elements.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum, 3). For students in the Rome program only.
The course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits each term.
An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with Architecture 500.
Prerequisite for Architecture 500 is Architecture 402. Architecture 500 will be considered equivalent to Architecture 501 when taken concurrently with Architecture 510 during a foreign summer program or in Rome.
Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for but not limited to graduate students in the Architectural Design and Urban Design Program.
Issues in architectural and urban design. Required for first-year graduate students in design.

ARCH 611-612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students.
Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.
The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.
Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students.
Not offered every year.
A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

Architectural Theory
ARCH 130 An Introduction to Architecture: Lecture Series
Summer. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.
A survey course that covers the many facets of architecture--history, design principles, preservation, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstra-

tions, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.
Intended to familiarize non-architecture students with the art and science of architecture. Fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus.

ARCH 132 An Introduction to Architecture
Spring. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.
Non-architecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Cross-cultural and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

ARCH 231 Architectural Analysis I
Fall. 2 credits. Architecture students must register concurrently in Architecture 201. An introduction to analysis of the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II
Spring. 2 credits. Architecture students must register for this course concurrently with Architecture 202. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: Architecture 231-232 or permission of instructor. Not offered every year.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.
Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan, "DOM-INO" theory.

ARCH 337 Special Investigations in the Theory of Architecture
Fall or spring. Variable credit (maximum, 3). Prerequisite: Architectural Design 402. Open to non-architecture students by permission of instructor and approved independent study form. Independent study.
Architecture, Culture, and Society
ARCH 342 Architecture as a Cultural System
Spring. 3 credits. Architecture 445, 446, 447, or 448 can substitute with permission of instructor.
What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is a significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geometries of non-Western traditions, and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year.
This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year.
This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year.
This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about “evil eye.”

Fall, 647; fall, 648. Spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 1996–97.
Fall term, theory, spring term, problem solving and method. An examination of the relationships between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

ARCH 649 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

Visual Studies
Darkroom fees charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits.
Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: Architecture 151.
Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I
Fall or spring. 3 credits each term. For description see Art 161.

ARCH 351 Photography II (also Art 261)
Spring. 4 credits. Prerequisites: Architecture 251 or Art 161, or permission of instructor. For description see Art 261.

[ARCH 356 Architectural Simulation Techniques]
Fall or spring. 3 credits. Prerequisite: Architecture 151 or permission of instructor. Not offered 1996–97.
Two- and three-dimensional simulation techniques in architecture. Emphasis on simulation of environment, space, materials, and lighting as visual tools for architectural design.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Collaboration and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of...
architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project In Photography
Fall or spring. Variable credit (maximum, 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum, 3). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topics to be announced before preregistration.

ARCH 485 Special Investigations in Visual Studies II
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 489 Special Topics in Visual Studies II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topic to be announced before preregistration.

Architectural Science and Technology Structures

ARCH 263 Structural Concepts
Fall. 4 credits. Prerequisite: Mathematics 111 or approved equivalent. Fundamental concepts of structural behavior, statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264 Structural Elements
Spring. 3 credits. Prerequisite: Architecture 263. Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

ARCH 363 Structural Systems
Fall. 3 credits. Prerequisite: Architecture 264. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 483 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 263, 264, and 363 or permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Construction

[ARCH 160 The History of Architectural Technology]
Fall or spring. 3 credits. Not for students in the Department of Architecture. Not offered 1996–97. Architectural technology is a seemingly illogical blend of scientific knowledge and empirical experience. Whereas it may seem chaotic to the nonprofessional, it is a product of logic in the widely differing areas of design, structure, installation, production and erection, material use, law, economics, and historical development. The evolution of this interdependence is treated using examples of architectural and civic engineering works and processes.

[ARCH 161 An Introduction to Building Technology]
Fall. 3 credits. Open to out-of-department students only. Not offered 1996–97. An introduction to building technology, materials, and construction systems for non-architecture majors. Topics will include structure (why buildings stand up); enclosure (mediation of environmental conditions); mechanical systems (how buildings provide comfort, hygiene, and safety); and interior surfaces (walls, floors, ceilings, acoustical behavior, and fire safety). The relationship between the principles and practices underlying the construction of buildings ("technology") and what buildings look like ("design") will also be explored. Concepts rather than computation will be emphasized.

ARCH 282 Building Technology, Materials, and Methods
Spring. 3 credits. Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 465 Special Topics In Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 262 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 475 Special Investigations In Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Environmental Controls

ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits. The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage, foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits. Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design. Light, color, and form. Natural lighting possibilities and constraints. Good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits. Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems and plumbing.

ARCH 464 Special Topics In Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 261, 361, and 362 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 474 Special Investigations In Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures, 1 recitation. D. Greenberg. Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology will be presented. Technical fundamentals of computer graphics capabilities will be emphasized. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education itself. The course will be heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization
For description, see Computer Science 417.

ARCH 375 Practicum in Computer Graphics (also Computer Science 419)
Spring. 2 credits. Prerequisite: Computer Science 211. Recommended: Computer Science 314. Corequisite: Architecture 374. Not offered every year. Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid-image generation on raster graphics displays.

ARCH 378 Microcomputer Applications In Design
Fall. 3 credits. Prerequisites: previous knowledge of PASCAL-based CAD or permission of instructor. This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It comprises seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Prerequisites: Limited to third-year students and above. Not offered every year. Exploration of the formalization of the design process for compatibility with the computer,
The history of the built environment as social ideas are addressed in greater detail for and cultural expression from more recent times. Themes, theories, and cultural expression from the earliest to

ARCH 181 History of Architecture I
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The course considers change and transformation of building types and their elements within the general context of social demands.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain. The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. This course examines the most significant theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381 Greek and Roman Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. The history of architecture and urban design during the sixteenth century. The course also investigates architecture and urban design in Italy from 1300 to the mid-sixteenth century.

ARCH 382 Architecture of the Middle Ages
Fall. 4 credits. Prerequisites: Architecture 181-182 or permission of instructor. Credit for this course may be obtained by taking History of Art 332. Not offered every year. Not offered 1996-97.

The course surveys medieval architecture from the Early Christian period to the late Gothic (A.D. 300-1500). Emphasis is given to the development of structural systems, form, function, and meaning of important medieval buildings.

ARCH 383 The City
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. This course examines urban form and urban consciousness from the bronze age to the industrial revolution. It studies conceptions of the city, competing urban paradigms, images of cities both real and fictive, as well as the religious and cultural practices associated with city design.

ARCH 384 The Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. This course focuses on the leading architects and theorists of the Renaissance from within the context of political and cultural developments in Italy from 1300 to the mid-sixteenth century. The course also investigates specific architectural problems faced by designers as well as questions of architectural patronage, practices, and theories.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the nineteenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. This course presents the turn of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization will be emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernismo, and Jugendstil.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. The modern movement from the 1890s through the 1940s is considered in this course. The course examines architecture and urban design for individuals, groups, and institutions, from Le Corbusier's Ville Contemporaine to Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in the service of the state during the 1930s.

ARCH 389 Architecture, Revolution and Traditions
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. From the early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism—the doctrine of unlimited government control—was challenged; Enlightenment attitudes—commitments to human reason, science and education—gained ascendency. This course considers architectural and urban design in these tumultuous times. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in admission to those of European colonists and settlers.

ARCH 391 American Architecture and Building II
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well
as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

**ARCH 392 Modern Architecture On Film**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium’s birth until the present day. The focus will vary each semester with particular emphasis to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect.

Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

**ARCH 393 The Cumulative City**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Well established cities were transformed by radical and imagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

**ARCH 394 Toward the Millennium**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

**ARCH 395 Contemporary Issues in the Built Environment**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. A consideration of how certain social, cultural, political, ethical, and economic issues are manifest in the architectural and built environments of the United States. Overarching issues will be examined through case studies such as the question of monuments and monumentality in a contemporary, multicultural society through the Vietnam Memorial in Washington, D.C., Holocaust museums and memorials, and the preservation of the Audubon Ballroom as a memorial to Malcolm X. Historical concerns and examples will be brought to bear on these contemporary manifestations of preservation, monumentality, gender, class, professional responsibility, and ethics and design as a collaborative art. A course for architects, planners, and preservationists but also clients and users of buildings and landscape.

**ARCH 396 Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Topic to be announced.

**ARCH 397 Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Topic to be announced.

**ARCH 398 Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Topic to be announced.

**ARCH 399 Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Topic to be announced.

**Courses in Preservation**

**ARCH 583 Measured Drawing**  
For description, see CRP 567.

**ARCH 584 Problems in Contemporary Preservation Practice**  
For description, see CRP 563.

**ARCH 585 Perspectives on Preservation**  
For description, see CRP 562.

**ARCH 586 Documentation for Preservation**  
For description, see CRP 560.

**ARCH 587 Building Materials Conservation**  
For description, see CRP 564.

**ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses**  
For description, see CRP 561.

**Graduate Seminars in the History of Architecture and Urbanism**

**ARCH 680 Seminar in Historicography**  
Fall. 4 credits. Prerequisite: permission of instructor. Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism program.

**ARCH 682 Seminar in Urban History**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 683 Seminar in the History of Theory**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 685 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 686 Seminar in Twentieth-Century Architecture and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 687 Seminar in the History of Cities**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 688 Seminar in Nineteenth-Century Architecture, Building, and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 689 Seminar in Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 690 Seminar in American Architecture, Building, and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 691 Seminar in Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 692 Seminar in Special Topics in the History of Architecture and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

**ARCH 693 Seminar in the History of Architecture and Urbanism**  
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit. Prerequisite: permission of instructor. Independent study for graduate students.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in Arch 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit. Independent study for the doctoral degree.

ART

Undergraduate Program
The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

The curriculum in art is a program of study within the College of Architecture, Art, and Planning. The undergraduate curriculum in art is an excellent background for a career in applied art although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

All members of the faculty in the Department of Art are active, practicing artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can petition to be registered in both colleges simultaneously. Each student will be assigned an adviser in both colleges, of their dual degree program, to provide needed guidance. As a candidate for two degrees you must satisfy all requirements for both degrees. At least 67 of the total credits must come from courses offered in the Department of Art and an additional 6 credits of History of World Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution
150 credits are required for the B.F.A. degree. A minimum of 67 are taken in the Department of Art and an additional 6 credits of Survey of World Art. A minimum of 49 are taken outside the department.

Curriculum
Students are expected to take an average course load of 16 credits per semester during their four years. No more than three studio courses may be taken in any one semester. Studio courses may be repeated for elective credit. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned prior to the act.

Specific Course Requirements
By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, and photography and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration
Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, or photography or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students must complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total)
The required courses for each concentration are as follows:

- Painting: ART 121, 221, 321, 322, 421, 422 (Thesis)
- Sculpture: ART 141, 241, 341, 342, 441, 442 (Thesis)
- Printmaking: ART 130, 231/232/235 (1 of 3), 231, 232, 233, 234, 235, 236, 264 (2 of 7); 431, 432 (Thesis)
- Photography: ART 161, 261, 265/263, 264/265 (1 of 4), 461, 462

Dual Concentration
If a student is interested in studying in more than one area, he or she may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students must take 23 credits in the first area of concentration. Students must take 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration

Total Credits

- Painting: ART 121, 221, 321, 421, 422... 23
- Sculpture: ART 141, 241, 341, 441, 442... 23
- Printmaking: ART 130, 231/232/235 (1 of 3), 231, 232, 233, 234, 235, 236, 264 (1 of 7); 431, 432... 23
- Photography: ART 161, 261, 265/263, 264/265... 461, 462... 23

Second Area of Concentration

Total Credits

- Drawing: ART 151, 152, 251, 252, 256... 15
- Painting: ART 121, 221, 321, 322... 15
- Sculpture: ART 141, 241, 341, 342... 15
- Printmaking: ART 130 and 231/232/235/234/235/236/264 (2 of 7)... 15
- Photography: ART 161, 261, 265/263/264/265... 461, 462... 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration
The combined media program enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

The required courses for the concentration in Combined Media (33 credits) are:

- 100 and 200 level studios: ART 1, 2... 7
- 200 and 300 level studios: ART 2, 3... 8
- Pre-Thesis and Thesis: ART 481, 482
- Out-of-college studio electives: minimum of 2 OCE Studio, OCE Studio... 6

Total: 33 credits

Note: The total number of in/out-of-college elective credits required will be adjusted to allow for the additional credits required of the combined media concentration.
Out-of-College Requirements

A minimum of 49 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All BFA students are required to take 12 credits in the History of Art. One course must be taken in each of the following areas:

Elective: Any art history elective at the 300 level or above or any architectural history elective.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of their residency at the university subject to the conditions of the Cornell faculty Legislative Council. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the art department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors may also attend the Rome Program. Students wishing to spend two consecutive semesters in Rome are encouraged to do so. In both cases students must petition for special consideration. This petition must include the proposed course schedule for both semesters and must show signatures of approval by the adviser in the student’s area of concentration, the department chair, and by the Rome Program adviser.

16 Total

Students may not take more than 16 credits a semester in the Rome Program. Only four studio credits may be taken in any one semester. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

For these students matriculating in fall of 1996:

Students are required to take ART 100, Basic Studio in Art, ART 111, Introductory Art Seminar, ART 121, Introductory Painting; or ART 141, Introductory Sculpture; ART 112, History of World Art; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 113, History of World Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement.

The M.F.A. Program

The Master of Fine Arts program requires four terms of residence and sixty credits. Transfer credit for graduate work done elsewhere or in the summer session is not acceptable. The curriculum leading to the master's degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community.

The ratio of graduate faculty to students is greater than one-to-one, allowing exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to specialized studios and labs.

Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university: specialization courses in writing, stagecraft, cinema, and music are available as well as general education courses in the history of art, philosophy, anthropology, and so forth.

Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written thesis, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the
written and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information
Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees.

To take advantage of the special opportunities afforded by summer study, the department has developed several summer-only courses.

Guidelines for Independent Study
A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of independent study cannot be used to fulfill any of the four drawing requirements. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies do NOT count toward studio requirements. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism
ART 111 Introductory Art Seminar
Fall. 1 credit. S-U only. Limited to B.F.A. students. Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed.

ART 112 History of World Art
Fall and spring. 3 credits. This two-semester course will survey world art from the Paleolithic era to the present. While primary emphasis will be placed upon the art and architecture of the western tradition, lectures on the visual arts outside that tradition will also be presented. The course will emphasize major monuments, important trends and developments, and critical approaches to the art of the past and present. The history of artistic styles will be studied in relation to cultural factors shaping the work of art such as patronage, politics, religion, and economics. The original settings and functions of works of art and buildings will be emphasized as well the possibilities and limitations of materials and techniques.

[ART 113 History of World Art
Fall and spring. 3 credits. Not offered 1996-97. Continuation of Art 112.]

ART 214 Art and the Multicultural Experience
Fall. 3 credits. This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the study of art. They will question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 310 Pictorial Analysis
Fall or spring. 3 credits. A lecture course using historical illustrative material which is presented in a comparative, nonchronological format for the purpose of examining how each painting uses principles that are constant throughout art history. The foundations of these principles are studied separately as the elements of abstract order. These elements are demonstrated by original compositions that proceed sequentially from relatively simple arrangements to those of maturity.

[ART 311 Issues in Contemporary Art
Fall. 3 credits. Not offered 1996-97. A seminar course in issues of contemporary art, including lectures by visiting artists.]

ART 312 Modern Art in Italy
Fall or spring. 3 credits. Rome Program only.
This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed, post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries and museums will introduce students to the exchange between artists, dealers and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

ART 317 History of Art in Rome: Early Christian to the Baroque Age
Fall. 4 credits. Rome Program only. General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 318 History of Art in Rome: Renaissance in Rome and Florence
Spring. 4 credits. Rome Program only. A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

ART 419 Independent Study/Supervised Readings in Art
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to be pursued under the supervision of a faculty member.

ART 611 Professional Skills for the Visual Artist
Fall. 4 credits.
This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 Recent Practice in the Visual Arts
Spring. 3 credits.
This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial will be discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 On-Line Publication for the Visual Artist
Fall. 3 credits.
This course is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student will interview a contemporary visual artist. These interviews will be illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student will learn to create a home page on the World Wide Web.

ART 614 Contemporary Theory in the Visual Arts
Spring. 3 credits.
This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics will vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

Studio Courses in Painting
Fees for painting courses:
121, 221, 321, 322, 323, 421, 422, 429: $40

ART 121 Introductory Painting
Fall, spring, or summer. 3 credits. An introduction to the problems of artistic expression through pictorial composition; proportion, space, shapes, and color as applied to abstract and representational design.

ART 122 Painting I
Fall or spring. 4 credits. Prerequisite: Art 121 or permission of instructor.

ART 123 Landscape Painting
Summer. 3 credits. Class meets outdoors at selected sites in the Ithaca area. A different motif is explored each week. Pen, pencil, and water- or oil-based colors (optional) are the materials employed. Analysis and discussion of the landscape work of Corot, Cézanne, van Gogh, Seurat, and others are included.

ART 221 Painting II
Fall or spring. 4 credits. Prerequisite: Art 121 or permission of instructor.
A continuation of Art 121.

ART 321 Painting III
Fall or spring. 4 credits. Prerequisite: Art 221 or permission of instructor.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 322 Painting IV
Fall or spring. 4 credits. Prerequisite: Art 321 or permission of instructor.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.
ART 323 Painting V
Fall or spring. 4 credits. Will not be offered after spring 1997. Prerequisite: Art 322 or permission of instructor.
Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticisms.

ART 421 Pre-Thesis in Painting
Fall or spring. 6 credits. Prerequisite: Art 420.
Further study of the art of painting through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 422 Thesis in Painting
Fall or spring. 6 credits. Prerequisite: Art 421.
Advanced painting project to demonstrate creative ability and technical proficiency.

ART 429 Independent Studio in Painting
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in painting allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 721-722, 821-822 Graduate Painting
721 Fall, 722 Spring, first-year M.F.A. students. 9 credits. 821 Fall, 822 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

Studio Courses in Printmaking
Fees for printmaking courses:

- Intaglio: 231, 431.1, 432.1, 439.1: $65
- Lithography: 232, 432.2, 432.3, 439.2: $85
- Screenprinting: 232, 432.4, 432.3, 439.3: $45

ART 130 A Survey of the Printmaking Processes
Fall. 3 credits.
An introduction to the printmaking processes of intaglio, screen printing, and lithography. Students will produce introductory-level projects utilizing each of these printmaking processes. This class will also address the procedures and protocol of the printshop.

ART 231 Intaglio
Spring. 4 credits. Prerequisite: Art 130.
A studio course in advanced etching techniques. Refinement of processes and ideas through the uses of acquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

ART 232 Screen Printing
Fall. 4 credits. Prerequisite: Art 130.
An exploration of the screen printing process as it applies to the Fine Arts. Students will develop skills in multicolor printing using transparent inks and additives. Stencils will be made by the handcut and the photo process.

ART 233 Lithography
Spring. 4 credits. Prerequisite: Art 130.
The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 234 Art of the Book
Fall. 4 credits.
A studio course that investigates the expanding genre of artists' and one-of-a-kind books. Assignments guide the student's exploration of elements of the book: page, type, scale, covers, dynamics. Projects involve a variety of structures, media, and binding techniques. A valuable course for artists, architects, poets, and others who are curious about the book form.

ART 235 Large Relief/ Monoprint
Spring. 4 credits. Prerequisite: Art 130.
A studio course that investigates large-scale composition through the specific print techniques of woodcut, linoleum cut, and monoprint. The multiple state print will be utilized for this painterly approach to printmaking. The large format is especially suitable for understanding scale and its relationship to printing.

ART 236 Non-Press Printing
Spring. 4 credits. A consideration of the various methods of printing available to the artist that do not involve a press or other mechanical means. Included will be linocuts, woodcuts, collage prints, rubbings, pochier, and monoprint as well as various experimental techniques.

ART 431 Pre-Thesis in Printmaking
Fall or spring. 6 credits. Prerequisites: Art 231/232/233 (1 of 3) and 231/232/233/234/239.1.
Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432 Thesis in Printmaking
Fall or spring. 6 credits. Prerequisite: Art 431.
Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439 Independent Studio in Printmaking
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in printmaking allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 731-732, 831-832 Graduate Printmaking
731 Fall, 732 Spring, first-year M.F.A. students. 9 credits. 831 Fall, 832 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

Studio Courses in Sculpture
Fees for sculpture courses:

- Art: 130, 234, 235, 236: $55
- Casting 439.3: $45
- Intaglio: 231, 431.1, 432.1, 439.1: $65
- Lithography: 232, 432.2, 432.3, 439.2: $85
- Screenprinting: 232, 432.4, 432.3, 439.3: $45

ART 241 Sculpture II
Fall or spring. 4 credits. Prerequisites: Art 141, or an Arch design studio, or permission of instructor.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 242 Sculpture IV
Fall or spring. 4 credits. Prerequisite: Art 241 or permission of instructor.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 341 Sculpture III
Fall or spring. 4 credits. Prerequisite: Art 241 or permission of instructor.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 342 Sculpture V
Fall or spring. 4 credits. Prerequisite: Art 341 or permission of instructor.
Continuation and expansion of Art 341.

ART 343 Sculpture V
Fall or spring. 4 credits. Will not be offered after spring 1997. Prerequisite: Art 342 or permission of instructor.
Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441 Pre-Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: Art 343.
Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.
ART 442 Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: Art 441. Advanced sculpture project to demonstrate creative ability and technical proficiency.

ART 449 Independent Studio in Sculpture
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in sculpture allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742, 841-842 Graduate Sculpture
741 Fall, 742 Spring, first-year M.F.A. students. 9 credits. 841 Fall, 842 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography
Darkroom fees for photography courses:
- Fee for B & W courses: $80.00
- Fee for color courses: $160.00
- Fee for an additional B & W course taken the same term: $25.00
- Fee for an additional color course taken the same term: $105.00

ART 161 Photography I (also Architecture 251)
Fall, spring, or summer. 3 credits. A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photography imagery.

ART 168 Black-and-White Photography
Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169 Color Photography
Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261 Photography II (also Architecture 351)
Fall, spring, or summer. 4 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor. A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography
Fall, spring, or summer. 4 credits. Prerequisite: Art 161 or Architecture 251, or permission of instructor. A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264 Photo Processes
Fall, spring, or summer. 4 credits. Prerequisite: Art 161 or Architecture 251, or permission of instructor. A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

ART 265 Studio Photography
Fall or spring. 4 credits. Prerequisite: Art 161 or Architecture 251, or permission of instructor. A studio course intended for photography majors and other qualified students. Emphasis is on basic camera skills, black-and-white photography, and the content of color photography.

ART 361 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 261, 263. A studio course intended for photography majors and other qualified students. Emphasis is on advanced photography project to demonstrate creative ability and technical proficiency.

ART 369 Independent Studio in Photography
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 461 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 261, 263. A studio course intended for photography majors and other qualified students. Emphasis is on advanced photography project to demonstrate creative ability and technical proficiency.

ART 462 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 461. A studio course intended for photography majors and other qualified students. Emphasis is on advanced photography project to demonstrate creative ability and technical proficiency.

ART 469 Independent Studio in Photography
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 471-762, 861-862 Graduate Photography
761 Fall, 762 Spring, first-year M.F.A. students. 9 credits. 861 Fall, 862 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing
Fees for drawing courses:
- 151, 152, 251, 252, 459: $25
- 151: $25
- 171, 479: $100
- 481, 482, 489: $70

ART 100 Basic Studio in Art
Fall. 4 credits. An introductory course designed to teach basic art concepts and theory, to introduce all art media, and provide a basis for the study and practice of the visual arts.

ART 151 Drawing I
Fall, spring, or summer. 3 credits. A course that is general in nature and introduces students to techniques and principles of representation. Emphasis will be on the human figure and still life, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: Art 151. A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of Art 151 concentrating on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

ART 159 Conceptual Drawing
Summer. 3 credits. Emphasis is on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing
Summer. 3 credits. The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 251 Drawing III
Fall. 3 credits. Prerequisites: Art 152. An intermediate drawing course in which students will study drawing as a composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisites: Art 251. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

Special Studio Courses
Course fees:
- 100: $25
- 171, 479: $100
- 481, 482, 489: $70

ART 372 Special Topics in Art Studio
Fall, spring, or summer. Variable credit. An exploration of a particular theme or project.
ART 372 Special Topics: Digital Photography

ART 379 Independent Studio in Rome for Non-Majors
Fall and spring. 4 credits variable. Prerequisite: student must be a junior in good standing, and have the written permission of the instructor. Rome Program only. Independent studio in Rome allows non-art majors the opportunity to pursue special interests in Fine Arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 400 Rome Studio
Fall or spring. 4 credits. Prerequisite: permission of instructor. Fee: $25. Rome Program only. The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. Art 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: 481 and written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489 Independent Studio in Combined Media
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

The department offers several programs of study at both the undergraduate and graduate levels. The Undergraduate Program in Urban and Regional Studies The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regional systems. The URS program provides students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements
- Requirements for Graduation: URS requirements include (1) eight semesters of residence, (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) free electives, (9) a minimum of 34 courses. The university requires students to complete two semesters of physical education.

1. General Education
   - Freshman writing seminars: 2 courses
   - Foreign language: 3 courses or qualification in one foreign language
   - Distribution Requirements: 9 courses

   Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1-4.

Group 1: Physical and biological sciences (2-3 courses required)
Group 2: Quantitative and formal reasoning (1-2 courses required)
Group 3: Social sciences and history (2-3 courses required)
Group 4: Humanities and the arts (2-3 courses required)

Advanced Placement Credit
Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses applied to distribution requirements are not acceptable.

2. Required Courses for the Major in Urban and Regional Studies: 5 courses
   - CRP 100: The American City
   - CRP 101: The Global City People, Production, and Planning in the Third World
   - CRP 320: Introduction to Statistical Reasoning for Urban and Regional Analysis (statistics course)
   - Micro Economics course (at least 3 credits, from approved list)
   - Architecture course (at least 3 credits, from approved list)
   - Approved List of Micro Economics and Architecture Courses

Micro Economics:
   - CEAH 110: Introductory Micro Economics
   - CEAH 210: Intermediate Micro Economics

ECON 101: Introduction to Micro Economics
ECON 203: Micro Economics
ECON 313: Intermediate Micro Economics

Architecture:
   - ARCH 131: An Introduction to Architecture I
   - ARCH 132: An Introduction to Architecture II
   - ARCH 181: History of Architecture I
   - ARCH 182: History of Architecture II

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses
   - A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis
     - Design
     - CRP 415: Gender Issues in Planning and Architecture
     - CRP 481: Principles of Spatial Design and Aesthetics
     - CRP 482: Urban Land Use Concepts
Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. We encourage qualified undergraduates to study abroad because exposure to foreign cultures can be an eye-opening part of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable, and work continually to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. We encourage URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options
Linked degree options. Urban and regional studies students can earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor’s degree. Under this option, a minimum of 30 credits and a master’s thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences can earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment, a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding capabilities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students
In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous course work closely parallels the “General Education” requirements of the Urban and Regional Studies curriculum will have relative ease in transfer. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor John Forester, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, New York 14853-6701 (telephone: 607-255-4613).

The Graduate Program in City and Regional Planning
The major concentrations of course work in city and regional planning are in the following areas:
Built environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making, and administration.

History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.

Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.

Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating more equitable
programs of socioeconomic change and development.

International planning offers a broad range of courses in international economic development, development planning, and political economy. Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems. Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), for a two-year program; the Master of Arts (M.A.) in historic preservation planning, for a two-year program; and, in special cases, the Master of Professional Studies (International Development) [M.P.S. (I.D.)], for the twelve-month international planning program.

Off-Campus Opportunities
Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information
Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor. The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

CRP 100 The American City
Fall. 3 credits.
An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 101 The Global City: People, Production, and Planning in the Third World
Spring. 3 credits.
A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and short-comings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.
aspects from those for undergraduates. Mentions for graduate students will differ in some natural resources, government, environmental students interested in urban issues, planning, policy management perspective. This course handles environmental problems. Study of forms of social welfare provisions and how current social policy controversies (such as social policy in the United States. A series of relationship between economic change and other Northeast locations.

CRP 421 Introduction to Computers in Planning (also CRP 522) Fall. 4 credits.

Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase and MacGIS are examined as packages that have been taught in previous years.)

CRP 422 The Sociology of Science For description, see S&S 442.

This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course will introduce principles that guide the development of social policy including fairness and justice. Various conceptions of society will be examined with reference to their influence on the extent and nature of social welfare provision, comparing the U.S. and other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and workfare) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provisions and how they are administered.

CRP 451 Environmental Law (also CRP 551) Fall. 4 credits.

An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of examples of packages from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resource management, government, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.

CRP 453 Environmental Aspects of International Planning (also CRP 683) Fall. 3 credits.

This seminar will examine the roles of diverse environmental actors—international organizations, national governments, international organizations, NGOs, and social movement organizations in shaping environmental debates and designing conservation and remediation programs in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

CRP 457 Community Service Fieldwork Fall or spring. 4 credits variable. Permission is granted by instructor. Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

CRP 461 Methods of Archival Research Fall. 3 credits.

Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

CRP 477 Issues in African Development (also CRP 577) Fall and spring. 3 credits. S/U only.

This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 481 Principles of Spatial Design and Aesthetics (also CRP 581 and Landscape Architecture 450) Fall.

Course enrollment is restricted to planning and landscape architecture students unless special permission is granted by instructor. A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 482 Urban Land Use Concepts Fall. 3 credits.

Exploration of the use of land in urban areas, with an emphasis on the experience of North American cities. The course reviews use types, use characteristics, and use relationships in terms of conflicting social and economic demands. Concepts of organizing urban space in the past and present are reviewed. Physical planning, site planning and urban design issues are discussed.

CRP 490 Student-Faculty Research Fall or spring. 1-4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S/U grades only.

CRP 492 Honors Thesis Research Fall or spring. 4 credits. Limited to Urban and Regional Science students who have been selected as honor students by the department faculty. Each selected student works with his or her thesis adviser.

CRP 493 Honors Thesis Writing Fall or spring. 4 credits. Prerequisite: Completion of CRP 492. Each selected student works with his or her thesis adviser.

CRP 495 Special Topics Fall, spring, summer. 4 credits. Hours to be arranged.

CRP 495.27 Cuban Transitions: The Search for Development Alternatives Fall. 3 credits. Open to sophomores, juniors, seniors. No prerequisites. Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy within a Caribbean context. Cuba's relations with other nations and their impacts on Cuban development will be emphasized. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students will learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

CRP 497 Supervised Readings Fall or spring. Variable 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

Graduate Courses and Seminars Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses, those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 400. Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.

CRP 508 Introductory Workshop Fall. 2 credits. First-year MRP students. A short, intensive workshop course designed to engage entering MRP students and selected faculty in a simulated or real world planning problem. Group problem solving, oral and written report presentation, and graphics.

CRP 512 Public and Spatial Economics for Planners Fall. 3 credits. Letter grade. No prior knowledge of economics. Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning, and the perspective of the public and nonprofit sectors is the perspective of city and regional planning.

Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course will also introduce the economic theory necessary to understand the many applications of economics presented in
CRP 513 Planning Practice and Urban Structure Seminar
Fall. 4 credits.
This introductory graduate seminar has several objectives. It exposes students to the theory and history of (1) planning, administration, and related public intervention in urban affairs, (2) the growth and development of cities, and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing and oral presentations, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Fall. 4 credits. For description, see CRP 417.

CRP 520 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits.
An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis
Fall. 1 credit. S-U only. Meets for two hours, once each week, for approximately half the semester.
Review of mathematical foundations for planning analysis that include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 522 Introduction to Computers in Planning
For description, see CRP 421.

CRP 532 Real Estate Development Process
Fall. 3 credits.
Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

CRP 533 Real Estate Marketing and Management
Spring. 3 credits.
The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

CRP 541 The Politics of Technical Decisions I (also Government 628 and Science and Technology Studies 415)
Spring. 4 credits. For description, see S&TS 415.

CRP 545 Introduction to Public Policy Analysis and Management
For description, see CRP 321.

CRP 546 Conflict Resolution in Community and Environment
Fall. 3 credits.
This course will explore the theories and techniques of conflict resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363, LA 363, and LA 547)
Spring. 3 credits.
For description, see LA 363.

CRP 548 Social Policy and Social Welfare (also CRP 448)
For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning
Spring. 4 credits variable.
An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451)
Fall. 4 credits. For description, see CRP 451.

CRP 552 Urban Land-Use Planning I
Fall. 3 credits.
Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II
Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.
In-depth examination of special issues in urban land-use planning, such as industrial districts, large-scale integrated development, Planned Unit Development, public and institutional facilities, open space, land banking, central business districts, neighborhoods, energy impacts, transportation impacts, and others.

CRP 555 Urban Systems Studio (also Landscape Architecture 701)
Fall. 3 credits. Prerequisite: permission of instructor.
Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 557 City Planning Design Studio
Spring. 4 credits. Prerequisite: previous planning courses or permission of instructor.
A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop
Fall and spring. 4 credits. S-U only. Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues, with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560 Documentation for Preservation (also Architecture 585)
Fall or spring. 3 credits.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 586)
Fall or spring. 4 credits.
Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation (also Architecture 585)
Fall. 3 credits.
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also Architecture 584)
Spring. Variable credit.
A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also Architecture 587)
Spring. 3 credits. Open to juniors, seniors, and graduate students.
A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.
CRP 565 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 567 Measured Drawing (also Architecture 583)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology on Preservation Planning and Landscape (also LA 569)
Fall. 3 credits. Offered alternate years. Not offered 1997-98. For description, see LA 569.

CRP 581 Principles of Spatial Design and Aesthetics (also Landscape Architecture 480)
For description, see CRP 481.

[CRP 604 Urban Economics]
Not offered 1996-97. For description, see CRP 404.1

CRP 605 Urban Public Finance
Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics. An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources utilized by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

CRP 608 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)
Spring. 4 credits. Letter grade. For description, see CRP 408.

[CRP 614 Gender and International Development (also Women's Studies 614)]
Spring. 3 credits. Not offered 1996-97. This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth, to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 616 Development and Change in the World Economy
Fall. 3 credits. Letter grade only. This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibilization, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

CRP 620 Planning Analysis
Spring. 4 credits. A survey of commonly used techniques for analyzing various aspects of urban socioeconomic systems. Emphasizes planning applications.

CRP 621 Local Economic Policy-Field Workshop
Spring. 4 credits. A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis: interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

CRP 635 Workshop: State Economic Development Strategies
Spring. 4 credits. S-U grades optional. The purpose of this course/ workshop is twofold: 1) to provide students with research tools useful in developing state-level economic development strategies; and 2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm specific subsidies. The course will consist of lecture and discussion meetings. The workshop sessions will include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World: Historical and Theoretical Perspective
Fall. 4 credits variable. Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for urban-rural and regional interactions will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World: Current Policy Perspective
Spring. 4 credits variable. The course focuses on what the market can or cannot accomplish in terms of guiding economic industrial, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are drawn for Third World regional development policy drawn from the experience.

CRP 642 Critical Theory and the Micro-politics of Practice
Spring. 4 credits variable. Trying to "solve problems," planners and policy analysts set agendas, shape participation, negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of ordinary speech and action.

CRP 653 Legal Aspects of Land-Use Planning
Spring. 3 credits. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 661 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1-4 credits. Prerequisite: CRP 561. Preparation of elements of historic preservation plans, designs, legislation, and studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 662 Seminar in American Urban History (also CRP 361)
Spring. 3 credits. Prerequisite: permission of instructor. For description, see CRP 361.

[CRP 663 Historic Preservation Law]
Spring. 3 credits. Offered alternate years. Not offered 1996-97. Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation.

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation
Fall. 3 credits. The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665 Preservation Planning and Urban Change
Fall. 3 credits. An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

[CRP 666 Pre-industrial Cities and Towns of North America (also CRP 360, LA 360 and LA 461)]
Spring. 3 credits. S-U grades optional. Not offered 1996-97. For description, see LA 360.
CRP 670 Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 675 Seminar in Project Planning in Developing Countries
Spring. 4 credits.
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as a seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U only.
For description, see CRP 477.

CRP 683 Environmental Aspects of International Planning (also CRP 453)
Fall. 3 credits.
For description, see CRP 453.

CRP 703 Contemporary Theories of Regional Development
Fall or spring. 4 credits. Not offered 1996-97.
An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

CRP 711 Planning and Organization Theory
Fall or spring. 4 credits.
Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

CRP 720 Quantitative Techniques for Policy Analysis and Program Management
Fall. 4 credits.
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 730 Methods of Regional Science and Planning I
Fall or spring. 4 credits variable.
An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. The spring semester emphasizes statistical and econometric models.

CRP 731 Methods of Regional Science and Planning II
Fall or spring. 4 credits.
See CRP 730. The fall semester will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

CRP 732 Methods of Regional Science and Planning III
Fall or spring. 3 credits.
Prerequisites: CRP 730 and CRP 731. (See description of the CRP 731.) An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CGE models will be discussed. The GAMS software package will be used in related computer exercises.

CRP 733 Seminar in Regional Models
Fall or spring. 3 credits. S-U grades optional.
Prerequisite: sufficient methodological background to read the current literature. Not offered 1996-97.
A review of the classical and important current literature on socioeconomic and/or environmental models of regional economies. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

CRP 790 Professional Planning Colloquium I
Fall or spring. 1 credit.
Visiting lecturers treat problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

CRP 792 Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits variable. S-U grades optional.
CRP 794 Planning Internships
Fall, spring, or summer. 1–12 credits.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine selected issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795 Master's Thesis in Preservation Planning
Fall or spring. 1-6 credits.

CRP 796 Colloquium Journal Publication Workshop
Fall or spring. 2 credits. S-U grades only. Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 variable credits. Limited to graduate students. Prerequisite: permission of instructor.

CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit.
Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

CRP 800 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. Prerequisite: CRP 500.
The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intratraditional distribution of population and economic activity are reviewed.

CRP 801 Advanced Seminar in Urban and Regional Theory II
Spring. 3 credits. Prerequisite: CRP 800.
A continuation of City and Regional Planning 800, concentrating on recent developments.

CRP 810 Advanced Planning Theory
Fall. 3 credits. Prerequisite: CRP 500 or 710.
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 830 Seminar in Regional Sciences, Planning, and Policy Analysis
Fall or spring. Variable-4 credits. S-U grades only.
This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890 Planning Research Seminar I
Fall or spring. 2 credits.
Intended for doctoral candidates in city and regional planning. Other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892 Doctoral Dissertation
Fall or spring. 1–2 credits.
LANDSCAPE ARCHITECTURE
The Landscape Architecture Program at Cornell is jointly sponsored by the College of Agriculture and Life Sciences (in association with the Department of Floriculture and Ornamental Horticulture) and the College of Architecture, Art, and Planning.

The Program

The Landscape Architecture Department offers a four-year Bachelor of Science degree administered through the College of Agriculture and Life Sciences. The Landscape Architecture Graduate Program offers two professional degree alternatives: a two-year graduate curriculum directed to those who have undergraduate degrees in landscape architecture or architecture and a three-year graduate curriculum directed to those who have undergraduate degrees in other fields. Graduate studies in landscape architecture are administered through the Graduate School and lead to a Master of Landscape Architecture degree. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information

*LA 141 Grounding in Landscape Architecture
Fall. 4 credits.

*LA 142 Introduction to Landscape Architecture
Spring. 4 credits.

*LA 201 Medium of the Landscape
Fall. 6 credits.

*LA 202 Medium of the Landscape
Spring. 6 credits.

*LA 261 Urban Archaeology (also CRP 261)
Fall. 3 credits.

*LA 262 Laboratory in Landscape Archaeology
Spring. 3 credits.

*LA 282 The American Landscape
Spring. 3 credits.

*LA 301 Integration of Realities
Fall. 6 credits.

*LA 302 Integration of Realities
Spring. 6 credits.

*LA 315 Site Engineering I
Spring. 2 credits. First seven weeks of semester.

*LA 316 Site Engineering II
Fall. 2 credits. Second seven weeks of semester.

*LA 317 Site Construction I
Spring. 2 credits. First seven weeks of semester.

*LA 318 Site Construction II
Spring. 2 credits. Second seven weeks of semester.

*LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)
Fall. 3 credits. Offered alternate years 1997–98/1999–00.

*LA 363 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)
Spring. 3 credits.

*LA 401 Advanced Synthesis: Project Design
Fall. 6 credits.

*LA 402 Advanced Synthesis: Urban Design
Spring. 6 credits.

*LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits.

*LA 412 Professional Practice
Spring. 1 credit.

*LA 480 Principles of Spatial Design and Aesthetics (also CRP 481/581)
Fall. 3 credits.

*LA 483 Design Criticism
Spring. 3 credits.

*LA 486 Community Design Workshop
Spring. 3 credits.

*LA 487 Experiential Community Design
Fall. 3 credits.

*LA 491 Planting Design and Establishment (also HORT 491)
Fall. 3 credits.

*LA 494 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits.

*LA 497 Individual Study in Landscape Architecture
Fall or spring. 1–5 credits, may be repeated for credit. S-U grades optional. L. J. Mirin.

Work on special topics by individuals or small groups.

*LA 498 Undergraduate Teaching
Fall or spring. 1–3 credits.

LANAR 497 Individual Study in Landscape Architecture
Fall. 6 credits. Limited to graduate students. Cost of basic drafting and supplies about $250. Cost of field trip $250. L. J. Mirin.

Basic design principles and processes applied to the design of the outdoor environment. Studio projects focus on the analysis, organization, and form of outdoor space through the use of three-dimensional components including structures, vegetation, and earthform.

*LA 502 Composition and Theory
Spring. 6 credits.

*LA 505 Graphic Communication I
Fall. 3 credits.

*LA 506 Graphic Communication II
Spring. 3 credits.

LANAR 510 Composition and Theory
Spring. 6 credits.

LANAR 520 Contemporary Issues in Landscape Architecture
Fall. 2 credits. S-U grades only. L. Mirin.

Presentations on topics that are current and significant to the environmental design and planning fields. Issues are discussed from a landscape architecture point of view by practitioners and researchers representing a range of professions.

LANAR 524 History of European Landscape Architecture
Spring. 3 credits. L. Mirin.

A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, plazas, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525 History of American Landscape Architecture
Fall. 3 credits. L. Mirin.

Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

*LA 547 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 363)
Spring. 3 credits.

For description, see LA 363.

*LA 569 Archaeology on Preservation Planning and Landscape (also CRP 569)

*LA 590 Thesis Seminar
Fall. 3 credits.

**LANAR 800: Master's Thesis in Landscape Architecture**

- Fall or spring: 9 credits. L. J. Mirin. Independent research under faculty guidance, leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in the final semester of residency. Offered through the College of Agriculture and Life Sciences.

**FACULTY ROSTER**

- Booth, Richard S., J.D., George Washington U. Assoc. Prof., City and Regional Planning.
- Chi, Lily H., M. Phil., Cambridge U., Asst. Prof., Architecture.
- Christopherson, Susan M., Ph.D., U. of California at Berkeley. Asst. Prof., City and Regional Planning.
- Clavel, Pierre, Ph.D., Cornell U. Prof., City and Regional Planning.
- Crump, Ralph W., B.Arch., Cornell U. Prof., Emeritus, Architecture.
- Czarnikwiak, Stan, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.
- Drennan, Matthew P., Ph.D., New York University. Prof., City and Regional Planning.
- Forester, John, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.
- Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning.
- Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture.
- Iselin, Walter, Ph.D., Harvard U. Prof., City and Regional Planning.
- Jarzembek, Mark, Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Architecture.
- Jones, Barclay G., Ph.D., U. of North Carolina. Prof., City and Regional Planning.
- Kelly, Burnham, M.C.P., Massachusetts Inst. of Technology. Prof. Emeritus, City and Regional Planning.
- Lewis, David B., Ph.D., Cornell U. Assoc. Prof., City and Regional Planning.
- Lacey, Jean N., M.F.A., Ohio U. Prof., Art.
- Lynch, Barbara, Ph.D., Cornell U. Visiting Assoc. Prof., City and Regional Planning.
- Miller, John C., M. Arch., Cornell U. Prof., Architecture.
- Olpstadwa, Porus, Ph.D., Cornell U. Assoc. Prof., City and Regional Planning.
- Parsons, Kermit C., M.R.P., Cornell U. Prof., City and Regional Planning.
- Poleske, Stephen F., B.S., Wilkes Coll. Prof., Art.
- Reps, John W., M.R.P., Cornell U. Prof., Emeritus, City and Regional Planning.
- Saltzman, Sid, Ph.D., Cornell U. Prof., City and Regional Planning.
- Simich, Andrea, B.Arch., Cornell U. Assoc. Prof., Architecture.
- Singer, Arnold. Prof. Emeritus, Art.
- Stein, Sharron W., M.C.P., Massachusetts Inst. of Technology. Prof. Emeritus, City and Regional Planning.
- Tomlin, Michael A., Ph.D., Cornell U. Asst. Prof., City and Regional Planning.
- Vietoros, Thomas, Ph.D., Massachusetts Inst. of Technology. Adjunct Prof., City and Regional Planning.
- Woods, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture.
The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcements of the Graduate School.

ORGANIZATION

The Division of Biological Sciences is composed of seven sections: Biochemistry, Molecular and Cell Biology; Ecology and Systematics; Genetics and Development; Microbiology, Virology, and Immunology; Physiology; Plant Biology; and, in addition, the L. H. Bailey Hortorium and the Shoals Marine Laboratory.

Student services are provided by the division's Office for Academic Affairs and the Behrman Biology Center, both located in Starr Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Corwith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group D) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107-108, or a combination of the first term of one sequence and the second term of another. An Advanced Placement score of 4 or 5 fulfills one-half the distribution requirement. Students must take an upper-level biology course to complete the distribution requirement in biological sciences. The remainder of the distribution requirement may be satisfied by an upper-level course (200+)

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.

THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is
coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, Biostem Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major are advised. These students should consult their faculty advisers when choosing appropriate courses in introductory biology, chemistry, and mathematics sequences in their freshman year. Students are not encouraged to continue with the major in biological sciences unless they have evidence of successful completion of the freshman year courses listed below.

The requirements for the biological sciences major are listed below. These courses, with the exception of the language requirement, should be taken for a letter grade, unless the course is offered for S/U grades only.

1) **Introductory biology for majors**
   - (one year): Biological Sciences 101 and 103 plus 102 and 104, or 105-106. Biological Sciences 101-108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101 and 103, 102 and 104, or 103-104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216 Simson Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, completion of Biological Sciences 101 and 103 is advised. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).

2) **General chemistry**
   - (one year): Chemistry 207-208, or 103-208, or 215-216.

3) **College mathematics**
   - (one year): two semesters of calculus (Mathematics 111-112, 191-192, or their equivalents) or one semester of calculus (Mathematics 106, 111, 191, or equivalent) plus either Mathematics 105 or Statistics and Biometry 101. Education 115 may not be used to fulfill any part of this requirement.

4) **Organic chemistry**
   - Chemistry 253 and 251, or 253 and 301, or 257 and 251, or 357-358 and 251, or 357-358 and 301, or 359-360 and 251, or 359-360 and 301.

5) **Physics**
   - Physics 207-208, 112-213, or 101-102. Those who take Physics 112-213 are advised to complete Physics 214 as well.

6) **Genetics**
   - Biological Sciences 281.

7) **Biochemistry**
   - Biological Sciences 350, or 331 and 332, or 333.

8) **Evolutionary Biology**
   - Biological Sciences 278.

9) **A program of study**
   - selected from the outline below.

10) **Foreign language**
    - students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above-list indicate the courses that provide evidence of successful completion of the foreign language requirement. All courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

**Programs of Study and Requirements**

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

1) **Animal Physiology**
   - BIOAP 311, Introduction to Animal Physiology; BIOAP 313, Histology: The Biology of the Tissues; BIOAP 316, Cellular Physiology; and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical practice or research.

2) **Biochemistry**
   - Quantitative Chemistry (Chemistry 300 or completion of Chemistry 215-216 for the general chemistry requirement for the major); a minimum of four credits of organic chemistry laboratory (Chemistry 301-302 or 251-252 or 301 or 251-252); one of the 5-credit options of Biochemistry (311 and 312 or 350 and 351); 4 credits of Biochemistry laboratory courses (BIOBM 630) (see note below); and Physical Chemistry (Chemistry 389-390 or 207-208 or 287-288 or 389-390 or 391-392). Note that Chemistry 288 is designed for students interested in graduate work in biochemistry. The Program in Biochemistry includes a year of introductory biochemistry other than Chemistry 103-104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

   *Note* Formerly the 600-level biochemistry laboratory courses were taught separately as BIOBM 630, 634, and 638. These courses have been reorganized as sections under a single course number. The specific courses offered in any semester may vary. All courses emphasize qualitative and quantitative aspects of modern approaches to research in biochemistry, molecular and cell biology, and expect some student input into experimental design based on readings of original papers.

3) **Cell Biology**
   - Chemistry 300 or 215-216, Quantitative Chemistry; BIOBM 452, Survey of Cell Biology; 4 credits of biochemistry laboratory courses (strongly recommended to include the Experimental Cell Biology section of BIOBM 630) (see "Note" under Biochemistry); and at least 5 additional credits of study in the following courses: BIONB 222, Neurobiology and Behavior II; Introduction to Neurobiology, BIO G 305, Basic Immunology; BIOAP 413, Histology: The Biology of the Tissues; BIOPL 345, Plant Anatomy; BIONB 425, Natural History of Ion Channels; BIOBM 435-436, Undergraduate Biochemistry Seminar; BIOBM 437, Oncogenes and Cancer Viruses; BIONB 222.
444, Plant Cell Biology; BIO G 450, Light and Video Microscopy for Biologists; BIOGD 483, Molecular Aspects of Development; BIOBM 632, Membranes and Bioenergetics; BIOBM 636, Cell Biology; BIOBM 639, The Nucleus.

Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103-104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year and are strongly encouraged to take one of the 5-credit options of Biochemistry (331 and 332 or 330 and 334). If graduate work in cell biology is anticipated, students should consider taking a physical chemistry sequence (Chemistry 389-390 or 287-298 or 287-390 or 389-298).

4) Ecology and Evolutionary Biology: BIOES 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:

(a) BIOPL 241, Introductory Botany; BIOES 274, Functional and Comparative Morphology of Vertebrates; BIOES 373, Biology of the Marine Invertebrates; BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOES 471, Mammalogy; BIOES 472, Herpetology. BIOES 475, Ornithology; BIOES 476, Biology of Fishes; ENTOM 212, Insect Biology.

Note: One 400-level, 4-credit course (including 4 credits from BIOES 364) offered at Sholes Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

Note: The Ecology and Evolutionary Biology program offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

5) General Biology: The Program of Study in General Biology requires a minimum of 15 credit hours from courses offered by the Division of Biological Sciences in addition to courses counted towards requirements 1-8 above. These credits must include one course (200-level or above) from the courses fulfilling requirements 4 or at least three of the eight other programs of study (see pages 128-129), and must include a course with a laboratory (200-level or above) and a minimum of two upper-level (300 and above) courses of two or more credits. BIO G 498, may not count as the lab course. BIO G 490 (minimum of 2 credits, but no more than 4 credits) may not count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

6) Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 389, Embryology; BIOGD 490, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOGD 488, Molecular Genetics (up to 3 credits); BIOGD 438, Yeast Genetics and Molecular Biology; BIOGD 470, Ecological Genetics; BIOGD 485, Bacterial Genetics, BIOGD 493, Developmental Neurobiology; BIOGD 494, Molecular Biology and Genetic Engineering of Plants.

Students may also choose from the following courses to complete the 15-credit requirement: BIOGD 682, Cell Biology and Early Development; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 687, Developmental Genetics; BIOGD 633, Biosyntesis of Macromolecules; BIOGD 683, Population Genetics; BIOGD 663, Theoretical Population Genetics; BIOGD 694, Genetics of Diverse Bacteria; BIOGD 641, Laboratory in Plant Molecular Biology; BIOGD 644, Plant Growth and Development; BIOGD 652, Plant Molecular Biology II; BIOGD 653, Plant Molecular Biology I; PL BR 606, Advanced Plant Genetics.

Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIO G 499, Undergraduate Research in Biology, with approval of the faculty adviser.

7) Microbiology: BIOI 290, General Microbiology, Lectures; BIOI 291, General Microbiology, Laboratory; BIOI 300, Seminar in Microbiology; BIOI 391, Advanced Microbiology, Laboratory; and at least 5 credits from the following course lists, including at least one course from each group:

(a) BIOMI 485, Bacterial Genetics; or
(b) BIOMI 415, Bacterial Diversity; or
(c) BIOMI 451, Structure and Function of Bacterial Cells.

8) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion section (4 credits per term), and 7 additional credits, among which must be a course from the neurobiology and behavior offerings. BIONB 420, BIO G 498 and 499, and BIONB 720 may not be used as this neurobiology and behavior course. These readings and independent research courses may form part of the additional credits (beyond those provided by the advanced neurobiology and behavior course) required to complete the Program of Study in Neurobiology and Behavior.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W363 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

9) Plant Biology: Students choose one area of study from the following two options.

Option (a) Botany: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training: BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 246, Plants and Civilization; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 354, Plant Anatomy; BIOPL 359, Biology of Grasses; BIOPL 444, Plant Cell Biology; BIOPL 445, Photosynthesis; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241, Introductory Botany; BIOPL 243 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 346, Algal Physiology; BIOPL 444, Plant Cell Biology; BIOPL 691-698, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

10) Independent Option: A special program for students interested in nutrition is available under this option. Students interested in courses in biophysics should contact the Office for Academic Affairs (200 Stimson Hall) for further information. In addition, students who want to undertake a
course of study not covered by the nine existing programs of study or the special program may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office for Academic Affairs, 200 Stimson Hall.

**Independent Research and Honors Program**

Individual research projects under the direction of a faculty member are encouraged as an aspect of study within a program of study. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals to choose the space and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Students register for this course in 200 Stimson Hall. Any faculty member in the Division of Biological Sciences may act as a faculty supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Students may not earn credit for research conducted outside of Cornell. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, 216 Stimson Hall.

Research credits may not be used in completion of the following program of study areas: animal physiology; biochemistry; cell biology; ecology and evolutionary biology; microbiology; plant biology. Up to 3 credits of research may be used to complete the Program of Studies in general biology and genetics and development, and 4 credits of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office for Academic Affairs, 200 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences (BIO G) 499 (Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation. In addition, candidates must have a faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a faculty supervisor. Students may also work with Cornell faculty supervisors outside the division. Students who select supervisors outside the division must arrange for a faculty member of the division to serve as co-supervisor of the research. The division co-supervisor must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students who are considering study abroad during their junior year should consult with a member of the Honors Committee during their sophomore year to plan a reasonable schedule for honors research. The Honors Program requires that student participants attend honors seminars in which they give oral presentations during the first and second semesters of their senior year. Therefore, students who are considering studying away from campus during the senior year should consult with a member of the Honors Committee no later than the beginning of the first semester of their junior year. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the chair of the Honors Program Committee or from the Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall. Deviation from any of the requirements of the Honors Program requires a petition in the form of a letter to the Honors Program Committee, c/o 200 Stimson Hall.

**CURRICULUM COMMITTEE**

Many decisions pertaining to the curriculum, to division-wide requirements, and to the programs of study are made by the Curriculum Committee of the division. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

**ADVISING**

Students in need of academic advice are encouraged to consult their advisers, come to the Behrman Biology Center (216 Stimson Hall), or contact the associate director for academic affairs (200 Stimson Hall).

Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.

Students interested in the multidisciplinary program Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

**INDEX OF COURSES**

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOB; Ecology and Systematics, BIOS; Genetics and Development, BIOGD; Microbiology, BIOM; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Sholes Marine Laboratory, BIOSM.

Note: Biological sciences courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.
The Division of Biological Sciences teaches three introductory biology course sequences during the academic year: Bio G 101-104, Bio G 105-106, and Bio G 109-110; and one during the eight-week summer session: Bio G 107-108. Bio G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meets the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. Bio G 109-110 is a course sequence intended for non-majors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credit).

**Bio G 101-102 Biological Sciences, Lectures**

101, fall, 102, spring. 2 credits each term.

Prerequisite: concurrent enrollment in Bio G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission of instructor. May not be taken for credit after Bio G 105-106 or 109-110. S-U grades optional, with written permission of instructor. Lec, T 9:05 (1st lec of fall term, M Tu W Th R 1:25-4:25, M or W 7:30-10:30 p.m., or T R or S 8-11. One 3-hour lab each week and a weekly lec for discs, special lectures, etc. J. C. Glase, P. R. Ecklund, and staff.

Bio G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, immunology, invertebrate diversity, population growth and development, and ecology. During the first semester, dissection of a doubly-pitted frog is included. Pithing is done by the instructor.

**Bio G 105-106 Introductory Biology**

105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after Bio G 101-104 or 109-110. No admittance after first week of classes.

Estimated cost for dissection kit, $11. S-U grades optional, with written permission of instructor. Lec, T 9:05 (1st lec of fall term, M Tu W Th R 8-29 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Physiology, anatomy (accompanied by preserved vertebrate and invertebrate dissections), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved vertebrate dissection). The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who take the course must respect deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work or on extensive dissections (both vertebrate and invertebrate). Performance examinations in the core units, the laboratories, and the final examination determine the final grade. Students who object to dissecting live invertebrates should talk to the instructor before registering.

**Bio G 107-108 General Biology**

Summer (8-week session; 107, weeks 1-4; 108, weeks 5-8). 4 credits each. Prerequisite: one year of college or permission of instructor; Bio G 101-103, 105, or 107 is a prerequisite for 108. Fee, $25 for weeks 1-4, $15 for weeks 5-8; Lees, M W F 9-12; labs, M T R 1:30-4:30, 8-12. Staff.

Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general
education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of general biology, population biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school.

BIO G 109-110 Biological Principles
109; fall; 110; spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or 101-103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an examination from the instructor. May not be taken for credit after BIO G 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and the Division of Biological Sciences but may not be used as an introductory course for the major in biological sciences. Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology. Letter grade only. Lecs, M W F 9:05 or 10:10; lab, M T W R or F 2:45—2:45 or T 10:10—12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 26 and Nov. 12; spring, Feb. 20 and Apr. 3. R. Turgeon, M. Taylor, C. Eberhard, and staff.

This course is designed to complement introductory biology by providing an opportunity for diversified exploration of selected topics of interest. Class involvement and discussion are encouraged.

BIO G 170 Evolution of the Earth and Life (also Geological Sciences 102)

BIO G 200 Special Studies in Biology
Fall, spring, or summer. 1–3 credits. Prerequisites: transfer- or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 200. S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for BIO G 109-110 together or for any 100-level courses and may not be used in fulfillment of college distribution requirements except by permission of the associate director of the division.

BIO G 207 Evolution (also History 287 and Science and Technology Studies 287)

Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology, and exploration of the implications of evolution for culture. Range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIO G 208 Drawing the Human Figure
Summer (6-week session). 3 credits. Labs, M T W 9:00–5:15. K. Kucharski. Human anatomy; preparation and learning correct anatomical information relating to the skeletal and muscular systems as approached through observation and drawing practices.

BIO G 209 Introduction to Natural Science Illustration
Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs, T R 6:30–9:30 p.m. B. S. King.

This course provides an introduction to the principles and practice of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and color illustration, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also Veterinary Microbiology 315)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:30–9:55. J. A. Marsh.

A survey of immunology, with emphasis on the biological functions of the immune response.

BIO G 400 Undergraduate Seminar in Biology
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Sem to be arranged. Staff.

From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty members from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology, please see directions under appropriate section.

BIO G 401 Introduction to Scanning Electron Microscopy
Fall or spring, weeks 1–8. 1 credit. Limited to 8 students (fall), 12 students (spring). Prerequisite: permission of instructor. S-U grades optional. Not offered fall 1996; next offered spring 1997. Lecs. M 10:10; lab, T R or F 9:05—12:15 or T W or R 1:25–4:25. Fee may be charged. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine architectural features of organisms. In preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.

BIO G 403 Transmission Electron Microscopy for Biologists
Fall, 1, 2, or 4 credits (4 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOL 345 or 443, or written permission of instructor. S-U grades optional. Not offered 1996–97; next offered fall 1997. Lecs, T 11:15; labs, M W or T R 1:25–4:25. Two sections: Sec 01, 1 credit, weeks 1–4; sec 02, 3 credits, weeks 5–12. Students may register for one or both sections. Fee may be charged. M. V. Parthasarathy.

Section 01, credit, weeks 1–4, covers the principles and use of the transmission electron microscopy (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used for viewing with the transmission electron microscope. Section 02, 3 credits, weeks 5–12, covers the principles and techniques of preparing biological
material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixatives, cryostat sections, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

**BIO G 405 Neotropics: Introduction to Their Biology**
Fall. 2 credits. Limited to 18 students. Prerequisites: BioES 261 or equivalent, and permission of instructor. Sem. W 7:30-9:30 p.m. A. S. Flecker, P. H. Wrege, J. B. Heiser.

This seminar is an introductory survey of the biology of selected biomes of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn the basic characteristics and phenomena important to an understanding of neotropical biology, to gain firsthand knowledge of the resources available at Cornell for the pursuit of this knowledge, and to learn (through doing) how to organize and execute a meaningful seminar presentation. Specific topics and the students' choice of assignments from the two texts for the course. Additional readings are available if background material is needed or if the students have an area of special interest. In addition, each student participates in the design, organization, and presentation of one unit of course work. This may include arranging class visits to various Cornell resource facilities for the study of tropical biology, arranging for guest speakers, presenting additional material from the literature, and interviewing members of the Cornell community with experience or expertise relevant to that unit's topic. Selected films may also be presented.

**BIO G 450 Light and Video Microscopy for Biologists**
Spring. 3 credits. Limited to 12 students. Prerequisite: one year of introductory biology and permission of instructor. Lecs. T R 1:25-2:30; lab, R 2:30-4:30. R. O. Wayne.

Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

**BIO G 469 Food, Agriculture, and Society (also Biology and Society 469 and Science and Technology Studies 469)**
Spring. 3 credits. Limited to 20 students. Prerequisite: introductory ecology course or permission of instructor. S-U grades optional. Lecs. T R 1:25-2:40. A. G. Power.

A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of food production and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

**BIO G 498 Teaching Experience**
Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent, and written permission of instructor. *Students in the College of Arts and Sciences may not count credits from this course toward the 120 credits required for graduation, unless S-U grades are accepted.*

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. In addition, credit may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105; 106; BIOAP 311, 319; BIOM 231, 330, 331; BIOMES 274, 475; and BIOM 291, 292.

**BIO G 499 Undergraduate Research in Biology**
Fall or spring. Variable credit. *Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor.* Prerequisite: written permission of staff member who supervises the work and assigns the grade. Stu­dents register in the Office for Academic Affairs in 200 Stimson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices and in 200 Stimson Hall.) Any faculty member in the Division of Biological Sciences may act as a supervi­sor. Cornell faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as cosigner, taking full responsibility for the quality of the work. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours to be arranged.

**BIOAP 212 Human Physiology for Non-Biology Majors**
Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any Program of Study in the biological sciences major. Lecs. M W F 1:25; disc, M W or F 2:15. Evening prelim: Feb. 27 and Apr. 15. W. W. Concannon and staff.

Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by staff of research physiologists and cooperating physicians.

**ANIMAL PHYSIOLOGY 133**
BIOAP 214 Biological Basis of Sex Differences (also Biology and Sociology 214 and Women's Studies 214)
Fall. 3 credits. Limited to non-biology majors and freshman and sophomore biology majors; junior and senior biology majors may register with permission of instructor. Prerequisite: one year of introductory biology. S-U grades optional. Offered alternate years. Lecs, T R 8:30-9:55; occasional discussion to be arranged. E. Fortune.

The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction, where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOAP 311 Introductory Animal Physiology, Lectures (also Veterinary Physiology 346)
Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor. Lecs, M W F 11:15. Evening prelims: Sept. 24 and Oct. 22. A. Quarni and staff.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 312 Farm Animal Behavior (also Animal Science 305)
Spring. 2 credits. Prerequisites: introductory course in animal physiology. Recommended: at least one animal production course or equivalent experience. S-U grades optional. Lecs, T R 11:15. E. A. Oltenacu, K. A. Houp.

The behavior of production species (avian and mammalian) influences the success of any management program. Students study behavior relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production, and their implications for animal behavior and welfare are stressed.

BIOAP 313 Histology: The Biology of the Tissues
Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331, or their equivalents; and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Lecs, T R 1:25; labs, T R 2:30-5:00. C. Wahl.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

BIOAP 316 Cellular Physiology
Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 332 or 333. Lecs, M W F 9:05; lab, M T 1:25-5:00. Evening prelims: Feb. 25, Apr. 3, and Apr. 22. A. Quarni and staff.

Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Students also provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function in vivo and in vitro. Experiments performed in the laboratory are closely related to, and provide practical experience with, topics covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

BIOAP 319 Animal Physiology Experimentation
Fall. 4 credits. Designed for upper-level undergraduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 3 afternoon laboratory sections limited to 32 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor based on previous meritorious performance in another introductory animal physiology course. Lec, R 12:20; lab, M W F 12:20-5:00 (includes disc section). R. A. Corradino.

A series of student-conducted in vivo and in vitro experiments with exercises designed to illustrate basic physiological processes in animals and to introduce students to animal physiology research techniques, instrumentation, experimental design, and interpretation of results. Topics include anesthesia, dissection, vivisection under anesthesia, physiographic and computer recording and analysis. Experiments with living tissues and live animals examine properties of blood, muscle, and neuronal, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals of several vertebrate species, including frogs, rats, and rabbits, which are euthanized in conjunction with the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, quizzes, and laboratory performance.

BIOAP 419 Advanced Animal Physiology Experimentation
Spring. 3 credits. Prerequisite: BIOAP 319 previous semester. Limited to 12 selected students. Lab to be arranged. Coordinator: R. A. Corradino.

Advanced research on fundamental aspects of laboratories conducted in BIOAP 319, Animal Physiology Experimentation.

BIOAP 458 Mammalian Physiology
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in T9 026 Vet Research Tower before the first class. Lecs, M W F 10:10. Evening prelims: Feb. 18, Mar. 25, and Apr. 22. K. W. Beyenbach and staff.

The course is intended to provide a thorough treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multifaceted animals; mammalian fluid compartments; homeostasis; membrane and epithelial transport; electro­physiology; cardiovascular physiology, gastrointestinal physiology; renal physiology; and acid-base physiology. The lectures will incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine. Recommended for biological sciences majors, pre-med and pre­vet students, and beginning graduate students in physiology, nutrition, and animal science.

BIOAP 619 Lipids (also Nutritional Sciences 602)
Fall. 2 credits. Prerequisite: permission of instructor. Minimum enrollment of 6 required. Offered alternate years. Not offered 1996-97. Lecs, T R 11:15. A. Bensadoun.

Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catabolism; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

BIOAP 650 Molecular Mechanisms of Hormone Action

An advanced course developed from the current literature on endocrine mechanisms. Primarily a lecture course with student discussion.

BIOAP 710-719 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics. Two topics offered fall 1996; one topic offered spring 1997.

BIOAP 711 Stress Physiology: to be discussed as part of animal welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Lec, 1 hour each week to be arranged. K. A. Houp.

Emphasis is on physiological assessment of stress.

BIOAP 712 Proteolysis in Physiological Function and Dysfunction (also VET MED 618)
Spring. 1 credit. Offered alternate years. Lec, 1 hour each week to be arranged. J. F. Wootton.

BIOAP 713 Cardiac Electrophysiology
Fall. 1 credit. Offered alternate years. Lec, 1 hour each week to be arranged. R. F. Gilmour.

Survey of cardiac action potentials, passive membrane properties, ion channels, and
dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 719 Graduate Research in Animal Physiology (also Veterinary Physiology 528)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours to be arranged. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 757 Current Concepts in Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Offered alternate years. Lect, 2 hours each week to be arranged; disc, 1 hour each week to be arranged. J. E. Fortune, W. R. Butler, and staff.

A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOAP 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: P. W. Nathanielz. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOAP 812 Advanced Physiological Methods II
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: P. W. Nathanielz. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 132 Orientation Lectures in Biochemistry
Spring, weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lect, S 10:10-11:00, for first three S of semester. Section chair and staff. Discussions by six professors about their research and promising areas for research in the future.

BIOBM 231 General Biochemistry
Fall. 3 credits. Not offered 1996-97. Staff.

BIOBM 233 Introduction to Biomolecular Structure
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lect, T R 2:30-3:20. S. E. Ellick. This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

BIOBM 234 Recombinant DNA Applications, Discussion
Spring. 1 credit. Concurrent registration in BIOBM 232 required. Limited to 16 students in each section. S-U grades optional. Not offered 1998-99. Applications discussed include screening for genetic diseases, HIV and other maladies; gene therapies; DNA fingerprinting; agricultural uses—animals, plants, and food products, and drugs, diagnostics, and vaccines. Social, ethical, legal, and economic issues are discussed as well as new linkages between agriculture and medicine.

BIOBM 320 Physics of Life (also Applied and Engineering Physics 330)
Spring. 3 credits. Prerequisites: freshman and sophomore physics, chemistry, math. S-U grades optional. Lecs, T R 10:10–11:25, lab/field trips/discussions to be arranged. L. Jelinski. A foundations course for students interested in biophysics and bioengineering.

BIOBM 330-332 Principles of Biochemistry
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture-tracks (333) during the summer. Individualized instruction is offered to a maximum of approximately 200 students each semester. Lectures given fall semester (331) and spring semester (332).

BIOBM 330 Principles of Biochemistry, Individualized Instruction
Fall or spring. 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 253 or 257 or 357-358 or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grades optional for graduate students only. Hours to be arranged. Evening prelims: fall, Oct. 22; spring, Mar. 11. J. E. Blankenship, G. S. Albrecht, P. C. Hinkle, R. Wu, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene expression. No formal lectures, autotutorial format; discussion sessions on three research papers on protein structure and function.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 253 or 257 or 357-358 or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Lects, M W F 10:10. Evening prelim: Oct. 22. G. W. Feigenson. The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include methods for studying proteins, protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 332 Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one year of introductory biology for majors or previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lects, T R 12:20. M. C. Zheng. A comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.
BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology

Summer (6-week session). 4 credits.
Prerequisites: one year general chemistry and CHEM 253 or 257, or 358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S-U grades with permission of instructor. Lecs, M-F 10:00-12:00. H. T. Nivison.
The content of this course is similar to that of BIOBM 330; however, it is presented in lecture format rather than as individualized instruction. The topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334 Computer Graphics and Molecular Biology

Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330 or written permission of instructor. May not be taken for credit after BIOBM 331, 332, or 333. S-U grades optional. Lecs, J. E. Blankenship, G. S. Albrecht, P. C. Hinkle, A. Karplus, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Student presentations on current topics in molecular biology.

BIOBM 432 Survey of Cell Biology

Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. S-U grades optional for graduate students only. Lecs, M W 6:40-9:50. W. J. Brown and staff.
A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOGD 489, BIOBM 652, 656, and 659.

BIOBM 434 Biotechnology: Molecular Basis

Summer (6-week session). 3 credits.
Prerequisite: BIOBM 330 or 331 and 332 or 333, or equivalent. Lecs to be arranged. S. Ely.
This course provides a detailed account of the biochemistry and molecular biology behind recent biotechnological advances and commercial introductions. Topics include the use of transgenic bacteria in bioconversion and for insect pest control, of transgenic plants to provide novel biopharmaceutical delivery and protection systems, and the engineering of plants and animals for production of pharmaceutical and other valuable materials.

BIOBM 435-436 Undergraduate Biochemistry Seminar

435. Fall. 436. Spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOBM 330 or 333 or 331 and 332 or written permission of instructor. S-U grades only. Sec to be announced. Organizational meeting first W of each semester at 4 p.m. Fall: G. P. Hess; spring: staff. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

BIOBM 437 Oncogenes and Cancer Viruses (also Tropology 437)

Fall. 3 or 4 credits (4 credits for participation in the writing component of the course). Undergraduates are required to do the 4-credit option. Prerequisite: BIOBM 330 or 333 and 332. Recommended: BIOGD 281. S-U grades optional. Lecs, T R 12:20-1:35; disc, W 7:30 p.m. D. J. Shalloway. The use of animal cells in culture as an experimental system for studying the cellular mechanisms involved in carcinogenesis through the use of recombinant DNA and biochemical methods. Topics include immortalization of cells, the cell cycle, differences between normal and neoplastically transformed cells, growth factors, molecular biology and biochemistry of cancer viruses, and structure and function of viral and cellular oncogenes. Understanding of relevant experimental techniques, experimental design, approaches to selected primary research literature is emphasized. This is not a survey course; it is designed primarily for students planning a career in research. A series of exercises to develop scientific writing skills are required for graduate students except by special permission. Depending on availability, graduate students may also participate in this writing component. Four credits are given when the writing component is included.

BIOBM 438 Yeast Genetics and Molecular Biology

Spring. 2 credits. Prerequisites: BIOGD 281 and BIOBM 330 or 332 or 333, or permission of instructor. S-U grades optional. Offered alternate years. Lecs, W 8-9:55 p.m. B.-K. Tye. An advanced overview of genetic studies in yeast, primarily Saccharomyces cerevisiae. Special attention is given to the use of yeast as a model for studying problems in cell biology in eukaryotes. Both genetic and molecular exercises to develop scientific writing skills are required for graduate students except by special permission. Depending on availability, graduate students may also participate in this writing component. Four credits are given when the writing component is included.

BIOBM 630 Laboratories in Biochemistry, Molecular, and Cell Biology (formerly BIOBM 630, Experimental Cell Biology; BIOBM 634, Experimental Proteins and Enzymes; and BIOBM 638, Experimental Molecular Biology)

Fall or spring. 2 or 4 credits (students are expected to sign up for two sections for a total of 4 credits, limited space available for students taking only one section). Enrollment limited. Prerequisites: BIOBM 330, or 331 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, or 333, and permission of instructor obtained by filling out an enrollment form (available in 301C Rice Hall). Strongly recommended: BIOGD 281. Class assignments are affected by date enrollment forms returned to 301C Rice Hall. Preference given to undergraduate majors in the Biochemistry or Cell Biology Program of Study, and to graduate students with a minor in the Field of Biochemistry, Molecular and Cell Biology. Labs, M W 12:20-4:25 (disc, one hour F afternoon to be arranged) or T 9:05-4:25 (disc, one hour R morning to be arranged) or R 9:05-4:25 (disc, one hour T afternoon to be arranged). Each section is seven weeks during the semester; the dates to be determined at the beginning of each semester depending on scheduling constraints and student preferences.

Section 01 Experimental Molecular Biology

2 credits. H. T. Nivison, B. Tyler, V. M. Vogt. Includes cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

Section 02 Experimental Proteins and Enzymology

2 credits. H. T. Nivison, B. Tyler, V. M. Vogt. Includes purification of enzymes by ion exchange chromatography and affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

Section 03 Experimental Cell Biology

BIOBM 631 Protein Structure and Function

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. L. Nicholson. Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

[BIOBM 632 Membranes and Bioenergetics

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Not offered 1996-97. Lecs, T R 11-1:15. P. C. Hinkle. Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.]

BIOBM 633 Biosynthesis of Macromolecules

BIOBM 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also Nutritional Sciences 635)

Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and CHEM 358 or 368 or equivalent. Biochemistry, Molecular and Cell Biology major or instructor. Offered alternate years. Lecs, T R 9-10:55. M. N. Kazarinoff, N. Noy, P. Stover. Molecular mechanisms by which sensory, hormonal, and nutritional inputs cause changes in enzyme activity in order to regulate metabolic transformations. Emphasis is on gene expression, protein modification,
and allosteric effects using examples from mammalian systems. Consideration of identification and characterization of regulatory steps in metabolism from both theoretical and practical aspects.

**BIOBM 636 Cell Biology**
Spring. 2 credits. Prerequisites: BIOBM 350 or 353 and 452, or their equivalents. Not offered 1996–97. Lecs: T 9:05–11:00. A. P. Bretscher. Lectures covering current topics in cell biology, including a detailed discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, junctions, the cell cycle, and related topics. Together with BIOBM 632 and 639, this course provides broad coverage of the cell biology subject area.

**BIOBM 637 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 636)**
Fall. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 or equivalent. Lecs: M W F 9:05. Evening prelins to be arranged. W. J. Arton.

The elements and dynamics of energy metabolism in humans and higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes in vivo are analyzed in the contexts of selected physiologic and pathologic stresses.

**BIOBM 639 The Nucleus**
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 or equivalent. Recommended: BIOGD 281. Lec, M 7:30–9:25 p.m. J. T. Lis.

Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 652 and 636, provides broad coverage of the cell biology subject area.

**BIOBM 648 Plant Biochemistry (BIOL 648)**
Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, organic chemistry, and a course in plant physiology. Offered alternate years. Lecs, M W F 9:05. A. T. Jagendorf and staff.

For course description, see BIOL 648.

**BIOBM 692 Protein-Nucleic Acid Interactions (BIOMI 692)**
Spring. 3 credits. Prerequisites: BIOBM 350 or 353 or 351 and 352 or equivalent. Lecs, T R 10–11:25. J. D. Helman.

For course description, see BIOMI 692.

**BIOBM 732–737 Current Topics in Biochemistry**
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 350 or 353 or 331 and 332 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

**BIOBM 738 Macromolecular Crystallography (also Chemistry 788)**

Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the 3-dimensional structures of macromolecules. These include crystallization, data collection, multiple isomorphous replacement, molecular replacement, model building, refinement, and structure interpretation.

**BIOBM 750 Cancer Cell Biology (also Veterinary Pathology 750)**
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 332 or equivalent. Offered alternate years. Not offered 1996–97. Lecs to be arranged. J. Guan, R. Levine, B. Pauli, A. Yen.

Course covers cellular, molecular and genetic aspects of cancer. The course is divided into three sections: The first section addresses tumor etiology, progression and metastasis; the second section looks at cell-matrix and cell-cell interactions; and the third section focuses on cell cycle. For a detailed course description, see the Division of Biological Sciences "Course Supplement."
An introduction to principles of ecology discussing ecological principles extensively. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are discussed. Ecological principles are extensively applied to current environmental problems and issues.

**BIOES 261 Ecology and the Environment**
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. T. E. Dawson, R. B. Root.

An introduction to ecology concerning the interactions between organisms and their environment. The course covers both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are discussed. Ecological principles are extensively applied to current environmental problems and issues.

**BIOES 263 Field Ecology**
Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 261. Lec, R 1:25; lab, F 12:20-5:00. One weekend field trip to the Hudson Valley. Small fee for field trip. R. B. Root.

Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

**BIOES 264 Birds in Biology, Lectures**
Spring. 2 credits. May not be taken for credit after BIOES 475. Intended for students with no background in biology. S-U grades optional. Lecs, M W 9:05. A. A. Dhondt.

Using birds as a starting point, this course aims at bringing exciting new insights in bird biology to non-majors. Bird research has often generated new insights in the biological sciences. Starting from studies on birds a number of topics from a variety of biological disciplines can be addressed. These include problems from behavioral ecology (rating systems, sperm competition, extra-pair paternity, territorial behavior, song), from population ecology (population dynamics, micro-evolution, competition), from evolutionary biology (in life history theory, optimal clutch size) and from conservation biology (biodiversity, habitat fragmentation, inbreeding).

**BIOES 266 Birds in Biology, Laboratory**
Spring. 1 credit. Limited to 40 students. Intended for students with no background in biology. Prerequisite: concurrent enrollment in BIOES 264. S-U grades optional. Lab, S 9:05-12:05; some all-day field trips to be arranged. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. A. A. Dhondt. Laboratories supplement the lecture course and provide hands-on experience. Laboratories include field trips, some field-research experience, and work in the Cornell bird count.

**BIOES 272 Functional Ecology of Vertebrates**
Spring. 4 credits. Enrollment limited to 60 students (15 per laboratory section), preference given to sophomores and juniors. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1996-97; next offered spring 1998. Lecs, M W F 9:05; lab, M T W R or 1:25-4:25. Fee, $15. Staff.

An introductory course for students interested in organismal biology. The features of the physical environment that are important to insects and vertebrates are used to illustrate the interaction of physiological, behavioral, and morphological characteristics in organismal biology and biology. Laboratories include a survey of the diversity of endothermal and ectothermal animals, ecophysiological measurements, and measurements of important environmental parameters in local habitats. This course uses live and preserved vertebrate animals for field observations and laboratory exercises.

**BIOES 274 The Vertebrates: Structure, Function, and Evolution**
Spring. 4 credits. Prerequisite: one year of introductory biology. Offered alternate years. Lecs, M W F 12:20; labs, M T or W 1:25-4:25. Evolving technology at be announced. Fee, $15. Staff.

An exploration of the relations between form and function in biological systems with an emphasis on trends in vertebrate evolution. Lectures integrate data from topics such as locomotion, feeding, size, and scaling with issues of historical importance and current interest (e.g., correlation of body parts, adaptationist explanations, developmental constraints, criteria for determining biomechanical efficiency). Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations (motion analysis, surface electrode, and force-plate recordings).

**BIOES 275 Human Biology and Evolution (also Anthropology 275 and Nutritional Sciences 275)**
Fall. 3 credits. S-U grades optional, with permission of either instructor. Offered alternate years. Lecs, W F 10:10; disc, M 10:10. K. A. R. Kennedy, J. D. Haas.

An introduction to the biology and evolution of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

**BIOES 276 Evolutionary Biology**
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students each semester. Students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 300 students; not open to freshmen fall semester. Prerequisite: one year introductory biology or permission of instructor. Lecs, T R 9:05; disc, 1 hour each week to be arranged. Evening prelims: Fall, Oct. 1 and Nov. 5; spring, Feb. 25 and Apr. 1. Fall, A. S. Kondroshov; spring, R. G. Harrison and staff.

The course considers explanations for patterns of diversity and for the apparent “good fit” of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

**BIOES 371 Human Paleontology (also Anthropology 371)**
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years. Not offered 1996-97; next offered fall 1997. Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. K. A. R. Kennedy.

A basic introduction to human evolution with special attention to skeletal and dental anatomy, geographical contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

**BIOES 373 Biology of the Marine Invertebrates**
Fall. 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Offered alternate years. Not offered 1996-97. Lecs, M W F 10:10; lab, W 1:25-4:25. 1 optional weekend field trip to Shools Marine Laboratory. $60 fee for optional field trip. C. D. Harvel.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. This course provides evidence for human evolution with special attention to skeletal and dental anatomy, geographical contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

**BIOES 452 Herbivores and Plants: Chemical Ecology and Coevolution (also Entomology 452)**
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Offered alternate years. Lecs, M W F 11:15. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. P. P. Feeny.

Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of defense and attack; and implications for human food and agriculture.
ECOLOGY AND EVOLUTIONARY BIOLOGY 139

[BIOES 455 Insect Ecology (also Entomology 455)]
FALL. 3 Credits. Prerequisites: BIOES 261 or equivalent and ENTO 212 or knowledge of another taxon. S-U grades optional. Offered alternate years. Not offered 1996-97. Lect., M W F 11:15, R. B. Root.
Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

[BIOES 456 Stream Ecology (also Entomology 456)]
SPRING. 4 Credits. Recommended. BIOES 261. S-U grades optional, with permission of instructor. Lect., T R 9:05, labs, T W or R 1:25-4:25. Field project with term paper. B. L. Peckarsky, M. B. Bain.
Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics, colonization and succession; community dynamics, conservation; and the impacts of disturbances. Lab: A field project includes descriptive and experimental techniques and hypotheses testing related environmental assessment.

[BIOES 457 Limnology: Ecology of Lakes, Lectures]
FALL. 3 Credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Offered alternate years. Lect., M W F 11:15, N. G. Hairston, Jr.
The study of continental waters, with emphasis on lakes and ponds. Factors regulating nutrient cycling processes, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

[BIOES 458 Limnology: Ecology of Lakes, Laboratory]
FALL. 2 Credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Offered alternate years. Lab., T W or R 1:25-4:25; 1 weekend field trip. Fee, $10. N. G. Hairston, Jr. and staff.
Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip.

[BIOES 461 Population and Evolutionary Ecology]
SPRING. 4 Credits. Prerequisites: BIOES 261 or 274 plus two semesters of calculus, or permission of instructor. S-U grades optional. Offered alternate years. Lect., M W F 11:15, R. B. Root.
Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal, competition, predation, parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

[BIOES 462 Marine Ecology]
SPRING. 3 Credits. Limited to 75 students. Prerequisite: BIOES 457, Offered alternate years. Lect. and disc., M W F 10:10, C. D. Harvell, C. H. Greene.
Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on invertebrate marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystems, and evolutionary biology. Examples drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

[BIOES 463 Plant Ecology and Population Biology, Lectures]
FALL. 3 Credits. Prerequisite: BIOES 261 or 274 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOES 465. Offered alternate years. Lect., M W F 11:15, M. A. Gerber, P. L. Marks.
This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment on processes such as competition, herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

[BIOES 464 Macroevolution]
SPRING. 4 Credits. Limited to 25 students. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lect., T R 10:10-11:25, disc., 1 hour each week to be arranged. A. R. McCune.
An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origins and fate of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphological systematics, paleobiology, evolution, and ecology.

[BIOES 465 Plant Ecology and Population Biology, Laboratory]
FALL. 1 Credit. Prerequisite: concurrent enrollment in BIOES 463. Offered alternate years. Lab., F 12:05-5:00, M. A. Gerber, P. L. Marks.
Laboratory and field exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

[BIOES 466 Physiological Plant Ecology, Lectures]
A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, energy balance; water use and water relations, nutrient relations, linking physiology, development, and morphology; stress physiology; life history and physiology; the evolution of physiological performance; and physiology at the population and community and ecosystem levels. Readings draw from the primary literature and textbooks.

[BIOES 468 Physiological Plant Ecology, Laboratory]
SPRING. 2 Credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 274. Offered alternate years. Not offered 1996-97. Lab., T 1:25-4:25, plus additional lab hours to be arranged. T. E. Dawson.
A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/week in additional lab time for this course.

[BIOES 470 Ecological Genetics (also Entomology 470)]
SPRING. 4 Credits. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional. Offered alternate years. Lect., T R 10:10-11:25, disc., 1 hour each week to be arranged. S. Via.
A study of the relationships between genetic and ecological processes in populations. Topics include considerations of variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

[BIOES 471 Mammalogy]
FALL. 4 Credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Lect., T R 10:10-11:25, disc, optional. Lab., M T or W 1:25-4:25, 1 weekend field trip required. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee, $15. Staff.
Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the
North American fauna. Systematics laboratories are discussed. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

**BIOES 472 Herpetology**
- Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes systematics, functional morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

**BIOES 473 Ecology of Agricultural Systems (also Soil, Crop, and Atmospheric Sciences 473)**
- **Fall**: 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years. Lecs and disc, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. A. G. Power and staff.
- Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, and the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agroecosystems. The studies from both the tropics and the temperate zone are used to illustrate important concepts.

**BIOES 474 Laboratory and Field Methods in Human Biology (also Anthropology 474)**
- **Spring**: 5 credits. Limited to 16 students with permission of instructor obtained by preregistration in Corson. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years. Lecs and labs, T R 10:10-12:05. J. L. Cisne and staff.
- Analysis of ecosystems in terms of energy flow and nutrient cycling. Emphasis on an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

**BIOES 478 Paleobiology (also Geological Sciences 479)**
- **Fall**: 3 credits. Prerequisites: BIOES 272 or GEO 375, BIOES 373, or permission of instructor. Offered alternate years. Not offered 1996-97. Lecs, M W F 12:20. J. L. Cisne and staff.
- A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of biology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

**BIOES 475 Ornithology**
- **Fall**: 4 credits. Limited to 30 students, with permission of instructor obtained by preregistering in E241 Corson. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Lecs and labs, T R 12:20-4:25; occasional field trips and special projects. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee, $15. D. W. Winkler.
- Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

**BIOES 476 Biology of Fishes**
- **Fall**: 4 credits. Limited to 24 students. Recommended: BIOES 272 or 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. Offered alternate years. Lecs, M W F 10:10; lab, M 1:25-4:25. A small lab fee may be required. A. R. McCune.
- An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

**BIOES 479 Ecosystem Biology**
- **Spring**: 4 credits. Prerequisites: BIOES 261 or equivalent, S-U grades optional. Offered alternate years. Lecs and disc, T R 10:12-1:05. L. O. Hedin, R. W. Howarth.
- Analysis of systems in terms of energy flow and nutrient cycling. Emphasis on experimental approaches and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

**BIOES 579 Paleobiology (also Geological Sciences 479)**
- **Fall**: 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 272 or GEO 375, BIOES 373, or permission of instructor. Offered alternate years. Not offered 1996-97. Lecs, M W F 12:20. J. L. Cisne and staff.
- A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of biology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

**BIOES 600 Field Studies in Ecology and Systematics**
- **Fall or spring**: Variable credit. Prerequisites: BIOES 261, a taxonomic-oriented course, and permission of instructor. Estimated costs: to be announced. S-U grades optional, with permission of instructor. Lecs and field trips to be arranged. Staff.
- This course provides students with opportunities to learn field techniques and a new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intercession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors in the Division's "Course Supplement" issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

**Section 01: Life Histories of Marine and Freshwater Invertebrates**
- **Fall**: 2 credits. Prerequisite: Undergraduates must have previous experience or course work with marine or freshwater invertebrates. Fee, $100 (to help cover transportation and housing at Sholes Marine Lab). Two extended field trips in early September and October. Organizational meeting Thursday, August 29, 4:00 p.m., in Corson/Mudd A409. C. D. Harvell, N. G. Hairston, Jr.
- Field trips to the Sholes Marine Lab and Shackleton Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.

**BIOES 661 Environmental Policy (also ALS 661 and Biology and Society 461)**
- **Fall and spring**: 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Offered alternate years. D. J. Magil.
- This course uses an interdisciplinary approach to focus on complex environmental problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

**BIOES 662 Mathematical Ecology (also Statistics and Biometry 662)**

**BIOES 663 Theoretical Population Genetics**
- **Spring**: 3 credits. Prerequisites: knowledge of general population genetics (e.g., BIOGD 481), and some mathematics (e.g., MATH 111). Primarily for graduate students; permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, 2 hours each week to be arranged; lab (computer), 3 hours each week to be arranged. A. S. Kondrashov.
- Theoretical population genetics (TPG) is one of the areas of current evolutionary biology. The course explains why TPG is successful in its domain and what its limitations are. Students analyze the effects of seven elementary factors of population dynamics (mutation, selection, drift, migration, segregation, recombination, and non-random mating). Consideration of biologically relevant situations when several factors act simultaneously (migration-drift, mutation-selection-drift, segregation-recombination...
selection, etc.) leads to studying the changes of not only the population state, but of the "rules of the game" themselves (evolution of reproductive isolation, life history, recombination, mutability, etc.). Students study in detail several topological biological interest (maintenance of quantitative variability, evolution of aging, and sexual selection). Active use of computers in analyzing the models, but no formal training in program-
ing required.

N. G. Hainston, Jr.
A seminar course on advanced topics in freshwater ecology.

Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

[BIOES 669 Plant Ecology Seminar] Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Sem to be arranged. Staff.

Includes review of general literature, student research, and selected topics of interest to participants.

[BIOES 670 Graduate Seminar in Vertebrate Ecology] Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem to be arranged. Staff.

Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

[BIOES 672 Graduate Seminar in Physiological Ecology] Spring. 2 credits. May be repeated for credit. Limited to 12 students. Prerequisite: a course in plant or animal physiology, especially BIOES 466 or 467. Permission required for undergraduates. S-U grades only. Offered alternate years. Not offered 1996-97. Sem. 2 hours each week to be arranged. T. E. Dawson and staff.

Discussion of topics on water balance, energetics, and temperature regulation emphasize parallels and contrasts in the relations of animals and plants to their biophysical environments. Each student leads a discussion and prepares a written review of a topic, drawing on the primary literature of his or her own research interests.

[BIOES 673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)] Fall 3 credits. Prerequisite: one year of introductory biology, ANTHR 101, or permission of instructor. Offered alternate years. Not offered 1996-97; next offered fall 1998. Lec, M 2:30, sem and disc, W 7:30-9:30 p.m. K. A. B. Kennedy.

The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

[BIOES 760 Special Topics in Evolution and Ecology] Fall or spring. 1-3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

[BIOES 767 Current Topics in Ecology and Evolutionary Biology] Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lecs and discs, T R 8-9:55. One weekend field trip. Staff. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

Related Courses in Other Departments

GENETICS AND DEVELOPMENT 141

GENETICS AND DEVELOPMENT (BIODG)

BIODG 184 Understanding Genetics
Spring. 3 credits. May not be taken for credit after BIODG 281 or 282. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any Program of Study in the biological sciences major. S-U grades optional. Offered alternate years. Lecs, M W F 9:05. T. D. Fox.

An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprints). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.

BIODG 281 Genetics
Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollments may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Lecs, T R 10:10-12:05; lab, T W or F 2:30-4:25; additional hours to be arranged. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Problem-solving sessions strongly recommended, T or W 8:30-9:45 (additional session to be arranged if necessary). T. D. Fox, M. L. Goldberg, R. J. MacIntyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombinaton, gene structure, and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

BIODG 282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIODG 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent. Permission of instructor required for students who have taken BIODG 281. May not be taken for credit after BIODG 184. S-U grades optional. Lecs, M W 10:10 (lecs, also F 10:10 1st 3 weeks only); disc, R 10:10 or F 11:10. R. A. Calvo.
**BIOGD 385 Developmental Biology**
Fall. 3 credits. Prerequisite: BIOGD 281.
Lecs, M W F 11:15. A. W. Blackler.
An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

**BIOGD 389 Embryology**
Spring. 3 credits. Preference given to seniors. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Lecs, T R 10:10; labs, either R 2:30-4:25. A. W. Blackler.
A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

**BIOGD 480 Seminar in Developmental Biology**
Spring. 1 credit. May be repeated for credit. Limited to upperclass students.
Topic for spring, 1997: Developmental Aspects of Sex.

**BIOGD 481 Population Genetics**
Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Lecs, M W F 10:10; disc, M 2:30 or T 1:25.
C. F. Aquadro.
Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

**BIOGD 482 Human Genetics and Society**
Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and development. Prerequisites: BIOGD 281 and BIOBM 330 or 333 or 331 and 332, and written permission of instructor. S-U grades optional. Disc, T 2:30-4:25 and R 2:30-3:30. R. A. Calvo, H. T. Simons.
Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are new reproductive strategies, eugenics, genetic counseling, genetic screening (prenatal, neonatal, presymptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and therapy for genetic diseases. Students lead most discussions. There is a major writing component in the course.

**BIOGD 483 Molecular Aspects of Development**
Spring. 3 credits. Prerequisites: BIOGD 281, BIOBM 332 (preferred) or 330 or 333; and BIOGD 385. Offered alternate years. Lecs, T R 2:30-4:00. M. F. Wolfer.
An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular events such as cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, results and their interpretation.

**BIOGD 484 Molecular Evolution**
An analysis of evolutionary changes in proteins and nucleic acids. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.

**BIOGD 485 Bacterial Genetics (BIOMI 485)**
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOBM 330 or 331 and 332. Lecs, W 7:30-9:25 p.m. V. J. Stewart.
For course description, see BIOMI 485.

**BIOGD 486 Advanced Eukaryotic Genetics**
Spring. 3 credits. Prerequisites: BIOGD 281 or equivalent. Interview with instructor required (255-7816 or 380-2813). E. E. Alani.
The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as cell cycle control or protein secretion, and then the basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, chromosome organization, and protein trafficking.

**BIOGD 488 Molecular Genetic Analysis**
Fall or spring. 3 credits. May be repeated for credit. Limited to 10 students. Prerequisites: BIOGD 281 and written permission of instructor. Interview with instructor required (255-7816 or bp14@cornell.edu). S-U grades optional for graduate students only. Labs, T R 1:25-4:25; additional three hours each week to be arranged. B. J. Sneath.
Course teaches the basic principles of fruit fly development and provides students with hands-on research experience in modern experimental genetic methods. The course involves screening a collection of female sterile Drosophila melanogaster mutants for P-element mutations disrupting early embryonic development. The nuclei and cytoskeletal structures of mutant larvae characterized using fluorescence microscopy. The location of the mutated genes is examined by in situ hybridization. The disrupted genes are cloned and sequenced using molecular genetic techniques.

A maximum of 3 credits may be used to fulfill the requirements in the Program of Study in Genetics and Development.

**BIOGD 682 Fertilization and the Early Embryo**
Spring. 2 credits. Prerequisites: BIOGD 281; BIOBM 332 (preferred) or 330 or 333; and BIOGD 385. Offered alternate years. Not offered 1996-97. Lec, R 2:30-4:25. M. F. Wolfer.
This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization, pre-implantation, mitosis, cleavage divisions, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture, and mioblastula transition.

**BIOGD 684 Advanced Topics in Population Genetics**
Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Offered alternate years. Lec, T 2:30-4:25. C. F. Aquadro.
An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and should be confirmed using the course catalog. Format includes lectures, discussion, and presentations by students.

**BIOGD 685 Advanced Bacterial Genetics (BIOMI 485)**
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, W 7:30-9:25; disc, R 10:10-11:00. V. J. Stewart.
For course description, see BIOMI 685.

**BIOGD 687 Developmental Genetics**
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or their equivalents. S-U grades optional. Offered alternate years. Not offered 1996-97. Lec, to be arranged. R. J. Kemphues.
Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in Drosophila, Caenorhabditis, and mouse. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and
BIOMI 292  General Microbiology, Discussion
Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Disc to be arranged. C. M. Rehkugler, E. Seacord.
A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 300  Seminar in Microbiology
Spring. 1 credit. Required of biological science students in the microbiology program of study. Strongly recommended for students considering the microbiology program of study. S-U grades only. Sem. W 12:20. Staff.
A series of lectures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on the Cornell campus.

(BIOMI 304 Pathogenic Bacteriology and Mycology (also Veterinary Microbiology) 218
The study of the major bacterial and fungal agents of infectious disease, with emphasis on the function of virulence mechanisms and the host-parasite interaction. Lectures cover the significance of normal flora, antibiotic therapy and drug resistance, and vaccine development. Laboratories emphasize techniques for isolation, culture, and identification of infectious agents. Animal models are used to help understand certain pathogenic mechanisms.)

BIOMI 391  Advanced Microbiology Laboratory
Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Preference given to biological sciences students in the microbiology program of study. Lab, M W or T R 1:25–4:25; disc, F 1:25. J. B. Russell and staff.
A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology, 2) physiology, 3) genetics, and 4) structure and function. Students select a topic from one of the modules and conduct a two-week independent experiment at the end of the semester.

BIOMI 398  Environmental Microbiology
Spring. 3 credits. Prerequisite: BIOC 261 or BIOMI 290 or SCAS 260 or permission of instructor. Offered alternate years. Lect, M W F 10:10. W. C. Ghiorse, E. L. Madsen.
The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

BIODG 780 Current Topics in Genetics
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Sem. to be arranged. Fall: K. J. Kemphues; spring: D. M. Noden.
A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

BIODG 781 Problems in Genetics and Development
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc. to be arranged. M. F. Wolfer and staff.
An introduction to the research literature in selected areas through weekly problem sets and discussions.

BIODG 782-783 Current Genetics/Development Topics
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Fall: K. J. Kemphues.

BIODG 786 Research Seminar in Genetics and Development
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, W 12:20–1:30. Staff.
Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIODG 787 Seminar in Genetics and Development
Fall or spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, M 4–5:00. Staff.
Seminars in research in genetics and developmental biology conducted by distinguished visitors and staff.

MICROBIOLOGY (BIOMI)

BIOMI 192 Microorganisms on the Planet Earth
A course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaeabacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

BIOMI 290 General Microbiology, Lectures
Fall, spring, or summer (6-week session). 2 or 3 credits (2 credits if taken after BIOMI 192). Prerequisites: one year of introductory biology for majors and one year of college chemistry, or equivalent. Recommended: concurrent registration in BIOMI 291. Lect, M W F 11:15. M. L. Cords, S. M. Merit.
A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and immunology and medical microbiology.

BIOMI 291 General Microbiology, Laboratory
Fall or spring. 2 credits. Summer (6-week session), 2 or 3 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Labs, M W 2:45–5:00, or T R 11:15–1:45 or 2:45–5:00. C. M. Rehkugler.
A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.
BIOLOGICAL SCIENCES - 1996-1997

BIOMI 406 Clinical Microbiology
Fall and spring. 15 credits each semester. Prerequisites: permission of instructor. Hours to be arranged. R. P. Mortlock. Training and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis is on developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of clinical microbiology. This is a full-time program, taking place from September to August of the student's senior year.

BIOMI 408 Viruses and Disease (also Veterinary Microbiology 417)
Spring. 3 credits. Prerequisites: BIOMI 290, 291; BIO G 305; and permission of instructor. Recommended: BIOGD 281. Lecs, M W 7:30 p.m. J. Casey. The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

BIOMI 415 Bacterial Diversity
Fall. 3 credits. Prerequisites: BIOMI 290, 291; and BIOMI 330 or 331 or 333. Lecs, M W F 11:15 a.m. J. P. Shapleigh. A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 416 Microbial Physiology
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Lecs, M W F 11:15 a.m. S. H. Zinder. The concern is with the physiological and metabolic functions of microorganisms. Consideration is given to chemical structure, regulation, growth, and the energy metabolism of prokaryotic organisms. Special attention is given to those aspects of microbial metabolism not normally studied in biochemistry courses.

BIOMI 417 Medical Parasitology (also Veterinary Microbiology, Immunology and Parasitology 431)
Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Offered alternate years. Not offered 1996-97. Lecs, T R 3:30-5:25. D. Bowman. A systematic study of anthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

BIOMI 415 Structure and Function of Bacterial Cells
Fall. 3 credits. Prerequisites: BIOMI 290 and BIOMI 330 or 331 or 333 or permission of instructor. Recommended: BIOMI 415. S-U grades optional. Offered alternate years. Not offered 1996-97. Lecs, M W F 10:10 a.m. W. C. Ghiorse. Morphology, ultrastructure, macromolecular organization, and life cycles of bacterial cells are considered with regard to chemical composition and physiological and ecological function of cellular components.

BIOMI 485 Bacterial Genetics (also BIOMI 685)
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOGD 281. Recommended: BIOMI 290 and BIOMI 330 or 331 or 332 or 333. Lecs, W 7:30-9:25 p.m. V. J. Stewart. Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutation and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

BIOMI 652 (Section 04) Molecular Plant-Microbe Interactions (BIOPLO 652, Sec 03)
Spring. 1 credit. Prerequisites: BIOGD 281, BIOMI 330 or 331 or 333, and BIOPLO 653 (section 01) or their equivalents. S-U grades only. Lees, M W F 11:15 a.m. J. D. Helmann.

BIOMI 685 Advanced Bacterial Genetics (also BIOMI 485)
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOMI 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec, W 7:30-9:25 p.m.; disc, R 10:10 a.m. V. J. Stewart. Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutation and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis. For course description, see BIOPLO 652, Sec 04.

BIOMI 702 Protein-Nucleic Acid Interactions
Spring. 3 credits. Prerequisites: BIOMI 330 or 331 or 333 and 633. Lecs, T R 10:10-11:25 a.m. J. D. Helmann. The physical and chemical bases of protein-nucleic acid interactions are explored including both theory and specific examples. Proteins considered include bacterial non-specific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombinases, topoisomerases, DNA repair enzymes, and nucleases.

BIOMI 704 Genetics of Diverse Bacteria
Spring. 3 credits. Prerequisite: BIOMI 485 or equivalent. Lecs, M W F 10:10-11:25 a.m. S. C. Winans. Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.

BIOMI 791 Advanced Topics in Bacterial Genetics
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Disc, T 4-5:00. Fall: S. C. Winans; spring: V. J. Stewart.

Discussion and critical evaluation of selections from the contemporary literature in bacterial genetics and molecular biology.

BIOMI 795-796 Current Topics in Microbiology
Fall, 1995; spring, 1996. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lecs to be arranged. Staff.

Lectures and seminars on special topics in microbiology.

BIOMI 797 Graduate Seminar In Microbiology
Fall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students are expected to lead discussions on recent primary literature in microbiology. S-U grades only. Sem to be arranged. Staff.

BIOMI 798 Graduate Research Seminar In Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. Sem to be arranged. Staff. A seminar relating to the research activities of those enrolled. Students who have completed the BIOMI 797 series requirement are required to present a seminar concerning their research interests and activities at least once each year.

BIOMI 799 Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Not offered 1996-97. Sem to be arranged. Staff.

BION 322 Hormones and Behavior (also Psychology 322) Spring. 3 or 4 credits. The 4-credit option involves a one-hour section once a week in which students are expected to read original papers in the field and participate in discussion. Limited to juniors and seniors; open to sophomores by permission. Prerequisites: BION 221 or 222 or one year of introductory biology plus a course in psychology. S-U grades optional. Lect, M W F 1:25; disc to be arranged. Staff. Following a review of the neural and endocrine systems, this course connects endocrine physiology to specific behaviors observed in various species, including humans. Although the relationship between sexual physiology and behavior is strongly emphasized, the lectures also describe hormonal contributions to parental behavior, aggression, stress, learning and memory, homeostasis, and biology rhythms. Topics for the discussion sections are chosen by the students within the context of hormonal influences on behavior.

BION 324 Biopsychology Laboratory (also Psychology 324) Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology, BION 221 and 222 or PSYCH 123 and 222, and permission of instructor. Labs, T R 1:25–4:25. T. J. DeVoogd. Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

BION 325 Neuroses - Molecular Aspects Fall. 3 credits. Prerequisites: two courses from BION 222, BIOGD 281, BIOBM 330, or 331; co-registration in one of the two is acceptable. S-U grades optional. Offered alternate years. Lect, T R 9:05; disc, T 2:30–4:25. H. K. Reeve and staff. A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

BION 421 Effects of Aging on Sensory and Perceptual Systems (also Psychology 431 and 631) Fall. 3 or 4 credits (4 credits with term paper). Limited to 25 students. Prerequisites: introductory course in biology or psychology, plus a second course in perception, neurobiology, cognition, or psychology. Topics include invertebrate, “simple system” approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human memory. Many of the readings are from primary literature.

BION 422 Biopsychology of Learning and Memory (also Psychology 332) Spring. 3 credits. Prerequisites: one year of biology and either a course in biopsychology or BION 222. Lect, M W F 11:15. T. J. DeVoogd. This course surveys the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include invertebrate, “simple system” approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human memory. Many of the readings are from primary literature.
especially relevant. The course examines the current developments in human sensory receptor structures. Brief written statements taught using the Socratic Method, in which the instructor asks questions of the students. Students are expected to come to each class having already done, and thought about, the assigned readings.

**BIONB 422 Modeling Behavioral Evolution**

Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, one course in probability or statistics, and permission of instructor (Office: W309 Mudd Hall; phone: 254-4552). This course is open to advanced undergraduates and graduate students. S-U grades optional. Not offered 1996-97. Lecs, T R 2:30-4:00; computer lab, one class period per week to be arranged. H. K. Reeve.

This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population genetics (including quantitative genetics), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution cooperation and criminal and animal social groups. Students learn to assess critically recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

**BIONB 423 Neurogenetics**

Fall. 3 credits. Limited to junior, senior, and graduate students. Prerequisites: permission of instructor, one year of introductory biology or equivalent, and BIOGD 281. Strongly recommended. BIONB 222. S-U grades optional. Offered alternate years. Not offered 1996-97. Lecs, T R 2:15-3:35.

A. M. Schneiderman.

Lectures, discussions, and student presentations focus on the uses of genetics for the study of the nervous system. Emphasis is on recent advances in genetic and molecular biological techniques and their application to the study of neural development and behavior. Both invertebrate and vertebrate systems are discussed, and main consideration is given to the fruit fly and the mouse. Readings are taken primarily from original journal articles.

**BIONB 424 Neuroethology (also Psychology 424)**

In the 1950s through the 1970s, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolutionary analysis, careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of acoustic communication in insects and in vertebrates, echolocation in bats and sound localization in owls, electroreception and electrolocation, and visual processing. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts. Assigned readings include original articles from the scientific literature. A term paper or equivalent is required. Recitations scheduled in class.

**BIONB 425 Natural History of Ion Channels**

Spring. 3 credits. Limited to 20 students. Prerequisite: BIONB 222. S-U grades optional. Offered alternate years. D. McCobb.

Course takes a broad view of ion channels and cellular bioelectricity, with emphasis on the gene superfamily including voltage-gated channels. Evolutionary divergence is considered across phylogenetic history and tissue differences and structural variety, particularly in neural cells, examined from modern electrophysiological and molecular biological perspectives. Contributions to behavioral plasticity and neural development are considered.

**BIONB 427 Animal Social Behavior**

Fall. 4 credits. Limited to 20-30 students. Prerequisites: BIONB 221 and BIOES 261 or 278, and advanced permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lecs and discs, T. T. Emlen.

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, spacing systems, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.

**BIONB 428 Topics in Behavior**

Fall or spring. 2-4 credits. (Credits based on number of lectures and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) May be repeated for credit.

Primarily for undergraduates. S-U grades optional.

Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal communication, behavior, bio-rhythms, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester.

**BIONB 429 Olfaction and Taste: Structure and Function (also Psychology 429)**

Fall. 3 or 4 credits (4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to advanced senior and graduate students. Graduate students, see Psychology 629. Prerequisite: a 300-level course in biology or equivalent. Offered alternate years. Not offered 1996-97. Lecs, T R 10:10-11:25. B. P. Halpem.

The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electrophysiology as well as at the molecular level. Function is examined primarily in its neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of Smell and Taste in Health and Disease, edited by T. V. Getchell, R. H. Brainard, and J. B. Snow; The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.

**BIONB 490 Neotropical Behavior/Ecology Field Semester**

Spring. 15 credits. Limited to 2-4 juniors or senior students. Prerequisites: BIONB 221 or BIOES 260 or their equivalents and permission of instructor. S. T. Emlen, P. H. Wrege.

Field studies in the Neotropics conducted under the auspices of Cornell University and the Smithsonian Tropical Research Institute (STRI) in central Panama. Students live in the town of Gamboa, perform research in the lowland tropical rain forest of Soberina National Park, and visit research projects on the Barro Colorado Island, Gigan Peninsula, Pipeline Road, Metropolitan Park, and elsewhere.

The semester includes three units of study:

1. **Field Methods in Behavior and Ecology (4 credits).** Weekly discussion meetings; through selected readings students examine the objectives, strengths, and limitations of the field methods being used on an ongoing research project on role reversal in a neotropical shorebird, the Wattled Jacana.

   Students learn about a wide variety of field methods through short-term visits to other field projects sponsored by the Smithsonian.

2. **Topics in Neotropical Biology (4 credits).** Weekly seminars on behavior, ecology, physiology, and systematics presented by Smithsonian staff and visiting scientists.

   Topics may also include the geography and paleontology of the Isthmus regions. Students prepare a paper exploring the status and interdependence of two topics introduced in the seminar series. (3) Independent Research in Behavioral Ecology: A months' intensive experimental field research, through active participation in ongoing research. This unit of the program includes readings on, and discussions of, the conceptual framework underlying the projects. Participation in the design of the experimental protocols and data acquisition methods; capture, marking, and measuring of study animals; intensive use of methods to study animal social behavior in...
The field; organization and entry of data for analysis; and examination and statistical analysis of data. Students are expected to develop an independent research project within the framework of the ongoing Jacana Research Project.

**BIONB 491 Principles of Neurophysiology**

Spring. 3 credits. Intended for juniors, seniors, and graduate students. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional for graduate students. Lecs, M W 10:10, lab, M or T 12:20-4:25; additional hours to be arranged. R. Johnson.

A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results obtained. Offered alternate years and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and cellular basis for resting and action potentials and synaptic transmission. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

**BIONB 492 Sensory Function (also Psychology 492)**

Spring. 3 or 4 credits. (The 4-credit option involves a one-hour section once a week, in which students are expected to participate in discussion. The 4-credit option is not always offered.) Prerequisite: a 300-level course in biophysics or BIONB 222 or BIOAP 311, or permission of instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Not offered 1996-97. Lecs, M W F 10:10; disc, hours to be arranged. B. P. Halpern, H. C. Howland.

This course covers classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as elementary perception and internal chemoreceptors. Both human and nonhuman species are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of The Sense, edited by Barlow and Mollon, and An Introduction to the Physiology of Hearing, 2nd edition, by Pickles.

**BIONB 493 Developmental Neurobiology**

Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1996-97. Lecs, M W F 9:05. R. Booker.

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and developmental genes in neural development is stressed. Readings are taken from original journal articles.

**BIONB 494 Comparative Vertebrate Neuroanatomy**

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

**BIONB 496 Biocoustic Signals in Animals and Man**

Fall. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: one year of introductory biology, PHYS 101–102 or 207–208, and permission of instructor. S-U grades optional. Offered alternate years. Next offered spring 1999 and alternate spring semesters thereafter. Lecs, M W F 9:05; lab to be arranged. C. W. Clark, R. R. Hoy.

Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course focuses on animal acoustic communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratories are designed around the lecture material and provide "real-world" exercises designed to stimulate discovery of the fundamental principles described in class. Class research projects on a selected topic in biocoustics are required. The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/A data acquisition boards.

**BIONB 497 Neurochemistry and Molecular Neurobiology**

Fall. 3 credits. Limited to 30 students. Prerequisites: BIONB 330 or equivalent, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996-97. Lecs, T R 9:05; disc, T 2:25. R. M. Harris-Warrick.

This course focuses primarily on the biochemistry/molecular biology of neurons. Emphasis is on the molecular properties of these cells that account for their unique function. The presynaptic regulation of neurotransmitter release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Readings are selected primarily from research journals.

**BIONB 623 Chemical Communication (also Chemistry 522)**

Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students.

Prerequisites: one year of introductory biology for majors or equivalent, course work in BIONB 221 and CHEM 359 or equivalent. Offered alternate years. Not offered 1996-97. Lecs, M W 1:25; disc, F 1:25. J. Meinwald, T. Eisner, W. L. Roelofs, and guest lecturers.

The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on the chemical, physiological, ecological, behavioral, and evolutionary principles. The discussion sessions focus on readings from the recent literature and involve student-led discussions of contemporary topics.

**BIONB 626 Sex Differences in Brain and Behavior (also Psychology 524)**

Spring. 2 credits. Limited to 12 students. Prerequisites: BIONB 222 or permission of instructor. Discs and seminars to be arranged. T. J. DeVoogd.

A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

**BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior**

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Staff and students.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and the instructor is named at least one semester in advance. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

**BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior**

Fall. 2 credits each term. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lecs and disc, T R 11:15-12:05, alternate weeks. T. D. Seeley.

Lectures by faculty and seminar discussions on topics of current importance in neurobiology and behavior. Topics are linked to the materials presented in BIONB 221 and 222. Class meets twice a week, every other week. Students are required to write four term papers, over the two semesters, on selected topics in two of three sub-areas: (1) cellular and molecular neurobiology; (2) integrative neurobiology; (3) behavior.

**BIONB 723 Advanced Topics in Animal Behavior**

Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem to be arranged. Staff. A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.
A seminar-field experience course designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

PLANT BIOLOGY (BIOP)

BIOP 241 Introductory Botany

Fall. 3 credits. Lecs, T R 9:05; lab, M T W or R 1:25-4:25, or W 7:30-10:30 p.m.

K. J. Niklas

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plants, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOP 242 Plant Physiology, Lectures

Spring. 3 credits. Primarily for undergraduates in agricultural sciences, but also for any Biological Sciences students wanting to know about plant function. Suitable as a second-level course for nonmajors to satisfy the biology distribution requirement. Prerequisite: one year of introductory biology and/or BIOP 241. Recommended: one year introductory chemistry. Concurrent enrollment in BIOP 244 required of undergraduates except those majoring in the social sciences or humanities, for whom it is recommended. May not be taken for credit after BIOP 342 except by written permission of instructor. Lecs, M W F 10-10. C. Reiss.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, flowering, fruiting, dormancy, and abscission; stress, tissue culture; and genetic engineering.

BIOP 243 Taxonomy of Cultivated Plants

Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOP 248. Lecs, M W 10:10; labs, W 2-4:25. M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOP 244 Plant Physiology, Laboratory

Spring. 2 credits. Prerequisite: concurrent enrollment in BIOP 242. May not be taken for credit after BIOP 244. Disc and lab, M T W or R 12:20-4:25. C. Reiss.

Experiments emphasize concepts covered in BIOP 242 and offer experience in a variety of biochemical and bioengineering techniques, including use of small amounts of radioisotopes.

BIOP 245 Plant Biology

Summer (6-week session). 3 credits. Limited to 24 students. Lecs, M-F 11:30-12:45; labs, M W 2-5:00. S. Williams.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Most of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack college-level biology are expected to work more closely with the instructor on supplemental instructional materials.

BIOP 246 Plants and Civilization

Spring. 3 credits. Lecs, T R 11:15; disc, T or W 1:25 or W or R 12:20. D. M. Bates.

A consideration of the role that plants have played and continue to play in the evolution of human cultures. Emphasis is on the interactions between humans and the plant environment, the nature of plants and manner in which humans use and integrate them into their cultures, and the problems and concerns related to contemporary and future use of plant resources.

BIOP 248 Taxonomy of Vascular Plants

Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after BIOP 243. S-U grades optional. Lecs, M W F 9:05, lab, W or R 1:25-4:25 J. J. Davis.

An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOP 251 Plants in Laboratory Teaching

Fall. 2 credits. Limited to 16 students. Prerequisite: one year of introductory biology. S-U grades optional. Disc and lab, T R 5:10-6:30. C. Reiss, D. J. Paolillo.
This course is intended for science education students who intend to teach biology at the high school level. The focus is on how to use plants in the biology laboratory in interesting ways, with particular emphasis on using plants to demonstrate basic biological principles. Hands-on experience is provided in experimental set-up and performance. Additional emphasis given to experimental design, data collection, data analysis, and critical thinking. There is an emphasis on the development of skills in the laboratory, in a high school biology teaching laboratory.

**BIOPL 342 Plant Physiology, Lectures**
Spring. 3 credits. Prerequisite: one year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 242 unless written permission is obtained from instructor. Lecs, T R 10:10-11:25.
T. G. Owens.

An integrated and interdisciplinary study of the processes that contribute to the growth, reproduction, and physiology of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, development of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

**BIOPL 343 Molecular Biology and Genetic Engineering of Plants**
Fall. 2 credits. Prerequisite: one year of general biology or permission of instructor. S-U grades optional. Lecs, T R 11:15.
M. E. Nasrallah.

An introduction to current studies involving recombinant DNA technology and its application to the analysis of basic plant processes. The course emphasizes genetic transformation methodology, molecular genetic approaches to the study of selected plant systems, and prospects for plant improvement by genetic engineering. This course is offered at graduate level under the guidance of graduate students. Students are expected to discuss the uniqueness of plant life and how it differs from other systems.

**BIOPL 344 Plant Physiology, Laboratory**
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at a more advanced level. Lab, W 1:25-4:25; disc, W 12:20.
C. Reiss.

Experiments exemplify concepts covered in BIOPL 342 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioactive isotopes, with emphasis on experimental design.

**BIOPL 345 Plant Anatomy**
Fall. 4 credits. Limited to 15 students. Prerequisite: one year of introductory biology or a semester of botany. Offered alternate years. Not offered 1996-97.
Lecs, M W F 9:05; labs, M W 2:40-2:55.
D. J. Paolillo.

A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

**BIOPL 346 Algal Physiology**
Fall. 3 credits. Prerequisite: one year of introductory biology for majors and BIOPL 242 or 244, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996-97.
Lecs, T R 8:30-9:55.
T. G. Owens.

This course takes an interdisciplinary approach to the study of algae with an emphasis on the interrelationships between biochemistry, and ecology of this diverse group of organisms. The algal classes are briefly described with consideration of traditional and emerging criteria for classification of the algae. The majority of the course is focused on interactions of algae with the physical/chemical environment, uptake of inorganic compounds, algal photosynthesis, metabolic strategies, and population dynamics of planktonic algae and benthic macrophytes. There is no laboratory section with this course.

**BIOPL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants**
Fall. 2 credits. Limited to 24 students. Prerequisite: BIOPL 343 or permission of instructor. Concurrent enrollment is encouraged. S-U grades optional. Lab, W 1:25-4:25.
M. E. Nasrallah.

The laboratory provides experience in handling and experimenting with the plant Arabidopsis thaliana. Believed experiments include the preparation and analysis of nucleic acids, methods used in the detection and isolation of plant genes, analysis of gene expression using antibody and nucleic acid probes, mutant isolation, and methods of gene transfer to plants.

**BIOPL 359 Biology of Grasses**
Fall. 3 credits. Limited to 24 students. Prerequisite: one year of introductory biology or an introductory plant taxonomy course, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996-97.
Lecs, T R 10:10; lab, T 1:25-4:25.
J. L. Davis.

Systematics and ecology of the graminoid plant families (grasses, sedges, and rushes), with principal emphasis on grasses. Major topics include: asexual reproduction, phylogenetics, physiology, reproductive biology, ecotypic variation, speciation, biogeography, and population biology. The role of graminoids as ecosystem dominants, weeds, and the origins of cultivated species are discussed. Laboratory concentrates on the diversity of grasses.

**BIOPL 440 Phylogenetic Systematics**
Fall. 4 credits. Limited to 24 students. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 1996-97.
Lecs, T R 10:10; labs, T R 2:00-4:25.
K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

**BIOPL 441 Systematics and Evolution of Crops**
Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Offered alternate years.

D. M. Bates.

An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.

**BIOPL 443 Topics and Research Methods in Systematics**
Fall or spring. 1-2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. A series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

**Section 01 Pollen Structure and Morphology**
Fall. 1 credit. Lecs, M W 12:20-1:10.
Offered alternate years.

**Section 02 Polyploidy in Plants**
Fall. 4 credits. Limited to 24 students. Prerequisite: one year of introductory biology or permission of instructor. Offered alternate years.

**BIOPL 444 Plant Cell Biology**
Fall. 4 credits. Limited to 24 students. Prerequisite: one year of introductory biology or permission of instructor. Offered alternate years.

**BIOPL 445 Photosynthesis**
Fall. 3 credits. Prerequisites: CHEM 104 or 208, MATH 106 or 111, and either PHYS 102 or 208 or permission of instructor. Offered alternate years.

A detailed study of the processes by which plants use light energy to grow. Structure of the photosynthetic apparatus, light absorption and antenna processes, photochemistry, and electron transport are emphasized. The course incorporates biophysical, biochemical, physiological, and molecular aspects of photosynthesis. Photosynthetic carbon metabolism is not covered in detail. Discussions include relevant material in bacterial, algal, and higher-plant photosynthesis.
BIOL 447 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOES 278 or BIOGD 281 or BIOBM 332, or written permission of instructor. Offered alternate years. Not offered 1996-97. Lecs, T R 8:30-9:55. J. J. Doyle.
The study of variation at the molecular level and its application to the taxonomy and evolution of plants, particularly angiosperms. Emphasis is on the use of molecular evidence, particularly DNA data, for reconstructing phylogenies. Theory and methods of phylogenetic reconstruction are discussed. The organization and evolution of nuclear, mitochondrial, and chloroplast genomes, genes, and gene products are described from the standpoint of their utility for addressing a diversity of evolutionary questions. These questions span the entire taxonomic spectrum, and include such issues as the origin of angiosperms, evolution of species related to important crop plants, and population studies of hybridization.

BIOL 448 Plant Evolution and the Fossil Record
Spring. 3 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Offered alternate years. Lecs, T R 9:05; lab, R 12:20-2:15. K. J. Niklas, W. L. Crepet.
An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOL 453 Principles and Practice of Historical Biogeography (also Entomology 453)
Fall. 3 credits. Prerequisite: a course in systematics or permission of instructor. S-U grades optional. Lecs, T R 10:10-11:30. J. K. Liebherr, M. A. Luckow.
This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.

BIOL 464 Laboratory in Plant Molecular Biology
Spring. 4 credits. Prerequisites: BIOL 281 or equivalent, BIOL 330 or equivalent, and permission of instructor. S-U grades optional. Lab, T 9:05-4:30. J. B. Nassallah, M. R. Hanson, S. D. Tanksley.
Selected experiments on genome organization, gene expression, and gene transfer in plants. The course emphasizes the application of molecular biology methodology to plant systems. Students may have additional lab time to complete assignments.

BIOL 464 Families of Tropical Flowering Plants: Field Laboratory
Intersession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: BIOL 243 or 248 or equivalent. Recommended: BIOL 465. S-U grades only. More details and application, contact the L. H. Bailey Hortorum, 467 Mann Library. Offered alternate years. Not offered 1996-97. K. C. Nixon.
An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole-biology" context.

BIOL 467 Seminar in Systematic Botany
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator required for undergraduates. S-U grades optional. Sem, T 11:15-1:10. Bailey Hortorum staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

BIOL 468 Plant Biochemistry
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years. Lecs, M W F 9:05. A. T. Jagendorf and staff.
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, phenolic compounds, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

BIOL 469 Transport of Solutes and Water in Plants
Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants; phosphorus transport; and water relations of single cells and whole plants.

BIOL 645 Families of Tropical Flowering Plants
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1996-97. Lab and disc, F 11:15. K. C. Nixon.
The families of flowering plants encountered solely or chiefly in tropical regions are considered in lecture, discussion, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families for the student venturing into the tropics.
BIOL 652 Plant Molecular Biology II
Spring. 1-4 credits (1 credit per section). Prerequisites: BIOLGD 281 and BIOLBM 350 or 352, or their equivalents. Recommended: BIOLGD 351. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Molecular Plant-Pathogen Interactions (also Plant Pathology 662)
An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

Section 02 Molecular Aspects of Plant Development II
The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature and the operation of the vegetative shoot apical meristem. The module is a companion to BIOL 653, Sec 04 (Plant Development I), which covers molecular aspects of reproductive development.

Section 03 Molecular Plant-Microbe Interactions
Course focuses on the interactions of Agrobacterium and Rhizobium with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include the regulation of nitrogenase activity and expression, organization and function of the sym plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Section 04 Plant Gene Evolution and Phylogeny
Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to reconstruct evolutionary patterns. The principles of distance and parsimony methods are described, and computer methods for reconstructing gene phylogenies are discussed.

BIOL 653 Plant Molecular Biology I
Fall. 1-5 credits (1 credit per section). Prerequisites: BIOLGD 281 and BIOLBM 350 or 352, or their equivalents. Recommended: BIOLGD 351. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Concepts and Techniques in Plant Molecular Biology (also Plant Breeding 653.1)
A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

Section 02 Plant Biotechnology (also Plant Breeding 653.2 and Plant Pathology 663)
1 credit. Lecs, M W F 10:10 (12 lecs) Sept. 4-Sept. 30. M. Zatlin, F. D. Earle.
This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

Section 03 Plant Genome Organization and Function (also Plant Breeding 653.3)
This course covers the origins and measurements of nuclear DNA variation in plants as well as the development and exploitation of molecular markers for breeding and the isolation of genes underlying interesting phenotypes.

Section 04 Molecular Aspects of Plant Development I
1 credit. Lecs, M W F 10:10 (12 lecs) Nov. 4-Dec. 2. J. B. Nasrallah.
This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the integration of environmental and developmental signals during the transition to flowering, the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during development, and fertilization. The module is a companion to BIOL 652, Sec 02 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

Section 05 Molecular Biology of Plant Organelles
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Nov. 4-Dec. 2. M. R. Hanson (odd years), D. B. Stern (even years).
An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization and expression of organelle genomes, RNA editing, organelle transformation, expression of nuclear genes for organelle proteins. Special topics include cytoplasmic male sterility and gene regulation during plant development.

BIOL 654 Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1996-97. Lect and disc to be arranged. Staff. An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOL 655 Seminar in Ethnobotany
Fall. 2 or 4 credits (4 credits with independent reading). Prerequisite: written permission of instructor for undergraduates. Lec, W 1:25; disc, W 2:30. D. M. Bates.
An exploration of ethnobotany, the study of the interrelationships of people and plants viewed from anthropological and botanical perspectives. Contemporary issues, theory, and methodology are considered. Topics include subsistence systems, crop domestication, traditional medicine, indigenous resource management, and preceptions of nature, among others.

BIOL 656 Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOLGD 448 or equivalent background in evolution, or written permission of instructor. Lab and disc to be arranged. K. J. Niklas.
A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOL 740 Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:15. Staff.
Lectures on current research in plant biology, presented by visitors and staff.

BIOL 741 Problems in Plant Cell and Molecular Biology
Fall. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc to be arranged. Staff.
An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOL 742 Current Topics in Plant Molecular Biology
Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only. Sem, 1 hour each week to be arranged. Staff.
A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.
BIOL 743 Current Research in Plant Cell and Molecular Biology
Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program required for undergraduates. Lecture to be arranged. Staff.

An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOL 749 Graduate Research in Botany
Fall or spring. Variable credit. May be repeated for credit. S-U grades only. Hours to be arranged. Staff.

Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOL 840 Current Topics in Plant Physiology
Fall or spring. 2 credits. May be repeated for credit. S-U grades only. Staff.

Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

Undergraduate Research in Biology (Biological Sciences [BIO G] 499)

COURSES IN MARINE SCIENCE

Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology and Oceanography offered through the Division of Biological Sciences and the summer program of courses offered by the Shoals Marine Laboratory. Further information on both can be found at the Cornell Marine Programs Office, G14 Stimson Hall.

Undergraduate Specialization in Marine Biology and Oceanography

Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the areas of marine biology and oceanography. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology and oceanography are encouraged to enroll in the following courses:

1. BIOES 154, The Sea: An Introduction to Oceanography,
2. BIOSM 364, Field Marine Science or a 400-level BIOSM field course at the Shoals Marine Laboratory,
3. BIOES 462, Marine Ecology.

Students in this specialization are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

The objective of the Shoals Marine Laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established an enviable reputation for excellence and has become North America's largest marine field station focusing on undergraduate education.

The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally immerses themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences.

Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Shoals Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47-foot research vessel, John M. Kingsbury. Field experience is an integral component of all courses, using Appledore's extensive intertidal zone, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). SML and SEA offer a joint SEA Island semester for 18 credits, which combines both programs (BIOSM 364, 366, 367, 368, 372).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

BIOSM 161 Introduction to Field Marine Science
Summer. 4 credits. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,800.

BIOSM 204 Biological Illustration
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, supplies, and ferry transportation), $590. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist or science student a chance to experience several illustration techniques with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course size is limited so that individual attention can be emphasized.
BIOSM 309 Coastal Ecology and Biotopics
Summer. 4 credits. Prerequisite: one year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,850. Daily labs, labs, and fieldwork for 2 weeks. SML faculty. A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including solar radiation, temperature, atmospheric moisture, precipitation, wind, and currents. On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

BIOSM 327 Neurobiology of Animal Behavior
Summer. 4 credits. Prerequisite: permission of instructor and successful performance in college-level introductory biology and chemistry courses with laboratories. Recommended: course work in neurobiology, psychology, and animal behavior. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML) on an island off the coast of Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,850. Daily labs, labs, and fieldwork for 2 weeks. SML faculty. Neural mechanisms underlie all behaviors, from simple reflexes to complex social interactions. The functional elements of those mechanisms often are common to both vertebrate and invertebrate nervous systems. This course considers mechanisms of behavior in marine organisms, a topic that has produced significant biomedical discoveries. Students gain hands-on experience with a spectrum of modern research techniques for behavioral, ecological, social, and molecular approaches. A visiting scientist program allows student interaction with research scientists.

BIOSM 329 Ecology of Animal Behavior
Summer. 4 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,850. Daily labs, labs, and fieldwork for 2 weeks. SML faculty. The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 363 Marine Biology for Teachers
Summer. 3 or 4 credits (4-credit option: additional 4 days for individual research). Primarily for 2-year college students, but open to others with teaching experience. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,850. Daily labs, labs, and fieldwork for 10 days. SML faculty. Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems, marine fisheries, economics of marine organisms, and educational resources of the marine environment.

BIOSM 364 Field Marine Science
Summer. 6 credits. Prerequisite: one year of college biology. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $2,850. Daily labs, labs, and fieldwork for 4 weeks. A core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty. Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical aspects of marine biology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course.

BIOSM 365 Underwater Research
Summer. 3 credits. Prerequisite: one year of college-level biology or recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,950. Daily labs and fieldwork for 2 weeks. Team-taught by three faculty members with occasional guest lecturers. Not for recreational divers. Course covers the philosophy of research, hypothesis testing and experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasis is on subtidal ecological research. Requirements include critical evaluation of several journal articles and production of a research proposal.

BIOSM 366 SEA Introduction to Oceanography
3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

BIOSM 367 SEA Introduction to Maritime Studies
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368 SEA Introduction to Nautical Science
3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sailing taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.
Sea Component (six weeks)
Courses 369 and 370 take place aboard the R/V Westward, a 125-foot steel auxiliary-powered stasylar schooner built in 1961, or the R/V Anemone, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of thirty-four. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition, one or more visiting investigators are frequently aboard. Up to twenty-four students round out the complement.

BIOSM 369: SEA Practical Oceanography I
4 credits. Prerequisite: BIOSM 368. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the basic oceanographic equipment; in the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370: SEA Practical Oceanography II
4 credits. Prerequisite: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372: SEA Practical Oceanography III
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

BIOSM 402: Marine Pollution
Summer. 4 credits. Prerequisites: one year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G 14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $2,500. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. The laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

BIOSM 409: Ciliophorology
Summer. 2 credits. Prerequisite: BIOSM 367 or permission of instructor. A special 1-week course offered at Cornell's Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $950. Daily lecs and lab for 1 week. SML faculty. A special course that examines ciliophoran biology in perpetually high lectures and laboratory exercises. Topics include a detailed look at the ciliate fauna found in such diverse habitats as salt marshes, sandy sediment interstitial spaces, the Gulf Stream and the Sargasso Sea, marine caves, and benthic hydrothermal vents. Laboratory focuses on examining silver stained specimens, and covers staining techniques, as well as back scattered and secondary SEM and TEM methodologies.

BIOSM 413: Adaptations of Marine Organisms
Summer. 6 credits. Prerequisite: BIOSM 364 or permission of instructor. S-U grades optional. A special 3-week course offered at Cornell's Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $2,500. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty. An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment, respiration in intertidal organisms, proteins, and lipids as nutrients in the sea; acclimation and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

BIOSM 418: Tropical Marine Science
Summer. 8 credits. Limited to 12 students. Prerequisites: one year college-level biology; BioES 261 or BIOSM 364 or equivalent; BIOSM 365 or equivalent experience; recognized SCUBA certification; medical exam; and permission of instructor. Lec/lab, 2 weeks; 6 weeks monitoring study and individual research projects, including data analysis on computers. D. F. Shapiro. A special 8-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $4,000. For competent divers only. In addition to lectures and laboratories covering the basic principles of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects. This course applies skills learned in the Underwater Research course at Shoals Marine Laboratory.

BIOSM 449: Marine Botany: Ecology of Marine Plants
Summer. 4 credits. Prerequisite: BIOSM 364 or one year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shools Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,850. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. An overview of the major marine algal groups, including topics of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

BIOSM 477: Marine Vertebrates
Summer. 6 credits. Prerequisites: permission of instructor and a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shools Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $2,500. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty. Topics in marine vertebrate biology emphasize laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from ecology, population biology and the contemporary Gulf of Maine fishery, Mesozooic marine reptiles, the biology of sea turtles in cold water, coloniality in marine invertebrates, and avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

ARKEO: Archaeology of Maritime Communities (Archaeology 300: Individual Study in Archaeology)
Summer. 2 credits. Prerequisite: a strong interest in history. A special 1-week course offered at Cornell's Shools Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $950. Daily lecs, labs, and fieldwork for 1 week. SML faculty. Fieldwork on various land sites and their adjacent offshore marine environments. Artifact analysis, preliminary conservation, and the proper recording of finds are emphasized. Methods of archaeological research, including the use of archives and historical materials, and publication methodologies as well as the larger questions in the discipline are discussed.
ARKEO Archaeology Underwater (Archaeology 319)
Summer. 2 credits. Prerequisites: recognition and documentation of ancient remains, and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room, and board, and ferry transportation), $950. Daily lecs, labs, and fieldwork for the SML faculty. An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience. "The New England coast" defined, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

GEOL Marine and Coastal Geology (Geological Sciences 213)
Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room, and board, and ferry transportation), $950. Daily lecs, labs, and fieldwork for 1 week. SML faculty. With the "New England coast" defined, as beginning at the -200 meter isobath and proceeding westward, this course examines specific geological events and processes important in shaping the area’s bedrock and surficial sediments, including geology, geophysics, and the Pleistocene geology of the region are investigated. Consideration of the geologic history of New England within the plate tectonic model is emphasized. Examination of insular geology intended to integrate micro-, meso-, and macro-scale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. Experience aboard a coastal research vessel is an integral part of the course.

NTRES Coastal and Oceanic Law and Policy (Natural Resources 306)
Summer. 2 credits. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $950. Daily lecs and disc for 1 week. SML faculty. Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory’s library and personnel is assigned. The week concludes with a mock hearing.

NTRES Wetland Resources (Natural Resources 417)
Summer. 2 credits. Prerequisite: one year of college-level biology. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $950. Daily lecs, labs, and fieldwork. SML faculty. An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

FACULTY ROSTER

New York State College of Agriculture and Life Sciences
Adler, Kraig K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Alani, Eric E., Ph.D., Harvard U. Asst. Prof., Genetics and Development
Anderson, John M., Ph.D., New York U. Prof., Emeritus, Genetics and Development
Banks, Harlan P., Ph.D., Cornell U. Liberty Hyde Bailey Prof. of Botany Emeritus, Plant Biology
Bates, Donald M., Ph.D., U. of California at Los Angeles. Prof., Bailey Hortorium
Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology/Veterinary Physiology
Brus, Peter J., Ph.D., U. of Illinois. Prof., Genetics and Development
Cade, Thomas J., Ph.D., U. of California at Los Angeles. Prof. Emeritus, Ecology and Systematics
Calvo, Joseph M., Ph.D., Washington State U. William T. Keeton Professor in Biological Sciences, Biochemistry, Molecular and Cell Biology
Chabot, Brian F., Ph.D., Duke U. Prof., Ecology and Systematics
Clayton, Roderick K., Ph.D., California Inst. of Technology. Prof., Emeritus, Plant Biology
Corradino, Robert A., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Crepet, William L., Ph.D., Yale U. Prof., Bailey Hortorium
Daniel, Louise J., Ph.D., Cornell U. Prof., Emeritus, Biochemistry, Molecular and Cell Biology
Davies, Peter J., Ph.D., U. of Reading (England). Prof., Plant Biology
Davis, Jerrold E., Ph.D., U. of Texas at Austin. Assoc. Prof., Bailey Hortorium
Dhondt, André A., Ph.D., Ghent State U. (Belgium). Edwin H. Morgens Professor of Ornithology, Ecology and Systematics/Laboratory of Ornithology
Dondero, Norman C., Ph.D., Cornell U. Emeritus, Microbiology
Doyle, Jeffrey J., Ph.D., Indiana U. Assoc. Prof., Bailey Hortorium
Dress, William J., Ph.D., Cornell U. Prof., Emeritus, Bailey Hortorium
Ealick, Steven E., Ph.D., U. of Oklahoma. Prof., Biochemistry, Molecular and Cell Biology
Eisner, Thomas, Ph.D., Harvard U. Jacob Gould Schurman Professor, Neurobiology and Behavior
Enlen, Stephen T., Ph.D., U. of Michigan. Jacob Gould Schurman Professor, Neurobiology and Behavior
Fitzpatrick, John W., Ph.D., Princeton U. Prof., Ecology and Systematics/Laboratory of Ornithology
Fox, Thomas D., Ph.D., Harvard U. Prof., Genetics and Development
Goldberg, Michael L., Ph.D., Stanford U. Assoc. Prof., Genetics and Development
Hanson, Maureen R., Ph.D., Harvard U. Prof., Genetics and Development
Harrison, Richard G., Ph.D., Cornell U. Prof., Ecology and Systematics
Harris-Warrick, Ronald M., Ph.D., Stanford U. Prof., Neurobiology and Behavior
Helmann, John D., Ph.D., U. of California at Berkeley. Assoc. Prof., Microbiology
Hopkins, Carl D., Ph.D., Rockefeller U. Prof., Neurobiology and Behavior
Howarth, Robert W., Ph.D., Massachusetts Inst. of Technology/Woods Hole Oceanographic Institution. David R. Atkinson Professor in Ecology and Environmental Biology, Ecology and Systematics/Soil, Crop, and Atmospheric Sciences
Ingram, John W., Ph.D., U. of California at Berkeley. Prof. Emeritus, Bailey Hortorium
Jagendorf, André T., Ph.D., Yale U. Liberty Hyde Bailey Professor of Plant Physiology, Plant Biology
Keller, Elizabeth B., Ph.D., Cornell U. Prof., Emeritus, Biochemistry, Molecular and Cell Biology
Kempfues, Kenneth J., Ph.D., Indiana U. Assoc. Prof., Genetics and Development
Kingsbury, John M., Ph.D., Harvard U. Prof., Emeritus, Plant Biology
Lis, John T., Ph.D., Brandeis U. Prof., Biochemistry, Molecular and Cell Biology
Lou, Ellis R., Ph.D., U. of California at Los Angeles. Assoc. Prof., Physiology/Veterinary Physiology
Luckow, Melissa A., Ph.D., U. of Texas at Austin. Asst. Prof., Bailey Hortorium
MacDonald, Russell E., Ph.D., U. of Michigan. Prof. Emeritus, Biochemistry, Molecular and Cell Biology
MacIntyre, Ross J., Ph.D., Cornell U. Prof., Genetics and Development
Madsen, Eugene L., Ph.D., Cornell U. Asst. Prof., Microbiology
Macknight, Robert L., Ph.D., U. of Illinois. Assoc. Prof., Microbiology
Schneiderman, Anne M., Ph.D., Harvard U. Asst. Prof., Neurobiology and Behavior
Seeley, Thomas D., Ph.D., Harvard U. Prof., Neurobiology and Behavior
Sherman, Paul W., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Tugeon, Robert, Ph.D., Carleton U. (Canada). Assoc. Prof., Plant Biology
Wallace, Bruce, Ph.D., Columbia U. Prof. Emeritus, Genetics and Development
Wilson, David B., Ph.D., Stanford U. Prof., Biochemistry, Molecular and Cell Biology
Wolfner, Mariana F., Ph.D., Stanford U. Prof., Genetics and Development

Other Teaching Personnel
Albrecht, Genia S., Ph.D., U. of Washington. Sr. Lecturer, Biochemistry, Molecular and Cell Biology
Eberhard, Carolyn, Ph.D., Boston U. Sr. Lecturer, Plant Biology
Johnson, Bruce R., Ph.D., Boston U. Sr. Lecturer, Neurobiology and Behavior

Joint Appointees
Adkins-Regan, Elizabeth, Prof., Psychology/Neurobiology and Behavior
Levin, Simon A., Adjunct Prof., Princeton U./Ecology and Systematics
Likens, Gene E., Adjunct Prof., Institute of Ecosystem Studies/Ecology and Systematics

New York State College of Veterinary Medicine
Fortune, Joanne E., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Gasteiger, Edgar L., Ph.D., U. of Minnesota. Prof. Emeritus, Physiology
Gilmour, Robert F., Ph.D., SUNY Upstate Medical Center. Assoc. Prof., Physiology
Robertsaw, David, Ph.D., Glasgow U. (Scotland). Prof., Physiology/Veterinary Physiology
Tapper, Daniel N., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Waterman, Robert H., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology/Nutritional Sciences

Other Teaching Personnel
Concannon, Patrick W., Ph.D., Cornell U. Sr. Lecturer, Physiology

Joint Appointees
Houp, Katherine A., Prof., Veterinary Physiology/Physiology
Houp, T. Richard, Prof., Veterinary Physiology/Physiology
Nathanielz, Peter W., Leading Prof., Clinical Sciences/Veterinary Physiology
Wootton, John F., Prof., Veterinary Physiology/Physiology

College of Engineering
Joint Appointees
Cisne, John L., Assoc. Prof., Geological Sciences/Biological Sciences
Jelinski, Lynn W. Prof., Biotechnology Program/Biological Sciences
Webb, Watt W., Prof., Applied and Engineering Physics/Biological Sciences

Division of Biological Sciences
Stinson, Harry T., Jr., Ph.D., Indiana U. Prof., Biological Sciences/Genetics and Development

Division of Nutritional Sciences
Joint Appointees
Arion, William J., Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Bensadoun, Andre, Prof., Nutritional Sciences/Physiology
Kazarinoff, Michael N., Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Wright, Lemuel D., Ph.D., Oregon State Coll. Prof. Emeritus, Nutritional Sciences/Biochemistry, Molecular and Cell Biology

*Joint appointment with the College of Arts and Sciences.
Joint appointment with the College of Veterinary Medicine.
Joint appointment with the College of Agriculture and Life Sciences.
Joint appointment with the College of Engineering.
COLLEGE OF ENGINEERING

ADMINISTRATION
John E. Hopcroft, dean
Michael S. Isaacson, associate dean for research and graduate studies
Kenneth C. Hover, associate dean for undergraduate programs
Mark K. Spiro, associate dean for administration
Deborah Cox, assistant dean for student services
Murray Deathie, assistant dean for development and alumni relations

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Ryle-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:
- Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.
- Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.
- Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.
- Center for Theory and Simulation in Science and Engineering. A national supercomputer facility used for advanced research in engineering and the physical and biological sciences.
- Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.
- Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.
- Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.
- Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.
- Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.
- Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.

MATERIALS SCIENCE CENTER. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.
- Mathematical Sciences Institute. An interdisciplinary program in applications of mathematics funded by the U.S. Army.
- National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.
- National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.
- National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.
- Power Systems Engineering Research Center. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.
- Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.
- Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.
- SRC Center for the Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

Statistics Center. Coordinates a university-wide program in statistics and probability.
- Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY
Bachelor of Science (B.S.) degrees are offered in the following areas:
- Agricultural and Biological Engineering
- Chemical Engineering
- Civil Engineering
- College Program
- Computer Science
- Electrical Engineering
- Engineering Physics
- Geological Sciences
- Materials Science and Engineering
- Mechanical Engineering
- Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the
field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum with a bioengineering option within one of the field programs or through the College Program. Information about the bioengineering option is available in the Bioengineering Advising office, 167 Olin Hall. Students interested in environmental engineering may pursue the environmental option offered by the School of Civil and Environmental Engineering.

"Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology."

To receive the Bachelor of Science degree, a student must meet the Common Curriculum as set forth by the school or department with which he or she becomes affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 1996-97 edition of the Engineering Undergraduate Handbook.)

*One writing-intensive technical course or a course in technical or scientific writing must also be taken; this course may simultaneously satisfy some other requirement.

One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 129 credit hours are required for graduation; the specific number of required credit hours will vary depending on which field program is chosen. (See field curricula for specific field requirements.) Two terms of physical education must be taken in the freshman year and students must meet the swimming requirement to satisfy a university requirement.

**Mathematics**

The normal program in mathematics includes Mathematics 191 or 193, 192, 293, and 294. Every student must attain a grade of at least C- in Mathematics 191 or 193, 192, 293, and 294, or other courses that may be approved as substitutes for this requirement. This requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

**Physics**

The normal program in physics includes Physics 112, 213, and 214 or the corresponding honors courses (Physics 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in Mathematics 191 or equivalent before taking Physics 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in Mathematics 192 before taking Physics 213, or C- in Mathematics 293 before taking Physics 214). Students in the field programs of ABEN, CHEME, CEE (environmental track), or ORAE may substitute Chemistry 208 for Physics 214.

**Chemistry**

Chemistry 211 or 207 is required for all students. Chemistry 211 is a course designed for students who do not intend any further study in chemistry and may be taken either in the fall or spring of the freshman year or the first semester of their sophomore year if they take Physics 112 or 213 in their freshman year. In general, students intending to affiliate with the following departments and schools should take Chemistry 211: electrical engineering, operations research and industrial engineering, computer science, material science and engineering, mechanical and aerospace engineering, applied and engineering physics (applied and engineering physics students should discuss this option with the field consultant), and civil engineering (not students in the environmental engineering option). Students in chemical engineering must take Chemistry 207 in the fall of their freshman year, to be followed by Chemistry 208 in the spring term. All students considering the environmental concentration in civil engineering, geological sciences, or a health-related career such as medicine should take the Chemistry 207-208 sequence.

**Freshman Writing Seminars**

Each semester of their freshman year, students choose a freshman writing seminar from among more than seventy courses offered by over twenty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

**Technical Writing**

In addition to the two Freshman Writing Seminars required, engineering students must take a course that includes a significant amount of technical and scientific writing. This course may be used to satisfy another graduation requirement. A student can fulfill the technical writing requirement by enrolling in an engineering course specifically designed to include a writing-intensive component or by taking a course in technical or scientific writing. Courses that currently satisfy this requirement are A&EP 264, ABEN 396, CHEM E 432, COMM 352*, COMM 360*, COMM 365*, COMM 367*, ELE E 215, ENGRC 350, ENGRC 435, M&M&AE 427, M&M&AE 443, M&M&AE 444 if both courses are taken. Students participating in the Engineering Cooperative Program may also arrange for a writing-intensive co-op experience to satisfy this requirement. Updated information on these approved courses may be obtained from Engineering Advising, 167 Olin Hall.

*Note that there is limited enrollment in all Communications Department writing courses.

**Computing**

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, COM S 212, ENGRD 211 or 212, ENGRD 222, ENGRD 241, ENGRD 264, ELE E 423, M&M&AE 389, M&M&AE 489, M&M&AE 575, M&M&AE 578, and M&M&AE 670. The recommended choice for students intending to enter the Field Program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 222 or 241; in Computer Science, ENGRD 211 or COM S 212, in Electrical Engineering, ENGRD 211; in Civil Engineering, ENGRD 241; in Mechanical Engineering, M&M&AE 389, M&M&AE 489, M&M&AE 575, or M&M&AE 670; and in Operations Research and Engineering, ENGRD 211.

**Engineering Distribution**

Three engineering distribution courses (9 credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRD) and is to be taken by the student during their freshman year. The Introduction of Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for currently offered courses.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

---

1. Mathematics
2. Physics (depending on field)
3. Chemistry (depending on field)
4. Freshman writing seminar*
5. Computer programming
6. Engineering distribution (3 courses)
   a. One Introduction to Engineering (ENGRD)
   b. Two other distribution courses
7. Liberal studies distribution (6 courses)
8. Approved electives
9. Field program
   a. Field required courses
   b. Field approved electives
   c. Courses outside the field
1) Scientific computing
ENGRD 211, Computers and Programming
ENGRD 212, Modes of Algorithmic Expression
ENGRD 222, Introduction to Scientific Computing
ENGRD 241, Engineering Computation

2) Materials science
ENGRD 261, Introduction to Mechanical Properties of Materials
ENGRD 262, Introduction to Electrical Properties of Materials

3) Mechanics
ENGRD 202, Mechanics of Solids
ENGRD 203, Dynamics

Students in the Field Program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) Probability and statistics
ENGRD 270, Basic Engineering Probability and Statistics

Students in the Field Program in Electrical Engineering may substitute ELE E 310 for ENGRD 270. Students in the Field Program in Engineering Physics may substitute ELE E 310 or Mathematics 471 for ENGRD 270. Students in the Field Programs in Civil Engineering and Agricultural and Biological Engineering may substitute CEE 304 for ENGRD 270.

5) Electrical sciences
ENGRD 210, Introduction to Electrical Systems
ENGRD 230, Introduction to Digital Systems
ENGRD 264, Computerized-Instrumentation Design

6) Thermodynamics and energy balances
ENGRD 219, Mass and Energy Balances
ENGRD 221, Thermodynamics

7) Earth and life sciences
ENGRD 201, Introduction to the Physics and Chemistry of the Earth

8) Biology and chemistry
BIO S 101 and 103, Biological Sciences, Lecture and Laboratory
BIO S 105,Introductory Biology
BIO S 107, General Biology (summer only)
CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Chemical Engineering: ENGRD 219
Civil Engineering: ENGRD 202, and ENGRD 219 (for environmental option)
Computer Science: ENGRD 211 or ENGRD 212
Electrical Engineering: ENGRD 230
Materials Science and Engineering: ENGRD 261 or 262
Mechanical Engineering: ENGRD 202
Operations Research and Engineering: ENGRD 270

Liberal Studies Distribution
The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories:
(a) humanities or history, (b) social sciences,
(c) foreign languages, and (d) expressive arts.

- At least two courses must be chosen from category (a).
- No more than 3 credits toward this requirement may be taken in category (d).
- At least two courses in categories (a) or (b) must be from the same field of study.

One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising office.

a) Humanities or History

American Studies 201, 202
Architecture 181, 182
Art 317, 318
Africana Studies 202, 204, 205, 211, 280, 285, 304, 310, 351, 370, 422, 425, 451, 452, 453, 454, 475, 483
Anthropology 290, 451, 452, 453, 455
Archeology (courses in Old World Archeology and 493)
Asian Studies (courses in Old World Archeology)
Biology and Society 206
Classics (all courses except 285, 356, 360, 361 and language courses)
Collective Bargaining, Labor Law and Labor History 100, 101, 384, 385, 386, 482, 488
Communication 426, 465
Comparative Literature (all courses)
Economics 315, 323, 324, 325, 326
Engineering 250, 298, 360
English (all courses except ENGL 285 and writing courses, whose numbers end in the 80s; e.g., 288, 289, 362, etc.)
French Literature (all courses)
German Literature (all courses)
History (all courses)
History of Art (all courses)
Industrial and Labor Relations Interdepartmental Course 451
International and Comparative Labor Relations 450
Italian Literature (all courses)
Jewish Studies 274, 351, 352
Labor Economics 448
Music (only introductory, music theory, and music history courses)
Natural Resources 407
Near Eastern Studies (courses listed under history, civilization, or literature)

Philosophy (all courses except courses in logic)
Religious Studies 101
Russian Literature (all courses)
Science and Technology Studies 233, 435, 444, 525
Spanish Literature (all courses)
Theater Arts (only courses in Theater Studies, film analysis and history)

b) Social Sciences

Agricultural Economics (ARME) 100, 250, 431, 432, 450, 464
Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)
Archeology (all courses except those in Methodology and Technology)
Architecture 342
Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)
Biology and Society 201, 301, 406, 407
City and Regional Planning 100, 101, 314, 361, 382, 404, 442
Communication 116, 120, 314, 410, 416, 420
Consumer Economics and Housing (110, 111, 247, and any course having one or more of these as a prerequisite)
Design and Environmental Analysis 150, 250
Economics (all courses except 315, 317, 318, 319, 320, 326. Engineering students should generally take Economics 203-204 and not 101-102, unless they have had no calculus.)
Education 210, 212, 271, 311, 317, 378, 413, 477
Government (all courses)
Human Development and Family Studies (all courses)
Human Service Studies (all courses)
International and Comparative Labor Relations (all courses)
Labor Economics (all courses except 345 and 448)
Linquistics (all courses)
Natural Resources 201
Organizational Behavior (all courses)
Rural Sociology (all courses)
Sociology (all courses)
Textiles and Apparel 245
c) Foreign Language
This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to 6 advanced placement credits equal to two courses according to these rules.

d) Expressive Arts
Africana Studies 303, 425, 430
Art (studio courses)
Biological Sciences 208, 209
Communications (all courses)
Design and Environmental Analysis 101, 102, 114
Engineering (all Engineering Communications courses, which are designated ENGR C)
English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)
Floriculture (courses in Freehand Drawing and Scientific Illustration)
Industrial and Labor Relations 452
Music (courses in musical performance and musical organizations and ensembles three credit courses equals one course)
Theater Arts (all courses except those listed in category (a) above)

Electives
• Approved electives—six (6) credits required (approved by the academic adviser)
Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:
  1. One Introduction to Engineering course (ENGRI).
  2. Engineering distribution courses.
  3. Courses stressing written or oral communication.
  4. Upper-level engineering courses.
  5. Advanced courses in mathematics.
  6. Rigorous courses in the biological and physical sciences.
  7. Courses in business, economics, or language (when they serve the student's educational and academic objectives).
  8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
  • Field approved electives—Nine (9) credits (approved by engineering field program faculty and faculty advisers). Students should refer to the Field Program curricula for descriptions of courses that meet this category.
  • To ensure breadth of engineering studies, field programs will also include nine (9) hours of courses outside the field.

Social Issues of Technology
It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed within the "Science and Technology Studies" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising Office
From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women's Programs in Engineering office provide additional specialized services.

Freshman Year
At the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:
• MATH 191 (or 193) and MATH 192
• CHEM 211 and PHYS 112 OR CHEM 207 and CHEM 208
• COM S 100
• Two (2) Freshman Writing Seminars
• One (1) Introduction to Engineering course (ENGRI designation)
• Two (2) Physical Education courses
  (*Students with an interest in pre-med, chemical engineering, or the environmental option in civil engineering should enroll in the CHEM 207-208 sequence during their freshman year.)

Affiliation with a Field Program
Students must apply for affiliation with a field program during the first term of their sophomore year. This is done by going to the undergraduate field consultant's office in the field of their choice and completing the "Application for Field Affiliation" form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field's course and grade requirements as specified below:

Field Program Courses and Minimum Grade Requirements
Agricultural and Biological Engineering
No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent
Applied and Engineering Physics
2.7 GPA in all mathematics and physics courses
Chemical Engineering
No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses

Civil & Environmental Engineering
A grade of C- in ENGRD 202 and a 2.0 GPA in all engineering and science courses
Computer Science
A grade of B- in COM S 280, ENGRD 211 or 212 and all mathematics courses
Electrical Engineering
A grade of C or better in all 200-level mathematics and physics courses
Geological Sciences
Passing grades in required field courses
Materials Sciences & Engineering
A grade of C in ENGRD 261 or 262
Mechanical & Aerospace Engineering
A grade of C- in mathematics and science courses and ENGRD 202

Operations Research
A grade of C- in Math 191 (OR 193) and 192

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

College Program
Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives can be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required
courses in humanities and social sciences and approved electives.

Further information about the College Program may be obtained from the associate dean for undergraduate programs, 221 Carpenter Hall.

**College Program in the Science of Earth Systems**

A new curriculum in the Science of Earth Systems highlights study of the Earth as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The curriculum coalesces Cornell’s strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of our complex, highly interactive earth. Students in the College of Engineering can take this curriculum under the College Program. The curriculum includes a freshman/sophomore emphasis on strong preparation in mathematics, physics, chemistry, and biology. In the junior and senior years, students take a set of four core common courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences. The curriculum in Science of Earth Systems is outlined in more detail in the section, Interdisciplinary Centers, Programs, and Studies, in the front part of the catalog. Students interested in the new field should select ENGR 122 and ENGRD 201 and contact Prof. B. Isacks, W. Brutsaert, Y. Parlange, or M. Kelley.

**Bioengineering Option**

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from one category: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least two from the bioengineering course list. Each student interested in the bioengineering option can request through the Engineering Advising office a bioengineering adviser who will assist the student in course selection for this option. The bioengineering adviser is in addition to the student’s regular academic adviser. A list of approved courses is available in the Engineering Advising office, 167 Olin Hall.

**International Programs**

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today’s engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. The college sponsors a specially designed Seminar in Europe program, supports students who wish to study abroad in regular exchange programs, and offers a special International Scholars College program for students to minor in international studies and study abroad during their junior year. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in Engineering Advising, 167 Olin Hall. Information on co-op programs abroad is available from the Engineering Professional Programs office in 148 Olin Hall.

**Dual Degree Option**

A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and a Bachelor of Arts degree can be earned in about five years. Students registered in the College of Engineering or the College of Arts and Sciences may apply and, after acceptance of their application, begin the dual program in their second or third year. Those interested should contact the coordinator of dual degree programs, 172 Goldwin Smith Hall; the associate dean for undergraduate programs in 221 Carpenter Hall; or an adviser in Engineering Advising, 167 Olin Hall.

**Double Major In Engineering**

The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years, Students affiliate with one field in the normal way and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from Engineering Advising, 167 Olin Hall, and the individual field consultant offices.

**Engineering Communications Program**

The ability to communicate effectively is an essential aspect of successful professional practice. The Engineering Communications Program offers instruction in written, oral, and visual presentation. Engineering Communications (ENGRG 350) and Communications for Engineering Managers (ENGRG 435) are three-credit seminar courses designed for students who desire intensive work in these areas. Examples from real-life engineering contexts are analyzed, and many specific assignments are presented as professional case studies. Students learn to address audiences having different levels of technical expertise and to consider the social and ethical aspects of written and oral communication. These courses fulfill the college’s technical writing requirement (see Requirements for Graduation). In addition to offering free-standing communications courses, the program works with the engineering fields to integrate communications into technical courses. The program occasionally offers courses on topics of special interest and independent studies or projects in technical/professional communications. The program awards several annual prizes for writing and oral presentation, and arranges discussions of professional communications with students and alumni. For further information, contact the director, 465 Hollister Hall.

**Engineering Cooperative Program**

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

Sophomores in the upper half of their class are eligible to apply for the co-op program. Students in computer science and agricultural and biological engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

**M.S. Engineering Programs**

One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The M.Eng. degrees and the academic fields under which they are described are listed below.

M.Eng. (Aerospace): Mechanical and Aerospace Engineering
M.Eng. (Agricultural and Biological): Agricultural and Biological Engineering
M.Eng. (Chemical): Chemical Engineering
M.Eng. (Civil & Environmental): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geology): Geological Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
whom field they intend to affiliate during their upperclass years. Information about admission to either program and about special scholarship aid may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students may qualify for AP credit in one of two ways:

1) by receiving sufficiently high scores on advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or

2) by receiving sufficiently high scores on Cornell's departmental placement examinations, which are given during orientation week before first-semester classes begin. Advanced placement is granted only to first-semester freshmen, and the placement examinations are scored before the students begin classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways:

1. They may enroll in a more advanced course in the same subject right away.
2. They may substitute an elective course from a different area.
3. They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. In mathematics, physics, chemistry, and computer science, AP credit is awarded only for courses required in the engineering curriculum.

Mathematics: Math 191 or 193, 192, 293, and 294 are required.

First-term math (Math 191 or 193). AP credit may be earned by:

- a score of 3 or 4 on the CEEB BC exam, or
- a score of 4 or 5 on the CEEB AB exam, or
- a passing score on the Cornell departmental exam for first-term math.

First-year math (through Math 192). AP credit may be earned by:

- a score of 5 on the CEEB BC exam, or
- a passing score on the Cornell departmental exam for first-year math.

Physics: Physics 112 or 116 and 213 or 217 are required.

Physics 112. AP credit may be earned by:

- a score of 4 or 5 on the mechanics portion of the CEEB exam, or
- a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for Physics 112.

Note: Students who have received credit for Physics 112 may not enroll in Physics 213 unless concurrently enrolled in Math 293.

Physics 213. Students, receiving a 5 on the Electricity and Magnetism portion of the CEEB exam may choose to accept AP credit for Physics 213 or placement in Physics 217 with no AP credit for Physics 213. For advice or more information contact Professor Rich Galik, the departmental representative. His telephone number is 607/255-3633.

Chemistry: Chem 207 or Chem 211 is required.

Chem 207 or Chem 211. AP credits may be earned by:

- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: Students who are successful in obtaining AP credit for Chem 207 and who are considering majors in chemical engineering or materials science and engineering should consider enrolling in Chem 215. Those who are offered AP credit for Chem 207 and then elect to take Chem 215 will also receive academic credit for Chem 207. You may want to discuss this option with your faculty adviser.

Computing: Computer Science 100 is required. AP credit may be earned by:

- a score of 4 or 5 on the CEEB A or AB exam, or
- a passing score on the Cornell departmental exam for Computer Science 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- students receiving a 4 on the CEEB AP exam will be offered six credits.

Those who want to study more biology should contact the Office for Academic Affairs, Division of Biological Sciences, 200 Stimson Hall, to discuss proper placement.

Freshman Writing Seminar: Two Freshman Writing Seminars (for a total of six credits) are required.

AP credit for one Freshman Writing Seminar may be earned by a score of 5 on the CEEB AP English exam. A score of 4 on the AP English exam will earn a student three credits in English. These three credits cannot be applied toward the Freshman Writing Seminar requirement, but can be applied toward the expressive arts category in the Liberal Studies Distribution requirement. AP credit earned in the humanities and social sciences cannot be used to fulfill the "upper level" liberal studies requirement.
Liberal Studies Distribution: Six courses beyond two Freshman Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Thology who score 3 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may be met an approved elective requirement, contingent on discussions with the faculty adviser.

General Policies for Advanced Placement
The general policies in the College of Engineering governing awards of AP credit are as follows:
1. AP credit will not be offered in any subject area without a documented examination (CEEB or departmental).
2. All AP examinations (both CEEB and departmental) are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of the scores sent directly to Cornell as soon as possible. Those who wish to take departmental examinations must do so during Orientation Week, permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Committee on Academic Standards, Petitions, and Credit (ASPAC), and must be filled within the first three weeks of the fall semester.
3. Except when permission for late testing has been granted, students offered AP credit must accept or decline within the first three weeks of the first term at Cornell in the Engineering Registrar's office, 158 Olin Hall. Final AP awards are recorded on the last day of the third week.

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from Engineering Advising, 167 Olin Hall.

Transfer Credit
Entering freshmen and transfer students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

To apply for transfer credit, the student must complete and submit a transfer credit form (one form for each request), accompanied by a course description. (Transfer Credit forms are available from the Engineering Advising Office.) After the transcript is submitted by the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.

To apply for transfer credit to satisfy requirements in mathematics, science, and engineering courses, and the Freshman Writing Seminar, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course must require course materials, textbooks used, etc., in addition to the course description before approving the course.

To apply for transfer credit to satisfy liberal studies distribution requirements, departmental approval is not required. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in the Engineering Advising Office.

Cornell does not award credit for courses in which a student earned a grade less than C, schools and departments may stipulate a higher minimum grade.

College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate CEEB or Cornell departmental placement examination, as described in the Advanced Credit section.

After matriculation no more than 18 credits of transfer or Cornell extramural credit may be used to satisfy bachelor's degree requirements. Summer session courses taken at Cornell are not considered transfer credits.

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. No more than 72 transfer credits may be used to meet graduation requirements.

A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet, Advanced Placement and Transfer Credit for First-Year Engineering Students, available from Engineering Advising, 167 Olin Hall.

Academic Standing
Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these requirements will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 12 credits passed, including at least two courses from mathematics, science, and/or engineering;
2. a C- or better in the mathematics course;
3. a semester average of 2.0 or higher.

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 14 credits passed in courses that meet engineering degree requirements;
2. a C- or better in the mathematics course, if one was taken;
3. a semester average of 2.0 or higher.

Academic Progress
The total number of credits required for graduation range from 123 to 129, depending upon the field program. Therefore, an average semester credit load ranges from approximately 15 to 16 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in Math 191 (or 193), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once, in the following semester. Failure to achieve at least a C- the second time will generally result in dismissal from the engineering program. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay your progress in the physics and mathematics curricula.

Dean's List
Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 or higher with no failing, unsatisfactory, or incomplete grades (even in physical education) and 12 credits or more of letter grades. Students may earn Dean's List status retroactively if they meet these criteria after making up incompletes according to college rules.

Graduating with Distinction and Honors Program
Graduating with Distinction
Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude. Cum laude requires a GPA of 3.50 (either overall or for the last four semesters); magna cum laude requires a GPA of 3.75 (based on all credits taken at Cornell); and summa cum laude requires a GPA of 4.0 (based on all credits taken at Cornell).

Honors Program
To be eligible for honors, a student must achieve and sustain a GPA of 3.50. (i.e., the student must also be eligible for one of the three cum laude distinctions.) If the field has
an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of “With Honors.” For more specific information, see the field program outline in this catalog.

S-U Grades
Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Engineering students may choose to receive an S-U grade option under the following conditions:

- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one (1) course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered “S-U only” may be taken in the same semester as the “elected S-U” course, given permission through the petition process.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed add/drop form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed (except by petition), nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

The S-U policy does not apply to courses in physical education and other courses that are not taken to fulfill degree requirements.

When a particular course is offered only on an S-U basis, a student may petition to take a second S-U course in the same term.

Residence Requirements
Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are voluntarily not enrolled at Cornell as full-time students may take individual courses only through the School of Continuing Education and Summer Sessions. Students who have been required to take time off are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) may be used to satisfy the requirements for the bachelor’s degree in engineering.

Degree candidates may spend periods of time studying at Campuses of the University of Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of Engineering Advising, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell
It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising office. Students who wish to transfer into the College of Engineering can apply at the Office of Engineering Admissions—application forms are available in Hill Annex. Students who would enter the college as second-semester sophomores or upperclassmen must be accepted by a field program as part of the admission process. Others may be accepted into the college without the requirement of field affiliation.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, and physics that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in Engineering Advising, 167 Olin Hall.

Leave of Absence
A leave of absence may be voluntary, medical, or required. Following is a description of each:

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for the specific period of time and receive written approval.

Affiliated students request leave through their field. Unaffiliated students request leave through Engineering Advising for engineering fields. The first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before the end of a term are usually required to remain in good standing and to maintain their registration status.

Voluntary leave for an entire semester is not permitted; students may take a leave of absence for no more than a six-week period during the academic year. A leave of absence for up to five years is possible with the understanding that the student must return at the beginning of the fifth year. Students who do not return at the beginning of the fifth year are returned to the point of departure.

Term Leave: Students who withdraw should do so through Engineering Advising. Affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should detail the student’s activities while away from Cornell, including any academic work completed during this time, and specify the courses the student intends to take upon return.

Rejoining the College
Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to Engineering Advising; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should detail the student’s activities while away from Cornell, including any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College
A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through Engineering Advising. Affiliated students should contact their field office. If a withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations. Any student who fails to register in the first week of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission
Agricultural and Biological Engineering

Bachelor of Science Curriculum

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the environment; and ensuring an adequate and safe food supply in an era of expanding world population. The undergraduate Engineering Program in Agricultural and Biological Engineering has a unique focus on biological engineering, training the next generation of engineers to meet these challenges.

Agricultural and Biological Engineering and Engineering Mathematics

Math 191 (or 193), 192, 293, 294, Calculus for Engineers and Engineering Mathematics

Chem 211, General Chemistry, or equivalent

Phys 112, 213, 214, Physics I, II, and III (organic chemistry or biochemistry may be substituted for Physics 214)

Introducory biological sciences

ABEN 151, Introduction to Computer Programming

ABEN 200, Undergraduate Seminar

Engineering distribution (two courses, including Mechanics of Solids)

Liberal studies (two freshman seminars and at least two courses in humanities or history)

Advanced and Applied Subjects

Engineering sciences in any field (must include fluid mechanics and thermodynamics, plus ABEN 250, 350, 396 and 496 (Engineering Applications in Biological Systems, Bio. & Env. Transport Processes, Fundamentals of Engineering Design, and Capstone Design Project, respectively)) and a minimum of three agricultural and biological engineering courses (at least 9 credits) or best (within courses numbered 450 to 495)

Biological or agricultural sciences (at least 3 credits of biological sciences beyond the introductory level)

Approved electives (at least 3 credits in the College of Agriculture and Life Sciences)

Total (minimum)

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

• A significant research experience or honors project under the direct supervision of an ABEN faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.

• A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (i.e., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make
arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Each applicant to the ABEN honors program must have a faculty advisor to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the College verifies the student's grade-point average, the student will be officially enrolled in the honors program.

**Master of Engineering (Agricultural and Biological) Degree Program**

The program for the M.Eng (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering projects. The curriculum is designed for students who want to pursue careers in research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the student may combine physics and engineering with a background in a conventional area of engineering or applied science.

The industrial demand for graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geotechnical analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of our graduates go on for advanced study in many subfields.

A candidate for the M.Eng (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include aquaculture, agricultural engineering, biological engineering, energy, environmental engineering, food engineering, structures and their environments, waste management, and highway engineering. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design projects. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and some electives from the designated topic areas. More information is available from the ABEN Student Services Office, 207 Riley Robb Hall (255-2173), or by e-mail at rg5@cornell.edu.

The Engineering Common Curriculum allows students to take only 4 courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both of the freshmen semesters so that they may have additional flexibility in developing a strong, individualized educational program in their later years, and for best maintaining such options as a semester or year abroad, or early graduation.

Some courses (though the list is not all-inclusive) that will satisfy this requirement are Physics 444, Nuclear and High-Energy Particle Physics; Physics 454, Introductory Solid-State Physics; A&EP 438, Complementing Engineering Physics; A&EP 440, Quantum and Nonlinear Optics; A&EP 609, Low-Energy Nuclear Physics; ELE E 430, Lasers and Optical Electronics, and ELE E 531, Quantum Electronics I.

If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Areas of concentration.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. This can include the pursuit of dual majors or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore and junior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in
accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Michael S. Isacson.

Electives need not be all formal course work: Qualified students are encouraged to undertake informal study under the direction of a member of the faculty (A&EP 490). This may include research, a design project in areas in which faculty members are active. The variety of course offerings and many electives provide a sizable flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to attend each semester all required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

Engineering Physics Honors Program Eligibility

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of a B- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral written report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is required for successful completion of the honors requirement.

Master of Engineering (Engineering Physics) Degree Program

The M.Eng (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, microstructure science and technology, device physics, materials characterization, or engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to microstructure science and technology. Core courses in this specialty include the microcharacterization of materials (A&EP 661), and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, microstructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 or more than 12 credits)

2) an integrated program of graduate-level courses, as discussed below (14 to 20 credits)

3) a required special-topics seminar course (4 credits)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and/or physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng (Engineering Physics) degree program should contact Professor R. V. E. Lovelace.

APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.
There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

### Chemical Engineering

### Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take Chemistry 208 during the freshman year. The program for the last three years, for students who have taken an Introduction To Engineering course during the first year and entered Cornell Fall 1994 or later is as follows:

<table>
<thead>
<tr>
<th>Semester 3</th>

### Semester 6

| Applied Science elective† | 3 |
| CHEME 301, Nonresident Lectures | 1 |
| CHEME 324, Heat and Mass Transfer | 3 |
| CHEME 332, Analysis of Separation Processes | 4 |
| CHEME 390, Reaction Kinetics and Reactor Design | 3 |
| Humanities or social sciences | 3 |

### Semester 7

| CHEME 432, Chemical Engineering Laboratory | 4 |
| CHEME 472, Process Control | 3 |
| Electives* | 6 |

### Semester 8

| CHEME 462, Chemical Process Design | 4 |
| Humanities or social sciences | 3 |
| Electives* | 3 |
| Humanities or social sciences | 3 |

*The electives in semester seven and eight comprise 6 credits of technical electives, and 3 credits of CHEME process or systems elective. CHEME process or systems electives include CHEME 564, Design of Chemical Reactors, CHEME 566, Systematic Methods for Process Design; CHEME 640, Polymeric Materials; CHEME 643, Introduction to Bioprocess Engineering; CHEME 650, Separations Using Membranes or Porous Solids; CHEME 661, Air Pollution Control. **Chemistry 357 may be substituted for CHEM 253. The applied science elective must then be CHEM 358. ***A computer applications course is recommended, for example, ENGRD 241, 222, or 211.

### Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng.(Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

### Dean's Certificate Programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing

A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

### CIVIL AND ENVIRONMENTAL ENGINEERING

### Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, students may emphasize structural engineering, geotechnical engineering, hydraulics and hydrology, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, environmental and water resource systems, and hydraulics and hydrology. Sample curricula are available in the school office, 220 Hollister Hall.

### Requirements for Admission to the Field

Students planning to enter the Field Program in Civil and Environmental Engineering are required to complete ENGRD 202, Mechanics of Solids, either before or during the sophomore year with a grade of C- or better. Additional requirements for affiliation in the field are grade-point averages of at least 2.0: (1) in all engineering and science courses, (2) in the term immediately prior to affiliation, and (3) cumulatively for all courses.

### Recommended Engineering Distribution Courses

The recommended engineering distribution course for students planning to enter the environmental engineering option is ENGRD 219, Mass and Energy Balances. Students entering the environmental option who have not taken ENGRD 219 will be required to do so as part of the Field Program.

Recommended engineering distribution courses for students planning to enter the civil engineering option are:

- ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;
- ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;
- ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;
ENGRD 211, Computers and Programming, for students interested in transportation.

**Field Program:**
These field program requirements will apply to all students in the Classes of 1998 and later, and students in the Class of 1997 are strongly encouraged to follow these new curriculum options as well.

**Environmental Engineering Option**
For the Field Program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

<table>
<thead>
<tr>
<th>Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 241, Engineering Computation*</td>
<td>3</td>
</tr>
<tr>
<td>CHEM 253, Elementary Organic Chemistry</td>
<td>4</td>
</tr>
<tr>
<td>or Chem 257, Elementary Organic Chemistry</td>
<td>3</td>
</tr>
<tr>
<td>BIOMI 290, General Microbiology, Lectures</td>
<td>3</td>
</tr>
<tr>
<td>CEE 304, Uncertainty Analysis in Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 323, Engineering Economics</td>
<td>3</td>
</tr>
<tr>
<td>CEE 331, Fluid Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>CEE 341, Introduction to Geotechnical Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 351, Environmental Quality Engineering</td>
<td>3</td>
</tr>
<tr>
<td>ABEN 475, Environmental System Analysis</td>
<td>3</td>
</tr>
</tbody>
</table>

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRC or approved Communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

*ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement.*

**Civil and Environmental Engineering Honors Program**

**Eligibility**
The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation. Only students graduating in 1997 or later are eligible (i.e., only those fulfilling the curriculum requirements of the college and school that were adopted in 1994).

**Content**
A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in Civil Engineering.

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400. Honors Project in CEE (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member as part of a regularly recognized course in the College of Engineering (i.e., ENGR 470: Undergraduate Engineering Teaching or CEE 401: Undergraduate Teaching in CEE (1-3 credits per semester).

3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

**Timing**
All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

**Procedures**
Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the Associate Director for all but unusual proposals.

**Master of Engineering (Civil) Degree Program**
The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, and it includes an intensive, full-time, three-week session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master's Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 503) and a two-course design project (CEE 501 and 502).

2) Specialization in a major—three to five courses in either environmental engineering, environmental and public systems engineering, geotechnical engineering, hydraulic engineering, remote sensing, structural engineering, or transportation engineering.

3) Two courses in a single related or minor area.

4) Technical electives (up to two courses).

Courses in the minor and electives may consist of graduate or advanced courses in fields related to the major, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Five courses: Management Practice (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).

2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.

3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the sixth term of study.

**COMPUTER SCIENCE**

**Bachelor of Science Curriculum**

The Field Program in Computer Science is intended for students who are interested in the computing process and in the fundamental structure of algorithms, data, and languages that underlie that process.

A student entering the Field Program in Computer Science must take COM S 211 or 212 and COM S 280 before beginning the upperclass sequence. Students who do not earn a grade of B- or better in both COM S 211 or 212 and COM S 280 are strongly advised against attempting the computer science field program. Students who have not maintained an average of at least 3.0 in the mathematics courses required by the Common Curriculum are also discouraged from entering the program. Apart from these requisites and those of the college, the courses required for the Field Program in Computer Science are:

**Course Work Credits**

- Systems sequence 11
- COM S 314, Systems and Organization
- COM S 410, Data Structures
- COM S 414, Systems Programming and Operating Systems
- Theory sequence 8
- COM S 381 or 481, Theory of Computing
- COM S 482, Analysis of Algorithms
- Numerical Analysis 3-4
- COM S 222, Scientific Computation
- COM S 421, Numerical Solutions of Algebraic Equations
- Computer science electives 8-9
- Two nonrequired computer science courses numbered 400 or above,* plus a laboratory project course (for example, COM S 413, 415, 418, 433, 463, or 473).
- Related electives 14-16
- One mathematically oriented course plus three courses at the 300-level or above forming an upper-level concentration in mathematics, operations research, electrical engineering, or another technical area.
- *Must be three or more credits.

For more information, consult our Web Page at http://www.cs.cornell.edu or refer to the Computer Science Undergraduate Handbook, available from 303 Upson Hall.

The performance of students in the Field of Computer Science is reviewed each term. To remain in good standing with the department, they must have an overall term average of at least 2.3 with no course failed and a term average for field program courses of at least 2.7 with no course grade less than C-, and they must be making satisfactory progress in the field.

**Computer Science Honors Program**

**Eligibility**

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

- maintained a cumulative GPA ≥ 3.50
- qualified for *cum laude* honors in the College of Engineering
- completed 8 credit hours of CS course work at or above the 500-level
- completed 6 credit hours/2 semesters of research with a CS faculty member, obtaining grades of A- or better.

**Content**

Honors courses may not be used to satisfy any other CS-field requirements, with the exception of the approved electives. In essence, honors course work represents a depth of field work that is well beyond the minimum requirements needed to fulfill the major.

**Timing**

Honors' determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: <ugrad@cs.cornell.edu>. The subject line for this message should read "HONORS TRACT". Related questions may also be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

**Preparation**

Arrangements for doing CS490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisers and/or browse the department's web page at <http://www.cs.cornell.edu> for specific leads on research opportunities.

The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in CS will be subject to the same honors criteria.

**Master of Engineering (Computer Science) Degree Program**

The one-year program leading to the degree of M.Eng. (Computer Science) admits more than 70 students a year. The "fifth year," as it is sometimes referred to, provides students with the opportunity to more fully establish professional credentials in advanced computing technologies. In recent years, the demand for the "fifth year" has expanded enormously.

A strong undergraduate background in computer science or a related field is required. Early admission is available for Cornell seniors who apply in the fall semester. The emphasis of the curriculum can be on programming languages, systems, theory of algorithms, theory of computation, numerical analysis, artificial intelligence, computer graphics/visualization, multimedia, network systems, or information processing, which includes databases and information organization and retrieval. The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language or the solution of a significant engineering problem using computer science techniques.

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng.(Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

**ELECTRICAL ENGINEERING**

**Bachelor of Science Curriculum**

The undergraduate Field Program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer engineering; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; and semiconductor devices and applications.

**New Curriculum (starting with Class of 1998)**

Students planning to enter the Field Program in Electrical Engineering must take ELE E 230, Introduction to Digital Systems, as an engineering distribution course. The fall of the sophomore year is the preferred term for EE 230 for students without advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are
encouraged to take COM S 211 as an engineering distribution course prior to entry into the field program. In addition, the field program begins normally in the spring of the sophomore year, as shown below. All of the elective courses (except ELE E 210) are taught only once a year, either spring or fall, as indicated in the course descriptions.

Course Credits
**Field Required Courses**
ELE E 210, Introduction to Electrical Systems 3
ELE E 215, Electrical Systems Laboratory 3
ELE E 301, Electrical Signals and Systems I 3
ELE E 303, Electromagnetic Waves and Fields I 4
ELE E 315, Electrical Laboratory 4
A choice of three courses from among: 12
ELE E 302, Electrical Signals and Systems II 4
ELE E 304, Electromagnetic Waves and Fields II 4
ELE E 306, Fundamentals of Quantum and Solid State Electronics 4
ELE E 308, Fundamentals of Computer Engineering 4
ELE E 310, Probability and Random Signals

Field Elective Courses
Electrical Engineering Approved Electives 12
Electives Outside Field (3 courses) 9
Total minimum field credits 51

*ELE E 310 can be taken in place of ENGRD 260 or 270 or TAM 310 to satisfy the college application of probability and statistics requirement.

†Must include two electrical engineering laboratory courses and at least one course at the 400-level or above.

‡See Electrical Engineering Handbook for detailed definitions, but must include one course at the 300-level or above. At least one of the required electrical engineering laboratory courses must be selected from a list including ELE E 316, 425, 430, 453, 457, 475, 476, 488, 497, 550 and 534. The other may be selected from the above list or from among ELE E 423, 426, 433, 439, 451, 452, 471, 472, 524, 526, 536, 539, 554, and 558.

All students graduating with a B.S. degree must fulfill the engineering design requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available in the electrical engineering undergraduate program office.

Undergraduate specialization is achieved through the various electrical engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates.

Maximum technical course scheduling flexibility in the field program is preserved only for those students who do not complete their 6 credits of college approved electives prior to entry into the field requirements. Accordingly, intended electrical engineering students are advised to consider course selection carefully during their first three terms in engineering.

An electrical engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires additional courses, a required undergraduate research or design project, or an honors thesis. Details are available in the Electrical Engineering Handbook or on the electrical engineering homepage located on the World Wide Web at http://www.ee.cornell.edu.

Students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin the Master of Electrical Engineering program in their last semester of undergraduate course work so long as 8 or fewer credits remain toward B.S. degree requirements and a 3.0 GPA has been maintained. Admission must be approved in advance of this last semester of undergraduate work.

All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C--may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the first semester in the Field Program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical Engineering Handbook to remain active participants.

**Electrical Engineering Honors Program Eligibility, Entry, and Continuation**
A student may apply to enter the EE Honors Program as early as the beginning of the fifth semester and as late as the end of the seventh semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped at least temporarily from the honors program. If such a "dropped" student has a cumulative GPA of at least 3.5 at the end of any subsequent semester up to and including the seventh, then he or she will be eligible to reapply for entry into the program. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

**Honors Seminar**
Any student in the honors program is required to take (or to have taken) an Honors Seminar during his or her junior year. The Honors Seminar will be a 2-credit semester-course (offered both fall and spring) consisting of a weekly series of introductory research lectures by EE faculty members. Each Honors Seminar retiree will be required to write a short paper on one of the topics covered in the lecture series. All EE faculty members will be expected to give a lecture or short series of lectures as part of the Honors Seminar at least every two or three years. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program will receive letter grades for the Honors Seminar. Other students may attend the Honors Seminar for academic credit, but will be graded on an S/U basis.

**Honors Project**
Any student in the honors program is required to accumulate at least three credit hours from an honors project consisting either of research, teaching, or directed reading. All Honors Projects should place some emphasis on development of communication skills. A 5-credit teaching-oriented honors project would consist of a one-credit seminar on teaching coupled with two credit hours worth of classroom teaching at the level and intensity of Academic Excellence Workshop facilitators. Research- and reading-oriented honors projects, while similar to the senior projects we now offer, should require explicitly a certain amount of writing.

**Additional Coursework**
Any student in the honors program is required to take at least four credit hours of advanced EE coursework that has at least a 300-level prerequisite. These four credit hours are in addition to any credit hours required as part of the EE field program.

The program described above would require honors program participants to amass at least nine credit hours over and above the 126 credit hours required for a B.S. degree; thus an honors degree would require a minimum of 135 credit hours.

**Master of Engineering (Electrical) Degree Program**
The M.Eng.(Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on engineering design and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work, including a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum and increase the project component to 10 credits. Students with particular career goals, such as engineering management, may apply to use up to 8 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Although admission to the M.Eng.(Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.
GEODETICAL SCIENCES

BACHELOR OF SCIENCE CURRICULUM

Study in geological sciences is offered for engineering students who are preparing for careers in earth sciences and for those who want a broad background in the geological sciences as preparation for careers in other engineering fields. The Department of Geosciences is organized as an intercollege department in the College of Arts and Sciences and the College of Engineering. College of Arts and Sciences students should consult that college's section on geological sciences as well as the course listing here.

The Department of Geosciences is taking part in a new intercollege program in the Science of Earth Systems, available to students in the Colleges of Arts and Sciences, Engineering, and Agricultural and Life Sciences since fall 1995. This program, which is being developed as a new intercollege major, emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the earth system, including the lithosphere, biosphere, hydrosphere, and atmosphere. The aim is to prepare students for graduate study and careers across the broad spectrum of earth sciences required for successful understanding and management of our planet. For a description of the program and proposed requirements for the major, see the section, Interdisciplinary Centers, Programs, and Studies, in the front part of the catalog.

All geology majors take substantially the same set of upper-level geology courses regardless of their college affiliation. The difference between the curricula for students in engineering (B.S.-degree candidates) and those in arts and sciences (B.A.-degree candidates) is in their respective college requirements such as distribution courses, languages, social sciences, and humanities requirements. Both B.S.- and B.A.-degree programs stress a balanced overview of geology, without specialization. Within the B.S.-degree program, substantial specialization can be achieved by careful selection of field approved electives.

Students in the College of Engineering who may wish to affiliate with the Field Program of Geosciences may take ENGRD 122 and ENGRD 201 as distribution courses. As a prerequisite for the major, they should take GEOL 201 (ENGRD 201) or GEOL 101 or 103 as a field approved elective, preferably during their freshman or sophomore year. For those interested in geobiology, BIO G 101-105 and 102-104 are recommended. Chemistry 208 may be substituted for PHYS 214 with approval of the adviser.

Geological Sciences requires the following courses for the engineering major: GEOL 210, 214, 326, 355, 356, 375, and 388; GEOL 210 plus 214 count as one course for purposes of graduation requirements. At least two field approved electives should be GEOL 400 or 600-level courses.

In addition, a requirement for field experience may be met by completing one of the following: (a) GEOL 491-492 (Undergraduate Research) based on field work (2-credit minimum); (b) GEOL 437 (Geophysical Field Methods) as an additional field approved elective (3 credits); (c) An approved field course taught by another college or university (2-credit minimum); (d) GEOL 212 (Special January Field Trip) (2 credits). Field observations made during GEOL 212 as the basis for GEOL 491-492 is an excellent way to satisfy the requirement.

Care courses may be taken in any reasonable sequence, except that GEOL 355, which is offered in the fall, should be taken before GEOL 356, which is offered in the spring. GEOL 326, 355, 356, and 375 should be taken relatively early in the major program. It is recommended that students intending to specialize in geochemistry select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students’ choice of other electives outside the major field.

A&EP 333, Mechanics of Particles and Solid Bodies
A&EP 355, Intermediate Electromagnetism
A&EP 356, Intermediate Electrodynamics
A&EP 434, Continuum Physics

Phys 410, Advanced Experimental Physics
T&AM 310-311, Advanced Engineering Analysis I and II

It is recommended that students intending to specialize in geophysics select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students’ choice of other electives outside the major field.

A&EP 635, Aquatic Chemistry
Chem 207, 208, General Chemistry
Chem 267-288, Introductory Physical Chemistry
Chem 300, Quantitative Chemistry
Chem 301, Experimental Chemistry I
Chem 302, Experimental Chemistry II
Chem 303, Experimental Chemistry III
Chem 357-358, Introductory Organic Chemistry
Chem 399-400, Physical Chemistry I and II

MS&E 331, Structure of Materials
MS&E 335, Thermodynamics of Condensed Systems

It is recommended that students intending to specialize in geobiology select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents; these guidelines also apply to the students’ choice of other electives outside the major field.

BIOPL 241, Introductory Botany
BIOES 261, Ecology and the Environment
BIOES 274, Functional and Comparative Morphology of Vertebrates
BIOES 278, Evolutionary Biology

BIOES 371, (also ANTHR 371), Human Paleontology
BIOES 373, Biology of the Marine Invertebrates
BIOL 448, Plant Evolution and the Fossil Record
Chem 253, Elementary Organic Chemistry

It is recommended that students who want to pursue further training or immediate employment in applied geology (environmental and engineering geology, geohydrology, petroleum geology, or geological engineering) select most of their field approved electives from the appropriate advanced geology courses and the following courses or their equivalents, with two of the four from the same field, these guidelines also apply to the students’ choice of other electives outside the major field.

GEOL 204 (also SCAS 371 and ABEN 371), Hydrology and the Environment
ABEN 475, Environmental Systems Analysis
ABEN 671, Analysis of the Flow of Water and Chemicals in Soils
SCAS 260, Introduction to Soil Science
SCAS 363, Intermediate Soil Science I: Genesis, Classification, and Survey
SCAS 364, Intermediate Soil Science II: Physics
SCAS 365, Intermediate Soil Science III: Chemistry and Microbiology
SCAS 371 (also ABEN 371 and GEOL 204), Hydrology and the Environment
SCAS 667, Advanced Soil Physics
SCAS 671, Soil Chemistry
CEE 331, Fluid Mechanics
CEE 332, Hydraulic Engineering
CEE 341, Introduction to Geotechnical Engineering
CEE 351, Environmental Quality Engineering
CEE 610 (also Agronomy 660), Remote Sensing Fundamentals
CEE 615, Digital Image Processing
CEE 617, Project—Remote Sensing
CEE 630, Advanced Fluid Mechanics
CEE 631, Flow and Contaminant Transport Modeling in Groundwater
CEE 632, Hydrology
CEE 633, Flow in Porous Media and Groundwater
CEE 640, Foundation Engineering
CEE 653, Water Chemistry for Environmental Engineering
CEE 655, Pollutant Transport and Transformation in the Environment
MS&E 331, Structure of Materials
MS&E 445, Mechanical Properties of Materials
ORIE 270 (also ENGRD 270), Basic Engineering Probability and Statistics
ORIE 360, Engineering Probability and Statistics
ORIE 361, Introductory Engineering Stochastic Processes
Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses and should select most of their field approved electives from the groups of courses listed above for geochemistry and applied geology plus the following additional courses; these guidelines also apply to the students' choice of other electives outside the major field.

CxEE 654, Aquatic Chemistry
CxEE 741, Rock Engineering

Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their field approved electives from the same field, at a level comparable to the courses listed above. The electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of GEOL 491 and 492, Undergraduate Research, for a four-year field approved elective.

Students intending to pursue graduate study in geology are reminded that some graduate schools require proficiency in reading the scientific literature in one or two of the three languages, French, German, and Russian. Undergraduate preparation in foreign languages is advantageous for many careers, as well.

Geological Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Geological Sciences and have been recommended for the degree by the honors committee of the department. An honors' program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

In addition to the minimum graduation requirements, a student must

1. Have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies.

2. Complete an honors thesis (GEOL 490, two credits each over two semesters) of breadth, depth, and quality.

Timing

A student interested in completing an honors thesis must, by the beginning of their 7th semester, have a written proposal of his/her honors project accepted by his/her adviser and the director of undergraduate studies.

Procedures

Each application to the Geological Sciences honors program must have a faculty adviser to supervise the honors program. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) degree is intended to provide future professional geologists with the geological and engineering background they will need to analyze and solve engineering problems that involve geological variables and concepts. Students may choose a program from one of several options, or tailor a program to meet their special interests with the help of a faculty adviser.

The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree programs can be found in the college's introductory section.

MATERIALS SCIENCE AND ENGINEERING

Bachelor of Science Curriculum

Students majoring in materials science and engineering are required to take MS&E 261, Introduction to Mechanical Properties of Materials, or one of the other MS&E distribution courses, before affiliating with the field. They are strongly urged to take it as an engineering distribution course during their sophomore year. Students in materials science and engineering must concentrate in a specialization which may cover an area such as materials science, solid state, metallic materials, ceramic materials, polymeric materials, or electronic materials.

Specialization is achieved through the selection of technical electives in the junior and senior years. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects. The requirements for a Bachelor of Science degree in Materials Science and Engineering are:

1. Completion of common curriculum including humanities and social sciences.

2. Completion of 11 required field courses below:
   - MS&E 331, Structural Characterization of Materials
   - MS&E 352, Electrical and Magnetic Properties of Materials
   - MS&E 355, Thermodynamics of Condensed Systems
   - MS&E 356, Kinetics, Diffusion, and Phase Transformations
   - MS&E 441, Microprocessing of Materials
   - MS&E 442, Macroprocessing of Materials
   - MS&E 433/435, Senior Materials Laboratory I or Senior Thesis I

Material Science and Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Materials Science and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

The requirements for an honors degree in Materials Science and Engineering are:

1. Students in the Class of '96 must take at least six credits above the minimum required for graduation in Materials Science and Engineering, so that the minimum number of credits for an honors degree is 138.

2. Students in the Class of '97 and subsequent classes must take at least nine credits above the minimum required for graduation in Materials Science and Engineering, so that the minimum number of credits for an honors degree is 135. These additional courses must be...
Note:

3. A senior honors thesis (eight credits) with the Honors program at the beginning of their senior year, so that they must have a cumulative GPA greater than or equal to 3.50 at that point.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the Geological Science honors program must have a faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng (Materials) program. This program consists of 30 credits, including course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MSE. One 3-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MSE undergraduate requirements.

MECHANICAL AND AEROSPACE ENGINEERING

Members of the faculty of the graduate fields of Aerospace Engineering and Mechanical Engineering are listed in the Announcement of the Graduate School.

Bachelor of Science Curriculum in Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machines, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and heat transfer systems is concerned with the efficient conversion of energy in electric power generation and transfer systems, the environmental impact of engineering activity (including pollutants and noise), and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, heat, energy, and power engineering; and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering Program take ENGRD 202 (also T&AM 202) as an engineering distribution course. They also are urged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School is supportive of students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's adviser.

The requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.

2. Completion of the field requirements, which and aerospace engineer courses (beyond ENGRD 202 already mentioned), and five elective courses (24 credits).

The eleven required courses are:

M&AE 212, Mechanical Properties and Processing of Engineering Materials

M&AE 221, Introduction to Thermodynamics

M&AE 225, Mechanical Design and Synthesis

T&AM 203, Dynamics

Electives

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

Field Approved Electives

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student.

Typically these are two courses chosen from an appropriate subset of the school's upper-class offering.

However, students can petition for approval of two related courses to form a custom concentration.

The standard concentrations are Fluids/Aerospace Engineering, M&AE 305, 306, 423, 506, 507

Thermo-Fluids M&AE 423, 449, 506

Materials Processing M&AE 412, 514

Mechanical Systems M&AE 389, 465, 469, 478, 489

Vehicle Engineering M&AE 386, 449, 486, 506, 507

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 464, 486, and 489.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after Math 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and OR&E 270.

One of the field approved electives can be viewed as a technical elective and can be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizations are not accepted. Advisers may approve such courses as approved electives.

Approved Electives

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years),
the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- course stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- course in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

Recommendation on Humanities/Social Sciences Electives

Students are encouraged to build a program that includes studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of:

- a technical drawing course in high school or in a community college,
- ENGRG 102, Drawing and Engineering Design,
- another technical drawing course at Cornell, or
- a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 389 or 489.

The writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Electrical Systems (ELE E 210) may be replaced or supplemented by Introductory Electronics (PHYS 390).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

Applicability: The curriculum requirements described above apply to the Class of '98 and beyond. Graduates of the Class of '97 may choose to complete their studies under the previous requirements or those described above. Generally the Sibley School expects the Classes of '96 and '97 to use the requirements described above. More detailed materials detailing the Mechanical Engineering Program may be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, energy and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, CFD, CAE, CAD, CAM, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty advisor. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of class; any subsequent changes must also be approved by the committee. An individual student's curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.
Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the Manufacturing, Energy, or Electronic Packaging option programs leading to special dean's certificates in those areas.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the Master of Engineering (Nuclear) curriculum include K. B. Cady (faculty representative), D. D. Clark, H. H. Fleischmann, D. A. Hammer, V. O. Kostroun, and S. C. McGuire. The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or allied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng.(Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Laboratory of Nuclear Engineering are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The required background is (1) an accredited baccalaureate degree in engineering, physics, or allied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses are included in the 30-credit program:

**Fall term**
- NS&E 509, Nuclear Physics for Applications
- A&E 612, Nuclear Reactor Theory
- A&E 653, Nuclear Engineering
- Technical elective

**Spring term**
- A&E 651, Nuclear Measurements Laboratory
- NS&E 545, Energy Seminar

**Spring term**
- A&E 651, Nuclear Measurements Laboratory
- NS&E 545, Energy Seminar

**Program for Applications of Nuclear Analytical Methods (PANAM)**

This new program was initiated in 1993–94. It provides for specialization by Ph.D. candidates with either a major or a minor in NS&E. For those with majors in non-nuclear fields who wish to use nuclear analytical methods in their research, the sequence NS&E 509–551–590 forms a suitable minor in NS&E. The laboratory course 551 has been offered since spring 1989. The lecture course 509, offered for the first time in 1993, covers nuclear physics without requiring quantum mechanics as a prerequisite. For NS&E majors, PANAM offers the opportunity to extend and develop new nuclear-analytical methods, for example, uses of cold neutrons and neutron-depth profiling with conversion electrons. They would normally follow the M.Eng. program in the first year, continue with advanced courses in the second year (including a full quantum-mechanical treatment of nuclear physics), and begin, as early as possible, independent projects as prerequisites to thesis research.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

Bachelor of Science Curriculum in Operations Research and Industrial Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. Excep-

**Technical elective**
- Engineering design project
- Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- M&AE 651, Advanced Heat Transfer
- ELE E 581, Introduction to Plasma Physics
- ELE E 582, Advanced Plasma Physics
- ELE E 589, Magnetohydrodynamics
- ELE E 471, Feedback Control Systems
- ELE E 472, Digital Control Systems
- A&E 661, Microcharacterization
- NS&E 484, Introduction to Controlled Fusion: Principles and Technology
- NS&E 621, Radiation Effects In Microelectronics
- NS&E 459, Physics of Modern Materials Analysis

**Program for Applications of Nuclear Analytical Methods (PANAM)**

This new program was initiated in 1993–94. It provides for specialization by Ph.D. candidates with either a major or a minor in NS&E. For those with majors in non-nuclear fields who wish to use nuclear analytical methods in their research, the sequence NS&E 509–551–590 forms a suitable minor in NS&E. The laboratory course 551 has been offered since spring 1989. The lecture course 509, offered for the first time in 1993, covers nuclear physics without requiring quantum mechanics as a prerequisite. For NS&E majors, PANAM offers the opportunity to extend and develop new nuclear-analytical methods, for example, uses of cold neutrons and neutron-depth profiling with conversion electrons. They would normally follow the M.Eng. program in the first year, continue with advanced courses in the second year (including a full quantum-mechanical treatment of nuclear physics), and begin, as early as possible, independent projects as prerequisites to thesis research.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

Bachelor of Science Curriculum in Operations Research and Industrial Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. Excep-

Master of Engineering (OR&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design of new or improved man-machine systems, information systems, and control systems.

General admission and degree requirements are described in the introductory “Degree Programs” section. The M.Eng.(OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Industrial Engineering. We also welcome applications from Cornell undergraduates in many other majors, or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in statistics and in computer programming (Pascal or C). Students interested in the Manufacturing Option should obtain further information from the Center for Manufacturing Enterprise, 103 Frank H. T. Rhodes Hall, 607-255-7757. Students interested in the Financial Engineering Option should contact the Financial Engineering Option Office in 201 Frank H. T. Rhodes Hall, 607-255-9128. Information concerning industrial internships can be obtained from the Master of Engineering Program Office, 148 Olin Hall.

I. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Industrial Engineering:

THEORETICAL AND APPLIED MECHANICS

Undergraduate Study
The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science
A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Master of Engineering (Engineering Mechanics) Degree Program
Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T&RAM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

ENGINEERING COURSES
Courses offered in the College of Engineering are listed under the various departments and schools. Courses are identified with a standard abbreviation followed by a three-digit number.

- Introduction to Engineering
- Engineering Distribution
- Engineering General Interest
- Engineering Communications
- Agricultural and Biological Engineering
- Applied and Engineering Physics
- Chemical Engineering
- Civil and Environmental Engineering
- Computer Science
- Electrical Engineering
- Geological Sciences
- Materials Science and Engineering
- Mechanical and Aerospace Engineering
- Nuclear Science and Engineering
- Operations Research and Industrial Engineering
- Theoretical and Applied Mechanics

ENGINEERING COMMON COURSES
Courses in this category are of general interest to all students and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

- ENGRG 101 The Computer Age (also COM S 101)
- Summer. 3 credits. Not offered every year. Credit is granted for both COM S 100 and 101 only if 101 is taken first. An introduction to computer science and programming for students in nontechnical areas. The aims of the course are to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics may include the history of computation; microtechnology; the retrieval and transmission of information; scientific computing; computer graphics, art, and music; robotics; natural-language processing, and machine intelligence.

Students become acquainted with the notion of an algorithm by writing several programs in Pascal or Scheme and testing them on microcomputers. The amount of programming is about half that taught in COM S 100.

- ENGRG 102 Drawing and Engineering Design (also M&AE 102)
- Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional. Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Use of computer-aided drafting software is introduced in the final design project.

- ENGRG 150 Advising Seminar
- Fall. 0 credits. First-year students only. S-U grades only. Discussions with freshman faculty advisers to give students information about the various fields of engineering and related career opportunities. Topics may include recent science and engineering developments, applications of engineering principles, and a view of campus resources. Visits to campus academic and research facilities may be included.

- ENGRG 250 Technology in Western Society (also ELE E 260)
- Fall. 3 credits. Meets humanities distribution requirement. This course will investigate the history of technology in Western society from ancient Roman times to the present. Topics include the economic and social aspects of industrialization; the myth of heroic innovators like Morse, Edison, and Ford; the government's regulation of technology, the origins of mass production, and the spread of the automobile and microelectronics cultures in the United States.

- ENGRG 290 Engineering in Europe
- Spring. 2 credits. Open only to participants in the Semester in Europe Program. S-U grades only. A specially designed course for students in residence in Hamburg, Germany. Weekly seminars and writing assignments associated with approximately ten weekly field trips to engineering sites in and around Hamburg. A term paper is required. No unexcused absences.

- ENGRG 298 Inventing the Power and Information Society (also ELE E 298 and S&AS 292)
- Spring. 3 credits. Approved for humanities distribution, not as field electives. This course explores the history of electricity in society from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, and computers. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, and the social relations of this technology.

- ENGRG 323 Engineering Economics and Management (also CEE 323)
- Spring. 3 credits. Primarily for juniors and seniors. D. P. Loucks. Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to...
ENGRC 356 Women in Engineering Career Planning Seminar
Fall, spring. 1 credit. Limited to 25 students. S–U grades only. Covers aspects of transition to the engineering profession and related issues especially of interest to women. Topics include career and life planning, the job-search process, interviewing strategies, juggling career and family, graduate education, sexual harassment and sexism in the workplace, professionalism, and networking. Corporate professionals and Cornell faculty and staff participate in class discussions.

ENGRC 481 Entrepreneurship For Engineers
Fall. 3 credits. See MAE 461 for course description.

Engineering Communications Courses
Courses in this category, offered by the Engineering Communications Program, develop writing and oral presentation skills relevant to engineers.

ENGRC 233/433 Topics in Engineering Communications
TBA. 3 credits. Topics vary as the need and interest arise. Sample topics are: introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology and the law. Fulfills the college technical writing requirement.

ENGRC 234/434 Independent Study in Engineering Communications
TBA. Variable (1–3). Credit and course level (234 or 434) determined by the amount and intellectual level of the work. Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

ENGRC 301 Writing in Engineering
TBA. 1 credit. Prerequisite: Permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. This course can only be taken in conjunction with a "writing-intensive" engineering class. Some "writing-intensive" engineering classes may require students to enroll in the supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

ENGRC 350 Engineering Communications
Fall, spring; summer. 3 credits. Limited to 20 students per section. Emphasizes technical and professional writing; also includes oral and visual presentation. Communications in real-life engineering contexts are analyzed, with case studies and assignments modeled on professional situations. Students learn to adapt language and formats—letters, memoranda, instructions, definitions, proposals, reports—to audiences having different needs and levels of technical expertise. Students also consider the social and ethical implications of the communications they encounter and produce. Taught as a workshop, with ample time for discussion. The goal throughout is clear, well-organized, responsible, and forceful professional communication. Fulfills the college technical writing requirement. Lab fee will be charged to cover photocopying costs.

ENGRC 435 Communications for Engineering Managers
Fall, spring. 3 credits. Limited to 20 students per section. Guidance and practice in professional writing through a variety of assignments, including case write-ups on management issues. Emphasizes working effectively in teams (topics include listening skills, team roles, and respectful disagreement) and communicating with a variety of audiences, particularly technical and managerial audiences. The course is taught as a workshop and focuses on oral as well as written communication skills. Fulfills the college technical writing requirement. Lab fee will be charged to cover photocopying costs.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGRI 110 The Laser and its Applications in Science, Technology, and Medicine (also A&EP 110)
Fall, spring. 3 credits. The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGRI 111 Materials by Design (also MS&E 111)
Fall. 3 credits. E. P. Giannelis. Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves dissecting and analyzing various consumer products like a disposable camera or portable cassette player. Emphasis is placed on materials identification and their selection to perform an engineering function.

ENGRI 112 Introduction to Chemical Engineering (also CHEM E 112)
Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen. Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGRI 113 Environmental Systems Engineering (also CHEME 113)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students, who should take CEE 120 instead. C. A. Shoemaker. Introduction to analysis, management, and modeling of environmental systems. Discussion of physical, chemical, and biological processes affecting environmental quality. Use of computers to simulate environmental phenomena. Examples include management of water resources, ecosystems, solid waste management, and water quality in surface and ground waters.

ENGRI 114 An Introduction to Electrical Engineering Design
Fall. 3 credits. An introduction to electrical engineering and electronic circuit design. Students work in small groups on a series of electric circuit projects leading to the team design of a working fiber optic transmitter-receiver system. The laboratories and lectures introduce the concepts and principles of electronic circuits and focus upon circuits useful in the design project. Laboratory fee required.

ENGRI 115 Engineering Application of Operations Research (also ORRAIE 115)
Fall, spring. 3 credits. An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation). The situation in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.
ENGRI 116 Modern Structures (also CEE 1116)
Fall, spring. 3 credits. A. R. Ingraffea, G. G. Deierlein.
An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structural failures occur. Concepts are illustrated by a series of case studies of major structures such as spacecraft, skyscrapers, bridges, shell structures, and dams. The philosophy of engineering design and lessons learned from structural failures and earthquakes are discussed. A semester project involves the design and construction of a small balsa-wood bridge.

ENGRI 117 Introduction to Mechanical Engineering (also MAAE 117)
Fall or spring to be determined. 3 credits. Enrollment is limited to 60 students.
An introduction to topics of current interest in mechanical engineering. Specific topics vary from offering to offering. Students are urged to check in Upson 112 for details. In 1995, the course was "The Engine and the Atmosphere." This course discussed engines and their design including constraints imposed by the laws of thermodynamics, the combustion process, and the products of the exhaust. This led to a discussion of local and global environmental problems, including greenhouse warming. The dilemma of productivity versus environmental degradation and the engineer's role in this was also discussed. This offering was intended for students wishing to study mechanical engineering as well as environmental, chemical, and civil engineering.

ENGRI 118 Design Integration: A Portable CD Player (also MS&E 118 and T&M 118)
Spring. 3 credits.
This course examined the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGRI 120 Introduction to Biotechnology (also CHEM 120)
Fall. 3 credits. W. M. Saltzman.
Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

ENGRI 121 Fusion, Fusion, and Radiation (also NS&E 121)
Spring. 3 credits.
Lecture-laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's two research reactors; detection of nuclear radiation; activation analysis using gamma-ray spectros-

ENGRI 122 Earthquake! (also GEOL 122)
For description, see GEOL 122. L. Brown.

ENGRI 125 Chemistry of the Environment (also GEOL 125)
For description, see GEOL 125.

ENGRI 181 Engineering in Context (also Science and Technology Studies)
Fall. 3 credits. No prerequisites. Illustrated lectures; multimedia lab.
Survey of fundamental engineering principles designed to introduce engineering and other majors to the traditions and practices of the engineering profession and their effects on our culture. (Technological literacy for non-engineers.) Development of scientific and engineering-design principles in a variety of technological contexts. The relationship between science, technology, and engineering. Civil, mechanical, electrical, chemical, and other engineering project case studies.

ENGRI 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, CLASS 285, ENGL 285, MS&E 285, NS&E 285, PHYS 200)
Spring. 3 credits. 3 lectures. Does not meet liberal studies distribution requirements.
The interdepartmental course on application of techniques of physical sciences and engineering to cultural research. Archaeological artifacts or works of art are discussed with a focus on historical and technical aspects of their creation and on their analysis by modern methods to deduce geographical origins, to date and authenticate objects, etc.

Engineering Distribution Courses
Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or co-requisites.

ENGRI 201 Introduction to the Physics and Chemistry of the Earth (also GEOL 201)
Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112. L. M. Cathles.
Formation of the solar system: accretion and evolution of the earth. The rock cycle: radiogenic isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport. Weathering cycle: chemical cycles, CO₂ (weathering), rock cycle, controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

ENGRI 202 Mechanics of Solids (also T&M 202)
Fall, spring. 3 credits. Prerequisite: Physics 112, registration in Mathematics 293 or permission of instructor.
Principles of statics, force systems, and equilibrium; frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shearing force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

ENGRI 203 Dynamics (also T&M 203)
Fall, spring. 3 credits. Prerequisite: T&M 202, co-registration in Mathematics 294, or permission of instructor.
Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, moment of momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRI 210 Introduction to Electrical Systems (also ELE E 210)
Fall, spring. 3 credits. Corequisites: Mathematics 293 and Physics 213.
Fundamental circuit elements and laws, circuit analysis techniques, and operational amplifiers circuits. Response of linear systems, with an introduction to complex frequency and phasors, forced response, average power, transfer function, and the frequency spectrum.

ENGRI 211 Computers and Programming
For description, see COM S 211.

ENGRI 212 Structure and Interpretation of Computer Programs
For description, see COM S 212.

ENGRI 219 Mass and Energy Balances (also CHEM 219)
Fall. 3 credits. Co-requisite: physical or organic chemistry or permission of instructor. P. Clancy.
Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems.

ENGRI 221 Thermodynamics (also MAAE 221)
Fall, spring. 3 credits. Prerequisites: Mathematics 192 and Physics 112.
The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, multiphase pure substances, gaseous reactions. Heat-engine and heat-pump cycles, with an introduction to energy-conversion systems.

ENGRI 222 Introduction to Scientific Computation
For description, see COM S 222.

ENGRI 230 Introduction to Digital Systems (also ELE E 230)
Fall, spring. 4 credits. Prerequisite: COM S 100.
An introduction to basic principles and design techniques for digital systems such as computers and communications systems. Includes Boolean algebra, switching circuits, finite state machines, and system design methodology.

ENGRI 241 Engineering Computation (also CEE 241)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Co-requisite: MATH 294. W. D. Philpot.
This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, optimization counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail root of functions, simultaneous linear equations,
regression, interpolation, numerical differentiation, integration in one and two variables, and partial differential equations. The course and context of solution of partial differential equations are broached. Applications are drawn from different areas of engineering.

ENGRD 261 Introduction to Mechanical Properties of Materials (also MSE 261)
Fall. 3 credits. S. L. Sassa.
The relationship of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and dressing of materials to achieve high modulus, damping capacity, hardness, fracture strength, creep resistance, or fatigue resistance. Flaw-tolerant design methods using fracture mechanics.

ENGRD 262 Introduction to Electrical Properties of Materials (also ECE 262)
Fall. 3 credits. Prerequisite: co-registration in PHYS 213 or electricity and magnetism in high school physics. Not offered 1996–97; next offered 1997–98. M. O. Thompson.
Electrical and structural properties of semiconductors, the operation of p-n junctions and transistors, and the processing methods used to form modern integrated circuits. Electrical conduction in metal films, semiconductors, bipolar and field-effect transistors and light-emitting diodes. Diffusion, ion implantation, oxidation, metallization, and other process steps in fabricating semiconductor devices. Interplay between structural and electrical properties and their application to the design of semiconductor devices and integrated circuits.

ENGRD 264 Computerized Instrumentation Design (also A&EP 264)
Fall, spring. 5 credits. Prerequisites: Engr 100 or CEE 100, 1 lab. Fall: T. Cool, spring: J. Brock.
This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using an IBM-AT style computer (80486) running Windows. The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, non-linear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written communication skills in the context of science and engineering. A number of rhetorical principles will be presented that can produce clarity in communication without oversimplifying scientific issues. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics (also ORIE 270)
Fall, spring. 3 credits. Prerequisite: first-year calculus.
This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

AGRICULTURAL AND BIOLOGICAL ENGINEERING
Courses in agricultural and biological engineering will be found in the section listing the offerings of the College of Agriculture and Life Sciences.

APPLIED AND ENGINEERING PHYSICS
A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGR 110)
Fall, spring. 3 credits. This is a course in the Introduction to Engineering series. For description see Engineering Common Courses.

A&EP 264 Computer-Instrumentation Design (also ENGR 264)
Fall, spring. 3 credits. Prerequisites: Engr 100 or COM S 100.
For description see Engineering Common Courses.

Spring. 3 credits. Prerequisites: freshman and sophomore chemistry, physics, math. Introduction to biophysics for engineers and students interested in bioengineering.

A&EP 321 Mathematical Physics I
Fall, summer. 3 credits. Prerequisite: Math 294. Intended for upper-level undergraduates in the physical sciences. Review of vector analysis; complex variable theory, Cauchy-Kiemann conditions; complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables; texts. Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321. Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.
Partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions; integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant and covariant representations, group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Butkov.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Enrollment limited.
Prerequisites: Physics 214 or equivalent. E. Bodenschatz.
A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology and engineering. The students will also be introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: Physics 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor. Newton's mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatment, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thornton.)

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor. Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quantum mechanics, and magnetic circuit design. Emphasis is on developing proficiency with analytic and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor. Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis on physical concepts and developing ability to design and/or analyze microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or Physics 318; coregistration in A&EP 332 or equivalent and in A&EP 356 or Physics 326.
A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: Physics 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lab, 1 lab. Fall: E. Kirkland; spring: J. Alexander.
Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits:

A&EP 438 Computational Engineering Physics
Spring 3 credits. Prerequisites: COS 300, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in 361 permitted. Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot by solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics

A&EP 448 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&E E 559, and NS&E 484)
Spring 3 credits. Not offered every year. Prerequisites: Physics 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. For description see NS&E 484.

A&EP 490 Independent Study in Engineering Physics
Fall, spring. Credit to be arranged. Laboratory or theoretical work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details to be arranged with respective faculty member.

A&EP 506 Introduction to Plasma Physics (also ELE E 581)
For description, see ELE E 581.

A&EP 561 Microcharacterization
Fall 3 credits. Prerequisites: introductory three-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

A&EP 651 Nuclear Measurements Laboratory
Spring 4 credits. Prerequisite: A&EP 609 or equivalent. Primarily for graduate students in nuclear fields. A less-intensive related course, NS&E 551, is intended for students in non-nuclear fields in which nuclear methods are used. Offered on demand. Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experiments in radiation detection, attenuation, and measurement; activation analysis; neutron radiography; reactor physics. The TRIGA reactor and the Zero Power Reactor are used. At the level of Radiation Detection and Measurement, by Knoll.

A&EP 662 Micro/Nano-fabrication and Processing
Spring 3 credits. An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic materials, with emphasis on electronic and optical materials, micromechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.
CHEMICAL ENGINEERING

A&EP 681-689 Special Topics in Applied Physics
Topics, instructors, and credits to be announced each term. Typical topics include quantum superconducting devices, physics of submicron conductors, nonlinear fluctuators, biophysical processes, molecular fluorescence.

A&EP 711 Principles of Diffraction (also MS&E 610)
Spring. 4 credits. Offered alternate years. Introduction to diffraction phenomena as applied to solid-state problems. Scattering and absorption of neutrons, electrons, and X-ray beams, with particular emphasis on synchrotron radiation X-ray sources. Diffraction from two- and three-dimensional periodic lattices. Fourier representation of scattering centers and the effect of thermal vibrations. Diffraction from almost periodic structures, surface layers, gases, and amorphous materials. Survey of dynamical diffraction from perfect and imperfect lattices. Several laboratory experiments will be conducted.

A&EP 751/752 M ENG Project
Fall, spring. 6-12 credits to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics
Fall. 4 credits. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

CHEMICAL ENGINEERING

CHEM 112 Introduction to Chemical Engineering (also ENGR 112)
Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen. For description see Engineering Common Courses.

CHEM 120 Introduction to Biotechnology (also ENGR 120)
Fall. 3 credits. W. M. Saltzman. For description see Engineering Common Courses.

CHEM 219 Mass and Energy Balances (also ENGRD 219)
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. P. Clancy. For description see Engineering Common Courses.

CHEM 301 Nonresident Lectures
Spring. 1 credit. P. Clancy. Lecturers from industry and from selected departments of the university provide information to assist students in their postgraduate plans.

CHEM 313 Chemical Engineering Thermodynamics

CHEM 323 Fluid Mechanics
Fall. 3 credits. Prerequisites: CHEM 219 and engineering mathematics sequence. P. H. Steen. Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEM 324 Heat and Mass Transfer

CHEM 332 Analysis of Separation Processes
Spring. 4 credits. Prerequisites: CHEM 313 and 323. K. E. Gubbins. Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, absorption, membrane separations.

CHEM 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEM 313 and 323. D. L. Koch. A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. Staff. Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 462 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEM 432. Staff. A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 472 Process Control
Fall. 3 credits. Prerequisites: CHEM 324 and 390. W. L. Olbricht. Analysis of the dynamics of chemical processes and design of feedback and feedforward control systems. Laplace transform techniques; stability analysis; frequency-response analysis. An introduction to multivariable control.

CHEM 481 Biomedical Engineering
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent permission of instructor. W. M. Saltzman. Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological fluid dynamics, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEM 490 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEM 491 Undergraduate Teaching in Chemical Engineering
Fall, spring. 1 credit. Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEM 492 Chemical, Pharmaceutical, and Food Processing
Spring. Variable to 3 credits. Prerequisite: students or M.Eng. students with one term of college chemistry. C. Cohen, M. L. Shuler, and S. Mulvany. This course consists of three equal parts, each worth one credit. The chemical part is open to non-chemical engineers only and covers process fundamentals, design, and control of continuous large-scale chemical processes. Pharmaceutical processing covers fermentation, purification, and sterilization. Food processing emphasizes food preservation principles and technology.

CHEM 562 Managing Chemical Process Design
Fall. 1 or 2 credits. Prerequisite: CHEM 462. K. E. Ackley. Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHEM 564 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. P. Harrington. Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEM 565 Design Project
Fall, spring. 3 or 6 credits. Required for students in the M.Eng.(Chemical) program. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEM 566 Systematic Methods for Process Design
CHEME 590 Special Projects in Chemical Engineering
Fall, spring. Variable credit. Limited to graduate students. Non-thesis research or studies on special problems in chemical engineering.

CHEME 640 Polymers and Materials
Fall. 3 credits. F. Rodriguez. Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHEME 642 Polymeric Materials Laboratory
Spring. 2 or 3 credits. Prerequisite: CHEME 640. F. Rodriguez. Experiments in the formation, characterization, fabrication, and testing of polymers.

CHEME 643 Introduction to Bioprocess Engineering
Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler. A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEME 645 Advanced Concepts in Biological Engineering
Spring. 3 credits. Prerequisite: CHEME 643 or equivalent or permission of instructor. Not offered spring 1997. D. A. Hammer. Fundamentals of biochemical and biomedical engineering, with additional emphasis on cell and membrane biophysics. Topics include cell-surface receptor phenomena, protein diffusion, cell adhesion, membrane biophysics, cell motility and growth, mathematical immunology, virus binding and infection, enzyme catalysis, bioseparation, and genetically modified organisms.

CHEME 648 Polymers in Electronics and Related Areas
Spring. 3 credits. Prerequisite: CHEME 645 or equivalent or permission of instructor. Not offered spring 1997. P. Rodriguez. Applications of polymers as resists for microolithography, as insulators, and as conductors. Radiation effects, polymer synthesis, and surface characterization. Additional special topics may be covered.

CHEME 656 Separations Using Membranes or Porous Solids

CHEME 661 Air Pollution Control

CHEME 673 Adsorption and Reactions on Chemically Reactive Solids
Fall. 3 credits. Not offered 1996-97. R. P. Merrill. The physics and chemistry of reactions at solid surfaces are presented in molecular detail. The emphasis is on the use of modern spectroscopic techniques to determine the geometric structure, electronic properties, and reaction sequences on well-defined surfaces. Examples from the preparation of optoelectronic materials and thin films will be given to illustrate the concepts and principles presented.

CHEME 675 Synthetic Polymer Chemistry (also MS&E 671 and Chemistry 761)
Fall. 4 credits. Prerequisites: Chem 359-360 or equivalent or permission of instructor. MS&E 620 is recommended. For description see Chemistry 671.

CHEME 681 Dynamics of Colloidal Systems
Fall. 3 credits. Prerequisite: basic understanding of thermodynamics and fluid dynamics. Offered alternate years. Not offered fall 1996 and fall 1998; next offered fall 1997. A. Z. Panagiopoulos. Fundamental descriptions of colloidal systems under equilibrium and non-equilibrium conditions. Phase equilibria of surfactant systems, thermodynamics of micelle formation, forces between colloidal particles, electrokinetic phenomena, flocculation and aggregation, transport of surfactant in interfacial systems, stability of emulsions, and dynamics of thin films. Open to advanced undergraduates and graduate students from all fields.

CHEME 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEME 313 or equivalent. K. E. Gubbins. Postulate approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase diagrams, Monte Carlo methods, and theory of liquids.

CHEME 713 Chemical Kinetics and Dynamics

CHEME 721 Thermodynamics and Phase Change Heat Transfer (also M&A 652)
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. For description see M&A 652.

CHEME 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEME 323 and 324 or equivalent. D. L. Koch. Derivation of the equations of motion for Newtonian fluids. Unsteady flow, number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

CHEME 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHEME 731 or equivalent. P. H. Steen. Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEME 741 Selected Topics in Biochemical Engineering
Fall. 1 credit (may be repeated for credit). Prerequisite: CHEME 643 or permission of instructor. M. L. Shuler and W. M. Saltzman. Discussion of current topics and research in biochemical engineering for graduate students.

CHEME 745 Physical Polymer Science I

CHEME 751 Mathematical Methods of Chemical Engineering Analysis

CHEME 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEME 751 or equivalent. Offered alternate years. P. H. Steen. Elements of stability and bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

CHEME 772 Theory of Molecular Liquids
Spring. 3 credits. Prerequisite: CHEME 711 or equivalent. Theory of intermolecular forces, and equilibrium statistical mechanics for nonspherical molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation theory techniques. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.
CHEM 774  Atomistic Simulation of Materials  
Spring. 3 credits. Prerequisite: Competence in FORTRAN, PASCAL, or C. Prior knowledge of statistical mechanics helpful. Offered alternate years. A. Z. Panagiotopoulos. The statistical mechanical theory behind Monte-Carlo and Molecular-Dynamics computer-simulation techniques. Strong emphasis is placed on students writing their own MC and MD code. Calculation of distribution functions, thermodynamic, kinetic and structural properties. Introduction to the application of computer graphics to simulation. Interparticle forces and application of atomistic simulation of systems containing metals, semiconductors, and biological materials. Issues of code efficiency and vectorization.

CHEM 790  Seminar  
Fall, spring. 1 credit each term. General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

CHEM 792  Advanced Seminar in Thermodynamics  
Fall, spring. 1 credit. A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.

CHEM 890  Thesis Research  
Fall, spring. Variable credit. Thesis research for the M.S. degree in chemical engineering.

CHEM 990  Thesis Research  
Fall, spring. Variable credit. Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING  
General  
CEE 113  Environmental Systems Engineering (also ENGR 113)  
Fall. 3 credits. C. A. Shoemaker. For description see Engineering Common Courses.

CEE 116  Modern Structures (also ENGR 116)  
Fall, spring. 3 credits. A. R. Ingargiela, G. G. Deierlein. For description see Engineering Common Courses.

CEE 120  Readings on the Environment  
Spring. 1 credit. Staff. A reading course from an introductory environmental text. Topics include structure and dynamics of ecosystems, water habitats and communities, water resources, toxic-waste pollution of surface and groundwater, international water-pollution problems, energy resources, nuclear-waste disposal, hydroelectric power, environmental carcinogens. Not available to students receiving credit for ENGR 113 or Natural Resources 201.

CEE 241  Engineering Computation (also ENGR 244)  
Fall or spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. W. D. Philpot. For description see Engineering Common Courses.

CEE 304  Uncertainty Analysis in Engineering  
Fall. 4 credits. Prerequisite: first-year calculus. M. D. Grigorius. An introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. The course covers data presentation, probability theory, commonly used probability distributions, parameter estimation, probability plotting and normality tests, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, models of vehicle arrivals, and distributions describing wind speeds, floods, pollutant concentrations, and soil and material properties. Total quality management is employed.

CEE 309  Special Topics in Civil and Environmental Engineering  
Fall, spring. 1-6 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 400  Senior Honors Thesis  
Fall, spring. 1-6 credits. Staff. Available upon approval of the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401  Undergraduate Engineering Teaching in CEE  
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 501  Civil and Environmental Engineering Design Project I  
Fall. 3 credits. Required for students in the M.Eng. Staff. Design of major civil engineering project. Planning and preliminary design in fall term, final design in January intersession (CEE 502).

CEE 502  Civil and Environmental Engineering Design Project II  
Spring (work required during January intersession). 3 credits. Required for students in the M.Eng. (Civil) program. Prerequisite: CEE 501. Staff. A continuation of CEE 501.

CEE 503  Professional Practice in Engineering  
Spring. 3 credits. Required for and limited to students in the M.Eng. (Civil) program. Staff. Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interactions among the physical, social, economic, and ethical constraints on engineering design.

CEE 601  Water Resources and Environmental Engineering Seminar  
Fall. 1 credit. Presentation of topics of current interest.

Remote Sensing  
CEE 411  Remote Sensing: Environmental Applications (also SCAS 461)  
Spring. 3 credits. Prerequisite: permission of instructor. W. D. Philpot. A survey of how remote sensing and resource inventory methods are applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

CEE 610  Remote Sensing Fundamentals (also SCAS 660)  
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

CEE 619  Digital Image Processing  
Spring. 3 credits. Prequisite: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor. Not offered 1997-98; next offered 1998-99. W. D. Philpot. An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.

CEE 617  Project—Remote Sensing  
On demand. 1-6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 618  Special Topics—Remote Sensing  
On demand. 1-6 credits. W. D. Philpot. Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CEE 619  Seminar in Remote Sensing (also SCAS 662)  
Spring. 1 credit. E. J. De M. Grades only. Lectures on current developments in assessing earth resources or the environment. Each week a different topic on remote sensing or geographic information systems is presented by specialists from government, industry, Cornell, or other research or academic institutions.

CEE 710  Research—Remote Sensing  
On demand. 1-6 credits. W. D. Philpot. For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 810  Thesis—Remote Sensing  
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
Environmental and Public Systems

See also CEE 113, CEE 120, CEE 241, CEE 304, and CEE 597.

CEE 323 Engineering Economics and Management (also ENGRG 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Louchks. For description see Engineering Common Courses.

CEE 423 Environmental Quality Systems Analysis
Spring. 3 credits. Prerequisites: MATH 294 and systems (CEE 323). Intended for undergraduates who have not taken OR&IE 320 or ABEN 475. Most lectures concurrent with CEE 623. C. A. Shoemaker. Applications of optimization and simulation methods to the development of plans and the design and operation of facilities for managing environmental quality. Introduction to algorithms for nonlinear programming, linear programming, and sensitivity analysis. See description of CEE 625 for water quality applications and case studies.

CEE 528 Public Political Economy (also ECON 539)
Spring. 4 credits. R. E. Schuler. For description, see ECON 539.

CEE 529 Water and Environmental Resources Problems and Policies
Spring. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. D. J. Allee and L. B. Dworsky. Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

CEE 620 Water-Resources Systems I
Fall. 3 credits. Prerequisite: CEE 323 or equivalent. D. P. Louchks. Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 621 Water-Resources Systems II: Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor. Offered 1996–97 and 1998–99. Not offered 1997–98. J. R. Sodinger. Course examines statistical, time series, and stochastic optimization methods used to address water resources problems. Statistical issues include properties of moments and other statistical estimators, maximum likelihood, method of moments, and method of L-moments estimation; censored datasets and historical information, probability plotting, Bayesian inference and index flood methods; ARMA and Box-Jenkins models; and disaggregation and multivariate stochastic streamflow models. Course also addresses Monte Carlo methods, stochastic simulation of water resource systems, and stochastic reservoir-operation optimization models.

CEE 623 Environmental Quality Systems Analysis
Spring. 3 credits. Prerequisites: MATH 294 and optimization (ABEN 475, CEE 593, or OR&IE 320/520) and probability and statistics (ABEN 475 or OR&IE 270), or permission of instructor. C. A. Shoemaker. Applications of optimization, simulation methods, and uncertainty analysis to the design and operation of facilities for managing the quality of surface- and ground-water. Applications include location of wastewater, solid waste, and hazardous-waste facilities, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated aquifers. Optimization applications use linear programming, and integer, dynamic, and nonlinear programming.

CEE 628 Environmental and Water Resources Systems Analysis Seminar
Spring. 1 credit. Prerequisite: permission of instructor. Staff. Graduate students and faculty members give informal lectures on topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 722 Environmental and Water Resources Systems Research
On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff. Investigations of particular environmental or water resources systems problems.

CEE 729 Special Topics in Environmental or Water Resources Systems Analysis
On demand. 1–6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 820 Thesis—Environmental and Water Resource Systems
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Fluid Mechanics and Hydrology
See also CEE 241 and CEE 655.

CEE 331 Fluid Mechanics
Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). W. H. Brutsaert. Hydrodynamics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water-supply systems, canals, and other hydraulic schemes.

CEE 332 Hydraulic Engineering
Spring. 4 credits. Prerequisite: CEE 351. M. L. Weber-Shirk. Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

CEE 431 Geohydrology (also ABEN 471 also GEOI 445)

CEE 435 Coastal Engineering
Fall. 4 credits. Prerequisite: CEE 331. P. L. F. Liu. Introduction to wave water phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave theories to engineering design problems such as forces on coastal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.

CEE 630 Advanced Fluid Mechanics

CEE 631 Flow and Contaminant Transport Modeling in Groundwater
Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or equivalent. P. L. F. Liu. Potential flows and their calculation. Numerical methods include finite difference, finite elements, and boundary elements. Fundamental equations of saturated and unsaturated flow in porous media. Flow in fractured media. Numerical modeling of transport in porous media. Diffusion and advective dispersion in one, two, and three dimensions. Anisotropy. Additional terms for reactive substances. The course will include the use of computer programs.

CEE 632 Hydrology

CEE 633 Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert. Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells, drought flows, infiltration, groundwater recharge; land subsidence; seawater intrusion, miscible displacement; transient seepage in unsaturated materials.
CIVIL AND ENVIRONMENTAL ENGINEERING

[C E E 634 Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 1996–97 and 1998–99; offered 1997–98.
W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.]

[C E E 635 Small and Finite Amplitude Wave Waves
Review of linear and nonlinear theories of ocean waves. Discussion on the applicability of different wave theories to engineering problems.]

[C E E 636 Environmental Fluid Mechanics
Spring. 3 credits. Prerequisite: CEE 655 or permission of instructor. Offered alternate years. Not offered 1996–97 and 1998–99; offered 1997–98. Staff.

C E E 638 Hydraulics Seminar
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L.-F. Liu.
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

C E E 639 Special Topics in Hydraulics
On demand. 1–6 credits. Staff.
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

[C E E 732 Computational Hydraulics
Fall. 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Not offered 1995–96 and 1996–97; offered 1997–98.
Staff.

C E E 735 Research in Hydraulics
On demand. 1–6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

C E E 730 Thesis—Fluid Mechanics and Hydrology
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Geotechnical Engineering

C E E 341 Introduction to Geotechnical Engineering
Spring. 4 credits. Prerequisite: ENGRD 202. F. H. Kulhawy.

C E E 400 Foundation Engineering
Fall. 3 credits. Prerequisite: CEE 341.
F. H. Kulhawy.

C E E 461 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341.
T. D. O'Rourke.

C E E 463 Pavement Engineering (also ABEN 692)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: CEE 341 or CEE 362. J. H. Irwin.
For description see ABEN 692.

C E E 464 Environmental Applications of Geotechnical Engineering
Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke.
Principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfill designs. Design problems are based on real projects and involve students as practicing engineers.

C E E 468 Seminar in Geotechnical Engineering
Fall, spring. 1 credit. Staff.
Presentation and discussion of topics in current research and practice in geotechnical engineering.

C E E 640 Special Topics in Geotechnical Engineering
On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

C E E 740 Engineering Behavior of Soils
Fall. 4 credits. Prerequisite: CEE 341.
Detailed study of the physical-chemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Field-testing methods for determining properties based on laboratory testing. Laboratory sessions include in-situ field testing, simple index tests, and complete laboratory characterization of important soil properties.

C E E 741 Rock Engineering
Spring. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology.
Staff.

C E E 744 Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CEE 460.
A continuation of CEE 460, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

C E E 745 Soil Dynamics
Fall. 4 credits. Prerequisite: permission of instructor. H. E. Stewart.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions. Laboratory experiments and demonstrations using resonant column and a range of cyclic testing equipment.

C E E 746 Embankment Dam Engineering
Spring. 2 credits. Prerequisites: CEE 641 and 741, or permission of instructor.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

C E E 749 Research in Geotechnical Engineering
On demand. 1–6 credits. Staff.
For the student who wants to pursue a particular geotechnical topic in considerable depth.

C E E 840 Thesis—Geotechnical Engineering
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental Engineering

CEE 351 Environmental Quality Engineering
Spring; usually offered in summer for Engineering Co-op Program. 3 credits.
L. W. Lion.

CEE 352 Water Supply Engineering
Fall. 3 credits. Prerequisites: ENGRD 219, CHEM 253, BIOMI 290 and CEE 351.
R. I. Dick.

CEE 453 Laboratory Research in Environmental Engineering
Fall, spring. 3 credits. Prerequisites: CHEM 253, BIOMI 290, CEE 351 or permission of instructor. Enrollment limited to 12.
M. L. Weber-Shirk.
Laboratory investigations reflecting faculty research on current environmental problems. Laboratory exercises will change from year to year; possible topics include: Acid rain/lake chemistry; contaminated soil-site assessment, risk assessment, and remediation; packed tower air stripping treatment of contaminated groundwater; pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills.

CEE 651 Microbiology for Environmental Engineering
Fall. 2 credits. Prerequisite: one semester of college chemistry. J. M. Gossett.
A self-paced autotutorial introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Course work consists of assigned readings, study questions, and brief exams.

CEE 652 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654 Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 653 or Chemistry 287-288. J. J. Bisogni.
Concepts of chemical equilibrium applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, pH-diagram adsorption phenomena, humic acid chemistry, and chemical equilibrium computational techniques. n-depth coverage of topics covered in CEE 453.

CEE 655 Pollutant Transport and Transformation in the Environment
Fall. 3 credits. Prerequisite: CEE 331.
J. J. Bisogni.
Introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment.

CEE 658 Sludge Treatment, Utilization, and Disposal
Spring. 3 credits. Prerequisite: CEE 352 or permission of instructor. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial wastewater and pollution control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

CEE 659 Environmental Quality Engineering Seminar
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff.
Presentation and discussion of current research and design projects in environmental engineering.

CEE 750 Research in Environmental Engineering
On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CEE 755 Environmental Engineering Processes I
Fall. 3 credits. Prerequisite: Previous or concurrent enrollment in CEE 653 or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

CEE 756 Environmental Engineering Processes II
Spring. 3 credits. Prerequisites: CEE 651 and 755, or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment processes.

CEE 757 Environmental Engineering Processes Laboratory I
Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755.
J. J. Bisogni.
Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption, filtration, ion exchange, gas transfer, remediation, characterization of reactor mixing regimes, coagulation.

CEE 758 Environmental Engineering Processes Laboratory II
Spring. 2 credits. Prerequisite: CEE 651 and concurrent enrollment in CEE 756.
J. M. Gossett.
Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies, enumeration of bacteria.

CEE 759 Special Topics in Environmental Engineering
On demand. 1-6 credits. Staff.
Supervised study in special topics not covered in formal courses.

CEE 850 Thesis—Environmental Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Transportation

CEE 361 Introduction to Transportation Engineering
Spring; usually offered in summer for Engineering Co-op Program. 3 credits.
A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supply-demand interactions, system planning, design, and management; traffic flow and control; intersection and network analysis. Institutional and energy issues; environmental impacts.

CEE 362 Highway Engineering (also ABEN 491)
Fall. 3 credits. Prerequisites: Fluid mechanics (may be taken concurrently) and junior standing in engineering.
L. H. Irwin.
For description, see ABEN 491.

CEE 463 Transportation and Information Technology
Fall. 3 credits. Prerequisite: CEE 361 or permission of the instructor. L. K. Nozick.
Focuses on shift from building new infrastructure to improving the utilization of current facilities. Reviews major legislation that solidifies this shift and examines the role of computer and telecommunications technology. Technologies to be considered include: tags and readers, weigh-in-motion, cellular communication technology, the global positioning system, on-board navigation systems, databases, and distributed databases.
Advanced subject matter not covered in depth
structural systems for buildings and bridges.

Discussion of...labatory experiments.

Role of material properties in structural
and prestressed concrete. Fatigue-crack
mixed-mode fracture mechanics.

Role of material properties in structural
behavior and design. Role and limitations of analysis in
design.

Design of reinforced concrete and prestressed concrete structures. Design
project.

Behavior and design of steel members,
connections, and structures. Discussion of structural systems for buildings and bridges.
CEE 776  Advanced Design of Metal Structures  
Fall. 3 credits. Prerequisite: CEE 374 or equivalent. G. G. Deierlein. Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.

CEE 777  Advanced Behavior of Metal Structures  

CEE 779  Structural Dynamics and Earthquake Engineering  
Fall. 3 credits. M. D. Grigoriu. Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 780  Advanced Concrete Material Science  

CEE 783  Civil and Environmental Engineering Materials Project  
On demand. 1-3 credits. K. C. Hover. Individual projects or reading and study assignments involving engineering materials.

CEE 785  Research in Structural Engineering  
On demand. 1-6 credits. Staff. Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 786  Special Topics in Structural Engineering  
On demand. 1-6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 880  Thesis—Structural Engineering  
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Engineering Management  
See also CEE 323 and CEE 463.

CEE 590  Engineering Management Practice  
Fall. 3 credits. Prerequisite: permission of instructor. M. A. Turnquist and F. J. Wayno. An introduction to the work and skills of management, especially for the management of projects. Planning, organizing, communicating, scheduling, controlling, and correcting will be covered in combination of lectures, readings, outside assignments, and in-class role-playing exercises.

CEE 591  Engineering Management Project  
Fall. 3 credits. Prerequisite: permission of instructor. Staff. An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592  Engineering Management Project  
Spring. 3 credits. Prerequisite: permission of instructor. Staff. A continuation of CEE 591.

CEE 593  Engineering Management Methods I: Data, Information, and Models  
Fall. 3 credits. Prerequisites: OR&IE 320 and OR&IE 270 or CEE 304 or equivalent. L. K. Nozick. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project scheduling, quality control, forecasting, and resource allocation.

CEE 594  Engineering Management Methods II: Managing Uncertain Systems  
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. M. A. Turnquist. Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration and queuing. Simulation as a tool for analyzing uncertain systems. Projects and case studies to illustrate application of the methods.

CEE 595  Construction Planning and Operations  
Fall. 3 credits. Prerequisite: permission of instructor. K. C. Hover. A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 597  Risk Analysis and Management  
Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 170 or equivalent. J. R. Stedinger. Course develops a working knowledge of risk terminology and reliability engineering, analytic tools used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the U.S., transportation risks, transportation of hazardous materials, waste incineration, air pollution modeling, public health risks such as AIDS, regulatory policy, risk communication, environmental risk issues in the media, and risk management.

CEE 692  Special Topics in Engineering Management  
On demand. 1-6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 694  Research in Engineering Management  
On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

COM S 099  Fundamental Programming Concepts  
Fall. 2 credits. No prerequisites. S-U grades only.

This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Students who do not intend to take COM S 100 but want some introduction to computers and programming should take COM S 101 instead. Students cannot receive credit for both COM S 101 and COM S 099. Basic programming concepts and problem analysis are studied. The programming language used is Pascal. Students with previous programming experience should not take this course.

COM S 100  Introduction to Computer Programming  
Fall, spring, summer. 4 credits. Students who plan to take COM S 101 and also 100 must take 101 first.

An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is C. The course does not presume previous programming experience. Programming assignments are tested and run on interactive, stand-alone microcomputers. During some semesters, two versions of COM S 100 are available as described below.

COM S 100a  Introduction to Computer Programming  
Standard version of COM S 100. No college-level mathematics is assumed. Register for COM S 100.

COM S 100b  Introduction to Computer Programming  
Prerequisite: MATH 111, 191 or equivalent. Offered fall only. Alternative version of COM S 100, emphasizing examples and applications involving continuous mathematics, including trigonometry and calculus. Register for COM S 100. COM S 100b is not always available at all COM S 100 lecture hours.
COM S 101 The Computer Age (also ENGRG 101)
Summer. 3 credits. Credit is granted for both COM S 100 and 101 only if 101 is taken first.
An introduction to computer science and programming for students in nontechnical areas. The aim of the course is to acquaint the student with the major ideas in computer science and to develop an appreciation of algorithmic thinking. Topics may include the history of computation; microtechnology; the retrieval and sharing of information; scientific computing; computer graphics, art, and music; robotics; natural-language processing, and machine intelligence. Students become acquainted with the concept of an algorithm by writing several programs in Pascal or Scheme and testing them on microcomputers. The amount of programming is about half that taught in COM S 100.

COM S 130 Creating Web Documents
Spring. 3 credits.
Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students with little or no computer background to tools and techniques for creating interactive documents. Topics covered will include HTML authoring, scripting languages, interaction techniques, data mining, and incorporating sound, video, and images in documents.

COM S 211 Computers and Programming (also ENGRG 211)
Fall, spring, summer. 3 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and analysis of algorithms. C++ is the principal programming language.

COM S 212 Structure and Interpretation of Computer Programs (also ENGRG 212)
Fall, spring. 4 credits. Credit will not be granted for both COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. Programs are written in Scheme or a related dialect.

COM S 212 emphasizes a varied collection of advanced programming concepts and techniques available in a modern functional programming language. In contrast, COM S 211 focuses on perfecting programming skills in a conventional imperative programming language. Corrective transfers between COM S 211 and 212 (in either direction) are encouraged during the first few weeks of instruction.

COM S 214 A Taste of UNIX and C
Fall, spring. 1-2 credits. Prerequisite: COM S 211 or equivalent programming experience. S-U grades only.
A brief introduction to the UNIX operating system and the C programming language. Recommended for students who intend to pursue an advanced major. Taught in the first four to eight weeks of the semester. The 2-credit version involves an implementation project.

COM S 222 Introduction to Scientific Computation (also ENGRG 222)
Spring. 3 credits. Prerequisites: COM S 100 and pre/corequisite of MATH 221 or MATH 223.
An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The Matlab computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation and high-performance Fortran.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Prerequisite: COM S 411 or 212 or permission of instructor. Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics; covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs.

COM S 314 Introduction to Digital Systems and Computer Organization
Fall, spring, summer. 4 credits. Prerequisite: COM S 211, 212, or equivalent. Introduction to computer organization. Topics include representation of information, machine-assembly languages, processor organization, interrupts and I/O, memory hierarchies, operand selection, input-output circuits, data path and control unit design, RTL, and microprogramming.

COM S 381 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.
An introduction to modern theory of computing: automata theory, formal languages, and effective computability.

COM S 400 The Science of Programming
Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; semester to be announced.
The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types, introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

COM S 401 Programming Languages and Software Engineering
Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language.
An introduction to the programming languages, tools, and methods used in modern software development. Programming methodologies: modularity, data abstraction, object-oriented programming. Programming tools, software libraries, and interface definition languages. General techniques will be implemented with programming experience.

COM S 410 Data Structures
Fall, spring, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.
Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisite: COM S 410 or permission of instructor. Not offered every year; semester to be announced.
The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.

COM S 412 Introduction to Compilers and Translators
Spring. 3 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 413. Not offered every year; next offered spring 1997.
Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol-table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

COM S 413 Practicum in Compilers and Translators
A compiler implementation project related to COMS 412.

COM S 414 Systems Programming and Operating Systems
Fall. 3 credits. Prerequisite: COM S 314 or permission of instructor.
An introduction to the logical design of computer operating systems, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.
COM S 415 Practicum in Operating Systems
Fall. 2 credits. Prerequisite: COM S 410. Corequisite: COM S 414. The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring. 3 credits. Prerequisite: COM S 211 or 212. An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

COM S 418 Practicum in Computer Graphics (also ARCH 375)
Spring. 2 credits. Enrollment limited. Permission of instructor. Prerequisite: COM S 211 or 212. Recommended: COM S 417. Programming assignments dealing with interactive computer graphics and visualization of scientific data.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: Mathematics 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation.

COM S 422 Parallel Computing for Scientific Problems
Spring. 4 credits. Enrollment limited. Permission of instructor. Prerequisites: Math 294, COM S 222 or COM S 421, knowledge of C and FORTRAN. Not offered every year; next offered 1998. Parallel algorithms and programming environments for important scientific problems, such as fluid flow, systems of particles, and large-scale optimization. This course will involve algorithm development on some of the world's fastest computers, including a Connection Machine and a hypercube.

COM S 432 Introduction to Database Systems

COM S 433 Practicum in Database Systems
Spring. 2 credits. Corequisite: COM S 452. Issues related to the design and implementation of database-management systems will be addressed. Students will implement a simplified relational database system, including a file-access method and query-processing algorithms.

COM S 444 Distributed Systems and Algorithms
Fall. 4 credits. Corequisite: COM S 414 or permission of instructor. Not offered every year; next semester to be announced. The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies and paradigms necessary for understanding and designing distributed applications, with an emphasis on fault-tolerant computing. Theoretical concepts will be complemented with practical examples of their implementation in current distributed systems.

COM S 462 Robotics and Machine Vision
Spring. 3 credits. Prerequisite: Permission of instructor, COM S 410, and COM S 381. Co-requisite: COM S 463. Not offered every year, semester to be announced. Introduction to the science of robotics and machine vision using a combination of programming techniques, applied mathematics, algorithms, and robot labs. Topics include: robot vision, hand-eye systems, feature detection and object recognition, motion planning, shape reconstruction, compliant motion and assembly, model-based planning and recognition, uncertainty and error, active sensing, and manipulation.

COM S 463 Robotics and Machine Vision Lab
Spring. 2 credits. Prerequisite: Permission of instructor, COM S 410, and COM S 381. Co-requisite: COM S 462. Not offered every year; semester to be announced. Use physical robots (vision systems, hand-eye systems, and mobile robots) in the Computer Science Robotics and Vision Teaching Laboratory. Students should be comfortable both with mathematical concepts and programming, know LISP or Scheme, have a master of calculus and linear algebra, a strong background in algorithms, and an ability to work independently.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: COM S 107 or COM S 212, COM S 280 and COM S 410. Open to juniors, seniors, and graduate students. 3 lecs. A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, search, problem solving, natural-language processing, vision, robotics, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Prerequisite: COM S 107 or COM S 212, COM S 280 and COM S 410. Corequisite: COM S 472. Project portion of COM S 472. Topics include Common LISP programming, representation systems, deductive retrieval, databases and frame languages, and truth-maintenance-system implementations.

COM S 481 Introduction to Theory of Computation
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 481 and COM S 381 (in either direction) are encouraged during the first few weeks of instruction. A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: COM S 410 and either 381 or 481, or permission of instructor. Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 486 Applied Logic (also Mathematics 486)
Fall or spring. 4 credits. Prerequisites: Mathematics 222 or 294, COM S 100, and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness of first-order logic. Herbrand Universes and unification. Rewrite rules and equational logic. Knuth-Bendix method and the congruence-closure algorithm. Calculus reduction. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490 Independent Reading and Research
Fall, spring. 1–4 credits. Independent reading and research for undergraduates.

COM S 501 Programming Languages and Software Engineering
Fall. 3 credits. Prerequisites: Math 222 or 294, COM S 100, and knowledge of the C programming language. An introduction to the programming languages, tools, and methods used in modern software development. Programming methodologies: modularity, data abstraction, object-oriented programming. Programming tools, software libraries, and interface definition languages. General techniques will be complemented with programming experience.

COM S 511 Modern Programming Languages
Fall. 4 credits. Prerequisites: COM S 410 and a project course or permission of instructor. Not offered every year; semester to be announced. Current trends in programming languages, with emphasis on programming methodologies supported by languages. Topics will include object-oriented programming, modularity and data abstraction, functional and declarative programming, concurrency, logic programming, and programming language design. There will be programming exercises in several new languages.

COM S 514 Practical in Distributed Systems
Fall or spring. 3 credits. Prerequisites: COM S 414 or permission of instructor. Not offered every year; next offered spring 1997. Practical issues in designing and implementing distributed software. Topics include local and
wide-area network protocols, replicated data, dynamic reconfiguration, monitoring for and reacting to failures or recoveries, distributed computation, synchronization, and techniques for expressing coarse-grained parallelism at the application level.

**COM S 515 Practicum in Distributed Systems**
Fall or spring. 1–2 credits. Co-requisite: COM S 514. Not offered every year; next offered spring 1997.

The practical aspects of distributed systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year, at the discretion of the instructor.

**COM S 516 High-performance Computer Architecture**
Spring. 4 credits. Prerequisite: COM S 410, and COM S 514 or 414 highly recommended.

Introduces techniques used in high-performance computer architecture. Covers pipelining of instruction execution to superscalar, superpipelined, and speculative architectures; memory system design, including caches, operating system support in the form of naming and protection schemes; introduction to parallel architectures.

**[COM S 522 Parallel Computing for Scientific Problems**
Not offered every year; next offered 1998. For description, see COM S 422.

**COM S 562 Robotics and Machine Vision**
Spring. 3 credits. Prerequisites: permission of instructor, COM S 410, and COM S 381/481. Co-requisite: COM S 563. Not offered every year; semester to be announced.

For description, see COM S 462.

**COM S 563 Robotics and Machine Vision Lab**
Spring. 2 credits. Prerequisites: permission of instructor, and COM S 381/481. Co-requisite: COM S 562. Not offered every year; semester to be announced.

For description, see COM S 463.

**COM S 572 Introduction to Automated Reasoning**
Spring. 3 credits. This course teaches the use of a modern theorem proving system such as Nuprl or PVS or HOL. It covers the underlying logic as well as system operation and style of use. Assignments and projects involve the use of these systems on typical problems in software or hardware engineering and on the issues arising in creating a database of formalized mathematics.

**COM S 601 System Concepts**
Spring. 3 credits. Prerequisites: Open to students enrolled in the COM S Ph.D. program. Not offered every year; next offered spring 1997.

This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

**COM S 611 Advanced Programming Languages**
A study of programming paradigms: functional, imperative, concurrent and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented programming constructs. Program transformations, programming logic, and applications to programming methodology.

**COM S 612 Compiler Design for High-Performance Architectures**
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor. Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, data flow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multiprocessors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

**COM S 613 Concurrent Programming**
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year; semester to be announced.

Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

**COM S 614 Advanced Systems**
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication mechanisms, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

**COM S 615 Theory of Concurrent Systems**
Spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. Not offered every year; semester to be announced.

Modeling, specification, and verification of concurrent systems. Topics in modeling will include interleaving vs. partial-order semantics, and linear time vs. branching time. Among the specification methods discussed are temporal logic, automata, process algebra, and Petri nets. Verification methods include proof calculus, model checking, and refinement mappings. Advanced topics will include open systems and real-time.

**COM S 617 Frontiers of Parallel Computer Systems**
Fall. 4 credits. Prerequisites: COM S 314 or 516 required; COM S 411, 412, or 414. Not offered every year; semester to be announced.

Focus on the architecture, compiler, and operating system aspects required to support features taken for granted in sequential computing, such as portable parallel programs, powerful debuggers, multi-user machine access, virtual memory, and fast I/O.

**COM S 618 Topics in the Theory of Distributed Systems**
Fall. 4 credits. Prerequisites: COM S 444 or COM S 614 or permission of instructor. Not offered every year; semester to be announced.

This course focuses on research in distributed systems and algorithms. It covers the fundamental problems and presents some of the latest results and open questions in both message-passing and shared-memory systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

**COM S 621 Matrix Computations**
Spring. 4 credits. Prerequisite: COM S 411. Offered in odd-numbered years. Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties; quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

**COM S 622 Numerical Optimization and Nonlinear Algebraic Equations**
Spring. 4 credits. Prerequisite: COM S 421. Offered in odd-numbered years. Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties; quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

**COM S 624 Numerical Solution of Differential Equations**
Spring. 4 credits. Previous exposure to numerical analysis, mathematical analysis including Fourier methods, and differential equations. Offered in even-numbered years.

Finite difference and spectral methods for the solution of differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, the treatment of boundary conditions, and multigrid methods. This course combines theory and programming (in Matlab), emphasizing fundamental principles more than applications.

**COM S 631 Multimedia Systems**
Fall. 4 credits. Prerequisites: COM S 414 or permission of instructor.

Hardware and software issues involved in computer manipulation of audio, video, and images. Topics include media capture, representation, compression, editing, processing, storage, and transportation. Special emphasis on the processing of digital video, including algorithms for special effects and automatic extraction of content, and applications of parallel architectures to video processing.

**COM S 661 Robotics**
Fall. 4 credits. Prerequisites: COM S 482 and permission of instructor. Not offered every year; semester to be announced.

State-of-the-art in theoretical and experimental robotics, with an emphasis on robot-motion planning. Topics include: Task-level robot planning, collision-free path planning, grasp
synthesis, modeling and propagating uncertainty, planning compliant motions for perception assembly, geometrical planning theories, motion planning with dynamics (and dynamic constraints), computational complexity of robot-motion planning, computational theories of friction, impact, and the physics of manipulation, and collision detection and recovery in robotics.

**COM S 662 Robotics Laboratory**
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered every year; semester to be announced.
Introduction to the use of equipment and techniques in a modern robotics laboratory. Includes robot programming, force sensing, compliant motion, and mechanical assembly.

**COM S 664 Machine Vision**
Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and Math 221 or equivalent.
An introduction to computer vision. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

**COM S 674 Natural Language Processing**
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year; semester to be announced.
This course presents an introduction to natural language understanding, a subfield of artificial intelligence whose primary concern is the computational study of language use. The course will cover all aspects of natural language processing including semantic interpretation, syntactic analysis, discourse processing, text summarization, natural language generation, language acquisition, knowledge representation, memory models, and statistical methods of ambiguity resolution. The course emphasizes computational modeling and the realization of theories of language processing in computer programs.

**COM S 676 Reasoning about Knowledge**
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered every year; next offered fall 1996.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, and modeling resource-bounded reasoning.

**COM S 677 Reasoning about Uncertainty**
Spring. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Not offered every year; semester to be announced.
Examines formal reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, and probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief.

**COM S 681 Analysis of Algorithms**
Fall. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor. Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

**COM S 682 Theory of Computing**
Spring. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor. Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

**COM S 684 Introduction to Symbolic Computation**
Spring. 4 credits. Prerequisites: COM S 381 or 481, or permission of instructor. Not offered every year; semester to be announced.
Introduction to the algorithms used for algebraic problems in symbolic computing and their mathematical and complexity theoretic foundations. Topics include simplification of, and arithmetic operations with, continued fractions, polynomials, rational functions and elements of algebraic extensions, polynomial factorization, and techniques for questions in algebraic geometry. Related topics may also be included.

**COM S 685 Computational Geometry**
Fall. 4 credits. Prerequisite: COM S 681 or permission of instructor. Not offered every year; semester to be announced.
The study of algorithms for geometric problems. Topics include: convex hulls, arrangements of lines, planes and hyperplanes, intersections, problems, triangulations, proximity (Voroni diagrams and Delaunay triangulations), geometric searching, randomized algorithms, parallel algorithms, and geometric optimization.

**COM S 709 Computer Science Colloquium**
Fall, spring. 1 credit. S-U grades only.
For staff, visitors, and graduate students interested in computer science. A weekly meeting for the discussion and study of important topics in the field.

**COM S 713 Seminar in Systems and Methodology**
Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 600, 611, 613, 615, 671, a logic course, or permission of instructor. Not offered every year; semester to be announced.
Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalism.

**COM S 715 Seminar in Programming Refinement Logics**
Fall, spring. 4 credits. Prerequisite: permission of instructor.
Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

**COM S 717 Topics in Parallel Architectures**
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester to be announced.
Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, modeling systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

**COM S 718 Topics in Computer Graphics**
Fall or spring. 4 credits. Prerequisite: COM S 417 or permission of instructor. Not offered every year; semester to be announced.
Covers advanced topics in computer graphics and applications of computer graphics to scientific computation.

**COM S 719 Seminar in Programming Languages**
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

**COM S 722 Topics in Numerical Analysis**
Fall or spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester to be announced.
Topics are chosen at instructor's discretion.

**COM S 729 Seminar in Numerical Analysis/ACRI**
Fall, spring. 1-4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.

**COM S 754 Seminar in Work-in-Progress Distributed Systems**
Fall or spring. 4 credits. Prerequisites: COM S 611 or permission of instructor. S-U grades only.

**COM S 755 Seminar in Work-in-Progress Distributed Systems**
Fall or spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

**COM S 775 Seminar in Natural Language Understanding**
Fall, spring. 4 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

**COM S 781 Dynamic Manipulation and Scientific Computation**
Spring. 4 credits. Prerequisites: COM S 462 or 661, a strong background in robotics and algorithms (e.g., COM S 481) and permission of the instructor. Not offered every year; semester to be announced.
Most work in dynamic manipulation, an important new area in robotics, uses computer-controlled devices, and yet has been non-computational in flavor. This course surveys the field and attempts to apply methods from numerical and symbolic computation to cast the field into a precise framework and place it on a firm algorithmic footing. Required readings include papers by a variety of researchers.

**COM S 782 Robot Café**
Spring. 4 credits. Prerequisite: COM S 661. Not offered every year; semester to be announced.
Advanced seminar on varying topics.

**COM S 773/774 Proseminar in Cognitive Studies I & II**
(also Cognitive Studies, Philosophy, Linguistics, and Psychology 773/774) Fall and spring. 2 credits.
This is a year-long lecture-and-discussion course that is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its presentation, acquisition, and use. Topics may include the psychology of perception and cognition; the philosophy of mind, language, and knowledge; the phonology, syntax, and semantics of natural language; computational approaches to natural language processing, vision, and reasoning; parallel distributed processing; and neuropsychology.

**COM S 775 Seminar in Natural Language Understanding**
Fall, spring. 4 credits.
Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

**COM S 784 Seminar in Computational Algebra**
Fall, spring. 4 credits. Not offered every year; semester to be announced. Informal weekly seminar in which current topics in computational algebra and symbolic mathematics are discussed.

**COM S 789 Seminar in Theory of Algorithms and Computing**
Fall, spring. 2–4 credits. Prerequisite: permission of instructor. S-U grades only.

**COM S 790 Special Investigations in Computer Science**
Fall, spring. Prerequisite: permission of a computer science adviser. Letter grade only.
Independent research or Master of Engineering project.

**COM S 890 Special Investigations in Computer Science**
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only.
Master of Science degree research.

**COM S 990 Special Investigations in Computer Science**
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only.
Doctoral research.

**ELECTRICAL ENGINEERING**

**ELE E 210 Introduction to Electrical Systems (also ENGRD 210)**
Fall, spring. 3 credits. Corequisites: Mathematics 293 and Physics 213. For description, see Engineering Common Courses.

**ELE E 215 Electrical Engineering Laboratory I**
Spring. 3 credits. Co-requisite: ENGR 210. Letter grade only.
Basic electric and electronic instrumentation. Measurements and design involving circuits with both active and passive elements. Characterization of semiconductor devices. Introduction of the personal computer as a laboratory aid. Technical report writing and communication skills.

**ELE E 230 Introduction to Digital Systems (also ENGRD 230)**
Fall, spring. 4 credits. Prerequisite: COM S 53.
For description, see Engineering Common Courses.

**ELE E 250 Technology in Western Society (also ENGRG 250 and S&TS 250)**
Fall. 3 credits. Approved for humanities distribution.
For description, see Engineering Common Courses.

**ELE E 298 Inventing the Power and Information Society (also ENGRG 298)**
Spring. 3 credits. Approved for humanities distribution.
For description, see Engineering Common Courses.

**ELE E 301 Electrical Signals and Systems I**
Fall. 4 credits. Prerequisites: a grade of at least C+ in Engr 210 and C in Mathematics 293 and 294.
Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and z transforms; convolution, FFTs and DFTs; applications to modulation, filtering, and sampling.

**ELE E 302 Introduction to Digital Signal Processing**
Spring. 4 credits. Prerequisite: ELE E 301. The use of digital technology to store, change, and create sounds and pictures, digital signal processing (DSP), is one of the most significant technological developments in the last half-century. This course presents the mathematical concepts necessary to develop a clear and intuitive understanding of the key concepts in DSP. These include sampling, quantization, Fourier analysis, and digital filtering.

**ELE E 303 Electromagnetic Fields and Waves**
Fall. 4 credits. Prerequisites: grades of C or better in Physics 213, 214, and Mathematics 294.
Electrostatics, magnetostatics, quasistatics; electromagnetic energy and force; Maxwell's equations in integral and differential form; Poynting's theorem; wave equation; plane electromagnetic waves, phase and group velocities, dispersive media; wave reflection and transmission; dielectric and conduction; dielectric and conducting interfaces; guided waves on finite-transmission lines; transient pulse propagation.

**ELE E 304 Electromagnetic Fields and Applications**
Spring. 4 credits. Prerequisite: ELE E 303. Theory of electromagnetic fields and waves as a continuation of ELE E 303. Recommended for students interested in wireless communication, high data rate electronics, space based communications systems and fiber optics. Review of Maxwell's equations, boundary conditions, vector and scalar potentials, electromagnetic waves, and the wave equation. Applications include transmission lines, waveguides, and fiber optic guides. Cavities, radiation from dipoles and arrays of dipoles, and other transmitting-receiving systems.

**ELE E 306 Fundamentals of Quantum and Solid-State Electronics**
Spring. 4 credits. Prerequisites: Physics 214 and Mathematics 294.
Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

**ELE E 308 Fundamentals of Computer Engineering**
Spring. 4 credits. Prerequisite: ELE E 230 and CS 211.
This course provides a fundamental understanding of computer systems, including their integration into embedded systems. Topics covered include assembly language programming, machine code generated by compilers, high-level language data structures, computer organization, CISC and RISC computer architectures, floating point arithmetic, I/O, and memory hierarchy.

**ELE E 310 Introduction to Probability and Random Signals**
Spring. 4 credits. Prerequisite: Mathematics 294. This course may be used in place of Engr 270 to help satisfy the engineering distribution requirement. It can then also meet a field breadth requirement if 3 additional credits of field approved or out-of-field elective are taken.
Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions; nonlinear transformations of data, expectation, correlation; and the central limit theorem.

**ELE E 319 Electronic Circuit Design**
Fall. 4 credits. Prerequisites ELE E 210 and ELE E 215. Design of electronic circuits for computers, signal processing, communication, microelectronics, optoelectronics, measurements and control, analog, digital, and mixed signals. Design of building blocks and design with building blocks. Methodology based on estimation, hand calculation, and circuit simulation. PC based on data acquisition, analysis and simulation. Weekly laboratory sessions.

**ELE E 319 Global Positioning System Theory and Design**
Spring. 4 credits. Prerequisites: ELE E 301 and 303 or permission of the instructor. 3 design credits.
A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

**ELE E 360 Ethical Issues in Engineering (also SATS 360)**
Spring. 3 credits. A social science elective for engineering students. For description, see Engineering Common Courses.

**ELE E 391–392 Electrical Engineering Project**
391, fall; 392, spring. 1–8 credits. Limited to juniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students
must make individual arrangements with a faculty sponsor prior to registration.

ELE E 407 Quantum and Solid State Electronics II
Fall. Prerequisite: ELE E 306. Introduction to quantum mechanical and solid-state concepts. Quantum topics: harmonic oscillator, annihilation and creation operators, angular momentum; selection rules; LS coupling, elements of perturbation theory; and modulation index. Solid-state topics: Bose-Einstein and Fermi-Dirac distribution, specific heat, metallic conductivity and resistivity; thermal conduction in metals; nearly-free-electron model, k-p expansion, plasma dispersion relation, plasmons, polaronics, excitons; Shockley barrier.

ELE E 411 Random Signals in Communications and Signal Processing
Fall. 3 credits. Prerequisite: ELE E 301 and 310 or equivalent. Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ELE E 423 Computer Methods in Digital Signal Processing

ELE E 425 Digital Signal Processing
Fall. 4 credits. Prerequisite: ELE E 301. Fundamentals of signal analysis, review of Fourier, Laplace, and Z transforms. Sampling and reconstruction. Discrete Fourier transform properties and computation (FFT). Digital filter design; the approximation problem for FIR and IIR filters, perception, statistical modeling of images, image transforms. Compression, enhancement, restoration analysis.

ELE E 426 Applications of Signal Processing
Spring. 3 or 4 credits. Prerequisite: ELE E 425. Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ELE E 430 Lasers and Optical Electronics
Fall. 4 credits with lab. Prerequisite: ELE E 303 or equivalent. An introduction to the operation of lasers and devices based nonlinear and nonlinear optics. Material covered includes diffraction-limited optics, Gaussian and beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

ELE E 433 Microwave Integrated Circuits
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and 310, or equivalent. An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six-two week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

ELE E 439 VLSI Digital System Design
Fall. 4 credits. Prerequisites: ELE E 308 or COM S 314 and a course in probability. Design, analysis, and implementation of local area networks, wide area networks, and telecommunications systems; circuit switching, packet switching, broad band switching, protocols, asynchronous transfer mode systems.

ELE E 440 Computer Networks and Telecommunications
Fall. 3 credits. Prerequisites: ELE E 308 or COM S 314. Six two-week labs cover the basics of computer networks and telecommunication systems. Topics include: state realizations, digitizations of analog systems, least-squares system identification, state feedback control, observers, combined observer-controller, and algebraic-control design. Assignments will consist of reports on computer-aided controller design and digitally simulated dynamic process.

ELE E 476 Digital Systems Design Using Microcontrollers
Spring. 4 credits. Prerequisite: ELE E 408 or ELE E 475. Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work, the lectures being used primarily for the introduction of examples, description of contacts, ohmic contacts, and metal-oxide-semiconductor (MOS) structures. Operation of bipolar junction transistors (BJTs) and field effect-transistors (FETs). Six-two week labs covering electrical measurements of semiconductor materials and devices.
specific modules to be designed, and instruction in the hardware and high-level design tools to be employed. The laboratory environment is that of ELE E 475 enhanced with the addition of an integrated single-board computer based on the 80C196KB microcontroller chip. Programming is in assembly language and (optionally) C.

**ELE E 482** Plasma Processing of Electronic Materials

Spring. 3 credits. Prerequisite: ELE E 303 or its equivalent. Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffuse processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing will be discussed in detail.

**ELE E 484** Introduction to Controlled Fusion: Principles and Technology (also NAE 559 and NS&E 484)

Spring. 3 credits. Prerequisites: ELE E 303, or permission of instructor. Intended for seniors and graduate students.

For description, see NS&E 484.

**ELE E 485** Space Science and Engineering

Fall 3 credits. Prerequisites: ELE E 301 and ELE E 303 or equivalent. A survey of subjects relevant to spacecraft design. Astrodynamics and orbital maneuvers. Rigid-body dynamics and control. Communications. Black-body radiation and temperature control. Geospace environment. Remote sensing using electromagnetic techniques. Applications of these topics will be discussed where appropriate. At the level of Design of Geosynchronous Spacecraft, by Agrawal.

**ELE E 487** Introduction to Antennas and Rf Circuits and Systems

Fall 3 credits. Prerequisites: ELE E 301 and ELE E 303 (or a grade of B or better in ELE E 303).

Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites: over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques.

**ELE E 488** RF Circuits and Systems

Spring. 3 credits. Prerequisites: ELE E 315 or equivalent. 2 design credits. Lab credit.

Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

**ELE E 491–492** Electrical Engineering Project

491, fall; 492, spring. 1-8 credits. Limited to seniors in Engineering.

Individual study, arranged, to be used usually, experimental team in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course.

**ELE E 493** MicroElectro Mechanical Systems (MEMS)

Spring. 3 credits. Prerequisite: ELE E 210 or permission of instructor. Introductory course to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS including materials, microstructures, devices and simple microelectromechanical systems, scaling electronic and mechanical systems to the micronometer/nm-scale, material issues, and the integration of microelectromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

**ELE E 494** Distribution Automation and Control for Electric Power Networks

Spring. 3 credits. Prerequisite: ELE E 303, or permission of instructor. Intended for seniors and graduate students.

Distribution automation is a system that enables an electric utility to monitor, control, and operate distribution systems in a real-time mode from remote locations. This course will cover modeling of distribution networks, three-phase unbalanced power flow analysis and short circuit calculations, state estimation, operation and control strategies, communication systems, and computer systems for distribution automation.

**ELE E 495-496** Special Topics in Electrical Engineering

1–4 credits. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

**ELE E 515–516** Applied Signal Processing Systems Design

515, fall; 516, spring. Variable credits. Prerequisites: Project-level design of systems in the area of signal processing and general instrumention, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate project resources with other students with related interest.

**ELE E 517–519** A Practical Electric Vehicle Motor Controller Utilizing Vector Control

Fall, 517; spring, 518. Variable credits (3-8 per year). Prerequisites: ELE E 471, 472, 476, or 457. Not offered 1996-97 Design of a microcontroller-based vector-control system for a 3-phase induction motor. Emphasis is placed upon the coordinated design of a suitable feedback system with torque control and a microcontroller arrangement capable of performing the coordinate rotations and implementing an overall torque feedback algorithm. Display and data acquisition software will be developed.

**ELE E 521** Theory of Linear Systems

Fall. 4 credits. Prerequisite: ELE E 302 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations. State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems, by T. Kailath.

**ELE E 522** Nonlinear Systems: Analysis, Stability, Control, and Applications

Spring. 4 credits. Prerequisites: ELE E 521 or a solid background in linear algebra and real analysis strongly recommended but not required.

A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle's Theorem, regions of attraction, slowly varying systems, advanced stability theory, Lyapunov redesign, applied nonlinear control, describing functions, averaging and singular perturbation. Nonlinear systems, stability, control and application to physical systems.

**ELE E 525** Adaptive Filtering in Communication Systems

Fall. 4 credits. Prerequisite: ELE E 425 or ELE E 521.

Fundamentals of an adaptive filter theory intended for digital communication systems applications. Traditional problem, e.g., channel equalization for intersymbol interference removal, is used to motivate adaptive filter design and to raise issues of current interest. Assignments will consist of reports on adaptive digital filter and simulated evaluation.

**ELE E 526** Advanced Signal Processing

Fall. 4 credits. Prerequisites: ELE E 425 and ELE E 521.

**ELE E 530** Fiber and Integrated Optics

Spring. 4 credits. Lab. Prerequisite: ELE E 303 or equivalent. Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and amplifiers. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.

**ELE E 531** Quantum Electronics I

Fall. 4 credits. Prerequisites: ELE E 306 and 407, or Physics 443.

A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interactions of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

**ELE E 532** Quantum Electronics II

Spring. 4 credits. Prerequisite: ELE E 531 or permission of instructor. Not offered 1996-97 A continuation of ELE E 531. Topics include density matrix; nonlinear optical processes; properties of nonlinear optical materials; optical parametric oscillators; spontaneous and stimulated Raman and Brillouin processes; theory of coherence; pico- and femto-second optics; ultrastiff processes in semiconductors and molecules; optical properties of semiconductor-doped glasses, quantum-well structures, and superlattices.
ELE E 533   Semiconductor Lasers  
Spring. 3 credits. Prerequisites: ELE E 450, ELE E 457, or permission of instructor. Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.

ELE E 535   Semiconductor Physics  
Fall. 4 credits. Prerequisites: ELE E 457 and 407, or permission of instructor. Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.

ELE E 536   VLSI Technology  
Spring. 4 credits. 3 credits without laboratory with permission of instructor. Microfabrication for silicon very large scale integrated circuits, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.

ELE E 537   Computer System Packaging  
Spring. 4 credits. 3 credits without project with permission of instructor. Prerequisites: ELE EE 230 and ELE EE 453 or ELE EE 457 or ELE E 459 or permission of instructor. Not offered 1996–97. Physical integration of circuits, packages, boards, and full electronic systems. Computer (portable, desktop, cabinet levels) and telecommunication (cellular telephone, base station, switch levels) system applications. Packaging architecture; electrical, optical, signal distribution, power distribution, signal integrity, power, thermal management, mixed signals, manufacturing, measurements, and simulation. Case studies. Lectures include industry experts.

ELE E 539   Practicum in VLSI Design  
Fall and spring (year-long course). 2 credits each semester. Prerequisites: EE 475 or consent of instructor. Corequisite: EE 439. A year-long implementation project related to EE 459. Students will design a chip and have it fabricated in the fall semester and test it for functionality, diffusion, ion implantation, thin film deposition, and etching. Process integration for CMOS, BiCMOS and ECL VLSI, MEMS, CS LSI, and optoelectronics. Hands-on fabrication, characterization, and simulation laboratory.

ELE E 541   Advanced Computer Architectures  
Fall. 3 credits. Prerequisite: ELE E 508 (or COMS 280 and 514). Not offered 1996–97. Design and evaluation of processor architectures are examined in the light of actual implementations. Topics include parallel and pipelined architectures, interleaved memories, cache and virtual memories, I/O processors, vector and array processors, protection mechanisms, and RISC architectures.

ELE E 542   Parallel Processing  
Spring. 3 credits. Prerequisite: ELE E 541. Parallel algorithms are designed to provide a high computation rate for large specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multicomputers and massively parallel processors are also discussed.

ELE E 546   Information Networks  
Spring. 3 credits. Prerequisite: EE 445 or consent of the instructor. 3 lectures. Evolution of network architectures for integrated services; advance in switching and transmission with an emphasis on asynchronous transfer mode (ATM); performance modeling; traffic and network management.

ELE E 547   Computer Vision  
Fall. 4 credits. Prerequisites: ELE E 308 (or COM S 280 and 314) or consent of instructor. Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.

ELE E 548   Digital Image Processing  
Spring. 3 credits. prerequisites: ELE E 411, EE 425, familiarity with linear algebra. Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and special attention is allocated to compression. Equal emphasis will be placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.

ELE E 554   Advanced VLSI Circuit Design  

ELE E 555   Advanced Power Systems Analysis and Control I  

[ ]

ELE E 556   Advanced Power Systems Analysis and Control II  

ELE E 558   Compound Semiconductor Electronics  
Spring. 4 credits with lab. Prerequisites: ELE E 457 or equivalent. Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ELE E 561   Error-Control Codes  
Fall. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for correcting codes. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

ELE E 562   Fundamental Information Theory  
Fall. 4 credits. Prerequisite: ELE E 310 or equivalent. Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ELE E 563   Communication Networks  
Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor. Classical line-switched communication networks: point-process models for offered traffic, blocking and queuing analysis. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets: using various protocols, TDMA. Flow control and capacity assignment algorithms for wideband circuit-switched and ATM networks.
ELE E 564 Decision Making and Estimation
Fall. 4 credits. Prerequisite: ELE E 411.
An introduction to the use of decision analysis and to basic techniques of estimation and decision making. Topics include Bayes, minimum, and Neyman-Pearson decision theories; Bayes and minimum likelihood point estimation; Gram–Rao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

ELE E 567 Communication Systems II
Spring. Offered as 2 or 4 credits. Prerequisites: ELE E 562.
Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data conversion, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

ELE E 573 Optimal Control and Estimation for Continuous Systems
Fall. 4 credits. Prerequisite: ELE E 521 or permission of instructor. Not offered 1996-97.
Control system design through parameter optimization, with and without constraints. The minimum principle; linear regulations, minimum-time and minimal-fuel problems. Computational techniques; properties of Lyapunov and Riccati equations.

ELE E 577 Artificial Neural Networks
Fall. 4 credits. Prerequisites: ELE E 310, ELE E 411 recommended.
Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide our primary analytical approach to design and analysis of neural networks. The course will cover mathematical and computer-based design capabilities of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers.

ELE E 580 Applied Electrodynamics
3 credits (4 credits with project). Prerequisite: ELE E 583 or permission of instructor.
Contemporary electrodynamics with emphasis placed on applications. Theory, design, and use of high-performance microwave devices, such as gyrotrons, free-electron lasers, and traveling-wave devices. Waveguide and cavity modes, charged-particle orbit theory, particle dynamics in electromagnetic fields, electron beam generation, waves on beams. Project based on a numerical simulation of microwave devices.

ELE E 581 Introduction to Plasma Physics
Fall. 4 credits. Prerequisites: ELE E 303 and ELE E 304 or equivalent.
First-year graduate-level course; open to exceptional seniors with permission of instructor. Plasma state; motion of charged particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics, plasma technology, and controlled fusion.

ELE E 582 Advanced Plasma Physics (also AE&EE 607)
Spring. 4 credits. Prerequisites: ELE E 581 or AE&EE 606.
Boltzmann and Vlasov Equations; dielectric tensor; waves in hot-magnetized plasma; Langmuar and cyclotron damping; microinstabilities; low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

ELE E 583 Electrodynamics
Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 304 or equivalent. 3 lecs.
Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of Classical Electrodynamics, by Jackson.

ELE E 584 Microwave Theory
Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent. 3 lecs, 1 rec.

ELE E 585 Atmospheric and Near Earth Space Science (also Astronomy 575)
Fall. 3 credits. Not offered 1996-97; next offered 1997-98.

ELE E 586 Solar Terrestrial Physics
(also Astronomy 576)
Spring. 3 credits. Not offered 1996-97; next offered 1997-98.
High-latitude ionosphere, electric fields in the polar cap and auroral zone; particle precipitation and the aurora, magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth’s magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.

ELE E 587 Energy Seminar (also NS&E and M&A 545)
Fall and spring 1 credit each semester. Students may take this seminar both fall and spring for credit. 1 lec. D. Hammer.
Energy resource conversion to electricity or mechanical work, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the University, and by outside experts. Examples of topics to be surveyed are energy resources, and economics, coal-based electricity generation; nuclear reactors; solar power; energy conservation by users, and air-pollution control.

ELE E 588 Advanced Electromagnetic Wave Propagation and Scattering
Spring. 3 credits. Prerequisite: ELE E 487 and 581 or permission of instructor.
Offered alternate years. Not offered 1996-97.
WK band and full-wave solutions of the wave equations, interactions between particles and waves, scattering of matter types from random fluctuations in refractive index, scatter propagation, incoherent scatter from the ionosphere and its use as a diagnostic tool, scattering from unstable plasma waves, pulse compression and other radar probing techniques.

ELE E 593 Bioelectric Signal Analysis and Processing
3 credits with lab. Prerequisites: ELE E 301, 315, and a knowledge of C programming.
Measurement and analysis of low-level biological signals in the presence of background noise. Basic electrocardiography will be described. A/D conversion, filtering, signal conditioning, and data reduction techniques will be investigated using the human surface ECG as signal source. Pattern classification and safety of biomedical instrumentation will be introduced. Term design projects are required.

ELE E 596 Compiling Concurrent Programs for Field Programmable Gate Arrays
Fall. Prerequisites: ELE E 475 and CS 412.
Current generation field programmable gate arrays (FPGAs) provide circuit densities of 10,000–100,000 gates on a single chip that can be reconfigured in situ. In this course we shall examine systolic array type algorithms and real time data I/O. The course will consider the languages and their compilation to hardware, applications and architectural issues. The course will involve a substantial individual project.

ELE E 596-599 Graduate Topics in Electrical Engineering
1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 633 Radiation Effects in Microelectronics
Not offered 1996-97.
For description, see NS&E 621.

ELE E 636 Advanced Solid-State Devices
Spring. 4 credits. Prerequisites: ELE E 555 or ELE E 457 and ELE E 407 or equivalent. May not be offered 1996-97.
Review of quantum foundations of carriers in semiconductors. Detailed discussion of non-equilibrium transport of carriers in semiconductors including carrier dynamics, scattering, relaxation, recombination, hot carrier effects, high field effects, and quantum mechanical tunneling. Exploration of semi-classical drift-and-diffusion, hydrodynamics, and Monte Carlo-based device simulation. Project requires independent simulation study of state-of-the-art semiconductor device.
GEOE 101  Introduction to Geological Science
Fall, spring, or summer. 3 credits. Fall: W. Travers; spring: J. Bird; summer: W. Brice.

GEOE 102  Evolution of the Earth and Life
(also Bio Q 170)
Spring, summer. 3 credits. GEOE 101 recommended. Spring: J. L. Cesme; summer: W. Brice.

GEOE 103  Introduction to Geology Through the Environment
Fall. 3 credits. Limited to 40 students. D. E. Kang.

GEOE 104  The Sea: An Introduction to Oceanography (also BIOES 154)
Spring, summer. 3-4 (4 credits with lab section) credits. Spring: C. H. Green, W. M. White; summer: L. Godfrey and W. M. White.

GEOE 105  Writing on Rocks (Freshman Seminar)
Fall. 3 credits. J. Chiment.

GEOE 106  How the Earth Works
Fall. 1 credit. J. Cesme.

GEOE 107  Geology and Society
Spring. 1 credit. May be taken concurrently with ENGRI 101, 102, 103, 104, 111, 201, or 206. T. E. Jordan.

GEOE 108  Geology and Society
Spring. 1 credit. May be taken concurrently with ENGRI 101, 102, 103, 104, 111, 201, or 206. T. E. Jordan.

GEOE 109  Dinosaurs
Fall. 1 credit. J. L. Cesme.

GEOE 111  To Know the Earth and Build a Habitable Planet
Fall. 3 credits. J. L. Cesme.

GEOE 122  Earthquakes! (also ENGRI 122)
Fall. 3 credits. L. Brown.

GEOE 123-124 Science of Earth Systems Colloquium (also ABEN 120-121, SCAS 101-102 and SES 101-102)
For description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.

GEOE 125  Chemistry of the Environment (also ENGR 125)
Fall. 3 credits. W. White, R. Kay, L. Derry.

GEOE 191-199 Graduate Topics in Electrical Engineering
1-6 credits.

GEOE 201  Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112. L. M. Cathles.

GEOE 204  Hydrology and the Environment (also SCAS 371 and ABEN 371)

GEOE 210  Introduction to Field Methods in Geological Sciences
Fall. 3 credits. Prerequisite: GEOE 101, 103, 201, or permission of instructor.

GEOE 211  Special January Field Trip
Fall. 2 credits. Prerequisites: GEOE 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced. Staff.

GEOE 212  Special January Field Trip
Fall. 2 credits. Prerequisites: GEOE 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced. Staff.
should contact the instructor during the early part of the fall semester.

**GEOL 213 Marine and Coastal Geology**
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor. Staff.
A special one-week course offered at Cornell's Shools Marine Laboratory (SML), on an island near Portsmouth, New Hampshire. For more details and an application, consult the SML office, G14 Simson Hall. Estimated cost for 1995 (including tuition, room, board, and ferry transportation) is $895.

**GEOL 214 Western Adirondack Field Course**
Spring, one week at the end of the semester. 1 credit. Prerequisite: GEOL 210 or equivalent, or permission of instructor. Students should be prepared for overnight camping and share in the cost of camp meals. Independent project. W. A. Bassett.
Field mapping methods, mineral and rock identification, examination of Precambrian metamorphic rocks and lower Paleozoic sediments, talc and zinc mines.

**Junior, Senior, and Graduate Courses**
Of the following, the core courses GEOL 326, 355, 356, and 388 may be taken by B.S. candidates who have successfully completed GEOL 201 or the equivalent and by B.A. candidates who have completed GEOL 101 or the equivalent, or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

**GEOL 301 Evolution of the Earth System (also SES 332 and SCAS 302)**
For description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.

**GEOL 326 Structural Geology**
Spring. 4 credits. Prerequisite: GEOL 101, 103, or 201, or permission of instructor. R. W. Allmedinger. Nature and origin of deformed rocks at microscopic to macroscopic scales, with emphasis on structural geometry and kinematics. Topics includes stress, strain, rheology, deformation mechanisms, minor structures, faulting, folding, and structural families.

**GEOL 355 Mineralogy**
Fall. 4 credits. Prerequisite: GEOL 101, 103, or 201 and Chem 207 or permission of instructor. W. A. Bassett. Examination of minerals by hand-specimen, X-ray diffraction is introduced. Independent research project.

**GEOL 356 Petrology and Geochemistry**
Spring. 4 credits. Prerequisite: GEOL 355. R. W. Kay. Principles of phase equilibrium as applied to igneous and metamorphic systems. Description, classification, chemical properties, origin, regional distribution, and dating of igneous and metamorphic rocks. Geochemical distribution of trace elements and isotopes in igneous and metamorphic systems. The petrological evolution of the planets.

**GEOL 375 Sedimentology and Stratigraphy**

**GEOL 386 Geodynamics and Geotectonics**
Spring. 4 credits. Prerequisite: Mathematics 192 and Physics 208, 213, or equivalent. B. L. Isacks. Global tectonics and the deep structure of the solid earth as revealed by investigations of earthquakes, earthquake waves, the earth's gravitational and magnetic fields, and heat flow.

**GEOL 401 Introduction to Biogeochemistry (also NTRES 432, SES 401)**
Fall. 4 credits. Prerequisites: college-level biology and chemistry. L. Derry and J. Yavitts. The cycling of elements at the earth's surface through biologically governed processes and fluxes. Topics include weathering and acid-base chemistry, river fluxes and marine inorganic chemistry, nutrient limitation and recycling in terrestrial and marine systems, anthropogenic pollution, isotopic tracers and mathematical modeling of element fluxes.

**GEOL 411 Global Change Research: Mountains, Climate, and Erosion**
Fall. 3 credits. B. L. Isacks. Undergraduate participation in one of the interdisciplinary research projects of the Earth Observing System (EOS). Choice of topics concerning the interplay of climate, topography, and the environment of the Andes and Himalayan mountains as revealed by satellite images and other computerized data analyzed with modern image processing and Geographical Information Systems (GIS).

**GEOL 417 Field Mapping in Argentina**
Summer. 3 credits. Prerequisites: GEOL 210 and 326; Spanish desirable, but not required. S. M. Kay. Modern techniques of geological mapping applied in the region of San Juan, Argentina, including folded and faulted sedimentary rock units of the Andean Precordillera (San Juan River section), intensely deformed Precambrian metamorphic rocks of the Pampean Ranges (Pie de Palo), and shallow-level silicic intrusives (Cerro Blanco-Ullum).

**GEOL 423 Petroleum Geology**
Fall. 3 credits. Recommended: GEOL 326. Offered alternate years. W. B. Travers. Introduction to hydrocarbon exploration and development. Exploration techniques, including well logs, fluid pressures, seismic-reflection methods, gravity, and magnetic measurements to map subsurface structures and stratigraphy. Petroleum origin and migration. Discussion of compositional patterns of petroleum reservoirs. Economics of exploration, leasing, drilling and production. Estimates of petroleum reserves, including tar sands and oil shales.

**GEOL 425 Precambrian Orogenic Cycles**
Fall. 3 credits. Prerequisites: GEOL 326, GEOL 356, or permission of instructor. Offered alternate years. Not offered in 1996-97. K. Attoh. Thermal and kinematic histories of Precambrian orogenic belts. Interpretation of data from metamorphic, structural, and geochronological studies to infer deformation paths in selected orogens, including Dahomeyide and Eburnian orogens of West Africa, and Grenville, Penokean, and Kenoran orogens of the Canadian Shield. Current hypotheses regarding Precambrian orogenic styles and continental crust evolution.

**GEOL 426 Geologic Evolution of South America**
Spring. 3 credits. Prerequisites: GEOL 326 and GEOL 356, or permission of instructor S. Mahlburg Kay. Regional overview of Paleozoic to recent tectonic and magmatic evolution of South America in the framework of crustal and mantle evolution, with particular emphasis on the evolution of the region of the modern Andean Cordillera.

**GEOL 434 Reflection Seismology I: Acquisition and Processing**
Fall. 3 credits. Offered alternate years with GEOL 438. L. Brown. Design of seismic surveys, both 2D and 3D. Source characteristics, array design, recording geometries and equipment. Land and marine operations. Basis signal processing theory. Applied 2D interactive seismic processing with ProMAXFK filtering, deconvolution, velocity analysis, stacking, migration (time and depth), display.

**GEOL 436 Environmental Geophysics**
Spring. 3 credits. Offered alternate years. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor. L. Brown. Theory of geophysical techniques for imaging the subsurface. Gravity, magnetic, electrical, and radar methods are covered, but emphasis is on seismic reflection and refraction. The focus is on shallow targets of environmental or archaeological interest. Field experience with these methods is offered in a companion course, GEOL 437.

**GEOL 437 Geophysical Field Methods**
Fall. 3 credits. Offered alternate years. Prerequisites PHYS 213 and MATH 192 or equivalents, or permission of instructor. L. Brown. Introduction to field methods of geophysical exploration, especially as applied to environmental issues. Emphasis on seismic, gravity, and magnetic techniques. Field surveys carried out at the beginning of the semester are analyzed in a series of weekly follow-up meetings during the semester wherein the results are analyzed and interpreted. A field companion to GEOL 436, which is recommended but not required prior to this course.

**GEOL 438 Reflection Seismology II: Analysis and Interpretation**
GEOL 445 Geohydrology (also ABEN 471 and CAEE 431)
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202. W. Brutsaert, L. M. Cathles, J.-Y. Parlange, R. S. Steenhuis.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

GEOL 452 X-ray Diffraction Techniques
Spring. 3 credits. Prerequisites: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1996-97. W. A. Bassett and staff.
Automated X-ray diffractometer, Debye-Scherrer, real-time Laue, high-temperature diffraction, high-pressure diffraction, and pole-figure analysis. Applications in materials science and geological sciences. Labs will be held in the new Materials Science X-Ray Facility.

GEOL 453 Advanced Petrology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years. R. W. Kay.
Magmas and metamorphism in the context of plate tectonics. Study of rock compositions, trace element chemistry and phase petrology as monitors of the creation and modification of igneous rocks. Temperature and stress in the crust and mantle and their influence on reaction rates and textures of metamorphic rocks. Application of experimental studies to natural systems.

GEOL 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. W. A. Bassett.
Crystallography and crystal chemistry of minerals and the methods of their study. X-ray diffraction, optical methods, computer simulation of crystal structures. Emphasis on effects of high pressures and temperatures with implications for understanding of Earth's interior.

GEOL 455 Geochemistry
The Earth from a chemical perspective. Formation of the elements; cosmochemistry; chemical evidence regarding the formation of the Earth and Solar System; trace-element geochemistry, isotope geochemistry; geochemical thermodynamics and kinetics; chemical evolution of the crust, mantle, and core; weathering and the chemistry of natural waters; chemistry of rivers and the oceans; hydrothermal systems and ore deposition.

GEOL 457 Metamorphic Petrology
Fall. 3 credits. Prerequisite: GEOL 355. Offered alternate years. K. Attoh.
Theory, field, and experimental basis for the understanding of metamorphic processes and rocks. Relations between crustal dynamics and metamorphic processes.

GEOL 458 Volcanology
Spring. 3 credits. Corequisite: GEOL 356 or equivalent. Offered alternate years. R. W. Kay and W. M. White.
Causes of volcanism, volcanism as it exists in the Earth, and the origin of magmas. Physical volcanology, nature and types of volcanic eruptions and associated deposits, eruption mechanisms.

GEOL 476 Sedimentary Basins: Tectonics and Mechanics
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1996-97. T. E. Jordan.
Subsidence of sedimentary basins from the point of view of plate tectonics and geomechanics. Subsidence, sediment supply, and environmental characteristics in development of stratigraphic sequences. Stratigraphic characteristics of active-margin, passive-margin, and cratonic basins. Geophysical and stratigraphic modeling; sequence stratigraphy. Modern and ancient examples.

GEOL 478 Advanced Stratigraphy
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. T. E. Jordan.
Modern improvements on traditional methods of study of ages and of genetic relations among sedimentary rocks, emphasizing 3-D relationships. Techniques and applications of sequence stratigraphy at scales ranging from beds to entire basins. Physical correlation, dating techniques, and time resolution in sedimentary rocks. Physical controls on the stratigraphic record. Numerical modeling.

GEOL 479 Paleobiology (also BIOE 479)
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOE 272 or 274, GEOL 375, BIOE 373, or permission of instructor. Offered alternate years. Not offered 1996-97. J. Cisne and staff.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological background of geology majors and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

GEOL 481 Senior Survey of Earth Systems
Fall, spring. 1-12 credits. Limited to seniors majoring in geological sciences. J. M. Bird.
Survey course that integrates undergraduate course work, intended to enhance overall understanding of geological sciences. Emphasis on current models of earth's dynamic systems (e.g., global climate change, mantle evolution). Guest lecturers; synthesis and review literature; scientific literature readings; discussions, student presentations.

GEOL 490 Honors Thesis (B.A. degree candidates)
Fall, spring. 2 credits. Staff. Thesis proposal to be discussed with director of undergraduate studies during the junior year. Participation requires acceptance of a thesis proposal by the faculty committee.

GEOL 491-492 Undergraduate Research
Fall, spring. 1 or 2 credits. Staff. (B. L. Isacks and R. W. Kay, coordinators). Introduction to research techniques and philosophy of research in the earth sciences and an opportunity for undergraduates to participate in current staff research projects. Topics chosen in consultation with, and guided by, a staff member. A short written report is required, and outstanding projects are prepared for publication.

GEOL 500 Design Project in Geohydrology
Fall, spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters. L. M. Cathles.
The project may address one of many aspects of groundwater flow and contamination, and must involve a significant geological component and lead to concrete recommendations or conclusions of an engineering nature. Results are presented orally and in a professional report.

GEOL 502 Case Histories in Groundwater Analysis
Spring. 4 credits. L. M. Cathles.
Groundwater flow in a specific area, such as a proposed nuclear-waste disposal site, is analyzed in depth. Geological and resource data on the area are presented early in the course. Then the material is analyzed by students working as an engineering analysis team. Each student makes a weekly progress report and writes a final report. Results are presented in a half-day seminar at end of term.

GEOL 622 Advanced Structural Geology I
Stress-strain theory and application. Advanced techniques of structural analysis. Topics include finite and incremental strain measurement; microstructural preferred orientation, and TEM analysis; pressure solution and cleavage deformation; and experimental deformation. Applications to deformation of unconsolidated sediments, brittle and brittle-ductile deformation of supracrustal strata, and ductile deformation of high-grade metamorphic rocks. Kinematic analysis of shear zones and folds in these regimes.

GEOL 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years. R. W. Allmendinger.
Geometry, kinematics, and mechanics of structural provinces. Concentration on thrust belts, nolt provinces, or strike-slip provinces. Techniques of balanced cross sections.

GEOL 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor. J. M. Bird.
A seminar course in which students study specific geologic topics of an orogenic belt selected for study during the term. The course is intended to complement GEOL 681.

GEOL 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years. D. L. Turcotte.
Definitions of fractal sets, scale invariance, self-affine fractals, multifractals, applications to fragmentation, seismicity and tectonics, petroleum distribution and reserves, ore grade and tonnage, drainage networks and landforms, and floods
and droughts. Definitions of chaos and self-organized criticality, renormalization groups, diffusion limited aggregation and percolation clusters, wavelet transforms, applications to mantle convection, the earth's dynamo, and distributed seismicity.

**GEOL 636 Advanced Geophysics II: Quantitative Geodynamics**
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternative years. Not offered 1996-97.
L. D. Turcotte.
Stress and strain in the earth, elasticity and flexure, heat transfer, gravity, fluid mechanics, rock rheology, faulting, chemical geodynamics, flow in porous media.

**GEOL 651 Analysis of Biogeochemical Systems**
Fall. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternative years. Not offered 1996-97.
L. A. Derry.
Dynamics of biogeochemical systems. Kinetic treatment of biogeochemical cycles. Box models, residence time, response time. Analytical and numerical solutions of model systems. Eigen-analysis of linear systems. Feedback and nonlinear cases, problems of uncertainties in natural systems. Modeling software such as Stella II and Matlab; applications to current research of participants or from recent literature.

**GEOL 656 Isotope Geochemistry**
Spring. 3 credits. Open to undergraduates. Prerequisite: GEOL 455 or permission of instructor. Offered alternate years. Not offered 1996-97.
W. M. White.
Nucleosynthetic processes and the isotopic abundances of the elements. Geochronology and cosmochronology using radioactive decay schemes, including U-Pb, Rb-Sr, Sm-Nd, K-Ar, U-series isotopes, and cosmogenic isotopes such as 13C and 18O. Use of radiogenic and stable isotopes in petroleum and their application to study of the evolution of the crust and mantle. Isotopic evidence regarding the formation of the Earth and the Solar System. Stable isotopes and their use in geothermometry, ore petrogenesis, paleontology, and the global climate system.

**GEOL 681 Geotectonics**
Fall. 3 credits. Prerequisite: permission of instructor. J. M. Bird.

**GEOL 695 Computer Methods in Geological Sciences**
Fall, spring. 3 credits. L. Brown, B. L. Isacks.
Independent research projects using state-of-the-art computational resources in the Department of Geological Sciences. Possibilities include: image and seismic processing, seismic and geomechanical modeling, GIS, use of interpretational workstations for 3D seisms and satellite imagery; modeling fluid flow through complex media.

**GEOL 700-799 Seminars and Special Work**
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Staff.
Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

**GEOL 722 Advanced Topics in Structural Geology**
R. W. Allmendinger.

**GEOL 725 Rock and Sediment Deformation**
D. E. Karig.

**GEOL 731 Plate Tectonics and Geology**
J. M. Bird.

**GEOL 732 Fractal Chaos—Independent Studies**
D. L. Turcotte.

**GEOL 751 Petrology and Geochemistry**
S. Mahlburg Kay, R. Kay.

**GEOL 752 Advanced Topics in Mineral Physics**
W. A. Bassett.

**GEOL 755 Advanced Topics in Petrology and Tectonics**
J. Bird, W. A. Bassett.

**GEOL 757 Current Research in Petrology**
S. Mahlburg Kay, R. Kay.

**GEOL 762 Advanced Topics in Petroleum Exploration**
W. Travers.

**GEOL 771 Advanced Topics in Sedimentology and Stratigraphy**
T. E. Jordan.

**GEOL 773 Paleobiology**
J. L. Cisne.

**GEOL 775 Advanced Topics in Oceanography**
C. H. Green.

**GEOL 780 Seismic Record Reading**
M. Barazangi.

**GEOL 781 Geophysics, Exploration Seismology**
L. D. Brown.

**GEOL 783 Advanced Topics in Geophysics**
B. L. Isacks.

**GEOL 789 Lithospheric Seismology (COCORP Seminar)**
L. Brown.

**GEOL 793 Andes-Himalaya Seminar**

**GEOL 795 Low Temperature Geochemistry**
L. A. Derry.

**GEOL 796 Geochemistry of the Solid Earth**
W. M. White.

**GEOL 797 Fluid-Rock Interactions**
L. M. Cathles.

**GEOL 799 Soil, Water, and Geology Seminar**
L. M. Cathles, T. S. Steenhuis.

---

**MATERIALS SCIENCE AND ENGINEERING**

**Undergraduate Courses**

**GEOL 111 Materials by Design (also ENGR 111)**
Fall. 3 credits. E. P. Giannelis.
For description, see Engineering Common Courses.

**GEOL 112 Design Integration: A Portable CD Player (also ENGR 118)**
Spring. 3 credits. M. O. Thompson, W. Sachse.
For description, see Engineering Common Courses.

**GEOL 261 Introduction to Mechanical Properties of Materials (also ENGR 261)**
Fall. 3 credits. S. L. Sass.
For description, see Engineering Common Courses.

**GEOL 262 Introduction to Electrical Properties of Materials (also ENGR 262)**
Fall. 3 credits. Prerequisite: co-registration in Physics 213 or electricity and magnetism in high school physics.
M. O. Thompson.
For description, see Engineering Common Courses.

**GEOL 265 Biological Materials and Their Synthetic Replacements**
Fall. 3 credits. D. T. Grubb.
From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course will consider a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials will be discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and biocompatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities, will also be considered.

**GEOL 277 The Substance of Civilization—Materials through the Ages**
Spring. 3 credits. 2 lecs, 1 lab. S. L. Sass.
Materials have enabled revolutionary advances in how we live, work, fight, travel, and play, hence the naming of eras after them—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern Western industrial civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between critical developments are identified and explored—for example, the relationship between materials, agriculture, and written languages in the fourth millennium B.C., and between the Exodus of the Hebrews, the general tumult in the Eastern Mediterranean, and the onset of the Iron Age, at the end of the second millennium B.C. Early technologies will be illustrated with beautiful works of art. Lectures, demonstrations, and hands-on laboratory experiments, will elucidate the origin of the unique properties of materials.
such as polymers, ceramics, metals, and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

**MS&E 285** Art, Archaeology, and Analysis (also ENGR 185 and MS&E 285)
For description, see Engineering Common Courses.

**MS&E 331/531** Structure of Materials

**MS&E 332/332** Electrical and Magnetic Properties of Materials

**MS&E 333 Research Involvement I**
Fall: 3 credits. Prerequisite: Approval of course coordinator. Staff. Supervised independent research project in association with faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized.

**MS&E 334 Research Involvement II**
Spring: 3 credits. Prerequisite: Approval of department. Staff. See MS&E 333 for description. May be a continuation of MS&E 333 or a one-term affiliation with a research group.

**MS&E 335/353** Thermodynamics of Condensed Systems
Fall: 4 credits. Prerequisite: Math 293 and 294. E. J. Kramer.
The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. Statistical mechanics is introduced and applied to the calculation of entropy and specific heat of ideal gases and solids. Examples of design and control of processes.

**MS&E 336/336** Kinetics, Diffusion, and Phase Transformations
Spring: 3 credits. Prerequisite: MS&E 353 or permission of instructor. R. Dieckmann. Introduction to absolute rate theory, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids, solidification, crystal growth, oxidation and corrosion, radiation damage, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties. One-third of course involves examples of design and control of processes.

**MS&E 414/514** Chemical Processing of Ceramics
Spring: 3 credits. E. P. Giannelis. Design and characterization of materials at the molecular level. Synthesis, drying, and sintering of ceramics, glasses, and composites. Sol-gel, hydrothermal, chemical-vapor deposition, and pyrolysis techniques. Surface chemistry of oxides. Analytical techniques include chromatography, mass spectrometry, infrared, uv-visible and near-infrared, and magnetic resonance spectroscopy. Design, synthesis, and characterization of inorganic and organic precursors. Application of these principles to the design of improved materials and engineering structures.

**MS&E 447/448** Materials Design Concepts I & II
447, fall; 448, spring. 2 credits each term. C. K. Ober/D. G. Ast. Designs in the field of materials science using Dieder's Engineering Design, Ashby's Materials Selection in Engineering Design, and other sources. Innovation, patent searching, and ASTM standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral and written presentations. Proposal for design study project in the fall semester. Completion of extensive design study project in the spring semester. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise.

**MS&E 449 Introduction to Ceramics**
Fall: 3 credits. Prerequisite: MS&E 331 or permission of instructor. R. Dieckmann. Ceramic processes and products, crystal structures, structure of glasses, point defects (point defect chemistry and related nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

**MS&E 452 Properties of Solid Polymers**
Spring: 3 credits. Prerequisite: Engr 261 or permission of instructor. E. J. Kramer/C. R. Ober.

**MS&E 454** Processing of Glass, Ceramic, and Glass-Ceramic Materials
Spring: 3 credits. Offered alternate years. Recommended: MS&E 449.
Conventional and unconventional techniques for processing glass, ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photovoltaic materials, and powder processing and sintering of ceramics will be discussed. This course is team taught.
with scientists from the research and development laboratory of Corning Glass Works.

**MS&E 459 Physics of Modern Materials Analysis**
Spring. 3 credits. M. O. Thompson.
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are relevant to understanding techniques of modern materials analysis. Principles of analysis techniques such as Auger electron spectroscopy, ion scattering, and x-ray and ion-mass spectroscopy. Design of experiments for near-surface analysis.

**MS&E 463 Principles of Electronic Packaging**
Spring. 3 credits. C. Y. Li.
Design, materials, and manufacturing needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and connecting disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

**MS&E 482 Plasma Processing of Electronic Materials (also ELE 482)**
Spring. 3 credits. Prerequisite: ELE 303 or its equivalent. D. Hammer.
Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their application to electronic materials processing will be discussed in detail.

**MS&E 489 Undergraduate Teaching Involvement**
Fall and spring. Variable credit.
This course will give credit to students who help in the laboratory portions of ENGR 111, 118, 261 or 262 or MS&E 277. The number of credits earned will be determined by your teaching load, and will typically be either 1 or 2 credits.

**MS&E 490 Independent Study**
Fall and spring. 3 credits. Individual faculty.
This course is meant for students who are not yet seniors and who have already taken MSE 333 and MSE 334, Research Involvement, and who want to do an intense research project.

**MS&E 495 Introduction to Group Theory with Applications (also EE 495)**
Fall. 2 credits. Homework only. S-U only. R. L. Liboff.

**MS&E 501 Introduction to Electron Microscopy**
Fall. 1 credit. S. L. Sass.
This course is for undergraduates and graduate students who are interested in getting a basic foundation in transmission electron microscopy and electron diffraction techniques. This course will be particularly important for students who are planning to use the electron microscope for their undergraduate or graduate research projects. Included will be electron optics, kinematic theory of diffraction, image contrast from crystal defects, high resolution lattice imaging, and the interpretation electron diffraction patterns. Both theoretical and practical aspects of electron microscopy are discussed.

**Graduate-Level Professional Courses**

**MS&E 516 Thin-Film Materials Science**
Fall. 3 credits. Offered alternate years. Not offered 1996-97. Staff. This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and the study of in-plane and out-of-plane properties and phase transitions. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, nitrides, and aluminides will be presented.

**MS&E 518 Introduction to Electron Microscopy**
Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor. Offered alternate years. Staff.
Basic optics and operation of scanning and transmission electron microscopes. Image formation, modes of contrast, and resolution in SEM and TEM. Electron diffraction. Images of perfect crystal and defects in two-beam electron microscopy will be compared with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, nitrides, and aluminides will be presented.

**MS&E 520 Practical Electron Microscopy**
Fall. 3 credits. Corequisite: MS&E 518. Limited to 12 students. A fee will be charged for instrument usage. Offered alternate years. Staff.
Subjects will be instructed in the proper use of a scanning and a transmission electron microscope. All stages from initial alignment of the microscope to preparation of the results will be covered. Three or four projects will be completed, including obtaining atomic lattice fringe images and X-ray microanalysis.

**MS&E 553-554 Special Project**
553, fall; 554, spring. 6 credits each term. Master of Engineering research project.

**MS&E 455-655 Introduction to Composite Materials**
L. Phoenix.
See TAM 455-655 for description.

**Graduate Core Courses**

**MS&E 455-655 Introduction to Composite Materials**
L. Phoenix.
See TAM 455-655 for description.

**MS&E 461 Thermodynamics of Fracture**

**MS&E 602 Elasticity, Plastic Flow, and Fractures**
Fall. 3 credits. Staff.
Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics and atomic structure. Techniques include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperatures over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

**MS&E 603 Analytical Techniques for Materials Science**
Spring. 4 credits. Lab. M. O. Thompson. Not offered 1996-97; next offered 1997-98. Survey of atomic and structural analysis techniques as applied to surface and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids: characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopies, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.

**MS&E 604 Diffusion and Phase Transformation: Kinetics in Condensed Matter**
Spring. 3 credits. Staff.
Phenomenology and microscopic aspects of diffusion in solids, both simple and polymeric, and in solids, metallic and ionic. Phase stability and transformation; nucleation and growth, spinodal decomposition and displacive transformations. Phase coarsening processes, recrystallization and grain growth. Diffusion-controlled growth, interfacial reactions, moving-boundary problems. Grain-boundary migration controlled kinetics. At the level of Diffusion in the Condensed State, by Kirkaldy and Young.

**Related Course in Another Department**
Introductory Solid-State Physics (Physics 454).
Further Graduate Courses

**MS&E 610 Principles of Diffraction**
Spring. 4 credits. Offered alternate years. B. Battistoni.
For description, see A&EP 711.

**MS&E 611 Modern Polymer Physics**
Spring. 3 credits. Prerequisites: MS&E 452, ChemE 711, or equivalent. Offered alternate years. Not offered 1996–97.
E. J. Kramer.
Modern engineering plastics and polymeric matrices for fiber-reinforced composite materials often demand more detailed knowledge of polymer structure and properties in the melt or solid state than is afforded by beginning courses that emphasize polymer solutions. This course is a fundamental approach to the structure and physical properties of polymers, copolymers, and polymer mixtures, including thermodynamics, phase equilibria, diffusion, kinetics of phase separation, surfaces, and interfaces. At the level of scaling concepts in polymer physics by de Gennes.

**MS&E 612 Solid-State Reactions**
Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanical processes of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport, including some aspects of thermodynamics of irreversible processes, Fick's laws), point-defect relaxation (migration controlled, phase-boundary reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxides, nitrides, carbides, silicides, solid solutions, liquid solutions), solution of materials in potential gradients, selected solid-state processes (internal reactions, etc.).

**MS&E 614 Transmission Electron Microscopy**
Spring. 3 credits. Prerequisite: MS 331 or equivalent level of knowledge of crystallography and diffraction. D. T. Grubb.
This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include specimen preparation, adjustment and calibration of the TEM, and image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, including Bloch waves and anomalous absorption, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Texts recommended are: Loretto Electron Beam Analysis of Materials, 2nd ed., and Riemen Transmission Electron Microscopy, Physics of Image Formation.

**MS&E 617 Solid State Electrochemistry**
Spring. 3 credits. Prerequisite: MS&E 612 or permission of instructor. Offered alternate years. Not offered 1996–97; next offered 1997–98. R. Dieckmann.
Disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Rickert.

**MS&E 619 Superhard Materials**
Fall. 3 credits. Prerequisite: permission of instructor. A. L. Ruoff.
The superhard materials include diamond, cubic boron nitride (possibly the new C_{3}N_{4} and borderline, B_{4}C). The origin of their extreme hardness is examined. The thermodynamics of their stability and the kinetics of their crystal growth will be described. Commercial methods of synthesis of large crystals, powders, thin films and polycrystalline aggregates (by sintering at pressure) will be examined. Their chemical, optical and mechanical properties will be studied. Moreover, there is substantial potential for radiation-hard semi-conducting devices and the status of this area will be covered. At the level of Field, The Properties of Natural and Synthetic Diamonds, plus recent papers.

**MS&E 524/624 Synthesis of Polymeric Materials**
Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and block copolymers. Isotacticity and tacticity of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics will include liquid crystalline polymers, photorefractis, and supermolecular chemistry. At the level of Principles of Polymerization, by Orlan.

**MS&E 626 Advanced Inorganic Chemistry III: Solid-State Chemistry**
Spring. 6 credits. Prerequisite: Chemistry 605 or permission of instructor. F. DiSalvo.

**Specialty Courses**
**MS&E 779 Special Studies in Materials Sciences**
Fall, spring. Variable credit. Offered on demand. Staff.
Supervised studies of special topics in materials science.

**MS&E 789 Materials Science and Engineering Colloquium**
Fall, spring. 1 credit each term. Credit limited to graduate students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

**MS&E 799 Materials Science Research Seminars**
Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff.
Short presentations on research in progress by students and staff.

**MS&E 800/801 Research in Materials Science**
Fall, 800; spring, 801. Credit to be arranged. Staff.
Independent research in materials science under the guidance of a member of the staff.

**MECHANICAL AND AEROSPACE ENGINEERING**

**General and Required Courses**

**M&AE 101 Naval Ship Systems**
For description, see NAV S 202.

**M&AE 102 Drawing and Engineering Design**
(also ENGRG 102)
Fall. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.
For description, see Engineering Common Courses.

**M&AE 117 Introduction to Mechanical Engineering**
(also ENGRG 117)
Spring. 3 credits.
For description, see Engineering Common Courses.

**M&AE 212 Mechanical Properties and Processing of Engineering Materials**
Spring. 4 credits. Prerequisite: ENGRD 202.
Introduction to the broad range of mechanical behavior of materials and their processing. The mechanical properties of metals, ceramics, and composite materials are covered together with their microstructural features and processing. Ideal work methods are introduced for the analysis of bulk deformation processes. Heat treatment of metals and alloys, phase diagrams, casting and quenching processes.

**M&AE 221 Thermodynamics**
(also ENGRG 221)
Fall, spring, may be offered summer. 3 credits. Prerequisites: Mathematics 192 and Physics 112.
For description, see Engineering Common Courses.

**M&AE 225 Mechanical Design and Synthesis**
Spring. 3 credits. Prerequisite: ENGRD 202. Lab fee.
A hands-on laboratory, the use of machine tools, mechanical dissection, and a number of design projects provide direct experience of creative design synthesis.
MECHANICAL AND AEROSPACE ENGINEERING 209

M&AE 323 Introductory Fluid Mechanics
Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: Engr 202 and 203 and coregistration in 221, or permission of instructor. Statics, kinematics, potential flow, dynamics, momentum, and energy relations. Thermodynamics of compressible flow; dimensional analysis; real fluid phenomena, laminar and turbulent motion, boundary layer, lift and drag, supersonic flow and shock waves.

M&AE 324 Heat Transfer
Spring; may be offered in Engineering Cooperative Program. 3 credits. Prerequisites: M&AE 323 or permission of instructor. Conduction of heat in steady and unsteady situations. Surfaces with fins and systems with heat sources. Forced and natural convection of heat arising from flow around bodies and through ducts. Heat exchangers. Emission and absorption of radiation; radiative transfer between surfaces. Introduction to boiling and phase change.

M&AE 325 Mechanical Design and Analysis
Fall; usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202, ENGRD 203, M&AE 212 and M&AE 225. Lab fee. Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&AE 326 System Dynamics
Spring; may be offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202, ENGRD 203, M&AE 212 and M&AE 225. Junior standing required. Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems, stability analysis. Computer simulation and experimental studies of vibration and control systems.

M&AE 327 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&AE 323, 324. Fits the writing requirement. Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and heat transfer. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, air foil stall, two-phase flows and engine performance. Biweekly written assignments.

M&AE 428 Engineering Design
Fall. 2 credits. Prerequisite: completion of six semesters in mechanical engineering or equivalent. A comprehensive look at principles of design with a special focus. Examples come from fluid, thermal, and energy areas, as well as mechanical systems and the manufacturing area of mechanical engineering. Special emphasis on the design sources of engineering failures in products, machines, and mechanical systems, as well as how design should relate to a successful manufactured product.

Mechanical Systems, Design, Materials Processing, and Precision Engineering

M&AE 386 Automotive Engineering
Spring 3 credits. Prerequisite: M&AE 325 or permission of instructor. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, driveline, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

M&AE 389 Computer-Aided Design
Fall 3 credits. Limited to juniors and seniors. May be offered in Engineering Cooperative Program. Prerequisite: A course in programming. May be taken either before or in conjunction with a numerical-methods course. Fulfills computer applications requirement. A first course in CAD, introducing the use of software and computer methods in mechanical engineering. Topics include simulation, optimization, solution of field equations (finite elements, finite differences), least-square function approximation, geometry (space curves, splines, patches), computer graphics, and data visualization.

M&AE 412 Smash and Crash: Mechanics of Large Deformations
Prerequisites: M&E 212, TAM 202. Severe loading is a defining feature of both materials processing and crash worthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crash worthiness, it is to absorb the vehicle energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory deal with these topics and conclude with the individual design, construction, and testing of a crash cage.

M&A 417 Introduction to Robotics

M&AE 461 Entrepreneurship for Engineers (also ENGRG 461)
Spring 3 credits. Enrollment open to seniors; others with permission of instructor. Enrollment may be limited. Course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include: competitive analysis, competitive strategy; business formation; bookkeeping; technical and legal protection; human resource management; negotiation; business valuation; and manufacturing issues. Guest speakers will provide a real-life perspective on critical issues facing the entrepreneur. A term project will be the team development of a business plan for an innovative new venture and will require detail of manufacturing, support, and information systems as well as staffing and cost data.

M&AE 464 Design for Manufacture
Spring 3 credits. Prerequisites: M&E 212 and M&AE 225. Fulfills field design requirement. Readings and class discussion will provide a context for the importance of design for manufacture and assembly in product development, manufacturing, and marketing. Lecture topics include DFMA design rules and applications; net present value analysis applied to product development; determination of manufacturing capability using statistical process control; and Taguchi design for experiment methodology to evaluate product/process improvements. A team design project will evaluate the manufacturability of a new or existing product.

M&AE 465 Biomaterials Systems—Analysis and Design
Spring. 3 credits. Prerequisites: ENGR 202 and 203. Enrollment limited. Selected topics from the study of the human body as a mechanical system. Focus on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

M&AE 469 Stress Analysis for Mechanical and Aerospace Design
Fall 3 credits. Prerequisites: T&M 202 and M&AE 325 or permission of instructor. Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to the analysis and design of mechanical and aerospace systems and components. Review of fundamentals and application to classical problems. Introduction to modern computational methods (e.g., finite elements) for analysis of stress and deformation.

M&AE 478 Feedback Control Systems
For description, see ELE E 471

M&AE 486 Automotive Engineering Design
Spring. 4 credits. Prerequisite: M&AE 428 and senior standing. Fulfills field design requirement. For description, see M&AE 386.

M&AE 489 Computer-Aided Design Project
Fall. 4 credits. Limited to seniors in mechanical engineering. Fulfills both field design and computer applications requirements. Requires extensive project in addition to course assignments. For description, see M&AE 389.

M&AE 511 Survey of Manufacturing Processes
Fall or spring to be determined; may be offered in summer program. 3 credits. Prerequisites: graduate standing or permission of instructor. Not for M&AE majors.

M&AE 514 Introduction to Precision Engineering
Fall. 3 credits or 4 with laboratory. Prerequisites: ENGRG 102 and M&AE 212, or 412, or permission of instructor. Variability in mechanical products arises primarily from the processes used to make and assemble parts; it must be accommodated or controlled to produce the desired output. This course addresses form variation through studies of ideal-form modeling, form tolerancing, form measurement, and manufacturing process modeling (sources of form error). Central principles, practices, and limitations are summarized.
M&AE 555 Introduction to Composite Materials (also T&AM 555)
For course description, see T&AM 555.

M&AE 570 Intermediate Dynamics
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor.
2 lecs.
Introduction to analytical mechanics, virtual work, Lagrangian mechanics. Small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies.

M&AE 577 Mechanical Vibrations
For description, see T&M 574.

[M&AE 578 Feedback Control Systems Design and Implementation]
Spring. 3 credits. Prerequisite: M&AE 478 or ELE E 471, graduate standing, or permission of instructor. Fulfills the computer application requirement. Not offered 1996-97.
Further development of the theory, design, and implementation of feedback control systems with particular emphasis on applications, modeling and system identification, and hardware implementation. Digital control is introduced. Labs include real-time microprocessor-based control of a D.C.-motor positioning system, a two-link robot arm, and a two-tank level-control system.

M&AE 612 Materials Processing: Theory and Applications
Fall. 4 credits. Prerequisite: graduate standing, or permission of instructor.

M&AE 613 Computational Methods in Materials Processing
Spring. 4 credits. Prerequisite: M&AE 612 or permission of instructor.

M&AE 615 Experiments in Materials Processing
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor.
These experiments are related to the mechanical properties of materials and experiments using various materials processing apparatus and will include a general introduction to sensors and instrumentation for engineering measurements. Testing for mechanical properties: model parameter characterization: inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and instability experiments. Determination of heat transfer coefficients associated with quenching and solidification process. Fluidity measurements. Specimen design and fabrication. Although the focus is on metals and alloys attention is also given to polymeric and ceramic materials.

[M&AE 625 Product Development]
Fall or spring. 4 credits. Prerequisite: graduate standing. Not offered 1996-97.
Covers a wide range of methods and techniques used in the product development process. Cognitive methods of design, team organization, conceptual design, parametric design, concurrent engineering, quality function deployment, and Taguchi methods.

M&AE 655 Advanced Composite Materials and Structures (also T&AM 655)
For course description, see T&AM 655.

[M&AE 665 Advanced Topics in Orthopaedic Biomechanics]
On demand. 4 credits. Prerequisites: graduate standing, prior or concurrent registration in advanced courses in strength of materials or elasticity, and intermediate dynamics. Not offered 1996-97.
Advanced treatment of topics in the biomechanics of the musculoskeletal system. Force analysis of the musculoskeletal system under static and dynamic conditions, compact and trabecular bone as structural materials, structural analysis of bone-implant systems, remodeling of bone.

M&AE 670 Finite Element Analysis for Mechanical and Aerospace Design
Spring. 4 credits. Prerequisite: graduate standing, or permission of instructor.
Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures or related nonstructural applications such as heat conduction.
Primary emphasis on underlying mechanics and numerical methods. Secondary consideration of inherent capabilities and limitations of large-scale, structural mechanics programs. Introduction to computational aspects through development of small, special-purpose programs and application of available general-purpose programs. Term project.

[M&AE 678 Optimal Control and Estimation]
Fall, on demand. 3 credits. Prerequisites: M&AE 478, ELE E 471, graduate standing, or permission of instructor; programming ability in FORTRAN, Pascal, or C. Corequisite: ELE E 521. Not offered 1996-97.
Develops the theory of the design of modern multi-input-multi-output feedback control systems using optimal control techniques. Topics covered include trajectory optimization and the minimum principle, bang-bang optimal control solutions, Kalman filtering, LQR/LQE compensator design, suboptimal control and estimation, and applications to regulator and tracking problems. Both linear and nonlinear systems, and continuous-time and discrete-time control, and considered.

M&AE 679 Modeling and Simulation of Dynamic Systems
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
Practice tools with selected applications from diverse fields. Representation of continuous dynamic systems by differential models. Simulation by numerical integration using procedural languages (such as FORTRAN and Pascal) and digital simulation packages (such as CSMP and STELLA). Special topics in linear and nonlinear dynamics. Term project.

[M&AE 715 Finite-Deformation Plasticity and Rheology and Their Applications in Materials Processing]
Fall. 4 credits. Prerequisites: advanced graduate students, Introduction to Continuum Mechanics and Plasticity. Offered alternate years. Not offered 1996-97.

Energy, Fluids, and Aerospace Engineering

M&AE 305 Introduction to Aeronautics
Spring. 3 credits. Limited to upperclass engineers; others with permission of instructor.
Introduction to the concepts of aircraft design. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Description and performance of propeller-driven and jet propulsion engines. Design studies focus on transonic passenger airplanes and small supersonic jets.

M&AE 306 Spacecraft Design
Spring. 3 credits. Prerequisite: ENGR 221.
Introduction to spacecraft design covering launch, orbital maneuvers, and reentry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, spacecraft control, integrated design, thermal control, and atmospheric entry.

M&AE 400 Components and Systems: Engineering in a Social Context (also Physics 481 and Science, Technology, and Society 400)
Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Serves as an approved elective but not as a field elective in mechanical engineering. Offered alternate years. This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through study of individual cases such as the Strategic Defense Initiative (SDI), the National Aerospace Plane, and nuclear power and its alternatives, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.
Stability and Control

lateral-directional motions; transient control at atmospheric-flight vehicles. Review of pollution characteristics. Future possibilities.

Application of thermodynamic and fluid-mechanic principles to the design and projections.

For description, see NS&E 484.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also ELE 484)

For description, see NS&E 403.

M&AE 468 Power Systems

A broad survey of methods of large-scale power generation, emphasizing energy sources, thermodynamic cycle considerations, and component description. Power-industry, economic, and environmental factors, trends, and projections.

M&AE 450 Introduction to Nuclear Science and Engineering I (also A&EE 303, ELE E 403, and NS&E 403)

For description, see NS&E 403.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484)

For description, see NS&E 484.

M&AE 506 Aerospace Propulsion Systems

Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years. Not offered 1996–97.

Application of thermodynamic and fluid-mechanic principles to the design and performance of aerospace systems. Jet propulsion principles, including rockets. Pollution characteristics. Future possibilities for improved performance.

M&AE 507 Dynamics of Flight Vehicles

Spring. 3 credits. Prerequisites: M&AE 405 and Engr 203, or permission of instructor. Offered alternate years.

M&AE 524 Thermal Management of Electronic Packages

Spring. 3 credits. Prerequisites: M&AE 221 and MATH 294 or permission of instructor. Not offered 1996–97.

This course presents the basic elements of heat transfer in the context of thermal control of a microelectronic package: conduction, convection, radiation, and boiling. The application is to semiconductor chips, transistors, resistors, and optoelectronic devices. Topics include component reliability and temperature; conduction of heat in steady and unsteady states; multilayered structures; thermal contact resistance; extended surfaces (fins); analyses of forced and natural convection flows over surfaces and within enclosures; functional solutions, Reynolds analogy, and integral analyses; calculation of the heat-transfer coefficient; the basics of radiative transfer; jet impingement cooling; immersion cooling; and compact heat exchangers.

M&AE 543 Combustion Processes

Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetis processes that govern combustion reaction. Thermodynamics, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, and combustion of solids.

M&AE 601 Foundations of Fluid Dynamics and Aerodynamics

Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

M&AE 602 Fluid Dynamics at High Reynolds Numbers

Spring. 4 credits. Prerequisite: M&AE 601.

M&AE 603 Compressible Flow

Fall. 4 credits. Graduate standing or permission of instructor. Fundamental aspects of compressible flow are described in terms of thermodynamics and fluid properties. Conservation laws and Bernoulli equations. Isentropic flow theory including perfect gas relations and nozzle flow. Normal shock waves including Rankine-Hugoniot relations and compressible flow including duct flow and supersonic flow. Extensive use will be made of computer software to demonstrate and illustrate these topics.

M&AE 608 Physics of Fluids

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.

Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: internal structure, rigid rotor, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics. These ideas are combined through application to modeling finite rate changes in the vibrational energy and chemical composition of high-temperature gases.

M&AE 651 Advanced Heat Transfer

Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Advanced treatment of conductive and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

M&AE 654 Radiation Heat Transfer

M&AE 732 Analysis of Turbulent Flows

M&AE 733 Stability of Fluid Flow

concentrated vortex flows. Spatial development of linearly unstable motion: "absolute" and "convective" instability.

M&AЕ 734 Turbulence and Turbulent Flow
Fall. 4 credits. Prerequisite: M&AЕ 601, graduate standing, or permission of instructor.
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

M&AЕ 736 Computational Aerodynamics
Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Numerical methods to solve inviscid high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming digital computer.

M&AЕ 737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics, heat transfer, or fluid mechanics, and some FORTRAN or C programming experience.

Special Offerings

M&AЕ 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to undergraduate students.
Prerequisite: permission of instructor.
Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AЕ 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credits to be arranged.
Prerequisite or corequisite: M&AЕ 428.
Fulfills field design requirement.
Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

M&AЕ 545 Energy Seminar
For description, see NS&E 545.

M&AЕ 592 Seminar and Design Project in Aerospace Engineering
Fall, spring. 2 credits each term. Prerequisite: graduate standing or permission of instructor. Intended for students in M&AЕ (Aerospace) program.
Introduction to topics of current research interest in aerospace engineering by Aerospace faculty and invited speakers. Individual design projects supervised by separate faculty members after introductory sessions.

M&AЕ 594 Manufacturing Seminar
For description, see OR&IE 893.

M&AЕ 690 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to graduate students.

M&AЕ 695 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Graduate standing and permission of instructor.
Special lectures by faculty members on topics of current research.

M&AЕ 791 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects.
Presentations on research in progress by faculty and students.

M&AЕ 799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&AЕ 890 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&AЕ 990 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A&EP 509, 612, 633, 634, 636, 638, and 651).

NS&E 121 Fission, Fusion, and Radiation (also ENGR 121)
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see Engineering Common Courses.

NS&E 285 Art, Archaeology, and Analysis
For description, see ENGR 185.

NS&E 403 Introduction to Nuclear Science and Engineering I (also A&EP 303, ELEE 403, and M&AЕ 458)
Fall. 3 credits. Prerequisites: Physics 214 and Mathematics 112.
This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field.
Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering, nuclear structure, radioactivity, and reactions; interaction of radiation and matter, and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of Introduction to Nuclear Engineering, by Lamarche.

 NS&E 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AЕ 459, and A&EP 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor.
Intended for seniors and graduate students.
Introduction to the physical principles and various engineered aspects underlying power generation by controlled fusion. Topics include: (i) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (ii) fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and (iii) an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&E 509 Nuclear Physics for Applications
Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some upper-division physics is desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. Offered on demand.
A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vance.

NS&E 545 Energy Seminar (also M&AЕ 545 and ELEE 567)
Fall and spring. 1 credit each semester. May be taken both fall and spring for credit. Master of Engineering (M.Eng.) students in the Energy Option are expected to take this seminar both fall and spring for credit.
Energy resources, their conversion to electricity or process heat, and the environmental consequences of the energy cycle will be discussed by faculty members from several institutions.
departments in the College of Engineering, other units within the university, and invited experts. Examples of topics are energy resources, economics, and politics; coal-based electricity generation; nuclear reactors; solar power; energy conservation by users; and energy from biomass.

**NS&E 551 Nuclear Methods in Non-Nuclear Research Fields**
Spring. 3 credits. Prerequisite: Physics 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology, geology, chemistry, biology, materials science, and other non-nuclear fields in which nuclear methods are used. Open to qualified undergraduates. A more intensive related course, A&EP 651, is intended for nuclear specialists. Offered on demand.

Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experiments on radiation detection and measurement; electronic instrumentation, including computerized systems; activation analysis, and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on methods used in non-nuclear fields. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vance.

**NS&E 590 Independent Study**
Fall, spring. 1-4 credits. Grade option letter or S-U. Independent study or project under guidance of a faculty member.

**NS&E 591 Project**
Fall, spring. 1-6 credits. Master of Engineering or other project under guidance of a faculty member.

**NS&E 621 Radiation Effects in Microelectronics (also ELE E 633)**
Fall. 1 to 3 credits. Prerequisite: ELEE 435 or permission of instructor. A seminar offered in alternate years intended for seniors and graduate students in engineering or applied physics. S-U or letter grade option.

An introduction to the physical processes that underlie the malfunction and failure of microelectronic circuitry resulting from exposure to ionizing radiation. The roles testing and modeling play in improving circuit and device designs are included.

**OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING**

**OR&IE 210 Industrial Systems Analysis**
Spring. 4 credits. Prerequisite: ENGRT 270, OR&IE 350. Design of production facilities, including engineering economy, taxation effects, materials handling, product design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control. Formerly listed as OR&IE 410.

**OR&IE 320 Optimization I**
Fall. 4 credits. Prerequisite: Mathematics 221 or 294. Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

**OR&IE 321 Optimization II**
Spring. 4 credits. Prerequisite: ORIE 320 or equivalent.

A variety of optimization methods stressing extensions of linear programming and applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

**OR&IE 350 Financial and Managerial Accounting**
Fall. 4 credits. Principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of short-term decisions.

**OR&IE 360 Engineering Probability and Statistics I**
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.

This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

**OR&IE 361 Introductory Engineering Stochastic Processes I**
Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent.

Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queueing and reliability.

**OR&IE 415 Design of Manufacturing Systems**
Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor only.

Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures. Lab fee $15.

**OR&IE 417 Material Handling Systems**
Fall. 4 credits. Design of the layout of processes and storage areas and the material-handling system for movement of items. Typical equipment used. Material flow analysis. The functions of identification control, storage, movement, batching, merging, and dispersion.

**OR&IE 431 Discrete Models**
Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor.

Basic concepts of graphs, networks, and discrete optimization. Fundamental models and algorithms, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

**OR&IE 432 Nonlinear Optimization**
Spring. 4 credits. Prerequisite: OR&IE 320. Not offered 1996-97; next offered 1997-98.

Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming, e.g. interior-point methods. Methods of numerical linear algebra introduced as needed.

**OR&IE 435 Introduction to Game Theory**
Spring. 3 credits.

A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games, games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

**OR&IE 451 Economic Analysis of Engineering Systems**
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 360.

Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student project group.

**OR&IE 462 Introductory Engineering Stochastic Processes II**
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent.

Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.
**OR&IE 475 Regression**  
Spring. First half of term. 2 credits.  
Prerequisite: ENGRD 270.  
Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

**OR&IE 476 Experimental Design I**  
Spring. Second half of term. 2 credits.  
Prerequisite: ENGRD 270.  

**OR&IE 490 Teaching in OR&IE**  
Fall, spring. Credit to be arranged.  
Prerequisite: permission of instructor.  
This course involves working as a TA in an OR&IE course. The course instructor will assign credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

**OR&IE 499 OR&IE Project**  
Fall, spring. Credit to be arranged.  
Prerequisite: permission of instructor.  
Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

**OR&IE 515 Design of Manufacturing Systems**  
Fall. 4 credits. Prerequisite: permission of instructor. Limited to M.Eng. students in OR&IE.  
For description, see OR&IE 416. Lab fee $15.

**OR&IE 516 Case Studies**  
Fall, 1 credit. Limited to M.Eng. students in OR&IE.  
Students are presented with unstructured problems that resemble real-world situations. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

**OR&IE 520 Operations Research I: Optimization I**  
For description, see OR&IE 520.

**OR&IE 521 Optimization II**  
For description, see OR&IE 521.

**OR&IE 522 Operations Research II: Topics in Linear Optimization**  
Fall, 1 credit. Corequisite: OR&IE 520.  
Students who have already taken OR&IE 521 should not enroll. Limited to M.Eng. students in OR&IE.  
An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

**OR&IE 523 Operations Research II: Introduction to Stochastic Modeling**  
For description, see OR&IE 516.

**OR&IE 525 Production Planning and Scheduling Theory and Practice**  
Spring. 3 credits. Prerequisite: OR&IE 320.  
Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing operations in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

**OR&IE 528-529 Selected Topics in Applied Operations Research**  
Fall, spring. Credit to be arranged.  
Prerequisite: permission of instructor. Current topics dealing with applications of operations research.

**OR&IE 551 Economic Analysis of Engineering Systems**  
Spring, 4 credits. Prerequisites: OR&IE 320 and OR&IE 350. Lectures concurrent with OR&IE 451. For description see OR&IE 451.

**OR&IE 560 Engineering Probability and Statistics II**  
For description, see OR&IE 560.

**OR&IE 561 Queuing Theory and its Applications**  
Spring. 3 credits. Prerequisite: OR&IE 361 or permission of instructor. Not offered 1996–97; next offered 1997–98.  

**OR&IE 562 Inventory Theory**  
Spring. 4 credits. Prerequisite: OR&IE 361, 361 or permission of instructor. Not offered 1996–97; next offered 1997–98.  
Discussion of the nature of inventory systems and their design and control. Periodic and continuous review policies for single-item and single-location problems. Multi-item and multi-echelon extensions. Dynamic and static models are discussed. Distribution problems are analyzed. Applications are stressed.

**OR&IE 563 Applied Time-Series Analysis**  
Fall, 3 credits. Prerequisites: OR&IE 361 and OR&IE 270, or permission of instructor.  
The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

**OR&IE 564 Introductory Engineering Stochastic Processes II**  
Spring, 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.  
For description, see OR&IE 462.

**OR&IE 565 Applied Financial Engineering**  
Spring. 4 credits. Limited to M.Eng. students.  
This course has two components: a sequence of lectures and a project. The course will be co-listed with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng project requirement.

**OR&IE 571 Introduction to Engineering Design II**  

**OR&IE 575 Experimental Design II**  

**OR&IE 577 Quality Control**  
Fall. 3 credits. Prerequisites: ENGRD 270.  

**OR&IE 580 Design and Analysis of Simulated Systems**  
Fall. 4 credits. Prerequisites: programming experience and OR&IE 360/560, or permission of instructor. Note: OR&IE 360/560 may be taken concurrently.  
Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo-random-variable generation, simulation languages, statistical considerations; applications to a variety of problem areas.

**OR&IE 590 Project**  
Fall, spring. 5 credits. For M.Eng. students.  
Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

**OR&IE 625 Scheduling Theory**  
Spring, 4 credits.  
Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

**OR&IE 626 Advanced Production and Inventory Planning**  
Introduction to a variety of production and inventory control planning problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.

**OR&IE 630 Mathematical Programming I**  
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.  

**OR&IE 631 Mathematical Programming II**  
A continuation of OR&IE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Some discussion of dynamic programming, and elementary polyhedral theory.
OR&IE 632 Nonlinear Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Necessary and sufficient conditions for unconstrained and constrained optimization. Duality theory. Computational methods for unconstrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.

OR&IE 633 Graph Theory and Network Flows

OR&IE 634 Combinatorial Optimization
Fall. 3 credits. Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms. Topics change each semester. This course may be taken more than once for credit.

OR&IE 635 Interior-Point Methods for Mathematical Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

OR&IE 636 Integer Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Theory and algorithms for integer programming problems.

OR&IE 637 Polyhedral Convexity

OR&IE 650 Applied Stochastic Processes
Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

OR&IE 651 Probability
Spring. 4 credits. Prerequisite: Real analysis at the level of Math 413 and a previous one-semester course in calculus-based probability. Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

OR&IE 662 Advanced Stochastic Processes
Fall. 3 credits. Prerequisite: OR&IE 651 or equivalent. Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

OR&IE 663 Time-Series Analysis

OR&IE 665 Statistical Principles
Fall. 4 credits. Co-requisite: OR&IE 650 or equivalent. Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation, maximum likelihood and Bayes estimation, basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

OR&IE 671 Intermediate Applied Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 1996-97; next offered 1997-98. Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

OR&IE 672 Selected Topics in Environmental Statistics (also BTRY 672)
Fall, spring. 2 credits. Prerequisite: ENGR 270 or equivalent. For description, see BTRY 672.

OR&IE 676 Statistical Analysis of Life Data

OR&IE 678 Asymptotic Methods in Statistics
Fall. 3 credits. Prerequisite: OR&IE 670 or Mathematics 574. Not offered 1996-97; next offered 1997-98. Topics chosen from: large-sample behavior of MLE's and other estimates; chi-square, likelihood ratio, and related tests; Pitman and Bahadur efficiency; LAN families and LAM estimates; statistical applications of Edgeworth expansions; adaptive estimation and semiparametric inference, rank statistics, EDF and sample quantiles, nonparametric estimation, and smoothing.

OR&IE 680 Simulation
Spring. 4 credits. Prerequisite: permission of instructor. An advanced version of OR&IE 580, intended for Ph.D-level students.

OR&IE 728-729 Selected Topics in Applied Operations Research
Fall, spring. Credit to be arranged. Current research topics dealing with applications of operations research.

OR&IE 738-739 Selected Topics in Mathematical Programming
Fall, spring. Credit to be arranged. Current research topics in mathematical programming.

OR&IE 748-749 Selected Topics in Applied Probability
Fall, spring. Credit to be arranged. Topics chosen from current literature and research areas of the staff.

OR&IE 778-779 Selected Topics in Applied Statistics
Fall, spring. Credit to be arranged. Topics chosen from current literature and research of the staff.

OR&IE 780 Special Investigations
Fall, spring. Credit to be arranged. For individuals doing thesis research for master's or doctoral degrees.

OR&IE 891 Operations Research Graduate Colloquium
Fall, spring. 1 credit. A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.
THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD Player (also MS&E and ENGR 118)
Fall. 3 credits.
For description, see Engineering Common Courses.

T&AM 202 Mechanics of Solids (also ENGRD 202)
Fall, spring. 3 credits. Prerequisite: Physics 112, coregistration in Mathematics 293 or permission of instructor.
For description, see Engineering Common Courses.

T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in Mathematics 294, or permission of instructor.
For description, see Engineering Common Courses.

Engineering Mathematics

T&AM 191 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191/193. For description, see MATH 192.

T&AM 193 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry. For description, see MATH 193.

T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in Engineering Common Courses 101.
For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.
For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent. Initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Special functions, linear partial differential equations. Introduction to probability and statistics. Use of computers to solve problems.

T&AM 311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: Mathematics/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310). Introduction to complex variable theory. Cauchy's Integral theorem, Laurent series, Classification of singularities, Method of residues. Applications include conformal mapping (Laplace equation), Laplace transform, Fourier transform. Fourier series, Transfer function, Solution and stability of Linear Systems. Examples are drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates, open to exceptional undergraduates with permission of instructor. Emphasis is on linear algebra, calculus of several variables, vector analysis, ordinary differential equations, complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent. Emphasis on applications. Partial differential equations, transform techniques; tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics III
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes' phenomenon. The course may also include computer exercises at the option of the instructor.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent. Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes' phenomenon. The course may also include computer exercises at the option of the instructor.

T&AM 591 Master of Engineering Design Project I
Fall. 3-6 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II
Spring. 5-15 credits. M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M&E 655 and MS&E 455)
Fall. 4 credits. Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits. Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors; deformations, rotations and strains; balance principles; stress, small-strain theory; linear elasticity; stress concentrations; classical elasticity; linear viscoelasticity; fundamental solutions; composite materials. There is a group component including computer software for design; which may include normal forms, center manifolds, Liapunov-Schmidt reductors. The course may also include computer exercises at the option of the instructor.

T&AM 664 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent. Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, Airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; three-dimensional elasticity.

T&AM 751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611, and 663 and 664 or equivalents. Kinematics; conservation laws; the entropy inequality; constitutive relations: frame indifference, material symmetry; finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611, and 751 or equivalents. Offered alternate years. Review of governing equations. Linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories, phase transformations and crystal defects.

T&AM 753 Fracture
Fall. 3 credits. Prerequisites: T&AM 610 or 611, and 663 and 664 or equivalents. Offered alternate years. Fundamentals of linear elastic fracture mechanics: K, small-scale yielding, solutions of elastic crack problems, energy concepts, J-integral. Nonlinear, rate-independent, small-deformation, fracture mechanics: plastic fracture, J-integral, small-scale yielding, fields for stationary and growing cracks. Failure mechanisms of polymers, ceramics, composites, and metals: void growth, load transfer

T&AM 757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 665 and 644 or equivalents. Offered alternate years. Not offered 1996-97. Plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; solution of boundary-value problems, plastic waves, one- and three-dimensional. Visco-elasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 633 and 644 or equivalents. Offered alternate years. Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

T&AM 760 Elastic Waves
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 633 and 644 or equivalents. Offered alternate years. Not offered 1996-97. An advanced course on dynamic stress analysis and wave propagation in elastic solids. Theory of elastodynamics; waves in isotropic and anisotropic medium; reflection and refraction, surface waves and waves in layered media; transient waves and methods of Lamb-Cagniard-Papkens; thick plate theories; vibrations of spheres; scattering of waves and dynamic stress concentrations.

T&AM 761 Advanced Dynamics
Spring. 3 credits. Prerequisite: Mathematics T&AM 293 or equivalent. Review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; Melnikov's method.

T&AM 762 Celestial Mechanics (also Astronomy 578)
Spring. 3 credits. Offered alternate years. Not offered 1996-97. Description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability, capture problems. Osculating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings.

T&AM 673 Mechanics of the Solar System (also Astronomy 571)

T&AM 675 Nonlinear Vibrations
Fall. 3 credits. Prerequisite: T&AM 578 or equivalent. Offered alternate years. Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous medium, normal forms, and exploitation of symmetry.

T&AM 776 Applied Dynamical Systems
Not offered 1996-97. For description, see MATH 617.

Special Courses, Projects, and Thesis Research

T&AM 491-492 Project In Engineering Science
491, fall; 492, spring. 1-4 credits, as arranged. Projects for undergraduates under the guidance of a faculty member.

T&AM 790-800 Topics In Theoretical and Applied Mechanics
Fall, spring. 1-3 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research In Theoretical and Applied Mechanics
Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research In Theoretical and Applied Mechanics
Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

GRADUATE SCHOOL

Walter Cohen, dean
Christine Ranney, associate dean
Eleanor S. Reynolds, associate dean
Hilary Ford, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee who usually has the primary responsibility for directing the student's thesis or dissertation research.

Students who want to use the university's facilities for intensive specialized training only and who do not want to become degree candidates may apply for admission as non-degree students.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:
1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be
1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher;
2) a degree from a college or university in a country where the native language is English; or
3) two or more years of study in an undergraduate or graduate program in a country where the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08541, U.S.A.

Applications for admission to the Graduate School may be submitted at any time during the year. Many fields, however, require that applicants for fall admission submit their completed applications by January 10.

Applicants who are also applying for Cornell Graduate School fellowship consideration must submit their completed applications and supporting credentials by January 10.

Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, New York 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the graduate faculty representative in the particular field.

More detailed information is contained in the Graduate School Catalog. Both the catalog and an application for admission to the Graduate School may be obtained from the Graduate School, Caldwell Hall, Cornell University, Ithaca, New York 14853-2602. Both the catalog and application are available for viewing on the World Wide Web: http://www.gradschool.cornell.edu/.

Note: Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on these programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
ADMINISTRATION
David A. Dittman, dean
A. Neal Geller, associate dean for academic affairs
Judi Brownell, Richard J. and Monene P. Bradley director for graduate studies
Timothy Hinkin, director of undergraduate studies
Donald C. Bishop, associate dean of students and enrollment management
David W. Butler, associate dean for executive education
Margaret Haley Ferguson, director of financial services
James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center
Cheryl S. Farrell, director of student services
Yariela Kerr-Donovan, director of minority student programs
Sandra K. Boothe, director of the professional master's program
Katherine S. Margolis, director of academic information resources and training
Richard S. MacDonald, director of administrative services
Preston Clark, director of instructional support
Mille Reed, associate director of career services
Harry R. Keller, director of alumni affairs
Glenn Withiam, director of publications
Fred Conner, senior editor of the Cornell Hotel and Restaurant Administration Quarterly
Mark Adams, director of communications

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 25,000 volumes, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student. Please visit us and benefit from our collections and services.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs for approximately 300 students each semester with preference given to students in the hotel school.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;
2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses in the final semester), of 120 required and elective credits, as set forth in the table on the following page;
3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 500 on Cornell Placement Test; 3) pass 121 and 122 (8 credits) or the equivalent, and attain a minimum grade of at least C- in each (C or above for transfer credit from other institutions); or 4) pass 123 or the equivalent;
4) completion of two units of practice credit prior to the last term of residence, as defined on the following page;
5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the selected concentration accounts for 12 credits, and the remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 21-credit group of free electives.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least seventy-five (75) credits at Cornell University, of which a minimum of sixty (60) must be in courses offered by the Hotel School, and nine (9) must be in distributive electives taken outside the Hotel School. Thus, a maximum of forty-five (45) hours in transfer credit may be allowed from other accredited colleges or universities, as follows.

<table>

<tr>
<td>Ph.D.</td>
</tr>
</tbody>
</table>

223
In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others (including HA 243 and HA 174) generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. Communication courses (HA 105 and HA 356) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Concentration courses may not transfer without the express written consent of the faculty in the area concerned. While such consent is rare, it is not impossible.

The remaining nine (9) must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three (3) credits are taken (at Cornell or transferred from elsewhere) in each area.

Twenty-one (21) credits in free electives may transfer.

Concentration

While completing the required courses leading to the bachelor's degree, undergraduates in the school also must select a concentration: 12 elective credits in a major area of the core curriculum or, with the support of a faculty member, in a self-directed course of study.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement, in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

Independence Study

Students may conduct independent study projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H Adm 499 or 699 for more details.

Practice-Credit Requirement

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last semester. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school's Career Services Office, room 255 Statler Hall.

Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 academic credits, 1 practice credit, and may petition on an ad-hoc basis to have a portion of the academic credits applied toward their concentration. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the U.S. and internationally. Sponsors include hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance.

Information meetings are held at the beginning of each semester and are open to all students. See H Adm 493 and 494 for more details. More information about the management intern program is also available in the Career Services Office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Study Abroad Office (in Uris Hall). Students in recent years have studied in Italy, Spain, France, England, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's study-abroad faculty representative and the director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0, D to 1.0, F to 0. For good standing, the student must maintain a minimum average of 2.0. Of the free-elective courses, a maximum of 4 credits each term may be taken on a “satisfactory-unsatisfactory” (S-U) basis.
Sophomore Year

Required courses

- H Adm 211, Human Resources Management 3
- H Adm 221, Managerial Accounting 3
- H Adm 222, Finance 3
- H Adm 236, Culinary Theory and Practice 4
- H Adm 243, Principles of Marketing 3
- H Adm 255, Hotel Development and Planning 3

Free electives 3-6
Distributive electives 3-6

Junior Year

Required courses

- H Adm 301, Strategic Management 3
- H Adm 321, Hospitality Financial Management 3
- H Adm 355, Restaurant Management 4
- H Adm 355, Hospitality Facilities Operations 3
- H Adm 365, Managerial Communication: Principles and Practices 3
- H Adm 387, Business and Hospitality Law 3

Concentration 6

Free electives 3-6

Balance of courses are electives.

Total credits required for first-year professional master's program: 64

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

Management Operations Courses

H ADM 100 Principles of Management
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. R. Chase. An introductory survey course in management with general reference toward the hospitality industry. The course is organized around the traditional management functions of planning, organizing, leading, and controlling.

H ADM 102 Distinguished Management Lectures
Fall. 1 credit. Limited to hotel school students except by written permission. Elective. D. Dittman. A series of lectures given by non-resident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.

H ADM 105 Rooms-Division Management
Fall and spring. 3 credits. Limited to hotel school and sponsored internal transfer division students. Required. R. Hartmanis. Provides students with a comprehensive, well-rounded, fundamental understanding of rooms division operations and management in hotels. Operational areas include housekeeping reservations, front desk (including check-in, check-out, bellstand, operator, and night audit). Managerial areas include yield management, human resource management, basic marketing and management principles, and organizational objectives.

H ADM 301 Strategic Management
Fall and spring. 3 credits. Limited to 45 juniors and seniors per lecture. Prerequisites: H Adm 105, 115, and 211 or equivalents. Required. C. Enz, P. Rainford. Focuses on analysis, planning, change, and implementation issues associated with strategic management, emphasizing the value of analyzing environments and formulating strategies linked to environmental conditions, building on organizational strengths, and defending against organizational weaknesses. Emphasis also on handling ambiguous facts and analysis. Because of the group project nature of the course, the absolute drop deadline for all students is September 5 in the fall and January 27 in the spring.

H ADM 303 Club Management
Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H Adm 105, or equivalent. Elective. R. James. The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards.

H ADM 305 Resort and Condominium Management
Fall. 3 credits. Not open to freshmen. Recommended: H Adm 387. Elective. M. Noden. A lecture course in the operation of various types of resort hotels and condominiums. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and non-contract relationships with the travel industry, terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed.

H ADM 306 Franchising in the Hospitality Industry
Fall. 2 credits. Prerequisite: H Adm 121. Elective. M. Noden. Relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

H ADM 401 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to juniors, seniors, and graduate students, with preference given to hotel school seniors and second-year graduate students. Prerequisites: H Adm 115, 702, or equivalents. Elective. T. Simons. Provides hands-on experience in negotiation in a hospitality context. Through role-play exercises, discussion, and writing, students will develop their skills at the fine art of being a tough negotiator with whom people want to continue doing business. Students will improve their comfort level with negotiations and will develop their own personal negotiating style as well as adjusting their style to respond to others’ different personalities and negotiation tactics.

H ADM 402 Hospitality Management Seminar
Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H Adm 102. Elective. D. Dittman.

GRADUATE CURRICULUM

The school’s programs for advanced degrees include those of Master of Management in Hospitality, Master of Science, and Doctor of Philosophy. For further information on graduate programs, consult the school’s graduate catalog (available in room 172 Statler Hall), contact Professor Judi Brownell, the school’s Bradley director for graduate studies at 255-7245, Sandra K. Boothe, director of the Master of Management in Hospitality program at 255-7246, or see the university’s Announcement from the Graduate School.

Required Program for Professional Master’s Students

Required courses

- H Adm 701, Competitive Strategies for the Hospitality Industry 3
- H Adm 702, Human Behavior in Organizations 3
- H Adm 711, Human Resources Management 3
- H Adm 721, Financial Economics 3
- H Adm 722, Hospitality Financial Management 3

H Adm 731, Food and Beverage Management 3
H Adm 741, Marketing Management 3
H Adm 751, Properties Development and Planning 3
H Adm 761, Communication Modules 0
H Adm 771, Quantitative Methods 3

H ADM 303 Club Management
Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H Adm 105, or equivalent. Elective. R. James. The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards.

H ADM 305 Resort and Condominium Management
Fall. 3 credits. Not open to freshmen. Recommended: H Adm 387. Elective. M. Noden. A lecture course in the operation of various types of resort hotels and condominiums. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and non-contract relationships with the travel industry, terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed.

H ADM 306 Franchising in the Hospitality Industry
Fall. 2 credits. Prerequisite: H Adm 121. Elective. M. Noden. Relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.

H ADM 401 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to juniors, seniors, and graduate students, with preference given to hotel school seniors and second-year graduate students. Prerequisites: H Adm 115, 702, or equivalents. Elective. T. Simons. Provides hands-on experience in negotiation in a hospitality context. Through role-play exercises, discussion, and writing, students will develop their skills at the fine art of being a tough negotiator with whom people want to continue doing business. Students will improve their comfort level with negotiations and will develop their own personal negotiating style as well as adjusting their style to respond to others’ different personalities and negotiation tactics.

H ADM 402 Hospitality Management Seminar
Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H Adm 102. Elective. D. Dittman.
A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the speaker's area of expertise. The class is relatively unstructured, and students are expected to participate in discussions.

### HOTEL ADMINISTRATION

#### H ADM 404 Entrepreneurship and Small Business Management
Fall and spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H Adm 321 or equivalent. Elective. Not offered spring 1997. R. Rainford.
Focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used. There will be one major term project, which will require the application and integration of the course material. Because of the group project nature of the course, the absolute drop deadline for all students is September 5 in the fall.

#### H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin.
Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analysis.

#### H ADM 406 Integrated Studies in the Hospitality Industry
Fall and spring. 3 credits. Limited to hotel school seniors. Elective. R. Chuse.
Employed text readings, participation in a simulation of a hotel organization, and guest presentations to explore business missions, objectives, strategies, action plans, and evaluations. As an integrative, summary course, the areas of review and application will involve hotel and food service, marketing, organization, and finance.

#### H ADM 407 Seminar in Hotel Operations
Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-to-large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

#### H ADM 408 Introduction to Casino Operations
Spring. 2 credits. Limited to 45 juniors, seniors, and graduate students. Estimated cost of field trip, $150. Elective. Faculty.
Introduction to the multi-billion dollar gaming industry, including a historical overview of gaming and examination of legal, social, and economic issues within the industry. Reviews various games played in casinos, current trends, and the most popular casino destinations in the world. Special attention is devoted to the growth of casinos in cruise ships, Indian reservations, and on river boats in the U.S.

#### H ADM 409 Airline Management
Spring. 3 credits. Limited to 25 seniors and graduate students. Elective. Focuses on domestic and international airline industries and explores both pre- and post- regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

#### H ADM 501 Creative Management for Organizational Change
Spring. 3 credits. Limited to 24 students. Elective. Through lectures, exercises, and group problem-solving sessions, students will explore the characteristics of creative people, organizations, and processes, and obtain an inventory of their own creative abilities, examine blocks to creativity and ways to overcome them, plan tactics for selling ideas, discuss methods for leading creative problem-solving meetings, and analyze strategies for producing organizational change. Organizational leaders will present problems for which students will develop creative solutions.

#### H ADM 603 Managing Across Cultural Boundaries
Spring. 3 credits. Limited to 15 seniors and graduate students. Prerequisites: H Adm 121, 165, 301, 321, or graduate student status. Elective. T. Cullen.
Contributes to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and conflicts faced by managers working in foreign countries; and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

#### H ADM 605 Best Practices for High Performance and the Management of Change
Fall and spring. 3 credits. Professional master's elective. Not offered 1996-97; next offered fall 1997. Explores the dynamics of identifying and implementing "best practices" to renew organizations and enhance performance. Examines how to introduce planned change to implement the practices. Emphasis placed on the diagnosis and design of human resource initiatives to achieve improved organizational performance.

#### H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master's requirement. T. Cullen.
An integration and application of management concepts and strategies to business situations. Students analyze current problems, formulate strategies, and implement policies.

#### H ADM 702 Human Behavior in Organizations
Fall. 3 credits. Professional master's requirement. T. Hinkin.
An integration of theory and application, designed to increase interpersonal and managerial effectiveness. Emphasis on personality and perception, decision making, motivation, power, group process, and diversity management.

### HUMAN RESOURCES MANAGEMENT COURSES

#### H ADM 115 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. P. Berger, T. Simons.
Focuses on managing people in the workplace. Students develop theoretical lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.

#### H ADM 210 The Management of Human Resources
Fall and spring. 3 credits. Limited to 100 non-hotel school students, no freshmen. Elective. C. Lundenberg.
Examines the role of human resources management, starting with an introduction to the personnel function, and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized.

#### H ADM 211 Human Resources Management
Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, no freshmen or graduate students. Prerequisite: H Adm 105 and 115 (co-registration in 115 allowed). Required. B. Tracey.
Provides students with an overview of the human resources management (hrm) field and shows them the link between specific hrm activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will understand the relationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will a) understand the relationship among hrm activities, as well as the relationship between hrm and other functional areas within hospitality organizations; and b) understand how to effectively attract, retain, and motivate hospitality employees.
Training is one of the primary activities for
coping with a continuously changing
environment. It also is one of the fundament­
al responsibilities of all hospitality managers.
Students will learn the major theoretical and
practical issues associated with program
design, development, implementation, and
evaluation. Semester-long project with one or
more hospitality organizations.

H ADM 412 Managing Organizational
Change
Spring. 3 credits. Prerequisite: H ADM
211 or equivalent. Elective. C. Lundberg.
Facilitating and managing change in organiza­
tions. Topics include change processes,
organizational diagnosis, action planning, and
consultancy. Individual and team projects.

H ADM 414 Leadership and Small Group
Processes
Fall. 3 credits. Limited to 30 hotel school
juniors, seniors, and graduate students.
Elective. C. Lundberg.
Applications of organizational behavior will be
explored through lectures, case studies, and
management games and exercises. Students
will participate in experiential labs aimed at
enhancing their effectiveness as members or
leaders of groups. Topics include leadership,
decision making, motivation, power, and
organizational change.

H ADM 415 Managerial Leadership in the
1990s
Spring. January 31, February 1, 2.
1 credit. Elective. K. Blanchard.
Students become participant observers in their
own lives through studying the field of
applied behavioral science. Students will be
able to use what they learn about human
beings and how they function best in groups
and organizations on a day-to-day basis to
develop quality relationships between
themselves and the people they support and
depend upon (boss, staff, internal peers/
associates and customers). Because of the
popularity of this class, priority will be
given in the following order: seniors,
juniors, non-employee extramural
students, sophomores, freshmen, and
Cornell employees. Space permitting, the
class may be added up to the first day,
but the absolute deadline for dropping the
course is 3:00 p.m. on the Monday
immediately preceding the first class day.

H ADM 711 Human Resources
Management
Spring. 3 credits. Professional master’s
requirement. C. Lundberg.
Focuses on the development of human
resources management skills and exploration of
the dilemmas and responsibilities of
leadership. Uses managerial perspective with
emphasis on the effects that managerial
activities have on recruitment, selection, and
retention systems. Individual decision-making
and integration abilities will be assessed. Case
studies, exercises, and simulations.

FINANCIAL MANAGEMENT COURSES

H ADM 120 Survey of Financial
Management
Spring. 2 credits. Limited to non-hotel
school students. Elective. Faculty.
A survey of basic principles of financial
management, investment management, and
financial analysis. Designed for the student
who desires a basic general knowledge of
financial decision making.

H ADM 121 Financial Accounting
Fall and spring. 3 credits. Limited to hotel
school students. Required. D. Ferguson.
The basic principles of financial accounting,
transaction analysis, flow of accounting data
to the financial statements, and careful
consideration of accounting for revenues,
expenses, assets, liabilities, and owner’s
equity.

H ADM 123 Financial Accounting
Principles
Spring. 3 credits. Limited to non-hotel
school students. Elective. Faculty.
An in-depth introduction to the principles of
financial accounting, involving transaction
analysis, flow of accounting data to the
financial statements, and careful consideration
of accounting for revenues, expenses, assets,
liabilities, and owner’s equity.

H ADM 125 Finance
Fall and spring. 3 credits. Limited to non-
hotel school students. Elective. Faculty.
Corporate finance topics include time value of
money, financial markets, interest rates,
financial statement analysis and planning,
working capital policy and management, risk
and return, risk management, security
valuation models, cost of capital, capital
budgeting, capital structure, dividend policy,
and creative finance.

H ADM 221 Managerial Accounting
Fall. 3 credits. Prerequisites: H ADM 121
and 175, or equivalents. Required.
G. Potter.
Focuses on the use of accounting information
for management decision making and control.
Topics include product costing, management
control systems and performance measure­
ment.

H ADM 222 Finance
Spring. 3 credits. Prerequisite: H ADM
121, 221, or equivalents. Required.
S. Carvell.
Provides students with accounting cash flow
information for financial planning, capital
structure decisions, capital budgeting,
valuation and short-term and long-term
financial decision making. Topics include
current asset management, short-term
financing, capital budgeting, long-term
financing, cost of capital, and problems in
international finance.

H ADM 321 Hospitality Financial
Management
Fall. 3 credits. Prerequisites: H ADM 121,
221 and 222, or permission of instructor.
Required. J. Fyster
Integrates theories of financial accounting,
managerial accounting, and finance and
applies the interpretive and analytical skills of
each to hospitality-industry situations. Topics
include uniform system of accounts, revenue
and expense tracking and internal control,
cost behavior, accounting systems, ratio and comparative
analysis, cost-volume-profit analysis, pricing,
operational budgeting, project capital
budgeting, decision-making, equity and debt
financing structures, and operating agreement
forms. Students analyze hospitality operations
and projects and present their findings in
management report form.

H ADM 322 Principles of Investment
Management
Fall. Limited to non-hotel school students.
Hotel school students or those with a
background in economics, quantitative
analysis, and computers are advised to
enroll in H ADM 424. Elective. A. Arbel.
An introductory course covering institutional
and analytical aspects of security analysis and
investment portfolio making with emphasis on
valuation models and practical strategies for
stocks, bonds, and mutual fund selection and
trading. Computer-assisted analysis, including
students participation in an investment game,
is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate
Finance
Spring. 3 credits. Limited to juniors and
seniors. Prerequisite: H ADM 321, or
equivalent. Elective. Faculty.
Focuses on real estate financing for hospitality-
based projects. Topics include methods of
measuring rates of return; feasibility and
appraisal processes; equity and debt financing
vehicles to include joint ventures, limited
partnerships, construction mortgages,
 participación, convertible, and seller-financed
mortgages; forms of operating agreements to
include management contracts, leases, and
franchises; workout strategies for distressed
properties; trends in international hotel
franchising; and ethical issues of real estate
development. Presentation of hospitality
industry real estate practitioners.

H ADM 324 International Financial
Management
Fall and spring. 3 credits. Prerequisites:
H ADM 121, 221, 222, or equivalents, micro
and macroeconomics. Elective.
D. Ferguson.
Focuses on the international aspects of
financial management important to the
hospitality industry with the intention of
providing an understanding of and confidence
in dealing with the economic issues faced by
the multinational corporation. Areas covered
are the international financial management
environment, the management of foreign
exchange risk, international asset manage­
ment, and international sources of funds.

H ADM 326 Corporate Finance
Fall. 3 credits. Limited to juniors and
seniors. Prerequisite: H ADM 321.
Elective. S. Carvell.
In-depth analysis of corporate financial
management, including financing alternatives
and capital structure decisions, cash manage­
ment, capital budgeting decisions, risk
analysis, and working capital management.
Although applicable to all businesses, special
attention is placed on issues important to the
hospitality industry. Emphasizes analytical
methods through case studies and an in-depth
semester project.

H ADM 421 Internal Control In
Hospitality Operations
Fall. 3 credits. Limited to 30 students.
Prerequisite: H ADM 321, 722, or
Hotel and restaurant operations are analyzed
from the perspective of preventing fraud and
embezzlement. The design and distribution of
production, accounting, information systems,
and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors and graduate students. Elective. A. Sciarabba.

Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter "S" corporations; financial information reporting to tax authorities and shareholders and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

H ADM 423 Financial Management Policy
Fall. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H Adm 326 or 721. Elective. S. Carvell.

Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: micro and macro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective. A. Adal.

An in-depth analysis of financial instruments, investments and portfolio management including fixed income, equity securities, advanced valuation models, risk-return analysis, screening techniques, asset allocation and active portfolio management and trading. Recent developments in investments research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 621 Hospitality Real Estate Finance
Spring. 3 credits. Limited to graduate students. Prerequisite: H Adm 722, or equivalent. Elective. Faculty.

For description, see H ADM 323. This graduate course includes the H Adm 323 lectures plus an hour-long discussion session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 624 Analysis and Interpretation of Financial Statements
Spring. 3 credits. Limited to seniors and graduate students. Elective. G. Potter.

Covers the financial accounting issues that are encountered in reporting the operations of corporate enterprises. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. Emphasis is on outsiders' views of the company and their decision making through interpretation of the statements.

H ADM 721 Financial Economics
Fall. 3 credits. Professional master's requirement. Faculty.

Integrates corporate finance with the framework of value minimization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management
Spring. 3 credits. Professional master's requirement. Faculty.

Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT COURSES

H ADM 136 Food and Beverage Management
Fall and spring. 4 credits. Limited to hotel school students. Required. G. Norkus.

An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized.

H ADM 230 Introduction to Culinary Arts
Fall and spring. 2 credits. Limited to non-hotel school students. Priority given to seniors and graduate students. S-G grades only. Attendance is mandatory. Absolute drop deadline for fall is September 9; spring drop deadline is January 24. Elective. Faculty.

Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice
Fall and spring. 4 credits. Prerequisite: H Adm 136. Attendance at first class is mandatory. Required. T. Neuhaus, T. O'Connor, B. Richmond, R. White.

Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare menu meals, production schedules and will develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They also will develop an awareness of potential production problems and how to trouble-shoot them.

H ADM 237 Seminar in Culture and Cuisines
Fall. 3 credits. Limited to 20 students. Prerequisites: H Adm 165 and 236, or permission of instructor. Elective. E. Merberg.

Reviews various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 330 Seminar in Chain-Restaurant Operations
Spring. 3 credits. Prerequisite: H Adm 136 and 236, or permission of instructor. Elective. C. Muller, G. Norkus.

Chain-affiliated restaurants account for an ever-increasing market share of all food service dollars. The growth of multi-unit chain operations brings out unique challenges, opportunities, and strategic orientations for restaurant management. This course will identify these present issues, the historical factors that have led to them, and the pending economic and organizational questions facing the chain restaurant segment. Case study analyses, company research, and a term project.

H ADM 331 Food Service Distribution Management
Spring. 3 credits. Limited to 24 juniors, seniors, and graduate students; others by permission of instructor. Elective. E. Merberg.

Provides an overview of the food service distribution industry: past, present, and future. Specific disciplines of food service distribution include marketing and sales, operations, routing, credit management practices, and financial management of the distribution center. Focus also on the newly emerging role of the "distributor consultant." Concept of developing business partnerships between food service operators and food service distributors is stressed.

H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience
Spring. 3 credits. Field trip $200. Limited to 20 students. Prerequisites: H Adm 165 and 335, or permission of the instructors. Elective. Faculty.

Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

H ADM 333 Current Issues in Food Safety and Sanitation
Spring. Variable to 3 credits. Elective. B. Richmond.

A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis, legal responsibilities related to food, food handlers, equipment and facilities, foodborne illness and other public-health concerns; and
certification and training. Preparation for NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

[H ADM 334 Wine and Food Pairing Principles and Promotion] Fall. 2 credits. Limited to 20 seniors and graduate students. Prerequisite: H ADM 430 or permission of instructor. Elective. Not offered 1996-97; next offered fall 1997.

Focuses on the pairing of marketing and wine and food. Students develop an understanding of regional and varietal wine styles, how food can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.

H ADM 335 Restaurant Management Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H ADM 136 and 236. Approximate cost of utensils and manual, $75. Once enrolled, student must complete the course within the academic year without permission of instructor. Required: G. Pezzotti, S. Gould, B. Halloran, B. Lang, J. Ridley.

A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics related to the general management of restaurants, including issues in defining a service philosophy, improving profit margins, securing adequate financing, identifying target markets, and planning for organization growth. The laboratory is based on a hands-on managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant.

H ADM 337 Specialty Foods Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites for hotel undergraduates: H ADM 136 and 236. Elective. T. Neuhaus.

An advanced course covering finer points of cooking and baking. A culinary, chemical, and marketing perspective will be taken using principles of organoleptic food evaluation. Topics include flavor marriages, garnishes, unusual vegetables and fruits, marinades, charcuterie, wild game, fermentations, and chocolates.

[H ADM 338 Health and Fitness in the Resort Hotel and Spa Industry] Fall. 3 credits. Limited to juniors, seniors, and graduate students. Field trips, $75-100. Prerequisite: previous courses in food and beverage management and marketing. Elective. M. Tabacchi. Not offered fall 1996; next offered fall 1997.

Emphasizes the management aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments and other spa programs. Other topics include personnel required, safety, legal and ethical issues, integration of nutritious menu items and their marketing and merchandising. Guest speakers.

Focuses on the challenge of preparing and distributing 20,000-30,000 meals per day to 20-30 different airline carriers and rethermalizing, serving, and clearing those meals at 30,000 ft. in confined space and short periods of time. Examines strategies, planning, and forecasting by airline, airline catering, and sales executives, as well as the effect of the economy and the airline's competition upon the type of meals served.

H ADM 430 Introduction to Wines Fall and spring. 2 credits. Wine glass kit and course fee, $25.00. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be the first day of university classes. S-U grades only. Elective. S. Mulkowski, B. Lang, A. Nash.

An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary in 274 Statler of their absence before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school.

Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 13 in the fall and January 31, 1997 in the spring.)

H ADM 431 Seminar in Independent Restaurant Operations Management Fall and spring. 3 credits. Five field trips, $250. Limited to 20 students. Prerequisite: written permission of instructor. Elective. G. Pezzotti.

Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students visit and analyze various independently owned restaurant operations. Any student may cover the restaurant's concept (market), organization, ownership, management, physical structure, staff, front- and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant required. Classes alternate weekly between field trips and seminar/case presentations.

[H ADM 432 Contemporary Healthy Foods] Fall. 3 credits. Field trip, $50. Limited to 20 seniors and graduate students, or by permission of instructor. Elective. Not offered 1996-97; next offered fall 1997.

Builds a greater awareness and understanding among nutrition and food service professionals of the origins and manifestations of today's health-conscious and educated food service patron. Topics include the marriage of nutrition and the cuisine demanded by today's consumer, fresh produce, lean meats, and lack of fabricated diet foods. Menu design includes creativity and nutrient density of foods. Major emphasis is on preparation, marketing, merchandising and selling of healthy menus in Statler's outlets.

Designed to explore and analyze food service management in business, industry, and health-care facilities, e.g., office/industrial complexes, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of food service organization structures, controls, systems design, equipment, and government/legal regulations. Readings, small investigative projects, presentations, discussions, and local site visits.

H ADM 434 Desserts Merchandising Spring. 3 credits. Limited to 25 students with permission of instructor. Prerequisite: H ADM 230, 236, or for graduate students, H ADM 436, 438. Elective. T. Neuhaus.

A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop large-scale production skills, become familiar with bakeshop utensils, and advertise and sell their products.

H ADM 435 Selection, Procurement, and Supply Management Fall. 3 credits. Prerequisites: H ADM 136 and 236, or 731. Elective. G. Norkus, R. Spies.

Expands upon the concepts of purchasing and supply management that were developed in H ADM 136 and 731. Designed to expose the student to two specific areas: the management of the procurement system and the major commodity groups that are germane to the operation of a hotel or foodservice operation. Lectures include discussions on the comparison of the purchasing function in the hospitality industry to other industries, distribution systems, legal and ethical implications in buying, competitive analysis, procurement options, buying strategy development, price protection programs, and other contemporary issues. Students work with the major entree food groups: meats, seafood, and poultry, with emphasis placed on identification, quality and condition, market form, yield tests, and cost analyses.

H ADM 436 Beverage Management Fall and spring. 2 credits. Limited to 20 hotel school juniors, seniors, and graduate students in the fall, 36 in the spring. Prerequisite: H ADM 430 (co-registration is not allowed). Elective S. Mulkowski, A. Nash.

Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in the awareness of dram shop liability; staff training and responsible customer service; beverage pricing, food and wine pairings; wine list development, purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lecturers.
H ADM 437 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Limited to 20 students. Prerequisite: H Adm 335 or 731. Elective.
B. Lang, B. Halloran, H. Winslow.

Designed for students with a strong food and beverage background, especially those considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management
Spring. 2 credits. Limited to 20 students. Prerequisite: H Adm 335, 731, or permission of instructor. Elective.
R. Spies.

Examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 439 Wine: A Cultural and Historical Perspective

Designed to provide students with a cultural and historical perspective on wine and its place in society. Topics include history, people, culture, production of wine in specific wine-producing regions of the world, wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.

H ADM 631 Case Studies In Multi-unit Restaurant Management
Fall. 3 credits. Limited to 20 graduate students. Prerequisite: Professional master's elective. C. Muller.

Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and design, consumer demand, corporate culture, production planning and operations management, strategic planning and implementation, tactics and market responses, international expansion, breakpoints and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation, and written assignments.

H ADM 731 Graduate Food and Beverage Management
Spring. 3 credits. Professional master's requirement. T. Kelly.

Focuses on the technical, managerial, and human resources skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and current and future issues affecting the food service industry.

MARKETING AND TOURISM

H ADM 240 Marketing Principles
Fall and spring. 3 credits. Limited to non-hotel school students. Faculty.
An introductory course providing a basic understanding of consumer behavior and how it affects decision making, product planning, distribution, promotion, and pricing. Companies and their current marketing strategies will be examined to better understand these fundamental tenets of marketing and how they contribute to the crucial process of strategic planning.

H ADM 241 Marketing Principles
Fall and spring. 4 credits. Limited to non-hotel school students. Elective. Faculty.
For description, see H ADM 240. This course includes the H Adm 240 lectures plus section activities.

H ADM 243 Marketing Management for the Hospitality Industry
Fall and spring. 3 credits. Limited to hotel school students only. Elective. Required. R. Bell, M. Lynn.

Provides an overview of the discipline of marketing as it applies to the hospitality industry. Topics include understanding how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, the external operating environment, and how the special nature of service affects the development of marketing strategies in the hospitality industry.

H ADM 244 Tourism I
Fall. 3 credits. Not open to freshmen. Elective. M. Noden.

An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 245 The Basics of Hotel Sales
Spring. 3 credits. Field trip, $50. Limited to 30 students. Prerequisite: H Adm 240/241/243, 741, or equivalent. Elective.
R. Bell.

Emphasis on skills and knowledge leading to an understanding of the role of a successful property level sales person. Topics include roles of types of sales positions at the hotel level, tools necessary to make it up the ladder, operation of a hotel sales function, and differing buying strategies of market segments.

H ADM 343 Marketing Research
Fall and spring. 3 credits. Limited to 30 students. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective.

Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing.

H ADM 346 Marketing Planning for Hotels
Fall. 3 credits. Prerequisite: H Adm 243, 741, or equivalent. Elective. Not offered 1996-97; next offered fall 1997.

Key variables in property level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies and measurement of results. Upon completion, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.

H ADM 347 Consumer Behavior
Fall and spring. 3 credits. Limited to 55 juniors and seniors. Prerequisite: an introductory principles of marketing or marketing management course. Elective. M. Lynn.

Introduces students to the dynamic interactions among affect, cognition, behavior, and environmental events that are involved in market exchanges. Covers information processing, behavior management, and market segmentation and positioning as well as using the consumer behavior concepts and principles in the development of marketing strategy.

H ADM 442 Marketing Communications
Spring. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev.

Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, direct marketing and out-of-home. Hospitality industry emphasized.

H ADM 444 Tourism II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 243, 244, or equivalents, or written permission of instructor. Elective. M. Noden.

An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand predictions is examined and analyzed. Students are expected to engage in a wide range of discussion and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 445 Services Marketing
Fall and spring. 3 credits. Limited to undergraduate students. Prerequisite: a previous marketing course or permission of instructor. Elective. L. Renaghan.

Students preparing for ownership or management positions will develop an understanding of services marketing principles applicable across entire service sector. Topics include marketing strategies of service firms, new marketing approaches, and the formulation of traditional marketing principles from consumers and industrial goods marketing. Four case studies, guest speakers.
Examines the major elements of the structure, conduct of international marketing in various domestic and international marketing and the similarities and differences that exist between cant readings, guest lectures.

H ADM 444 Channels of Distribution in Tourism
Spring. 3 credits. Prerequisite: H ADM 343. Elective. M. Noden.
Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Signifi-
can readings, guest lectures.

H ADM 449 International Marketing
Spring. 3 credits. Limited to 25 students. Prerequisites: Micro and macroeconomics, Elective. Faculty.
Develops understanding of international marketing with emphasis on hospitality-industry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

H ADM 641 Marketing Decision Models for Service Firms
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. M. Morgan.
Introduces students to advanced data analysis and modelling methods used for decision making in hospitality marketing.

H ADM 642 Strategic Marketing
Fall. 3 credits. Limited to 20 graduate students. Prerequisite: a previous marketing or management course and permission of instructor. Elective. C. Dev.
Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

H ADM 643 Marketing Research
Fall and spring. 3 credits. Limited to 20 graduate students. Prerequisites: principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. M. Morgan.
Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing. Advanced research topics, five lab sessions.

H ADM 644 Food and Beverage Marketing Strategy
Fall. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior three-credit marketing course. Elective. Not offered 1996–97; next offered fall 1997.
Focuses on how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. Addresses developing a market segmentation based upon understanding the needs and wants of potential target markets, translating needs and wants into viable food service concept positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.

H ADM 645 Services Marketing
Fall and spring. 3 credits. Limited to graduate students. Prerequisite: previous marketing course, or permission of instructor. Elective. Not offered 1996–97; next offered fall 1997.
For description, see H ADM 445. This course includes the H ADM 445 lectures plus three case studies and a research paper.

H ADM 646 Marketing Planning For Hotels
Fall. 3 credits. Limited to graduate students. Prerequisite: H ADM 243, 741, or equivalent. Elective. Not offered 1996–97; next offered fall 1997.
For description, see 346. This course includes the H ADM 346 lectures plus a theoretical paper.

H ADM 647 Consumer Behavior
Fall and spring. 3 credits. Limited to 55 graduate students. Prerequisite: introductory marketing principles or marketing management course. Elective. M. Lynn.
Basic concepts and principles underlying marketing decision making and the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

H ADM 741 Marketing Management
Spring. 3 credits. Professional master's requirement. R. Bell.
An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence, conceptual and space planning; architectural design criteria, construction management; and the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 350 Real Estate Management
Fall. 3 credits. Elective. J. deRoos.
Designed for students interested in the management of residential and commercial real estate. Overview of real estate econom-
ics, the relevant aspects of property management including leases and management contracts, accounting and finance, staffing, and building operations. Examples from several types of properties.

H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisite: H ADM 255 or 751 or permission of instructor. Elective. R. Penner.
A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

H ADM 352 Hotel Planning and Interior Design
Spring. 3 credits. Field trip, $200; drawing supplies, $75. Limited to 12 students. Prerequisite: H ADM 351. Elective. R. Penner.
A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the renovation of hotel guestrooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation. Drawing ability is essential.

H ADM 353 Food Service Facilities Design
Spring. 3 credits. Limited to 12 students. Prerequisites: H ADM 351 and 335 (co-registration is allowed) or food service experience is recommended. Elective. M. Redlin.
An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of mainte-
nance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H ADM 351 or equivalent studio experience. Attendance at first class is mandatory. Elective.
A course designed for students interested in the use of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations
Fall. 3 credits. Required. H ADM 255.
An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibili-
ties of the engineering-maintenance depart-
ments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Hospitality Risk Management
Spring. 3 credits. Limited to 30 hotel school juniors, seniors and graduate students. Elective. D. Sipanuk.
Risk management within the hospitality environment as applied to issues of control and risk financing. Issues in fire protection, customer and workplace safety, OSHA requirements, and customer and corporate security are analyzed. Basic elements of insurance and crisis management are discussed.
H ADM 357 Insurance and Risk Management
Fall and spring. 3 credits. Limited to 75 students per lecture. Prerequisite: An introductory accounting or business course. Elective. G. Shankar.

A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and noninsurance solutions to controlling loss, the general legal environment within which risk management occurs, and the integration of crisis management into the overall corporate risk management plan.

H ADM 450 Principles of Real Estate
Fall. 3 credits. Limited to juniors and seniors. Elective. J. Corgel.

Addresses real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional coursework in real estate investment, finance, and development.

H ADM 455 Special Topics in Properties Management
Spring. 3 credits. Limited to juniors, seniors and graduate students. Elective. D. Stapanuk.

The theme and instructor of the "special topics" course will change each year on the basis of current trends, student interest, and faculty expertise. See the school registrar or properties area coordinator for details about the current topics.

H ADM 456 Hospitality Facilities Management
Fall. 3 credits. Prerequisite: H ADM 355, 751, or permission of the instructor. Elective. D. Stapanuk.

A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the World Wide Web.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Limited to seniors and graduate students. Elective. Not offered 1996-97; next offered fall 1997. Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group projects.

H ADM 458 Hospitality Real Estate
Spring. 3 credits. Prerequisite: H ADM 323, 450, or permission of instructor. Elective. J. Corgel.

Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 459 International Development
Fall. 3 credits. Limited to 25 seniors and graduate students. Elective. J. Clark.

Seminar covering the strategic development of international hospitality projects. Topics include corporate expansion strategies, the international development process, viewpoints of public and private stakeholders, technology, infrastructure, environmental concerns, and public policy issues. Guest lecturers.

H ADM 651 Principles of Real Estate
Fall. 3 credits. Limited to graduate students. Elective. J. Corgel.

For description, see H ADM 450. This course includes the H ADM 450 lectures plus an hour-long recitation each week featuring guest speakers from the industry, faculty from other colleges, and case studies. Comprehensive term project.

H ADM 658 Advanced Real Estate
Spring. 3 credits. Prerequisite: H ADM 323, 450 or 651. Elective. J. Corgel.

Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and non-residential real estate are analyzed; however, special emphasis is placed on the analysis of hospitality properties.

H ADM 751 Properties Development and Planning
Spring. 3 credits. Professional master's requirement. J. Clark.

Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams will prepare the program documentation for a new hotel or one undergoing major rehabilitation in conjunction with other professional master's core courses.

H ADM 185 Managerial Communication I
Fall and spring. 3 credits. Each lecture limited to 16 students. Elective. D. Jameson, S. Brozin, S. Niner.

A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their objectives. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 286 Intermediate French: Le Francais de l'Hotellerie et du Tourisme
Spring. 3 credits. Limited to 15 students. Prerequisite: French 125 or equivalent (CPT 560 or above), or permission of instructor. Elective. A. Grandjean-Levy.

Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general competence in practical usage. Students with special interest in the hospitality industry will be given priority for admission.

H ADM 364 Advanced Business Writing
Fall and spring. 3 credits. Limited to juniors, seniors, or graduate students, or written permission of instructor. Prerequisite: H ADM 165 (for hotel school students) or completion of student's freshman writing requirement. Elective. S. Jones.

Focuses on the written communication that requires special persuasiveness and control of tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and specific relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusals, rejections, and responses to complaints. A major topic is the planning and executing of a job-hunting campaign, for which students prepare resumes, letters of application, and follow-up messages adapted to their individual needs.

H ADM 365 Managerial Communication II
Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not drop it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. Prerequisites: Hotel school students (or completion of CPT 560 or above), or permission of instructor. Elective. A. Grandjean-Levy.

A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their objectives. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.
**H ADM 462 Communication and the Multicultural Organization**

Fall. 3 credits. Elective. E. Huettman. Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic business situations. Focus is on individual work forces. Topics include values and beliefs, how race and gender affect language use, cultural differences, and the role of communication in the hospitality industry. Emphasis is on personal communication tasks and the relationship between written and oral communication. Students develop skills in five generic areas: text, graphics, spreadsheet, presentation, and list processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows.

**H ADM 463 Persuasive Communication in Organizations**

Spring. 3 credits. Limited to 18 students. Prerequisites: H Adm 165 and 365 for hotel school undergraduates, or permission of instructor. Elective. Preparatory students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis is on persuasive speaking; also relationship between written and oral communication. Studies the principles of persuasion and analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

**H ADM 661 Organizational Communication For Managers**

Spring. 3 credits. Elective. B. Stevens. Focuses on the complex interactions that occur when people communicate in organizations. Structured around the communication tasks managers must accomplish to be effective on the job. Business cases. Emphasis on design of effective communication strategies. Applications and experiential exercises help students perfect their ability to write, make oral presentations, and interact effectively with others in managerial contexts.

**H ADM 761 Communication Modules**

Year-long course. Variable credits. S-U grades only. Elective. F. Berger, D. Jameson, B. Stevens. Elective modules related to the professional master's program benchmarks: written communication, presentational speaking, and group process/leadership. Additional topics in support of students' individual goals also may be offered. Topics include organizing ideas, revising and editing written documents, etc. Modules are available on a first-come, first-served basis, and are offered throughout the semester during the management development periods.

**H ADM 174 Microcomputing**

Fall. 3 credits. Limited to hotel school freshmen. Spring and summer. 3 credits. Open enrollment. Maximum of 30 students per lecture. Required. R. Alvarez, B. David, R. Moore. An introduction to microcomputing to develop functional competency and fluency. Students develop skills in five generic areas: text, graphics, spreadsheet, presentation, and list processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows.

**H ADM 176 Quantitative Methods**

Fall and spring. 3 credits. Limited to 120 students. Co- or prerequisite: H Adm 174. Required. G. Thompson. An introduction to statistical and operations management methods appropriate to the hospitality industry. Topics include descriptive statistics, probability, correlation and regression, forecasting, decision analysis, quality control charts, and an introduction to yield management. Emphasis is on practical applications of the techniques to hospitality related problems.

**H ADM 374 End-User Business Computing Techniques**

Spring. 3 credits. Limited to 20 students per lecture. Elective. R. Alvarez. Explores the personal computer as a managerial tool. Concepts of spreadsheet modeling, database, and end-user computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on IBM computers.

**H ADM 375 Hotel Computing Applications**

Spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective. R. Moore. Introduces students from a management perspective to technology-based systems used in the hospitality industry which enhance guest service and support management decision making. Topics include following systems: global distribution, yield management, property-management, communication networks (LANS and WANS); and food service management. Experience on systems widely used in hospitality industry and develops IBM PC knowledge and skills.

**H ADM 474 Corporate Information Systems Management**

Spring. 3 credits. Limited to juniors, seniors, and graduate students who have not taken H Adm 772. Elective. R. Alvarez. Explores ten key issues in information technology management through use of case studies of companies with relevant experience with the issues. A basic understanding of information technology, organizational behavior, and general management is advised.

**H ADM 674 Service Operations Management**

Spring. 3 credits. Limited to 25 graduate students. Prerequisite: H Adm 775 or equivalent. Elective. S. Kimes. The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

**H ADM 675 Yield Management**

Spring. 3 credits. Prerequisites: H Adm 175, 771, or equivalent. Elective. S. Kimes. Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

**H ADM 771 Graduate Quantitative Methods**

Fall. 3 credits. Professional master's requirement. R. Moore. Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management.

**H ADM 772 Information Technology for Hospitality Managers**

Fall. 3 credits. Professional master's requirement. R. Moore. Familiarizes students with issues surrounding the use of information technology in supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

**LAW COURSES**

**H ADM 385 Business Law I**

Spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school. Elective. R. Alvarez. Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities.

**H ADM 387 Business and Hospitality Law**

Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. J. Sherry. Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities.

**H ADM 485 Employment Discrimination Law for Managers**

Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. D. Sherwyn. Provides students with an understanding of anti-discrimination statutes and a framework for establishing the proper policies and procedures for complying with the law, avoiding liability, and maintaining positive employment relations.
H ADM 487 Real Estate Law
Fall and summer. 3 credits. Recommended: completion of H Adm 387 preferred. Elective. J. Sherry. Familiarizes students with the nature and ownership of real estate. Describes interests in real estate and how title is transferred. Aims at students with legal aspects of marketing residential and commercial real estate, including shopping center and commercial leases, real estate syndication, and subdividing real estate for development.

H ADM 681 The Interplay of Law and Ethics in Service Industry Management
Spring. 3 credits. Limited to 50 hotel graduate students; seniors and other graduate students by permission of instructor. Prerequisite: completion of all required professional master's first-year courses, or permission of instructor. Elective. J. Sherry. Involves students in ethical aspects of traditional law problems confronting service industry managers and executives within the areas of commerce, consumerism, administrative law and practice, regulation of anti-competitive marketing activities, and federal securities regulation. The impact of the corporation on traditional notions of personal social responsibility will be stressed.

OTHER COURSES

H ADM 191 Microeconomics for the Service Industry
Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, others by permission of instructor. Required. M. Conlin, G. Hay. Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Emphasis on methods of market segmentation in the service industries, analyzing economic incentives involved in franchise arrangements, and the nature of competition in various segments of the hospitality industry.

H ADM 490 Housing and Feeding the Homeless
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O'Connor. Explores the public and private sector partnership in addressing the crisis of homelessness. Through lectures, readings, discussions, research, volunteerism, and field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. The components of successful housing programs, and how the food and assistance programs will be analyzed.

Students taking the course for four credit hours will, in small groups, work with agencies providing services to homeless persons. They will analyze the agency's mission, identify a specific managerial challenge, and develop an approach and solution to that challenge. This fieldwork will require approximately eight days during the semester.

Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency approximately three hours per week during the semester.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable credit (maximum, 4). Prerequisite: written permission. Elective. G. Fazzotti. Elected board members of Hotel Ezra Cornell may receive credit for developing, organizing, and managing the April "hotel-for-a-weekend" event.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel school juniors and seniors with approval of the MIP faculty committee. Prerequisites: Students are expected to have completed H Adm 105, 115, 211, 221, 222, 136, 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended: H Adm 301, 321, 335, 355, and 365. Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H Adm 494. S-U grades only, based on six performance evaluations. Elective. R. Chase.

H ADM 494 Management Intern Program II—Academics
Fall and spring. 6 credits. Must be taken in conjunction with H Adm 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefing, and oral presentation. Elective. R. Chase.

H ADM 495 Development and Management of Wellness in Business Organizations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, $25-50. Elective. Not offered spring 1997; next offered spring 1998. Designed to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which should increase the corporation's competitive edge.

H ADM 499 Undergraduate Independent Study
Fall and spring. Variable, to 4 credits. Elective. Assisted by a faculty team from management, marketing, and operations, students will define, diagnose, design, measure, control, and change service quality. Emphasis will be placed on critical decision making and strategic thinking. Students must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172, Statler.

H ADM 791 Creating and Managing for Service Excellence
Fall. 3 credits. Professional master's requirement. S. Kimes, L. Renaghan. Focuses on developing a clear understanding of service quality from multiple perspectives. Assisted by a faculty team from management, marketing, and operations, students will define, diagnose, design, measure, control, and change service quality. Emphasis will be placed on critical decision making and strategic thinking. Students must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172, Statler.

H ADM 793 Industry Mentorship Program
Fall and spring. No credits. S-U grades only. Professional master's requirement. M. Redlin. Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

H ADM 794 Management Development Component I, II, and III
Year-long course. No credits. S-U grades only. Professional master's requirement. J. Brownell, D. Jameson. Individualized approach ensuring that all students meet program benchmarks in written communication, presentational speaking, and group process/leadership skills as well as identify and achieve individual goals. Begins with an assessment center weekend. Students then work with their advisers to complete a personal development plan. Assignments in core courses are used to benchmark students' skills and determine progress. Continues throughout the professional master's program.
FACULTY ROSTER

Alvarez, Roy, M.Ed., Auburn U. Lecturer
Arbel, Avner, Ph.D., New York U. Prof.
Bell, Russell A., Ph.D., Kansas State U. Assoc. Prof.
Berger, Florence, Ph.D., Cornell U. Prof.
Brownell, Judith, Ph.D., Syracuse U. Prof., and Richard J. and Monene Bradley Director of Graduate Studies
Canina, Linda, Ph.D., New York U. Asst. Prof.
Carvell, Steven A., Ph.D., SUNY Binghamton. Assoc. Prof.
Chase, Robert M., M.B.A., Cornell U. Prof.
Clark, John J., Jr., Ph.D., Cornell U. Prof.
Corgel, John B., Ph.D., U. of Georgia. Assoc. Prof.
Cullen, Thomas, Ph.D., Cornell U. Assoc. Prof.
David, Betty B., Lecturer
deRoos, Jan A., Ph.D., Cornell U. Asst. Prof.
Dev, Chekitan S., Ph.D., Virginia Polytechnic. Assoc. Prof.
Dittman, David A., Ph.D., Ohio State U. Dean and E. M. Statler, Professor.
Enz, Cathy A., Ph.D., Ohio State U. Assoc. Prof.
Eyster, James J., Ph.D., Cornell U. Hospitality Valuation Services Professor of Finance and Real Estate
Ferguson, Dennis H., Ph.D., Cornell U. Assoc. Prof.
Geller, A. Neal, Ph.D., Syracuse U. Prof. and Associate Dean for Academic Affairs
Gould, Shelly, B.S., Cornell U. Teaching Support Specialist
Hinkin, Timothy, Ph.D., U. of Florida. Assoc. Prof. and Director of Undergraduate Studies
Huettman, Elizabeth, Ph.D., Purdue U. Asst. Prof.
Katz, Norman, Ph.D., Harvard U. Lecturer
Kelly, Thomas J., M.S., Cornell U. Assoc. Prof.
Kimes, Sheryl E., Ph.D., U. of Texas. Assoc. Prof.
Kiner, Susan W., M.A., U. of Illinois. Lecturer
Lang, Barbara, B.S., Cornell U. Lecturer
Lumley, Jane, M.A., Pennsylvania State U. Senior Lecturer
Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management
Lynn, Wm. Michael, Ph.D., Ohio State U. Assoc. Prof.
Morgan, Michael S., Ph.D., U. of Texas. Asst. Prof.
Muller, Christopher C., M.P.S., Ph.D., Cornell U. Asst. Prof.
Mukoski, Stephen A., Ph.D., Cornell U. Banfi Vintners Professor of Wine Education and Management
Neuhaus, Thomas W., M.S., U. of Maryland. Lecturer
Noden, Malcolm A., Senior Lecturer
Norkus, Gregory X., M.S., Cornell U. Senior Lecturer
O'Connor, Therese A., M.S., Elmira College. Senior Lecturer
Penner, Richard H., M.S., Cornell U. Prof.
Pezzotti, Giuseppe G. B., B.S., Cornell U. Lecturer
Rainsford, Peter, Ph.D., Cornell U. Assoc. Prof.
Redlin, Michael H., Ph.D., Cornell U. Prof.
Renaghan, Leo M., Ph.D., Pennsylvania State U. Assoc. Prof.
Richmond, Bonnie S., M.S., U. of Missouri. Senior Lecturer
Ridley, Jane S., B.A., SUNY at Binghamton. Teaching Support Specialist
Sherry, John E. H., J.D., Columbia U. Prof.
Simons, Tony L., Ph.D., Northwestern U. Asst. Prof.
Spies, Rupert, Studienassessor, Lecturer
Stevens, Betsy, Ph.D., Wayne State U. Asst. Prof.
Tabacchi, Mary H., Ph.D., Purdue U. Assoc. Prof.
Thompson, Gary M., Ph.D., Florida State U. Assoc. Prof.
Tracey, J. Bruce, Ph.D., SUNY Albany. Asst. Prof.
White, Robert, A.O.S., Culinary Institute of America. Teaching Support Specialist

Visiting and Other Teaching Staff

Blanchard, Kenneth, Ph.D., Cornell U. Visiting Assoc. Prof.
James, Robert, M.B.A., Pace U. Visiting Lecturer
Merberg, Elliot, B.S., New York U. Visiting Lecturer
Nash, Abby, B.A., Cornell U. Visiting Lecturer
Robson, Stephanie K.A., B.S., Cornell U. Visiting Lecturer
Sciarabba, Andrew, B.B.A., St. John Fisher College. Visiting Lecturer
Yesawich, Peter C., Ph.D., Cornell U. Visiting Assoc. Prof.
ADMINISTRATION
Francille M. Firebaugh, dean
Charles McClintock, associate dean
William Lacy, associate dean; director of Cornell Cooperative Extension
Carol L. Anderson, assistant dean; associate director of Cornell Cooperative Extension
Jennifer Gerner, assistant dean; assistant director, Cornell University Agricultural Experiment Station
Brenda Bricker, director, admissions
Mary Rhodes, director, student services college registrar

FACILITIES
The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, and human development through education, basic and applied research, and the extension of knowledge. The college is distinctly characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by the College of Human Ecology and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and a computer-aided design laboratory; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DIVISION OF STUDENT SERVICES

Brenda Bricker, director, Office of Admissions
Mary Rhodes, director and college registrar, Office of Student Services

Persons interested in undergraduate study in human ecology should contact the Office of Admissions, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department.

Matriculated students can find assistance with matters of academic credit, graduation requirements, academic advising, minority student advising, study abroad advising, career planning and placement, and personal counseling from the Office of Student Services, N101 Martha Van Rensselaer Hall. International students should contact their student counselor in the Office of Student Services.

The Students

The College of Human Ecology undergraduate enrollment is 1,298 with 56 percent in the upper division. About 575 students are graduated each year, and last year 241 freshmen and 104 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective.

Approximately 70 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. Twenty-seven percent were identified as members of minority groups in 1995.

Approximately 218 graduate students have members of the college's faculty chairing their special committees. The college awarded 66 master's degrees and 19 doctorates last year.

ACADEMIC PROGRAMS

MAJORS

Selection of a major begins with selection of career goals. In later years, students can explore ways to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The counselor for career development in the Office of Student Services (N101 Martha Van Rensselaer Hall), and resources in the Student Resource Center (N139 MVR) can help students through their career exploration process.

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.

- Consumer Economics and Housing (CEH): The department supervises the department major and the policy analysis major.
- Design and Environmental Analysis (DEA): Interior design, facility planning and management, human environment relations.
- Human Development and Family Studies (HDFS): Does not have separate options. Courses focus on cognitive, social, and personality development, phases of development, and family studies and life course. The department administers an honors program for selected students.
- Human Service Studies (HSS): Does not have separate options. Courses focus on three content clusters: human service environments, programs, and processes. A professional internship and senior seminar are required. Students must meet the requirements of an accredited bachelor's degree program in social work.
- Nutritional Sciences (NS): The division supervises the Department major. (By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.) The division administers an honors program for selected students.
- Textiles and Apparel (TXA): Apparel design, apparel-textile management, fiber science.

ACADEMIC PROGRAMS

MAJORS

Selection of a major begins with selection of career goals. In later years, students can explore ways to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The counselor for career development in the Office of Student Services (N101 Martha Van Rensselaer Hall), and resources in the Student Resource Center (N139 MVR) can help students through their career exploration process.

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. Although a student may satisfy the requirements of more than one major option, he or she is officially certified to graduate under only one. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.

- Consumer Economics and Housing (CEH): The department supervises the department major and the policy analysis major.
- Design and Environmental Analysis (DEA): Interior design, facility planning and management, human environment relations.
- Human Development and Family Studies (HDFS): Does not have separate options. Courses focus on cognitive, social, and personality development, phases of development, and family studies and life course. The department administers an honors program for selected students.
- Human Service Studies (HSS): Does not have separate options. Courses focus on three content clusters: human service environments, programs, and processes. A professional internship and senior seminar are required. Students must meet the requirements of an accredited bachelor's degree program in social work.
- Nutritional Sciences (NS): The division supervises the Department major. (By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.) The division administers an honors program for selected students.
- Textiles and Apparel (TXA): Apparel design, apparel-textile management, fiber science.
Changing Majors
Because any student’s interests and goals may change as new options emerge, the college provides ways for students to change their majors. It is important for a student to discuss a possible change of major with her or his faculty adviser or counselor. If the student decides to make a change, a completed change-of-major form (available from the Office of Student Services, N101 Martha Van Rensselaer Hall) will officially record the change so that a new adviser can be assigned to the student.

Students of Mature Status
The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger college graduates. To facilitate the education of mature students, defined as those twenty-four years old or older at first matriculation, the college has adopted certain procedures specifically for that group. The counselor for mature students in the Office of Student Services (N101 MVR) can provide information of interest to mature students.

Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and are also permitted to extend their residency beyond the normal eight terms.

Mature students are encouraged to contact the director of the Continuing Education Information Service, B20 Day Hall, for information on resources available through that office.

Special Students
Students eligible for special status are those viewing only one or two institutions and interested in particular programs in the college; those with a bachelor’s degree preparing for graduate study or jobs and careers in human ecology–related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor’s degree.

Empire State Students
Occasionally a student who is completing requirements for a bachelor’s degree in one or another institution through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs, B20 Day Hall. All rules of the extramural division apply, and registration will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College’s notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

CONSUMER ECONOMICS AND HOUSING
The behavior of people as consumers and family members and their interactions with private markets and public sectors of the economy are increasingly important as the economy becomes more service-based. One result has been an increasing demand from business and government for trained individuals who understand consumers, families, the markets in which they deal, and how public policies affect the markets and through them consumers and families. The demand has been sufficient to elevate salaries for well-trained individuals.

The consumer economics and housing major provides such training. The major combines economics with statistics, sociology, and family resource management to study how consumer markets work, how firms and consumers behave, the role governments play in consumer protection, how functions shift between households and markets as prices, incomes, social values, and legislation change, and how changes in the family affect consumer markets. Students interact with the faculty and with each other in both the classroom and in field-based learning experiences in the Ithaca area, New York City, Washington, or abroad.

Graduates in consumer economics and housing are prepared for a wide variety of consumer- and family-related positions in business and government. The major also provides an excellent foundation for further studies in economics, law, graduate business, and policy analysis.

The consumer economics and housing major is flexible. Students are assigned a faculty adviser by the advising coordinator unless the student wants a particular adviser. The earlier the decision to major in CEH is made, the greater the freedom to develop a program to meet individual educational or career goals.

Transfer students are urged to discuss their plans with a faculty adviser as soon as possible. Students may make an appointment directly with an adviser or with the advising coordinator, Alan Mathias, 120e Martha Van Rensselaer Hall.

DESIGN AND ENVIRONMENTAL ANALYSIS
The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department’s gallery. The DEA Resource Center includes books, journals, newsletters, and materials samples for student use.

Options
The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design
The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with one of the other options.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management
This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychol-
HUMAN DEVELOPMENT AND FAMILY STUDIES

The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop throughout the life cycle, and the clinical implications of their development. The emphasis of the courses is on understanding the family as a context for individual development and as a part of the larger social structure of society. An ecological perspective—the person in interaction with complex biological, situational, and environmental conditions of everyday life—is featured in many departmental courses.

Major social science disciplines concerned with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and education. The department's programs of instruction, extension, and research provide diverse opportunities for students to prepare for career development or to acquire the bases for graduate study. Many of the department's majors are interested in clinical psychology, counseling, law, medicine, special education, or university teaching and research that require some graduate study. Others may go directly into employment in business or industry or take bachelor's-level positions such as youth counselors, day-care workers, personnel assistants, research technicians, and social program assistants.

Academic Advising

Every HDFS major is assigned a faculty adviser in the department, and advising conferences are required at least twice a year. An adviser helps plan the course work and consults with the student about career options. The adviser can also help students find special opportunities for individual study or for experience outside the classroom. Although advisers must distribute pin numbers, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Students who need an adviser or who want to change advisers for any reason should check with the department office, in NG14 Martha Van Rensselaer Hall.

Curriculum

HDFS majors usually combine a broad liberal education with a more specialized focus on either a problem of human concern or a substantive area of concentration. Areas of specialization available within HDFS include infant, child, adolescent, and adult development; abnormal development; family studies; and social-personality and cognitive development. Some students combine an HDFS major with premedical or prelaw training or with electives. The teaching certification program is not an option for external transfers entering as late as upper sophomore or junior year. More information is available in the HDFS Office, NG14 Martha Van Rensselaer Hall.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it is released by the instructor. The department is not responsible for loss or theft of student work.
Language Competency
The HDFS faculty believe that competence in a foreign language is an essential liberal arts goal for the educated HDFS student. Such exposure opens another culture for exploration at both the instrumental and expressive levels, helps students understand language itself, and encourages knowledge of language as a fundamental intellectual tool and as an essential communicative asset with potential applied benefits. While this is not a graduation requirement, it is strongly recommended that HDFS majors develop competency in a second language.

The following departments teach foreign languages or literature or both in the College of Art and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

Work toward foreign language competency should be undertaken in the freshman and sophomore years. Please note that high school or college language courses can be used for advanced standing credit, even if the student does not want to do any further language work at Cornell.

Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits are granted to students who demonstrate PROFIENCY equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for PROFIENCY in their native language and for studying English as a second language at Cornell.

Language Course Placement and Credit
Students who have had two or more years of high school study in a language may not register in any course in that language without being placed by examination. Nor may transfer students register without examination, even though they may have been given credit for language work elsewhere.

The type of examination depends on the language course and the level of achievement:

1. French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test (CPT). Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling services, 205 Barnes Hall, and pay a fee.

2. Latin (all courses except 105 and 107): departmental examination.

6. Other languages: special examinations—see the professor in charge.

7. High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE).

See section on College of Arts and Sciences, Language Requirement, for further information.

HUMAN SERVICE STUDIES
Faculty in the Department of Human Service Studies (HSS) prepare students for a variety of careers in programs that serve individuals, families, and the community. HSS provides a broad understanding of human services and development content, program delivery methods, decision-making processes, basic social planning methods, and program evaluation.

All students take a professional internship and an integrative senior seminar. Regardless of their specific career goals, students acquire a broad understanding of human services and the ways they can collaborate to improve the human condition. In addition, students specialize in an area of concentration such as health, education, social welfare, policy, planning, or evaluation.

Academic Advising
It is important for a student who is interested in majoring in Human Service Studies to declare that major as early as possible. Once that is done, students work with their assigned faculty advisers to plan course work and related educational activities. Students are free to change advisers. Although faculty advisers must sign the schedule card during course enrollment each term, it is the student’s responsibility to keep track of courses and make sure that the program meets graduation requirements of the major and the college. Students may make an appointment with an advisor or with the undergraduate advising coordinator, Don Tobias, in 183 Martha Van Rensselaer Hall.

Social Work Program
The undergraduate social work major at Cornell has as its principal educational objective the preparation of students for beginning social work practice. In addition, the program prepares students for graduate education in social work. The program also contributes to the enrichment of a college education by helping students understand social welfare needs, services, and issues.

Students wishing to enter the Cornell Social Work Program must apply to the program one semester before they want to be admitted. The first step is to make an appointment with the director of the Social Work Program. Admission criteria are 1) GPA of 2.5 or higher; 2) strong written and oral communication skills; and 3) completion of the following courses with a passing grade: two semesters of English writing seminars, HDFS 115 or an equivalent Human Development course.

A beginning psychology course
A beginning sociology course
Two seminars of biology
A basic math, statistics, or computer science course
A basic philosophy course

The social work program is accredited by the Council on Social Work Education. Because it is an accredited program, students who complete all social work requirements are eligible to apply for beginning-level employment as professional social workers and to apply for advanced standing in graduate schools of social work.

The social work program is accredited by the Council on Social Work Education. Because it is an accredited program, students who complete all requirements are eligible to apply for beginning-level employment as professional social workers and to apply for advanced standing in a graduate school of social work.

TEXTILES AND APPAREL
The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of
Options
Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design
The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel-Textile Management
Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or II (Fiber Science).

Option III: Fiber Science
Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with opportunities in engineering, consumer economics, and the social sciences.

Career Opportunities
Graduates of programs in the departments of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of new product development, design, management, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY
Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in areas such as medicine, health, or related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in conjunction with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Human Ecology Student Guide, available in the Office of Student Services, N101 Martha Van Rensselaer Hall. Academic advising is coordinated by S. Kay Obendorf, 208 Martha Van Rensselaer Hall.

INTERDEPARTMENTAL MAJOR IN POLICY ANALYSIS
As our economy has become more complex, so too has the role of the public sector in our society. An understanding of governmental processes and of how public policies affect the several segments of society has become more important. Individuals with the ability to evaluate government programs critically and trace their impacts quantitatively to consumers, families, business, and industry are in demand at all levels of government and business. Supervised by the Department of Consumer Economics and Housing, the policy analysis major uses the resources of the college and the university to trace and estimate government's influence in the economy.

In the policy analysis major, the student gains a basic understanding of the role of government in the economy and the political environment in which policy is made. Students concentrate on learning the economic, cost/benefit, and statistical skills necessary to evaluate the performance of government programs and policies—consumer policy, housing policy, welfare policy, environmental policy, foreign policy, for example. Because experience in legislative, regulatory, and public administration activities is helpful in providing the context for policy analysis, involvement in Field and International Study, Cornell-in-Washington, and Cornell Abroad is encouraged. The specific requirements for policy analysis as listed under the interdepartmental majors.

Graduates in policy analysis are attractive to business and industry as well as to government because of their analytical skills in economics and statistics, and their knowledge
The policy analysis major is flexible and allows individual program planning. The faculty adviser assigned by the undergraduate advising coordinator can help develop a program to meet individual educational and career goals. This is particularly important in constructing the appropriate policy concentrations. Transfer students are urged to contact their faculty adviser as soon as possible. An appointment may be made directly to talk either with an adviser or with the advising coordinator, Jennifer Gerner, 132 Martha Van Rensselaer Hall.

INDIVIDUAL CURRICULUM
A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator.

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, Pati Papapietro, the individual curriculum coordinator in the Office of Student Services, N101 MV, will provide direction in formally developing a program of study. Although the individual curriculum coordinator must sign the course enrollment schedule during course enrollment each term, it is a student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

SPECIAL OPPORTUNITIES
Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts, when accompanied by appropriate documentation from the program.

International Study
Approximately 16 percent of the class of 1996 in Human Ecology studied abroad. Study abroad allows students to focus on international issues and intercultural understanding through sponsored programs of study abroad for which academic credit is available. Course work in a foreign institution will be planned to increase knowledge of the people and institutions of the country concerned, fieldwork may provide guided experience in family, community, or agency situations of the country concerned and in an area related to individual student interest in human ecology. Students should begin planning for their study abroad experience in their freshman or sophomore year. Opportunities for study abroad and development of an individual program are in several ways: through Cornell Abroad, through other U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. In all cases, students interested in Cornell during the overseas study, and their study abroad will be credited as part of their Cornell degree program. Application packets for study abroad can be obtained from and should be submitted to the Study Abroad Office in the Office of Student Services, N101 Martha Van Rensselaer Hall. The Student Resource Center, N139 Martha Van Rensselaer Hall, has catalogs and other information about study abroad opportunities. The study abroad adviser is Mary Rhodes, N101 Martha Van Rensselaer Hall.

Field Study, Internships, and Research Opportunities
Field study, internships, and research opportunities allow students to receive academic credit for work that extends and complements their course of study. Through structured experiences facilitated by faculty members, students learn to test, deepen, and apply what they've learned in the classroom. Students strengthen their ability to integrate theory and practice and learn to reflect critically on their experience while broadening their understanding of service and professional life and enhancing their understanding of diversity and complex societal issues. In existing courses and through individual and group projects, students develop an intellectual framework for understanding and solving problems in a variety of challenging settings.

Placement opportunities are available in business, health, law, medicine, environmental analysis, education, nutrition, government, laboratories, textiles and apparel, design, social service and community settings. Students are encouraged to plan early for these opportunities.

To learn more, students should consult with their faculty adviser, professor, or undergraduate advising coordinator. They can also visit the Student Resource Center in N-139 MVR and explore listings of opportunities on the "Human Ecology Field Study Computer Program" available on Bear Access. New initiatives are encouraged. For further information, contact Debra Dyason, Field Study Coordinator, N-137 MVR.

Cornell in New York City
The Urban Semester Program in Multicultural Dynamics in Urban Affairs
Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. Experiential learning practices inform all courses of study. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students learn by doing and through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and learn how to be agents of change.

Several majors in the college require internships or encourage field study. Check with the advising coordinator of each major for more information. The Student Resource Center in N-139 MVR and the Field Study Coordinator in N-137 MVR can help you find internships and provide more information on department opportunities and enrolling in Cornell in New York City.

The Urban Semester Program in Multicultural Dynamics in Urban Affairs
Fall and spring semesters: HE 408
During the fall and spring semesters, students focus on multicultural issues in urban affairs. Each term, course work in two separate seminars investigates multicultural dynamics in professional, community, or public policy settings. Students study the possibilities and barriers that a multicultural society presents and their relationship to professional practice, culture, and identity.

Students intern in placements of their own choosing and use internship sites to study multicultural issues and dynamics. A list of recent placements follows. Students may choose to participate in Dr. Sam Beck's South Bronx-Banana Kelly/Cornell University Project in Community Building instead of an internship placement. Other options also are available.

The Winter Intersession in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building
Winter intersession: HE 402
Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx. In carrying out community service, students participate in a research project with the director of the Cornell in New York City program. In the 1995 intersession, six students mentored 12 children in an after-school program before documenting the community with photographs and stories. A photography exhibit was produced that is presently circulating. Other projects with Banana Kelly are available to students throughout the year. Please contact Dr. Sam Beck in the Cornell in New York City program office.

Fieldwork in Diversity and Professional Practice
Summer session: HE 406
Over the course of an eight-week summer session, students carry out research projects on the multicultural dynamics of professional practice by interning full time in settings of...
their choice. Students meet weekly for three hours and discuss professional practice with New York City practitioners. A reflective seminar, led by Dr. Sam Beck, director of the Cornell in New York City program, follows each discussion.

Gerontology Concentration

Gerontology Certificate Program

This program develops students' understanding of and competence in dealing with the processes and issues of aging. Study in gerontology provides practical experience and preparation for professional work. Students draw on resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to their professional goals and interests. Contact the Gerontology Coordinator, Life Course Institute, 259 Martha Van Rensselaer Hall.

Teacher Certification in Home Economics

Students can combine any major in the college with additional course work that leads to home economics teacher certification (kindergarten through twelfth grade) in New York State and a number of other states. Interested students should contact the Office of Student Services in N101 Martha Van Rensselaer Hall.

University Programs

Africana Studies and Research Center

Courses taken in the Africana Studies and Research Center (ASRC) may be used to meet some of the distribution requirements of the college. Up to two courses or 8 credits of such courses may be applied toward the 12 additional credits in natural and social sciences (section I-C of the graduation requirements) or toward the 9 additional credits in communication, analysis, and the humanities (section II-B). This allowance is in addition to the freshman writing seminar credits that may be taken in ASRC. Other courses taken in the center count as endowed division elecives (area IV).

Double-Registration Programs

Johnson Graduate School of Management

A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after the junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology. Applicants must be aware that the management course work taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed division, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

Law School

A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate education. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedure for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Because students accepted to this program will spend their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

Cornell Medical College

A limited number of highly qualified students from three Cornell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the bachelor of science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine. Interested students should contact the Health Careers Program office in 103 Barnes Hall.

Off-Campus Programs

New York State Assembly Internships

A limited number of session internships with the New York State Assembly are available in spring semester. Intern applicants must be sophomores or higher and enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Office of Student Services, N101 Martha Van Rensselaer Hall.

Cornell-in-Washington

For information on Cornell-in-Washington, see the section, Interdisciplinary Centers, Programs, and Studies, in the front of the catalog.

Ithaca College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Cornell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Ithaca College.

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Wells College. Students pay regular tuition to Cornell and only special fees to Wells College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Wells College.

Cornell students are eligible to register only in Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Wells College courses is on a space-available basis. Participation in this program is not guaranteed, and Wells College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

PLANNING A PROGRAM OF STUDY

Academic Advising

Students who choose to major in a particular department are assigned to a faculty adviser by that department's advising coordinator. The advising coordinator can help match a student's needs with the special interests of a faculty member. Students may change advisers as their own interests change and should see the advising coordinator to discuss such a change. Faculty advisers, and counselors in the Office of Student Services (N101 Martha Van Rensselaer Hall), are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must sign the course enrollment schedule card during course enrollment each term, it is the student's responsibility to make sure that her or his program meets graduation requirements for the major and the college. Advising coordinators in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

Completing Graduation Requirements

A summary of record is kept for each student in the Office of Student Services, N101 Martha Van Rensselaer Hall. At fall registration each continuing student receives a copy showing which major and degree requirements have already been met. It is important to check this summary and to bring any questions to the attention of the faculty adviser and the staff members in the Office of Student Services. Although a student may complete the requirements of more than one major, he or she is officially certified to graduate under only one.
Electives
Students have individual objectives in courses beyond the minimum requirements of the major. The university is diverse, the departments, centers, and special programs numerous, the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Announcement for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.

Foreign Language Study and Placement
Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section “Advanced Placement of Freshmen.”

Requirements for the Degree of Bachelor of Science

General
Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college.

Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to
1) meet college credit and distribution requirements,
2) complete requirements for a major,
3) achieve a cumulative average of 1.7 (C-) or better,
4) fulfill residency requirements,
5) complete two terms of physical education within the first two semesters.

College Requirements
These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there.

I. Natural and Social Sciences (24 credits)
A. Natural sciences (6 credits) selected from Biological Sciences 101-102, 102-104, 105-106, 109-110; Chemistry 103-104, 207-208, 215-216; and Physics 101-102, 112, 201 or 202, 207-208.

B. Social sciences (6 credits) selected from economics (including CEH 110, 111 but excluding Agricultural Economics 221 and 310); psychology (including Education 110, 311, 317; DEA 150); HDPS 115, 216, 217, 218, 219; sociology (including rural sociology, CEH 148, and HDPS 150). Do not take both Economics 101 and CEH 110; Economics 102 and CEH 111; Psychology 275 and HDPS 360; Rural Sociology 101 and Sociology 101; or Sociology 243 and HDPS 150; they are equivalent courses.

C. Additional credits (12 credits) selected from any subjects listed above or from courses in anthropology (except archaeology); Astronomy 101 or 102; biochemistry; microbiology; genetics and development; Geological Sciences 101; and government.

II. Communication, Analysis, and the Humanities (15 credits)
A. Freshman writing seminars (6 credits) selected from courses listed in the freshman writing seminar brochure.

B. Additional credits (9 credits) selected from art; communication; comparative literature; computer science; drawing; English; ancient or modern foreign languages; history; history of art; history of architecture; mathematics; music; Natural Resources 407; philosophy; statistics; students should not take both Industrial and Labor Relations 210 and Agricultural Economics 310, since the courses are substantially the same); theatre arts; DEA 101, 111, or 115; HSS 292; TXA 117, 125, 375; and selected ARS courses (list available in the Office of Student Services, N101 Martha Van Rensselaer Hall).

III. Human Ecology (40 credits)
A. Requirements for the major (the number of credits required varies by major and option).

B. Other credits in Human Ecology (15)
The following specific qualifications apply:
- No credit for HE 00 courses, HE 100, HE 101, or any 403 course can be counted to fulfill this requirement.
- A maximum of three credits of special studies credits (400, 401, and 402) or of any internship credit can be used.
- A maximum of six credits of HE 408 can be used.

Transfer students (external and internal) can meet this requirement by completing 15 credit hours comprised of transfer credit and credit earned in the college, or comprised of credit hours all taken in the college and approved according to the student’s status at matriculation. (Refer to “Policies Related to College Requirements” in the Human Ecology Student Guide for details of this policy.)

All students, including internal and external transfer students, must complete a total of 40 credits in Human Ecology.

IV. Additional Credits (41 credits)
A. Requirements for the major (number of credits varies from 0 to 15 credits).
B. Electives (number of credits varies from 26 to 41 credits).

Credit requirements in this section are met through courses in the state divisions of Cornell:
- College of Human Ecology (in addition to courses in sections I, II, and III)
- College of Agriculture and Life Sciences
- School of Industrial and Labor Relations
- College of Veterinary Medicine

and through courses in the endowed divisions of Cornell:
- Africana Studies and Research Center
- College of Architecture, Art, and Planning
- College of Arts and Sciences
- College of Engineering
- School of Hotel Administration
- Johnson Graduate School of Management

Courses in the endowed divisions in this section may not exceed a total of 21 credits. Students are not required to take any elective credit in the endowed units.

V. Physical Education (2 credits)
Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies
College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

Section II. Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. Students who score 5 on the Princeton Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

In sections I, II, and III, the required credits listed are the minimums; credits taken in excess of those minimums (section I, 24 credits; section II, 15 credits and section III, 40 credits) count toward electives (section IV, 41 credits).

In sections I and II, courses specified by the major to meet the requirements in the sections may either be used as meeting the credit requirements in those sections or be applied toward the additional credits in section IV.

Section IV. There is no limit to the number of credits that may be taken in the state divisions of Cornell, and therefore students may choose to take additional state credits and graduate with more than 120 credits.

Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of F or U is received will be counted as part of the 21 endowed credits allowed. Students are not required to take elective credit in the endowed units.
Elective credits earned in Cornell's endowed divisions during summer session, list, absen
ta credits, and transfer credits are counted as
credits earned in the state divisions and therefore do not count as part of the 21
credits allowed in the endowed divisions in meeting the requirements of this section.

Not more than 21 credits in section IV may be taken in the endowed divisions of the
university except under both of the following conditions:

1) The students must have senior status
   (must be in the final two semesters prior to graduation);
2) Payment must be made for each credit
   taken in excess of the 21 allowed,
   whether or not the courses are passed. For
   the fee per credit charge, students should call the Office of the Bursar.

Related Policies for Transfer Students

Section I-A. Transfers who enter human
ecology programs in consumer economics and
housing, design and environmental analysis, human service studies (with the exception of
the social work program), and policy analysis can satisfy the College of Human Ecology's
natural science graduation requirements with any course(s) taken to meet a former college's
natural science requirements as long as the course(s) transferred dealt with matter, energy,
and their interrelationships and transformations. Courses in areas such as psychology
and mathematics are not included, even though courses in these areas may have been taken
to meet a former institution's natural science requirement.

Section II-A. Transfer students should have taken at least 6 credits in courses in English
composition or in courses requiring substantial
writing and offering instruction in writing
equivalent to that offered in the freshman writing seminar program at Cornell. Students
who have not fulfilled this requirement before
transferring must fulfill it after matriculation.

Section III-B. External and internal transfer
students can meet the requirement for course
work outside the major in the College of
Human Ecology by completion of either of the following:

1) 15 credits of work, outside their depart-
   ment, comprised of transfer credit and
credit earned in the college,
   or
2) credits all taken in this college (no
   transfer credit is allowed to meet this
   requirement), on the basis of the status of
   the student's matriculation and prorated as follows:

   Cornell
   Human Ecology
   Credits to Satisfy
   Work outside
   the Major

   Status at Matriculation
   Freshman (1-25 transfer credits) 15
   Sophomore (26-55 transfer credits) 12
   Junior (56-85 transfer credits) 9
   Senior (86-120 transfer credits) 9

   Note that transfer students are still responsible for completing a total of 40 human ecology
   credits under section III.

Section IV. Transferred credits for courses
applied toward electives do not reduce the 21
Cornell endowed credits that students are
allowed. Courses with a passing grade below
C– will not transfer to meet human ecology
degree requirements.

Section V. Transfer students who have had
the equivalent of two semesters of college
(and therefore enter as sophomores) are not
required to take physical education at Cornell,
regardless of whether they took physical
education at their first college. Exemption or
postponement for medical reasons must be
clarified by Gannett Health Center. For further
information about exemption from or
postponement of, physical education, students
should consult the Office of Physical
Education in Teagle Hall.

Related Policies for Freshmen

Section V. Freshmen are required to take
two semesters of physical education during their
freshman year. Freshman transfer
students entering with 12 or more credits have
their physical education requirement reduced to
one term.

Residency Requirements

All college curricula are planned to fit within
an eight-semester program. An average
schedule of 15 credits a semester (in addition to
physical education) is considered standard,
and if pursued for eight semesters will provide
the credits needed for graduation. If the
student completes all the requirements—for
the major, for distribution, for total credits,
and for cumulative average—in fewer than
eight semesters, the degree may be conferred
at the end of the semester in which the last
requirements are met. Students who plan to
receive their degrees early should notify the
college registrar at the beginning of the
semester so that their names can be placed on the
list of degree candidates.

Sometimes a student (particularly a transfer
student) may need an additional semester to complete a program. To register for a
semester beyond the eighth, the student
submits a general petition to the college
registrar in the Office of Student Services,
N101 Martha Van Rensselaer Hall. The
petition should detail the reasons for wanting
to enroll for the extra semester and include a
list of courses planned for the additional
semester. Such requests are usually granted
when there appears to be no feasible way for the
student to complete the professional
curriculum or the degree requirements
without the extra semester.

Freshmen entering the college with 15 transfer
credits have seven semesters in which to
complete the degree. Transfer students must complete at least 60 credits at Cornell.

Mature students (those at least twenty-four
years old at the time of matriculation) are not
required to petition the college registrar for
approval to study beyond the usual eight
semesters.

Exemptions from Requirements

Students who want an exemption from a
specific graduate or major requirement may
petition, and approval may be given under
certain circumstances. Full information about
the petition process is given in the Human
Ecology Student Guide. Petition forms are
available in the Office of Student Services,
N101 Martha Van Rensselaer Hall.

PROCEDURES

Course Enrollment and Registration

Students are expected to complete course
enrollment during specified times each
semester. It is the responsibility of the student to
learn the dates of course enrollment.

Freshmen and transfer students enrolling in
the university for the first time in the fall term
request their courses during the summer
before they arrive on campus. Enrollment
materials are mailed to new students in May.
Because new students starting at midyear do
not have an opportunity to enroll in courses
until after they arrive on campus, the college
tries to reserve places for them in human
ecology courses. The orientation schedule
given to all new students lists a specified time
to enroll in such courses.

Continuing students enroll for fall semester in
March or April, and enroll for spring semester in
October or November preceding the
beginning of the term. They are notified of
course enrollment dates by poster and by
notices in the Cornell Daily Sun. Course
enrollment materials are available for
continuing students via computer access to
Just the Facts and in the Office of Student
Services, N101 Martha Van Rensselaer Hall.

For the first three weeks of the term, students
have an opportunity to add courses in other
divisions of the university as well as in human
ecology.

Enrollment

Before or during course enrollment, students
discuss their program plans with a faculty
adviser or a college counselor in the Office of
Student Services. For their advising sessions,
students need the Course and Time Roster
issued by the university registrar which also is
available via computer on CURINFO. Students
must obtain an enrollment PIN unumber from
their departmental major faculty adviser, or
if they have not declared a major, from a college
counselor.

Students complete their enrollment course
requests by the deadline announced by the
university registrar.

The following policies and procedures apply
to course enrollment.

Permission of Instructor

Certain courses may be taken only with the
permission of the instructor as indicated in
Cornell University: Courses of Study. For such
courses, students must request the instructor's
permission during the pre-enrollment period
by placing their name on a list maintained by
the departmental advising assistant.

Students interested in taking a course in the
Department of Art in the College of Architec-
ture, Art, and Planning are required to register
with the departmental secretary (100 Olive
Tjaden Hall) before enrolling in the course.
Seniors who want to take an elective course in
the Johnson Graduate School of Management
are required to obtain permission of the
instructor on a course authorization form that
the student then files with that school's
Registrar in 312 Malott Hall.

Special Studies Courses

Each department in the College of Human
Ecology (CEH, DEA, HDFS, HSS, DNS, and
TXA) offers special studies courses that
provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. These courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair or of the student's department adviser before submitting it to the Office of Student Services. The student also must complete a course registration form in the Office of Student Services. Special studies forms and instructions are available in the departmental offices.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

Course Loads

The normal course load in the college ranges from 12 to 18 credits. During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater.

Credits beyond 15 may be added during the first three weeks of the semester without special permission. Students should avoid planning excessive work loads; the time required to keep abreast of college work increases as the semester progresses. Courses cannot be dropped after the seventh week of classes without petitioning and by substantiating extenuating circumstances, so students should try to avoid the need to drop courses.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Student Services, N101 MVR.

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar for more information.)

Students of mature status may carry 6 to 11 credits without petitioning and may have their tuition prorated. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of Student Services, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

Oversubscribed Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in Cornell University: Courses of Study. Student's professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Late Course Enrollment

Students who do not complete course enrollment during the course enrollment period usually must wait until the beginning of the semester to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in N101 MVR as soon as possible. The college registrar can explain available options on course enrollment procedures under such circumstances.

Important: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade option and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under Course Enrollment Changes.

At the beginning of the fall semester, each continuing student receives a copy of his or her summary of record from the Office of Student Services. This summary shows degree requirements that the student has completed. Students are responsible for assuring that their academic program meets degree requirements. They resolve any questions about degree requirements with the appropriate staff person in the Office of Student Services. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Student Services.

Late University Registration

A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.

All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, there will be a $200 additional charge.

After completing late university registration, the student submits the college registration card to the Office of Student Services and receives a computer printout of the courses for which he or she is officially registered. Students who fail to register by the third week of the term will be withdrawn from the university. Should withdraw students wish to return, they must reapply through the admissions committee.

Course Enrollment Changes

Deadlines

- During the first three weeks of the term, courses may be added or dropped.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor (instructor's signature on the add/drop form).
- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- From the eighth week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.

A student who submits a petition after the seventh week of classes requesting permission to drop a course must attach a statement from his or her faculty adviser to that petition indicating whether or not the advisor supports the request.

After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the term requesting course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.

Aside from the procedures listed below for special studies courses, all course change procedures required for course enrollment changes, all course change forms for nutritional science majors must be signed by the faculty department adviser.

Waiting List: The Office of Student Services maintains waiting lists for students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a
In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval. Note that in absentia study and leave of absence status are mutually exclusive.

In absentia petition forms are available in the Office of Student Services, N101 MVR. The student completes the form, has it signed by his or her faculty advisor, attaches catalogue descriptions for the courses that will be taken, then submits the form to the Office of Student Services, N101 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar. A student may take up to 15 credits in absentia as long as the course does not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. A student's petition for more than 15 credits in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modem foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Office of Student Services in the College of Human Ecology. Only then will credit be granted.

To make course changes during the fourth through seventh weeks of the term, a student takes the following steps:
1) Completes the five steps listed above for changes made during the first three weeks.
2) Obtains the instructors' signatures on the course change form for human ecology courses.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section below, Petition Process.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

In absentia Study
Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students

an extension in writing from the Office of Student Services. Note that in absentia study and leave of absence status are mutually exclusive.

A student considering a leave of absence is urged to discuss plans with a counselor in the Office of Student Services. The counselor can supply the necessary forms for the student to complete and file with the Office of Student Services, N101 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. The student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

A leave of absence is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Student Services and filing a written notice of withdrawal in the Office of Student Services. A student considering such an action is urged to discuss plans with a counselor in the Office of Student Services, N101 MVR.

In some instances a student may be given a withdrawal by the college registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Committee on Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Petition Process
The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.
Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Student Services, N101 MYR.

Although many kinds of requests can be processed in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar in the Office of Student Services.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition must attach a statement from the student’s faculty adviser before CAS will consider the appeal.

Two kinds of petition forms are available. The uses for both forms are described in the Human Ecology Student Guide.

General Petition Form
The general petition form is available in the Office of Student Services, N101 MYR. After completing the form, submit it to the Office of Student Services. Students learn the result of the petition process for the general petition form by checking their mail folder in the student mail center, 138 MYR.

In absentia Petition Form
The in absentia petition form is available in the Office of Student Services, N101 MYR. After completing the form, submit it to the Office of Student Services. In absentia petitions must have attached to them the catalog descriptions of the courses for which credit is requested from the other institution. In absentia petition decisions usually are sent to students via the U.S. postal service.

GRADES
See the "Grading Guidelines" section for information on the official university grading policies.

S-U Grades
Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the Cornell University: Courses of Study. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better; for work below that level, a U must be given. No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student’s record.

A student who is attempting to qualify for the Dean’s List must take at least 12 credits for the usual A-F grades.

A student may take no more than four courses (or 12 credits) on an S-U basis during his or her college career; however, more than one S-U course may be taken in one semester. S-U courses may be taken only as electives or in the 15 credits required in the college outside the major unless the requirements for a specific major indicate otherwise.

Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis, then either sign up for S-U credit during course enrollment, or file an add/drop/change form in the Office of Student Services before the end of the third week of the term. After the third week of the term, students cannot change grade options. Forms are available in the Office of Student Services.

Grades of Incomplete
A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

Beginning fall 1984, a grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The student has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete will be automatically converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of F or incomplete, which has been signed by both the instructor and the student, must be submitted by the instructor to the Office of Student Services. This form is submitted with the final grade sheets whenever a grade of incomplete is given.

This form is for the student’s protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the student may, if requested by the student, initiate the process by filling out and signing part of the form and turning it in to the Office of Student Services with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of Student Services to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student’s official transcript with an asterisk and not more than 20 percent of the senior year’s work may be for S-U grades.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Office of Student Services (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

ACADEMIC HONORS
The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean’s List. Excellence in academic achievement is recognized each semester by placing on the Dean’s List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living— at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact Gret Atkin, N115A Martha Van Rensselaer Hall, their sophomore year or the first semester of their junior year.

Bachelor of Science with Distinction recognizes outstanding scholastic achievement. Consideration will be given to seniors whose academic standing at the end of seven semesters is in the top 10 percent of the graduating class. The honor is conferred on those seniors who are in the top 5 percent of the class after grade point averages have been adjusted by including grades for transfer work and after grades earned in the fifth, sixth, and seventh terms have been given double weighting in the final average. The graduating class includes students who complete requirements for Bachelor of Science degrees in January, May, or August of the same calendar year.

To be eligible for consideration, transfer students must have completed 45 credits at Cornell. In determining the academic standing of a transfer student, the work taken at another institution is included in the
computation of the student’s academic average. Names of seniors who meet these requirements are forwarded to the faculty of the college for approval.

The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines.

To be eligible for membership students must rank in the top ten percent of the senior class, or in the top five percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

INTERDEPARTMENTAL COURSES

HE 100 Critical Reading and Thinking
Fall, spring, or summer. 2 credits.
Enrollment limited. Priority is given to freshmen and sophomores. Factors and seniors are admitted with permission of the instructor. S-U grades only.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

HE 101 College Achievement Seminar
6-week summer session. 2 credits.
Enrollment limited to and required of Prefreshman Summer Program students. S-U grades only.

The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

HE 401 Empirical Research
Fall, spring, and summer. 1–5 credits. Permission of instructor. S. Beck.

This course is available to juniors and seniors who wish to pursue a well-defined, independent research project sponsored by one or more faculty members. Honors projects are welcome. Such students must participate in the course work of HE 402, HE 406, or HE 408. Students must provide a project proposal no longer than five pages, an annotated bibliography representing the fields of interest to be researched or explored, and a letter of approval from one faculty member who will sponsor the investigation.

HE 402 Supervised Fieldwork in Urban Affairs
Winter. 1 credit. Limited to 12 students. Permission of instructor.

This course allows students to participate in Urban Semester Program research or internship opportunities in New York City. Research projects are carried out under the supervision of the program director and will include opportunities for field observation, interviewing, and library and archival inquiry, focused on socioeconomic processes in urban settings. Students interested in internships locate their own placements with assistance from the Urban Semester Program staff. Students keep a journal that reflects on their community service experience, with a focus on specific learning objectives. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.

Applications must be accompanied by a résumé, a statement of learning objectives, a letter from the placement supporting the student’s plan, and a rationale for participating in this activity. The research or community service must take place during the Cornell winter session period.

HE 403 Teaching Apprenticeship
Fall, spring, winter, and summer.
For study that includes assisting faculty with instruction. Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance.

HE 406 Fieldwork in Professional Practice: Summer in the City
Summer. 1–3 credits. 8-week session. Limited to 12 students.

This is a seminar that examines the culture of professional practice, how professionals think and behave, and the role of professionals in society through internships and weekly discussions with practitioners in a variety of fields. Students will carry out fieldwork in internship placements by researching professional practice in New York City. They will intern for a minimum of eight weeks in organizations and fields such as business, government, private not-for-profit services, education, medicine and health, law, media and communications. Students locate their own internships with assistance from the Urban Semester Program staff. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.
CONSUMER ECONOMICS AND HOUSING

W. K. Bryant, chair; P. Chi, director of graduate studies; A. Mathios, undergraduate advising coordinator; R. J. Avery, F. Firebaugh, J. Germer, R. Heck, D. Kenkel, N. Kutty, D. Lillard, L. Morton, E. Peters, P. Pollak, M. Rendall.

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

CE&H 210 Intermediate Microeconomics
Fall or spring. 4 credits. Prerequisite: CEH 110 or equivalent. Fall: preference to sophomores and juniors. Spring: preference to juniors and seniors. Fall: T R 12:20-1:35. Spring: M W F 1:25-2:15. B. Rosen.

A section is mandatory. Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost, models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

CE&H 226 Household and Family Demography
Fall. 3 credits. Prerequisite: RSOC 101 or equivalent. S-U grades optional. T R 2:30-3:45. M. Rendall.

This course identifies important trends in U.S. household and family structure, examines the demographic, social, and economic forces behind recent changes in household structure, and evaluates current and future consequences and policy implications of these changes for both households and society. Topics include historical and contemporary trends in the size and composition of families and households, trends in marriage, divorce, remarriage, contraception, childbearing, and living arrangements, and interrelationships between household division of labor. Policy implications of all of the above are also considered.

CE&H 233 Consumers in the Market
Fall. 4 credits. Prerequisites: CEH 110 or equivalent. M W F 2:30-3:20. R. J. Avery.

A study of the structure and functioning of consumer retail markets with emphasis on demographic and marketing factors. The role of the consumer in the marketing process and the role of government. Case studies of consumer behavior. Offered 1996-97. Staff.

CE&H 247 Housing and Society
Spring. 3 credits. S-U grades optional. M W F 10:10-11:00. P. Chi.

A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and roles in alleviating housing problems.

CE&H 250 Introduction to Policy Analysis
Spring. 3 credits. Prerequisite: CEH 210. T R 12:20-1:35. N. Kutty.

Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as consumer and producer surplus, deadweight loss; rationale for public policy; benefit-cost analysis; impact assessments; experimental, quasi-experimental and non-experimental designs; and the social ecology of policy analysis.

CE&H 300 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the topic they want to undertake, on a form available from the Student Services Office. The professor or the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

CE&H 307 Introduction to Econometrics
Fall. 4 credits. Prerequisites: ARME 310 or equivalent. M W F 10:10-11:00. D. Lillard.

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Section meets once a week.

CE&H 315 Personal Financial Management

The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, basic economic and financial principles, returns to human resources, income and wealth analysis, the role of consumer and government in financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, retirement and estate planning, and alternative forms of savings and investments.

CE&H 320 Economics of Family Policy—Adults (also Economics 420)
Fall. 4 credits. Limited to 40 students. Junior or senior standing; non-CEH or PA majors by permission of instructor. M W F 1:25-2:15. Not offered 1996-97. Staff.

This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.

CE&H 321 Economics of Family Policy—Children (also Economics 421)
Spring. 4 credits. Limited to 40 students. Junior or senior standing; non-CEH or PA majors by permission of instructor. M W F 1:25-2:15. J. Germer.

This course examines the economics of family policy issues that particularly affect children. This course focuses on a) the economic behavior that generates the policies and b) the economic incentives and behavior that result from the policies. Topics include child welfare, education, day care provision, child support, and adoption.

CE&H 325 Economic Organization of the Household
Fall. 4 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. T R 10:10-11:25. W. K. Bryant.

Economic models are used to help explain a wide variety of family and individual behavior. Topics include the demand for consumer goods and services; consumption and saving; time allocation in the household including labor supply, household production and leisure; human capital investment; fertility, marriage and divorce; and each topic, uses of the material by public and private sector decision makers are discussed.

CE&H 330 The Economics of Consumer Policy
Fall. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: CEH 110, 111 and 210 or permission of instructor. Class meets at the Economics 420 sale at Campus Store. T R 1:25-2:40. D. Lillard.

Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to write three short papers on each area of policy intervention discussed in class.

CE&H 333 Consumers in the Market II

This course focuses on external and internal forces that drive consumer demand. Material
in this course will cover the processes whereby consumers interpret market-provided information and the social forces impacting consumer purchase decisions. Particular emphasis will be placed on communication institutions in the market (advertising, the news and other mass media) and the control of these institutions through government regulation. Select group of consumer policy issues will be covered such as consumer evaluation of product safety and quality, food additives, consumer privacy, and socially responsible advertising.

CEAH 348 Urban Economics and Policy
Spring. 4 credits. Prerequisite: CEH 210 or equivalent. S-U grades optional. T R 2:30-3:45. N. Kuby.
This course explores the economics of cities and urban problems. The course is a study of the location choices of firms and households, growth of cities, and determination of land rents. The urban policy issues explored in this course include—housing, urban poverty, zoning, and community development.

CEAH 355 Wealth and Income
Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under CEH 600. Prerequisites: CEH 110-111 or equivalent. S-U grades optional. M W F 9:05-9:55. D. Lillard.
The wealth and income positions of American households are defined and described. Various statistics are employed to present conflicting pictures of the distribution of income using the same underlying data. Several models of economic determinants of income are presented and redistributive policies are discussed in the context of the economics of the political and philosophical positions for and against such policies.

CEAH 356 The Economics of Welfare Policy
Fall. 4 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. M W F 11:15-12:05. M. Rendall.
Using the tools of economics, this course examines welfare policy. Included are an examination of which populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of welfare policies. Also evaluated are various proposals for welfare reform.

CEAH 365 Economics of Consumer Law and Protection
Spring. 3 credits. Prerequisite: CEH 110 or equivalent. S-U grades optional. M W F 11:15-12:05. A. Mathies.
Economics analyses of consumer laws played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, accident law and antitrust law, as well as the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

CEAH 400-401-402 Special Studies for Undergraduates
Fall and Spring. 3 credits. S-U grades optional. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake, on a form available from the Student Services Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

CEAH 400 Directed Readings
For study that predominantly involves library research and independent reading.

CEAH 401 Empirical Research
For study that predominantly involves data collection and analysis.

CEAH 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

CEAH 432 Economics of Health Behavior and Policy
Spring. 3 credits. S-U grades optional. Prerequisites: CEH 210 or equivalent or permission of instructor. T R 8:40-9:55. D. Kenkel.
This course uses the tools of economics to provide a better understanding of health behavior and policy. One focus is on policies that promote public health, including education programs and cigarette and alcohol taxation. Policies that influence consumer choices about health care and health insurance are also considered. A common theme is that to understand the effects of health policy it is necessary to analyze the incentives faces by the employers, insurers, and health care providers. Analyses of specific health policies help develop this theme.

CEAH 435 Families in Business
Spring. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. T R 10:10-11:25. R. Heck.
Offers students the opportunity to explore family business topics such as business formation, growth and expansion, strategic management, professionalization, succession, locational choices, and family dynamics, conflicts, and relationships relative to the business. An overview of families who own businesses and the profiles of their businesses will be presented along with the examination of the course topics relative to the various stages of business activity including feasibility, start-up, ongoing maintenance, expansion or redirection, and exit or transfer. Case studies from the Harvard Business School series will be utilized to examine the course topics listed above. The course also provides an introduction to research on family businesses by surveying the conceptual issues and methodological approaches related to the study of family businesses.

CEAH 436 Empirical Research on Family Owned Businesses
Fall. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. T R 10:10-11:25. R. Heck.
Allows students to develop research skills by providing opportunities for hands-on survey and fieldwork. Topics and activities include research design, sampling, questionnaire development, and statistical analyses related to family-owned businesses; critical review of current research approaches and extant databases used to research ownership; and implementation and completion of an actual survey of fieldwork project of selected family business owners, or the use of extant databases for descriptive analyses of family-owned businesses.

CEAH 444 Housing for the Elderly
Fall. 3 credits. Prerequisite: CEH 247 or permission of instructor. S-U grades optional. T 2:30-4:30. P. Chi.
This is a service-based seminar that will allow students to explore, through a wide range of service experiences, the different ways community agencies and older adults remain independent in such diversified residential settings as planned retirement housing, subsidized housing for the low-income elderly, home-sharing projects, ECHO housing, accessory apartments, shared group living projects, and continuing care retirement community. This seminar will focus on how the residential environment influences the ability of older adults to function independently and impacts their need for services. Throughout the semester, students will be asked to reflect critically on how their service experience complements, challenges, or extends the course curriculum.

The seminar will meet every week for 2 hours. Students are also required to have 4–6 hours of service a week, 4 during the weeks the seminar meets and 6 during the other weeks.

CEAH 475/476/485 Psycho-Economic Perspectives on Human Intelligence and Achievement: Did the Bell Curve Get It Right?
Spring. 3 credits. Prerequisites: Basic Statistics—any of the following (ARM 310, ARME 411, BRITY 215, CEH 307, ECON 319, ECON 320); Basic Economics: CEH 110 or ECON 101 or permission of either instructor. Open to juniors and seniors; limited to 100. S. Ceci, E. Peters.
The course brings together the analytical tools and key models of economics and psychology to investigate issues raised by Herrnstein and Murray's book The Bell Curve. The objective of the course is to have students bring their research and knowledge into the classroom by enabling students to understand and use the methods available for defining and assessing intelligence and its relationship to success in life and other social issues.

CEAH 485 Evaluation of Public Policies
Spring. 3 credits. Prerequisites: CEH 110, 210, 250, or equivalent and an introductory statistics course. T R 12:20-1:35. D. Kenkel.
This is an advanced course in economic evaluation of public policies that builds on the material covered in CEH 250, Introduction to Policy Analysis. The course will use a series of policy examples to demonstrate the economic
approach. Special topics in cost-benefit analysis and policy evaluation techniques will be developed when necessary for the example under study. The courses of topics that may be addressed include excise taxation, economic evaluations of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.

CE&H 499 Honors Program
Fall or spring. Maximum of 15 credits. The goal of the honors program is to provide the student the opportunity to undertake basic or applied research leading to the preparation of a thesis representing original work of publishable quality. The program is intended for those students who desire the opportunity to explore interests and efforts beyond the current course offering with the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest.

CE&H 600 Special Problems for Graduate Students
Fall and spring. S-U grades optional. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

CE&H 601 Research Workshop in Consumer Economics and Housing
Fall and spring. 1 credit. S-U grades only. W 12:10–1:30. Staff. Research workshop designed to provide a forum for graduate students in consumer economics and housing to present their research.

CE&H 606 Demographic Techniques
Fall. 3 credits. S-U grades optional. T R 12:20–1:35. M. Rendall. This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

CE&H 613 Economics of Consumer Demand (also Economics 413)
Fall. 3 credits. Prerequisite: CEH 210, Economics 311 or 313, or concurrent enrollment in one or more of the three. S-U grades optional. T R 8:40–9:55. W. K. Bryant. Introduction at the graduate level to theory and empirical research on household demand, consumption, and saving. Emphasis on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption and savings. As time allows, Becker and other models of consumer demand will be introduced.

CE&H 634 Economics of Household Behavior (also Economics 427)
Spring. 3 credits. Prerequisite: CEH 613 or Economics 509–510 or consent of instructor. S-U grades optional. T R 12:20–1:35. E. Petersen. This course examines economic models of fertility, investment in children, family formation and dissolution, resource allocation within the household, and intergenerational transfers across households. Empirical applications of the models are presented for both developed and developing countries.

Implications of the models for family policies such as child care subsidies, divorce laws, and family planning programs are also discussed.

CE&H 627 Advanced Family Demography
Fall. 3 credits. Prerequisite: CEH 606 or equivalent. S-U grades optional. T R 1:25–3:35. M. Rendall. Offered alternate years. Not offered 1996–97. M. Rendall. This course builds on the basic methods of dynamic population analysis covered in CEH 606, Demographic Techniques, extending them to the study of lives and populations structured not only by age and sex, but also by family status. The same or very similar methods apply to populations structured on other discrete dimensions (e.g., labor force status, region of residence, health status). Life-course analysis methods used to study the distribution of total lifetime are extended to the study of the distribution of total lifetime between family states. Methods for studying reproduction are extended to the study of kin and family sizes resulting from distributions of reproductive performance in the female population. Methods for studying individual lifetimes are also extended to the study of the distribution of total lifetime, primarily through nuptiality. These are two-sex models or, more generally, models of interacting populations. Finally, household structure, fusion, and fission are studied; combines elements of interacting-population and kin-availability modeling, plus static population-comparison methods.

CE&H 635 Information and Regulation (also Economics 435)
Spring. 3 credits. Prerequisite: CEH 613 or CEH 210 and two semesters of calculus. M W F 9:05–9:55. A. Mathis. A survey of the problems and policies accompanying informational failures and other market failures with regard to consumer well-being. Governmental regulation of products, of producers, of consumers, and of prices is examined. Antitrust activity, disclosure requirements, advertising restrictions, and regulatory agencies are examined in terms of their ability to serve the public interest or to regulate the market. Specifically, the course examines ways in which producers attempt to exercise market power, the effects of advertising, imperfect information, and uncertainty on consumer product evaluation, and ways to regulate price and output.

CE&H 639 Consumer Decision Making
Spring. 3 credits. M W F 2:30–3:20. R. J. Avery. Individual and family decision making with respect to their market purchases will be investigated from a multidisciplinary perspective. Topics to be covered in the course include cognitive theories of information processing, theories of group interaction in decision making, advertising, imperfect information, and uncertainty on consumer product evaluation and purchase behavior. Special attention will be given to decision making by consumers in various market segments, e.g., low-income consumers, children, and the elderly. Specific attention will be paid to how consumers in these segments process marketer-provided information and their related consumption decisions.

CE&H 648 Housing Economics (also Economics 448)
Spring. 3 credits. Prerequisite: CEH 210 or Economics 311 or 313. M 1:25–3:55. N. Kutt. A survey of economic theory and empirical research related to housing markets. The course studies the demand and supply sides of the housing market as applications of microeconomic theory. Topics related to housing demand include tenure choice (decision to own or rent), household formation, mobility, and discrete choice models of housing demand. Topics on the supply side include housing starts, maintenance, and rehabilitation. Topics in housing finance such as mortgage choice, and the demand for home mortgage debt will be studied. Housing policy issues such as tax policy, housing for the elderly, fair housing, rent control, and zoning also will be addressed.

CE&H 699 Master’s Thesis and Research
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional. Graduate faculty.

CE&H 999 Doctoral Thesis and Research
Fall and spring. Prerequisite: permission of the chair of graduate committee and instructor. S-U grades optional. Graduate faculty.

DESIGN AND ENVIRONMENTAL ANALYSIS COURSES
W. Sims, chair; F. Becker, graduate faculty representative; P. Eshelman, undergraduate advising coordinator; A. Basinger, S. Danko, P. Eshelman, G. Evans, K. Gibson, R. Gilmore, A. Hedge, J. Jennings, L. Laquatra, L. Maxwell, E. Schrank

NOTE: A minimal charge for photocopied course handouts may be required.

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

DEA 101 Design I: Fundamentals
Fall. Each section limited to 18 students. Permission of instructor required. Priority given to interior design majors. Option I majors must take DEA 101 in fall of their first year. Approximate cost of materials, $60. M W 1:25–4:25, or T R 10:10–1:10. Staff. A studio course introducing the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of form through problem-solving approaches.

DEA 102 Design II: Fundamentals
Spring. 2 credits. Permission of instructor required. Option I DEA majors only. B- or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $200; shop fee, $10. T R 1:25–4:25. P. Eshelman. A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

DEA 111 Making a Difference: By Design
Fall. 3 credits. Limit 285. Lab Fee: $25. M W F 12:20–1:10. S. Danko. Students in any academic area examine how design affects their daily life and future profession. Course focuses on issues of leadership, creative problem-solving, and risk-
taking through case study examination of leaders in business, education, medicine, human development, science, etc., who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics: nurturing innovation, visual literacy, design cognition, design and culture, semiotics, proactive/reflective decision-making, and ecological issues.

DEA 115 Drawing for Interior Design
Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100. Permission of instructor only. T R 10:10–11:10. P. Eshelman. A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

DEA 143 Inside Out: The American Everyday Interior
Spring (odd-numbered years). 3 credits. U–S option. T R 10:10–11:15. J. Jennings. A study of the twentieth-century everyday interiors in socio-cultural contexts, with an emphasis on design dissemination, consumer patterns, and gender issues. Topics include women’s power, the parlor, photographs as a mirror, the love of the colonial.

DEA 150 Introduction to Human-Environment Relations
Spring. 3 credits. M W F 12:20–1:10. G. Evans. Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and household composition; effects of design on physical well-being; environmental design; design for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; user-responsive design; participatory design-programming; and post occupancy evaluation.

DEA 201 Design III: Basic Interior Design
Fall. 4 credits. Limited to 18 students. Prerequisites: DEA 101, 102, and 115 (minimum grades of B–). Recommended: DEA 111 and 150. Coregistration in DEA 203 and DEA 251 is required. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $100; diazo machine fee, $8. M W F 1:25–4:25. J. Jennings. Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

DEA 202 Design IV: Basic Interior Design
Spring. 4 credits. Each section limited to 18 students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 111 and 204. Minimum cost of materials, $120; diazo machine fee, $8; field trip fee. T R 12:20–4:25. R. Gilmore. Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to the selected set of interior design problems of limited complexity. Each problem of 3 to 5 weeks duration is structured to emphasize different aspects of the design process.

DEA 203 Design Communications
Fall. 1 credit. Priority given to DEA majors. Lab fee $10. R 12:20–2:15. K. Gibson. Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

DEA 204 Introduction to Building Technology
Spring. 2 credits. M 2:30–4:25. W. Sims. Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.

DEA 250 The Environment and Social Behavior
Fall. 3 credits. Limited to 16. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:30–4:00. G. Evans. A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the uses and effects of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 251 History and Theory of the Interior
Fall. 3 credits. Prerequisites: DEA 101 and 111. M W F 9:05–9:55. J. Jennings. An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements and theorists. Reading, discussion, analytical exercises, essays, examinations, Field trip.

DEA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Department faculty. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301 Design V: Intermediate Interior Design
Fall. 4 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204. Corequisite: DEA 303 and 459. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $100; diazo machine fee, $8. T R 12:20–4:25. P. Eshelman. Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

DEA 302 Design VI: Intermediate Interior Design
Spring. 4 credits. Prerequisites: DEA 301 and 303 or permission of instructor. Corequisites: DEA 304 and DEA 305. Minimum cost of materials, $150; shop fee, $10; diazo machine fee, $8. M W F 1:25–4:25. K. Gibson. Intermediate-level interior design studio with an introduction to computer applications. Emphasis on using the microcomputer as a design tool in the process of creating and planning interior spaces. Continued development of design skills and problem solving in relation to a selection of problem types.

DEA 303 Introduction to Furnishings, Materials, and Finishes
Fall. 2 credits. M 2:30–4:25. R. Gilmore. Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, wall, and floor coverings; ceiling and lighting systems; and materials and finishes. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

DEA 304 Introduction to Professional Practice of Interior Design
Spring. 1 credit. T 2:30–4:25. A. Basinger. Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 305 Construction Documents and Detailing
DEA 325 Human Factors: Ergonomics—Anthropometrics
Fall or spring. Credits to be arranged. S-U grades optional. Department faculty. For advanced independent study by an individual student or for study on an independent basis. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 349 Graphic Design
Spring. 3 credits. Enrollment limited to 18 students. Recommended: design background. Open to all major programs. Approximate cost of materials, $50. M W 1:25-4:25. Not offered spring 1997. Staff. The fundamentals of lettering, typography, layout, presentation techniques and the application of photography and illustration are also covered. A series of projects explores problems typical of the graphic design field, and in interior and exterior graphics, signing, and directional systems.

DEA 350 Human Factors: The Ambient Environment
Spring. 3 credits. Recommended: DEA 150. T R 9:05-10:30. A. Hedge. An introduction to human-factors considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Faculty. For advanced independent study by an individual student or for study on an independent basis. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program. Approximate cost of materials, $50. M W 1:25-4:25. Not offered spring 1997. Staff. The fundamentals of lettering, typography, layout, presentation techniques and the application of photography and illustration are also covered. A series of projects explores problems typical of the graphic design field, and in interior and exterior graphics, signing, and directional systems.

DEA 404 Design VII: Advanced Interior Design

DEA 405 Portfolio Preparation
Spring. 3 credits. Enrollment limited to 18. Prerequisites DEA 301 or permission of instructor. S-U option. Minimum cost of materials, $200. Required field trip 20. M W 10:10-1:10. Not offered spring 1997. Staff. Students apply graphic design principles to develop a professional portfolio of their work. Also covered are resume writing and planning the job search, and the use of appropriate computer software and computer-aided graphic tools.

DEA 430 Furniture as a Social Art
Fall. 3 credits. Limited to 15. Permission of instructor. Cost of building materials: $150. Students must also sign up for 2 hours of DEA shop time each week for model building. M W 10:12-12:05. P. Eshelman. This course examines furniture as a design process that emphasizes support of human behavior. It addresses information about specific social issues including health care, aging, child care, and education, and is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 443 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior

DEA 451 Seminar in Facility Planning and Management
Fall. 1 credit. S-U grades only. M 3:35-4:45. W. Sims. Series of seminars led by Cornell faculty and other facility management professionals. Topics include strategic space planning, space standards, office automation, project management, energy conservation, environmental protection and regulatory issues.

DEA 453 Planning and Managing the Workplace
Spring. 3 credits. Prerequisite: DEA 250 or permission of instructor. M 7:30-10:30. Not offered spring 1997. F. Becker. Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including building, design, furniture and equipment and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered.

DEA 454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials, $100. T R 1:25-4:25. W. Sims. For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

DEA 455 Research Methods in Human-Environment Planning and Design
Fall. 3 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25-2:15. G. Evans. The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and on the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459 Programming Methods in Design
Fall. 3 credits. T R 11:15-1:10. Not offered fall 1996. F. Becker. Introduction to environmental programming. Emphasis on formulation of building requirements from physical characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problems and creation of new methods or techniques are emphasized.

DEA 470 Environmental Analysis I: Applied Ergonomic Methods
Spring (even-numbered years). 3 credits. Prerequisite: DEA 325. T R 2:30-4:00. A. Hedge. This course covers ergonomics methods and techniques and their application to the design
of modern work environments. Emphasis is placed on understanding key concepts. Coverage includes conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems. This course is the undergraduate precursor to DEA 670, which will share the same lectures but will meet for an additional hour. DEA 670 will have additional readings and projects.

DEA 499 Design VIII: Advanced Interior Design
Fall. 6 credits. Prerequisites: DEA 301, 302, 303, and 304. Letter grade only. Minimum cost of materials, $150. diazo machine fee, $8 per semester. T R 12:20-4:25. R. Gilmore. Design-problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection, design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Department faculty. Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

DEA 643 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior
Spring (even-numbered years). 4 credits. Enrollment limited to 15 students. S-U option. Field trips $50. Offered 1996. T R 10:10-11:30. J. Jennings. A course intended for graduate students who want a more thorough grounding in the history of vernacular interiors than is provided by DEA 443. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class hour each week, and do additional readings and projects.

DEA 645 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor. T 4:30-7:30. S. Danko. Focuses on thinking processes and techniques that support creative problem solving. Theories of cognitive behavior and critical thinking are examined. Course is highly participatory and experiential by design. Weekly discussions include hands-on applications of the theories on short problems tailored to the backgrounds of the students. Primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem-solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 648 Advanced Applications in Computer Graphics
Fall. 3 credits. Limited to 12 graduate and advanced undergraduate students. Prerequisites for undergraduates: DEA 302 or permission of instructor. Minimum cost of materials $150. T R 9:00-12:05. K. Griffith. Advanced use of computer technology to create and analyze interior environments. Emphasis will be on the use of 3-D modeling, animation, photorealistic rendering and emerging technologies to investigate dynamic design solutions.

DEA 650 Programming Methods in Design
Fall. 4 credits. Recommended prerequisites: DEA 660, 652, and 656. T R 11:15-11:10. Not offered fall 1996. F. Becker. A course intended for graduate students who want a more thorough introduction to environmental programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 459 for more detail.

DEA 651 Human Factors: Ergonomics-Anthropometrics
Fall. 4 credits. Recommended: DEA 150 and a 3-credit statistics course. T R 9:05-11:00. A. Hedges. A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 325 for more detail.

DEA 652 Human Factors: The Ambient Environment
Spring. 4 credits. Recommended: DEA 150 and a 3-credit statistics course. T R 9:05-11:00. A. Hedges. A course intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. For detailed description, see DEA 350.

[DEA 653 Planning and Managing the Workplace
Spring. 4 credits. Prerequisite: DEA 250/660 or permission of instructor. M 7:30-10:30. Not offered spring 1996. F. Becker. Intended for graduate students who want a more thorough grounding in the planning, design, and management of facilities for complex organizations than is provided by DEA 453. Each student is required to attend DEA 453 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 453 for more detail.

DEA 654 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 659 or permission of instructor. Letter grades only. Minimum cost of materials, $100. For graduate students in facility planning and management. T R 1:25-4:25. W. Sims. For description, see DEA 454.

DEA 656 Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25-2:15. G. Evans. Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between the physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 455 for more detail.

DEA 659 Seminar on Facility Planning and Management
Fall. 1 credit. For graduate students and advanced undergraduates interested in careers in facility planning and management. S-U grades only. M 3:35-4:25. W. Sims. Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic and tactical facility planning, space standards, project management, computer and facility management, facility maintenance and operations, energy conservation and building systems.

DEA 660 The Environment and Social Behavior
Fall. 4 credits. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:30-4:00. G. Evans. Intended for graduate students who want a more thorough understanding of the influence of environmental factors than is provided by DEA 250. Each student is required to attend DEA 250 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 250 for more detail.

[DEA 668 Design Theory Seminar
Fall. 3 credits. Enrollment limited to 15 students. Not offered 1996-97. Staff. Directed toward advanced undergraduate and graduate students with interest in the theory of design. The purpose is to provide an understanding of major trends in and underlying design movements of the twentieth century. Explores these ideas through readings, lectures by faculty and visitors, student presentations of research papers, and seminar discussions.

DEA 670 Environmental Analysis I: Applied Ergonomics Methods
Spring (even-numbered years). 4 credits. Enrollment limited to 20. Prerequisite: DEA 651. T R 2:30-4:00. A. Hedges. Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 470. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 470 for more detail.

[DEA 671 Environmental Analysis II: Indoor Air Quality Methods
Spring (odd-numbered years). 3 credits. Enrollment limited to 20. Prerequisite: DEA 652. T R 2:30-4:00. A. Hedges. This course provides in-depth coverage of the nature of indoor air pollutants and techniques for analyzing indoor air quality in modern
work environments. Emphasis is placed on understanding key concepts in environmental exposure, toxicology, epidemiology and on understanding the procedures for assessing indoor air quality conditions. Coverage also includes detailed consideration of the design of modern ventilation systems."

DEA 899 Master's Thesis and Research
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate program and the instructor. S-U grades optional. Department graduate faculty.

HUMAN DEVELOPMENT AND FAMILY STUDIES COURSES

NOTE: Class meeting times are accurate at the time of publication. If changes are new information as soon as possible.

HDFS 115 Human Development
Fall or summer. 3 credits. S-U grades optional. M W F 1:25-2:15. R. Canfield. Provides a broad overview of theories, research methods, and current knowledge of human development from conception into adulthood. Course material primarily covers infancy and childhood with considerably less focus on adolescent and adult development. Topics include biological, intellectual, linguistic, social and emotional development as well as the cultural, social, and interpersonal contexts that affect developmental processes and outcomes in these domains.

HDFS 150 Families and the Life Course
Spring or summer. 3 credits. S-U grades optional. M W F 1:25-2:15. E. Wethington. This course provides an introduction to social scientific research on family roles and functions. Families are examined in regard to how they appear in U.S. history, how they change over the life course, and how they are influenced by cultural and economic forces.

HDFS 216 Human Development: Infancy and Youth
Spring or summer. 3 credits. Prerequisite: HDFS 115. S-U grades optional. T R 2:30-4:00. Staff. Provides a broad overview of theories, issues, and research in the study of human development from early adolescence to early adulthood (youth). Attention is focused on the interplay of biological and cognitive factors, interpersonal relationships, social structure, and cultural values in shaping the individual's development. The role of adolescence in both the individual's life course and the evolution of the culture as a whole is also considered. Familial, peer group, educational, and work contexts for development are discussed.

HDFS 218 Human Development: Understanding and the Adulthood.
Fall. 3 credits. Prerequisite: HDFS 115. S-U grades optional. M W F 9:05-9:55. Staff. Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through late adulthood are discussed. Both individual development within generations and differences among generations are emphasized.

HDFS 241 History of Childhood in the United States
Spring. Limited to 30 students. 3 credits. Not offered 1996-97. J. Brumberg. An examination of childhood and adolescence in various historical contexts: Puritan New England, slave plantations, evangelical revivals, the Western frontier, Victorian families, reform schools, early high schools and colleges, the sexual revolution of the 1920s, immigrant communities, the Depression and World War II, the 1950s, and more recent social and cultural changes affecting families. Students will evaluate cultural, social, and historical changes in the lives of American children as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own childhood and adolescence. This course is designed to give students a humanities perspective on approaches to childhood central to many different disciplines.

HDFS 242 Participation with Groups of Young Children
Fall or spring. 4 credits (3 credits possible, but not recommended). Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HDFS 115 and permission of instructor. S-U grades optional. W 10:10-12:05. J. Ross-Bernstein. This course is designed to integrate developmental theories with supervised experience in child care centers, with the intention of enhancing the student's abilities to understand and to relate effectively with young children. Participants will reflect, read, write, and sharing of viewpoints are some of the means used to these ends. Placements are in local nursery schools, day care centers, Head Start programs, and kindergartens.

HDFS 243 Participation with Groups of Children, Ages 6-12
Fall. 4 credits (3 credits possible, but not recommended). Limited to 20 students (limit depends on availability of placements and of supervision). Prerequisites: HDFS 115 and permission of instructor during preregistration. S-U grades optional. W 12:20-2:15. Not offered 1996-97. Staff. This course is designed to allow students to gain a working developmental perspective on the school-aged child (ages 6-12). Students will participate in local elementary schools for 6 hours per week as a classroom assistant, attend a weekly 2-hour resource and discussion seminar, and complete readings in developmental theory, current trends and issues regarding children's learning and growth. The application of readings and discussions to the field experience via written assignments will give the student the opportunity for a well-integrated understanding of the school-aged child.

HDFS 251 Social Gerontology: Aging and the Life Course
Spring. 3 credits. Limited to 60 students. Prerequisites: HDFS 150 or equivalent to be determined by instructor. S-U grades optional. T R 10:10-11:30. D. Dempster-Aust. This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) An introduction to the field of gerontology, its history, theories and research methods. (2) A brief overview of the physiological and psychological changes that accompany aging, (3) An analysis of the contexts (such as family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences by gender, ethnicity, and social class. (4) The influences of society on the aging individual. Guest speakers will provide an introduction to various careers in the field of gerontology.

HDFS 253 Gender and the Life Course
Fall. 3 credits. Limited to 110 students. S-U grades optional. T R 10:10-11:40. P. Moen. This course examines the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between societal change and individual lives, observing the significance of two key institutions—work and family—in shaping basic life choices and their consequences throughout the life course. Implications of key life trajectories and transitions for individual lives and for social policy will also be discussed.

HDFS 258 Historical Development of Women as Professionals, 1800 to the Present (also Women's Studies 258 and History 238, American Studies 238)
Fall. 3 credits. S-U grades optional. Human ecology students must register for HDFS 258. T R 10:10-11:40. Not offered 1996-97. J. Brumberg. The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, readings, and discussions are geared to identifying the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

HDFS 259 Socialization, Social Control, and Deviance across the Life Course
Fall. 3 credits. Prerequisites: HDFS 150 or Sociology 101 or Rural Sociology 101. T R 8:00-10:00. Not offered 1996-97. E. Wethington. Provides an overview of sociological theories and research on how social institutions, values and ideologies, social networks, and close relationships regulate individual behavior. Theories and research on social control processes, occupational socialization, crime, delinquency, and creativity are emphasized.

HDFS 260 Personality Development
Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 101. Offered alternate years. T R 12:20-1:45. C. Hazan.
An introduction to personality psychology, with special emphasis on development. Covers the major theories, influences (including genetic, biological, experiential and environmental factors), basic psychometric concepts, and methods for measuring and assessing personality.

Issues in the development of social behavior are viewed from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

[HDFS 284 Introduction to Sexual Minorities (also Women's Studies 285)] Fall. 3 credits. Prerequisite: one social science course. S-U grades optional. M 6:30-9:00 p.m. R. Savin-Williams.

This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexual questioning, and other sexual minority populations. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Required activities include reaction papers to the readings.

[HDFS 300 Special Studies for Undergraduates] Fall or spring. Credit to be arranged. Permission required. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multipage description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of-registration period.

[HDFS 313 Problematic Behavior in Adolescence] Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101; HDFS 216 recommended. T R 2:30-4:00. J. Haugaard.

This course will explore several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors will be presented. Appropriate research will be reviewed; treatment and prevention strategies will be explored. An optional drop-in education session will be available to students who would like an opportunity to discuss readings and lectures in greater depth.

Examine descriptive theories and models of learning and their differing implications for real-world situations that require learning or relearning. Considers the interrelations of learning and development and of learning and intelligence. Through fieldwork, application is made to the assessment of learning processes in the cognitive domain and to implementation of the variables which affect learning.

A survey of theories and problems in the development of selected cognitive processes: attention, perception, concept formation, memory, and language. The focus is on the first two years of life.

[HDFS 334 The Growth of the Mind] Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HDFS 635, a supplemental graduate seminar. Prerequisites: A course in human experimental psychology, statistics, or HDFS 115 or equivalent, or permission of the instructor. S-U grades optional. Offered alternate years. Not offered 1996-97. B. Lust.

In this course the fundamental issues of cognition are introduced. What is the nature of human ingenuity and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of those issues, how, cognitive theory and experimental psychology be related through the experimental method?

Basic debates in the study of cognition are introduced and discussed throughout: for example, the roles of innateness and learning, the distinction between competence and performance, and the relation between induction and deduction in the acquisition of knowledge. Those psychological issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism.

The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.

Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interconnectedness of these aspects of development will be strongly emphasized, as well as their relation to the biology of fetal and infant development. Topics with implications for general theories of development (e.g., the functional significance of early behavior, the nature of continuity and change, the role of the environment in development). Conditions which put infants at risk for poor development (e.g., prematurity, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research, the student will explore the meanings and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

[HDFS 347 Human Growth and Development: Biological and Behavioral Interactions (also Biology and Society 347 and Nutritional Sciences 347)] Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HDFS 115 or Psychology 101. Offered alternate years. Limited to 150 students. M W F 1:25. S. Robertson and J. Haas.

This course is concerned with the interrelationships between physical and psychological growth and development in humans during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

[HDFS 348 Advanced Participation with Children] Fall or spring. 4 or 8 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HDFS 115 and HDFS 242, 243 or 331; and permission of instructor. Recommended: HDFS 346. S-U grades optional. Original. T 12:20-2:15. J. Ross-Bernstein.

An advanced, supervised field-based course, designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children in their placement. Conference group and readings focus on contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the class. Participation is in settings that serve typical and/or special needs children from two to ten years of age and provide education, care, or special-purpose interventions for them.

[HDFS 354 Families in Cross-cultural Perspective] Spring. 3 credits. Prerequisites: HDFS 115 or HDFS 150 or Rural Sociology 101 or 102 or Anthropology 101 or 102, or equivalent. S-U grades optional. M W F 10:10-11:00. Staff.

This course will be taught with an emphasis on the life cycle of families and individuals. Focus will be on the rites/rituals, both subde
and obvious that mark an individual's movement through the stages of life. The approach will be both anthropological and historical. Students will see correlations between diverse family forms in the United States and around the world.

HDFS 359 American Families in Historical Perspective (also Women's Studies 357, History 359, American Studies 359)
Spring. 3 credits. Prerequisite: HDFS 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HDFS 359. T R 8:30-9:55. J. Brumberg.
This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural perceptions of sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to do life-course development and data drawn from the social sciences, and historical circumstances.

HDFS 362 Human Bonding
Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101. S-U grades optional. T R 12:20-1:45. C. Hazan.
The science of interpersonal relationships. Examines the basic nature of human affective bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the social and psychological health.

HDFS 370 Experimental Psychopathology
Spring. 3 credits. Limited to sophomores, juniors, and seniors. Prerequisites: HDFS 115; Psychology 101, or Education 110; a course in statistics (e.g., Psych 350, Soc 301, Educ 352 or 353, Ag Ec 310 or equivalent); and an introductory biology course. Letter grades only. T R 10:10-11:40. Not offered 1996-97.
M. Lenzenweger.
A research-based survey of the cognitive, emotional, and biological aspects of psychopathology across the life span. The major mental illnesses will be covered, including schizophrenia, anxiety disorders, affective disorders, and personality disorders as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development, minimal attention to psychotherapy.

HDFS 379 Experimental Child Psychology
Fall. 4 credits. Prerequisites: HDFS 115 or Psychology 101 and one course in statistics. Intended primarily for students interested in entering graduate programs involving further research training. Limited to 16 students. M W 10:10-12:05. L. Lee. A study of experimental methodology in research with children. Includes lectures, discussions, and practical experiences covering general experimental design, statistics, and skills and strategies of working with children.

HDFS 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: either HDFS 115, 150, or two intermediate level HDFS courses, or four courses in psychology or sociology. S-U grades optional.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HDFS not otherwise provided through coursework in the department or elsewhere at the university. Students prepare a multipage description of the study they wish to undertake, on a form available from the department office in NG14. This form must be signed by the instructor directing the study and the student's faculty adviser and submitted to NG14 MVR, the Office of Undergraduate Education. After clearance that all prerequisites are met, the student picks up the form in NG14 to file at course registration or within the change-of-registration period after registration. To ensure review before the close of the period, each must be submitted from the department office in NG14. Literature relevant to current empirical studies aimed at cognition as a function of aging in adults will be selectively surveyed. Topics will include attention, perception, memory, conceptualization, intelligence, and wisdom. An aim will be to identify possible mechanisms that underlie observed age-related decrements in cognitive functioning as well as possible approaches to improving functioning in the aged. Students will be asked to design empirical research aimed at an aging cognition question.

HDFS 417 Female Adolescence in Historical Perspective (also Women's Studies 438 and History 458)
Fall. 3 credits. Limited to 50 students. Prerequisite: HDFS 258 or 359 or 200- or 300-level history or women's studies course. Permission of instructor required. W 2:00-4:25. J. Brumberg. A reading, writing, and discussion course that will attempt to answer the historical question that has consequence for both contemporary developmental theory and social policy: How has female adolescence in the United States changed in the past 200 years? The focus will be on the ways in which gender, class, ethnicity, and popular culture shape adolescent experience. Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.

HDFS 431 Cognition and Aging
Fall. 3 credits. Enrollment limited to 25 juniors and seniors or by permission of instructor. Prerequisites: HDFS 115 OR Psychology 101 and at least one higher level course in cognition OR aging. A course in statistics is strongly recommended. S-U grades optional. Not offered 1996-97.
G. Suci.
Literature relevant to current empirical studies aimed at cognition as a function of aging in adults will be selectively surveyed. Topics will include attention, perception, memory, conceptualization, intelligence and wisdom. An aim will be to identify possible mechanisms that underlie observed age-related decrements in cognitive functioning as well as possible approaches to improving functioning in the aged. Students will be asked to design empirical research aimed at an aging cognition question.

HDFS 432 Cognitive Development and Education
Spring. 3 credits. Prerequisite: HDFS 115 or equivalent. Limited to 20 students. Not offered 1996-97. M. Potts.
This course defines basic cognitive processes that underlie education (for example, linguistic processes that underlie language comprehension and production; numerical processes that underlie mathematics; perceptual processes that underlie reading) and reviews research on these processes in children. A laboratory component focuses on assessment and facilitation of cognitive competencies as they bear on one educational subject.

HDFS 436 Language Development (also Psychology 436 and Linguistics 436)
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HDFS/LING 633, a supplemental graduate seminar. Prerequisites: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. Offered alternate years. Not offered 1996-97. T R 3:30-4:25. B. Lust.
This course surveys basic issues, methods, and research in the study of language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from
infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for language acquisition. The course involves a discussion of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

HDFS 438 Thinking and Reasoning
Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101. W 2:00-4:25. B. Koslowski.
The course will examine problem solving and transfer, pre-causal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and non-rational reasoning. Two general issues will run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is used to solve the types of problems and issues that arise and must be dealt with in the real world.

HDFS 439 Cognitive Development: Infancy through Adolescence
Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 101. Letter grades only. W 2:00-4:25. B. Koslowski.
The course will be an overview of current and classic issues and research in cognitive development. Central topics of both "hard cognition" (e.g., information processing and neuropsychological functioning) and "soft cognition" (e.g., problem solving, concepts and categories) will be covered. Selected topics will be linked to methodological issues and to important social issues such as cross-cultural cognitive development and putative racial and social class differences.

HDFS 440 Internship in Educational Settings for Children
Fall or spring. 8-12 credits. Prerequisites: HDFS 115, 242, or 243 or 331 and 348. Recommended: HDFS 346. Permission of instructor required. S-U grades optional. J. B. Betteire.
Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages two to ten and their families. Interns will function as student teachers in a preschool or elementary school classroom and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and progress, to do assigned and self-directed readings, and to keep a critical incident journal.

HDFS 451 Nontraditional Families and Troubled Families
Fall. 3 credits. Limited to 30 students. Prerequisites: HDFS 115 and 150. Letter grades only. T R 8:30-9:55. J. Haugaard.
This is an advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. Four types of communications are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child).

HDFS 456 Families and Social Policy
Spring. 3 credits. Prerequisite: one course in the area of the family or in sociology. S-U grades optional. Not offered 1996-97. P. Moen.
An examination of the rewarded and unintended family consequences of governmental policies, such as case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.

HDFS 457 Health and Social Behavior
Fall. 3 credits. Prerequisites: HDFS 150, HSS 101, Sociology 101, or Rural Sociology 101 and a course in statistics. Letter grades only. Not offered 1996-97. T R 8:30-10:00. E. Wethington.
This course critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. The lectures focus on social stress, social support, and family structure which are associated with variations in physical health, mental health, and maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

HDFS 461 The Psychology of Television
Spring or summer. 3 credits. Limited to 100 students. Prerequisites given to juniors and seniors. Prerequisite: a development or psychology course; HDFS 115 or Psychology 101 preferred. Not offered 1996-97. Staff.
This course offers a historical and topical survey of the research literature regarding the influence of television. Topics include (1) the introduction of television from 1950 to 1960 and its direct effects, (2) the audience for television, (3) the content of television, (4) behavioral mechanisms of influence: imitation, disinhibition, arousal/desensitization, (5) the psychological research of the 1960s and 1970s; cognitive mechanisms of influence; mainstreaming and resonance; formal features of television, and perceived reality; current issues in research from 1980 on; the role of advertisements; government policies and advertisements; and television over the life span.

HDFS 464 Sexual Minorities and Human Development (also Women's Studies 467)
Spring. 3 credits. Limited to 15 students. Permission of instructor required. T 2:00-4:25. R. Savin-Williams.
The first half of the course covers topics of a fairly general nature regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students will determine the content through their selection of particular topics that interest them. The course covers the topics of students feeling personally engaged and committed to the course content. Because of the multidisciplinary nature of the course, it is hoped that students from a variety of backgrounds (e.g., gender, sexual orientation, ethnicity, race, class, and religious affiliation) will feel comfortable in the course.

HDFS 466 Neurobiology of Personality and Psychopathology
Fall. 3 credits. Limited to 30 students. Prerequisites: HDFS 115 or Psychology 101, Psychology of Psychopathology (HDFS 370 or Psychology 352), a semester of biology OR biological psychology. Letter grades only. W 2:00-4:25. R. Depue.
For juniors and seniors who have an interest in the neurobiology of behavior. Course material is presented from an evolutionary and neurobiological perspective, where the development of neurobehavioral systems as a means of adapting to critical internal and external stimuli is explored. Focus is on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin) and opiate in personality and psychopathology. Specifically, the relation of dopamine and positive emotionality, norepinephrine and negative emotionality, serotonin and behavioral stability, and opiate and reward-attachment is explored in the area of personality. The manner in which these neurotransmitters may also be involved in disorders of affect, anxiety, personality, obsessive-compulsive, and autism, respectively, is covered. The manner in which environmental influences across the lifespan may be coded in the brain and influence the development of personality and psychopathology is explored. Approximately 24-30 papers and chapters will be read and discussed.

HDFS 470 Advanced Experimental Psychopathology
Fall. 3 credits. Limited to 20 juniors or seniors; not open to graduate students. Prerequisites: HDFS 370, statistics (Psychology 350 preferred), introductory biology or neurobiology. Permission of instructor required. Letter grades only. W 10:10-12:35. M. Lenzenweger.
This course is intended to be an opportunity for advanced undergraduate students (i.e., juniors and seniors) to develop their rigorous and in depth the empirical research literature concerning several specific forms of severe psychopathology. The course will focus on schizophrenia, affective illness, and personality. The course will be discussed in terms of phenomenological and classification issues, etiological factors, and developmental trajectory within the context of the diathesis-stress model of psychopathological development.

HDFS 471 Child Development and Psychopathology
Spring. 3 credits. Limited to 60 advanced-level students. Prerequisites: a basic course in psychopathology or instructor's permission. Letter grades only. T R 2:30-4:25. J. Haugaard.
This class will explore the development and process of mental, emotional, and behavioral disorders in children such as mental retardation, autism, and attention deficit disorders. Topics will include (1) the classification of mental disorders; (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders; (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventive interventions. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.

HDFS 472 Typical and Atypical Intellectual Development
Spring. 3 credits. Prerequisites: HDFS 115, a course in statistics, and a course in biology. TBA. S. Ceci.
This course provides an intensive historical examination of both normal and abnormal
intelligence, focusing on the antecedents of contemporary views of the heritability of intelligence, brain-behavior linkages, expertise, generality, and cognitive modifiability. It coincides with an examination of current theories, with an emphasis on the instructor's own bioecological theory.

[HDFS 473 Schizophrenia]
Fall. 3 credits. Limited to 25 students. Prerequisites: HDFS 370 OR Psychology 325, and a statistics course and a neurobiology course. Letter grades only. Offered even years. Not offered 1996-97. Next offered fall 1997. M. Lenzenweger. This course will examine the nature of schizophrenia as a major mental illness in depth. The history of the illness will be traced from early observations through the most current nosological perspectives. Research data from a variety of relevant disciplines will be examined with a particular emphasis on etiology, course, and outcome of the illness. Perspectives from classification, behavioral genetics, neuropsychology, psychology, and epidemiology will be integrated within an experimental psychopathology framework. This course will not focus on issues related to treatment or nonscientific approaches to the disorder.

[HDFS 482 Child Development and Social Policy]
Fall. 3 credits. Enrollment limited to 25 HDFS juniors and seniors or by permission of instructor. Prerequisites: HDFS 115, HDFS 150, and a course in statistics. HDFS 260 OR 261 strongly recommended. Letter grades only. Offered alternate years. T R 12:20-1:45. C. Raver. Course work and seminar discussion emphasize the integration of basic research in young children's social and emotional development with intervention and prevention-oriented research. The course also examines theoretical models of the relations between risk and resilience in child development, family functioning, community and culture. Policies in the domains of parenting, early childhood education, family and community violence, poverty, and child care are analyzed. Broad questions regarding the identification of social problems and the design of solutions are considered within cultural and historical contexts.

[HDFS 498 Senior Honors Seminar]
Fall. 1 credit. Required for, and limited to, seniors in the HDFS honors program. S-U grades only. TBA. R. Canfield. This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

[HDFS 499 Senior Honors Thesis]
Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty.

Topics Courses
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. This provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

[HDFS 215, 315, 415 Topics in Adolescent and Adult Development]

[HDFS 235, 335, 435 Topics in Cognitive Development]

[HDFS 245, 345, 445 Topics in Early-Childhood Development and Education]

[HDFS 255, 355, 455 Topics in Family Studies and the Life Course]

[HDFS 265, 365, 465 Topics in Social and Personality Development]

[HDFS 275, 375, 475 Topics in Developmental Psychopathology]

[HDFS 285, 385, 485 Topics in the Ecology of Human Development]

The Graduate Program
HDFS graduate courses are only open to undergraduates with instructor's permission.

General Courses

[HDFS 610 Processes in Human Development]
Spring. 3 credits. Open to graduate students and juniors and seniors in HDFS and related fields with recommendation from a faculty member and instructor's permission. Prerequisite: a minimum of one course in statistics. Letter grades only. W 2:00-4:25. U. Bronfenbrenner. This course focuses on research that illuminates processes of human development as a function of organism-environment interaction through the life course. Topics to be examined will be drawn from the following: the ecology of cognitive development, developmentally instigative characteristics of persons and environments; developmental processes in males and females; activity and work as developmental processes; intimate relationships as contexts of development; developmental processes in adulthood. The final selection will be responsive to student interest.

[HDFS 617 Adolescence]
Spring. 3 credits. Not offered 1996-97. Staff. Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.

[HDFS 631 Cognitive Development]
Fall. 3 credits. Letter grades only. Offered alternate years. Not offered 1996-97. Staff. Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language, thinking and reasoning, learning, creativity, and intelligence.

[HDFS 640 Infancy]
Fall. 3 credits. TBA. S. Robertson. Development in infancy will be examined through a critical review of key research and theory in selected areas of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues to be considered include the role of experience in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development will also be considered, such as preontogeny, perinatal medical complications, and exposure to environmental toxins. The course will combine perspectives from developmental psychology and psychobiology.

[HDFS 641 Early-Childhood Development and Education]

[HDFS 650 Contemporary Family Theory and Research]
Fall. 3 credits. T R 10:10-11:40. E. Wethington. Sociological and social psychological theories and research on the family are examined with reference to the relationship between the family and society. Topics change from year to year, but focus on the processes of socialization and social control, the reproduction of gender and social class across generations, changes in family "values" across time, the rise of divorce and single motherhood, family diversity, and the genesis of deviance and psychological disorder.

[HDFS 660 Social Development]
Spring. 3 credits. S-U grades optional. Not offered 1996-97. C. Raver. This course is designed to provide both broad and in-depth training in the areas of social and emotional development during infancy and childhood. It will cover most of the major topical areas and theoretical orientations. Consideration will be given to basic influences on socioemotional development—biological, social, and cultural. Coverage will include normative development as well as the origins and nature of individual differences. We will explore such fundamental issues and questions as: What are emotions? What role do they play in the development and organization of personality? What are the effects of early social relationships on emotional regulation? When and how does the self-system emerge? Emphasis will be on the processes—both internal and external—that help determine the course and outcome of development.

[HDFS 670 Experimental Psychopathology]
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neurobiology or related biological science. Not offered 1996-97. TBA. M. Lenzenweger. Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.

Topical Seminars
Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.
HDFS 618 Seminar in Adolescence and Adult Development
Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

HDFS 633 Seminar on Language Development
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

HDFS 635 Seminar in Cognitive Development
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

HDFS 645 Seminar on Infancy
Topics covered in depth include the role of emotions in early development, infant stimulation and early experience, and the assessment of infant developmental competencies.

HDFS 646 Seminar in Early-Childhood Development and Education
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

HDFS 655 Seminar in Family Studies and the Life Course
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

HDFS 665 Seminar in Personality and Social Development
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

HDFS 675 Seminar in Developmental Psychopathology
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

HDFS 685 Seminar in Human Development and Family Studies
Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

HDFS 690 Seminar on Ecology of Human Development
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individualized Special Instruction

HDFS 700-706 Special Studies for Graduate Students
Fall or spring. Credits and hours to be arranged. S-U grades at discretion of instructor.

Independent advanced work by graduate students recommended by their Special Committee chair with approval of the instructor.

HDFS 700 Directed Readings
For study that predominantly involves library research and independent study.

HDFS 701 Empirical Research
For study that predominantly involves collection and analysis of research data.

HDFS 702 Practicum
For study that predominantly involves field experience in community settings.

HDFS 703 Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HDFS 704 Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HDFS 705 Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HDFS 706 Supervised Teaching
For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HDFS 899 Master's Thesis and Research
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.

HDFS 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.

HUMAN SERVICE STUDIES COURSES

HSS 100 Skills for Learning in the Field
Fall and spring. 3-4 credits. Priority given to HSS students. Open to all levels, undergraduate and graduate. Limited to 30 students. T R 2:30-4:25. Students learn to be self-directed learners and to integrate theory and experience. Topics include experiential learning, participant observation, interpersonal communication, critical analysis, and empowerment. These ideas and skills are learned through participation in CLASP, an adult literacy program.

HSS 101 Human Services in Contemporary Society
Fall. 3 credits. Recommended for freshmen and first-year transfer students. T R 10:10-11:25 A lecture and discussion course designed as an introduction to the community base of services. Current and historical human services are examined. Emphasis is placed on social services, education, health, and criminal justice. Human services issues are discussed, such as racism, sexism, classism, sexual preference, physical disability, and age. Contemporary issues that impact on service delivery will also be discussed with attention to the relationship between direct service and public policy.

HSS 203 Groups and Organizations
Spring. 3 credits. Enrollment limited to 125 students. M W F 10:10-11:00. A basic course in the social psychology of groups and human service organizations. Study of the human service organization focuses on individual, group, and organization interface in terms of such issues as the perception of roles, norms, communication, power, leadership, and other issues. Students are expected to learn about the basic concepts and propositions that provide insight into organizational issues that confront members of organizations. Exercises are used to heighten understanding of group and organizational behavior.

HSS 210 The Elements of Helping
Fall and spring. 3 credits. Limited to 60 students. Priority given to HSS majors. S-U optional. Attendance at first class meeting mandatory. W 1:25-4:25.

An introduction to the theoretical and practical aspects of human service processes. Included is an overview of the helping relationship covering roles, characteristics, relationships, dilemmas, and career issues of helpers. The course focuses on understanding and development of helping skills. Through role playing and exercises, students deal with basics such as attending, listening, responding, empathy, respect, genuineness, and confronting. Other topics include self-awareness, learning, communication, and conflict management. The course includes an overview of some of the major theories of helping. The theory base underlying principles taught in the course is general systems theory.

HSS 225 Education as a Human Service
Fall and spring. 3 credits. M W F 11:15-12:05.

This course provides students with an overview of the relationship between educational programs and the delivery of human services, and the evaluation of human services and trends for the future. Emphasis is placed on the analysis of approaches that have been taken by educators, human service professionals and others in schools, neighborhood organizations, and human services to ameliorate the factors that place children and youth at risk. External and individual conditions or circumstances that place youth at risk will be identified, and the characteristics of systems and programs that promote positive growth and development of children and youth will also be examined.

HSS 246 Determinants of Behavior
Fall. 3 credits. Prerequisites: introductory sociology and introductory psychology and HDFS 115. Enrollment limited to 45. Priority given to social work majors. M W F 2:30-3:20.

This course provides an interdisciplinary knowledge base for human service professionals. We examine social behavior in the human environment from ecological, ethological, historical, cultural, and social system perspectives. Applications are made to professional practice at the micro level (counseling with individuals and families or other small groups) and at the macro level (social planning and policy formulation for vulnerable groups in our society).
HSS 280 Racial In American Society
For description, see AS&RC 280.

HSS 292 Research Methods
Spring. 3 credits. M W 2:30-3:20.
Sections TBA.
Students will learn the logic and methods of social science research and develop skill in transforming issues of interest to them into researchable questions. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. HSS majors should take no later than their junior year.

HSS 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multiplicity of description of the study they want to undertake on a form available from the Student Services Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

HSS 315 Human Sexuality
Spring. 3 credits. Limited to 500 students.
Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: Fundamentals in biology. T R 2:30-3:45.
The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. The course will focus on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Future trends in sexuality will be addressed. Biological and environmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural system on the development of sexual needs, standards, and values. Research and theory in human sexuality will be explored in an interdisciplinary approach drawing on human and organizational behavior, biology, history, communication arts, education, research theory, law, sociology, and psychology.

HSS 325 Health-care Services and the Consumer
Fall. 3 credits. Prerequisite: an introductory course in human services or health or biology. S-U grades optional. Next offered 1997-98. T R 12:20-1:35.
This course is an introduction to health care services and will present developments in the health field that affect the availability and kinds of health services. Emphasis is placed on interrelationships between types of practitioners, institutions and agencies, and the part each can play in prevention, diagnosis, and treatment of disease and disability. Focus will include historical and current trends, quality health care, consumer issues, cultural concerns, ethical issues, politics and policies, and the contemporary problems of health care.

HSS 330 Ecology and Epidemiology of Health
Ecological and epidemiological approaches to the problems of achieving human health within the physical, social, and mental environment. The course introduces epidemiological methods to the students and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires’ disease, plague, cancer, and chlamydia. Application of epidemiology to health care will be discussed.

HSS 335 Contemporary Issues in Women's Health
Fall. 3-4 credits. T R 12:20-1:35.
This course will deal with the history of women in medicine and historical and cultural treatment of women’s health problems. Health care research and the exclusion of women from research trials and protocols will also be addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethics, and factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations will also be discussed in depth. Students may take the course for a fourth credit, which will require attending a discussion section every other week and observations of seven facilities that provide a variety of women’s health care (i.e., birthing center, mammogram, and ultrasound centers, hospital labor and delivery unit, LaMaze class, women’s self defense class, etc.) on the alternate weeks.

HSS 340 Introduction to Program Planning and Development
Fall and spring. 3 credits. M W F 9:05-9:55.
The course provides an introduction to program planning and development in the delivery of human services. Models of program planning, development, and delivery will be analyzed in relation to practice. The processes of conceptualizing a program and the context of planning and development (political, organizational, economic, and social) will be examined. Basic tools and techniques available to planners will be identified and skills developed. Issues related to ethics, power/authority, confidentiality, and accountability will be included. Professional roles and competencies needed will be highlighted throughout the course. Students will apply the planning and development process to individual projects.

HSS 355 Leadership and Community Services
Fall 1996. 3 credits. T R 10:10-12:05.
Students enrolled in the course will examine and develop their own leadership styles and will examine leadership styles in community agencies and projects. The role of volunteerism, both historically and in contemporary society, will be considered. Special attention will be given to the present service learning movement in American higher education. This course will use an active, experiential learning approach by considering the leadership and community service experiences of class participants in the case study material. Students who are presently involved in community service will have the opportunity to use their experiences as bases for paper and discussion topics.

HSS 370 Social Welfare as a Social Institution
Fall. 3 credits. M W F 9:05-9:55.
A philosophical and historical introduction to social welfare services. The course reviews the historical, social, and political contexts within which social welfare programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and the ways in which policies are translated into social welfare programs. Basic issues in welfare are discussed through present program designs, public concerns, and the interrelationships and support of services in the community.

HSS 380 Community Mental Health
Summer only. 3-4 credits.
Students become acquainted with basic concepts in the field of community mental health. Beginning with the injustices that served as a catalyst to the community mental health movement, the course evaluates the ethical and practical challenges experienced by mental health professionals in the community. Other topics include social roles of mental illness, epidemiology, the role of culture and social class in mental illness, public attitudes, and civil liberties.

HSS 400-401-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional.
For independent study by an individual student in advanced work in a field of HSS not otherwise provided in the department or elsewhere at the university, or for study on an experimental basis with a group of students in advanced work not otherwise provided in the department or at the university. Students prepare a multiplicity of description of the study they want to undertake on a form available from Student Services. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the change-of-registration period, early submission of the special-studies form to the chair is necessary. Students, in consultation with the instructor, should register for one of the following subdivisions of independent study.

HSS 400 Directed Readings
For study that predominantly involves library research and independent readings. Directed readings may incorporate experiential learning.

HSS 401 Empirical Research
For study that predominantly involves data collection and analysis or laboratory or studio projects. Independent research may incorporate experiential learning.

HSS 403 Teaching Apprenticeship
Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

HSS 414 Professional Internship in Human Service Studies
Fall or spring. 3 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: HSS 100.
Precourse enrollment required. T 1:30-4:25.
Students intern for a minimum of 10 hours a week in a human service organization and attend a weekly seminar or office hours with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experientially and, at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

HSS 417 Power and Empowerment in Human Services
Spring. 3 credits. Limited to 20 students. T R 10:10-11:25.
The course will take a theoretical world view of power and the historically colonial relationship between the American ruling class and other people. The three dimensions of power will be used as the framework for analysis. The relationships among social class, race, sex, and power will be under study. In addition, the class will explore the nature of empowerment and new theories of power and empowerment.

HSS 426 Crime and Crime Policy
Fall. 3 credits. S-U grades optional. Limited to 20 juniors and seniors. T R 10:10-12:05.
This course is for students who are interested in understanding crime and crime-control policies. The purpose of the course is to learn how to think about crime problems in terms of their social, political, and human service contexts. The following topics are among those addressed in order to realize the objectives of the course: American culture and crime policy; criminal justice agency and system operations; criminal offending and victimization; race and crime; and community crime-control programs. These topics are examined from the vantage point of criminal justice, social justice, and public health perspectives.

HSS 465 Community Decision Making
Fall. 3 credits. S-U grades optional. T R 12:20-2:15.
This course provides an introduction to the local political environment of human service agencies and programs. Special attention is given to how community issues are raised, debated, and resolved. Topics include the roles of service providers, local government officials, social movement organizations, federal and state governments, the courts, and the news media. Previous or concurrent participation in community activities is desirable but not required.

HSS 471-472 Social Work Methods and Practice I and II
Introduction to concepts and methods used in a generalist model of social work practice. Examination of the values and ethics of professional practice. Students learn knowledge and skills appropriate for working with individuals, groups, families, organizations, and communities. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are expected to arrange and to pay for their own transportation.

HSS 471 Social Work Methods and Practice I
Fall. 9 credits. Limited to 25 social work students. Prerequisites: introductory psychology, introductory sociology, one course in human development, grades of C+ or better in HSS 246 and 370. Lec M W 10:10-12:05 and T R 9-5.

HSS 472 Social Work Methods and Practice II
Spring. 9 credits. Limited to 25 social work students. Prerequisites: grade of B- or better in HSS 471 and satisfactory performance in fieldwork. M W 10:10-12:05 and T R 9-5.

HSS 473 Senior Seminar
Spring. 3 credits. Prerequisite: HSS 414 or 471-472 (472 may be taken concurrently). M 1:25-4:00.
The process of change at the individual, family, and community level is a major theme of the senior seminar. The second theme, which is integrated throughout the course, concerns ethical principles and values that should inform professional practice. We will also discuss value dilemmas attendant on interventions to promote change at both the micro and macro levels of practice.

HSS 475 Social Policy
Spring. 3 credits. Prerequisite: HSS 370 or Government 111 or Sociology 141. S-U grades optional. M W 9:05-9:55.
An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

HSS 476 Housing and Feeding the Homeless
For description, see H ADM 490.

HSS 490 Human Service Environments
Spring. 3 credits. Limited to 20 juniors and seniors. T R 10:10-11:25.
Introduction to the environment of human service agencies. Topics include location, size, and internal layout of agencies; relationships among agency, community, and human service organizations, and communities. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are expected to arrange and to pay for their own transportation.

HSS 491 Human Service Programs
Spring. 3 credits. Limited to 20 juniors and seniors. T R 10:10-11:25.
Introduction to programs within human service agencies. Topics include program planning, delivery, evaluation, and the role of program administration. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are expected to arrange and to pay for their own transportation.

HSS 492 Human Service Processes
Spring. 3 credits. Limited to 20 juniors and seniors. T R 10:10-11:25.
The course will focus on the processes within human service agencies. Topics include program planning, delivery, evaluation, and the role of program administration. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are expected to arrange and to pay for their own transportation.

The Graduate Program
Human service studies graduate courses are open to undergraduates only with the instructor's permission. The courses listed below will be taught regularly (annually or in alternate years).

HSS 600 Special Problems for Graduate Students
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge for independent advanced work. S-U grades optional. Department faculty.

HSS 603 Teaching Experience
Fall and spring. 1-3 credits. S-U only. For students assisting faculty with instruction. The aspects of teaching and the degree of involvement vary depending on the needs of the course and the experience of the student. Does not apply to work for which students receive financial compensation.

HSS 613 Seminar in Mental Health Services
Fall. 3 credits. Open to undergraduate seniors with instructor's approval. T 4:00-6:30.

The courses listed below will be taught regularly (annually or in alternate years).

HSS 625 Health Care Services: Consumer and Ethical Perspectives
Fall. 3-4 credits. Limited to 30 students; undergraduates with permission of instructor. 4-credit option, may be used as Biology and Society Senior Seminar option. T R 10:10-11:25.
The course will focus on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and graffiti Doc cases.

HSS 627 Legal Aspects of Health Services Delivery
Spring. 3 credits. Prerequisites: HSS 604 or permission of instructor. Next offered 1997-98.
This course introduces principles of the law that are specifically applicable to health services delivery. Topics considered include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.
An overview of health services is given within the context of the social and economic development policies of several industrialized democracies and developing countries. Sociocultural, economic, and epidemiologic factors stressed as keys to the formulation of realistic strategies. Resource allocations for health services are assessed against the backdrop of changing rates of economic growth.

HSS 630 Comparative Health-Care Systems
Spring. 3 credits. Open to graduate students and a limited number of seniors with permission of instructor. M 7:30-10:00.

HSS 631 Managed Health Delivery Systems: Primary-Ambulatory Care
Spring. 3 credits. Prerequisite: HSS 634. T R 2:30-3:45.
The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Pressures on traditional inpatient and solo fee-for-service medicine are examined in the context of the transition from unmanaged to managed delivery systems. The course is divided into two parts: Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part 2 centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in competitive markets. Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. The consumer health care behavior literature is reviewed in the light of marketing strategies and utilization control objectives. Many of the managerial topics are amplified by field trips and a select group of visiting speakers.

HSS 634 Health Care Organization
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of the instructor. T R 12:20-1:35.
The course will provide an introduction at the graduate level to the organization of health providers in the United States, the interrelationships of health services, and major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different services interrelate along the continuum of care. The course will describe and analyze organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., economy, quality). Innovations by public and private sectors in the delivery and reimbursement of health care will also be presented.

HSS 635 Field Studies in Health Administration and Planning
Fall or spring. 1–4 credits. TBA.

HSS 637 Epidemiology, Clinical Medicine, and Management Interface Issues
Spring. 3 credits. Next offered 1997-98. T 3:45-6:15.

This course explores from an empirical and analytical viewpoint the relationships between epidemiology, clinical medicine, and management. The course will review the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant portion of utilization and cost of health care services. In addition, students will have an opportunity to explore issues of resource allocation and continuous quality improvement. The format for the class is lecture, discussion, and case analysis.

HSS 638 Quality in Health Care Organizations
Spring. 1 credit. TBA.
The quality of health services—the extent to which the appropriate and most effective care is properly administered in the least costly manner—is a topic of paramount importance to patients. It is also a central concern of the providers and managers of health services and those who pay for care. It is also a cornerstone of health care reform. Through readings, lecture, discussion, and group work, this course will acquaint students with the basic elements of managing quality in health care organizations including: defining quality from many perspectives; measuring performance and detecting poor quality care; traditional and progressive approaches to managing quality including Continuous Quality Improvement; and the politics of quality, both within and outside the organization.

HSS 640 Economics of Health and Medical Care
Fall. 3 credits. T R 8:30-9:55.
The course is designed for graduate students who seek an understanding of the tools, vocabulary, and way of thinking of economics as it is applied to decision making in health services delivery, administration, and policy. The philosophical and methodological approach is based upon the often-quoted credo of John M. Keynes: "The theory of economics does not furnish a body of settled conclusions immediately applicable to policy. It is a method rather than a doctrine, an apparatus of the mind, a technique of thinking which helps its possessor to draw correct conclusions." The basic methods of micro-economics will be emphasized as tools to help individuals and organizations make better decisions about health services delivery, administration, financing and policy issues.

HSS 641 Health Care Financial Management I
Spring. 3 credits. T 10:10-12:40.
The course is designed to give graduate students an intensive introduction to the issues and techniques in the financial management of health service organizations. Class lectures, readings, guest speakers, problems, case studies, and research for term paper/projects will all be used to get across the important points and reinforce them with examples and applications. The course emphasizes the internal financial management knowledge and skills necessary for financial success in complex health organizations.

HSS 642 Health Care Financial Management II: Payment Systems
Spring. 3 credits. Prerequisite: HSS 641. W 3:35-6:05.
The purpose of this course is to develop an understanding of the theories on which health care payment systems are based and the techniques through which they operate.

HSS 645 Information Resources Management in Health and Human Service Organizations
Spring. 3 credits. Prerequisite: HSS 641. W 12:20-2:50.
The course focuses on the nature of decision making and decision support systems, sources of information, and the strategic management of information resources in organizations.

HSS 648 Managing Health and Human Service Organizations I
Fall. 4 credits. T R 12:20-2:00.
This is the first segment of an 8-credit sequence addressing the management and leadership of health and human service organizations, with a perspective that ranges from that involved in first-line supervision to that of strategy setting at the CEO level. This course begins with a study of basics of management—communications, motivation, change management, leadership, human resources, organizational design issues, and labor relations. It then turns to the development of technical skills in the areas of problem solving, decision making, productivity measurement, resource allocation and performance measurement. The course is taught with an applied focus and utilizes a case study approach.

HSS 649 Managing Health and Human Service Organizations II
Spring. 4 credits. Prerequisite: HSS 648. T R 12:20-2:00.
This is the second segment of an 8-credit sequence in the management and leadership of health and human service organizations. This course concentrates on strategy issues, marketing, organizational culture issues, development of mission, the management of professionals, and studies the importance of roles, structure, and intra-institutional relationships in these organizations. The course is taught via a case study approach.

HSS 655 Leadership in the Human Services
Spring. 3 credits. Limited to 20 students. S-U grades optional. T R 4:00-5:15.

Students in this seminar will study human service organizations in the context of their changing economic, political, ecological, and technological environments, and in terms of the leadership behaviors of administrators who are making successful adaptive responses to these changes. The introduction of new organizational forms and strategies for nurturing innovation and for effecting cultural change within the work environment will be discussed from the perspective of leadership roles at various organizational levels.

Readings include both new theoretical literature and practical how-to-do-it guides for administrators. The seminar format provides an opportunity for simulations so that students can enact and receive feedback on their own developing leadership skills.
HSS 658 Ethics, Public Policy, and American Society
Fall. 3 credits. M W 2:00–4:25.
This course will explore current issues of ethics and public policy against a background of theories of behavior. Questions of how public officials and managers of public and non-profit agencies and private enterprises act will be examined. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings will be drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential. Open to seniors and graduate students.

HSS 660 Social Policy and Program Planning in Human Services
An examination of the policy process with an emphasis on the ways in which this process determines need distribution of social services in the fields of health, education, income security, employment, criminal justice, and housing. The relationship of the policy process to the political economy, to intergovernmental relations, and to social change at the national, local, and state, and local levels will be analyzed. To this end history, theory, cultural values and beliefs, and the structure of society will also be investigated. The role of evaluation in policy planning and implementation will be underscored. Current issues in policy, such as the role of the private and voluntary sectors, interest group politics, barriers and constraints to the development of effective policies, and the respective roles of consumers, clients, and human service professionals in the policy process will also be addressed.

HSS 664 The Intergovernmental System: Analysis of Current Policy Issues
Fall. 3 credits. Open to seniors who have had a course in American government and to juniors and seniors. M W 10:10-12:00.
This course offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Particular attention is paid to how certain policies in human service issues are played out at the federal, regional, and local levels of government, and to the formulation of federal and state budget policy. General public administration theory is considered. Students work in teams on a policy/administrative research project and report to the class.

HSS 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems
Spring. 3 credits. T R 9:00–10:15.
Prerequisite: HSS 654.
This course examines the organization and delivery of long-term care services and examines the context of public-financing constraints. Progressive long-term care is viewed as a continuum encompassing medical and social services positioned to optimize independent living. Relevant experience from other highly developed countries is presented. Visiting speakers from the public and private sectors are featured. Field trips provide additional insights into the many challenges and opportunities in long-term care policy and management.

HSS 689 Introduction to Program Evaluation
Fall. 1 credit. M W 10:10–12:25.
This course provides a conceptual introduction to the theory and practice of social program evaluation. It is designed particularly but not exclusively for students planning a major or minor in HSS program evaluation and planning. The course emphasizes two major dimensions of evaluation: 1) its practical, real-world and theoretical, methodological dimension. At the intersection of these two dimensions lie issues of evaluation’s purpose and role, which are also addressed in the course.

HSS 690 Measurement for Program Evaluation and Research
Fall. 3 credits. Priority given to HSS students. M W 10:10–11:25.
The course reviews measurement theory and its application to the evaluation of human service programs. Topics include validity, reliability, scaling methods, basic principles of instrument design, and varied methods of data collection with an emphasis on structured questionnaires and interviews. Student work is focused around an applied course project. Attention is also given to ethical and managerial issues that arise in applied measurement settings.

HSS 691 Program Evaluation and Research En Design
Spring. 3 credits. M W 10:10–11:25.
This course reviews research design and its application to the evaluation of human service programs. Major topics include experimental, quasi-experimental, and nonexperimental research designs; basic sampling and measurement theory; and the theory of validity in research. Attention is given to issues that arise in the application of research designs to the evaluation of programs, including problems of randomization, causal inference, replication, and utilization of results. The central role of the general linear model in the statistical analysis of outcome evaluation studies is highlighted. Case examples and computer simulation. Students will encounter examples of outcome evaluations from a wide range of disciplines including health, mental health, social welfare, criminal justice, social policy, and education.

HSS 692-693 Program Evaluation in Theoretical Perspective
Fall, spring. 4 credits each semester.
Prerequisites for HSS 692: 690 or 691 or 696 or permission of instructor. Prerequisite for HSS 693: 692. Students must register for both semesters. M W 2:30–3:45. Next offered 1997-98.

This course is a practicum in which the class designs and conducts an evaluation of a human service program. Students are involved in all phases of the evaluation from design through the production and dissemination of a final report. Emphasis is on research design. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, adding current issues of importance in the field.

HSS 695 Strategies for Policy and Program Evaluation
Fall. 3 credits. S-U grades optional. M 2:00–4:25.
This course examines a wide range of approaches to policy and human service issues played out at the federal, state, and local levels will be analyzed. To this end history, theory, cultural values and beliefs, and the structure of society will also be investigated. The role of evaluation in policy planning and implementation will be underscored. Current issues in policy, such as the role of the private and voluntary sectors, interest group politics, barriers and constraints to the development of effective policies, and the respective roles of consumers, clients, and human service professionals in the policy process will also be addressed.

HSS 696 Qualitative Methods for Program Evaluation
Spring. 3 credits. Prerequisites: HSS 690 and 691 or equivalent. M W 10:10–11:25.
This course presents a qualitative approach to applied research and the evaluation of human service programs. Topics include the epistemological assumptions underlying this approach, questions of entry into setting, methods for data collection and data analysis, reporting, confidentiality of participants, and the ethics of qualitative inquiry. The course aims to help students understand how, when, and why a qualitative approach to social inquiry can be used appropriately, effectively, and defensively.

HSS 704-705 Internship in Human Service Studies
Fall, spring, or summer. 1–15 credits. S-U grades optional.
Internship placement in human services is determined by availability and students’ academic and professional goals. Opportunities are available in public and private human service organizations at the national, state, and local levels in positions consistent with students’ needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

HSS 790 Advanced Seminar in Program Evaluation
Fall. Spring. 1–3 credits. S-U grades optional.
This advanced course is intended for students with at least three courses in evaluation (HSS 690 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, adding current issues of importance in the field.
**HUMAN ECOLOGY - 1996-1997**

**HSS 799 MPS Problem Solving Project**
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge for independent advanced work. S-U grades optional.

**HSS 899 Master's Thesis and Research**
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

**HSS 999 Doctoral Thesis and Research**
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

**Topics Courses**
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being.

Hours to be arranged. This series of courses provides an opportunity for graduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

**HSS 610 Human Service Administration**

**HSS 611 Program Evaluation and Planning**

**HSS 612 Health Administration**

**Topical Seminars and Practica**
Seminars and practica, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practica offer concentrated study in a specific human service area or in the educational dimension, or evaluation processes within human services.

**[HSS 669 Seminar in Program Planning and Development**
Topics include microlevel program planning, third-sector organizations, and intergovernmental influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human services are examined.

**HSS 679 Seminar in Program Evaluation and Evaluative Research**
Fall and spring. 1 credit. W 12:20-1:10. This ongoing seminar is topically organized according to student and faculty projects. Focuses on professional issues in evaluation practice, including consulting, ethics and standards, preparation of conference and publication materials, and various methodological issues.

**TEXTILES AND APPAREL COURSES**

**A. Lemley, chair, A. Netravali, director of graduate studies; P. Schwartz; undergraduate advising coordinator; S. Ashdown, C. C. Chu, C. Coffman, C. Jirousek, S. K. Obendorf, A. Racine, S. Watkins**

**NOTE:** Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**TXA 114 Introduction to Computer-aided Design**
Fall and spring. 3 credits. Limit 12 per lab section. Priority given to TXA and DEA students. S-U grades optional. A. Racine. A studio course that focuses on using the microcomputer as a design tool. The command-driven AutoCAD software program is the medium of expression for creating, modifying, and plotting visual images. Students will develop two-dimensional surface designs based on historical and cultural sources for portfolios and display. Approximate cost of supplies is $80.00; lab fee $10.

**TXA 125 Art, Design, and Cultural Thinking**
Fall. 3 credits. S-U grades optional. Lects M W F 9:05-9:55. P. Schwartz. An introduction to the visual artists and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an internet-based electronic textbook, lectures emphasize the visual expression to be seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

**TXA 135 Fibers, Fabrics, and Finishes**

**TXA 145 Apparel Design I**
Spring. 4 credits. Limited to 44 students with 22 students per lab section; priority given to TXA majors and students transferring into TXA. Apparel design majors should take course during the first year. Minimum cost of materials, $125; lab fee, $10. Lect C 1:25-4:25 and lab F 1:25 or lect R 1:25-4:25 and lab F 1:25. A. Racine. Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children's apparel. Students develop a thorough understanding of principles and techniques necessary to produce apparel.

**TXA 217 Drawing the Clothed Figure**
Spring. 5 credits. Enrollment limited to 18 students. Prerequisite: a basic drawing course. Priority given to apparel design students. S-U grades optional. Minimum cost of supplies $100.00. Lab fee: $30. T R 9:05-12:05. S. Watkins. To improve the student's ability to illustrate two-dimensionally the interaction of draped fabric and the human form and to develop awareness of clothing as a design medium. Emphasis is on development of techniques and skills in selected media necessary for the communication of design ideas.

**TXA 246 Apparel Design II**
Fall. 4 credits. Prerequisite: TXA 135 and TXA 145. Minimum cost of materials, $125; lab fee, $10. T R 10:10-1:10. S. Watkins.

This studio course applies the principles and processes of advanced pattern making and the theory of functional clothing to the development of sportswear, actionwear, and clothing for active leisure activities. Assigned problems will require students to use the design process to apply information about body structure, user needs (thermal protection and comfort, mobility, and visibility), and the nature of materials to the production of functional, fashionable apparel.

**TXA 300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged.

Staff:
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change of registration period.

**TXA 331 Apparel Production Technology**
Fall. 3 credits. Prerequisites: Economics 101 and 102 or CEH 110 and 111 and an upper-division course in either apparel or textiles. Staff:

Introduction to technical and economic aspects of textile and apparel production. Emphasis is on design and functioning of apparel manufacturing systems and their components. Analysis of efficient manufacturing methods such as Quick Response (QR), Just-in-Time (JIT) as applicable to apparel production, and use of computer technology in production and quality control will be included.

**TXA 335 Fiber Science**
Spring. 3 credits. Prerequisites: College chemistry and physics. Lects M W L 1:25. Lab M 2:30-4:25. A. Netravali. This course covers fibers commonly used in various engineering, medical, and apparel applications. Topics include nature of polymer molecules, chemical structure of organic fibers, inorganic fibers, micro-structure of fibers, fiber dimensions, environmental effects, mechanical, optical, thermal, and frictional properties of fibers. Fiber uses such as composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, etc. will be discussed.

**TXA 336 Fundamentals of Color and Dyeing**
Fall. 3-4 credits. Prerequisite: College Natural Science Requirements. Fiber science students are required to take the lab. Lab fee, $15. Lects M W F 10:10-11:00, lab M 1:25-4:25. C. C. Chu. Color is an extremely important and useful factor in daily life. This course will emphasize theories and scientific principles of color, providing a framework for the use of colors in design, marketing, or research. How colorants are used to dye fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to
non-textile majors. Guest lecturers from industry will provide the practical aspects of color in business.

TXA 337 Structural Fabric Design

This course covers the elements of traditional fabric design with an emphasis on the history and development of textiles. The course will focus on the structure and properties of textiles, as well as the techniques used in the production of textiles. Topics include the history of textiles, the structure and properties of textiles, and the techniques used in the production of textiles.

TXA 367 Apparel Design III
Spring. 4 credits. Limited to 20 students. Prerequisite: TXA 125, TXA 246, and one drawing course. Minimum cost of materials, $125; lab fee, $10. M W F 1:25-4:25. S. Ashdown.

This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. Through exercises, the principles and processes of draping, advanced flat pattern making, and lining are studied. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 368 Apparel Design IV

Intermediate apparel students prepared to challenge and refine their design skills will be presented with a variety of complex studio problems including computer-assisted apparel design. The Cornell Costume Collection is used for inspiration and illustration.

TXA 369 Style, Fashion, and the Apparel Industry

Illustrated lectures will focus on changes in the U.S. apparel industry and fashion from the nineteenth century to the present day due to social forces, technological developments, and shifting demographics. The Cornell costume collection will be used for discussion. Students will write short research papers on issues related to the apparel/textile complex.

TXA 375 Color and Surface Design of Textiles
Fall. 4 credits. Recommended. TXA 114 and TXA 135. Minimum cost of other materials, $100; lab fee, $60. Limited to 15 students. T R 1:25-4:25. C. Jirousek.

Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects will utilize techniques such as block printing, shibori, batik, silk painting, silk screen, and stichery to produce a portfolio of textile designs. Studio work will be augmented by lectures on pattern and color theory illustrated by slides and textile examples.

TXA 400-401-402-403 Special Independent Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXTA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiprofession description of the study they want to undertake on a form available from the Student Services Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair name necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 400 Directed Readings
For study that predominantly involves library research and independent reading.

TXA 401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

TXA 403 Teaching Apprenticeships
Fall or spring. 2-4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the core academic program, and have permission of the instructor and the department chair. S-U grades optional. Staff.

Apprenticeship includes both a study of teaching methods, data generation for analysis, and participation in a community setting and assisting the faculty with instruction.

TXA 432 Product Quality Assessment
Fall. 3 credits. Prerequisites: TXA 135 and Statistics. Lab fee, $15. Lecs M W F 1:25; lab W 2:30-4:25. S. Obendorf.

This course covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Day-to-day tests done in textile and apparel industry will be discussed. Laboratory sections will introduce students to various test methods, data generation for analysis, and evaluation.

TXA 436 Fiber Chemistry
Spring. 3 credits. S-U grade optional. Senior and first-year graduate students. Lecs M W F 10:10-11:00. C. C. Chu.

The chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyesters, nylon, acrylic, polyolefins and spandex and their polymerization process are discussed. The general chemical and physical properties of each will be given. Degradation reactions for certain fibers such as polyolefins and acrylics will be discussed.

TXA 439 Biomedical Materials and Devices for Human Body Repair

Survey of materials and devices for repair of injured, diseased, or aged human tissues/ organs. It includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, heart, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

TXA 444 Issues in Apparel/Textile Management
Spring. 3 credits. S-U grades optional. Prerequisite: TXA 135 and ARME 240 or equivalent. Lec T R 2:30-3:45. V. Schwartz. Not offered 1996-97.

This course provides an overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. The organization and structure of both domestic and international retailers is included along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies will be emphasized throughout.

TXA 446 Apparel Design: Intermediate Functional Clothing Design

Complex problems in functional apparel design will be studied with an emphasis on totally encapsulating clothing. Students will work in groups and individually to set design criteria and develop innovative solutions for current problems in protective apparel.

TXA 448 Apparel Design: Product Development and Presentation
Fall. 3 credits. Prerequisites: minimum of three drawing or art courses, TXA 367, TXA 369, and TXA 373 or permission of instructor. Minimum cost of materials, $250; lab fee, $10. S. Ashdown.

Through studio problems in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Some portfolio development included.

TXA 499 Honors Thesis Research
Fall and spring. 1-6 credits (maximum 6 credits for graduation). S-U grades optional. Prerequisite: TXA students who have been admitted to college honors program.

Independent research leading to the honors thesis. College honors program guidelines are to be followed.

TXA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional.

Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.
268 Human Ecology - 1996-1997

TXA 620 Physical Properties of Fiber-Forming Polymers and Fibers
Spring. 3 credits. Prerequisite: permission of instructor. Next offered 1997-98. A. Netravali. Formation and properties of fiber-forming polymers, rubbery, glassy, and crystalline states and their interconnection. Fiber structure, relationship between chemical structure and physical properties of manufactured and natural fibers. Mechanical, thermal, and viscoelastic properties of fibers and testing methods will be discussed.

TXA 626 The Chemistry of Textile Finishes and Dyeing
Spring. 3 credits. S-U optional. Prerequisite: TXA 536 or equivalent and organic chemistry, or permission of instructor. C. C. Chu. Chemical aspects of textiles with emphasis on finishes and dyeing are discussed. Industrially important textile chemicals used for dying and enhancing fiber and fabric properties, such as durene press, anti-soiling, water repellency will be studied. The emphasis is on the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources and synthetic routes. The environmental impact of these textile chemicals and current federal regulation will be briefly discussed.

TXA 635 Special Topics in Textiles and Apparel
Fall. 1-3 credits. Prerequisite: permission of instructor. Staff. A study of the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tensile, shear, and compression stress; bending and buckling; and the mechanical behavior of nonwoven textile materials.

TXA 639 Mechanics of Fibrous Assemblies
Fall. 3 credits. Prerequisite: solid mechanics or permission of instructor. P. Schwartz. A study of the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tensile, shear, and compression stress; bending and buckling; and the mechanical behavior of nonwoven textile materials.

TXA 644 Human Factors: Anthropometrics and Apparel
Spring (even-numbered years). 3 credits. S-U grades optional. Limit 15. Prerequisite: permission of instructor. Open to advanced undergraduates. Not offered 1996-97. S. Ashdown. Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of apparel sizing; techniques; national and international sizing systems and standards; impact of sizing systems on various populations (elderly, handicapped, etc.).

TXA 675 Aesthetics and Meaning in World Dress
Spring. 3 credits. S/U grades optional. Prerequisite: TXA 125 or course in history of art, costume history, or other history. Next offered 1997-98. C. Jirousek. An examination of the aesthetic and social psychological relationship between body and clothing in the context of various cultures. Students will develop a research topic to be presented orally and in a term paper and will participate in the development of an exhibition.

TXA 899 Master's Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S/U grades optional. Staff.

TXA 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S/U grades optional. Staff.

Faculty Roster
Anderson, Carol L., Ph.D., Iowa State U. Assoc. Prof., Human Development and Family Studies, Assistant Dean
Ashdown, Susan, Ph.D., U. of Minnesota. Asst. Prof., Textiles and Apparel
Avery, Robert B., Ph.D., U. of Wisconsin. Prof., Consumer Economics and Housing
Avery, Rosemary J., Ph.D., Ohio State U. Assoc. Prof., Consumer Economics and Housing
Barr, Donald J., Ph.D., Indiana U. Prof., Human Service Studies
Battistella, Roger M., Ph.D., U. of Michigan. Prof., Human Service Studies
Becker, Franklin D., Ph.D., U. of California at Davis. Prof., Design and Environmental Analysis
Boyd, David Michael, B.A., U. of North Iowa. Prof., Design and Environmental Analysis
Brumtberg, Joan J., Ph.D., U. of Virginia. Prof., Human Development and Family Studies
Bryant, W. Keith, Ph.D., Michigan State U. Prof. and Chair, Consumer Economics and Housing
Canfield, Rick, Ph.D., U. of Denver. Asst. Prof., Human Development and Family Studies
Chi, Peter S., Ph.D., Brown U. Prof., Consumer Economics and Housing
Chu, Chih-Chang, Ph.D., Florida State U. Prof., Textiles and Apparel
Cochran, Moncrieff, Ph.D., U. of Michigan. Prof., Human Development and Family Studies
Cornelius, Steven W., Ph.D., Pennsylvania State U. Assoc. Prof., Human Development and Family Studies
Darke, Sheila M., Ph.D., Rhode Island School of Design. Assoc. Prof., Design and Environmental Analysis

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 650 undergraduates and approximately 120 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

When the construction of the new Ives Hall classroom building is complete, ILR students will return to modern, technologically advanced lecture halls and seminar rooms, as well as to a library enlarged in size and more useable for study. During the construction, ILR classes will meet in buildings near the Ives Hall complex of faculty and administrative offices. Lunches, receptions, parties, and activities will be organized to promote the continuing interaction of ILR students and faculty.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of recent entering classes, and minority students comprise about 25 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in the field, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 140 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 163 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

This department offers specialization in human resource studies. Human Resources focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of human resource management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

International and Comparative Labor Relations

International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as the newly industrializing countries in Asia and the Third World.

Labor Economics

Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

By studying individuals, groups, single organizations, and associations or organizations, persons in the field of Organizational Behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

Social Statistics

Economic and Social Statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.
INDUSTRIAL AND LABOR RELATIONS - 1996-1997

RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students will be provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services. Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to open access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances. One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in the Johnson Graduate School of Management, earning their bachelor's degree in ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State. The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to the school. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

Leave of Absence or Withdrawal

If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

Curriculum Changes Effective Fall 1994 for Entering Class

FRESHMAN YEAR

Fall Semester

Freshman Writing Seminar 3
Introductory Microeconomics (ECON 101) 3
History of American Labor: Nineteenth Century (ILRCB 100) 3

Spring Semester

Econ 101-102, Micro-Macroeconomics* 6 Fall and spring

Junior and Senior Years

Econ 320, Social and Psychological Foundations of Organizational Behavior I (ILROB 170)* 3
ILR Colloquium (ILR 150) 1
Elective 3

Requirements for Graduation

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

Junior Year
ILRLE 340, Economic Security 3 Fall or spring
*College of Arts and Sciences

Required Courses (55 credits)
The curriculum prescribes the courses and subjects listed in the table above, to be taken in the terms indicated. In the senior year, all courses will be electives.

Elective Courses (65 credits)
From the courses offered by the school, students must select a minimum of 27 credits of ILR elective courses. No more than 9 of these credits may be satisfied by ILR 499, Directed Studies, or ILR 497–498, Internships, or ILR 495, Honors Program.
Undergraduates are required to select one course in the humanities and one intensive writing course (each for a minimum of three credits) from a list of designated courses.
The remaining 35 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 33 credits in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

passed. For the precise fee per credit, students should call the Office of the Bursar.
The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

SCHEDULING AND ATTENDANCE

Schedule Changes
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance
It is each student's responsibility to attend all scheduled classes unless approved excuses have been given by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:
1) participation in authorized university activities such as athletic events, dramatic productions, or debates;
2) medical problems supported by a record of medical treatment;
3) serious illness or death in the immediate family;
4) other circumstances beyond the student's control.
A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

ACADEMIC STANDING AND GRADES

Academic Integrity
In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.
Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:
1) knowingly representing the work of others as one's own;
2) using or obtaining unauthorized assistance in any academic work;
3) fabricating data in laboratory or field work;
4) giving fraudulent assistance to others;
5) fabricating data in support of laboratory or field work.
Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

Dean's List
A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:
1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2) a minimum course load, for the term of 12 letter-graded credits;
3) completion of all courses registered for at the beginning of the term;
4) satisfaction of all good-standing requirements.

Academic Standing
Good standing requires that all of the following criteria be met at the end of each term:
1) an average of C- (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2) no failing grades in any course, including physical education;
3) a cumulative average of C- (1.7) for all completed terms.
If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

Involuntary Separation from the School for Academic Reasons
A student may be denied permission to reregister at the end of any term when he or she has failed:
1) to establish good standing after a semester on warning;
2) to maintain an average of 1.7 in any term after a previous record of warning;
3) to achieve good standing after being on warning any two previous semesters;
4) two or more courses in one term or has a term average of 1.0 or below.
The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if...
S-U Grading Policy
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives only, not directed studies;
2) students are limited to registering in two S-U courses a term;
3) S-U registration is limited to 4 credits for each course;
4) students registering for S-U grades must be in good standing;
5) students must fulfill the graduation requirement of 105 letter-graded credits. ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete
A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work may be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial work remaining. When approved, a firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS
To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Dual Registration in the Johnson Graduate School of Management
Dual informal registration in the Johnson Graduate School of Management leads to a Bachelor of Science degree in industrial and labor relations and a master's degree in management after five years of study and is open to students who meet the requirements of the Johnson Graduate School of Management.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that the expectations of the Johnson Graduate School of Management and ILR curriculum requirements are fulfilled. Students interested in the very limited and selective program of the Johnson Graduate School of Management should contact the Admissions Office, 319 Malott Hall, and a counselor at the Office of Student Services.

Five-Year Master of Science Degree Program
With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish to concentrate study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships
The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problem solving. A number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honor Program
Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has agreements with universities in Germany, Israel, England, and the Scandinavian countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, 474 Uris Hall.

Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

ILRCB 100 Introduction to U.S. Labor History: Nineteenth Century
Fall. 3 credits. C. Daniel, I. DeVault, N. Salvatore
This first semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

ILRCB 101 Introduction to U.S. Labor History: The Twentieth Century
Spring. 3 credits. Prerequisite: ILRCB 100. C. Daniel, I. DeVault, N. Salvatore
This second semester of a two-semester sequence covers the major changes in the nature of work, the workforce, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

ILRCB 201 Labor and Employment Law
Fall. 3 credits. M. Gold, R. Lieberwitz, K. Stone
A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework within which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 300 Collective Bargaining (200)
Fall and spring. 3 credits. M. Cook, R. Hebdon, H. Katz, S. Kuruvilla, L. Turner
A comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict; the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 302 Strangers and Citizens: Immigration and Labor in U.S. History
Fall or spring. 3 credits. I. DeVault
This course will explore immigrant workers' experiences in the 19th and 20th centuries from different perspectives. We will examine what it meant to the immigrants themselves to arrive as strangers in the United States while also examining the ways in which pre-existing American groups defined these immigrants as "strangers." Similarly, we will look at U.S. citizens in their roles as greeters of immigrants, detractors of immigrants, and models for the aspirations of immigrants. Throughout the course, our main examples will come from the industrial and union realms.
ILRCB 304 Seminar in American Labor and Social History
Fall or spring. 4 credits. Permission of instructor. C. Daniel, I. DeVault, N. Salvatore.
An undergraduate seminar whose topic changes depending on semester and instructor.

ILRCB 384 Women and Unions (also WOMNS 384)
Fall or spring. 4 credits. I. DeVault.
Will explore women's participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered will include women workers' relations with male-dominated unions and the historical development of class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.

ILRCB 385 The African-American Workers, 1865-1910: The Rural and Urban Experience
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. N. Salvatore.
Examines the history of blacks in America from Emancipation through the experience of the first generation born after slavery, with a focus on the work experience. Topics will include the restructuring of work during Reconstruction, the relationship between work and black organizational development; between black and white workers; and the nature of work in the agricultural south and in cities throughout the nation.

ILRCB 386 The African-American Workers, 1910-1992: Race, Work and the City
Fall. 3 credits. Prerequisites: junior or senior. N. Salvatore.
Examines the history of blacks in America from the start of the Great Migration through the 1970s, with a focus on the work experience. Topics will include the effects of migration and urbanization on black workers; the nature of the relationship between black and white workers as influenced by depression and two world wars; and an examination of the effect of the Civil Rights movement on the economic circumstances of black workers.

ILRCB 401 My Brother's Keeper: Voluntarism and Philanthropy
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. Not offered 1996-97. M. Gold.
The philosophy, practice, economics, and law of volunteering labor and donating money. Topics include altruism versus self interest; why individuals volunteer labor and raise and donate money; the structure and practices of charitable organizations; the economic effects of voluntary labor and philanthropic gifts; and the law of raising and distributing money.

ILRCB 407 Contemporary Trade Union Movement
An examination of contemporary trade union issues, including union power, political action, collective bargaining approaches, and organizing efforts. The course will cover structural, functional and strategic aspects of contemporary unions. Speakers from the union movement will address the class.

ILRCB 482 Ethics at Work
Fall or spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.
Major theories of ethics are examined, then applied to issues in the employment relationship such as genetic screening, job applicants, random drug testing of employees, affirmative action, discrimination, for-off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 488 Liberty and Justice for All
Fall or spring. 3 credits. Prerequisite: junior or senior or permission of instructor. M. Gold.
Major theories of ethics are examined, then applied to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 495 Honors Program
Fall and spring (yearlong course). 3 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the 80 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be proposed to an ILR faculty member who agrees to act as thesis supervisor; and (c) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and presentation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the department chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 497-498 Internship
Fall and spring. 497, 3 credits; 498, 6 credits. Staff.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of Off-Campus Credit Programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded S-U, for completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 499 Directed Studies
Fall and spring.
For individual research, conducted under the direction of a member of the faculty, in a special area of labor relations not covered by regular course offerings. Registration is normally limited to seniors who have demonstrated ability to undertake independent work. Eligible students should consult a counselor in the Office of Student Services at the time of course registration to arrange for formal submission of their projects for approval by the Academic Standards and Scholarship Committee.

ILRCB 500 Collective Bargaining
Fall. 3 credits. Open only to graduate students. Recommended: ILRCB 501 taken previously or concurrently. M. Cook, R. Hebdon, H. Katz, S. Kuruvilla, L. Turner.
A comprehensive introduction to the industrial relations system of the United States. The negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; U.S. industrial relations in international and comparative perspective.

ILRCB 501 Labor and Employment Law
Fall. 3 credits. Open only to graduate students. M. Gold, R. Lieberwitz, K. Stone.
A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework within which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the development of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502 History of Industrial Relations in the United States since 1865
Spring. 3 credits. Open only to graduate students. C. Daniel, I. DeVault, N. Salvatore.
This introductory survey course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and other such topics as industrial conflicts, working-class life and radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 602 Arbitration
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 200; 201 graduate students, ILRCB 500 and 501; permission of instructor. J. Gross, R. Lieberwitz.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of labor arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 603 The Economics of Collective Bargaining in Sports
Fall or spring. 3 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include: 1) salary determination, including free agency, salary caps, salary arbitration; 2) competitive balance and financial health of sports leagues; 3) anti-trust issues in sports; 4) labor disputes, union history, and contract administration issues in sports leagues; 5) discrimination in sports; 6) performance incentives.
An examination of the various aspects of ways in which societal discrimination on these of race, gender, and national origin, and the equality in the workplace, focusing on issues in the workplace. The course entails a high level of student participation in class discussions, and assignments include a research paper.

ILRCB 605 Readings in the History of Industrial Relations in the United States
Fall. 3 credits. Limited to seniors and graduate students. C. Daniel, N. Salvatore. A seminar covering, intensively, original printed sources and scholarly accounts for different periods in American history.

ILRCB 606 Theories and Industrial Relations Systems
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: seniors, ILRCB 100, 101, 200; graduate students, ILRCB 500. H. Katz. Will trace the evolution of theory and research on industrial relations. Topics include: theories of the labor movement, institutional models and evidence regarding what unions do, the origins of internal labor markets and their relationship with unionization, models of strikes, empirical assessments of arbitration, research on union decline, and empirical evidence of the impacts of new technology.

ILRCB 607 Values in Law, Economics, and Industrial Relations
Fall and spring. 3 credits. Limited to 21. Prerequisites: ILRCB 200, 201, 500, 501. Not offered 1996-97. J. Gross. An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussion and student research projects will use novels and short stories as well as the literature of industrial and labor relations to focus on issues such as: discrimination, law, economics and the state; work and business; power, conflict and protest; and rights and justice.

ILRCB 608 Special Topics in Collective Bargaining, Labor Law, and Legislation
Fall and spring. 3 credits. Prerequisites: undergraduates, ILRCB 200; graduate students, ILRCB 501. Staff. The areas of study are determined each semester by the instructor offering the seminar.

ILRCB 609 Special Topics: Labor Law Policy Seminar
Spring. 3 credits. K. Stone. The United States collective bargaining system, which had its origin during the New Deal period, has come under intense attack. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time the decline in the labor movement has undermined its political support. This seminar will look at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Some of the topics to be discussed: the theory of the theory of regulation embodied in the National Labor Relations Act and its critique; alternative concepts of labor markets and their policy ramifications; the emerging of the global economy and its ramifications for domestic labor regulation. There will also be discussion of alternative systems of labor regulation, such as found in West Germany, Sweden, and Japan.

ILRCB 650 Service Work and Workers in Historical Perspective
Fall or spring. 3 credits. T. DeVault. Takes a historical perspective on the development of a service economy in the United States. Readings will include general and theoretical works, but the main focus will be recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students will explore primary sources for research on the subject and write research papers.

ILRCB 651 Industrial Relations in Transition
Spring. 3 credits. Limited to seniors and graduate students. H. Katz. Considers whether recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms represent a fundamental transformation in industrial relations practice. Will review recent research and new theories arguing that such a transformation is occurring, including the work of Piore and Sabel, Bluestone and Harrison, and Kochan, McKenzie, and Katz. Will also review the counterarguments and evidence put forth by those who believe no such transformation is under way. Course material will focus on industrial relations practice in the private sector in the United States, although some attention will be paid to developments in Western Europe, the United Kingdom, and Japan.

ILRCB 655 Employment Law
Spring. 3 credits. Prerequisites: ILRCB 201/501. M. Gold. Examines a number of major federal and state laws designed to protect workers in the employment relationship. Material covered will be selected from the following: the Fair Labor Standards Act, unemployment insurance, workers' compensation, the Occupational Safety and Health Act, the Employee Retirement Income Security Act, the doctrine of employment at will, Social Security, workers' right to know, plant closings, and protection of workers' privacy.

ILRCB 682 Seminar in Labor Relations Law and Legislation
Fall or spring. 3 credits. Limited enrollment. Prerequisite permission of instructor. R. Lieberwitz. Legal problems in public employment and other areas of labor relations affecting the public interest.

ILRCB 683 Research Seminar in the History of Industrial Relations
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502. C. Daniel, T. DeVault, N. Salvatore. The areas of study are determined each semester by the instructor offering the seminar.
ILRRC 705 The Economics of Collective Bargaining
Spring. 3 credits. Prerequisites: ILRRC 500; ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor. Staff. Focuses on the economic analysis of union and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, profits, productivity, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRRC 783 Seminar in American Labor History
Spring. 3 credits. Permission of instructor. S. Salavatore. A reading and research seminar for graduate students that focuses on selected topics in nineteenth- and twentieth-century labor history. The topic changes each semester.

ILRRC 790 ILR M.P.S. Program
Fall and spring. 1-9 credits. Staff. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRRC 798 Internship
Fall and spring. 1-3 credits. Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRRC 798 must be approved by the faculty member who will supervise the project.

ILRHR 260 Directed Studies
Fall and spring. Credit to be arranged. For individual research conducted under the direction of a member of the faculty.

ILRHR 270 Workshop in Collective Bargaining, Labor Law, and Labor History
Fall and spring. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only. Designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student's thesis research.

HUMAN RESOURCE STUDIES

ILRHR 260 Human Resource Management
Fall 1996 and spring 1997. 3 credits. Open only to ILR RC students; others by permission. Staff. An introductory overview of the management of human resources in organizations. Topics include human resource decisions dealing with staffing, employee development, work-system rewards, and employee relations. Emphasis is on (a) problem-solving and decision-making approaches; (b) operational methods, technologies, and practices; (c) application of relevant behavioral science theory and research; and (d) legislation and other environmental constraints having an important bearing on the effective utilization of human resources by an enterprise.

ILRHR 266 Personal Computer Basics

ILRHR 350 Human Resource Economics and Public Policy
Fall 1996, spring 1997. 3 credits. Open to sophomores, juniors, and seniors. V. Briggs. A review of labor-market trends, data collection systems, and theories pertaining to public efforts to develop the employment potential of human resources and to combat unemployment. The major segments of the nation's educational training enterprise—public education, higher education, employer-provided training, apprenticeship training programs for the disadvantaged—are examined. Special policy and programmatic issues pertaining to youth, rural workers, welfare reform, direct job creation, worker relocation, economic development, targeted tax credits, industrial policy, and "enterprise zone" proposals are examined. Comparisons are made with other industrialized nations.

ILRHR 362 Career Development: Theory and Practice
Fall 1996, spring 1997. 2 credits. 7 weeks. Prerequisite: ILRHR 260 or permission of instructor. Limited to 30. S-U only. J. McPherson. The components of career management: individual factors and occupational realities in the development of both careers and organized programs for career management. Two complementary learning tasks required: information-gathering for career decision making based on self-assessment activities, and comprehension of organizational circumstances and practices encountered as careers develop. Grade based on short writing assignments and research paper.

ILRHR 366 Women at Work
Fall or spring. 3 or 4 credits. Prerequisite: ILRHR 260 or equivalent. Various aspects of female occupational roles in twentieth-century United States. Historical, social, and legal factors that influence women's choice of careers, work socialization and training, and subsequent labor-market experience are considered. Working women's entry-level jobs, opportunities for advancement, and income are compared to men's.

ILRHR 460 Human Resource Strategies for Entrepreneurial Firms
Fall or spring. 4 credits. Open to juniors and seniors. ILR 260 or permission of instructor. T. Welbourne. This class utilizes a semester-long case study that focuses on human resource issues and strategies for growing, entrepreneurial firms. Students solve weekly dilemmas by integrating their knowledge of the functional areas of human resource management, economic outcomes (wages, prices, inflation, profits, productivity, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined, and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRHR 461 The Design of Work Systems: Comparative and Interdisciplinary Perspectives
Fall or spring. 3 credits. Prerequisite: ILRHR 260 or equivalent and consent of instructor. Limited to juniors and seniors. R. Batt. Seminar designed to explore the state of knowledge and current research concerning the design and development of alternative work systems. The focus is on understanding alternative approaches to work restructuring and their differential effects on firm competitiveness and employee welfare. The first half of the course considers the class via role plays, formal presentations, impromptu meetings, and class discussions. In addition to the semester-long case study, students work in teams to develop their own case of an existing company. The emphasis is on concepts, application to real-life business situations, and acquisition of general management skills and knowledge.

ILRHR 465 Career Development: Comparative and Interdisciplinary Perspectives
Fall or spring. 3 credits. Prerequisite: ILRHR 260 or equivalent and consent of instructor. Limited to juniors and seniors. R. Batt. Seminar designed to explore the state of knowledge and current research concerning the design and development of alternative work systems. The focus is on understanding alternative approaches to work restructuring and their differential effects on firm competitiveness and employee welfare. The first half of the course considers the class via role plays, formal presentations, impromptu meetings, and class discussions. In addition to the semester-long case study, students work in teams to develop their own case of an existing company. The emphasis is on concepts, application to real-life business situations, and acquisition of general management skills and knowledge.

ILRHR 468 Human Resources Management Simulation
3 credits. Limited to juniors and seniors. Prerequisite: ILRHR 260 or equivalent. 3 weeks. W. Wasmuth. Uses a simulation model and an open-systems approach as means to enhance students' skills in strategic planning and managerial decision making. Attention will be given to the implications and efforts of strategic human resources management and supervisory decisions as measured by ten organizational performance indicators, including quality of human capital, leadership, work group climate, and productivity.
work life, employee productivity, customer satisfaction, employee retention, internal control, and the role that immigration plays as a source of human resource development in the United States. Immigration policy will be placed in an evolutionary context but primary attention will be given to the post-1965 revival of mass immigration. In addition to legal immigration, policies pertaining to border control, unauthorized immigration, collective bargaining, and international agreements are examined. Comparisons are also made with immigration systems of other nations.

ILRHR 469 Honors Program
Fall 1996, Spring 1997. 3 credits. V. Briggs.
For those students who are interested in the area of immigration and the American workforce. The course is designed to enhance the understanding of key functional and strategic issues related to human resource management and can assist in planning and evaluating programs. The course includes an introduction to the role of human resource management in the context of national and international business, and an exploration of the role of human resource management in the context of international business.

ILRHR 497-498 Internship
Fall and spring. 3 and 6 credits.
For those students who are interested in the area of human resource management and can assist in planning and evaluating programs. The course includes an introduction to the role of human resource management in the context of national and international business, and an exploration of the role of human resource management in the context of international business.

ILRHR 499 Directed Studies
For those students who are interested in the area of human resource management and can assist in planning and evaluating programs. The course includes an introduction to the role of human resource management in the context of national and international business, and an exploration of the role of human resource management in the context of international business.

ILRHR 560 Human Resource Management
Fall 1996, Spring 1997. 3 credits.
Open only to graduate students. Staff.
A survey course covering the major areas of the management of human behavior in work organizations. Consideration is given to such aspects as strategic and human resource planning, design and management of human resource systems, staffing, training and management development, organization development, compensation, and employee and labor relations. Emphasis is on the application of theory and research to the solution of personnel problems.

ILRHR 565 Research on Education Reform and Human Resource Policy
Spring 1997. 3 credits.
Two courses in statistics and/or knowledge of SAS.
1. Bishop.
This course is a research seminar and tutorial in which students conduct empirical research on a topic that can inform education reform efforts or human resource policy more generally. The class will be taught by a combination of instructors and students, and will be structured to meet the needs of the individual student. The course will also provide an opportunity for the students to develop their own research proposals.

ILRHR 566 International Human Resource Management (also MBA 568)
Spring 1997. 3 credits. Prerequisite: ILRHR 260/560. Limited. Seniors or graduate students only with permission of the instructor. V. Pucik.
The course is designed to enhance the understanding of key functional and strategic issues related to human resource management in multinational firms. It has several objectives: to enhance the understanding of key functional and strategic issues related to human resource management in multinational firms, and to develop practical applications of concepts learned from the course in leading U.S. corporations. The first part of the course is designed to familiarize students with the theory of international human resource management and the second part is designed to provide hands-on experience with the implementation of HRM strategies. During the semester, students will conduct TEAM research on state-of-the-art HRM practices in leading U.S. multinational firms. In addition, each student will prepare a review paper on a specific area of HRM of his or her choice.

ILRHR 657 Employer Training: Economic and International Perspectives
3 credits.
Examines the training and learning that occurs on the job in both domestic and international contexts. The course includes an exploration of the role of training in the context of international business, and the role of training in the context of national and international business.

ILRHR 661 Organizational Development Methods
Spring 1996. 3 credits. G. Thomas.
An experiential course that deals with OD and its role in the organizational change process. Combines the opportunity for hands-on practice in a workshop setting. Students will have responsibility for research and writing a paper that examines a specific method, technique, or critical issue; an in-class demonstration/presentation illustrating applications of a chosen subject; and a final project requiring a comprehensive proposal that describes an approach to logically supported intervention strategy.

ILRHR 665 Transferring Human Resource Management: Case Studies
Spring 1996. 4 credits. Limited. Prerequisite: ILRHR 260/560 plus two other courses in human resource management and permission of instructor, G. Milkovich.
As the capstone course in HR Studies, students will integrate the theories and practices learned in other courses. Extensive field work is involved. The field projects are designed to require students to draw upon and integrate their course work in HR planning, staffing, development, compensation and reward, and new work systems.

ILRHR 666 Cost-Benefit Analysis for Human Resource Management
Spring 1996. 3 credits.
Examines the role of cost-benefit analysis in human resource management decision making. The course includes an exploration of the role of cost-benefit analysis in the context of national and international business, and an exploration of the role of cost-benefit analysis in the context of international business.

ILRHR 667 Employee Relations
Spring. 4 credits. Prerequisite: ILRHR 260/560 or equivalent and permission of instructor. L. Dyer.
Explores the policies, programs, and practices used by employers to promote the just and humane treatment of employees, especially with regard to the organizational and human capital implications of employee relations strategies. Topics include the role of human resource management in the context of national and international business, and an exploration of the role of human resource management in the context of international business.

ILRHR 688 Managing Compensation
Fall 1996 and spring 1997. 4 credits.
Limited to 30 students. Prerequisites: ILRHR 260/560, ILRHR 266 and basic statistics or permission of instructor, G. Milkovich, B. Gerhart.
Major emphasis is on the decisions and issues involved in the design and administration of total compensation systems. Topics include recruitment, selection processes and techniques, legal issues in selection, international issues, and evaluating the effectiveness of staffing decisions.

ILRHR 690 Comparative Human Resource Management
Spring or fall, 4 credits. Prerequisites: ILRHR 260/560, or permission of instructor, V. Pucik.
The course surveys human resource practices in key countries and regions of the world: Germany, U.K., France, Eastern Europe, Japan, and ASEAN. The focus is on issues related to management of professional and managerial work force, such as selection and staffing, development, and appraisal. Attention is given to current changes and trends in the human resource management area (e.g., Europe 92, transformation in Eastern Europe, globalization of Japanese firms). Implications for multinational managers operating in these countries will also be discussed.
ILRHR 691 Human Resource Planning and Strategy
Fall. 4 credits. Limited. Prerequisites: ILRHR 560 or equivalent, one course in statistics, and permission of instructor. L. Dyer, T. Welbourne.
Covers the content of human resource strategies and the process of human resource planning. The emphasis is on developing human resource strategies that are integrated with firm business strategies. Covered are methods and techniques used to forecast and plan for organization structures and processes, work force population, employee contributions, and employee morale. Much of the course is designed around case studies. Students make policy and program decisions for fictional organizations. Decisions are evaluated on the basis of their contributions to the organizations' human resource and business objectives.

ILRHR 692 Training the Displaced and Disadvantaged
Fall or spring. 3 credits. Prerequisite: permission of instructor. J. Bishop.
Examines public and private efforts to lower unemployment and underemployment of displaced and disadvantaged workers. The seminar examines a scope of the problem, its causes, and why specific programs have worked and others have not. Topics covered will include training for displaced workers, rehabilitation of the disabled, job-search training, tax credits for hiring, vocational training, literacy instruction, EEO, public service employment, assisting new business, and industrial policy. The seminar also investigates how the structure of the economy influences the ability of targeted training and job creation to achieve sustained reductions in unemployment and draws lessons from the experience of other societies.

ILRHR 693 Design and Administration of Training Programs
Spring. 3 credits. Prerequisites: ILRHR 260/560 or equivalent and permission of instructor. J. Boudreau.
The purpose of this course is to acquaint students with various aspects of the training and development function in organizations. A systems approach is used. Topics include how to determine that training problem exists, how to conduct a training needs assessment, issues regarding the design of training programs, a review of current training techniques and management development strategies, financial and evaluation strategies, and the role that training plays for U.S. firms and labor unions in trying to become more competitive in the world economy. After completion of this class, students should be familiar with current views of the Human Resource Development function and profession, contemporary conceptual models of HRD and adult learning, and the management of an effective HRD function within the current business environment.

ILRHR 694 Human Resource Information System Applications
Fall or spring. 3 credits. Limited to 22 students. Prerequisites: ILRHR 260/560 or equivalent; ILRHR 266; at least one upper-level HRS elective; basic statistics; and permission of instructor. J. Boudreau.
Explores the development, implementation, and management of computerized personnel information systems and their use in human resource management. Theories and concepts relevant to the design and implementation of such systems are presented and used as the framework for hands-on experience with personal and mainframe computer systems. Students create and use applications of current popular human resource software to design their own applications and present them to the class. Where possible, student applications are based on field work in actual organizations.

ILRHR 695 Education, Technology, and Productivity
Fall. 3 credits. J. Bishop.
The seminar investigates the nexus between the education and training occurring in schools and at the workplace and the technological progressiveness, productivity, and competitiveness of firms, individuals, and nations. We will investigate (1) how technological progress is changing the nature of work and what this implies for reform of education and training, (2) why United States productivity has increased so little in the past two decades, (3) how education and training contribute to the growth and competitiveness, (4) why education and achievement has declined, and (5) how the responsibility for education and training should be apportioned among individuals, firms, private nonprofit organizations, and government.

ILRHR 697 Special Topics in Resource Studies
Fall or spring. 3 credits. Staff.
The areas of study are determined each semester by the instructor offering the seminar.

ILRHR 698 International Human Resource Policies and Institutions
Fall. 3 credits. J. Bishop.
A comparative study of human resource policies and institutions in Western Europe, North America, Japan, and East Asia (with special emphasis on math and science education) and of the effects of these institutions on productivity, growth, and equality of opportunity. The institutions studied include primary and secondary education, apprenticeship, employer training, and higher education. Data on the consequences of policies are presented and an effort made to understand why resource policies and institutions have contributed to the rapid growth and low levels of inequality in Europe, Japan, and the Pacific Rim nations. Another focus of the course is understanding the causes of the low levels of achievement of American high school students relative to their counterparts abroad.

ILRHR 760 Seminar in Human Resource Studies
Fall or spring. 3 credits. Prerequisites: ILRHR 560, ILRST 510/511, and ILRHR 669 and permission of instructor. Staff.
A "floating" seminar designed to give faculty and students an opportunity to pursue specific topics in detail, with an emphasis on theory and research. Topics vary from semester to semester. Interested students should consult current course announcements for details.

ILRHR 769 Topics in Compensation Theory and Research
Fall. 4 credits. Prerequisite: ILRHR 699.
G. Milkovich, B. Gerhart.
Examines recent developments in theory, research, and practice related to compensation. Discussion emphasizes the role of theory and research to compensation decision making. Students examine compensation and reward-related theories and research from supporting disciplines such as economics, psychology, sociology, and organizational behavior and evaluate their relevance to employee, managerial, executive, and international compensation.

ILRHR 790 ILR M.P.S. Program
Fall and spring. 1-9 credits.
Supervised research only for those enrolled in the ILR M.P.S. program.

ILRHR 798 Internship
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRHR 799 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.
International and Comparative Labor

ILRRC 332 Labor in Developing Economies (also Econ 462) Spring. 3 credits. Not offered spring 1997. Prerequisite: ILRLE 240, Economics 311, or permission of instructor. G. Fields.

The economic problems of labor in less-developed nations. Among the subjects included are determinants of income and wage structures in less-developed countries; labor demand and unemployment; labor supply and migration; human resource policy; and development strategy and employment growth.

ILRRC 333 Western Europe, the United States, and Japan in a Changing World Economy Fall. 3 credits (1 additional credit may be arranged). Open to juniors and seniors. L. Turner.

Offers an introduction to the contrasting national trajectories and current political economies of Germany, Britain, France, Japan and the U.S. Emphasis will be on (a) cross-national differences and comparisons; and (b) the different capacities that contrasting institutions offer each society as it grapples with intensifying trade competition, domestic political conflict, and the need for production reorganization and "new industrial relations."

ILRRC 337 Special Topics: Fall or spring. 3 or 4 credits. Not offered 1996-97. Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRRC 339 The Political Economy of Mexico Spring. 3 credits. M. Cook.

Explores the range of challenges affecting contemporary Mexican policies, politics, and economic development—from democratization to immigration to NAFTA. The course provides both an introduction to Mexican political economy for those with no prior background and an opportunity for students with more knowledge of Mexico to explore a research topic in greater depth.

ILRRC 499 Directed Studies For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILRRC 532 Labor in Developing Economies Spring. 3 credits. Not offered spring 1997. For graduate students. G. Fields.

Students in this course attend the lectures in ILRRC 532 (see description for ILRRC 332). If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in ILRRC 332 and additional topics.

ILRRC 533 Western Europe, the United States, and Japan in a Changing World Economy Fall. 4 credits. Graduate students. L. Turner.

See description for ILRRC 333. Graduate students attend class, take the midterm and submit an analytical research paper at the end of the semester.

ILRRC 537 Special Topics: Fall or spring. 3 or 4 credits. Not offered 1996-97. Staff.

Devoted to new topics in the field. The specific content and emphasis vary depending upon the interests of the faculty member teaching the course.

ILRRC 631 Comparative Labor Movements in Latin America (also Government 471) Spring. 3 credits. M. Cook.

Examines the historical development of labor movements in Latin America, their role in national political and economic development, and the impact of external liberalization, authoritarianism, and redemocratization on contemporary labor organizations in the region. Countries examined will include but are not limited to Mexico, Brazil, Argentina, Chile, Peru, and Venezuela.

ILRRC 632 Reforming Industrial Relations: A Comparative Perspective Spring. 4 credits. Graduate seminar open to seniors with permission of instructor only. L. Turner.

Examines contemporary efforts in advanced industrial democracies to reform industrial relations. The first half of the course will examine contemporary industrial relations reform efforts in the U.S., including innovative organizing strategies; new calls for union militance; business strategies for a "union-free" environment; efforts at labor-management cooperation; and the report of the Dunlop Commission. The second half will cover Britain—the Thatcher reforms of the 1980s and the current labor-backed works council movement; France—the Aurox Laws of the 1980s and their effects; and Germany—the transformation of industrial relations in eastern Germany since 1989.

ILRRC 633 Labor, Industry, and Politics in Germany Fall. 4 credits. Open to seniors with permission and graduate students. L. Turner.

Is the successful postwar "social partnership" model of organized capitalism in the Federal Republic of Germany viable in the 1990s? To answer this question, we will study the works councils and codetermination, the rise of a strong postwar labor movement, the contemporary German version of social partnership, with an emphasis on current events and the new challenges for German industry and labor posed by German unification and the single European market.

ILRRC 636 Comparative History of Women and Work (also Womens Studies 636) Fall. 4 credits. Permission of instructor. I. DeVault.

Will explore the similarities and differences between different cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Beginning with theoretical pieces and overviews of the history of women and work, most of the course will consist of in-depth examinations of specific work situations or occupations across time and geography. Comparative examples will be taken from the United States, Europe, and the Third World.

ILRRC 637 Labor Relations in Asia Spring. 3 credits. Permission of instructor required. Seminar format. S. Kuruvilla.

A comparative survey of the industrial relations systems of selected Asian nations such as Japan, S. Korea, Thailand, Malaysia, Singapore, Hong Kong, China, and several others. The emphasis is on economic development strategies and industrial relations policies in these countries. Industrial relations practices, the extent of union organization, and labor force demographics of these countries will be examined. The primary objective is to provide students with an introduction to industrial relations systems in Asia. The countries chosen are representative, but not exhaustive.

ILRRC 638 Labor, Free Trade, and Economic Integration in the Americas (also Government 630) Fall. 3 credits. Limited. Open to seniors and graduate students; junior by permission. M. Cook.

Analyzes the contemporary movements toward free trade and regional economic integration in the Western Hemisphere. Special attention is paid to labor's role in this process. Examines the origins and implications of the North American Free Trade Agreement (NAFTA) and looks at integration schemes in South America (Mercosur), Central America, and the Caribbean, and at hemisphere-wide initiatives. A research paper is required.

ILRRC 730 Research Seminar on Labor Markets and Economic Development Fall or spring. 3 credits. Prerequisite: Open to M.S. and Ph.D. students only. G. Fields.

Research seminar for students writing theses or dissertations on aspects of labor markets and economic development. Will address research questions, methodologies, and contributions in the areas of employment and unemployment, income and earnings, educational and human resource development, welfare economics, and economic growth. Numerous presentations and written papers will be required.

ILRRC 739 The Political Economy of Mexico Spring. 3 credits. M. Cook.

For course description, see ILRRC 339.

ILRRC 790 ILR M.P.S. Program Fall and spring. 1-9 credits.

Supervised research only for those enrolled in the ILR M.P.S. program.
among members and the ILR faculty and small, randomly assigned groups of students. The course includes a plant visit and several meetings early in the semester designed to introduce issues encountered in studying the employment relationship.

**ILRID 451 Science, Technology, and the American Economy**

*Spring. 4 credits. V. Briggs.*

The industrial revolution did not begin in the United States, but the nation became the world's first technological society. Attention will be given to the evolutionary confluence of science, technology, mathematics, religion, and capitalism in the formation of the U.S. economy, its institutions, and its labor force. Primary attention will be given to the post-World War II economic developments. The vantage point will be the linkage with employment, unemployment, income, and productivity considerations. Public policy issues (such as research and development policy, national defense influences, the "agricultural revolution," savings and investment rates, labor force preparedness) will be explored. Critical concerns pertaining to environmental impacts, income polarization, and consumerism will also be examined. The industrial and human resource policies of other nations as well as the implications of the globalization of technology in the future will also be discussed.

**ILRHR 452 Writing in Industrial and Labor Relations**

*Fall and spring. 3 credits. J. Farley.*

Will require close reading of four or five books related to the term’s theme in the field of industrial and labor relations and careful writing about them. Students will also have an opportunity to practice writing about the world of work for different audiences.

**ILRID 790 ILR M.P.S. Program**

*Fall and spring. 1-9 credits.*

Supervised research only for those enrolled in the ILR M.P.S. program.

**LABOR ECONOMICS**

**ILRLE 140 Development of Economic Institutions**

*Fall. 3 credits. Prerequisite for non-ILR students: permission of instructor.*

Provides students with an understanding of the historical roots of the economic system currently dominant in Western Europe and the United States. The course will focus on (a) the process of European economic growth prior to 1914, (b) the effect of industrialization on labor in Great Britain, and (c) the historical evolution of economic thought from Adam Smith to J. M. Keynes.

**ILRLE 240 Economics of Wages and Employment (also Economics 341)**

*Fall and spring. 3 credits. Prerequisites: Economics 101-102 or Economics 103, Economics 313, or permission of instructor.*

Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. Considers both the demand (employer) and supply (employee) sides of the labor market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include employment demand, basic compensation determination, education and training, benefits and the structure of compensation, labor-force participation and its relation to household production, occupational choice, migration, labor-market discrimination, and the effects of unions.

**ILRLE 340 Economic Security (also Econ 451)**

*Spring. 3 credits. Prerequisites: ILRLE 240 or equivalent.*

Considers the economic and social effects of income security measures. Analyzes programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, premature death, and unemployment, as well as private efforts to provide security, and the problems of integrating public and private programs. Proposals for amending or modifying economic security measures are also considered.

**ILRLE 444 The Economics of Unemployment (also Econ 453)**

*Fall. 4 credits. Prerequisite: ILRLE 240, 540 or permission of instructor. Not offered 1996-97.*

This course introduces students to several issues fundamental to understanding unemployment: the social costs; definitional questions and measurement problems; the patterns of unemployment; and the various types of unemployment, their causes, and the policies that can or have been pursued to alleviate unemployment. The course is designed for undergraduate and graduate students who have taken a survey course in labor economics or its equivalent.

**ILRLE 441 Income Distribution (also Econ 458)**

*Fall. 4 credits. Prerequisite: ILRLE 240 or Economics 341.*

Explores income distribution in the United States and the world. Topics to be covered include functional and site distributions of income, wage structure, income-generating functions and theories, discrimination, poverty, public policy and income distribution, and changing income distribution and growth. Students who have taken CEH 355 may not receive credit for 441.

**ILRLE 442 The Economics of Employee Benefits (also Econ 456)**

*Fall. 4 credits. Prerequisites: ILRLE 240 or equivalent.*

An in-depth treatment of the economics of the labor process and financial management and administration of employee benefits: health care, insurance, retirement income, family-care benefits, executive incentive plans, and other compensation provided as a service or contingent financial package to employees. Detailed international comparisons of health care and retirement systems are included.

**ILRLE 444 Modern European Economic History**

*Spring. 4 credits. Prerequisite: ILRLE 240 or equivalent.*

An introduction to the economic development of Europe from 1500 to 1939. Topics covered include: the establishment of an institutional framework supporting economic growth in early modern Europe, the causes of the first industrial revolution in Great Britain, the effects of industrialization on workers' living
ILRLE 445 Women in the Economy (also Econ 457)
Fall. 4 credits. Prerequisite ILRLE 240 or equivalent.
Examines the changing economic roles of women and men in the labor market and in the family. Topics include: a historical overview of changing gender roles; the determinants of the gender division of labor in the family; trends in female and male labor force participation; gender differences in occupations and earnings; and the consequences of women's employment for the family.

ILRLE 448 Topics in Twentieth Century Economic History: The Economics of Depression and the Rise of the Managed Economy (also Econ 458)
Spring. 4 credits. Prerequisites: ILRLE 240 or Economics 314.
Topics covered include: the causes of the Great Depression in the United States; the economics of the New Deal; the causes of high unemployment in interwar Great Britain; the rise of Keynesian economics and the development of demand management policies in Great Britain and the United States after 1945.

ILRLE 495 Honors Program
Fall and spring (yearlong course). 3 credits each term.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 497-498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 499 Directed Studies
For description, see the section on Collective Bargaining, Labor Law, and Labor History.

ILRLE 540 Labor Economics
Fall. 3 credits. Prerequisites: Economics 101-102 or Economics 103 or equivalent. Required of graduate students majoring or minoring in labor economics and M.L.R candidates. Applies the theory and elementary tools of economics to the characteristics and problems of the labor market. The course considers both the demand (employer) and supply (employee) sides of the market to gain a deeper understanding of the effects of various government programs and private decisions targeted at the labor market. Topics covered include: employment and demand; basic compensation determinations; education and training; benefits and the structure of compensation; labor-force participation and its relation to household production; occupational choice, migration, labor-market discrimination and the effects of unions.

ILRLE 541 Social Security and Protective Labor Legislation
Spring. 3 credits. Prerequisite: ILRLE 540 or equivalent. Required of graduate students majoring in labor economics and M.L.R candidates. Considers the economic and social effects of income security measures. Analyzes programs offering protection against economic loss due to industrial accident, temporary and permanent disability, illness, old age, and death, and unemployment, as well as regulatory efforts to improve working conditions and the problems of integrating public and private programs. Proposals for amending or modifying economic security measures are also considered.

ILRLE 460 Economic History of British Labor 1750-1940 (also Econ 459)
Fall or spring. 4 credits. Not offered 1996-97. Will examine various aspects of British labor history from the beginning of the Industrial Revolution until World War II. Specific topics will include: (1) monetary and non-monetary changes in working conditions; (2) immigration and emigration; (3) the London labor market; (4) the extent of poverty and the evolution of the welfare state; (5) Luddism and Chartism; and (6) the development of trade unions.

ILRLE 462 Economic Analysis of the Welfare State (also Econ 460)

ILRLE 644 The Economics of Occupational Safety and Health (also Econ 461)
Spring. 3 credits. Not offered 1996-97. Analyzes the problems of occupational injuries and illnesses in the United States. The first section concentrates on legal requirements, judicial interpretations, and legal implications of the Occupational Safety and Health Act, then shifts to such questions as the need for, and appropriate goals of, the act; the stringency of safety standards considered in a benefit-cost framework; the difficulties in enforcing the act; and estimates of the impact of the act.

ILRLE 647 Evaluation of Social Programs
Fall. 4 credits. Not offered 1996-97. An introduction to the methodologies used by social scientists to evaluate the impacts of social programs and legislation of social programs and legislation. General evaluation methodology, cost-benefit analysis, and econometrics are discussed. Case studies are considered to illustrate the uses of these techniques, to acquaint the student with major current government programs and legislation, and to estimate these programs economic impacts. Throughout, the primary analytic framework used by the instructor is microeconomics.

ILRLE 648 Economic Analysis of the University
Spring. 4 credits. Not offered 1996-97. Seeks to illustrate the complexity of decision making in a nonprofit organization and to show how microeconomic analysis in general, and labor market analysis in particular, can be usefully applied to analyze resource allocation decisions at universities. Among the topics covered are financial aid, tuition, admissions policies, employment policies, faculty salary determination, the tenure system, mandatory retirement policies, merit pay, affirmative action, comparable worth, collective bargaining, resource allocation across and within departments, undergraduate and graduate education, research costs, libraries, athletics, and "socially responsible" policies. Lectures and discussions of the extensive readings will be supplemented by presentations by Cornell administrators and outside speakers who have been engaged in university resource allocation decisions or have done research on the subject.

ILRLE 741 Applied Econometrics I
Fall. 4 credits. Covers statistical methods for models in which the dependent variable is not continuous. It covers models for dichotomous response (including probit and logit) and polytomous response (including ordered response and multinomial logit) and various types of censoring and truncation (e.g., the response variable is only observed when it is greater than a threshold), as well as sample selection issues, etc. Will also include an introduction to duration analysis. Covers not only the statistical issues but also the links between behavioral theories in the social sciences and the specification of the statistical model.

ILRLE 744 Seminar in Labor Economics I (also Econ 641)
Spring. 3 credits. Not offered 1996-97. ILRLE 744, 745 and 746 constitute the Ph.D.-level sequence in labor economics. Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 745 Seminar in Labor Economics II (also Econ 642)
Fall. 4 credits. Not offered 1996-97. ILRLE 744, 745 and 746 constitute the Ph.D.-level sequence in labor economics. Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 746 Seminar in Labor Economics III (also Econ 643)
Spring. 4 credits. ILRLE 744, 745 and 746 constitute the Ph.D.-level sequence in labor economics. Reading and discussion of selected topics in labor economics. Applications of economic theory and econometrics to the labor market and human resource areas.

ILRLE 748 Economics of Employee Benefits
Fall. 4 credits. Students in this course attend the lectures in ILRLE 442 (see description for 442) but have additional course requirements. If enrollment warrants, they will also meet separately at a time to be arranged for discussion of topics in 442 and additional topics.
Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

Fall. 3 credits. Prerequisites: ILROB 170 and 171 (120 and 121). Limited enrollment. R. Stem.

Examines the central role that organizations in industrial societies play in allocating income, status, and other resources to individuals. A variety of theoretical explanations of social inequality will be examined, and the social policy implications of each will be considered. Class assignments are designed to develop students' general writing skills, as well as substantive understanding of different theories and approaches to the problem of inequality.

Spring. 4 credits. Prerequisite: one in social psychology or equivalent. Staff.

An examination of theory and empirical evidence relating to the resolution of interpersonal, intergroup, and international conflict. Specific attention is devoted to studying factors that contribute to the development of cooperative or competitive bonds between parties to a conflict. The following topics are studied: the availability and use of this information, the intensity, and costs of threat; fractioning and escalating conflict. Personality and situational factors that regulate conflict intensification are stressed.

Fall or spring. 3 credits. Prerequisite: one or more courses in sociology. Staff. Reviews the concept of culture as it has evolved in sociology and anthropology, applying it to formal organizations in workplaces such as corporations and unions. The course first examines the nature of ideologies as sense-making definitions of behavior, concentrating on the cultural forms that carry these cultural messages, rituals, symbols, myths, sagas, legends, and organizational stories. Considerable attention will be given to rites and ceremonies as a cultural form in organizational life that consolidates many of these expressive forms into one. The course will examine types of ceremonial behavior such as rites of passage, rites of enhancement, and rites of degradation, including the role of language gestures, physical settings, and artifacts in ceremonial behavior. The presence of subcultures and countercultures in organizational behavior will also receive attention, especially the particular types played by occupational subcultures in formal organizations.

Fall. 4 credits. Open to juniors and seniors. T. Hammer.

Designed to acquaint the student with the basic concepts and theories of human motivation. Specifie attention is devoted to the design and organizational effectiveness. Focus is on theories of worker motivation and on research approaches and results as these apply to the performance of individuals and groups in formal organizations. Readings are predominantly from the field of organizational psychology, supplemented by relevant contributions from experimental and social psychology. Each student will design, execute, and analyze a research study of his or her own.

Fall or summer. 4 credits. Recommended: some acquaintance with the substance and methods of behavioral or social science. L. Gruenfeld.

Examines personality from a comparative psychodynamic point of view. Social behavior, authority relationships, and work motivation are used to illustrate how various theories could be applied to understand behavior and experience in organizations.

Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Limited enrollment. R. Stem.

Basic principles of organizational behavior as studied through readings and participation in simulation games. Simulations model traditional organizational and management strategies. Games model executive decision making, running a company, assembly work, and cooperative decision making. Organizational design, decision making, conflict, cooperation, and power are the central topics of discussion. The contrasting bases of power in the organizations permits the study of the assumptions underlying organization structure and process.

Fall or spring. 3 credits. Prerequisites: ILROB 170 and 171 (120 and 121).

Introduces students to contemporary applications of organizational behavior theory in work organizations. Will explore the frameworks of common and current organizational and managerial change interventions, review contemporary literature about them, and try to discover existing links between these processes and the theoretical OB literature. Specific topics will vary from year to year. For this year, topics include TQM, re-engineering, team development, learning organizations, world-class manufacturing, competing values frameworks, assessment instruments, and multiculturalism and diversity issues in the workplace.

Fall. 4 credits. R. Stem.

Will examine public and private power from an organizational perspective. The resource-dependence approach to organization-environment relations provides a framework for interpreting government attempts at the regulation of corporate behavior. Topics cover the structure and functioning of government regulatory agencies and corporate responses to regulation, including corporate strategy, change, and political influence. Business ethics and corporate social responsibility are considered along with the role of interest groups such as consumer or citizen organizations. Research and case materials focus on the implementation of environmental protection, occupational health and safety, equal opportunity, antitrust, securities, and consumer regulations.

Fall. 3 credits. Enrollment limited to 60. W. Sonnestuhl.

Focuses upon the deviant actions of organizations, including such behaviors as price fixing, environmental pollution, illegal campaign contributions, and discrimination in hiring and
promotion. Examines the origins of such behaviors within organizations, the processes by which they become institutionalized, and the processes by which they become defined as deviant organizational actions. Within this context, the course will examine such manifestations as Exxon's Valdez oil spill, Iran-Contragate, drug testing, and the federal savings and loan scandal. These events raise troubling questions about what it means to live and work within an organizational society, and they cannot be dismissed as instances of a few individuals gone bad.

ILROB 422 Negotiation
Fall. 3 credits. Prerequisite: enrollment.
Permission of instructor required.
Prerequisite: all interested students must obtain "Course Expectation Form" from Mrs. Knout, 387 Ives Hall, or Ginny Freeman, 101 Ives Hall. J. Halpern. Provides hands-on experience in developing negotiation skills and strategies for daily living as well as for the job. Not only do negotiators need to know different strategies, they need to know which strategy is appropriate for a particular situation and how to apply it. This course emphasizes the development of personal skills applicable to all negotiation strategies. We use actors' exercises regularly to develop these skills.
Particularly recommended for shy or hesitant individuals and for negotiators who anticipate interacting with a large variety of people during their careers (e.g., human resource professionals, lawyers, professional negotiators, politicians, etc.). Participation in all exercises and in class discussion is mandatory. Grading requirements include written preparation for exercises, journal entries analyzing the exercises, and a final paper.

ILROB 425 Sociology of Industrial Conflict
Spring. 4 credits. R. Stern.
The focus is on the social, economic, and political causes of industrial conflict. These causes include sociological, class relations, work-non-work effects, as well as the nature of work and employment relations. Social movement, collective organization, and individual actions are examined including such phenomena as mass action, conflict, strikes, labor turnover, absenteeism, and sabotage, and the influence of the environments in which they occur.

ILROB 427 The Professions: Organization and Control
Fall. 3 credits. Prerequisite: Permission of the instructor. R. Tolbert.
Focus is on the sources of power and control exercised by professional groups in contemporary society. A number of issues will be examined in this context including the role of professions in society, processes through which an occupational group becomes defined as a profession, sources of control that professional associations have over their members, relations between professionals and nonprofessors, and the relationship between unionization and professionalization of occupations.

ILROB 428 Organizational Change and Intervention
Fall. 3 credits. Limited to 25. Juniors and seniors with permission of instructor.
W. Williams.
Seminar will focus on planned and unplanned change in organizations. Topics will include mergers and acquisitions, team building, self-management and the role of change agents. Participants will be required to develop and present topics in addition to keeping a weekly journal and participating in exercises.

ILROB 429 Organizational Politics and Institutional Change
Spring. 2 credits. 7 weeks. Limited to juniors and seniors with permission of the instructor. Please see instructor before the first class. S. Bacharach.
Will examine the market, cultural, political, and structural forces that change the organizational "rules of the game," how these forces affect individual actions, and how the distortions that occur as individuals and organizations attempt to adjust to a new unstable order. Issues to be examined include power, corruption, deal-making, rationality, uncertainty, and competition. Course requirements include completing a major research paper and leading a class discussion.

ILROB 470 Group Processes
Fall. 3 credits. Prerequisites: ILROB 170 and 171 or equivalent. Permission of instructor. E. Lawler.
A review of theoretical approaches and selected research on group phenomena, including the formation of groups, the structure of group relations, and group performance. Specific topics include conformity and obedience, status and power relations, task conflict, solidarity and commitment, the management of emotion, the emergence and change of microcultures, and the role of groups in networks and organizations.

ILROB 471 Organizational Analysis of Trade Unions
Spring. 4 credits. Prerequisites: ILROB 170 and 171 and one additional course in organizational behavior. Staff.
Designed to use organizational theory and research in the examination of trade unions. Study of trade unions as organizations including the discussion of the role of unions in contemporary society and the meaning of unions to individual members. Unions will be analyzed in understanding them as agents of social change, interorganizational relationships, and political activity. Union members will be the focus in considering why people join unions, their commitment, problems of dual allegiance and leadership. The issue of how effective unions are as a mechanism of worker participation in management decision making is also addressed. Course material focuses on current research on unions and on strategies for further research.

ILROB 472 Applied Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 170 and 171.
Introduces students to intermediate theory of organizational behavior. It will specifically concentrate on teaching students to use organizational theories for analytical and applied purposes. Among the issues to be addressed are organizational structure, work processes, organizational politics, organizational design, job design, incentive systems, and quality-of-work-life programs.

ILROB 473 Mediation
Spring. 3 credits. Limited enrollment with permission of instructor. J. Halpern.
Mediation is a useful life and work skill as well as a career option. This course considers different styles and uses of mediation. Students will have an opportunity to watch experienced mediators in a variety of simulations, and to learn from these experts' experiences. Students will gain hands-on experience mediating cases, and will participate in exercises. Staff.

ILROB 479 Technical Workers and the Social Organization of Research and Development
Spring. 3 credits. Prerequisite: ILROB 170, 171 or an introductory course in sociology or anthropology.
Examines how industrial R&D is organized and seeks to impart an appreciation for the practical problems that arise when firms employ a significant number of scientists, engineers, and other technical workers. It is designed for students who have an interest in high-technology firms or who anticipate working for firms in which R&D plays an important role. The course brings relevant theoretical perspectives to bear on pragmatic issues surrounding innovation and the employment of scientists and engineers. Representative topics include: the organization of scientific and technical communities, the industrialization of research, the nature of scientific and technical strategies, strategies for fostering innovation, the careers of scientists and engineers, and the managerial problems characteristic of high-technology firms. Requirements include a take-home midterm and a final paper.

ILROB 499 Directed Studies
Fall and spring (yearlong course). 3 credits each term.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 497-498 Internship
Fall and spring. 3 and 6 credits.
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

ILROB 520 Micro Organizational Behavior and Analysis
Fall or spring. 3 credits. Staff.
Survey of concepts, theories, and research from the fields of organizational and social psychology as these relate to the behavior of individuals and groups in organizations. Job attitudes, motivation, performance, leadership and power, group formation, perception, and organizational climate. A preliminary course for advanced work in organizational behavior.

ILROB 521 Macro Organizational Behavior and Analysis
Spring. 3 credits. Staff.
Formal organizations are studied from the perspectives of classical organization theory, human relations theory, and comparative and cross-cultural analysis. Contemporary theories and quantitative approaches to organizational structure are also considered in some detail. Intended to be preliminary to more intensive work in organizational behavior.

ILROB 522 Theories of Organizational Change, Innovation, and Evaluation
Spring. 4 credits. Prerequisites: two organizational behavior courses at the 300 level, or advanced courses in sociology or psychology. W. Sonnenstuhl.
Examines the dynamics of individual, structural, and environmental factors operating in organizational change in general, and in the implementation and use of innovations within formal organizations in particular. The role of evaluative research in assessing the effectiveness of the implementation of innovations and in determining organizational effectiveness are analyzed. Several case studies of organizational change in government, unions, and private industry are examined. The emphasis is on conceptual frameworks for analyzing organizational change and mounting evaluative research on innovations. Readings are interdisciplinary and include sociology, psychology, and political science.

ILROB 621 Organizational Diagnosis
Intervention and Development
Spring. 4 credits. Prerequisites: under­graduates, ILROB 170 and 171; graduate students, ILROB 520 and 521 or equivalent; and permission of instructor. L. Gruenfeld.
This applied course considers theories and techniques for the identification and improve­ment of problems at the organizational level. Methods for the implementing of change are evaluated in the light of several normative and descriptive theories of individual and group development and organizational behavior. The course emphasizes both quantitative and qualitative data processing procedures.

ILROB 623 MicroPolitics in Organizations
Spring. 3 credits. Prerequisites: ILROB 170 and 171. Limited, permission of instructor. S. Bacharach.
Examines micro-political processes in organizations. Italian, French, Machiavellian, Marxist, and Weberian approaches to organizational politics will be specifically analyzed. Among the theories to be discussed are the institutionalization of ideology and the relationships between power, tactics, and strategy. Interest groups and coalition politics will be examined in terms of conflict and bargaining. Other issues to be discussed include corruption, dealmaking, and competition. Examples will be drawn from both the public and private sectors. Seminar require­ments will include a term-paper presentation and a major paper and/or take-home final exam.

ILROB 624 Groups in Work Organizations
Fall. 4 credits. Enrollment limited. Permission of instructor required. L. Gruenfeld.
This is an experiential learning course designed primarily for advanced students who have a comprehensive background in the theory and methods of the behavioral sciences. Work group members study their roles and relationships to each other, the task, other work groups, and especially authorities. Students write a number of self-reflective papers in which they conceptualize their experiences and relate them to theory and method in organizational behavior and experience.

ILROB 625 Conflict, Power and Negotiations
Fall. 3 credits. Open to seniors and graduate students. Permission of instructor is required. Limited enrollment. E. Lawler.
Theoretical seminar adopts a power perspec­tive on bargaining and conflict resolution.

Examines how power relations and power processes affect the tactics people adopt in bargaining and also when power relations inhibit or promote conflict resolution. “Power” is viewed in the course as a capability, embedded in a social structure, and tactics are then based on using such power. The seminar gives overview of several theoretical approaches to conflict and bargaining (e.g., rational choice, cognitive, social exchange) and places the power perspective in this context.

ILROB 626 Advanced Topics in the Social Psychology of the Workplace
Spring. 3 credits. Permission of instructor. Limited enrollment. J. Halpern.
Challenges students to question what’s hot and what’s not in current research in the social psychology of the workplace from an academic standpoint, with an eye toward application in the corporate world. Topics will be chosen based in part on students’ interest. We will examine how the momentum for each topic developed and consider whether the current excitement is likely to last. Topics in the past have included decision making and negotiation, affect, organizational justice, leadership, and gender differences. Students will learn to develop testable hypotheses and will produce a research proposal (for either corporate or academic use) at the end of the semester.

ILROB 627 Leadership in Organizations
Spring. 3 credits. Prerequisites: two organizational behavior courses at the 300 level or advanced courses in sociology or psychology. L. Gruenfeld.
An examination of research findings from the behavioral sciences that are relevant to leadership and the influence process in groups and organizations. Personality, situational factors, intergroup processes, intergroup perception, as well as motivation to lead and to follow will be discussed. The implications for leadership training, organization development, and action research are explored.

ILROB 628 Cross-Cultural Studies in Organizational Behavior
Spring. 3 credits. Limited. Permission of instructor before registering in course. L. Gruenfeld.
Designed for students interested in social psychological theory and research in international culture comparisons of behavior and experience in organizations. Variables such as power distance, individualism-collectivism, universalism-particularism and attitudes toward authority as well as work motivation will be examined. Upon comple­tion of the readings and discussion of conceptual materials and consideration of several major international comparison studies, each student will prepare and present a paper on a topic of his/her own choice usually related to his/her country of origin (China, Japan, German, USA, etc.).

ILROB 629 Personality in Organization
Fall. 4 credits. Open to undergraduates with permission of instructor. L. Gruenfeld.
This advanced course considers psychody­namic theories of organizational diagno­sis and intervention. Topics include leadership, power, authority, work motivation, intervention, and change. The topics are discussed and applied in small study groups. The professor’s role is as a consultant and resource person. Class members study and research their own behavior and present their qualitative and quantitative findings to the class. Students are expected to have background and interest in both research methods and theory.

ILROB 670 Semester in Manufacturing
Spring. 15 credits. Open to master’s and Ph.D. students in Industrial and Labor Relations with permission of instructor. Intended for students who want to work as professionals or who have a strong interest in the manufacturing industries. It is taught by an interdisciplinary faculty team from the College of Engineering, the Johnson School of Management, and the School of Industrial and Labor Relations. Course material will be based on plant visits and project work with local industry. Student participation will be in interdisciplinary teams with members representing the different disciplines. The course content will focus on major issues thought to make a competitive difference in today’s economic environment: (1) the changing environment for product design; (2) rapid-response production systems; (3) organization, management, and compensa­tion of the manufacturing team; and (4) performance measurement.

ILROB 671 Organizations as Social Networks
Spring. 3 credits. Prerequisites: one or more courses in organizational behavior, sociology, psychology, anthropology, or political science. A course in statistics or research methods would be helpful.
Increasing attention has been devoted to the idea that social structures can be fruitfully investigated as social networks. In particular, organizational and inter-organizational structures may be analyzed as patterned relationships among individuals, groups, and even other organizations. Such networks appear to be strong predictors of a variety of organizational outcomes, such as variation in employee attitudes, work behavior, and production. This course will concentrate on actual data sets and relevant computer programs.
ILROB 676 Systems of Labor Participation in Management
Fall. 4 credits. Prerequisites: senior standing and permission of instructor. Examines the theory and practice of worker participation in systems ranging from informal shop-level participation to self-management. Special emphasis is placed on socio-technical systems of job design and work restructuring that give workers control over the labor process. Attention is also given to legislated programs of participation (codetermination) and to participation in employee-owned firms.

ILROB 679 Methods of Observation and Analysis of Behavior Attitudes and Interactive Work Groups and Organizations
Fall 1996 or spring 1997. 4 credits. Permission of instructor required. Considers qualitative and psychometrically precise and systematic research methods for the study of behavior in groups and organizations. Includes a workshop that is designed to improve teamwork with the use of on-line data generated by group members. Individual and group dynamics are the major focus. Students will observe, record, and videotape group and individual behavior, which will be analyzed with the help of microcomputer programs, especially SYMLOG (a system for the multiple-level analysis of group behavior) developed by Bales (1970, 1979). In addition to lectures and discussion of research papers this course will also include a research project designed and executed by the students.

ILROB 720 Issues of Measurement in Research on Organizations (Institutionalism)
Fall. 4 credits. Concerns the study of tests and measures used to assess central variables in organizational behavior and related fields. Students will learn where to find measures suitable for their research purposes and will examine the theories that define the constructs being measured; the empirical information available about different measures—construction, reliability, and validity; and the ways in which the instruments have been used in research and practice.

ILROB 721 Advanced Micro Organizational Behavior
Spring. 3 credits. Prerequisites: ILROB 520 and 521. Examines the historical development of psychological theories of organizational behavior and contemporary issues in micro organizational research. The course will emphasize reading and analysis of primary source material.

ILROB 722 Advanced Macro Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and 521. Examines the historical development of sociological theories of organizations and contemporary issues in macro organizational research. The course will emphasize reading and analysis of primary source material.

ILROB 723 Behavioral Research Theory, Strategy, and Methods I
Fall. 4 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll. Materials studied in ILROB 723 and 724 include (1) theoretical, conceptual, and ethical questions; (2) survey research and attitude-scaling procedures; (3) laboratory research methods; (4) participative observation and interview techniques; and (5) use of documents and qualitative data analysis. Provides students with important philosophical background for doing research and exposes them to a well-balanced, interdisciplinary set of quantitative and qualitative research tools.

ILROB 724 Behavioral Research Theory, Strategy, and Methods II
Spring. 3 credits. Designed to meet the needs of M.S. and Ph.D. candidates majoring in organizational behavior, but other graduate students may enroll. Course will cover (a) analysis and interpretation of quantitative data, (b) traditional problems encountered in the assessment of human and organizational characteristics, (c) the use of different methods of data analysis, and (d) an examination of the limitations imposed on data analysis and interpretation by traditional measures. Examples of topics covered in the course: the use of Chi-square, t-tests, ANOVA, simple and multiple correlation and regression, reliability and validity analyses, causal models, factor analysis, scale construction.

ILROB 725 Analysis of Published Research in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and 521 and one year of statistics. An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 726 Selected Topics in Organizational Behavior
Fall. 3 credits. Prerequisites: ILROB 520 and 521 and permission of instructor. An advanced research methods course that critically examines published research papers in the field of organizational behavior in terms of research design and method as well as theory.

ILROB 727 Work and Industrial Conflict
Spring, weeks 7–14. 2 credits. A concentrated examination of the sociology of industrial conflict. The seminar focuses on classic formulations of conflict theory in sociology, anthropology, linguistics, philosophy, and political science. Class members will be encouraged to analyze contemporary changes such as mergers and acquisitions and work force reductions. Participants will submit weekly work force journals.

ILROB 770 The Cultures of Work Organizations
Fall. 3 credits. Open only to graduate students. Considers both administrative and occupational cultures in the workplace. It takes an anthropological perspective, focusing on ideologies as the main ingredient of cultures but emphasizing the role of cultural forms, e.g., myths, stories, sagas, language, rites and ceremonies, and physical settings of meaning. It pays special attention to the place of subcultures and countercultures in the makeup of administrative culture and to occupations as a major source of subcultures. The role of the environment in which organizations are embedded, and its influence on workplace cultures, is also included. Forms of cultural leadership and approaches to reading and changing cultures are also considered.

ILROB 773 Advanced Seminar in Cross-Cultural Studies of Organizational Behavior
Fall. 3 credits. Permission of the instructor. Consider theory and method for the study of cross-cultural and cognitive style variables. Students will participate in the conceptualization and conduct of a comparative research project.

ILROB 774 Negotiations
Fall. 3 credits. Limited enrollment. Permission of instructor required. Prerequisite: all interested students must obtain "Course Expectation Form" from Mrs. Knut, 387 Ives Hall, or Ginny Freeman, 101 Ives Hall. J. Halpern. For course description, see ILROB 423.

ILROB 775 Theories of Motivation and Leadership
Spring. 2 or 4 credits. Prerequisites: ILROB 520 and 521. Two independent but sequence-connected minicourses.

(1) Theories of Work Motivation. 7 weeks. 2 credits. Course will provide an introduction to basic concepts of human motivation in general, with particular emphasis on the theories that explain and predict work motivation. Students will examine the empirical research that tests the validity of the theories and shows how and under what conditions different motivation models can be used in practice in work organizations.

(2) Theories of Leadership and Power. 7 weeks. 2 credits. Several current microtheories of leadership and power and related research are examined. The disciplinary perspective employed is social organizational psychology and the level of analysis emphasized is action and experience of individuals in groups.

ILROB 779 Organizational Change and Intervention
Fall. 3 credits. Graduate students only; no exceptions. This seminar is concerned with planned and unplanned change in organizations. It is designed to analyze theory in practice. Particular attention will be paid to the role of internal and external change agents. Class members will be encouraged to analyze contemporary changes such as mergers and acquisitions and work force reductions. Participants will submit weekly work force journals.
ILRST 110-112 Mathematics for the Social Sciences
3 credits. J. Bunge
These courses introduce several topics in mathematics that have applications in the social sciences. One goal is to prepare students to take other courses in the social sciences such as statistics and economics. The three courses are offered consecutively during the semester. Students can register in one or more of the courses. A description of each of these courses is given below.

ILRST 110 Algebra
1 credit. Four weeks.
Topics include: a review of basic algebra concepts; summation and products; linear equations; quadratic, exponential, logarithmic, and other nonlinear functions; graphs; inequalities.

ILRST 111 Differential Calculus
1 credit. Five weeks. Prerequisite: ILRST 110 or passing a qualifying exam in algebra.
Topics include: limits, derivatives, optimization and other applications of differentiation.

ILRST 112 Matrix Algebra
1 credit. Five weeks. Prerequisite: ILRST 110 or passing a qualifying exam in algebra.
Topics include: definitions and special types of matrices, matrix addition and subtraction, matrix product, linear dependence and independence, vector geometry, matrix reduction (ranks, determinants, norms), matrix inversion, linear transformation, eigenvalues, matrix decompositions, ellipsoids and distances; some applications of matrices.

ILRST 210 Statistical Reasoning I
Fall and spring 1996, 1997. 3 credits. Prerequisite: ILRST 111 and ILRST 211 or equivalent courses. J. Angellotti.
An introduction to the basic concepts of statistics and data analysis. Descriptive methods, mathematical models and inference procedures for univariate and bivariate data. Basic statistical designs, an introduction to probability and applications of the Binomial and Normal distributions. Estimation, confidence intervals, and tests of significance for a population mean and proportion, simple linear regression, correlation, and two-way contingency tables. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

ILRST 211 Statistical Reasoning II
Fall and spring 1996, 1997. 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. T. DiCiccio, M. Wells.
A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include statistical inference; simple linear regression; multiple linear regression; elements of time-series analysis; and sample-survey design. Computer packages are used throughout the course.

ILRST 310 Statistical Sampling
Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Course includes an applied project.

ILRST 311 Practical Matrix Algebra
Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis and for other "research methods" courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norms); matrix inversion; linear transformation; eigenvalues; matrix decompositions; ellipsoids and distances; some applications of matrices.

ILRST 312 Applied Regression Methods
Fall 1996. 3 credits. Prerequisite: ILRST 112 and ILRST 211 or equivalent courses. J. Bunge.
First, the matrix algebra necessary to analyze regression models is reviewed. Then, multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models are covered. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used. Course includes an applied project.

ILRST 313 Design and Analysis of Experiments
Spring 1997. 3 credits. Prerequisite: ILRST 211 or equivalent. J. Angellotti.
The statistical design and analysis of comparative experiments including completely randomized, factorial, randomized block, latin squares, and split-unit designs including crossover and repeated measures. Application of statistical design to various treatment comparisons. Analyses to compare treatment groups including ANOVA, ANCOVA, contrasts and multiple comparison procedures. Computer packages are used.

ILRST 314 Graphical Methods for Data Analysis
Fall 1997. 3 credits. Prerequisite: ILRST 211 or equivalent. Not offered 1996-97.
Classical and recently developed graphical methods for analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data. Includes study of current computer programs and methods expected to be practical in the near future: graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis, the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.

ILRST 410 Techniques of Multivariate Analysis
Spring 1997. 3 credits. Prerequisite: two statistics courses or permission of instructor. P. Velleman.
Techniques of multivariate statistical analysis discussed and illustrated by examples from various fields. We emphasize application, but theory will not be ignored. Deviation from assumptions and the rationale for choices.
among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Participants should have some knowledge of matrix notation. Topics include: multivariate normal distribution; sample geometry and multivariate distances; influence about a mean vector; comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis, and multivariate multiple regression.

**ILRST 411 Statistical Analysis of Qualitative Data**
3 credits. Prerequisites: two statistics courses or permission of instructor. Not offered 1996-97.
An advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variates, rank-order methods, and other nonparametric statistical techniques, including those related to chi-squared.

**ILRST 499 Directed Studies**
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

**ILRST 510 Statistical Methods for the Social Sciences I**
A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

**ILRST 511 Statistical Methods for the Social Sciences II**
Fall and spring 1996, 1997. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course. T. DiCiccio, J. Bunge.
A second course in statistics that emphasizes applications to the social sciences. Topics include: simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

**ILRST 610 Seminar in Modern Data Analysis**
3 credits. Prerequisite: two statistics courses or permission of instructor. Not offered 1996-97.
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, data re-expression, philosophy of data analysis, robust methods, statistical graphics, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices, and some experience using a computer.

**ILRST 611 Statistical Computing**
3 credits. Prerequisites: linear algebra, knowledge of a programming language, and statistics at least through multiple regression. Not offered 1996-97.
A survey of new aspects of statistical computing. Topics include: basic numerical methods, numerical linear algebra, nonlinear statistical methods, numerical integration and approximation, smoothing and density estimation. Additional special topics may include Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computing, computing environments. Designed for graduate students in the statistical sciences and related fields interested in new advances. Students may be asked to write programs in a programming language of their choice.

**ILRST 612 Statistical Classification Methods**
3 credits. Prerequisite: knowledge of statistics equivalent to the level of ILRST 312 or permission of instructor. Not offered in 1996-97.
An introduction to a variety of statistical techniques that classify objects to categories on the basis of observed characteristics of the objects. Course topics include (but are not limited to) discriminant analysis and its extensions and variations; nearest neighbor methods, classification and regression trees (CART); neural networks for classification; and estimation of error of classification rules.

**ILRST 613 Bayesian and Conditional Inference**
Fall 1996. 3 credits. Prerequisite: Graduate level courses equivalent to OR&IE 650 or OR&IE 651 or permission of instructor. M. Wells.
This course covers the following topics: loss functions and utility theory, prior information and subjective probability, coherency, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference. Bayesian computations, ancillarity, conditional properties of statistical procedures, and Barnard-Breiman's exact likelihood theory.

**ILRST 614 Structural Equations with Latent Variables**
Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

**ILRST 615 Expert Systems and Probabilistic Network Models**
Spring 1997. 3 credits. S-U only. Prerequisite: OR&IE 560 or an equivalent course in probability and statistics. A. Hadji.
This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include components of expert systems, rule-based expert systems, probability-based expert systems, uncertainty measures, dependency models, Bayesian and Markov networks, propagation of uncertainties, learning structure from data, and examples of applications. Students will use computer software to gain experience.

**ILRST 711 Sensitivity Analysis in Linear Regression**
3 credits. S-U only. Prerequisite: A first course in regression analysis or linear models, or permission of instructor. Not offered 1996-97.
A course on regression for students in statistical sciences and related fields. Attempts to narrow the gap between the theory and practical application of the linear regression model. Classical and recently developed statistical procedures are discussed. Students will be expected to read articles and thoroughly analyze real-life data sets using computer-packaged programs. Topics include role of variables in regression diagnostics (outliers, leverage points, influential observations, generalized linear models, errors in variables, and multicolinearity).

**ILRST 712 Theory of Sampling**
3 credits. Prerequisite: calculus and at least one semester of mathematical statistics. Not offered 1996-97.
Sampling theory from the viewpoint of mathematical statistics. The first part of the course focuses on the classical or "design" approach; the second part on the more recent "model-based" approach. Attention is paid to recent progress in the field.

**ILRST 713 Counting Processes with Statistical Applications**
3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor. Not offered 1996-97.
The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. We will formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. We will examine the marginal dynamics for point processes relevant to life history data. Both parametric and nonparametric inference for multiplicative intensity models will be considered. The list of topics might change from one year to the next. Students should have some knowledge of multiple regression, including the use of matrices, and some experience using a computer.

**ILRST 714 Topics in Modern Statistical Distribution Theory**
Fall 1997. 3 credits. Prerequisite: Courses equivalent to OR&IE 651 or Math 571, and STATS 409 or OR&IE 670. Not offered in 1996-97.
Recent research has revealed vast territories of distribution theory that are unfamiliar to most statisticians. Provides an introduction to three topics underlying this "modern" theory: infinite divisibility, decomposability, and stability; characterization of distributions; extensions of univariate distributions to multivariate distributions.

**ILRST 715 Likelihood Inference**
Spring 1997. 3 credits. Prerequisite: graduate courses equivalent to OR&IE 670 and OR&IE 670. Not offered in 1996-97.
In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order likelihood approximations for likelihood-based methods of inference.

**ILRST 716 Statistical Consulting**
Fall and spring 1996, 1997. 2 credits. Prerequisites: Limited to graduate students. S-U only. P. Velleman.
A course in practical consulting on "real-world" statistical problems. Under the
supervision of the instructor(s), students will hear problems presented by clients (usually faculty and graduate students from other fields) and will collaborate in proposing a statistical model, analyzing data, and interpreting results. Statistical computing will be used as needed.

**ILR EXTENSION 799 Directed Studies**
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

**ILR EXTENSION**

**Statewide**

The following courses are open to participants in the Extension Division's statewide credit programs in labor studies and management studies. Extension offices are based in Buffalo, Albany, Rochester, Ithaca, New York City, and Long Island. These courses are not open to undergraduate or graduate students matriculated in the Ithaca ILR programs. Courses and course credits earned in Extension Division certificate programs are not automatically accepted as transfer credits or as a basis of admission to the resident ILR undergraduate and graduate programs in Ithaca. Student applications for course transfer are evaluated by the ILR school on an individual basis.

**208 Workplace Negotiations**
Fall or spring. 3 credits.
Will cover the theory and practice of negotiation as it applies to workplace and business situations. Students will be exposed to theoretical models of negotiation and will participate in negotiation exercises. Students will be participating in two negotiation exercises and will be asked to write a paper on their negotiating position in each exercise. More weight will be given in grading to the student's ability to present a well-thought-out rationale for positions and tactics than to the outcome of the negotiation itself.

**241 Arbitration**
3 credits.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in both oral presentation, the conduct of an arbitration hearing, and the preparation of an arbitration opinion.

**242 Public Sector Collective Bargaining**
Fall or spring. 3 credits.
This course is designed as an introduction to collective bargaining in the public sector. The course examines the historical development of bargaining in public employment, the evolution of state and federal and bargaining theory and practices, as well as impasse resolution techniques frequently found in this sector. Special emphasis will be given to developing an understanding of the similarities and differences between public and private sector bargaining and how they have affected tactics and strategies employed by the parties.

**243 Growth of American Business and Management History**
Fall or spring. 3 credits.
The growth and cycles of American business enterprise produced significant changes in education, government, work, the family, the ethnic composition of the population, and the landscape. As business and industry expanded, new methods evolved for managing these enterprises. This course will examine the development of managerial practices, the relationship of management to the work force, and the social ramifications of capitalist expansion.

**245 Public Sector Labor Law**
3 credits.
A survey and analysis of the New York State Public Employees Fair Employment Act is made as well as a comparison with other state laws covering public employees. The course will examine the extent to which the laws protect and regulate concerted actions by employees in the public sector. The intent is to study and understand the law as written, but more importantly how it has been interpreted by the courts of New York State in its application. Major emphasis will be placed on employee and employer rights, including recognition and certification, improper practices, strikes, grievances, and disciplinary procedures of the New York State Public Employment Relations Board.

**247 Labor and the American Economy**
3 credits.
Will help the student understand how economic theories relate to the economic problems confronting the American citizen in general and the American union member in particular. Emphasis will be placed on contemporary economic theories and how their proponents attempt to solve American economic problems.

**248 Employment Practices Law**
3 credits.
Considers laws and regulations that impact directly on managers and employers. Students will examine issues and laws such as Equal Employment Opportunity, Employee Retirement Income Security Act, Federal Wage and Hour Laws, Occupational Safety and Health Act, unemployment laws and other topics. Students will focus on the practical application of laws and their impact on the workplace.

**250 New York Workers' Compensation Law for Trade Unionists and Injured Workers**
Fall or spring. 3 credits.
There is a collective perception that the Worker's Compensation system in New York compounds an injured personal predicament with Byzantine responses that lead to despair. Unions and injured workers' organizations believe that, if properly empowered, they can be just as effective as lawyers in looking after their injured colleagues' cases. This course is structured to meet both of these realities. We will delve into every nook and cranny of New York Worker's Compensation law. The course will be entirely practical. Skills teaching, i.e., explaining how to present a case, decorum, ethics, and persuasiveness, are built into the course. Experts on how the system really works will also be used.

**251 Principles and Practices of Management**
Fall or spring. 3 credits.
Prepares the theory and processes of management with an emphasis on supervi­sion. Managerial functions of planning, organizing, staffing, and evaluating are included. Concepts and theories are presented, and case studies are analyzed. Motivating people, exercising leadership, and effectively developing employees are emphasized.

**252 Contract Bargaining**
Fall or spring. 3 credits.
Examines the principles of contract bargaining, including bargaining environments and structures as well as standards used in bargaining. Students will learn to prepare bargaining demands, cost economic items, and negotiate contractual language. Students will experience the consequences of collective bargaining. Students will consider the impact of bargaining on outcomes in workers, unions, employers, and the public.

**253 Contract Administration**
Fall or spring. 3 credits.
Focuses on the role of the steward in administering the union contract in the workplace. Students will evaluate grievance and arbitration contract clauses, the grievance procedure in practice, the role of the union steward, the role of local and international unions, negotiation of grievances, and preparation for arbitration. Students will analyze the impact of grievance and arbitration procedures on workers, unions, and employers.

**254 Labor Law**
Fall or spring. 3 credits.
Examines the principles of labor law by looking at social philosophy and the historical context of federal labor legislation from the 1930s. Students will concentrate on major provisions of the National Labor Relations Act, examining how the National Labor Relations Board and the federal courts have interpreted the national labor laws. Discussion will include new directions in labor legislation and interpretation with consideration given to the impact of labor law on workers, unions, and employers.

**255 Labor History**
Fall or spring. 3 credits.
Reviews American labor history from the perspective of workers' social dimensions of the development of the working class, reform and revolutionary movements, and the emergence of craft, industrial, and public employee unions. Included will be a discussion of the development of trade union institutions and leaders and the evolution of union political activities and collective bargaining. Special attention will be paid to the involvement of women and minority workers with unions.

**256 Dispute Resolution**
Fall or spring. 3 credits.
Examines third-party participation in dispute resolution in private and public sector collective bargaining. Development of dispute resolution methods in American labor relations; issues and practices in neutral, binding arbitration of grievances and mediation; conciliation; and fact finding procedures will be discussed. We will also look at exclusive labor-management mechanisms to settle industry disputes.

**257 Human Resource Administration**
Fall or spring. 3 credits.
Designed to provide an overview of personnel practices in the modern organization. It will focus on manpower planning, employment, training and development, motivation and
compensation, and performance appraisal and communication for students who are currently supervisors or personnel practitioners or for those aspiring to those positions.

258 Organizational Behavior
Fall or spring. 3 credits. Designed to illustrate how behavioral science theory leads to research and how theory and research provide a basis for practical application in business, industry, education, and government.

259 Union Administration
Fall or spring. 3 credits. Focus is on the principles and practices of effective union administration. Students will study the dynamics of democratic organizations and the development of organizational leadership. The course explores alternative methods of decision making and lines of responsibility. The legal obligations of unions and union officials will be discussed and analyzed. The course also examines the structure and evolution of relationships inside the labor movement.

264 Contemporary Labor Problems
Fall or spring. 3 credits. A survey of the major challenges that confront the American labor movement. Students are briefed on the background of each problem and discuss practical solutions proposed by the experts.

266 Professional Writing: The Power of the Written Word in Business
3 credits. Focuses on the importance of developing effective writing skills and strategies required to be successful in business communities. Students will analyze and correct existing writing skills, correct bad writing habits, and develop new writing habits through "real life" exercises taken from case studies and their own experiences. In addition, they will learn the importance of using rhetorical strategies such as defining situations requiring written responses, writing to a specific audience, attending to a specific purpose, choosing the appropriate language, and varying tone and style as the situation demands. Students, upon completing this course, will have the confidence and the writing skills to successfully address most situations requiring written communication. Genres include memos, reports, letters, and proposals.

267 Speaking and Listening for Business
Fall or spring. 3 credits. Focuses on making effective presentations to management, supervisors, or departmental neighbors, and on understanding the ways people respond to speech. Students will become familiar with the commonly used oral communication methods. (Students are encouraged to attend one or more COSH groups, union-sponsored medical exams at occupational health clinics, and the OSHA complaint process. Case studies will provide basic education and training in workplace safety and health. The course will focus on applicable federal and state laws, standards for safety and health, industrial hygiene, and such health concerns as asbestos, radon, and AIDS. Practical experience will be provided through workplace walk-through safety and health inspections and in use of industrial hygiene equipment that measure noise, temperature, humidity, airflow, and airborne toxins.

THE PRIMARY FUNCTION OF THE LAW SCHOOL IS TO
prepare attorneys for both public and private practice who will render the highest quality of ethical and professional service to their clients and who will further legal progress and reform. The curriculum is designed to prepare students for admission to the bar in all American states and territories.

Ordinarily, a student who is admitted to the Law School must have a baccalaureate degree from an approved college or university. The course of study leading to the degree of Doctor of Law (J.D.) covers three academic years. Students may be admitted to a program of study leading to the degree of Doctor of Law "with specialization in international legal affairs." The Law School also offers to a limited number of students an opportunity to earn both a J.D. degree and an LL.M. degree.

There are combined graduate degree programs with the Johnson Graduate School of Management, the Department of City and Regional Planning of the College of Architecture, Art, and Planning, the School of Industrial and Labor Relations, the graduate divisions in economics, history, and philosophy of the College of Arts and Sciences, and the Université de Paris I (Panthéon-Sorbonne), as well as a special opportunity for highly qualified undergraduates in the College of Arts and Sciences to register in the Law School during their senior year.

Each year the graduate program of the Cornell Law School admits a limited number of students, generally all from abroad. The LL.M. degree (Master of Laws, Legum Magister) and the J.S.D. degree (Doctor of the Science of Law, Jurisprudentiae Scientiae Doctor) are conferred. A small number of law graduates may also be admitted as special students, to pursue advanced legal studies without seeking a degree.

For further information, refer to the Law School catalog, which may be obtained from the Office of the Registrar, Myron Taylor Hall.

FIRST-YEAR COURSES

**LAW 500 Civil Procedure**
Fall and spring. 6 credits. K. M. Clermont, B. J. Holden-Smith, R. B. Kent, J. Leubsdorf, J. J. Rachlinski, F. F. Rossi. An introduction to the theoretical underpinnings of the practical and perennial questions of what constitutes law, how it is to be interpreted once ascertained, what moral and political principles or visions it presupposes, and how its aspirations and purposes on the one hand relate to its formal dimension or literal shape on the other.

**LAW 501 Legal Process**
Spring. 3 credits. S. P. Garvey, D. A. Nance. An introduction to legal research, including finding statutes, court decisions, and administrative materials relevant to a legal issue or problem, using both print and electronic media. The course examines information sources that organize, index, and explain the law.

**LAW 502 Constitutional Law**
Fall. 4 credits. S. L. Johnson, R. K. Osgood, G. J. Simpson. A study of basic American constitutional law, including judicial review, some structural aspects of the Constitution as developed particularly in light of the passage of the Civil War Amendments, and certain of its rights provisions.

**LAW 504 Contracts**
Fall and spring. 5 credits. R. A. Hillman, R. S. Summer. An introduction to the nature, functions, and processes of exchange, contract, and contract law. The course focuses on the predominant rules and principles governing contract and related obligation, including the substantive reasons underlying the rules and principles.

**LAW 505 Criminal Law**
Spring. 3 credits. S. D. Clymer, J. A. Siliciano. An introductory study of the criminal law, including theories of punishment, analysis of the elements of criminal liability and available defenses, and consideration of specific crimes as defined by statute and the common law.

**LAW 506 Property**
Spring. 2 credits. Recommended prerequisite: Administrative Law and Public International Law. J. Tahsuda. An examination of the primary themes and materials of the federal law concerning Native American tribes and individuals. The course devotes considerable attention to the historical
development of law and policy in that area and to the present division of authority over Indian country among federal, state, and tribal governments.

**LAW 609 Antitrust Law**
Spring. 3 credits. G. A. Hay.
A consideration of the basic antitrust rules enacted by Congress and amplified by the courts to protect competitive markets and limit the exercise of monopoly power. Price fixing, boycotts, and market allocation agreements among competitors; agreements between suppliers and customers; joint ventures; attempts to monopolize and monopolization; price discrimination, and mergers.

**[LAW Banking Law and Regulation]**
The course begins by defining the roles that banks and other financial intermediaries play in the economy. It considers the claim that a specialized set of regulations governing the activities of financial intermediaries is justified by the special role banks occupy in society. In that context, theoretical and normative arguments about banking regulation are considered. The course then examines each of the major laws that govern banking activities against the background of the various regulations discussed. Topics to be addressed include entry restrictions, growth and expansion of bank activities, regulation of the business of banking, expansion through the bank holding-company structure, branch banking, interstate banking, and regulation of failing or failed banks.

**LAW 614 Business Combinations**
Spring. 2 credits. J. J. Hanks, Jr.
This course examines the principal business, legal, and accounting issues in the purchase and sale of privately and publicly held businesses. Emphasis is placed on the negotiation, structuring, financing, and documentation of the most common type of combining transaction—the acquisition of assets of a privately held company. Among the legal issues considered are directors' duties, successor liability, securities regulation, tax, and antitrust. Additional issues surrounding acquisitions of publicly held companies (including hostile takeovers) are studied principally for comparison. The responsibilities of transactional lawyers to persons other than their clients are also assayed.

**[LAW Civil Rights Legislation]**
Explores in depth the history and current status of federal civil rights legislation. The course focuses on 42 U.S.C. §1983, the dominant vehicle for vindication of constitutional rights in civil cases. It is strongly recommended for students who have taken Civil Rights Legislation. T. Eisenberg.

**LAW 616 Commercial Law**
Spring. 3 credits. R. A. Hillman.
Examines a variety of commercial dealings and focuses on Articles 2 and 3 of the Uniform Commercial Code, with some coverage of other Articles and the Convention on Contracts for the International Sale of Goods. The course is designed to give students an understanding of commercial statutes and to inform them about many of the underlying commercial transactions to which the law relates.

**LAW 618 Comparative Law**
Fall. 2 credits. Prerequisite: Basic common law. B. A. Rudden.
The course tackles first the sources, structures, and assumptions common to the legal systems of continental Europe, Latin America, and some countries of the Far East, and then examines their own legacy of their private law. Particular examples are then studied: they may be grouped under a topic (e.g., the liability of the post office or the problem of the injured rescuer) or by country (e.g., French contract law, and Roman and German tort law). The course aims to demonstrate the utility of the comparative method by encouraging students to rethink their own law in the light of other approaches. This enables students to see how problems may sometimes be solved by breaking the categories in which they are embedded in a given system, and thus to gain a better understanding of the reasons for the rules.

**LAW 619 Conflict of Laws**
Fall. 3 credits. R. B. Kent.
A study of the methods used by courts to decide the applicable law in cases that, in their parties or events, involve more than one state or country. Attention to the due-process limitations on jurisdiction, an American state's obligation under the full-faith-and-credit clause to recognize state judgments, and conflicts between federal and state law.

**LAW 620 Constitutional Law II: The First Amendment**
Spring. 3 credits. S. H. Shiffrin.
A comprehensive discussion of freedom of speech, press, and association. The free-exercise-of-religion clause and the establishment clause from the First Amendment are treated less extensively.

**LAW 622 Constitutional Remedies**
Fall. 2 credits. Prerequisite: Not available to students who have taken Civil Rights Legislation. T. Eisenberg.
Explores in depth the history and current status of federal remedies. The course focuses on 42 U.S.C. §1983, the dominant vehicle for vindication of constitutional rights in civil cases.

**LAW Consumer Law**
The principal subject areas are consumer sales and consumer credit transactions and their judicial, legislative, administrative, and extralegal regulation.

**LAW 623 Copyright and Digital Works**
Fall and spring. 3 credits. Prerequisite: A prior course covering the basic elements of copyright law or completion of a set of assigned readings covering those topics in advance of the beginning of the course. P. W. Martin.
The application of copyright law's basic elements or concepts — coverage, protected rights, infringement and fair use — along with associated remedies issues, to creative works encoded in digital form. The course will explore the major copyright issues posed by such categories of digital works as: software, databases containing factual and other public domain content, multi-media materials, computer generated or assisted works, and audio recordings containing digital sampling. In addition the course will review the recent "White Paper" on "Intellectual Property and the National Information Infrastructure" and subsequent legislative proposals as a means of focusing on the Internet's implications for both domestic and international copyright regimes.

**[LAW Corporate Reorganization]**
The course explores the process of reorganization as practiced under Chapter 11 of the Bankruptcy Code. Topics include the purpose of reorganization, out-of-court workouts, procedure under Chapter 11, operating a business in bankruptcy, plans and confirmation, and postconfirmation issues. Prior or concurrent enrollment in Bankruptcy or Debtor-Creditor Law is helpful but not required.

**LAW 624 Corporations**
Fall or spring. 4 credits. J. A. Fanto, J. R. Macey.
An introduction to modern American business corporation law. Topics include corporate organization and defective incorporation, the corporation as a legal entity, corporate control and management, state and federal rules governing the solicitation of proxies, fiduciary duties of directors and controlling shareholders under state law, and antitrust and insider-trading provision under the federal securities laws.

**LAW 625 Corruption Control**
Spring. 2 credits. R. C. Goldstock.
This course examines the factors which facilitate and inhibit public or private corruption control and analyze the wide variety of criminal, civil and nontraditional approaches designed to promote governmental and commercial integrity.

**LAW 626 Criminal Procedure**
Fall. 3 credits. S. P. Garvey.
This course examines the factors which facilitate and inhibit public or private corruption control and analyze the wide variety of criminal, civil and nontraditional approaches designed to promote governmental and commercial integrity.

**[LAW Consumer Law]**
The principal subject areas are consumer sales and consumer credit transactions and their judicial, legislative, administrative, and extralegal regulation.

**LAW 627 Current Topics at the Crossroads of Law and Finance [also NBA 551]**
Spring. 3 credits. J. R. Macey, M. O'Hara.
Financial institutions of all kinds, whether they are formally known as insurance companies, banks, investment banks, mutual funds, or pension funds, invest money on behalf of clients in a wide variety of investment vehicles. This course will look at the way that these financial institutions are treated from both a legal and an economic perspective. Emphasis will be placed on the intersections between modern financial theory and legal analysis. Topics to be covered include insurance, bank regulation and reform, securities markets, investment banking, and pensions.

**LAW 628 Debtor-Creditor Game**
Spring. 3 credits. Prerequisite: Prior enrollment in Secured Transactions or Debtor-Creditor Law or concurrent enrollment in one of those courses and permission of the instructor. L. M. LoPucki.
Advanced debtor-creditor law including Chapter 11 of the Bankruptcy Code, bankruptcy procedure, negotiation techniques, and case strategy.
LAW 629 Debtor-Creditor Law
Fall. 3 credits. Recommended prerequisite: Prior or concurrent enrollment in Secured Transactions. L. M. LoPucki. Selected topics in the law of bankruptcy. An overview of the various bankruptcy chapters and a detailed study of the bankruptcy provisions of most general applicability. The relationship between the rights of an Article 9—secured creditor and the bankruptcy trustee—power to avoid liens. Related topics in the enforcement of money judgments and the law of fraudulent conveyances.

LAW 630 Directed Reading
Fall or spring. 1 or 2 credits. A two-hour directed reading may also fulfill the second writing requirement. Arrange directly with instructor. See Cornell Law School Catalog.

An examination of a topic through readings selected by arrangement between the instructor and an individual student or group of students (not exceeding eight).

[LAW Economics for the Lawyer
2 credits. Not offered 1996–97. An introduction to economic analysis for students with little or no background in economics. Simple models of consumer and firm behavior; circumstances under which markets may be expected to operate well and poorly; and the economic implications of legal institutions and rules. Students who already have taken economics beyond the introductory level may not take this course.]

LAW 633 Employment Law
Spring. 3 credits. S. J. Schwab. Survey of major laws and programs affecting the employee-employer relationship other than laws regulating unions (covered in Labor Law). One major area covered is the common law relating to privacy, drug testing, and unjust dismissal in the workplace. That area is contrasted with major statutory programs such as worker's compensation, unemployment insurance, FLSA, OSHA, and ERISA. Antidiscrimination legislation will also be covered.

LAW 634 English Legal and Constitutional History
Fall. 3 credits. C. Donahue, Jr. An introduction to the legal and constitutional history of England from the Anglo-Saxons to the beginning of the 18th century. By and large, the "constitutional" developments will be considered. The course focuses on reported cases as well as innovative theories of recovery being proposed in courts and in administrative agencies at the present time. Long-range litigation trends are examined and predicted. The course looks to examples of litigation in state and federal courts and discusses local and county enforcement mechanisms.

[LAW Estate and Gift Taxation

LAW 641 Family Law
Spring. 3 credits. J. L. Dolgin. An examination of the ways in which family law seeks to intervene as an institution. Besides examining the usual matters surrounding the legal formation and dissolution of families, the course emphasizes issues relating to children and pressures for new legal definitions of the family arising from social changes.

LAW 643 Federal Courts
Spring. 3 credits. J. Holden-Smith. An intensive examination of the federal courts and their constitutional and statutory role in the federal system. The relationship of the federal courts with the other branches of the federal government and with the states, and the relationship between state and federal law. Case-or-controversy problems, the allocation of jurisdiction between state and federal courts, federal question and diversity jurisdiction of the district courts, and limitations thereon. The course is strongly recommended for anyone planning a judicial clerkship.

LAW 644 Federal Income Taxation
Fall or spring. 4 credits. Limited enrollment. R. A. Green, L. Kahng. A basic course designed to develop understanding of tax concepts and ability to work effectively with the Internal Revenue Code, regulations, cases, and other tax materials.

LAW 646 Feminist Jurisprudence
Spring. 2 credits. This course examines the role of law, and, more generally, the role of the state, in perpetuating and remedying inequities against women. We will study an arc of feminist legal theories, including equality, difference, dominance, and various anti-essentialist theories (e.g., intersectional, post-structuralist). Among the questions considered will be: How does the law help to construct gendered ways of seeing? How does it interact with cultural images and assumptions regarding women's disadvantaged status in society? To what extent can a set of institutions implicated in women's marginalization be used to remedy it? Can a legal system predicated on the liberal assumption of a unitary, pre-political, autonomous self accommodate feminist accounts of social construction, constrained choice, or decentered subject? What methods have feminists used to argue in and about the law, and do these methods themselves have the potential to transform legal thinking?

[LAW History of the Common Law
2 credits. Not offered 1996–97. A study of the development in England (with occasional digressions into Scotland) of the institutional framework and the substantive law of the system known as the common law. Classes focus on the chronological development of the system, with particular attention to the law of real property and trespass writs. The course concerns events from the Norman Conquest in 1066 down to the period of the ready availability of Blackstone's Commentaries, circa 1780.]

[LAW Injunctions
2 credits. Not offered 1996–97. Focuses on the availability and use of the injunction: the substantive and procedural prerequisites for obtaining interlocutory and permanent injunctions, permissible scope and timing, and the duties of those enjoined. Special consideration is given to the use of the injunction as a remedial tool for federal courts in public law litigation.]

LAW 650 Insurance
Spring. 3 credits. J. A. Henderson, Jr. Insurance is an increasingly important tool for the management of risk by both private and public enterprises. This course provides a working knowledge of basic insurance law governing insurance regulation: risk classification; property, commercial, and liability insurance; and claims processes. The emphasis throughout the course is on the link between traditional insurance law doctrine and modern ideas about the function of private law.

LAW 651 Intellectual Property
Fall. 2 or 3 credits. Prerequisite: Available to students who have already taken Copyright or Patent Law for 2 credits. Not available to students who have taken both Copyright and Patent Law. Available to students who have not taken either for 3 credits. P. W. Martin. An introduction to the domestic and international context of intellectual property law with a review of state and federal law relating to intellectual property including copyrights, patents, and trademark law. Intellectual property issues raised by new information technologies are emphasized throughout the course.
treatment of U.S. investment and business operations abroad. The course focuses on international tax jurisdiction and on the methods by which the United States relieves international double taxation, both by statute and through income tax treaties.

**Law 659 Japanese Business Law**
Fall. 2 credits. H. Oda.
This course examines the legal aspects of investment and trade in Japan. After a general introduction to the Japanese legal system (sources of law, administration of justice, and the legal profession including foreign attorneys), basic rules of corporate law are considered. This is followed by subjects such as contracts, restrictions on unfair trade practices, mergers and acquisitions, product liability, and intellectual property. Recent reform of the financial system and amendments to the securities and exchange law are also covered. Finally, problems of international commercial litigation involving Japanese companies are addressed.

**Law 655 International Human Rights**
Spring. 3 credits. Recommended prerequisite: Public International Law. D. Wippman.
This course explores the development and effectiveness of international legal rules governing the conduct of a state toward people within its jurisdiction. Topics include the substantive norms of human rights, and their philosophic basis; the mechanisms for the protection of human rights, such as the United Nations (UN) Special Rapporteur and UN international human rights commissions, and domestic courts; and current issues such as the doctrine of humanitarian intervention, the status of indigenous peoples, and human rights in conflictual armed conflicts, illustrated where possible through case studies of current situations.

**Law 656 International Protection of Intellectual Property**
Fall. 2 credits. Recommended prerequisite: Intellectual Property. J. Strauss.
This course studies intellectual property rights in the international legal system. A general introduction reviews the international protection of patents, trademarks, industrial design, and copyrights. The international protection of intellectual property is studied through consideration of the several international conventions and treaties dealing with it. Also examined is the protection of copyrights and neighboring rights under three other international conventions. The course concludes with a look at new attempts to provide international protection through the General Agreement on Tariffs and Trade.

**Law 657 International Taxation**
Spring. 3 credits. Prerequisite: Federal Income Taxation. R. A. Green.
This course examines the U.S. income tax treatment of foreign investment and business operations in the United States, as well as the

and supplemental readings from legal, medical, and scientific literature.

**Law 667 Law and Ethics of Lawyering**
Fall. 3 credits. Satisfies the professional responsibility requirement; limited enrollment. R. C. Cramton.
The law governing the practice of law and the regulatory and institutional arrangements that affect the availability, quality and cost of legal services will be surveyed in 26 classroom hours (two 50-minute classes per week) through discussion of assigned materials in Hazard, Koniat & Cramton, The Law and Ethics of Lawyering (1994). The remaining class time (nine 75-minute sessions) will be devoted to topics of larger ethical and social concern. Some of these will be devoted to panel discussions of important issues with distinguished practitioners (Keck visiting fellows); others to consideration of issues raised by contemporary critics of the legal profession and scholars and in popular culture (novels, movies, TV shows). Topics likely to be considered in 1996 include: who's in charge in the lawyer-client relationship (lawyers and paternalism); the legal ethics of Atticus Finch; legal services for poor people; women and minorities in the legal profession; and the relationship of legal education to legal ethics. Several short papers will be required.

**Law 668 Lawyers and Clients**
Spring. 3 credits. Satisfies the professional responsibility requirement. R. C. Cramton.
A survey and critique of (1) the law governing the practice of law and the legal profession's norms concerning the lawyer-client relationship; (2) the social function of lawyers; (3) the organization of the legal profession; (4) the modes and patterns in which legal services are or are not made available; and (5) ethical theory relating to lawyer behavior.

**Law 670 Legislation**
Spring. 3 credits. L. I. Palmer.
This course explores various theories of legislation by studying how statutes become a source of public policy, how judges interpret them, and how lawyers draft them. Drafting exercises are used throughout the course to determine to what degree legislation can be used to reform law or to remedy particular social problems.

**Law 674 Negotiation**
Fall. 2 credits. Limited enrollment. M. D. Pinnisi.
This course is intended to develop methods and skills required for negotiation practice. Approaches to negotiation strategy formation, preparation, and conduct will be explored through discussion of selected readings and through class exercises. Students will engage in four or more mock negotiations in situations that typically involve lawyers: civil litigation, labor contract negotiations, commercial transaction negotiations, and criminal plea bargains.

**Law 675 Organized-Crime Control**
Fall. 2 credits. Prerequisite: Criminal Law. R. C. Goldstock.
This course discusses selected aspects of criminal procedure and remedies that are used to control sophisticated illegal syndicated activity. Constitutional, statutory, and practical concerns in the use of electronic surveillance and RICO are a particular focus.
[LAW Patent Law
Federal patent law. The course will primarily examine substantive and procedural issues commonly arising in patent infringement litigation. Particular attention will be given to the nonobviousness and novelty requirements; the patentability of living organisms, computer software, and surgical procedures, the intersection of patent and antitrust law; the extent to which patent issues are resolved by courts rather than by juries; the doctrine of equivalents; remedies for patent infringement; and defenses to patent infringement claims.]

LAW 676 Philosophy of Human Rights
Fall. 3 credits. W. Sadurski.
The aim of the course is to provide a basis for the theoretical analysis of rights, and to apply that analysis to specific legal situations in which human rights are the central issue. The emphasis will be on the philosophical and ethical foundations of human rights, and on the interconnection that exist between theory and practice. Particular attention will be given to the central role that human rights play in the law of treaties; state responsibility; international environmental law; and human rights. Special attention will be given to the law governing the use of force.

LAW 680 Roman Law and Modern Civil Law Systems
Spring. 2 credits. H. Hausmanninger.
Roman law has been the most influential legal system in Western legal history. The course will focus on selected areas of Roman property, contract, and tort law in order to demonstrate two basic aspects: (1) the distinctive characteristics of classical Roman law, which was largely a jurist’s law that was shaped by legal experts similar to modern law professors (as opposed to statutory or judge-made law); and (2) the continuing substantive and methodological influence of Roman law in modern civil law systems, including the major impact of Roman law on the unification process of European law. Roman case law will be studied in English translation and compared with legal reasoning and solutions in contemporary civil law systems (e.g., German and French) legal systems. The course will also demonstrate a number of direct and indirect influences of Roman law on Anglo-American law.

LAW 681 Secured Transactions
Fall. 3 credits. L. M. LoPucki.
The course exploits the use of security in commercial and consumer transactions. Specific subjects include creditor remedies, default, acceleration and cure, the creation and perfection of security interests, and priority among security interests and liens. The objective is to see secured credit as a system for lending and recovering money.

LAW 682 Securities Regulation
Fall. 2 credits. J. J. Hanks, Jr.
This course examines the federal system of regulation of the offering, sale and distribution of securities, including the Securities Act of 1933 and the Securities Exchange Act of 1934. Emphasis is placed on the structure, negotiation and consummation of securities transactions as part of the capital-raising process. The responsibilities of securities professionals are also reviewed.

LAW 684 Sports Law
The course traces the development of sports law in the United States. Particular attention is given to the relationship of sports with antitrust and labor law. Contemporary issues involving arbitration, collective bargaining, amateur athletics, agents, torts, criminal law, and constitutional law are addressed.

LAW 686 Supervised Teaching
Fall or spring. 1 or 2 credits.
Arrange directly with instructor. See Cornell Law School Catalog.

LAW 687 Supervised Writing
Fall or Spring 1, 2 or 3 credits. A two- or three-credit supervised writing program may also fulfill the second writing requirement. Arrange directly with instructor. See Cornell Law School Catalog.

LAW 688 Taxation of Corporations and Shareholders
Spring. 3 credits. Prerequisite: Federal Income Taxation. R. A. Green.
This course examines the federal income taxation of corporate structure and transactions involving alterations in structure, including the rules governing incorporation, dividends, redemptions, liquidations, divisions, and reorganizations.

LAW 692 Trial Advocacy
Fall or spring. 3 credits. Three hours. Prerequisite: Practice. Limited enrollment. G. G. Galbreath, F. F. Romano.
This course is devoted to the study of the trial. Fundamental skills are taught in the context of challenging procedural and substantive law problems. Each stage of the trial is examined: jury selection, opening, objections, direct examination, cross-examination, impeachment, expert witnesses, child witnesses, summation, and pretrial. In addition to exercises every week on a particular segment of a trial, the students will also do a full-day jury trial at the completion of the course. Video equipment is used to teach and critique student performance. There are several written assignments.

LAW 694 Trusts and Estates
Fall. 4 credits. G. S. Alexander.
The course examines the process of gratuitous transfers of wealth and introduces the practice of estate planning. It surveys the basic law of property succession, including wills and intestate succession, the law of trusts, powers of appointment, federal transfer taxation, and trust investment. Certain recurring policy problems are emphasized, including the problem of form of legal norms and the problem of collective constraints on private intention.

PROBLEM COURSES AND SEMINARS
All problem courses and seminars satisfy the first or second writing requirement. Limited enrollment.

[LAW African Americans and the Supreme Court
Beginning with its first decisions related to the slavery question, the Supreme Court has at times aided and at other times hindered efforts to afford African Americans full citizenship. This course explores the relationship between blacks and the Supreme Court by examining the major Court decisions affecting African Americans and attempting to understand those decisions in their historical contexts. The course begins with a review of the background and meaning of the constitutional provisions pertaining to the status of blacks in the new nation and ends with an intensive look at Brown v. Board of Education.]

LAW 702 American Legal Theory
Fall. 3 credits. R. S. Summers.
The fall 1996 topic for this seminar is the formality of basic types of legal phenomena such as legislative processes, criteria of validity (for both publicly and privately made law), statutory rules, accepted methods of statutory interpretation, the principle of stare decisis and common law rules, adjudicative processes, limitations on courts to modify rules, and the formal characteristics of the legal system viewed as a whole. American law lacks appropriate formality in many
important ways and a heavy price is paid for this. However, legal formality and its distinctive understanding rationales (general legal values) profoundly affect the overall content of law and its practice by lawyers in the American as well as other legal systems. Such formality and its rationales have as much or more of a claim to primacy as the essence of laws. The line of logic developed in the seminar will also inform the law's content. In this seminar, there is about equal emphasis on practical skills and theory.

**LAW 703 Bankruptcy Reorganizations Seminar**
Spring. 3 credits. Prerequisite: Debtor-Creditor Law or Secured Transactions. L. M. LoPucki.
This seminar will address selected topics in business reorganization under Chapter 11 of the Bankruptcy Code. Each student will write a substantial research paper and, time permitting, present the paper in class. Topics covered in the seminar will depend to some degree on the topics students select for their papers. Publication of papers is encouraged.

**LAW 704 Biblical Law**
Fall. 3 credits. C. M. Carmichael.
Analysis of law and narrative in the Bible from the perspective of ancient law and legal history. Topics include the nature of the law codes (e.g., hypothetical formulation versus statutory law), legal issues in the narratives (e.g., law of adultery and women's rights), law and morality (e.g., Ten Commandments), law and religion (e.g., instruction guaranteed by the law but condemned by religious authority), the transformation of extralegal relations into legal ones (e.g., with the introduction of money), legal interpretation in antiquity (e.g., Semitic on the Moabite social factors in legal development (e.g., shame and guilt), and aspects of criminal, family, and private law (e.g., eye for an eye, incest rules, and unjust enrichment).

**LAW 706 Burdens of Proof**
Spring. 3 credits. Prerequisite: Evidence. D. A. Nance.
This seminar will examine issues of the sufficiency of evidence to warrant a verdict. It presumes that the student already has an understanding of the exclusionary rules, and thus the basic evidence course is a prerequisite. We will discuss the type of proof and presumptions in both civil and criminal cases, and constitutional restrictions on such devices, in an effort to understand exactly what it is that one must prove and what it takes to prove it. We will read material from treatises, cases, and the law review literature. There will be some discussion of probability and statistical inference theory, so a tolerance for numerical thinking is expected, but the only mathematical background needed is basic algebra. Evaluation will be based on the paper and class participation, the latter accounting for as much as 30% of the grade.

**LAW 708 Comparative and International Corporate Governance**
Fall. 3 credits. Recommended Prerequisite: Working knowledge of a foreign language. J. A. Fanto.
This seminar will examine differences and similarities in corporate governance systems, primarily (although not exclusively) those in Western European countries and the U.S. The seminar will be a joint effort to understand the historical, social and, more generally, cultural origins of some of these systems, as well as their economic rationality. We will also focus upon the critical issue of worldwide convergence of corporate governance and, in this connection, attempt to understand the forces (social, as well as market) that promote or hinder it. The seminar will make use of the growing legal and economic literature on these subjects and will particularly analyze theoretical works, anthropology, sociolinguistics, sociology and general cultural studies.

**LAW 710 Constitutional Law and Political Theory**
Spring. 3 credits. S. H. Shifrin.
The purpose of the seminar is to explore theories of freedom of speech and theories of equality. How are the ideas of freedom, equality, association, and community linked in doctrine, and how should they be related? Neoconservative, liberal, radical, feminist, and Marxist writings are considered.

**LAW 714 Criminal Procedure Seminar: Selected Topics**
Spring. 3 credits. Prerequisite: Criminal Procedure recommended but not required. S. D. Clymer.
This seminar starts where the course Criminal Procedure ends. Topics may include double jeopardy, restraints on the decision to prosecute, pretrial detention and release, grand jury and petit jury, search and seizure, recovery of illegally seized evidence, and the use of illegally seized evidence, and the use of illegally seized evidence in trial. Students will read cases from the Legal Aid Clinic, and studying the role of the defendant in a courtroom setting, the role of the defendant in a courtroom setting, the role of the defendant in a courtroom setting, the role of the defendant in a courtroom setting, the role of the defendant in a courtroom setting, the role of the defendant in a courtroom setting, the role of the defendant in a courtroom setting. Students will be expected to perform basic legal research, read, and discuss legal materials, and write a research paper on a topic of their choosing.

**LAW 715 Employment Discrimination**
Fall. 3 credits. T. Eisenberg.
This seminar explores contemporary problems in employment law. It focuses on legal issues involving Title VII, comparable worth, wrongful discharge, discrimination, age discrimination, and equal pay. Students are required to submit a paper as partial fulfillment of the requirements of the course.

**LAW 716 Ethnic Conflict and International Law**
Fall. 3 credits. Recommended Prerequisite: International Human Rights or Public International Law. D. Wippman.
This seminar examines the status and rights of ethnic, racial, religious, and national groups under international law, and considers the role of international law in creating an adequate response to intercommunal conflicts in Europe, Asia, and Africa. Topics include the sources of nationalism and ethnic conflict, the role of human rights law, humanitarian law, and international organizations in responding to ethnic conflict, and possible solutions to ethnic conflict, including secession, autonomy, and federalism.

**LAW 717 Empirical Studies of the Legal System**
This seminar guides students in their own empirical studies of the legal process. Students derive research topics from a variety of legal and business sources and design and run their own computer programs. Sample topics may include testing theories of the litigation explosion, evaluating the success rates and burden of Title VII cases, studying family law cases from the Legal Aid Clinic, and studying products liability cases from the Legal Aid Clinic.

**LAW 718 European Union Law**
Spring. 3 credits. J. J. Barceló.
The course will study the EU treaty, institutions, and the effects of EU law in the member states; the development of the four freedoms (goods, services, persons, and capital), fundamental rights doctrine, protection of the environment, and EU antitrust law.

**LAW 720 Family Law Seminar**
Fall. 3 credits. B. Colapinto.
This course is designed to familiarize the student with the practical problems facing the practitioner in family law cases. Students participate in negotiating settlement agreements, presenting oral arguments of motions, preparing a memorandum of law, and developing interviewing skills and client relationships. The philosophy of the family law practitioner and methods of dealing with clients involved in divorce, custody, and the like are covered. The emphasis is on method rather than substantive law.

**LAW 721 Federal Litigation Seminar**
Spring. 3 credits. D. Bordewich.
This seminar is designed for students genuinely interested in being litigators. We will explore the "real world" of civil litigation in federal court, from the institution of a lawsuit through termination by some means other than trial. Particular attention will be given to complaints; answers; document requests and responses thereto; removal issues; venue motions; preliminary injunction motions; summary judgment motions; nonparty discovery; sanctions; FRCP 26 disclosures and requirements; attorney-client privilege issues; and pretrial conference orders. Throughout the seminar, we will endeavor to determine how one rationally litigates before frequently disinterested judges pursuing their own agendas and against counsel evidencing little regard for the rules or the law.

**LAW 722 Health Care Reform**
Spring. 3 credits. H. R. Beresford.
This seminar will address the role of law in structuring efforts to resolve problems of access, quality, and costs in health care. The focus will be on the U.S. health care system but approaches of some other nations to comparable problems will be briefly explored. Materials will include readings from books and selected readings from medical and health policy sources. During the later sessions of the seminar, students will present their seminar papers to the class.

**LAW 723 Immigration and Refugee Law**
Fall. 3 credits. Recommended Prerequisite: Constitutional Law. S. W. Yale-Loehr.
This course explores the complex relationship between U.S. immigration policy and our national purposes. Immigration plays a central role in contemporary American life, significantly affecting our foreign relations, human rights policies, ethnic group relations, labor market conditions, welfare programs, public services, and domestic politics. It also raises in acute form some of the most basic problems that our legal system must address, including the rights of groups to be recognized, the principles of nationhood and sovereignty, fair treatment of competing claimants for scarce resources, the imperatives of mass administration, justice, and pervasive discrimination. In approaching these questions, the seminar draws on diverse historical, legal, adminis-
LAW 733 Introduction to French Law
Spring. 3 credits. Prerequisite: Not available to students with significant knowledge of civil law system. C. M. Germain.

Introduction to the French legal system from a comparative law perspective, with a focus on civil law methodology and French legal institutions. Topics studied include French law sources and authorities, such as legislation, court decisions, and scholarly writings; the relationship between French law and the European Union; the French court structure in civil and criminal cases; and French labor law and its major procedural features; and the organization of the legal profession.

[LAW 741 Law and Ethics Seminar (also ILR 608)]

The U.S. collective bargaining system, which had its origins during the New Deal period, has come under intense attack. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time, the decline in the labor movement has undermined its political support. This seminar will look at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Some of the topics to be discussed are: the theory of regulation embodied in the National Labor Relations Act and its critique; alternative conceptions of labor markets and their policy ramifications; the emerging global economy and its impact on domestic labor regulation. There will also be discussion of alternative systems of labor regulation, such as those found in West Germany, Sweden, and Japan.

LAW 740 Law and Economics Seminar
Fall. 3 credits. S. J. Schwab.

Selected analysis of ways in which the law has incorporated, written or unwritten, an economic perspective. A major topic is the Coase Theorem and whether the common law promotes efficiency; a second theme is whether such a common law is ethically appropriate; a third theme contrasts the efficiency of the common law with the marketplace for legislation. Prior study of economics is neither required nor disqualifying.

LAW 741 Law and Higher Education
Spring. 3 credits. Prerequisite: Constitutional Law or Administrative Law. J. J. Mingle.

Higher education is a complex, idiosyncratic institution. Universities and colleges have a unique mission—teaching, research, and public service—and a uniquely challenging task of accommodating the various constituencies it may be asked to serve. This seminar addresses the nature of the law regulating higher education and the economic issues that arise. It will explore the dynamic tensions high expectations and complex legal policy issues universities face in fulfilling their mission.

LAW 742 Law, Morals, and Theology
Fall. 3 credits. Recommended prerequisite: Exposure to the study of religion. C. Donohue.

In marked contrast to other religions (Judaism and Islam come immediately to mind) Western Christianity has for a long time relegated law to a secondary position. (Some, though by no means all, Christian denominations, maintain that law has nothing to do with religion.) Western Christianity has put law in this position by giving off topics that other religions regard as "legal" to other categories, like "ecclesiastical," "sacramental theology" or "eccclesiology." The questions that this seminar addresses are how and why did this process of categorization happen and what effect has it had? We will deal with a number of "hot-button" topics, such as contraception, abortion, divorce, the ordination of women, perhaps euthanasia. Our focus, however, will not be on coming to a resolution of the issues raised by these topics but to understand how Western Christianity has framed the debate about those topics.

LAW 743 Legal Aspects of Foreign Investment in Developing Countries
Spring. 3 credits. M. B. Ndulo.

This seminar will study legal aspects of foreign investments in developing countries. The course is designed to identify legal problems facing both a commercial investment in a developing country. In addition to identifying the legal issues involved, it will discuss possible approaches to the solution of the problems. The course will include the following topics: economic development and foreign capital; obstacles to investment; guarantees to investors and investment codes; nationalization; joint ventures; transfer of technology; compensation for damage caused by scientific experiments and new technologies.

LAW 744 Law, Science, and Technology
Fall. 3 credits. Y. M. Gripps.

An examination of the interaction between legal principles and procedures and scientific research and development. Topics include the role of the law in regulating recombinant DNA research, surrogacy, and in vitro fertilization; plant breeders rights and the patentability of organic matter; judicial assessment of expert scientific evidence; and compensation for damage caused by scientific experiments and new technologies.

LAW 745 Legal Aspects of Commercial Real Estate Development
Fall. 3 credits. J. E. Blyth.

Through the use of several written memos and one oral presentation, this seminar addresses the applicable law to commercial real estate development. It focuses on purchase agreements, options, rights of refusal, memoranda thereof, representations, and warranties; disclosure required of brokers and sellers, attorneys as brokers, notarial misconduct; conveyancing and surveys; commercial leases; conventional financing; conflicts between commercial tenants and institutional lenders; alternatives to conventional financing; title insurance; attorney opinion letters; and choice of real estate entity.

LAW 756 Legal Aspects of Commercial Real Estate Development Seminar
Fall. 3 credits. J. E. Blyth.

High expectations and complex legal policy issues universities face in fulfilling their mission.

LAW 758 Legal Ethics and Legal Malpractice
Spring. 3 credits. Prerequisite: It is recommended, but not required, that the basic professional responsibility course, Lawyers and Clients, be taken previously or concurrently. Satisfies the professional responsibility requirement. R. F. O'Malley.

This seminar is an in-depth examination of several fundamental legal ethics subjects: Conflicts of interest, the lawyer's obligation of confidentiality, and the ethical limitations on the lawyer and the lawyer's client in a litigation matter, supplemented by an analysis of real cases in which a lawyer who has deviated from the norms has been found liable for legal malpractice. This seminar will also explore the ethical obligations of junior lawyers in instances where the conduct or proposed conduct of a senior supervising lawyer is questionable. Consideration will be given to relevant portions of The American Law Institute's Restatement of the Law Governing Lawyers.

LAW 759 Problems in Corporate Law
Fall. 3 credits. Recommended prerequisite: Corporations. Three hours. R. F. Balotti.

This seminar will consider a variety of issues in corporate law today, especially those which may be involved in corporate reorganization. Potential issues include the requirement of a demand by a stockholder prior to instituting derivative litigation, the business judgment rule, the duties of care, loyalty and disclosure, indemnification, directors and shareholders, etc. The course will concentrate on the manner in which the American Law Institute and the courts of Delaware have dealt with these issues.

LAW 765 Selected Business Transactions Seminar
Fall. 3 credits. Recommended prerequisites: Corporations. Z. J. Shulman.

An in-depth look at initial public offerings and acquisitions from a practitioner's point of view. With respect to initial public offerings, the course will cover: the applicable statutory framework, pre-offering preparations (such as the implementation of poison pills and stock option plans), the due diligence process, the implementation of corporate governance policies appropriate for a public company, and the listing registration process. The course will take into account federal securities laws, the Securities and Exchange Commission review process, underwriting arrangements, selection of a trading forum (i.e., NYSE, NASDAQ, or AMEX), and the transaction closing. Regarding acquisitions, the course will explore: financing alternatives, accounting treatment, due diligence, choosing an appropriate transaction structure (i.e., stock versus asset sales), due diligence, key financiers, regulatory approval requirements, and crucial legal aspects of the acquisition, such as letters of intent, successor liability, continuity of employees and non-competition agreements.

LAW 766 Seminar on Physician-Assisted Suicide: The Social Experience
Spring. 3 credits. L. I. Palmer.

Advances in medical technology and various notions of individualism are forcing legislatures and courts to consider whether physicians should be allowed to assist their patients to die. Traditional laws that make criminal one's assistance in another's suicide are being challenged by judicial pronouncements and new legislative provisions such as
the Oregon statute allowing terminally ill patients to request humane ending of their lives. The videotape and transcripts of Dr. Jack Kevorkian's televised acquittal will be the main subject of study in this seminar.

Students will work in groups to develop a short academic product from these videos that could be used by various groups to understand the emerging law on physician-assisted suicide. Each group will write a study guide for the intended audience of the group's project, i.e., doctors, prosecutors, undergraduate students in bioethics courses.

**LAW 777 Theories of Social Justice**

Fall. 3 credits. W. Sadurski.

The aim of the course is to discuss theories of social (distributive) justice, with special emphasis on the conflicting ideologies that attempt to provide foundations for a conception of distributive justice compatible with the ideal of the rule of law. The main focus will be on the notion of desert and its central role in a theory of just distribution, also the idea of distribution according to basic human needs will be explored. In the course of the exploration of these substantive issues, some leading modern philosophies of justice will be discussed, including Rawls’s “justice as fairness,” Nozick’s entitlement theory, Posner’s economic theory of justice, Walzer’s pluralist theory, and Marxist and feminist critiques of distributive justice.

**LAW 778 United Nations, Elections, and Human Rights**

Fall. 3 credits. M. B. Ndulo.

This seminar will focus on elections and human rights. Taking part in the conduct of public affairs is a basic human right increasingly prized by people throughout the world. Universally the right to take part in government is proclaimed and guaranteed by the Universal Declaration of Human Rights and the International Covenant on Civil and Political Rights and is recognized in many other treaties and declarations. Sometimes free and fair elections necessitate international intervention to assist to countries to aid them in fulfilling international human rights standards, and cooperation in establishing and strengthening the legal, technical, and physical infrastructures necessary to carry out elections. This seminar will focus on the basis of modern international human rights principles relating to fair and free elections and the right to take part in government.

**LAW 779 Water Pollution and Water Quality Law**

Spring. 3 credits. W. A. G’Sell

This seminar considers various aspects of pollution and practical questions surrounding the tort system. The central inquiry focuses on the purported goals of tort law, their compatibility with each other, and the degree to which they are realized in practice. The seminar also embraces substantive areas and considers various proposals to restructure tort law.

**LAW 780 Separation of Powers**

Spring. 3 credits. J. A. Siliciano.

The seminar explores some of the major theoretical and practical questions surrounding the tort system. The central inquiry focuses on the purported goals of tort law, their compatibility with each other, and the degree to which they are realized in practice. The seminar also embraces substantive areas and considers various proposals to restructure tort law.

**LAW 781 Seminar on Tort Theory Practice and Reform**

Spring. 3 credits. J. R. Macey.

This seminar considers various aspects of domestic and international finance. The seminar will begin with a basic introduction to financial principles, and discuss the basic legal problems with domestic (U.S.) corporate finance, including securitization, bond covenants, and the conflicts of interest that exist among various claimants to corporate cash flows. The course will proceed to consider certain aspects of domestic finance, including the European Union’s Single Market in Financial Services, foreign exchange markets, Japanese banking, the payments system, asset freezes, and emerging markets.

**LAW 782 Tax Policy Seminar**

Spring. 3 credits. Prerequisite: Federal Income Taxation. L. Kahng.

This seminar analyzes the tax policy goals of fairness, simplicity, and economic efficiency, and examines how well the present tax system satisfies these goals. Specific topics include: progressivity of the tax rate structure; use of the tax system to advance social policies; tax legislative process; taxation of the family; comparison of income and consumption taxes.

**LAW 783 The Regulation of Domestic and International Finance**

Fall. 3 credits. J. A. Siliciano.

This seminar considers various aspects of domestic and international finance. The seminar will begin with a basic introduction to financial principles, and discuss the basic legal problems with domestic (U.S.) corporate finance, including securitization, bond covenants, and the conflicts of interest that exist among various claimants to corporate cash flows. The course will proceed to consider certain aspects of domestic finance, including the European Union’s Single Market in Financial Services, foreign exchange markets, Japanese banking, the payments system, asset freezes, and emerging markets.

**LAW 784 The Religion Clauses of the First Amendment**

Fall. 3 credits. Prerequisite: Constitutional Law. G. J. Simpson.

This course examines various issues relating to the First Amendment’s establishment and free-exercise clauses. In the early part of the semester the seminar meets to discuss assigned readings. The later part is devoted to the presentation of seminar papers. Each student must submit a substantial paper on an approved topic and brief written critiques of two other students’ papers.

**LAW 785 Theoretical Issues in the Law of Crime and Punishment**

Spring. 3 credits. Prerequisite: Criminal Law. S. P. Garvey.

The purpose of this seminar is to examine various theoretical issues in the criminal law. Among the topics to be discussed are the justification (if any) for punishment; the relationship between theories of punishment and political theory; the moral limits on the authority of the state to criminalize conduct; theories of excuse and justification in the criminal law; and the role of emotion and reason in the criminal law.

**LAW 786 Theories of Property**

Fall. 3 credits. Prerequisite: Property. G. S. Alexander.

This seminar explores the various ways that people have conceived of, or understood, property. The materials studied are eclectic and interdisciplinary and include readings on slavery and property, women and property, community interests in property, as well as classical theories (libertarian, utilitarian, Marxist).
CLINICAL COURSES AND EXTERNSHIPS

All clinic courses and externships satisfy the second writing requirement. Limited enrollment.

**LAW 780 Appellate Advocacy**
Fall. 3 credits. Prerequisite: permission of instructor. M. D. Pinnisi.
This course will involve students in the representation of clients in actual appeals and other applications for post-trial relief pending before New York State and federal appellate courts. Approaches to appeal planning, preparation, and conduct will be explored through class discussion of selected readings. Students will work individually and in teams to review trial court records, identify viable issues, research and draft briefs and other papers, and possibly attend argument on motions and appeals prepared by the class.

**LAW 781 Capital Punishment Clinic**
Spring. 3 credits. S. L. Johnson.
This course is taught as a clinic. Two (or possibly three) cases from the South Carolina Death Penalty Project will be worked on by students. These cases may be in the state postconviction relief stage or the federal habeas corpus stage, depending on the vagaries of litigation and the needs of the South Carolina Death Penalty Project. Students will read the record, may assist in drafting the initial pleading (an application for postconviction relief or a federal habeas petition), and/or may then assist in the preparation of briefs. Students are included in discussion regarding the necessary investigation and the thought process about the case.

**[LAW Civil Liberties Clinic**
Students work in teams on cases provided by civil liberties organizations. All students do substantial brief or memoranda writing, and some may have the opportunity to make an oral argument. To help ensure that students have the opportunity to take a case to completion (or at least to the next stage of litigation), this is a full-year course, with students required to register for both semesters for four credit hours and a grade at the end. Given the nature of litigation, demands on student time may be sporadic, and students should be prepared to do some work over intersession if court deadlines so require.

**LAW 782 Estate Planning and Drafting Clinic**
Fall. 3 credits. Prerequisite: Trusts and Estates. R. F. Seibel.
This course will focus on the skills and substantive knowledge required for basic estate planning. Using simulation problems, students will be required to counsel and draft documents for clients with a variety of tax and nontax planning problems. There will also be opportunities to represent real clients. Equal emphasis will be given to analytical skills of mastery and creative thinking applied to implementation skills of applying legal knowledge.

**LAW 784 Government Benefits Clinic**
Fall or spring. 6 credits. B. Strom.
The course has both a substantive component, in which a broad conceptual understanding of a complex and controversial area of law and public policy is developed, and a live client clinical experience, in which those concepts can be applied in solving actual client problems. The substantive component of the course provides an introduction to government benefits issues involving various based benefit programs including Aid for Dependent Children (AFDC), Supplemental Security Income (SSI), and Food Stamps. Case handling involves the representation of clients in government benefits matters at the local, state, and federal levels, including public assistance, temporary assistance to families, unemployment insurance, Medicaid, etc.) involving both the Tompkins County Department of Social Services and the Social Security Administration. The course also includes a lawyering skills classroom component since students are simultaneously enrolled in Legal Aid 1, 2, or 3. See the descriptions for Legal Aid 1, Legal Aid 2 or Legal Aid 3.

**LAW 785 Government Benefits Clinic/Neighborhood Legal Services Externship**
Fall or spring. 6 credits. B. Strom.
This course is a combination of Government Benefits and the Neighborhood Legal Services Externship and either Legal Aid Clinic 1, Legal Aid Clinic 2 or Legal Aid Clinic 3 (6 hours combined credit for all three combinations). The course is the same as Government Benefits except that the case handling component involves handling cases for the ithaca office of Neighborhood Legal Services. The course also includes a lawyering skills classroom component and the Neighborhood Legal Services Externship and the appropriate Legal Aid course for additional details.

**LAW 786 Judicial Externship**
Fall or spring. 4 credits. R. F. Seibel.
Students work with a trial court judge. Work involves courtroom observation, conferences with the judge, research and writing memoranda, drafting decisions. The emphasis is on learning about judges, judicial decision-making process, and trials. There are weekly class meetings with readings and discussions of topics related to the externship experience.

**LAW 790 Law Guardian Externship**
Fall or spring. 4 credits. J. M. Miner.
Students will handle the representation of children in abuse and neglect cases, juvenile delinquency proceedings and PINS (Persons in Need of Supervision) cases through their placement at the Tompkins County Law Guardian office. Duties may include interviewing, investigating, drafting memoranda, and motions, and assisting in trial preparation. Participants in the externship are required to attend classes to discuss issues related to the representation of children.

**LAW 791 Legal Aid Clinic 1**
Fall or spring. 4 credits. N. L. Cook, G. G. Galbreath, J. M. Miner, R. F. Seibel, B. Strom.
Participants handle civil cases for low-income clients of the Legal Aid Clinic under the supervision of the clinic faculty. Students interview and counsel clients; investigate and analyze facts; prepare substantive and procedural law with facts in the context of actual representation; develop a strategy to handle clients' problems; identify and require professional witnesses for all three combinations. B. Strom.

Seminar classes seek to develop interviewing, counseling, negotiation, and advocacy skills through the use of readings, videocassettes, demonstrations, and simulation exercises.

NOTE: On Mondays of the second and third week of the term, LAI will meet from 3:00-8:00 p.m. Classes are mandatory for all Legal Aid Clinic 1 students and all students in courses which include the LAI 1 classroom component.

**LAW 792 Legal Aid Clinic 2**
Fall. 4 credits. Prerequisites: Legal Aid Clinic 1 or a clinic course that includes the Legal Aid Clinic 1 classroom component. N. L. Cook, G. G. Galbreath, J. M. Miner, R. F. Seibel, B. Strom.
Students handle legal aid cases, participate in a classroom component, and help supervise participants in Legal Aid Clinic 1. Students will spend a few hours each week working in conjunction with a local community service agency. Cases are handled as described in the course description for Legal Aid 1. Students represent the clinic's clients in both federal and state courts.

**LAW 793 Legal Aid Clinic 3**
Spring. 4 credits. Prerequisites: Legal Aid 1 or a clinic course that includes the Legal Aid Clinic 1 classroom component. N. L. Cook, G. G. Galbreath, J. M. Miner, R. F. Seibel, B. Strom.
Students handle legal aid cases, participate in a classroom component and help supervise participants in Legal Aid Clinic 1. Students will spend a few hours a week working in conjunction with a local community service agency. Many of the cases handled will be generated at community sites. Cases are handled as described in the course description for Legal Aid 1. Students represent the clinic's clients in both federal and state courts.

**LAW 794 Legislative Externship**
Fall or spring. 3 credits. B. Strom.
This course is a combination of the LAI 1 classroom component and a placement at the Tompkins County Law Office, and the Ithaca office of Neighborhood Legal Services Externship. Work involves drafting legislation, tracking legislation for constituents, legal research and writing, responding to constituent requests that particularly require legal research or an explanation of law. The emphasis is on learning about legislative process, drafting of legislation, understanding the reasons for statutory ambiguity, and developing various skills. There are several informal meetings with the faculty supervisor during the semester with readings and group discussions related to the externship experience.

**LAW 795 Neighborhood Legal Services Externship**
Fall or spring. 4 credits. B. Strom.
This course must be taken simultaneously with Legal Aid Clinic 1, Legal Aid Clinic 2, or Legal Aid Clinic 3 (4 hours combined credit for all three combinations). Along with case handling it includes a classroom component. (See Legal Aid 1, 2, and 3 course descriptions.) The course is designed to provide the development of lawyering skills and issues related to professional responsibility and the role of an attorney. Cases involve the representation of clients of a legal services office, the Ithaca office of Neighborhood Legal Services (NLS). In addition, each student will meet periodically with the faculty supervisor for review of the placement experience.
FACULTY ROSTER

Alexander, Gregory S., J.D., Northwestern U. Prof.
Clermont, Kevin M., J.D., Harvard U. James and Mark Flanagan Professor of Law.
Clymer, Steven D., J.D., Cornell U. Asst. Prof.
Crepp, Yvonne M., Ph.D., U. of Cambridge. Visiting Prof.
Dolgin, Janet L., Ph.D., Brown U. Visiting Prof.
Donahue, Charles, Jr., LL.B. Yale U. Visiting Prof.
Eisenberg, Theodore, J.D., U. of Pennsylvania. Prof.
Fanno, Cynthia R., J.D., Boston U. Prof.
Foster, Frances J., S.D., Stanford U. Visiting Prof.
Garvey, Stephen P., J.D., Yale U. Asst. Prof.
Green, Robert A., J.D., Georgetown U. Assoc. Prof.
Hausmaninger, Herbert, Dr. jur., Graz. Visiting Prof.
Hay, George A., Ph.D., Northwestern U. Edward Cornell Professor of Law and Professor of Economics in the College of Arts and Sciences.
Hillman, Robert A., J.D., Cornell U. Prof.
Johnson, Sheri L., J.D., Yale U. Prof.
Kahng, Lily, J.D., Columbia U. Assoc. Prof.
Kenn, Robert B., LL.B., Boston U. Prof.
Leubsdorf, John, J.D. Harvard U. Visiting Prof.
Macey, Jonathan R., J.D., Yale U. J. DuPratt White Professor of Law.
Martin, Peter W., LL.B., Harvard U. Jane M. G. Foster Professor of Law.
Nance, Dale, J.D., Stanford U. Visiting Prof.
Ndulu, Muna B., Ph.D., Trinity C. Visiting Prof.
Oda, Hiroshi, LL.D., Tokyo U. Visiting Prof.

Straus, Joseph, Dr. jur., Munich. Visiting Prof.
Summers, Robert S., LL.B., Harvard U.
Taylor, Winnie F., LL.M., U. of Wisconsin. Prof.
Varady, Tibor, S.J., Harvard U. Visiting Prof.
Wippman, David J., Yale U. Assoc. Prof.
Wolfram, Charles W., LL.B., U. of Texas. Charles Frank Reavis Sr. Professor of Law.

Lecturers
Cook, Nancy L., J.D., Georgetown U. Senior Lecturer.
Galbreath, Glenn G., J.D., Case Western Reserve U. Senior Lecturer.
Miner, JoAnne M., J.D., U. of Connecticut. Adjunct Lecturer and Director, Cornell Legal Aid Clinic.
Seibert, Robert F., J.D., Northeastern U. Senior Lecturer.
Strom, Barry J., J.D., Cornell U. Senior Lecturer.

Academic Library Staff
Court, Patricia G., M.L.S., Indiana U. Head of reference.

Members of Other Faculties Associated with the Law School
Carmichael, Calum M., B. Lit., Oxford U. Prof. College of Arts and Sciences.

Adjunct Faculty Members
Beresford, H. Richard, M.D., U. of Colorado. Adjunct Prof.
Blyth, John, Dr. jur., Goethe U. Adjunct Prof. BowdRow, Douglas, J.D., Harvard U. Adjunct Prof.
Briggs, W. Buckley, J.D., Georgetown U. Adjunct Prof.
Colapietro, Bruno, J.D., Cornell U. Adjunct Prof.
O'Sell, William A., J.D., U. of Washington. Adjunct Prof.
Goldstock, Ronald G., J.D., Harvard U. Adjunct Prof.
Hanks, James L., Jr., LL.M., Harvard U. Adjunct Prof.
Levario, Richard A., J.D., Cornell U. Adjunct Prof.
Mingle, James J., J.D., U. of Virginia. Adjunct Prof.
Finniss, Michael D., J.D., Cornell U. Adjunct Prof.
Sherwyn, David S., J.D., Cornell U. Adjunct Prof.
Shulman, Zachary, J.D., Cornell U. Adjunct Prof.
Tahsuda John, J.D., Cornell U. Adjunct Prof. Yale-Loehr, Stephen W., J.D., Cornell U. Adjunct Prof.

Practitioners in Residence
O'Malley, Robert E., J.D., Northwestern U. Pract.

FIELD 706 Women and the Law Clinic
Fall or spring. Six hours. J. M. Miner, R. F. Seibel.
This course requires simultaneous enrollment in Legal Aid Clinic I, Legal Aid Clinic 2, or Legal Aid Clinic 3 (6 hours combined credit for each combination). Students will represent women clients who have legal matters primarily in the family law area (divorce, custody, support, domestic violence). Students will also participate in the lawyering skills classroom component of Legal Aid 1, 2 or 3. An additional class will focus on such issues as the impact of substantive law on women, the impact of legal institutions on women, professional role development, feminist lawyering methods, and other topics related to women and the law.

Nonprofessional Course
Government 313 The Nature, Functions, and Limits of Law
Spring. 4 credits. R. K. Osgood. Undergraduates only.
A general-education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of techniques for resolving conflicts and dealing with social problems. The course analyzes the roles of courts, legislatures, and administrative agencies in the legal process, considering also constitutional limits on their power and practical limits on their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process.
ADMINISTRATION

Thomas R. Dyckman, dean
L. Joseph Thomas, associate dean for academic affairs
Michael J. Hostetter, associate dean for executive education
Richard A. Highfield, assistant dean for students
Steven J. Sharratt, assistant dean for external relations
John A. Elliott, director, doctoral program, associate dean for academic affairs
Daphne Atkinson, director of admissions
Harriet Peters, director of advising and student services
Stephen F. Johansson, director of career services
L. Joseph Thomas, director of the Executive Development Program
Eugene Ziegler, director of computing services
Donald Schnedeker, head librarian, Eastwick Library
Rhonda Velaquez, assistant to the dean
Nancy A. Culligan, business manager and director of human resources
Catherine M. Davidson, managing editor, Cornell Enterprise, and publications coordinator
Linda Pike, managing editor, Administrative Science Quarterly

The Johnson Graduate School of Management prepares men and women for managerial careers in business. The school offers course work in many disciplines to provide potential managers with an understanding of the complexities of the professional world in which they will operate and of the organizations of which they will become a part.

A bachelor's degree or its equivalent is required for admission to the two-year program leading to the Master of Business Administration (M.B.A.) degree. Nearly half of the students have a background of undergraduate studies in arts and sciences, and about one-quarter in engineering. Five percent of the students begin their graduate training immediately after receiving their bachelor's degrees and the remaining 95 percent following work experience.

Combined degree programs allow highly qualified Cornell students to co-register in the school during their senior year, thereby earning a master's degree in less than the usual time.

The doctoral program, administered through the Graduate School, provides an advanced level of education in business for those who seek careers in teaching and research at leading universities.

More detailed information about these programs is available from the Office of Admissions and Student Affairs, Johnson Graduate School of Management, Malott Hall. Students in other graduate programs and undergraduate students registered with the university are welcome in many classes. Since matriculated MBA students require certain courses for graduation, non-Johnson School students are not allowed to pre-enroll. During the first week of classes, registration of non-Johnson School students occurs on a space-available basis.

UNDERGRADUATE ONLY

NBA 300 Entrepreneurship and Enterprise
This course provides a disciplined look at the entrepreneur and small business management. It deals with the formation and the acquisition of enterprises from the viewpoint of individuals who desire to become the principal owners. Reviews include legal and tax aspects, valuation techniques, organization forms, and venture-capital sources, as well as planning techniques necessary to launch a successful venture.

NCC 500 Financial Accounting
Fall. 3 credits. Johnson School core course. Enrollment limited. R. Libby, J. D'Souza.
An introductory accounting course that examines the subject from the viewpoint of users external to the organization. Topics include transactions analysis, the accounting cycle, financial-statement preparation, use, and analysis; revenue recognition and cost measurement; present value; and problems in financial-accounting disclosure.

NCC 501 Quantitative Methods for Management
Fall. 3 credits. Johnson School core course. Enrollment limited. J. McClain.
An introduction to decision making under conditions of uncertainty. Topics include descriptive statistics, probability theory, classical statistics, statistical decision theory, and simple and multiple regression analysis. Some knowledge of calculus required.

NCC 502 Microeconomics for Management
Fall. 3 credits. Johnson School core course. Enrollment limited. M. Waldman.
Microeconomic theory is introduced and applied to problems faced by managers. Specific topics covered include supply and demand, consumer behavior, pricing when a firm has market power, and the role of government. The class employs a lecture format that emphasizes the role of theory and the use of models to analyze economic problems.

Grading is based on two midterms and a final exam.

NCC 503 Marketing Management
Fall. 3 credits. Johnson School core course. Enrollment limited. D. Stayman, J. Russo.
The course provides an introduction to marketing and the processes that determine consumer behavior. Topics include target markets, market segmentation, product development, pricing, distribution, advertising, and promotion.

NCC 504 Management and Organizations
Fall, spring. 3 credits. Johnson School core course. Enrollment limited. P. Shurer, H. Haveman, D. Sally.
The course covers the strategic management of organizations in the context of the general environment. It focuses on leadership, decision making, communication, and organizational structures.

NCC 506 Managerial Finance
Fall, spring. 3 credits. Johnson School core course. Enrollment limited. Prerequisites: NCC 500 and NCC 501.
An introduction to business finance through theory and case studies. Topics include capital-budgeting decisions, portfolio theory, asset-pricing models, capital structure, mergers and acquisitions, costs of capital, option pricing, and international finance.

NCC 508 Production and Operations Management
Fall, spring. 3 credits. Johnson School core course. Enrollment limited. Prerequisites: NCC 500 or permission of instructor.
Operations management deals with the problems of producing and delivering goods and services, topics that are of strategic
importance in almost every organization. Production scheduling is a significant problem for manufacturing firms; smooth work flow and quality control are important in banking operations; inventory control is crucial in large retail establishments; and proper task sequencing is a major problem in the construction industry. The course deals with those and other problems, from a managerial viewpoint. The course is designed around managerial problems in the operations area. Students use case studies to improve skills in problem identification.

NBA MANAGEMENT ELECTIVE COURSES

Accounting

NBA 300 Entrepreneurship And T. Endeavor
Fall, spring. 3 credits. Restricted to undergraduate students. D. BenDaniel.
The course uses Cornell-developed case studies and lectures to address entrepreneurial management and new-business development in existing companies. Among the topics covered are valuation of business, planning, obtaining resources, management of growth, and cashing out. Guest lecturers speak on specialized topics such as corporate and patent law, bankruptcy and work-outs, leveraged buy-outs, and valuations of businesses. Students team up to write and present business plans. The course attempts to integrate marketing finance, operations, and human-resource topics in the context of high-growth business ventures. For non-Johnson School students only. Johnson School students see NBA 564.

NBA 500 Intermediate Accounting
Fall, spring. 3 credits. Prerequisite: NCC 500 or the equivalent. M. Nelson, T. Dwyer.
The course is based on the essential concepts and terminologies of financial accounting introduced in the accounting core course. Students learn to evaluate financial statements through the use of case studies drawn from actual corporate financial reports.

NBA 501 Accounting for Mergers and Recapitalizations
Spring. First half of semester. 1.5 credits. Prerequisite: NBA 500 or permission of the instructor. R. Libby.
The course focuses on accounting problems related to equity financing, including equity restructuring, hybrid securities, intercorporate investments, consolidated reports, proforma statements for a merger prospectus, and other related financial reporting problems. The method of instruction is lecture mixed with cases. Grading is based on two exams: First half of semester. Course continues in NBA 508, Advanced Accounting, offered second half of semester.

NBA 502 Managerial Cost Accounting
Fall, spring. 3 credits. Prerequisites: NCC 500, NCC 501, and NCC 502, or the equivalent. R. Bloomfield, R. Hilton.
The course is designed both for those responsible for internal accounting information and those who use such information for decision making. Topics include budgeting, accumulating costs for product costing, activity-based costing, standard costs, the analysis of cost variances, cost estimation and prediction, cost-price-volume decisions, performance measurement, nonmanufacturing cost analysis, cost allocation, and transfer pricing. Instruction will be a mixture of lecture and case discussion. Student evaluation will be based on a mid-term exam, a final exam, a project, and class participation.

NBA 503 Strategic Cost Management
Fall. 2 credits. R. Hilton.
This course focuses on the role of cost management and related issues in helping a firm compete successfully in the global market. Topics considered include activity-based costing, activity-based management, value chain analysis, the lean enterprise, confronting competition in an industry dominated by lean enterprises, re-engineering, process value analysis, identification of non-value-added activities and costs, target costing, Kaizen costing, continuous improvement, time-based competition, cost versus quality, and benchmarking. The course is almost entirely based on cases, many of them lean enterprises in Japan.

NBA 505 Auditing
3 credits. Prerequisite: NCC 500 or permission of the instructor. Not offered 1996–97. M. Nelson.
The course examines the process by which financial-accounting systems are audited. Topics include ethics, the meaning of audit reports, the legal liability of auditors, the study and evaluation of internal control systems, and various approaches for testing account balances. Problems, cases, and video simulations are used to illustrate concepts.

NBA 506 Business Analysis and Security Valuation
Fall, spring. 3 credits. Prerequisite: NCC 506, NBA 500 (or concurrent enrollment), or permission of instructor. C. Lee.
The focus of this course is on using accounting-based information to make business decisions. We will introduce a variety of decision contexts, including strategic ratio analyses, cash flow projections, security valuation, quality of earnings assessments, equity trading strategies, MBO fairness options, credit decisions, bankruptcy predictions and bond ratings. Our goal is to gain an appreciation for both the usefulness and limitations of accounting data in performing these tasks. Emphasis is on practical applications and special attention is given to cultivating your analytical and communication skills.

NBA 508 Advanced Accounting
Spring, second half of semester. 1.5 credits. Prerequisites: NBA 501 or permission of the instructor. J. Elliott.
The course examines advanced topics in accounting for intercorporate investments, including leveraged buy-outs, international transactions and international subsidiaries, joint ventures, spin-offs, and other related financial reporting problems. The method of instruction is lectures mixed with cases. Grading will be based on two exams. Second half of semester. Continuation of NBS 501, Accting for Mergers & Consol. (offered first half of semester).

Economics

NBA 520 Pricing and Strategy
This course extends material introduced in the core microeconomics course, where the focus is on pricing decisions. The course is taught very much like the core microeconomics course, i.e., the course consists mostly of lectures and problem sets that utilize the ideas contained in the lectures. One difference is that some understanding of calculus is required. The grading for the course is based on a midterm exam, a final exam, and a paper. Specific topics covered include price discrimination, peak-load pricing, product line pricing, and pricing when information is asymmetric.

NBA 522 Managerial Economics
Students review microeconomic theory and then apply it in a number of real-world situations. They explore the relationship between micro-theory and decisions for capital investments through concrete case-study applications. Topics include problems related to the appropriate timing for the insertion of new technology (for example, whether it is preferable to buy an existing tanker or to wait for the next iteration of technology). Also explored are complex pricing decisions, including peak-load pricing. The sequential relationships among those various applications of microeconomic theory are examined. The format of the course is that of a lecture-discussion.

NBA 524 Macroeconomics and International Trade
Fall, spring. 3 credits. Prerequisite: NCC 502 or equivalent or permission of the instructor. R. Lind, R. Highfield.
The course applies basic macroeconomic theory to such problems as inflation, unemployment, economic growth, and productivity and examines how those problems interact with international trade and finance. Students learn to be informed observers of national and international economic policies and discourse. They learn of economic analyses and forecasts. A lecture-discussion format is used as the method of instruction.

NBA 526 Business and Economic Forecasting
Not offered in 1996–97. 3 credits. Prerequisite: NCC 501 or equivalent. D. Highfield.
This course provides students with a toolbox of useful, proven time-series forecasting methods and teaches them how to choose the appropriate one. Topics include the Box-Jenkins method and those traditional forecasting methods, the prediction of turning points, combination of forecasts, and the relationship of forecasting to decision making. Application, rather than theory, is emphasized.

NBA 527 Applied Price Theory (also ECON 516)
Spring. 4 credits. Letter/S-U optional grading. R. Frank.
The course emphasizes applications of the principles of price theory to a variety of problems taken from concrete, practical settings.
Finance

NBA 528 Information and Incentives in Organizations
Fall, spring. 3-3 credits. R. Gibbons. Explores the roles of information, incentives, and strategic behavior in shaping the internal structure and practices of organizations. Consists of three major sections: compensation and incentives (including performance pay, distortionary performance measures, and subjective performance assessments), human resource management for general managers (including labor market mobility, up-or-out rules, and self-managed teams), and organizational design and performance (including communication, decentralization, and re-engineering). Instruction is via lectures (about 50 percent, more toward the beginning) and case discussions. Lectures often involve mathematical models that are abstract but not technical. Pedagogical strategy is to use models as coherent frameworks for organizing the welter of facts presented in each case. Evaluation is via two take-home midterms (involving problems related to models discussed in class), five 2-page case write-ups; one group project (including longer write-up and class presentation), and class participation (particularly in case discussions where no write-up is required).

NBA 540 Financial Policy Decisions
Spring. 3 credits. Prerequisite: NCC 506 or the equivalent. H. Bieman. An introduction to basic and advanced financial decision models, developed from the viewpoint of the issuing firm, for different methods of corporate financing, and organizational design and performance (including communication, decentralization, and re-engineering). Instruction is via lectures (about 50 percent, more toward the beginning) and case discussions. Lectures often involve mathematical models that are abstract but not technical. Pedagogical strategy is to use models as coherent frameworks for organizing the welter of facts presented in each case. Evaluation is via two take-home midterms (involving problems related to models discussed in class), five 2-page case write-ups; one group project (including longer write-up and class presentation), and class participation (particularly in case discussions where no write-up is required).

NBA 541 Economic Evaluation of Capital Investment Projects
Fall. 3 credits. Prerequisite: NCC 506 or permission of the instructor. B. Swaminathan, S. Smidt. This course deals with the evaluation of capital investment projects under uncertainty. The first part of the course focuses on traditional capital budgeting techniques using the discounted cash flow approach. This involves the estimation of cash flows, the treatment of risk and discount rates, the role of inflation and taxes, and the use of single-factor and multifactor asset pricing models in determining discount rates. The second part of the course focuses on the valuation of future investment opportunities of a firm using option pricing techniques. This includes issues such as flexibility options, options on real assets, evaluation of natural resource investments, and evaluation of new product investments. The methods of instruction are lectures, case discussions, spreadsheet exercises, statistical exercises, and seminars by practitioners. Students are evaluated on the basis of midterm and final examinations, cases, and homework assignments.

NBA 542 Investments and Portfolio Analysis
3 credits. Prerequisites: NCC 501 and NCC 502. Recommended: NBA 624. Not offered 1996-97. The course is designed for students who not necessarily specializing in investment banking, but majoring in finance. It covers the pricing of financial assets and instruments such as securities, bonds, options, and futures; the concepts of diversification, market efficiency, and risk-and-return relationships for portfolios of securities. The approach balances rigor and mathematical simplicity, but this is an essentially quantitative course. Students must be comfortable with statistics, regression analysis, and quantitative techniques. It is assumed that students will be comfortable with statistics, regression analysis, and quantitative techniques as these tools will be routinely used from the beginning of classes. Students should also be able to perform statistical analysis on computer packages (e.g. Minitab) and program worksheet packages (e.g. Lotus or Excel). The course will give the students a good view of the paradigms of asset valuation and their implications for financial asset management. Students can elect to take either NBA 542 or NBA 551, but not both.

NBA 543 Financial Markets and Institutions
Fall. 3 credits. Prerequisite: NCC 506 (Finance Core). M. O'Hara. The course develops a framework for discussing financial intermediation. It analyzes the sources, uses, and pricing of funds in the economy and the various roles of banks and other financial intermediaries. Students explore the theory of commercial banking, study how central bank operations affect financial institutions, and learn how to conduct analysis on market work. They also learn how the money market and the financial-futures market operate. Quantitative techniques are used to model economic theory.

NBA 544 Bank Management
3 credits. Prerequisite: NBA 543. Not offered 1996-97. S. Smidt. The course provides an in-depth treatment of management issues in commercial banking. Topics include risk management, credit decisions and pricing, information problems, bank performance evaluation, international lending, and securitization. Students learn tools through case studies and participate in a bank-simulation exercise.

NBA 545 Corporate Financial Policy and Investment Strategies
3 credits. Prerequisite: NCC 506 (Finance Core). Not offered 1996-97. R. Michaely. The course is designed to integrate the students' course work in engineering (computing, stochastic modeling) and finance (options/futures and investment theory) through the completion of a project. The course project will be undertaken via student groups. It will involve the implementation of a financial model to a real world problem. Problems will come from the real issues facing the financial industry. The implementation will include model formulation, computer programming, data collection, and data analysis. The course format will be a mixture of lectures by faculty, industry professionals and students (project presentations).

NBA 546 Trading
3 credits. Prerequisite: NCC 506 and second-year status, or permission of the instructor. Not offered 1996-97. S. Smidt. The course considers the economics of securities trading. It reviews theoretical, empirical, and descriptive studies of trading and traders. Among the topics covered are who trades, how trading occurs, what is traded, trading costs and volumes, and the regulation of trading. Students also discuss how trading influences prices, how trading information is disseminated, and how the characteristics of exchanges and clearing-houses affect, and are affected by, the trading process.

NBA 550 Advanced Topics in Derivative Securities
3 credits. Prerequisite: NBA 546 or permission of the instructor. Not offered 1996-97. The course will cover the pricing and hedging of various exotic derivative securities now trading over-the-counter. Examples include Asian options, barrier options, compound options, lookback options, and quantos. The method of instruction is primarily lectures, supplemented by guest speakers. Students have the option of either playing a trading game or else writing a term paper. A midterm and a final exam comprise roughly half the
NBA 569 Management Consulting
Fall. 3 credits. A. McAdams.
The course is case-study oriented and focuses on strategic consulting. It has multiple objectives. First, it provides students with the opportunity to understand the role of the consultant and to gain indirect experience in that role through dealing with a broad range of practical and real-world issues. Second, it helps students improve their analytic skills through practice with case studies. Third, it provides students with information that they are unlikely to gain in other courses, as well as experience making group presentations and evaluating them. In addition, students are required to write a comprehensive analytic term paper.

NBA 571 Cornell Management Simulation
Fall, second half of semester. 1.5 credits.
Restricted to second-year MBA students. S. Smidt.
This computer-based simulation is played by teams of four, self-selected students who make marketing, production, and finance decisions for one of five companies operating competitively in the same industry. After the first week, during which all of the rules of the simulation are explained and the software used by each team is demonstrated, the teams make weekly decisions (meeting at their own convenience). At the beginning of the simulation, each team writes a Strategic Intent paper and the decisions of the last decision have been determined, each team presents an in-depth analysis of its performance and its strategy for the future in a “Board of Directors” meeting. Letter grading only, based on the value created for the company’s shareholders (relative to other firms in the same industry), the team’s Strategic Intent paper and the instructor’s evaluation of team’s performance at the BOD meeting.

NBA 573 Projects in Environmental Management
Spring. 3 credits. A. McAdams.
This is a project course of interdisciplinary teams focused on environmental issues faced by real world organizations: businesses, governmental agencies, not-for-profit institutions. The project teams are to establish a “contract” with their organization to achieve mutually agreed goals during the semester, with appropriate “milestones” to be completed at intermediate stages. Project outcomes will be provided to the host organization through a formal presentation and report at the end of the semester and result in a formal case study of the issues involved. This course is taught jointly with Professor McAdams/Advanced Consulting course, NBA 575.

NBA 575 Advanced Consulting
Spring. 3 credits. Limited to 20 students. Priority given to students who have taken NBA 569. A. McAdams.
The course investigates the efficacy of “concept maps” as tools integral to the consulting process. In the first part of the course, recent case studies, both fictional and actual, are employed to review the use of concept maps in various corporate settings. Following that, the research base documenting Professor Novak’s use of concept maps in many other settings is examined. In the final part of the course, student teams undertake field projects designed to determine the potential contribution of concept maps in various business settings.

NBA 576 The World Geopolitical Environment of Business
Fall. 3 credits. Letter/S-U optional grading. R. Line.
The geopolitical face of the world is changing at a pace that few could have envisioned even five years ago. The unification of Germany, the fall of communism and institution of sweeping economic restructuring in the former Soviet Union, the move toward democracy with market economies in Eastern Europe, the movement of Europe toward a unified economy, and the fluctuations with reform and its implications in China are just a few of the many facets of the changing world environment of business. The course provides students with a view of those fast-paced worldwide changes. Topics covered include developments in Western and Eastern Europe, the former Soviet Union, the Pacific Rim, Central and South America, the Middle East, and Africa, and the role and fate of developing countries in the world economy. Guest speakers include leading scholars from Cornell and other universities and leaders in business and government.

NBA 577 The Political, Legal, and Regulatory Environment of Business
Spring. 3 credits. Letter/S-U optional grading. R. Schuler.
The political climate, laws, regulations and government arrange for infrastructure have a profound effect on the nature, operation, and profitability of business. Many of the most important decisions that top management makes are driven by political, legal, and regulatory considerations (e.g., the responses of Exxon to the Exxon Valdez oil spill and Union Carbide to the Bhopal, India, gas leak and the decision of AT&T to accept the division of its company in response to an antitrust suit filed by the United States government). Environmental and waste management concerns are leading to new laws and regulations that will affect many aspects of business well into the next century, creating opportunities as well as posing problems. The course begins with a discussion of the political foundations of business regulation. Students examine different areas of application, including economic regulation, environmental regulation, antitrust, and product liability. Guest speakers include leading scholars from throughout the university and business and government leaders.

NBA 578 Business Ethics
Fall. 3 credits. R. Frank.
Students examine actual situations in business, both in the United States and abroad, that involve ethical issues affecting individuals and organizations. They are encouraged to decide on appropriate ethical positions.

NBA 579 Cases in Business Strategy
Fall, first half of semester. 1.5 credits.
Restricted to second-year MBA students. J. Hass.
Classic as well as new cases spanning a variety of industries and situations are used to develop an understanding and appreciation for several business strategy principles and dealing with issues such as ethical behavior, managing growth, employee empowerment, managing change and achieving innovation. A new case will be discussed in class each day, except the two or three days when an executive visitor is making a presentation. Students are expected to have prepared for and participate in the discussion. Each student will also participate twice in a four-person group that will be required to present or receive a case in a role-playing context on two Friday mornings during the last five weeks of the course. The role-playing is based only, based on individual classroom, case group performance, and a final paper.

International Management
NBA 580 Strategies for Global Competitiveness
Spring. 3 credits. A. McAdams.
Initially, students explore the role of government in several private-market industrialized nations—Japan, France, Germany, the United Kingdom, and Italy—for lessons the United States might learn and use. They investigate the impact in each of those countries and government policies on the global competitiveness of the country’s firms. Special emphasis is given to different policies appropriate to each of a range of industries, from the mature to the high tech (including computers, telecommunications, and electronics), and to stages of development in each economy. Possible lessons are then tested for less developed countries that might include Venezuela and Malaysia and newly emerging countries such as Singapore.

NBA 583 Market Transitions in Eastern Europe
Fall. 3 credits. D. Stark.
The course examines the problems and prospects of the transition from state socialism to a market economy in contemporary eastern Europe. Patterns of investment, enterprise decision making, labor markets, and property rights are examined from a comparative institutional perspective. The final part of the course is organized around the research interests of the seminar participants and includes such themes as privatization of state enterprises, the role of international monetary institutions, capital markets, new financial institutions, organizational restructing, and the relationship between rights and property rights. Although the course focuses on recent changes in Hungary, Poland, and the Czech Republic, its content should yield insights for students interested in other societies (including the former Soviet Union) currently undergoing the transition from state socialism. Instructional methods used are lectures and discussion. Evaluation of students will be based on short papers on readings, class participation, a final paper and student presentations.

NBA 584 Management of the Multinational Corporation
Fall. 3 credits. Letter/S-U optional grading. J. Katz.
This course introduces students to analytical frameworks and skills used in international management. The first half of the class focuses on international strategy, including selection and implementation of a competitive position. The second half covers comparative management (two focus countries are chosen each semester) and cross-national management. Topics include motivation in an international context, cross-cultural communication, and multinational team operations. The course is a mixture of lectures and cases. Grading is based on two case write-ups, a mid-term, a final, and class participation. There are no prerequisites, but a real interest in international management is needed to benefit from the class.
NBA 589 Business in Japan
Spring (first half of semester). 2 credits. V. Puck.
The course, based primarily on case studies and lectures, focuses on the organizational capabilities and competitive strategies of Japanese firms in the context of business globalization. Two core areas will be reviewed in detail: intra-firm policies and practices common in Japanese industry, and their implications for globalization. The special emphasis will be given to organizational and human management issues and to their impact on strategy formulation and implementation. Each student will be required to choose a topic of his/her interest related to any of the main issues discussed in the class for a written literary review. The review (10-15 pages plus bibliography) should not only summarize the key points of principal contributions reviewed, but also should contain their critical evaluation. Grading policy: 70% review paper, and 30% class performance.

NBA 590 Managing in Developing Countries
Fall, first half of semester. 1.5 credits. Letter-S/U optional grading. J. Katz.
This course addresses the unique features of industrializing countries as hosts for multinational business operations. It is a case-based course; each day is spent discussing one or two cases. Topics include environmental variation and how to deal with it and concentrated national power structures and their management. We cover a large number of countries spread throughout the world. Students are responsible for providing in-class updates on one country, but because the case content remains valid, some of the facts presented about the countries are out-of-date. Grading is based on the country update presentation, a final case write-up, and class participation.

NBA 592 Experience in International Management
Fall, second half of semester. 1.5 credits. S-U grades only. J. Katz.
The objective of this course is to combine classroom sessions and an international study trip to give students a fuller understanding of differences in national industrial structures and national management styles. All students will attend six sessions (one per week for the last half of the semester) that will provide a theoretical background on business structures, management norms, and cross-cultural communications patterns in the countries that will be visited. Each student must then join one of the January study trips (Destinations to be announced in September). On the trips, students will visit local businesses, subsidiaries of foreign multinationals, government officials, local business school students and others. Following the trips, students will be required to write a final paper integrating the material learned on the trip with their experiences. The class will also have one debriefing meeting. NOTE: participation in a study trip is required to complete this course (fee charged).

Management Information Systems
NBA 600 Database Management
Fall. 3 credits. Prerequisite: Some knowledge of computing and systems, e.g., COM S 211. L. Orman.
The course introduces the design, use, and management of computerized databases. Topics include physical and logical data structures, design issues, and retrieval, maintenance, and security problems. Students design, create, and use databases using various database management systems.

NBA 609 MIS Policy
3 credits. Prerequisite: Some knowledge of computing and systems, e.g., COM S 211. Not offered 1996-97. L. Orman.
Design, use, and management of information systems are studied through examples. The seminar format places heavy emphasis on class discussion and presentations. All major technological and organizational objectives studied in the context of MIS Policy, planning, and implementation.

NBA 610 Thriving on the Information Revolution
Spring, first half of semester. 2.5 credits. Letter-S/U optional grading. P. Kamps.
Rapidly advancing information technologies are breaking down long-standing barriers to business productivity, innovation, and distribution. The result is an era of transformational change called the Information Revolution. The purpose of this course is to prepare students for the challenges faced by businesses, governments, and organizations in the face of its many strategic implications to business, education, entertainment and government. And: An approach to developing strategies to exploit the Information Revolution for comparative advantage.

NBA 612 Imaging and the Electronic Age
Fall. 3 credits. D. Greenberg.
The advances in computer graphics, computer processing power, network bandwidths and video compression technologies are forcing the merger of the telephone, television and computer industries. The influence of these technologies has created paradigm shifts that will drastically change the way we communicate, how we are educated, the way we work, design, and in essence, how we will live in the next century. This course will start by presenting historical and technological advances that created major paradigm shifts for communications. Advances in computer technology emphasizing the fundamentals behind the increases in processing power, video and computer graphics capabilities, and network transmission will be presented. The latter half of the course will cover the effect of these advances on several discipline-specific areas including photography and publishing, as well as the computer industry itself. One session will be devoted to the social and legal issues rising from the rapid advances in electronic communication. The course will be especially tailored to a business school and industrial concerns and will have interactive live demonstrations at the state of the art laboratory of the Program of Computer Graphics. Prior knowledge in computer science is required.

NBA 614 Managing in the Information Age
Fall, first half of semester. 1.5 credits. A. M. McAdams.
This course explores a topic that is just beginning to emerge: the implications of the explosion of the Internet and interactive multimedia communications for the way managers think and manage. It will examine the origins of the Internet and some of the forces that have led to its rapid development, noting along the way why and how it has "blindsided us" as Andy Grove of Intel and Bill Gates of Microsoft candidly state. The course will look at a few new and innovative uses of modern information technologies. The course itself will evolve—even in real time—with the developments in the field.

Marketing
NBA 620 Marketing Research
Fall, spring. 3 credits. Prerequisites: NCC 501 and NCC 503, or the equivalent. S. Srinivasan.
The course teaches students to identify information needs for developing marketing strategies and making tactical plans. They are introduced to up-to-date research design and data collection, measurement, and analysis. They gain hands-on experience with such methods through problem sets and group projects. The discussion balances the viewpoint of researchers with that of managers who commission research.

NBA 621 Advertising Management
3 credits. Prerequisite: NCC 503 (Marketing Core). Not offered 1996-97. D. Stayman.
The course is designed to give students an understanding of the advertising as a promotion management process. It covers the components of a successful advertising campaign and helps students develop an appreciation of the issues involved in advertising planning and decision making. They also learn how recent social-scientific findings and theory can facilitate advertising management.

NBA 622 Marketing Strategy
Fall. 3 credits. Prerequisite: NCC 503 (Marketing Core). V. Rao.
The course balances theoretical and practical approaches to the development and evaluation of marketing strategies for mass-market product firms. It considers various environmental opportunities and constraints in developing and evaluating integrated marketing strategies for new and established products and services. Recent research results are applied to decisions on product-market boundary definition, resource allocation, product positioning, and competitive reactions. It includes selected current topics such as brand equity, acquisitions, and lead-user analyses. Students use case studies extensively to develop skills in strategy analysis and to enhance skills in assessing external threats and opportunities. They employ computer-assisted market strategies simulations to evaluate the effects of competing strategies. Guest speakers from industry provide a view of the operational aspects of marketing strategy.

NBA 623 Models and Methods for New Product Development
Spring. 3 credits. Prerequisites: NCC 501 and NCC 503. D. Wittink.
The successful introduction of new products requires careful planning and systematic screening and testing. This course covers models and methods that are useful to managers in the development (e.g., specifica-
tion of products and services) and marketing of new products. Heavy emphasis is placed on the measurement of consumer preferences. Students are required to complete a group project, consisting of a measurement instrument, data collection (from at least 30 respondents) and data analysis, for a self-chosen product category. The method of instruction consists of a combination of lectures and discussion of cases and articles. Performance is evaluated primarily based on exams and the group project.

**NBA 625 International Marketing**

Fall, spring. 3 credits. Recommended: NCC 503. J. Katz.

International Marketing is designed to train students to take a domestic product and expand it into international markets successfully. Market selection, international market research issues, and international marketing strategies are all discussed. The term project (actually submitted in three parts throughout the term) requires that students choose some product and develop a plan for taking it abroad. The course test includes a series of short (1-3 page) cases that are used as the basis of discussion in each class. Therefore, class participation is essential. Grading is based on the term project, the final, and class participation. Core marketing provides a useful background, but is not a prerequisite.

**NBA 626 Consumer Behavior**

Spring. 3 credits. A. Iseki.

Topics include factors that influence response to advertising of various kinds, purchase decisions, product perceptions, response to promotions, route to satisfaction, and the basic methodologies for understanding consumer behavior.

**NBA 627 Affect and Brand Equity**

Spring. 3 credits. A. Iseki.

The course examines ways in which affect, or feelings, can play a role in processes related to brand equity. It focuses on the influence of affect on the development, change, and maintenance of brand perceptions and brand loyalty. Topics include brand loyalty, variety seeking, product categorization, judgment, decision making, and risk preference. These six areas are studied in choices related to brand equity and brand loyalty. (e.g., choosing brand-name products or value-priced ones, staying with a brand or switching).

**NBA 630 Policies for Marketing Channels**

Fall. 3 credits. Prerequisite: NCC 503.

V. Kadiyali.

Marketing channels are analyzed as a chain of interdependent and interlocking organizations that produce and deliver goods and services to various types of consumers. We will look at various aspects of these relationships, such as efficiency, conflict, incentives and government intervention. Instruction consists of lectures, cases and guest speakers. Evaluation of students is based on cases and a final project (presentation and write-up) and class participation.

**NBA 635 Marketing Models**

Lect. Fall. 3 credits. Prerequisite: NCC 503.

V. Kadiyali.

Students learn how to use mathematical models to solve marketing problems. The objective is to develop students' skills in evaluating marketing models and implementing them in management practice.

**NBA 637 Direct Marketing**

Not offered in 1996-97. 3.5 credits. Prerequisite: NCC 503 Marketing Management, or equivalent. V. Rao, D. Stavrakakis.

The objective of this short course is to expose MBA students to selected contemporary issues in the area of direct marketing. In addition to providing an overview of the direct marketing industry and its trends, the course will address major strategic and tactical issues in the management of direct marketing. The discussion will mainly consider the perspective of a marketer interested in employing the opportunities in direct marketing as an integral element of the marketing mix for a product/service. It will also address appropriate ethical concerns with direct marketing. To acquire a flavor of various practices in the industry, students will visit one or two direct marketing firms in New York City or its vicinity toward the end of the course.

**NBA 638 Analysis of Competitive Decision Making**

Fall, spring. 3 credits. Prerequisite: NCC 502 (Microeconomics core course). V. Kadiyali.

This course brings methods of microeconomics analysis to competitive decision making. Specifically, we will address issues relating to optimal competitive decisions for a firm interacting with current and potential rivals. We discuss how firms can, by their choice of appropriate decisions, best signal to rivals their intentions and degree of commitment to them. We also look at sustainability and the implications of various strategies and methods of decision choices. Game theoretic perspectives are used to understand these concepts. The dimensions of competitive strategy that we look at include product proliferation, R&D and patent policies, choice of compatibility with existing products, bundling of products, investing in capacity, vertical integration, choice of channels of distribution partners, pricing, and promotions. We also discuss problems caused in the optimal choice and implemention of strategies when information is imperfect. Specifically, we look at issues of moral hazard and adverse selection, and how these issues affect firm choices of strategies (e.g., pricing, choice of channel partners, etc.). Instruction includes lectures and cases. Student evaluation is based on cases, class participation and a final project.

**NBA 641 Logistics and Manufacturing Strategy**

Spring. 3 credits. Prerequisite: NCC 508, OR&E 410, or permission of the instructor.

The course is about strategic management of the value chain from materials to customer. Students discuss operations strategy issues that are important to both manufacturing and service. The course emphasizes written and oral communication skills. About a third of the classes are spent on case studies, with small groups presenting their analyses of them. There is one mid-term examination, but the majority of the grade is evaluated based on projects and class participation. There is an option of replacing some components with a "live case," a project with a local company.

**NBA 642 Statistical Methods in Business**

3 credits. Prerequisite: Good performance in NCC 501 or the equivalent. Not offered 1996-97.

Regression analysis is one of the most abused quantitative techniques in the business world. Moreover, the field of econometrics is now hard to avoid for those who want to understand the theoretical literature of many areas of business, such as finance, economics, marketing, and operations research. The course offers indispensable theoretical and practical knowledge that makes students sophisticated contributors in their careers. Econometricians.

Topics covered are the multiple-regression-model theory of estimation and prediction, diagnosis, and the complications encountered most often, such as outliers, heteroskedasticity, multicollinearity, autocorrelation, lagged dependent variables, simultaneity, and truncated variables. Principal component analysis and probit/logit analysis, often used in business, are also covered. Heavy emphasis is placed on the analysis of datasets from the fields of business and economics. Computer packages are used throughout the course. The students must be comfortable in quantitative thinking and computer environments.

**NBA 644 Quality Management**

Fall. 3 credits. Prerequisite: NCC 508 or permission of the instructor.

L. Robinson.

The course uses the Malcolm Baldrige national National Award Criteria to examine issues in managing quality in both service and manufacturing environments. Topics include an external focus on identifying and satisfying the customer, an internal focus on process redesign and improvement (including bottleneck management and the just-in-time philosophy of eliminating waste), the strategic and competitive aspects of quality improvement, human-resource issues (such as worker participation, motivation and performance measurement, and worker teams), quality and design, and selected topics in statistical quality control (exponentially weighted moving average, acceptance sampling, and process control). Students should have a working knowledge of Lotus 1, 2, 3 or Excel software.

**NBA 649 International Operations Management**

3 credits. Prerequisite: NCC 508 (Production & Operations Core). Not offered 1996-97.

The course intends to address issues in five areas: international operations strategy (globalization of operations, structure of international operations, and global strategies); global comparison of operations (comparative study of environment and operational practices in various countries and regions, including discussions on international diversification, government regulation of firms, and governmental issues); issues critical to global operations (international operations planning, facilities location, global logistics, aggregate planning across national borders, global sourcing, technology and quality, and D issues, currency risk, and capital budgeting); operations issues affected by globalization (lead-time, just-in-time, and cost issues, including accounting practices); and international cross-functional coordination (product development in an international context, workforce management, interface with marketing, and finance). The course uses directed readings and case discussions.)
NBA 650 Semester In Manufacturing Management (also OR & IE 587 and ILR 670)
Spring. 15 credits. Enrollment limited; permission of instructor required.
R. Conway, R. Matthews, T. Hammer.
This is a full-time program for the semester; students will not be able to take other courses concurrently. The course is concerned with the integration of technological, human-resource, logistical, and financial considerations to produce a manufacturing enterprise that can respond quickly and effectively to market requirements. It will be taught by a team of faculty and industrial practitioners, and much of the student work will be team-oriented. There will be considerable off-campus travel for field study of a variety of manufacturing plants. Note that this course is an approved substitute for both the Production and Operations Management and Organizational Behavior core courses, i.e., NCC 504 and NCC 508. Johnson School students should complete NCC 500 before taking this course.

Behavioral and Organizational Science

NBA 663 Managerial Decision Making
Fall. 3 credits. J. Russo.
All managers make decisions, usually without the aid of formal tools. Much research has shown that such intuitive decisions produce common, predictable errors. The course uses the psychology of decision making to teach managers how to recognize the situations that most commonly lead to error and offers methods to overcome such errors. Specific applications include forecasting, pricing and promotion strategies, negotiations, the psychology of financial markets, and managerial risk taking.

NBA 665 Managing Technology and Innovation
Fall. 3 credits. Not offered 1996-97.
H. Haveman.
This course is designed for students who see themselves in settings where they have to develop new products or processes and for students who must implement change in existing products or processes. We discuss major issues involved in managing the introduction of new technology, including competitiveness, technology assessment, R&D strategy, and positioning. We examine how industries are transformed by new technologies and how innovations diffuse among firms. We also consider internal management issues, including such topics as the structure of innovative organizations, the design of incentive and reward systems that foster risk taking, the way innovation champions manage the new-product development through cross-functional teams, and the role of executive leadership. The course uses a combination of readings, lectures, discussions, case analyses, and guest lectures. Grades will be based on a combination of case analyses, a group project, and class participation. Two case analyses will be prepared by students working in groups. The remainder of preparation for the group project, which requires students to study a product or process innovation in a firm. Class participation requires thoughtful discussion of the materials assigned each week.

NBA 666 Negotiations
Fall. 3 credits. D. Sally.
Negotiation is the art and science of securing agreements between two or more interdependent parties. The purpose of this course is to understand the theory and processes of negotiation as it is practiced in a variety of settings. This course is designed to complement the technical and diagnostic skills learned in other courses at the Johnson School. A basic premise of the course is that while a manager needs analytical skills to develop optimal solutions to problems, a broad array of negotiation skills is needed for these solutions to be accepted and implemented. The course will highlight the components of an effective negotiation and teach students to analyze their own behavior in negotiations. The course will be largely experiential, providing students with an opportunity to develop their skills by participating in negotiations and integrating their experiences with the principles presented in the assigned readings and course discussions.

NBA 670 Strategic Management of Human Assets
Not offered in 1996-97. 3 credits.
Prerequisite: NCC 504 or permission of the instructor.
This course builds on the growing awareness among academics, consultants, corporate planners, and senior executives that the management of people as human assets plays an important role in the production of firm capabilities and is the untapped arena for gaining competitive advantage. The course builds on this awareness by drawing from topics in the fields of human resource management, organizational design, and the resource-based approach in business strategy. The topics are both theoretical and practical and the course takes a "macro" or firm-level perspective. Cases will be used extensively throughout the course.

NMI AND NRE RESEARCH AND ADVANCED STUDIES

NMI 500-502 Directed Reading and Research
Fall, spring. 1, 2 or 3 credits. S-U grading only.
Students undertake special-interest research under the supervision of faculty members. Registration is limited to students who have the approval of their advisers and of the faculty members involved in the research.

NMI 510 Multi-Cultural Work Environments
Spring. 1 credit. S-U grading only.
Restricted to Johnson School students.
C. Rosen, B. Mink.
NM 510 is a 1-credit, S-U, independent study course that is open to students whose summer internships will be in a country other than that of their citizenship or prior work experience. The goal of the course is to promote an understanding of the assumptions we bring to the work environment and the effects of cultural differences on organizational interactions and productivity. Registration for the course occurs in the spring semester prior to the internship, and grades are posted in the following fall semester after completion of the course project (a 10-page paper). Students may register for the course after obtaining an internship offer and completing the paperwork for the course instructors. International students must obtain and process work authorization forms with the International Students Office. See Charlotte Rosen (Malott 558) for further details about the academic and immigration requirements for NMI 510.

DOCTORAL SEMINARS

NRE 502 Doctoral Seminar in Marketing
Spring. 3 credits. Staff.

NRE 504 Doctoral Seminar in Accounting
Spring. 3 credits. Staff.
The seminar provides a rigorous and integrative exposure to those aspects of the literature in accounting, behavioral economics, and psychology that are related to questions of accounting and auditing theory and research. This course is for Ph.D. students only.

NRE 507 Doctoral Seminar: Affect and Cognition
3 credits. A. Ison.
The course examines research on some of the ways affect influences such thought processes as memory, decision making (including risk taking), and problem solving (including creative problem solving). Applied topics relevant to management concerns (for example, organizational behavior and consumer behavior) as well as other theoretical and applied topics (among them medical decision making, social interaction, self-concept, and cognitive and affective development) are considered, depending on student interest. Courses in statistics and experimental design.

NRE 509 Doctoral Seminar in Research Methods
H. Haveman.
This course concerns the fundamentals of scientific research: theory, research design, methods, and criticism. It is designed for doctoral students who wish to undertake research publishable in scholarly journals. Little or no scientific training is assumed. Statistics will not be emphasized; however, familiarity with elementary statistical concepts and inference will prove useful. The course will cover: 1) the principles of theory building; 2) the pros and cons of various general research designs (laboratory and field experiments, surveys, interviews, participant observation, archival studies, simulations, and formal mathematical models); and 3) the structure of research papers and the review process.

NRE 511 Doctoral Seminar in Finance—Corporate Finance
1.5 credits. Not offered 1996-97.
R. Michaely.
This course will cover topics in corporate finance and empirical asset pricing.

NRE 513 Doctoral Seminar in Finance—Market Microstructure
Not offered in 1996-97. 3 credits.
M. O'Hara.
The course examines recent research in market microstructure, particularly as it relates to theoretical issues. Topics covered include asymmetric information in securities markets, market behavior, and market structure.
Gibbons, Robert S., Ph.D. Stanford U. Charles H. Dyson Professor of Management, Prof., Economics
Greenberg, Donald P., Ph.D., Cornell U. Jacob Gould Schumman Prof., Computer Graphics, Prof., Management Information Systems

Stark, David F., Northwestern U. Assoc. Prof., Sociology
Swinson, John H., Jr., Sr. Lect. in Operations Management
Thomas, William, MBA, Harvard. Lect., Management
THE DIVISION
Nutritional sciences draws upon the chemical, biological, and social sciences to understand the complex relationships among human health, nutritional status, food and lifestyle patterns, and social and institutional environments. Understanding these relationships includes the study of the metabolic regulation and function of nutrients, nutrient requirements through the life span, role of diet in reducing risk of chronic disease, nutritional quality of foods, and interventions and policies designed to promote nutritional health of individuals and populations.

The focus of this broad field of study at Cornell is the Division of Nutritional Sciences, which brings together specialists from many disciplines. The faculty are involved in undergraduate and graduate teaching, research, and extension of research-based knowledge throughout New York State, the nation, and the world.

The division is affiliated with both the College of Human Ecology and the College of Agriculture and Life Sciences. An undergraduate program in nutritional sciences is offered through the College of Human Ecology, and an undergraduate program, Nutrition, Food, and Agriculture, is offered in the College of Agriculture and Life Sciences. Graduate study is administered through the Field of Nutrition, which includes faculty members throughout the university.

FACILITIES
Most of the faculty members of the division work in Savage Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, those buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities.

The division's Learning Resources Center in Martha Van Rensselaer Hall is used by students for individual study and small group discussions. The Learning Resources Center contains class materials, audiovisual aids, and supplementary books and periodicals for independent study and special projects in nutrition. Savage Hall also has a graduate reading room.

UNDERGRADUATE PROGRAMS
The B.S. degree programs provide students with strong training in chemistry and biology and a strong foundation in the broad field of nutritional sciences. Through the nutritional sciences major in the College of Human Ecology, students can prepare for a variety of career interests including medicine and other health careers, fitness and sports nutrition, clinical nutrition, dietetics, nutritional biochemistry, and nutrition education. The undergraduate program, Nutrition, Food and Agriculture, in the College of Agriculture and Life Sciences is for students who desire strong training in human nutrition in combination with supportive course work in agriculture and the life sciences. Students in the Nutrition, Food, and Agriculture program supplement the core nutrition curriculum with courses in such areas as food science, animal science, food and agricultural economics, and advanced biology.

Every student majoring in nutrition is assigned a faculty adviser. An effort is made to match interests, and students may change advisers at any time if their goals and interests change. Regular student-adviser conferences are required at least twice a year. The adviser helps students select courses to meet their interests and college graduation requirements and often can suggest opportunities for individual study or experience outside the classroom.

THE CORE CURRICULUM
The core undergraduate curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and math as well as introductory courses in the social sciences. Students complete five core courses in nutritional sciences: Nutrition and Health: Concepts and Controversies, Social Science Perspectives on Food and Nutrition, Nutritional and Physicochemical Aspects of Foods, Physiological and Biochemical Bases of Nutrition, and Methods in Nutritional Sciences. Students select a minimum of three advanced courses in nutritional sciences in the area of their interest.

A strong foundation in chemistry and biology is required. New majors, including transfer students, should plan chemistry courses carefully to assure the appropriate sequence of courses. All students who have adequate preparation in high school mathematics and chemistry are encouraged to take Chemistry 207–208. For information about specific course requirements for the nutritional sciences major in the College of Human Ecology or the Nutrition, Food, and Agriculture program in the College of Agriculture and Life Sciences, contact the division's Academic Affairs Office, 309/335 MVR.

CAREER OPTIONS AND COURSE PLANNING
The core curriculum is viewed as the minimum requirements for a major in nutritional sciences. Students should consult with their advisers to develop course programs that will prepare them for entry-level jobs or graduate study in the field(s) of their particular interests. Independent study involving research or field study may be chosen to enhance a course program. A summary of suggested areas from which students can choose electives for different career interests follows.

Medicine and Other Health Careers: Students add physics and calculus to the core curriculum. Nutrition courses of special interest include those focused on the relationship of nutrition to disease, behavior, growth, development, and aging. Other electives may include genetics, advanced biology, sociology, psychology, humanities, public policy, and language.

Fitness and Sports Medicine: Students can complete the Applied Exercise Science Concentration at Ithaca College which includes courses in anatomy, kinesiology, exercise physiology, and biomechanics. Nutrition courses of special interest relate to growth and development, regulation of body weight, and community nutrition and health. For information about the Applied Exercise Science Concentration, contact the DNS Academic Affairs Office, 309 MVR.

Dietetics and Clinical Nutrition: Students can complete the academic requirements for The American Dietetic Association (ADA) by adding courses in foods, nutrition and disease, microbiology, management, statistics, and nutritional care to the core curriculum. For additional information about meeting ADA requirements see Gertrude Armbruster, 366 MVR.

Nutritional Biochemistry: Recommended electives include calculus, physics, genetics, advanced biology and chemistry, toxicology, and nutritional sciences courses related to the physiology, biochemistry, and metabolism of different nutrients and disease states.

Nutrition Communications and Community Nutrition: Suggested electives include courses in communications, education, human development, human service studies, public policy, and nutritional sciences courses related to community nutrition, maternal and child nutrition, geriatric nutrition, nutrition and disease, and food economics.

Consumer Foods: Recommended electives include courses in business, economics, communications, food science, microbiology, and nutritional science courses related to the physicochemical aspects of foods, management, and experimental foods.

Nutrition, Food and Agriculture: Recommended electives include food science, animal science, plant sciences, international agriculture, agricultural economics, biological sciences, and rural sociology.
International Nutrition: Recommended electives include courses in language, anthropology, agricultural economics, policy, economics, rural sociology, international agriculture, and nutritional science courses related to maternal and child health and problems of developing nations.

FIELD EXPERIENCE
Structured field experience in a community agency, health-care facility, or business can be taken for credit in several ways through the Human Ecology Field and International Study Program or as an independent study course (NS 402).

INDEPENDENT STUDY ELECTIVES
Independent study courses (NS 400, 401, 402) can be used to obtain credit for more diverse or intensive experience than the classroom can offer, whether this involves laboratory work, library research, or field study. Any student interested in independent study should obtain the sponsorship of a faculty adviser and the approval of Carole Bisogni or consider applying to the honors program.

HONORS PROGRAM
The honors program, leading to a B.S. degree with honors in nutritional sciences, gives official recognition to students who have demonstrated excellence in their academic work and their capacity for independent study.

In addition to fulfilling the requirements for a major, students in the honors program take courses on designing and evaluating research, complete an original piece of research, and prepare an honors thesis. The honors project may be laboratory or field research or deal with policy and program development.

Animals may be used in some research studies.

For more information, students should contact Michael Kazarinoff, 230 Savage Hall.

COURSES RECOMMENDED FOR NONMAJORS
Courses in nutritional sciences can strengthen programs of study in biological sciences, biology and society, agriculture, food science, human development, human services, and other fields.

NS 115, Nutrition and Health: Concepts and Controversies, is open to all students. After NS 115, nonmajors with limited backgrounds in chemistry and biology may elect NS 222, Maternal and Child Nutrition; NS 247, Food for Contemporary Living; NS 262, Nutrients and Cells; NS 275, Human Biology and Evolution; and NS 276, Motivation; NS 306, Nutritional Problems of Developing Nations; NS 315, Obesity and the Regulation of Body Weight; NS 347, Human Growth and Development; Biological and Behavioral Interactions; NS 349, Genetic Nutrition; NS 375 Developmental Psychobiology: Motivational Processes; NS 380, Integrating Food Systems and Human Nutrition Needs; NS 457, National and International Food Economics. Nonmajors with strong backgrounds in chemistry and the biological sciences may consider NS 331, Physiological and Biochemical Bases of Human Nutrition, as well as many advanced nutritional sciences courses, such as NS 421 Nutrition and Exercise; NS 441, Nutrition and Disease.

GRADUATE PROGRAMS
Graduate study is administered by the Field of Nutrition. A group of more than fifty faculty members from throughout the university who have a common interest in nutritional problems. In the M.S. and Ph.D. degree programs, students may specialize in animal nutrition, human nutrition, international nutrition, nutritional biochemistry, foods, or general nutrition. Research is emphasized in all graduate programs. Field experience may be a component of concentrations in community, infant-health nutrition, and nutrition education.

The specialties and interests represented by faculty in the Field of Nutrition provide almost unlimited opportunity for graduate study. Cornell's extensive laboratory and agricultural facilities ensure that students interested in experimental nutrition have exceptional opportunities for thorough training. As the largest faculty in the country devoted to the study of human nutrition, the field includes specialists in biochemical, metabolic, epidemiological, and sociocultural research. Opportunities to work with community and federal agencies are available to students interested in applied nutrition and public policy, and students in international nutrition are expected to conduct their thesis research abroad.

For more information about the graduate program, interested persons may write for the brochure Graduate Study in Nutrition, available from the Graduate Faculty Representative, Field of Nutrition, Cornell University, MVR Hall, Ithaca, New York 14853-6301; telephone (607)255-4410.

COURSES

**NS 115 Nutrition and Health: Concepts and Controversies**

Fall. 5 credits. S-U grades optional.

**NS 116 Personalized Health and Nutrition**

Fall. 1 credit. Corequisite: NS 115. S-U only. Limited 10 per section. D. Levitsky.

This course provides students enrolled in NS 115 individualized assistance in many skills used in NS 115 including using computers to analyze diets, using electronic mail, finding and using scientific literature, and reviewing material presented in NS 115 lectures.

**NS 120 Nutrition and Health: Issues, Outlooks, and Opportunities**

Spring. 1 credit. S-U grades only. Limited to 120 freshmen, sophomores and juniors, others by permission of instructor.

C. Bisogni. M W F 12:20. Limited to 25 students. Preparation is required in course 309 Martha Van Rensselaer Hall. C. Garza. M W F 1-2:50. Includes the study of nutritional requirements in pregnancy, lactation, infancy, and child- hood growth through adolescence. Topics include the relationship between maternal diet and pregnancy outcome; analysis of different methods of infant feeding; and nutritional status of pregnant women, children, and adolescents in the United States and in developing countries.

**NS 222 Maternal and Child Nutrition**

Spring. 3 credits. Prerequisites: NS 115 and a college biology course or permission of the instructor. S-U grades optional. Limited to 25 students. Preparation is required in course 309 Martha Van Rensselaer Hall. C. Garza. M W F 1-2:50. Identifies requirements in pregnancy, lactation, infancy, and childhood growth through adolescence. Topics include the relationship between maternal diet and pregnancy outcome; analysis of different methods of infant feeding; and nutritional status of pregnant women, children, and adolescents in the United States and in developing countries.

**NS 245 Social Science Perspectives on Food and Nutrition**

Fall. 3 credits. Prerequisite: NS 115. Limited to nutrition majors. Lecture only. R. Sobal, D. Sanjur. T R 10:10-11:25. Theories, concepts, and methods from several social science fields will be applied to food and nutrition topics and issues. Emphasis will be placed on theories of the formation and modification of food habits, dietary methodologies, ethnicity and food habits, and educational programs in nutrition in both national and international contexts.

**NS 247 Food for Contemporary Living**

Fall and spring. 3 credits. Laboratory sections limited to 16 students. Laboratory preregistration during course pre­

See BIO SCI 275 for course description.

**NS 276 Motivation (also Psychology 276)**
Spring. 3 credits. Not offered 1996-97. E. M. Blass
See PSYCH 276 for course description.

**NS 300 Special Studies for Undergraduates**
Fall or spring. Prerequisites: permission of instructor. S-U grades optional. DNS faculty.
Special arrangements to establish equivalency for courses not transferred from a previous major or institution. Students prepare a description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the associate director for academic affairs, is filed at course registration or during the change-of-registration period.

**NS 306 Nutritional Problems of Developing Nations**
The course is designed for undergraduates interested in the nutritional problems of developing countries. Attention is given to the array of nutrition problems encountered, the causes of hunger and malnutrition, the epidemiology of the major nutritional problems afflicting poor nations, the functional consequences of these problems on individuals and societies, and the types of programs that can be implemented to improve health and nutrition.

**NS 315 Obesity and the Regulation of Body Weight (also Psychology 613)**
This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, genetics of obesity, role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

**NS 321 Nutrient Control of Mammalian Gene Expression**
Spring. 2 credits. Prerequisites: college chemistry and biology, biochemistry recommended but not required. P. Stover. T R 11:15.
This introductory molecular biology course focuses on the mechanisms used by mammals to alter gene expression in changing nutrient environment. Fundamental concepts of eukaryotic DNA structure, function, and gene expression are covered. Key aspects of mammalian biochemistry, metabolism, and physiological chemistry integrated, emphasizing the relationships of these processes to mammalian gene expression. Topics include the basic principles of biotechnology and the application of this technology to experimental animal nutrition and medicine.

**NS 331 Physiological and Biochemical Bases of Human Nutrition**
Spring. 4 credits. Prerequisites: Biological Sciences 330 or 331 or equivalent. S-U grades optional. M. Stipanuk, C. McCormick. Lec M W F 10:10, disc. W or R. The biochemical and physiological bases for human nutritional requirements, including digestion and absorption, energy metabolism, fat and intakes regulation, lipids, carbohydrates, protein and amino acids, minerals, vitamins, and relationship of nutrition to major chronic diseases.

**NS 332 Methods In Nutritional Sciences**
Fall and spring. 3 credits. Each section limited to 18 students. Prerequisites: NS 245, NS 345, NS 331 preferred or concurrent registration. Laboratory prerequisites during course registration required in room 309 Martha Van Rensselaer Hall. One evening prelab to be scheduled. J. T. Brenna. Fall. Lec M 12:20, lab M W 1:25-4:00 or W R 10:10-12:15. Spring. Lec M 12:20, labs M W 1:25-4:00 or T R 8:15-10:45 or T R 1:25-4:45. Laboratory introduction to principles and analytical techniques of nutritional research. Emphasis is on an analytical approach and skills required to determine nutrient function and nutritional status of individuals. Topics include methods of nutrition, metabolite, and enzyme analysis in body fluids, and methods for assessing individual food intake and nutritional status.

**NS 341 Human Anatomy and Physiology Lab**
Spring. 4 credits. Letter grade only. Prerequisites: college biology; NS 115 recommended. Limit 120. V. Utermohlen. Lec W F 12:20; lab W or R F 9:05-11:00 or 2:45-5:30.
Introduction to human anatomy and physiology with particular emphasis on aspects of relevance to nutrition sciences and medicine. All major organ systems will be covered. Laboratories emphasize histology, recognition, and description of anatomical structures and testing of physiological function with an emphasis on tests of nutritional and medical relevance.

**NS 345 Nutritional and Physicochemical Aspects of Food**
Spring. 3 credits. Prerequisite: course in organic chemistry or biochemistry. S-U grades optional. B. Lewis, R. Parker. T R 2:30-4:45.
A study of the nutritional, physical and chemical properties of foods including composition, food structure, enzymatic and nonenzymatic phenomena, and processing/preparation aspects. Issues related to food safety, regulation, and food composition data bases will also be discussed.

**NS 347 Human Growth and Development: Biological and Behavioral Interactions (also Human Development and Family Studies 347 and Biology and Society 347)**
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent. Human Development and Family Studies 115 or Psychology 101 or equivalent. Offered alternate years. J. Haas, S. Robertson.
This course is concerned with the interrelationships between physical and psychological growth and development in humans, particularly during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variation for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

**NS 349 Geriatric Nutrition**
Fall. 3 credits. Prerequisite: NS 115. Division faculty. T R 2:30-3:45.
Aims of the course are to acquaint students with effects of aging on nutritional needs, to teach them methods of nutritional assessment that are appropriate for use with the elderly, and to give them information on nutritional interventions that have been shown to have positive effects on the nutritional and health status of older individuals.

**NS 361 Biology of Normal and Abnormal Behavior**
Fall. 3 credits. Prerequisites: Biological Sciences 101-102, Psychology 101, or permission of the instructor. A fundamental knowledge of biology and psychology is essential. S-U grades optional. Limited to juniors and seniors. B. Strupp. M W F 9:05.
A critical evaluation of biological factors thought to influence behavior and/or cognitive functioning. Biological, psychological, and societal influences will be integrated. Topics include nutrition and behavior, psychiatric disorders, developmental exposure to environmental toxins and drugs of abuse, and biopsychology of learning, memory, intelligence, and related cognitive disorders.

**NS 378 Food, Nutrition, and Service Management**
Fall. 3 credits. Prerequisites: NS 115, NS 247 or permission of instructor. P. Tennant. T R 8:40-9:55.
The application of management principles and theory to foodservice operations and nutrition services is discussed. The systems concept of organization is used. Emphasis is placed on leadership development, decision making/problem solving as it applies to procedures related to procurement, production, distribution, and quality assurance in food and nutrition services. Recipe and menu development projects show the interrelationships of nutrition, labor, equipment, and environmental concerns. Marketing strategies and implementation are discussed.

**NS 380 Integrating Food Systems and Human Nutrition Needs**
Spring. 2 credits. Prerequisites: NS 115 or Food 200 or An Sc. 100. Letter grade only. G. Combs. T R 8:40-9:55.
A student-centered course that employs case studies to address concepts linking human nutrition and health issues to those involving systems of food production and distribution. Student teams will investigate new and existing technological options within food systems to address domestic or international human nutrition needs.

**NS 398 Honors in Nutritional Sciences**
Fall. 1 credit. Limited to students admitted to the division honors program. S-U grades only. M. Kazarinoff. M 12:20.
Research design. Analysis of research papers on selected topics.
Development of skills necessary to implement nutrition care plans: interviewing and counseling, theories of nutrition education, dietary assessment, principles of diet therapy and menu planning, and quality assurance are covered.

NS 457 National and International Food Economics (also Economics 374)
Spring. 4 credits. Prerequisites: Econ 101 or ECE 110 and junior standing, or permission of instructor. S-U grades optional. T. Thorbecke. M W F 9:05. Analysis of the world food economy. Review and analysis of the major economic factors determining the demand for food, the composition of food consumption, and nutritional intake; and the major economic factors affecting food production and supply. Evaluation of effectiveness of various policies and programs in alleviating poverty and malnutrition.

NS 458 Applied Dietetics in Foodservice Systems
Spring. 3 credits. Limited to 27 students. Prerequisites: NS 378, Micro 290. Laboratory prerequisite: during course registration, required in room 309 Martha Van Rensselaer Hall. White lab coat is required. Approximately $25.00 will be needed for special supplies/activities. P. Tennant. M W F 5:05; labs, M T W 1:30-6:00. Students will gain experience in facility design, equipment selection, use, and care; job analysis and evaluation; human resources planning; management of financial resources; menu planning, recipe development, value food production; computer-assisted management; employee training, applied safety and sanitation standards and will develop other skills required to operate manage a foodservice program. The application of total quality management in food service operations and general facility management is stressed. Laboratories will be arranged through Cornell Dining.

NS 498 Honors in Nutritional Sciences
Spring. 1 credit. Limited to students admitted to the division honors program. Students may register in NS 499 concurrently. M. Kazarinoff and Division faculty. M or F 2:30. Juniors (Mondays). Discussion of research opportunities in nutrition and orientation to research facilities. Delineation of honors research problems in consultation with faculty mentors. Seniors (Fridays). Workshop sessions on honors thesis or oral presentation preparation.

NS 499 Honors Problem
Fall and spring. Credits to be arranged. Open only to students in the division honors program. M. Kazarinoff and Division faculty. An independent literature, laboratory, or field investigation. Students should plan to spread the work over two or more semesters.

NS 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. Limited to graduate students recommended by their chair and approved by the instructor in charge. S-U grades optional. Division faculty. Emphasis on independent advanced work. Experience in research laboratories in the division may be arranged.

NS 601 Proteins and Amino Acids (also Animal Science 601)
Spring. 2 credits. Prerequisites: physiology, biochemistry, and nutrition, or permission of instructor. Letter grade only. Offered alternate years. R. E. Austic. M W F 12:20. A course in amino acid and protein nutrition, with emphasis on the dynamic aspects of protein digestion, amino acid transport, and amino acid and nitrogen metabolism. Topics also will include nutritional interrelationships of amino acids, amino acid availability and requirements, and the roles of amino acids in selected physiological processes.

NS 602 Lipids (also Bio Sci 619)
Fall. 2 credits. A. Bensadoun. M W F 11:15. Advanced course on biochemical, metabolic, and physiological aspects of lipids, more specifically lipid transport. Topics covered include lipid methodology, structure of plasma lipoproteins, molecular biology and cell biology of apolipoproteins, lipidprotein receptors, lipid transfer factors, lipolytic enzymes, and atherosclerosis.

NS 604 The Vitamins (also An Sc 604)
Fall. 2 credits. G. Combis. M R 10:10. Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

NS 607 Nutrition as an Integrating Discipline: Concepts and Paradigms
Fall. 3 credits. Prerequisite: some prior coursework or experience in nutrition, or permission of the instructor. M. Kazarinoff, J-P. Habicht, and Division faculty. M W F 10:10. An overview course for beginning graduate students in nutrition and related disciplines to introduce them to the full breadth of nutritional science disciplines, including quantitative and qualitative sciences. The course presents concepts and paradigms of molecular biology, biochemistry, clinical nutrition, epidemiology, anthropology, economics, program planning and administration, policy development, and ethics. This semester the course will use Vitamin A as the example. Emphasis will be placed on the integration of actual and conceptual knowledge to solve nutrition problems in human societies.

NS 611 Molecular Toxicology (also Toxicology 611)
Fall and spring. 3 credits. Prerequisite: Toxicology 610 and a full-year 400-level course in biochemistry or equivalent. S-U grades optional. Staff. TBA. Not offered 1996-97. A study of fundamental biochemical mechanisms of absorption, transport, metabolism, and excretion of drugs, carcinogens, and toxicants. Emphasis on oxidative and conjugative pathways of metabolism and of environmental and dietary factors that influence toxicant metabolism and disposition. Methods of evaluating in vivo and in vitro metabolism.

NS 612 Methods of Assessing Physical Growth in Children
Spring. 3 credits. Limited to graduate students and students who have permission of the instructor. A previous course in statistics required. S-U grades optional. J. Haas. Lec T 1:25; lab, R 1:25-4:25; disc T 2:15-3:05.
A laboratory course to train students in methods and techniques used to assess the physical growth and development of children. The methods explored are those applicable for field, community, and clinical studies and cover anthropology, body composition, skeletal age, maturity indicators, physical fitness, and energy expenditure.

**NS 614 Topics in Maternal and Child Nutrition**
Fall. 3 credits. Prerequisites: NS 331, and 222 or 347, Biological Sciences 311, and permission of instructor. K. Rasmussen. T R 8:30-9:50.

Advanced course on the role of nutrition during pregnancy and lactation. Feeding and growth of infants and children in health and disease is considered. Critical evaluation of current literature is emphasized via lecture, discussions, and a term paper.

**NS 617 Teaching Seminar**
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of the instructor. S-U only. C. Bisogni, D. Way.

Individualized instruction focusing on development of teaching skills for guiding classroom learning, preparation, discussion, and laboratory settings. Preparation of content, presentation, and interaction techniques and evaluative methods are emphasized in relation to the student's specific teaching assignment. Videotape simulations provide opportunity for practice and analysis of teaching behaviors.

**NS 618 Teaching Experience**
Fall or spring. 0 credit. Limited to division graduate students and students who have permission of instructor. S-U only. C. Bisogni, D. Way.

Designed to provide experience in teaching nutritional sciences by direct involvement in college courses under supervision of a faculty member. The aspects of teaching and the degree of involvement vary, depending on the needs of the course and the experience of the student.

**NS 619 Field of Nutrition Seminar (also BioBM 639)**
Fall or spring. 0 credit. S-U only. Faculty and guest lecturers. M 4:00.

Lectures on current research in nutrition.

**[NS 620 Food Carbohydrates (also Food Science 620)]**

A consideration of the chemistry of carbohydrates, including sugars and complex carbohydrates (starches, pectins, hemicelluloses, gums, cellulose, and glycoconjugates). Emphasis is on intrinsic chemistry, functionality in food systems, and changes occurring during food processing and storage.

**NS 626 Special Topics in Food**
Fall. 2 credits. B. Lewis. TBA.

Current research related to basic concepts of foods and health issues.

**NS 631 Dietary Assessment**
Fall. 1 credit. 7 weeks only. Prerequisites: statistics and NS 331 or equivalent. Enrollment limited. R 2:30-5:30. D. Sanjür.

Study of methods and techniques for assessing dietary intakes at the individual and house-

**NS 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also BioBM 635)**
Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and Chem 358 or 360, or permission of instructor. Offered alternate years. Leo T R 9:05. M. N. Kazarinoff, N. Noy, P. Stover.

Molecular mechanisms by which sensory, hormonal, and nutritional inputs cause changes in enzyme activity in order to regulate metabolic transformations. Gene expression, post-transcriptional, and allosteric effects will be emphasized using examples from mammalian systems. Identification and characterization of regulatory steps in metabolism will be considered from both theoretical and practical aspects.

**NS 636 Integration and Coordination of Energy Metabolism (also Biological Sciences 637)**
Fall. 3 credits. Prerequisites: Biological Sciences 330 and 331, or equivalent. M W F 9:05.

The dynamics of energy metabolism in humans and higher animals are developed through characterization of how the metabolic components support the structure and function of the individual tissues. Mechanisms that control and coordinate energy metabolism within and between organs are analyzed in the context of selected physiological and pathological stresses.

**NS 637 Epidemiology of Nutrition**
Spring. 3 credits. Limited to graduate students. Prerequisites: Biometry 601 and concurrent registration in Biometry 602 or NS 641 or equivalent knowledge. Basic knowledge about the nutritional aspects of growth and development and about nutritional biochemistry. J.-P. Habicht. TBA. Next offered Spring 1998.

Course covers principles of nutritional epidemiology, impact assessment of nutrition intervention programs, and nutritional surveillance. Teaching principles of using nutritional information for decision making, including the level of evidence about nutrition and health for making decisions. The course shows how the biochemistry and physiology of nutrition can be related to epidemiological assessment and research strategies.

**NS 638 Epidemiology of Nutrition Seminar**
Spring. 3 credits. Reserved for graduate students planning field intervention studies; by permission of instructor. Prerequisite: NS 637. J.-P. Habicht. TBA.

Covers the meta-analysis, design, measurement, and analysis of issues involved in developing, implementing, and analyzing studies of field interventions with nutritional impact.

**NS 639 Epidemiology Seminar (also Statistics and Biometry 639)**
Spring. 0–1 credit. Limited to graduate students; by permission of instructor. Contact P. Cassano 255-7551 for permission and credit information. S-U grades only. P. Cassano. M 12:20.

This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**NS 640 Social Science Theories in Nutrition**
Fall. 3 credits. Limited to 20 graduate students. J. Sobal. T R 2:30-3:45.

Social science theories from psychology, sociology, anthropology, economics, political science, geography, and history that contribute to understanding food and nutrition will be examined. Examples of approaches, concepts, and methods from each discipline will be added to understand how to apply social science theories to nutrition topics, issues, and problems.

**NS 641 Applied Regression Methods**
Spring. 3 credits. Prerequisite: BTRY 601 or equivalent. E. Frongillo. M W F 11:15. Second statistics course intended for graduate students who need to apply regression methodology in nutrition, health, human services, human development, program intervention, or related fields. The course covers the conceptual and statistical aspects of regression models for continuous, discrete, and time-to-event response variables with multiple covariates, estimation of parameters, confounding and interaction, and assessing fit are emphasized. An introduction to modeling complex observational data with multiple response variables is presented.

**NS 644 Community Nutrition Research Seminar**

This seminar sponsored by the Cornell Community Nutrition Program focuses on research presentation, critique, and evaluation in nutrition education and other areas of community nutrition. Cornell faculty and graduate students and outside invited speakers present research proposals, results from ongoing research, theoretical bases for research, program evaluations, and discuss current programs and issues in community nutrition research. The format varies but always includes discussion by participants.

**NS 645 Nutrition Intervention in Communities: A Global Perspective**
Spring. 3 credits. Limited to 25 graduate students with an interest in human nutrition and health and exceptional senior nutrition majors by permission. Prerequisite: NS 640. C. Olson. TBA.

The goal of the course is to help students gain tools and develop conceptual frameworks for thinking critically about nutrition interventions in communities around the world. The course involves extensive reading and active involvement in class discussions.

**NS 646 Seminar in Physicochemical Aspects of Food**
Spring. 1–3 credits. Prerequisite: a college course in organic chemistry or biochemistry. S-U grades optional. B. Lewis, R. Parker. T R 2:30-3:45.

An introduction to physicochemical aspects of food, for graduate students who have had limited or no work in this area. The seminar uses the lectures of NS 345 as a basis for supplementary readings and critical review of research on selected topics.
**NS 650 Public Health Nutrition**
Spring. 3 credits. For graduate students with a major or minor in nutrition and undergraduate nutrition majors in their senior year. Prerequisite: NS 331 or equivalent. Division faculty. TBA. Lectures cover social, environmental, and disease variables that influence the nutrition of infants, children, and adults. Students gain experience in nutritional assessment methods. Endemic nutritional problems (such as obesity, dental caries, and anemias) of public health importance of the United States are discussed.

**NS 660 Special Topics in Nutrition**
Fall or spring. 3 credits maximum each term. Registration by permission of the instructor. Division faculty. Designed for students who want to become informed in any specific topic related directly or indirectly to nutrition. The course may include individual tutorial study, experience in research laboratories, a lecture series on a special topic selected by a professor or a group of students, and/or selected lectures of another course already offered. Topics may be changed so that the course may be repeated for credit.

**NS 660 International Nutrition Problems, Policy and Programs**
Fall. 3 credits. Prerequisite: permission of instructor. M. Latham. T R 11:15-12:30. Next offered 1997-98. Designed for graduate students who want to learn about the important international nutritional problems of developing countries. The major forms of malnutrition related to poverty and their underlying causes are discussed. Emphasis is placed on programs and policies that can assist poor countries and communities to improve their nutritional and health status.

**NS 661 Nutritional and Public Health Importance of Human Parasitic Infections**
Fall. 2 credits. Prerequisites: graduate student standing in Biochemistry (1) seeking field projects, (2) experimental design issues, (3) choice of procedures, and (4) planning for and carrying out data collection. Also includes how to a construct a C.V., b) write an abstract and prepare a clear 10-minute talk with legible slides (FASEB formation), and c) when, where, and how to publish research results. Extensive handouts. Lecture/demonstration/discussion.

**NS 665 Food and Nutrition Policy (also Agricultural Economics 688)**
Spring. 3 credits. Prerequisites: introductory microeconomics, intermediate statistics (through multiple regression), or instructor's permission. D. Sahn, P. Dorosh. This course examines the role of government policy in alleviating poverty, food insecurity, and malnutrition in developing countries. Topics covered include methodologies for economic policy analysis of time uses and food acquisition behavior, the “production” of nutritional outcomes, and the role of price policy and markets. Course readings drawn largely on examples from Africa and Asia.

**NS 690 Trace Element and Isotopic Analysis (also Chemistry 628)**

**NS 695 International Nutrition Seminar**
Fall and spring. No credit. No grades given. J. Haas, J-P. Habicht. R 12:20-1:10. This seminar series consists of presentations by Cornell faculty and graduate students, and by outside invited speakers. Speakers cover a range of topics which relate to nutritional problems, policy, and programs in the non-industrialized countries.

**NS 699 Special Topics in International Nutrition**
Fall and spring. 3 credits maximum each term. Registration by permission of instructor. Faculty in Program in International Nutrition. This option is designed for graduate students, mainly those with a concentration in international nutrition, who wish to become familiar with some specific topic related to international nutrition that is not adequately covered in an existing course. It consists usually of tutorial study on an agreed topic. Because the topics change, the course may be repeated for credit.

**NS 700 Current Topics in Toxicology (also Toxicology 698)**
Fall or spring. 1-3 credits. S-U grades optional. Staff. TBA. A discussion of the most current developments in various areas of toxicological research and testing. Faculty and students will participate jointly in evaluating research findings and provide seminars and discussion of such material. For information regarding topic, instructor, and credit, contact the office of the Graduate Field of Environmental Toxicology.

**NS 702 Seminar in Toxicology (also Toxicology 702)**
Fall or spring. 1 credit. S-U grades only. Staff. F 12:20. The seminar program covers varied topics in biochemical, genetic, nutritional, veterinary, and regulatory toxicology, ecotoxicology, and environmental chemistry. Included are presentations of basic research studies, fundamental concepts, and research activities involving environmental problems of a toxicological nature. Presentations are given by speakers from Cornell and visitors.

**NS 703 Seminar in Nutritional Sciences**
Fall and spring. 1 credit. S-U grades only. Division faculty. T 12:20 or W 12:20. Presentations of original articles pertinent to the Nutritional Sciences. Students will learn how to make professional presentations and how to critique the presentations by others. In addition, students will learn how to read and interpret original articles published in a wide variety of journals.

**NS 707 Nutrition as an Integrating Discipline: Evaluation, Criticism, Application**
Fall. 3 credits. Prerequisites: advanced graduate standing and permission of the instructor. 2-hour class period per week plus discussion and workshop. Not offered 1996-97. M. Kazarinoff, K. Rasmussen. The goal of this course is to provide an integrative capstone learning experience for advanced graduate students with majors or minors in nutrition. Groups of students will focus on a series of special problems in nutrition drawn from those currently faced by nutrition professionals. Special problems may involve assuming the role of consultants, expert committee members or peer-reviewers who are charged with answering questions or formulating recommendations related to research, programs, or policies.

**NS 899 Master's Thesis and Research**
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

**NS 999 Doctoral Thesis and Research**
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Division graduate faculty.

Van Campen, Darrell R., Assoc. Prof., U.S. Plant, Soil, and Nutrition Laboratory/Nutritional Sciences
Military instruction began at Cornell University in 1868 under the provisions of the Morrill Act of 1862. Since that time, officer education has been highlighted by the construction of Barton Hall in 1914, establishment of a formal Reserve Officers Training Corps (ROTC) unit in 1917, and the evolution of a program that, while teaching drill and ceremonies, places greater emphasis on the development of leadership and managerial skills. Throughout the years, Cornell's program of officer education has produced many outstanding civilian and military leaders.

The programs of officer education allow the student to prepare for a career as an officer in either the United States Army, Navy, Air Force, or Marine Corps. Each service program is headed by a senior military officer who also serves as a full professor on the Cornell faculty.

**MILITARY SCIENCE**

Lieutenant Colonel Michael Merola, Quartermaster Corps, United States Army, Professor of Military Science and Commanding Officer, U.S. Army ROTC Instructor Group

Major Jim S. Nuanes, Signal Corps, United States Army Reserve

Captain David G. Johnson, Field Artillery, United States Army

**United States Army ROTC Program**

The primary objective of the Army Officer Education Program at Cornell is to commission the future officer leadership of the United States Army. Intermediate objectives are to provide students with an understanding of the fundamentals of responsibility, integrity, and self-discipline, as well as an appreciation of the citizen's role in national defense. The application of the decision-making process to a variety of situations is given major emphasis as a valuable aid in developing leadership potential.

These objectives are achieved through a program normally covering four years. A two-year program is available for those who qualify. The program includes specific courses in military science, more general academic subjects that assure a well-rounded education, practical training in leadership through participation in the Cadet Corps (including attendance at one six-week summer camp at an Army installation), and the opportunity to participate in a number of extracurricular activities. The combination prepares the student for commissioning and effective performance in the many branches of the Army. The student's academic major, academic performance, leadership ability, personal desires, and the needs of the Army determine the branch of the Army in which the student is commissioned upon graduation.

**Requirements for Enrolling**

Applicants must be citizens of the United States prior to being commissioned as lieutenants. (Noncitizens may enroll in selected portions of the program.) Students must meet Army medical requirements.

Overall sound mental and physical condition is essential, and students are required to undergo periodic physical fitness tests. Enrollment and continuation in the program is subject to the approval of the professor of military science.

Enrollment in specific courses by students not formally enrolled in the program must be approved by course instructors.

Contracted students must register for letter-grade military science classes and leadership laboratories for the purpose of commissioning assessments into the United States Army.

**Four-Year Program**

The Four-Year Program is open to students in their freshman year or, with the approval of military and university authorities, to sophomores in a five-year degree program. Veterans of the Armed Forces of the United States and students entering Cornell with AROTC credit from secondary or military schools (Junior Division AROTC) may receive advanced standing.

Under the Four-Year Program students enroll in the Basic Course (Mil S I and II) during the first two years, and the Advanced Course (Mil S III and IV) during the next two years. A total of twelve credits of military subjects is taken. In addition, academic-enrichment courses are required in such fields as written communications, math logic, computer science, human behavior and military history. All cadets attend a six-week camp, with pay, between the junior and senior years. All cadets participate in physical fitness training three days per week. Each year cadets are sent to the Army's Airborne School, Winter Survival School, and Air Assault Course, dependent upon the number of school slots and the students' standings within the ROTC program.

**Basic Course (Mil S I and Mil S II)**

Students in the first year of the Basic Course take one classroom course in military science in the fall and spring semesters, for which they receive academic credit depending upon their college. These courses include study of the U.S. organization for defense and principles and techniques of leadership and management.

Students also participate in leadership modules that include rappelling, orienteering, drill and ceremony, physical training, winter survival, rifle marksmanship, historical site visits, land navigation, interpersonal communication, and individual tactical training. These modules are designed to promote personal development and enrichment. While they do not receive academic credit for these activities, students may receive physical education credit. Typical freshman participation in Army officer education is 48 1/2 program-related hours.

During the fall of the second year, students take a one-credit course in map reading and spend approximately two hours a week in practical leadership training, land navigation, and military skills. In the spring, students take a one-credit course in the basic principles of small organizations.

**Advanced Course (Mil S III and Mil S IV)**

The Advanced Course of the Four-Year Program is open to students who have successfully completed the Basic Course and are accepted by the Professor of Military Science for further enrollment. It is also open to students who have gained appropriate advanced standing through either successful completion of a six-week summer camp or prior military training. Students entering the Advanced Course must have two years of academic work remaining at Cornell or another degree-granting institution. Students must pass required physical and aptitude tests. In addition, the past performance and desire of each student is evaluated to determine if he or she has the potential for eventual commissioning.

When students are accepted for the Advanced Course or accept a scholarship, they execute a written contract with the U.S. government. Under terms of the contract, they agree to complete the Advanced Course and to accept a commission if tendered. Concurrently with the signing of the contract, students enlist in the United States Army Reserve for control purposes.

Classroom study in the Advanced Course includes one military science course each semester on such subjects as leadership and management, small-unit tactics, and command and staff organization and functions. The two hours a week of practical leadership training continues, and between the junior and senior years all cadets attend a six-week advanced summer camp currently conducted at Fort Bragg, North Carolina.

**Scholarships**

Scholarships are awarded on the basis of merit and are available for two, three, or four years. AROTC scholarships are awarded each year to outstanding Basic Camp participants and students in the freshman and sophomore classes. Scholarships pay from $5,000 to $20,000 toward tuition and mandatory fees. Scholarship cadets and Advanced Course cadets also receive $150 a month for up to ten months a year. Scholarship cadets receive $450 per year to defray the cost of books and may be reimbursed up to $400 per year for lab fees.

**Commissioning**

All students who successfully complete the Advanced Course, including the advanced summer camp, are commissioned as second lieutenants in the United States Army Reserve or Regular Army upon graduation.
Service Obligations

ROTC graduates may serve on Active Duty, in the Army Reserve, or in the National Guard, depending upon the needs of the Army and the desires and leadership abilities of the cadet.

Officers beginning active duty attend the Officer Basic Course (normally ten to sixteen weeks) of their assigned branch. Upon completion of this course, officers are assigned to a unit and location that is determined by the desires of the individual and the requirements of the Army. Those officers selected for reserve duty attend the Officer Basic Course, after which they are released to reserve status.

Non-scholarship cadets accepting a Regular Army commission serve a minimum of three years on active duty followed by five years in reserve status. They may elect to go into the Army Reserve after commissioning as opposed to active duty.

Scholarship cadets, whether commissioned in the Regular Army or the Reserve, generally serve four years on active duty and four years in reserve status; however, some may serve eight years on reserve duty.

Choice of Branch

Cadets in the second year of the Advanced Course (normally the senior year) may specify the branch of the Army—such as Infantry, Armor, Field Artillery, Air Defense Artillery, Aviation, Special Forces, Corps of Engineers, Signal Corps, Military Police, Military Intelligence, Civil Affairs, Adjutant General, Finance Corps, Chemical Corps, Ordnance Corps, Quartermaster Corps, Transportation Corps, Medical Corps, Army Nurse Corps, Dental Corps, Veterinary Corps, Medical Service Corps, Chaplains, and the Judge Advocate General Corps—in which they prefer to serve. They are notified in the spring, before commissioning, of the branch to which they are assigned. The likelihood of appointment in a chosen branch depends upon the student’s academic and officer education performance, degree area, and the needs of the Army at that time.

Graduate Study

Active duty deferments, or educational delays, may be granted to individuals who want to attend graduate school at their own expense. Requests will be considered on the basis of needs of the service. Admission to graduate school is the student’s responsibility.

Benefits

Each cadet in the Advanced Course (Mil S III and Mil S IV) receives $350 a month for up to ten months a year. While attending the advanced summer camp (between the junior and senior years), each cadet receives approximately $700 and an allowance for travel to and from camp. A cadet in the Two-Year Program receives the same payments as cadets in the Advanced Course and, in addition, receives approximately $700 and travel costs for summer Basic Camp attendance before entering the Advanced Course.

Military Science Courses

All cadets take one course and a leadership laboratory each semester in military science. The number of hours a week spent in the classroom varies from semester to semester, as does the credit received for each course.

Freshman Year (Mil S I)

**Mil S 101 United States Organization for Defense**
Fall. 1 credit. Required. Staff.
Students examine the U.S. defense structure in terms of organization, mission, personnel, and relationships among military forces and between the military forces and various branches and departments of the government. The United States Army force structure is examined at all levels. The complexities and magnitude of operating the defense organization are studied to provide a framework for subsequent instruction. In addition, students develop skills in conducting oral and written presentations.

**Mil S 102 Leadership Theory**
Spring. 1 credit. Required. Staff.
This course allows students to develop a basic understanding and appreciation of the theories of social and organizational psychology and behavior as they apply to the military setting. Attention is given to leader types, the source and exercise of authority, and the impact of varying styles of leadership, resource management, and organization effectiveness. The student is introduced to the concepts of integrity, ethics, and professionalism. Initial classes on historical events and strategy will be presented.

Sophomore Year (Mil S II)

**Mil S 221 Mapping: Land Navigation**
Fall. 1 credit. Required. Staff.
This course provides practical knowledge of the various forms of topographic representation. Students interpret and use maps in terrain assessment and land navigation. Knowledge of topography is complemented by an orientation on significant environmental influences from physical, social, and climatic factors. Portions of the course offer practical experience in land navigation and orienteering.

**Mil S 222 Small Organizational Operations**
Spring. 1 credit. Required. Prerequisite: Mil S 102 or instructor approval. Staff.
Students learn the basic principles of group dynamics at the level of the smallest military unit, the squad. Leadership and land navigation proceedings are introduced through case studies and role-playing exercises. Leadership theories introduced in Mil S 102 are examined in a variety of realistic settings. The practical application of behavioral theories is explored in the context of small military organizations.

**Junior Year (Mil S III)**

**Mil S 331 Theory and Dynamics of the Military Team**
Fall. 2 credits. Required. Staff.
After an initial introduction to techniques of presenting briefings, students are provided with a broad understanding of the principles and application of teamwork in military organizations. Particular emphasis is given to leadership responsibilities of the commander as the team coordinator. Additionally, students have an opportunity to develop an understanding of the roles and contributions of the various branches of the Army in support of the military team.

**Mil S 332 Leadership in Small-Unit Operations**
Spring. 2 credits. Required. Prerequisite: Mil S 331. Staff.
This course provides an understanding of the nature of decision making and the tactical application of the military team. Through the use of conferences and extensive practical exercises, students develop familiarity with the factors influencing a leader’s decisions, the processes of planning, coordinating, and directing the operations of military units through operation plans and orders.

Senior Year (Mil S IV)

**Mil S 441 Contemporary Military Environment**
Fall. 2 credits. Required.
An overview of the functions, responsibilities, and interrelationships among small-unit leaders, the commander, and the staff. Detailed discussions focus on actions of small-unit leaders, communication skills, the military justice system, and the logistical support of the army in the field.

**Mil S 442 Contemporary Military Environment II**
Spring. 2 credits. Required.
A continuation of Mil S 441. Students examine the leadership environment of the Army officer. Conferences and seminars examine the techniques of effective military leadership with special attention given to professionalism and ethical considerations in the armed forces during peacetime and armed conflict.

Practical Leadership Training

**All Army Officer-Education Students**

As with many laboratory periods, no credit is given, and participation is required for successful completion of the ABOTC program. Students may receive physical education credit for the laboratory.

Each semester, cadets register for the appropriate leadership laboratory, consisting of physical fitness training three times per week, two hours of military training each week, and one or two weekend training exercises per semester.

**Mil S I Leadership Laboratory I**

Fall. 0 credits. Spring. 0 credits. S/U. 0 credits. S/U.
Mil S I 151 Mil S I 152
Mil S I cadets meet for two hours each week to learn a variety of military skills including rappelling, first aid, drill and ceremonies, military skiing, and weapons familiarization.

**Mil S II Leadership Laboratory II**

Fall. 0 credits. Spring. 0 credits. S/U. 0 credits. S/U.
Mil S 251 Mil S 252
Mil S II cadets meet for two hours each week as members of the cadet organization to participate in practical leadership exercises. Types of practical activities include familiarization in rifle marksmanship, orienteering, drill and ceremonies, signal communications, physical fitness training, first aid, tactics and field exercises.

**Mil S III Leadership Laboratory III**

Fall. 0 credits. Spring. 0 credits. Required. S/U. Required. S/U.
Mil S 351 Mil S 352
Cadets meet for two hours a week and some weekends to prepare for a six-week summer camp that follows the senior year. Emphasis is on the development of individual skills in leadership techniques and practical skills. Cadets rotate through leadership positions to
OFFICER EDUCATION - 1996-1997

develop an ability to apply decision-making processes to a myriad of situations. Cadets also acquire technical expertise and proficiency in signal communications, physical fitness, drill and ceremonies, rappelling, orienteering, tactics, water survival, and other military skills.

**Mil S IV Leadership Laboratory IV**
- Fall: 0 credits. Spring: 0 credits. S/U. Required. S/U. Mil S 451 Mil S 452
- Senior cadets plan and operate the leadership laboratory programs for Mil S I-III cadets. The development of planning and supervisory skills is emphasized. Cadets have an opportunity to practice leadership skills developed during previous ROTC training and summer camp experiences. This also includes two to three hours a week devoted to physical fitness.

**Mil S V Leadership Laboratory V**
- Fall: 0 credits. Spring: 0 credits. S/U. Mil S 551 Mil S 552
- A continuation of Leadership Lab IV expressly for those cadets who need additional leadership skill development as determined by the Professor of Military Science. Enrollment is by instructor approval only.

**Professional Military Education (PME) Requirements**

In addition to the ROTC classes and leadership laboratories above, a number of courses are required as part of the contracted student's academic program. These courses are offered by the university and round out the student's professional education. The PME component of the ROTC program requires at least one college course in each of the following areas: human behavior, written communication skills, military history, math logic, and an introduction to computers. These courses must be completed prior to graduation and commissioning. Courses that meet these requirements are approved by the Professor of Military Science.

**NAVAL SCIENCE**

Captain M. Kehoe, United States Navy, Professor of Naval Science and Commanding Officer, Naval ROTC Unit

Commander L. Landin, United States Navy

Major R. Stickel, United States Marine Corps

Lieutenant C. D. Myers, United States Navy

Lieutenant S. Young, United States Navy

Lieutenant J. A. DeSantis, United States Navy

The objective of the Naval Officer Education Program is to prepare selected students for service as commissioned officers in the United States Navy or United States Marine Corps by supplementing their undergraduate education with instruction in essential concepts of naval science and fostering development in the qualities of leadership, integrity, and dedication to the country and the naval services. The program is compatible with most undergraduate major fields of study, including five-year baccalaureate degree programs on a case-by-case basis.

The objective is achieved through a broad program, normally covering four years, that combines specific courses in naval science and specified academic subjects to supplement weekly professional development sessions in which the practical aspects of naval science and leadership procedures are stressed. It also includes at least one summer-at-sea period.

Non-naval officer education students: Though the Navy-Marine Corps program has been designed to prepare future officers, Naval science courses are open to all students at Cornell University as space limitations allow.

**Requirements for Enrollment**

An applicant for the Naval ROTC program at Cornell must be a citizen of the United States. Applicants must have reached their seventeenth birthday by June 30 of the entering year and be less than twenty-five years of age on June 30 of the calendar year in which they are commissioned. Waivers of the upper age limit may be available for applicants who have prior active duty military service. Applicants must also meet physical and medical requirements. Interested students can visit the Naval ROTC Unit in Barton Hall or contact their local recruiter.

**Programs**

There are two programs: the Scholarship Program and the College Program. They differ primarily in benefits to the student.

**Scholarship Program**

The Scholarship Program provides approximately one thousand scholarships in more than sixty universities nationwide to selected students who want to serve in the Navy or Marine Corps. Financial support is provided students during college preceding the award of the baccalaureate degree.

**Benefits**

The program offers scholarships that provide full tuition and are not need-based. While on scholarship, students also receive money for instructional fees, textbooks, nonconsumable supplies, and a $150-a-month stipend for a maximum of forty months.

Successful completion of the Scholarship Program leads to a commission in the Navy or Marine Corps Reserve. At Cornell University over 90 percent of NROTC students have a scholarship. Students entering NROTC without a prior scholarship award are entitled to compete for two- or three-year scholarships controlled by the Chief of Naval Education and Training.

**Scholarship Program: Entrance Options**

There are three ways to enter the Scholarship Program:

First, by applying for the national competition each year. This process entails filling out and submitting an appropriate application; being interviewed; having a physical examination; and applying to, and being accepted by, one of the colleges or universities throughout the country that offers an NROTC program.

Second, by enrolling in the College Program at Cornell and being recommended by the Professor of Naval Science for a scholarship after at least one semester in the program.

Third, by entering through the Two-Year Scholarship Program.

**College Program**

There are two College Programs available. Both lead to a commission in the Naval or Marine Corps Reserve.

Each of these programs provides textbooks for naval science courses, uniforms, and a subsistence allowance of $150 a month from the beginning of the junior year. The regular College Program is four years long. Academic requirements for students in this program are somewhat less than those for scholarship students, as noted in the curriculum section of this booklet.

The Two-Year College Program begins the summer before the junior year, when students attend a required program with pay at the Naval Science Institute in Newport, Rhode Island.

**Summer Training**

Each summer, students in the Scholarship Program spend approximately four to six weeks on a Navy ship or with a naval activity anywhere in the world for on-the-job training. College Program students attend one summer training session of the same duration between the junior and senior years.

**Active Duty Requirements**

Scholarship midshipmen commissioned in the Navy or Marine Corps Reserve serve on active duty for a minimum of four years. College program midshipmen commissioned in the Naval or Marine Corps Reserve serve a minimum of three years on active duty. Specialized training such as aviation or nuclear power following commissioning adds additional active duty requirements in some cases.

**Choice of Assignment**

Graduates have an opportunity to request the duty they prefer upon graduation. These requests are given careful consideration, and every effort is made to assign the newly commissioned officer the duty of his or her choice.

Among the assignments available are duty on submarines, in naval aviation as either a pilot or naval flight officer, and on surface ships. Other specialties may be available on a limited basis.

**Marine Corps Options**

The United States Marine Corps is an integral part of the Naval Services and is commanded by the Commandant of the Marine Corps. One-sixth of the NROTC scholarship students may be Marine selectees who will be designated Marine-option midshipmen. Upon successful completion of the program they will be appointed second lieutenants in the United States Marine Corps Reserve.

Marine-option midshipmen follow the same program as other NROTC midshipmen for the first two years. Beginning with the junior year, Marine-option midshipmen are taught Marine oriented courses by a Marine Officer Instructor. For first class summer training (after the junior year), Marine-option students travel to Quantico, Virginia, for the ten-week intensive training known as the USMC Officer Candidate School. Upon commissioning the following year as second lieutenants, they are assigned to the Basic School at Quantico, Virginia. After the
Basic School, the Marine officer is assigned duty in a variety of occupational fields. Among the duties available are Infantry, Aviation, Artillery, Tracked Vehicles, Engineers, Communications, Electronics, Supply, Administration, and Computer Science. The officer may serve on board naval vessels or at shore installations of the Marine Corps or Navy, in this country or overseas.

The Marine Corps has a postgraduate training system similar in objectives and organization to that of the Navy. Marine officers selected for aviation receive flight training at the Naval Air Station, Pensacola, Florida, along with their Navy counterparts.

**Curriculum**

A student has three categories of requirements to fulfill as a midshipman. The first of these requirements is a weekly naval professional development session each semester. The second requirement is a naval science course each semester. The last set of requirements consists of other required courses prescribed by the Navy to meet the growing need for more and better technically educated junior officers.

**Naval Professional Laboratories**

Nav S 141-142, 241-242, 341-342, or 441-442

All students in the program participate in one ninety-minute professional development session each week. The session is held from 2:30 until 4:00 on Wednesday afternoon. This period consists of both drill and professional information briefings. Students gain experience in actual leadership situations and at the same time learn the fundamentals of seamanship, military formations, movements, commands, discipline, courses, and honors. During information briefings special emphasis is given to applied leadership as it relates to the administrative and managerial aspects of a Navy or Marine Corps officer’s duties.

**Naval Science Courses**

All Navy and Marine midshipmen take one naval science course each semester during their freshman and sophomore years. Navy-option students continue to take a naval science course each semester during their junior and senior years. Marine-option students have slightly different curriculum requirements for their junior and senior years.

**Freshman Year (Navy and Marines)**

Nav S 157 Principles of Sailing

Fall and spring. Physical education credit. Instruction in basic sailing skills and safety principles. Students sail small boats on Cayuga Lake, weather permitting. Focus is on U.S. Navy Class B inshore skipper certifications.

Nav S 201 Organizational Behavior and Small Group Processes (also Hotel Administration 115)

Fall. 3 credits. See description for Hotel Administration 115 or IRL 170.

Nav S 202 Naval Ship Systems I (also Mechanical and Aerospace Engineering 101)

Spring. 3 credits. Two lecture classes each week. An introduction to primary ship-systems and their interrelationship. Basic principles of thermodynamics, propulsion, mechanical operation, internal communications, electronics, ship structure, and other marine systems are considered.

**Sophomore Year (Navy and Marines)**

Nav S 301 Principles of Navigation (also Agricultural Engineering 305)

Fall. 4 credits. Four classes each week (lecture-recitation-project work).

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also discussed.

Nav S 302 Naval Operations

Spring. 3 credits.

The course covers the application of the nautical rules of the road and maneuvering board in order to avoid collisions at sea. Other aspects of naval surface ship operations that are introduced include visual and electronic communications methods, tactical disposition of forces, ship handling theory, and deck seamanship topics.

Nav S 401 Naval Ships Systems II (Weapons)

Fall. 3 credits.

The principles and theories used in the development of naval weapons systems are examined. Initially, extensive study is made of detection systems, especially radar and sonar, followed by discussions of ancillary systems for computing, stabilizing, tracking, and weapons control and delivery.

Nav S 402 Leadership and Management II

Spring. 3 credits.

A variety of topics important to the naval officer for both professional and managerial development are reviewed. The material is tailored for the midshipman to provide an understanding and appreciation of leadership and ethics in preparation for assignments in the naval service. Through the use of lectures, case studies, and role playing, the student will learn various aspects of Navy leadership and ethical decision-making. Marine-option students also take this course.

**Junior or Senior Year (Marine Options)**

Nav S 310 Evolution of War

Fall. 3 credits.

A study of warfare that examines the relationship of military strategy to geography, economics, sociology, technology, and national political realities and values; the evolution of warfare, including principles of war, weapons, and associated equipment; and the effects of nuclear weapons and guerrilla warfare on traditional concepts of national strategy.

Nav S 410 History of Amphibious Warfare

Spring. 3 credits.

The history of the development, theory, techniques, and conduct of amphibious operations from 450 B.C. to the present. Special emphasis will be on amphibious operations conducted in the central Pacific during World War II and the future of amphibious operations.

**Other Required Courses**

**Naval Option Scholarship Program**

To be eligible for a commission in the United States Navy, midshipmen must successfully complete all the requirements for a baccalaureate degree in any field of study offered by Cornell University and complete courses in the following subjects (specified courses to be approved by the Professor of Naval Science):

- American military affairs or national security policy (one semester)
- English (one year)
- Calculus (one year)
- Calculus-based physics (one year)
- Computer science (one semester)

The calculus requirement must be satisfied by the end of the sophomore year and the physics requirement by the end of the junior year.

Although free choice of academic majors is permitted, students are encouraged to pursue majors in engineering and the physical sciences to meet the technological requirements of the modern Navy.

**Naval Option College Program**

Navy-option College Program students must complete one year of college-level study in mathematics, physical science, and English as a prerequisite for commissioning. The mathematics course must be completed by the end of the junior year; the physical science course by the end of the senior year. In addition, one term of computer science is required. College Program students who desire entry into the Naval-option Scholarship Program should fulfill all of the requirements applicable to Navy-option scholarship students to be eligible and competitive for a scholarship controlled by the Chief of Naval Education and Training.

**Marine Option**

Any midshipman, in either the Scholarship Program or the College Program, who completes all of Cornell University's degree requirements in any academic major is eligible for a commission in the United States Marine Corps or United States Marine Corps Reserve. Marine-option students take the same naval science courses and naval professional
Aerospace Studies academic courses are open to all qualified freshmen. Sophomores may enter the program but require departmental approval. Students in a five-year degree program may enroll in their freshman, sophomore, or junior year.

Veterans of the U.S. armed forces and students entering Cornell from military schools may receive advanced standing, subject to approval by the Professor of Aerospace Studies.

The Four-Year Program includes General Military Courses (GMC) and Professional Officer Courses (POC). For scholarship cadets, the first year of the GMC carry no military commitment, and students may withdraw at any time. For non-scholarship cadets, both years of the GMC carry no military commitment, and students may withdraw at any time.

General Military Course
Students in General Military Courses (GMC) take one credit Aerospace Studies course each semester. During the freshman year, the student studies the organization and mission of the United States Air Force and the environment of the Air Force officer. In the sophomore year, the student studies the history and development of American air power. In both years, officerhip and professionalism within the United States Air Force are emphasized.

Students also spend 2 hours a week in a leadership laboratory. Leadership laboratory provides cadets with the opportunity to put into practice those skills they learn in their aerospace studies classes. These laboratories focus on the development of officer qualities through such activities as drill and ceremonies, group leadership problems, confidence-building exercises, and guest lecturers. In addition, all students participate in summer field training for four weeks between their sophomore and junior years.

Professional Officer Course
The Professional Officer Courses (POC) provide a two-year advanced program of instruction. Students who are accepted for the POC must have successfully completed or validated the basic course and must meet academic and physical standards. Each cadet accepted into the POC must sign an agreement to complete the program and accept, if offered, a commission in the United States Air Force upon graduation.

Classroom study in the POC is a 3-credit-hour course each semester. In the junior year, cadets study leadership and management at the junior officer level. During the senior year, cadets study the elements of national security and the military's role in American society. Leadership laboratory requires 2 hours a week in the junior and senior years. In leadership laboratory, cadets are exposed to advanced leadership experiences and apply principles of leadership learned in the classroom.

Two-Year Program
The Two-Year Program consists of the last two years (Professional Officer Courses) of the regular Four-Year Program plus a six-week summer training course preceding enrollment.

The Two-Year Program is open to all qualified students with two years of academic study remaining at Cornell (graduate or undergraduate) or at schools supported under a crosstown agreement. Applications are accepted from October through April of the academic year preceding the applicant's planned entry into the program. Selectees are then required to complete a six-week summer training program at government expense.

SCHOLARSHIPS
The Air Force offers 4-year scholarships to high school seniors and 2- and 3-year scholarships to college students. Four-year scholarships are offered on a competitive basis in specified majors to high school seniors. Scholarship information can be obtained from a high school guidance counselor, from Air Force ROTC officers at Cornell (AFROTC phone number is 607-255-4004), from a local Air Force recruiter, or from AFROTC/RROO, Maxwell AFB, AL 36112-6653. The deadline for submitting a four-year scholarship application is December 1 of the year preceding the academic year in which a student wants to enter the program. Students should apply early.

SCHOLARSHIPS FOR 2 AND 3 YEARS
Applicants for these scholarships should be made to the Professor of Aerospace Studies during the freshman or sophomore year of college. All selections are based on the student's major, scores achieved on the Air Force Officer Qualifying Test, the student's overall grade point average, and the recommendation of the Professor of Aerospace Studies. Scholarship amounts range from $2,000 per year to full tuition, fees, and books, and provide a $150 monthly nontaxable allowance during the school year. Scholarships do not include the cost of room and board.

FEES
An initial uniform deposit of $50 is required on entry into AFROTC. There are two subsequent $50 uniform payments due, one on entry into the POC and the final one before commissioning, at which point the cadet can purchase the uniform with the deposits.

BENEFITS
All cadets in the advanced program (POC)—whether they are on scholarship or not—receive a $150-a-month, nontaxable subsistence allowance during the academic year. During the four- or six-week summer field training (see below), each cadet receives a pay allowance plus an allowance for travel to and from the field training site and all travel supplies required for Department of Aerospace Studies courses provided.

All cadets are eligible to participate in AFROTC-sponsored field trips made to Air Force bases throughout the country as well as voluntary summer programs for professional development. Scholarship and advanced scholarship cadets (POC) are entitled to space-available travel on Air Force aircraft flying within the continental United States.

FIELD TRAINING
There are two types of field training: a four-week course for cadets in the Four-Year Program and a six-week course for Two-Year Program applicants. Students in these
programs normally attend field training between their sophomore and junior years. Field training is designed to stimulate the development of military leadership skills through meaningful experiences. The curriculum consists of aircraft, aircrew, and survival orientation; junior officer training; physical training; small arms training; a social-actions program; and supplemental training. The six-week training program includes sixty hours of Air Force ROTC academic course work that substitutes for the freshman and sophomore Aerospace Studies courses.

Cadets may also volunteer for one of many Advanced Training Programs. These programs include the Development Program, Air Force Academy Free Fall Parachute Training, the British Royal Air Force (RAF) Exchange Program, Research and Development Experiences, the Academy Soaring Program, and Academy Survival Training.

**Commissioning Obligations**

All students who successfully complete the AFROTC advanced program (POC), are awarded a baccalaureate degree, and are tendered a commission enter the Air Force as second lieutenants. Second lieutenants commissioned in nonflying categories are required to serve on active duty for four years. Pilots are required to serve on active duty for eight years after completing flying training. Navigators serve six years after completing training.

**Air Force Careers**

The Air Force assigns new officers to a career field based on mission requirements, educational background, and officers’ preferences. Students in the engineering-scientific category may be assigned to practice in their specialty in research and development, communications, electronics, aeronautics, astronastics, the biological sciences, computer design and maintenance, meteorology, space, or various other engineering and scientific fields. Those graduating in the nontechnical category can anticipate assignments in manpower management, information management, logistics, law enforcement and investigation, intelligence, personnel, transportation, accounting and finance, and numerous other career fields. They may use their educational backgrounds in positions of responsibility and be given the opportunity to further their development in leadership and management skills.

Any undergraduate major is suitable for those who are qualified and interested in becoming pilots or navigators. After completion of flying training, personnel are assigned to a specific type of aircraft.

**Curriculum**

Students in the Four-Year Program are required to take all courses listed below. Students in the Two-Year Program are required to take all of the courses listed for the junior and senior years.

**Freshman Year**

**Air S 161 Introduction to the Air Force Today, Part I**

Fall. 1 credit.

An introductory study of U.S. Air Force mission and organizational structure, with emphasis on officer skills and basic communications skills.

**Air S 162 Introduction to the Air Force Today, Part II**

Spring. 1 credit. No prerequisite required.

A study of U.S. Air Force mission and organizational structure with an emphasis on professionalism, officer skills, communications skills, and the principles of leadership.

**Sophomore Year**

**Air S 211 American Air Power**

Fall. 1 credit.

This course studies the development of American air power. It concentrates on the evolution of thought on the proper way to employ air power to meet national security objectives and addresses the many factors that influenced air-power thinking. This course also emphasizes communication skills and practical application.

**Air S 212 Introduction to Leadership**

Spring. 1 credit.

This course examines several topics that prepare cadets to succeed at field training. Subjects include effective communications, leadership, management, and problem-solving skills.

**Junior Year**

**Air S 331 Air Force Leadership and Management**

Fall. 3 credits.

This course is divided into three major parts. Part I is an introduction to effective written and oral communication skills. Communication skills are practiced and developed throughout the course. Part II focuses on leadership and management principles. The final part addresses ethics, values, and the standards of conduct expected of and practiced by military members. Student-run seminars, case studies, and oral and written assignments are required.

**Air S 332 Management in the Armed Forces**

Spring. 3 credits.

This course focuses on Total Quality Management (TQM) and its role in today’s Air Force. Written and oral communication skills are emphasized throughout the course. Primary topics of discussion and analysis include the history and development of management thought, the fundamentals of TQM, TQM in the Air Force—Quality Air Force (QAF), and QAF application through real-world team problem solving. Student-run seminars, case studies, Quality Improvement Team participation, and oral and written assignments are required.

**Senior Year**

**Air S 401 National Security Forces in Contemporary American Society I**

Fall. 3 credits.

This is an advanced course on U.S. national security policy and processes, and current international political-military issues affecting American security interests. Primary topics of discussion include the role of military forces in the post-cold-war era, national security decision-making, and specific issues such as military operations other than war, alliances, international forces, peacekeeping, arms control, and terrorism. Roles and missions of the U.S. Air Force in support of U.S. national security objectives are also examined.

**Air S 402 National Security Forces in Contemporary American Society II**

Spring. 3 credits.

This is a second-semester study of American national security policy, process, actors, and strategies. This course focuses on military and officer issues and explores Air Force issues relevant to future officers. Throughout the course, writing and public speaking exercises are directed at improving students’ communication skills.

**Leadership Laboratory Courses**

All Air Force cadets spend 2 hours a week throughout the academic year in a leadership laboratory, for which no academic credit is given. Occasionally laboratories are held at times other than the normally scheduled period. All cadets are expected to participate in an evening formal dinner and to meet minimum physical fitness and weight standards each semester. Leadership lab is open to students qualified to compete for an Air Force commission.

**Air S 141–142 Initial Military Experiences**

Introduction to the responsibilities, life, and work of an Air Force officer. Basic knowledge, skills, and abilities to operate a military organization. Student-run seminars, case studies, and the wearing of the uniform. Field trip to a local military installation.

**Air S 241–242 Intermediate Military Experiences**

Develops skills in giving commands for drill and ceremonies. Introduction to the Air Force base environment in which the Air Force officer functions. Includes a look at career areas available based on academic majors. Students experience and participate in leadership situations through military drills and ceremonies. Field trip to a local military installation.

**Air S 341–342 Junior Officer Leadership**

Cadets assume leadership responsibilities similar to those of a junior officer. Emphasis is on comprehending the importance of applying effective human relations skills in dealing with superiors, peers, and subordinates. Cadets also gain insight into the general structure and progression patterns common to selected Air Force officer career fields.

**Air S 441 Advanced Leadership Experiences**

Cadets assume command leadership responsibilities to operate a military organization. Cadets apply effective leadership and managerial techniques with individuals and groups and participate in self-analysis of leadership and managerial abilities.

**Air S 442 Precommissioning Laboratory**

Factors that facilitate transition from civilian to military life are reviewed. The need for military security, base services and activities, personal finances, travel regulations, and social obligations are introduced.
COURSES

The courses and fees described in this catalog are subject to change or cancellation at any time by official action of Cornell University. For current fee information on physical education courses call 255-4286; for Outdoor Education courses, call 255-6415 (ext. 2).

Enrollment in any course is limited by the space available. Other restrictions are included in the course description. Most courses are coeducational. The specific time and place of class meetings, as well as information about fees, are available at physical education course registration or may be found on "Bear Access," a package of software for accessing a variety of network services at Cornell, or on the World Wide Web (at http://www.cornell.edu/Academic.html#Class). Course fees are billed through the Office of the Bursar.

Additional course offerings may be listed at registration, as the curriculum is frequently reviewed and changed.

Aquatic Courses

**Lifeguard Training**

Fall and spring. Fee charged. Prerequisites: swimming test consisting of 500 yards, demonstrating three strokes, treading water without the use of hands, and retrieving a brick from seven feet of water. Three classes a week.

An American Red Cross certification course. Practice and execution of lifeguarding first aid and CPR skills and techniques. Certification is awarded in lifeguarding, first aid, and CPR upon satisfactory completion of the course.

**Lifeguard Training Instructor**

Spring. Fee charged. Prerequisites: current Red Cross ICT or instructor card, written and skill tests in lifeguarding, first aid, and CPR techniques. Students must not miss first class. Two classes a week.

American Red Cross lifeguarding instructor and CPRFPR certifications are awarded upon successful completion.

**Scuba, Open-Water**

Fall, spring, and summer (6 weeks). Fee charged.

Program includes classroom work skill training in a pool and open-water training in Cayuga Lake. P.A.D.I. open water certification awarded upon successful completion.

**Scuba, Advanced Open-Water**

Fall and spring. Fee charged.

Advanced-level open-water training in Cayuga Lake. For those who have completed the open-water course.

**Rescue Diver**

Fall and spring. Fee charged. Advanced course for scuba divers. For those who have completed Advanced Open-Water Scuba certification and are interested in learning rescue and safety techniques.

**Dive Master**

Fall and spring. Fee charged. Advanced-level scuba course open only to those who have completed the Rescue Diver course. NOTE: This is a long, time-consuming course, which requires the student to be in good physical and swimming shape.

**Specialty Scuba Diving**

Fall and spring. Fee charged. Courses offered in the following specialty diving areas: navigation, search and recovery, night diving, deep diving, underwater photography, wreck, multi-level, boat, tropical fish identification and buoyancy control, and underwater naturalist.

**Scuba Diving Trips**

Fall and spring. Fee charged. This course is offered during intersession periods. Scuba trips to various destinations such as the Bahamas. Locations change from year to year. See the information sheet at the registration table.

**Swimming, Introduction to (ARC)**

Fall, spring, and summer. (6 weeks). Instruction and practice in basic skills leading to passing the basic swimming proficiency test.

**Swimming, Advanced Beginning (ARC)**

Fall and spring. This course is ideal for all who have taken one term of Beginning Swimming, regardless of whether the swimming test was successfully completed. Areas of special emphasis are the crawl stroke and rotary breathing, back crawl, elementary backstroke, diving, treading water, and underwater swimming. The primary objective of the advanced beginning swim course is to strengthen the student's confidence and competence.

**Swimming, Intermediate (ARC)**

Fall and spring. Practice of basic skills and five basic strokes; front crawl, back crawl, elementary backstroke, breaststroke, sidestroke.

**Swimming, Advanced (ARC)**

Fall and spring. Practice of nine strokes: front crawl, back crawl, elementary backstroke, breaststroke, inverted breaststroke, sidestroke, overarm sidestroke, trudgeon, and butterfly.

**Swimming Conditioning**

Fall and spring. Prerequisite: good swimming ability. Introduction to, and practice of, different training methods. Final objective: to swim 2,500 yards during class period. Primarily a conditioning and not an instructional course.

**Water Safety Instructor**

Fall and spring. Fee charged. Prerequisites: passing of written and water tests, which are given on the first day. American Red Cross water safety instructor certification is awarded on satisfactory completion of the course. This is not a course for casual participant. Approximately 45 hours of work is required.

**Water Safety Instructor Refresher Course**

Spring. Fee charged. Selected sessions of the water safety instructor certification course.

**Bowling Courses**

**Bowling**

Fall and spring. Fee charged. For the beginning and intermediate bowler. Shoe rental is included in the fee.

**Dance Courses**

Develop flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with rhythmic accuracy, clarity of body design, and fullness of feeling. Auditions are required for admission to some advanced courses, since they require the mental and physical ability to perform more-complex phrases in various styles.

**African Dance**

Fall and spring. Fee charged.

**Ballet I**

Fall and spring.

**Ballet II**

Fall and spring.

**Ballet III**

Fall and spring.

**Ballroom Dancing**

Fall and spring and summer. Fee charged. One class a week. Helen Newman Hall. Students and their partners must sign up at course registration. Includes instruction in the waltz, swing, cha cha, calypso, tango, and others.

**Belly Dancing**

Fall and spring. Fee charged. Belly dancing is an exciting Middle Eastern folk art that can help in the development of flexibility, body awareness, and overall body tone. The class will begin with warm-ups and continue with basic movements and rhythms while putting them together in dance to music of the Middle East.

**Country Line Dancing**

Fall and spring. Fee charged.

**Modern Dance I (also Theater Arts 124)**

Fall and spring.
Exam upon successful completion of this course. Rigid attendance and participation requirements are strictly enforced.

**Fitness Courses**

**Aerobic Dance**
- Fall, spring, and summer (6 weeks). Fee charged.
- A simple dance program designed to keep the cardiovascular system in top shape by making the body demand increased amounts of oxygen.

**Body Sculpting**
- Fall and spring. Fee charged.

**Fitness and Conditioning**
- Fall and spring.
- Physical fitness program that embodies features of stretching exercises, weight lifting, and jogging. Students work on their individual training needs.

**Jogging**
- Fall and spring.
- This course will cover correct running and stretching techniques. A conditioning program with the objective to develop the capacity to run three miles after 12 weeks of training.

**Jogging Tours—Distance Running**
- Fall and spring.
- A course designed for the Intermediate Runner who can run an average of 3 miles in 30 minutes. Most tours will be 3–4 miles long and will go through campus and nearby countryside.

**Triathlon**
- Fall and spring. Fee charged.
- Designed to acquaint students with the components of, and conditioning for, triathlon (running, swimming, and bicycling).

**Wellness and Fitness**
- Fall and spring. Fee charged.
- “Here’s to a Healthier You”—A wellness experience for the busy student. This course will assess the student’s physical fitness status, blood cholesterol levels, and overall lifestyle health habits. Each student will receive an individual exercise prescription and have access to the Wellness Program fitness room in Helen Newman Hall. Lectures on nutrition and stress management are also presented.
- This course has been made possible through the generosity of the Bateman family in memory of Ms. Dorothy Bateman, Cornell’s first director of women’s sports and physical education (1920 to 1962).

**Golf Courses**

**Golf, Introduction to**
- Fall and spring. Fee charged.
- A PGA program of instruction is geared to all levels of experience and ability. The objective is to give beginners enough skill to play, and to give more-advanced players direction in their thinking, practice, and play, through a thorough understanding of fundamentals. Equipment is furnished.

**Golf, Recreational**
- Fall and spring. Limited to students who are experienced golfers. Fee charged. Students must provide their own clubs. A minimum of ten rounds of nine holes each must be played to receive credit. Fee covers a semester’s membership.

**Gymnastics Courses**

**Gymnastics, Introduction to**
- Fall and spring.
- Introduction to gymnastics deals with a majority of the Olympic events. The course will focus upon beginner-level skills only and is open to both male and female participants.

**Ice Skating Courses**

**Skating, Introduction to**
- Fall and spring.
- Fee charged. Instruction and practice in basic figure skating techniques: forward and backward, crossovers, turns, and spirals. Students provide their own figure skates or rent them at Lynah Rink. Course will cover basic skills of forward and backward skating, turns and stops.

**Figure Skating, Introduction to**
- Fall and spring.
- Fee charged.
- Designated for a small additional fee. This would be a typical certification for lifeguards and other supervisory professions.

**Martial Arts—Self-Defense Courses**

**Boxing, Introduction to**
- Fall and spring. Fee charged.
- The course covers the basic skills of footwork, defensive, and offensive techniques. Skipping rope, shadow boxing, and heavy bag work will be taught as methods for individual aerobic conditioning.

**Boxing, Thai**
- Fall and spring. Fee charged.
- A martial art system developed from the unique culture of Thailand is a blend of art, science, and sport.

**Fencing, Introduction to**
- Fall and spring.
- Fee charged.
- Includes warm-up exercises and all basic offensive and defensive moves. Equipment is furnished.

**Fencing, Intermediate**
- Spring. Fee charged. Prerequisite: Introduction to Fencing or the equivalent.
- Interclass competition is stressed. Equipment is furnished.

**Judo, Introduction to**
- Fall and spring. Fee charged.
- Conditions and increases suppleness. Continue to develop skills in two parts of judo: standing techniques (throws and trips) and mat techniques.

**Judo, Intermediate**
- Fall and spring. Fee charged.
- Conditions and increases suppleness. Continue to develop skills in the two parts of judo: standing techniques (throws and trips) and mat techniques.

**Karate, Introduction to**
- Fall and spring. Fee charged.
- A beginning course taught by professional black belt instructors. Involves mastery of basic blocks, kicks, and punches.

**Karate, Advanced**
- Fall and spring. Fee charged.
- Open to those who have taken Basic Karate or the equivalent.
Kung Fu
Fall and spring. Fee charged. Exploration of conditioning and fitness procedures used in the major martial arts, such as karate or judo. Covers circular movement for generating strong blocks, kicks, and punches.

Self-Defense and Empowerment for Women
Fall and spring. Fee charged. Basic methods of physical protection for women.

Tae Kwon Do, Introduction to
Fall and spring. Fee charged. A Korean martial art distinguished by its emphasis on high and powerful kicks. Basic kicking, punching, and blocking are emphasized.

Tae Kwon Do, Intermediate
Fall and spring. Fee charged. A Korean martial art distinguished by its emphasis on high and powerful kicks. Intermediate-level kicking, punching, and blocking are emphasized.

Tae Kwon Do, Advanced
Fall and spring. Fee charged. A Korean martial art distinguished by its emphasis on high and powerful kicks. Advanced-level kicking, punching, and blocking are emphasized.

T'ai Chi Chuan, Introduction to, and Intermediate
Fall and spring. Fee charged. Introduction to T'ai Chi, a system of graceful, movement for generating strong blocks, kicks, and punches. Intermediate-level kicking, punching, and blocking are emphasized.

Outdoor Education Program
See the brochure for the Cornell University Outdoor Education Program at registration for more information about courses.

Climbing Courses
Basic Rock-Climbing
Fall, spring, and summer. Fee charged. Seven afternoons climbing inside on the Lindseth climbing wall.

Basic Rock-Climbing, for Women
Fall, spring. Fee charged. Seven afternoons climbing inside on the Lindseth climbing wall taught by and for women.

Basic Rock-Climbing, for 25 and Over
Fall, spring. Fee charged. Non-credit course. Four evenings climbing indoors on the Lindseth wall for people age 25 or older.

High Adventure 101
Fall, spring, and summer. Fee charged. Six afternoons at local parks and wilderness areas, some classes on indoor Lindseth climbing wall.

Continuing Rock-Climbing
Fall, spring. Fee charged. Seven afternoons of advanced climbing techniques on the Lindseth climbing wall.

Ice Climbing
Spring. Fee charged. Four outings to local state parks and gorges.

Outdoor Top Roping
Fall, spring. Fee charged. Two outings (nights) on the Lindseth climbing wall and two outings at local climbing areas.

Shawangunks Rock-Climbing
Fall, spring. Fee charged. Four-day climbing camp at the Shawangunks.

Backpacking Courses
Natural History of the Finger Lakes
Fall, spring. Fee charged. Backpacking skills with a strong environmental focus.

Backpacking in the Finger Lakes
Fall, spring. Fee charged. Classes lead to two full weekends on the trail.

Southwest Backpacking
Spring. Fee charged. Spring Break trip to the SW deserts and canyons.

Trail Maintenance
Fall, spring. Fee charged. Work with the local trails club to support and maintain trail systems.

Wilderness Skills
Fall, spring. Fee charged. Break trip focusing on wilderness travel and living skills.

Wilderness Survival Skills
Fall, spring. Fee charged. Primitive living skills taught in three classes and a weekend backpack trip.

Biking Courses
Bike and Hike
Fall, spring. Fee charged. Four full days exploring local countryside.

Bike Repair, Beginning
Fall, spring. Fee charged. Non-credit. Two evenings of hands-on repair work.

Bike Repair, Intermediate
Fall, spring. Fee charged. Non-credit. One evening of hands-on repair work.

Mountain Biking
Fall. Fee charged. Four full days exploring local countryside.

Canoeing Courses
Canoeing, Adirondacks
Fall. Fee charged. One evening of beginning canoeing and kayaking.

Introduction to Paddling
Fall, spring. Fee charged. Includes a full weekend of river paddling.

Caving Courses
Caving
Fall, spring. Fee charged. Four days in the fall and two weekends in the spring in Pennsylvania caves.
Telemark Skiing
Spring. Fee charged.
Four evenings of skiing at Song Mountain Ski Area.

Personal Growth Courses

Body-Mind
Fall and spring.
Activities in this course are drawn from ancient Eastern practices as well as modern Western psychology, and are designed to give the student first-hand experience of the interaction between their own bodies and minds.

Explorations in Meditation
Fall and spring. Fee charged.
This course provides the opportunity to explore a variety of ancient and modern methods designed to bring one to the state of meditation. The methods serve to evoke the deep relaxation from which heightened awareness and creativity arise.

Health Issues for Student Athletes
Fall and spring.
To promote and encourage lifestyle choices on the part of student athletes that will help them establish and maintain high levels of all-around health, and thereby contribute positively to their academic and athletic achievement. NOTE: This is an NCAA requirement open to sophomore athletes only.

Relaxation and Stress Management
Fall and spring.
Introduction to basic relaxation techniques for the reduction of everyday stress. Techniques will be taught that can be used in normal everyday living situations.

Swedish Massage
Fall, spring, and summer. Fee charged.
Learn to give a relaxing, stress-reducing Swedish massage. You will master the basic strokes of Swedish massage and learn about their application to the different parts of the body. Students will use oils and lotions as a part of their training.

Therapeutic Massage
Fall, spring, and summer. Fee charged.
This course will provide an experiential introduction to several types of massage. Included are Swedish, shiatsu, polarity, and sports massage. Class members will participate in group exercises and practice on each other during class time. All exercises and techniques can be done while wearing street clothing.

Yoga, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Fundamentals of hatha-yoga. Covers basic postures, breathing techniques, and deep relaxation. Introduces chanting.

Racket Sports Courses

Badminton, Introduction to
Fall and spring. Helen Newman Hall.
Fundamental shots, scoring, and general play.

Badminton, Intermediate
Fall and spring. Helen Newman Hall.
Review of fundamental shots, scoring, and general play.

Racquetball, Introduction to
Fall, spring, and summer. Fee charged.
Instruction for beginners. Equipment is furnished. Protective eyewear required.

Squash, Introduction to, Intermediate
Fall, spring, and summer. Fee charged.
Classes for appropriate level of play. Equipment is furnished. Protective eye wear required.

Tennis, Introduction to
Fall, spring, and summer. Fee charged.
Basic skills taught include forehand, backhand, serve, and volley. Scoring methods taught.

Tennis, Advanced
Fall, spring. Fee charged.
Advanced strokes taught and doubles play emphasized. Recommended for tournament players or those with previous team experience.

Tennis, Indoor-Recreational
Fall and spring. Fee charged.
Play is conducted at the new Reis Tennis Center. Players must have high school or college tournament experience or a rating of 3.5 or higher from the USTA. Matches are played in both doubles and singles. Equipment furnished. NO BLACK-SOLE SHOES ALLOWED ON COURTS!

Sailing Courses

Board Sailing (Wind Surfing)
Fall, spring, and summer (6 weeks). Fee charged.
A Mistral Board Sailing Academy certificate is awarded on successful completion of the course.

Catamaran, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Learn unique skills necessary for sailing multihull catamarans.

Small-Boat Sailing, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Learn basic skills necessary to sail small sailboats and basic keelboats safely.

Small-Boat Sailing, Competitive
Fall and spring. Fee charged.
Vanguard 420 sailboat used for the course. USYRA Rules Book used as a text for the course. Fee includes one-year membership in university sailing team program.

Skiing and Snowboarding

Downhill Skiing and Snowboarding
Spring. Fee charged.
Transportation, instruction, ski-lift fees, and skiing time are offered in a package deal.

Target Shooting Courses

Archery, Introduction to
Fall and spring. Fee charged. Two classes a week.
Instruction in the care of equipment; seven basic steps for shooting; scoring; practice shooting at twenty, thirty, and forty yards.

Archery, Intermediate
Fall and spring. Fee charged.
For those who have basic experience.

Pistol, Introduction to
Fall, spring, and summer (6 weeks). Fee charged.
Instruction on the use of the pistol in the three modes of fifty-foot competitive target shooting—slow fire, timed fire, and rapid fire. Emphasis placed on safety and responsibility while firing.

Riflery
Fall and spring. Fee charged.
Instruction and practice in the techniques of target riflery from various shooting positions.

Team Sports Courses

Basketball
Fall and spring.
Fundamental drills in passing, shooting, and dribbling. scrimmages each class session.

Ice Hockey, Introduction to
Fall and spring. Fee charged.
Sticks handling, passing, and shooting are stressed. Students provide their own skates and sticks; all other equipment is furnished.

Ice Hockey, Intermediate
Fall and spring. Fee charged. Prerequisite: beginning hockey or previous participation in organized hockey.
This course is designed for the intermediate hockey player. Advanced techniques taught include positioning, power play, penalty killing, and offensive and defensive attack. Each session emphasizes game situations and scrimmaging. Skates and hockey sticks must be supplied by the participants. All other necessary equipment will be supplied.

Soccer
Spring.
Introduction to the game. Includes basic individual skills (passing, trapping, shooting) and team play and strategy.

Volleyball, Introduction to
Fall and spring.
Fundamentals of ball handling, serves, defensive blocks, and position play are stressed. Classes will scrimmage.

Volleyball, Intermediate
Fall and spring.
Passing and blocking strategy; scrimmages in class.

Volleyball, Advanced
Fall and spring.
Offensive and defensive team strategy is emphasized in class scrimmages.
Weight Training Courses

Nautilus
Fall, spring, and summer. (6 weeks).
Enrollment limited to capacity of facilities.
Fee charged.
Advanced weight lifting on specifically designed apparatus. There are ten stations in the room.

Olympic Weight Training
Fall and spring. Fee charged.
Introduces the student to the proper use of olympic weights for improving physical condition and muscular strength. Instruction with focus on the relation between high-rep light weight lifting, low-rep heavy lifting, and the development of bulk, strength, and endurance.

Independent Study
Independent Study
Fall and spring.
Independent study is designed for those who have difficulty fitting any of the regularly scheduled courses into their academic program. Class activities will be based on personal fitness programs. A term paper is required. Special permission to enter this program must be granted by the program director.
The School of Continuing Education and Summer Sessions provides a wide variety of educational opportunities beyond the degree-granting programs of the university. These programs serve virtually all age groups in a great variety of formats and time frames. For information about the following programs write B20 Day Hall, Ithaca, New York 14853-2801; call 607/255-4987; e-mail info@sce.cornell.edu; or fax 607/255-9697; unless indicated otherwise below. You may also visit us on the Web at http://www.sce.cornell.edu/.

ADMINISTRATION
Glenn C. Altschuler, dean
Alicia C. Dowd, media manager
Judith K. Eger, director, special programs
Abby H. Eller, director, Cornell University Summer College
Wilson Manik, acting computing director
Ralph Janis, director, Cornell’s Adult University
Charles W. Jermy, Jr., associate dean, and director, Cornell University Summer Session
Cathy M. Pace, registrar
Diane E. Sheridan, director, finance and administration

CORNELL UNIVERSITY SUMMER SESSION
The Cornell University Summer Session provides unique and unusually attractive opportunities for study and recreation at a time when the Cornell campus and the Finger Lakes region of central New York are at their loveliest and the Ithaca weather is at its best. Participants may choose from a wide spectrum of courses scheduled during three-, eight-, and six-week sessions. Although admission is open to persons of all ages, the majority of summer session participants are matriculated Cornell students. Classes meet daily and are usually kept small to foster a close association between students and teachers.

SPECIAL AND PROFESSIONAL PROGRAMS
Intensive learning experiences are presented year-round both for students and for professionals in many fields. Formats include for-credit courses of one to six weeks and noncredit weekend and weeklong short courses. Programs are also custom-designed for corporations, government agencies, professional societies, and other groups. These programs take place on the Cornell campus, on site, and at other locations worldwide. For information call 607/255-7259; e-mail sp@sc.cornell.edu; or fax 607/255-8942.

SUMMER COLLEGE PROGRAM FOR HIGH SCHOOL STUDENTS
High school sophomores, juniors, and seniors attend regular university courses through Cornell University Summer College and may earn college credit. They also explore career options through specially designed workshops. Students live in residence halls, become familiar with campus life, and attend seminars describing the college admissions process. The program is designed to help ease the transition from high school to college. For information call 607/255-6203; e-mail sc@sce.cornell.edu; or fax 607/255-8942.

CORNELL’S ADULT UNIVERSITY
Cornell’s Adult University (CAU) offers week­long noncredit courses on campus for adults and families during the summer. During the fall, winter, and spring, there are weekend seminars, week-long domestic programs, and international study tours. Developed and led by distinguished members of the Cornell faculty, all programs are inspired by the belief that learning never ends and that one of the roles of a great university is to provide a bridge between traditional formal education and informal, noncredit study. For information, write Cornell’s Adult University, 626B Thurston Avenue, Ithaca, New York 14850-2490; e-mail cau@sce.cornell.edu; or call 607/255-6260.

EXTRAMURAL STUDY
Area residents may take courses at the university on a part-time basis by registering through extramural study. Those interested may enroll in almost any course offered in the fall and spring terms if they receive the instructor’s written approval. The Visitor’s Program is also offered. It allows adults to attend classes in many divisions of the university on a space-available basis at a reduced charge. In this program no credit is given, and no record is kept of attendance or performance. Visitors are required to obtain written permission of the instructor.

WINTER SESSION
Cornell undergraduate and graduate students, as well as employees and area residents, can earn three to four credits between the fall and spring semesters by enrolling in the winter session. This quiet time on campus allows students to enjoy generally smaller classes and to concentrate on intensive study. Winter session students may enroll in scheduled courses or design individualized study with a faculty member.

CONTINUING EDUCATION INFORMATION SERVICE
This service provides free information, counseling, and referral to people who have been out of school for several years and want to resume their education. It also provides information about short courses, workshops, professional updates, and executive programs offered by the university to people inside and outside Cornell.

SUMMER COURSE ROSTER
The Cornell University Summer Session offers a wide variety of courses. The list that follows includes those courses that are usually offered every summer. The list is not exhaustive; many new courses or courses offered only occasionally are not listed. For complete information, contact the Summer Session Office. The summer session catalog is published in February. A preliminary course roster is available beginning in late November and current course offerings are listed and updated on QUINFO and the Web from November through June.

Africana Studies
AS&RC 205 African Civilizations and Culture
A program in African languages is also offered. Consult the department for a complete listing.

Agricultural, Resource, and Managerial Economics
ARME 220 Introduction to Business Management
ARME 221 Financial Accounting
ARME 310 Introductory Statistics
ARME 320 Business Law I

Anthropology
ANTHR 101-102 Introduction to Anthropology
ANTHR 201 Lost Tribes and Sunken Continents
ANTHR 204 Ancient Civilizations

Archaeology
ARKEO 100 Introduction to Archaeology
ARKEO 201 Lost Tribes and Sunken Continents
ARKEO 204 Ancient Civilizations
ARKEO 319 Underwater Archaeology
ARKEO 358 Field Archaeology in Honduras
ARKEO 360 Field Archaeology in Greece
ARKEO 361 Summer Program in Etruscan Archaeology at La Piana
Other field study opportunities are usually available through this department.

Architecture
ARCH 110 Introduction to Architecture: Design Studio
ARCH 130 An Introduction to Architecture: Lecture Series
ARCH 251 Photography I
ARCH 351 Photography II
Consult the Department of Architecture office for a complete list of summer design offerings.

NEW YORK STATE COLLEGE OF VETERINARY MEDICINE

ADMINISTRATION
Franklin M. Loew, dean
Donald F. Smith, associate dean for academic programs
Douglas D. McGregor, associate dean for research and graduate education
Janet M. Scarlett, associate dean for student services
John F. Cummings, secretary of the college
John A. Lambert, assistant dean for administration
Janet M. Scarlett, associate dean for student services
Joseph A. Piekunka, director of admissions
Donald F. Smith, associate dean for academic aid
Franklin M. Loew, dean

DEPARTMENT CHAIRS
Anatomy: C. Farnum
Clinical Sciences: M. White
Diagnostic Laboratory: D. Lein
Microbiology and Immunology: R. Avery
Pathology: B. Pauli
Pharmacology: G. Sharp
Physiology: D. Robertshaw

THE COLLEGE
The College of Veterinary Medicine offers a professional program that requires four years of full-time academic and clinical study of the normal and abnormal structure and function of the animal body and the diagnosis, treatment, and prevention of animal disease.

Graduates of the college receive the Doctor of Veterinary Medicine (D.V.M.) degree, which is recognized by licensing boards throughout the world. Graduates generally enter private practice, academia, or become engaged in one of the increasing number of other biomedical activities.

Admission requires a minimum of three years of college work, including specific prerequisite courses and experience. Applications must be filed approximately one year before the proposed matriculation date. The competition for admission is keen, since there are many more qualified applicants than can be admitted.

Graduate programs in veterinary research and postdoctoral training in clinical specialties are open to Doctors of Veterinary Medicine and some highly qualified holders of baccalaureate degrees and lead to the degree of Master of Science or Doctor of Philosophy.

More detailed information is contained in the Catalog of the College of Veterinary Medicine, which may be obtained by writing to the college.

Note: 500- and 600-level courses are open only to veterinary students except by written permission from the instructor.

The College of Veterinary Medicine has revised its professional curriculum; the new course requirements apply to the class that matriculates in the fall of 1993 and to subsequent classes. Courses in the revised professional curriculum are designated with the prefix "VTMED," and consist of two categories of courses: foundation courses and distribution courses.

The Professional Curriculum

FOUNDATION COURSES
In foundation courses I, II, III, IV, and V (VTMED 510, 520, 530, 531, 540, 550, and 551), students work in small groups under the guidance of a faculty tutor. Case-based exercises are used to facilitate the understanding of basic science concepts within the context of clinical medicine. On average, three to four 2-hour tutorial sessions are scheduled each week. These are complemented by lectures, laboratories, and discussion sessions or other organized learning opportunities specific to the individual course. Faculty are available to respond to questions that arise as a result of the case-based exercises.

Tutorial sessions and all other organized learning programs are usually scheduled during the mornings, thereby reserving the afternoons for independent study. By situating learning in a clinical context, students are better able to integrate material from the basic and clinical sciences, and are encouraged to develop an understanding of the clinical reasoning process from the beginning of the curriculum. The tutorial-based educational format creates an atmosphere that requires students to be involved actively in their learning and allows them to develop skills in communication, information retrieval, and analysis.

Foundation courses (I, II, III, IV, and V) are approved courses that are not offered during the 1996-97 academic year.

VTMED 510 The Animal Body
(Foundation Course I)
Fall. 12 credits. Limited to first-year veterinary students. Letter grades only. J. F. Cummings (course leader) and others. This course is designed to enable students to understand the principles of veterinary anatomy at the gross, microscopic, and ultrastructural levels. Developmental anatomy is emphasized to the extent that it reflects determination of adult form and species differences. Radiologic and related imaging techniques are used throughout the course to assist in the understanding of normal structural anatomy. Understanding of the anatomic basis of common surgical procedures is achieved during the various dissection procedures. The course is based on tutorials with significant emphasis on practical laboratories. Lectures and modules complement student learning.

VTMED 517 Animals, Veterinarians, and Society: Part A (Foundation Course II)
Fall and spring. 6 credits. Limited to first-year veterinary students. Letter grades only. A fee of approximately $10 is charged for the course guide. J. E. Saidia (course leader) and others.

This course is the correlate for VTMED 510 The Animal Body. This is a laboratory-based course that teaches the physical examination of four species (dog, cat, cow, and horse). The class is divided into smaller groups and each group meets for two hours each week during the first eleven weeks. The skills of auscultation, percussion, palpation, and observation are taught along with clinically related diagnostic procedures.

VTMED 520 Genetics and Development (Foundation Course II)
Fall and spring. 8 credits. Limited to first-year veterinary students. Prerequisite: VTMED 510 The Animal Body. Letter grades only. D. M. Noden (course leader) and others.

This course emphasizes cellular and genetic control mechanisms operating during mammalian development and adulthood. Four basic processes—cell proliferation, cell movement, cell differentiation, and morphogenesis—are essential to all living systems but may be regulated differently in embryonic and mature cells and tissues. Tutorial sessions are used to initiate explorations of the mechanisms that regulate these processes in embryonic, normal adult, and transformed (cancer) cell populations. Tutorial sessions are complemented by lectures, laboratories, minicas, or discussions, and modules.

VTMED 521 Neuroanatomy and Clinical Neurology
Spring. 3 credits. Limited to first-year veterinary students. Letter grades only. A. de Lahunta.

Fundamentals of functional neuroanatomy and diseases of the nervous system are taught so that each student is competent in the diagnosis of clinical neurologic disorders of domestic animals. This is a vertically integrated course that includes dissection of the central nervous system of the dog, the anatomic basis for the diagnosis of diseases of the nervous system, and the differential diagnosis of those diseases. Clinical cases with pertinent lesions are demonstrated with each system. Films and videotapes of clinical patients are used to demonstrate the clinical signs produced by the various diseases. Slides of gross and microscopic lesions are used to emphasize the clinical and neuroanatomic relationships and to stress characteristic features of representative conditions.
This course also provides opportunities to bond, animal death, and grief counseling. It is necessary to communicate effectively with clients to practice client interviewing skills and to assess patients. J. E. Saidla (course leader) and others.

This course is the correlate for VTMED 520 Genetics and Development. It enters into a study of ethical issues related to animal use, animal welfare, animal genetics, clinical application of genetics, genetics counseling, and clinical day-to-day ethics. The course meets for one 2-hour session each week.

**VTERM 530 Function and Dysfunction: Part I (Foundation Course IIa)**

Spring. 9 credits. Limited to first-year veterinary students. Prerequisite: VTERM 520 Genetics and Development. Letter grades only. B. J. Cooper (course leader) and others.

A continuation of VTERM 530 Function and Dysfunction: Part I.

**VTERM 531 Function and Dysfunction: Part II (Foundation Course IIb)**

Fall. 7 credits. Limited to second-year veterinary students. Prerequisite: VTERM 530 Function and Dysfunction: Part I. Letter grades only. B. J. Cooper (course leader) and others.

A continuation of VTERM 530 Function and Dysfunction: Part I.

**VTERM 532 Function and Dysfunction: Part III (Foundation Course III)**

Spring. 1 credit. Limited to first-year veterinary students. Prerequisite: VTERM 530 Function and Dysfunction: Part I. Letter grades only. A fee of approximately $9.00 is charged for the course guide. J. E. Saidla (course leader) and others.

This course is the correlate for VTERM 530 Function and Dysfunction: Part I. The central goal of this course is to provide students with the interprofessional skills and techniques necessary to communicate effectively with clients. In addition, students will be provided an opportunity to study the human-animal bond, animal death, and grief counseling. This course also provides opportunities to practice client interviewing skills and to participate in a home or farm visit.

**VTERM 538 Animals, Veterinarians, and Society: Part C2 (Foundation Course V, continued)**

Fall. 1 credit. Limited to second-year veterinary students. Prerequisite: VTERM 537 Animals, Veterinarians, and Society: Part C1. Letter grades only. A fee of approximately $6.00 is charged for the course guide. J. E. Saidla (course leader) and others.

This course is the correlate for VTERM 531 Function and Dysfunction. Part II. This course provides for understanding the importance of the medical record, the diversity of clients, employees, and society in general, and a session on alternative medicine and its various practices. Studying how to critically read and evaluate clinical studies and journal articles is also provided.

**VTERM 541 Host, Agent, and Defense (Foundation Course IV)**

Fall. 12 credits to second-year veterinary students. Prerequisite: VTERM 531 Function and Dysfunction: Part II. Letter grades only. J. T. Blue (course leader) and others.

This course is divided into six sections: the host response, intracellular environment, extracellular environment, somatic environment, external environment, and surrounding environment. Using this approach, students develop an understanding of the host response to insult; a familiarity with groups of important pathogens; an understanding of how pathogens manipulate the host and how the host defends itself against attacks; and an understanding of the roles played by the external environment and human intervention in the epidemiology of infectious organisms.

**VTERM 547 Animals, Veterinarians, and Society: Part D (Foundation Course VIIa)**

Fall. 1 credit. Limited to second-year veterinary students. Prerequisite: VTERM 538 Animals, Veterinarians, and Society: Part C2. Letter grades only. A fee of approximately $12.00 is charged for the course guide. J. E. Saidla (course leader) and others.

This course is the correlate for VTERM 540 Host, Agent, and Defense. This course will emphasize maintaining health in both individuals or populations of animals and humans. Topics will include animal bites, nosocomial infections, rabies control programs, vaccine reactions, zoonotic diseases, and integrated health maintenance programs.

**VTERM 550 Animal Health and Disease: Part I (Foundation Course V)**

Spring. 10 credits. Limited to second-year veterinary students. Prerequisite: VTERM 540 Host, Agent, and Defense. Letter grades only. R. O. Gilbert.

This course integrates the clinical sciences of medicine, surgery, anesthesia, radiology, and theriogenology, which are themselves integrated subjects, with systems pathology and relevant aspects of applied pharmacology. The course will be presented on a systems basis moving from clinical signs of alteration in function, to pathophysiology of clinical signs, to strategies for diagnosis and treatment. Specific examples will be used to establish a cognitive framework and knowledge of the most important diseases. This course will provide a sound foundation for clinical rotations in the Foundation Course VI. It builds upon the strengths developed in earlier courses by an increased exposure to case examples in a more directed way, taking advantage of the diversity of skills and special knowledge of both faculty and students. A variety of educational techniques will be used, including lectures in which interaction is encouraged, laboratories, demonstrations, case discussions, and autotutorials.

**VTERM 556 Community Practice Service-Medicine**

2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. E. Hornbuckle (coordinator) and others.

The Community Practice-Medicine Service is structured to provide supervised clinical experience in the practice of small companion animal medicine. The course is conducted in the Small Animal Clinic of the Veterinary Medical Teaching Hospital. Students interact directly with clients presenting their pet for primary medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

**VTERM 562 Community Practice Service-Surgery and Anesthesiology**

2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. H. J. Harvey (coordinator) and others.

Basic principles of anesthesia and surgery are emphasized in the clinical rotation. Under direct staff supervision, students will anesthetize and perform surgical procedures on patients presented to the Small Animal Clinic for neutering and minor elective procedures. Students will be responsible for all aspects of patient care during their hospital stay and will be expected to fully participate in client communications. Ordinarily, this course will precede Anesthesiology Service and Small Animal Surgery Service (soft tissue component).
VTMED 563 Small Animal Medicine
Fall, spring, winter, and summer.
4 credits. Required course open to second-semester and all fourth- or third-year veterinary students; not open to others. Letter grades only. S. C. Barr (coordinator), S. A. Center, J. F. Randolph (coordinator), K. W. Simpson.
The Small Animal Medicine Service is structured to provide supervised clinical experience in the practice of companion small animal medicine. The course is conducted in the Small Animal Clinic of the Companion Animal Hospital. Students interact directly with clients presenting their pets for primary or referral medical care. Under the supervision of the clinical faculty and staff, the students are expected to formulate and carry out plans for the diagnostic evaluation and medical management of these patients. After review, students explain their plans to the clients and provide follow-up care and management of these patients.

VTMED 564 Small Animal Surgery Service
Fall, winter, spring, and summer.
4 credits. Required of all third- and fourth-year veterinary students; not open to others. Letter grades only. E. J. Trotter (coordinator) and small animal surgery faculty.
A clinical service rotation, this course exposes the student to the practice of surgery under hospital conditions. Students participate in the diagnostic techniques; planning of therapy, and daily care of dogs, cats, and exotic species under the direction of a faculty veterinarian. Students assist experienced surgeons in the operating room and, with house-officer supervision, are responsible for patients undergoing elective ovariohysterectomy or castration. Client communications and the basics of efficient practice are also emphasized.

VTMED 565 Ambulatory Medicine Service
Fall, winter, spring, and summer.
4 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. C. L. Guard (coordinator) and others.
A clinical service rotation in which students accompany ambulatory clinicians on farm and stable calls and learn the skills and procedures necessary for operation of a modern veterinary practice offering primary care to large animal clients. Routine herd health visits are conducted for cattle, horses, sheep, goats, and swine. Reproductive evaluations (including pregnancy and fertility examinations), nutritional evaluation, and disease prevention are stressed. Herd health programs also include vaccinations, parasite control, mastitis prevention, and routine procedures such as castration and dehorning. With appropriate herd health analysis, differentiated treatment strategies are devised and discussed with the owner. In addition to assisting with routine scheduled work, students participate in diagnosis and surgical or medical treatment of ill or injured animals. This includes rotating assignments for night and weekend duty.

VTMED 566 Large Animal Medicine Service
Fall, winter, spring, and summer.
3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. W. C. Rebhun (coordinator) and others.
Students assigned to this service will assist the faculty and house staff of the Large Animal Medicine service in the diagnosis and care of patients admitted to the service. It is hoped that students working on this service will acquire knowledge and skills in history taking, physical examination, election and completion of appropriate ancillary tests, diagnosis, treatment, and patient care. Daily rounds and discussions are used to monitor patient progress and further educate students.

VTMED 567 Large Animal Surgery Service
Fall, winter, spring, and summer.
4 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. P. Hackett (coordinator) and others.
This clinical rotation is structured to provide supervised clinical experience in the practice of large animal surgery. Under the direction of faculty and house staff, students participate in the diagnosis, surgical treatment, and care of patients presented to the Large Animal Clinic. Training through patient care is supplemented by formal rounds and by didactic instruction.

VTMED 568 Anesthesiology Service
Fall, winter, spring, and summer.
3 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. D. Gleed (coordinator), J. W. Ludders, P. F. Moon and others.
This course is designed to provide clinical experience in the use of anesthetics in small companion animals, horses, and some food animals. The students participate in selecting suitable anesthetic techniques for patients in the Veterinary Medical Teaching Hospital and then implement those techniques under the supervision of residents and faculty. The goal is for students to learn the skills necessary to perform safe anesthesia in a modern veterinary practice.

VTMED 569 Dermatology Service
Fall, winter, spring, and summer.
2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. D. W. Scott (coordinator) and others.
During this clinical rotation, students participate in the diagnosis and management of skin disorders in small and large animals. Patients are examined by appointment and through consultation with other hospital services.

VTMED 570 Ophthalmology Service
Fall, winter, spring, and summer.
2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. R. C. Riis (coordinator) and others.
This course involves the hands-on diagnostic necropsies of most mammalian species that are presented to the pathology necropsy room and of avian species that are admitted to the avian and aquatic animal medicine necropsy room. Students work in groups of three to five for the two-week rotation. Necropsies are performed under the guidance of pathology faculty, residents, or interns. Students prepare written reports of necropsies performed, review microscopic hematology and cytology slides, perform urinalyses, and discuss case studies.

VTMED 571 Pathology Service
Fall, winter, spring, and summer.
2 credits. Required component of Clinical Rotations (Foundation Course VI). Letter grades only. J. M. King (coordinator) and others.
This course involves the hands-on diagnostic necropsies of most mammalian species that are presented to the pathology necropsy room and of avian species that are admitted to the avian and aquatic animal medicine necropsy room. Students work in groups of three to five for the two-week rotation. Necropsies are performed under the guidance of pathology faculty, residents, or interns. Students prepare written reports of necropsies performed, review microscopic hematology and cytology slides, perform urinalyses, and discuss case studies.

VTMED 572 Radiology Service
Fall, winter, spring, and summer.
2 credits. Required component of Clinical Rotations (Foundation Course VII). Letter grades only. N. L. Dykes (coordinator) and others.
A two-week clinical rotation in the Radiology Section of the Veterinary Medical Teaching Hospital. Students will use radiographic, CT, ultrasonographic, and nuclear medicine imaging techniques to evaluate animal patients under treatment in the Veterinary Medical Teaching Hospital. With guidance of radiology faculty and technical staff, students obtain and interpret radiographic and ultrasonographic studies. Two 3-hour laboratory sessions are given to allow hands-on experience in patient positioning and radiographic technique. An autotutorial teaching film file is used to familiarize students with radiographic examples of common diseases of large and small animal species. Small-group discussions are scheduled to present and discuss current cases. Radiation safety aspects regarding the veterinary practitioner are emphasized.

VTMED 573 Fourth-Year Seminar
Fall and spring. 1 credit. Required of all fourth-year veterinary students. First-, second-, and third-year students and all staff members are also invited and encouraged to attend. S-U grades only. F. H. Fox, chair of the Senior Seminar Committee.
The aim of this course is to give the student the responsibility and opportunity of selecting and studying disease entity on the basis of a cases that usually challenge the service. Adequate routine case material is presented to prepare most students for practice.
Student dissection material will be supplemented by skeletal materials, radiographs, models, preserved specimens, and postmortem specimens. Students will be required to complete an independent study project on a relevant subject of their choice.

**VTMED 604 Mechanics of Animal Movement**
Spring. 2 credits. Open to veterinary students, graduate students, and qualified undergraduates with permission of the instructor. J. E. A. Bertram.

This course explores the mechanical factors that influence how movement occurs within animals. A conceptual approach to understanding the relationship between the animal and its performance is emphasized. The main focus will be on an analysis of whole animal locomotion and an exploration of the functional basis of gait and its abnormalities. This will be followed by investigation of functional features of the anatomical components that are involved with providing the capabilities for movement (both mechanical and physiological). The class operates in a discussion format, meeting two evenings per week. Four hour laboratories are devoted to demonstrating how biomechanical research is conducted and distributed throughout the eight-week course. Assessment involves weekly short quizzes and a final term paper.

**VTMED 605 Comparative Anatomy: Pattern and Function**

The goal of this course is to remove the confusion surrounding anatomical variability among amniote species (mammals, birds, and reptiles). This is accomplished by reducing the anatomy of major organs in each species to a common basic pattern and relating the differences to functional and historical considerations. Six major systems will be explored (e.g., respiratory, locomotor, neurosensory, cardiorespiratory, digestive, and urogenital) in a variety of species as available.

**VTMED 606 Advanced Clinical Neurology**
Spring. 1 credit. Letter grade. Prerequisite: VTMED 521 Neuroanatomy and Clinical Neurology. A. deLahunta.

The objective of this course is to further the experience and confidence of the student in the diagnosis and understanding of clinical neurological disorders. It continues their correlation of anatomy, physiology, and pathology in the diagnosis of diseases of the nervous system and the understanding of their pathogenesis. Neurological disorders that are not covered in the foundation course will be considered here. The course is entirely based on case examples that are presented on videotapes or 35mm film and slides.

**VTMED 607 The Literature and Subject Matter of Natural History**
Spring. 1 credit. Letter grade. H. E. Evans.

This course is an introduction to classic and current literature of life on earth. Materials relating to the functions and the biology of plants and animals from around the world will be shown and discussed. Students will be required to show and discuss a book that concerns natural history. A recommended text for this course is *Illustrated Dictionary of Natural History* by R. J. Lincoln and G. A. Boxshall, 1990.
The specific diseases of a few selected species are presented as examples, including the diseases of a crustacean, a shellfish, a finfish, and marine mammals. The course is taught by an invited faculty of thirty-five individuals who are leaders in their respective fields of aquatic animal medicine. Students present seminars on appropriate topics.

VTMED 614 Aquavet II: Comparative Pathology of Aquatic Animals
Two-week instructional session at Woods Hole, Massachusetts, immediately after the spring term. 2 credits. Maximum enrollment: 18. Prerequisites: formal course work in diseases of aquatic animals or appropriate experience and permission of the instructor. S-U or letter grade. Course fee required. P. R. Bowser. This course is sponsored by Cornell University, the University of Pennsylvania, and three marine science institutes at Woods Hole: the Marine Biological Laboratory, Woods Hole Oceanographic Institution, and Northeast Center of the National Marine Fisheries Service. It is an advanced course in the comparative pathology of aquatic invertebrates and vertebrates commonly used as laboratory animals. The material presented will consist of discussions of the diseases of aquatic animals as well as extensive use of the microscope to examine the histopathology associated with these diseases. The course is taught by an invited faculty of twelve individuals who are leaders in their respective fields of aquatic animal medicine.

VTMED 615 Veterinary Medicine in Developing Nations
Spring. Offered alternate years. Offered spring 1997 and 1999. 2 credits. Maximum enrollment: 16. Emphasis on veterinary students, others by permission of instructor. Letter grade. K. A. Schat. Veterinary medicine has an important role to play in developing nations in (a) developing and providing economical sources of animal proteins for human consumption and (b) protecting ecological resources. This seminar course will provide interested veterinary students with information on and insight into the multitude of veterinary issues facing U.S. veterinarians working in developing nations.

VTMED 616 Diseases of Birds
Spring. 2 credits. Second-, third-, and fourth-year veterinary students. Enrollment minimum: 10; maximum: 80. Maximum enrollment: 20. Prerequisites: formal course work in diseases of aquatic animals, or appropriate experience and permission of the instructor. S-U or letter grade. E. J. Pearce. The primary objective of this lecture course is to make the student aware of the most important areas of research in contemporary pathobiology. Lectures will focus on a broad range of parasites, with an emphasis on those of medical importance. Recently published research articles and reviews will be used as the basis for discussion. Invasion of host defenses mechanisms by parasites, vaccination against parasitic infections, chemotherapy, drug resistance, vector biology, and molecular diagnosis. Biological processes (especially well understood through work on parasites, such as RNA editing and GPI-anchor biosynthesis and structure, will be covered in detail.)

VTMED 621 Neuroendocrine-Immune Interactions (also VETMI 721)
Spring. 1 credit. Offered alternate years. For second-, third-, and fourth-year veterinary students. Letter grade. J. A. Marsh. This five-week course is designed to provide the veterinary student with additional understanding of the functioning of the immune system, with an emphasis on the integration of immune development and function into the overall physiologic status of the organism. The student should gain an understanding that manipulation of either endocrine or immune organs has more far-reaching effects than just on the affected system. Major topics include: immunoregulatory activities of the neuroendocrine system; the cytokines—hormones or immune mediators; endocrine products of the immune system—functional or fictional; and neuroendocrine aspects of age-related changes in immune function.

VTMED 622 Foreign Infectious Diseases of Animals

VTMED 623 The Pathogenesis of Significant Bacterial Infections of Large Domestic Animals
Spring. 2 credits. Second-, third-, and fourth-year veterinary students. Letter grade. S. G. Campbell. This course will require three contact hours per week for eight weeks: One contact hour in a lecture format to summarize the current canons of important, selected information about significant bacterial diseases of large domesticated animals and to emphasize the pivotal events in pathogenesis, including, where applicable, localization, virulence, invasion, evasion, host reaction, lesion production, and resolution. Two additional contact hours will be used as follows:

- 50 percent—a local expert with focus on an important aspect of the above, e.g., treatment, clinical findings, diagnosis, current problems, etc., to bring reality and expertise to bear on the subject.
- 50 percent—a group of three students will present the results of their original explorations into one specific aspect of the particular week's infection. This might include an update of information, an in-depth look at one aspect of pathogenesis, or an intellectual attack on the current dogma about pathogenesis, treatment, or diagnosis.

VTMED 624 Feline Infectious Diseases
Spring. 1 credit. For second-, third-, and fourth-year veterinary students. Letter grade. F. W. Scott. This course will provide an opportunity for the student to understand and discuss the etiology, transmission, diagnosis, treatment, and prevention of various feline infectious diseases that are important in veterinary medicine. Feline diseases to be discussed include feline panleukopenia, feline respiratory disease, feline leukemia, feline immunodeficiency virus, feline infectious peritonitis, rabies, toxoplasmosis, and various bacterial infections.

VTMED 625 Osteoarthritis
Spring. 1 credit. Maximum enrollment: 16. Letter grade. G. Lust. This course provides a basis at the molecular, cellular, and tissue levels for understanding the function of mammalian diarthrodial joints. It includes a descriptive overview of the joint and the detailed composition and metabolism of bone, articular cartilage, ligaments, meniscus, capsule, and synovium. The interrelationship of synovium, synovial fluid, joint lubrication, articular cartilage, and bone matrix is emphasized. Biochemical, biomechanical considerations, and etiopathogenesis of osteoarthritis are demonstrated. A comprehensive discussion of the osteoarthritis that inextricably is associated with hip dysplasia in dogs serves as a basis for the etiopathogenesis of this disease. Osteoarthritis in joints of cats, dogs, horses, pigs, sheep, and cows also are discussed as detail as is osteochondrosis. Consideration also is given to infectious arthrits and also human joint diseases such as gout and pseudogout. The role of pain receptors, a brief discussion of therapy such as the role of nonsteroidal anti-inflammatory drugs, glucocorticoids, and mention of possible corrective surgery procedures are included.

VTMED 626 Epidemiology of Infectious Diseases
Spring. 1 credit. Second-, third-, and fourth-year veterinary students. Enrollment maximum: 8. H. Mohammed and others. This course will provide an introduction to epidemiologic methods used in the infectious disease investigations. The importance of surveillance systems in detecting modern epidemics and in the development of effective disease prevention and control strategies will also be discussed. An emphasis will be placed on understanding the relationships between the host, the agent and the environment as they relate to disease causation. The course will explore contemporary epidemiologic methods applicable to old diseases that remain real or potential problems, newly emerging infectious diseases, and nosocomial infections. Selected diseases will be discussed to clarify the role of epidemiology in understanding the pathogenesis of infectious processes in individuals and groups of animals. The students will have the opportunity to apply these methods they learned to actual disease problems and write an epidemiologic report that might lead to a publication in a peer-reviewed scientific journal.
VTMED 630 Clinical Biostatistics for Journal Review
The student will become familiar with the statistical methods commonly used in veterinary clinics and will be able to recognize obvious misuse of those methods.

VTMED 632 Senior Seminar
Fall and spring. 1 credit. S-U grade.
Senior Seminar Committee.
Attendance at fourteen of the senior seminar sessions presented during the academic year constitutes acceptable completion of this course.

VTMED 633 Introduction to Nontraditional Companion and Laboratory Animals
Spring. 1 credit. No minimum or maximum enrollment. Letter grade only.
J. E. Saidla (course leader) and others.
This course is both laboratory and lecture based and deals with a wide variety of nontraditional species that might be brought into a small animal practice other than a dog or cat. These can either be canine or laboratory animals and include rodents, lagomorphs, other small mammals, reptiles, amphibians, birds, fish, goats, sheep, potbellied pigs, primates, and llamas. Instruction in restraint and handling, breeding, husbandry, and general management information is provided for each species. This is followed, where practical, by laboratory sessions for observation, restraint, and physical examination.

VTMED 634 Introduction to Large Animal Ambulatory Practice
Fall, winter, spring, and summer. 1 credit.
For first- and second-year veterinary students. Letter grade. C. L. Guard (coordinator).
This course introduces veterinary students to primary care large animal ambulatory practice and herd health management through direct exposure to the Large Animal Ambulatory and Production Medicine Clinic Service of the Veterinary Medical Teaching Hospital. Students observe and assist with restraint, examination, and routine treatment of animals and communication with clients. Successful completion requires satisfactory participation during five days of clinical service.

VTMED 635 Introduction to the Professional Literature
This course introduces veterinary students to the professional and biomedical literature, including development of critical reading skills. Students will become familiar with the broad range of professional and biomedical literature and will be encouraged to develop a rigorous approach to journal and scientific article review. Secondary emphasis is on developing skills in library and bibliographic search techniques.

VTMED 637 Introduction to Community Practice at Seafood
Fall, spring, and summer. 1 credit.
W. E. Horbuckle.
This course introduces veterinary students to primary care small animal clinical practice through direct exposure to the Community Practice Service of the Veterinary Medical Teaching Hospital. Students observe and assist with restraint, examination and routine treatment of pets, and communication with clients. Successful completion requires satisfactory participation during ten half-days of clinical service.

VTMED 638 Physiological Nutrition
Spring. 1 credit. Minimum enrollment: 10; maximum: 90. For second-year veterinary students, others by permission of instructor. A. J. Reynolds.
This course will provide information on the evaluation and formulation of rations for large and small animals. These concepts will be applied in discussion on the nutrition requirements of these animals during maintenance, gestation, lactation, growth, stress, and aging. The class is recommended for all second-year veterinary students who do not have a strong background in ruminant, equine, canine, and feline nutrition. This course, or its equivalent, will be necessary for comprehension of clinical nutrition concepts in Foundation Course V.

VTMED 639 Veterinary Dentistry (Distribution Course)
Spring. 1 credit. Limited to second-, third-, and fourth-year students. Letter grade only.
The number of sections will be determined by the class size as the laboratory is limited to 24 students per section. J. E. Saidla.
This is an introductory-level course in small animal dentistry. It is a laboratory course that meets for two hours, twice a week for 14 sessions. Basic concepts and practical topics in dental nomenclature, dental anatomy, oral/dental examination, routine dental care including prophylaxis, recordkeeping, genetics and breed differences, feline-specific dental disease, occlusion/malocclusion, periodontics, endodontics, restorative dentistry, and orthodontics are presented. Basic instrumentation and materials used in dentistry are stressed. The class will use prepared specimens for all but two sessions and will perform live animal dental prophylaxis during these two sessions.

VTMED 640 Veterinary Aspects of Captive Wildlife Management
Spring. 2 credits. Letter grade. All years. G. V. Kollas.
This course will concentrate on principles of captive wildlife management, both clinical and nonclinical. Students will be challenged to learn and integrate a variety of disciplines that are essential to successfully managing wildlife in a captive or semi-free-ranging environment. These disciplines include but are not limited to species-specific (1) behavior and behavioral requirements, (2) nutritional requirements and problems, (3) natural history, (4) zoologic, and toxico logical problems, (5) manual restraint and recovery, (6) restraint and anesthesia, (7) legal and medical ethics.

VTMED 641 Approaches to Problems in Canine Infectious Diseases
The course consists of two 50-minute discussion periods a week for seven weeks. In the 8th week, students will work through cases in canine infectious diseases using a specifically designed software program. The course will emphasize the approach to clinical medical problems generally and infectious diseases specifically.

The overall objective is to give future small animal practitioners skills in the approach to clinical problems with an emphasis placed on history taking, clinical signs and examination skills, assessment of clinicopathology data and diagnostic materials (radiographs, ultrasounds), treatment plans, and prevention. The course expands knowledge gained in Foundation Course IV and under the instruction of a clinical faculty member is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases encountered in practice. A basic level of computer literacy is advised but not required.

VTMED 642 Management of Fluid and Electrolyte Disorders
Students will focus on clinical manifestations and the pathophysiologic mechanisms associated with fluid, electrolyte, and metabolic acid base disturbances in domestic animals. The course is divided into segments dealing with salt and water imbalances, potassium abnormalities, metabolic acidosis, metabolic alkalosis, and mixed acid-base disturbances.

VTMED 643 Fundamental Aspects of Embryo Transfer
This course provides an introduction to the theory and practice of embryo transfer in domestic animals. Topics include background, advantages and disadvantages, superovulation, embryo recovery techniques, embryo culture and manipulation, embryo transfer techniques, registration of offspring, import and export, and related areas. Students are exposed to practical techniques of embryo transfer in cattle, small ruminants, horses, and swine. The course consists of lectures, demonstrations, and laboratory classes during which students practice techniques of embryo recovery, evaluation, handling and transfer.

VTMED 644 Techniques in Equine Surgery
Winter. 1 credit. Limited to third- and fourth-year veterinary students. S. L. Fubini (coordinator) and others.
This course consists of six laboratories performing surgical procedures on ponies and cadaver specimens. It is the intent of this course not to make the students proficient in these procedures but to familiarize them with some specialized surgical techniques and to make them more proficient in the evaluation and management of common equine surgeons.

VTMED 645 Techniques in Food Animal Surgery
Winter. 1 credit. Limited to third- and fourth-year veterinary students. S. L. Fubini (coordinator) and others.
This course consists of four laboratories performing surgical procedures on sheep, calves, cadaver specimens, and adult cattle. It is the intent of this course not to make the
students proficient in these procedures but to familiarize them with surgical techniques and to introduce them to those preparing for more enlightened referring practitioners. The course, therefore, is intended for those students anticipating food animal practice after graduation. This course is offered during a one-week period over winter intersession.

VTMED 646 Llama Tutorial
Fall, spring, and summer. 1 credit. Limited to third- and fourth-year veterinary students. S-U grade. M. C. Smith. This autotutorial or group tutorial course covers common problems of llamas and alpacas. Each week, participants will be provided with a brief case description and a set of sample study questions. Reference will be made to textbooks, journal articles, videotapes, and (if available) a teaching llama to assist students in finding the answers to the questions efficiently. Grading is based on an oral exam.

VTMED 647 Poisonous Plants
Fall. 1 credit. All years; students from other colleges by permission of the instructor. S-U grade. R. Hillman and M. Smith. Field trips demonstrate toxic plants growing in natural and cultivated settings. Lectures address economically important poisonous plants native to the United States. Information presented includes plant identification, natural habitat, toxic principles, clinical signs of toxicity, and treatment and prevention of poisoning in livestock. Some of the major toxic principles found in plants and considered in detail in the course are nitrates, cyanide, oxalates, photodynamic agents, alkaloids, and mycotoxins.

VTMED 648 Clinical Management of Native Wildlife
Fall, spring, and summer. 1 credit. All years. Letter grade. G. Kollia and staff. This course introduces veterinary students to primary native wildlife care and to wildlife issues that face practicing veterinarians on a daily basis. Students are responsible for the assessment, physical examination, and medical care of native wildlife presented to the Veterinary Medical Teaching Hospital by the public and local wildlife rehabilitators. Student activities are directly supervised and assessed by faculty wildlife clinicians on a daily basis. Successful completion of the course requires 40 hours of satisfactory supervised participation per semester in the clinic. Clinic times will be appropriately scheduled throughout the semester. Students are required to attend organized rounds one hour per week and submit three case summaries before the end of the semester.

VTMED 649 Introduction to Equine Practice
Spring. 0.5 credit. All years. Enrollment: no limit; maximum 18. R. Hackett and C. Collyer. This is an introductory course in equine husbandry intended for students with little or no experience working with horses. Lecture topics will include horse breeds and colors, housing facilities and fencing, and overview discussions of the racing, showing, and breeding industries. Laboratories will emphasize basic equine handling and restraint as well as feeds and bedding.

VTMED 650 Veterinary Parasitology (Large Animals)
Spring. Offered alternate years. 1 credit. All students. Letter grade. D. Bowman. This course provides a basic introduction to large animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoaan parasites. Emphasis will be given to parasites representative of significant disease processes or of significant economic importance to veterinarians, clients, and producers. The course will be based on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced through examples of each of the different groups of organisms.

VTMED 651 Veterinary Parasitology: Small Animals
Spring (Feb—Mar—4 weeks, Apr—May—4 weeks). Offered in 1996, not in 1997. 1 credit. Letter grade only. All years. D. Bowman. This course provides a basic introduction to small-animal parasites of veterinary importance, concentrating mainly on the biology, control, and diagnosis of protozoan and metazoaan parasites. Emphasis will be given to parasites representative of significant disease processes or of significant clinical importance to veterinarians and pet owners. The course will elaborate on the biology and pathogenesis of these major pathogens with the ultimate goal being to maximize the recognition of the major disease manifestations induced through examples of each of the different groups of organisms.

VTMED 652 Avian Medicine and Surgery
Spring (Mar—May—8 weeks). 1 credit. Third- and fourth-year veterinary students. Enrollment: 20 minimum; 80 maximum. Letter grade only. G. Kollia and others. This course is designed to introduce third- and fourth-year veterinary students to the principles and practice of clinical avian medicine and surgery. The course will be taught in a basic didactic lecture and discussion format with two laboratories that will reinforce concepts presented in the lectures.

VTMED 653 Advanced Equine Lameness
Spring (Apr—May—4 weeks). 1.5 credits. Third- and fourth-year veterinary students. Enrollment: 7 minimum; 21 maximum. Letter grade only. N. Ducharme and others. This course is designed to help students understand the methodology and to develop the manual skills required for lameness examination in horses. Emphasis will be on developing skills. Specifically, the student will be expected to develop proficiency in the identification of clinical characteristics associated with recognized lamenesses and to localize the origin of the lameness. The course will include videos modules outlining various gait abnormalities. In addition, horses with specific gait abnormalities will be available for physical, radiographic, and ultrasonographic examination.

VTMED 654 Current Therapy in Equine Reproduction
Spring (Apr—May—4 weeks). 2 credits. Lecture portion: 1 credit; laboratory portion: 1 credit. Enrollment: lecture, no limit; laboratory exercises, 12 minimum; maximum 24. Third- and fourth-year veterinary students. Letter grade only. P. Daels. This course will cover aspects of physiology and therapy of equine reproduction. The purpose of the course is to prepare the student for equine broodmare practice.

VTMED 655 Production Animal Theriogenology
Theriogenology
Spring (Mar—Apr—4 weeks). 2 credits. Lecture portion: 1 credit; laboratory portion: 1 credit. Third- and fourth-year veterinary students. Enrollment: lecture, no limit; laboratory, 12 minimum; maximum 24. R. Gilbert. This course deals with specific reproductive conditions of production animals as well as reproductive management of production units. Content includes reproductive biology of production animals, economic considerations, and medical and surgical approaches to management of reproductive disorders. Laboratory sessions are tailored to acquisition of specific skills fundamental to the practice of theriogenology of production animals.

VTMED 656 Special Problems in Equine Medicine
Spring (Feb—Mar—4 weeks, Apr—May—4 weeks). 1.5 credits. Third- and fourth-year veterinary students. Enrollment: minimum, 10; maximum, 30. S-U grades. T. Divers and others. This course is intended for students who plan to or may enter equine practice. In-depth study of important diseases, health management, and hands-on procedures will be the core of this course.

VTMED 657 Disorders of Large Animal Neonates
Spring. 1 credit. Enrollment: minimum, 10; maximum, 100. All years. D. Ainsworth. The common medical problems of foals and calves, with emphasis placed on the neonatal period, are discussed. Specific topics examined in detail include disorders affecting the respiratory, gastrointestinal, and musculoskeletal systems. Laboratory work will also depend several hours in the neonatal intensive care unit providing medical care of hospitalized patients under staff supervision.

VTMED 658 Small Animal Orthopedic Surgery
Spring (Mar—Apr—4 hours, Apr—May—4 hours). 0.5 credit. Enrollment: no minimum; 80 maximum. Third- and fourth-year veterinary students. E. Trotter. This course is essentially a laboratory course utilizing inanimate models (Sawbones) and appropriate orthopedic equipment. Working in pairs, students perform a variety of surgical techniques for both the external and internal fixation of fractures under the direct supervision of board certified orthopedic surgeons. No live animals are used. Sawbones (canine bone models), available from Pacific Research Laboratories, provide an inexpensive alternative to live animals. Utilizing these models, students should further develop their orthopedic surgical skills outside the operating room setting as a supplement to didactic instruction.

VTMED 659 Equine Soft Tissue Surgery
Equine Soft Tissue Surgery
Spring (Jan—Feb—4 weeks). 1 credit. Enrollment: minimum, 6; maximum 21. Third- and fourth-year veterinary students. Letter grades. R. Hackett and others. This course, intended for students anticipating equine practice after graduation, will build
upon material presented in the foundation courses to provide supplemental instruction in surgical disorders of the horse. Lectures will be case based and emphasize those disorders likely to be encountered in equine practice (colic, traumatic injuries, dentistry, upper respiratory tract diseases, postoperative examination). Laboratories will emphasize those diagnostic and therapeutic procedures in which an entry-level equine practitioner should be competent.

**VTMED 660 Twenty Questions on ECM (Extracellular Matrix)**
Spring. 1 credit. Letter grades. R. M. Minoff.
This course will explore the roles of ECM in embryonic development and tissue regeneration and repair.

**VTMED 661 Surgical Pathology**
Spring, summer, fall. Variable 1–2 credits. For second-, third-, and fourth-year veterinary students. Letter grades. B. A. Valentine.
This two-week course (approximately eight hours per day for 2 credits) will provide hands-on experience in the Surgical Pathology Service of the Department of Pathology. Students will assist in tissue selection and sample submission and in trimming and preparing specimens. Working with residents and the attending pathologist, they will examine tissue specimens histologically, propose diagnoses, and discuss their interpretations.

**VTMED 662 The Bottom Line**
Fall and spring. 1 credit. S-U grades only. R. Lewis.
This course provides case analysis of material submitted to the necropsy service. Gross and microscopic lesions for each disease/condition are emphasized and correlated with relevant anatomic findings. When appropriate, pathogenetic mechanisms, epidemiology, etiology, prevention, and treatment are included in the discussion.

**VTMED 663 Wildlife Pathology**
This course introduces students to common and important lesions of wild species of animals. The etiology and pathogenesis of diseases of importance to wildlife are discussed. Slide presentations of lesions are made, and they are discussed by an experienced pathologist.

The nature and causes of diseases of wild rabbits, opossums, squirrels, deer, certain waterfowl, and other species are presented. Emphasis is on epizootiology, etiology, pathogenesis, diagnostic lesions, and effects on populations. Laboratory experience is provided in specimen collection and necropsy techniques. Guest lectures are provided on ecology and population dynamics by members of the Department of Natural Resources.

**VTMED 664 Veterinary Clinical Immunology**
Fall and spring. 1 credit. All years. Enrollment minimum of 12 students. Letter grades. R. Lewis.
This course is a case-based discussion course in which selected diseases of immunologic origin are presented for and by the students. Emphasis is placed on the immunologic mechanisms which lead to clinical disease.

Review of hospital medical records, selection of an appropriate case, and written assessment of the case forms the basis of student evaluation.

**VTMED 665 Medical and Surgical Problems of Dairy Cattle—Emphasis on the Individual Animal**
This course will provide students with a special interest in dairy practice the opportunity for in-depth discussions of special problems in bovine medicine and surgery. Emphasis will be on case discussions, physical examination techniques, and ethical and practical matters. The course will emphasize individual cow treatment and will be taught by members of the large animal medicine and surgery faculty.

**VTMED 666 Small Animal Clinical Oncology**
This course will present common tumor syndromes in small animals. Emphasis will be placed on biological behavior, patient management, and client relations. Format will include lectures, journal club discussions, demonstrations, and seminars.

**VTMED 667 Special Problems in Small Animal Medicine**
Spring. 2 credits. Enrollment minimum 10; maximum 40. Third- and fourth-year veterinary students. K. Simpson and others.
During the 4-week course, students will work through cases in small animal medicine. The course consists of a 50-minute weekly discussion period. The focus will be on the medical problems associated with cases using historic, clinical, clinical pathologic, and pathologic findings to elucidate basic pathophysiologic principles of disease. The overall objective is to give future small animal practitioners skills in the approach to clinical problems with specific emphasis placed on history taking, clinical signs and examination skills, assessment, biopathology data and diagnostic materials (radiographs, ultrasounds), treatment plans, and prevention. The course expands knowledge gained in Foundation Course V and, under the instruction of a clinical faculty member, is aimed at facilitating the use of that knowledge into the practical skills of managing clinical cases.

**VTMED 668 Practice Management**
Spring. 2 credits. Limited to third-year veterinary students. The number of sections will be determined by the enrollment. Letter grades. J. E. Saitta.
Course participants form a veterinary group practice that includes the specialties of each person's interest. Topics are presented and discussed in the staff meeting format of the practice. Topics include basic practice organization, leadership styles, career planning, communication skills, facility management, human resource management, maintenance of standards, marketing and merchandising, maintaining clients, practice growth, finances, computing systems and information management, money management, legal issues and insurance, professional relations and responsibility, and maintaining an acceptable quality of life, including stress management. Three area veterinary practices are visited, toured, and reviewed by the group to find different successful examples of good management and organization.

**VTMED 669 Sheep and Goat Medicine**
Spring. 1 or 1.5 credits. (Lecures only: 1 credit; lectures plus laboratory: 1.5 credits). S-U grading. Third- and fourth-year veterinary students; others by permission of instructor. M. Smith.
This course will discuss diagnosis, treatment, and prevention of medical and surgical problems of individual small ruminants of sheep and goat herds. Basic information on breeds, behavior, nutritional requirements, and management systems will be supplied. Economically important contagious or metabolic diseases will be discussed in depth. The diagnostic evaluation and differential diagnoses for clinical presentations such as skin disease, neurologic disease, lameness, and mastitis will be considered. Herd monitoring of economically important parameters and necropsy diagnosis of abortions and neonatal losses will be addressed. Breeding systems, pregnancy diagnosis methods, and correction of dystocia will be discussed and demonstrated in optional laboratory sessions.

**VTMED 670 Drug Handling in the Body**
Spring. 0.5 credit. Maximum enrollment: 60. For second-, third-, and fourth-year veterinary students. Letter grade. R. A. Cerone.
This course will provide an in-depth consideration of the pharmacological principles of administration, adsorption, distribution, metabolism, and elimination of drugs. Emphasis will be on the conceptual basis of the pharmacokinetic considerations in the therapeutic use of drugs. The course will build on the pharmacological and physiological principles learned in Foundation Course III. The course will include independent study pharmacokinetic exercises using interactive computer courseware.

**VTMED 671 Autonomic Pharmacology**
Spring, each year. 0.5 credit. Maximum enrollment: 50. For second-, third-, and fourth-year veterinary students. Letter grade. G. A. Weiland.
This course will provide an in-depth consideration of the pharmacological and physiological principles of autonomic pharmacology. Molecular, cellular, and organ system mechanisms will be emphasized. The course will explore in most detail the fundamental pharmacological and physiological principles of the effects of drugs on autonomic organs covered in Foundation Course III.

**VTMED 672 Antimicrobial Drug Therapy in Veterinary Medicine**
Spring. 1 credit. For second-, third-, and fourth-year DVM students. Letter grade. W. S. Schwark.
The objective of this course is to familiarize students with antimicrobial drugs used in veterinary practice. The course will build on fundamental pharmacological and microbiological principles covered in Foundation Courses III and IV and will consider antibacterial, antifungal, antiparasitic, and antitumor drugs from the point of view of unique
pharmacokinetic properties, indications for clinical use, and potential toxicities as the basis for rational use.

**[VTMED 673 Growth Factor-Coupled Signal Transduction]**

Spring, alternate years. Next offered spring 1998. 0.5 credit. Letter grade.

R. A. Cerione.

This course will present basic information regarding the regulation of cell growth and differentiation. The emphasis will be on the signal transduction pathways that are responsible for translating growth factor binding at the cell surface into nuclear responses and cell proliferation. The course should complement cases covered in Foundation Course V and tie together the biochemical pathways underlying cell growth with biological processes such as wound healing and disease states such as cancer.

**[VTMED 674 Physiology and Pharmacology in the Understanding and Treatment of Diabetes]**

Spring, even-numbered years. 1 credit. Maximum enrollment: 24. Letter grade.

G. Sharp.

This course will cover the basic causes of the manifestations of diabetes, signal transduction mechanisms controlling insulin secretion and insulin action, and the principles underlying current and potential future treatment for this group of diseases. The course will stress the value of basic research into cellular and molecular mechanisms for the treatment and cure of disease.

**[VTMED 675 Fundamental Principles of Vertebrate Central Nervous System Pharmacology]**

Spring, every year. 0.5 credit. Enrollment: 6 minimum; maximum open. Second-, third-, and fourth-year veterinary students. Letter grade.

Linda M. Nowak.

This course will include up-to-date knowledge of physiological and pharmacological aspects of the main central nervous system neurotransmitter receptors and provide a basis for rational understanding of the drugs used during surgery and in treatment of neurological diseases.

**[VTMED 676 Clinical Pharmacology]**

Spring (Feb-Mar—4 wks). 0.5 credit. Enrollment: no minimum/maximum. Third- and fourth-year veterinary students. Letter grade.

W. Schwark.

This course is offered after Blocks I-V and formal exposure to pharmacology coursework is completed. The course is designed to familiarize students with drug use in the clinical setting and utilizes ongoing cases in the teaching hospital as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, utilizing basic concepts obtained during formal coursework. The onus will be placed on the student to explain, rationalize, and discuss drugs employed in clinical cases in the teaching hospital.

**[VTMED 677 Dairy Production Medicine]**

Fall. 2 credits. Enrollment: 6 minimum; maximum 14. Third- and fourth-year veterinary students. Letter grade.

C. Guard.

This is an intermediate course in the techniques and procedures used by veterinarians in modern dairy practice. Many of these activities fall outside the traditional boundaries of medicine, surgery, and theriogenology and might include housing, facilities, manure management, and employee education. Data analysis, disease and productivity monitoring, and evaluation of deviations from targeted performance. Planning cost-effective interventions or corrections, followed by continued surveillance to monitor their effect. Students will be introduced to the dominant software currently used in dairy management. Local dairy herds will serve as additional laboratories for class projects.

**[VTMED 678 Small Animal Theriogenology]**

Spring (Feb-Mar—4 wks). 0.5 credit. Third- and fourth-year veterinary students. R. Gilbert.

This is a distribution course in a lecture-based format designed to complement the knowledge gained in the theriogenology component of Foundation Course V, Animal Health and Disease. Content includes discussion of breeding management, infectious and non-infectious causes of infertility and pathology of the male and female reproductive tracts, their diagnosis and management. The emphasis of the course will be on conditions affecting dogs and cats, but some conditions of other common pet species will be discussed.

**[VTMED 679 Clinical Pharmacology]**

Spring. 1 credit. Enrollment: no minimum/maximum. Third- and fourth-year veterinary students. Letter grade.

W. Schwark.

This course is offered after Blocks I-V and formal exposure to pharmacology coursework is completed. The course is designed to familiarize students with drug use in the clinical setting and utilizes ongoing cases in the teaching hospital as a teaching tool. Pharmacological concepts are emphasized, with a focus on the rationale for drug choice, alternative drug choices available, pharmacokinetic considerations, and potential drug interactions/toxicities. This course is offered at the time students are about to embark on their clinical rotations. It is designed to emphasize practical aspects of pharmacology in the clinical setting, utilizing basic concepts obtained during formal coursework. The onus will be placed on the student to explain, rationalize, and discuss drugs employed in clinical cases in the teaching hospital.

**[VTMED 680 Behavior Problems of Horses]**

The goal of this course is to give veterinary students the ability to treat the behavior problems of-taking, counseling, diagnostic tests, follow-up, the importance of cooperation with the referring veterinarian, prevention of behavior problems, training techniques of value to the practitio­ner, and socialization of foals will be presented.

**[VTMED 681 Behavior Problems of Small Animals]**

The goal of this course is to give veterinary students the ability to treat the behavior problems of cats and dogs. History-taking, counseling, and follow-up methods will be presented. Each student will have the opportunity to participate in cases. Behavioral and pharmacological treatments for behavior problems will be presented.

**[VTMED 684 Thermal Regulation and Exercise (also BioS 713)]**

Fall. 1 credit. Offered alternate years. Next offered fall 1997. Letter grade.

D. Robertshaw.

An examination of the competing demands on the body of exercise and heat exposure with particular emphasis on the cardiopulmonary system and integration of thermoregulatory reflexes.

**[VTMED 685 Physiology of Pregnancy]**

Spring. 2 credits. Maximum enrollment: 20. For second-, third-, and fourth-year veterinary students. Letter grade.

P. W. Nathanielz.

This course is presented in lecture fashion, with weekly assignments consisting of one major reference per lecture related to that week's work to review. Subjects covered are placental function, fetal growth, central nervous system development, fetal breathing, biometrics in maternal and fetal physiology, parturition, and adaptations to newborn life.

**[VTMED 686 Proteolyis in Physiological Function and Metabolism (also BIOAP 712 and BIOBM 732)]**

J. F. Wooton.

This course, which uses a lecture and seminar format, deals with the role of proteolytic enzymes and related peptides in physiological function and their regulation. Topics will include several of the following: comparative aspects of gastrointestinal, intracellular, and extracellular proteolysis in protein turnover, control of posttranslational processing and targeting of proteins; hemostasis; fibrosis and fibrinolysis; endocrine regulation; viral infectivity (e.g., AIDS); tumor metastasis; remodeling of cellular function; apoptosis.

**[VTMED 687 Topics in the Physiology and Pathophysiology of the Digestive Tract: Simple Stomached Animals]**

Spring, weeks 1–8. 1 credit. Offered alternate years. Offered spring 1997 and 1999. Limited to 20 students. For second- and third-year veterinary students. Letter grade.

A seminar course in which topics relevant to clinical problems will be considered at a fundamental level based upon the current literature. A mix of brief lectures, student reports on research papers, and discussion by the group. Primarily gastrointestinal problems of dogs, cats, and pigs. Examples are gastric secretion and the gastric mucosal barrier (Why doesn't the stomach digest itself?); pancreatic function and pancreatitis (Why doesn't the pancreas digest itself?); the enteric nervous system and ileus (How can the intestines become paralyzed?).

**[VTMED 688 International Animal Agriculture]**

Spring, alternate years (next offered spring 1998). 2 credits. Letter grade.

D. Robertshaw.

This course will introduce students to the incidence and role of disease in animal production systems in developing countries. Agriculture is fundamental to the economy and economic stability of virtually all of these countries, and animal agriculture is an integral part of their systems ranging from the modest small ruminant farmer to large parastatal beef-dairy operations. The focus will be on the peasant farmer since the large operations are usually relatively well managed but represent only a very small component of the total agricultural economy. The scope will be broad and will serve only as an introduction to the subject. The breadth of the suggested readings will provide those who are interested with an avenue for individual exploration.)
VTMED 689 Fundamentals of Ruminant Digestion
Spring, weeks 1-7. 0.5 credit. All years. Minimum enrollment: 6. Letter grade.
T. R. Houpt
This course is designed for the student with little or no previous course work in ruminant digestive physiology. It will consist primarily of lectures surveying the functional aspects of: control of feed intake; salivation; reticulorumen motility, including rumination and eructation; microbial flora and fauna; fermentation in reticulorumens (digestion of carbohydrates, proteins and fats); ruminal gas formation; absorption of short-haired fatty acids, special features of ruminal nitrogen metabolism, passage of nutrients to lower tract; and a brief consideration of the functions of omasum, abomasum, small and large intestines. Emphasis will be on the differences of the ruminant digestive processes from those of the simple-stomached animals.

VTMED 690 Molecular and Genetic Basis of Metabolic Disorders in Animals
Spring, every other year. Offered spring 1997. 2 credits. All years. Enrollment: 5 minimum; 15 maximum. Letter grade: P/F.
This course introduces the molecular basis of metabolic diseases in domestic animals. Topics include several inherited metabolic defects causing systematic malfunctions; muscle, bone abnormalities; retinal degeneration; failure of the immune systems. Techniques to characterize genes and mutations. Use of molecular techniques for diagnosis and prevention. Use of molecular tools for the treatment of inherited disorders.

VTMED 692 Current Concepts in Reproductive Biology
Fall. 3 credits. First-, second-, and third-year veterinary students or appropriate undergraduate/graduate training. Letter grade: J. Fortune, R. Butler.
This is a team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrine regulation, ovarian development and function, oocyte physiology/function); pregnancy, parturition, puberty, and reproductive technology. Student participation in the form of discussions and/or presentations.

VTMED 693 Regulation of Skeletal Metabolism
Spring, alternate (even) years. 1 credit. Fall: 6 minimum; no maximum. Second-, third-, and fourth-year veterinary students. Others students by permission of instructor. Letter grade: R. Wasserman.
This lecture consists of discussions of the cellular and physiological basis of bone formation, bone loss, and bone turnover. The origin, function, and hormonal regulation of bone cells—the osteoblasts, osteocytes, and osteoclasts—will be covered in some detail. Current information on the homeostatic regulation of the primary minerals of bone—calcium and phosphorus, will also be brought forth. Discussions of selected skeletal diseases, such as osteoporosis, osteoarthritis, rickets, and renal osteodystrophy, will provide the clinical underpinnings of the course, and will contribute to an understanding of bone cell function and dysfunction.

VTMED 694 Physiological and Pharmacological in the Understanding and Treatment of Diarrhea
Spring, alternate (even-numbered) years. 1 credit. Enrollment: maximum 24. Second-, third-, and fourth-year veterinary students: G. Sharp.

VTMED 695 Genetic Basis of Eye Diseases
This course covers the topic of the molecular and genetic basis of inherited eye diseases in domestic and laboratory animals. It is aimed at the professional student in the veterinary curriculum, but is open to graduate level students. Students will both attend classes and present to other students. Emphasis will be on the care of the high-risk patient, fluid therapy, drug interactions, pain management, treatment of cardiovascular complications, cardiopulmonary resuscitation, and post-anesthetic management.

VTMED 696 Fundamental Principles and Anasthetic Techniques for Small Animal Practice
This course is designed for the veterinary student with interest in small animal practice. It will consist of lectures, case discussions, and anesthetic protocol development for routine and complicated cases. Subjects covered in the course will include: management of anesthesia for elective surgery, management of the high-risk patient, fluid therapy, drug interactions, pain management, treatment of cardiovascular complications, cardiopulmonary resuscitation, and post-anesthetic management.

VTMED 700 Theriogenology Service
Spring, 2 or 4 credits. Enrollment min/max: 3-6. Third- and fourth-year veterinary students: R. O. Gilbert and others.
This clinical service rotation is offered to provide additional hands-on experience in all phases of theriogenology. Equine reproductively experience is gained in teasing, rectal palpations, ultrasound scanning, semen collection and evaluation, natural breeding, and artificial insemination. Additional techniques emphasized include taking and evaluating endometrial biopsies, equine uterine culture, and collecting and evaluating endometrial cytology smears. Bovine experience includes weekly trips to the slaughterhouse, where rectal-palpation findings can be compared to actual structures present in recovered tracts. Additional experience in rectal palpation is gained by following cyclic changes in assigned cows in the college dairy herd as well as by participating in herd-health palpations. Hands-on experience is provided in reproductive biopsies and embryo recovery techniques, as well as in surgical deviation of the penis to provide teaser balls. Trips to the Department of Animal Science sheep and swine barns allow observation of bovine breeding, ovary palpation, and experience in castration, docking, clipping milk teeth, and notching ears. Weekly seminars are presented on current topics in theriogenology.

VTMED 701 Cardiology Service
Fall and spring. 2 credits. Enrollment min/max: 3-6. Third- and fourth-year veterinary students. Letter grades: S. Moise.
The purpose of the cardiology rotation is to provide the student with the opportunity to put into practice what they have learned in the foundational years. The management of the most common cardiovascular diseases will be emphasized including congestive heart failure, arrhythmias, and secondary cardiac diseases. All species will be examined, large and small, although the major focus will be on large animals. Diagnostics includes cardiovascular physical examination, electrocardiography, radiography, and echocardiography will be taught. The rotation includes clinical work, didactic teaching, and self-directed learning for information. An oral report concerning a clinical case study will be required for completion of this rotation.
VETERINARY MEDICINE - 1996-1997

VTMED 702 Laboratory Animal Medicine
Fall and spring. 2 credits. Enrollment min/max. Third- and fourth-year veterinary students. Letter grades. F. Quinby and others.

The practice of laboratory animal medicine requires a combination of preventive programs, clinical skills, knowledge of various species' biologies, familiarity with research methodology, and acquaintance with state and federal regulations. This course is offered as a two-week introduction to that specialty. Students accompany laboratory animal veterinarians on clinical rounds of Cornell's research animal housing and participate in laboratory diagnostic work. Review sessions are conducted on the biology, medicine, pathology, and husbandry of rodents, rabbits, and primates and on current legislation regulating the care and use of research animals. The course may include a field trip to the research animal facilities of Rockefeller University, the Cornell University Medical College, Marshall Farms, and the Laboratory of Experimental Medicine and Surgery in Primates.

VTMED 703 Clinical Wildlife and Exotic Animal Medicine
Fall, winter, spring, and summer. 2 credits. Enrollment min/max. Third- and fourth-year veterinary students. Letter grades. G. V. Kollias and others.

This course introduces students to primary medical care of non-traditional pet species including birds, reptiles, amphibians, ferrets, rabbits, and pocket pets. Students are responsible for the assessment, physical examination, and medical management of exotic animal species presented to the veterinary teaching hospital. Other opportunities available to assist in the development of clinical skills in wildlife and exotic animal medicine include the Wildlife Clinic, Cornell Raptor Program, Reynolds Game Farm, and ongoing wildlife research projects. Successful completion of the course requires satisfactory participation during this 14-day clinical rotation.

VTMED 704 Quality Milk
Fall or spring. 2 credits. Enrollment min/max. Third- and fourth-year veterinary students. Letter grades. R. Gonzalez, D. Wilson and others.

This course covers the causes, diagnosis, treatment, and prevention of bovine mastitis. The role of management practices is stressed. The course includes lectures, readings, discussions, laboratory exercises, and farm visits as part of the Quality Milk Promotion Services—New York State Mastitis Control Program.

VTMED 705 Special Opportunities in Clinical Veterinary Medicine
Fall, spring, and summer. Variable credits. Enrollment min/max. Third- and fourth-year veterinary students. S-U grades only.

This course provides opportunities for students after the end of Foundation Course V to explore professional areas not available through the regular curriculum. Blocks of two to four weeks are usually spent at other teaching hospitals, research laboratories, or zoological facilities. Student proposals are submitted to the associate dean for academic program review and approval. On-site supervisors of the block act as ex-officio faculty members and are required to evaluate each student formally.

ANATOMY

VETA 600 Special Projects in Anatomy (Selective)
Fall and spring. 1 credit per 2.5-hour period. By permission of the instructor. S-U grades only.

VETA 604 Mechanics of Animal Movement
Spring. 2 credits. Open to veterinary students, graduate students, and qualified undergraduates with permission of the instructor. J. E. A. Bertram. For course description, see VETMD 604.

VETA 700 Predictions of Form or Function
Spring. 1 credit. By permission of the instructor. S-U optional grading. J. W. Hermanson.

Form and function are often discussed as a correlated entity in biology. This seminar group will start with the question, "Does form really predict function?" This will be addressed initially with respect to the analysis of paleobiology, but will then encompass examples of experimental functional morphology. In particular, there is a growing body of experimental data demonstrating that diverse functions can be achieved with nearly identical morphologies, and that the functional diversity may better be explained by behavior or environmental factors. Might these observations refute current theories about the origin of flight in extinct organisms (i.e., the cursorial or ground-up theory of flight versus the arboreal gliding theory of flight evolution)? Specific topics will be selected by participants in this course. Participation will be open to interested graduate students, advanced undergraduate students, and veterinary students.

CLINICAL SCIENCES

VETCS 664 Introduction to Epidemiology (Graduate)
Fall. 3 credits. Prerequisites: Statistics and Biometry 601 (College of Agriculture and Life Sciences) may be taken concurrently. S-U grades optional. Lectures and discussion deal with the fundamentals of epidemiology. Current topics in epidemiology from the fields of nutrition, infectious and chronic diseases, occupational health, and environmental factors. Might these observations refute current theories about the origin of flight in extinct organisms (i.e., the cursorial or ground-up theory of flight versus the arboreal gliding theory of flight evolution)? Specific topics will be selected by participants in this course. Participation will be open to interested graduate students, advanced undergraduate students, and veterinary students.

VETCS 665 Study Designs (Graduate)
Spring. 2 credits. Prerequisites: VETCS 664 and Statistics and Biometry 601 (College of Agriculture and Life Sciences). S-U grades optional. H. O. Mohammed. Design and interpretation of cross-sectional, case-control, and cohort studies (including controlled clinical trial) are covered. Design issues will include sample size, bias, and relative advantages and disadvantages.

VETCS 666 Advanced Methods in Epidemiology (Graduate)
Fall. 3 credits. Prerequisites: VETCS 665 and Statistics and Biometry 602 (College of Agriculture and Life Sciences). S-U grades optional. T. Grohn.

CONCEPTS IN VETERINARY MEDICINE - 1996-1997

Concepts introduced in VETCS 664 and VETCS 665 are further developed, with emphasis on statistical methods. Topics include interaction, effect modification, stratified analysis, matching and multivariate (logistic regression) methods, survival analysis, and strategies for the analysis of epidemiologic data.

VETCS 700 Pathophysiology of Gastrointestinal Surgery (Graduate)
Fall, every third year. 1.5 credits. Not offered 1996 or 1997; next offered fall 1998. S-U grades only.

VETCS 701 Pathophysiology of Orthopedic Surgery (Graduate)
Spring, every third year. 1.5 credits. Not offered 1997 or 1998; next offered spring 1999. S-U grades only.

VETCS 702 Pathophysiology of Cardiopulmonary Surgery (Graduate)
Fall, every third year. Offered fall 1996 and 1999. 1.5 credits. Prerequisite: DVM degree or equivalent. R. P. Hackett, S. L. Fubini, N. G. Ducharme, H. J. Harvey. Using lectures and group discussions, the objective of this course is to explain the pathophysiology of various cardiovascular diseases (cardiac arrest, cardiac arrhythmia under anesthesia) and thoracic disease (various forms of upper airway resistance). The emphasis is placed on understanding these mechanisms and outlining the surgeon's response to these.

VETCS 703 Surgical Principles and Surgery of the Integumentary System (Graduate)
Spring, every third year. Offered spring 1999. 1.5 credits. S-U grades only.

This course is designed for surgery residents and graduate students. It is largely discussion format and examines surgical principles and surgery of the integumentary system.

VETCS 704 Pathophysiology of Urogenital Surgery (Graduate)
Fall, every third year. Offered fall 1997. 1.5 credits. S-U grades only.

VETCS 705 Animal Pain and Its Control (Graduate)
Spring, 1997 and 1999. 2 credits. By permission of the instructor. Letter or S-U option. C. E. Short. This course is open to interns, residents, graduate students, and postdoctoral associates to provide instruction in fundamental and applied concepts of animal pain. The emphasis will be on neurologic, cardiology, and endocrine responses to either noxious stimulation or pain due to injury and disease processes and the medications used for its control. The subject material will be covered by lectures, group discussions, and group evaluation of protocols to treat or prevent animal pain.

VETCS 706 Pathophysiology of Neurologic Surgery (Graduate)
Spring, every third year. Next offered spring 1998. 1.5 credits. S-U grades only.

VETCS 707 Clinical Biostatistics (Graduate)
The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

**VETCS 708 Epidemiology Seminar Series (Graduate)**
Fall and spring. 1 credit. S-U grades only. Epidemiology faculty. Advanced theoretical and analytical epidemiologic concepts and techniques will be discussed.

**VETCS 710 Advanced Veterinary Anesthesiology I**
Fall and winter. Third- and fourth-year veterinary students, graduate students, interns, and residents. Prerequisites: VTMED 558 Veterinary Anesthesiology or permission from instructor. S-U grading. P. F. Moon (coordinator) and others. The content of the course is designed for preparation for the American College of Veterinary Anesthesiology Board Exam. However, the course is also suitable for residency training in other areas such as surgery and internal medicine. Speakers will be from both inside and outside the college. Topics will cover the basic sciences as they apply to anesthesiology such as physics and engineering, applied pharmacology, physiology and pathology. Clinically oriented lectures will also be given concerning specific anesthetic techniques and species-specific differences in response to anesthetic drugs.

**VETCS 711 Advanced Veterinary Anesthesiology II**
Fall and winter. 1 credit. Third- and fourth-year veterinary students, graduate students, interns, and residents. Prerequisites: VTMED 558, Veterinary Anesthesiology I or permission from instructor. S-U grading. P. F. Moon (coordinator) and others. For course description, see VETCS 710.

**VETCS 765 Graduate Research (Graduate)**
Fall, spring, and summer. Credit and hours to be arranged. By permission of the graduate faculty member concerned. S-U grades only. Epidemiology faculty.

**VETCS 768 Master's-Level Thesis Research (Graduate)**
Fall or spring. 1-6 credits. S-U grading. Epidemiology faculty. This course enables graduate students in the Section of Epidemiology to receive graduate research credits for master's-level thesis research.

**VETCS 769 Doctoral-Level Thesis Research (Graduate)**
Fall or spring. 1-6 credits. S-U grading. Epidemiology faculty. This course enables students in the Section of Epidemiology to receive graduate research credits for doctoral-level thesis research.

**VETCS 799 Independent Studies in Epidemiology**
Fall and spring. 1-3 credits. H. N. Erb, Y. T. Grohn, H. O. Mohammed, J. M. Scarlett. The purpose of this course is to investigate an epidemiologic topic with one of the instructors. It provides experience in problem definition, research design, and the analysis of epidemiologic data.

**DIAGNOSTIC LABORATORY**

**VETDL 700 Special Projects in Diagnostic Endocrinology (Selective)**
Fall and spring. 1-3 credits. By permission of the instructor. Letter grades only. T. J. Reimers. An independent study course. Students have the opportunity to research a particular topic in diagnostic/clinical endocrinology of animals.

**VETDL 701 Special Projects in Infectious Diseases (Selective)**
Fall and spring. 1-3 credits. By permission of the instructor. S-U grades only. Diagnostic Laboratory faculty. This course provides laboratory experience with attention to specific aspects of infectious disease problems.

**VETDL 702 Special Topics in Infectious Diseases (Selective)**
Fall and spring. 1-3 credits. By permission of the instructor. S-U grades only. Diagnostic Laboratory faculty. The objective of this course is to offer a broad exposure to various aspects of infectious diseases.

**VETDL 703 Doctoral-Level Thesis Research (Graduate)**
Fall and spring. 0-9 credits. By permission of the instructor. S-U grades only. Diagnostic Laboratory faculty. Research leading to a Ph.D. degree.

**VETDL 704 Master's-Level Thesis Research (Graduate)**
Fall and spring. 1-3 credits. By permission of the instructor. S-U grades only. Diagnostic Laboratory faculty. Research leading to an M.S. degree.

**MICROBIOLOGY AND IMMUNOLOGY**

**VETMI 315 Basic Immunology (Undergraduate) (also Biological Sciences 303)**
Fall. 3 credits. Strongly recommended: basic courses in microbiology, genetics, and biochemistry. S-U optional. A. Marsh. A survey of immunology, with emphasis on the biological functions of the immune response.

**VETMI 318 Pathogenic Bacteriology and Mycology (Undergraduate) (also Biological Sciences 304)**
Spring. 2 credits. Intended primarily for graduate and undergraduate microbiology majors. Prerequisites: Microbiology 290 and 291 (College of Agriculture and Life Sciences). Strongly recommended: VETMI 315. Letter grades only. E. D. Tullson. This is a lecture course in medical microbiology, covering pathogenic bacteriology and mycology. Lectures cover the major groups of bacterial pathogens and some of their important virulence mechanisms, as well as highlighting certain aspects of the normal flora, antibiotic therapy, and drug resistance that are relevant to the pathogenesis of bacterial and mycotic diseases. One important principle that is emphasized is that disease is the product of the interaction of the host, pathogen, and environment.

(VETMI 408 Viruses and Disease (Undergraduate) (also Biological Sciences 408)
Spring, alternate years (next offered spring 1998). 3 credits. Intended primarily for graduate and undergraduate microbiology majors. Prerequisites: Microbiology 290 and 291 (College of Agriculture and Life Sciences). Recommended: VETMI 315, Genetics 281. Letter grades only. J. W. Casey. The course will cover basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia will be highlighted in the context of approaches to prevent or reduce the severity of diseases.)

**VETMI 431 Medical Parasitology (Undergraduate)**
Fall, alternate years. Not offered fall 1997. 2 credits. Prerequisites: zoology or biology. Letter grades only. D. D. Bowman. A systematic study of arthropod, protozoan, and helminth parasites of public health importance, with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasitism.

**VETMI 605 Special Projects in Microbiology (Undergraduate)**
Fall and spring. Credit to be arranged. By permission of the instructor. Prerequisite: a good background in microbiology or immunology. Preferably, students should have background in pathogenic microbiology and immunology. S-U grades only. Microbiology staff. The course normally provides an opportunity for the student to work in a research laboratory or carry out a special project under supervision.

**VETMI 700 The Biology of Animal Viruses (Undergraduate)**
Fall and spring. Credit to be arranged. By permission of the instructor. Prerequisite: Microbiology 290 and 291 (College of Agriculture and Life Sciences). Recommended: VETMI 315, Genetics 281. Letter grades only. C. R. Parrish. This course is a general introduction to the biology of animal viruses. A brief history of the concept and study of viruses, along with an overview and classification of the major viral groups, will be given. Topics include the structures of viruses and their components, viral nucleic acids and genome replication strategies, selected examples of gene regulation mechanisms, structural and nonstructural viral proteins, and the interactions between viruses and cells. Traditional and recent examples of methods for the genetic analysis of viruses will be given. Further topics include evolution, variation, and selection of virus strains over time and during infections of host animals; traditional and novel approaches to vaccine development; and antiviral chemotherapy.

**VETMI 701 Pathogenesis of Viral Diseases (Graduate)**
Spring 1997. 2 credits. Open to graduate students and most advanced undergraduates, with permission of instructor. Letter grade. J. D. Baines. In this course the most recent advances in viral pathogenesis will be examined by reviewing model systems. In the process, the mechanisms of cell and animal infection, epidemiology of virus infections, spread between cells, disease mechanisms, roles of
the immune response in enhancing or suppressing the disease, and examples of the mechanisms involved in different types of disease will be examined in a variety of systems. The basic principles of virus taxonomy, structure, and replication will be briefly reviewed to introduce the various virus groups and their special properties. An overview of the basic principles of viral pathogenesis and disease will be based around various texts, including The Pathogenesis of Disease (third edition), which will be used as a general introduction to the area. For studying model systems of viral disease, students will use Concepts in Viral Pathogenesis (volumes 1–3), which contains short and simple introductions to the various viral diseases. The most recent literature will be used to bring students up to date on these topics.

[VETMI 702] Molecular Biology and Immunology of Host-Parasite Interactions (Graduate) (also VTMED 620)
Spring, even-numbered years. 2 credits. Letter grade or S-U option. E. J. Pearce. See description for VTMED 620.

[VETMI 705] Advanced Immunology (Graduate) (also Biological Sciences 708)
Spring, even-numbered years. 3 credits. Prerequisite: VETMI 315 Basic Immunology or permission of instructor. Letter grades only. R. G. Bell (coordinator) and staff. Coverage at an advanced level of molecular and cellular immunology.

[VETMI 706] Immunology Seminar Series (Graduate)
Fall and spring. No credit. Required of all graduate students in the Field of Immunology. S-U grades only. F. Quinby, J. Appleton. Presentations of research investigations by Cornell faculty members, postdoctoral fellows, and graduate students in the Field of Immunology and by invited speakers from other institutions.

[VETMI 707] Advanced Work In Bacteriology, Virology, and Immunology (Graduate)
Fall and spring. Credit to be arranged. By permission of the instructor. Letter grade or S-U option. Microbiology staff. This course is designed primarily for graduate students with a good background in pathogenic microbiology and immunology. It may be elected by veterinary students who are properly prepared.

[VETMI 708] Selected Topics in Animal Virology (Graduate)
Spring. 2 credits. Microbiology staff. Lectures focus on the molecular biology of a few selected animal viruses. Important publications will provide the basis for a discussion of current models for host-viral interactions.

[VETMI 709] Laboratory Methods of Diagnosis (Graduate)
Fall and spring. 1–3 credits by arrangement. By permission of instructor. Letter grade or S-U option. Microbiology staff. Intended to introduce the student to the practical aspects of microbiological and serological methods for the diagnosis of disease.
topics in the cell cycle. It includes cell growth regulation and de-regulation in cancer.

[**VETPA 750** Cancer Cell Biology (also Biological Sciences 750) (Graduate)]
Spring, alternate yrs. 3 credits. Not offered spring 1997; next offered spring 1998. Prerequisite: Biological Sciences 330 or 331 or equivalent. Recommended: graduate courses in biological sciences. Letter grade. J. L. Guan (coordinator), R. A. Levine, B. U. Pauli, A. Yen. This advanced graduate course will cover topics in the cell cycle. It includes cell growth and proliferation, differentiation, and apoptoisis. Topics will include the structure and function of the major matrix receptor integrin family of cell adhesion molecules, integrin interactions with the cytoskeleton, extracellular signaling pathways in cell-ECM interactions, integrin-mediated signaling in cellular growth regulation, changes of integrins in human tumors and metastasis, structure and function of cadherin family of cell-cell adhesion molecules, signaling mechanisms in cell-cell interactions in normal development and cancer. The third section will be on cell cycle. It will develop properties of the cell cycle and how its phases are measured, changes associated with cell transformation, and how oncogenes and tumor suppressor genes regulate cell proliferation, differentiation, and apoptosis.

[**VETPA 788** Seminar in Surgical Pathology]
Fall and spring. 1 credit. Intended for residents. Third- and fourth-year veterinary students may attend. Letter grades only. B. A. Summers (coordinator) and others.
The major objective of this discussion and seminar course is to introduce the residents to the discipline of surgical pathology. Selected material from the Surgical Pathology Service is prepared in advance for independent review by the residents. The material is presented in a slide-seminar format by the residents under the review of the faculty. Emphasis is placed on pathogenesis, etiology, and pathologic descriptions of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

[**VETPA 789** Seminar in Necropsy Pathology]
Fall and spring. 1 credit. Not offered 1996-97. Letter grades only. J. M. King.
The major objective of this course is to introduce students (veterinary and graduate students, residents) to the gross and microscopic features of necropsy pathology. Selected material from the Necropsy Service and elsewhere is prepared in advance for independent review by the students. This material is presented in a slide-seminar format by the students under the review of the faculty. Emphasis is on pathogenesis, etiology, and pathologic description of the lesions. In addition, appropriate guest lecturers cover specific areas of interest and special topics not encountered in the departmental service programs.

[VETPA 798 Medical Primatology]
Fall, alternate years. 1 credit. Not offered fall 1996 and 1998; next offered fall 1997. For residents and graduate students by permission of instructor. F. W. Quimby. A survey of major diseases, medical care, and management techniques for all life stages of primates. Anatomical, physical examination, restraint anesthetia, housing, and management of various nonhuman primate species; bacterial, viral, and parasitic diseases; infectious diseases; infant and nursery care reproduction and behavioral considerations; and therapeutics.

PHARMACOLOGY

[VETPR 610 Cellular and Molecular Pharmacology]
Fall, alternate years. 3 credits. Not offered fall 1996 and 1998; next offered fall 1997. By permission of the instructor. Letter grades or S-U option. G. A. Weiland and pharmacology faculty. A graduate-level course covering basic principles of cellular physiology, receptor mechanisms, and signal transduction pathways. Areas to be covered include autonomic and central nervous system pharmacology, pharmacology of inflammation, and chemotherapeutic approaches. All chin the course emphasizes molecular and cellular mechanisms, several integrated organ systems are discussed.

[VETPR 700 Calcium as a Second Messenger in Cell Activation]
Regulation of intracellular calcium and techniques for studying calcium movements and distribution in cells. Calcium channels and exchangers, calcium-binding proteins, and calcium stores. Phosphatidylinositol turnover, release of calcium from intracellular stores, and activation of calcium influx. Calcium gradients and oscillations. Other signal transduction pathways and second messengers involved in cell activation. Each topic will be introduced with a lecture followed by discussion of recent papers from the laboratory.

[VETPR 701 Organ System Toxicology (also Toxicology 611)]
Fall, alternate years. 1 credit. Offered fall 1996 and 1998. S-U grading. W. S. Schwark.
A minicourse on molecular mechanisms involved in chemical toxicity. Specific examples of toxicity in organ systems such as the nervous system, kidney, liver, respiratory tract, and cardiovascular system will be considered.

[VETPR 703 Receptor-Ligand Interactions (also Biological Sciences 790-07)]
Fall, alternate years. 2 credits. Offered fall 1996 and 1998; not offered fall 1997. By permission of the instructors. Letter grade or S-U option. R. E. Oswald, G. A. Weiland (coordinator). The course covers both the practical and theoretical tools for the study of ligand-receptor interactions, emphasizing the quantitative and physical chemical aspects of receptor theory. Topics discussed are basic methods of radioligand binding assays, including separation and measurement of bound and free ligand; characterization of receptor function; analysis of receptor structure, thermodynamic basis of the binding; methods of analyzing equilibrium binding, equilibrium binding for complex binding mechanisms; and kinetics of simple and complex binding mechanisms.

[VETPR 704 CNS Neuropharmacology: Mechanisms of Synaptic Transmission]
Fall, even-numbered years. 2 credits. Maximum enrollment: 20 graduate students and undergraduate seniors by permission of the instructor. Letter grade or S-U option. L. M. Nowak.
This is a survey course in vertebrate central nervous system physiology and pharmacology, and focuses on mechanisms of neurotransmitter action at the membrane and cellular levels. Roles of selected neurotransmitters in normal and dysfunctional brains are covered. Topics are introduced in lectures and followed up in discussions of recent journal articles.

[VETPR 705 Molecular Mechanisms of Receptor-G Protein Coupled Signaling]
Spring, alternate years. 2 credits. Offered spring 1997 and 1999. By permission of the instructor. Letter grade or S-U option. R. A. Cerione.
This course focuses on the mechanisms of action of GTP binding proteins. Several receptor-coupled signaling systems are examined, including cyclic nucleotides, vertebrate vision, phosphatidylinositol lipid turnover, and receptor systems regulating various ion channels.

[VETPR 706 Growth Factor-Coupled Signaling (also Biological Sciences 734)]
Spring, alternate years. 0.5 credits. Offered spring 1997 and 1999. By permission of the instructor. Letter grade or S-U option. R. A. Cerione.
General theme will be mitogenic signaling pathways. Receptor tyrosine kinases, src, ras, and ras-regulatory proteins will be covered.

**Special Projects and Research in Pharmacology**
Fall, spring, and summer. 1–3 credits each topic. By arrangement with the instructor. Letter grade or S-U option. Pharmacology faculty. Independent study or research.

[VETPR 711 The Role of Calcium in Stimulus-Secretion Coupling]
C. M. S. Fewtrell.

[VETPR 713 Mechanisms of Growth-Factor Action]
R. A. Cerione.

[VETPR 714 Central Nervous System Neuropeptide Transmitters]
L. M. Nowak.

[VETPR 718 Structure-Function of the Nicotinic Acetylcholine Receptor]
R. E. Oswald.

[VETPR 720 Modulation of Nicotinic Acetylcholine Receptor Function]
G. A. Weiland.
[VETPR 723] The Role of Calcium in the Control of Electrolyte Transport

[VETPR 724] The Control of Hormone Secretion

[VETPR 730] Graduate Research in Pharmacology
1-10 credits. This course is offered by individual faculty members. Reading and discussions.

Special Topics in Pharmacology
Fall, spring, and summer. 1-3 credits each. By arrangement with the instructor. Letter grade or S-U option. Reading and discussions.

[VETPR 741] Neuro modulation
G. A. Weiland.

[VETPR 742] Receptor Mechanisms
G. A. Weiland.

[VETPR 745] Biochemical Neuropharmacology
G. A. Weiland.

[VETPR 747] Amino Acid Neurotransmitters
L. M. Nowak.

[VETPR 748] Stimulus- Secretion Coupling
C. M. S. Fewtrell.

[VETPR 749] Second Messengers in Cell Activation
C. M. S. Fewtrell.

[VETPR 750] Cell Calcium
C. M. S. Fewtrell.

[VETPR 759] Calcium in the Control of Hormone Secretion

[VETPR 756] Mechanisms of Calcium Handling

[VETPR 757] Intestinal Electrolyte Transport

[VETPR 760] Advanced Topics in Pharmacology
Pharmacology faculty.

PHYSIOLOGY

[VETPH 346] Introductory Animal Physiology (also BIOAP 311) (Undergraduate)
Fall. 3 credits. Prerequisites: one year of college-level biology, chemistry, and mathematics. S-U by permission.
E. R. Loew, D. Roberts'haw. M WF 11:15. A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure-function relationships are stressed along with underlying physical-chemical mechanisms.

[VETPH 639] Graduate Research in Animal Physiology (Graduate) (also BIO S 719)
Fall and spring. Variable credit. Prerequisite: written permission of section chairperson and staff member who will supervise the work and assign the grade. S-U grades optional. Similar to Biological Sciences 499 but intended for graduate students who are working with faculty members on an individual basis.

[VETPH 720] Special Problems in Physiology (Graduate)
Fall and spring. By permission. Laboratory work, conferences, collateral readings, and reports. Adapted to the needs of students.

[VETPH 758] Molecular Mechanisms of Hormone Action (Graduate) (also BIOAP 658)
Spring, even-numbered years (next offered spring 1998). 2 credits. Prerequisite: permission of instructor. Minimum enrollment: 6 students. Letter grade only. R. A. Corradino. An advanced course developed from the current literature on endocrine mechanisms.

[VETPH 811 and 812] Advanced Physiology Methods I & II (also BIO S 811 and 812 (Graduate)
Fall and spring. 2 credits each. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only.
P. Nathanielsz. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint students with the latest techniques and methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

FACULTY ROSTER

Aquirre, Gustavo D., Ph.D., U. of Pennsylvania. Alfred H. Caspary Professor, Clinical Sciences
Ainsworth, Dorothy M., Ph.D., U. of Wisconsin-Madison. Asst. Prof., Clinical Sciences
Antczak, Douglas F., Ph.D., U. of Cambridge (England). Dorothy Havemeyer McConville Professor of Microbiology and Immunology
Appel, Max J., Ph.D., Cornell U. Professor, Microbiology and Immunology
Appleton, Judith A., Ph.D., U. of Georgia. Assoc. Prof., Microbiology and Immunology
Avery, Roger J., Ph.D., U. of Newcastle-upon-Tyne (England). Prof., Microbiology and Immunology
Baines, Joel, Ph.D., Cornell U. Asst. Prof., Clinical Sciences
Ball, Barry, A., Ph.D., Cornell U. Assoc. Prof., Clinical Sciences
Barr, Stephen C., Ph.D., Louisiana State U. Assoc. Prof., Clinical Sciences
Bell, Robin G., Ph.D., John Curtin School (Australia). Prof., Microbiology and Immunology
Bertram, John E., Ph.D., U. of Chicago. Asst. Prof., Anatomy
Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology
Bloom, Stephen E., Ph.D., Penn State U. Prof., Microbiology and Immunology

Blue, Julia T., Ph.D., U. of Pennsylvania. Assoc. Prof., Pathology
Bowman, Dwight D., Ph.D., Tulane U. Assoc. Prof., Microbiology and Immunology
Bowser, Paul R., Ph.D., Auburn U. Prof., Microbiology and Immunology
Campbell, S. Gordon, Ph.D., Cornell U. Prof., Microbiology and Immunology
Carmichael, Leland E., Ph.D., Cornell U. John M. Olin Professor of Virology, Clinical Sciences
Casey, James W., Ph.D., U. of Chicago. Assoc. Prof., Microbiology and Immunology
Center, Sharon A., D.V.M., U. of California at Davis. Assoc. Prof., Clinical Sciences
Cerione, Richard A., Ph.D., Rutgers U. Prof., Pharmacology
Chang, Yung Fu, Ph.D., Texas A&M. Asst. Prof., Diagnostic Laboratory
Cooper, Barry J., Ph.D., U. of Sydney (Australia). Prof., Pathology
Corradino, Robert A., Ph.D., Cornell U. Assoc. Prof., Physiology (Section of Pharmacology)
Cummins, John F., Ph.D., Cornell U. James Law Professor of Veterinary Anatomy
Daels, Peter F., Ph.D., U. of California at Davis. Asst. Prof., Clinical Sciences
Denkens, Eric Y., Ph.D., U. of Wisconsin-Madison. Asst. Prof., Microbiology and Immunology
deLahunta, Alexander, Ph.D., Cornell U. James Law Professor of Veterinary Anatomy
Dietert, Rodney R., Ph.D., U. of Texas at Austin. Prof., Microbiology and Immunology
Divers, Thomas J., D.V.M., U. of Georgia. Assoc. Prof., Clinical Sciences
Dubovi, Edward J., Ph.D., U. of Pittsburgh. Assoc. Prof., Diagnostic Laboratory
Ducharme, Normand G., D.V.M., U. of Montreal (Canada). Assoc. Prof., Clinical Sciences
Dykes, Nathan L., D.V.M., Cornell U. Asst. Prof., Clinical Sciences
Erb, Hollis N., Ph.D., U. of Guelph (Canada). Prof., Clinical Sciences
Farrum, Cornelia, Ph.D., U. of Wisconsin-Madison. Assoc. Prof., Anatomy
Fortune, Joanne E., Ph.D, Cornell U. Prof., Physiology
Fox, Francis H., D.V.M., Cornell U. Prof., Emeritus, Clinical Sciences
French, Tracy W., D.V.M., Purdue U. Assoc. Prof., Pathology
Fubini, Susan L., D.V.M., U. of Georgia. Assoc. Prof., Clinical Sciences
Gilbert, Robert O., B.V.Sc., U. of Pretoria (South Africa). Assoc. Prof., Clinical Sciences
Gilmour, Robert F., Jr., Ph.D., SUNY—Upstate Medical Center. Assoc. Prof., Physiology
Gleed, Robin D., D.V.Sc., U. of Liverpool (England). Assoc. Prof., Clinical Sciences
Grohn, Yrjo T., Ph.D., College of Veterinary Medicine, Helsinki (Finland). Assoc. Prof., Clinical Sciences
Guadalupe, Min-Lin, Ph.D., U. of California at San Diego. Asst. Prof., Pathology
Guard, Charles L. Ill, Ph.D., Case Western Reserve U. Assoc. Prof., Clinical Sciences
Hackett, Richard P., Jr., D.V.M., Ohio State U. Assoc. Prof., Clinical Sciences
Harvey, H. Jay, D.V.M., Kansas State U. Assoc. Prof., Clinical Sciences
Hemison, John D., Ph.D., SUNY at Albany. Prof., Diagnostic Laboratory
Hermanson, John W., Ph.D., U. of Florida. Assoc. Prof., Anatomy

INTRODUCTION
The College of Arts and Sciences at Cornell is a community of about 4,000 undergraduates and 600 faculty members. It is composed of those departments that teach and study the humanities and the arts, the basic sciences and mathematics, the social sciences and history. It is also a college within a university of about 18,000 students and 1,650 faculty members, and this wider community provides strength and diversity of applied and professional studies beyond what an isolated undergraduate institution can offer. Students may draw upon the knowledge and facilities of the other undergraduate colleges at Cornell to supplement their studies. Finally, the college is a graduate school and research center attracting faculty whose writing and research require first-rate academic facilities and whose participation in undergraduate teaching brings to their students the profound and whose participation in undergraduate research require first-rate academic facilities and whose participation in undergraduate teaching brings to their students the profound questioning and the current ideas of contemporary scholarship. It is this abundant variety and outstanding quality among many disciplines that gives the college its distinctive character.

The richness of the curriculum is extraordinary, there is no course that all students must take, and there are nearly two thousand from which they may choose. By choosing courses each semester, students design their own education. They strike a balance between developing known interests and exploring new subjects. They sharpen their verbal and quantitative skills. They also come to understand more thoroughly the Western tradition and learn something about the non-Western world and its peoples. An education in the liberal arts means honing one’s own. All this is highly individual, and education should have certain common capacities, learning more about oneself in nature and culture, and gaining real experience with views of the world radically unlike one’s own. All this is highly individual, and the college relies on each student and faculty adviser to select sensible, challenging, and appropriate courses.

Yet the faculty believes that each student’s education should have certain common qualities. These include familiarity with several different ways of knowing that are reflected in the natural sciences, in the social sciences, and in those achievements of intellect and imagination that are the focus of the humanities and the arts. In addition to these general areas of knowledge, students study foreign languages, acquire effective writing and quantitative skills, and concentrate on one particular field to develop, as fully as possible, the powers of imaginative and critical thinking. To accomplish these objectives, the college has certain requirements for graduation.

SUMMARY OF BASIC COLLEGE REQUIREMENTS FOR GRADUATION
1) Freshman Writing Seminars: Two courses.
2) Foreign language: Proficiency in one language or qualification in two. See below.
3) Distribution Requirements: See below.
4) Major: see below.
5) Electives: Four or five courses (at least 15 credits) in courses not used to fulfill other requirements and not in the major field.
6) Residence: Eight full-time semesters, unless a student can successfully complete all other requirements in fewer than eight semesters and meets the criteria to accelerate graduation. (See "Acceleration," under the heading "Residence.")
7) Minimum number of courses: Thirty-four courses. A two-credit course counts as half a course; a six-credit language course counts as one and one-half courses; a one-credit course does not count toward this requirement. (See below under "Courses and Credits.")
8) Credits: A total of 120 credits, of which 100 must be taken in the College of Arts and Sciences.
9) Physical education: Completion of the university requirement (two courses). Please note that physical education credit does not count toward graduation or toward the 12-credit minimum required for good standing each semester. See p. 13.
10) Application to graduate.

FRESHMAN WRITING SEMINARS
See "John S. Knight Writing Program." Freshman Writing Seminars may not be counted toward the distribution requirements.

FOREIGN LANGUAGE REQUIREMENT
The faculty considers competence in a foreign language essential for an educated person. Studying another language helps students understand language itself, our fundamental intellectual tool, and opens another culture for exploration. The sooner the student acquires competence, the more useful it will be. Hence, work toward the foreign language requirement should be undertaken in the freshman and sophomore years.

The following departments teach foreign languages or literature or both in the College of Arts and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Studies, Modern Languages, Near Eastern Studies, Romance Studies, and Russian Literature.

The language requirement may be satisfied in one of two ways:
1) by attaining proficiency in one language or
2) by attaining qualification in two languages.

PROFICIENCY
Proficiency is normally attained by passing a 200-level (intermediate) Cornell course (or Chinese or Japanese 161) or by equivalent achievement determined by examination (see chart below). Some introductory language courses are taught at the 300- or 400-level (for example, Near Eastern Studies 333–334); these do not confer proficiency.

Earning three credits on an AP language exam does not carry with it proficiency. Only by scoring high enough on the CASE (Cornell Advanced Standing Examination), does the student earn proficiency by examination. In other words, even students who earn advanced placement credit with scores of 4 or 5 on an AP language exam should take the CASE to see if they can be awarded proficiency. On the other hand, a score of 4 or 5 on an AP literature exam in French, Spanish, or German (German offers a combined language/literature exam) earns proficiency, as well as three credits, without the CASE. (Such students should also take the CASE to see if they can earn an additional three credits in language.)

QUALIFICATION
Qualification may be attained in any of the following four ways.

1) Three years of high school study in any one language gives qualification in that language. Note that this route to qualification does not guarantee entrance into a 200-level course. Students who want to continue studying the language must be placed in the appropriate course by a score on an examination. Being placed below the 200-level, however, does not cancel the qualification.
2) Passing the requisite course: 102, 123, or 134 in most languages taught by the Department of Modern Languages; Chinese 110, 112, or 114; Japanese 160; Near Eastern Studies 102 or 122 in Hebrew, 112 in elementary classical Arabic, or 118 in Turkish; Classics 103 or 104 in Greek, 106 or 107 in Latin, 112 in modern Greek; 132 in Sanskrit, AS&RC 134 in Swahili.

Note: Except in the case of Sanskrit, completion of language sequences 131–132 does not constitute qualification.
3) A score of 600 in French, 580 in German, and 590 in Italian or Spanish on the SAT II taken in high school or a score of 56 or higher on the Cornell LP (Language Placement test) taken during orientation week.

Students may earn a 56 placement test score at the end of course numbered 122 (second semester of the introductory sequence) and consequently attain qualification without taking 123, the third semester of the introductory sequence. However, with a score of 56, it may be worthwhile to take 123 to be better prepared for the 200-level courses.
4) Placement into a 200-level course by departmental or (when no placement test is available) individual examination at Cornell.

**Placement in Language Courses and Advanced Placement Credit**
Placement into language courses and advanced placement credit are separate results of examinations.

**Placement**
Entering students who have had two or more years of high school study in a language or who have been awarded credit for language work at another college or university may enroll in a course in the same language only after being placed by examination. The placement exam may have been taken in high school (SAT II, taken after the last course) or at Cornell during orientation (LP test). Students may, but need not retake a language test if a year or more has passed since last taking it.

**Advanced Placement Credit**
Being placed into a 200-level course does not earn credit toward the degree. Credit is earned only for high school work equivalent in level to language courses numbered 200 and above at Cornell.

The type of examination depends upon the language and the level of achievement:

1) French, German, Italian, Russian, and Spanish placement tests: students register for the placement tests with the Department of Modern Languages, 203 Morrill Hall. The Cornell Advanced Standing Examination (CASE) is recommended for students with the following scores on the SAT II: French 690; German 680; Italian 690; Spanish 690. The minimum score on the older SAT Achievement Test or a Cornell placement test taken prior to Fall of 1996 is 650 in all languages. The CASE is also recommended for scores of 65 and higher on the Cornell LP (Language Placement test) in all languages.

2) Greek, Ancient and Modern: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

3) Latin: departmental examination, Department of Classics, 120 Goldwin Smith Hall.

4) Arabic: departmental examination, Department of Near Eastern Studies, 360 Rockefeller Hall.

5) Hebrew: departmental examination, Department of Near Eastern Studies, 360 Rockefeller Hall.

6) Turkish: departmental examination, Department of Near Eastern Studies, 360 Rockefeller Hall.

7) Other languages: special examinations, see the instructor who teaches the language.

### Distribution Requirements

In satisfying the distribution requirements, students become acquainted with a broad range of subject matter in the liberal arts and sciences and explore areas that may be entirely new to them.

Attaining these two goals is part of the task of students. By fulfilling the distribution requirements, they can take advanced courses in many subjects they find intriguing only if they have previously completed the introductory courses.

Students must take a total of nine courses (of three or more credits each) for the distribution requirements: four courses from Groups 1 and 2 below, at least two of which are from Group 1 and at least one of which is from Group 2 (for example, one chemistry, one physics, one geology, and one mathematics); five courses from Groups 3 and 4 below, with at least two in each group and two in the same department (for example, one course in sociology, one in history, one in history of art, and two in theater arts). Although courses in the major may be applied to distribution requirements, no single course may satisfy more than one distribution requirement.

Further, no freshman writing seminar may satisfy any of the distribution requirements. Students may use one of the approved interdisciplinary courses for distribution as noted below, but may apply such courses to only one category of the distribution requirement and may not count courses offered or cross-listed by their major department for any distribution category beyond the usual category of the major department itself. For example, a history major may not count a course cross-listed between history and a literature department towards distribution in the humanities.

Grades of "S" in courses applied to the distribution requirements are acceptable.

#### 1. Physical and Biological Sciences

**Primary list:**

- Astronomy: all courses except 233
- Chemistry (all courses)
- Geological Sciences (all courses)
- Physics (all courses)

**Biological Sciences:** all courses except 152, 200 (unless permission of the associate director is obtained), 208, 209, or 367. The following courses are especially suitable for the distribution requirement because they have no prerequisites: 101-104, 105-106, 107-108, 109-110, 114-116, 170, 184, 192, 207, 212, 246, 264, 266, 275. Note that introductory biology can count for distribution credit only when taken as a two-semester sequence: 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107-108, or a combination of the first term of one sequence and the second term of another.

**Supplementary list:** In fulfilling the science distribution requirement, students must take at least one course from the list of "primary" courses above, and may select additional courses from the following list.

- Animal Science 100, 150, 212
- Anthropology 101, 275, 571, 390, 474, 490
- Applied and Engineering Physics 110
- Biology and Society 301
- Entomology 212
- Food 200
- Materials Science and Engineering 277
- Natural Resources 201, 210, 301
- Plant Breeding 225
- Psychology 123
- Plant Pathology 301
- Soils, Crops, and Atmospheric Sciences 131, 231

#### 2. Quantitative and formal reasoning

- All courses offered by the Department of Mathematics except Math 101 and 109
- Biometry and Statistics 215
- City and Regional Planning 320
- Computer Science 100, 101, 130, 211, 212
- Economics 321
- Industrial & Labor Relations 210, 211
- Linguistics 216
- Operations Research & Industrial Engineering 115
- Philosophy 231, 331, 431, 436
- Physics 205, 209, 210
- Psychology 350
- Sociology 301

If students choose two courses from this list to satisfy part of the distribution requirement, those two courses may not have significant overlap. For example, students should not choose two beginning courses in statistics.

Under exceptional circumstances and upon petition, certain Cornell courses not listed above under Group 2 (courses such as those appearing on the following auxiliary list) may be used to satisfy the requirement in quantitative and formal reasoning. The petition should provide a persuasive rationale both in terms of the student's course of study and in terms of meeting the goals of the requirement.

**Auxiliary list:** Agricultural Economics 310; Agricultural Engineering 151; City and Regional Planning 201; Industrial and Labor Relations 312; Linguistics 421, 450; Psychology 472-473 (a sequence of two two-credit courses which may count only in its entirety as one course).

**Note on advanced placement and transfer credit**

Students may apply up to two courses of approved advanced placement credit in science, mathematics, and computer science toward satisfaction of the distribution requirement in Groups 1 and 2 above, provided that they complete at least one course from the primary list of science courses during their undergraduate career. Transfer credit applied to the distribution requirement in Group 2 must be in mathematics or computer science; it may not be in any other quantitative subjects, for example statistics or logic.

#### 3. Social sciences and history

- American Studies 201, 202
- Anthropology (all courses except 101, 275, 371, 390, 451, 452, 453, 474, 490)
- Archaeology 100, 201, 202, 203, 204, 263, 275, 317, 353, 355, 362, 370, 402, 404, 458, 493, 494
- Asian Studies: any two courses in Asian anthropology, economics, government, linguistics, or sociology given by the Department of Asian Studies or listed there under the areas of China, Japan, South Asia, and Southeast Asia, excluding only Freshman Writing Seminars and courses given outside the College of Arts and Sciences. A reasonable sequence is formed by taking any two courses in the same area, or by taking ASIAN 208, 211, 212, 215, or 218, followed by a social science course in that area. Alternative sequences will, under special circumstances, be considered but require the permission of the director of undergraduate studies.
- Biology and Society 301, 342, 407, 427
- City and Regional Planning 100, 101
- Economics (all courses except 317, 318, 319)
- Engineering 250, 292
- Geography 301
- History 301
- Linguistics 482, 483, 484, 485, 486, 487, 488, 489, 490, 491, 492
- Near Eastern Studies 197, 198, 244 and all other courses in Near Eastern archaeology and history
- Psychology (all courses except 123, 290, 307, 322, 324, 326, 332, 350, 361, 396, 410, 420, 422, 424, 425, 429, 431, 440, 441, 470, 471, 472, 473, 475, 478, 479, 491, 492)
- Sociology 301

#### 4. Humanities and the arts

- Africana Studies 202, 211, 285, 303, 304, 310, 422, 425, 431, 432, 435, 455
- American Studies 201, 202
- Anthropology 290, 451, 452, 453, 455
- Archaeology 100, 221, 309, 357, 423, 434, 520, 629
- Asian Studies: any two courses in Asian art, literature, religion or cultural history given by the Department of Asian Studies or listed there under the areas of China, Japan, Korea, South Asia, and Southeast Asia, excluding only Freshman Writing Seminars and courses given outside the College of Arts and Sciences. A reason-
The geographic breadth requirement are marked with a @ when described in this catalogue. Courses that satisfy the historical breadth requirement are marked with a #. Many courses satisfy both requirements, and students may in fact use the same course to satisfy both. They may also apply courses conferring proficiency in a non-Western language toward the geographical breadth requirement and use courses satisfying distribution, major, or elective (but not writing) requirements in satisfaction of either of the breadth requirements. Credit awarded by examination may not be applied to either of the breadth requirements.

The Major

In their last two years, students devote roughly one-half their time to acquiring depth and competence in a major subject. The choice of major is not intended to define a student's intellect or character or to lead to a lifetime's occupation, although it may do some of each. By majoring, students focus the full extent of their imaginative and intellectual capacities on something they care about.

Sophomores must be accepted by departments or programs as majors before registering for courses for the junior year. Most departments and programs specify certain prerequisites for admission to the major; students should consult the departmental listings on the following pages. A department may refuse to accept into the major any student whose performance does not meet departmental standards. To seek admission into a major, students take a copy of their transcript to an appointment with the director of undergraduate studies in their prospective major department.

Available majors. Majors are offered by each of the departments. There are also majors in American studies, archaeology, biology and society, dance, film, religious studies, Russian and East European studies, and women's studies.

Some students want to pursue an interest that cannot be met within an established major. They may plan, with the help of their faculty adviser, an independent major that includes courses from several departments. See "Independent Major Program," below, under "Special Academic Options."

Students are responsible for completing their majors according to the regulations and with the approval of their departments. Courses that fulfill major requirements may not be taken for S-U grades.

Double Majors

One major only is required for graduation. Some students choose to complete two majors. No special permission or procedure is required; students simply become accepted into both majors and find an adviser in each department. Both majors will be posted on the official transcript.

Electives

Of the 34 courses and 120 credits required for graduation, almost one-third are free electives. How students use these electives frequently makes the difference between an ordinary and a truly interesting curriculum. Students must complete at least four courses and at least 15 credits outside the major field and not used to fill another requirement. AP credits not otherwise used may be used to fulfill elective requirements. Students may group electives to form a concentration separate from their major or even a second major. Some choose to explore a variety of subjects. Electives taken in other divisions of the university may be used to gain practical training or specialized knowledge. Some students develop a concentration in one particular department or subject outside arts and sciences. Students who choose to complete two majors may count courses in one of those majors as electives.

Residence

Eight semesters of full-time study in the College of Arts and Sciences are integral to earning the A.B. degree. Even if the minimum requirements can be met in fewer semesters, the faculty of the college expects students to take advantage of the resources of the university for eight full terms and obtain an education in the liberal arts and sciences as possible.

Approved study abroad, SEA Semester, and Cornell-in-Washington are considered semesters of residence, but students may spend no more than two semesters on such programs and must be on campus during their last semester. Mid-year freshmen who study full-time in an approved curriculum at another institution during the fall preceding their matriculation in the college may, if they wish, count that semester as a semester of residence.

Semesters of extramural study in the Division of Continuing Education and Summer Sessions do not count as semesters of residence.

Transfer students from other institutions must spend a minimum of four semesters on the Cornell campus in Ithaca. Transfers from other colleges and schools must spend four semesters on campus in Ithaca as students in the Internal Transfer Division or in the college.

Students occasionally enter with advanced placement credit from other institutions, take leaves and complete courses at other institutions, or take summer courses at other institutions. The college will accept credit for such courses, if they are comparable to courses offered by departments at Cornell and are approved by those departments (approval forms are available in the Academic Advising Center, 55 Goldwin Smith Hall). Students may not, however, count such credit as part of the 100 credits required in the College of Arts and Sciences or use such credit to replace a term of residence. Students may not leave the college after fewer than eight semesters of residence and complete their undergraduate degrees with credits earned at other institutions or as part-time or summer students at Cornell.

Acceleration. Some students decide that they do not need eight semesters of residence to obtain a solid undergraduate education. These students, however, should compress the first four semesters and spend four full semesters in the major. Benefiting from opportunities for advanced, seminar, and independent (sometimes honors) work is what best characterizes undergraduate education in the college. Students considering acceleration should discuss their plans with their major adviser.

Accelerants should apply to graduate two semesters before their intended new graduation date. They should meet with the dean for
Part-time study. Students in good academic standing may take a personal leave of absence and enroll in the Division of Continuing Education, but such semesters of part-time study do not count as terms of residence and credits from such semesters may not be used to reduce the residence requirement. Students are allowed to earn their degrees as part-time students only if they present convincing academic or medical reasons for a reduced schedule or if they are Ithaca residents who are 25 years of age or older. Students may complete their degrees as part-time students at Cornell after fewer than eight semesters of full-time residence only if:
1) They have completed all degree requirements by the end of the seventh term, and could have received permission to accelerate.
2) They have received permission to accelerate, but have been forced to drop or delay a course for reasons beyond their control.
3) They are writing an honors thesis and can complete all degree requirements by taking two or fewer courses, one of which is the thesis itself.

Courses and Credits
Students must complete at least 34 courses to graduate — that is, an average of four courses during each of six semesters and five courses during each of two semesters. A three- or four-credit course counts as one course; a two-credit course counts as one-half course. Single-credit courses do not count as part of the 34 except in certain cases when they form a part of a series (certain offerings in biology, music, and theatre arts) and two in the same series can be aggregated to count as one-half course. A six-credit language course counts as 1 1/2 courses, while the summer Falcon Programs in Asian languages count as ten credits and 2 1/2 courses each. Archaeology and geology fieldwork for more than six credits counts as two courses each. Biology 281 counts as 1 1/2 courses. Other five- or six-credit courses count as one course. AP exam scores that result in an award of 3 or 4 credits count as one course; those that result in an award of 5 credits count as two courses. Students must also complete 120 credits, 100 of which must be from courses taken in the College of Arts and Sciences. Courses approved for study abroad during a semester or academic year of full-time study (not summer study) and courses taken in certain off-campus residential programs may be counted toward the 100 credits required within the college and also toward the required 34 courses. Credits earned in other colleges at Cornell, or in any subject at U.S. institutions other than Cornell, do not count as part of the 100 nor, for students matriculating in Fall 1994 or after, do advanced placement credits count as part of the 100. The only exception is for courses (usually no more than three) that certain departments accept from other colleges at Cornell as fulfilling major requirements.
A course may not be used to fulfill more than one college requirement, with the following exceptions:
1) A course may be used to fulfill a distribution requirement and also a major requirement.
2) A one-semester course in foreign literature that is acceptable for achieving proficiency in that language may also be used as a partial fulfillment of the distribution requirement in the humanities and the arts.
3) Courses may count toward breadth requirements and toward any other requirement except Freshman Writing Seminars.

Repeating courses. Students occasionally repeat courses. If the instructor certifies that the course content has been changed, credit will be granted a second time. If the content has not changed, both grades will appear on the transcript and will be included in an average that is calculated, but credit will be counted toward the degree only once. Students who plan to repeat a course should submit a petition to the college registrar. If the original course grade was F, no petition is necessary.

Auditing. The college encourages its students to take advantage of its rich curriculum by sitting in on courses that interest them but do not fit into their schedules for credit. As long as the instructor agrees, students are welcome to visit courses. Small seminars and language courses are sometimes not open to visitors. Audited courses do not, of course, appear on the student's schedule or transcript.

Transferring credit. The college evaluates credit received from either another school or college at Cornell or at another accredited institution of collegiate rank to determine the number of credits and courses the student may apply toward the various requirements for the Bachelor of Arts degree at Cornell. Credit evaluations are normally provided to external transfers at the time they are notified of their admission. Transfer students must successfully complete at least 60 credits and 16 courses at Cornell; they must be in residence for four regular semesters. Summer session does not count toward the residence requirement. Advanced placement credit awarded by other colleges, either at Cornell or elsewhere, is subject to a re-evaluation by the college.

Advanced placement credit. See p. 5.

Summer session credit. A student may earn credit toward the degree by completing courses in Cornell's summer session or by petitioning to take courses at other colleges. Students should consult their advisers regarding summer study plans.

Credit for summer courses not taken at Cornell must be approved by the appropriate Cornell department. Approval forms and information are available in the Academic Advising Center, 55 Goldwin Smith Hall. Credit earned in summer courses other than those at Cornell will not count toward the 100 credits required in the college (including summer or orientation programs abroad). Transcripts from other institutions must be sent to the associate registrar, 55 Goldwin Smith Hall.

Entering students who want to receive credit toward the degree for courses completed in a summer session away from Cornell should have transcripts sent to the associate registrar, 55 Goldwin Smith Hall, during the summer before matriculation in the fall. Transcripts from institutions other than Cornell summer sessions will be awarded automatically.
Summer session at Cornell or elsewhere does not count toward the eight-semester residence requirement.

Noncredit courses. The college does not grant credit toward the degree for every course offered by the university. Courses in remedial or developmental reading, high school mathematics, remedial science and mathematics courses offered by the Learning Skills Center, keyboarding, shorthand, and military training courses are among those for which credit is not given and that do not constitute part of the 12 credits required for good academic standing (see list below). Faculty legislation strictly prohibits granting credit toward the degree for service as an undergraduate teaching assistant, even though the department may record credit for such service on the transcript. Examples of noncredit courses:

All courses numbered below 100 (with the exception of Computer Science 099)
All courses in Military Science, Naval Science, and Aerospace Studies
Biology G 498
Communications 498
Education 498
Hotel Administration 170
Human Development and Family Studies 403
Human Ecology 100, 101
Human Service Studies 403
Mathematics 109
Nutritional Science 403
Psychology 498

Physical Education
See "University Requirements for Graduation," p. 13. The college does not count physical education credit toward the 120 credits required for graduation, nor toward the twelve credits required for good standing each semester.

SPECIAL ACADEMIC OPTIONS

Degree Programs
The following programs allow students to work toward more than one degree or to alter the regular college requirements or departmental requirements for the major.

Independent Major Program
The Independent Major Program allows students to design their own interdisciplinary majors to pursue an interest that cannot be met within an established major. Proposals for an independent major must be equivalent in coherence, breadth, and depth to a departmental major, well suited to the student's academic preparation, and consistent with a liberal education. Proposals must also be supported by a faculty adviser and are assessed by a board of faculty members. Independent majors substitute for established majors, but students must still satisfy all the other requirements for the baccalaureate degree. Students should contact the director of the Independent Major Program, Academic Advising Center, 55 Goldwin Smith Hall, for further information. Deadlines for submitting independent major proposals are listed on the calendar supplement for the College of Arts and Sciences.

College Scholar Program
The College Scholar Program frees up to forty students in each class from the usual college requirements for a degree and allows them to design their own curricula. It is meant to serve students whose interests and talents would benefit from a little more academic freedom than other students have, who demonstrate exceptional promise, and who show the maturity to plan and carry out, with the help of their adviser, a well-designed program of studies. College Scholars do not all design the same kind of program: some, for instance, pursue diverse interests, while others integrate a variety of courses with a common theme.

College Scholars must complete 120 credits of course work (100 in the college), 34 courses, and, unless they receive special permission from the program to accelerate, eight full terms of undergraduate study. They must complete the physical education requirement. All College Scholars must complete a senior project. They are not required to complete or fulfill the distribution requirements, although members of the College Scholar Advisory Board believe that the spirit of the requirement is a good one.

Each applicant to the College Scholar Program is asked to write an essay, which is due the last Wednesday in April of the freshman year. Mid-year freshmen apply at the end of their first spring semester in the college. Students should contact the Academic Advising Center, 55 Goldwin Smith Hall, for further information.

Dual-Degree Program with Other Colleges
The Dual-Degree Program enables especially ambitious undergraduate students to pursue programs of study in two colleges. Dual-degree candidates may earn both a Bachelor of Arts degree from the College of Arts and Sciences and (1) a Bachelor of Science degree from the College of Engineering or (2) a Bachelor of Fine Arts degree from the Department of Art in the College of Architecture, Art, and Planning or (3) a Bachelor of Science degree in urban and regional studies from the Department of City and Regional Planning in the College of Architecture, Art, and Planning or (4) a Bachelor of Science degree in architectural history from the Department of Architecture in the College of Architecture, Art, and Planning. Students enter one of these colleges as freshmen or sophomores and begin the Dual-Degree Program with the second college in the second or, in some cases, the third year. The Dual-Degree Program ordinarily takes five years to complete, and students are eligible for five years of financial aid. For further information students should contact Assistant Dean Saraydar, Arts and Sciences Admissions, 172 Goldwin Smith Hall.

Double Registration with Professional Schools
Registration in the senior year of the College of Arts and Sciences and the first year of Cornell Law School, Cornell Medical College, or the Johnson Graduate School of Management, is possible. A few exceptionally well-prepared students have earned 100 credits before the start of the senior year and have been accepted by one of the above-named professional schools may be permitted to register simultaneously in the college and in one or another of these professional schools during the seventh and eighth terms. Students with eight or fewer credits to complete may apply to enter the Master of Engineering program during the seventh term. All-degree students may enter this program no earlier than the ninth semester.

Students interested in the joint program with the Law School or the Graduate School of Management, or the Master’s of Engineering program should see the dean for seniors, Academic Advising Center, 55 Goldwin Smith Hall.

Students registering simultaneously in the college and in the Cornell Medical College receive the Bachelor of Arts degree after the first year of medical studies and the Doctor of Medicine degree after the remaining three years of medical college are completed. Interested students should contact the health careers coordinator, 203 Barnes Hall.

Double-registered students must, of course, complete all requirements for the B.A. degree, including 100 credits in College of Arts and Sciences courses.

Teacher Education in Science and Mathematics
Students at Cornell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Teacher Education in Science and Mathematics (TESM) is a university program jointly conducted by the departments of education and mathematics. Although TESM offers options for undergraduate and graduate study, most students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching degree (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates, usually during their sophomore year. For more information, contact the TESM student support specialist at 255-9255 or the program coordinator, D. Trumbull, 255-3108.

Special-Interest Options
The following options do not alter the college's requirements but enable students to pursue special interests within the usual program.

Informal Minors
Some students organize electives within a discipline or department. Such informal minors are not noted on the transcript.

Concentrations
Interdisciplinary concentrations, described in the pages following the descriptions of the departments and their curricula, provide structures for organizing electives. Completed concentrations are noted on the transcript.

Independent Study
Independent study affords students the opportunity to pursue special interests or research not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for
independent study (proposal forms are available in the Academic Advising Center, 55 Goldwin Smith Hall). In one semester students may earn up to six credits with one instructor or up to eight credits with more than one instructor.

Undergraduate Research Program

One of the best ways to benefit from being an undergraduate at a research university and at Cornell in particular is to become an apprentice in on-going faculty research. About 400 students participate each year in creating new knowledge and earn independent study credit for what they learn and contribute. They sharpen their critical and creative abilities and can test their interest in pursuing a research career. Sometimes they publish their work.

The Undergraduate Research Program in Goldwin Smith Hall gathers information about research opportunities in most disciplines of the liberal arts and sciences, guides students in finding further opportunities—both on campus and elsewhere, and both during the academic year and during the summer—and helps students prepare for research and present themselves as candidates for apprenticeships. Other students locate research opportunities independently through faculty whose courses they have taken, through their major departments, or through published materials.

The Cornell Undergraduate Research Board, an undergraduate organization, conducts an annual open house to help students get started in research and an annual forum at which undergraduates present their work. Students interested in this program should see Assistant Dean Williams, Academic Advising Center, 55 Goldwin Smith Hall.

Language Study

More than forty languages are taught in the College of Arts and Sciences; some of them are taught only at Cornell. A full range of language, literature, and cultural courses are available in most of the major ancient and modern languages through the joint efforts of the Departments of Linguistics and Modern Languages and the departments that specialize in literary and cultural study: the Africana Studies and Research Center and the departments of Asian Studies, Classics, German Studies, Near Eastern Studies, Romance Studies, and Russian Literature. Semi-intensive courses afford students the option of accelerating the development of language skills.

FALCON (Full-Year Asian Language Concentration). FALCON allows students who are interested in the Far East to study Chinese, Indonesian, or Japanese exclusively for one year. They gain proficiency in the language and familiarity with the culture. Students who are interested in the Far East should be aware of the opportunities here to pursue rapid and thorough beginning studies on campus with the objective of studying abroad later—in China, Japan, or Southeast Asia.

Language House Program

A complement to classroom cultural and linguistic instruction, the Language House Program combines residential and academic opportunities for developing and practicing conversational skills in French, German, Italian, Japanese, Mandarin Chinese, Russian, and Spanish. It helps prepare students who plan to study abroad and helps returning students share their cultural experiences while further increasing their language skills.

Students interested in this program should see Academic Administrator Evett, 130 Goldwin Smith Hall.

Prelaw Study

Law schools neither require nor prefer any particular program of study; they do seek students with sound training in the liberal arts and sciences. It is important that students plan a program in which they are interested and do well. Beyond that, students are advised to take courses that will develop their powers of precise, analytical thinking and proficiency in writing and speaking.

The college offers a concentration in law and society. Students should work toward completion of this concentration because they find it interesting, not because they believe it will convince law schools of their interest. The adviser for students in the College of Arts and Sciences who are applying to law school is Assistant Dean Cox, Arts and Sciences Admissions, 172 Goldwin Smith Hall.

Premedical Study

The breadth and depth afforded by a liberal arts education are invaluable for people who plan medical careers, whether they intend to practice or go into medical research. Such training has a profound effect on the doctor's usefulness to patients, and it affords the flexibility of mind that is needed for major research undertakings. Medical and dental schools do not prescribe or even prefer a particular major; they do, however, require particular undergraduate courses, and most students are well advised to begin chemistry in their freshman year. Students who are interested in medical careers are urged to visit the Health Careers Office, 203 Barnes Hall.

The adviser for students in the College of Arts and Sciences who are planning careers in medicine is Assistant Dean Turner, Academic Advising Center, 55 Goldwin Smith Hall.

Off-Campus Programs

Many students find it important to their majors or to their overall academic programs to study off campus or abroad for one or two semesters. When it makes academic sense, the college encourages its students to pursue such studies and grants credit toward the degree for work satisfactorily completed.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study. Each year about 200 undergraduates in Arts and Sciences include semester- or year-long study abroad as part of their formal undergraduate education. Ideally, study abroad builds upon a broad liberal arts background in the early semesters, language training, and preparation in the proposed field of study are all essential.

The college encourages wherever possible study at foreign institutions alongside their degree candidates rather than study in self-contained programs that offer courses especially designed for foreigners. The goals of this educational immersion are several: to deepen students' understanding of the organization of knowledge into disciplines with their own methodologies and perspectives; to involve students in social relationships with peers who hold a new and unexpected range of social attitudes; to hear from leading academics the modes of inquiry, methods of analysis, and educational values of higher education offered to students of another country. Focused academic work in the right institution abroad can prepare students for advanced study or honors work in the final semesters back in Ithaca.

Many students go abroad to pursue work in their majors. Economics and government majors get new views of the European Union or foreign policy with study at the London School of Economics, the University of Geneva, or the Institute of Political Studies ('Sciences Po') in Paris. Biology and chemistry majors have gained research interests to Oxford, England, Continental universities, and the University of New South Wales in Australia.

Some students pursue an informal minor to complement the major. For instance, one mathematics major completed a certificate in Dutch studies at Leiden University in the Netherlands. Others combine a premed curriculum with a major in Asian studies enhanced by study in Japan, China, or Nepal. Students with majors in the traditional disciplines can often complete a second major in the interdisciplinary study of a particular region through appropriate study abroad.

The college advocates study abroad that enables students to become competent enough in another language to experience daily life, develop social relationships, and accomplish formal course work in that language. Students who intend to study abroad in a country where the host language is not English must demonstrate a serious commitment to learning the language through course work before studying abroad. At least one area studies course or one course in the history, culture, economics, politics, or social relations of the country of destination should be part of every student's preparation for study abroad.

Students planning to study abroad need solid academic credentials to do so productively and successfully. The college requires a minimum overall GPA of 3.0 for all Cornell course work and good academic standing in the semester immediately before going abroad.

Study abroad is possible during the sophomore and junior years or during the first semester of the senior year. Study abroad in the final semester is rarely approved. Important steps to prepare for study abroad include:

• substantial progress with college distribution requirements;
• admission to a major and a faculty adviser in the major;
• clear academic agenda for study abroad;
• appropriate study of the country or region of destination, especially language study.

Study abroad can earn up to 15 liberal arts and sciences credits per semester of full-time course work as long as the curriculum abroad
is consistent with that of the college. Courses that fall outside the scope of the liberal arts and sciences may earn non-Arts credits. Students must carry a full course load as defined by the host institution. Students may spend up to two semesters abroad. Only those with compelling academic reasons may study in more than one location over two semesters. The college does not approve study abroad that tours more than one country or that is more touristic than scholarly in content and structure. Students must continue study of the host language while abroad. Only in exceptional circumstances will the college approve programs which, in non-English speaking countries, provide no language training.

All courses taken abroad will appear on the Cornell transcript and grades earned are reported in the system of the host institution. Grades earned through course work abroad do not become part of the Cornell GPA, because grades at other institutions are rarely equivalent to grades at Cornell.

Students who transfer to Cornell must complete a minimum of four semesters of residence on campus in Ithaca and may not study abroad during one of those four semesters.

Applications to study abroad must have the support of a faculty adviser in the major and the approval of the college. Although students may investigate options for study abroad and submit final applications through the Cornell Abroad office, Arts and Sciences applicants submit to the college an essay describing the academic rationale for study abroad and an outline of prospective courses abroad. Students planning study abroad must consult their faculty advisers and an assistant dean in the Academic Advising Center, 55 Goldwin Smith Hall.

Summer Residential Programs in Archaeology

During the summer months students may participate in a Cornell-sponsored archaeological project. In recent years the program has organized archaeological projects in New York State, Central America, Greece, and Italy. Students should contact the Archaeology Program for information about the sites currently available.

Marine Science

Shoals Marine Laboratory is a seasonal field station that offers a variety of courses and experiences designed to introduce undergraduates to the marine sciences. The laboratory is located on Appledore Island, six miles off the Maine/New Hampshire coasts. Students should contact the Division of Biological Sciences for further information.

Cornell-in-Washington

The Cornell-in-Washington program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington program offers two study options: 1) studies in public policy, and 2) studies in the American experience. The program also offers a unique externship opportunity: students serve as externs in a federal agency, congressional office, or non-governmental organization and take part in a public policy or humanities seminar. They define and carry out individual research projects under the supervision of Cornell faculty. Potential externships are arranged through, and approved by, the Cornell-in-Washington program. For further information, see p. 19 or inquire at 131 Sage Hall, 255-4000. Seniors who wish to study in Washington during their final semester must petition the college for permission to do so; they should first consult with the dean for seniors, Academic Advising Center, 55 Goldwin Smith Hall, 255-5004.

Fieldwork

Sometimes it is appropriate for students to include fieldwork as part of their major. A three-member faculty committee helps the student plan the project, arranges for ongoing supervision, and evaluates the project at the end of the term. Fieldwork almost always involves writing a long paper or several short ones, as well as practical experience. All proposals for fieldwork must be presented in advance to the Committee on Academic Records for approval. A maximum of 15 credits in fieldwork may be earned. For further information students should contact an advising dean in the Academic Advising Center, 55 Goldwin Smith Hall.

ADVISING

The following advisers and offices provide academic advising or information on college procedures and regulations.

Faculty Advisers

All new students are assigned a faculty adviser. The adviser helps students design programs of study and advises them about ways to achieve their academic goals. Advisers and new advisers meet first during orientation week to plan the student's program. New students are encouraged to see their advisers again early in the term, before it is too late to drop courses, to discuss their academic program and to become better acquainted. Academic difficulties may frequently be solved or avoided if students and advisers recognize problems early. Advisers and advisees meet at least once each semester to discuss courses for the following term.

Students who would like to petition for an exception to college rules should discuss the matter with their advisers. Advisers may also help students with study or personal problems or may direct them to other offices on campus where help is available.

Student Advisers

Each new student is supplied with a list of student advisers who can provide information about the college's requirements, courses, and instructors and about life at Cornell.

Major Advisers

After acceptance into a major, students are assigned a major adviser, a faculty member in the major department, with whom they make many of their most important academic decisions at Cornell. The adviser eventually certifies the completion of the major. The major adviser should be consulted by the student about all academic plans, including honors, study abroad, acceleration, and graduate study. The adviser's support is especially important if a student petitions for an exception to the requirements for the degree.

Academic Services

The Academic Advising Center, 55 Goldwin Smith Hall, 255-5004 and the Office of Admissions, 172 Goldwin Smith Hall, 255-4833, offer resources for faculty and student advisers and for students themselves and their parents. Advising deans are available to help students define their academic and career goals and to help with special academic options and exceptions to college rules:

Lynne S. Abel, associate dean for undergraduate education, independent majors and college scholars—255-5004
Patricia M. Dougherty, college registrar—255-5051
Thak Chaloemiartiara, associate dean for seniors—255-4833
John Chiment, assistant dean for freshmen (fall matriculants)—255-5004
Gerry Cox, assistant dean, pre-law adviser, and coordinator of outside scholarships—255-4833
Michele Crane, associate registrar—255-5051
Daniel H. Evett, coordinator of international admissions and academic administrator, Language House—255-6543
Ken Gabard, assistant dean and adviser for internal transfer students—255-4833
Steve Saraydar, assistant dean for freshmen (spring matriculants) and dual-degree students—255-4833
Maria S. Terrell, assistant dean for sophomores and juniors—255-5004
Janice Turner, assistant dean for minority programs and premedical adviser—255-5004
Peggy Walbridge, assistant dean for transfer students and students with disabilities—255-4833
Marilyn Williams, assistant dean for undergraduate research, scholastic development and Career Center liaison—255-5004

REGISTRATION AND COURSE SCHEDULING

Enrollment in Courses in the College of Arts and Sciences

Students must enroll in courses through the Academic Advising Center, 55 Goldwin Smith Hall.

New Students

During orientation week the dean for freshmen and the dean for transfer students conduct briefings about scheduling courses for new students.

Continuing Students

Continuing students are expected to select and schedule courses in advance during the previous term. Students who fail to sign into courses during the designated period must wait until the beginning of the semester and
may have difficulty securing places in those they most want. Students may schedule up to five courses during the course enrollment (preregistration) period. Before signing into courses, students should make appointments with their faculty advisers to plan their programs. Course enrollment (pre-registration) is the best time to discuss long-range goals with faculty advisers. All students are welcome to discuss programs and plans with an advising dean in the Academic Advising Center, 55 Goldwin Smith Hall, or in the Office of Admissions, 172 Goldwin Smith Hall.

At the beginning of each term students should check their schedules and records on “Just the Facts.”

Limits on Courses and Credits
To meet the 34-course requirement, students must normally take four courses during each of six semesters and five courses during each of two semesters. To meet the 120-credit requirement, students should average 15 credits per semester. (AP credit and/or summer credits may reduce these numbers.) At a minimum, students must carry twelve credits per semester; if for compelling personal or academic reasons students need to carry fewer than twelve credits, they should consult their faculty adviser and an advising dean. Permission is by petition only; it is relatively freely given for first-semester students. Completion of fewer than twelve credits without permission results in unsatisfactory academic standing. First-term freshmen must petition to register for more than twelve credits; other students may register for more than eighteen credits a term only if their previous term’s average was a 3.0 or higher. No more than twenty-two credits may be taken in a regular semester without permission of the Committee on Academic Records. Students who fail to seek approval for excess credits from the committee run the risk of having only 18 credits for the semester count toward the degree.

Any student who is not officially enrolled in a schedule of courses by the end of the third week of classes may be withdrawn from the college.

Attendance in classes is a matter between students and their instructors. If a student cannot attend classes because of illness or family crisis, the Academic Advising Center will notify instructors when requested to do so, but students must arrange to make up examinations or other work with their instructors. When students will be absent because of religious holidays or athletic competitions, they must discuss arrangements for making up their work with their instructors. Students who must miss an examination must contact the professor in advance. Alternative arrangements are at the discretion of the instructor.

Adding and Dropping Courses
After course enrollment (preregistration), students may not adjust their schedules until the new term begins. During the first three weeks of the semester, students may change courses without petition. Add/drop forms are available in the Academic Advising Center, 55 Goldwin Smith Hall.

After the third week of classes, students may petition to add courses. They may drop courses up to the seventh week. Between the seventh and twelfth weeks students may petition to withdraw from courses, if (1) the instructor approves; (2) the adviser approves; (3) no issue of academic integrity is at stake and (4) an advising dean approves. Students must meet with an advising dean to obtain petition forms.

Courses dropped after the seventh week will be noted on the transcript by a "W" where the grade would normally appear. No petitions to withdraw from courses may be submitted after the end of the twelfth week in the term.

Deadlines for short courses will be adjusted accordingly. During the first and second weeks of a short course, students may drop courses without petition. After the midpoint of a short course, students who wish to add or drop the course must petition to do so.

Leaves of Absence
Taking time off from college to think about goals and progress, to gain additional experiences or funds, or just to take a break from studying is sometimes useful to students. Those in good standing who take a leave before the beginning of any semester or by the end of the seventh week of the semester are welcome to register in the college the following semester. Five years is the maximum length of time a student may be on leave and return without special permission. Leaves of absence are of four types:

1) Personal leaves impose no conditions concerning reentering the college except for the five-year limit. Readmission is automatic upon written request made at least one month before the beginning of the term in which the student wishes to return.

2) Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. In some cases students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student’s academic standing is subject to review at the time of the leave and on return.

3) Conditional leaves may be granted by an advising dean if the student is not in good standing or, in unusual circumstances, after the seventh week of the term. Normally students may not return from conditional leaves for at least two terms or until specific and individual conditions, such as completing unfinished work, have been met.

4) Required leaves: The Committee on Academic Records may require a leave of absence if a student is not making satisfactory progress toward the degree. See the section "Academic Actions." Any student who wishes to take a leave of absence should consult an advising dean in the Academic Advising Center. On readmission, the student’s graduation date will be recalculated according to the number of terms completed, the number of acceptable credits earned toward the degree, and the requirements for graduation.

Students who take courses elsewhere while on leave may petition to have credits transferred and applied toward the 120 credits needed for graduation, but not the 100 credits required in the college. Approval depends on acceptable grades and the judgment of the relevant departments. Credits earned during a leave do not count toward the eight semesters of residence and may not be used to reduce the terms of residence. See the section "Residence."

Withdrawals
A withdrawal is a voluntary severance of connection with the university. If a student wants to withdraw after registering for the term, the withdrawal must be made before the end of the seventh week of classes to avoid grades of "W" on the transcript. A notation of "W" will appear on the transcript for any course dropped after the seventh week. On withdrawal it is assumed that the student will not reregister in the college.

Students seeking readmission after withdrawing from the college must write to the Committee on Academic Records for permission. If a student fails to register for a term and does not request a leave, the student will be withdrawn from the college for failure to register.

Transferring within Cornell (Internal Transfer)
Internal transfer from one college or school at Cornell into another is attractive for many students whose intellectual interests change. Students who want to transfer should discuss their eligibility with a counselor at the new school or college.

In some cases students who want to transfer into the College of Arts and Sciences may transfer directly. In other cases they may be referred to the Internal Transfer Division. During the term immediately preceding transfer into the College of Arts and Sciences, students should complete at least 12 credits of courses in the College of Arts and Sciences with superior grades and without any grades of Incomplete, any S-U grades (unless only S-U grades are offered for that particular course), or any grades below C. Satisfying this minimum requirement does not, however, guarantee admission. Admission to the college is based on consideration of the student’s entire record at Cornell and the high school record, not just the work of one semester. Interested students should see the Academic Advising Center, 55 Goldwin Smith Hall.

ACADEMIC STANDING
Students are in good academic standing for the term if they successfully complete at least 12 credits by the end of the term and receive no more than one D and no F or U grades. If a student completes only three courses, all grades must be above D. In addition, students are expected to make satisfactory progress toward satisfactory requirements for the degree, and to earn grades of C (not C-) or better in at least 100 of the total credits for the degree. Courses listed above under "Noncredit courses" do not count towards good academic standing.

Academic Actions
Students who are not in good academic standing will be considered for academic action by the faculty’s Committee on Academic Records or by one of the deans of the college.
Warning. Any student who fails to maintain good standing will, at a minimum, be warned. The warning may be given by an advising dean in the college or by the Committee on Academic Records. A warning is posted on a student's unofficial college transcript but is not reported to the university registrar and does not appear on official transcripts.

Required leave of absence. A student in serious academic difficulty may be required by the Committee on Academic Records to take a leave of absence, normally for a full year. Usually, but not necessarily, the Committee on Academic Records warns students before suspending them. Before being allowed to return and reregister in the college, students must describe what they did on leave and how they resolved their problems and submit a plan for completing the degree. In some cases the students will be required to furnish evidence that they are ready to return before being allowed to reregister in the college.

Students who request to return in less than a year must present to the committee exceptionally strong evidence of their readiness to return. "Required leave" and the date are posted on the student's transcript.

Required withdrawal. The Committee on Academic Records may dismiss a student from the college because of a highly unsatisfactory record for one term or for failure to make satisfactory overall progress in grades, credits, or the requirements of the major. This action expels the student permanently from the college. "Required withdrawal" and the date are posted on the student's transcript.

Students being reviewed for academic action are provided evidence that will help explain their poor academic performance. Students may appeal a decision or action of the committee if they have new relevant information to present.

Forgery on Forms
Forging signatures or credentials on college forms is an academic offense; sometimes it constitutes academic fraud. In all cases of forgery on academic forms, the effect of the forged documents shall be negated. Students may then petition properly to do whatever they attempted to do improperly. Such incidents will be recorded in the Academic Integrity Hearing Board confidential file for forgeries. If a student forges more than once or if the forgery would advance the student's academic standing unfairly or fraudulently or if, for any other reason, the situation requires some response in addition to the uniform penalty, the Academic Integrity Hearing Board might make a different recommendation, such as a notation on the student's transcript, suspension, or dismissal.

GRADUATION

Application to Graduate
In the first semester of their senior year, students must complete an application to graduate so that the college can check each student's plan for fulfilling college requirements. This process is intended to help seniors identify problems early enough in the final year to make any necessary changes in course selection to satisfy those requirements.

Meeting graduation requirements is the student's responsibility; problems that are discovered, even late in the final term, must be resolved by the student before the degree can be granted.

Degree Dates
There are three degree dates in the year: May, August, and January. Students who plan to graduate in August may attend graduation ceremonies in the preceding May. Students graduating in January are invited to a special recognition ceremony in December; they may also attend graduation ceremonies in the following May.

The Degree
The College of Arts and Sciences grants the A.B. (or B.A.) degree. A.B. is the abbreviation of the Latin name for the degree: "Artium Baccalaurus," or translated into English, B.A.: "Bachelor of Arts."

Honors
Dean's List
Inclusion on the Dean's List for academic excellence is an honor bestowed by the dean of the college. The criteria are subject to change from semester to semester and are available in the Academic Advising Center, 55 Goldwin Smith Hall.

Bachelor of Arts with Honors
Almost all departments offer honors programs for students who have demonstrated exceptional ability in the major and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. The honors programs are described by individual departments in the following sections. The degree of Bachelor of Arts with honors will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have satisfactorily completed the honors program in their major and have been recommended for honors by their major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction
The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:
1) completed at least 60 credits while registered in regular sessions at Cornell;
2) ranked in the upper 30 percent of their class at the end of their seventh semester, or next-to-last semester for transfers and accelerants;

ARTS AND SCIENCES - 1996-1997

Letters

See Grading Guidelines, page 12.

S-U Grades
The S-U (satisfactory-unsatisfactory) option allows students to explore unfamiliar subjects or take advanced courses in subjects relatively new to them without being under pressure to earn high grades. It is not meant to reduce the amount of work a student completes in a course or the amount of effort a student devotes to a course. Students must select their grading option during the first three weeks of the term (virtually no exceptions to this deadline are permitted), although the S-U option is contingent upon the instructor's willingness to assign such grades. A grade of S is equivalent to a grade of C- or higher; a grade of U, which is equivalent to any grade below C-, is a failing grade equal to an F. S means the student receives the credit specified for the course. U means no credit is given. A few courses in the college are graded exclusively S-U; in that case, the final grade appears on the transcript as SX or UX.

Courses that will count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. Students may elect the S-U option in courses used to satisfy the distribution, language, and elective requirements, provided that such courses do not also count toward major requirements or serve as prerequisites for admission to the major. Students are advised to use the S-U option sparingly if they intend to apply to graduate school or for transfer to another college. There is no limit on the number of courses each term for which students may elect the S-U grade, but within the 120 credits required for the degree, a minimum of 80 credits must be in courses for which a letter grade was received.

Grades of Incomplete
A grade of incomplete signifies that a course was not completed before the end of the term for reasons beyond the student's control that are acceptable to the instructor. Students must have substantial equity in the course, and they must be able to complete the remaining work without further registration and must have a passing grade for the completed portion. When a grade of incomplete is reported, the instructor submits a form stating what work must be completed, when it must be completed, and the grade earned if the work is not completed by that date. When a final grade is reported, it is recorded on the official transcript with an asterisk and a footnote explaining that this grade was formerly an incomplete.

Students must resolve any incompletes with their instructors before graduation.

R Grades
R designates two-semester or year-long courses. The R is recorded on the student's transcript at the end of the first term. The grade recorded at the end of the second term evaluates the student's level of performance in the course for the entire year. The total of credits earned for the whole course is listed each term.

Grade Reports
Students should periodically check their courses and grades on "Just the Facts" to be sure that they are recorded correctly.

Class Rank
The college does not compute class rank.

Dean's List
Inclusion on the Dean's List for academic excellence is an honor bestowed by the dean of the college. The criteria are subject to change from semester to semester and are available in the Academic Advising Center, 55 Goldwin Smith Hall.

Bachelor of Arts with Honors
Almost all departments offer honors programs for students who have demonstrated exceptional ability in the major and who seek an opportunity to explore branches of their subject not represented in the regular curriculum or to gain experience in original research. The honors programs are described by individual departments in the following sections. The degree of Bachelor of Arts with honors will be conferred upon students who, in addition to having completed the requirements for the degree of Bachelor of Arts, have satisfactorily completed the honors program in their major and have been recommended for honors by their major department, the Independent Major Program, or the College Scholar Program. Concentrations do not offer honors programs.

Bachelor of Arts with Distinction
The degree of Bachelor of Arts with distinction in all subjects will be conferred on students who have completed the requirements for the degree of Bachelor of Arts, if they have met the following requirements by the end of their final semester:
1) completed at least 60 credits while registered in regular sessions at Cornell;
2) ranked in the upper 30 percent of their class at the end of their seventh semester, or next-to-last semester for transfers and accelerants;
3) received a grade below C— in no more than one course;
4) received no failing grade;
5) maintained good academic standing, including completing a full schedule of at least 12 credits, in each of their last four terms; and
6) have no Incompletes remaining on their records.

CALENDAR SUPPLEMENT
All of the dates in the university calendar at the front of this volume apply to all Cornell students. Listed below are some additional dates that are of importance for students in the College of Arts and Sciences.

<table>
<thead>
<tr>
<th>Fall 1996</th>
<th>Spring 1997</th>
</tr>
</thead>
<tbody>
<tr>
<td>First deadline for submitting independent major requests. Go to Academic Advising Center, 55 Goldwin Smith Hall, for further information.</td>
<td>Dec. 2</td>
</tr>
<tr>
<td>Last day for adding courses without petition.</td>
<td>Sept. 20</td>
</tr>
<tr>
<td>Last day for changing grade option to S-U or letter.</td>
<td>Nov. 15</td>

Courses and Departments

SPECIAL PROGRAMS AND AREAS OF CONCENTRATION
The college offers a number of interdisciplinary programs described in the section following the departmental program descriptions.

COURSES AND DEPARTMENTS

AFRICANA STUDIES MAJOR
See "Special Programs and Interdisciplinary Studies."

AKKADIAN
See Department of Near Eastern Studies.

AMERICAN STUDIES
See "Special Programs and Interdisciplinary Studies."

ANTHROPOLOGY

ANTHROPOLOGY is one of the most diverse disciplines in the university. Spanning human evolution, the development and heterogeneity of language and culture, human history, and the diversity of cultures past and present, the field has enormous scope, utilizes a wide variety of methods, and addresses basic issues about human origins and human life while retaining an active interest in understanding social life as a means to effect positive social change. Thus, anthropology is an ideal "liberal arts" major, but can also serve as a major that, when properly designed, prepares students for a wide range of professional careers, e.g., law, medicine, social services, business, etc.

The Major
The range and complexity of the field of anthropology requires active collaboration between the student and a faculty adviser in the development of an individualized program of study. To enter the anthropology major, a student must pass one course in each of the two broad introductory areas of anthropology: "Nature and Culture" and "Culture and History" as listed below under the heading "Introductory Courses." Provisional acceptance into the major is possible before completing these courses with permission from the Director of Undergraduate Studies in Anthropology. When first entering the major, the student and the adviser work out a preliminary program of study constructed in light of the student's interests and goals.

In the first semester of the junior year, the student and adviser formalize a concentration reflecting the special interests of the student and select a set of courses from those listed below as a program of study. Once it is approved, the student should consult the Anthropology Curriculum Committee for comment and advice. Examples of possible concentrations are Latin American ethnohistory and contemporary identity politics, nature and culture in human history, anthropology and literature, anthropology and social change, ethnomusicology, anthropology and the arts, etc. The plan must include a minimum of eight courses in anthropology (including the Anthropology Senior Seminar) totaling 32 credit hours. When warranted, the adviser is free to approve up to two cognate courses totaling up to 8 credit hours from other departments to fill this 8-course requirement. Students may revise their program of study in consultation with their adviser as their studies progress. The aim of this process is to provide a close and supportive advising relationship and a strong and coherent structure for the student's major.

In the senior year, all anthropology majors are required to take one of the Anthropology Senior Seminars offered by the department. These seminars are designed to provide a broad and integrative perspective on the field of anthropology through the study of some of its principal trends, issues, history, etc.

Study abroad and off-campus programs: the Department of Anthropology encourages students to consider a semester of study abroad or off-campus study developed as an integral part of the student's major concentration.

The Cornell-Nepal Study Program: the Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Holmberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major adviser and Cornell Abroad.

Honors
Honors in anthropology is awarded for excellence in the major, which includes an overall grade point average and completion of an honors thesis. Anthropology majors
interested in the honors program should consult the chair of the Honors Committee at the end of their junior year. To qualify for entrance into the honors program, a student must have at least a 3.0 GPA overall and 3.3 GPA in the major, and the consent of a faculty member in anthropology who will guide the honoree in the thesis program and being admitted as a candidate by the Honors Committee, the student will conduct research and write a thesis. This thesis will be evaluated by the faculty research adviser and two other faculty members. Honors (i.e., cum laude, magna cum laude, or summa cum laude) are awarded based on the quality of the thesis and the student’s overall record. Honors candidates must start this process by consulting their major adviser about the honors program early in their junior year.

While working on the thesis during the senior year, students may enroll in either Anthropology 483 (fall) or 484 (spring) “Honors Thesis Research.” To complete the thesis, students must enroll in either 491 (fall) or 492 (spring) “Honors Thesis.” Only Anthropology 483 or 484 may count toward hours for completion of the Anthropology major requirements. The credit hours for these courses are variable and grades for these courses are given by the faculty research adviser and are based on performance during thesis research and writing.

Any honors candidate whose research directly involves working with human subjects must receive approval for the project from the Cornell University Committee on Human Subjects.

Special Programs and Facilities

Collections: The department has an extensive collection of archaeological and ethnological materials housed in the anthropology collections. A limited number of students can make arrangements to serve as interns in the anthropology collections. Olin Library houses some of the most extensive collections of materials on the ethnology of Southeast Asia, South Asia, East Asia, and Latin America to be found anywhere in the United States. The biological anthropology laboratory (McGraw 303) houses an extensive collection of materials for teaching purposes, including 1) human skeletal remains, 2) articulated skeletons and cranial casts of primates, and 3) casts of important fossils in the human lineage.

Independent Study: Specialized individual study programs are offered in Anthropology 497–498, Topics in Anthropology, courses open to a limited number of juniors and seniors who have obtained consent and supervision of a faculty member. Undergraduates should note that many 600-level courses are open to them with consent of the instructor.

Colloquia: The Department of Anthropology holds colloquia almost every week of the semester on Friday at 3:50 in McGraw 215. Faculty members of Cornell and other universities participate in discussions of current research and problems in anthropology. Students are encouraged to attend.

Study abroad and off-campus study programs: The Department of Anthropology encourages students to consider a semester of study abroad or of either study developed as an integral part of the student's major concentration. The Cornell-Nepal Study Program: The Cornell-Nepal Study Program is a joint program of Cornell University and Tribhuvan University, the national university of Nepal. Qualified juniors, seniors, and first- or second-year graduate students work with faculty from both universities to prepare for and undertake field research projects in Nepal. Students receive 15 credits per semester; students may enroll for either fall or spring semester, or for the entire year; application is through Cornell Abroad. For further information, consult David Heltberg or Kathryn March in the Department of Anthropology.

Other anthropologically relevant study abroad options, using existing Cornell Abroad and off-campus options, can be worked out in consultation with the major adviser and the college study abroad adviser.

I. Introductory Courses

A. Nature and Culture:

ANTHR 101 Introduction to Anthropology: Biological Perspective on the Evolution of Humankind #

Fall. 3 credits. M. Small.

The evolution of humankind is explored through the fossil record, studies of the biological differences among current human populations, and a comparison with our closest relatives, the primates. This course investigates the roots of human biology and behavior with an evolutionary framework. Fee for lab usage and maintenance, $5.

ANTHR 203 Early People: The Archaeological and Fossil Record (also Archaeology 203) #

Spring. 3 credits. T. P. Volman.

A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretation will be stressed. Demonstrations and films supplement the lectures.

ANTHR 211 Nature and Culture #

Spring. 4 credits. P. S. Sangren.

Cultural anthropology, because it encompasses the comparative study of humankind in society, provides a unique vantage on the nature of humanity. One of the focal questions of the discipline is the relationship between the physical/biological and symbolic/moral worlds in which we live. This inquiry places anthropology squarely at the center of social theory, as all social theorists and political ideologies are founded on premises regarding human nature. Through study of a variety of issues and debates (e.g., "sociobiology," the origin and meaning of the incest taboo), this course examines a variety of past and current anthropological approaches to the relationships between nature and culture in human life.

ANTHR 275 Human Biology and Evolution (also Biological Sciences 275 and Nutritional Sciences 275) #

Fall. 3 credits. S-U grades optional, with permission of either instructor. Offered most alternate years. Lecs. W F 10:10; disc. M 10:10. K. A. R. Kennedy.

An introduction to the biology of Homo Sapiens through an examination of human evolution. biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, and sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology. These topics and others are the focus of the optional one-hour weekly discussions.

II. Culture and History:

ANTHR 102 Introduction to Anthropology: The Comparison of Cultures @

Spring. 3 credits. J. Krier.

An introduction to current anthropology through ethnographies, or the descriptive accounts of anthropologists. Through readings and lectures, students acquaint themselves with a number of cultures from several parts of the world. The cultures range in form from those of small-scale tribal societies to those of state societies. Through-the course, we attempt to make sense of exotic cultures in their own terms. Attention is focused on variation in cultural patterns as they are expressed in economic, political, and social practices. In this encounter, the principles of anthropology, as a comparative enterprise that poses distinct cultural systems in relief, will be developed. Fiction, films, and exercises supplement the formal anthropological materials.

ANTHR 200 Cultural Diversity and Contemporary Issues @

Fall. 3 credits. J. Bormeister.

This course will introduce students to the meaning and significance of forms of cultural diversity for the understanding of contemporary issues. Drawing from films, videos, and selected readings, students will be confronted with different representational forms that portray cultures in various parts of the world, and they will be asked to examine critically their own prejudices as they influence the perception and evaluation of cultural differences. We shall approach cultures holistically, assuming the inseparability of economies, kinship, religion, and politics, as well as interconnections and dependencies between world areas (e.g., Africa, Latin America, the West). Among the issues considered: "political correctness" and truth; nativism and ecological diversity; race, ethnicity, and sexuality; sin, religion, and war; and global process and cultural integrity.

ANTHR 202 Interpretive Archaeology (also Archaeology 202) #

Fall. 3 credits. Not offered 1996–97.

ANTHR 204 Ancient Civilizations (also Archaeology 204) @

Fall. 3 credits. Not offered 1996–97.

II. Honors and Independent Study

ANTHR 483 Honors Thesis Research

Fall. Credit and hours to be arranged. Prerequisite: consent of the Honors Committee. Staff.

Independent study under the close guidance of a faculty member selected by the student.
This seminar shall discuss key concepts and cultural foundations, and how kinship systems differ in sex, money, and power. We shall critically examine kinship's role in archaeology. We shall explore how kinship systems are produced ideologically and in cultural representations. The course will be centered around the concept of kinship "naturalization" social difference in such a way that relations of inequality and hierarchy appear to be the logical consequences of the natural order of things.

ANTHR 482 Anthropology, Culture, and the Univeristy

ANTHR 490 Primates and Evolution
Spring. 4 credits. Limited to ten students. Prerequisite: Anthropology 390 or permission of instructor. M. Small. This seminar will focus on one current controversy in primatology. Through readings and discussion, the issues will be subject to critical examination. Current topics might include: social intelligence, primates as predictors and prey, primate conversation, sexual selection theory, reproductive success, dominance, etc.

IV. Nature and Culture
Thinking about nature and culture and their interaction is central to contemporary anthropology. The courses in this section present a biological and evolutionary perspective on behavior, focusing on the interplay between nature and culture, and discussing the controversies surrounding these relationships between these dimensions of human life.

ANTHR 208 The Evolution of Human Matting
Spring. 4 credits. M. Small. The purpose of this course is to explore the human mating career from an evolutionary, biological, and current behavioral perspective. The course begins with a foundation in evolutionary theory, focusing on the concepts of reproductive success, mate choice, parental investment, sexual selection, and mating strategies. Next, the biological bases of reproduction and sexuality are presented. One goal of this course is to paint human sexuality on a larger mammalian and primate canvas. Therefore, lectures will include the hormonal, chemical, and nervous system contributions to animal sexuality. Topics include, for example, the female ovulatory cycle, the life of sperm, the hormones of the sex drive. Humans will be compared to mammals in general and other primates. Finally, humans will be viewed in particular. Based on comparison with other primates, we will ask important questions about the human sexual and reproductive condition. Are humans disconnected from the driving sexual hormones experienced by other animals? Is ovulation concealed, and if so, why is this important? Are people pushed by natural selection to choose particular mates? Why did humans evolve their current family mating system? Are humans "naturally monogamous"?

ANTHR 344 Male and Female in Chinese Culture and Society (also Women's Studies 344)
Fall. 4 credits. Not offered 1996–97.

ANTHR 370 Environmental Archaeology (also Anthropology 370) and Archaeology 370/670
Fall. 4 credits. Not offered 1996–97.
the variety of techniques authors use to establish or undermine their own authority. They have explored how things are represented. Can any "text"—whether a journalistic account, ethnography, novel, or film—really represent. Among the approaches discussed are those centering on the pedagogy of liberation, feminism, the industrial democracy movement, and "Southern" participatory action research, action science, and participatory evaluation.

ANTHR 321 Ethnicity, Identity, and the State
Spring. 4 credits. D. J. Greenwood. Centers on the handling of rights, distributive justice, and public policy in different political/legal systems that link to different expressions of ethnic identity.

VII. Understanding Cultures
Anthropologists examine the diversity of human behaviors, social relationships and structures, economic and political cycles, law, and how they shape culture.

ANTHR 217 Ethnicity, Identity, and the State
Spring. 4 credits. D. J. Greenwood. Centers on the handling of rights, distributive justice, and public policy in different political/legal systems that link to different expressions of ethnic identity.

ANTHR 323 Kinship and Social Organization
Fall. 4 credits. B. Lambert. Much of this course is a survey of forms of the family, descent groups, and marriage systems. The role at which they are shaped culturally and how they shape culture.
is devoted to a history of the British and American family and to its fate in utopian communities.

ANTHR 326 Economic Anthropology @ Fall. 4 credits. P. S. Sangren.

Economic anthropology is the study of the organization of production, distribution, and associated values in radically different primitive and peasant societies. The course introduces the major competing stances—formalist (neo-classical), substantivist, and Marxist—that have developed frameworks for analysis of exotic economic systems. Other topics include the integration of local communities with larger economic systems, the articulation of capitalist and non-capitalist modes of production, and a critique of theories of value from an anthropological perspective.

ANTHR 328 Conflict, Dispute Resolution, and Law in Cultural Context @ Spring. 4 credits. V. Santiago-Irizarry.

Rule-making and dispute resolution are integral aspects of social reality in any culture. The ways in which conflict is treated and interpreted—to be then deflected or resolved—articulate with other cultural domains such as religion, politics, and economics as part of the material and symbolic processes that enable or disable human interaction. At issue then are the formal and processual means that the treatment of conflict takes in different societies. These means constitute frames for the definition of social experience that are used by social actors in the interpretation of events within the terms of an overriding sociocultural logic that is in turn refriged by these interpretive frames.

ANTHR 365 Mothers, Priests, Rebels, and Indian Chiefs: New Social Movements in Latin America (also Anthropology 685) @ Fall. 4 credits. B. J. Isbell.

Latin America is characterized today as a region of widespread yet diverse forms of mobilization that appear to be in constant transformation. The "Mad Mothers" of Argentina, fundamentalists, liberation theologians, revolutionaries, ethnic leaders, gay activists, and urban squatters are challenging historicity, engaging in cultural innovation, and articulating in diverse ways with the cultures. This seminar will chart a course between theoretical texts on power and mobilization and examples of ethnographic/historical cases of social movements.

B. Interpretive Approaches in Cultural Anthropology:

These courses stress symbolic or textual approaches to human society. They take as their object of analysis structures of meaning in such diverse areas as performance and text, myth and religion, views of the self, gender, and the sociology of knowledge. These same topics arise in many of the area-focused courses as well (Section D), but take center stage in the following courses.

ANTHR 290 Filming Other Cultures (also Theatre Arts 274) @ Spring. 3 credits. Limited to twenty students. Preference given to students who have taken either Anthropology 102 or Theatre Arts 274. Fee for film screening and maintenance, $35. R. Ascher. For description, see section VI.

ANTHR 320 Myth, Ritual, and Symbol (also Religious Studies 320) @ Spring. 4 credits. D. Holmberg. This course examines how systems of thought, symbolic forms, and ritual practice are formulated and expressed in primarily non-Western societies. It focuses on anthropological interpretations of space, time, cosmology, myth, classificatory systems (such as color, totems, food, dress, kinship), taboo, sacrifice, witchcraft, sorcery, and rites of passage (birth, initiation, marriage, death). It will examine both the roles of specialists (spirit mediums, curer, priest, ascetics, etc.) and non-specialists in producing these cultural forms.

ANTHR 322 Magic, Myth, Science, and Religion (also Religious Studies 322) @ Fall. 3 credits (4 by arrangement with instructor). Limited enrollment. A. T. Kirsch.

How can something thought "not to exist" have such profound consequences in the real world? In lay understandings, ethnicity is believed to be a "natural" disposition of humanity... If so, why does ethnicity mean different "things" in different places? Anthropology has much to contribute to a greater understanding of this perplexing phenomenon. After all, the defining criterion for ethnic groups is that of cultural distinctiveness. Through ethnographic case studies, this course will examine some of the key anthropological approaches to ethnicity. We will explore the relationship of ethnicity to culture, ethnicity to nation, and ethnicity to state to better understand the role ethnicity plays in the identity politics of today.

ANTHR 460 The Culture of Lives (also Women's Studies 406) @ Spring. 4 credits. K. S. March.

This seminar will look at persons, lives, cultures, and methods in anthropological life history materials. Throughout the seminar we will attend to the evolution of interest in life forms of, and uses for life history materials in anthropology, with special attention to differences in men's and women's lives and life (re)presentations.

ANTHR 479 Ethnicity and Identity Politics: An Anthropological Perspective @ Fall. 4 credits. V. Munasinghe.

The most baffling aspect of ethnicity is that while ethnic sentiments and movements gain ground rapidly within the international arena, the claim that ethnicity does not exist in any objective sense is also receiving increasing credence within the academic community.
ANTHR 221 Anthropological Representation: Ethnographies on Latino Culture (also Latino Studies Program 221) Spring. 3 credits. Not offered 1996-97.

ANTHR 230 Cultures of Native North America # Fall. 4 credits. B. Lambert.
A survey of the principal Eskimo and American Indian culture areas north of Mexico. Selected cultures will be examined to bring out distinctive features of the economy, social organization, religion, and worldview. Although the course concentrates on traditional cultures, some lectures and readings deal with changes in native ways of life that have occurred during the period of European-Indian contact.

ANTHR 303 Asians in the Americas: A Comparative Perspective (also Asian American Studies 303) Fall. 4 credits. V. Munasinghe.
The common perception of ethnicity is that it is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won repute as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label "Asians" an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course will examine the dynamics behind group identity, namely ethnicity, by contrasting and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies will focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

ANTHR 316 Power, Society, and Culture in Island Southeast Asia (also Anthropology 316) Spring. 4 credits. J. Krier.
How are geographical regions linked—by boundaries, cosmological centers, or flows of people and goods? How is power or control exerted over the populations of a region through trade relations, military force, religious ideology, or identity politics? How do diverse local communities become part of an "empire"—through education and media, state benefits, or the creation of a popular culture? Focusing on Indonesia, Malaysia, and the Philippines, this course will examine the construction of political relations in local, colonial, and national settings, as well as the construction of theoretical models to describe power relations in Southeast Asia. We will examine the role of both social practices (kinship, gender, and economic relations) and cultural performances (drama, art, and ritual) in upholding relations of power and differences in Southeast Asia. Students will have an understanding of the variations of social and cultural life in Island Southeast Asia, comparative pre-colonial, colonial and national histories, as well as a sense of the concerns that have marked the ethnography of the region.

ANTHR 333 Ethnology of the Andean Region @ Spring. 4 credits. Not offered 1996-97.

ANTHR 336 Change and Continuity in the Pacific Islands # Fall. 4 credits. J. Fajans.
An overview of the ethnography of Micronesia, Polynesia, and Melanesia, exploring the historical relations between these regions as well as the geographical, social, and cultural differences among them. In addition to an ethnographic survey of the region, the course will focus on what an anthropological study of this part of the world has contributed to general anthropological theory. In this context, there will be a special focus on the analysis of systems of gender, kinship and descent, exchange and trade, and on the life cycle and social construction of the person.

ANTHR 339 Peoples and Cultures of the Himalayas: Interregional and International Perspectives Spring. 4 credits. K. S. Smith.
A comprehensive exploration of the peoples and cultures of the Himalayas. Ethnographic materials draw on the lifeways of populations living in the Himalayan regions of Bhutan, India, Nepal, and Tibet. Some of the cultural issues to be examined through these sources include images of the Himalayas in the West, forms of social life, ethnic diversity, political and economic history, and religious complexity.

ANTHR 343 Religion, Family, and Community in China (also Women's Studies 343) Fall. 4 credits. Not offered 1996-97.

ANTHR 344 Male and Female in Chinese Culture and Society (also Women's Studies 344) @ Fall. 4 credits. Not offered 1996-97.

ANTHR 345 Japanese Society @ Fall. 4 credits. R. J. Smith.
A survey of the social structure of Japan and a discussion of trends in urban and rural life during the past century. Topics to be emphasized include the family, ancestor worship, community and social organization, and urbanism and modernization.

ANTHR 350 Topics in the Anthropology of Europe Spring. 4 credits. J. Borneman.
This course explores ways in which Europe can and has been studied anthropologically. Emphasis will be on understanding processes of cultural differentiation and integration. The self-understandings of various peoples of Europe is accounted for in terms of the relation of local culture to national, transnational, and global process. Among the topics to be explored: 1) the role of culture in nation-building; 2) the rise and decline of fascism and communism in the twentieth century; 3) Cold War division and everyday life; 4) the creation and displacement of culture areas (i.e., the Mediterranean, Scandinavia, Mitteleuropia, Slavic culture, the West, and the East).

ANTHR 352 Identities, Power, and the State: The Anthropology of Spain # Fall. 4 credits. Not offered 1996-97.

ANTHR 355 Ancient Mexico and Central America (also Archaeology 355) # Spring. 4 credits. Not offered 1996-97.

ANTHR 377 The United States (also Latino Studies Program 377) Fall. 4 credits. V. Santiago-Inzunza.
The anthropological inquiry into one's own culture is never a neutral exercise. This course will explore issues in the cultural construction of the United States as a "pluralistic" society. We will look at the ideological context for the production of a cultural profile predicted upon ideas that are intrinsic to American images of identity such as individualism, freedom, and equality and the way these are applied in practice. The course readings will include historic documents and accounts, popular writing, and recent ethnographies on the United States.

ANTHR 433 Andean Thought and Culture @ Spring. 4 credits. Not offered 1996-97.

ANTHR 443 Religion and Ritual in Chinese Society (also Religious Studies 443) @ Fall. 4 credits. P. S. Sangren.
This course explores topics in the anthropological study of Chinese religion, including aspects of cosmology, ritual, and mythology as they relate to Chinese society. A premise of the course is that religion embodies values basic to Chinese culture. Consequently, study of Chinese religion provides important insights into Chinese society. By the same token, Chinese religion must be understood in the context of Chinese social institutions (family, community, state).

ANTHR 444 Japanese Social Organization @ Spring. 4 credits. Not offered 1996-97.

ANTHR 456 Mesoamerican Religion, Science, and History @ Fall. 4 credits. Not offered 1996-97.

ANTHR 477 Ethnology of Island Southeast Asia @ Fall. 4 credits. Not offered 1996-97.

ANTHR 493 Seminar in Archaeology (also Archaeology 493) @ Fall. 4 credits. Not offered 1996-97.

To many people in our society, "the Amazon" epitomizes the mysteries, the wild, the uncivilized—an image that anthropologists have variously exploited and criticized. Either way, they usually describe Amazonian societies as either isolated from or opposed to "civilization" (i.e., the capitalist state). As indigenous peoples are incorporated into the national-state and the global economy, however, it has become impossible to view them as either isolated or silent. This course is framed by discussions of three classic ethnological studies of South America—Claude Levi-Strauss' Tristes Tropique, Pierre Clastres' Society Against the State, and Michael Taussig's Shamanism.
Colonialism, and the Wild Man—as both examples of how the Amazon has inscribed itself on the imagination of anthropologists, and how anthropologists have used their experiences in simple societies to contribute to broad debates in Western philosophy. Ethnographic case-studies will provide the basis for discussing issues of theoretical and topical import, such as environmentalism, gender relations, and politics. We will contrast these anthropological constructions to the historically emerging voices of contemporary indigenous peoples.

VIII. Graduate Seminars

WOMNS 600 Feminist Theory
Fall. 4 credits. Prerequisite: permission of instructor(s). K. S. March, S. McConnell-Ginet.
The focus for fall 1996 will be the social and cultural(re)production of gendered bodies and identities, with special attention to symbolic and discursive dimensions of gender. Small-group collaborative research projects will build toward an in-house conference at which student and faculty work is presented and discussed.

[ANTHR 601 Southeast Asia Seminar: To be announced]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 602 Southeast Asia Seminar: To be announced]

[ANTHR 604 Praxis and Culture]
Fall. 4 credits. Not offered 1996-97.

ANTHR 607 Special Problems in Anthropology
Fall. Credit and hours to be arranged. Intended for graduate students only. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 608 Special Problems in Anthropology
Spring. Credit and hours to be arranged. Intended for graduate students only. Staff. For description, see ANTHR 607 above.

ANTHR 610 Language and Myth
Fall. 4 credits. J. T. Siegel.
An analysis of the theories on language leading to Levi-Strauss and Derrida. Myth and the notion of "the father".

[ANTHR 612 History of Anthropological Thought]

[ANTHR 614 Reading in the Ethnographic Tradition (1880-1960)]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 615 Reading Contemporary Ethnographies (1960-1990)]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 616 Cultural Production of the Person]

[ANTHR 617 Theories of Ritual and Myth]

[ANTHR 619 Anthropological Approaches to the Study of Buddhism in Asia]

[ANTHR 621 Gender and Culture (also Women's Studies 621)]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 626 Problems in Economic Anthropology]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 628 Political Anthropology]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 629 Chinese Ethnology]

[ANTHR 630 Symbolic Anthropology]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 632 Andean Symbolism]

ANTHR 634 Southeast Asia: Readings in Special Problems
Fall. Credit and hours to be arranged. Staff. Independent reading course on topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 635 Southeast Asia: Readings in Special Problems
Spring. Credit and hours to be arranged. Staff. For description, see ANTHR 634 above.

[ANTHR 636 Cognition and Classification]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 637 Theorizing Social Movements, Human Rights and Democracy in Latin America]

[ANTHR 639 The Feminine Symbolic]

ANTHR 640 South Asia: Readings in Special Problems
Fall. Credit and hours to be arranged. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 641 South Asia: Readings in Special Problems
Spring. Credit and hours to be arranged. Staff. For description, see ANTHR 640 above.

ANTHR 644 Research Design
Spring. 4 credits. J. Fajans.
This seminar focuses on preparing a full-scale proposal for anthropological fieldwork for a dissertation. Topics include identifying of appropriate funding sources; defining a researchable problem; selecting and justifying a particular fieldwork site; situating the ethnographic case within appropriate theoretical contexts; selecting and justifying appropriate research methodologies; developing a feasible timetable for field research; ethical considerations and human subjects protection procedures; and preparing appropriate budgets. This is a writing seminar, and students will complete a proposal suitable for submission to a major funding agency in the social sciences.

ANTHR 645 Japanese Ethnology
Fall. 4 credits. R. J. Smith.
This seminar is designed for advanced students who plan to conduct social science research in Japan. It deals with questions of historical continuity, the relationship of the individual to society, and the nature of contemporary Japanese social organizations. A reading knowledge of Japanese is strongly recommended.

[ANTHR 646 Marriage and Death]
Fall. 4 credits. Not offered 1996-97.

[ANTHR 649 Narrative and the Analysis of Culture]
Spring. 4 credits. J. Bomeman.
The purpose of the course is to acquaint students with narrative form and the use of narrative tools in the analysis of cultural artifacts. Narrative—a specific set of genres of discourse sharing the property of temporally sequenced clauses—is the subject of much research within many disciplines. Narrative is often said to fashion diverse human experiences into a form assimilable to structures of meaning that are generally human rather than culture-specific. By making personal knowledge communicable, narrative is intrinsic to the making of culture, its representation, and its comprehension. Participants will be introduced to the work of major narrative theorists and to attempts at applying narrative theory to culture. They will also be asked to examine critically a variety of cultural artifacts—including ethnography, performance art, film/video, and law—in terms of the theories discussed.

[ANTHR 651 Anthropological Boundaries: Seminar on Film]

[ANTHR 653 Myth Onto Film (also Theatre Arts 653)]
Fall. 4 credits. Not offered 1996-97.

ANTHR 654 East Asia: Readings in Special Problems
Fall. Credit and hours to be arranged. Staff. Independent reading course in topics not covered in regularly scheduled courses. Students select a topic in consultation with the faculty member who has agreed to supervise the course work.

ANTHR 655 East Asia: Readings in Special Problems
Spring. Credit and hours to be arranged. Staff. For description, see ANTHR 654 above.

ANTHR 656 Maya History
Fall. 4 credits. Not offered 1996-97.

ANTHR 660 Latino Languages, Ideology and Practice (also Latino Studies Program 660)
Spring. 4 credits. V. Santiago-Trizarry.
Hispanic ethnic identity in the U.S. is often organized around the use of Spanish and the issues this raises in an English-dominant society. Drawing from anthropological studies on language as a signifying practice, this course will look at the place of language in the life of Hispanic populations in the United States. Topics to be explored will include linguistic diversity and change, language as an instrument of accommodation and resistance, language maintenance and shift, culturally specific linguistic ideologies, and institutional applications of language.
This course poses an alternative to distances, "objectivist" social science by reviewing some of the many numerous approaches to socially engaged research. Among the approaches discussed are those centering on the pedagogy of liberation, feminism, the industrial democracy movement, and "Southern" participatory action research, action science, and participatory evaluation.

This seminar is a practicum in action research (AR) in which the semester becomes a self-managing learning environment for the exploration of the techniques and group processes involved in AR, including co-generative learning, searching, and AR facilitation. Participation in a seminar-centered LISTSERV on the Internet is expected.

ANTHR 685 Topics in Native American Societies and Cultures Spring. 4 credits. B. Lambert.

This seminar is intended for undergraduate and graduate students in any field who are prepared to undertake independent research in American Indian Studies. I am particularly interested in how materials from Native American cultures can be used to help solve problems of general anthropological significance and in the contributions Native Americans have made to anthropological and sociological knowledge as teachers and researchers. However, students will be encouraged to pursue their own interests and will be expected to discuss work in progress with other members of the seminar. A reading list will be developed to provide a shared background for discussions.

ANTHR 695 Proseminar in Sociocultural Anthropology: Culture and Symbol Fall. 4 credits. J. Fajans, D. Holmberg.

ANTHR 696 Proseminar in Sociocultural Anthropology: Social Organization Spring. 4 credits. S. Sangren.

These two core courses constitute a core sequence in sociocultural anthropology required of all entering graduate students but open to graduate students of other relevant fields. This sequence is premised on the idea that anthropology is best defined as the comparative study of human social life. This definition resists institutional pressures in the academy to distinguish social science from humanistic or cultural studies. Our most important method, ethnohistory and ethnography, is both scientific and humanistic; disciplinary aspirations refuse to view cultural interpretation and analytic explanation as separable values. Consequently, the core sequence is oriented explicitly toward subverting an ideological construction of social life as separable into cultural and social (or political-economic) domains. One semester, "Social Organization," approaches kinship, political life, economic organization, and local, regional, and global systems by insisting that so-called political economy cannot be adequately studied or comprehended without attention to the constitutive role of culture. By the same token, the other semester, "Culture and Symbol," moves toward an appreciation of the symbolic, expressive, and representational both as producers and as products of social activities. The courses are thus complementary insofar as each aspires to synthetic, holistic understandings of social life, but each approaches these understandings from slightly different directions. In one term, topics once glossed as political anthropology, economic anthropology, political economy, social organization, kinship theory, practice theory, etc., are discussed with a consistent emphasis on the irreducible productive efficacy of culture. In the other term, such traditional topics as symbolic anthropology, the anthropology of religion, myth and ritual, gender, linguistics, semiotics, etc., are similarly linked to the practical exigencies of social life. In short, the course sequence surveys many of the discipline's traditional focal points of research, emphasizing the productive debates and issues that have been raised in each of them, but it does so with a consistent commitment to a holistic or dialectical understanding of social life. Sequence of courses will vary from year to year.

ARABIC AND ARAMAIC

See Department of Near Eastern Studies.

ARCHAEOLOGY

S. Baughler (city and regional planning), R. G. Calkins (history and theory, R. K. Clinton (Classics), J. E. Coleman (Classics, director of graduate studies), D. Evett (Language House Program), R. T. Farrell (English), J. S. Henderson (anthropology), P. I. Kurganen, D. J. Owen (Near Eastern Studies), A. Ramage (history of art), S. Saraydar (Arts and Sciences), B. S. Strauss (history), T. P. Volman (anthropology; director of undergraduate studies).

Archaeology is an interdisciplinary field at Cornell, which is one of the few universities in the United States to offer a separate archaeology major. Program faculty members, affiliated with several departments, coordinate course offerings and help students identify opportunities for fieldwork, graduate study, and professional positions.

The Major

Prospective majors must complete Archaeology 100 or one of the basic courses as defined below before they will be admitted to the major. This initial course will not be counted toward the major requirements.

Because the major draws on the teaching and research interests of faculty from many departments to present a broad view of the archaeological process, interested students should discuss their course of study with a participating faculty member as early as possible. In some areas of specialization, intensive language training should be coordinated with other studies as early as the freshman year.

Once admitted to the major, students must take an additional 32 credits from the courses listed below, selected in consultation with a major adviser of their choosing. These courses should provide exposure to a broad range of archaeologically known cultures and the methods of revealing and interpreting them. Sixteen of the credit hours should be at the 300 level or above. At least two courses must be taken from each of categories B-E.

Courses basic to the discipline of archaeology are marked with the word 'Basic' after the number of credit hours. It is recommended that majors who are planning to pursue graduate studies in archaeology should take at least two of the basic courses in each category. Further courses in languages and in geology are also recommended.

Honor. Honors in archaeology is awarded on the basis of the quality of an honors essay and the student's overall academic record. Prospective honors students should have a 3.5 grade point in the major and a 3.0 grade point overall. They should consult with the director of undergraduate studies before the beginning of the senior year. The honors essay is normally prepared in consultation with a faculty adviser during the senior year; students may enroll in Archaeology 481, fall, 482, spring for this purpose.

Fieldwork. Every student should gain some practical experience in archaeological fieldwork on a project authorized by his or her adviser. This requirement may be waived in exceptional circumstances. The Jacob and Hedwig Hirsch bequest provides support for a limited number of students to work at excavations sponsored by Cornell and other approved institutions.

The Concentration

Students in Cornell schools and colleges other than Arts and Sciences may elect a concentration in archaeology. To concentrate in archaeology, the student must complete five courses, all with a grade of C or better. The five courses must consist of either (1) Archaeology 100 and four other courses from categories B-D, at least three of which must be basic courses, or (2) five courses from categories B-D, at least four of which must be basic courses. Concentrators are encouraged
to gain some fieldwork experience. They are eligible on the same basis as majors for Hirsch Scholarships in support of fieldwork.

**Freshman Writing Seminars**

For course descriptions, see the freshman writing seminar brochure.

**A. Introductory Courses and Independent Study Courses**

**ARKEO 100**  **Introduction to Archaeology**

Spring. 3 credits. J. S. Henderson.

A broad introduction to archaeology—the study of material remains to answer questions about the human past. Case studies illustrate current methods and interpretive frameworks. Guest lectures by members of the Cornell Archaeology Program are an integral part of the course.

**ARKEO 300**  **Individual Study in Archaeology and Related Fields**

Fall and spring. Credit to be arranged. Prerequisite: Archaeology 100 or permission of instructor. Students pursue topics of particular interest with the guidance of a faculty member.

**ARKEO 481-482**  **Honors Thesis**

481, fall; 482, spring. S-U only. Prerequisite: admission to Honors Program. The student, under faculty direction, will prepare a senior thesis.

**ARKEO 600**  **Special Topics in Archaeology**

Fall and spring. 4 (V) credits. Students pursue advanced topics of particular interest under the guidance of a faculty member(s).

**ARKEO 681-682**  **Master’s Thesis**

681, fall; 682, spring. S-U only. Limited to students admitted to Master’s Program in Archaeology. Students, working individually with faculty member(s), prepare a Master’s Thesis in Archaeology.

**B. Theory and Interdisciplinary Approaches**

**ARKEO 202**  **Interpretive Archaeology**

Fall. 3 credits. Basic. Limited to 60 students. Not offered 1996-97. T. P. Volman.

An introduction to the analysis and interpretation of archaeological data, especially stone and ceramic artifacts, and related contextual data, such as the remains of plants and animals. Emphasis is on the use of archaeological data to answer questions about ancient human behaviors, lifeways, and culture change. Topics include the formation of the archaeological record, the characterization and classification of artifacts, and the analysis of artifact distributions through space and over time. Section meetings include demonstrations, visits to campus facilities, and analyses of artifacts from Cornell archaeological collections.

**ARKEO 203**  **Early People: The Archaeological and Fossil Record**

Spring. 3 credits. Basic. T. P. Volman. A survey of the archaeological and fossil record of human evolution. Contributions by researchers from a variety of disciplines are highlighted, as are the discoveries, personalities, and controversies that have enlivened the study of human evolution for more than a century. Critical evaluation of evidence and interpretations will be stressed. Demonstrations and films supplement the lectures.

**ARKEO 204**  **Ancient Civilizations**

**ARKEO 317**  **Stone Age Archaeology**

Fall. 4 credits. Not offered 1996-97. T. P. Volman. A survey of current approaches to the archaeological record of Stone Age peoples, from the earliest sites to those of recent times. Case studies are used to illustrate the nature of archaeological occurrences, excavation procedures, and analytical methods. Multidisciplinary efforts to expand our knowledge of prehistoric lifeways and behaviors are a major concern of the course.

**ARKEO 404**  **Approaches to Archaeology**

Spring. 4 credits. Basic. Prerequisite: permission of instructor. Not offered 1996-97. T. P. Volman. An exploration of the concepts that have shaped modern archaeology. The course briefly examines the history of theoretical orientations in archaeology, then considers the variety of perspectives and interpretive frameworks that guide present-day investigations. Case studies illustrate the implications of the nature of the archaeological record for reconstructing subsistence and economic systems, politics, social and political organization, demography, and ideology. An undergraduate seminar especially recommended for undergraduate majors and graduate archaeologists but open to anyone with a serious interest in archaeology.

**ARKEO 494**  **Seminar in Archaeology: Archaeology of the Household**

Spring. 4 credits. Not offered 1996-97. J. S. Henderson. An exploration of the archaeology of domestic life. Topics include identifying residential remains, defining households and interpreting them in social terms, reconstructing domestic economies and ritual activities, and situating households in the context of neighborhoods, communities, and settlement systems.

**LA 261**  **Urban Archaeology**

Fall. 3 credits. S. Baugher. For description, see LA 261.

**LA 569**  **Archaeology in Preservation Planning and Design**

Fall. 3 credits. S. Baugher. For description, see LA 569.

**C. Old World Archaeology**

**ARKEO 221**  **Minoan-Mycenaean Art and Archaeology**

Fall. 3 credits. Basic. Not offered 1996-97; next offered 1997-98. J. Coleman. The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of Aegean interactions with Egypt, the Near East, and Anatolia.

**ARKEO 233**  **Archaeology in Action II**

Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1996-97. P. I. Kuniholm.

**ARKEO 263**  **Introduction to Biblical History and Archaeology**

**ARKEO 275**  **Ancient Seafaring**

**ARKEO 357**  **Greek Sanctuaries and Pausania (also Greece 357)**

**ARKEO 417**  **Early Medieval Archaeology and Literature**

4 credits. Prerequisite: permission of instructor. Enrollment limited to 15 students. This course may be used as one of the three pre-1800 courses required of English majors. R. T. Farrell. This course will begin with early Christian England and deal primarily with the period 600-1000. No culture exists in isolation, so the influence both of Irish and Scandinavian culture will also be examined. Students will do frequent oral reports. As a take-home mid-term, undergraduates will do either a final exam or a research paper, and graduates will do both. The course will have a most unusual element, for the Metropolitan Museum of Art has agreed to loan us a number of early medieval artifacts for study; this hands-on experience will take place in the study gallery of the Herbert F. Johnson Museum of Art.

**ARKEO 424**  **Sardis and the Cities of Asia Minor (History of Art 432 and Classics 432)**

Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. A. Ramage.

**ARKEO 425**  **Seminar on the Bronze Age Architecture of Greece (also History of Art History 425 and Classics 430)**

Spring. 4 credits. Prerequisite: permission of instructor. P. I. Kuniholm. The final course will cover major architectural building programs from Neolithic Catal Hüyük, Beycesultan, to the final phases of Troy and Hittite Bogazköy. The art and archaeology of these civilizations will be taken into account when relevant. Reading knowledge of German useful.

**ARKEO 434**  **The Rise of Classical Greece (also History of Art 434 and Classics 434)**

Spring. 4 credits. Recommended: Classics 220 or 221 or History of Art 220 or 221 preferred. Not offered 1996-97. P. I. Kuniholm.

**ARKEO 520**  **Seminar in Classical Archaeology**

Spring. 4 credits. Not offered 1996-97. P. I. Kuniholm. For description, see ART H 520.
ARKEO 617 Early Medieval Archaeology and Literature (also Archaeology 417; English 417 and 617)
For course description, see ARKEO 417.

ARKEO 629 The Prehistoric Aegean (also Classics 629; also History of Art 372) #
Fall. 4 credits. For graduate students, and advanced undergraduates with permission of instructor. J. E. Coleman.
Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early Bronze Age.

[CLASS 219 Mediterranean Archaeology (also Near Eastern Studies 267) #
For description, see CLASS 219.]

CLASS 220 Introduction to Art History: The Classical World (also History of Art 220) #
Fall. J. E. Coleman.
An overview of the art and archaeology of the Greek and Roman world; the sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic; and the art of the Romans from the early Republic to the late empire.

CLASS 322 Greeks and Their Neighbors (also History of Art 322) #
Spring. 4 credits. Prerequisite: Classics 200 or 221, or permission of instructor. J. E. Coleman.
A study of the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the thirteenth to the fourth centuries B.C.E. The course will focus on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.

CLASS 326 Greek Cities and Towns (also History of Art 326) #

CLASS 329 Greek Sculpture (also History of Art 329) #
Spring. 4 credits. J. E. Coleman.
An examination of ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic to the Hellenistic period. Aspects of the works studied include: technological advances, changing ideology of the sculptures, regionalism of styles, and taste of individual patrons.

CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also Religious Studies 333) #

[ART H 320 Arts and Monuments of Athens (also Classics 320) #
Fall. 4 credits. Prerequisite: Classics 220 or permission of instructor. Not offered 1996–97.]

[ART H 322 Arts of the Roman Empire (also Classical Studies 322) #
For description, see ART H 322.]

[ART H 325 Greek Vase Painting (also Classics 325) #
Fall. 4 credits. Not offered 1996–97. A. Ramage.]

[ART H 327 Greek and Roman Coins (also Classics 327) #

[ART H 427 Seminar on Roman Art and Archaeology (also Classics 438) #

[NE 367 History and Archaeology of Ancient Egypt @

D. New World Archaeology

[ARKEO 355 Ancient Mexico and Central America (also Anthropology 355) @
A survey of the cultural history of ancient Mexico and Central America, emphasizing Aztec and Maya civilizations. The use of ethnohistorical and historical information to enrich archaeological interpretation is a general theme. Special topics include the emergence of settled farming life, the rise of civilization and the state, and the development of mechanisms that linked the many societies of the region into a single sphere of interaction.]

[ARKEO 493 Seminar in Archaeology (also Anthropology 493) @

[ANTHR 456 Mesoamerican Religion, Science, and History @
For description, see ANTHR 456.]

LA 360/666 Pre-Industrial Cities and Towns of North America (also CRP 360/666)
Fall. 3 credits. S. Baugher.
For description, see LA 360.

E. Methodology and Technology

ARKEO 285 Art, Archaeology, and Analysis (also Engineering 185, MS&E 285, Physics 200, English 285, Art 372, and Classics 285)
Spring. 3 credits. 3 lecs. Does not meet liberal studies distribution requirements. Staff.
An interdepartmental course on application of techniques of physical sciences and engineering to cultural research. Archaeological artifacts or works of art are discussed with a focus on historical and technical aspects of their creation and on their analysis by modern methods to deduce geographical origins, to date and authenticate objects, and to assess their state for purposes of conservation.

ARKEO 300 Dendrochronology of the Aegean (also History of Art 309 and Classics 309)
Fall and spring. 4 credits. Limited to 10 students. Prerequisite: permission of instructor. P. I. Ramage.
Participation in a research project of dating modern and ancient tree-ring samples from the Aegean and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece or Turkey.

ARKEO 370 Environmental Archaeology (also Archaeology 670 and Anthropology 370 and 670)
Fall. 4 credits. Prerequisite: two previous courses in archaeology or permission of instructor. Not offered 1996–97. T. P. Volman.
A survey of selected topics in paleo-environmental analysis and reconstruction, with emphasis on how they inform interpretations of the archaeological record. The course ranges broadly from a general consideration of human ecology and the role of environment in culture change to detailed study of specific techniques and approaches.

ARKEO 402 Archaeology Research Design (also Anthropology 402)
Spring. 4 credits. Basic. Prerequisite: permission of instructor. J. S. Henderson. T. P. Volman.
Archaeological practice demands careful definition of research objectives and appropriate strategies before the fieldwork begins. Critical information lies in the arrangement and associations of objects and structures; this context should be a basic concern of any field investigation, particularly when it is destroyed by excavation. This course relies on case studies to illustrate how surveys, excavations, and analytical techniques must be tailored to solving specific problems. A seminar especially recommended for undergraduate majors and graduate archaeologists but open to anyone with a serious interest in archaeology.

ARKEO 423 Ceramics (also History of Art 423 and Classics 423)
Bronze Age, Greek, and Roman pottery specimens from Near Eastern and Mediterranean sites will be studied to provide direct experience in one of the basic prerequisites of archaeological excavation—the identification and dating of pottery types. Reports, delivered in class, will concern ancient ceramic materials or particular types and periods. Practical experience in making and decorating pottery will be encouraged.

ARKEO 458 Archaeological Analysis (also Anthropology 458) @
Fall. 4 credits. Prerequisite: one course in archaeology or permission of instructor. Enrollment limited to 15 students. Not offered 1996–97. J. S. Henderson.
An introduction to methods of recording, processing, and analyzing archaeological data. Topics include recording of excavation and survey data in the field; processing artifacts in the laboratory; storing and retrieving data; and basic methods of describing, tabulating, analyzing, and interpreting artifacts (mainly ceramic vessels), and spatial distributions. Intended for those with some understanding of the uses to which archaeological data are put in regional synthesis and interpretation; previous field experience is helpful.

ARKEO 601 Graduate Colloquium In Archaeology #
4 credits. Open to graduate students and advanced undergraduates by permission of instructor. Not offered 1996–97. Staff.
Faculty members of the Program in Archaeology and invited speakers will present
Asian American Studies

See Special Programs and Interdisciplinary Studies.

Asian Studies

The Department of Asian Studies encompasses the geographical areas of East Asia, South Asia, and Southeast Asia and offers courses in most of the disciplines of the social sciences and the humanities. Asian studies courses through the 400 level (ASIAN is the prefix) are taught in English and are open to all students in the university. Some of these courses may be counted toward majors in other departments; others fulfill the humanities distribution requirement. Courses listed under Asian Studies offered through other departments may fulfill the distribution requirements in history, social sciences, and arts.

The Major

The applicant for admission to the major in Asian studies must have completed at least one area studies course selected from among those listed under the Department of Asian Studies and must receive permission for admission to the major from the director of undergraduate studies. The student must have received a minimum grade of C in this course and in all other courses counted toward the major.

A student majoring in Asian studies is required to complete two courses at the 200 level (a minimum of 6 credits with a grade of C or better) in one area of the Asian languages offered at Cornell. The major consists of at least 30 additional credits (which may include up to 6 credits of further language study) selected by the student in consultation with his or her adviser from among the courses listed under the Department of Asian Studies and numbered 250 and above. Majors in Asian studies normally specialize in the language and culture of one country and often choose an additional major in a traditional discipline.

Concentration in South Asia Studies

A candidate for the Bachelor of Arts or Science degree at Cornell may take a concentration in South Asia Studies by completing at least 18 credits of course work in South Asian studies, including Asian Studies 215 (Introduction to South Asia) and four courses or seminars at the intermediate or advanced levels, two of which may be South Asian language courses.

Students taking a concentration in South Asian studies are considered members of the South Asia Program and will have an adviser from the program faculty. This adviser will be for the student’s concentration and is not a substitute for a student’s academic adviser in his or her major.

One South Asian graduate course may be taken for the concentration with consent of both the instructor and the adviser. The same applies for one South Asia-related course with a research paper on a South Asian subject. Additional courses may be added if offered with comparable South Asia content.

Concentration in Southeast Asia Studies

A candidate for the Bachelor of Arts or Bachelor of Science degree at Cornell may take a concentration in Southeast Asia studies by completing 18 credits of course work. A recommended plan would include Asian Studies 208 and four courses at the intermediate or advanced stage, two of which could be a Southeast Asian language. Students taking a concentration in Southeast Asia studies are members of the Southeast Asia Program and are assigned an adviser from the program faculty. Such students are encouraged to commence work on a Southeast Asian language either at the 10-week intensive courses offered by the Southeast Asia Studies Summer Institute or by studying for one semester at the Ngurah Rai Center, Brown Hall, Universitas Udayana, Bali, Indonesia; the Khon Kaen University, Khon Kaen, Thailand; and Hanoi University, Vietnam; fellowships are available for undergraduates through the Cornell Abroad Program.

Honors. To be eligible for honors in Asian studies, a student must have a cumulative grade average of at least 3.0 in all Asian Studies area courses, exclusive of language study only, and must successfully complete an honors essay during the senior year. Students who wish to be considered for honors should apply to the director of undergraduate studies during the second term of their junior year. The application must include an outline of the proposed project and a statement of a faculty adviser. During the first term of the senior year the student does research for the essay in conjunction with an appropriate Asian studies course or Asian Studies 401. Students of China, Japan and Southeast Asia must also complete Asian Studies 611, 612 or 613 respectively. By the end of the first term the student must present a detailed outline of the honors essay and have it approved by the faculty sponsor and the director of undergraduate studies. The student is then eligible for Asian Studies 402, the honors course, which entails writing the essay. At the end of the senior year, the student has an oral examination (with at least two faculty members) covering both the honors essay and the student’s area of concentration.

Intensive Language Program (FALCON)

For those students desiring to accelerate their acquisition of Chinese, Japanese, or Indonesian, Cornell offers a full-time intensive language program, the Full-Year Asian Language Concentration (FALCON). FALCON students spend six hours a day, five days a week, for periods of up to a full year studying only the language and thus are able to complete as many as twelve hundred hours of supervised classroom and laboratory work in one year. For further information, students should contact the FALCON Program Office, Department of Modern Languages, 423 Morrill Hall (telephone: 607/255-6457, e-mail: FALCON@cornell.edu).

Study Abroad

Cornell is a member of the Inter-University Centers for Chinese Language Study in Taipei and for Japanese Language Study in Yokohama. Cornell is a member of the Council on International Educational Exchange offering study in China at Peking University and Nanjing University. These centers offer intensive training in both spoken and written forms of the language. The Kyoto Center for Japanese Studies (KICS) is an intensive language program for students who want to spend a year in Japan studying both language and culture. Cornell is a class-A member of the American Institute of Indian Studies, which offers fellowships in India for intensive language study in Hindi, Bengali, and Tamil. Cornell and the central campus of the Nepalese national university—Tribhuvan—at Kirtipur, Kathmandu, cosponsors an academic semester or year in Nepal. North American students study and live with Nepalese students who come from outside the Kathmandu Valley to Tribhuvan University. Students may participate in one or two semesters. Courses are offered both at Tribhuvan University and at the Cornell-Nepal Study Program House adjacent to the university. All courses are officially taught in English. A five-week, in-country orientation program includes classes in intensive Nepali conversation, cultural orientation programs, and a ten-day field trip and trek. Some of their offerings include Nepali language (Tibetan and/or Newari Languages also possible), contemporary issues in Nepalese studies, field research design and methods in sociology/anthropology and
ecology/environment, and guided field research. Juniors and seniors in good academic standing from any major field may participate. Students must have a desire to study on the other side of the world, to participate in a multicultural program, and to undertake rigorous field research. No experience in Nepal is necessary and instruction is in English, but some prior Nepali language study is strongly recommended. Students interested in the study abroad in Nepal program should consult with the Cornell Abroad office (474 Uris Hall) for further information.

Other opportunities include a junior year abroad at IKP-Malang, in Indonesia, or at the School of Oriental and African Studies, University of London. Many other options for study in Asia exist, including in Indonesia, Thailand, and Vietnam through the Council for International Educational Exchange. Undergraduates should consult the Cornell Abroad Office, graduate students should inquire at the East Asia Program, the South Asia Program, or the Southeast Asia Program offices.

General Education Courses

**ASIAN 208 Introduction to Southeast Asia @**

Spring. 3 credits. K. Taylor.

This course is for anyone curious about the part of Asia with the most diversity; it defines Southeast Asia both as the nation-states that have emerged since 1945 (Brunei, Burma, Cambodia, Indonesia, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam) and as a larger cultural world extending from southern China to Madagascar and Polynesia. Students will find a serious, organized introduction to a variety of disciplinary and topical approaches to this region, including geography, linguistics, history, religion and ideology, anthropology, marriage and family systems, music, literacy and literature, art and architecture, agriculture, industrialization and urbanization, politics and government, warfare and diplomacy, ecological and human degradation, business and marketing. The course aims to teach both basic information and different ways of interpreting that information.

**ASIAN 211 Introduction to Japan @**

Fall. 3 credits. N. Sakai.

An interdisciplinary introduction to Japanese society and its history especially designed for students not majoring in Asian Studies. The first part of the course focuses on the historical changes in Japanese society from the eighth century down to the nineteenth century, the second part analyzes modern society from a variety of perspectives. It also addresses the question of how Japan is represented in the U.S. media. Guest lecturers from five or six different fields offer their opinions on Japanese history, culture, and politics.

**ASIAN 212 Introduction to China @**

Spring. 3 credits (4 credits with a special project, consult instructor for information). E. Gunn.

An interdisciplinary introduction to Chinese culture especially designed for students not majoring in Asian Studies.

**ASIAN 215 Introduction to South Asian Civilization @**

Spring. 3 credits (4 credits with a special project, consult instructor for information). C. Minkowski.

An interdisciplinary introduction to the culture and history shared by India and other states of South Asia. Designed for students not majoring in Asian Studies. Guest lecturers will provide the perspective of their disciplines to the general themes of the course: cultural diversity and the role of tradition in contemporary life.

**ASIAN 218 Introduction to Korea @**

An interdisciplinary introduction to Korean history and culture, including language, literature, art, and music. The course begins with an overview of Korean history from the Three Kingdoms Period to the present. The course then focuses on major events in twentieth-century Korean history: the March 1, 1919, Independence Movement, the Korean War, the 1960 Student Revolution, the 1980 Kwangju Massacre, and others. Visiting lecturers will speak about Korea from a variety of disciplinary viewpoints, including linguistics, sociology, anthropology, political science, and law.

Asia—Literature and Religion Courses

The following courses are taught entirely in English and are open to any Cornell student.

**ASIAN 250 Introduction to Asian Religions (also Religious Studies 251) ©**

Spring. 3 credits. J. M. Law.

A survey of the major religious traditions of India, China, and Japan, focusing on Vedic ritual and Brahmanical Hinduism; Indian, Chinese, and Japanese Buddhism; the native Chinese traditions of Confucianism and Taoism; and Shinto, Confucianism, and the new religions in Japan. Emphasis will be on the great traditions of these cultures, with frequent reference to the differing realms of popular religions.

**ASIAN 270 Hidden Songs in Greece and Asia (also Comp. Lit. 224 and Classics 224) ©**

This course will explore four similar moments in cultural histories when pre-literate folk traditions became incorporated into emerging or recently established literate ones. It will examine important early anthologies of songs, stories, myths, fables, genealogies, and other materials from China (the Shih ching), Japan (the Kokki), Korea (the Samguk Yusa), and Greece (tragedy and laments). The major part of the course explores the hypothesis that as pre-literate folk materials are incorporated into an official and literary canon, certain transactions occur between the two realms of discourse in which, characteristically, elements identified with disorder are repressed in favor of those identified with order. The final segment of the course will be a brief examination of the process by which songs and their performance have been reclaimed by contemporary, popular political movements in the Republic of Korea, the People’s Republic of China, and Greece.

**ASIAN 291 Classical Indian Narrative (also Classics 291) ©**

Reading in translation from the principal story collection of ancient India. Sources will include the Vedas, the Sanskrit epics, the Buddhist Jatakas, the Kathasaritsagara, the Panchatantra, and related collections. An introduction will be given to comparisons with Greek narrative, and to the diffusion of Indian narratives into the world’s literature.

**ASIAN 310 Pre-Modern Korean Culture and Literature ©**

Readings in English translation of Korean stories, novels, court diaries, poems, legends, and tales from the seventh century to the end of the nineteenth century.

**ASIAN 311 Modern Korean Culture and Literature ©**

The course will explore the relationship between thematic and formal concerns of Japanese film and narratives of modern Japanese history dealing with such issues as the nature of the Meiji Restoration, the rise of Taisho commodity culture, the Pacific War, postwar reconstruction, postmodernism and "new nationalism." Weekly analyses of specific films will be accompanied by readings that provide historical context and pose relevant interpretive and theoretical questions, particularly those of gender and cultural difference. Study of works by Ozu, Mizoguchi, Kurosawa, and Naruse will constitute the introductory portions of the course, followed each year by a series featuring recent works of contemporary directors.

**ASIAN 338 Democracy and War (also History 338) ©**

A comparative study, the course will focus on the Korean War (1950–1953) and the Peloponnesian War (431–404 B.C.). It will examine the relationship between ideas of democracy and democratic government, and the conduct of war to advance or defend them. We will be reading and discussing Korean materials on the background and prosecution of the Korean War; American newspapers and historical records on U.S. involvement; and histories, debates, plays, and other contemporary materials on the Athenian conduct of its war against Sparta.

**ASIAN 347 Tantric Traditions (also Religious Studies 349) ©**

This course treats the development of tantric traditions in the Indian subcontinent and beyond. Philosophical, socio-religious, cultic, and visionary dimensions of tantra will be discussed. We study different Hindu and Indo-Tibetan traditions, with some attention also paid to tantric developments in East Asian Buddhism.
Japanese religious practice: 1) ritual purity; 2) the concept of matsuri (festival) and girei (rite), 3) the concept of shugyo (cultivation) as expressed in asceticism, pilgrimage, and aesthetic discipline, and 4) religious understandings of the human body, expressed in healing rituals.

[ASIAN 357] Japanese Religions (also Religious Studies 357)  

This course is an exploration of major themes in Japanese religion through a focus on the category of religious practice. After an overview of the major spheres of Japanese religion, we look at the dominant understanding of sacrality and the human soul. With the syncretic interaction between Shinto and Buddhism as our foundation, we will study four dynamic themes that express aspects of Japanese religious practice: 1) ritual purity and pollution, 2) the concept of matsuri (festival) and girei (rite), 3) the concept of shugyo (cultivation) as expressed in asceticism, pilgrimage, and aesthetic discipline, and 4) religious understandings of the human body, expressed in healing rituals.

[ASIAN 358] Chinese Buddhism (also Religious Studies 358)  

A comparative study of Chinese and Japanese religions will examine the influence of Chinese Buddhism on Japan, especially in the period of the Nara and Heian Dynasties. The course will focus on representations of the human body, the concept of nirvana, and the workings of both the conscious and the unconscious. We will explore how such aspects of the human body as ecstasy, gender, sexual passion, illness, the dialectic of the physical and the spiritual, and corporeal ascetic discipline reveal models of religious experience. Further, we will study the ways these models become represented in visual art, narrative, and ritual practice.

[ASIAN 359] Japanese Buddhism (also Religious Studies 359)  

A comparative study of Japanese and American mass cultures. Rather than seeking, through comparison, to delineate distinctive models of national cultures, the course will trace the complex relationships between cultural narratives and transnational economies, emphasizing processes of hybridity and fusion. The course will introduce students to a small number of important theoretical writings on mass culture. Areas of study will include the analysis of science fiction, comic books, film and video, popular music, and toy industries. Enrollment limited to 25 students.

[ASIAN 360] Contemporary Mass Culture in Japan and the U.S. (also Comparative Literature 343)  
Fall. 3-4 credits. Not offered 1996-97. B. de Bary.

A contemporary study of Japanese and American mass cultures. Rather than seeking, through comparison, to delineate distinctive models of national cultures, the course will trace the complex relationships between cultural narratives and transnational economies, emphasizing processes of hybridity and fusion. The course will introduce students to a small number of important theoretical writings on mass culture. Areas of study will include the analysis of science fiction, comic books, film and video, popular music, and toy industries. Enrollment limited to 25 students.

[ASIAN 361] Chinese Philosophical Literature  

Readings in English translation of Confucian, Taoist, and Buddhist works.

[ASIAN 362] Twentieth-Century Chinese Literature  
Fall. 4 credits. Not offered 1996-97. E. Gunn.

A survey of the principal works in English translation, the course introduces fiction, drama, essays, and poetry of China beginning with the Republican era and continuing up to the present in the People's Republic and Taiwan, with attention to social and political issues and literary theory.

[ASIAN 363] Chinese Narrative Literature  

Selected works in classical Chinese fiction are read in translation. Major novels, such as *The Dream of the Red Chamber* and *Water Margin*, are emphasized.

A study in English translation of major narratives from the eighth to the eighteenth century. Subject matter will include novelistic narratives like *The Tale of Genji*, biographical stories, poem tales, war tales, and popular stories.

[ASIAN 365] The Postwar and the Postmodern in Japanese Literature  

[ASIAN 366] Vietnamese Literature in Translation  

A study of Vietnamese poetry, short stories, and novels available in English translation. The course will focus primarily upon texts from the last three centuries, with particular attention to contemporary literature.

[ASIAN 367] The Tale of Genji in Art and Theater  
Spring. 4 credits. K. Brazell and M. Watanabe.

After a careful reading of the *Tale of Genji* and the 12th-century *Genji Picture Scroll*, the class will explore representations of the *Genji* in the noh theater and in a wide variety of art forms. Extensive use will be made of materials in the Johnson Art Museum.

[ASIAN 368] Vietnamese Cultural Studies  
Fall. 4 credits. K. Taylor.

Issues related to constructions of Vietnamese histories and cultures, including languages and literatures, the visual and performing arts, families and societies, religions and ideologies, politics and governments, traditions and modernities, revolutions and wars, localization and regionalism, nationalism, and globalisms. This course will fulfill a humanities distribution requirement.

[ASIAN 369] Comparative Sanskrit Myth and Epic in Translation (also Classics 390)  
Fall. 4 credits. Not offered 1996-97. C. Minkowski.

Readings in translation from the two Sanskrit epics, the *Mahabharata* and the *Ramayana*, and from the main cycles of the *Puranas*, the Sanskrit mythological literature. Special attention will be given to parallels and comparisons with Greek myth and epic, especially Homer and Hesiod. *Classics* 236 or 238 would be useful as background, but not presupposed.

[ASIAN 370] Images of Humanity in Medieval China (also History 363)  

For description, see HIST 393.

[ASIAN 371] Classical Indian Philosophical Systems (also Classics 395 and Religious Studies 395)  
Fall. 4 credits. Prerequisite: some background in philosophy or in classical culture. Not offered 1996-97. C. Minkowski.

[ASIAN 372] Religious Reflections on the Human Body (also Religious Studies 421)  

One undeniable and inescapable fact of human life is that it is experienced in a body. How this fact is understood to define the parameters of religious experience and expression will be the topic of this course. While the format will be comparative, the majority of cases will be drawn from East Asia, primarily Japanese and Chinese sources. We will explore how such aspects of the human body as ecstasy, gender, sexual passion, illness, the dialectic of the physical and the spiritual, and corporeal ascetic discipline reveal models of religious reflection on this fact of human experience. Further, we will study how these models become represented in visual art, narrative, and ritual practice.

[ASIAN 373] The Postmodern in Japanese Literature  
Spring. 4 credits. E. Gunn.

The course will survey drama, music theater, and film in twentieth-century China. Some material will require knowledge of Chinese.

[ASIAN 374] Modern Japanese Literature: From Meiji through the Pacific War (also Comparative Literature 369)  
Fall. 4 credits. Not offered 1996-97. B. de Bary.

[ASIAN 375] Japanese Narrative Literature  

A study in English translation of major narratives from the eighth to the eighteenth century. Subject matter will include novelistic narratives like *The Tale of Genji*, biographical stories, poem tales, war tales, and popular stories.

[ASIAN 376] The Tale of Genji in Art and Theater  
Spring. 4 credits. K. Brazell and M. Watanabe.

After a careful reading of the *Tale of Genji* and the 12th-century *Genji Picture Scroll*, the class will explore representations of the *Genji* in the noh theater and in a wide variety of art forms. Extensive use will be made of materials in the Johnson Art Museum.

[ASIAN 377] Vietnamese Cultural Studies  
Fall. 4 credits. K. Taylor.

Issues related to constructions of Vietnamese histories and cultures, including languages and literatures, the visual and performing arts, families and societies, religions and ideologies, politics and governments, traditions and modernities, revolutions and wars, localization and regionalism, nationalism, and globalisms. This course will fulfill a humanities distribution requirement.

[ASIAN 378] Comparative Sanskrit Myth and Epic in Translation (also Classics 390)  
Fall. 4 credits. Not offered 1996-97. C. Minkowski.

Readings in translation from the two Sanskrit epics, the *Mahabharata* and the *Ramayana*, and from the main cycles of the *Puranas*, the Sanskrit mythological literature. Special attention will be given to parallels and comparisons with Greek myth and epic, especially Homer and Hesiod. *Classics* 236 or 238 would be useful as background, but not presupposed.
[ASIAN 460 Indian Meditation Texts (also Religious Studies 460) @ #]
Because texts that record visionary experience, prescribe the practice of contemplation, and present didactic utterances are highly valued in Indian tradition, they need to be taken seriously by students of Indian and world civilizations. Yet the special problems of interpretation that they present have often caused meditation texts to be passed over in embarrased, sometimes reverent silence. In this course we will draw on approaches from literary criticism, anthropology, and religious studies to explore a number of the problems to which these texts give rise. In what ways are the apparent differences in experience presented in meditation texts shaped by different cosmologies and ritual practice? Do different literary genres have particular religious implications? What are the relations between convention and experience in the creation of the texts? Readings will be drawn from the Upanishads and Tantra, devotional verse in the vernaculars, and the classical meditation manuals of Hinduism and Buddhism. Some attention may be given to Indian Sufi materials. No knowledge of Indian languages is required.

[ASIAN 463 Readings in Hindi and Urdu Literature @]
Selected topics in Hindi and Urdu literature, with readings in the original; discussions in Hindi-Urdu and English. May be repeated for additional credit with consent of instructor.

[ASIAN 464 Readings in Urdu Literature @]
Selected topics in Urdu literature, with readings in the original; discussions in Urdu and English.

[ASIAN 470 The Japanese Noh Theater and Modern Dramatists (also Comparative Literature 470 and Theater Arts 470) @ #]
Several weeks will be spent studying the literary, performance, and aesthetic aspects of the noh theater. Emphasis will be on noh as a performance system, a total theater in which music, dance, text, costume, and props all interact to create the total effect. Then attention will turn to modern theater people who have reacted to noh in some creative way. Texts will depend partly on student interests but will probably include Yeats, Brecht, Britten, Claudel, Grotowski, and Mishima. All readings may be done in English translation.

[ASIAN 471 Japanese Theatre (also Theatre Arts 471) @ #]

[ASIAN 475 Modernization and the Korean Family (also HSS 490 sec 30) @]

[ASIAN 481 Translation and Identities @]
Fall. 4 credits. Not offered 1996-97. N. Sakai.

[ASIAN 483 Internationalism, Nationalism, and Modern Japanese Discursive Space @]
Fall. 3 credits. Not offered 1996-97. N. Sakai.
The late 19th century marks an important transitional period, nation-states formed in Britain, France, Japan, Germany, the United States, and elsewhere sought to become imperial powers; and "internationalism" virtually collapsed. Focusing on Japanese examples but not excluding other cases, we will study the discursive spaces of modern national subjectivity with a view to the problems of ethnicity, colonialism, imperial sexism, violence, historical memory, post-coloniality and academic knowledge. A major critical paper will be required.

[ASIAN 496 Tokugawa Literature and Thought @ #]
An introduction (in English translation) to literary, theatrical, and intellectual works of the Tokugawa period (1600-1868). We will examine the characteristics of early Tokugawa literary and theatrical works and see how different they are from the literary works of the later Tokugawa period. We will also read the philosophical and philological works on the classics by writers such as Ogyu Sorai and Motoori Norinaga to understand the ways contemporary Japanese intellectuals understood cultural activities and literature during the Tokugawa period.

Asia—Graduate Seminars

[ASIAN 601 Southeast Asia Seminar: Indonesia]
Fall. 3-4 credits. J. Siegel.

[ASIAN 602 Southeast Asia Seminar: Topic TBA]

[ASIAN 605-606 Master of Arts Seminar in Asian Studies]
Fall, 605; spring, 606. Spring. 2-4 credits. Staff.

[ASIAN 607-608] The Plural Society Revisited (also Government 653)
Spring. 4 credits. 607 may be taken independently for credit; 608 is a prerequisite for 608. B. Anderson.
For description, see GOVT 653.

[ASIAN 609 Modern Japanese Studies: The Formation of the Field in History and Literature (also History 609)]
N. Sakai, J. V. Koschmann. For description, see HIST 609.

[ASIAN 611 Chinese Bibliography and Methodology]
Spring. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates. C. d'Orban.

[ASIAN 612 Japanese Bibliography and Methodology]
Fall. 1 credit. Prerequisite: permission of instructor. Required of honors students and M.A. candidates. F. Kotas.

[ASIAN 613 Southeast Asian Bibliography and Methodology]
Fall. 1 credit. Prerequisite: permission of instructor. A. Riedy.
This course is designed to instruct students in methods of identifying and locating sources for the study of Southeast Asia. Emphasis will be on the practical aspects of using various types of bibliographical tools to identify both primary and secondary sources in Southeast Asian and Western languages. The use of electronic databases and online services as well as traditional printed resources will be covered. Sources which are more general in nature, but have a significant Southeast Asia component will be discussed. Relevant arcana of library science will be explained as necessary. Required of honors students and Master of Arts candidates. No foreign language competence is required but a reading knowledge of at least one Southeast Asian language or other Asian language (especially Chinese or Japanese) and a major in a European language (especially French, Spanish, or Dutch) is highly desirable.

[ASIAN 621-622 South Asia Seminar: Topic to be announced]
621, Fall; 622, Spring. 4 credits. Not offered 1996-97.

[ASIAN 623-624 Topics in South Asia]
623, Fall; 624, Spring. 1 credit. Staff.
A series designed to introduce as well as enhance and build on students' knowledge of various topics of importance to South Asia (Bangladesh, India, Nepal, Pakistan, and Sri Lanka). Weekly lectures will survey contemporary themes in South Asian scholarship where visiting scholars and members of the Cornell community will discuss a multidisciplinary range of issues. These may include science and nation building, ritual power and resistance, tribal communities and the environment, industrial and agrarian relations, gender and the media, and economic liberalization. A short essay will be required at the end of the course.

[ASIAN 630 Strategies for Acquiring and Using Knowledge]
A graduate seminar designed to introduce students to contemporary theory while relating it to their research specialization. Readings and discussion about narrative, epistemic archaeology, translation, deconstruction, feminism, postmodernism, multiculturalism, and chance operations. Neither area- nor discipline-specific. Graduate students only.

[ASIAN 650 Graduate Seminar in Asian Religions]

[ASIAN 676 Southeast Asia Research Training Seminar]
Fall or spring. 3-4 credits. Staff.

[ASIAN 701-702 Seminar in East Asian Literature]
701, Fall; 702, Spring. 1-4 credits. Staff.

[ASIAN 703-704 Directed Research]
703, Fall or Spring; 704, Fall or Spring. 1-4 credits. Staff.
For additional courses on Asian religion, see "Related Courses" in the China and Japan area courses listing.
### Asia—General Courses

**ASIAN 401 Asian Studies Honors Course**
- Fall or Spring. 4 credits. Intended for seniors who have been admitted to the honors program. Staff. Supervised reading and research on the problem selected for honors work.

**ASIAN 402 Asian Studies Honors: Senior Essay**
- Fall or spring. 4 credits. Prerequisite: admission to the honors program. Staff. The student, under faculty direction, prepares an honors essay.

**ASIAN 403-404 Asian Studies Supervised Reading**
- Fall, spring, or both. 1–4 credits. Prerequisite: permission of instructor. Open to majors and other qualified students. Intensive reading under the direction of a member of the staff.

**Literature in Chinese**

**CHLIT 213-214 Introduction to Classical Chinese**
- 213, fall; 214, spring. 3 credits each term. Prerequisite: qualification in Chinese or permission of instructor. May be taken concurrently with Chinese 101-102, 201-202, 301-302. Staff.

**CHLIT 420 T’ang and Sung Poetry**
- Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. T. L. Mei.

**CHLIT 421-422 Directed Study**
- Fall or spring. 2–4 credits each term. Prerequisite: permission of instructor. Staff.

**CHLIT 424 Readings in Literary Criticism**
- Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. T. L. Mei.

**CHLIT 435 Chinese Buddhist Texts**

**CHLIT 603 Seminar in Chinese Fiction and Drama**
- Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. E. Gunn.

**CHLIT 605 Seminar in Chinese Fiction and Drama**
- Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. E. Gunn.

**CHLIT 610 Chinese Cultural Criticism**
- Fall. 4 credits. Not offered 1996-97. E. Gunn.

**CHLIT 621-622 Advanced Directed Reading: Chinese Historical Syntax**
- 621, fall; 622, spring. 2–4 credits. Prerequisite: permission of instructor. Staff.

**Literature in Japanese**

**JPLIT 406 Introduction to Classical Japanese**
- Spring. 4 credits. Prerequisite: permission of instructor. N. Sakai.

**JPLIT 407 Advanced Classical Japanese**
- Spring. 4 credits. Prerequisite: JPLIT 406 or permission of instructor. Not offered 1996-97. K. Brazell.

**JPLIT 421-422 Directed Readings**
- 421, fall; 422, spring. 2–4 credits. Prerequisite: for JPLIT 421, Japanese 402 or equivalent; for JPLIT 422, Japanese 421 or equivalent. Staff. Note: For complete descriptions of courses numbered 600 or above, consult the appropriate instructor.

**JPLIT 611 Seminar in Classical Japanese Literature**
- Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97. K. Brazell.

**JPLIT 612 Seminar in Medieval Genres**
- Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. K. Brazell.

**JPLIT 613 Seminar in Tokugawa Culture and Thought: Otherness, Text, and Body**
- Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97. N. Sakai.

**JPLIT 614 Seminar in Modern Japanese Literature**
- Spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97. N. Sakai.

**Graduate-Level Reading Courses**

**JPLIT 621 Advanced Readings in Pre-Modern Japanese Narrative Literature**
- Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Not offered 1996-97. K. Brazell.

**JPLIT 622 Advanced Readings in Pre-Modern Japanese Poetry**
- Spring. 2–4 credits. Prerequisite: permission of instructor. Not offered 1996-97. K. Brazell.

**JPLIT 623 Advanced Readings in Pre-Modern Drama**
- Fall or spring. 2–4 credits. Prerequisite: permission of instructor. Not offered 1996-97. K. Brazell.

**JPLIT 624 Advanced Readings in Modern Japanese Literature**
- Fall and spring. 2–4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97. B. de Bary.

Note: See courses listed under Asia—Literature and Religion courses—for Japanese literature courses in translation.

**Japanese Language**
- See Modern Languages and Linguistics.

**FALCON Program**

### Literature in Korean

**KRLIT 405 Readings in Korean Literature**

**KRLIT 406 Korean Literature Translation Workshop**
- Spring. 2–3 credits. Prerequisite: Korean 301–302 or equiv.; permission of instructor. Not offered 1996-97. D. McCann.

### Sanskrit

**SANSK 131-132 Elementary Sanskrit**
- 131, fall; 132, spring. 4 credits each term. Not offered 1996-97. An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

**SANSK 251-252 Intermediate Sanskrit**
- 251, fall, 252, spring. 3 credits each term. Prerequisite: Sanskrit 132 or equivalent. A. Nussbaum, fall; C. Minkowski, spring.

### Literature in Sanskrit

**SNLIT 467-468 Reading in Sanskrit Literature: The Vedas**
- Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1996-97. C. Minkowski.

### Related Courses in Other Departments and Colleges

Check the primary department section for the offering status of the following courses. Courses in other colleges will count as College of Arts and Sciences credit only for Asian Studies majors.

**Asia/General Courses**

- **ABEN 754** Sociotechnical Aspects of Watershed Development (also ARME 754 and GOVT 644)
- **ANTHR 313** Anthropology of the City
- **ANTHR 619** Anthropological Approaches to the Study of Buddhism in Asia

VIET 301-302 Advanced Vietnamese

VIET 401-402 Directed Individual Study

ASTRONOMY

The 200 and 300 levels may appeal to students interested in modern astronomy ranging from the fields of astrophysics and general relativity to radio and optical astronomy, and the exploration of the solar system. Cornell operates two local optical observatories, the world's largest radio telescope at Arecibo, Puerto Rico, and with two other institutions, the 200-inch optical telescope at Mt. Palomar in California. The department offers a number of courses to satisfy a general interest in astronomy. These courses have few or no prerequisites and are not intended for the training of professional astronomers. Among the introductory courses, several are available, depending on background and on the requirements to be fulfilled. The 100-level courses are designed primarily for non-science majors. The alternative introductory sequence Astronomy 211–212 is geared toward sophomores planning to major in physical science and requiring coregistration in a major in mathematics.

Astronomy 201 and 202 are required of all students who have had two to three years of high school algebra and trigonometry. Astronomy 232 is designed for physical science and engineering majors as an introduction to astrophysics. Other courses at the 200 and 300 levels may appeal to students of various backgrounds and interests, as indicated in the individual course descriptions. Courses numbered above 200 are intended for students who have had two to three years of college physics and at least two years of college mathematics. Astronomy 410, 431, and 432, for example, are normally elect the introductory physics sequence Physics 112-121-214 or 116–217–218 and the complementary pathway in mathematics, Mathematics 111–122–221–222 or 191–192–293–294 (or equivalent). Students who anticipate undertaking graduate study are urged to elect the physics sequence Physics 116–217–218–318–327 if possible. The sophomore seminar Astronomy 233, "Topics in Astronomy and Astrophysics," will provide an introduction to current research in astronomy and astrophysics for prospective majors, but is not required of students who elect to major in astronomy after the sophomore year. Students are also urged to acquire computer literacy.

Acceptance to the major will first be considered after completion of three semesters of introductory courses and in general will require a GPA of 3.20 in physics and mathematics courses.

The major requirements stress the importance of building a strong preparation in physical science. The following upper level courses are normally required:

- Physics 314 or 318, 316, 323 or 327, 341 and 443
- Mathematics 421 and 422 (or equivalent, e.g. A&EP 321–2)

Astronomy 410, 431, and 432.

Students interested in planetary studies may substitute one or more appropriate advanced courses upon consent of the major adviser or may pursue an independent major under the program in the Science of Earth Systems. In addition, majors are also encouraged to supplement the above courses with any astronomy, physics, or other appropriate courses at or above the 300 level. Advanced seniors can enroll in astronomy graduate courses with the consent of the instructor. Students are also encouraged to work with faculty members on independent study projects under the course Astronomy 440 or to apply to a variety of programs at Cornell, Arecibo, and elsewhere that offer undergraduate summer employment as research assistants. Nearly all undergraduate majors and concentrators become involved in research projects in the upperclass year.

Students whose interest in astronomy is sparked somewhat late in their undergraduate career are encouraged to discuss possible paths with the Director of Undergraduate Studies in Astronomy.

Honors. A student may be granted honors in astronomy upon the recommendation of the Astronomy Advisers Committee of the astronomy faculty.

Double majors. A double major in astronomy and another subject is possible in many circumstances. However, the set of courses used to fulfill the requirements for each major must be completely independent.

Concentration. The concentration in astronomy for other majors normally requires 12 credits, at least 8 of which must be at the 300 level or above. Astronomy 233 is recommended for sophomores planning to concentrate in astronomy.

Distribution Requirement

All courses in astronomy, except Astronomy 233, may be used to fulfill the science distribution requirement in the Colleges of Arts and Sciences.

Courses

ASTRO 101 The Nature of the Universe

Fall. 4 credits. No prerequisites. Labs and discussions limited to enrolled students each.

T. Herter; labs: G. Stacey.

The history of the universe and the physical nature of existence. An examination of the universe and our place in it and the possible existence of life and intelligence elsewhere in the cosmos. The nature of stars, galaxies, and quasi-stellar sources. The birth, evolution, and death of stars and the formation of the chemical elements, including discussions of supernovae, pulsars, neutron stars, and black holes. The physical state and composition of the interstellar material and its influence on the evolution of our galaxy. An introduction to the special and general theories of relativity. The nature of time. Modern theories of cosmology and the structure and evolution of the universe. The complete lecture notes are made available on the World Wide Web.

ASTRO 102 Our Solar System

Spring. 4 credits. No prerequisites. Labs and discussions limited to 20 students each.

P. Giersch, J. Houck; labs: G. Stacey.

A survey of the current state and past evolution of our solar system, with emphasis on results from the direct exploration of planets by spacecraft. The course is divided into four parts: theories of formation, the inner planets, the outer solar system, and the search for life in the solar system and elsewhere. Stress is placed on the important processes that have shaped the evolution of planets and satellites.

ASTRO 103 The Nature of the Universe

Fall. 3 credits.

Identical to Astronomy 101 except for omission of the laboratory (see description above).

ASTRO 104 Our Solar System

Spring. 3 credits.

Identical to Astronomy 102 except for omission of the laboratory (see description above).

ASTRO 105 An Introduction to the Universe

Summer. 3 credits.

How do we measure the size of our galaxy and the size of the universe? Is the universe round or flat? How are the stars born, why do they shine, and how do they die? What are the chemical elements, and how were they formed in stars? What are quasars, pulsars, and black holes? How was the solar system formed? What are the environments of other planets like? What is the basic structure of Earth and the other planets? Will life form catastrophically on other planets? Does life exist elsewhere in the universe? How can we find out? Each student has an opportunity to make observations with small telescopes.

ASTRO 106 Essential Ideas in Relativity and Cosmology

Summer. 3 credits. Prerequisites: high school algebra and trigonometry. Einstein's theories of special and general relativity, which brought about a fundamental change in our conceptual understanding of space and time, will be studied. Correspondence to, and conflicts with, common sense will be pointed out. Applications to various areas will be studied: in special relativity—space travel, equivalence of mass and energy,
nuclear fission and fusion, and thermonuclear processes in the sun; in general relativity—motion of light and particles in curved spacetime, cosmological models, and the question of whether the universe is open or closed.

**ASTRO 107 An Introduction to the Universe**  
Summer. 4 credits.  
Identical to Astronomy 105 except for the addition of the afternoon laboratory.

**ASTRO 201 Our Home in the Universe**  
Fall. 3 credits. Lec. 1, T R 10:10-11:25; R. Giovanelli; Lec. 2, M W F 10:10-11:05; M. Haynes. Assumes no scientific background. Preference given to freshmen and sophomores.

A general discussion of our relation to the physical universe and how our view of the universe has changed from ancient to modern times. Several main themes are covered over the course of semester: (1) our view of the night sky from the ancient Greeks to the Hubble Space Telescope, (2) the death of stars and the formation of black holes, (3) dark matter and the structure of galaxies and (4) the origin, evolution, and fate of the universe. We present a nonmathematical introduction to these subjects and discuss unresolved issues in our understanding.

**ASTRO 202 Our Home in the Solar System**  
Spring. 3 credits. Prerequisite: some background in science. Course intended for freshmen and sophomores. Limited to 25 students. Permission of instructor. C. Sagan.

A comparison of the Earth with the other worlds in our solar system, with an emphasis on the nature and fragility of planetary environments. Topics to be discussed include the climate and weather, species extinctions, the history of climate change, evolution of the atmosphere of the Earth and other planets, ecology and biological interdependence, and threats to the current global environment—including ozone layer depletion, greenhouse warming, and nuclear winter. Possible solutions to these problems, including their economic and social costs and their ethical implications, will be considered. The course will attempt to develop skills in writing and in elementary physics and chemistry.

**ASTRO 211 Astronomy: Stars, Galaxies, and Cosmology**  
Fall. 4 credits. Intended for engineering and physical sciences freshmen and sophomores. Prerequisite: introductory calculus or coregistration in Mathematics 111 or 111L. J. Hauke.

The formation and evolution of normal stars, supernovae, pulsars, quasars, and black holes. The interstellar medium. Cosmology and the structure and evolution of galaxies.

**ASTRO 223 Topics in Astronomy and Astrophysics**  
Fall. 2 credits. Prerequisites: Physics 112 and 211, Mathematics 112 and 221, or permission of instructor. Intended for sophomores planning to major in astronomy or related fields. M. Haynes; P. Nicholson.

A seminar course on selected topics in astronomy and astrophysics designed for prospective astronomy majors. Content will vary from year to year, but will include topics from the fields of planetary, galactic, and extragalactic research.

**ASTRO 280 Space Exploration**  
Fall. 3 credits. S. Squyres.

This course provides an overview of space science, with particular emphasis on the solar system, and a detailed examination of a few selected objects, including the planet Mars, the satellites in the outer solar system, and comets. The focus is on methods of collecting information and especially on spacecraft and space missions. Topics will include the design and limitations of instruments. Ethical and political questions associated with space exploration will be discussed. Intended for students with an interest in science, technology, and associated policy issues. No special background in physical sciences, math, or engineering is assumed.

**ASTRO 290 Relativity and Astrophysics**  
Spring. 4 credits. Prerequisites: freshman physics and calculus, knowledge of geometry. I. Wasserman.

This course provides a geometrically based introduction to special and general relativity, followed by consideration of astrophysical applications. Included will be discussion of topics of Einstein's theory of space, time, and gravitation; physics of white dwarfs, neutron stars, and black holes; introduction to modern cosmology.

**ASTRO 299 Search For Life in the Universe**  
Fall. 4 credits. Prerequisites: two courses in any physical science subject or permission of instructor. P. Goldsmith, Y. Terzian.

The contents of the universe will be surveyed. Theories of cosmic and stellar evolution, and of the formation and evolution of planetary systems, planetary atmospheres and surfaces will be reviewed. Questions regarding the evolution of life and the development of technology will be discussed. Methods to detect extraterrestrial life with emphasis on radio telescopes and associated instrumentation will be presented. Hypothetical communication systems will be developed and discussed.

**ASTRO 331 Climate Dynamics (also SCAS 331)**  
Spring. 4 credits. Intended for first and second year engineering and physical sciences students. Prerequisite: introductory calculus or coregistration in Mathematics 111 or 111L; some knowledge of classical physics (mechanics and thermodynamics). P. Nicholson.

Celestial mechanics; tidal evolution; the physics and chemistry of planetary surfaces, atmospheres, and satellites; planetary interiors; planetary rings; asteroids, comets, and meteories; searches for other planetary systems.

**ASTRO 332 Elements of Astrophysics**  

An introduction to astronomy, with emphasis on the application of physics to the study of the universe. Physical laws of radiation. Distance, size, mass, and age of stars, galaxies, and the universe; stellar evolution and nucleosynthesis. Supernovae, pulsars, and black holes. Galaxies and quasars. Introduc-
tion to cosmology. The structure and evolution of planets and of the solar system. Mainly intended for students of science, engineering and science education, interested in astronomy and astrophysics.

**ASTRO 410 Experimental Astronomy**  
Fall. 4 credits. Prerequisites: Physics 214 (or 310 or 360), Physics 325 (or coregistration) or permission of instructor. J. Cordes, P. Goldsmith, J. Houck.

Observational astrophysics. Major instruments will involve techniques in CCD (charge-coupled-device) imaging, optical photometry, optical spectroscopy, radiometry, radio spectroscopy and radio astronomy. The experiments involve use of the Hartung-Bockhord Observatory's 24-inch telescope, a laboratory 2-element radio interferometer, and a radio telescope mounted on top of the Space Sciences Building. The laboratory covers the fundamentals of using astronomical instrumentation and data analysis as applied to celestial phenomena: asteroids, normal stars, supernova remnants, globular clusters, planetary nebulae, the interstellar medium and galaxies.

**ASTRO 431 Introduction to Astrophysics and Space Sciences I**  
Fall. 4 credits. Prerequisite: mathematics above the 200 level and physics above the 300 level; co-registration in Physics 341 and 443 is recommended. Staff.

A systematic development of modern astrophysical concepts for physical science majors. Atomic and electromagnetic processes in space. Introduction to star formation, stellar structure and evolution, radiative transfer, and the interstellar medium. At the level of Astrophysical Concepts, by Harwit.

**ASTRO 432 Introduction to Astrophysics and Space Sciences II**  
Spring. 4 credits. Prerequisite: Astronomy 431 or permission of instructor. Staff.

This course is divided into two broad topics, the astrophysics of the interstellar medium and cosmology. The first section will cover thermal equilibrium and radiative transport in HII regions, atomic gas regions, and molecular clouds. The cosmology section will include expansion of the universe, density parameters, dark matter, cosmological tests, the early universe, and the cosmological production of the elements. At the level of Astrophysics of Gaseous Nebulae and Galactic Nuclei by Osterbrock.

**ASTRO 434 The Evolution of Planets**  
Spring. 4 credits. An introduction to the physical and chemical processes that have been active in altering the environments of planets and satellites from their original to their present state. Theories of the formation of the solar system are reviewed with special emphasis on chemical differentiation of the primitive solar nebula. A critical assessment is made of how well the various theories account for the clues left in the meteorite record and how well they explain the present environments of the planets and satellites. The main ideas about the formation and evolution of terrestrial planets, satellite systems, and asteroids are considered in detail. Some specific topics included are the habitability of the earth-moon system, the probable evolution of Jupiter's Galilean satellites, and the comparative histories of Venus, Earth, and Mars.
ASTRO 440 Independent Study in Astronomy
Fall or spring. 2-4 credits. Prerequisite: permission of instructor. Recommended: familiarity with the topics covered in ASTRO 332, 431, or 434. Individuals work on selected topics. A program of study is devised by the student and instructor. Students need to fill out an independent study form, have it signed by the instructor and register in the department office, 510 Space Sciences Building.

ASTRO 490 Senior Seminar Critical Thinking
Spring. 3 credits. J. Cordes, Y. Terzian. Critical thinking in scientific and nonscientific contexts. Topics will include elements of classical logic and rhetoric, including standards of evidence. Case studies will include examples of competing hypotheses in the history of science, with examples from borderline science and medicine, religion, and politics. Stress will be laid on creative generation of alternative hypotheses and their winnowing by critical scrutiny. Topics will include the nature and history of the universe, the nature of reality, the possibilities of life on other planets, and artificial intelligence.

ASTRO 509 General Relativity
For description, see PHYS 553: S. Teukolsky.

ASTRO 510 Applications of General Relativity
For description, see PHYS 554: S. Teukolsky.

[ASTRO 511 Physics of Black Holes, White Dwarfs, and Neutron Stars (also Physics 525)]

ASTRO 516 Galactic Structure and Stellar Dynamics

[ASTRO 520 Radio Astronomy]
Fall. 4 credits. Not offered 1996-97. Radio astronomy telescopes and electronics; antenna theory; observing procedures and data analysis, concepts of interferometry and aperture synthesis.

ASTRO 523 Signal Processing and Data Analysis in Astronomy
Fall. 4 credits. J. Cordes.

Topics will include probability theory, Fourier analysis of discrete and continuous time series, digital filtering, spectral analysis, parameter estimation, statistical inference using Bayesian methods, stochastic and chaotic processes, image formation and analysis, maximum entropy analysis, and cluster analysis. Topical emphasis will include neural networks and genetic algorithms. Examples will be drawn from subject areas in astronomy and astrophysics, geophysics, plasma physics, and electronics.

ASTRO 525 Techniques of Optical/Infrared and Submillimeter Astronomy
Spring. 4 credits. T. Herter, G. Stacey. Optical/infrared and submillimeter telescopes and instrumentation will be discussed and related to current research in these fields. Special emphasis will be on detector elements, instrument design and construction, data analysis and observing procedures. Intended for students with a thorough understanding of undergraduate physics.

[ASTRO 530 Astrophysical Processes]
Spring. 4 credits. Not offered 1996-97. Thermal and nonthermal radiation processes encountered in studies of stars, the interstellar and intergalactic media, galaxies and quasars. Fundamentals of radiative transfer, bremsstrahlung, synchrotron radiation, and Compton scattering will be covered, as well as spectral line transfer, gas heating and cooling, and topics in atomic and molecular spectroscopy. These topics will be discussed within the framework of astrophysical situations, such as star formation, interstellar gas and dust clouds, jets, active galactic nuclei, clusters of galaxies and cosmology.

[ASTRO 555 Theory of the Interstellar Medium]

[ASTRO 560 Theory of Stellar Structure and Evolution (also Physics 667)]
Observational overview; hydrostatic equilibrium; equations of state; radiative and convective energy transport; nuclear burning; solar neutrinos; rotation and magnetic fields; stellar seismology; brown dwarfs; pre-main sequence contraction.

[ASTRO 570 Physics of the Planets]
Fall. 4 credits. Not offered 1996-97. P. Nicholson. An introductory survey of planetary science with an emphasis on the application of physical principles. Planetary dynamics, including satellite orbits, tidal interactions, resonances, and ring dynamics. An introduction to the theory of planetary interiors, gravitational fields, heat sources, and rotational mechanics. Radio chemistry of planetary atmospheres, including radiative transfer, convection, and thermal structure. Important observational results, including those of ground-based optical, infrared, radio, and radar astronomy, as well as those made by spacecraft, will also be discussed. Intended for students in astronomy, physics, and engineering.

[ASTRO 571 Mechanics of the Solar System (also Theoretical and Applied Mechanics 873)]

[ASTRO 575 Atmospheric and Ionospheric Physics (also Electrical Engineering 586)]

[ASTRO 576 Solar Terrestrial Physics (also Electrical Engineering 586)]
Spring. 3 credits. Not offered 1996-97. High-latitude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; line-formation and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.

[ASTRO 579 Celestial Mechanics]
For description, see TTAM 672. Not offered 1996-97.

ASTRO 580 Galaxies and the Universe

[ASTRO 599 Cosmology]
This course is intended to provide a detailed theoretical development of current ideas in cosmology. Topics will include observational overview; growth of irregularities, galaxy formation and clustering; big bang cosmology, recombination, nucleosynthesis; very early universe, symmetry breaking, inflationary scenarios. At the level of Peebles, *Principle of Physical Cosmology*.

**ASTRO 620 Seminar: Advanced Radio Astronomy**
Spring. 2 credits. Prerequisites: some background in extragalactic astronomy and/or radio astronomy suggested. Open to advanced undergraduates by permission of instructor. Not offered 1996–97. Selected topics in observational cosmology at radio wavelengths including: redshift surveys, gas stripping mechanisms, rotation curves and the distributions of mass and light, large scale structure, peculiar motions, atomic and molecular studies at high redshift, the Sunyaev-Zel’dovich effect, evolution of radio luminosity function, and the cosmic microwave background.

**ASTRO 621 Seminar: Planetary Radar Astronomy**
Spring. 3 credits. Prerequisites: satisfactory completion of undergraduate mathematics and physics sequences for physical science/engineering majors, or permission of instructor. D. Campbell. Techniques of planetary radar astronomy, results of recent observations, and physical interpretation. Target detectability; the radar equation. Radar observables; delay and Doppler resolution. Instrumentation: antennas, receivers, transmitters, digital hardware; deconvolution and data analysis techniques. Target characterization: scattering laws and polarization properties. Delay-Doppler interferometry. Topographic mapping. Radar observations from orbit; bistatic measurements. Synthetic aperture radar. Satellite and STS systems for radar studies of Earth. Pioneer Venus and VRM. Ground-based results: Moon, Venus, Mercury, Mars, asteroids, comets, Galilean satellites, Saturn’s rings.

**ASTRO 640 Advanced Study and Research**
Fall or spring. Credit to be arranged. Guided reading and seminars on topics not currently covered in regular courses. Students need to register in the department office, 510 Space Sciences Building.

**ASTRO 660 Cosmic Electrodynamics** (also Applied and Engineering Physics 608)

**ASTRO 671 Seminar: Planetary Science**
Fall. 3 credits. J. Veverka. An informal series of lectures discussing the techniques used to obtain and interpret spacecraft and earth-based remote sensing data of the planets and smaller bodies in the solar system. Intended for graduate students and seniors. The emphasis this year will be on the exploration of asteroids, including recent results obtained by the Galileo spacecraft and data expected from the NEAR spacecraft currently on its way to asteroid 433 Eros.

**ASTRO 673 Seminar: Planetary Atmospheres**
Spring. 2 credits. P. Gierasch. This course will deal with motions in planetary atmospheres. Among the topics to be discussed are the Venus general circulation, dust storms on Mars, alternating jets on the outer planets, and compositional layering in the outer planets.

**ASTRO 680 Seminar: Cosmic Rays and High-Energy Electromagnetic Radiation**

**ASTRO 690 Seminar: Computational Astrophysics** (also Physics 680)
Spring. 3 credits. Prerequisites: working knowledge of FORTRAN or C. Not offered 1996–97. S. Teukolsky. A course designed to familiarize graduate students with numerical techniques for solving diverse problems in astrophysics. Numerical methods discussed in the course will include solving ordinary and partial differential equations, linear algebra and eigenvalue problems, Monte Carlo techniques, fast Fourier transforms, etc. In contrast to traditional numerical analysis courses, the flavor of the course will be “how-to”, rather than theoretical. No theorems will be proved. Students will be allotted computer time to solve, both individually and in small teams, assigned numerical exercises. Text: *Numerical Recipes* by Press, Teukolsky, Vetterling, and Flannery.

**ASTRO 699 Seminar: Problems in Theoretical Astrophysics** (also Physics 665)
Fall. 2 credits. I. Wasserman. An informal seminar that will examine “New Directions in Astrophysics.” The participants will discuss neutrino astronomy, LIGO (the gravitational wave observatory), high energy gamma rays and cosmic rays, laboratory searches for dark matter, and the future of optical, radio, and infrared astronomy, both on the ground and in space. The seminar is open to all graduate students.

**ASTRO 699 Seminar: Theoretical Astrophysics** (also Physics 665)
Spring. 2 credits. D. Chernoff. An informal seminar for advanced graduate students in astronomy or physics. Topics will include the Hubble space telescope results.

**BIOLOGICAL SCIENCES**

P. J. Bruns, director (169 Biotechnology Building, 255–5042); H. T. Stinson, associate director and director of undergraduate studies (200 Stimson Hall, 255–5233); R. M. Sparrow, biology center coordinator (Biology Center, 216 Stimson Hall, 255–3358); M. L. Cox, executive staff assistant (200 Stimson Hall, 255–6859).

Biology is a popular subject at many universities for a variety of reasons: It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services in the division’s Office for Academic Affairs and the Behman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology; biochemistry; cell biology; ecology and evolutionary biology; general biology; genetics and development; microbiology; neurobiology and behavior; and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255–3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

**BIOLOGY AND SOCIETY MAJOR**

See Special Programs and Interdisciplinary Studies.

**BURMESE**

See Modern Languages under Languages and Linguistics.

**CAMBODIAN**

See Modern Languages under Languages and Linguistics.

**CEBUANO (BISAYAN)**

See Modern Languages under Languages and Linguistics.

**CHEMISTRY**

T. Marcus, associate director of undergraduate studies.

The chemistry department offers a full range of courses in physical, organic, inorganic, analytical, theoretical, bioorganic, and biophysical chemistry. In addition to their teaching interests, chemistry faculty members have active research programs. The link between teaching and research is a vital one in a continuously evolving scientific subject; it ensures that students will be provided with the most advanced information and perspectives, and affords opportunities for students to participate in research.
The Standard Major

The chemistry major at Cornell provides a great deal of flexibility and prepares students for a range of career options. In recent years, chemistry majors have gone on to graduate study in chemistry, medicine, law, and business management, as well as directly into positions with chemical, pharmaceutical, and other industrial companies. A major in chemistry can also provide the basis for work in related areas such as molecular biology, chemical physics, geochemistry, chemical engineering, materials science, solid state physics, and biotechnology. The required courses for the major can be completed in three years, leaving the senior year open for advanced and independent work under the supervision of a professor.

The courses are arranged as a progression, with some (including mathematics and physics) prerequisite to those that are more advanced. During the first year, a student should normally register for general chemistry (preferably Chemistry 215–216 although Chemistry 207–208 is acceptable), mathematics, and a freshman writing seminar, for a foreground of career physics. Chemistry 215–216 is aimed at those students with good preparation and a strong interest in chemistry. Students who do not know if their preparation is adequate should consult the instructor. In the second year, a student should complete calculus and take physics and organic chemistry (Chemistry 359–360 is preferred to Chemistry 355–356). The second-year laboratory courses include 300, Quantitative Chemistry, if Chemistry II, 301, Experimental Chemistry I. Chemistry 389–390, Physical Chemistry I and II, and Chemistry 302–303, Experimental Chemistry II and III, should be completed in the third year. Chemistry 410 should be completed in the third or fourth year. Advanced work in chemistry and related subjects can be pursued in the fourth year and in the earlier years as well. The opportunity for independent research is also available. All students with questions about the major are encouraged to consult the chair of the Department of Chemistry or the chair's representative. Entering students who are exceptionally well prepared in chemistry may receive advanced placement credit for Chemistry 207.

Prerequisites for admission to a major in chemistry are (1) Chemistry 215–216; or 207–208; 300; or 211–208, 300; or 103, 208, 300; (2) Physics 207 or 112; and (3) Mathematics 111 or 191. Students are not encouraged to undertake a major in chemistry unless they have passed those prerequisite courses at a good level of proficiency. The minimum additional courses that must be completed for the standard major in chemistry are listed below.

1) Chemistry 301–302–303, 359–360 (357–358 may be substituted), 389–390, and 410
2) Mathematics 112, 213; or 122, 221–222; or 192–295–294
3) Physics 206

Potential majors electing to take Mathematics 213 are strongly urged to do so in their sophomore year to avoid scheduling conflicts with Chemistry 389 in their senior year. The sequence described above is a basic program in chemistry that students can extend substantially in whatever direction suits their own needs and interests. Those going on to do graduate work in chemistry should recognize that these requirements are minimal and should supplement their programs, where possible, with further courses such as Chemistry 405, 605, 666, 668, and 681. Even students not planning graduate work in chemistry should consider advanced work in physics and mathematics, courses in the biological sciences, and advanced work in chemistry as possible extensions of the basic program.

Honors. The honors program in chemistry offers superior students in the standard major, an opportunity to study independently in seminars and gain experience by engaging in research during the senior year. It is particularly recommended to those who plan graduate work in chemistry. Prospective candidates should complete the introductory material chemistry and physical chemistry sequences by the end of the junior year, although failure to have completed those courses in the junior year does not in itself disqualify a student from the honors program. Completion of the program at a high level of performance in at least 6 credits of under-graduate research such as is offered in Chemistry 421, 435, 461, or 477. In addition, the writing of a thesis in the honors seminar (Chemistry 498) is expected.

The Alternative Major

The alternative major is a flexible program that provides core coverage of chemistry around which students can design a program to meet their own career goals. Requirements consist of a core program along with four additional courses chosen by the student. One of the four must be in chemistry at the 300 level or above, the other three may be in another field but should represent a cohesive plan and must be approved by a departmental committee. Students who select the alternative major are not eligible for the Honors Program.

The Core Program for the Alternative Major

1) Chemistry 215–216 (or 207–208, 300; or 211, 208, 300; or 103, 208, 300); 253, 251, 287, 289, and 410 (Chemistry 357–358 or 359–360 can be substituted for Chem 253, or Chem 389–390 can be substituted for Chem 287, thereby fulfilling the requirement for an additional chemistry course)
2) Mathematics 111–112, or 111, 122, or 191–192
3) Physics 207–208; or 112, 213

Additional Courses for the Alternative Major

Possible plans for the remaining three courses might include programs in Biochemistry, Biology, Physics; Computer Science, Polymers, Materials Science; Science, Technology, and Society; History and Philosophy of Science and Technology, Business and Management; Economics; Education; and others.

Premedical students and those interested in pursuing double majors might find the alternative major particularly attractive. The course requirements for admission to the alternative major are the same as those for the standard major.

Program for Science Teachers

Chemistry majors who wish to become teachers will be interested to know that Cornell University offers a certification program for teachers of secondary (grades 7–12) science. Interested students apply to the program during their sophomore or junior year. If accepted, students integrate some coursework in Education with the rest of their undergraduate studies. All chemistry majors who enter this program will remain in the College of Arts and Sciences to complete the major.

After earning the bachelor’s degree, certification students enter the Graduate Field of Education to complete a fifth year of study at Cornell. Following this fifth year, students are eligible for a master’s degree from Cornell and a teaching certificate from New York State. Additional information is available from Susie Slack, 424 Kennedy Hall, 255-9255 or Prof. Deborah Trumbull, 426 Kennedy Hall, 255-3108.

Laboratory Course Regulations

Students registered for laboratory courses who do not appear at the first meeting of the laboratory will forfeit their registration in that course.

Students and members of the teaching staff are required to wear safety goggles and lab aprons in all chemistry laboratories. Close-toed footwear is required (no sandals). Students are reminded to take their goggles and lab aprons to the first laboratory session. Those who fail to cooperate with the safety program will be asked to leave the laboratories.

Students are required to pay for glassware and any other items broken or missing from their laboratory desks at the close of each semester. Students who fail to inventory their desks at the appointed time in the presence of their instructor are charged a $10 fee in addition to charges for any breakage.

Courses

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Preliminary examinations for all courses may be given in the evening.

CHEM 103 Introduction to General Chemistry
Fall or summer. 4 credits. Enrollment limited. Recommended for students who have not had high school chemistry and for those needing a less intensive course than Chemistry 207–208. Lecs, M W F 11:15, lab, T R or F 8:00–11:00; or M W or F 1:25–4:25. Prelims: 7:30–9 p.m., Oct. 8, Nov. 14. D. Y. Sogah.

An introduction to general chemistry, with emphasis on important principles and facts. Chemistry 103 covers much of the same material as Chemistry 207 and the first third of Chemistry 208, but does so in less depth.
CHEM 203 Strategies in Science: The World of Chemistry
Spring. 3 credits. This course plus Chemistry 103, 204, or 207 or 211 satisfies the College of Arts and Sciences physical science distribution requirement. Chemistry 203 satisfies the C.A.L.S. physical science requirement of one course in chemistry. S-U or letter grades. Lecs. M W F 1:25. Prelims: 7:30-9 p.m., Feb. 25, April 1. P. L. Houston.

A general appreciation of chemistry in the everyday world which will highlight for nonscientists the way the scientific method works. Using several case studies, the course will focus not only on what modern chemistry has accomplished generally on the way scientists think, how they function, what their modus operandi is. Selected topics include (a) the chemistry of food, food additives, and the effect of diet on health; (b) drugs and medicines, and air and water pollution, pesticides, herbicides, acid rain, and other environmental chemistry; (d) the chemistry of plastics, polymers, and other modern materials; (e) the chemistry of taste and smell, including flavors, perfumes, and cosmetics, and how technology and genetic chemistry. Other topics to be discussed are the influence of the media on scientific issues, the decision-making process in science, scientific publishing, and fraud in science.

CHEM 204 The Language of Chemistry
Fall. 3 credits. This course contributes to meeting the College of Arts and Sciences "Physical and Biological Sciences" (Group I) distribution requirement, as well as the C.A.L.S. physical science requirement of one course in chemistry. S-U or letter grades. Lecs. M W F 12:20. Prelims: 12:20 p.m., Oct. 30. J. Meinwald. In his autobiography, A. Kornberg (Nobel Laureate in Medicine, 1959) wrote, "much of life can be understood in rational terms if expressed in the language of chemistry. It is an international language, a language for all time, a language that explains where we came from, what we are, and where the physical world will allow us to go." Through careful examination of a few milestone investigations of easily occurring biologically important compounds (such as the antimalarial quinine, bombekyl, and the sperm attractants of algae), the principles of chemistry to which Kornberg refers will be developed. Methods of analyzing chemical problems will be emphasized, rather than the memorization of specific results or formulas. There will be an opportunity for students, working in small groups, to prepare and present short reports on topics of particular current interest at the interface between chemistry and biology.

CHEM 207-208 General Chemistry
207: fall, 208: spring or summer. 4 credits each term. Enrollment limited. Recommended for those students who will take further courses in chemistry. Prerequisite for Chemistry 207: high school chemistry. Prerequisite for Chemistry 208: Chemistry 207 or 103.

207: fall, 208: spring, or summer. 4 credits each term. Enrollment limited. Recommended for those students who will take further courses in chemistry. Prerequisite for Chemistry 207: high school chemistry. Prerequisite for Chemistry 208: Chemistry 207 or 103.

The fundamental chemical principles and descriptive facts are covered, with considerable attention given to the quantitative aspects and to the techniques important for further work in chemistry. Second-term laboratory includes a systematic study of qualitative analysis.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

CHEM 211 Chemistry for the Applied Sciences
Fall or spring. 4 credits. Recommended for those students who intend to take only one term of chemistry. Enrollment limited. Prerequisite: high school chemistry or permission of instructor. Corequisite: a calculus course at the level of Mathematics 111 or 119. Lecs: M W F 12:20. Lab: fall and spring. M T W R F 1:25-4:25. Prelims: 7:30-9 p.m., Sept. 24, Oct. 24, Nov. 26, Feb. 15, March 11, April 15. Fall. F. J. DiSalvo; spring: H. F. Davis.

The important chemical principles and facts are covered with the objective of understanding the role of chemistry in other fields. Emphasis is on topics such as solid-state materials, periodic trends, and specific classes of compounds, such as polymers.

Note: Entering students exceptionally well prepared in chemistry may receive advanced placement credit for General Chemistry by demonstrating competence in the advanced placement examination of the College Entrance Examination Board or in the departmental examination given at Cornell before classes start in the fall.

CHEM 215-216 General and Inorganic Chemistry

An intensive systematic study of the laws and concepts of chemistry, with considerable emphasis on quantitative aspects. Second term includes systems of inorganic chemistry. Laboratory work covers both qualitative and quantitative analysis.

CHEM 222 Molecular Messengers in Nature
Spring. 3 credits. Prerequisite: Chemistry 215 or 216. Offered 1996-97.

Organisms communicate with one another in nature through chemical means of chemical signals. We will examine this intriguing mode of communication as it applies to a wide variety of species ranging from bacteria to insects and mammals, including humans. Essential concepts of organic chemistry and biology will be introduced and illustrated. Each student will be expected to prepare a term paper, and there will be an opportunity for oral presenta-
ARTS AND SCIENCES - 1996-1997

**CHEM 287-288 Introductory Physical Chemistry**

287, fall, 288, spring. 3 credits each term. Prerequisites: Chemistry 208 or 216 and Mathematics 111-112, or permission of instructor. Prerequisite for Chemistry 288: Chemistry 287 or 389. Lecs, M W F 9:05; 287: rec, M or W 1:25, T 9:05; 288: rec, M or W 1:25. Prelims: 7:30-9 p.m., 287: Oct. 3, Nov. 7, Dec. 3. 288: Feb. 13, Mar. 25, Apr. 2. Lab, J. H. Freed; spring, A. C. Albrecht.

A systematic treatment of the fundamental principles of physical chemistry, focusing in the fall on thermodynamics and the quantum mechanics of the periodic table and chemical bonding. In the spring the course will be oriented to the application of physical chemistry to biological systems, including mass transport, kinetics, spectroscopy, and probability. Chemistry 287 satisfies the minimum requirement for physical chemistry in the alternative chemistry major.

**CHEM 289-290 Introductory Physical Chemistry Laboratory**

289, fall, 290, spring. 2 credits each term. Lecs: fall, R 8:00 a.m.; spring, R 9:05. Lab: fall, M T 1:25-4:25; spring, M T W F R 1:25-4:25. Fall, A. C. Albrecht; spring, J. H. Freed.

Quantitative and qualitative methods basic to the experimental study of physical chemistry.

**CHEM 300 Quantitative Chemistry**

Fall. 2 credits. Prerequisite: Chemistry 208 or advanced placement in chemistry. Lec, R 10:10; lab, M T W F R 12:40-2:45 or T R 8-12. Prelim: 7:30-9 p.m., Nov. 21. J. M. Burlitch.

Gravimetric, volumetric, spectrophotometric, and potentiometric methods are emphasized. Techniques are learned by analysis of knowns and then are used on unknowns. Lectures and problem sets stress the relationship between theory and applications.

**CHEM 301 Experimental Chemistry I**

Spring. 4 credits. Prerequisites: Chemistry 216 or 300, and 253 or 357 or 359. Lecs, M W F 8:00; 2 labs, M W T 1:25-4:25 or T R 8-11 or T R 1:25-4:25. D. A. Usher.

An introduction to the techniques of synthetic organic chemistry. A representative selection of the most important classes of organic reactions will be explored in the laboratory. The theoretical basis for these reactions and for the separation techniques used will be discussed in the lectures.

**CHEM 302 Experimental Chemistry II**

Fall. 4 credits. Enrollment limited; preference given to chemistry majors. Prerequisite: Chemistry 301. Lecs, M W F 9:05; 2 labs, M W T 1:25-4:25, T R 8-11 or T R 1:25-4:25. M. A. Hines.

Instrumental methods of analysis, including optical spectroscopy, atomic absorption, NMR, gas chromatography, and electrochemical methods.

**CHEM 303 Experimental Chemistry III**

Spring. 4 credits. Each lab limited to 11 students. Prerequisites: Chemistry 302, 389, 390; coregistration in the latter is permissible. Lecs, M W F 9:05; 2 labs, M W T 1:25-4:25, or T R 9:00-12 or T R 1:25-4:25. M. Hines.

An introduction to measurement strategies in physical chemistry as applied to kinetics, spectroscopy, the dynamics of the outer excited states, and the dielectric properties of matter.

**CHEM 357-358 Introductory Organic Chemistry**

357, fall, 358, spring. 3 credits each term. Prerequisite for Chemistry 357: Chemistry 208 or 216 or advanced placement; recommended: concurrent registration in Chemistry 251 or 300. Prerequisite for Chemistry 358: Chemistry 357; recommended: concurrent registration in Chemistry 252 or 301. Lecs, M W F 9:05 or 10:10, optional rec may be offered. Prelims: 7:30-9 p.m., Sept. 26, Oct. 19, Feb. 13, March 15, April 15. Fall: J. M. J. Frechet; spring: J. E. McMurry.

A systematic study of the more important classes of carbon compounds—reactions of their functional groups, methods of synthesis, reactions, and uses.

Note: Because of duplication of material, students are not permitted to earn both 4 credits for Chemistry 253 and 3 credits for Chemistry 357. In special situations (consult instructor for details), students should take Chemistry 253 and 357, having earned 3 credits for Chemistry 357. Students will not be permitted to take Chemistry 358 after completing Chemistry 253.

**CHEM 359-360 Organic Chemistry I and II**

359, fall, 360, spring. 4 credits each term. Recommended for students who intend to specialize in chemistry or closely related fields. Enrollment limited. Prerequisites: Chemistry 216 with a grade of B or better, Chemistry 208 with a grade of A or better, or permission of instructor. Prerequisite for Chemistry 360: Chemistry 359. Recommended: coregistration in Chemistry 300-301-302. Lecs, M W F 9:05, dis sec, W 7:30 p.m.; prelims, Fall, 7:30-9:00 p.m., Sept. 25, Oct. 23, Nov. 13, Spring, 9:05 a.m., Feb. 19, Apr. 4. Fall: J. C. Clardy; spring, T. P. Begley.

A rigorous and systematic study of organic compounds, their structures, the mechanisms of their reactions, and the ways they are synthesized in nature and in the laboratory.

**CHEM 389-390 Physical Chemistry I and II**

389, fall, 390, spring. 4 credits each term. Prerequisites: Mathematics 213 or, ideally, 221-222, Physics 208, Chemistry 208 or 216 or permission of instructor. Prerequisite for Chemistry 390: Chemistry 389. Lecs, 389: M W F 10:10, rec M or W 1:25 or T 9:05. Lecs, 390: M W F 10:10; prelims: 7:30-9 p.m. 389: Oct. 3, Nov. 7. 390: Dec. 9, Feb. 13, March 13, April 15. Fall: G. S. Ezra; spring: R. Loring. The principles of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

**CHEM 391 Physical Chemistry II**

Spring. 4 credits. Enrollment limited to engineering students only. Prerequisites: Mathematics 293; Physics 112, 213; Chemistry 208 or 216 or permission of instructor. Co-requisite: Math 294.

Prerequisite for Chemistry 391: Chemistry 389. Lecs, M W F 9:05; rec M or W 9:05; prelims: 7:30-9 p.m. Mar. 4, Apr. 8. B. Anton.

The principles of physical chemistry are studied from the standpoint of the laws of thermodynamics, kinetic theory, statistical mechanics, and quantum chemistry.

**CHEM 405 Techniques of Modern Synthetic Chemistry**

Spring. 3 or 6 credits. Enrollment limited. Prerequisites: Chemistry 202 and permission of instructor. To receive three credits, students may perform a minimum of three two-week experiments. Six credits will be given for three additional experiments. Completion of five exercises in elementary glass-blowing will count as one experiment. Lab time required: 16 hours each week, including at least two 4-hour sessions in one section (M W 1:25). First meeting will be at 1:30 on first class day of semester. Lect, first week only, at times to be arranged. Not offered 1996-97. J. M. Burlitch.

The syntheses of complex organic, organometallic, and inorganic molecules are carried out with emphasis on the following techniques: vacuum line, high-temperature solid state, inert atmosphere, nonaqueous solvents, radioactive labeling, solgel, photochemical and electrochemical methods, solid phase peptide synthesis, and polymer synthesis. Elementary glassblowing.

**CHEM 410 Inorganic Chemistry**

Fall. 4 credits. Prerequisites: Chemistry 253, 358 or 360, and 287 or 390. Lecs, M W F 11:15. Prelims: 7:30-9:00 p.m., Sept. 26, Oct. 29, Nov. 26. R. C. Fay.

A systematic study of the synthesis, structure, bonding, reactivity and uses of inorganic molecular and solid state compounds.

**CHEM 421 Introduction to Inorganic Chemistry Research**

Fall or spring. 2-4 credits. Prerequisites: Chemistry 253, 389-390, or Chemistry 287-288, and Chemistry 289-290 with an average of B- or better, or permission of instructor. Selected faculty.

Research in inorganic chemistry involving both laboratory and library work, planned in consultation with a faculty member.

**CHEM 433 Introduction to Analytical Chemistry Research**

Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 389-390, or Chemistry 287-288, and Chemistry 289-290 with an average of B- or better or permission of instructor. Selected faculty.

Research in analytical chemistry involving both laboratory and library work, planned in consultation with a faculty member.

**CHEM 461 Introduction to Organic Chemistry Research**

Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 358 or 360, and 287 or 390. Lecs, M W F 11:15. Prelims: 7:30-9:00 p.m., Sept. 26, Oct. 29, Nov. 26. R. C. Fay.

A systematic study of the synthesis, structure, bonding, reactivity and uses of inorganic molecular and solid state compounds.

**CHEM 467 Introduction to Physical Chemistry Research**

Fall or spring. 2-4 credits. Prerequisites: Chemistry 303 and 358 or 360, and 287 or 390. Lecs, M W F 11:15. Prelims: 7:30-9:00 p.m., Sept. 26, Oct. 29, Nov. 26. R. C. Fay.

A systematic study of the synthesis, structure, bonding, reactivity and uses of inorganic molecular and solid state compounds.
CHEM 498 Honors Seminar
Spring. No credit. Admission to standard chemistry majors only by departmental invitation. Additional prerequisites or corequisites: outstanding performance in either (1) two coherent 4-credit units of research in a course such as Chemistry 421, 433, 461, or 477; or (2) one 4-credit unit in a course such as Chemistry 421, 433, 461, or 477 and summer research equivalent to at least 4 credits in the same subject. W 2:30-4. D. B. Zax. Informal presentations and discussions of selected topics in which all students participate. Individual research is on advanced problems in chemistry or a related subject under the guidance of a faculty member, culminating in a written report.

CHEM 600-601 General Chemistry Colloquium
600, fall; 601, spring. No credit. Required of all graduate students except those majoring in organic or bioorganic chemistry. Juniors and seniors are encouraged to attend. R 11:15. Fall: R. Loring; spring: D. B. Zax. A series of talks representative of all fields of current research interest in chemistry other than organic chemistry, given by distinguished visitors and faculty members.

CHEM 605 Advanced Inorganic Chemistry I: Symmetry, Structure, and Reactivity
Fall. 4 credits. Prerequisite: Chemistry 389-390 or equivalent or permission of instructor. Lecs, M W F 11:15. J. M. Burlich. Selected topics in structure, bonding, and reactivity of inorganic compounds with emphasis on main group elements; at the level of Chemistry of the Elements, by Greenwood and Earnshaw. Group theory applications: hybrid orbitals, molecular orbitals, molecular vibrations, and ligand field theory; at the level of Cotton's Chemical Applications of Group Theory.

CHEM 606 Advanced Inorganic Chemistry II: Synthesis, Structure, and Reactivity of Inorganic and Organometallic Compounds

CHEM 607 Advanced Inorganic Chemistry III: Solid-State Chemistry

CHEM 622 Chemical Communication
Not offered 1996-97. For description, see BIOLN 623.

CHEM 625 Advanced Analytical Chemistry I
Fall. 4 credits. Prerequisite: Chemistry 288 or 390 or equivalent. Lecs, M W F 9:05; occasional prelims W 7:30 p.m. C. F. Wilcox. The application of molecular spectroscopy to chemical problems. Topics in infrared, NMR, and mass spectroscopy are discussed.

CHEM 627 Advanced Analytical Chemistry II
Fall. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 390 or equivalent. Lecs, M W F 12:20. D. B. Zax. Modern techniques in nuclear magnetic resonance. Little overlap is expected with Chem 625, as this course will focus on more general questions of experimental design, understanding of multipulse experiments, and aspects of coherent averaging theory. Example to be taken from both liquid and solid-state NMR. May also be of interest to other coherent spectroscopies.

CHEM 628 Trace Element and Isotopic Analysis (also Nutritional Sciences 690)
Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390, or Chemistry 208 and Mathematics 112, or permission of instructor. Offered alternate years. Lecs, T R 10:10. Not offered 1996-97. J. T. Brenna. Modern trace, micro-, and surface methods of analysis, including atomic spectrometry, solids mass spectrometry, high precision isotope ratio techniques, microscopic, microprobe, and electron spectroscopy. Applications to biological and solid-state problems.

CHEM 629 Electrochemistry
Fall. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: Chemistry 390 or equivalent (Mathematics 213 helpful). Lecs, T R 8:40-9:55. Not offered 1996-97. H. D. Abruna. Fundamental aspects of electrochemistry. Topics will include the fundamentals of electrode kinetics, electron transfer theory, the electrical double layer, diffusion, and other modes of transport. A wide range of techniques and their application as well as instrumental aspects will be covered.

CHEM 650-651 Organic and Organometallic Chemistry Seminar
650, fall; 651, spring. No credit. Required of all graduate students majoring in organic or bioorganic chemistry. Juniors and seniors are encouraged to attend. M 4. Fall: J. Meinwald; spring: D. B. Collum. A series of talks representative of all fields of current research interest in organic and organometallic chemistry, given by research associates, faculty members, and distinguished visitors.

CHEM 665 Advanced Organic Chemistry
Fall. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisites: Chemistry 253 or 358 or 360, and 390 or equivalents or permission of instructor. Lecs, M W F 12:20. B. K. Carpenter. A survey of reaction mechanisms and reactive intermediates in organic chemistry.

CHEM 666 Synthetic Organic Chemistry
Spring. 4 credits. Primarily for graduate students and upperclass undergraduates. Prerequisite: Chemistry 665 or permission of instructor. Lecs, T R 10:10-11:25. D. B. Collum. Modern techniques of synthesis, applications of organic reaction mechanisms to the problems encountered in rational multistep synthesis, with particular emphasis on modern developments in synthesis design.

CHEM 670 Fundamental Principles of Polymer Chemistry
Fall. 3 credits. Prerequisite: Chemistry 389 or equivalent. Lecs, T R 9:05-9:55, and Wednesdays 7:30 p.m. T. P. Begley. A representative selection of the most important classes of enzyme-catalyzed reactions will be examined from a mechanistic perspective. Topics discussed will include the chemical basis of enzymatic catalysis, techniques for the elucidation of enzyme mechanism, cofactor chemistry, and the biosynthesis of selected natural products. The application of chemical principles to understanding biological processes will be emphasized.

CHEM 671 Synthetic Polymer Chemistry (also Materials Science and Engineering 671 and Chemical Engineering 675)
Spring. 4 credits. Prerequisite: Chemistry 359-360 or equivalent or permission of instructor; recommended: Materials Science and Engineering 620. Lecs, T R 8:30-10:00. D. Sogah. Modern concepts in synthetic polymer chemistry. The application of organic synthesis to the development of new polymers and copolymers and the control of their architecture. Chain and step-growth polymerizations, reactions of polymers, block and graft copolymers. A broad spectrum of applications from recent literature will also be discussed.
CHEM 672 Protein Kinetics  
Fall. 4 credits. Primarily for graduate students in Chemistry and Biochemistry. Prerequisite: Chemistry 390, Biological Sciences 331, or equivalents or permission of instructor. Lects, M W F 10:10. B. A. Baird. Focus is on protein interactions with ligands and consequent changes in structure and activity. Topics include: protein structure and dynamics, thermodynamics and kinetics of ligand binding, and the state and transient enzyme kinetics; enzyme catalysis and regulation, role of cell membrane receptors in regulating cellular activities.

CHEM 677 Chemistry of Nucleic Acids  
Spring. 4 credits. Primarily for graduate students. Prerequisites: Chemistry 358 or 360, and 390 or equivalents. S-U grades only. Lects, M W 10-11:10. D. A. Usher. Properties, synthesis, reactions, and biochemical reactions of nucleic acids.

CHEM 678 Statistical Thermodynamics  

CHEM 681 Physical Chemistry III  
Fall. 4 credits. Prerequisites: Chemistry 288 or 390, Mathematics 213 and Physics 208, or equivalents. Not offered 1996-97. An introduction to the principles of quantum theory and statistical mechanics, atomic and molecular spectra, and elementary valence theory. At the level of Quantum Chemistry, by Levine.

CHEM 686 Physical Chemistry of Proteins  
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 288 or 390 or equivalents. S-U grades. Letter grades for undergraduates. Offered alternate years. Not offered 1996-97. Chemical constitution, molecular weight, and structural basis of proteins, thermodynamic, hydrodynamic, optical, spectroscopic, and electrical properties; protein and enzyme reactions; statistical mechanics of helix-coil transition in biopolymers; conformation of biopolymers; protein folding.

CHEM 700 Baker Lectures  
Spring, on dates to be announced. No credit. Distinguished scientists who have made significant contributions to chemistry present lectures for periods varying from a few weeks to a full term. This year's lecturer: Prof. Dieter Seebach, Univ. Zürich, Switzerland.

CHEM 701-702 Introductory Graduate Seminar in Analytical, Inorganic, and Physical Chemistry  
701, fall; 702, spring. No credit. Required of all first-year graduate students majoring in analytical, inorganic, physical, theoretical, and biophysical chemistry. Not offered 1996-97.

CHEM 716 Special Topics in Advanced Inorganic Chemistry (Bonding in Molecules)  
Spring. 3 credits. Prerequisite: some exposure to (or a course in) quantum mechanics. A good undergraduate physical chemistry course may be sufficient, while Physics 443 or Chemistry 793 or Chemistry 794 are at a substantially higher level than what is needed. Lects, M W F 12:20. R. Hoffman. The purpose of this course is to build a qualitative picture of the bonding in all molecules, including organic, inorganic, organometallic systems and extended structures (polymers, surfaces and three-dimensional materials). The approach uses molecular orbital theory to shape a language of orbital interactions. Most quantum mechanic ideas needed will be taught along the way; the course is specifically directed at organic, inorganic, and polymer chemists who are not theoreticians.

CHEM 745 Physical Polymer Science I (also Chemical Engineering 745)  

CHEM 762 Special Topics in Organic Chemistry: Fundamentals of Polymer Chemistry  
Fall. 4 credits. Prerequisite: Physical Chem 389/390 and Organic Chem 359/360 or equivalent or permission of instructor. Primarily for graduate and advanced undergraduate students. Not offered 1996-97. Lects, T R 9-10:00. Introduction to polymer physical chemistry. Kinetics and mechanisms of Polymerization methods: Ionic, radical, step-growth and group transfer polymerization. Polymer Stereorechemistry. Solution properties. Molecular weight distribution of oligomers and polymer solubility. Mechanical and Thermal Properties. Structure-Property Relations. The discussions will focus on chemistry rather than engineering of polymers and examples will be taken from current literature.

CHEM 766 Physical Organic Chemistry I  
Spring. 4 credits. Prerequisite: Chemistry 665 or permission of instructor. Lects, M W F 10:10. C. F. Wilcox. Application of computational and experimental techniques to studies of organic reaction mechanisms and the properties of reactive intermediates.

CHEM 766 Physical Organic Chemistry II  
Spring. 3 credits. Primarily for graduate students. Prerequisite: Chemistry 785 or permission of instructor. Not offered 1996-97.

CHEM 776 Physical Organic Chemistry I  
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 665 or permission of instructor. Lects, M W F 10:10. C. F. Wilcox. Application of computational and experimental techniques to studies of organic reaction mechanisms and the properties of reactive intermediates.

CHEM 776 Physical Organic Chemistry II  
Spring. 3 credits. Primarily for graduate students. Prerequisites: Chemistry 665-666. Lect, T R 10:10-11:30. D. B. Collum. Particular attention is devoted to methods of structure determination and synthesis as applied to selected terpenes, steroids, alkaloids, and antibiotics.

CHEM 780 Principles of Chemical Kinetics  
Fall. 4 credits. Prerequisite: Chemistry 681 or permission of instructor. Lects, T R 10:10-11:25. P. L. Houston. Principles and theories of chemical kinetics; special topics such as surface reactions, photochemistry, enzymatic reactions, energy transfer, and molecular beams.

CHEM 782 Special Topics in Biophysical and Bioorganic Chemistry  

CHEM 788 Macromolecular Crystallography (also BIOM 738)  
Spring. 3 credits. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Lects, M W F 10:10. S. A. Ealick, P. A. Karplus, J. C. Clardy. Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the 3-dimensional structures of macromolecules. These include crystalization, data collection, multiple isomorphous replacement, molecular replacement, model building, refinement, and structure interpretation.

CHEM 789 X-ray Crystallography  
Spring. 4 credits. Prerequisite: Chemistry 288 or 390 or permission of instructor. Offered alternate years. Lects, M W F 10:10. Not offered 1996-97. J. Clardy. A beginning course in the applications of X-ray crystallography to chemistry. Topics include symmetry properties of crystals, diffraction of X-rays by crystals, interpretation of diffraction data, and refinement of structures. The chemical information available from a diffraction experiment is stressed, and practical aspects are incorporated.

CHEM 791 Spectroscopy  
Spring. 4 credits. Prerequisite: Chemistry 793 or Physics 443 or equivalent. Lects, M W F 10:10. Not offered 1996-97. A. C. Allerhand. The course will explore the interaction of light with matter. We will start with the quantum mechanical foundations of spectroscopy and follow with a detailed treatment of a variety of different spectroscopies including the study of rotation, vibration, and electronic spectra of polyatomics. As time and interest allow, we will cover special topics such as non-linear spectroscopies and the molecular symmetry group.

CHEM 792 Molecular Collision Theory  

CHEM 793 Quantum Mechanics I  
Fall. 4 credits. Prerequisites: Chemistry 390, coregistration in A&EP 321 or equivalents or permission of instructor. Lects, M W F 11:15. R. Loring.
Tannoudji's uncertainty principle, WKB theory, matrix Schrödinger's equation, wave packets, Time-dependent phenomena in quantum mechanics and light/matter interaction. Spectroscopies. Group theory. At the level of Quantum Mechanics.

CHEM 796 Statistical Mechanics
Spring. 4 credits. Primarily for graduate students. Prerequisite: Chemistry 678 and 793 or equivalent. Lecs, TR 8:30-9:55. B. Widom. Statistical mechanics of systems of interacting molecules. Structure and thermodynamics of classical liquids. Phase transitions and critical phenomena in homogeneous fluids. Introduction to non-equilibrium statistical mechanics. Students are presumed to have taken a course in statistical thermodynamics at the level of the first twelve chapters of Statistical Mechanics, by McQuarrie.

CHEM 798 Special Topics in Physical Chemistry
Spring. 4 credits. Prerequisite: Chemistry 605, or 681, or 793, or Physics 443, or the equivalent. Lecs, TR 10:10-11:25. Not offered 1996-97. R. Hoffmann I.

CLASSICS

Cornell University has long recognized the importance of studying the civilizations of ancient Greece and Rome. Particularly in an age of increasing specialization, study of the Classics is widely viewed as an excellent means of acquiring a liberal education; at Cornell, we are doubly interested in the continuing humanistic values contained in the literature of the ancient world and in gaining a fuller understanding of these important cultures and their imprint upon subsequent ages. The Department of Classics at Cornell is one of the oldest and largest in the country. With nineteen faculty members, together with professors of related interests in the departments of History, Philosophy, Comparative Literature, History of Art, Modern Languages and Linguistics, and Near Eastern Studies and in the Archaeology, Medieval Studies, and Religious Studies programs, the range of instruction available is very large, including not only the traditional study of language, literature, and ancient history, but also newer developments in the field, such as comparative study of Mediterranean civilizations and modern literary theory.

Although Classics, like other areas of humanistic study, does not aim at providing specific preprofessional training, over the years Classics majors from Cornell have gone on to a wide variety of careers: in law, teaching, medicine, diplomacy, management, educational administration, government, and many others.

The department offers courses in Bronze Age and Classical archaeology and is active in field projects in Classical lands. It sponsors archaeological excavations at Halai in Greece, which serves as a field training school for Cornell undergraduate and graduate students. On campus there are also collections of ancient artifacts, reproductions of ancient sculpture, and one of the few laboratories in the world to concentrate on the tree-ring dating of ancient monuments from Greece, Cyprus, and Turkey. The archaeology courses may be used to satisfy some of the requirements for the Intercollegiate Program in Archaeology or for the major in Classical Civilization. They require no knowledge of either Greek or Latin. Similarly, the department offers a variety of courses and seminars in English on such subjects as Greek mythology, Greek and Roman mystery religions, early Christianity, and Greek and Roman society, as well as ancient epic, tragedy, history, and philosophy. For those whose interest in things Greek and Roman extends no further than a desire to understand the English language a little better, the department offers one course in the Greek and Latin elements that make up a huge proportion of the vocabulary of Modern English, and another that deals more specifically with the Greek and Latin ingredients of bioscientific vocabulary. Programs in Greek and Latin at the elementary level are also offered, of course; and for the more ambitious there are courses involving reading, in the original, of Greek and Latin authors from Homer to St. Augustine and Bede and, periodically, the Latin works of Dante, Petrarch, and Milton. Sanskrit, the classical language of ancient India, is also offered, along with courses in translation on Indian religion, myth, and literature. The department makes every attempt to adapt its program to the needs of each student. If there is a Classical writer you would like to study, the department will do its best to help you do so whether you are a major in the department or not.

Majors
The Department of Classics offers majors in Classics, Greek, Latin, and Classical Civilization.

Classics
Those who major in Classics must complete 24 credits in advanced Greek or Latin (numbered 201 or above) and 15 credits in related subjects selected in consultation with the adviser.

Classical Civilization
Those who major in Classical Civilization must complete (a) qualification in Latin and Greek or proficiency in either; (b) 24 credits selected from the courses listed under Classical Civilization, Classical archaeology, Latin, and Greek; and (c) 15 credits in related subjects selected in consultation with the adviser.

Greek
Those who major in Greek must complete 24 credits of advanced courses in Greek and 15 credits in related subjects (including Latin).

Latin
Requirements for the major in Latin parallel those of the major in Greek.

Honors
Candidates for the degree of Bachelor of Arts with honors in Classics, Greek, Latin, or Classical civilization must fulfill the requirements of the appropriate major study as given above and must also successfully complete the special honors courses, 471. Credit for honors courses may be included in the credits required for the major study. Students who wish to become candidates for honors, who have a cumulative average of B+ or better, and who have demonstrated superior performance in Classical courses (Greek, Latin, and Classical Civilization), submit an outline of their proposed honors work to the honors committee during the first month of their fifth semester. The chair will appoint a committee of three faculty members for each candidate, and the committee will be responsible for evaluating the candidate's proposal and subsequently supervising his or her work. At the completion of the honors thesis, which must demonstrate knowledge of the main bibliographical sources, give promise of scholarly talent, and show creativity, the committee will determine the level of honors to be awarded.

Study Abroad
Cornell participates in the Intercollegiate Center for Classical Studies in Rome, which offers courses in Latin, Greek, ancient history, art, archaeology, and Italian. Another opportunity for a semester's study abroad is available through Cornell Abroad in Greece at the Athens Centre. (Consult Cornell Abroad for details.) In addition, Cornell is a member institution of the American School of Classical Studies at Athens, whose Summer Program is open to graduate students and qualified undergraduates. The American Academy in Rome, of which Cornell is also a member institution, offers full-year and summer programs for qualified graduate students. For graduate students the Department of Classics offers a few travel grants each year from the Townsend Memorial Fund. Detailed information on these programs is available in the Department of Classics Office, 120 Goldwin Smith Hall.

Summer Support for Language Study
The Beatrice R. Kanders Memorial Scholarship (for the summer immediately following the freshman or sophomore year; preference given to dyslexic students) and a certain amount of tuition aid made possible by gifts.
from the Constantinos C. Polychronis Foundation are normally available to students who want to enroll in Intensive Latin or Greek in the Cornell summer session. These courses are designed to enable students to enter second-year Latin or Greek the following fall. Preference is given to Classics undergraduate majors, and other students needing Latin or Greek for completion of their majors. Applications are due to the chair of the Department of Classics by March 28.

Placement in Latin, Ancient Greek, and Modern Greek
Placement of first-year students in Latin, ancient Greek, and modern Greek courses is determined by an examination given by the Department of Classics during orientation week or by arrangement with the director of undergraduate studies.

Freshman Writing Seminars
The department offers freshman writing seminars on a variety of topics. Consult John S. Knight Writing Seminar Program brochures for times, instructors, and descriptions.

Classical Civilization
CLASS 100 Word Power: Greek and Latin Elements in the English Language
Spring. 3 credits. I. Hobendahl.
This course gives the student with no knowledge of the Classical languages an understanding of how the Greek and Latin elements that make up over half our English vocabulary operate in both literary and scientific English usage. Attention is paid to how words acquire their meaning and to enlarging each student’s working knowledge of vocabulary and grammar.

CLASS 102 Bioscientific Terminology
Summer. 3 credits. H. Roisman.
A study of Latin word elements that combine to form most of the specialized terms in the biological sciences. The student who learns the meanings of those elements and the rules of word formation usually can recognize the basic meaning of any unfamiliar word in that field. The class also gives attention to misformations and words still in use that reflect outmoded scientific theories.

CLASS 211 The Greek Experience
Fall. 3 credits. Limited to 50 students. F. Ahl.
An introduction to the literature and thought of ancient Greece. Topics will include epic and lyric poetry, tragedy and comedy, and historical, political, philosophical, and scientific writings. Some attention will also be given to the daily life of ordinary citizens, supplemented by slides of ancient art and architecture.

CLASS 212 The Roman Experience
Spring. 3 credits. Not offered 1996-97; next offered 1997-98.
An introduction to the civilization of the Romans as expressed in their literature, religion, and social and political institutions.

CLASS 217 Initiation to Greek Culture
Limited to 18 students. This course is intended especially for freshmen (a few exceptionally motivated sophomores or upperclass students may be accepted).

Apply in writing to the chair, Department of Classics, 120 Goldwin Smith Hall. Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary hour (occasionally two-hour) session, during which the class will participate in workshops with specially invited guests.

Fall. 4 credits. P.ucci and G. Van Steen. This course will examine the development in Greek thought from mythological to philosophical explanations of the world and man's place in it. Readings will include Homer, Aeschylus, Sophocles, Euripides, the pre-Socratics, Plato, and Aristotle, as well as works by such seminal modern thinkers as Hegel, Nietzsche, Heidegger, and Derrida.

CLASS 223 The Comic Theater
Summer 1997. 3 credits. J. Rusten.
The origins of comic drama in ancient Greece and Rome, and its subsequent incarnation, especially in the Italian renaissance (Commedia erudita and Commedia dell’arte), Elizabethan England, seventeenth-century France, the English Restoration, and Hollywood in the thirties and forties. Chief topics will be: the origin of the comic theatrical tradition and conventions; techniques and themes of comic plots (trickster, parody, farce, caricature); and the role of comedy in society. All readings in English.

CLASS 224 Hidden Songs in Greece and Asia
Spring. 3 credits. Not offered 1996-97; next offered 1997-98.
G. Holst-Warhaft and D. McCann.
For description, see ASIAN 270.

CLASS 226 Greek Mythology
Spring and summer 1997. 3 credits. D. Mankin.
A survey of the Greek myths, with emphasis on the content and significance of the myths in Mediterranean society, including the place of myth in Greek life and consciousness; the factors and influences involved in the creation of myths; and the use of myths for our understanding of Greek literature, religion, and moral and political concepts.

CLASS 237 Greek Religion and Mystery Cults
Fall. 3 credits. Not offered 1996-97; next offered 1997-98. K. Clinton.
Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, including the major art forms (epic poetry, tragedy, comedy, architecture, painting, sculpture), the course will investigate the interaction of religion with these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety of cults and their history will be studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kabbirion, the Great Gods of Samothrace, and Bacchic rites.

CLASS 238 The Ancient Epic and Beyond
Fall. 3 credits. Not offered 1996-97; next offered fall 1998. H. Pelliccia.

We will move, Odysseus-like, to the West, beginning with Homer’s Iliad (and including the British poet Christopher Logue’s “account” of the opening books) and Odyssey, we will continue in the Hellenistic and Augustan eras with Apollonius of Rhodes’ Argonautica and Virgil’s Aeneid. How and when time will have us conclude with two New World maritime epics: Herman Melville’s Moby Dick and Derek Walcott’s Omeros.

CLASS 247 Byzantine History and Culture
Spring. 3 credits. Not offered 1996-97; next offered 1997-98.
G. Van Steen.
From 312 to 1453, the Byzantine Empire was a major force in the Eastern Mediterranean and played a decisive role in the history, politics, and culture of Western Europe. This course traces the political, social, literary, and religious development of the Byzantine state.

CLASS 285 Art, Archaeology, and Analysis (also ARCH 285, ENGR 185, MS&E 285, PHYS 200, ENGL 285, ART 372, and NS&E 285)
Spring. 3 credits. Staff.
An interdepartmental course on how techniques of physical sciences and engineering are being applied to issues in cultural research. For complete description, see ENGR 185.

CLASS 291 Classical Indian Narrative
Summer. 3 credits. Not offered 1996-97; next offered 1997-98.
A previous course in Classics (civilization or language) or Religious Studies 101 is recommended. Not offered 1996-97; next offered 1997-98. G. Moskowki.
A study of the controversial question of religious continuity between paganism and early Christianity. After a brief survey of Classical mystery cults and Hellenistic religion, the course will focus on such Hellenistic cults as the mystery cults of Isis, Bacchus, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs both in the East and the West to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the "rival" pagan cults of late antiquity.

CLASS 333 Greek and Roman Mystery Cults and Early Christianity (also Religious Studies 333)
Knowledge of Greek or Latin is not necessary, since all texts are in translation. What is necessary is the willingness to participate in three one-hour seminars each week and also a supplementary hour (occasionally two-hour) session, during which the class will participate in workshops with specially invited guests.

CLASS 334 The Tragic Theater
We will move, Odysseus-like, to the West, beginning with Homer’s Iliad (and including the British poet Christopher Logue’s “account” of the opening books) and Odyssey, we will continue in the Hellenistic and Augustan eras with Apollonius of Rhodes’ Argonautica and Virgil’s Aeneid. How and when time will have us conclude with two New World maritime epics: Herman Melville’s Moby Dick and Derek Walcott’s Omeros.

CLASS 344 Greek and Roman Political Systems (also Comparative Literature 244)
Spring. 3 credits. Not offered 1996-97; next offered 1997-98.
F. Ahl.
Tragedy and its audiences from ancient Greece to modern theater and film. Chief topics: origins of (and changes in) theatrical conventions; tragedy as the mystery cults of Isis, Bacchus, and Attis and the Great Mother and on the distinctive features that contributed to their success. Discussion of Christian liturgy and beliefs both in the East and the West to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the “rival” pagan cults of late antiquity.

CLASS 345 The Tragic Theater (also Comparative Literature 344 and Theatre Arts 345)
Fall. 4 credits. Limited to 40 students. F. Ahl.
Tragedy and its audiences from ancient Greece to modern theater and film. Chief topics: origins of (and changes in) theatrical conventions; tragedy in the East and the West to determine what Christianity owed to its pagan predecessors and to isolate the factors that contributed to its triumph over the “rival” pagan cults of late antiquity.

CLASS 346 Greek and Roman Theater
Fall. 3 credits. Not offered 1996-97; next offered 1997-98. K. Clinton.
Greek religion constitutes one of the essential features of ancient Greek civilization and distinguishes it from later Western civilization. Since religion permeates Greek culture, including the major art forms (epic poetry, tragedy, comedy, architecture, painting, sculpture), the course will investigate the interaction of religion with these forms—an investigation that is fruitful both for the understanding of Greek religion and the forms themselves, some of which, like tragedy, originated in cult. A representative variety of cults and their history will be studied with special emphasis on mystery cults, such as the Eleusinian mysteries of Demeter and Persephone, the Kabbirion, the Great Gods of Samothrace, and Bacchic rites.
[CLASS 357 Greek Sanctuaries and Pausanias (also Archaeology 357, Religious Studies 353, and Classics 457) #
3 credits. Prerequisite: at least one course in classical civilization or archaeology. Not offered 1996–97. K. Clinton and J. Coleman.
Many Greek sanctuaries were described by Pausanias, who wrote a guide to Greece in the second century C.E. By comparing his descriptions (and often nineteenth-century sources) with the archaeological remains at the actual sites, the course will examine how these sanctuaries functioned and what they meant to Greeks of his day. No Greek required for 357; for 457 see Greek, Classics 457.]

[CLASS 363 Representations of Women in Ancient Greece and Rome (also History 367 and Women's Studies 363) #
The task of this course is to analyze ancient Greek and Roman representations of women—some famous, some infamous, some nameless—within their historical and cultural contexts and the assumptions that underlie these representations. Using literary, historical, legal, and artistic sources (in translation) and examining the historiographical and methodological problems the use of such evidence poses, the class will assess the changing social conditions that relate to the roles, status, and images of women in antiquity. Among the topics considered are: myth and ideology, women's role in the family and society, views of the female body and female sexuality, the place of women in creative art.]

[CLASS 382 Greeks, Romans, and Victorians (also Comparative Literature 382) #
Modern popular and scholarly views of Greek and Latin literature were shaped in the Victorian years of the nineteenth century, between the years of Republican and Marxist revolution. This course explores some of the ways in which nineteenth-century social and intellectual upheavals, and changes in scholarly techniques and approaches, may have affected how English and Irish writers presented Greco-Roman antiquity and, especially, how they began to discard an idealized past based on a Roman model for one based on a Greek model. The focus will be on poets and dramatists (and a few artists and novelists) rather than on philosophers and scientists. The varied influences of Vergil and Horner, Seneca and Sophocles, Plautus and Aristophanes, Horace, and Greek lyric poetry will be discussed in selected works of writers such as Thomas More, Shelley, Byron, Swinburne, Tennyson, W. S. Gilbert, Oscar Wilde, Samuel Butler, and others, including important artists such as Aubrey Beardsley.]

[CLASS 390 Comparative Sanskrit Myth and Epic (also Asian Studies 390) #
For description, see ASIAN 390.]

[CLASS 395 Classical Indian Philosophical Systems (also Asian Studies 395 and Religious Studies 395) #
For description, see ASIAN 395.]

[CLASS 463 Gender and Politics in the Roman World (also History 463 and Women's Studies 464) #
An undergraduate seminar examining the relationship between gender and politics in the late Roman Republic and early Empire. Among the questions this course will address are: was politics the exclusive domain of men in Roman society (as is generally assumed) or does a broader definition of politics and an understanding of the various forms of political activity in ancient Rome might take allow a place for women in Roman political life? What role does gender have in Roman political discourse and ideology? Why do issues such as family, marriage, and sexuality become subjects of political debate and legislation?]

[CLASS 465-466 Independent Study in Classical Civilization, Undergraduate Level
465, fall; 466, spring. Up to 4 credits.]

[CLASS 480 Roman Society and Politics under the Julio-Claudians (also History 473) #
An undergraduate seminar examining several of the important social and political changes in Roman society under Augustus and his successors, the Julio-Claudians. Topics to be investigated include Augustus's consolidation of power through political and social revolution, the Augustan attempt to regulate family life and social relations by legislation, the relation of the emperor Tiberius with the members of the old ruling class, the growth of the imperial bureaucracy and the new opportunities for social mobility, the political opposition to Claudius and Nero, Nero's cultural and provincial policy, and the manipulation of the imperial cult. All readings will be in English.]

[CLASS 711-712 Independent Study for Graduate Students in Classical Civilization
711, fall; 712, spring. Up to 4 credits.]

Greek

CLASS 101 Greek for Beginners
Fall. 4 credits. H. Pellicciu. Introduction to Attic Greek. Designed to enable the student to read the ancient authors as soon as possible.

CLASS 103 Attic Greek
Spring. 4 credits. Prerequisite: 101 or equivalent. H. Pellicciu.
A continuation of Classics 101.

CLASS 104 Intensive Greek
Summer. 6 credits. Staff.
An intensive introduction to the fundamentals of ancient Greek grammar. Prepares students in one term for 200-level Greek.

CLASS 111-112 Modern Greek
111, fall; 112, spring. 3 credits each term. H. Kolias.

CLASS 201 Attic Authors #
Fall. 3 credits. Prerequisite: Classics 103 or 104 or equivalent. K. Clinton.
Selected readings from Greek prose.

CLASS 202 The Greek New Testament (also Near Eastern Studies 220 and Religious Studies 202) #
3 credits. Prerequisite: at least one year of ancient Greek (Classics 101–103) or permission of instructor. Not offered 1996–97. Selections in Greek from all four gospels, the letters of Paul and Acts.]

CLASS 203 Homer #
Spring. 3 credits. Prerequisite: Classics 103 or equivalent. G. Van Steen.
Readings in the Homeric epic with emphasis on formulaic style.

CLASS 206 Herodotus #
Spring. 3 credits. Prerequisite: Classics 103 or 104 or equivalent. Not offered 1996–97, next offered 1997–98. Selected readings from Herodotus' Histories.

CLASS 209 Greek Composition
Fall. 3 credits. Prerequisite: one term of 200-level Greek or equivalent. P. Pucci.

CLASS 213 Intermediate Modern Greek
Fall. 3 credits. Prerequisite: Classics 112 or placement by departmental examination. H. Kolias.
This course, designed for students who have completed introductory modern Greek or have a reading knowledge of the language, will give attention to developing facility in conversational and written expression, usually in connection with assigned readings reflecting Greek history and culture.

CLASS 214 Readings in Modern Greek Literature
Spring. 3 credits. Prerequisite: Classics 213 or permission of instructor. Not offered 1996–97. A study of modern Greek language, history, and culture as manifested in the works of individual poets, dramatists, and prose writers.

CLASS 310 Greek Undergraduate Seminar: Tragedy #
Spring. 4 credits. Prerequisite: two 200-level courses in Greek or permission of instructor. P. Pucci.

CLASS 311 Greek Philosophical Texts: (also Philosophy 411) #
Fall and spring: up to 4 credits. Prerequisites: Knowledge of Greek and permission of instructor. T. Irwin.
Readings of Greek philosophical texts in the original.

CLASS 313 Greek Epic: Hesiod and Homer Hymns #
Fall. 4 credits. Prerequisite: Classics 206 or equivalent. M. Landon.

CLASS 401-402 Independent Study in Greek, Undergraduate Level
401, fall; 402, spring. Up to 4 credits.

CLASS 417 Advanced Readings in Greek: Sophocles #
Fall. 4 credits. K. Clinton.
[CLASS 312 Latin Undergraduate Seminar: Seneca]
Fall. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. C. Clinton.

[CLASS 314 The Augustan Age]
Fall. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. Not offered 1996–97.

[CLASS 317 Roman Historiography: Suetonius and Tacitus]
Spring. 4 credits. Prerequisite: one term of 300-level Latin or permission of instructor. Not offered 1996–97; next offered fall 1997.

[CLASS 338 Latin Undergraduate Seminar: Augustine's Confessions]
Spring. 4 credits. Prerequisite: two terms of 200-level Latin or permission of instructor. D. Shanzer.

[CLASS 403 Later Roman Literature]

[CLASS 411 Advanced Readings in Latin Literature]
Fall. 4 credits. Not offered 1996–97; next offered fall 1997.

[CLASS 412 Advanced Readings in Latin Literature: Verse]
Spring. 4 credits. Prerequisite: one term of 300-level Latin or permission of instructor. D. Shanzer.

[CLASS 441 Advanced Latin Composition]
Open to advanced undergraduates by permission of the professor.

[CLASS 442 Intermediate Latin]
Fall. 3 credits. Prerequisite: Classics 106, 107, or equivalent. Not offered 1996–97; next offered 1997–98.

[CLASS 451–452 Independent Study in Latin, Undergraduate Level]
451, Fall; 452, Spring. Up to 4 credits.

[CLASS 488 Augustine's Confessions (also Religious Studies 488)]

[CLASS 555 Graduate Seminar in Latin Literature]
Fall. 4 credits. D. Shanzer.

We will concentrate on three literary genres in the Later Roman Empire and the Early Middle Ages: Christian hagiography, personal poetry, and epistolography. We will also read one apologia, St. Patrick's Confessio. The texts will come from many different places, including Theodosian Spain, Italy from the 4th C. to the reign of Theodoric, Gaul from the 4th C. to the Merovingian period, and Sub-Roman Britain.

[CLASS 579 Graduate Seminar in Latin Literature: Cicero]
Fall. 4 credits. C. Clinton.

[CLASS 600 Graduate Seminar in Latin Literature]

[CLASS 751-752 Independent Study for Graduate Students in Latin]
751, Fall; 752, Spring. Up to 4 credits.

Classical Art and Archaeology

[CLASS 219 Mediterranean Archaeology (also Near Eastern Studies 267)]

An examination of the archaeological bases of ancient Mediterranean civilization with special focus on contacts and interrelationships in the Bronze Age (ca. 3500-1100 B.C.E.). Topics include the Neolithic of Anatolia, the early Bronze Age in Greece, and the Near East; the rise of civilization in Egypt; the Bronze Age states of Syro-Palestine (Elba, Ugarit, Byblos, etc.); Cyprus, copper, and the Alaskan question; the Hittites and Bronze Age Anatolia; the early Bronze Age in Greece, the Mycenaean, their eastern and western contacts; the Bronze Age in the western Mediterranean; and ancient ships and trade in the late Bronze Age.

[CLASS 220 Introduction to Art History: The Classical World (also History of Art 220)]
Fall. 4 credits. J. Coleman.

An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the Geometric period through the Hellenistic, and the art of the Romans from the early Republic to the late empire.

[CLASS 221 Minoan-Mycenaean Art and Archaeology (also Archaeology 221 and History of Art 221)]

The birth of civilization in Greece and the Aegean islands during the Bronze Age. The main focus is on the rise and fall of Minoan Crete and Mycenaean Greece, with consideration given to the nature and significance of...
Aegean interactions with Egypt, the Near East, and Anatolia.

[CLASS 232 Archaeology in Action I (also Archaeology 232 and History of Art 232)] Fall. 3 credits. Prerequisite: permission of instructor. Not offered fall 1996. P. I. Kuniholm.

[CLASS 233 Archaeology in Action II (also Archaeology 233 and History of Art 225)] Spring. 3 credits. Prerequisite: permission of instructor. Not offered spring 1997. P. I. Kuniholm.

CLASS 309 Dendrochronology of the Aegean (also Archaeology 309 and History of Art 309) Fall and spring. 4 credits. Prerequisite: permission of instructor. Limited to 10 students. P. I. Kuniholm. For description, see ART H 309.

[CLASS 322 Greeks and Their Neighbors (also History of Art 328)] Spring. 4 credits. Prerequisite: Classics 220 or 221, or permission of instructor. J. Coleman. A study of the archaeological and other evidence for the interaction between Greek civilization and the peoples of the eastern and western Mediterranean from the thirteenth to the fourth centuries B.C.E. The course will focus on Greek relationships with Egypt, Phoenicia, Cyprus, Anatolia, and Italy in the post-Bronze Age period.

[CLASS 325 Greek Vase Painting (also History of Art 325)] 4 credits. Not offered 1996-97. A. Ramage.

[CLASS 326 Greek Cities and Towns (also History of Art 326)] 4 credits. Not offered 1996-97; next offered 1998-99. J. Coleman. Ancient Greek cities and towns from an archaeological perspective. Topics include the city in its geographical setting, the development of the fortified city, town planning, the Classical house and household, official and religious life versus private life, the territory and boundaries of cities and towns, regional states and leagues, warfare between cities and regions, and roads and sea routes. Examples will mostly be drawn from Athens/Attica and central Greece. Two short oral presentations, presented after consultation in written form, and a final examination.

[CLASS 327 Greek and Roman Coins (also History of Art 327)] 4 credits. Not offered 1996-97. A. Ramage.

CLASS 329 Greek Sculpture (also History of Art 329) Spring. 4 credits. J. Coleman. An examination of ancient Greek sculpture, both three-dimensional and two-dimensional, from the Archaic to the Hellenistic period. Aspects of the works studied include technological advances, changing ideology of the sculptor, regionalism of styles, and taste of individual patrons.

[CLASS 350 Arts of the Roman Empire (also History of Art 322)] Spring. 4 credits. Not offered 1996-97. A. Ramage. For description, see ART H 322.

[CLASS 360 Field Archaeology in Greece (also Archaeology 360)] Summer. 6 credits. Not offered 1997; next offered 1998-99. A. Ramage. A six-week archaeological field training program in conjunction with the Cornell Halai and East Lokris Project. For information and application forms, contact Professor John E. Coleman, Department of Classics, 120 Goldwin Smith Hall.

[CLASS 423 Ceramics (also Archaeology 423 and History of Art 423)] Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97; next offered 1998-99. A. Ramage.

[CLASS 430 Seminar on the Bronze Age Architecture of Asia Minor (also Archaeology 425 and History of Art 425)] Spring. 4 credits. P. I. Kuniholm. For description, see ART H 425.

[CLASS 432 Sardis and the Cities of Asia Minor (also Archaeology 432 and History of Art 424)] 4 credits. Prerequisite: permission of instructor offered 1996-97. A. Ramage.

[CLASS 434 The Rise of Classical Greece (also Archaeology 434 and History of Art 434)] Spring. 4 credits. Recommended: Classics 220 or 221, History of Art 220 or 221, or permission of instructor. Not offered 1996-97. P. I. Kuniholm.

[CLASS 435 Seminar on Roman Art and Archaeology (also History of Art 427)] 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. A. Ramage.

CLASS 475-476 Independent Study in Classical Archaeology, Undergraduate Level 475, fall; 476, spring. Up to 4 credits.

CLASS 629 The Prehistoric Aegean (also Archaeology 629) Fall. 4 credits. J. Coleman. Seminar with focus on the Aegean and neighboring regions in the Neolithic and Early Bronze Ages.

[CLASS 630 Selected Topics in Classical Archaeology (also Archaeology 520 and History of Art 520)] Spring. 4 credits. Not offered 1996-97. For description, see ART H 520.1

CLASS 721-722 Independent Study for Graduate Students in Classical Archaeology 721, fall; 722, spring. Up to 4 credits.

Greek and Latin Linguistics

[CLASS 421 Greek Comparative Grammar (also Linguistics 609)] 4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. Not offered 1996-97; next offered 1997-98. A. Nussbaum. The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

The prehistory and evolution of the sounds and forms of Classical Latin as reconstructed by comparison with the other Indo-European languages.

[CLASS 426 Archaic Latin (also Linguistics 614)] 4 credits. Prerequisite: reading knowledge of Latin. A. Nussbaum.

[CLASS 429 Mycenaean Greek (also Linguistics 615)] 4 credits. Prerequisite: thorough familiarity with the morphology of Classical Greek. Not offered 1996-97. A. Nussbaum.

Sanskrit

[CLASS 131-132 Elementary Sanskrit (also Linguistics 131-132 and Sanskrit 131-132) 131, fall; 132, spring. 4 credits each term. Not offered 1996-97; next offered 1997-98. An introduction to the essentials of Sanskrit grammar. Designed to enable the student to read classical and epic Sanskrit as quickly as possible.

CLASS 251-252 Intermediate Sanskrit (also Linguistics 251-252 and Sanskrit 251-252) 251, fall; 252, spring. 3 credits each term. Prerequisite: Classics 132 or equivalent. Fall, A. Nussbaum; spring, C. Minkowski. Readings from the literature of Classical Sanskrit. Fall: selections from the two Sanskrit epics, the Mahabharata and the Ramayana. Spring: more selections from the epics, and from either Sanskrit story literature or from Sanskrit dramas.

392

CLASS 403–404 Independent Study in Sanskrit, Undergraduate Level
403, fall; 404, spring. Up to 4 credits.
Staff.

CLASS 703–704 Independent Study for Graduate Students in Sanskrit
703, fall; 704, spring. Up to 4 credits.
Staff.
Also see Classics 291, 390, and 395 (Classical Civilization listings).

Honors Courses

CLASS 370 Honors Course
A program of reading and conferences centered on an author or topic chosen in accordance with the special interests of the student and instructor.

CLASS 471 Honors Course
A continuation of Classics 370, with change of author or topic.

CLASS 472 Honors Course: Senior Essay
Spring. 4 credits. For students who have successfully completed Classics 471. Topics must be approved by the student’s honors committee at the end of the first term of the senior year.

COMPARATIVE LITERATURE

C. M. Carmichael, acting chair (139 Goldwin Smith, 255–4155); W. J. Kennedy, director of graduate studies (163 Goldwin Smith 255-3398); Edgar Rosenberg, director of undergraduate studies (133 Goldwin Smith, 255-6795); C. M. Arroyo, A. Caputi (Emeritus), D. Castillo, W. Cohen, J. Culler, B. deBary, H. Foster, G. Gibian, D. Grossvogel, P. Hohenbald, W. Holdheim (Emeritus), N. Melas, J. Monroe, J. Porte, L. Waugh, W. Wetherbee

The Department of Comparative Literature provides a broad range of courses in European as well as non-European literatures. Courses variously stress significant authors, themes, problems, styles, genres, historical periods, and theoretical perspectives. The departmental offerings reflect current interdisciplinary approaches to literary study, hermeneutics, rhetorical analysis, semiotics, deconstruction, Marxism, reception aesthetics, feminism, formalism, and psychoanalysis.

The Major

The major enables students to develop an integrated knowledge of Western literature, to strengthen their reading and writing abilities, and to prepare for careers demanding analytical, interpretive, and evaluative skills. Prospective majors should consult with the director of undergraduate studies. After declaring a major, a student chooses an adviser from the department’s faculty. The requirements for the major are designed to allow each student to follow a course of study that combines intellectual rigor with the pursuit of personal interests. The specific contours of such a program are worked out in consultation with the student’s adviser.

Requirements for the Major

1) Five courses in Comparative Literature at the 200 level and above, including the core course listed below. A student may include up to two literature courses from other departments.

2) One core course in Comparative Literature (for 1996–97 the core course is Comparative Literature 472 (fall)), to be taken by all majors either in the spring term of their junior year or the fall term of their senior year. Students may enroll in both core courses.

3) Five courses in literature or other areas of the humanities at the 200 or higher level, to be taken in one or more foreign literature departments. Texts must be read in the original language. A student may offer one language course (conversation, composition, etc.).

4) A senior essay (Comparative Literature 493) of roughly fifty pages, to be written during the senior year under the direction of the student’s adviser.

The department also encourages:

1) a program that includes broad historical coverage (e.g., Comparative Literature 201–202: Great Books, intensive study of a single genre, e.g., Comparative Literature 363–364: The European Novel); Comparative Literature 365: Contemporary Fiction: analysis of problems in literary theory (e.g., Comparative Literature 302: Literature and Theory, Comparative Literature 402: Theories of Rhetoric)

2) a second foreign language, especially for students interested in graduate work in literature.

Honors

A student who completes the requirements for the major is eligible for the degree of Bachelor of Arts with honors in comparative literature. The department bases its decision on the student’s achievements at the 200 level and above, including the core course listed below. A student may include up to two literature courses from other departments.

The Department of Comparative Literature marks two levels of achievement: Honors and Distinction. Courses, seminars, and independent study for honors majors are designed to develop critical reading abilities.

For description, please see Philosophy 213.

COM L 213 Existentialism and Literature (also PHIL 213)
Spring. 4 credits. A. Wood.

For description, please see Philosophy 213.

COM L 214 Gender, Desire, and Sentimental Fictions (also English 256 and WOMNS 219)

A study of 18th- and 19th-century sentimental fiction in the United States: we will consider how the genre describes the body of the woman in relation to the body politic in the new republic. The sentimental novel both confines women to a domestic sphere and begins to ascribe a political and ethical voice to women as keepers of hearth and home. We will consider the power of this voice as well as its limitations, and critiques of sentimental ethics and sentimental aesthetics. Issues we will consider include the pre-history of the genre (the relation of sentimental fiction to conversion narratives and liberal political theory), the figure of the Republican mother, infanticide, race and sentimentalism, citizenship, embodied ethics, and sexuality and identification. Readings will include works by Susanna Rowson, Hannah Foster, Lydia Maria Child, Harriet Beecher Stowe, Emily Dickinson, Nathaniel Hawthorne, and Maria Susanna Cummins.

COM L 223 The Comic Theater (also Classics 223 and THETR 223)
Fall 1997. 3 credits. (Also offered summer 1996). J. Rusten.

For description, please see Classics 223.

COM L 234 Arabs and Jews in Confluence and Conflict (also NES 234, JWST 234, Rel. St. 234)
Fall. 3 credits. T R 10:10-11:25. R. Brann.
For description, please see NES 234.

Program" for a full description of the freshman writing seminar program.

Courses

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

COM L 201–202 Great Books
201, fall; 202, spring. 4 credits. Comparative Literature 201 and 202 may be taken independently of each other. COM L 202 also offered Fall. M W F 11:15–12:05, W. J. Kennedy, spring: T R 10:10–11:25, B. Maxwell.

A reading each semester of seminal texts that represent and have shaped Western culture and hence form an essential part of the student's intellectual equipment. By analyzing, interpreting, and evaluating, students will develop critical reading abilities.

201: Selections from the Bible, Homer, Dante, Rabelais, Shakespeare, and others.

202: World literature of the last 300 years, emphasizing the response to European worldwide expansion first in the colonizing countries, then in the colonized. The resistance to and refunctioning of genres and forms will be a central concern, as will the making and showing in literature of subjects in hierarchical relations. Readings from (among others) Shakespeare, Defoe, Swift, Voltaire, Poe, Melville, Baudelaire, Flaubert, Conrad, Kipling, Brecht, Césaire, Brathwaite, Soyinka.

COM L 213 Existentialism and Literature (also PHIL 213)
Spring. 4 credits. A. Wood.

For description, please see Philosophy 213.

COM L 214 Gender, Desire, and Sentimental Fictions (also
English 256 and WOMNS 219)

A study of 18th- and 19th-century sentimental fiction in the United States: we will consider how the genre describes the body of the woman in relation to the body politic in the new republic. The sentimental novel both confines women to a domestic sphere and begins to ascribe a political and ethical voice to women as keepers of hearth and home. We will consider the power of this voice as well as its limitations, and critiques of sentimental ethics and sentimental aesthetics. Issues we will consider include the pre-history of the genre (the relation of sentimental fiction to conversion narratives and liberal political theory), the figure of the Republican mother, infanticide, race and sentimentalism, citizenship, embodied ethics, and sexuality and identification. Readings will include works by Susanna Rowson, Hannah Foster, Lydia Maria Child, Harriet Beecher Stowe, Emily Dickinson, Nathaniel Hawthorne, and Maria Susanna Cummins.

COM L 223 The Comic Theater (also
Classics 223 and THETR 223)
Fall 1997. 3 credits. (Also offered summer 1996). J. Rusten.

For description, please see Classics 223.

COM L 234 Arabs and Jews in Confluence and Conflict (also NES 234, JWST 234, Rel. St. 234)
Fall. 3 credits. T R 10:10-11:25. R. Brann.
For description, please see NES 234.
COM L 236 Greek Mythology (also Classics 236) #
Spring. 3 credits. Limited to 200. (Also offered summer '97). D. Mankin.
For description, see Classics 236.

COM L 302 Literature and Theory (also COM L 702 and English 302/702) Fall. 4 credits. M W F 11:15-12:05. J. Culler.
Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings from Barthes, Derrida, Foucault, B. Johnson, J. Rose, and others. No previous knowledge of literary theory is assumed.

COM L 313 Japanese and Asian Film (also Asian St. 313 and THETR 313) @
Spring. 4 credits. Not offered 1996-97. For description, please see Asian Studies 313.

COM L 323 Encounters with the Dead (also COM L 623 and ITAL L 323/623) Fall. 4 credits. M W F 11:15-12:05. M. Migiel.
For description, please see Italian Literature 323/623.

COM L 326 Christianity and Judaism (also Rel. St. 326) #

COM L 328 Literature of the Old Testament (also Rel. St. 328) @ # Fall. 4 credits. T R 2:55-4:10. C. M. Carmichael.
Analysis of small sections of well-known material for in-depth discussion.

COM L 334 Muslims, Christians and Jews In Islamic Spain: Literature and Society (also NES 339, JWST 339, Rel. St. 334 and SPAN, 338) @ # Spring. 4 credits. M W F 11:15-12:05. R. Brann.
For description, please see Near Eastern Studies 339.

COM L 337 The Modern and Contemporary Theatre (also THETR 337) # Spring. 4 credits. Prerequisite: THETR 240 or permission of instructor. K. Burroughs.
For description, see THETR 337.

COM L 344 The Tragic Theater (also Classics 345 and THETR 345) # Fall. 4 credits. Enrollment limited to 40 students. M W F 10:10-11:00. F. Ahl.
For description, please see Classics 345.

COM L 352 European Cultural History, 1815-1870 (also HIST 362) #
Fall. 4 credits. T R 11:40-12:55. M. Steinberg.
For description, please see History 362.

COM L 353 European Cultural History, 1870-1945 (also HIST 363) Spring. 4 credits. M. Steinberg.
For description, please see History 363.

COM L 356 Renaissance Literature #
An introduction to Renaissance literary texts with some attention to cultural backgrounds and intellectual history. Readings from Machiavelli, Erasmus, Rabelais, Shakespeare, Cervantes, and others.

COM L 358 Problems in Modernism: "High" and "Low" Culture (also ART H 357)
Spring. 4 credits. H. Posner.
For description, please see Art History 357.

COM L 367 The Russian Novel (also Russian Lit 367) @
For description, please see Russian Literature 367.

COM L 375 Chekhov In the Context of Contemporary European Literature and Art (also Russian Lit 373)
Spring. 4 credits. T R 1:25-2:40.
5. Senderovich.
For description, please see Russian Literature 373.

COM L 389 Contemporary Literature in Central and East Europe (also Russian Lit 389)
Spring. 4 credits. M W F 10:10-11:00. G. Gibian.
For description, please see Russian Literature 389.

COM L 404 History into Fiction: Nazis and the Literary Imagination (also ENGL 404 and German Studies 414)
Fall. 4 credits. Permission of instructor is needed. Limited to 25. M W F 11:15-12:05. E. Rosenberg.
For description, see ENGL 404.

COM L 406 Cultural Comparison and Colonial Difference (also SOC HUM 406)
Fall. 3 credits. Enrollment limited to 15 students. T 12:20-2:15. N. Melas.
For description, please see Society for the Humanities 406.

COM L 407 Global Culture and the Politics of Hybridity (also SOC HUM 417)
Spring. 3 credits. Enrollment limited to 15 students. N. Melas.
For description, please see Society for the Humanities 417.

COM L 409 Geography, Literature and Critical Social Theory (also SOC HUM 409 and English 430/635)
Fall. 3 credits. Enrollment limited to 15 students. Permission of instructor is needed. Writing sample is required and questionnaire which is available at A. D. White. T 10:10-12:05. S. Wong.
For description, please see Society for the Humanities 409.

COM L 419-420 Independent Study
419, fall; 420, spring. Variable credit. Comparative Literature 419 and 420 may be taken independently of each other. Applications available in 145 G.S.

COM L 429 Readings in the New Testament (NESTL 429, Rel. St. 429, and ENG 429) #

COM L 430 Brecht, Artaud, Mueller, Wilson (also GER ST 420)
Spring. 4 credits. D. Bathrick.
For description, please see German Studies 420.

Bertolt Brecht, Walter Benjamin, and Siegfried Krakauer.

COM L 366 Problems in Modernism: "High" and "Low" Culture (also ART H 367)
Spring. 4 credits. H. Posner.
For description, please see Art History 367.

COM L 367 The Russian Novel (also Russian Lit 367) @
Spring. 4 credits. M W F 2:30-3:20.
G. Gibian.
For description, please see Russian Literature 367.

COM L 375 Chekhov In the Context of Contemporary European Literature and Art (also Russian Lit 373)
Spring. 4 credits. T R 1:25-2:40.
S. Senderovich.
For description, please see Russian Literature 373.

COM L 389 Contemporary Literature in Central and East Europe (also Russian Lit 389)
Spring. 4 credits. M W F 10:10-11:00.
G. Gibian.
For description, please see Russian Literature 389.

COM L 404 History into Fiction: Nazis and the Literary Imagination (also ENGL 404 and German Studies 414)
Fall. 4 credits. Permission of instructor is needed. Limited to 25. M W F 11:15-12:05. E. Rosenberg.
For description, see ENGL 404.

COM L 406 Cultural Comparison and Colonial Difference (also SOC HUM 406)
Fall. 3 credits. Enrollment limited to 15 students. T 12:20-2:15. N. Melas.
For description, please see Society for the Humanities 406.

COM L 407 Global Culture and the Politics of Hybridity (also SOC HUM 417)
Spring. 3 credits. Enrollment limited to 15 students. N. Melas.
For description, please see Society for the Humanities 417.

COM L 409 Geography, Literature and Critical Social Theory (also SOC HUM 409 and English 430/635)
Fall. 3 credits. Enrollment limited to 15 students. Permission of instructor is needed. Writing sample is required and questionnaire which is available at A. D. White. T 10:10-12:05. S. Wong.
For description, please see Society for the Humanities 409.

COM L 419-420 Independent Study
419, fall; 420, spring. Variable credit. Comparative Literature 419 and 420 may be taken independently of each other. Applications available in 145 G.S.

COM L 429 Readings in the New Testament (NESTL 429, Rel. St. 429, and ENG 429) #

COM L 430 Brecht, Artaud, Mueller, Wilson (also GER ST 420)
Spring. 4 credits. D. Bathrick.
For description, please see German Studies 420.

Bertolt Brecht, Walter Benjamin, and Siegfried Krakauer.
COM L 435 Introduction to Literary Theory (also GER ST 435)
Fall. 4 credits. T 2:30–4:25. G. Waite. For description, please see German Studies 435.

COM L 436 Theories of Contemporary Performance (also Theatre Arts 435)
Fall. 4 credits. Permission of instructor is needed. Enrollment is limited to 20 students. W 12:20–1:15. K. Burroughs. For description, see THETR 435.

COM L 438 Fictions of Change: Shakespeare, Scott, Achebe (also English 428)
Fall. 4 credits. Enrollment limited to 20 students. M W F 10:10–11:00. H. Shaw. For description, please see English 428.

COM L 447 Reading Freud: Gender, Race, and Psychoanalysis (also GER ST 447)
Fall. 4 credits. W 12:20–2:15. B. Martin. For description, please see German Studies 447.

COM L 449 Misogyny and Its Readers (also COM L 649 and ITAL L 409/609)
Spring. 4 credits. M. Migiel. For description, please see Italian Literature 409/609.

COM L 452 Renaissance Humanism (also COM L 652)
Fall. 4 credits. Enrollment limited to 15 students. M 2:30–4:25. W. J. Kennedy. A reading and discussion of key texts by Renaissance humanists in Italian, French, English, and other European literatures from the fourteenth to the sixteenth centuries. Topic for 1996: Nationalism and the formation of national canons.

COM L 455 Caribbean Literature (also Africana Studies 455)
Fall. 4 credits. Enrollment limited to 15. M 2:00–4:25. A. Adams. For description, please see Africana Studies 455.

COM L 472 Poetry of the 1990s (also English 408, Span Lit 472, and German Studies 472)
Fall. 4 credits. Core course for 1996–97. Enrollment limited to 15 students. W 10:10–12:05. J. Monroe. Where is poetry now? Where is it heading as we move toward the twenty-first century? What is its current situation in light of the historic changes that have occurred since 1989? Exploring how contemporary poetry is responding to a new era of altered expectations and redrawn boundaries, a time of renewal and redefinition, we will track the principal issues, directions, figures, and forces shaping the process of poetry’s unfolding in the twentieth century’s final decade. Materials will be drawn from a wide variety of forms and contexts, including movies, literary journals, general circulation magazines, and anthologies, as well as individual poetry collections.

COM L 482 Latin American Women Writers (also Span Lit 482 and Women’s St. 481)
Fall. 4 credits. T R 1:25–2:40. D. Castillo. For description, please see Spanish Literature 492.

COM L 493 Senior Essay
Fall and spring. 8 credits. Hours to be arranged individually in consultation with the Director of Undergraduate Studies. Approximately fifty pages to be written over the course of two semesters in the student’s senior year under the direction of the student’s adviser. An “R” grade will be assigned on the basis of research and a preliminary draft completed in the first semester. A letter grade will be awarded on completion of the second semester.

COM L 495 The Aesthetic Theory of the Frankfurt School (also GER ST 495)
Spring. 4 credits. P. Hohenndahl. For description, please see German Studies 495.

COM L 607 Authorizing the Vernacular in Medieval Literature and Culture (also ENGL 607)
Fall. 4 credits. W 3:35–5:30. A. Galloway. For description, please see ENGL 607.

COM L 616 The Fiction of Empire (also ENGL 638)
Spring. 4 credits. W 1:25–3:20. W. Cohen. A colonizer’s-eye view of European expansion in canonical literary texts from the early eighteenth to the late twentieth century. In addition to attending to differences of genre and of national background, we will try to be alert to shifts in the fiction of empire over time and to the distinctive issues raised by each colonized region and people. Tentative readings: Swift, Voltaire, Goethe, Baudelaire, Melville, Flaubert, Tolstoy, Marti, Kipling, and Conrad. All readings available in English.

COM L 619-620 Independent Study

COM L 623 Encounters with the Dead (also COM L 323 and ITAL L 323/623)
Fall. 4 credits. M W F 11:15–12:05. M. Migiel. For description, please see Italian Literature 323/623.

COM L 626 Baroque (also GER ST 627)
Spring. 4 credits. G. Waite. For description, please see German Studies 627.

COM L 647 Romantic Narrative and the Concept of Freedom (also ENGL 647)
Fall. 4 credits. R 1:25–3:20. C. Chase. With the French Revolution and the writings of Kant and Rousseau, freedom becomes a philosophical theme and the stake of political conflict. We will also examine how freedom is linked with the imagination and the idea of literature. Readings include selections from Rousseau’s Emile, Du contrat social, La Nouvelle Heloise, and the Confessions, Madame de Stael’s Lettres sur Jean-Jacques Rousseau, Corinne, and sections of De l’allemande which are especially relevant to the discipline of comparative literature, Wallenstein’s Vindication of the Rights of Women, Shelley’s “The Triumph of Life,” Godwin’s Caleb Williams, and Claire de Duras’s Orissa (the first European novel with a woman of African origin as its protagonist). Reading knowledge of French is required.

COM L 649 Misogyny and Its Readers (also COM L 449 and ITAL L 409/609)
Spring. 4 credits. M. Migiel. For description, please see Italian Literature 409/609.

COM L 652 Renaissance Humanism (also COM L 452)
Fall. 4 credits. Limited to 15 students. M 2:30–4:25. W. J. Kennedy. For description, please see Comparative Literature 452.

COM L 655 Decadence (also ENGL 655 and WOMN ST 656)
Spring. 4 credits. E. Hanson. For description, please see English 655.

COM L 663 Nietzsche and Heidegger (also GER ST 663)
Spring. 4 credits. G. Waite. For description, please see German Studies 663.

COM L 670 Joyce’s Ulysses (also ENGL 670)
Fall. 4 credits. R 1:25–3:20. D. Schwarz. For description, please see English 670.

COM L 672 Theories of Modernism (also Art History 570)
Fall. 4 credits. Permission of instructor is required. T 2:30–4:25. H. Foster. For description, please see ART H 570.

COM L 674 Contemporary Poetry and Culture: 1960–1990 (also ENGL 674, Span Lit 674, and GER ST 674)
Spring. 4 credits. W 10:10–12:05. J. Monroe. The redrawing of cultural and political boundaries underway since the late 1980’s has made it possible to conceive of the poetry of the Cold War era with a degree of closure unimaginable only a few years ago. In light of this changed situation, we will focus on the second half of the post-1945 period—the twenty-eight years extending from 1968 to the present—with particular attention to the past two decades. Exploring issues of emerging and evolving importance for a poetry of the present moment in light of the recent past, we will consider dominant modes as well as alternative practices; canon formation, gender, and multiculturalism; the roles of the publishing industry, popular culture, creative writing programs, and new computer technologies in shaping reading habits and writing communities.

COM L 680 Baudelaire and Modern Criticism (also French Lit. 688)
Spring. 4 credits. T 10:10–12:05. J. Culler. A reading of Les Fleurs du Mal and Les Petits poemes en prose, in conjunction with major twentieth-century critical treatments of them, so as to grasp what has been at stake in discussions of Baudelaire. Critics to be read include Benjamin, Bersani, de Man, Friedrich, Jakobson,auss, Johnson, and Sartre. Reading knowledge of French required.

COM L 702 Literature and Theory (also COM L 302 and English 302/302)
Fall. 4 credits. M W F 11:15–12:05. J. Culler. For description, please see Comparative Literature 302.
The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science. The following describes the College of Arts and Sciences major.

The Major
The major has three components: a core (a minimum of 42 credits), a group of electives in computer science and related fields (a minimum of 10 credits), and a concentration outside computer science (a minimum of 14 credits). The core focuses on the central topics within computer science: the logical design of programs, data structures, and algorithms. The remaining components of the major—the related electives and the outside concentration—provide a flexible extension to the core program. In consultation with their advisors, students are expected to choose electives and an outside concentration that best suit their graduate and career plans.

Students interested in pursuing an advanced degree in theoretical computer science should concentrate in mathematics. Students preparing for advanced work in scientific computation should take Computer Science 621 (instead of Computer Science 222) and Computer Science 622 (as a related elective) and concentrate in some branch of applied mathematics. Qualified students are encouraged to concurrently major in mathematics.

Admission
The prerequisites for admission to the major are:

1) Completion of Computer Science 100-211 (or 212-280) (or equivalent)
2) Completion of Mathematics 111-122-221 or Mathematics 191-192-293
3) A 2.75 grade-point average in all computer science and mathematics courses
4) Acceptance by the department's admissions committee

After admission, students are expected to maintain at least a 2.75 grade-point average in their major courses. Any grade below C– in a core course or related elective is not acceptable.

Core
The core consists of the following courses:

1) Calculus and linear algebra: Mathematics 111-122-221 or 191-192-293
2) Programming and systems: Computer Science 100, 211 (or 212), 314, 410 and 414
3) Theory of computation: Computer Science 280, 381 (or 481), and 482. (One of the following may be substituted for Computer Science 280: Mathematics 332, 432, 454, or 481.)
4) Numerical analysis: Computer Science 222 or 421

Related Electives
The related electives requirement consists of three courses. One may be a computer science course or course/laboratory combination numbered above 400 that includes a substantial programming project, for example, Computer Science 412/413, 414/415, 417/418, 432/433, 462/463, or 472/473, the other two are to be selected from the following:
- Electrical engineering courses numbered 301 or higher
- Operations research courses numbered 260 or higher
- Mathematics courses numbered 300 or higher (except 403, 405, 408)
- Computer Science courses numbered 400 or above, which are three credits or more (except CS 410, 481, or 482).

Students are expected to select related electives that complement their concentration.

Concentration
This component encourages the student to study some discipline outside of computer science in reasonable depth. The concentration consists of an approved sequence of four courses (at least 14 credits) numbered 200 or higher in some field related to the theoretical or practical aspects of computing. A list of sample concentrations is included in the Computer Science Undergraduate Handbook. Students may also design their own concentrations, subject to the approval of their adviser.

Other Requirements
Computer science majors must also satisfy the College of Arts and Sciences and university requirements. In particular, the spirit of the 15-credit electives requirement will be strictly followed. This requirement helps ensure breadth of education, and consequently no computer- or mathematics-related course can be used toward its fulfillment. In general, no courses may be used to fulfill more than one requirement. There are two exceptions: first, appropriate core courses may be used to satisfy the "Quantitative and Formal Reasoning" distribution group (2), and second, in the case of a double major, the same course may be applied to both majors.

Probability and statistics courses. Computer science majors are encouraged to include at least one course in the field of probability and statistics in their program of study. Although there is no formal department of statistics at Cornell, the Department of Mathematics and the School of Operations Research and Industrial Engineering offer various probability and statistics courses suitable for computer science majors.

Honors. A student may be granted honors in computer science on the recommendation of the Computer Science Undergraduate Committee. The committee guidelines will generally be the following:

1) An overall grade-point average of not less than 3.50
2) A grade-point average for all computer science courses of not less than 3.50
3) Satisfactory completion of at least two computer science courses numbered above 500 and satisfactory completion of two semesters of independent research may also be required for high honors.

Courses
For complete course descriptions, see the computer science listing in the College of Engineering section.

COM S 099 Fundamental Programming Concepts
Fall. 2 credits. S-U grades only. No prerequisites.

COM S 100 Introduction to Computer Programming
Fall, spring, or summer. 4 credits. Students who plan to take both COM S 101 and 100 must take 101 first. During most semesters, two versions of COM S 100 (COM S 100a and COM S 100b) are available as described in the computer science listing in the College of Engineering.

COM S 101 The Computer Age (also ENGRE 101)
Summer. 3 credits. Credit is granted for both Computer Science 100 and 101 only if 101 is taken first.

COM S 130 Creating Web Documents
Spring. 3 credits.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, or summer. 3 credits. Prerequisite: Computer Science 100 or equivalent programming experience. Credit will not be granted for both Computer Science 211 and Computer Science 212.

COM S 212 Structure and Interpretation of Computer Programs (also ENGRD 212)
Fall, spring. 4 credits. Prerequisite: Computer Science 100 or equivalent programming experience. Credit will not be granted for both Computer Science 211 and Computer Science 212.

COM S 214 A Taste of UNIX and C
Fall, spring, 1-2 credits. Prerequisite: Computer Science 211, or equivalent programming experience. S-U grades only.

COM S 222 Introduction to Scientific Computation (also ENGRD 222)
Spring. 3 credits. Prerequisites: Computer Science 100 and pre/corequisite of Math 221 or Math 293.

COM S 260 Discrete Structures
Fall or spring. 4 credits. Prerequisite: Computer Science 211 or 212 or permission of instructor.

COM S 314 Introduction to Digital Systems and Computer Organization
Fall, spring, or summer. 4 credits. Prerequisite: Computer Science 211 or 212 or equivalent.

COM S 381 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: Computer Science 280 or permission of instructor.
A compiler implementation project related to COM S 410 Data Structures.

COM S 410 Programming Languages and Software Engineering
Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language.

COM S 410 Data Structures
Fall, spring, summer. 4 credits. Prerequisite: Computer Science 280 or permission of instructor.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisites: Computer Science 410 or permission of instructor. Not offered every year; semester to be announced.

COM S 412 Introduction to Compilers and Translators
Spring. 3 credits. Prerequisites: Computer Science 314, 381, and 410. Corequisite: CS 413. Not offered every year; next offered spring 1997.

COM S 413 Practicum in Compilers and Translators

COM S 414 Systems Programming and Operating Systems
Fall. 3 credits. Prerequisite: Computer Science 314 or permission of instructor.

COM S 415 Practicum in Operating Systems
Fall. 2 credits. Prerequisite: Computer Science 410. Corequisite: Computer Science 414.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring. 3 credits. Prerequisite: Computer Science 211 or 212.

COM S 418 Practicum in Computer Graphics (also ARCH 375)
Spring. 2 credits. Enrollment limited. Permission of instructor. Prerequisite: Computer Science 211 or 212. Recommended: Computer Science 314. Corequisite: Computer Science 417.

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: Mathematics 294 or equivalent, one additional mathematics course numbered 360 or above, and knowledge of programming.

COM S 422 Parallel Computing for Scientific Problems
Spring. 4 credits. Enrollment limited. Permission of instructor. Prerequisites: Math 294 and COM S 222 or COM S 421, knowledge of C and Fortran. Not offered every year; next offered spring 1998.

COM S 432 Practicum in Database Systems
Spring. 2 credits. Corequisite: Computer Science 432.

COM S 443 Distributed Systems and Algorithms
Fall. 4 credits. Co-requisite: COM S 414 or permission of instructor. Not offered every year; semester to be announced.

COM S 462 Robotics and Machine Vision
Spring. 3 credits. Prerequisite: Permission of instructor, Computer Science 410 and Computer Science 381. Co-requisite: Computer Science 463. Not offered every year; semester to be announced.

COM S 463 Robotics and Machine Vision Lab
Spring. 2 credits. Prerequisites: Permission of instructor, Computer Science 410 and Computer Science 381. Co-requisite: Computer Science 462. Not offered every year; semester to be announced.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: Computer Science 107 or 212, Computer Science 280 and Computer Science 410. Open to juniors, seniors, and graduate students.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Prerequisites: Computer Science 107 or 212, Computer Science 280 and 410. Corequisite: Computer Science 472.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: Computer Science 280 or permission of instructor. Credit will not be granted for both Computer Science 381 and Computer Science 481. A faster-moving and deeper version of Computer Science 381. Corrective transfers between Computer Science 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

COM S 482 Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: Computer Science 410 and Computer Science 381 or 481, or permission of instructor.

COM S 486 Applied Logic (also Mathematics 486)
Fall or spring. 4 credits. Prerequisites: Mathematics 222 or 294, Computer Science 100, and some course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall or spring. 1–4 credits.

COM S 501 Programming Languages and Software Engineering
Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language.

COM S 511 Modern Programming Languages
Fall. 4 credits. Prerequisites: Computer Science 410 and a project course or permission of instructor. Not offered every year; semester to be announced.

COM S 514 Practical Distributed Computing
Fall or spring. 4 credits. Prerequisites: Computer Science 414 or permission of instructor. Not offered every year; next offered spring 1997.

COM S 515 Practicum in Distributed Systems
Fall or spring. 1–2 credits. Co-requisite: COM S 514. Not offered every year; next offered spring 1997.

COM S 516 High-Performance Computer Architecture
Spring. 4 credits. Prerequisite: COM S 514 required; COMS 412 or 414 highly recommended.

COM S 522 Parallel Computing for Scientific Problems
Spring. 4 credits. Enrollment limited. Permission of instructor. Prerequisites: Math 294, COM S 222 or COM S 421, knowledge of C and FORTRAN. Not offered every year; semester to be announced.

COM S 562 Robotics and Machine Vision Lab
Spring. 2 credits. Prerequisites: permission of instructor, COM S 410 and COM S 381/481. Co-requisite: COM S 563. Not offered every year; semester to be announced.

COM S 563 Robotics and Machine Vision Lab
Spring. 2 credits. Prerequisites: permission of instructor, COM S 410 and COM S 381/481. Co-requisite: COM S 562. Not offered every year; semester to be announced.

COM S 572 Introduction to Automated Reasoning
Spring. 3 credits.

COM S 601 System Concepts
Spring. 3 credits. Prerequisite: open to students enrolled in the COM S Ph.D. program. Not offered every year; next offered spring 1997.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Prerequisites: Computer Science 410, and 381 or 481, or permission of instructor.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: Computer Science 414 and 412, or permission of instructor.

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisites: Computer Science 414 or permission of instructor. Not offered every year; semester to be announced.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: Computer Science 414 or permission of instructor.

COM S 615 Theory of Concurrent Systems
Spring. 4 credits. Prerequisites: COM S 611 or permission of instructor. Not offered every year; semester to be announced.
COM S 617 Frontier of Parallel Computer Systems  
Fall. 4 credits. Prerequisites: COM S 314 or 516 required, COM S 411, 412, or 414. Not offered every year; semester to be announced.

COM S 618 Topics in the Theory of Distributed Systems  
Fall. 4 credits. Prerequisites: COM S 444 or COM S 614 or permission of instructor. Not offered every year; semester to be announced.

COM S 621 Matrix Computations  
Fall. 4 credits. Prerequisites: COM S 444 or COM S 614 or permission of instructor.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations  
Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years.

COM S 624 Numerical Solution of Differential Equations  
Spring. 4 credits. Prerequisite: Previous exposure to numerical analysis of instructor, and differential equations. Offered in even-numbered years.

COM S 631 Multimedia Systems  
Fall. 4 credits. Prerequisite: Permission of instructor.

COM S 661 Robotics  
Fall. 4 credits. Prerequisites: Computer Science 482 and permission of instructor. Not offered every year; semester to be announced.

COM S 662 Robotics Laboratory  
Fall. 4 credits. Prerequisite: Graduate standing or permission of instructor. Not offered every year; semester to be announced.

COM S 664 Machine Vision  
Spring. 4 credits. Prerequisites: Undergraduate-level understanding of algorithms and Mathematics 221 or equivalent.

COM S 674 Natural Language Processing  
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year; semester to be announced.

COM S 675 Computational Geometry  
Fall. 4 credits. Prerequisites: COM S 681, or permission of instructor. Not offered every year; semester to be announced.

COM S 709 Computer Science Colloquium  
Fall or spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

COM S 713 Seminar in Systems and Methodology  
Fall, spring. 4 credits. Prerequisites: A graduate course employing formal reasoning, such as COM S 600, 611, 613, 615, 671, or permission of instructor. Not offered every year; semester to be announced.

COM S 715 Seminar in Programming Refinement Logics  
Fall or spring. 4 credits. Prerequisite: Permission of instructor.

COM S 716 Topics in Parallel Architectures  
Fall. 4 credits. Prerequisite: Computer Science 612 or permission of instructor. Not offered every year; semester to be announced.

COM S 718 Topics in Computer Graphics  
Fall or spring. 4 credits. Prerequisites: COM S 417 or permission of instructor. Not offered every year; semester to be announced.

COM S 719 Seminar in Programming Languages  
Fall or spring. 4 credits. Prerequisite: Computer Science 611 or permission of instructor. S-U grades only.

COM S 722 Topics in Numerical Analysis  
Fall or spring. 4 credits. Prerequisite: Computer Science 621 or 622 or permission of instructor. Not offered every year; semester to be announced.

COM S 729 Seminar in Numerical Analysis/ACRI  
Fall or spring. 1-4 credits (to be arranged). Prerequisite: Permission of instructor. S-U grades only.

COM S 754 Seminar in Work in Progress-Distributed Systems  
Fall or spring. 1 credit.

COM S 761 Dynamic Manipulation and Scientific Computation  
Spring. 4 credits. Prerequisites: COM S 462 or COM S 661, a strong background in robotics and algorithms (e.g. COM S 481), and permission of the instructor. Not offered every year; semester to be announced.

COM S 762 Robot Cafe  
Spring. 4 credits. Prerequisite: CSE 661. Not offered every year; semester to be announced. Advanced seminar on varying topics.

COM S 765 Seminar in Natural Language Understanding  
Fall, spring. 4 credits.

COM S 784 Seminar in Computational Algebra  
Fall or spring. 4 credits. Not offered every year; semester to be announced. Informal weekly seminar in which current topics in computational algebra and symbolic mathematics are discussed.

COM S 789 Seminar In Theory of Algorithms and Computing  
Fall, spring. 2-4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science  
Fall. 4 credits. Prerequisites: Permission of a computer science adviser. Letter grade only. Independent research or Master of Engineering project.

COM S 890 Special Investigations in Computer Science  
Fall. 4 credits. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

CZECH  
See Modern Languages under Languages and Linguistics.

DANCE  
See listings under Department of Theatre Arts.

DANISH  
See Modern Languages under Languages and Linguistics.

DUTCH  
See Modern Languages under Languages and Linguistics.

ECONOMICS  

The study of economics provides an understanding of the way economies operate and an insight into public issues. The department offers a broad range of graduate courses in such fields as money and banking international and comparative economics; econometrics; history, growth and development; and the organization, performance, and control of industry.
Social Science Distribution Requirement

The microeconomics distribution requirement can be fulfilled with any of the following:
Economics 101, Economics 201, Economics 203, or Economics 313.

The macroeconomics distribution requirement can be satisfied with any of the following:
Economics 102, Economics 202, Economics 204, or Economics 314.

The Major

Prerequisites

Economics 101 and 102 and Math 111 (or equivalents, with approval of the director of undergraduate studies), all with grades of C or better.
Economics 203 with a grade of C or better substitutes for 101; Economics 204 with a grade of C or better substitutes for 102.

Requirements

Eight courses listed by the Department of Economics at the 300 level or above, or approved by the student's major advisor, all with grades of C- or better.

These eight courses must include:
(1) Economics 313,
(2) Economics 314, and
(3) either Economics 321, or Economics 319 and 320.
Economics 203 with a grade of C or better substitutes for both 101 and 313; Economics 204 with a grade of C or better substitutes for both 102 and 314.

If Economics 321 is applied toward the major, neither 319 nor 320 can be applied.
Economics 399 and 499 cannot be counted toward the eight-course requirement.

Up to two courses from the following list can be counted toward the eight-course requirement. The courses within parentheses are cross-listed:

- Labor Economics: (ILRLE 322, ECON 462), (ILRLE 340, ECON 451), (ILRLE 345, ECON 452), (ILRLE 348, ECON 453), (ILRLE 440, ECON 454), (ILRLE 441, ECON 455), (ILRLE 442, ECON 456), (ILRLE 445, ECON 457), (ILRLE 448, ECON 458), (ILRLE 640, ECON 459), (ILRLE 642, ECON 460), (ILRLE 644, ECON 461);
- Consumer Economics and Housing: (CEH 320, ECON 420) and (CEH 321, ECON 421) (these two courses together count as one course toward the Economics major), (CEH 613, ECON 413), (CEH 624, ECON 424), (CEH 635, ECON 435), (CEH 648, ECON 448);
- Agricultural, Resource, and Managerial Economics: (ARME 415, ECON 415), (ARME 428, ECON 428), (ARME 464, ECON 464), (ARME 608, ECON 408), (ARME 611, ECON 411), (ARME 665, ECON 465), (ARME 666, ECON 466), (the following two courses together count as one course toward the Economics major) (ARME 640, ECON 440), (ARME 641, ECON 441);
- (ARME 450, ECON 450), provided Economics 309 is not applied toward the major.

ARME 450, provided Economics 309 is not applied toward the major.

An honors program is currently being offered. Students should consult the director of undergraduate studies before May of their junior year for more information.

Students planning graduate work in economics and business are strongly encouraged to prepare themselves well in mathematics and econometrics. These students are strongly encouraged to enroll in Economics 319–320 rather than Economics 321.

Courses

ECON 101 Introductory Microeconomics
Fall, spring, winter, and summer. 3 credits. Economics 101 is not a prerequisite for 102.

This course will introduce the student to the basic tools of microeconomic and macroeconomic theory necessary to understand and analyze contemporary economic problems and their proposed solutions. In particular, the allocative role of the price system in determining production, consumption, and the distribution of income will be analyzed. The course will also focus on aggregate economic activity in relation to the level, stability, and growth of national income. Topics discussed may include the distribution and effects of unemployment, inflation, balance of payments, deficits, and economic development, and how these may be influenced by monetary, fiscal, and other policies.

ECON 102 Introductory Macroeconomics
Fall, spring, winter, and summer. 3 credits. Economics 101 is not a prerequisite for 101.

This course covers the topics taught in Economics 101 and 313. This course covers the topics taught in Economics 102 and 314. (Can replace 314 only with grade of B or better). An introduction to the theory of national income determination, unemployment, growth, and inflation.

ECON 301 Economics of Market Failure

This course will review briefly the way properties of the perfect competitive market model and then consider a range of situations in which these properties are modified and where there may be a case for some form of government intervention. The course will be considered in four parts: (a) the presence of externalities, pollution, and the economics of the environment; (b) the provision of public goods, the free-rider problem; (c) uncertainty and imperfect information, an analysis in the context of labor and insurance markets, and the market for medical care; (d) the regulation of natural monopoly and public utility pricing; (e) the failure of the market to achieve desired redistributitional objectives; (f) direct and indirect taxation as instruments of redistribution.

ECON 303 Positive and Normative Theories of Income Distribution

After examining the distinction between the terms positive and normative as used in economics, this course will explore three main questions: (1) Why is income distributed the way it is? (2) How should income be distributed? (3) What is the relationship between 1 and 2? Particular emphasis will be given to those theories of income distribution, both positive and normative, that tend to dominate discussion of these topics in America.

ECON 304 Economics and the Law
Spring. 4 credits. Prerequisite: Economics 101.

An examination, through the lens of economic analysis, of legal principles drawn from various branches of law, including contracts, torts, and property. Cases are assigned for class discussion; in addition, there are several writing assignments.

ECON 306 Economics of Defense Spending

The economic aspects of defense spending are analyzed. Emphasis is on the procurement of weapons systems. Topics covered include an overview of the defense budget, special characteristics of the defense market, the structure of the defense industry, and the economic behavior of defense firms.

ECON 307 Introduction to Peace Science (also CRP 495.18 and Introduction to Peace Science)
Winter session. 3 credits. Prerequisites: Economics 101–102 or permission of instructor. Introduction to the theories of and research on conflict resolution. Topics include conflict, its role and impact on society; theories of aggression and altruism; the origins of war; game theory; conflict management procedures and other analytical tools and methods of peace science; alternatives to war.
[ECON 308 Economic Analysis of Government (also Civil and Environmental Engineering 322)]
Spring. 4 credits. Prerequisites: calculus plus Economics 313 or equivalent or Civil and Environmental Engineering 321. Not offered 1996-97.
Analysis of economic bases for government intervention in a market economy. Topics include public goods, cost-benefit analysis, public finance, environment regulation and risk management, and macroeconomic topics.

[ECON 309 Environmental Economics]
Fall. 4 credits. Prerequisites: Economics 101-102 and calculus plus.
This course examines the economic aspects of environmental issues. We will look at theoretical and analytical tools of economics as they apply to environmental issues, as well as related philosophical and ethical issues. We will then apply the various economic and ethical paradigms to current environmental issues.

[ECON 313 Intermediate Microeconomic Theory]
Fall, spring, and summer. 4 credits.
Prerequisites: Economics 101-102 and calculus.
The pricing process in a private enterprise economy are analyzed under varying competitive conditions, and their role in the allocation of resources and the functional distribution of national income is considered.

[ECON 314 Intermediate Macroeconomic Theory]
Fall, spring, and summer. 4 credits.
Prerequisites: Economics 101-102 and calculus.
The theory of national income and determination and economic growth in alternative models of the national economy is introduced. The interaction and relation of these models to empirical aggregate economic data is examined.

[ECON 315 History of Economic Analysis #]
Fall and spring. 4 credits. Prerequisites: Economics 101-102 or permission of instructor.
Early writings in economics and their relationship to current economic analysis and policy issues, for example, ancient and medieval philosophers on justice in exchange; mercantilist arguments for trade protection; early theories about the effect of monetary expansion (D. Hume); the role of the entrepreneur (Cantillon); and general competitive equilibrium (the Physiocrats). The most recent reading assignment in this course is Adam Smith's Wealth of Nations but the emphasis is on the relationship between the precursors of Adam Smith and his Wealth of Nations to modern economics analysis and current efforts to answer some of the questions raised in the early writings on economics.

[ECON 317 Intermediate Mathematical Economics I]
Introduction of calculus and matrix algebra; problems of maximization of a function of several variables. Economic examples are used to illustrate and teach the mathematical concepts.

[ECON 318 Intermediate Mathematical Economics II]
Advanced techniques of optimization and application to economic theory.

[ECON 319 Introduction to Statistics and Probability]
Fall. 4 credits. Prerequisites: Economics 101-102 and Mathematics 111-112.
This course provides an introduction to statistical inference and to principles of probability. It includes descriptive statistics, principles of probability, discrete and continuous distributions, and hypothesis testing (of sample means, proportions, variance). Regression analysis and correlation are introduced.

[ECON 320 Introduction to Econometrics]
Spring. 4 credits. Prerequisites: Economics 101-102, 319, or equivalent.
Introduction to the theory and application of econometric techniques. How econometric models are formulated, estimated, used to test hypotheses, and used to forecast; understanding economists' results in studies using regression model, multiple regression model, and introduction to simultaneous equation models.

[ECON 321 Applied Econometrics]
Fall and spring. 4 credits.
Prerequisites: Economics 101-102 and calculus.
This course provides an introduction to statistical methods and principles of probability. Topics to be covered include analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, correlation and time series analysis. Applications from economics are used to illustrate the methods covered in the course.

[ECON 322 American Economic History #]
Fall. 4 credits. Prerequisites: Economics 101-102 or equivalent.
Problems in American economic history from the first settlements to early industrialization are surveyed.

[ECON 324 American Economic History]
Spring. 4 credits.
Prerequisites: Economics 101-102 or equivalent.
A survey of problems in American economic history from the Civil War to World War I.

[ECON 324A American Economic History #]
Spring. 4 credits. Prerequisites: Economics 101-102 or equivalent. Instructor's permission required.
Same material as Economics 324, seminar limited to 12 students.

[ECON 325 Economic History of Latin America @ #]
Fall. 4 credits.
A survey of changing economic institutions and policies from pre-Columbian to modern times.

[ECON 326 History of American Enterprise #]
Spring. 4 credits. Prerequisites: Economics 101-102 or equivalent.
History of the changing structure of American business from 1800 to the present with major emphasis upon developments after the Civil War. The focus of the course will be the changing structure of challenges (for example, the rise of unions, development of a national capital market, changing role of government) and the various responses of business organizations and entrepreneurs to those challenges.

[ECON 331 Money and Credit]
Spring. 4 credits. Prerequisites: Economics 101-102 and 314.
A systematic treatment of the determinants of the money supply and the volume of credit. Economic analysis of credit markets and financial institutions in the United States.

[ECON 333 Financial Economics]
Fall. 4 credits. Prerequisites: Economics 313 and 314.
The theory and decision making in the presence of uncertainty and the practical aspects of particular asset markets are examined.

[ECON 335 Public Finance: The Microeconomics of Government]
Fall. 4 credits.
Prerequisites: Economics 101-102 and 313, or their equivalent, and one semester of calculus.
The role of government in a free market economy is analyzed. Topics covered include public goods, market failures, allocation mechanisms, optimal taxation, effects of taxation, and benefit-cost analysis. Current topics of an applied nature will vary from term to term.

[ECON 336 Public Finance: Resource Allocation and Fiscal Policy]
Spring. 4 credits.
Prerequisites: Economics 101-102, 313 or their equivalent and one semester of calculus.
This course covers the revenue side of public finance and special topics. Subjects covered include the federal debt, the budget, and government regulation and transfers, as well as problems like local public goods, health care, education, the hierarchy of governmental structure, plus a variety of applied problems.

[ECON 338 Macroeconomic Policy]
Spring. 4 credits.
Prerequisite: Economics 314 or equivalent. Not offered 1996-97.
The use of fiscal and monetary policies for achieving full employment, price-level stability, and appropriate economic growth are studied.

[ECON 341 Labor Economics]
For description, see ILRLE 240.

[ECON 342 Economic Analysis of the University]
For description, see ILRLE 648.

[ECON 351 Industrial Organization]
Fall. 4 credits.
Prerequisite: Economics 215 or its equivalent.
A study of markets that differ from the ideal of perfect competition (e.g., monopoly and oligopoly) and the efforts of our legal system through the antitrust laws to deal with the kinds of problems that arise in such markets. Specific topics covered include mergers, price fixing, price discrimination, predatory pricing, and vertical restraints such as resale price maintenance.

[ECON 352 Advanced Topics in Industrial Organization]
Spring. 4 credits.
Prerequisites: Economics 351.
This course is an extension of 351 and will emphasize (a) more advanced topics in the
theory of industrial organization with special attention to recent developments in the literature; and (b) empirical analysis of numerous issues relating to the structure of markets and their performance.

**ECON 355 Departures from Rational Choice**
Fall. 4 credits. Prerequisites: Economics 313 and 314, or their equivalents. Not offered 1996-97.
This course examines behaviors that appear inconsistent with the traditional theory of rational choice. These behaviors fall under two broad categories: (1) irrational behavior with regret, and (2) irrational behavior without regret. The first category includes, but is not limited to, behaviors that result from cognitive errors. Once people are made aware of these errors, they typically express a desire to modify their behavior in the directions called for by rational choice theory. The second category represents a deeper challenge to the traditional model. It consists of behaviors that people generally express no desire to modify despite their inconsistency with rational choice theory.

**ECON 357 Game Theory**
Spring. 4 credits. Prerequisites: Economics 313 and 319. Not offered 1996-97.
This course studies mathematical models of conflict and cooperation in situations of uncertainty (about nature and about decision makers).

**ECON 361 International Trade Theory and Policy**
Fall. 4 credits. Prerequisites: Economics 101-102 and 313.
This course surveys the sources of comparative advantage. It studies commercial policy and analyzes the welfare economics of trade between countries. Some attention is paid to the institutional aspects of the world trading system.

**ECON 362 International Monetary Theory and Policy**
Spring and summer. 4 credits. Prerequisites: Economics 101-102 and 314.
This course surveys the determination of exchange rates and the theories of balance of payments adjustments. It also explores open economy macroeconomics, and it analyzes some of the institutional details of foreign exchange markets, balance of payments accounting, and the international monetary system.

**ECON 363 International Economics**
Spring and summer. 4 credits. Prerequisite: Economics 101-102 or equivalent.
This course surveys international economics in one semester. First, it surveys the sources of comparative advantage, and it analyzes commercial policy and the institutional aspects of the world trading system. Second, it discusses exchange rates, and it studies theories of balance of payments adjustments. This course is intended primarily for government majors who are comfortable with a less technical approach to international economics. (Cannot be applied to the economics major.)

**ECON 365 Economic Problems of Latin America**
Spring. 4 credits. Prerequisites: Economics 101-102.
Current topics include, international debt, capital flight, economic integration, stabilization programs, etc.

**ECON 368 The Economics of the Former Soviet Union and of Central Europe: From Central Planning to Markets**
Fall. 4 credits. Prerequisites: Economics 313 and 314. Not offered 1996-97.
The course will introduce first the basic features of a planned economy and proceed to consider the most important example: the rise and fall of the Soviet Union. Secondly, the analysis will be extended to what used to be known as "Eastern Europe" (e.g., Czechoslovakia, Hungary, Poland). From this necessary historical background, the course will proceed to current attempts to move away from Socialist central planning and its legacies to market economy, privatization, and independence.

**ECON 367 Comparative Economic Systems: East and West**
Fall. 4 credits. Prerequisites: Economics 101-102.
The course will develop a framework for studying economic systems and national economies and present three simple stylized systems: market, socialist, and central planning. Secondly, the course will consider economic goals to be achieved (such as growth, stability, and productivity) and introduce quantitative measures useful in the evaluation of the performance. Thirdly, comparative studies of selected national economies representing the models will be carried out.

**ECON 369 The Economy of China**
Fall. 4 credits. Prerequisites: Economics 101-102 or permission of instructor.
Examines the development of the Chinese economy and the evolution of China's economic system since 1949.

**ECON 370 Socialist Economies in Transition**
This course studies the economic aspects of the transition of centrally planned, socialist economies to capitalist, market economies. It begins with an overview of the functioning of centrally planned economies, the arguments for reform, and experience with reform of these economies. From this necessary historical background, the course will proceed to current attempts to move away from Socialist central planning and its legacies to market economy, privatization, and independence.

**ECON 371 Economic Development**
Fall. 4 credits. Prerequisites: Economics 313 or equivalent.
Study of the problem of sustaining accelerated economic growth in less-developed countries. Trade-offs between growth, welfare, and equity; the legacy of colonialism; relevance of history and economic theory; problems of capital formation, economic planning and international specialization; and the interaction of industrialization, agricultural development, and population change are emphasized.

**ECON 372 Applied Economic Development**
Fall or spring. 4 credits. Prerequisite: Economics 101-102. Not offered 1996-97.
This course examines several special topics in the economics of developing countries. Among the topics to be considered recently are the concepts of development and underdevelopment, the debate over development economics, the peasant household and its place in the world economy, the debt crisis, the state vs. market debate and the role of the state in economic development, and the question of sustainable development.

**ECON 374 National and International Food Economics**
For description, see NS 457.

**ECON 375 Economic Problems of India**
Fall. 4 credits. Prerequisite: Economics 101/102 or equivalent background.
This course will present the major economics and development problems of contemporary India and to examine the country's future economic prospects. It will, however, be our aim to discuss these problems in their proper historical perspectives. Hence, the course will start with a brief outline of the social and political history of India. It will then turn to a more detailed account of the economic history of India in two stages.

**ECON 381 Economics of Participation and Workers' Management**
Spring. 4 credits. Prerequisites: Economics 313-314 or permission of instructor. Not offered 1996-97.
The theory of labor-management economics is developed systematically, and literature on that and related subjects surveyed. Theories of the participatory firm, industry, and general equilibrium are covered together with a microeconomics and study of special dimensions of the system. Efficient decision-making processes within the firm are also studied. Illustrative references to Yugoslavia and other real instances of labor participation are made throughout.

**ECON 382 The Practice and Implementation of Management**
Fall. 4 credits. Prerequisites: Economics 101-102. Not offered 1996-97.
A broad introduction to the subject of workers' self-management intended for both economists and non-economists. It contains no technical tools nor does it require prior professional knowledge: thus there are no prerequisites. The course objective is to answer 5 broad questions: (1) What is self-management? (2) Where and in what form does it occur? (3) What is its history? (4) How does it work? and (5) How is a cooperative enterprise/economy started/operated?

**ECON 399 Readings in Economics**
Fall or spring. Variable credit. Independent study.

**ECON 408 Production Economics**
For description, see ARME 608.

**ECON 413 Economics of Consumer Demand**
For description, see CER 413.

**ECON 415 Price Analysis**
For description, see ARME 415.
This course is intended for advanced discussion of the trade-offs facing a society in guiding capital accumulation: the roles of present value and internal rate of return in guiding investment decisions; (b) some earlier models of conditions for intertemporal efficiency in theory of decision making under uncertainty. This course provides an introduction to the model of optimal savings and accumulation; (c) growth, exhaustible resources; pollution and conservation: discussion of the trade-offs facing a society.

ECON 419 Economic Decisions under Uncertainty
Fall. 4 credits. Prerequisites: Economics 313 and 319. Not offered 1996-97. This course provides an introduction to the theory of decision making under uncertainty with emphasis on economic applications of the theory.

ECON 420 Economics of Family Policy—Adults
For description, see CEH 320.

ECON 421 Economics of Family Policy—Children
For description, see CEH 321.

ECON 422 The Economics of Infrastructure and a Sustainable Environment
For description, see CEH 422.

ECON 424 Economics of Household Behavior
For description, see CEH 624.

ECON 428 Technology: Management and Economic Issues
For description, see ARME 428.

ECON 430 Policy Analysis: Welfare Theory, Agriculture, and Trade
For description, see ARME 630.

ECON 435 Information and Regulation
For description, see CEH 635.

ECON 436 Projects in Environmental Management
For description, see NBA 573.

ECON 440 Analysis of Agriculture Markets
For description, see ARME 640.

ECON 441 Commodity Futures Markets
For description, see ARME 641.

ECON 445 Topics in Microeconomic Analysis—Markets and Planning
Fall. 4 credits. Prerequisites: Economics 313. Not offered 1996-97. This is a course of economic theory designed for upperclass undergraduates. Course content may vary from year to year. Issues that may be examined include (1) How can economic activities be efficiently organized through the market mechanism? Why is the presence of many traders essential to efficiency? (2) What can be done if the indivisibility in production processes becomes an important hindrance to competitive pricing? (3) How can economic planning be decentralized efficiently? This course serves two purposes: (1) to introduce concepts that are novel to undergraduates and relevant to public policy but require only a modicum of analytic tooling up, and (2) to illustrate the deductive approach of modern economic analysis—how to define concepts unambiguously, how to form propositions in clear-cut fashion, and how to follow up logical implications sequentially to the conclusion.

ECON 446 Topics in Macroeconomic Analysis—Is Keynesianism Dead?
Fall or spring. 4 credits. Prerequisites: Economics 314. Not offered 1996-97. The coverage of this course may vary from term to term. Presently the content of the course deals with the range of criticisms against Keynesian theory by the New Classical Economics, the Equilibrium School, the Rational Expectations School. Despite the fact that almost all intermediate macroeconomic textbooks are Keynesian in perspective, clearly Keynesian economics is currently at bay. We shall review critically, critiques to Keynesian theory.

ECON 448 Housing Economics
For description, see CEH 648.

ECON 451 Economic Security
For description, see ILRLE 340.

ECON 452 Corporate Finance
For description, see ILRLE 345.

ECON 453 The Economics of Unemployment
For description, see ILRLE 348.

ECON 454 The Economics of Health Care
For description, see ILRLE 440.

ECON 455 Income Distribution
For description, see ILRLE 441.

ECON 456 The Economics of Employee Benefits
For description, see ILRLE 442.

ECON 457 Women in the Economy
For description, see ILRLE 445.

ECON 458 Topics in Twentieth Century Economic History
For description, see ILRLE 448.

ECON 459 Economic History of British Labor 1750-1940
For description, see ILRLE 640.

ECON 460 Economic Analysis of the Welfare State
For description, see ILRLE 642.

ECON 461 The Economics of Occupational Safety and Health
For description, see ILRLE 644.

ECON 462 Labor in Developing Economies
For description, see ARME 664.

ECON 464 Economics of Agricultural Development
For description, see ARME 665.

ECON 465 Food and Nutrition Policy
For description, see ARME 666.

ECON 466 Economics of Development
For description, see ARME 666.

ECON 473 Economics of Export-Led Development
For description, see ARME 666.

ECON 481 Economic Effects of Participation and Labor-Managed Systems
Fall or spring. 4 credits. Prerequisites: Economics 381 and 382. Not offered 1996-97. This course applies microeconomic theory to analyzing the performance of firms in which employees either participate in the decision-making process or make all the important decisions. If a specialist in the area is lacking, Prof. Vanek may give the course as a seminar where primarily grad students will discuss topics in the literature selected through consensus of the participants.

ECON 482 Practical Aspects of Business Management of Worker Enterprises
Fall. 4 credits. Prerequisite: should be taken concurrently with or following Economics 382/582, and permission of instructor. Not offered 1996-97. This course is designed to further and deepen undergraduate and graduate students' knowledge of workers' self-management democratic enterprises. It will be based primarily on dialogue and participants' own presentations of their research in relevant areas such as cooperative business law, finance, accounting, or internal work organization. The instructor will act primarily as a coordinator and resource person. Whenever possible an attempt is made to form and incorporate a self-managing cooperative enterprise. Students who have taken all three courses, Economics 381/881, 382/882, and 482, both graduate and undergraduate, are welcome to participate as teacher-student interns. They may receive independent study credit for this work.

ECON 483 The Technological and Product Base of Worker Enterprises, with Special Emphasis on Ecology and Solar Energy Applications
Fall or spring. 4 credits. Prerequisite: may be taken concurrently with following Economics 382/582, and permission of instructor. Not offered 1996-97. This course is designed to deepen undergraduate and graduate students' knowledge of workers' self-management and cooperation, through learning about and construction of simple energy-related technologies, to be produced in workers' enterprises. Size of the class is limited by technical, space, and instruction resources. Some of the technologies may serve as a basis for projects to be undertaken in Economics 482.

ECON 499 Honors Program
Fall and spring. 8 credits. Consult the Director of Undergraduate Studies for details. Interested students should apply to the program in the spring semester of their junior year.

Graduate Courses and Seminars

ECON 509 Microeconomic Theory I
Fall. 4 credits. Topics in consumer and producer theory.

ECON 510 Microeconomic Theory II
Spring. 4 credits. Topics in consumer and producer theory, equilibrium models, and their application, externalities and public goods, intertemporal choice, simple dynamic models and resource depletion, choice under uncertainty.
This course is a continuation of Economics 517. It will cover selected topics in Matrix algebra (vector spaces, matrices, simultaneous linear equations, characteristic value problem), calculus of several variables (elementary real analysis, partial differentiation, convex analysis), classical optimization theory (unconstrained maximization, constrained maximization).

ECON 518 Intermediate Mathematical Economics II
Spring. 4 credits.
A continuation of Economics 517, the course develops additional mathematical techniques for applications in economics. Topics covered could include study of dynamic systems (linear and nonlinear difference equations, differential equation, chaotic behavior), dynamic optimization methods (optimal control theory, nonstochastic and stochastic dynamic programming), game theory (repeated dynamic and evolutionary games).

ECON 519 Econometrics I
Fall. 4 credits. Prerequisites: Economics 319–320 or permission of instructor.
This course gives the Probabilistic and statistical background for meaningful application of econometric techniques. Topics to be covered are (1) probability theory: probability spaces, random variables, distributions, moments, transformations, conditional distributions, distribution theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation, (2) statistics: sample statistics, sufficiency, exponential families of distributions. Further topics in statistics will be considered in Econometrics 520.

ECON 520 Econometrics II
Spring. 4 credits. Prerequisite: Economics 519.
This course is a continuation of Economics 519 (Econometrics I) covering (1) statistics: estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing and (2) econometrics: the general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

ECON 537 Economics of Financial Institutions
Fall. 4 credits. Prerequisites: Economics 313 and 314 and the consent of the instructor.
The purpose of this course is to introduce the student to some of the topics and analytic techniques of current macroeconomic research. The course will fall into three parts: dynamic programming, new Keynesian economics, and recent theories of economic growth. The dynamic programming section will include models of consumption, investment, and real business cycles. The new Keynesian section will cover models of wage and price rigidity, coordination failure and credit markets. The section on endogenous growth will look at recent efforts to add non-convexities to models of optimal growth. These topics are intended to complement the material on overlapping generations covered elsewhere.

ECON 538 Advanced Topics in Mathematical Economics
Fall or spring. Variable credit.
Among topics to be covered at an advanced level are game theory, coalition theory, bargaining and negotiation processes, cooperative procedures, microbehavior models, macro-social processes, and general systems analysis.

ECON 539 Advanced Social Theory for Peace Scientists
Spring. 4 credits. Prerequisites: Economics 509–510 and knowledge of microeconomic material on overlapping generations covered elsewhere.

ECON 540 Advanced Topics in Econometrics I
Fall. 4 credits. Prerequisites: Economics 519–520 or permission of instructor.
This course covered traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density.
analysis, and vector autoregressive models; parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including, unit root tests, cointegration, and permanent vs. transitory components.

[ECON 623] American Economic History
Fall or spring. 4 credits. Not offered 1996–97.

[ECON 624] American Economic History
Fall or spring. 4 credits. Not offered 1996–97.

[ECON 626] Methods in Economic History
Fall or spring. 4 credits. Not offered 1996–97.

[ECON 631] Monetary Theory and Policy
Spring. 4 credits. Prerequisites: ECON 514 or permission of the instructor. Advanced topics in monetary economics, macroeconomics, and economic growth—such as overlapping-generations, taxes and transfers, and fiscal policy—will be covered. Students will be introduced to economic history, with a focus on the development of the field of monetary economics over time.

[ECON 632] Monetary Theory and Policy
Fall. 4 credits. Prerequisites: ECON 631 or permission of the instructor. Advanced topics in monetary economics, macroeconomics, and economic growth—such as economic volatility, the "Burden of Government," and the role of the Federal Reserve System—will be covered. Students will be introduced to economic history, with a focus on the development of the field of monetary economics over time.

[ECON 635] Public Finance: Resource Allocation and Fiscal Policy
Spring. 4 credits. This course develops a mathematical and highly analytical understanding of the role of government in market economies and the fundamentals of public economics and related issues. Topics covered include generalizations and extensions of the fundamental theorems of welfare economics, in-depth analysis of social choice theory and the theory of implementation in economic environments, public goods, and equilibrium with complete and incomplete information. The course will also cover the implications of the theory for policy design and implementation.

[ECON 637] Location Theory and Regional Analysis
Fall. 4 credits. Prerequisites: Economics 509, 517, and Econometrics. Not offered 1996–97. Economic principles influencing the location of economic activity, its spatial equilibrium structure, and dynamic forces. Topics include spatial pricing policies, price regulation, and relocation by firms; residential location patterns; patterns of regional growth and decline; and patterns of urbanization.

[ECON 641] Seminar in Labor Economics
For description see ILRLE 744.

[ECON 642] Seminar in Labor Economics
For description see ILRLE 745.

[ECON 647] Economics of Evaluation (also Industrial and Labor Relations 647)
For description see ILRLE 647.

[ECON 648] Issues in Latin American Development
Fall. 4 credits. The topics include: "informal sector" (or multi-sector labor markets), evolving capital markets (particularly the market for short-term, domestic currency denominated public sector debt, privatization, etc.). The emphasis will be placed on the impact of these institutional (or structural) changes on economic growth.

[ECON 651] Industrial Organization and Regulation
Fall. 4 credits. This course focuses primarily on recent theoretical advances in the study of industrial organization. Topics covered include market structure, non-linear pricing, quality, durability, location selection, advertising, repeated games, collusion, entry deterrence, managerial incentives, switching costs and government intervention. These topics are discussed in a game-theoretic context.

[ECON 652] Industrial Organization and Regulation
Spring. 4 credits. Prerequisites: ECON 509 and 651. This course rounds out some topics in the Theory of Industrial Organization with the specific intent of addressing the empirical implications of the theory. The course reviews empirical literature in the SCP paradigm and in the NEO paradigm.

[ECON 653] Public Policy Issues for Industrial Organizations
Spring. 4 credits. Prerequisites: Economics 509, 510, and 651. Not offered 1996–97. The course takes an in-depth view of the interaction between the government and business. Methods of control including antitrust, price regulation, entry regulation, and safety regulation. Emphasis will be not only on the economic effects on business, but on the economics of selecting and evolving the method of control.

[ECON 655] Rivalry and Cooperation
Fall. 4 credits. Prerequisites: Economics 509. Graduate Core of instructor's permission. Not offered 1996–97. In standard models, economic interaction is impersonal. Agents respond to price signals and measure their own welfare not in relative but in absolute terms and cooperative behavior emerges only when it coincides with narrow self-interest. This course will explore the details of rivalry and cooperation in an effort to synthesize broader views of economic interaction. Topics will include the effects of concerns about relative income on wage rates, consumption, savings, and regulation; the effect of concerns about fairness on prices and wages; the conditions that foster trust and cooperation; and the role of positional competition in the distribution of economic rewards.

[ECON 656] Noncooperative Game Theory
Fall. 4 credits. Prerequisites: Economics 509–510 and 519. This course surveys equilibrium concepts for non-cooperative games. We will cover Nash equilibrium and a variety of equilibrium refinements, including perfect equilibrium, proper equilibrium, sequential equilibrium and more. We will pay attention to important special classes of games, including bargaining games, signalling games, and games of incomplete information. Most of our analysis will be from the strict decision-theoretic point of view, but we will also survey some models of bounded rationality in games, including games played by automata.

[ECON 657] Economics of Imperfect Information
Spring. 4 credits. Prerequisites: Economics 509–510 and 519. The purpose of this course is to consider some major topics in the economics of uncertain information. Although the precise topics considered will vary from year to year, subjects such as markets with asymmetric information, signalling theory, sequential choice theory, and record theory will be discussed.

[ECON 660] Topics in Political Economy
Fall. 4 credits. Prerequisite: Economics 513 or equivalent. This course will develop critiques and extensions of economic theory, taking into account the political and social moorings of economic activity and equilibria. The formation and persistence of social norms, the meaning and emergence of property rights, the role of policy advice in influencing economic outcomes; and the effect of political power and ideology on economic variables will be studied. While these topics were popular in the classical models of political economy, recent advances in game theory and, more generally, game-theoretic thinking allows us to approach these topics from a new perspective. Hence, the course will begin by devoting some lectures to elementary ideas in game-theory and strategic analysis.

[ECON 661] International Economics: Trade Theory and Policy
Fall. 4 credits. This course surveys the sources of comparative advantage. It analyzes simple general equilibrium models to illustrate the direction, volume, and welfare effects of trade. Topics in game theory and econometrics as applied to international economics may be covered.

[ECON 662] International Economics: International Finance and Open Economy Macroeconomics
Spring. 4 credits. This course surveys the determinants of exchange rates and theories of balance of payment adjustments. It explores open economy macroeconomics by analyzing models of monetary economics. Topics in monetary economics and econometrics as applied to international economics will be covered.
ECON 664 International Economics: Balance of Payments and International Finance
Fall or spring. 4 credits. Not offered 1996–97.

ECON 670 Economic Demography and Development
Fall or spring. 4 credits. Not offered 1996–97.

ECON 671 Economic Development and Development Planning
Spring. 4 credits.

Reviews the existing literature on the determinants of economic growth and the interrelationship between growth and income distribution through the process of economic development. A general equilibrium approach to development is taken. Computable general equilibrium models, based on social accounting matrices, are used to explore the performance of a variety of developing countries. Among the topics explored are: impact of structural adjustment and stabilization policies on growth, equity and internal and external equilibrium, sectoral interrelationship and interdependence through the growth process. Critical review and evaluation of national, sectoral and regional development models built for such developing countries as India, Brazil, Indonesia and Ecuador.

ECON 672 Economics of Development
Fall. 4 credits. Prerequisites: first-year graduate economic theory and econometrics.

Analytical approaches to the economic problems of developing nations. Topics to be covered include: some old and new directions in development economics thinking, the welfare economics of poverty and inequality, empirical evidence on who benefits from economic development, labor market models, project analysis with application to the economics of education, and development policy.

ECON 673 Economic Development
Fall or spring. 4 credits. Prerequisites: Economics 509 and 520. Not offered 1996–97.

The course is concerned with theoretical and applied works that seek to explain economic development, or lack thereof, in countries at low-income levels. Specific topics vary each semester.

ECON 674 Economic Systems
Spring. 4 credits.

The course deals with economic systems, with the formerly centrally planned economies, and with the economies in transition.

ECON 675 Comparative Economic Organization and Institutions

This course addresses problems of coordination, management, finance, and organizational structure in firms and, to some extent, economies. It covers topics such as coordination mechanisms for production activity, problems arising in the control of subordinate agents' behavior, decision making within firms, internal firm organization, financial institutions and loan contracts, and the market for firm control. Course material draws from literature on mechanism design and from the fields of industrial organization, finance, and comparative systems.

ECON 678 Economic Growth in Southeast Asia
Fall or spring. 4 credits. Not offered 1996–97.

ECON 681 Economics of Participation and Self-Management
Fall. 4 credits. Prerequisites: Economics 101–102, or permission of instructor. Not offered 1996–97.

For description see Economics 381. Economics 681 is given on a more advanced graduate level.

ECON 682 Seminar on Economics of Participation and Labor-managed Systems
Fall. 4 credits. Not offered 1996–97.

ECON 684 Seminars in Advanced Economics
Fall and spring. 4 credits.

The Department of English offers a wide range of courses in English, American, and Anglophone literature as well as in creative writing, expository writing, and film.

Literature courses focus variously on the close reading of texts, the study of particular authors and genres, questions of critical theory and method, and the relationship of literary works to their historical periods and to other disciplines. The department seeks not only to foster analytical reading and lucid writing but also, through the study of literary texts, to teach students about the nature of language, and to be alert to the rigors and pleasures of that ordinary and peculiar language, and to be alert to the rigors and pleasures of that ordinary and peculiar language, and to be alert to the rigors and pleasures of that ordinary and peculiar language, and to be alert to the rigors and pleasures of that ordinary and peculiar language.

Students who major in English develop their own programs of study in consultation with their advisers. Some focus on a particular historical period or literary genre; others combine sustained work in creative writing with the study of literature. Others pursue special interests in such areas as women's literature, Afro-American literature, literature and the visual arts, or critical theory. There are also many ways for students informally to supplement their course work in English, by attending the frequent lectures and poetry readings sponsored by the department, or by writing for campus literary magazines.

The Major

The Department of English recommends that its students prepare themselves for the English major by taking at least one introductory course. Freshmen interested in majoring in English are encouraged to take one of the following freshman seminars: The Reading of Fiction (English 270), The Reading of Poetry (English 271), Introduction to Drama (English 272). The courses concentrate on the skills basic to the English major and to much other academic work—responsive, sensitive reading and lucid, effective writing. English 270, 271, and 272, which may be used to satisfy the freshman writing seminar requirement, are open to all second-term freshmen. First-term freshmen with a score of 700 or above on the CEEB College Placement Tests in English composition or literature, or 4 or 5 on the CEEB Advanced Placement Examination in English, may enroll in English 270, 271, 272 as space permits (all students who have taken one freshman seminar are permitted to enroll in these courses as space permits).

ENGLISH 201 and 202, a survey of major British writers, though not required for the major, are strongly recommended for majors and prospective majors because they afford an overview of the history of English literature, providing an introduction to periods, authors, and genres that all Cornell students may find a more informed choice of advanced courses.

The American Literary Tradition (English 275), Creative Writing (English 280 or 281), and the Essay in English (English 295) are especially suitable in preparation for the major.

Course Requirements

Each major must complete with passing letter grades at least 36 credit hours in courses approved for the major. Students may count up to four courses for the major from the category entitled "200-level courses approved for the major." All English courses numbered 300 or above count toward the major. Of the 36 credits required for the major, 12 credits (three courses) must be taken in literature written before 1800. The remaining 24 credits count toward the English major a maximum of 12 credits in courses in literature and creative writing, at the 300 level or above, given by such departments as Comparative Literature, Theatre Arts, foreign languages, the Africana Studies and Research Center, and the Society for the Humanities. Double majors may count courses at the 300 level or above taken in their other major toward these 12 credits if such courses are approved by their English department adviser as relevant to the study of literature. English majors may use the same courses to satisfy both Arts college distribution requirements and English major requirements.

English majors are required to complete, with passing letter grades, six credits of foreign language study in courses which will count toward the major a prerequisite languages. These courses should be in the literature of the foreign language.

Advanced Placement credit DOES NOT fulfill this requirement, nor does the study of foreign literature in translation.) Majors are urged to complete this requirement by the end of their sophomore year, and those who enter Cornell without sufficient preparation should begin their language study at once.

HONORS

Prospective candidates for the degree of Bachelor of Arts with honors in English should...
Students in this seminar study plays, older and newer, in a variety of dramatic idioms and cultural traditions. A typical reading list might include works by Sophocles, Shakespeare, Molière, Chekhov, Brecht, Miller, Williams, Beckett, and O'Casey. Course work consists of writing and discussion and the occasional viewing of live or filmed performances.

Courses Primarily for Nonmajors

ENGL 205 Readings in English and American Literature #
Fall. 3 credits. R. Farrell. English Literature to 1800. This course is intended for nonmajors, and is open to any student interested in literature and culture. Authors covered include Chaucer, Shakespeare, Jonson, Swift, and Pope. There will be a take-home midterm and final, both open book. Students will be strongly encouraged to follow their own interests.

ENGL 210 Medieval Romances: The Voyage to the Otherworld #
Fall. 3 credits. T. Hill. The course will survey some medieval narratives concerned with transformative voyages to the otherworld or with the impinging of the otherworld upon ordinary experience. The syllabus will normally include some representative Old Irish otherworld literature; selections from The Mabinogion; selections from the Lais of Marie de France; Chretien de Troyes’s Erec, Yvain, and Lancelot; and the Middle English Sir Gawain and the Green Knight. We will finish by looking at a few later otherworld romances such as selections from J.R.R. Tolkien. All readings will be in modern English. Requirements: three brief (two or three typed pages) papers and a final exam designed to test the students’ reading.

ENGL 227 Shakespeare #
Fall and spring. 3 credits. Limited to 25 students. Fall: S. Davis and C. Levy; spring: B. Adams. A critical study of representative plays from the principal periods of Shakespeare’s career.

ENGL 288-289 Expository Writing
Fall and spring. 3 credits. Each section limited to 16 students. Students must have completed their colleges’ freshman writing requirements. English 288-89 offers guidance and an audience for students who wish to gain skill in expository writing. Each section provides a context for writing defined by a form or use of exposition, a disciplinary area, a practice, or a topic intimately related to the written medium. Course members will read in relevant published material and write and revise their own work regularly, while reviewing and responding to each other’s. As these seminar-sized courses depend on members’ full participation, regular attendance and submission of written work are required. Students and instructors will confer individually throughout the term. English 288 does not satisfy requirements for the English major.

Fall 1996:
Section 1.—Bright Lights, Big City: Young Adulthood and the Urban Experience—N. Revoyr

Section 2.—The Languages of Community—C. Carlson

Section 3.—The Essay: Personal to Public—D. E. Williams

Section 4.—Rights, Politics and the Constitution—H. Schweber

Section 5.—Understanding the Media—D. A. Williams

Section 6.—Writing in the Humanities—S. Davis

Section 7.—Issues and Audiences—B. LeGendre

Section 8.—Human Intelligence—D. Shapiro

Spring 1997: To be announced.

See English Department Guide to Course Scheduling for full fall and spring section descriptions.

Creative Writing

Students usually begin their work in Creative Writing with English 280 or 281, and only after completion of the Freshman Writing Seminar requirement. Please note that either English 280 or English 281 is the recommended prerequisite for 300-level creative writing courses. English 280 and 281 may satisfy a distribution requirement in your college (please check with your college advisor). English 382–383, 384–385, and 481–481 are approved for the English major.

ENGL 280-281 Creative Writing
Fall, spring, summer, and winter sessions. 3 credits. Prerequisites: completion of the Freshman Seminar requirement. Limited to 18 students.

An introductory course in the theory, the practice, and the reading of prose, poetry, and allied forms. Students are given the opportunity to try both prose and verse writing and may specialize in one or the other. Many of the class meetings are conducted as workshops. English 280 is not a prerequisite for English 281.

ENGL 382-383 Narrative Writing
See complete course description in section headed Courses for Sophomores, Juniors, and Seniors.

ENGL 384-385 Verse Writing
See complete course description in section headed Courses for Advanced Undergraduates.

Expository Writing

ENGL 381 Reading as Writing
See complete course description in section headed Courses for Sophomores, Juniors, and Seniors.

ENGL 386 Philosophic Fictions
See complete course description in section headed Courses for Sophomores, Juniors, and Seniors.

ENGL 387 Autobiography: Memoir, Memory, and History
Not offered 1996–97

ENGL 388-389 The Art of the Essay
See complete course description in section headed Courses for Sophomores, Juniors, and Seniors.
ENGL 202 The English Literary Tradition #

201 Fall; 202 Fall. W. Wetherbee.
Open to undergraduates who have completed the freshman writing requirement.
English 201 is not a prerequisite for 202. 201 may be used as one of the three courses before 1800 required of English majors.
Interpretation of major works ranging from Beowulf through Milton. Surveys Old English poetry, Chaucer, medieval romances, Spenser, Shakespeare, Renaissance lyric poetry, and Milton. Lectures and discussion sections.

ENGL 203 Major Poets
Spring. 3 credits. R. Gilbert.
Intensive readings in the work of six or seven poets chosen to represent important periods, modes, and assumptions about the uses of poetry. Poets to be studied may include William Shakespeare, Andrew Marvell, Alexander Pope, John Keats, Emily Dickinson, Robert Browning, Gwendolyn Brooks.

ENGL 204 Introduction to Medieval Literature (also LSP 240 and SPANL 242)
Fall. 3 credits. B. V. Olguin.
It is expected that by the year 2030, the Latino/a population in the United States will be the largest "minority group" in the country. This course seeks to introduce students to the growing body of literature across time, space, and genre, by the various U.S. Latino/a communities. Of particular interest are the manner and degree to which Latino/a literatures converge and diverge as they explore issues of "race," ethnicity, gender, sexuality, class, nationality, and identity in general, at a time when the American profile is increasingly becoming "Latinized." Authors examined include Tomás Rivera, Alurista, Gloria Anzaldúa, Cherrie Moraga, Jesús Colón, Miguel Píñero, Nicolaus Mohr, Cristina García, Oscar Hijuelos, Julia Alvarez, Ruben Martinez and several others.

ENGL 205 Twentieth-Century Women Novelists (also Women's Studies 251)
Spring. 4 credits. S. Samuels.
This course will be particularly concerned with questions about women's experience, perspective, and language raised by recent feminist criticism. We will read novels by Virginia Woolf, Louise Erdrich, Zora Neale Hurston, Jamaica Kincaid, Toni Morrison, and others. Assignments include two major papers, a research project, and a number of short in-class writings.

ENGL 206 Gender, Desire, and Sentimental Fictions (also Comparative Literature 214)
Spring. 4 credits. E. Dillon.
For complete description, see Comparative Literature 214.

ENGL 207 Introduction to Twentieth-Century Poetry
Spring. 3 credits. Not offered 1996-97.

ENGL 208 An Introduction to Medieval Epic #
Spring. 3 credits. This course may be used as one of the three courses before 1800 required for the English major. Not offered 1996-97.

ENGL 209 Introduction to U.S. Latino Literature (also LSP 240 and SPANL 242)
Fall. 3 credits. B. V. Olguin.
This course will introduce students to the wide range of writing by Asian Americans and to some critical issues concerning the production and the reception of Asian American texts. In reading through selected works of prose, poetry, and drama, we will be asking questions about the historical formation of Asian American identities and the problems of defining an Asian American literary tradition.

ENGL 210 Studies in Film Analysis
Fall and spring. 4 credits. Enrollment limited to 20 students. Preference given to English majors. L. Bogel.
Fall: Special topic: Interpreting Hitchcock.
Through detailed analysis of at least fifteen of Hitchcock's major films—from British silents such as The Lodger and the British talkies of the 30s (The Thirty-Nine Steps) to the early 40s work in Hollywood (Spellbound, Notorious), and major American films of his later period (Rear Window, The Birds)—we will consider Hitchcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to study, his films invite questions about film language, the ethics of spectatorship, and the nature of desire and sexuality. Frequent short essays and viewing exercises encourage students to engage through their viewing the course's critical concerns. Students must be free to attend regular evening screenings and video showings of the films once or twice a week. Lab fee.

ENGL 212 An Introduction to Medieval Epic #
Spring. 3 credits. This course may be used as one of the three courses before 1800 required for the English major. Not offered 1996-97.

ENGL 214 Introduction to American Indian Literature

ENGL 216 Asian American Literature (also Asian American Studies 262 and American Studies 262)
Fall. 3 credits. Staff.
This course will introduce students to the wide range of writing by Asian Americans and to some critical issues concerning the production and the reception of Asian American texts. In reading through selected works of prose, poetry, and drama, we will be asking questions about the historical formation of Asian American identities and the problems of defining an Asian American literary tradition.

ENGL 217 Studies in Film Analysis
Fall and spring. 4 credits. Enrollment limited to 20 students. Preference given to English majors. J. H. Bogel.
Fall: Special topic: Interpreting Hitchcock.
Through detailed analysis of at least fifteen of Hitchcock's major films—from British silents such as The Lodger and the British talkies of the 30s (The Thirty-Nine Steps) to the early 40s work in Hollywood (Spellbound, Notorious), and major American films of his later period (Rear Window, The Birds)—we will consider Hitchcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to study, his films invite questions about film language, the ethics of spectatorship, and the nature of desire and sexuality. Frequent short essays and viewing exercises encourage students to engage through their viewing the course's critical concerns. Students must be free to attend regular evening screenings and video showings of the films once or twice a week. Lab fee.

ENGL 218 Twentieth-Century Women Novelists (also Women's Studies 251)
Spring. 4 credits. S. Samuels.
This course will be particularly concerned with questions about women's experience, perspective, and language raised by recent feminist criticism. We will read novels by Virginia Woolf, Louise Erdrich, Zora Neale Hurston, Jamaica Kincaid, Toni Morrison, and others. Assignments include two major papers, a research project, and a number of short in-class writings.

ENGL 219 Gender, Desire, and Sentimental Fictions (also Comparative Literature 214)
Spring. 4 credits. E. Dillon.
For complete description, see Comparative Literature 214.

ENGL 220 Introduction to American Indian Literature

ENGL 222 American Literature (also Asian American Studies 262 and American Studies 262)
Fall. 3 credits. Staff.
This course will introduce students to the wide range of writing by Asian Americans and to some critical issues concerning the production and the reception of Asian American texts. In reading through selected works of prose, poetry, and drama, we will be asking questions about the historical formation of Asian American identities and the problems of defining an Asian American literary tradition.

ENGL 223 Studies in Film Analysis
Fall and spring. 4 credits. Enrollment limited to 20 students. Preference given to English majors. L. Bogel.
Fall: Special topic: Interpreting Hitchcock.
Through detailed analysis of at least fifteen of Hitchcock's major films—from British silents such as The Lodger and the British talkies of the 30s (The Thirty-Nine Steps) to the early 40s work in Hollywood (Spellbound, Notorious), and major American films of his later period (Rear Window, The Birds)—we will consider Hitchcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to study, his films invite questions about film language, the ethics of spectatorship, and the nature of desire and sexuality. Frequent short essays and viewing exercises encourage students to engage through their viewing the course's critical concerns. Students must be free to attend regular evening screenings and video showings of the films once or twice a week. Lab fee.

ENGL 224 Chicanos and Film: Representations of La Raza (also LSP 242 and SPANL 244)

ENGL 225 Chicano/a and Film: Representations of La Raza (also LSP 242 and SPANL 244)

ENGL 226 Studies in Film Analysis
Fall and spring. 4 credits. Enrollment limited to 20 students. Preference given to English majors. J. H. Bogel.
Fall: Special topic: Interpreting Hitchcock.
Through detailed analysis of at least fifteen of Hitchcock's major films—from British silents such as The Lodger and the British talkies of the 30s (The Thirty-Nine Steps) to the early 40s work in Hollywood (Spellbound, Notorious), and major American films of his later period (Rear Window, The Birds)—we will consider Hitchcock as a major technical and stylistic innovator in the history of cinema. As texts for psychoanalytic and feminist approaches to study, his films invite questions about film language, the ethics of spectatorship, and the nature of desire and sexuality. Frequent short essays and viewing exercises encourage students to engage through their viewing the course's critical concerns. Students must be free to attend regular evening screenings and video showings of the films once or twice a week. Lab fee.

ENGL 227 Folklore and Literature

ENGL 228 Lesbian Personae (also Women's Studies 279)

ENGL 229 Topics in American Indian Literatures

ENGL 230 Scottish Literature and Culture #
Fall. 4 credits. Enrollment limited to 20 students. This course may be used as one of the three pre-1800 courses required of English majors, but nonmajors are welcome. H. Shaw and T. Hill.
Scotland was an independent kingdom during most of its history. Although it is now politically united with England, it preserves its cultural distinctiveness. This course provides an introduction to Scottish literature and its cultural context. We will focus on important Scottish literary texts, with special emphasis on the medieval period and the eighteenth and nineteenth centuries. In addition, we will provide something of an introduction to Scottish history and to nonliterary expressions of Scottish culture (such as music and painting). The course should appeal to those who wish to learn more about their Scottish heritage, to those who wish to view in a new perspective works previously considered monuments of "English" literature, and to those who simply wish to know more about a remarkable culture and the literature it produced. Some of the texts will be read in Scots, but no familiarity with Scots or earlier English will be presumed. Study materials will include Henryson, Dunbar, Anonymous (the Scottish Ballads), Humle, Burns, Scott, Hogg, Stevenson, and Grasiss Gibbon.

ENGL 231 The American Literary Tradition (also American Studies 279)
Fall. Spring. 3 credits. Recommended for prospective majors in American Studies.
Fall: B. Maxwell; spring. J. Bishop.
The problem of an American national literature is explored through the reading, discussion, and close analysis of texts across the range of American literary history. Not a survey, this course focuses on the relations of the texts to each other, the shaping of national identities in those relationships, and the assumptions about history, language, and the self that underlie them.

ENGL 232 Folklore and Literature

ENGL 233 Lesbian Personae (also Women's Studies 279)

ENGL 291 American 1920s: Literature and Culture (also American Studies 291) Spring. 4 credits. B. Maxwell. The course will take a broad approach to the cultural activities of the decade that followed the First World War and preceded the Great Depression. Topics will include the new motives, forms, and audiences of fiction and poetry; literary realism under duress; the Harlem Renaissance; postwar blues and the influenza epidemic; suffragist politics and the New Woman; Fugitive revanchism; the masses as a matter for intellectual scrutiny; Fordism; the Red Scare, nativism, and the fear of anarchy; marketplace phantasmagoria, the cultures of radio, children’s illustrated books, popular song and jazz. We will ask: what made for aesthetic radicalism and political radicalism in the period; what were the relations of pleasure and labor; how were differentiated the self-consciousness of the “lost generation”; and what appear to be the legacies of the decade? Readings will include essays by Ralphson Boume, Margaret Sanger, Walter Lippmann, W.E.B. DuBois, and Lewis Mumford; poems by T.S. Eliot, William Butler Yeats, Ernest Hemingway, Sherwood Anderson, Dorothy Parker, Nella Larsen, John Dos Passos, Samuel Omri, Sinclair Lewis, Dashiell Hammet, and perhaps even F. Scott Fitzgerald; and poetry by Pound, Eliot, Williams, H.D., Langston Hughes, Hart Crane, Vachel Lindsay, Marianne Moore, and Louis Zukofsky.

ENGL 295 The Essay in English # Spring. 4 credits. Prerequisite: completion of freshman seminar requirement. This course may be counted as one of the three pre-1800 literature courses required of English majors. L. Falksindy. What is an essay and what is it for? How does it work as prose discourse, as a text of the self? Impelled by such generic questions and others raised by Montaigne’s French Essais (1580), this course explores the invention of the essay in English during the sixteenth and seventeenth centuries and its flowering in the periodicals and magazines of the eighteenth and nineteenth centuries. Readings include selections from the work of Bacon, Cornwallis, Donne, Earle, Cowley, Temple, Swift, Addison, Steele, Johnson, Franklin, Goldsmith, Lamb, Hazlitt, Irving, and DeQuincey. Essays by earlier writers are read alongside them, especially with readings from more recent practitioners of the genre including Dubois, Woff, Orwell, Welty, Baldwin, Selzer, Ozick, Acchebe, Didon, S. Naipaul, Dillard, Sanders, and others. This is a course for students interested in reading essays and in thinking about how this nonfiction prose genre developed and how it works. No special background in literary history is assumed.

Courses for Sophomores, Juniors, and Seniors
Courses at the 300 level are open to sophomores, juniors, and seniors and to others with the permission of the instructor.

ENGL 302 Literature and Theory (also English 702 and Comparative Literature 302 and 702) Fall. 4 credits. J. Culler. Study of issues in contemporary theoretical debates, with particular attention to structuralism, deconstruction, psychoanalysis, and feminism. Readings by Barthes, Derrida, Foucault, B. Johnson, J. Rose, and others. No previous knowledge of literary theory is assumed.

ENGL 310 Old English Literature in Translation # 4 credits. This course may be used as one of the three courses before 1800 required for the English major. Not offered 1996–97.

ENGL 311 An Introduction to Early Medieval Archaeology and Culture (also Archaeology 311, English 603) # 4 credits. Not offered 1996–97.

ENGL 319 Chaucer # Fall. 4 credits. This course may be used as one of the three courses before 1800 required of English majors. A. Galloway. This course will introduce the major (and some minor) works of Geoffrey Chaucer, perhaps the greatest satirist and among the greatest love poets in the language. Close study of his poetry and the Middle English in which he wrote will be supplemented by lectures and discussions of his life, society, literary background, and religious context. Requirements are presentations, two papers, and a final examination. No background in Middle English is required.

ENGL 321 Spenser and Malory # Fall. 4 credits. Limited to 45 students. This course may be used as one of the three pre-1800 courses required of English majors. C. Kaske. Paired selections covering about half of Malory’s Morte d’Arthur and half of Spenser’s Faerie Queene, with some minor works of Geoffrey Chaucer, perhaps the greatest satirist and among the greatest love poets in the language. Close study of his poetry and the Middle English in which he wrote will be supplemented by lectures and discussions of his life, society, literary background, and religious context. Requirements are presentations, two papers, and no exams.

ENGL 322 The Seventeenth Century # Spring 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. B. Adams. English poetry, prose, and drama from the Jacobean, Caroline, and Commonwealth periods (1603–1660). Readings from Shakespeare, Bacon, Jonson, Donne, Herbert, Herrick, Molière, Milton, and others, with attention to political and cultural contexts as well as literary analysis and problems of interpretation.

ENGL 325 The Culture of the Renaissance II (also Comparative Literature 362, and History 364) # 4 credits. Not offered 1996–97.

ENGL 327 Shakespeare # Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. C. Levy. A survey of representative Shakespearean drama designed to illustrate the range of the playwright’s artistic achievement.

ENGL 329 Milton # Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. G. Teskey. An introduction to the life, poetry, and thought of John Milton.

ENGL 330 Restoration and Eighteenth-Century Literature # Spring. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. N. Saccamano. Close reading of texts in a variety of genres (poetry, fiction, drama, autobiography) will be guided by such topics as the nature of satire, irony, and mock-forms; the languages of the ridiculous and the sublime; the authority and fallibility of human knowledge; connections among melancholy, madness, and imagination. Works by such writers as Aphra Behn, Swift, Dryden, Swift, Gay, Defoe, Johnson, Boswell, Sterne, and Cowper.

ENGL 333 The Eighteenth-Century English Novel # Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. R. Bogel. A study of form and theme in the British novel tradition. The course focuses on representative novels mostly from the eighteenth century, paying close attention to language and structure but also to cultural contexts and to the development as a novel form itself. We explore such topics as truth and fiction; romance, realism, satire, and the gothic; heroic and mock-heroic; modes, sentiment, sensibility, and sexuality; race and gender; and the forms and uses of narrative. Readings may include Gervants’ Don Quixote, Behn’s Oroonoko, Defoe’s The Journal of a Plague Year, Richardson’s Pamela: or Virtue Rewarded, Fielding’s Joseph Andrews, Defoe’s Memoirs of a Castle of Pleasure, Johnson’s Rasselas, Walpole’s The Castle of Otranto, Sterne’s Tristram Shandy, Mackenzie’s The Man of Feeling and Austen’s Pride and Prejudice.

ENGL 340 The English Romantic Period # 4 credits. R. Parker. Readings in various writers from the late 1780s through the 1820s—among them Blake, Burke, Wordsworth, Wollstonecraft, Coleridge, Byron, Mary Shelley, Percy Shelley, and Keats—with major emphasis on poetry but substantial collateral attention also to prose fiction, drama, letters, and criticism. The course will be concerned as much with formal experiments in narrative, lyric, and dramatic representation as with political and cultural contexts in an age of national reform and international revolution.

ENGL 346 The Female Literary Tradition (also Women’s Studies 348) # 4 credits. Not offered 1996–97.
ENGL 349 Readings in Feminist Literary Theory
Fall. 4 credits. D. Schwartz.
We will be looking at the development of feminist theories of language and literary practice and especially at conflicts among competing accounts, with some attention to seminal (I use the word advisedly) essays by Lacan and writers like Cixous and Butler. Key authors include Spivak, Cixous, Irigaray, Kristeva, Huggins, MacKinnon, Alcoff, and Butler.

ENGL 350 The Early Twentieth Century (to 1914)
Fall. 4 credits. D. Schwartz.
Critical study of major works by Hardy, Conrad, Lawrence, Joyce, Woolf, Eliot, Yeats, Hopkins, Wilde, Wallace Stevens and others. While the emphasis will be on close reading of individual works, we shall place the authors and works within the context of literary and intellectual history. The course will seek to define the development of literary modernism (mostly but not exclusively in England), and relate literary modernism to other intellectual developments, including those in painting and sculpture, especially the works of Picasso, Rodin and Matisse.

ENGL 353 Postcolonial Literature

ENGL 354 The British Modernist Novel

ENGL 355 Decadence (also Women's Studies 358)

ENGL 358 Twentieth-Century Experimental Fiction by Women (also Women's Studies 358)
Fall. 4 credits. M. Hite.
With only a few exceptions, the works of fiction that we associate with the two great avant-garde movements of the twentieth century, modernism and postmodernism, were written by men. Does this mean that women writers prefer traditional modes of narration or are uneasy with innovation or have some sort of innate or acculturated affinity with realism or naturalism? This seminar will examine the cultural contexts that may bias readers against seeing what is genuinely new and exciting in works by female authors, as well as ways that the works themselves may or may not resemble works by men. It will acknowledge experimental writers who are women—the difference that sexual differences may make. Writers include Virginia Woolf, H.D. (Hilda Doolittle), Djuna Barnes, Doris Lessing, Toni Morrison, and Margaret Atwood.

ENGL 360 The Esthetes and Their Critics

ENGL 361 Early American Literature (also American Studies 361)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. J. Porte.
American writing from the 1630s to the 1780s, including prose and poetry by the Puritans, Edwards, Franklin, Crevecoeur, Equiano, Jefferson, Rebecca Rush, Irving, Bryant, Cooper, and the early work of Poe, Hawthorne, and Emerson.

ENGL 362 The American Renaissance (also AM ST 362)
Spring. 4 credits. D. Fried.
The florescence of literary culture in New England and elsewhere, in a range of modes, including poetry, essays, travel writings, sketches, novels, journals, memoirs, reviews, public speeches, and personal letters. Readings include Emerson, Thoreau, Whitman, Melville, and Dickinson, with some attention to figures now considered "minor" or chiefly of historical interest, but who were central to the nineteenth-century literary scene, such as Lowell, Longfellow, Whittier, Stowe, Alcott, and Margaret Fuller. As time permits, related topics as contexts for literature: painting and photography, the growth and design of American cities, domestic architecture, responses to the Civil War, cross-Atlantic influences.

ENGL 363 The Age of Realism and Naturalism
Spring. 4 credits. M. Seltzer.
The literary expression of new attitudes toward American society and culture between the Civil War and the First World War. We will examine a number of representative instances, chiefly fictional or historical, selected from the work of such authors as Whitman, Twain, Howells, Cable, H. James, W. James, Crane, Wharton, H. Adams, S. O. Jewett, Dreiser, and Cather.

ENGL 364 American Literature between the Wars (also American Studies 364)

ENGL 366 The Nineteenth-Century American Novel (also American Studies 366)
Fall. 4 credits. Enrollment limited to 65 students. D. McCall.
A study of the American fiction in its first flowering, this course will include such major works as Hawthorne's The Scarlet Letter, Melville's Moby-Dick, James's The Portrait of a Lady, and Mark Twain's Adventures of Huckleberry Finn.

ENGL 367 The Modern American Novel (up to WW II)

ENGL 369 Survey in African American Literature (also 1917 (also AM ST 369)
Spring. 4 credits. Lois Brown.
In this course we will read poetry, drama, fiction, and non-fiction produced by African American writers of the eighteenth, nineteenth, and early twentieth centuries. Readings may include the following: poetry by Paul Laurence Dunbar, Phillis Wheatley, and James Monroe Whitfield; narratives by Frederick Douglass, Elizabeth Keckley, Harriet Wilson, and Harriet Jacobs; novels by William Wells Brown, Pauline Hopkins, Sutton Griggs and James Weldon Johnson; short stories by Charles Chesnutt, Frances Harper, and Alice Dunbar-Nelson; drama by Pauline Hopkins; and essays by Anna Julia Cooper, W.E.B. DuBois and Ida B. Wells. Selected texts may include Autobiography of an ExColoured Man, Colotl, Contending Forces, My Bondage and My Freedom, Our Nig, The House Behind the Cedars, The Souls of Black Folk, Sport of the Gods and Up From Slavery.

ENGL 370 Nineteenth-Century English Novel (also Women's Studies 370)
Spring. 4 credits. E. Hanson.
Nineteenth-century novels are notorious for their marriage plots. To assume that marriage or suicide is the only fate appropriate for women; nevertheless, the best of these novels offer rich insights into the psychology and social condition of women, as well as complex explorations of the dynamics of sexuality and gender. Furthermore, the Victorian period saw an efflorescence of great literature written by women, especially in the genre of the novel. We will discuss the relationship of gender to language and literary forms, to reading and writing as a practice, to the politics of marriage and family life, to capital and property, and to the rhetoric of love and sexual desire. We will focus on a few of the most memorable heroines of the period as they appear in the novels of Jane Austen, Charlotte Bronte, Leo Tolstoy, Gustave Flaubert, George Eliot, Thomas Hardy, and Kate Chopin.

ENGL 371 American Poetry to 1950 (also American Studies 371)
Fall. 4 credits. R. Gilbert.
A critical examination of the American poetic tradition, particularly as it evolves from Emerson. Poets to be considered will include Walt Whitman, Emily Dickinson, Robert Frost, Ezra Pound, William Carlos Williams, Wallace Stevens, T.S. Eliot, Marianne Moore, H.D., Langston Hughes, and Hart Crane.

ENGL 372 English Drama to 1700 (also Theatre Arts 372)
Fall. 4 credits. This course may be used as one of the three pre-1800 courses required of English majors. Not offered 1996–97.

ENGL 373 English Drama from 1700 to the Present (also THEATR 373)
Spring. 4 credits. S. McMillen.
The modern side of English drama, from the Restoration to contemporary plays. Writers include Aphra Behn, William Congreve, R.B.Shendran, P. B. Shelley, Bernard Shaw, and Caryl Churchill. Emphasis on drama as a performed event as well as a literary text.

ENGL 374 Nineteenth-Century American Women Writers (also Women's Studies 374 and American Studies 374)
Spring. 4 credits. Lois Brown.
In this cross-cultural examination of nineteenth-century American women writers, we will contrast a variety of nineteenth-century works of fiction, political/feminist manifestos, and slave narratives. We will investigate the ways in which these writers used their texts to construct culturally valuable and authentic selves. We will also consider tensions between "sentimental" idealism and political pragmatism, passionless femininity and expressed sexuality, restrictive domesticity and dangerous but vital individual or historical identity. Readings will include works by authors such as Louisa May Alcott, Lydia Marie Child, Kate Chopin, Fanny Fern, Pauline Hopkins, Emma Dunham-Kelley, Frances Harper, Catherine Maria Sedgwick, Harriet Beecher Stowe, and Harriet Wilson.

ENGL 377 Gay Fiction (also Women's 376)
Fall. 4 credits. E. Hanson.
This course offers an overview of male homoerotic narratives in literature and film. We will examine a number of texts from different historical and cultural sources to discuss the literary and cinematic construction
of desire between men. The course is organized around the various persons who have written from diverse historical paradigms for the articulation of modern gay identity. Topics for discussion will include Platonian and Christian idealism, sublimation, sexual encoding, the gay outlaw, decadence, psychoanalysis. AIDS, art, desire, and identity across race, class, generation, and sexual orientation. We will discuss texts by Plato, Christopher Marlowe, Sigmund Freud, Thomas Mann, Tennessee Williams, Jean Genet, Manuel Puig, Alan Hollinghurst, Carson McCullers, Robinson's Housekeeping, as well as films by Pier Paolo Pasolini, Derek Jarman, Pedro Almodóvar, Rosa von Praunheim, Todd Haynes, and Marlon Riggs, among others. Attendance at weekly film screenings is required. Nominal lab fee.

ENGL 386 Philosophic Fictions
Spring. 4 credits. Permission of the instructor. Our emphasis will center on the role of the unconscious in the creative act, as well as in the production of history. We will examine the work of such philosophers as Plato, Gorgias, Swift, Voltaire's "Moderate Proposal," Voltaire's Candide, St. John Mandeville's Travels, and Jonathan Swift's "A Modest Proposal." We will read the work of such writers as Samuel Lover, Charles Stewart Parnell, William Carleton, Hubert Butler, Arnold Bennett, John Hewitt, Douglas Hyde, James Joyce, Samuel Lover, Charles Stewart Parnell, and J. M. Synge. Our approach will be interpretive and critical. This course will be of interest to all students planning to write honors theses in English or another discipline.

ENGL 388-389 The Art of the Essay
Fall. 4 credits. Limited to 15 students. Prerequisite: permission of instructor. We will consider the essay as a "thought-experiment," a machine for "rewriting" the texts read. This is a course for English majors and non-majors who want to extend their mastery of critical and interpretive prose and the self-restrained way in which they use it. It will be helpful for students planning to write honors theses in English or another discipline.

ENGL 391 Irish Studies: Since the Eighteenth Century
Fall. 4 credits. S. Siegel. Organized opposition to English rule emerged in the South of Ireland in the mid-nineteenth century. In many respects it was consolidated for remaining within the United Kingdom. This introductory course is organized around a sequence of episodes in the unfolding awareness of divisions within Ireland and of the vexed relations between England and Ireland. Readings will be drawn chiefly from documentary and social history of Ireland and from the artworks—poetry, prose, drama, painting and music—that form part of this history. Topics will include the Young Ireland Movement; the formation of the United Irishmen; the Poets of '48; the De-Anglicization of Ireland; the "Irish Renaissance"; the Abbey Theatre; the Irish in England. Authors will include Hubert Butler, William Carleton, Thomas Davis, Charles Gavan Duffy, Maria Edgeworth, Jane Egee, Lady Augusta Gregory, John Hewitt, Douglas Hyde, James Joyce, Samuel Lover, Charles Stewart Parnell, G. B. Shaw, J. M. Synge, Oscar Wilde, W. B. Yeats. Weekly lectures and some sections.

ENGL 395 Video: Art, Theory, Politics (also Theatre Arts 395) 4 credits. Not offered 1996-97

Courses for Advanced Undergraduates
Enrollment in courses at the 400 level is generally limited by prerequisite or permission of the instructor.

ENGL 402 Literature as Moral Inquiry
Fall. 4 credits. S. Mohanty. What can literary works, especially novels and short stories, tell us about moral issues? Should they be seen as suggesting a form of moral inquiry similar to the kind of philosophical discussion we get in, say, Aristotle's Nicomachean Ethics? Do they deal with the same range of issues? Can reading philosophical works in ethics together with novels that deal with similar themes help us understand these themes better? This course is an attempt to answer these questions. We will read selections from key texts in moral philosophy, including works by Aristotle, Kant, Marx, Nietzsche, and Rawls. Our attempt will be to use these works to help us understand the nature of moral debate and inquiry in novels like Eliot's Middlemarch, James's Portrait of a Lady, Swift's "Modest Proposal," and Conrad's Heart of Darkness. We will also read philosophical works in ethics together with novels that deal with similar themes.

ENGL 404 History into Fiction: Nazis and the Literary Imagination (also COM L 404, and GER ST 414) Fall. 4 credits. E. Rosenberg. The twelve years of Hitler's rule remain the most critical, "longest" years of the century. We shall read some seven or eight texts by Anglophonic and Continental novelists (and a few playwrights and poets) that explore salient features of the regime. Hitler's rise to power, Goebbels' Mann's "Marie and the Magician," Brecht's ArturoUi, Faulkner's "Percy Grimm," Isherwood's Goodbye to Berlin; civil life in Nazi Germany (Brecht's "Jewish Wife" and Grass' Tin Drum). World War II and the Occupation of Europe (Camus' The Plague, Boell's short stories...
ENGL 405 The Politics of Contemporary Criticism

ENGL 407 The Geography of Race
(also ENGL 637, Society for Humanities 421)
Spring. 4 credits. S. Wong.
For complete description, see S HUM 421.

ENGL 408 Poetry of the 1990s
(also COM L 408, GER ST 470)
For description, please see COM L 408.

ENGL 411 Introduction to Old English
(also English 611) #
Fall. 4 credits.
This course may be used as one of the three pre-1800 courses required of English majors. T. Hill.
Why take "Old-Anguish"? A reason for anyone to consider a course in the earliest extant English language and literature is that it will expand your scope in considering later forms of the English language and subsequent literary genres. Old English elegies, for instance—the compilation of solitary, history-burdened men and women—are important parts of the entire tradition of lyric poetry; dream poetry in English also begins here; so does English epic and mini-epic.

In especially the first few weeks we will attend primarily to the language; from the beginning, however, cultural and literary issues will be brought to bear on the details of language, rhetoric, and narrative form. We will spend the balance of the course translating and discussing poetry and prose. No prerequisites; daily translation, a midterm, a final, and a short paper or some other appropriate project are required.

ENGL 412 Beowulf (also English 612) #
Spring. 4 credits.
This course may be used as one of the three pre-1800 courses required of English majors. A. Galloway.
A close reading of Beowulf. Attention will be given to relevant literary, cultural, and linguistic issues. One semester's study, or the equivalent, of Old English is a prerequisite.

ENGL 413 Middle English (also English 613)

ENGL 416 Chaucer and the Politics of Love #
Spring. 4 credits.
This course may be used as one of the three pre-1800 courses required of English majors. W. Wetherbee.
The course will be organized around a reading of Chaucer's great narrative poem Troilus and Criseyde, in the context of late-medieval English social and sexual politics. Readings will include classical and medieval love-lyric and romance; Ovid's Art of Love; and medieval theorists of sexual and romantic love. Requirements for the course will include some practice in reading Chaucer aloud, one or two in-class presentations, two short writing exercises and a term-paper.

ENGL 417 Early Medieval Archaeology and Literature
(also ENGL 617, Archeo 417, & 617)
Spring. 4 credits.
Permission of the professor is required, and the number of students will be limited to fifteen. This course may be used as one of the three pre-1800 courses required of English majors. R. Farrell.
This course will begin with early Christian England, and will deal primarily with the period 600-1300. No culture exists in isolation, so the influence both of Irish and Scandinavian culture will also be examined. Students will do frequent oral reports and a take home mid-term. Undergraduates will do either a final exam or a research paper, and graduates will do both. The course will have a most unusual element, for the Metropolitan Museum of Art has agreed to loan us a number of early medieval artifacts for study; this hands-on experience will take place in the study gallery of the Herbert F. Johnson Museum of Art.

ENGL 418 Literature and Institutions, 1350-1500
(also ENGL 618) #

ENGL 423 Seventeenth-Century Lyric
(also ENGL 612) #
Spring. 4 credits.
This course may be used as one of the three pre-1800 courses required of English majors. B. Adams.
Major comedies and tragicomedies by Shakespeare's principal contemporaries: Christopher Marlowe, John Lyly, Thomas Kyd, Ben Jonson, John Marston, John Webster, Thomas Middleton, John Fletcher, John Ford, and others.

ENGL 427 Shakespeare #
Spring. 4 credits.
This course may be used as one of the three pre-1800 courses required of English majors.
Spring: Shakespearean Tragedy.
G. Teskey.
We will follow the development of Shakespeare's tragic art, its relative naïve beginnings to the artistic and psychological crisis of Hamlet and thence to the supreme achievement of the mature tragedies. Plays to be read are the three parts of Henry VI, Richard III, Titus Andronicus, Richard II, Julius Caesar, Hamlet, Otello, King Lear, Macbeth, Antony and Cleopatra, and Coriolanus. Shakespeare's contemporaries and competitors, Kyd, Marlowe, and Jonson will be considered, as well the political context of Shakespeare's tragic writing, in particular the trial and execution of Essex. Attention will be paid to such technical matters as staging, structure, character, and versification, but with the purpose of discovering how Shakespeare continually sets himself new, and increasingly difficult, problems. We will consider how these problems become, in Shakespeare's hands, inseparable from exploring emotional experiences (such as cruel love and eroticism) that lie at the boundaries of social and ethical order. Some attention will be given to the theory of tragedy, with readings from Aristotle, Hegel, Nietzsche, Brecht, Frye, and Girard. Prerequisite: English 327 or equivalent.

ENGL 428 Fictions of Change:
Shakespeare, Scott, Achebe (also Comp. Lit 438).
Fall. 4 credits. Limited to 20. Non-majors are welcome. H. Shaw.
How do people from different ages and cultures deal with social and political change? When change seems irresistible, does this alter our sense of what it means to be human, by eroding our faith in human choice and moral responsibility? This course considers such questions. We read literary works by Shakespeare, Scott, Balzac, and Achebe, depicting periods of historical transition in England, Scotland, France, and Nigeria. Our assumption will be that plays and novels sometimes explore life in history more powerfully and suggestively than do the writings we normally think of as "history." Reading and discussing individual novels and plays will be our primary business (and pleasure). As time allows and class interest suggests, we will also turn our attention to the source materials our authors drew upon and to theories, past and present, about history and its relationship to literature.

ENGL 429 Readings in the New Testament
(also NES 429 and Religious Studies 429) #
Not offered 1996-97.

ENGL 430 Geography, Literature, and Critical Social Theory
(also English 635 and Society for Humanities 409)
Fall. 4 credits. S. Wong.
For complete description, see Soc. Hum. 409.

ENGL 431 Studies in Enlightenment
(also Women's Studies 431) #
Fall. 4 credits.
This course may be used as one of the three pre-1800 courses required of English majors. M. Jacobus.
Topic for Fall 96: Mary Wollstonecraft to Mary Shelley.
In this seminar we will focus on the writings and the autobiographical and biographical constructions of two famous women who were mother and daughter as a means to explore women's fiction from Wollstonecraft to Shelley. We will read Mary Wollstonecraft's major writings, including many of her letters, and her travel book, Letters written during a short residence in Sweden, Norway, and Denmark, as well as Godwin's Memoir of the Author of the Rights of Woman. Alongside Wollstonecraft, we will read major novels by less-known feminists of the period, Elizabeth Inchbald's A Simple Story, Mary Hays' Emma Courtney, and Eliza Fenwick's Secret. The central portion of the course will look at Jane Austen (Sense and Sensibility, Mansfield Park) and Maria Edgeworth (Belinda and Castle Rackrent)—the "conservative" but (arguably) feminist women writers of the period. In the latter part of the course, we will read Mary Shelley's writings, starting with Frankenstein; or, the Modern Prometheus, including her visionary or dystopic novels, Valperga and The Last Man, as well as her incest novel, Mathilda. The seminar will include readings that situate Wollstonecraft and her contemporaries, Austen, Edgeworth, and Shelley in relation to feminist theory and criticism.
ENGLISH 411

ENGL 437 Fictions of Apartheid and Modes of Liberalism
Fall. 4 credits. B. Jeyiho.
This course involves a study of selected works of four major contemporary white South African authors, Athol Fugard, Nadine Gordimer, Breyten Breytenbach, and J. M. Coetzee. The genres include drama, fiction, and the essay. Issues examined include modernity and Apartheid, constructions and deconstructions of racialized identity, ideological interpellations of the subject by juridical and cultural texts, revolutionary optimism and philosophical pessimism.

[ENGL 439] Austen and the Eighteenth Century

ENGL 442 Law and Literature
Spring. 4 credits. I. Tucker.
Since the early 1980s, literary critics and legal scholars have become increasingly eager to consider the categories of "law and literature" in relation to one another. Ought we to see this newly fashionable juxtaposition as a search for political relevance (on the part of literary critics), cultural weightiness (on the part of legal scholars) or, an example of mere (economically driven) willfulness? If, intuitively, we feel that law and literature "belong" together, what is it about the way in which the two categories organize the questions they ask, the ways they construct "subjects," envision agency, assign responsibility, the ways they establish their own "truth-telling" authority, that makes us think that they depend upon one another culturally?

We will begin by examining the rhetoric of law, reading a number of legal cases to see how they function as narratives, and by looking briefly at how Anglo-American legal writing has changed over the centuries. Is the use of "legal fictions" a sign that the law has ventured onto shaky ground, that it is passing judgment beyond its rightful ken, or are legal fictions a means of articulating how the law operates at all times? Is the "case law" tradition of legal writing (and legal pedagogy) simply a compelling way of offering examples or is it something more? We will then look at a comparable or even a rival tradition, that take up questions of law, more or less explicitly: Fielding's Tom Jones, Dickens' Bleak House, Dostoevsky's Crime and Punishment, Percy Shelley's The Cenci, Melville's "Bartleby the Scrivener," Twain's Pudd'nhead Wilson/Those Extraordinary Twins, Forster's Passage to India, Wright's Native Son, and Arendt's Eichmann in Jerusalem. Finally, we will examine some of the recent work emerging out of the law/literature "subdisciplines" like Critical Legal Studies, and certain versions of "The New Historicism" in order to ask how these apparently new ways of thinking revise, or remain caught within, the social and professional disciplines from which they have emerged.

ENGL 443 The Dandy in London and Dublin: 1790-1890
Spring. 4 credits. S. Siegel.
The emergence of the figure of the dandy coincided with a cultural form. This seminar will trace the transformation of that form, in and out of fiction. Our readings, drawn from novels and plays, memoirs, anecdotes, reviews, and graphic representations in the periodical press, will be guided by four questions: How does the word "dandy" behave in different temporal and geographical contexts? What is the form of change? From whom were "dandies" thought to differ? How are we to understand the politics of this literary legend and of this cultural form? Readings will include Baudelaire, Boethius, Bulwer, Byron, Carlyle, Chesterfield, Brumwell, Lover, Pater, Sheridan, Stein, Wilde, and Woolf.

[ENGL 444 Nineteenth-Century Women's Fiction (also Women's Studies 445)]

ENGL 446 Victorian Poetry
Spring. 4 credits. D. Mermin.
Reading of poems by Tennyson, Barrett Browning, Browning, Arnold, Emily Bronte, Christina Rossetti, and Swinburne, with particular attention to issues of gender and sexuality, cultural authority, religion and science, social conflict and social change as well as of genre and style.

[ENGL 448 The American Short Story]

ENGL 450 The History of the Book
Spring. 4 credits. Limited to 20 students. Prerequisite: permission of the instructor. D. Eddy.
A study of the physical aspect of books printed during the last six centuries. Included are papermaking, typography and printing, bookbinding, and the history of book illustrations; the transmission of texts and bibliographical descriptions of hand-printed and modern trade books. Above all, this is the study of the book as a work of art.

ENGL 453 Oscar Wilde and the 1890s
Fall. 4 credits. S. Siegel.
This seminar will consider four topics that recur in the writings of Oscar Wilde. They are the same topics that recur in the periodical press during the last decades of the nineteenth century: the idea of "decadence" in social life and in artworks, markers of gender and markers of social value; the emergence of the "Dandy" as a figure of artworks and history to one another. From Wilde's many writings we will select five texts: The Soul of Man Under Socialism, The Picture of Dorian Gray, The Importance of Being Earnest, Tug, and De Profundis. We will ask how Wilde was viewed by his contemporaries and how London literary culture received his work. To answer these and other questions we will rely principally on discussions in the periodical press of the 1870's and after.

[ENGL 455 The Aesthetics and Their Critics: 1860-1900]

ENGL 459 Contemporary British Drama
Spring. 4 credits. S. McMillin.
The contemporary scene in English theater. Plays by such writers as Tom Stoppard, Harold Pinter, Caryl Churchill, David Edgar, Pam Gems, and Edward Bond, with particular concern for the theater as a political and social institution.

ENGL 463 Problems in the Novel: Murder and Crime-Writing
Fall. 4 credits. M. Seltzer.
An investigation of the representation of murder across a range of genres, non-fictional accounts and film. Focus on turn of the century and recent materials.

ENGL 464 The Child in Literature
Fall. 4 credits. Limited to 15 students with the consent of the instructor. A. Lurie.
A look at changing images of childhood and parenthood over the last two hundred years. Is the child a holy innocent, a bundle of violent needs and greed, or a blank sheet upon which the world can write? Should the parent be a teacher or a companion? What counts most, heredity or environment? Are the rules different for boys and girls, for mothers and fathers, and for rich and poor children? Among possible texts may be traditional folk tales, Blake, Songs of Innocence and Experience, Dickens, Oliver Twist, Stevenson, A Child's Garden of Verses; James, What Maisie Knew; Barrie, Peter Pan; Burnett, The Secret Garden; Hughes, A High Wind in Jamaica; McCullers, The Member of the Wedding; Morrison, The Bluest Eye; and McCall, Jack the Bear.

ENGL 465 Proseminar in American Studies (also AmSt 465)
Spring. 4 credits. J. Porte.
For complete description, see American Studies 465.

ENGL 470 Studies in the Novel
4 credits. Limited to 18 students. Fall: Hawthorne, Melville, and James; Hawthorne, Melville, and James: the major texts. D. McCall.
Such a self-conscious inquiry into theories and methods should prepare students to confront other complex texts. No previous experience with Joyce is required.

[ENGL 475 Studies in the Twentieth Century]

[ENGL 477 Children's Literature]
Fall. 4 credits. Not offered 1996-97.

ENGL 479 Jewish-American Writing (also Jewish Studies 478, American Studies 479)
Fall. 4 credits. J. Porte.
A study of American Writing from about 1895 to the present that is connected with the Jewish experience in the New World. Some topics to be covered: immigrant life, gender issues, the conflict between religious and secular outlooks, political affiliation, the Great Depression, the Great War, Yiddish culture, Jewish life in the suburbs, the effect of the Holocaust, the "renewal" of Yiddish culture and religious interest. Authors to be studied may include: Abraham Cahan, Anzia Yezierska, Fannie Hurst, Henry Roth, Clifford Odets, Karl Shapiro, Alfred Kazin, Saul Bellow, Bernard Malamud, Philip Roth, Ruth Whitman, and Cynthia Ozick. There will be opportunities for research in secondary sources and we shall probably study some films on Jewish subjects (e.g., For Pete's Sake and Crossing Delancey).

ENGL 480-481 Seminar in Writing
480, fall; 481, spring. 4 credits. Each section limited to 15 students. Students are encouraged to take English 280 or 281 and at least one 300-level writing course. Prerequisite: permission of instructor, normally on the basis of a manuscript. Fall: Sec. 1, S. Vaughn; sec. 2, K. McClane.
Spring: R. Morgan, H. M. Viramontes. Students normally enroll for both terms and should be capable of a major project—a
ARTS AND SCIENCES - 1996-1997

The list of courses given below is illustrative.
Undergraduates are sometimes admitted.
Graduate students, although qualified for admission to courses numbered in the 600s, may not take such courses except by permission of the instructor. A definitive list, together with course descriptions and class meeting times, is published in a separate department brochure before course enrollment each term.

ENGL 491 Honors Seminar I
4 credits. Fall. Open to students in the Honors Program in English or related fields, or by permission of instructor.
Section II: Jane Austen. (also Women's Studies 491). D. Mermin. Students will read Austen's novels, juvenilia, and letters, and do research projects concerning the cultural circumstances in which the novels were produced, and consider various critical approaches. Short close-reading papers, a research report, and a long final essay.

ENGL 492 Honors Seminar II
Spring. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. D. Schwarz.

ENGL 696 Writing Resistance: Minority and Third World Prisoner Discourses (also LSP 606)

ENGL 702 Literature and Theory (also ENGL 302, Comp. Lit 302/702)

ENGL 707 Psychoanalysis and Literature: Topic for Fall 1996: Objects—Lost and Found: Psychoanalysis Since Freud

ENGL 780.1 MFA Seminar: Poetry
ENGL 780.2 MFA Seminar: Fiction

ENGL 494 Honors Essay Tutorial II
Fall or spring. 4 credits. Prerequisites: English 493 and permission of Director of the Honors Program.

ENGL 495 Independent Study
Fall or spring. 2-4 credits. Prerequisites: Permission of departmental adviser and director of undergraduate studies.

ENGL 491 Honors Seminar I
4 credits. Fall. Open to students in the Honors Program in English or related fields, or by permission of instructor.

Section II: Early Shakespeare
This course may be used as one of the three courses before 1800 required of English majors. S. McMullen.

Studies in the first half of Shakespeare's career, intended to introduce the critical and scholarly questions important in Shakespeare studies today. Readings will include such plays as Henry IV, Parts One and Two, Henry V, Romeo and Juliet, Comedy of Errors, Much Ado About Nothing, Merchant of Venice. Assignments will fall at the rate of about one play and one critical essay per week. Reports, short papers, a term paper.

ENGL 492 Honors Seminar II
Spring. 4 credits. Open to students in the Honors Program in English or related fields, or by permission of instructor. D. Schwarz.

ENGL 493 Honors Essay Tutorial I
Fall or spring. 4 credits. Prerequisites: senior standing and permission of Director of the Honors Program.

ENGL 494 Honors Essay Tutorial II
Fall or spring. 4 credits. Prerequisites: English 493 and permission of Director of the Honors Program.

ENGL 495 Independent Study
Fall or spring. 2-4 credits. Prerequisites: Permission of departmental adviser and director of undergraduate studies.

Courses Primarily for Graduate Students
Permission of the instructor is a prerequisite for admission to courses numbered in the 600s. These are intended primarily for graduate students, although qualified undergraduates are sometimes admitted. Undergraduates seeking admission to a 600-level course should consult the instructor. The list of courses given below is illustrative only, a definitive list, together with course descriptions and class meeting times, is published in a separate department brochure before course enrollment each term.

Graduate English Courses 1996-97

Fall
ENGL 600 Colloquium for Entering Graduate Students
ENGL 607 Authorizing the Vernacular in Medieval Cultures (also Comp. Lit 607)
ENGL 611 Introduction to Old English (also ENGL 411)
ENGL 621 Sponsor
ENGL 635 Geography, Literature, and Critical Social Theory (also ENGL 430, Soc. Hum 409)
ENGL 644 Victorian Poetry
ENGL 647 Romantic Narrative and the Concept of Freedom (also Comp. Lit 647)
ENGL 661 Gender, Race and Nation in 19th-Century America (also Women's Studies 660)
ENGL 665 The Crowd/The Mass/The Public
ENGL 668 Bloomsbury Culture
ENGL 670 Joyce's Ulysses (also Comp. Lit 670)
ENGL 678 History and the Exotic Other in Scott and Elliot
ENGL 695 Race, Colonialism, and Contemporary Theory
ENGL 696 Writing Resistance: Minority and Third World Prisoner Discourses (also LSP 606)
ENGL 702 Literature and Theory (also ENGL 302, Comp. Lit 302/702)
ENGL 707 Psychoanalysis and Literature: Topic for Fall 1996: Objects—Lost and Found: Psychoanalysis Since Freud
ENGL 780.1 MFA Seminar: Poetry
ENGL 780.2 MFA Seminar: Fiction

Spring
ENGL 612 Beowulf (also ENGL 412)
ENGL 617 Early Medieval Archaeology and Literature (also ENGL 417, Archeo 417/617)
ENGL 626 Sixteenth Century Poetry and Poetics
ENGL 631 Politics and the Passions: Hobbes to Rousseau
ENGL 637 The Geography of Race (also ENGL 407, Soc.Hum. 421)
ENGL 638 The Fiction of Empire (also COM L 616)
ENGL 648 Dickens
ENGL 655 Decadence (also Women's Studies 656, Comp. Lit. 655)
ENGL 662 Nineteenth-Century American Poetry: Emerson, Whitman, Dickinson

ENGL 686 African American Women Writers
ENGL 694 Marxism and Postcolonial Discourse
ENGL 697 Contemporary Poetry and Culture: 1968-1996 (also Comp. Lit 674 and Ger St. 674)
ENGL 704 Materials and Methods
ENGL 728 Paradise Lost
ENGL 733 Literary Antifeminism
ENGL 753 Yeats
ENGL 758 Bakhtin and the Twentieth-Century Experimental Novel
ENGL 781.1 MFA: Poetry Seminar
ENGL 781.2 MFA: Fiction Seminar

FILM
See listings under Department of Theatre Arts.

FRENCH LANGUAGE AND LINGUISTICS
See Languages and Linguistics.

FRENCH LITERATURE
See Department of Romance Studies.

FRESHMAN WRITING SEMINARS
For information about the requirements for freshman writing seminars and descriptions of seminar offerings, see "Special Programs and Interdisciplinary Studies" at the end of the Arts and Sciences section of this catalog and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in November for the spring term.

GEOLOGICAL SCIENCES

As an intercollege unit, the Department of Geological Sciences has degree programs in both the College of Arts and Sciences (B.A. degree) and the College of Engineering (B.S. degree). Currently, most of the undergraduate majors are in the College of Arts and Sciences. There are eighteen faculty members.

We live on a planet with finite resources and a finite capacity to recover quickly from human-induced environmental stresses. It is also a powerful planet, with geologic hazards such as earthquakes and volcanic eruptions that alter the course of history with little prior warning. As the human population grows,
understanding the earth and its resources

Agricultural Engineering, Soil, Crop, and Environment Engineering, Soil, Crop, and Atmospheric Sciences, Biological Sciences, and many others. Students who major in geology are urged to take courses to broaden their experience in other sciences, engineering, and mathematics.

The Department of Geological Sciences is also taking part in a new intercollege program in the Science of Earth Systems, available to students in the Colleges of Arts and Sciences, Engineering, and Agricultural and Life Sciences since fall 1995. This program, which is being developed as a new intercollege major, emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. The aim is to prepare students for graduate study and careers across the broad spectrum of earth sciences required for successful understanding and management of our planet. For a description of the program and proposed requirements for the major see the Science of Earth Systems section in “Interdisciplinary Centers, Programs, and Studies,” in the front part of the catalog.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth’s surface, isotopic analytical instruments, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral physics research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS).

Employment opportunities include environmental sciences (groundwater management, waste disposal), resource development (petroleum and minerals), public policy, education, and research. Undergraduates have served as field assistants for faculty members and graduate students in Argentina, British Columbia, the Aleutian Islands, Scotland, Switzerland, Tibet, and Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

The Major

The prerequisites for admission to a major in geological sciences in the College of Arts and Sciences are two two-semester sequences, Mathematics 111–112 or 191–192 and Physics 207–208 or 112–213, or their equivalents, and a semester course in chemistry, such as Chemistry 207 or 211. Geological Sciences 101,103, 111, or 201, followed by 102, 104, or 206 are strongly recommended, but a student with a strong foundation in mathematics and science may be accepted as a major without completion of an introductory sequence.

Majors take Geological Sciences 210 and 214, the five 300-level core courses in geological sciences. 6 credits of additional course work from geological sciences courses numbered 300, 400, or 600, plus an additional course in either computer science or biological science, or an intermediate-level course in biological science, mathematics, chemistry, or physics. In addition, a requirement for field experience may be met by completing one of the following: (a) GS 491–492 (Undergraduate Research) based on field work (2 credit minimum); (b) GS 437 (Geophysical Field Methods) as an additional field approved elective (3 credits); (c) an approved field course taught by another college or university (3 credit minimum); (d) GS 212 (Special January Field Trip) (2 credits). Field observations made during GS 212 as the basis for GS 491–492 is an excellent way to satisfy the requirement. Seniors are encouraged to undertake a research project or honors thesis.

Core Courses

GEOL 226 Structural Geology
GEOL 355 Mineralogy
GEOL 356 Petrology and Geochemistry
GEOL 375 Sedimentology and Stratigraphy
GEOL 388 Geophysics and Geotectonics

Prospective majors should consult R. W. Kay, director of undergraduate studies, or another faculty member as early as possible for advice in planning a program. Students majoring in geological sciences may attend the departmental seminars and take advantage of cruises, field trips, and conferences offered through the Department of Geological Sciences.

Courses offered at the 100 and 200 level are open to all students. Certain 300- and 400-level courses in geology also may be of particular interest to students of chemistry, biology, ecology, and physics. Students are encouraged to inquire about courses that interest them at the department office in Snee Hall.

Honors. An honors program is offered by the Department of Geological Sciences for superior students. Candidates for honors must maintain an overall 3.0 grade-point average, a cumulative average of 3.5 in the major, and complete an honors thesis (Geological Sciences 490). Students interested in applying should contact the director of undergraduate studies during the second semester of the junior year.

Courses

For complete course descriptions, see the Geological Sciences listing in the College of Engineering section.

GEOL 101 Introductory Geological Sciences
Fall, spring, summer. 3 credits.

GEOL 102 Evolution of the Earth and Life (Bio G 170)
Spring, summer. 3 credits. GEOL 101 recommended.

GEOL 103 Introduction to Geology Through the Environment
Fall. 3 credits.

GEOL 104 The Sea: An Introduction to Oceanography (Bio ES 154)
Spring, summer. 3 or 4 credits (4 credits with lab section).

GEOL 105 Writing on Rocks (Freshman Seminar)
Fall. 3 credits.

GEOL 107 How the Earth Works
Fall. 1 credit.

GEOL 108 Geology and Society
Spring. 1 credit. May be taken concurrently and with or after GEOL 101, 102, 103, 104, 111, 201, or 206.

GEOL 109 Dinosaurs
Fall. 1 credit.

GEOL 111 To Know the Earth and Build a Habitable Planet
Fall. 3 credits.

GEOL 122 Earthquake! (also Engineering 122)
Fall. 3 credits.

GEOL 123-124 Science of Earth Systems Colloquium (also ABEN 120-121, SCAS 101-102 and SES 101-102)
For course description, see the Science of Earth Systems section in “Interdisciplinary Centers, Programs, and Studies,” in the front part of the catalog.

GEOL 125 Chemistry of the Environment (also ENGR 125)
Fall. 3 credits.

GEOL 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Spring. 3 credits. Prerequisites: Mathematics 191 and Physics 112.

GEOL 203 Natural Hazards and the Science of Complexity
Fall. 3 credits. 1 course in calculus.

GEOL 204 Hydrology and the Environment (also SCAS 371 and ABEN 371)
Spring. 3 credits. Prerequisite: 1 course in calculus.

GEOL 206 Geologic Perspective on Climate Change
Spring. 3 credits.

GEOL 210 Introduction to Field Methods in Geological Sciences
Fall. 3 credits. Prerequisite: GEOL 101, 103, or 201, or permission of instructor. Weekly field sessions. A weekend field trip.

GEOL 212 Special January Field Trip
Fall. 2 credits. Prerequisites: GEOL 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced.

GEOL 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.

GEOL 214 Western Adirondack Field Course
Fall. 3 credits. Prerequisite: GEOL 210 or equivalent, or permission of instructor.
GEOL 302 Evolution of the Earth System
(also SES 332 and SCAS 302)
For course description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.

GEOL 326 Structural Geology
Spring. 4 credits. Prerequisite: GEOL 101, 103, or 201, or permission of instructor.

GEOL 355 Mineralogy
Fall. 4 credits. Prerequisite: GEOL 101, 103, or 201 and Chem 207 or permission of instructor.

GEOL 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: GEOL 355.

GEOL 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: GEOL 101, 103, or 201.

GEOL 388 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: Mathematics 192 and Physics 208, 213, or equivalent.

GEOL 401 Introduction to Biogeochemistry (also NTRES 432, SES 401)
Fall. 4 credits. Prerequisites: college-level biology and chemistry.

GEOL 411 Global Change Research: Mountains, Climate, and Erosion
Fall. 3 credits.

GEOL 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: GEOL 210 and GEOL 326; Spanish desirable, but not required.

GEOL 423 Petroleum Geology
Fall. 3 credits. Recommended: GEOL 326. Offered alternate years.

GEOL 425 Precambrian Orogenic Cycles
Fall. 3 credits. Prerequisites: GEOL 326 or GEOL 356, or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 426 Geologic Evolution of South America
Spring. 3 credits. Prerequisite: GEOL 326, 356, or permission of instructor.

GEOL 434 Reflection Seismology I: Data Acquisition and Processing
Spring. 3 credits. Offered alternate years with GEOL 438.

GEOL 436 Environmental Geophysics
Spring. 3 credits. Offered alternate years. Prerequisite: PHYS 213 and Mathematics 192 or equivalents, or permission of instructor.

GEOL 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: Physics 213 and Mathematics 192 or equivalents, or permission of instructor. Offered alternate years.

GEOL 438 Exploration Seismology II: Analysis and Interpretation
Spring. 3 credits. Offered alternate years with GEOL 434. Not offered 1996-97.

GEOL 440+ Geohydrology (also ABEN 471 and C&EE 431)
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202.

GEOL 452 X-ray Diffraction Techniques
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 453 Advanced Petrology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years.

GEOL 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years.

GEOL 455 Advanced Petrology
Fall. 3 credits. Prerequisites: Chemistry 207 and Mathematics 102, or equivalent. Recommended GEOL 356. Offered alternate years. Not offered 1996-97.

GEOL 457 Metamorphic Petrology
Fall. 3 credits. Prerequisite: GEOL 355. Offered alternate years.

GEOL 458 Volcanology
Spring. 3 credits. Corequisite: GEOL 356 or equivalent. Offered alternate years.

GEOL 476 Sedimentary Basins: Tectonics and Mechanics
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 478 Advanced Stratigraphy
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years.

GEOL 479 Paleobiology (also Bio ES 479)
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIO ES 272 or 274, GEOL 375, BIO ES 373, or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 481 Senior Survey of Earth Systems
Fall. 3 credits. Limited to seniors majoring in geological sciences.

GEOL 489 Honors Thesis (B.A. degree candidates)
Fall, spring. 2 credits.

GEOL 491-492 Undergraduate Research
Fall, spring. 1 or 2 credits variable.

GEOL 500 Design Project in Geohydrology
Fall. 3 credits. Offered alternate years. Not offered 1996-97.

GEOL 502 Case Histories in Groundwater Analysis
Spring. 4 credits.

GEOL 524 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years.

GEOL 529 Advanced Structural Geology I
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years.

GEOL 545 Advanced Petroleology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years.

GEOL 546 Advanced Mineralogy
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years.

GEOL 555 Advanced Petrology
Fall. 3 credits. Prerequisite GEOL 356.

GEOL 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years.

GEOL 625 Advanced Structural Geology I
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years.

GEOL 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years.

GEOL 635 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 651 Analysis of Biogeochemical Systems
Fall. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 656 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisites: GEOL 455 or permission of instructor. Offered alternate years. Not offered 1996-97.

GEOL 680 Computer Methods in Geological Sciences
Fall, spring. 3 credits.

GEOL 700-799 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Advanced work on original investigations in geological sciences. Topics change from term to term.

GEOL 722 Advanced Topics in Structural Geology

GEOL 725 Rock and Sediment Deformation

GEOL 731 Plate Tectonics and Geology

GEOL 733 Fractal Chaos - Independent Studies

GEOL 751 Petrology and Geochemistry

GEOL 752 Advanced Topics in Petroleum Physics

GEOL 755 Advanced Topics in Petroleum and Tectonics

GEOL 757 Current Research in Petroleum

GEOL 762 Advanced Topics in Petroleum Exploration

GEOL 771 Advanced Topics in Sedimentology and Stratigraphy

GEOL 773 Paleobiology

GEOL 775 Advanced Topics in Oceanography

GEOL 780 Seismic Record Reading

GEOL 781 Geophysics, Exploration Seismology

GEOL 783 Advanced Topics in Geophysics

GEOL 789 Lithospheric Geochemistry (COCORP Seminar)

GEOL 793 Andes-Himalaya Seminar

GEOL 795 Low-Temperature Geochemistry

GEOL 796 Geochemistry of the Solid Earth
The German Area Studies Major

The German area studies major is intended for students who are interested in subject matter related to German-speaking countries but not necessarily exclusively in German literature or linguistics. Students will select appropriate courses offered in history, government, economics, music, theater arts, or other suitable subjects. Minimum course requirements for the German area studies major are the same as for the German major. These students may select a committee of two or more faculty members to help them design a program and supervise their progress. One committee member must be from the German faculty of either the Department of Linguistics or the Department of German Studies. The other member(s) should represent the student’s main area of interest.

The student majoring in German area studies is expected to become competent in the German language. Such competence is normally demonstrated by successful completion of German 304. A minimum of six area courses above the 200-level is required for the major; one of the six courses must be a senior seminar (German Studies 410).

Advanced Standing. Students with an AP score of 4 or better are automatically granted three credits in German literature. Students coming to Cornell with advanced standing in German and/or another subject often find it possible to complete two majors. Recent double majors have combined history, government, psychology, chemistry, biology, or physics with German literature or German area studies. Students in Agriculture and Engineering have entered dual-degree programs. Double majors will complete separate programs, one for each major.

Honors. The honors program in German is open to superior students who want to work independently in an area of their own choice. Students are free to select any faculty member of the Field of Germanic Studies (in the case of area studies majors, the appropriate member of the department) to assist them in designing their honors program, to supervise their work, and to help them select a suitable topic for an honors essay. The independent study courses, German 451 and 452, may form part of the program.

Study Abroad

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of the Courses of Study.

Freshman Writing Seminar Requirement

The following courses will satisfy the freshman writing seminar requirement: German 109, 151, 175, 311, and 312. For details students should consult the instructors.

Fees. Depending on the course, a small fee may be charged for film rental or photocopied texts for course work.

Literature

Freshman Writing Seminars

See Freshman Seminar booklet for course times and descriptions.

GERST 109 Fairy Tales and the Literary Imagination
Fall or spring. 3 credits. I. Ezergailis and staff.

GERST 151 Kafka, Hesse, Brecht, and Mann
Fall or spring. 3 credits. H. Deinert and staff.

GERST 175 Cinema and Society
Fall or spring. 3 credits. G. Waite and staff.

Courses Offered in German

GERST 201 Introduction to German Literature I: Prose
Fall or spring. 3 credits. Prerequisite: qualification in German or permission of instructor. Taught in German. Fulfills both the language proficiency requirement and, followed by German 202 or another German literature course at the 200-level or above, the humanities distribution requirement. B. Buettner, D. Hobbs.

An intermediate course designed to improve reading, writing, speaking, and listening skills in German. Emphasis is placed on developing reading competency, tools of literary analysis, and expansion of vocabulary. Grammar review included. The complexities of inner and outer reality as expressed in selected prose works of Bachmann, Brecht, Kafka, Mann, Dürrenmatt, Al'chingr and others.

GERST 202 Introduction to German Literature II: Drama
Fall or spring. 3 credits. Prerequisite: German 201 or permission of instructor. Taught in German. Fulfills both the language proficiency requirement and, together with German 201 or another German literature course at the 200-level or above, the humanities distribution requirement. B. Buettner, D. Hobbs.

An intermediate course designed to improve reading, writing, speaking, and listening skills in German. Emphasis is placed on developing reading competency, tools of literary analysis, and expansion of vocabulary. Self-confrontation and social conflict in the plays of major Austrian, Swiss, and German dramatists, including Dürrenmatt, Frey, Frisch, Hofmannsthal, Goethe, and Schiller.

GERST 220 Was Ist Deutsch?
Fall. 3 credits. Taught in German. Prerequisite: one German course at the 200 level. B. Buettner.

Questions of German identity have always raised difficult issues—both for Germans themselves and for others. These issues are again taking center stage as Germans redefine themselves in a reunified Germany. How has the concept of “Germaness” evolved? How do past perceptions of identity impinge on the present? Through selections from film, literature, art, and music we will explore this peculiarly German question.

GERST 307 Modern Germany

GERST 311 Workshop in German Studies I
Fall. 4 credits. Intended primarily for freshmen with training in the German language (CPT score of 650, SAT II German score of 680, AP score of 4, or comparable evidence). Taught in German. Students taking the course in fulfillment of the Freshman Writing requirement write their papers in English. H. Deinert.
The course will provide an intensive introduction to the study of German literature, culture, and political history through the discussion of exemplary prose works, dramas, and poems from the eighteenth and nineteenth centuries, among them Goethe's _Ifigenien_, Schiller's _Don Carlos_, and Mozart's _The Magic Flute_. The visual arts, music, and theater will serve as additional tools of interpretation.

**GERST 312 Workshop in German Studies II**

Spring. 4 credits. Intended primarily for freshmen with training in the German language (CPT score of 650, SAT II 1996 score of 681). AP score of 4, or comparable evidence). Taught in German. Students taking the course in fulfillment of the Freshman Writing requirement will write their papers in English. B. Buetner.

The emphasis in this seminar is on German literature, culture and political history in the first half of this century. Readings include such prominent works as _Death and the Fool_, _Eremit, Demian, Death in Venice, The metamorphosis_, Metamorphosis, _Mother Courage_ and _Galileo_. The visual arts, music, and theater will serve as additional tools of interpretation.

**GERST 342 The New Europe (also GOVT 342)**

Not offered 1996-97.

**GERST 353 Kleist #**

Not offered 1996-97.

**GERST 354 Schiller #**

Not offered 1996-97.

**GERST 357 Major Works of Goethe #**

Not offered 1996-97.

**GERST 365 Austrian Literature**

Not offered 1996-97.

**Courses in English Translation**

**GERST 320 Postwar German Novel**

Not offered 1996-97.

**GERST 330 Political Theory and Cinema (also Comparative Literature 330, Government 370 and Theatre Arts 330)**

Not offered 1996-97.

**GERST 374 Opera and Culture (also Music 374)**

Not offered 1996-97.

**GERST 396 German Film (also Comparative Literature 396 and Theatre Arts 396)**

Not offered 1996-97.

**GERST 398 The Poetic and the Political: A Look at Some German Women Writers**

Fall. 4 credits. Prerequisite: German 201-202 or permission of instructor. Taught in German. If, due to enrollment, the discussion needs to be in English, there will be additional sessions to accommodate those who want to work on their material in English. G. Ezergailis.

_If one does not read the most complex poetic text, one risks not knowing how to read the newspaper, but being read by it.”_ (Helene Cixous) Is there such a thing as the “purely” poetic text? What does it mean for poetry and poetic prose to touch on the political? What does it mean to a woman writer? We will examine some of these questions through a careful reading of texts by selected German women writers. The texts are mainly from the twentieth century, with a few earlier ones. Poetry and prose by Anne Seghers, Else Lasker-Schüler, Nelly Sachs, Sarah Kirsch, Ingeborg Bachmann, Christa Wolf, and several other authors will furnish the reading in German.

**GERST 413 Women around Freud (also Comparative Literature 413 and Women's Studies 413)**

Not offered 1996-97.

**GERST 414 History into Fiction: Nazis and the Literature of Imagination (also English 404, Comparative Literature 404, and Near Eastern Studies 404)**

For description, see English 404.

**GERST 415 Marx, Freud, Nietzsche (also Comparative Literature 425 and Government 473)**

Not offered 1996-97.

**GERST 418 Thomas Mann**

Not offered 1996-97.

**GERST 458 Comparative Decolonization (also Government 458)**

Not offered 1996-97.

**Course in Latvian and Baltic Literature**

**GERST 377 Perfection of Exile? Baltic Emigré Literature (also Russian Literature 377)**

Spring. 4 credits. I. Ezergailis.

Examinations of exile literature go back not only to classical antiquity, but to Adam and Eve. We will attempt a case study informed by general readings about exile and reactions to it, and based on a sampling of Estonian, Latvian, and Lithuanian writing (translated into English) after World War II. Hopefully, this will lead to some understanding of the dynamics, ideologies, and emotional investments of such literature.

**Graduate and Advanced Undergraduate Courses**

**GERST 409 Introduction to Medieval German Literature I #**

Fall. 4 credits. Prerequisite: reading knowledge of German. A. Groos.

_After a brief introduction to basic aspects of the medieval universe, ranging from cosmology to psychology, readings will focus on introductory texts of late twelfth-century courtly culture. Using the predominant genres of aristocratic self-representation, the heroic epic (Nibelungenlied), Arthurian romance (Hartmann's _Iwein_), and Minnesang, discussions will investigate the court as the locus of conflicting forces in the rise of the secular culture in Germany, examining such issues as the first vernacular construction of social and sexual identity, generic conflicts within the communal-dynastic order, the rise of individualism (the knightly quest), and subjectivity (the love lyric)._ **GERST 410 Introduction to Medieval German Literature II #**

Spring. 4 credits. Prerequisite: German 405 or equivalent. A. Groos.

_Political lyrics by Walther von der Vogelweide will introduce agendas of conflict in thirteenth-century German culture, ranging from crusades to civil war. Against this backdrop, we will examine the utopian quest to win the Holy Grail and heal the Fisher King in Wolfram's _Parzival_, using Bakhtin's approach to pre-novelistic discourse. Readings from the love lyric trace representations of gender across emerging class differences, the increasing complexity of the self, and instabilities of the performance text. Concluding topics will be to explore myths and late medieval narratives of socio-sexual violence, anti-Semitism, and urban Angst._

**GERST 410 Senior Seminar: Minority Literature in the Federal Republic**

Fall. 4 credits. Taught in German. Required readings are in German. L. Adelson.

This undergraduate seminar will focus on West German literature by Turkish, Iranian, Jewish, and Afro-German authors and explore the shifting parameters of the literary public sphere(s) in the Federal Republic against the backdrop of world events. Readings will cover history and demographics. Readings include: Anne Seghers, _Der Ausflug der toten Mädchenn_, Grete Wel, _Meine Schuster sind Antigone_, Irene Dische, _Frommen Lügen_, Sahila Scheinhardt, Drei Zyptessen, Jakob Arupni, _Happy Birthday, Türke!_, ed. Katharina Ogontoye et al., _Farbe bebenen_._ Afro-Deutsche Frauen auf den Spuren ihrer Geschichte_, May Ayim, _Blues in Schauerm Weiss_. Gedichte, additional essays and short stories to be purchased as xeroxed materials.

**GERST 412 German Literature from 1770 to 1848 #**

Spring. Taught in German. Required readings are in German. Students should possess intermediate language skills upon entering this course. L. Adelson.

This survey course introduces students to German literature in its historical, social, and philosophical context from the Age of Enlightenment to the first German unification. Reading and discussing representative literary texts will be the major focus of the course. Readings will include: Lessing, _Emilia Galotti_, Goethe, _Die Leiden des jungen Werthers_, Kant, _Was ist Aufklärung?_, Goethe, _Prometheus_, Tieck, _Der blonde Eckbert_, Kleist, _Erzählungen_, Drost-Hilflöß, _Die Judenbuche_, Heine, poems.

**GERST 430 Brecht, Artaud, Müller, Wilson (also Comparative Literature 430 and Theatre Arts 420)**

Spring. 4 credits. D. Bathrick.

This course will explore in depth the writings and practices of four major twentieth-century theatrical artists: Bertolt Brecht, Antonin Artaud, Heiner Müller, and Robert Wilson, in order to (a) map out differences and similarities among the four as representatives of avant-garde theater and performance art; (b) situate their respective work in the political and cultural contexts out of which they emerged; and (c) explore their impact upon succeeding movements and artists of modern drama and cinema. A central focus of the course will be to explore the differing and changing notions of “avant-garde theater” as demonstrated in the work and reception of Brecht, Artaud, Müller, and Wilson. Exploration of the work of these four artists will serve methodologically both to situate them narratively what have become competing strategies in the development of performance theater and avant-garde theater as well as to consider ways in which these models have been and could be synthesized.
GERST 435 Introduction to Literary Theory (also Comparative Literature 435)  
Fall. 4 credits. The course and readings are in English, but students with other languages are encouraged also to work in them. Every attempt will be made to keep assigned readings short, to read these texts carefully, and to apply theory to practice. G. Waite.

This is a basic introduction to several modes and vocabularies of literary theory and analysis. The main focus is on the later twentieth century and on current issues. Thus we study aspects of the linguistic paradigm, Russian formalism, structuralism, poststructuralism, deconstruction, phenomenology, philosophical hermeneutics, critical theory and several types of argument in psychoanalysis, feminism, gay and lesbian studies, and cultural studies. Authors might include: Adorno, Althusser, Bakhtin, Barthes, Benjamin, de Man, Cixous, Deleuze, Derrida, Foucault, Freud, Heidegger, Irigaray, Jakobson, Jameson, Lacan, Levi-Strauss, Podegora, Saussure, Sedgwick, Shklovsky, Timpanaro, Voloshin. Writers analyzed might include Balzac, Baudelaire, Becket, Brecht, Burroughs, Conrad, E.T.A. Hoffmann, Hölderlin, Kafka, Leopardi, Sterne.

GERST 447 Reading Freud: Gender, Race, and Psychoanalysis (also Comparative Literature 447 and Women's Studies 447)  
Fall. 4 credits. All of the primary readings are available in English. B. Martin.

This course will trace the development of psychoanalytic theory and practice through a close reading of selected works of Sigmund Freud (beginning with the Studies in Hysteria and concluding with Moses and Monothemism). This course will provide a general introduction to the basic concepts of Freudian psychoanalytic theory. Close attention will be paid to the cultural, scientific, as well as polemical literature on the ideas of race and gender in the late nineteenth century as one of the contexts in which psychoanalysis evolved.

GERST 451-452 Independent Study  
451, fall; 452, spring. 1–4 credits each sem. Prerequisite: permission of instructor.

GERST 472 Poetry of the 1990s (also Comparative Literature 472, English 408, and Spanish Literature 472)  
For description, see Comparative Literature 472.

[GERST 492 The Advance of Humanism: Aspects of the European Enlightenment]  

[GERST 495 The Aesthetic Theory of the Frankfurt School (also Comparative Literature 495)]  
Spring. 4 credits. P. U. Hohendahl.

This course is designed as an introduction to the history of the Frankfurt School and the essential concepts of critical theory. The emphasis will be placed on the theory of culture and its application to the understanding of literature and aesthetics. The reading material will be taken from the works of Max Horkheimer, Theodor W. Adorno, Walter Benjamin, and Jürgen Habermas.

[GERST 496 Theorizing the Public Sphere (also Comparative Literature 496 and History 496)]  

Seminars  
Note: For complete descriptions of courses numbered 600 or above consult the appropriate instructor.

[GERST 600 Special Topics in Feminist Theory (also Anthropology 600 and Comparative Literature 600)]  

[GERST 608 Modern/Postmodern (also Comparative Literature 608)]  

[GERST 621 Issues in Gay and Lesbian Studies (also Women's Studies 621)]  

[GERST 624 Seminar in Medieval German Literature II]  
Spring. 4 credits. Prerequisite: German 405–406 or equivalent. A. Groos.  
Topic to be announced.

[GERST 626 Nuremberg]  

[GERST 627 Baroque (also Comparative Literature 626)]  
Spring. 4 credits. The course is conducted in English. G. Waite.

This graduate seminar focuses on the "baroque" in two basic ways: (1) as a period of cultural production in seventeenth-century continental Europe (France, Holland, Italy, and Spain in addition to Germany); (2) but more especially as a problem in current theory. Thus we will study concepts such as: "allegory" and "Trauerspiel" (Walter Benjamin); "action from a distance," "absent and immanent cause" (Spinoza, Louis Althusser); "the fold" (Leibniz, Gilles Deleuze); "savage anomaly" (Antonio Negri); and "guided culture" (José Antonio Maravall). Approximately equal attention will be given to literary and philosophical texts, written and visual practices. Thus, in addition to representative literary texts, we will analyze works by Leibniz and Spinoza, Caravaggio, Poussin, and Velázquez, as well as some contemporary critics and theorists (Christine Buci-Glucksmann, Michel Foucault, Louis Marin, among others).

[GERST 629 The Enlightenment]  
Fall. 4 credits. P. U. Hohendahl.

The seminar will focus on eighteenth-century German literature and philosophy from 1730 to 1790. Emphasis will be placed on the concept of Aufklärung and its meaning for the development of German thought. The discussions will stress major areas of critical inquiry, such as religion, philosophy, and literature. Readings will be taken from authors like Forster, Gellert, Gottsched, Kant, Lessing, and Wieland. The critical literature will include the writings of Adorno, Foucault, Habermas, Horkheimer, and Koselleck.

[GERST 630 Classicism and Idealism]  

[GERST 634 German Romanticism]  

[GERST 637 Novelle Workshop]  
fliegender Holländer or Tannhäuser to Die Meistersinger or Die Walküre. In addition to the analysis of individual operas, the larger focus of discussions will be on the emergence of a German operatic tradition and its intertextual nexus, the role of love in the development of Romantic subjectivity, and the formation of a national consciousness.

GERST 673-674 Contemporary Poetry and Culture: 1968-1993 (also Comparative Literature 674, English 679 and Spanish Literature 674)
For description, see COM L 674.

[GERST 675 After the Divide: German Critical Theory of the Seventies and Eighties (also Comparative Literature 675 and History 675)
Not offered 1996-97.]

[GERST 676 Bertolt Brecht in Context (also Comparative Literature 676 and Theatre Arts 679)
Not offered 1996-97.]

[GERST 677, 678 Gramsci and Cultural Politics (also Comparative Literature 678 and Government 678)
Not offered 1996-97.]

[GERST 679 The Politics of Culture in the Germany of Democratic Republic
Not offered 1996-97.]

[GERST 690 Feminist Criticism and Theory (also Women's Studies 690)
Not offered 1996-97.]

[GERST 691 The Politics of Criticism (also Comparative Literature 691 and Theatre Arts 691)
Not offered 1996-97.]

GERST 753-754 Tutorial in German Literature
Fall and spring. 1-4 credits per term. Prerequisite: permission of instructor.

GOVERNMENT

Government is what Cornell calls a department that elsewhere might be termed political science. The focus of this discipline is power applied to public purposes. Some faculty concentrate on purposes, some on applications. Some engage in the close reading of great texts of political philosophy, while others analyze the behavior of power-wielders and publics in this and other societies.

Government is divided into four subfields: U. S. politics, comparative politics (other nations), political theory (philosophy), and international relations (transactions between nations).

To accommodate new courses or course changes, a supplementary announcement is prepared by the department. Before enrolling in courses or registering each term, students are requested to consult the current supplement listing courses in government, available in 125 McGraw Hall.

The Major

To be admitted to the major, a student must pass two government courses.

To complete the major, a student must:

1. pass two of the introductory government courses (Government 111, 131, 161, 181);
2. pass an additional course in one of the remaining subfields (American government, comparative government, political theory, or international relations). This course may be any course offered in the government department, including introductory courses, upper-level courses or seminars. Students are strongly advised to take at least one course in each of the four subfields;
3. accumulate an additional 28 credits of government course work at the 300-level or above;
4. (4) complete at least one seminar-style course in government which may be applied toward the 28 credits. These courses include those numbered 400XX to which students are admitted by application only; (5) accumulate 12 credits in upper-level courses in related fields (such as anthropology, economics, history, psychology, and sociology). Upper-level courses are usually courses numbered at the 300-level or above (200-level courses are not considered upper-level). Students should consult with their major adviser to choose appropriate courses. All choices of related courses must be approved by the major adviser, or the director of undergraduate studies; (6) all courses used to fulfill a government major must be passed with a letter grade.

To summarize, a total of 10 government courses and 3 additional courses (12 credits) of upper-level related courses are required to complete the major.

Cornell-in-Washington Program. Government majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.
Study Abroad in Geneva. French, history, and government majors, or other students with a commitment to international experience, may study abroad in Geneva, Switzerland. Geneva is an especially appropriate location for students with an interest in international affairs, as many international organizations maintain offices there, among them the United Nations, the Red Cross, the Headquarters of the World Health Organization, the World Intellectual Property Organization, the Ecumenical Center at Grand-Saconnex, the United Nations Office, the World Trade Organization, the International Telecommunications Union, the World Intellectual Property Organization, the European Nuclear Research Center, and the European Court of Human Rights. In addition, many international students pursuing programs in economics, law, political science, business, and French, and the American Studies Program, may study abroad in Geneva. Students may choose classes in many subjects, including international relations, political science, economics, business, history, and French language, civilization, and history. The University of Geneva offers four consecutive three-week language and civilization summer courses beginning in mid-July, which prepare students for the mandatory French exam given in early October. Cornell students must attend the last of these sessions, from mid-September to early October, but earlier sessions are recommended for students who need additional language preparation.

Interested students can participate in internships at international organizations, and qualified participants may be able to work under the direction of officials on research studies that are of mutual interest. Students must be Cornell undergraduates with a strong academic record. The minimum French preparation is the completion of French 204 or 213, or its equivalent in an advanced credit or placement by the Cornell C.A.S.E. examination. Students should plan to stay abroad for at least one academic year. Qualified participants may be able to work for up to two summers, beginning in mid-July, which prepare students for the mandatory French exam given in early October. Cornell students must attend the last of these sessions, from mid-September to early October, but earlier sessions are recommended for students who need additional language preparation.

European Studies Concentration. Government majors may elect to group some of their required and optional courses in the area of European studies, drawing from a wide variety of courses in relevant departments. Students are invited to consult Professors P. Katzenstein, Scheiman, and Tarrow for advice on course selection and foreign study programs.

Model European Community Simulation. Undergraduates with an interest in the European Community, public affairs, or debating may participate in the annual Model European Community Simulation (SUNYMECO) held in April at SUNY Brockport. The simulation is an opportunity for participants, representing politicians from the member nations of the European Community, to discuss issues and resolutions of current concern to the EC.

To prepare for this simulation, a 2-credit seminar, Government 431, is offered each spring. Participation in the simulation will be open only to those who register for this seminar. Anyone interested in participating or in finding out more information should contact the Western Societies Program at 130 Uris Hall, 255-7592.

International Relations Concentration. See the description under "Special Programs and Interdisciplinary Studies."

Honors. Each fall a small number of qualified seniors enter the honors program. To apply, juniors and seniors submit applications in April. Along with a fuller description of the honors program, application forms are available in 125 McGraw Hall. The two courses comprising the honors sequence (honors courses) are described below.

Introductory Courses

Students registering for introductory courses should register for the lecture only. Sections will be assigned during the first week of class. Introductory courses are also offered during summer sessions.

GOVT 111 Introduction to American Government and Politics

Fall, spring, and summer. 3 credits. T. J. Lowi. An introduction to government through the American experience. Concentration on analysis of the institutions of government and politics as mechanisms of social control.

GOVT 131 Introduction to Comparative Government and Politics

Spring and summer. 3 credits. V. Bunce. This course provides a survey of the institutions, political processes, and policies of contemporary states. It focuses on the conditions for and workings of democracy. Looking at Western Europe, we will analyze institutional variations among liberal democracies, and their political implications. We will then probe the origins of democracy in Western societies and the reasons why communism and other forms of authoritarian rule have prevailed elsewhere. Finally, we will explore the impetus behind and the obstacles to democratization in the Third World and the erstwhile Communist Bloc. Throughout this survey, problems of democracy will be related to problems of economic development, efficiency, and equality.

GOVT 161 Introduction to Political Philosophy

Fall and summer. 3 credits. J. Kramnick. A survey of the development of Western political theory from Plato to the present. Readings from the works of the major theorists. An examination of the relevance of their ideas to contemporary politics.

GOVT 181 Introduction to International Relations

Spring and summer. 3 credits. S. Telhami. An introduction to the basic concepts and practice of international politics.

Major Seminars

GOVT 400 Major Seminars

Fall or spring. 4 credits.

These seminars, emphasizing important controversies in the discipline, cap the majors' experience. Thus preference in admission is given to seniors over nonmajors and seniors over juniors. Topics and instructors change each semester. To apply, students should pick up an application in 125 McGraw Hall during the course selection period the semester before the seminar is given.

The following courses are open to sophomores, juniors, and seniors without prerequisites unless otherwise indicated.

American Government and Institutions

Government 111 is recommended.

GOVT 121 Economic Growth and Democratic Legitimacy

Summer. 3 credits. E. W. Kelley.

This course will explore the psychological, economic, and participatory foundations for the acceptance of democratic governments. We will explore the effects of economic growth, the distributions of income and wealth and actual access to the ballot on support for democratic institutions. Among the authors we read will be Adam Smith, Max Weber, Emile Durkheim, David McClelland, Rinchert Bendix, Anthony Downs, Carolyn Bell, John Dollard, Neal Miller, James Fallows, and Cornell West. We will conclude by focusing on the degree of current acceptance of democratic political institutions in the United States.

GOVT 301 The Political Economy of American Industrialization

GOVT 302 Social Movements in American Politics (also American Studies 302)

GOVT 303 Introduction to American Political Parties

Spring. 4 credits. J. Cowden.

This is a survey course about American political parties. The course will consider the following: the development of the American party system, realignments and critical elections; party identification, national, state, and local party organizations; theories of party decline; and the role of surrogate organizations such as the mass media. Throughout we will examine how and to what extent the actual function of parties is related to normative and theoretical models of party behavior.

GOVT 305 Atomic Consequences: The Incorporation of Nuclear Weapons in Post-War America

Spring. 4 credits. M. Dennis.

This course will explicate the development of atomic weapons from early twentieth-century ruminations about super bombs in science and fiction through the Manhattan Project, the postwar development of thermonuclear weapons and civil defense, and more recent plans for strategic defense. Our focus will expand to cover the lives of researchers at such institutions as Los Alamos during and after World War II as well as discussions of national politics. Other topics include the Nazi effort to develop an atomic bomb, the role of technical espionage during and after World War II, and the problems posed by the
classification of technical knowledge. From our vantage point at the end of the cold war, we will seek to understand how the bomb became part of American culture through the use of literature and film, as well as reading in primary historical documents and secondary analyses.

**GOVT 308 Science in the American Polity 1800-1960**
Fall. 3 credits. M. Dennis.
For description, see S&TS 390.

**GOVT 309 Science in the American Polity**
Spring. 4 credits. S. Jasnow.
For description, see S&TS 391.

**GOVT 310 Power and Poverty in America**
Spring. 4 credits. E. W. Kelley.
Despite egalitarian democratic rights, the United States remains a stratified society conspicuous for great disparities in the allocation of income and wealth. The purpose of this class is to investigate these disparities, both empirically and normatively, and to assess the impact of government upon them. Topics for discussion will include: what do we mean by distributional inequality and by the demand for greater egalitarianism? What is the extent of inequality and of poverty in America today? How does one establish minimum standards for distributional justice? Is the United States currently on the road toward achieving that minimum standard? What is the array of federal welfare programs presently available? What is the efficacy of these programs? What reforms or changes are currently on the political agenda? Can we imagine a society somewhat like that in the United States achieving a very different distribution of educational and occupational outcomes as described by race, income class, and language spoken by parents?

**GOVT 311 Urban Politics**
Fall. 4 credits. M. Shefter.
The major political actors, institutions, and political styles in large American cities: mayors, city councils, bureaucracies, ethnic and racial minorities, urban machine politics and the municipal reform movement. The implications of these political forces for policies pertaining to urban poverty, homelessness, and criminal justice.

**GOVT 313 The Nature, Functions, and Limits of Law**
Spring. 4 credits. Undergraduates only. Siliciano.
A general education course for students at the sophomore and higher levels. Law is presented not as a body of rules but as a set of varied techniques for resolving conflicts and dealing with social problems. The roles of courts, legislatures, and administrative agencies in the legal process is analyzed, considering also the constitutional limits on their power and practical limits of their effectiveness. Assigned readings consist mainly of judicial and administrative decisions, statutes and rules, and commentaries on the legal process. Students are expected to read assigned materials before each class and to be prepared for participation in class discussion.

**GOVT 316 The American Presidency (also American Studies 316)**
Fall. 4 credits. E. Sanders.
Analysis of the politics of the presidency and the executive branch with emphasis on executive-legislative relations, executive branch policymaking, and the problems of the modern presidency.

**GOVT 317 Campaigns and Elections**
Fall. 4 credits. W. Mebane.
This course examines campaigns and elections, focusing primarily on national elections in the United States. Topics include the relationship between elections and the economy, the weakness of the American party system, voter turnout, individual voting decisions, negative campaigning, and the noncompetitiveness of congressional elections. We examine several theories that explain these, including in particular the theory of rational choice. Course requirements include one or two papers based on original analysis of election survey data.

**GOVT 318 The American Congress**
Spring. 4 credits. M. Shefter.
The role of Congress in the American political system. Topics to be discussed: the political setting within which Congress operates, the structure of Congress, the salient features of the legislative process, and recent congressional behavior in a number of policy areas.

**GOVT 320 Public Opinion and Public Choices**
Spring. 4 credits. Prerequisite: Government 111 or permission of the instructor. W. Mebane.
A fundamental paradox in democracy is the fact that a government the people control will only rarely be a government that does what the people want. This is not to say that government NOT by the people is better (it's usually worse). This course explores this problem, contrasting the answers given by the concept of public opinion and the formal theory of social choice. We encounter the paradox in several American political institutions, including elections, legislatures, and bureaucracy.

**GOVT 324 Legal Reasoning and Legal Adaptation: A Comparison of American and Talmudic Law**
Spring. 4 credits. J. Rabin.
Legislatures may change old laws to reflect new preferences, but much American law is still adapted to modern challenges by judges invoking old precedents and principles, particularly in family law, the law of contracts, and the law of torts. Talmudic law, which rests on much older principles and precepts and cannot fall back on new legislation to justify change in the modern world, must also be adapted to new circumstances. The rabbinic authorities who seek to apply this law often invoke similar kinds of reasoning as American courts but under peculiar constraints. This course, an unusual venture in comparative law, will focus on characteristic modes of reasoning in each system, rather than attempting any systematic surveys of legal outcomes. Readings will include selections from ancient texts as well as modern decisions and contemporary commentaries. Prior background is required.

**GOVT 327 Civil Liberties in the United States**
Spring. 4 credits. A. Ruten.
An analysis of contemporary issues in civil liberties and civil rights, with emphasis on Supreme Court cases analyzed in terms of democratic theory and the social and political context in which they arose.

**GOVT 328 Constitutional Politics: The United States Supreme Court**

**GOVT 353 Feminism Movements and the State (also Women's Studies 353)**
Fall. 4 credits. Permission of the instructor only. Students seeking admission are required to attend first class of the semester. M. Katzenstein.
This course focuses on women's activism and the American state. The subject emphasis and format (lecture, sections, tutorials) of this course changes each year, and is announced on the first day of class. Active class discussion and extensive writing will be encouraged, whatever the particular format of this coming year's class organization. Irrespective of students should pre-register (in order that we may estimate possible class number) but final admission to the class is contingent on application to be completed at the first meeting of the class.

**GOVT 401 Introduction to Science and Technology Policy (also S&TS 431)**

**GOVT 402 Public Opinion and Mass Political Behavior (also GOVT 702)**

**GOVT 403 State and Economy in Comparative Perspective**

**GOVT 404 American Political Development in the 20th Century**

**GOVT 405 Government and the Economy (also GOVT 705)**
Spring. 4 credits. E. W. Kelley.
What would Adam Smith and Karl Marx consider the causes of such problems as stagflation, an unfavorable balance of trade, the threat of protectionism, the growth of massive public and private sector bureaucracies, and excessive government regulation? What suggestions would they make about remedies? How can we evaluate both their suggestions, and appraise the representational democracy itself part of the problem? Can Woodrow Wilson, Thomas Jefferson, or Grant McConnell help us understand the effects of legislative behavior on economic transactions? This course will use selected works of Smith, Marx, Durkheim, Wilson and more recent authors like Mancur Olson, Bendix, and McConnell. Substantive focus will be on classical political economy, the development of the state, the rise of professions, guilds, and labor unions; regulation and the increased delegation of public authority to private groups. Methodological focus will be on the ways of evaluating both discursive and quantitative evidence for the factual and causal claims of the authors read.

**GOVT 406 Politics of Education (also GOVT 706)**
Fall. 4 credits. E. W. Kelley.
Education is simultaneously America's biggest business and the institutional process through which skills and values are transmitted to the next generation. This course deals with conflicts about, and the politics of, education as they occur at national, state, and local levels. What (including values) will be taught and to whom; who will benefit from formal education as a vehicle for entry into economic opportunity? What are the powers and
restrictions on government in this area? How does the American system differ from other systems? How does educational testing affect equal opportunity to obtain meaningful system? How does educational testing affect COVT 407 Law, Science, and Public values underlying these initiatives. Three to the use of science and technology. It has developed in recent years as a result of courtroom, regulation of hazardous technolo­

eties, and legal control of professional chemicals and nuclear power, controversies about biotechnology, reproductive technolo­
gies, and biomedical research, and scientific misconduct.

GOVT 408 The Political Theory of Federalism Fall. 4 credits. J. Ferejohn. The course will examine positive and normative theories of federalism making use of historical materials in the development of American institutions as well as comparative historical experiences in Canada and more recent ones in Europe. As part of this effort we shall examine recent normative efforts that have evolved in courts that articulate a central judicial role in maintaining federal arrange­

ments.

GOVT 409 Racial Prejudice and Racial Intolerance Fall. 4 credits. J. Cowden. This course explores the psychology of intolerance and its implications for the operation of politics in the United States. Readings will include many of the "classics" in political science, psychoanalysis, and social psychology, dating from the 1930s to the present.

GOVT 410 Legislatures, Courts, and Public Policy Spring. 4 credits. A. Rutten. Courts play a central role in the formulation and enforcement of policy in the United States. However, courts are not all powerful; politicians and bureaucrats have a variety of ways of changing judicial decisions. This course examines judicial control over policy by examining the relations among politicians, bureaucrats, and judges. To do so, we must examine how courts fit into the political process. Among the topics that we will consider are: The origins and role of perestroika and the systemic and individual factors which led to the crisis in the Communist Party and the collapse of the Soviet Union; (c) the institutional, ideological, and individual context of Russian politics in the post-coup era; (d) the problems of the development of a "civil society" in the post-communist context, with particular emphasis on the development of a multi-party system, finding new sources of social solidarity in a system still psychologically dependent on Leninist ideology, market reform in a collapsing command economy, and the particular problems of resurgent nationalism and state-building in the post-communist context.

GOVT 423 Political Economy of East Asia Spring. 4 credits. R. Bullock. This lecture course examines East Asian political economy in historical and comparative perspective. Central topics include: Why have Japan, South Korea, and Taiwan developed so rapidly in the postwar era? Can we identify an East Asian mode of development? What does the region's growth mean for other countries and for the international economy? Are Southeast Asian countries following a similar trajectory today? Particular topics include Japanese colonialism, industrial policy and its critics, domestic political consequences of rapid growth, political corruption, US-Japan economic conflict, and recent attempts at political-economic liberalization.

GOVT 436 Modern Japanese Politics @ Fall. 4 credits. R. Bullock. This course is an introduction to Japanese domestic politics and political economy. Subject matter begins with post-Meiji Japan but focuses on the postwar ear. Questions to be explored include: Who rules Japan? How is policy formulated? How do we account for postwar political stability and rapid economic growth? How are opposition interests accommodated or ignored? How is the political system changing today?

GOVT 437 Government and Politics of China @ Fall. 4 credits. V. Shue. An introduction to the main currents in China's domestic politics over the last sixty years. Topics include the revolutionary rise of
**GOVT 349 Political Role of the Military**
Spring. 4 credits. B. Anderson.
Comparative study of the political consequences of the global spread since the early nineteenth century, of professionally officered, industrially equipped militaries. Case studies of selected European, Asian, African, and American states will investigate the relationships of these militaries to nationalism, imperialism, technological innovation, and munitions industries, as well as class, ethnic, and religious conflict. Particular attention will be paid to the peculiarities of the modern military's organizational structure in shaping its political roles.

**GOVT 350 Comparative Revolutions**

**GOVT 351 India: Social and Economic Change in a Democratic Polity**

**GOVT 354 America in the World Economy**
Spring. 4 credits. P. Katzeinstein.
Unemployed auto workers in Detroit and the wood stoves in New England signal an important change in America's relation to the world economy. This course characterizes these changes in a number of fields (trade, money, energy, technology), explains them as the result of the political choices of a declining imperial power that differs substantially for the choices of other states (Japan, Germany, Britain, France, the small European states, and Korea), and examines their consequences for America and international politics.

**GOVT 355 International Relations of the Ancient Near East**
Spring. 4 credits. M. Bernal.
In this course we shall consider a number of international systems in古代 Southwest Asia, Northeast Africa and Southeast Europe during these three millennia. The course will focus on three systems: that of the city states of Mesopotamia and Syria in the 3rd millennium BCE, the concert of powers centered on Egypt in the Late Bronze Age 1500-1200 BCE and the period of Phoenician hegemony 1100-750 BCE. Both internal political structures and external relations will be considered, as well as possible correlations between the two. Attention will also be paid to the importance of the sociology of knowledge in modern studies of these societies and systems.

**GOVT 357 Understanding Russia Today**
Fall. 4 credits. G. Gibian.
For description see, Russ L 330.

**GOVT 358 Modern History of the Middle East: Changing Politics, Society, and Identity**
Fall. 4 credits. J. Teitelbaum.
For description, see NES 294.

**GOVT 431 Model European Union**
Spring. 2 credits. J. Pontusson.
This two-credit course is designed to prepare students to participate in the annual Model European Union Simulation held, on an alternating basis, at SUNY Brockport and in Brussels. The simulation provides an opportunity for participants, representing politicians from the member states of the European Union, to discuss issues and resolutions of concern to the EU. The preparatory course introduces students to the EU, the country that the Cornell team will represent, and the issues to be discussed at the simulation. A substantial part of travel costs for the Cornell team will be paid by the Institute for European Studies, and course enrollment will be restricted by budgetary considerations. Students enrolled in this course are required to write a research paper.

**GOVT 433 The Politics of Economic Liberalization in the Developing World**
Fall. 4 credits. H. Schanis.
What drives the current processes of economic liberalization taking place in most of the developing world? What kinds of constraints and opportunities do governments embarked upon such policy reforms face? What types of factors account for their success or failure? What is the relationship between the international dimension of its phenomenon and the domestic political conditions? This seminar addresses these questions by examining the interplay of domestic and international ideas, local and foreign actors, and national and transnational institutions which take part in these processes. The course is taught on a seminar basis, and is not limited to Latin America.

**GOVT 434 Politics and Society in Eastern Europe**
Fall. 4 credits. C. Tarrow.
Italy is a country that political scientists have not known how to understand. Too modern to be considered a "developing country," its reputation for corruption, crime, and inefficiency has hung over it for years. Considering it along with the "modern" states of Northern Europe. Yet Italy has one of the five or six most developed industrial economies in the world, a center for technical innovation, and is the only state on the Mediterranean that has been functioning uninterrupted as a parliamentary democracy since the end of World War II. Italy's political system has always been a puzzle and, recently, it imploded upon itself after an outbreak of corruption scandals, Mafia violence, and the collapse of its two main governmental parties. The result has been polarization, polemics and political instability, and a political future that looks highly uncertain. This course will trace the development of Italian politics and society since the fall of fascism, particularly in its relationship to the changes in Italian society, and focusing on the role of its (post) Communist party, the cleavage between North and South, the shape of the political economy and the recent convulsions in the party and electoral systems. Students may take a final examination or write a term paper. Students are not required to read Italian, but those who have completed Italian 314 are welcome to take the course.

**GOVT 435 Collective Action and Politics in Modern Europe (also History 435)**

**GOVT 436 Environmental Politics and Policy**
Fall. 4 credits. R. Herring.
A research-oriented seminar oriented toward theoretical understanding of the interaction of social and natural systems as mediated by the state. Readings and examples will come from both rich and poor societies. Specific topics will include the "tragedy of the commons," biodiversity, international agreements affecting the environment and various models of political behavior and the translation of political movements into public law.

**GOVT 437 Contemporary China: Society and Politics**

**GOVT 438 Contemporary China: Political Economy**
Spring. 4 credits. V. Shue.
Selected readings and in-class discussion of some of the central questions that have been posed by the introduction of 'marketizing' reforms under conditions of continuing communist party dictatorship in China today. Topics include, the political consequences of the move away from central planning of the economy and of China's opening its doors to trade with the world, the changing composition and role of the party; the rise in the power of city and local governments and of the phenomenon of 'local state-corporatism' in the countryside; new problems of governance accompanying the emergence of a private business sector and of a freer labor market; and what is likely to be done about the recent epidemic of economic crimes and political corruption.

**GOVT 439 Japan in International Politics**
Spring. 4 credits. R. Bullock.
The course focus is how 'Japan shapes and is shaped by the international environment, with particular emphasis on the post-cold war era. Our approach will be both thematic and institutional. Topics to be discussed include US-Japan trade friction, Japan's investment and ODA in Southeast Asia, and cultural politics and notions of a New Asian Identity.

**GOVT 442 Feminist Politics and Policy in the United States and Europe**
Fall. 4 credits. M. Katzenstein and U. Liebert.
In both Western Europe and the United States, feminist organizational politics as well as policies that support gender equality are simultaneously under siege and yet, in certain ways, still vibrant. Through cross-national comparisons, we hope to assess the ways the strengths and weaknesses of feminist politics and policies can be traced to global processes, and/or to differences in individual state structures and state-society relationships. Our approach in this course is inductive: We begin by highlighting some important similarities and differences in gender policy. We then turn to a comparison of state institutions and an examination of the place of movement politics in the interaction of state and society. Finally, we consider the character and effect of global changes in the form of the internationalization of capital and the rise of global communication and networks.
GOVT 443 Proseminar in the Politics of South Asia
Spring. 4 credits. M. Katzenstein and R. Herrig.
This course explores regional politics thematically with an eye to comparative analysis, both within the region and across regions. Prominent themes include: 1) identity politics, including but not limited to ethnic conflict—its social origins, mobilization and political expression; 2) environmental politics and policy—from local to global; 3) development strategies—political sources of intervention and withdrawal of public authority in economic processes; 4) social movements, especially as connected to the above. Theoretically, we are concerned with the structure-agent problem, the material-idealational (or cultural) problematic in explanation, and the logic of comparative analysis. What do we usefully compare to what? Materials and subject matter will be decided interdisciplinary. Open to graduate and advanced undergraduate students. Seminar format.

GOVT 444 Afrocentrism
Spring. 4 credits. M. Bernal.
The seminar will begin with a survey of African-American writings about African history from David Walker's Appeal in 1829 to W.E.B. DuBois's The Negro and Black Folk Then and Now. We shall then read from the works of "Afrocentrists" writers of history including Chancellor Williams, Yosef ben-Yochanan and Chiekht Antu Diop as well as those of sympathetic scholars such as St. Clair Drake and Shomarka Keita. After examining the historical utility of these writings, we shall turn to Afrocentrism as a social, political, and pedagogical movement. We shall read works of such figures as Molefi Asante, Charles Finch, Asa Hilliard and Leonard Jeffries. In this section we shall be investigating the relationship of Afrocentrism to more directly political movements. As well as the objections to it from those who dislike its neglect of issues of class and gender. In the last section, we shall consider the portrayal of Afrocentrism as a "boogy" discussing selections from the works of Arthur Schlesinger, Dinesh D'Souza, Mary Lefowitz and others.

GOVT 454 The Herodotean Moment: The Uses of "Western Civilization" (also Comparative Literature 454, History 454)

GOVT 458 Comparative Democratization

GOVT 468 Global and Domestic Dimensions of Science and Technology Policy (also SATS 425)

Political Theory
Government 161 is recommended.

GOVT 260 Social and Political Philosophy (by petition for breadth requirement) (also Philosophy 242)

GOVT 361 Modern Ideologies: Liberalism and Its Critics

GOVT 362 Politics of Sexuality (also Women's Studies 262)

GOVT 364 The Selfish Individual and the Modern World

GOVT 366 American Political Thought from Madison to Malcolm X (also History 316 and American Studies 366)
Spring. 4 credits. J. Kramnick.
A survey of American political thought from the eighteenth century to the present. Particular attention will be devoted to the persistence of liberal individualism in the American tradition. Politicians, pamphleteers and poets will provide the reading. The professor offers insightful historical and social context.

GOVT 368 Global Climate and Global Justice (also Philosophy 368)
Fall. 4 credits. H. Shue.
On-going international negotiations under the Framework Convention for Climate Change, adopted to deal with "global warming," are producing conflicts between rich and poor states, and between oil-producers and oil-consumers, about who ought to bear which proportion of the costs of any economic changes necessary either to slow the predicted rate of climate change or to adapt to rapid change. What is fair when rich and poor cooperate to deal with a common but long-term threat? This course critically examines a variety of views about international and intergenerational justice.

GOVT 369 Introduction to Feminist Political Thought (also Women's Studies 269)

GOVT 370 Political Theory and Cinema
Not offered 1996-97.
For description, see GERST 330.

GOVT 375 Visual Culture and Social Theory (also ART H 370 and Comp. Lit. 368)

GOVT 376 Rethinking Marx

GOVT 377 Concepts of Race and Racism
Spring. 4 credits. A. M. Smith.
This course examines race and racism from a political theoretical perspective. We will discuss the different types of racism: traditional racism, "new" cultural racism, and neo-conservative racism. We will then examine various radical approaches to anti-racism: Marxism, civil rights, black power, colonization theory, domestic underdevelopment theory, Omi and Winant's racial formation framework and women of color feminist theory. In final section of the course, we will discuss the significance of race in contemporary American politics. Topics may include immigration, multiculturalism, and affirmative action.

GOVT 461 Disciplining Walter Benjamin (also Soc Hum 403)
Fall. 4 credits. S. Buck-Morss.
Walter Benjamin's writings on the experience of modernity demonstrate the arbitrariness of disciplinary boundaries on the one hand, and the richness of their perspective variations on the other. Are his writings radicalizing the disciplines, or are the disciplines robbing his writings of their radical intent? We will read texts by Benjamin and contemporary texts about them.

GOVT 462 Modern Political Philosophy
For description, see PHIL 346.

GOVT 463 Politics of Contemporary Feminist Theory

GOVT 466 Feminism and Gender Discrimination

GOVT 467 Freedom and Slavery (also Soc Hum 415)
Spring. 4 credits. S. Buck-Morss.
This course examines the development of the European idea of freedom within the context of the European institutionalization of slavery, in order to reveal how the theory of freedom and the practice of slavery were inextricably connected. Readings in philosophy, history, critical theory, and cultural studies.

GOVT 468 Global and Domestic Dimensions of Science and Technology Policy

GOVT 469 Limiting War
Not offered 1996-97.

GOVT 470 Anthropology-Theory-Politics-Performance (also Anthropology 470)

GOVT 473 Marx, Nietzsche, Freud (also German Studies 415)

GOVT 474 Community, Nation, and Morality
Spring. 4 credits. N. Hirschmann, R. Miller, and H. Shue.
Although the moral point of view is often taken to transcend ties to particular groups, actual political choices often express the choosers' ties to a nationality, state, community, religion, or racial or ethnic group. To what extent are such choices morally legitimate? Do such choices, located in particular identities, conflict with universalist moral principles, e.g., principles requiring equal respect for all? These questions will include such topics as: the role of community in liberalism and in critiques of liberal individualism; the nature of nationality and community and their role in both individual identity and political justice—multiculturalism and separatism, including specific issues of race, gender and sexuality; the moral status of patriotism; justice and international inequality. Readings will include work by Taylor, Rawls, Sandel, Gresshaw, Gilligan, Okin, MacIntyre, Nagel, Kymlicka, West, David Miller, and the instructors. The course will have a seminar format. It is intended for both advanced undergraduates and graduate students.

International Relations
Government 181 or 261 is recommended.

GOVT 294 Global Thinking
Fall. 4 credits. H. Shue.
The analysis taught in this course is global in two different respects: international subjects and interdisciplinary methods. We look in detail at two of the most important and most difficult issues facing international society, devoting approximately half the course to each case: (1) when, if ever, should other nations intervene militarily into ethnic conflict like that in Bosnia? and (2) what, if anything, should industrialized nations and industrializ-
ing nations respectively do to reduce the emissions that promote climate change? On military intervention, we bring together political science, law, and ethics; on climate change we bring together atmospheric chemistry, economics, and ethics. The course is team-taught by five leading faculty researchers from the fields listed.

[GOVT 380] The Politics of German Unification

[GOVT 381] The Politics of Defense Spending

GOVT 382 International Relations of East Asia
Spring. 4 credits. T. Christensen.
This open lecture class is offered as an alternative to Government 482, a limited-enrollment, advanced seminar with the same title. The course will discuss Japanese imperialism in the 1930s, the Cold War in Asia, and regional affairs in the post-Cold War era. The lectures will present and test competing explanations for the behavior of the great powers and local actors in the region. We will analyze the links between the security and economic components of foreign relations. We will also analyze how regional subsystems influence each other by exploring the connections between the Cold War in Europe and the Cold War in East Asia. The course will conclude with a discussion of how the demise of the Soviet Union and the rise of China may alter future regional dynamics. This course is open to all undergraduates except those who have taken or intend to take Government 482. Graduate students must obtain the instructor’s permission to attend this class.

[GOVT 383] Theories of International Relations

[GOVT 384] War and Peace in the Nuclear Age (also Physics 208)

[GOVT 385] American Foreign Policy

[GOVT 386] International Political Economy

GOVT 389 International Law
Fall. 4 credits. Staff:
Characteristics of international law; its theoretical foundations, principles, processes, and relationship to international politics. Emphasis on law-in-action. Attention to both traditional problems (intervention, coercion, and the scope and limits of adjudication) and contemporary trends and processes (arms control, outer space, exploitation of seabed resources, the individual in international law, and cooperative patterns of socioeconomic relations at global and regional level). Content may vary according to international events.

[GOVT 391] Chinese Foreign Policy

GOVT 392 International Relations of the Middle East (also NES 395)
Fall. 4 credits. S. Telhami.
This course will examine patterns of international relations in the Middle East in the twentieth century, with special reference to the Arab-Israel and Iran-Iraq conflicts. These conflicts will be treated as part of a Middle East system, whose other main elements are the interaction between domestic and external politics, inter-Arab relations, and the involvement of extraregional powers.

[GOVT 393] Introduction to Peace Studies

GOVT 394 Comparative Foreign Policy
Spring. 4 credits. M. Evangelista.
This course explores the sources of differences in foreign-policy processes and outcomes between and within states. One school of thought holds that differences in the characteristics of the countries in question (large versus small, democratic versus authoritarian, industrialized versus developing, etc.) lead to differences in their foreign policies. Another argues that the important differences are not so much between countries as between “issue-areas,” for example, military policy versus trade policy. In this course, students will evaluate the competing explanations by looking at a number of aspects of foreign policy—including diplomatic strategy, economic policy, and alliance policy—in several areas and historical cases: the World Wars, the Cold War, arms races, North-South political and economic relations, foreign economic policies of advanced industrial, state-socialist, and developing countries. We will attempt to understand why some states are more successful than others in achieving the main goals of foreign policy: security and prosperity.

GOVT 395 Palestinian Nationalism (also NES 299)
Spring. 4 credits. Prerequisites: NES 294 or Govt 358 or permission of the instructor. J. Teitelbaum.
A survey of the development of Palestinian nationalism from the late Ottoman period until the current peace process. Special emphasis will be placed on the role of East Jerusalem, in which domestic and international political processes, along with social and economic factors, contributed to the crystallization of a sense of a separate and unique Palestinian identity and consciousness. Readings will include selections from Palestinian literature in English translation.

[GOVT 396] The Past as Prelude? (also History 352)

[GOVT 398] North-South Relations

[GOVT 399] International Relations of the Former Soviet Union

GOVT 475 Topics in International Political Economy: Money and Finance
Fall. 4 credits. J. Kirshner.
Government 475 is a topical seminar which focuses on a different aspect of international political economy each time it is offered. The goal of the course is to explore the historical and theoretical background of a particular issue or controversy and consider the implications of that analysis for the contemporary system. In Fall 1996 the focus will be on money and finance.

[GOVT 482] International Relations of East Asia

GOVT 483 The Military and New Technology (also S&TS 483)
Spring. 4 credits. J. Reppy.
In conventional wisdom, military organizations are seen paradoxically both as inflexible institutions and as proponents and consumers of rapid technological change. In this seminar we will examine changes over time in the attitude of the military toward new technology and analyze competing explanations for these changes. Readings will include Michael Howard, War and European History; John Ellis, The Social History of the Machine Gun; and Donald MacKenzie, Inventing Accuracy: An Historical Sociology of Nuclear Missile Guidance.

[GOVT 489] International Law and Regime Development

GOVT 491 Conflict, Cooperation, and Norm: Emerging Issues in International Affairs
Fall. 4 credits. M. Evangelista.
This course examines current and historical issues in international relations from the perspectives of international norms and laws, political science, and ethics. We develop general principles and concepts, such as "just war," "national interest," and "human rights," and apply them to real-world situations. Most of the focus of the course is on particular cases that involve legal and ethical issues: violations of human rights and genocide; war crimes; military intervention; economic sanctions; environmental degradation; economic injustice. The first part of the course examines these issues using examples from 20th-century international affairs, including recent events. The second part focuses on current issues that pose ethical problems for the foreign policy of the United States: internal violence and human rights abuses in the former Yugoslavia and former Soviet Union; indigenous uprisings in Mexico and their relation to U.S. foreign economic policy; the appropriate U.S. response to situations in countries such as Haiti, Nigeria, and China.

Honors Courses
Each April a limited number of junior majors are admitted to the honors program, their work to begin the following fall. Application forms and a full description of the program may be obtained in 125 McGraw Hall.

GOVT 492 Empirical Research
Spring. 4 credits. U. Liebert.
Introduces several theoretical models often used to represent political situations and actions, and some basic methods for assessing how well the theories that motivate the models explain actual events (or non-events). Examines the connections between ideas, arguments, models, data and evidence about politics. Intended primarily for well-prepared juniors and exceptionally advanced sophomores interested in completing a large-scale research project in political science, such as an honors thesis. Previous work in social theory, logic, or statistics would be helpful but his not necessary.
GOVT 494 Honors Seminar: Thesis Clarification and Research
Fall. 4 credits. E. Sanders.
Each student works individually with a faculty member. The student initiates the tutorial by interesting a faculty member in his or her likely thesis project and by submitting to the director of undergraduate studies a form outlining the general area the thesis will treat and bearing the faculty tutor's signature. This form is due the third week of classes. The tutorial culminates in a ten-to-fifteen-page paper setting forth the central questions to be addressed by the thesis, the state of existing knowledge regarding those questions, and why they matter.

GOVT 495 Honors Thesis: Research and Writing
Spring. 4 credits. Limited to students who have successfully completed Government 494.
Students continue the work of the preceding semester typically with the same faculty tutor. Research on the thesis is completed and writing begun. The tutorial culminates in a thesis of some sixty to eighty pages. The grade for the tutorial is determined by the faculty tutor, while the degree of honors (if any) awarded the thesis is decided by a committee of faculty members established for that purpose.

Independent Study
Independent study, Government 499, is a one-on-one tutorial which is arranged by the student with a faculty member of their choosing. Government 499 is open to government majors doing superior work, and it is the responsibility of the student to establish the research proposal and to find a faculty sponsor. Applicants for independent study must present a well-defined program of study that cannot be satisfied by pursuing courses in the regularly scheduled curriculum. No more than 4 credits of independent study may count toward fulfillment of the major. Students who elect to continue taking this course for more than one semester must select a new theme or subject each semester. Credit can be given only for work that results in a satisfactory amount of writing. Emphasis is on the capacity to subject a body of related readings to analysis and critical judgment. Keep in mind that independent study cannot be used to fulfill the seminar requirement. The application form for Independent Study is available in 125 McGraw Hall and must be completed at the beginning of the semester in which the course is being taken.

GOVT 499 Readings Fall or spring.
Fall or spring. 1-4 credits.

Graduate Seminars
Qualified undergraduates are encouraged to apply for seminars listed with 600 course numbers but may only register with the permission of the instructor. Students may consult the supplement that lists graduate courses, available in the department office.

Field Seminars
GOVT 603 Field Seminar in American Politics
Spring. 4 credits. E. Sanders.
The basic issues and institutions of American government and the various subfields of American politics are introduced. The focus is on substantive information and theoretical analysis and problems of teaching and research.

GOVT 606 Field Seminar in International Relations
Fall. 4 credits. S. Telharni and M. Evangelista.
A general survey of the literature and propositions of the international relations field. Criteria are developed for judging theoretical propositions and are applied to the major findings. Participants will be expected to do extensive reading in the literature as well as research.

GOVT 607 The Western Political Tradition: A Survey
Spring. 4 credits. N. Hirschmann.
An introduction to political theory through a reading of selected classics in political thought from Plato to Marx.

Methodology
GOVT 601 Scope & Methods of Political Analysis
Fall. 4 credits. W. Mebane.
This course introduces the major analytical approaches used in contemporary political science research. We touch on broad philosophical issues concerning the nature of theory and inference, the practices of cultural and historical interpretation, and the relevance of moral values and political commitments. Several kinds of research designs, including comparative case studies and quasi-experimentation, are briefly examined. The basic analytical ideas involved in statistical methods such as sampling and regression analysis are introduced, as are the basic concepts of the theory of collective choice and the elementary methods of applied game theory.

GOVT 602 Field Seminar in Political Methodology
Spring. 4 credits. J. Cowden.
This course introduces the quantitative methods most often used in contemporary political science research. We dover applied sampling and basic survey design, categorical data analysis, and basic regression analysis. The statistical methods are treated in conjunction with the problems of research design that most commonly arise in political science applications. Attention is given to the conventions accepted in political science for how a statistical interpretation and the results interpreted. A good basic course in probability and statistics is desirable, though not necessary, prior preparation. Enrollment by interested undergraduates is encouraged.

GOVT 605 Comparative Methods
Fall. 4 credits. J. Pontusson and H. Schamis.
An introduction to selected theoretical problems in the study of comparative politics and to their application in empirical analysis. Basic problems are social class and politics, authority and legitimacy, participation and mobilization, economic development and democracy, authoritarian and totalitarian politics, corporatism and pluralism, nation building and political integration.

GOVT 608 Normative and Interpretive Methodologies
Spring. 4 credits. A. M. Smith and Staff.
This course will present various normative and interpretive methodological approaches to issues in political science. Though the specific focus of the course will vary depending on the interests of the instructor, the general orientation of the seminar will be to expose students to the role of hermeneutic techniques and qualitative criticism in political analysis. This course will fulfill departmental requirements for the second methodology course.

[GOVT 610 Formal Theory and Modelling
4 credits. Not offered 1996-97.]

American Government and Institutions
GOVT 609 Political Parties and Elections
Fall. 4 credits. M. Shifter and J. Cowden.
This graduate seminar examines changes in the character of political parties and the behavior of the electorate. It also considers the changing relationship between political parties and elections, on the one hand, and other political processes and institutions, on the other.

[GOVT 612 American Political Development II: Social Movements and State Expansion in the Twentieth Century
4 credits. Not offered 1996-97.]

GOVT 613/413 Finance, Federalism, and Politics
Spring. 4 credits.
See Government 413 for description.

[GOVT 615 State and Economy in Comparative Perspective
4 credits. Not offered 1996-97.]

[GOVT 618 Feminist Jurisprudence
4 credits. Not offered 1996-97.]

[GOVT 619 Social Movements, the State, and Public Policy
4 credits. Not offered 1996-97.]

GOVT 620 The United States Congress
Fall. 4 credits. R. Bensel.
The United States Congress will be examined: first, as a "closed system" in which institutional arrangements decisively apportion political power; and, second, as the product of electoral and social forces outside the institution. Emphasis will be placed on the historical relationship between institutional growth and state formation, parliamentary rules as both arrangements within which the "rational choices" of legislators are played out and as deliberate, constructions and allocations of political influence, and the use of legislative behavior as evidence in the analysis of fundamental principles of politics. Because the literature on the lower chamber is generally more rich, the House of Representatives will receive greater attention than the Senate.

[GOVT 622 The Political Economy of American Development
4 credits. Not offered 1996-97.]

[GOVT 623 The Politics of Courts
4 credits. Not offered 1996-97.]

[GOVT 624 American Political Organizations, Institutions, and Party Systems
4 credits. Not offered 1996-97.]

[GOVT 629 Cleavages and Coalitions in Contemporary American Politics
4 credits. Not offered 1996-97.]

GOVT 641 Positive Theory of Politics
Fall. 4 credits. A. Rutten.
In order to cooperate with each other, people must develop some method of making and
enforcing collective decisions. This course examines several solutions to this problem. The first is anarchy, or statelessness, in which there is no specialized body charged with enforcement. The bulk of the course will focus on societies in which political decisions are enforced centrally by the state. We will give special attention to the use of constitutions to control the state. The material in the course will be both theoretical and historical.

**GOVT 702 Public Opinion and Mass Political Behavior (also GOVT 402)**

**GOVT 703 Political Economy**
Spring. 4 credits. R. Bensel and J. Kirshner.
This course will undertake a general survey of the classical and modern theories of political economy. The works of Smith, List, Marx, Weber, Keynes, Schumpeter, Hayek, and Friedman, among others, will be studied and placed within the context of the history and evolution of the thought, practice, and method of the field.

**GOVT 705/405 Government and the Economy**
Spring. 4 credits. E. W. Kelley. See Government 405 for description.

**GOVT 706 The Politics of Education**
Fall. 4 credits. E. W. Kelley. See Govt 406 for description.

### Comparative Government

**GOVT 633 European Party Systems and Political Change**
Spring. 4 credits. U. Liebert.
This course is an analysis of West European party systems and major changes in voting behavior with a particular emphasis on the re-emergence of far right parties in the 1980s and 1990s. The course is organized in two parts. First, there will be a discussion of various concepts and approaches to the study of party systems and electoral change (cleavage theory, realignment, value change, etc.). Second, with the help of these theoretical instruments, the rise of new (or old) far right parties and their effect on the party systems in Western Europe will be analyzed in several case studies.

**GOVT 634 Genetic Engineering: Politics and Society in Comparative Perspective**
Spring. 4 credits. S. Hilgartner. See S&T 645 for description.

**GOVT 639 Studying Political Culture**
Fall. 4 credits. V. Shue.
Selected readings deploying a range of differing approaches to the study of the relations between culture and politics. Discussion of methodological and interpretive questions including the linkage of cultural with structural explanations and the framing of informative comparisons across cultures. Readings and discussion focused on, but not confined to, Asian examples.

**GOVT 642 Comparative Political Economy: East and Southeast Asia**
Fall. 4 credits. R. Bullock.
This course focusses on the political economy of rapid growth in postwar Japan, South Korea, and Taiwan. Seminar themes include: Japanese colonial legacies, contending models of East Asian economic success; international implications of rapid growth; the "Japanese model of development" and regional variance; one-party conservative rule; structural corruption and political scandal; ongoing efforts at political-economic liberalization; and Southeast Asian cases as second-generation NICs.

**GOVT 644 Sociotechnical Aspects of Irrigation**
Not offered 1996-97.
For description, see AG EC 754.

**GOVT 645 Chinese Politics**
Spring. 4 credits. V. Shue.
Review and assessment of several of the major currently competing approaches to the study of Chinese politics. Discussion and evaluation of leading works in the field analyzing Chinese state and society, policymaking and policy implementation, bureaucratic politics, elite political culture, and political economy. Special attention to problems of research and interpretation.

**GOVT 647 Political Anthropology: Southeast Asia**

**GOVT 648 Political Economy of Change: Rural Development in the Third World**

**GOVT 649 Agrarian Political Economy: Land, Labor, and Nature**

**GOVT 652 Southeast Asia Seminar: The Philippines [also Asian Studies 601]**

**GOVT 653 The Plural Society Revisited [also Asian Studies 602 and 607]**
Spring. 4 credits. B. Anderson.
John Fumivall's concept, invented 40 years ago, posited colonial society as one in which race (and ethnicity), class, occupation, and residence were distributed more or less isomorphically. The seminar will review the utility of the concept in the light of sub­sequent research on colonial Asia, and its applicability to developments since the achieving of independence. It will also consider the relevance of the concept to (un)colonized modern Thailand. The core problematic will be in the relationship between classification (naming) and power.

**GOVT 655 Women, Politics, and Policies in Europe**

**GOVT 656 Comparative Political Economy**

**GOVT 657 Comparative Democratization**
Spring. 4 credits. H. Scharis.
This course will focus on the transition from authoritarian to liberal politics in Eastern Europe and in Latin America. Particular attention will be paid to Poland, Hungary, Russia as well as Argentina, Brazil, and the not-necessarily-Mexico. During the course, we will also bring in a variety of other cases of democratization—in particular, Spain, Portugal, Italy, and Greece. Our focus will be equally divided between the empirics of these transitions and theoretical understandings of transitions to democracy.

**GOVT 660 Globalization and Social Movements**
Fall. 4 credits. S. Tarrow.
This is a research seminar on the relationships among politics, organized social movements, and periods of mass mobilization like those that swept through Western Europe and the U.S. in the 1960s and Eastern and Central Europe today. The course begins with a theoretical introduction to major approaches to social movements and collective action, concentrating on the factors that induce masses of people to adopt disruptive forms of collective action. It moves from there to a historical section focussing on cycles of protest in the recent and not-so-recent past. It continues with case materials that illustrate a series of theoretical problems in the study of movements and collective action—particularly that of the relations between protest and reform. Students will write term papers on particular cycles of protest and reform.

**GOVT 682 The Administration of Agricultural and Rural Development**
Spring. 4 credits. N. Uphoff.
For description, see INTAG 603.

### Public Policy

**GOVT 663 Political Theory**

**GOVT 664 Contemporary Democratic Theory**

**GOVT 665 American Political Thought: From Madison to Malcolm X**
Spring. 4 credits. I. Kramnick.
This seminar will trace developments and tendencies in American political thought from the eighteenth century to the present. It will examine individual thinkers, like Jefferson, Calhoun or Dewey, movements like Anti-Federalism, Social Darwinism and Progressivism, and themes of political culture like racism, sexism, class policies, and religion. The seminar will assume a basic familiarity with American history.

**GOVT 666 Modern Social Theory I**

**GOVT 670 Modern Social Theory II**

**GOVT 671 Graduate Seminar in Feminist Political Theory**
Fall. 4 credits. N. Hirschmann.
This graduate seminar will examine contemporary feminist theory from the perspective of political theory. We will study the work of feminist theorists who work specifically within the discipline of political science, as well as the specifically political dimensions of work not generally considered political theory. Though particular readings and topics will change from year to year in response to the most recent literature, in general the course will focus on questions of epistemology and methodology as a way to explore a variety of issues of relevance to feminism as an academic, intellectual, and political enterprise. The course is open to undergraduates who have taken Government 463 or other courses in feminist theory, with permission of the instructor.
[GOVT 672] Theories and Policies of Feminist Issues

[GOVT 674] Theory and Practice of Nationalism

[GOVT 675] Gramsci and Cultural Politics
(also Goldman Literature 685)

International Relations

[GOVT 683] Foreign Policy Analysis

[GOVT 685] International Policy
Economy
Spring. 4 credits. P. Katzenstein.
An exploration into a range of contemporary theories and research topics in the field of international political economy. The seminar will cover different theoretical perspectives and a number of substantive problems.

[GOVT 686] International Strategy

[GOVT 687] International Environmental Policy
Not offered 1996-97.

[GOVT 688] Political Economy and National Security
Fall. 4 credits. J. Kirshner.
This seminar considers the relationship between economics and national security. Specific topics will change from year to year, but will typically include the following: the economic foundations of power, economic coercion, the economic roots of conflict, and the ways in which structural changes in the international economy shape and limit state authority.

[GOVT 689] International Security
Politics

[GOVT 691] Normative Elements of International Relations

[GOVT 694] Research Design and Grant Writing
Fall. 4 credits. M. Evangelista.
This course is intended as a follow-up to the field seminars for students who are close to or in the midst of designing a dissertation project. We revisit key issues of research design and method; we seek to identify what constitutes a good, manageable research question; to learn how to place it within the relevant literature and debates in the field; and to persuade someone to fund our research. We begin with general issues of epistemology and logic of inquiry. Then we consider the merits of various research designs in the context of specific examples of published work in several subfields. Students will review successful and unsuccessful grant proposals; will hear presentations from faculty members of their own experiences with grant-seeking; will learn the nuts and bolts of writing proposals directed toward such foundations as the SSRC, NSF, MacArthur, and others; and will present drafts of their own dissertation grant proposals and receive constructive advice from members of the class, and, perhaps, outside reviewers.

Independent Study
This course is NOT open to undergraduates. Undergraduates wishing to conduct supervised study should register for Government 499.

[GOVT 799] Independent Study
Fall or spring. 4 credits.
Government 799 is a course of individualized readings and research for graduate students. Topics, readings, and writing requirements will be designed through consultation between the student and the instructor. Graduate students in government who are looking to use this as an option to fulfill their course requirements should check with their chairs to be certain that the program of study is acceptable for this purpose. Applications must be completed and signed by the instructor and by the chairs of their special committees. They are available from, and must be returned to, the graduate secretary in 125 McGraw Hall.

HINDI-URDU
See Modern Languages under Languages and Linguistics.

HISTORY

The history department offers an honors program for students who wish to research and write a thesis during their senior year. In addition to writing the thesis, honors students must maintain a 3.5 average in their history courses, take the Honors Proseminar (History 400) plus an additional 400-level seminar, preferably during their junior year, and complete 44 credit hours in history. During the second term of sophomore year or early in junior year, interested students should speak to a faculty member or faculty adviser about the honors program. Before the beginning of senior year, the candidate presents in conversation or in writing a thesis proposal to an appropriate member of the faculty. The faculty member who approves the proposal ordinarily becomes the thesis supervisor. If for any reason it is necessary to change supervisors, this arrangement should be confirmed no later than the fourth week after the beginning of the candidate's senior year.

Honors candidates should register in History 401, Honors Research, with their supervisors. Any exceptions to this must be approved by the Honors Committee. History 401 is a 4-credit course that permits honors candidates to conduct research and to begin writing the honors essay. At the end of the first semester of the senior year, as part of the requirements for History 401, the student submits to the supervisor a ten-to-fifteen page overview, or, alternatively, a preliminary draft of some part of the thesis along with an outline of the whole and meets with a committee consisting of the student's supervisor and one other department member who will eventually serve as a reader of the thesis. That committee then recommends whether the student may proceed to enroll in History 402, Honors Thesis, during the final semester of the senior year. History 402 is a 4-credit course that permits honors candidates to complete the honors essay and to demonstrate their understanding of the ways in which the themes explored in the thesis fit into a larger historical context.
The completed thesis is evaluated by three readers, including the two faculty members who administered the preliminary oral interview in December.

The text of the honors essay may not exceed sixty pages except by permission of the chair of the honors committee and the student's supervisor. Two copies are due during the third or fourth week of April. In May each honors candidate is given an oral examination administered by the supervisor and the examination focuses on the specific issues of the essay as well as the specific subfield of history in which the student has conducted research (e.g., Periclean Athens, eighteenth-century science, nineteenth-century America).

To qualify for a bachelor of arts degree with honors in history, a student must (1) sustain at least a B+ cumulative average in all history courses and (2) earn at least a cum laude grade on the honors essay and on the oral examination.

**Cornell-in-Washington Program.** History majors may apply to the Cornell-in-Washington program to take courses and undertake a closely supervised externship during a fall or spring semester.

**Course Offerings**

**Comparative History**

[HIST 274 Foodways: A Social History of Food and Eating #
Fall. 4 credits. Not offered 1996-97. S. L. Kaplan.]

An interdisciplinary examination of the validity of the adage "man is what he eats." Among the topics: food and nutrition, food and social structure, the politics of food control, food and modernization, taste making, and food in religion and literature. Cases will be drawn widely across space and time, from Pharaoh's Egypt to the 1980s.]

[HIST 360 Early Warfare, East and West #
Fall. 4 credits. C. Peterson.]

A study of the principal modes of warfare found both in the East and the West from ancient times up to the eighteenth century. Tactical evolution and the impact of innovations are stressed, but attention is also paid to the general social and cultural background and the role of nonlinear factors.

[HIST 370 Resistance and Adaptation: Native American Responses to the Contact #

[HIST 380 Social History of Western Technology #

For description, see History of Science.

[HIST 393 Images of Humanity in Medieval China (also Asian Studies 382) @ #
Fall. 4 credits. Prerequisite: any course on premodern China or Chinese religions, or permission. Not offered 1996-97. C. Peterson.]

[HIST 405 Population and History #

[HIST 409 Seminar on Work in Europe and America #

A comparative study of the meaning of work in different societies from premodern times to the present. Emphasis on the "representations" of work of the actors themselves who worked, as well as of those who for various critical reasons did not work. The seminar will examine not only ideology but also the organization, practice, and physical place of work. It will explore theory as well as "cases," and draw on anthropological and sociological as well as historical materials.

[HIST 432 The City in History: Europe and America #

A comparative study of the meaning of work in different societies from premodern times to the present. Emphasis on the "representations" of work of the actors themselves who worked, as well as of those who for various critical reasons did not work. The seminar will examine not only ideology but also the organization, practice, and physical place of work. It will explore theory as well as "cases," and draw on anthropological and sociological as well as historical materials.

[HIST 451 Lord and Peasant in Europe: A Seminar in Social History #

[HIST 454 The Herodotean Moment: The Uses and Abuses of "Western Civilization" (also Government 454) #

For description, see Govt. 454.]

**History of Science**

[HIST 250 Technology in Western Society (also Engineering General Interest 250, Electrical Engineering 250, and Science and Technology Studies 250) #
Fall. 3 credits. R. Kline.]

For description, see ENGRG 250.

[HIST 281 Science in Western Civilization (also Science and Technology Studies 281) #
Fall. 4 credits. History 281 is not a prerequisite to 282. M. A. Dennis.]

How did the natural philosophy of the 18th century become the natural science of the 19th and 20th centuries? This course will explore the changing conceptions of knowledge in the West with particular attention to the connections among theories of nature, political cultures, and commercial and industrial practices. In addition to the traditional discussions of such fundamental figures and constellations of events as William Herschel, the Chemical Revolution and the French Revolution, Darwin and the theory of evolution, and natural philosophy in the Scottish Enlightenment, lectures will also focus on the development of research in the sciences in Germany, the role of research schools in dissemination new knowledge and experimental practice, and the different national styles of support for science during the period.

[HIST 287 Evolution (also Science and Technology Studies 287) #
Fall. W. Provine.

For description, see BIO G 207.

[HIST 292 Inventing the Power and Information Societies (also Engineering General Interest 292, Electrical Engineering 292, and Science and Technology Studies 292) #
Spring. 3 credits. R. Kline.

For description, see ENGRG 298.
I cultural expression. Special attention to three accompanied technological changes and with instances of social transformation that century. Readings and lectures will deal both Europe and America since the eighteenth period: Britain during the Industrial Revolution, America in the nineteenth century, and America during the Vietnam War.

[HIST 415 Seminar in the History of Biology (also BioEs 467, Biology and Society 447, Science and Technology Studies 447)] Fall. 4 credits. Not offered 1997–98. W. Provine. For description, see BIO ES 467.

[HIST 465 Scientific Rhetoric in Historical Perspective (also Communication 465 and Science and Technology Studies 465)] Spring. 4 credits. No prerequisites. Not offered 1996–97. P. R. Dear. B. Lewenstein. Exploration of the development of scientific discourse since the Scientific Revolution, with special emphasis on understanding the rhetorical purposes served by differing forms and techniques. Readings will include classics from Newton, Darwin, Einstein, and others, along with representative samples of more routine scientific communications. Students will prepare brief reports during the semester and a final term paper.

[HIST 680 Seminar in Historiographical Approaches to Science (also Science and Technology Studies 680)] Fall. 4 credits. P. R. Dear. Examines philosophical, sociological, and methodological dimensions of recent historiography of science.

[HIST 682 Topics in the Scientific Revolution (also Science and Technology Studies 682)] Fall. 4 credits. Not offered 1996–97. P. R. Dear. This is a graduate seminar devoted to investigation of recent scholarship and issues in sixteenth- and seventeenth-century European knowledge of nature. Students will be expected to produce a substantial paper focused on the study of primary source documents. The seminar will focus alternately on the study of recent historiography in selected areas, and an examination of primary source materials intended to critique and test those historiographical approaches. Topics will include: credibility and social status, the academic environment, philosophy and court culture, the situated meaning of experiment.

American History

[HIST 101 Introduction to American History] Fall. 3 credits. 101 is not a prerequisite to 102. M. B. Norton and D. H. Usner. A survey of American history from the beginnings through the Civil War. Topics include cultural encounters in the age of Columbus, European colonization, the American Revolution, the early republic, antebellum reform movements, and the coming of the Civil War.

[HIST 102 Introduction to American History] Spring. 3 credits. 101 is not a prerequisite to 102. T. Borstelmann. An introductory survey of the development of the United States since the Civil War.

[HIST 208 The Era of Franklin D. Roosevelt] Spring. 4 credits. Primarily for sophomores. Prerequisite: permission of instructor. R. Polenberg. The impact of the Great Depression and World War II on American politics, law, and culture.

[HIST 209 Political History of Indians in the United States] Fall. 4 credits. Not offered 1996–97. P. R. Dear. An investigation of political organization and change among Native American societies. Discussions and assignments examine forms of tribal government, diplomacy, and warfare, as well as political relations with European colonies and the United States. Specific topics include pan-Indian confederacies, Indian policy, struggles over sovereignty, and Indian strategies of autonomy and resistance.

[HIST 213 Asian American History (also Asian American Studies 213)] Fall. 4 credits. G. Okihiro. Comparative introductory history of Asian Indians, Chinese, Filipino, Japanese, and Koreans in the U.S. from about 1850 to World War II. Themes include U.S. expansionism in the Pacific, Asian migrant labor in Hawaii and the American West, the anti-Asian movement, and Asian resistance.

[HIST 227 Men and Women in Modern America (also Women's Studies 227)] Fall. 4 credits. Limited to 20 students. Permission of instructor required. Intended primarily for sophomores. Not offered 1996–97. M. B. Norton.

[HIST 238 The Historical Development of Women (also Women's Studies 238)] Fall. 3 credits. Not offered 1996–97. J. Brumberg. J. Silbey. For description, see HDFS 238.

[HIST 273 Women in American Society, Past and Present (also Women's Studies 273)] Fall. 4 credits. Not offered 1996–97. M. B. Norton. A survey of women's experiences in America from the seventeenth century to the present. Among the topics to be discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, racial and ethnic differences in women's experiences, and contemporary feminism.

[HIST 276 American Indian History, 1500–1850] Fall. 4 credits. Not offered 1996–97. Next offered 1997–98. D. Usner. A survey of North American Indian history from the sixteenth century to the mid-nineteenth century. Relations between Indian nations and with European colonies will be explored. Different cultural groups and cross-cultural encounters will be compared, with emphasis on resistance and adaptation to European colonialism. The formative years of U.S. Indian policy and the experiences of Indian people through the removal era will receive close attention.

[HIST 277 American Indian History since 1850] Spring. 4 credits. Not offered 1996–97. Next offered 1997–98. D. Usner. A historical study of American Indians in the United States and Canada from the mid-nineteenth century to the present. The active and complex role played by Indian people in their responses to government policies and to socioeconomic changes will be emphasized. Challenges faced and strategies attempted taken by Indians will be traced from the early reservation years to the current era of self-determination. Cultural change and continuity within Indian communities will be closely examined.

[HIST 304 American Culture in Historical Perspective, 1880–1980 (also American Studies 304)] Fall. 4 credits. M. Kammen. An introduction to American Studies and the study of modern American culture. Emphasis upon relationships between mass culture, popular culture, and high culture; and on the question of American exceptionalism (distinctiveness). Special attention also to the situation of subcultures and regions, to the changing role of entertainment in relation to leisure, the media, ethnicity (pluralism), the decorative and popular arts.

political culture, nature of decision making, popular and legislative voting behavior, and the role of interest groups, political parties, and political elites in shaping our political history.

[HIST 313 U.S. Foreign Relations, 1750-1912] Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1996-97. W. LaFeber. Examines policy and policymakers from Benjamin Franklin to Woodrow Wilson. Emphasis is placed on domestic events that shaped foreign policy. In conjunction with HIST 312, a special course for discussion and guided research will be offered.

[HIST 314 History of American Foreign Policy, 1912 to the Present] Spring. 4 credits. T. Borstelmann. Students examine the emergence of the United States as a world power in the twentieth century. The course focuses on the domestic sources of foreign policy and the assumptions of the major policymakers (Wilson through Clinton). Important themes include the American response to a revolutionary world since 1912, the role of American racial views in the making of foreign policy, and the increasingly dominant role of the president in the making of U.S. foreign policy.

[HIST 316 American Political Thought: From Madison to Malcolm X (also Government 366)] Spring. 4 credits. I. Kramnick. For description, see GOVT 366.

[HIST 318 American Constitutional Development] 4 credits. Not offered 1996-97. Next offered 1997-98. R. Polenberg. Major issues in constitutional history. Topics include: the drafting of the Constitution; the Bill of Rights; the Marshall era; the crises caused by slavery and emancipation; the rise of substantive due process; Holmes, Brandeis, and freedom of speech; the Roosevelt "revolution"; civil liberties and civil rights in modern America, the right of privacy, the contemporary Supreme Court.

[HIST 325 Age of the American Revolution, 1763-1815] Spring. 4 credits. Not offered 1996-97. Next offered 1997-98. M. B. Norton. An examination of the process by which the thirteen English colonies became an independent and united nation, with emphasis on political thought and practice, social and economic change, and cultural development. Attention will be paid to the impact of the American Revolution on women, Blacks, and Indians as well as on white males.

[HIST 327 American Frontier History Before 1850] Fall. 4 credits. Not offered 1996-97. D. Usner. An overview of European exploration and colonization in North America, life on different colonial-Indians frontiers, and territorial expansion by the United States. Topics include the ideological and material frameworks of expansionism, the political and social dimensions of imperialist rivalry, and the formation of U.S. Indian and land policies. Themes of human migration, commercial development, and environmental change are emphasized.

[HIST 328 American Frontier History: The West since 1850] Spring. 4 credits. Not offered 1996-97. D. Usner. An examination of the American West, both as place and myth, from the mid-nineteenth century to the present. Conquest of Indian territories, class and ethnic struggles, frontier ideology, and western politics are among the topics. The course comparatively studies agricultural, mining, and other frontier societies. The role of government and science in transforming western environments is closely explored, toward an understanding of recent farm, energy, and other land-use policies in the West.

[HIST 331 The American Civil War and Reconstruction 1850-1877 (also American Studies 331)] Spring. 4 credits. J. Silbey. An analysis of the factors leading up to the breakup of the Union, the impact of the war in North and South, and the problems of restoration and reconstruction of the seceded states.

[HIST 332 The Urbanization of American Society: 1800-1860 (also American Studies 332)] Fall. 4 credits. S. Blumin. America was born in the country and moved to the city. This course examines the transformation of America from a rural to a rapidly urbanizing society and culture, from the first European settlements to the era of the Civil War. It is also a history of the city itself, as a human community, and as a crucible of cultural contact and change.

[HIST 333 The Urbanization of American Society: 1860-2000 (also American Studies 333)] Spring. 4 credits. S. Blumin. America was born in the country and moved to the city. This course examines the transformation of America from the urbanizing society and culture of the mid-nineteenth century to the thoroughly metropolitan nation of the present (and near future). It is also a history of the city itself, as a human community; a crucible of cultural contact and change, and a focus of public policy.

[HIST 335 African-American History from Slavery to Freedom] Fall. 4 credits. Not open to freshmen. M. Washington. An introductory course on African-Americans from 1619 to 1865. Emphasis will be on life in bondage, the free black communities, and racism. Other topics include African cultural heritage, the slave trade, religion, the family, and the black freedom struggle.

[HIST 336 Capitalism and Society in Developing America, 1607-1877 (also American Studies 336)] Fall. 4 credits. Not offered 1996-97. Next offered 1998-99. S. Blumin. An examination of American society in the context of capitalist development, and of capitalism as a social phenomenon. The transformation of pre-industrial colonies into an industrializing nation; the development of social classes; the emerging ethos of free enterprise.

[HIST 340 Recent American History, 1925-1960] Fall. 4 credits. Not open to freshmen. R. Polenberg. Topics include the Sacco-Vanzetti case; radicalism and reform in the New Deal; Franklin Roosevelt and World War II; the Holocaust and the atomic age; the Cold War and civil liberties; individualism and conformity in the 1950s.

[HIST 341 Recent American History, 1960 to the Present] Spring. 4 credits. Not open to freshmen. R. Polenberg. Topics include the Supreme Court and civil rights; Kennedy, Johnson, and social reform; the Vietnam War and Watergate; politics and the presidency from Carter to Clinton, and class, race, and ethnicity in modern America.

and the adaptation of social ideas and values to new conditions.)

**HIST 359 American Families In Historical Perspective** (also American Studies 359, HDFS 359, and Women's Studies 357)
Spring. 3 credits. Prerequisite: HDFS 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HDFS 359. J. Brumberg.
For description, see HDFS 359.

**HIST 375 The African-American Workers, 1865–1910: The Rural and Urban Experience** (also ILRRCB 385) # Fall. 3 credits. Prerequisite: juniors and seniors, or permission of instructor. N. Salvatore.
For description, see ILRRCB 385.

**HIST 411 Undergraduate Seminar in American Political History**
Fall. 4 credits. Prerequisite: permission of instructor. J. Silbey.

**HIST 412 Undergraduate Seminar in Asian American History** (also Asian American Studies 412)
Spring. 4 credits. G. Okihiro.
A reading and research seminar that will cover various topics in Asian American history.

**HIST 414 Motivations of American Foreign Policy**
Fall. 4 credits. Prerequisite: Permission of instructor. Not offered 1996–97. W. LaFeber.

**HIST 418 Undergraduate Seminar in the History of the American South**

**HIST 419 Seminar in American Social History** (also American Studies 419)

**HIST 421 Cultural Taste Levels in Historical Perspective** (also American Studies 421)
Spring. 4 credits. Prerequisite: permission of instructor. M. Kammen.
The emergence of popular, middlebrow, and mass culture in the U.S., along with the discourse among cultural critics concerning all three in relation to traditional high culture. The underlying context will concern the changing uses of leisure in twentieth-century America and conflicting attitudes toward cultural taste levels in a democratic society.

**HIST 429 Undergraduate Seminar in Indians of Eastern North America #**
Spring. 4 credits. D. Usner.
A seminar examining the history of Native Americans in the eastern woodlands from colonial times to the present. The cultural and economic participation of Indians in the evolution of frontier societies will be examined. Major topics include fur-trade networks, political relations, removal, and the persistence of Indian communities in eastern states.

**HIST 432 The City in History: Europe and America #**
Spring. 4 credits. Prerequisite: permission of instructor. S. Blumkin.
Reading and discussion of significant interpretations of the rise, role, and character of cities in medieval and early modern Europe, and in modern Europe and America. Individual research projects.

**HIST 440 Undergraduate Seminar in Recent American History**
Fall. 4 credits. Prerequisite: permission of instructor. R. Polenberg.

**[HIST 441 Religion and Politics in American History: From J. Winthrop to R. Byrd (also American Studies 441 and Religious Studies 442)](Fall. 4 credits. Not offered 1996–97. R. L. Moore.)**

**HIST 458 Female Adolescence in Historical Perspective** (also Women's Studies 438 and Human Development and Family Studies 417) #
Fall. 3 credits. Prerequisite: permission of instructor. J. Brumberg.
For description, see HDFS 417.

**HIST 464 Seminar in the History of American Labor: Race, Work, and the City** (also ILR 304)
Fall. 4 credits. Open to juniors and seniors only with the permission of the instructor. Not offered 1996–97. N. Salvatore.
For description, see ILRRCB 304.

**HIST 466 Seminar on the 1960s**
Fall. 4 credits. T. Borstelmann.
This course will explore the issues and developments of the most turbulent and significant decade in recent U.S. history. Major topics will include the civil rights movement, the Kennedy and Johnson administrations, the Vietnam War, the anti-war movement, the counterculture, the women's liberation movement, the media, and the Nixon administration. A substantial research paper will be required.

**HIST 500 Undergraduate Research Seminar (also American Studies 500)**
Fall and spring. 8 credits each term. J. Silbey and others.
Offered in Cornell-in-Washington Program. An intensive research and writing experience utilizing the extensive resources of Washington, D.C.

The focus will be the relationship between government and culture in historical perspective. After three contextual sessions devoted to 19th-century background, we will mainly be concerned with the period from the 1930s to the present. Several comparative sessions will be devoted to government as a patron of culture in other societies. A research paper is required.

**HIST 608 African-American Women**
Spring. 4 credits. Prerequisite: permission of instructor. M. Washington.
A reading and discussion seminar focusing on the experiences of African-American women in nineteenth-century America, including the Caribbean. Topics include women and labor, abolitionism, women's rights, sexuality and race relations, education and racial uplift, black women's literature, marriage and family.

**HIST 610 Afro-American Historiography**
Fall. 4 credits. M. Washington.
Reading and discussion course focusing on the way historians write and interpret the Black experience in America. Students will be concerned with individual historians, various schools of thought, and historical approaches.

**HIST 613 Seminar on American Diplomatic History**
Fall. 4 credits. T. Borstelmann.
A reading and research seminar in twentieth-century American diplomatic history, emphasizing the Cold War period. Discussion will focus on interpretive approaches to U.S. foreign policy and on U.S. relations with the Third World since 1945. A research paper is required.

**HIST 617 Seminar in American Cultural History**

**HIST 618 Seminar in American Cultural History**

**HIST 621 Graduate Seminar in American History**

**HIST 624 Graduate Seminar in American Indian History**

**HIST 626 Graduate Seminar in the History of American Women (also Women's Studies 626)**
Spring. 4 credits. M. B. Norton.
A reading and research seminar intended primarily for graduate students. Major works in American women's history will be carefully scrutinized, and each student will prepare a lengthy research paper.

**HIST 627 Graduate Seminar in Early American History**

**HIST 633 Seminar in Nineteenth-Century American History**
[HIST 634 Seminar in Nineteenth-Century American History @ ]
A research seminar intended primarily for graduate students exploring society, culture, and politics of the United States between 1815 and 1896.

[HIST 640 Graduate Seminar in Recent American History @ ]

[HIST 683 Seminar in American Labor History (also ILRSC 783) @ ]
Fall. 3 credits. Prerequisites: graduate students only. N. Salvatore.
For description, see ILRSC 783.

[HIST 710 Colloquium in American History @ ]
Spring. 4 credits. Required of all first-year graduate students in United States history. M. Kammen.
Examination of major approaches, periods, issues, and modes of interpreting American history. Readings include recent "classics" of American scholarship from diverse subfields and genres.

Latin American History

[HIST 295 Colonial Latin America @ ]
Fall. 4 credits. T. Holloway.
Survey of Latin America from the rise of pre-Columbian civilizations through the European conquest, the establishment of the Spanish and Portuguese colonial societies, imperial rivalries in the New World, the background of the independence movements, and the achievement of political independence.

[HIST 296 Latin America in the Modern Age @ ]
Spring. 4 credits. T. Holloway.
Survey of the Latin American nations from independence to the present. Major themes include the persistence of neocolonial economic and social institutions, the development of nationalist and populist politics, revolutionary movements of the twentieth century, and United States–Latin American relations.

[HIST 347 Agrarian Societies in Latin American History @ ]
The development of rural patterns of wealth, status, and power, focusing on the role of country people in the larger society. Topics include disruption of the conquest, evolution from encomienda to hacienda, rise of plantation agriculture and export enclaves, decline of Indian communities, peasant protest, and land reform and development programs of the recent past.

[HIST 348 Contemporary Brazil @ ]
Fall. 4 credits. T. Holloway.
With some historical background, the course focuses on the twentieth century. Topics include the import-substituting growth model, contradictions leading to military rule 1964–1985, transition to competitive politics, debt, ecology, regional and social disparities. Some comparisons are made to other Latin American countries.

[HIST 370 Resistance and Adaptation: Native American Responses to the Conquest @ ]

[HIST 424 Art and Politics in Twentieth-Century Latin America @ ]
This seminar will examine the intersection of art and politics in Latin America and the role of both in constructing culture, ideology, and national/ personal identity from the period of the Mexican Revolution through the military dictatorships of the late twentieth century. Topics will include the Mexican muralists and the Revolution (but including Frida Kahlo) working class and immigrant culture in Argentina and the tango; samba as a vehicle for social and political protest in Brazil; the construction of gender and political self in the writings of Latin American women in exile; and the inscription of violence on public spaces and bodies through graffiti and torture in the late twentieth century.

[HIST 445 Prostitutes and Patriots: Urban Culture and the Construction of Citizenship in Latin America, 1880–1950 (also History 645) @ ]
The growth of industry and commerce in Latin American cities attracted migrants and European immigrants (many of them young women) in search of economic opportunity and freedom from the restrictions of rural society. The "invasion" of a once elite-dominated urban space by individuals of mixed ethnic or low status, and the rise of an industrial working class spurred debate about the rights and duties of "citizens" and the limits of participation in urban political and economic life. Ambivalence over the dangers and pleasures of urban culture were frequently expressed through the double trope of the prostitute/patriot—one symbolizing corruption and moral decadence and the other statesmanship and scientific progress. The course examines changing notions of the private/public dichotomy, the policies devised to regulate people's sexuality and behavior and popular participation in urban and national life.

[HIST 449 Race and Class in Latin American History @ ]
Spring. 4 credits. Prerequisite: permission of instructor. T. Holloway.
This seminar focuses on the intersection of race and class in the formation of the historical development of Latin American societies considering the roles of Native Americans, Europeans, and Africans. Each unit will be approached as an analysis of the historical origins of contemporary patterns, and comparisons will be made among units, in a search for underlying and overarching themes.

[HIST 470 Violence, Nation, Myth: The Americas (1770–1940) (also English 464 and Society for Humanities 470) @ ]

[African History

[HIST 390 Southern African History @ ]
Spring. 4 credits. G. Okhiro.
Southern African history from the establishment of kingdoms and the institutions of African kings and the role of African rulers in the so-called "dark continent" to the present. The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent." The course will deal with the history of the establishment of states and the role of African rulers in the so-called "dark continent.” 

[HIST 400 Introduction to Asian Civilizations @ ]
Spring. 4 credits. J. Piggott, D. Wyatt.
An introduction to the distinctive cultures of China, India, Japan, and Southeast Asia that features an intensive examination of selected topics and periods of particular significance in the history of each.

[HIST 491 Introduction to Modern Asian History @ ]
Fall. 4 credits. S. Cochran, D. Wyatt.
The history of Asia-Pacific from the nineteenth century to the present, focusing on relations of China, Japan, and Southeast Asia with each other and with the West.
Japan's premodern evolution compared with a variety of original sources in translation will attend the lectures of History 297 and participate in their own colloquium. A survey that concentrates on the rise of the eighteenth century that also undertakes a survey of the principal developments in the medieval ages. The story of the upheavals resulting from domestic rebellions and foreign imperialism in the nineteenth century, and the twentieth-century efforts to achieve social mobilization, political unity, and commercial expansion.

HIST 297 Premodern Japan: Historical Perspectives @ #
Fall. 4 credits. J. Piggott.
This course explores the premodern civilization of Japan from a variety of historical perspectives. A textbook, readings from primary sources and literature and several historical essays will be assigned. Students gain familiarity with the high points of premodern Japanese history and consider a number of comparative questions about Japan's premodern evolution compared with that of other parts of the world. (Graduate students should enroll in History 497. They will attend the lectures of History 297 and participate in their own colloquium.)

HIST 298 State, Society, and Culture in Modern Japan @
Spring. 4 credits. J. V. Koschmann.
A survey of Japan from the mid-eighteenth century to the present, with special attention to changing configurations of institutional structure, knowledge, action, and conceptions of history. Japanese works in translation will be read and discussed in addition to secondary sources.

HIST 322 Warrior Government and Culture in Medieval Japan #
This course traces warrior institutions and culture from the Heian period (794-1185) through the medieval ages. The story of warrior development opens a broad window into premodern society. Students will read a variety of original sources in translation as well as analytical essays. Preliminary consultation with the instructor is advised.

HIST 326 Early Warfare, East and West Fall. 4 credits. C. A. Peterson.
For description see Comparative History.

HIST 360 Images of Humanity in Medieval China (also Asian Studies 393) @ #
A survey of the earlier history of Southeast Asia, concentrating particularly on regional movements of economic, social, political and cultural change and using to the extent possible, readings in primary sources.

HIST 396 Southeast Asian History from the Eighteenth Century @
A survey of the modern history of Southeast Asia with special attention to the formation of modern states (colonial as well as national), changing economic and social structure, and consciousness. Primary texts will be read in translation whenever feasible.

HIST 420 Japan in the Year 1000: The Tale of Genji in Historical Perspective @
Fall. 4 credits. J. Piggott.
The tale of Genji is a classic of premodern Japanese literature that provides readers a broad view into Japan's courtly society at a time when many of the elements of Japan's classical tradition were taking form. Additional primary source readings and secondary sources provide insight into the countryside beyond the capital as well. Previous study of premodern Japan is advised.

HIST 448 Gender and Family in Classical Japan @
An inquiry into structures of family and gender from the eighth to the fourteenth centuries. Themes will include kinship and family, state formation, and gender construction, and those interested in these themes in comparative perspective are invited to enroll. "Breadth" reading, primary source materials, and comparative reading placing Japan in an East Asian context will be assigned. Previous study of some aspect of premodern Japan is recommended.

HIST 460 Seminar in Islamic History: Muhammad and the Rise of Islam (also Near Eastern Studies 418 and Religious Studies 418) @ #
For description, see NES 418.

HIST 466 The Taiheiki: A Japanese Epic as History and Literature (also Society for the Humanities 426) @ #

HIST 489 Undergraduate Seminar in Modern Japanese History @
Fall. 4 credits. Prerequisite: History 298 or equivalent, and permission of instructor. J. V. Koschmann.
Topic for Fall 1996: The ambivalent legacy of World War II and Postwar Japan—total war and "Modernization".

HIST 492 Undergraduate Seminar in Medieval Chinese History @ #
Spring. 4 credits. Prerequisite: History 190, 293, 360, or permission of instructor. C. A. Peterson.

HIST 493 Problems in Modern Chinese History (also History 693) @
Fall. 4 credits. Prerequisite: History 294 or permission of instructor. Not offered 1996-97. S. Cochran.
Conflicting interpretations of Chinese history during the late imperial period and the first half of the twentieth century.

HIST 494 The Japanese in Asia @

HIST 495 Japanese Kingship in Comparative Perspective: Premodern East Asia @ #

HIST 497 Colloquium in Premodern Japanese History @ #
Fall. 4 credits. J. Piggott.
Explores the premodern civilization of Japan from a variety of historical perspectives. Students will attend History 297 lectures and participate in a special weekly colloquium.

HIST 499 Problems in Modern Chinese History (also History 694) @
Spring. 4 credits. Prerequisite: History 294 or permission of instructor. Not offered 1996-97. S. Cochran.
This course gives each student an opportunity to select one research topic and work on it throughout the semester. Knowledge of Chinese is not required, but background in Chinese studies is needed.

HIST 598 Colloquium in Modern Japanese History
Spring. 4 credits. J. V. Koschmann.
For graduate students. Students will attend lectures and do the reading for History 298, participate in a special weekly colloquium, and write a seminar paper.

HIST 609 Modern Japan Studies: The Formation of the Field in History and Literature (also Asian Studies 609)
Fall. 4 credits. J. V. Koschmann and N. Sakai.
The course will provide both a historical introduction to and critical analysis of the constitution of modern Japan studies as a "field" of postwar academic inquiry. While reading texts particularly influential in the early and contemporary formation of the field, we will consider such questions as the domestic and international contexts in which Japanese studies has been institutionalized and maintained, and the relationship between "Japan" as object of area studies discourse and "Japan" as represented in American journalism, popular culture, and politics. Interdisciplinary and team-taught, the course will aim to introduce students to a range of methodologies and approaches developed in historical and critical works, problematizing assumptions in each case. Possibilities for cross-disciplinary research (along lines recently undertaken in areas such as feminist criticism and cultural studies, for example), will also be explored.
## HIST 691 Chinese Historiography and Source Materials

## HIST 693 Problems in Modern Chinese History (also History 493)
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. S. Cochran. Conflicting interpretations of Chinese history during the late imperial period and the first half of the twentieth century.

## HIST 694 Problems in Modern Chinese History (also History 499)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. S. Cochran.

## HIST 695 Early Southeast Asia: Graduate Proseminar
Fall. 4 credits. Not offered 1996-97. Next offered 1997-98. D. Wyatt. Introduction to the history of Southeast Asia for graduate students. Students will be expected to attend the lectures and complete the readings for History 395, and will meet separately as a group to further explore selected topics.

## HIST 696 Modern Southeast Asia: Graduate Proseminar
Spring. 4 credits. Not offered 1996-97. Next offered 1998-99. T. Shiraishi. Introduction to the modern history of Southeast Asia for graduate students. Students will be expected to attend the lectures and complete the readings for History 396, and they will meet separately as a group to further explore selected topics.

## HIST 791-792 Seminar in Medieval Chinese History
Fall and spring. 4 credits. Prerequisite: permission of instructor. C. A. Peterson.

## HIST 795 Seminar in Modern Southeast Asian History
Fall. 4 credits. Permission of the instructor. D. Wyatt.

## HIST 796 Seminar in Southeast Asian History
Spring. 4 credits. Prerequisite: reading knowledge of relevant languages. D. Wyatt.

## HIST 797 Seminar in Japanese Thought
Fall. 4 credits. Prerequisite: reading knowledge of Japanese and permission of instructor. J. V. Koschmann.

## HIST 798 Seminar in Japanese Thought

## HIST 372 Introduction to Islamic Law (also HIST 652, NES 651, REL ST 350)
Not offered 1996-97. For description, see NES 353.

## HIST 437 Sexuality, Society, and the State in the Near East (also NES 456, NES 657, HIST 657 and Women's Studies 455, Women's Studies 655)
Spring. 4 credits. Not offered 1996-97. L. Peirce. For description, see NES 456.

## HIST 446 Ottoman History, 1300-1600 (also History 446, Near Eastern Studies 356/658)
Fall. 4 credits. Not offered 1996-97. L. Peirce. For description, see NES 459.

## HIST 451 Seminar in Islamic History 600-750 (also History 671, Near Eastern Studies 451 and 650, and Religious Studies)
Spring. 4 credits. Enrollment is limited to 20 students. Not offered 1996-97. L. Peirce. For description, see NES 451.

## HIST 464 Ottoman History: 1300-1600 (also History 446, Near Eastern Studies 356/658)
Spring. 4 credits. Prerequisite: previous course within Islamic Studies desirable but not essential. L. Peirce. For description, see NES 459.

## HIST 457 Women, Men and the Law in Muslim Court (also History 657, Near Eastern Studies 459/655, Religious Studies 459, and Women's Studies 458)
Fall. 4 credits. Prerequisite: previous course within Islamic Studies desirable but not essential. L. Peirce. For description, see NES 459.

## HIST 461 Seminar in Islamic History 600-750 (also History 671, Near Eastern Studies 451 and 650, and Religious Studies)

## HIST 452 The Tragedy of Classical Athens, 462-404 B.C.

## HIST 265 Ancient Greece from Homer to Alexander the Great

A survey of Greece from the earliest times to the end of the Classical period in the late fourth century B.C. The course focuses on the Greek genius: its causes, its greatness, its defects, and its legacy. The Heroic Age, the city-state, ancient democracy, and the intellectual ferment of the Greek Enlightenment are the main topics of study. Readings in translation from Homer, Thucydides, Plato, Aristotle, and from the evidence of ancient inscriptions, coins, art, and architecture.

## HIST 268 A History of Rome from Republic to Holy City

A survey of Rome from the founding of the Roman Republic to the end of the Western Empire. The focus is on the Roman conquest of the Mediterranean world and on the cultural reconquest of Rome by the vanquished. Roman politics, peasant society, Imperialism, and propaganda are the main topics of the first half. The government of the Caesars, society during the Roman peace, and the fertile interaction of Romans, Jews, and Greeks that produced Christianity are the main topics of the second. Readings in translation include Cicero, Polybius, Livy, Tacitus, Plutarch, and Saint Augustine.

## HIST 367 Representations of Women in Ancient Greece and Rome (also Class 363 and Women's Studies 363)

## HIST 338 Democracy and War (also Asian Studies 385)
Spring. 4 credits. Not offered 1996-97. B. Strauss and D. McCann. For description, see Asian 338.

## HIST 452 The Tragedy of Classical Athens, 462-404 B.C.

The nature of Athenian democracy, society, and culture in the "golden age" of Athens. The course will examine the influence of Athenian political life on the great tragedies of the age and the influence of tragedy on the Athenians' conception of their character and history. Readings from Herodotus, Thucydides, Aeschylus, Sophocles, Euripides, Aristophanes, Plato, Aristotle, and Plutarch.

## HIST 453 Crisis of the Greek City-State, 415-336 B.C.
Fall. 4 credits. Prerequisite: permission of instructor. B. Strauss. The fortunes of the city-state and citizen in an age of uncertainty. The focus is on Athens with some attention paid to the wider Greek world. Topics include the nature of Athenian politics, Athenian society, cultural change, and war between the city-states, crisis as a historical concept, and anthropology and ancient Greece. Readings in translation include Thucydides, Sophocles, Euripides,
Aristophanes, Plato, Aristotle, Demosthenes, and Xenophon. [HIST 463 Gender and Politics in the Roman World (also Classics 463 and Women's Studies 464)]

[HIST 473 Roman Society and Politics under the Julio-Claudians (also Classics 480)]

For description, see Classics 480.

[HIST 630 Topics in Ancient History]

Fall. 4 credits. Not offered 1996-97. B. Strauss.

Topic for 1995: Ethnicity and Empire. An introduction to the history and historiography of, and sources of evidence for such topics as large-scale multi-ethnic states in antiquity, imperial government, the nature of pre-modern ethnicity, assimilation and Hellenization, native resistance. The emphasis is on the Hellenistic period, primarily Ptolemaic Egypt and the Seleucid kingdom.

Medieval, Renaissance, and Early Modern European History

[HIST 152 Introduction to Western Civilization]

Spring. 4 credits. P. Holquist and R. Weil.

For description see Modern European History.

[HIST 233 The Politics of Religion in Early Modern Europe]

We will look at the impact of the reformation, counter-reformation and wars of religion on aspects of political, social and cultural life in 16th- and 17th-century Europe, exploring shifts in gender relations, the problem of social control, the effect of religious conflict on the power of the state and its contested boundaries with the church, the relationship of elite and popular religion, and the encounter of European missionaries with other cultures. Students will engage with major historical and interpretative readings by historians in a seminar format. Emphasis will be placed on a close reading of primary sources. [HIST 351 Machiavelli]

Spring. 4 credits. J. Najemy

This course will present Machiavelli in a variety of historical and contemporary contexts: European and Italian politics in the early sixteenth century; the decline of the Florentine republic and the rise of the Medicean prince; Machiavelli's own career in government and his, and the republic's, crisis in 1512-13; the intellectual traditions of Renaissance humanism, political thought, and the revival of antiquity; vernacular literary currents and popular culture; and the remarkable genealogy of Machiavelli's works, writers, and theorists with whom Machiavelli associated and corresponded. Emphasis will be placed on a close reading of the major works (including the letters, The Prince, the Discourses, Mandragola, Art of War, and Mandragola; selections from The Art of War and the Florentine Histories, all in translation) and a critical examination, in the light of that reading, of some major modern interpretations of Machiavelli.

[HIST 361 The Culture of the Renaissance I (also History of Art 350 and Comparative Literature 361)]

Spring. 4 credits. C. Lazzaro

An interdisciplinary exploration of some major themes of Renaissance society and culture from the fourteenth to the sixteenth centuries. Using the perspectives of history, art history, and literature, the course will investigate the representation of primitive and exotic peoples and cultures in art (and with the aid of selected modern criticism) of Renaissance discourses of nationality and authority, education and learning, republics and courts, politics, gender and family, love and eros, and cross-cultural encounters. Most of the attention will be to Italian history and culture, but with some comparisons to other European contexts. Readings include selections from Petrarch, Boccaccio, Alberti, Machiavelli, More, Erasmus, and Vasari. Artists range from...
[HIST 365 Medieval Culture, 400-1150 (also Religious Studies 365)]

The origin and development of the universities will be studied as background for a consideration of the scholastic mentality and its influence on the art, literature, philosophy, science, scripture, and theology of the period.

Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, and others.

[HIST 366 Medieval Culture, 1100-1300]

Few topics generate heat so readily as gender relations and sexuality. Behind the current controversies lie decisions made in the first Christian centuries, and formed up in the course of the Middle Ages; these still affect all of us, believers and unbelievers alike. This course studies Western attempts to deal with the problem of sexuality up to about 1500. The class will first clarify the church's ties to the origin and development of the universities and its influence on the art, literature, philosophy, science, scripture, and theology of the period.

Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, and others.

[HIST 368 Marriage and Sexuality in Medieval Europe (also Wom St. 368)]

Few topics generate heat so readily as gender relations and sexuality. Behind the current controversies lie decisions made in the first Christian centuries, and formed up in the course of the Middle Ages; these still affect all of us, believers and unbelievers alike. This course studies Western attempts to deal with the problem of sexuality up to about 1500. The class will first clarify the church's ties to the origin and development of the universities and its influence on the art, literature, philosophy, science, scripture, and theology of the period.

Readings from Abelard, Hugh of St. Victor, Bonaventure, Thomas Aquinas, Dante, and others.

[HIST 369 The History of Florence in the Time of the Republic, 1250-1530]

Florentine politics and society from the communal period through the age of Dante, the rise and decline of the guild republic, the age of civic humanism, and the rise of the Medici to the time of Machiavelli. Economic structures and social classes, corporate politics, family history, and political and historical ideas are considered in the context of the emergence and transformation of republican government.

[HIST 374 War, Trade, and Empire, 1500-1815]

Maritime enterprise, imperial policy, and naval power in the age of expansion. The rise and decline of the Portuguese and Spanish empires are considered, but the emphasis is on English, French, and Dutch rivalry in the Atlantic and Caribbean.

[HIST 377 Gender in Early Modern Europe (also Women's Studies)]

An inquiry into how masculinity and femininity were defined in early modern Europe. Questions to be explored include: What purpose did gender distinctions serve in this particular society? To what extent were men and women able to shape and redefine the meaning of their gender? How was their ability to do so affected by such events as the Reformation and the French Revolution?

[HIST 405 Population and History]

For description, see Comparative History.

[HIST 408 Feudalism and Chivalry: Secular Culture in Medieval France, 1000-1300]

An upper-level seminar on the main currents of noble lay culture in France, which led European fashions in love, warfare, entertainment, and environment through most of the period. There will be heavy emphasis on contemporary sources (in English), including lively and complete readings from epic literature (the Song of Roland), lives, and chronicles.

[HIST 409 Seminar on Work in Europe and America]

For description see Comparative History.

[HIST 427 Power and Society in Early Medieval Europe and Japan]

Spring. 4 credits. Prerequisite: a course in medieval European or Japanese historical studies, or permission of instructor. P. Hyams and J. Figgeott.

This seminar will focus on structures, processes, and practices of society in early medieval Europe and Japan. It will provide a forum for discussion of the ways in which, in some very different European and Japanese handled power. We will also be interested in comparing historiographical methodologies employed and issues considered by historians of these societies.

The nature of power and authority and characteristic organizational practices, including kingship, land tenure, status systems, and religious and military structures; the formation of ideology through art, ritual, literature, and law; and various means of linking center and periphery in these societies will be topics for discussion.

[HIST 436 Conflict Resolution in Medieval Europe]

This seminar concentrates on a time (late 9th-13th centuries) when much of Europe lacked formal systems of justice, and so handled questions of social control quite largely by extra-legal means. Its subject is in one sense political history upside-down, as viewed by individuals rather than their rulers. We examine ways in which anthropologists and some recent approaches to law can assist: the readings will be partly anthropology, partly translated medieval accounts of actual conflicts, with samples of recent interpretation. The topics covered should be of interest to law students and majors in anthropology and other modern social sciences.

[HIST 443 Gifts, Commodities and Alliances: Historical Perspective on Exchange]

Spring. 4 credits. G. Sreenivasan.

Almost all forms of social interaction are predicated on some type of exchange, whether equal or unequal, voluntary or coerced, real or fictive. This course is an exploration of the varieties of exchange. Readings will combine classic theoretical treatment (Marx, Mauss, Goody and others) with historical monographs from both the Western and non-Western worlds, as well as contemporary literature in economic anthropology. The main themes of the course will be the social corollaries of exchange and the homologies between material and immaterial modes of exchange.

[HIST 447 Crusaders and Chroniclers (also NES 401)]

An intensive reading seminar offering a natural progression from History 259 The Crusades. It will examine contemporary accounts of the crusades in English translation. The twin goals are to follow select themes of crusading history to a deeper level than is possible in History 259 and to study medieval historiography through whole chronicles and other primary sources.

[HIST 451 Lord and Peasant in Europe: A Seminar in Social History]

[HIST 488 Undergraduate Seminar in Renaissance History]

Spring. 4 credits. J. Najemy.

[HIST 472 Politics and Culture in 18th-Century England]

Fall. 4 credits. R. Weil.

Between 1660 and 1800 England experienced imperial and economic expansion, the Enlightenment, and the threat of Revolution abroad and at home. How in this context did people interpret and imagine the nature of the social order, political authority, and the family? We will consider the changing and fiercely contested notions of property, politeness, crime and punishment, sexuality, Empire, slavery and the market. Readings include works by Locke, Aphra Behn, Swift, Cletand, Defoe, Godwin and Adam Smith.

[HIST 481 The English Revolution]

Spring. 4 credits. R. Weil.

Between 1640 and 1660, England experienced two decades of civil war and revolution and embarked on a fascinating series of attempts to reorganize political and religious life. Women and the lower classes emerged as actors on the political stage, radical religious sects flourished, and the nature of authority was questioned in both the family and the state. This course will explore the political, cultural, religious and social dimensions of the English Revolution, using mostly primary sources.

[HIST 486 Confidence Revolution in Renaissance History]

Between 1640 and 1660, England experienced two decades of civil war and revolution and embarked on a fascinating series of attempts to reorganize political and religious life. Women and the lower classes emerged as actors on the political stage, radical religious sects flourished, and the nature of authority was questioned in both the family and the state. This course will explore the political, cultural, religious and social dimensions of the English Revolution, using mostly primary sources.
What was the pre-modern household? Was it a construction, an emotional body, or a patriarchal economic unit, a residential entity, a legal kinship, property rights and inheritance customs, variation in household structure, the economic context and demographic implications of household formation patterns, and power relations inside and outside of the household.

[HIST 496] Theorizing the Public Sphere (also Comparative Literature 496 and German Studies 496)
Fall. 4 credits. Not offered 1996-97. P. Hohendahl. For description, see GERST 496.

[HIST 651] Old English Literature in Its Historical Context (also English 710)
This graduate course, cross-listed with English 710, might equally be known as "Anglo-Saxon England: History and Literary Context." It studies the written sources for major questions of Anglo-Saxon history in their literary and cultural context. It concentrates on important texts extant in both Latin and Old English. Comparison can illuminate the resources and intentions of writers, compiler, and copyists, the literary and linguistic culture of England, and the ways in which historians might most fruitfully study such texts. Bede's Ecclesiastical History, and Battle of Maldon and Aelfric's Colleagues, and selections from the Anglo-Saxon chronicle, Beowulf, laws, homilies and wisdom literature will all come under scrutiny. One goal is to reclaim for European religious history a corpus of material that historians neglect because it is in Old English.

[HIST 653] England—Britain—Europe in the Middle Ages
Fall. 4 credits. P. Hyams. This graduate seminar tentatively explores the complex modes of study of medieval English history to that of the British Isles and its inhabitants within the wider context of Europe and Western Christendom. Readings will mostly be representative original sources. The precise texts and topics studied will depend on the interests (and especially future teaching plans) of participants, but will certainly allow for a critical examination of existing literature on the general and cultural history of England, Scotland, Ireland and Wales.

[HIST 663] Graduate Seminar in Renaissance History

[HIST 664-665] Seminar in Latin Paleography
Fall, 6 credits; Spring, 4 credits each term. Hours to be arranged. J. J. John.

[HIST 666] Seminar in Medieval History

[HIST 669] Politics, Power, and Culture in Early Modern England
Fall. 4 credits. Not offered 1996-97. R. Weil. An inquiry into how the ruling class ruled, and what that meant to and for everyone else. Topics include: the invention of the "state," the relationship of central and local power, clientage and patronage, the construction of categories of "public" and "private," representations of monarchy, hegemony and resistance, court culture, the social interpretations of the English Revolution and their critics. Focus is on historiography and methodology, with some engagement with primary sources.

[HIST 676] Looting and Illicit Violence in the Sixteenth and Seventeenth Centuries
Spring. 4 credits. Not offered 1996-97. Next offered 1997-98. G. Sreenivasan. An inquiry into the varieties of violence in early modern Europe. We will examine both those forms of violence which the authorities prohibited (murder, rioting, tyranny, the feud) and those forms which they themselves employed (espionage, exaction).
We will also examine over-later forms of violence which though 'merely' psychic (black magic) or even spurious (the myth of Jewish ritual murder) powerfully influenced the lives of everyday women and men.

Modern European History

[HIST 152] Introduction to Western Civilization (1600 to the end of World War II)
Spring. 4 credits. P. Holquist and R. Weil. This course is designed to introduce students to some of the main themes of European history from the Renaissance to the present. The lectures are organized around the problems of state-building and social order: how have European societies ordered and reproduced themselves? Why did the modern state and modern civil society develop? How have a succession of political ideologies legitimized them? How have state and society responded to crisis and disruption? What balance has been struck between acquisitiveness and force, between order and violence, in upholding order? Readings emphasize primary works by figures such as Luther, Hobbes, Tocqueville, Marx, etc.

[HIST 218] The Russian Military Effort and Foreign Policy
Fall. 3 credits. Not offered 1996-97. W. Pinter.

[HIST 220] The French Experience: An Introduction (also French Literature 224)
Fall. 3 credits. S. Kaplan and P. Lewis.
An examination of French society culture and institutions. What has made French culture so distinctive? Its literature and its revolutions, its gastronomy and fashion, its painting, cathedrals and cinemas. Looking attentively at texts, images and contexts from selected moments in the eighteenth, nineteenth, and twentieth centuries, we will attempt to unravel some of the threads of the French experience. Two lectures/week in English and one section (one section conducted in English, one in French). Readings available both in French and English translation.

[HIST 224] The British Empire, ca. 1760-1860
Spring. 3 or 4 credits. D. A. Baugh. A seminar course examining instances of British rule on five continents. Topics will explore dynamics of colonization, interactions with native peoples, and the goals, successes, and failures of British imperial policies and institutions.

[HIST 225] Russian History to 1800
Fall. 4 credits. W. Pinter. The origin and development of the fundamental social, political, economic, and cultural institutions that have determined the nature of contemporary Russian society.

[HIST 235] Russian History since 1800
Spring. 4 credits. W. Pinter. Nineteenth- and twentieth-century Russia up to the revolution of 1917, with emphasis on the major social, political, and economic changes that have transformed Russia since the mid-nineteenth century.

[HIST 258] English History from the Revolution of 1688 to the Present
Spring. 4 credits. D. Baugh. An introductory course surveying political, social, economic, imperial, and constitutional developments. Major themes are the significance of 1688, eighteenth-century society and politics, the rise and decline of liberalism, the Irish Question, the impact of the two world wars, and the challenges and achievements of the welfare state.

[HIST 283] Europe in the Technological Age
Spring. 4 credits. J. Weiss. An introduction to politics, culture, and technology in contemporary Europe. In the sections on politics a survey of party systems and their interactions with social movements is followed by examinations of post-Communist constitution and political structures, the New Germany, and the European Union. The section on European culture pays special attention to the European press and electronic media as shapers and reflectors of cultural values. A section on the struggle over the control of the past deals with tensions and conflicts in European national memories. In the section on Nationalism and ethnicity, political and cultural approaches are combined in consideration of the wars in former Yugoslavia as well as less violent conflicts between nationalists and members of ethnic minorities elsewhere in Europe. The section on technology deals with the design of products and processes as a cultural phenomenon, making cross-national comparisons of some of the social, cultural, and institutional influences on engineering performance.

[HIST 290] Twentieth-Century Russia and the Soviet Union
Fall. 4 credits. P. Holquist. An introductory lecture and discussion course spanning the lifetime of the USSR (1917-1991), but concentrating on the last years of the Russian Empire and the first years of the post-communist present as well. Geographically, it focuses on the Russian heartland and the non-Russian areas of the Soviet Union. Course will explore the roots and consequences of the Russian Revolution; the nature and evolution of Leninism, Stalinism and Soviet communism; the entrenchment of reform of the post-Stalinist system; and the legacy of communism for the region's new regimes. Students are
An examination of the social, political, and intellectual history of the modern industrial state. [HIST 357 Survey of German History, Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1996-97. D. LaCapra.]

This course examines significant currents in the social sciences, psychoanalysis, the modern novel, structuralism, and poststructuralism. Readings include Weber, Freud, Heidegger, Sartre, Camus, Woolf, Foucault, and Derrida.

[HIST 355 The Old Regime: France in the Seventeenth and Eighteenth Centuries] #

A systematic examination of the social structure, economic life, political organization, and collective mentalities of a society that eclipsed all others in its time and then, brutally and irreversibly, began to age. France, in European perspective, from the wars of religion through the age of Voltaire.

[HIST 362 European Cultural History, 1815-1870 (also Comparative Literature 340)] #

Fall. 4 credits. M. Steinberg.

In 1996-97, History 362 and 363 will be offered in consecutive semesters. History 362 will focus on the making of middle-class culture, thinking, and imagination in modern Europe. We will look at the legacies of Enlightenment and revolution, religious and class conflict, the origins of nationalism, the rise of urban culture, and issues of property, gender, and sexuality. Primary readings (including novels, paintings, and operas) will be considered along with contemporary historical and critical analyses.

[HIST 385 Europe in 20th Century: Fall 1996-1990] #

The major political developments in Europe between the upheavals of 1968 and the collapse of Communist regimes. Topics will include the effects of economic downturn in 1973-1974; the response to terrorism; regionalist movements; new ethnic minorities and their opponents; Socialist governments in southern Europe; the arrival of democracy in Spain, Portugal, and Greece; new dynamics in the European Community; the rise of Thatcherism; the war scare of the 1980s; and the final phase of the Cold War.

[HIST 366 The Era of the French Revolution and Napoleon] #

A study of the failure of the traditional system, its dismantling and replacement in France, and the international consequences. Focus will be on the meaning of the revolutionary experience, the tension between the desires to destroy and to create, and the implications of the Revolution for the modern world.

[HIST 358 Survey of German History, 1890 to the Present] #

Fall. 4 credits. Open to freshmen with permission of instructor. Not offered 1996-97. I. Hull.

An examination of the social, political, intellectual, and diplomatic history of the German states from the devastation of the Thirty Years' War, through absolutism, the bourgeois revolutions of 1848, and the struggle for unification, to the beginning of the modern industrial state.

[HIST 363 European Cultural History, 1870-1945 (also Comparative Literature 353)] #

The First World War destroyed the European world: its hegemony in international politics, its international balance, its social and economic structures, its intellectual certainties. This course examines the long-term and immediate causes of this cataclysm, with special focus on the relations between the various countries' domestic politics and their foreign policies, the changing balance of power, economic rivalries, imperialism, the growth of extreme nationalism, and the arms race. It considers why the war was so long and destructive and why, afterwards, no one could put the pieces back together again.

[HIST 380 Social History of Western Technology] #

An investigation of the major developments in European politics between 1900 and the end of the Second World War. Emphasis on the rise and fall of democratic political systems and their alternatives. Topics include the reorientation of liberalism and socialism, the transforming effects of war and depression, the dynamics and diplomacy of fascism, the European response to the economic and ideological influence of America and the Soviet Union, the changes in Eastern Europe during the interwar years, and the interaction between politics and social structure.
HISTORY 456 Seminar in European Cultural History

HIST 457 Seminar in European Fascism

HIST 462 Popular Culture in European History
An examination of the origins, practices and meanings of popular culture throughout Europe from the Middle Ages to the era of the French Revolution. After considering the various cultures which “culture” and “popular” can be construed, the seminar will focus on the specific manifestations of popular culture, its various languages and gestures, and its complex relations with the dominant/elite cultures.

HIST 464 Russian Social History #
Fall. 4 credits. Prerequisite: one semester of Russian history or permission of instructor. W. Pintner.
Examines the development of major social groups throughout Russian history in the sixteenth and twentieth centuries and compares them to similar groups in other societies.

HIST 467 Seminar in Modern European Political History

HIST 474 Topics in Modern European Intellectual History
Fall. 4 credits. Prerequisite: permission of instructor. D. LaCapra.
Topic for 1996–97: Modernism, Postmodernism, and the Disciplines. The seminar will investigate attempts to define and evaluate modernism and postmodernism. It will also relate these attempts to the problem of defining disciplines, especially historiography, literary criticism, and philosophy. One crucial issue to be explored is the role of critical self-reflection in the practice of a discipline, including the relation of self-reflection to historical understanding itself.

HIST 476 Social and Cultural History of Contemporary Europe
The “other Europe”: language, culture, and nation among the minority peoples of Europe. A comparative investigation of the development of the cultural and historical identity of non-dominant European ethnic groups and their relation to the formation and policies of European national states: the Basques, the Welsh, the Catalans, the Bretons, the Occitans, the Gaelic Irish, the Frisians, the Gypsies, the Romani, and others. The course will combine historical, literary, and sociolinguistic approaches.

HIST 477 Seminar on the Politics of the Enlightenment #
An inquiry into the historical origins of European (especially French) political, social, and economic thought, beginning in the 1660s, at the zenith of Louis XIV’s absolutism, and culminating in the French Revolution a century later. Emphasis is on the relation of criticism and theory to actual social, economic, religious, and political conditions. An effort is made to assess the impact of enlightened thought on the eighteenth-century world and to weigh its implications for modern political discourse. Readings in translation from such authors as Bayle, Montesquieu, Voltaire, Rousseau, Diderot, and others as well as from modern scholarly and polemical literature.

HIST 478 Stalinist Civilization
Spring. 4 credits. P. Holquist.
The collapse of the Soviet Union provides an opportunity to reconsider the entire Stalinist experience, both on the basis of newly accessible documents and from fresh perspectives. This course approaches Stalinism as an entire system, examining the links between high politics, foreign relations, culture and everyday political strategies. Readings will include historical studies as well as newly available primary materials. Knowledge of Russian not required.

HIST 480 Twentieth-Century Britain
A seminar course, focusing on political and social history. The main emphasis is on the two world wars and their role in British economic and imperial decline. The course also looks at some great personages—Lloyd George, Churchill, and Bevin—and the major political and social transitions, taking departure from Edwardian era.

HIST 485 The Historical Origin of the Post-Soviet Successor States
Spring. 4 credits. W. Pintner.
The course will deal with the peoples of several of the many new states emerging from the former USSR, including the Ukrainians, one of the Baltic Peoples, the Muslim Turks of Central Asia, and either the Georgians or the Armenians. Special attention will be paid to how each group came to the part of the Russian empire, their relations with Russians in both the pre- and post-revolutionary periods, and the growth of national consciousness within each national group.

HIST 490 Empire, State, and Nation in Russian and Soviet History
Fall. 4 credits. P. Holquist.
The Russian Empire represented a distinct type of empire, and the USSR provided a specific paradigm of nation-building. Among the topics treated in this course: how the heterogeneous Russian Empire was conceived and administered; the emergence of competing models of political organization (ethno-nationalism, federalism, pan-Islamic and pan-Turkic movements); the USSR’s attempts to reintegrate areas of the Empire, and the consequences of such Soviet policies, both in the life of the USSR and their legacy for post-communist states. Readings will include historical treatments as well as theoretical readings on forms of political organization.

HIST 605 Graduate Seminar in European Cultural and Intellectual History (also German Studies)
Fall. 4 credits. M. Steinberg.
The seminar will focus on the issues of modern subjectivity among German Jewish thinkers, with an emphasis on the Weimar period. Readings of Freud, Rosenzweig, Leo Strauss, Aby Warburg, and Walter Benjamin, among others, according to student interest.

HIST 635 The Gates to Modernity: From Karlsbad to the 1848 Revolution (also German Studies 635)
For description, see GER ST 635.

HIST 661 Graduate Seminar in Twentieth-Century German History

HIST 672 Seminar in European Intellectual History
Fall. 4 credits. D. LaCapra.

HIST 673 Seminar in European Intellectual History
Spring. 4 credits. D. LaCapra.

HIST 674 Graduate Seminar in German History, 1770–1918
Topic for 1995: Law in German History. This course explores selected topics in the political, social, and cultural history of Germany from 1770 to 1918. It is designed to introduce graduate students to the history and historiography of modern Germany and to allow those with sufficient preparation to pursue directed research during the semester.

HIST 675 After the Divide: German Critical Theory of the Seventies and Eighties (also Comparative Literature 675 and German Studies 675)
For description, see GER ST 675.

HIST 677 Seminar in Russian History
Fall. 4 credits. W. Pintner.

HIST 678 Seminar in Modern European Social History
Spring. 4 credits. Permission of instructor required. J. Weiss.
Topic: political culture since World War II.

HIST 750 European History Colloquium
Fall and spring. 4 credits, each term. Kaplan, Steinberg (fall); Weil (spring). A research colloquium designed for European history graduate students. The colloquium will offer a forum for students to present papers and to discuss the work of visiting scholars.

Honors and Research Courses
Note: History 301–302 are not regular courses for which students may sign up at will. They are personal arrangements between an instructor and a particular student. Students must first gain the consent of a particular instructor to work with them.

HIST 301 Supervised Reading
Fall or spring. 2 credits. Open only to upperclass students. Prerequisite: permission of instructor. Staff.

HIST 302 Supervised Research
Fall or spring. 3 or 4 credits. Open only to upperclass students. Prerequisite: permission of instructor. Staff.
ARTS AND SCIENCES - 1996-1997

HIST 400 Honors Proseminar
Fall. 4 credits. Limited to 15 students. For prospective honors candidates in history. Prerequisite: permission of a member of the Honors Committee is required to register. M. K. Kirschenbaum. An examination of major approaches to historical inquiry and analysis. Masterworks of historical writing (traditional as well as recent) will be discussed. There will be one short essay and a research paper (a study of the work of one major historian). The readings will be drawn from all time periods and diverse cultures.

HIST 401 Honors Guidance
Fall or spring. 4 credits. Prerequisites: History 400 and permission of instructor. Staff.

HIST 402 Honors Research
Fall or spring. 4 credits. Prerequisites: History 400 and permission of instructor. Staff.

HIST 703-704 Supervised Reading
703, fall; 704, spring. 4 credits each term. Limited to graduate students. Prerequisite: permission of instructor. Staff.

HIST 709 Introduction to the Graduate Study of History
Fall. 4 credits. Required of all first-year graduate students. S. Blum, S. Cochran. The course is designed to introduce entering graduate students to crucial issues and problems in historiography that cut across various areas of specialization.

HISTORY OF ART

L. L. Meixner, acting chair (1996-97); C. Lazzaro, chair; K. Barzman, director of undergraduate studies; J. E. Berinbach, director of graduate studies; R. G. Calkins, H. Foster, P. I. Kuniholm, A. Ramage, S. Reiss, M. W. Young.

The Department of the History of Art provides a broad range of introductory and advanced courses in Western (European and American) and non-Western art (particularly East and Southeast Asian), from ancient times to the present. Courses have various emphases: archaeology, artists, styles, themes, iconography (the study of subject matter), patronage, social history, and theoretical perspectives. The department offers regular courses and a number of seminars. The department offers sections on: the Hellenistic, and the art of the Romans to the Renaissance; the history of art in the Modem period. Painting, sculpture, and architecture with an emphasis on the history of art. The major traditions and movements in Modem art, and one in non-Western art. Majors must in addition develop a thorough knowledge of at least two and preferably three areas in the history of art. By studying them on progressively more advanced levels, students will also acquire facility with the tools and methods of the discipline of art history. The major requires two sequences of courses, each in a different area. A sequence is two courses in the same area, the second at a higher level than the first, as in a 200- and 300-level course or a 300- and 400-level course. One seminar (400- or 500-level course) is also required for the major.

Majors will acquire an understanding of different approaches in the history of art, such as connoisseurship, iconography, and various methods informed by poststructuralist theories for the analysis of works of art. Majors are required to take the proseminar, which is a survey of methods and historiography, normally taken in the fall of their junior year. They are also encouraged to take at least one additional course that will develop their knowledge and skills in one method of the study of art (in museum issues and dendrochronology) or their understanding of critical discourses (art criticism since the nineteenth century, psychoanalytic, Marxist, feminist, and postmodern criticism).

The history of art is intrinsically interdisciplinary and various other disciplines are necessary complements for understanding of works of art in their historical and cultural contexts. Therefore, majors are encouraged to take related courses in history of architecture, history, literature, critical theory, studio art, etc. Majors are also encouraged to study foreign languages related to their principal interests in art, particularly if they are considering graduate study. In addition to the 36 credits, the major also requires two courses in related areas, approved by the adviser, or two additional courses in the department.

Admission to the Major

Students wishing to major in the history of art should complete two courses at Cornell in the department by the end of their sophomore year. One of the two courses required for entry into the major must concern material that deals predominately with periods before 1500 AD or with non-Western art. These two courses are prerequisites for the major and may not be counted toward fulfillment of the major requirements. Prospective majors should consult with the director of undergraduate studies.

Requirements for the Major

The major in History of Art requires 36 credits, of which 30 must at the 300-level or higher.

Majors should acquire a broad familiarity with the history of art in several chronological and general areas (in Western art: ancient, medieval, Renaissance and baroque, and modern; and in non-Western art: Chinese, Japanese, Southeast Asia, or other areas that are occasionally taught in the department).

The department does not offer a survey of Western art, because such a course provides only a very superficial knowledge, but it encourages students to gain experience with several areas in the history of art. The major requires at least one course in an area from ancient through baroque art, one course in modern art, and one in non-Western art.

Majors must in addition develop a thorough knowledge of at least two and preferably three areas in the history of art. By studying them on progressively more advanced levels, students will also acquire facility with the tools and methods of the discipline of art history. The major requires two sequences of courses, each in a different area. A sequence is two courses in the same area, the second at a higher level than the first, as in a 200- and 300-level course or a 300- and 400-level course. One seminar (400- or 500-level course) is also required for the major.

Majors will acquire an understanding of different approaches in the history of art, such as connoisseurship, iconography, and various methods informed by poststructuralist theories for the analysis of works of art. Majors are required to take the proseminar, which is a survey of methods and historiography, normally taken in the fall of their junior year. They are also encouraged to take at least one additional course that will develop their knowledge and skills in one method of the study of art (in museum issues and dendrochronology) or their understanding of critical discourses (art criticism since the nineteenth century, psychoanalytic, Marxist, feminist, and postmodern criticism).

The history of art is intrinsically interdisciplinary and various other disciplines are necessary complements for understanding of works of art in their historical and cultural contexts. Therefore, majors are encouraged to take related courses in history of architecture, history, literature, critical theory, studio art, etc. Majors are also encouraged to study foreign languages related to their principal interests in art, particularly if they are considering graduate study. In addition to the 36 credits, the major also requires two courses in related areas, approved by the adviser, or two additional courses in the department.

Honors

To become a candidate for the degree of Bachelor of Arts with honors in the history of art, a student must have a cumulative average of B+ for all courses taken in the department and in all arts and sciences courses. Application to write an honors thesis should be made to the director of undergraduate studies during the second term of the junior year. The application must include a summary of the proposed project, an endorsement by a faculty sponsor, and a copy of the student's transcript. In the senior year the honors candidate will include in his/her course load, History of Art 600 and 601. These courses address the research and writing of the senior thesis under the direction of the student's project adviser.

Course Numbering System

100-level courses are all freshman writing seminars.

200-level courses are introductions to the major subdivisions of Western and non-Western art and they often have large enrollments.

300-level courses are more specialized, and some have the introductory course in the appropriate area as a prerequisite. Freshmen are advised to take the introductory courses unless they already have substantial background in the history of art.

400-level courses are upper-level seminars, primarily for undergraduates, although graduate students in the history of art and other fields also take them.

500-level courses are primarily graduate seminars, which undergraduates may also take.

Freshman Writing Seminars

For Freshman Writing Seminar offerings in the History of Art, see the John S. Knight Writing Program's special brochure. These courses may be used as freshman electives but not to satisfy the distribution requirement.

Courses

History of Art Introductory Courses

200-level courses in Western art have been changed. 220, 230, 245, and 260 will all be offered as 4-credit courses with required sections.

ART H 202 Survey of European Art: Renaissance to Modern #

Summer only. 3 credits. Staff. The major traditions and movements in western European art from the Renaissance to the Modern period. Painting, sculpture, and architecture with an emphasis on painting.

ART H 220 Introduction to Art History: The Classical World (also Classics 220)

Fall. 4 credits. Each student must enroll in a section. J. Coleman. An overview of the art and archaeology of the Greek and Roman world. The sculpture, vase painting, and architecture of the ancient Greeks from the geometric period through the Hellenistic, and the art of the Romans from the early Republic to the late empire.
An introduction to early modern art as it is fundamental to interpreting works of art. Fauvism (Matisse), Surrealism (Miro), Abstract inquiry, including social history and feminism, supplemented with discussions of methods of Eakins, and Vincent van Gogh. Lectures are emphasis on major movements and artists in art from 1780 to the present. The course also covers the social contexts. The course also covers the main focus is on the rise and fall of Minoan and Mediterranean. Supervised reading and laboratory work. A possibility exists for summer fieldwork in Greece and Turkey.

ART H 245 Introduction to Art History: Renaissance and Baroque Art # Fall. 4 credits. Each student must enroll in a section. K. Barzman. A survey of major works of European painting, sculpture, and architecture from 1400 to 1700. The focus is on preeminent artists, workshop methods, style, meaning, patronage, and the function of art in a range of social contexts. The course also covers the methods of art history currently practiced in Renaissance and Baroque studies. Weekly section meetings are required.

ART H 260 Introduction to Art History: The Modern Era Spring. 4 credits. Not open to students who have taken History of Art 261. Each student must enroll in a section. J. Berlstock. A discussion of the most important developments in art from 1780 to the present. The emphasis is on major movements and artists such as Romanticism (Delacroix), Realism (Courbet), Impressionism (Monet), Post-Impressionism (van Gogh), Cubism (Picasso), Fauvism (Matisse), Surrealism (Miro), Abstract Expressionism (Pollock), and Pop Art (Warhol).

ART H 261 Introduction to Art History: Modern Art Summer only. 3 credits. Staff. An introduction to early modern art as it developed between the French Revolution and World War I. Both European and American movements are examined, including Romanticism, Impressionism, and Cubism. Units are organized around central figures such as Mary Cassatt, Edgar Degas, Thomas Eakins, and Vincent van Gogh. Lectures are supplemented with discussions of methods of inquiry, including social history and feminism, fundamental to interpreting works of art.

ART H 280 Introduction to Art History: Approach to African Art # Fall. 3 credits. Staff. Designed to introduce students to the varied responses of the Asian artist in different social and geographical contexts. By selective focus and emphasis rather than broad survey, the student will gain some familiarity with the Javanese shadow-puppet theater, high-fired ceramics, Chinese landscape painting, Buddhist sculpture and painting of Thailand, Indian miniature paintings, and Japanese prints. A number of class sessions will meet in the Herbert F. Johnson Museum of Art.

ART H 309 Dendrochronology of the Aegean (also Classics 309 and Archaeology 309) Fall and spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. P. I. Kuniholm.

ART H 320 The Archaeology of Classical Greece (also Classics 320) # Not offered 1996-97. A. Ramage.

ART H 322 Arts of the Roman Empire (also Classics 350) # Not offered 1996-97. A. Ramage.

ART H 323 Painting in the Greek and Roman World (also Classics 323) # 4 credits. Not offered 1996-97. A. Ramage.

ART H 325 Greek Vase Painting (also Classics 325) # 4 credits. Not offered 1996-97. A. Ramage.

ART H 326 Greek Cities and Towns (also Classics 326) # 4 credits. Prerequisite: Classics/History of Art 220 or permission of instructor. Not offered 1996-97; next offered 1998-99. J. Coleman.

ART H 327 Greek and Roman Coins (also Classics 327) # 4 credits. Not offered 1996-97. A. Ramage.

ART H 328 Greeks and Their Neighbors (also Classics 322) # Spring. 4 credits. J. Coleman. For description, see CLASS 322.

ART H 329 Greek Sculpture (also Classics 329) # Spring. 4 credits. J. Coleman. For description, see CLASS 329.

ART H 333 Early Medieval Art and Architecture # Spring. 4 credits. R. G. Calkins. Sculpture, painting, and architecture in the period from the late antique through the Carolingian era (A.D. 300-900). The evolution of the early Byzantine tradition will also be considered.

ART H 337 The Medieval Illuminated Book (also Religious Studies 337) # 4 credits. Not offered 1996-97. R. G. Calkins. A study of selected major examples of medieval illuminated manuscripts from between A.D. 500 and 1500. Families of major manuscripts such as the Lindisfarne Gospels, the Book of Kells, and the Hours of Mary of Burgundy will be examined. Students will write a research paper on a manuscript of their choice.

ART H 341 Flemish Painting (also Religious Studies 341) # Fall. 4 credits. R. G. Calkins. An examination of Flemish painting in the 15th century, with emphasis on the works of Robert Campin, Jan van Eyck, Roger van der Weyden, Hugo van der Goes, Hans Memling, and ending with Jerome Bosch. Issues of the social, economic, and devotional context will be discussed as they pertain to the particular development of Northern Realism and Symbolism during this century.

ART H 344 Italian Renaissance of the Sixteenth Century: Leonardo, Michelangelo, and Raphael # Fall. 4 credits. S. Reiss. A detailed examination of the art and architecture of these three great artists and of the cultural and historical environment in which they worked. The primary focus of the course will be works of art and architecture created by Leonardo, Michelangelo, and Raphael, but their writings will be studied as well. The importance of drawing for these artists will be stressed, as will the profound
impact of their art and thought on other sixteenth-century sculptors and architects. The course will emphasize conditions of patronage in Florence, Milan, and at the papal court in Rome, and the results of recent conservation campaigns involving works by the three artists will be considered.

[ART H 345] Rome, Florence, and Venice in the Baroque: Space in Italian Cities from the End of the Sixteenth Century to 1800

Emphasis will be placed on thematic displays, on the forms and spaces of art, and on the address intended to guide and impress the viewer, and on the various institutions and individuals served by this kind of cultural production. Artists covered include Bernini, Borromini, Caravaggio, Carracci, Gaulli, Cortona, and Tiepolo.

ART H 360 Painting and Everyday Life in Nineteenth-Century America (also American Studies 360) #

Fall. 4 credits. L. L. Meixner. Nineteenth-century American painters often constructed their art around the social and cultural conditions of their day. This course will explore this relationship, focusing on the urban lower classes, the impact of the development of the art market in the United States, and at the papal court in Rome, and the results of recent conservation campaigns involving works by the three artists will be considered.

ART H 360 Problems in Modernism: "High" and "Low" Culture (also Comparative Literature 366)

Spring. 4 credits. Not offered 1996-97. Never autonomous as such, "high" art is partly defined in relation to different "low" terms: folk, popular, mass, or commercial art. This course traces the symbiotic relationship between "high" and "low" art through its important modern and postmodern manifestations in the West. We will attend to formal devices (e.g., cubist collage, pop appropriation) as well as technological developments (e.g., mass production, electronic information), but our emphasis will be on critical models (e.g., Baudelaire on "modern life", W. Benjamin on "mechanical reproduction", C. Greenberg on "avanti-garde and kitsch", T. J. Clark and G. Pollock on."myth of modernism", G. Bataille on "spectacle", S. Sonntag on "camp"). What social formations and sexual regimes underpin high/low distinctions? Are these distinctions somehow collapsed today?

ART H 370 Visual Culture and Social Theory (also Government 375 and Comparative Literature 360) #

4 credits. Not offered 1996-97. H. Foster, S. Buck-Morss. A historical and critical survey of the history of art and culture, and the social formations and social theories that have been concerned with them. The focus is on the social and historical context in which art has been produced.

ART H 371 Architectural History of Washington, D.C.

Fall or spring. Variable credit. For students in the Civil-Engineering program. Only for non-architects.

ART H 370 Visual Culture and Social Theory (also Government 375 and Comparative Literature 360) #

ART H 372 Art in African Culture and Society (also AS&RC 310) #

Fall. 3 credits. S. Hassan.

ART H 378 Introduction to the Arts of China #

A one semester introduction to the arts of China, this course will examine the visual arts of this world's oldest continuous civilization in a topic rather than thematic framework. The lectures will cover the major contributions of the Chinese in the area of traditional arts, and in the arts of the West. The course will also be devoted to the development of landscape painting, particularly in the later centuries of Chinese art. Sections for the course will be held in the Johnson Museum to examine original works from the museum's large Chinese collection.

ART H 381 Buddhist Art in Asia #

ART H 380 Problems in Modernism: "High" and "Low" Culture (also Comparative Literature 360) #

ART H 380 Introduction to the Arts of China #

ART H 380 Introduction to the Arts of China #

ART H 380 Introduction to the Arts of China #

ART H 380 Introduction to the Arts of China #

ART H 380 Introduction to the Arts of China #

ART H 384 The Arts of Japan @ #  
M. W. Young.

ART H 385 Chinese Painting @ #  

ART H 386 Art of South Asia @ #  

ART H 396 The Arts of Southeast Asia @ #  

Seminars  
Courses at the 400 and 500 level are open to upperclass students, majors, and graduate students. All seminars involve the writing and presentation of research papers. Enrollment is limited to 15 students, and permission of the instructor is required. Students may repeat courses that cover a different topic each semester.

ART H 400 Proseminar for Art History  
Majors: The History and Practice of Art History  
Fall. 4 credits. Prerequisite: History of Art majors only. Enrollment is limited. K. Barzman.

Limited to majors in the department, this seminar focuses on methods and historiography. We will consider the various practices of art history employed over the years in the analysis and interpretation of cultural production. Readings will focus on classic texts and major authors responsible for codifying these approaches. Papers will call upon students to put methods into practice and to think critically about the writing of art history.

ART H 401 Independent Study  
Fall or spring. 2-4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ART H 402 Independent Study  
Fall or spring. 2-4 credits. May be repeated for credit. Prerequisite: permission of a department faculty member. Individual investigation and discussion of special topics not covered in the regular course offerings, by arrangement with a member of the department.

ART H 407 Seminar on Museum Issues  
Fall. 4 credits. Prerequisite: permission of instructor. Limited enrollment. All classes will meet in the Johnson Art Museum Study Gallery. M. W. Young and museum staff.

This undergraduate seminar will utilize the resources of the Johnson Art Museum and is designed to give students with a strong art history background the opportunity to work closely and directly with original objects from the museum's major collections. The course will focus on the broad issue of art and connoisseurship and will address critically the question of what determines quality in the work of art. Topics to be covered in the weekly sessions will include methods of attribution, fakes and forgeries, technique and media, restoration and conservation. Some sessions will involve curatorial staff of the museum. Frequent reports and a significant final paper will be expected of all participants.

Enrollment is limited, and permission of the instructor is necessary before the first meeting. Students interested in this course should indicate so by notifying the department directly at the time of pre-registration.

ART H 423 Ceramics (also Classics 423 and Archaeology 423)  

ART H 424 Sardis and the Cities of Asia Minor (also Archaeology 432 and Classics 432)  

ART H 425 Seminar on the Bronze Age Architecture of Asia Minor (also Classics 430 and Archaeology 425)  
Spring. 4 credits. Prerequisite: permission of instructor. P. I. Kuniholm.

The course will cover major architectural building programs from Neolithic Catal Hüyük, Beycesultan, to the final phases of Troy and Hittite Bogazköy. The art and archaeology of these civilizations will be taken into account when relevant. Reading knowledge of German useful.

ART H 427 Seminar on Roman Art and Archaeology (also Classics 435)  
4 credits. Prerequisite: permission of instructor. Not offered 1996-97. A. Ramage.

ART H 434 The Rise of Classical Greece (also Classics 434)  
4 credits. Recommended: Classics 220 or History of Art 220, Classics 221 or History of Art 221, or permission of instructor. Not offered 1996-97. P. I. Kuniholm.

ART H 441 Medieval Art in Washington Collection  

ART H 448 Studies in Sixteenth-Century European Art  

ART H 450 Women in Italian Renaissance Art (also Women's Studies 451)  

ART H 451 Prints of the Fifteenth through the Seventeenth Century  

ART H 456 Seminar in Baroque Art  
4 credits. Prerequisite: permission of instructor. Not offered 1996-97. K. Barzman.

ART H 461 Fin-de-siècle Cultures in Europe, England, and America  
4 credits. Prerequisite: permission of instructor. Auditing is not permitted. Not offered 1996-97. L. L. Meixner.

ART H 462 Topics in Early Modernism  
Fall. 4 credits. Prerequisite: permission of instructor. Auditing is not permitted. Not open to freshmen or sophomores. L. L. Meixner.

Seminar Topic for 1996: Post Impressionism. Our project is to seek the themes, styles, and social concerns linking various American and European artists during a period of transition between the nineteenth and twentieth centuries. Topics include: James Ensor and Belgian public life, Edvard Munch and Norwegian literati, the Nabis, Symbolists, Decadents, and Pont Aven artists. Key literary figures include Poe, Ibsen, and Strindberg. We seek to consider whether or not there existed a fin-de-siècle "mentality," and what it might comprise.

ART H 463 Studies in Modern Art  
Fall. 4 credits. Prerequisite: permission of instructor. J. E. Bernstok.

Topic for 1996: Modern Sculpture. Developments in modern sculpture will be explored from their beginnings in the late nineteenth century. A wide range of styles, media, and content will be studied. The focus will be on major sculptors, such as Auguste Rodin, Constantine Brancusi, Henry Moore, David Smith, Alberto Giacometti, Louise Nevelson, George Segal, Donald Judd, Robert Morris, Eva Hesse and Richard Serra.

ART H 464 Studies in Modern Art  
Spring. 4 credits. Prerequisite: permission of instructor. Auditing is not permitted. J. E. Bernstok.

Topic for 1997: To be announced.

ART H 466 Women Artists (also Women's Studies 404)  
4 credits. Prerequisite: permission of instructor. Not offered 1996-97. L. L. Meixner.

This seminar will be devoted to a study of the work of women artists from antiquity to the present. The works of the most prominent women artists from each period will be studied in relation to the changing roles of women in society. The artists to be studied include Jennifer Bartlett, Artemisia Gentilecheschi, Elizabeth Vigee-Lebrun, Mary Cassatt, Käthe Kollwitz, Georgia O'Keeffe, Louise Nevelson, Joan Mitchell, Judy Chicago, and Barbara Kruger.

ART H 470 Postmodernist Art and Criticism (also Comparative Literature 474)  
4 credits. Prerequisite: permission of instructor. Not offered 1996-97. H. Foster.

ART H 476 Seminar in American Art  

ART H 477 Impressionism in America and France  
4 credits. Prerequisite: permission of instructor. Not offered 1996-97. L. L. Meixner.

ART H 478 Post-Impressionism in France  

ART H 481 The Arts in Modern China  

ART H 482 Ceramic Art of China and Southeast Asia  
4 credits. Prerequisite: permission of instructor. Not offered 1996-97.

ART H 483 Chinese Art of the Tang Dynasty  
M. W. Young.

ART H 488 Traditional Arts of Southeast Asia @ 4 credits. Not offered 1996–97.

ART H 489 Miniature Paintings and Drawings of India @ 4 credits. Not offered 1996–97.

K. Barzman.
Seminar participants will examine the impact of feminist theory on art historical practice. Based on critical analysis of texts from the early 1970s to the present, we will consider the range of methods employed, the discursive traditions to which they belong (e.g., liberal, Marxist, psychoanalytic, poststructuralist), the relative merits of the methods, and the interpretive problems they present. At the graduate level, some additional meetings and work required.

ART H 520 Seminar in Classical Archaeology (also Classics 630 and Archaeology 520) 4 credits. Prerequisite: permission of instructor. Not offered 1996–97.
P. I. Kuniholm.

ART H 531 Problems in Medieval Art and Architecture (also Religious Studies 531) Fall. 4 credits. Prerequisite: permission of instructor. R. G. Calkins.
Topic for Fall 1996: Late Flemish Illuminated Manuscripts. An examination of Late Flemish illuminated manuscripts, mostly late 15th-century Books of Hours, with particular attention to their cycles of miniatures, sequence of texts, and relationships of illustrations to the texts and the manuscript as a whole. Facsimiles of relevant manuscripts housed in the Rare Book Room will constitute the primary resource.

ART H 540 Seminar in Renaissance Art 4 credits. Prerequisite: permission of instructor. C. Lazzaro.

ART H 549 Problems in Interpretation in Italian Renaissance Art 4 credits. Prerequisite: permission of instructor. Not offered 1996–97.
C. Lazzaro.
This seminar will examine assumptions about meaning and how meaning is produced in Renaissance art. Various interpretative strategies will be examined, among them iconographic, semiotic, feminist, and psychoanalytic, within a specifically Renaissance literary, intellectual, and social context. Texts by Panofsky and critical discussions of them, Baxandall, Bryson, and others will be read and discussed with reference to particular works of art. The seminar is intended primarily for graduate students in all areas of History of Art and those in other disciplines with an interest in the Italian Renaissance. Senior History of Art majors with background in the Italian Renaissance are also welcome.

ART H 555 Baroque Ephemera and Public Performance Spring. 4 credits. Prerequisite: permission of instructor. K. Barzman.
This seminar focuses on early modern rituals of family, church, and state in which palaces, shrines, streets, and squares provided a theatre for the rehearsal of formalized practices and the constitution of various economies (of pleasure, fear, mastery, control) in an asymmetrical field of social exchange. Emphasis will be placed on mixed media and ephemeral displays as the backdrop for civic parades, the elevation of popes and crowned heads of state, the reception of diplomats, trials, public execution, feastday celebrations, religious processions, funerals of state, family obsequies, banquets, weddings, and other rites of passage. Opera, ballet, and staged drama (liturgical and secular) will be introduced as more codified forms of public performance, with which performances of the self and of corporate community had much in common. Students are encouraged to attend lectures for ART H 355 in addition to required seminar meetings.

ART H 570 Theories of Modernism Topic: Shock and Trauma (also Comparative Literature 672) Fall. 4 credits. Prerequisite: permission of instructor. H. Foster.
The seminar will investigate the relationship between two concepts that are fundamental to modernist studies and psychoanalytic theory alike: shock and trauma. Our readings will be guided by this hypothesis: that the physiological notion of shock governs important readings of modernist art and writing, and that the psychoanalytic notion of trauma governs significant accounts of contemporary practice—not only in art and writing but in film and theory as well. Readings to include texts by Simmel, Benjamin, Freud, Wolfgang Schivelbusch, ShoshanaFelman, and others; we will also view films by Claude Lanzmann, Hans-JurgenSyberberg, Atom Egoyan, and others. (As the subject of this course changes with each offering, it can be repeated for full credit.)

ART H 591–592 Supervised Reading 591, fall; 592, spring. 4 credits. May be repeated for credit. Limited to graduate students.

K. Barzman.

ART H 595 Art History and Visual Culture (also Comparative Literature 625) Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1996–97.
H. Foster.
What is art history? How was it constituted as a discipline in the 19th century? What are its foundational principles and methods? What is visual culture? What are its parameters? What relation does its study have to art history? to cultural and/or media studies? Readings will include classic texts of art history (Riegl, Wolfflin, Panofsky) and new writings in visual culture (Norman Bryson, Hubert Damisch, Rosalind Krauss, Jonathan Crary, others).

ART H 600 Honors Work Fall or spring. 8 credits. Intended for senior art history majors who have been admitted to the honors program. Basic methods of art historical research will be discussed and individual readings assigned, leading to the selection of an appropriate thesis topic.

ART H 601 Honors Work Fall or spring. 8 credits. Prerequisite: History of Art 600. The student under faculty direction will prepare a senior thesis.

See Department of Classics.

LANGUAGES AND LINGUISTICS
Professors Emeriti of Modern Languages and Linguistics: N. Bodman, J. Grimes, R. Hall, C. Hockett, R. Jones, E. Jorden, H. Kufner, R. Leed, W. McCoy, G. Messing, D. Soló, F. van Coetsem

LANGUAGES, MODERN

Language is enormously complex and encompasses virtually all areas of human endeavor.

Learning individual languages is, of course, integral to understanding language itself as well as to understanding other cultures. The Department of Modern Languages is responsible for a large variety of language courses (the departments of linguistics, classics, Near Eastern studies, and Africana studies offer still others). In addition to fulfilling the College of Arts and Sciences language requirement, some language courses satisfy the college's breadth requirements.

Courses at all levels are offered not only in Spanish, French, German, Italian, Chinese, Japanese, and Russian, but also in some less familiar languages such as Korean, Hindi, Indonesian, Quechua, and many others—a total of about thirty. See the listings below under the rubric "Language Courses." The department's resources include the Center for Language Learning at Noyes Lodge, a state-of-the-art facility where instructors can create high-tech language study materials and students can use them in a beautiful setting on Beebe Lake.

The study of language itself is part of many disciplines and thus is offered in various departments in the College of Arts and Sciences. The members of the professorial faculty in the Department of Modern Languages are linguists who have many interests in common with the faculty of the Department of Linguistics (see below). The courses of the Department of Modern Languages lie mainly in the areas of language use, language perception and production, language acquisition, textual and discourse analysis, cognitive, social and cultural aspects of language, and the structure, history, or social circumstances of a particular language or language family.

LINGUISTICS
J. Bowers, chair; J. Whitman, director of graduate studies (320 Morrill Hall); A. Cohn, director of undergraduate studies (216 Morrill Hall); W. Browne, V. Carstens, C. Collins, M. Diesing, W. Harbert, S. Herz, J. Jasanoﬀ, S. McConnell-Ginet, A. Nussbaum, M. Suter, D. Zec. Visiting: S. Tomioka

Linguistics, the systematic study of human language, lies at the crossroads of the humanities and the social sciences, and much of its appeal derives from the special combination of intuition and rigor that the analysis of language demands. The interests of the members of the Department of Linguistics and linguists in the Department of Modern Languages and other departments span most of the major subfields of linguistics: phonetics and phonology, the study of speech sounds; syntax, the study of how words are combined; semantics, the study of meaning; historical linguistics, the study of language change over time; sociolinguistics, the study of language's role in social and cultural interactions; and applied linguistics, which relates the results of linguistic research to problems of bilingual education, second-language learning, and teaching.

Studying linguistics is not a matter of studying many languages. Linguistics is a theoretical discipline with ties to such areas as cognitive psychology, philosophy, logic, computer science, and anthropology. Nonetheless, knowing particular languages (e.g., Spanish or Japanese) in some depth can enhance understanding of general properties of human language. Not surprisingly, then, many students of linguistics owe their initial interest to a period of exposure to a foreign language, and those who come to linguistics by some other route find the knowledge they gain invaluable. The department's resources include the Center for Language Learning at Noyes Lodge, a state-of-the-art facility where instructors can create high-tech language study materials and students can use them in a beautiful setting on Beebe Lake.

The study of language itself is part of many disciplines and thus is offered in various departments in the College of Arts and Sciences. The members of the professorial faculty in the Department of Modern Languages are linguists who have many interests in common with the faculty of the Department of Linguistics (see below). The courses of the Department of Modern Languages lie mainly in the areas of language use, language perception and production, language acquisition, textual and discourse analysis, cognitive, social and cultural aspects of language, and the structure, history, or social circumstances of a particular language or language family.

The Major
For questions regarding the linguistics major, contact Professor Abby Cohn (216 Morrill Hall, 255-3073).

The prerequisite for a major in linguistics is the completion of Linguistics 101 and either Linguistics 201 or 203. The major has its own language requirement, which should be completed as early as possible: qualification in two languages other than English, one of which must be either non-European or non-Indo-European. Linguistics 101 serves as an introduction to language acquisition, textual and discourse analysis, and the general features of human language, and is usually written during the senior year but may be begun in the second term of the junior year when the student's program so warrants. The oral examination will be conducted by the honors committee, consisting of the thesis adviser and at least one other faculty member in linguistics.

Members of other departments may serve as additional members if the topic makes this advisable. Linguistics 493 and 494 may be taken in conjunction with thesis research and writing but are not required.

The courses in both the Department of Modern Languages and the Department of Linguistics are listed below under the following rubrics: General Linguistics, Linguistics of Particular Languages, Language Courses.

HONORS. Applications for honors should be made during the second term of the junior year. Candidates for admission must have a 3.0 (B) average overall and should have a 3.2 average in linguistics courses. In addition to the regular requirements of the major, the candidate for honors must have a 3.0 (B) average overall and should have a 3.2 average in linguistics courses. In addition to the regular requirements of the major, the candidate for honors will complete an honors thesis and take a final oral examination in defense of it. The thesis is usually written during the senior year but may be begun in the second term of the junior year when the student's program so warrants. The oral examination will be conducted by the honors committee, consisting of the thesis adviser and at least one other faculty member in linguistics. Members of other departments may serve as additional members if the topic makes this advisable. Linguistics 493 and 494 may be taken in conjunction with thesis research and writing but are not required.

The courses in both the Department of Modern Languages and the Department of Linguistics are listed below under the following rubrics: General Linguistics, Linguistics of Particular Languages, Language Courses.
General Linguistics

Fees: Depending on the course, a small fee may be charged for photocopied texts for course work.

Freshman Writing Seminars

LING 100 Language, Thought, and Reality
For descriptions, see freshman writing seminar brochure.

LING 101 Theory and Practice of Linguistics
101, fall, spring, or summer. 4 credits each term. Fall: V. Carstens; spring: W. W. Harbert.
An introductory course designed to provide an overview of the science of language, especially its theoretical underpinnings, methodology, and major findings. Linguistics 101 plus any other course in linguistics or any course for which Linguistics 101 is a prerequisite satisfies the social science distribution requirement.

LING 110 Language Learning and Language Use
Fall. 3 credits. J. Sereno.
Language permeates every aspect of our life—cognitive, social, economic, and political. In this course, we will explore how language is used in everyday conversation and how language is learned. What communicative functions does language serve? What is the social significance of forms of language use? How does language relate to the mental capacities that people have? How do we learn language as children? Is this process different from learning languages as an adult? How does literacy influence the processing of language?

LING 115 Language and Culture
Spring. 3 credits. J. Whitman.
We often assume that there is a close relationship between differences in language and cultural variation. This course focuses on that relationship, beginning with an examination of the linguistic relativity hypothesis, which postulates a link between basic properties of languages and crosscultural differences in world view. We also examine potential cultural determinants of variation in language: persuasive, social, economic systems, systems of ritual and taboo in language, and the impact of narrative organization on grammar. Special attention is paid to 'extreme' forms of language: invented languages from Esperanto to Klingon, glossa tabulae, and trance languages, language games and secret languages.

LING 118 Varieties of Human Language
Language diversity has a place in our complex world. Whether spoken by a handful of speakers or by hundreds of millions, each language manages the same tasks of communication and fits in with its social environment. Language identification, literacy, and multilingualism are among the issues touched on.

LING 200 Introduction to Bilingualism
Spring. 3 credits. J. Sereno.
A basic introduction to the study of individual and societal bilingualism. Characteristics of bilingual language learning and use, and possible cognitive consequences will be discussed. Aspects of societal bilingualism in terms of social and political issues will also be considered.

LING 201 Introduction to Phonetics and Phonology
Spring. 4 credits. Prerequisite: Linguistics 101 or equivalent or permission of instructor. D. Zec.
An introduction to the study of human speech sounds and the patterns in languages. The first part of the course will focus on phonetics: the production, acoustics, and perception of speech, with attention to both the common and the less common sounds of the world's languages. The second part of the course will focus on phonology: how human speech sounds pattern within and across languages, with an emphasis on the rules that govern these patterns and their possible representation.

LING 203 Introduction to Syntax and Semantics
Fall. 4 credits. Prerequisite: Linguistics 101 or equivalent or permission of instructor. S. Tomioka.
This course focuses on language as a system of knowledge that enables native speakers to create and interpret the structures of their language. Part of the course will consider issues of syntactic structure, such as the order of constituents, the hierarchical organization of grammars, and syntactic universals. The other part of the course will focus on meaning and interpretation, addressing such issues as the role of context, how information is structured, and how it is encoded in the syntax.

LING 211 Diction for Oral Presentation
[also Music 201]
For description, see MUSIC 201.

LING 215 Psychology of Language [also Psychology 215]
For description, see PSYCH 215.

LING 216 Mathematical Linguistics
Spring. 4 credits. Prerequisite: Linguistics 101. S. McConnell-Ginet.
The course introduces the mathematical concepts and techniques most frequently used in theoretical linguistics.

LING 220 Acquisition of Spoken Language
Spring. 3 credits. A. Jongman.
A survey of phonetic aspects of language learning, focusing on first- and second-language acquisition. Relevant concepts in phonetics and psycholinguistics will be introduced at every stage. Topics include the role of innate knowledge versus linguistic experience in phonological development, language-universal aspects of speech learning, the phonetics of motherese, the existence of a critical period for language learning, and the phonetics of foreign accents.

LING 240 Experiments on Language
Fall or spring. 4 credits. Prerequisite: Linguistics 101 or equivalent. Not offered 1996–97. A. Jongman.
This course surveys experimental linguistic research in order to discover how language is organized and processed. Experimental methods and data will be discussed for each level of language, including phonetics, phonology, lexicon, morphology, syntax, semantics, and pragmatics. Includes a lab section with "hands-on" projects.

LING 244 Language Use and Gender Relations [also Women's Studies 244]
This course explores connections between language (use) and gender/sex systems, addressing such questions as the following: How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do sociocultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.

LING 246 Minority Languages and Linguistics
Spring. 4 credits. W. Harbert, V. Carstens, M. Suter.
This course examines minority languages from linguistic, social, and political perspectives. Topics discussed include language death, language maintenance, bilingualism, language contact, official status, and related issues. Languages/language families to be discussed include Spanish in the U.S., Celtic languages, African languages, Yiddish, and others, depending on the special interests of the instructors.

LING 264 Language, Mind, and Brain
Fall. 4 credits. For non-majors or majors. Prerequisite: a basic course in linguistics and/or psycholinguistics is desirable. Not offered 1996–97. J. Bowers.
An introductory course that emphasizes the formal structure of natural language and its biological basis. The following topics are covered: the formal representation of linguistic knowledge, principles and parameters of universal grammar, the basic biology of language, mechanisms of linguistic performance, the modularity hypothesis, and language and cognition. This course is especially suited for majors in fields such as psychology, philosophy, computer science, and linguistics (and also for those enrolled in the concentration in cognitive studies) who want to take a more systematic introduction to linguistics that concentrates on the formal principles that govern linguistic knowledge, along with some discussion of their biological realization and their use in perception and production.

LING 301–302 Phonology I, II
301, fall; 302, spring. 4 credits each term. Prerequisites: for Linguistics 301, Linguistics 201 or equivalent; for Linguistics 302, Linguistics 301 or permission of instructor. Fall: D. Zec; spring: staff.
Basic topics in contemporary phonological theory, which studies the representational structures and principles underlying the human ability to produce and understand spoken language. 301: Adopting a crosslinguistic perspective, develops a conception of phonological representations in which different types of phonological information are arrayed on distinct structural planes. Includes the study of segmental features and their organization, the extra-segmental quantity, and syllable organization. Relations of phonology with morphology, syntax, and phonetics. 302: Using American English as a case study, explores phonological rules and
their systematic relations. Principles of syllabification and metrical structure. The organization of current theories, constraints on rule interaction, lexical and morphological conditioning of rules, stratal and prosodic organization. Evidence for the mental representation of speech; principles of phonological acquisition.

LING 303–304 Syntax I, II
303, fall; 304, spring. 4 credits each term. Prerequisite: Linguistics 303, Linguistics 305; for Linguistics 304, Linguistics 303 or permission of instructor. Fall: M. Suer, spring: J. Bowers. 303 is an introduction to syntactic theory, with emphasis on the classical theory of transformational grammar. 304 is an advanced course, surveying current syntactic models and dealing with such issues as the nature of syntactic representation, levels of representation, principles of universal grammar, and the relation of syntax and semantics.

LING 306 Functional Syntax
Fall. 4 credits. Prerequisite: Linguistics 101 or equivalent or permission of instructor. Not offered 1996–97. A general survey of syntactic theories that highlight grammatical function and reveal its role in discourse structure.

LING 309 Morphology
Spring. 4 credits. Prerequisite: Linguistics 101 or equivalent or permission of instructor. V. Carstens. A general survey course, focusing on the relationship of meaning and form in morphological and introducing techniques of morphological analysis. Current research on form-meaning questions is discussed.

LING 310 Morphology II
Fall. 4 credits. Prerequisite: Linguistics 203 or permission of instructor. Not offered 1996–97. Staff. Considers recent discussions in morphological theory, in particular the relationship of morphology and syntax.

LING 319 Phonetics I
Fall. 4 credits. Prerequisite: Linguistics 201 or permission of instructor. A. Jongman. Provides a basic introduction to the study of phonetics. Topics to be covered include anatomy and physiology of the speech production apparatus, transcription and production of some of the world’s sounds, basic acoustics, computerized methods of speech analysis, acoustic characteristics of sounds, speech perception, speech synthesis, stress and intonation.

LING 320 Phonetics II
Spring. 4 credits. Prerequisite: Linguistics 319. A. Jongman. This course is a continuation of Phonetics I and provides a more detailed survey of some areas in acoustic and articulatory phonetics. Topics include feature theory, vocal tract acoustics, quantal theory, speaker normalizations, theories of speech perception, coarticulation, theories of speech production, and prosody. In addition, a number of "hands-on" projects will be part of the course.

LING 325 Pragmatics
Spring. 4 credits. Prerequisite: Linguistics 101 or permission of instructor. S. McConnell-Ginet. An introduction to the study of such topics as speech acts, presupposition, deixis, implicatures, and conversational strategies.

LING 334 Non-Linear Syntax
Fall. 4 credits. Prerequisite: Linguistics 303 or equivalent. Not offered 1996–97. C. Rosen. Analyses of some twenty diverse languages are examined with the aim of building a formal account of the syntactic constructions existing in the world’s languages, and discerning universals that delimit this inventory. Non-linear theory, designed for comparative work, depicts constructions in the abstract, not imagining them as arrays of elements in space. Simultaneously it studies the morphosyntactic systems that relate constructions to their linear realizations.

LING 350 Representing Language: Knowledge Taught and Untaught (also Cognitive Studies 350)
Fall. 4 credits. J. Gair. This course will deal with some of the discoveries made in modern linguistics that reveal some fundamental properties of human language and the special human capacity for it, as well as some of the still unsettled questions about it. It will also trace some of the paradigms that have occurred within linguistics, and consider some of the ways in which language has been represented, both within the science of linguistics and outside of it, by contrasting what is known with what is popularly believed to be true. Projected topics will include: innateness vs. language as socio-cultural; language variability vs. Universal Grammar; language change and relatedness of languages; the question of correctness.

LING 370 Language and Cognition (also Psychology 370)
Fall. 4 credits. Prerequisite: Linguistics 101 or Psychology 215, or permission of one of the instructors. Not offered same years as Psychology 416. Not offered 1996–97. Examination of current research on selected topics on language from both linguistic and psychological perspectives. Topics may include: Universal Grammar and language acquisition, syntactic parsing, word recognition, sentence production, aphasia, and schizophrenic language.

LING 390 Independent Study in Linguistics
Fall or spring. 1–4 credits variable. Prerequisite: Linguistics 101 or permission of instructor. Staff. Independent study of linguistics topics not covered in regular curriculum for undergrads.

LING 400 Semiotics and Language (also Comparative Literature 410 and French 400)
Spring. 4 credits. Prerequisite: some background in an area relevant to semiotics: e.g., linguistics, philosophy, psychology, anthropology, or literature, or permission of instructor. Not offered 1996–97. L. Waugh. An introduction to the study of semiotics in general and to particular semiotic theories (for example, theory, Pierce, Jakobson) and to language as a semiotic system. The particular topics to be discussed will depend on the interests of the students.

LING 401 Language Typology
Fall. 4 credits. Prerequisite: Linguistics 101 or equivalent. C. Rosen. Study of a basic question of contemporary linguistics: in what ways do languages differ, and in what ways are they all alike? Efforts to formalize universals of syntax and to characterize the total repertory of constructions available to natural languages. Common morphological devices and their syntactic correlates. Emphasis on systems of case, agreement, and voice.

LING 403 Introduction to Applied Linguistics
Fall. 4 credits. Prerequisite. A course in the structure of a language at the 400 level. I. Santof. Examination of the theoretical bases of applied linguistics, including second-language learning and current language-teaching methodologies.

LING 405 Sociolinguistics
Fall. 4 credits. Prerequisite: Linguistics 101 or permission of instructor. J. Wolff. Systematically within the interactions between language and social context, we will examine dialect usage (diglossia, multilingualism, code-switching); variation and language change (network theory, change in progress); ethnography of communication and speech acts; language and culture; and language and gender, race and power (including pidgins and creoles).

LING 406 Ethnolinguistics
Spring. 4 credits. Prerequisite: Linguistics 101 or permission of instructor. Not offered 1996–97. Staff. This course will be an introduction to the study of pidgin and creole languages and the issues surrounding them both in and beyond linguistics. Topics covered will include: genesis of pidgins and creoles; classification of pidgins and creoles; creoles and language universals; creoles and sociolinguistic variation; a module on Saramaccan Creole English; educational and language planning issues; sociolinguistic issues; Black English.

LING 409 Psycholinguistics of Second-Language Reading
Fall. 4 credits. Prerequisite: permission of instructor. Not offered 1996–97. G. Appel. In-depth analysis of the research on the reading process in a second language. Topics include processing of narrative vs. expository texts (descriptive, problem solving, causative, etc.); comparison of the reading process in native vs. second languages, and development of methodologies for the teaching of reading in the second-language classroom.

LING 410 Introduction to Historical Linguistics
Fall. 4 credits. Prerequisite: Linguistics 201 or permission of instructor. J. Jasanoff. A survey of the basic mechanisms of linguistic change, with examples from a variety of languages.

LING 413 Topics in Historical Linguistics
Fall. 4 credits. Prerequisite: Linguistics 410 or permission of instructor. Not offered 1996–97. W. Harbert, J. Jasanoff, and C. Rosen. Examinations of a selection of recent research illustrating a variety of productive and innovative approaches to problems in historical linguistics. Readings center on phonological and morphological evolution in the Romance and Germanic families. Students carry out guided research projects.

Languages and Linguistics
LING 421-422 Semantics I, II
Fall, 4; Spring, 4 credits each term. Prerequisites: for Linguistics 421, Linguistics 203; for Linguistics 422, Linguistics 421 or permission of instructor. S. Tomioka. 421: An introduction to semantics of natural language. The course starts from basic foundational questions concerning the nature of meaning and the empirical domain of semantic theory. Truth-conditional and logical theories and their application to the investigation of the structure of natural languages are extensively explored (with some comparisons with other approaches). Through the study of quantification, scope, anaphora, modalities, presuppositions, and the like, one tries to gain insight into general characteristics of the cognitive status that is at the basis of our capacity for understanding sentences. 422: Guides students into current work in semantic theory. The first half of the course is an introduction to Montague-style semantics, whose potential is enormous. The second half of the course focuses on selected topics that have grown out of (and sometimes against) classical Montague semantics. Such topics are usually drawn from the following: generalized quantifiers and anaphora, type-shifting, problems of tense and aspect, the linguistic relevance of algebraic approaches to properties, propositions, events and thematic roles, and discourse representation theory.

LING 436 Language Development (also Human Development and Family Studies 436 and Psychology 436) Spring. 4 credits. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. Offered alternate years. Not offered 1996-97. B. Lust. A survey of major theoretical perspectives in the field. The fundamental linguistic issues of universal grammar and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communicative systems in nonhuman species such as chimpanzees are addressed, but major emphasis is on the child.

LING 450 Mathematical Methods for Linguists Fall. 4 credits. Prerequisite: Linguistics 203. Not offered 1996-97. Staff. In this course we will study questions concerning the generative capacity, learnability, and parsing of different syntactic models. Some knowledge of recent developments in syntax is important. Some knowledge of mathematical linguistics may be helpful, but is not required. The course is meant for graduate students and advanced undergraduate students in linguistics, but may also be of interest to students in psychology, psycholinguistics, computer science, and cognitive studies.

LING 493 Honors Thesis Research Fall. 4 credits. Staff. May be taken before or after Linguistics 494, or may be taken independently.

LING 494 Honors Thesis Research Spring. 4 credits. Staff. May be taken as a continuation of, or before, Linguistics 493.

LING 600 Field Methods Spring. 4 credits. Prerequisites: Linguistics 201 and 203 or permission of instructor. V. Carstens, A. Cohn. Elicitation, recording, and analysis of data from a native speaker of a non-Western language not generally known to students.

LING 601 Topics in Phonological Theory Fall. 4 credits. Prerequisites: Linguistics 301 and one higher-level course in phonology. D. Zec. Selected topics in current phonological theory.

LING 603 History of Linguistics Fall. 4 credits. Not offered 1996-97. Staff. The history of linguistics from early Greek and Sanskrit grammarians to the modern period.

LING 604 Research Workshop Fall. 4 credits. S-U grade only. Prerequisite: three or more semesters of graduate study in linguistics. J. Lantolf, A. Cohn, S. McConnell-Ginet. Participants will present their ongoing research and discuss it with their colleagues. Individual topics will be chosen on the basis of interest, experience, and probable focus of dissertation research.

LING 607 Twentieth-Century Approaches to Language Fall. 4 credits. Prerequisite: at least one course in linguistics or permission of instructor. Offered alternate years. Not offered 1996-97. L. Waugh. The development of 20th-century approaches to language in America and Europe. Work in 19th-century approaches will also be considered in their relation to 20th-century approaches.

LING 608 Discourse Analysis Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. J. Lantolf, L. Waugh. Linguistic theory applied to relationships beyond the sentence.

LING 616 Syntax III Fall. 4 credits. Prerequisite: Linguistics 304 or permission of instructor. V. Carstens. An examination of recent developments in syntactic theory, including "minimalist" approaches to phrase structure, derivations, representations, and the nature of economy conditions, and parametric differences.

LING 633 Seminar in First-Language Acquisition: Cross-linguistic Studies of the Acquisition of Anaphora (also Human Development and Family Studies 633) Fall. 1-4 credits. Prerequisite: Linguistics 456 or equivalent or permission of instructor. Not offered 1996-97. B. Lust. This seminar will review and critique current theoretical and experimental studies of the first-language acquisition of anaphora, with a concentration on insights gained by cross-linguistic study of this area. The seminar will focus on relating current development in linguistic theory regarding anaphora to current experimental research on first-language acquisition of anaphora. Attention will also be given to the development of research proposals.

LING 637 Experimental Research for Language Sciences Fall. 4 credits. Not offered 1996-97. A. Jongman, J. Lantolf. A detailed study of experimental procedures for carrying out research in linguistics, especially in the areas of applied linguistics, phonetics, and language acquisition. Quantitative and qualitative research methods are considered.

LING 648 Speech Synthesis by Rule Spring. 4 credits. Prerequisite: Linguistics 301, 319, or permission of instructor. Offered alternate years. Not offered 1996-97. S. Hertz. Investigates the nature of the acoustic structure of speech synthesis, using speech as a tool for exploring this structure. A particular acoustic model will be proposed, developed, and motivated by considering the relationship between phonological and acoustic structure, speech timing, phonetic universals, coarticulation, and speech perception. The primary tool for investigation will be the Delta System, a powerful software system for investigating phonology and phonetics through speech synthesis. The course is meant for graduate students and advanced undergraduate students in linguistics, but may also be of interest to students in psychology/psycholinguistics, computer science, and cognitive studies.

LING 700 Seminar Fall or spring, according to demand. Credit to be arranged. Seminars are offered according to faculty interest and student demand. Topics in recent years have included subject and topic, Montague grammar, speech synthesis, lexicography, classical and autonomous phonology, Japanese sociolinguistics, relational grammar, semantics and semiotics, and others.

LING 773-774 Proseminar in Cognitive Studies I, II (also Cognitive Studies 773-774, Psychology 773-774, Philosophy 773-774, and Computer Science 773-774) Fall: R Grade; spring: S-U only. 4 credits. Staff. This year-long seminar is intended to provide graduate students with an interdisciplinary introduction to the study of knowledge, its representation, acquisition, and use.

Linguistics of Particular Languages
Fees: Depending on the course, a small fee may be charged for photocopied texts for course work.

African
LING 235 Introduction to African Languages and Linguistics Fall. 3-4 credits variable. Not offered 1996-97. C. Collins. This is a survey of aspects of language use in Africa. We will discuss the relation between language and culture, the structural characteristics of African languages, and the historical relationships between different African languages.
LING 431 Structure of an African Language
Spring. 4 credits. Prerequisite: Linguistics 101 or permission of the instructor. Offered alternate years. Not offered 1996-97. V. Carstens.

A survey of the grammar of an African language in light of current linguistic theory.

LING 514 Syntax of African Languages
Spring. 4 credits. Prerequisites: Linguistics 101 and permission of instructor. Not offered 1996-97. V. Carstens.

Selected topics in the syntax of African languages.

Arabic
LING 416 Structure of the Arabic Language (also Near Eastern Studies 416) @ #
For description, see NES 416.

Celtic
LING 239/439 The Celtic Languages
Fall. 4 credits. Graduate students register under Ling 439. W. Harbert.

This course surveys the history, structure, and political and social situation of the Celtic languages (Welsh, Scottish Gaelic, Irish Gaelic, Breton, Cornish, and Manx). The course includes a few days of introductory language instruction in some of these languages.

LING 623-624 Old Irish I, II
623, fall; 624, spring. 4 credits each term. Prerequisite for 624: 623 or permission of instructor. J. Jasanoef.

LING [625-]626 Middle Welsh [I], II
[625]; 626, fall. 4 credits each term. Prerequisite: permission of instructor. W. Harbert.

Students develop a reading knowledge of Middle Welsh through reading prose and poetic texts. [625: Focuses on Middle Welsh prose tales, including the Mabinogi. Not offered 1996-97] 626: Representative poetic works are introduced, including the Gododdin, and the poems of Taliesin and Dafydd ap Gwilym.

LING 627 Advanced Old Irish]

[WELSH 404-405 The Structure of Welsh I, II
404, fall; 405, spring. 4 credits each term. Prerequisite: Linguistics 101. Not offered 1996-97. W. Harbert.

404: Structure of Welsh I: Phonology and Morphology. This course will treat the phonological and morphological structure of Modern Spoken Welsh, with greater or lesser reference to current theoretical literature on these topics, depending on the background and interests of the participants. 405: Structure of Welsh II: Syntax. This course will treat the syntax of Modern Spoken Welsh, with greater or lesser reference to current literature on these topics, depending on the background and interests of the participants. The two courses may be taken independently.

LING 217 History of the English Language #
Fall. 4 credits. W. Harbert.

This course explores the development of the English language from its Indo-European beginnings to the present. Topics covered include changes in sound, vocabulary and grammatical structure, external influences, Old English, Middle English, Standard English, dialects, and World Englishes.

LING 311 The Structure of English: Demystifying English Grammar
Spring. 4 credits. M. Sufer.

Do you find grammatical insecurity? In foreign language classrooms, do you find yourself at a loss because you don’t know how grammatical terminology applies to English? This course will make English grammar accessible and comprehensible to native speakers who want to understand how the language they use so easily works. In addition to standard grammatical notions, the course will consider dialectal variation, matters of style, how sentence structure conveys viewpoint, and other discourse phenomena.

French
The Major
The French major has three separate tracks: the literature track, the area studies track, and the linguistics track. The linguistics track is described here; for the literature and area studies tracks, see the description under Romance Studies. The major in French linguistics is designed to give students proficiency in the oral and written language and to develop skills in the linguistic analysis of French.

While prospective majors should try to plan their programs as far ahead as possible, no student will be refused admission merely because of a late start. It is even possible for a student to begin French and/or linguistics at Cornell and become a major. Students are admitted to the major in French linguistics by the director of undergraduate studies of the Department of Romance Studies, Professor Jacques Béraud, but will be guided by their individual advisers.

The French Linguistics Major
To be admitted to the major, students should have completed Linguistics 101 and French 200, 203, 205, or 213 (or their equivalents) by the end of the sophomore year. It is expected that all students in the major will also take either French 220, 221, or 222, preferably by the end of the sophomore year.

To complete the major, a student must:
1) acquire a sound degree of competence in French. This competence is demonstrated by the successful completion of French 312 (or its equivalent) or by the passing of a special examination. Typically, students in the major will have taken 312 by the end of their junior year.
2) take six courses in French, Romance, and general linguistics (in addition to Linguistics 101). These courses will include at least one course concerning the history of French (e.g., Romance Linguistics 321), one course concerning the structure of French (e.g., French 405, 408, 410, Linguistics 323), and one other course in French linguistics.

3) take two courses (preferably a sequence) in some allied area, for example, (a) French literature and civilization, (b) psycholinguistics, (c) philosophy of language, (d) French history, culture, music, or history of art or architecture. (This requirement may be waived for students who are double majors in other fields.)

Honors. The honors program encourages well-qualified students majoring in French linguistics to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not practically possible in the case of course papers.

No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in French 429–430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grades in the major and the quality of the honors essay.

[FRDML 405 Contemporary Theories of French Grammar]
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97. L. Waugh.

Selected topics in twentieth-century French linguistics.

[FRDML 408 Linguistic Structure of French I (also Linguistics 408)]
Fall. 4 credits. Prerequisites: qualification in French and Linguistics 101 or Linguistics 400, or permission of instructor. Offered alternate years. Not offered 1996-97.

Staff.
A synchronic study and analysis of modern French, with emphasis on its phonology and morphology.

[FRDML 410 Linguistic Structure of French II: Semantics, Pragmatics, and Discourse Analysis]
Fall. 4 credits. Prerequisite: qualification in French. Offered alternate years. L. Waugh.

A synchronic study and analysis of modern French, with emphasis on semantics, pragmatics, and discourse analysis.

[FRDML 700 Seminar in French Linguistics]
Spring, according to demand. Credit to be arranged.

Seminars are offered according to faculty interest and student demand. Topics in recent years have included current theories in French phonology, current theories in French syntax, and semantics of French.

[LING 232 The French Language Today (also French 232)]
Fall. 3 credits. Prerequisite: Linguistics 101. Not offered 1996-97. D. Cohm.

Described here; for the literature and area studies tracks, see the description under Romance Studies. The linguistics track is designed to give students background and interests of the participants. The two courses may be taken independently.

English
GERLA 605 Structure of Old English
Fall. 4 credits. Prerequisite: German 401. Offered alternate years. Not offered 1996-97. W. Harbert.

Linguistic overview of Old English, with emphasis on phonology and syntax.
German and Germanic

[LING 241 Yiddish Linguistics] Spring. 3–4 credits variable. Prerequisite: Linguistics 101 or permission of instructor. Not offered 1996-97. M. Diesing. This course will cover a wide variety of topics relating to the Yiddish language and Yiddish culture, including the structure of Yiddish, the history of the Yiddish language, Yiddish in America (the Yiddish revival, the role of the Yiddish press, etc.), Yiddish as a minority/dying language, and the influence of Yiddish on present-day American English. No previous knowledge of Yiddish required.

[LING 247 The Germanic Languages] Fall. 4 credits. Not offered 1996-97. W. Harbert, M. Diesing. This course surveys the history, structure, and use of the modern Germanic languages (English, German, Dutch, Afrikaans, Swedish, Danish, Icelandic, Norwegian, Faroese, and Yiddish).

[LING 315-316 Old Norse] 315, fall; 316, spring. 4 credits each term. H. Bernhardsson. Old Norse is a collective term for the earliest North Germanic literary languages: Old Icelandic, Old Norwegian, Old Danish, and Old Swedish. The richly documented Old Icelandic will be the center of attention, and the course is twofold: the student will gain (a) knowledge of an ancient North Germanic language, important from a linguistic point of view, as well as (b) access to the medieval Icelandic (and Scandinavian) literature.

315: The structure of Old Norse (Old Icelandic), phonology, and morphology, with reading of selections from the Prose-Edda, an 13th-century narrative based on the Eddic poetry. 316: Extensive reading of Old Norse texts, among them selections from some of the major Icelandic family sagas: Njáls saga, Grettis saga, and Egils saga, as well as the whole Hrafnkels saga.

[GERLA 404 Modern German Syntax] Spring. 4 credits. Prerequisites: German 304 or equivalent and Linguistics 101 or 303. Not offered 1996-97. M. Diesing. An application of selected theoretical syntactic models to problems in the syntax of modern German.

[GERLA 606 Topics in Historical Germanic Phonology] Spring. 4 credits. Prerequisite: German 401. Not offered 1996-97. W. Harbert. The development of the sound system from Proto-Germanic to its daughter languages.

[GERLA 710 Seminar in Germanic Linguistics] Fall or spring, subject to the needs of students and to the limitations of staff time. 4 credits. Not offered 1996-97.

[GERLA 720 Seminar in Comparative Germanic Linguistics] Fall or spring, subject to the needs of students and to the limitations of staff time. 4 credits. Not offered 1996-97. Topics include phonology, morphology, syntax, and dialectology of the older Germanic languages.

[GERLA 730 Seminar in German Linguistics] Fall or spring, subject to the needs of students and the limitations of staff time. 4 credits. Not offered 1996-97. Selected topics including the history, structure, and dialects of German.

Greek

[LING 609 Greek Comparative Grammar (also Classics 421)] 4 credits. Prerequisite: thorough familiarity with the morphology of classical Greek. Not offered 1996-97. Next offered 1997-98. A. Nussbaum. The prehistory and evolution of the sounds and forms of ancient Greek as reconstructed by comparison with the other Indo-European languages.

[LING 613 Homeric Philology (also Classics 427)] 4 credits. Prerequisite: ability to read Homeric Greek. Not offered 1996-97. A. Nussbaum. The language of the Homeric epics. dialect background, archaisms, modernizations. The notion of a Kunstsprache: its constitution, use, and internal consistency. The phonological and morphological aspects of epic compositional technique.

[LING 615 Mycenaean Greek (also Classics 429)] 4 credits. Prerequisite: thorough familiarity with the morphology of Classical Greek. Not offered 1996-97. A. Nussbaum. An introduction to the epigraphy, language, and content of the Linear B tablets with special attention to their implications for Greek historical grammar and dialectology.

Indic and Dravidian

[LING 440 Dravidian Structures] Fall. 4 credits. Prerequisite: Linguistics 101. J. Gair. A comparative and contrastive analysis of the structures of several Dravidian languages.

[LING 442 Indo-Aryan Structures] Fall. 4 credits. Prerequisite: Linguistics 101. J. Gair. Typological discussion of the languages of the subfamily. Specific topics and emphasis may vary depending on the interest of the students.

Indo-European

[LING 617-618 Hittite] 617, fall; 618, spring. 4 credits each term. Prerequisites: for Linguistics 617, permission of instructor; for Linguistics 618, Linguistics 617 or permission of instructor. Not offered 1996-97. J. Jasanoff.

[LING 635-636 Indo-European Workshop] 635, fall; 636, spring. 4 credits each term. Prerequisite: permission of instructor. Fall: J. Jasanoff, spring: A. Nussbaum. An assortment of subjects intended for students with previous training in Indo-European linguistics: problems in the reconstructions of Proto-Indo-European, topics in the historical grammars of the various IE languages, reading and historical linguistic analysis of texts, and grammatical sketches of "minor" IE languages.

Italian

[ITALA 403 Linguistic Structure of Italian] Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent and qualification in any Romance language. Offered alternate years. Not offered 1996-97. C. Rosen. Survey of Italian syntax, using simple theoretical tools to bring hidden regularities to light. Topics include auxiliaries, modals, clitics, reflexive constructions, agreement, impersonal constructions, causatives.

[ITALA 404 History of the Italian Language] Spring. 4 credits. Prerequisites: Linguistics 321 and either Italian 201, 203, or equivalent. Offered alternate years. Not offered 1996-97. Overview of Italian and its dialects from the earliest texts to the present day. Emergence
of the standard language. External history and sociolinguistic circumstances.

Japanese

[JAPAN 404 Linguistic Structure of Japanese]
Fall. 4 credits. Prerequisites: Japanese 102 or permission of instructor and Linguistics 101 or equivalent introductory course in linguistics. Offered alternate years. Not offered 1996-97. J. Whitman.
Introduction to the linguistic study of Japanese, with an emphasis on morphology and syntax.

[JAPAN 410 History of the Japanese Language]
Fall. 4 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1996-97. J. Whitman.
An overview of the history of the Japanese language followed by intensive examination of issues of interest to the participants. Students should have a reading knowledge of Japanese.

Korean

[LING 430 Structure of Korean]
Fall. 4 credits. Offered alternate years. Not offered 1996-97. J. Whitman.
Intensive examination of the syntax and phonology of a non-Indo-European language with the objective of testing principles of current linguistic theory. No previous knowledge of Korean required.

Latin and Italic

[LING 610 Latin Comparative Grammar (also Classics 422)]
The prehistory and evolution of the sounds and forms of classical Latin as reconstructed by comparison with the other Indo-European languages.

[LING 612 Italic Dialects (also Classics 425)]
The phonology and morphology of Faliscan, Ocean, and Umbrian studied through the reading of epigraphical texts. Attention to the relations of these languages to Latin and the question of proto-Italic.

LING 614 Archaic Latin (also Classics 426)
Fall. 4 credits. Prerequisite: reading knowledge of Latin. A. Nussbaum.
Reading of epigraphic and literary preclassical texts with special attention to archaic and dialectal features. The position of Latin among the Indo-European languages of ancient Italy, the rudiments of Latin historical grammar, and aspects of the development of the literary language.

Romance

LING 321-322 History of the Romance Languages
321: Fall, 322: spring. 4 credits each term. Prerequisites: Linguistics 101 or equivalent and qualification in any Romance language. Offered alternate years. C. Rosen.

[LING 323-324 Comparative Grammar of the Romance Languages]
Fall, 323; spring, 324. 4 credits. Prerequisites: Linguistics 101 or equivalent and qualification in any Romance language. Offered alternate years. Not offered 1996-97. C. Rosen.
Concise survey of Romance syntax, covering the salient constructions in six languages with equal attention to their historical evolution and their current state. Grammatical innovation and divergence in a typological perspective.

LING 620 Area Topics in Romance Linguistics
Spring. 4 credits. May be repeated for credit. Offered alternate years. Not offered 1996-97.

LING 621 Problems and Methods in Romance Linguistics
Fall. 4 credits. Prerequisites: Linguistics 101 or equivalent and qualification in two Romance languages. Offered alternate years. Not offered 1996-97.

Russian and Slavic

[LING 443-444 Linguistic Structure of Russian (also Russian 403-404)]
443, fall; 444, spring. 4 credits each term. Prerequisites: Linguistics 443, Linguistics 101 and permission of instructor; for Linguistics 444, Linguistics 443 or equivalent. Offered alternate years. Not offered 1996-97. W. Browne.
A synchronic analysis of the structure of modern Russian. Linguistics 443 deals primarily with morphology and its relation to syntax and 444 with syntax and word order. Topics covered include case theory, the functions of word order, voice, agreement, impersonal constructions, negation, nonuniversal categories, and the relation between morphology and syntax.

[LING 671-672 Comparative Slavic Languages (also Russian 651-652)]
671, fall; 672, spring. 4 credits each term. Prerequisites: for Linguistics 671, Russian 601 taken previously or simultaneously or permission of instructor; for Linguistics 672, Linguistics 671 or permission of instructor. Offered alternate years. Not offered 1996-97. W. Browne.
Sounds and forms of the Slavic languages and of prehistoric common Slavic, main historical developments leading to the modern languages.

[RUSSA 401-402 History of the Russian Language]
401, fall; 402, spring. 4 credits each term. Prerequisites: for Russian 401, permission of instructor; for Russian 402, Russian 401 or equivalent. Offered alternate years. Not offered 1996-97. W. Browne.
Phonological, morphological, and syntactic developments from Old Russian to modern Russian.

[RUSSA 601 Old Church Slavic]
Fall. 4 credits. This course is prerequisite to Russian 602. Offered alternate years. Not offered 1996-97. W. Browne.
Grammar and reading of basic texts.

[RUSSA 602 Old Russian Texts]
Grammatical analysis and close reading of Old Russian texts.

[RUSSA 700 Seminar in Slavic Linguistics]
Offered according to demand. Variable credit. Not offered 1996-97. Staff.
Topics chosen according to the interests of staff and students.

Southeast Asian

[KHMER 403-404 Structure of Khmer]
403, fall; 404 spring. 4 credits each term. Prerequisite: Linguistics 101 or equivalent. Not offered 1996-97. G. Diffloth.
Introduction to the linguistic study of Khmer.

LING 230 Introduction to Southeast Asian Languages and Linguistics
Fall. 3-4 credits variable. For non-majors or majors. A. Cohn, J. Wheatley, and J. Wolff.
This is a survey of the languages of Southeast Asia. The goal of this course is to expose students to Southeast Asia as a linguistic area and introduce them to the rich language diversity of the region. It includes three main parts: 1) sociolinguistic and ethnolinguistic issues of language and politics, language and culture, and language use; 2) language structures and typological patterns of the area’s languages; 3) historical linguistics, genetic relations between languages, as well as the linguistic effects of language contact and linguistic evidence for prehistory.

[LING 653-654 Seminar in Southeast Asian Linguistics]
653, fall; 654, spring. 4 credits each term. Prerequisite: Linguistics 303 or permission of instructor. Linguistics 653 is not a prerequisite for 654. Not offered 1996-97. G. Diffloth.
Languages of mainland Southeast Asia. Topics, chosen according to student interests, may include description, dialectology, typology, comparative reconstruction, and historical studies.

LING 655-656 Seminar in Austronesian Linguistics
655, fall; 656, spring. 4 credits each term. Prerequisites: for Linguistics 655, Linguistics 101 and permission of instructor; for Linguistics 656, Linguistics 655. J. Wolff.
Descriptive and comparative studies of Malayo-Polynesian languages.

[LING 657-658 Seminar in Austrastiatric Linguistics]
657, fall; 658, spring. 4 credits each term. Prerequisite: Linguistics 101 or permission of instructor. Not offered 1996-97. G. Diffloth.
Descriptive and comparative studies of Austrastiatric languages.

LANGUAGES AND LINGUISTICS 451
Spanish

The Major

The major is designed to give students proficiency in the oral and written language, to acquaint them with Hispanic culture, and to develop their skill in the linguistic analysis of Spanish. (For the major in Spanish literature see the description under Romance Studies.) Satisfactory completion of the major should enable students to meet language requirements for teaching, to continue with graduate work in Spanish or other appropriate disciplines, or to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake pre-professional training for graduate study in law, medicine, business, etc. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult the director of undergraduate studies Professor Margarita Suter (218 Morrill Hall) for Spanish linguistics.

The Core

All majors will work out a plan of study in consultation with their advisers. Previous training and individual vocational goals are taken into account when the student’s program of courses is determined. Spanish 201 and 204 or 212 (or equivalent) are prerequisite to entering the major in Spanish. All majors normally include the following core courses in their programs:

1. Spanish 315-316-318
2. Spanish 311 and 312 (or equivalent)

Spanish majors have great flexibility in devising their programs of study and areas of concentration.

The Linguistic Option

Spanish linguistics, for which the program normally includes at least 20 credits, and at least 3 additional credits in general or Spanish linguistics (such as 366, 405, 407, 408, and others). (Linguistics 101 is recommended before entering this program.) The J. G. White Prize and Scholarships are available annually to students who achieve excellence in Spanish linguistics.

Honors. Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty engaged in Spanish literature or linguistics to supervise their work and direct the writing of their honors essays (see Spanish 429-430).

LING 366 Spanish in the United States (also Spanish 366 and Latino Studies Program 366)

Fall. 4 credits. Prerequisite: some knowledge of Spanish. M. Suner. Examination of major Spanish dialects in the United States from a linguistic perspective. Contrast with the standard language. Borrowing, interference, and code switching. Syntactic, morphological, and phonological characteristics. Sex-related phenomena.

LING 407 Applied Linguistics: Spanish (also to Spanish 407)

Spring. 4 credits. Prerequisite: proficiency in Spanish or permission of instructor. Not offered 1996-97. M. Suner. This course seeks to equip the advanced student or the future teacher of Spanish with insights into problem areas for foreign language learners with the aid of linguistic descriptions. The intent is to narrow the gap that is known to exist between the knowledge that a native speaker has and the incomplete one that a foreign language learner possesses.

[SPAN 405 Hispanic Dialectology

[SPAN 408 The Grammatical Structure of Spanish

Spring. 4 credits. Prerequisites: Linguistics 101 and proficiency in Spanish or permission of instructor. Offered alternate years. Not offered 1996-97. M. Suner. Survey of the salient morphological and syntactic characteristics of contemporary Spanish.

SPAN 700 Seminar in Spanish Linguistics

Fall or spring, according to demand. Variable credit. Topics in synchronic and diachronic Spanish linguistics.

Language Courses

(pre-modern and modern)

Courses in foreign language literatures as well as certain language courses are taught in the following departments, consult entries under the department name for course listings:

- African Studies and Research Center: Swahili, Yoruba
- Asian Studies: Chinese, Japanese, Korean, Sanskrit, Vietnamese
- Classics: Greek, Latin
- German Studies: German
- Near Eastern Studies: Akkadian, Arabic, Hebrew, Sumerian, Turkish, Ugarritic
- Romance Studies: French, Italian, Spanish
- Russian Literature: Russian
- The Full-year Asian Language CONCetration (FALCON Program) offers intensive instruction in Chinese, Japanese, or Indonesian to students wishing to gain fluency in the language in a single year.

Arabic

See listings under Near Eastern Studies.

Bengali

Fees. A small fee may be charged for photocopied texts for course work.

BENG 203-204 Intermediate Bengali Composition and Conversation

203, fall; 204, spring. 3 credits each term. Prerequisites: Bengali 203, Bengali 122 or examination; for Bengali 204, Bengali 203 or examination. D. Sudan. Continuing instruction in grammar with attention to writing skills.

BENG 303-304 Bengali Literature I, II

303, fall; 304, spring. 4 credits each term. Prerequisites: Bengali 203-204 or equivalent. D. Sudan. An introduction to noted Bengali writers. Selections of works by Rabindranath Tagore and Abanindranath Tagore and short stories by Bonophul will be covered. The course will be devoted to reading these works and developing literary criticism and creative writing in Bengali.

Burmese

NOTE: Contact S. Tun in Morrill Hall before classes begin for placement or other testing and organizational information.

Fees. A small fee may be charged for photocopied texts for course work.

BURM 103-104 Burmese Conversation Practice

103, fall; 104, spring. 2 credits each term. Prerequisites: for Burmese 104, Burmese 103 and Burmese 121. May not be taken alone. Must be taken simultaneously with Burmese 121-122. Satisfactory completion of Burmese 104/122 fulfills the qualification portion of the language requirement. S. Tun. Additional drills, practice and extension of materials covered in Burmese 121 and 122. These courses are designed to be attended simultaneously with Burmese 121-122 respectively, allowing students to obtain qualification within a year.

BURM 121-122 Elementary Burmese

121, fall; 122, spring. 4 credits each term. Prerequisites: for Burmese 122, Burmese 121. May be taken alone or simultaneously with Burmese 103-104. Satisfactory completion of Burmese 104/122 fulfills the qualification portion of the language requirement. S. Tun. A thorough grounding is given in all language skills: listening, speaking, reading, and writing.

BURM 123 Continuing Burmese

Fall. 4 credits. Prerequisite: Burmese 122. Satisfactory completion of Burmese 123 fulfills the qualification portion of the language requirement. S. Tun. Continuing instruction in conversational and reading skills, to prepare students for 200-level courses.

BURM 201-202 Intermediate Burmese Reading

201, fall or spring; 202, fall or spring. 3 credits each term. Prerequisites: for Burmese 201, Burmese 202. S. Tun. Continuing instruction in spoken and written Burmese.

BURM 301-302 Advanced Burmese Reading

301, fall or spring; 302, fall or spring. 3 credits each term. Prerequisites: for Burmese 301, Burmese 202 or permission of instructor; for Burmese 302, Burmese 301. S. Tun.
Continuing instruction in spoken and written Burmese, emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

BURM 401-402 Burmese Directled Independent Study

401, fall; 402, spring. 2-4 credits variable each term. Prerequisites: permission of instructor. S. Tun.
Various topics according to need.

Cambodian
See Khmer.

Chinese
For literature courses (conducted in English or Chinese) and Classical Chinese, see Asian Studies.

NOTE: Testing for placement, except for those with near-native abilities (particularly those schooled in a Chinese setting up until the age of about 12) takes place in registration week, before classes begin. Time and place will be posted on the Chinese bulletin board opposite Morrill 416. Students with some Chinese schooling who want to obtain 3 or 6 credits for their proficiency will be tested at the beginning of the second week of classes. Again, the time and place will be announced.

Fees. A small 'materials fee' may be charged in some courses.

CHIN 101-102 Elementary Standard Chinese ('Mandarin') @

101, fall; 102, spring. 6 credits each term. Prerequisites: for Chinese 102, Chinese 101 or equivalent. Since each section is limited to 15-18 students, students missing the first two class meetings without a university excuse are dropped so others may register. No student will be added after the second week of classes. Satisfactory completion of Chinese 102 fulfills the qualification portion of the language requirement.

A course for beginners or those who have been placed in the course by examination. The course gives a thorough grounding in conversational and reading skills. Students with some facility in the spoken language (Chinese is spoken at home) but who do not read characters should take 109/110.

Students who read Chinese, but who speak 'dialects,' such as Cantonese or Amoy, should see the program director in Morrill 416 before enrolling.

CHIN 109-110 Beginning Reading and Writing (Standard Chinese)

109, fall; 110, spring. 4 credits each term. Prerequisites: for Chinese 109, basic conversational Chinese ('Mandarin'); if in doubt, take the placement examination; for Chinese 110, Chinese 109 or equivalent. Students who complete Chinese 110 normally continue with Chinese 209 and 210. Because of high demand for this course, students missing the first two class meetings without a university excuse are dropped so others may register. Satisfactory completion of Chinese 110 fulfills the qualification portion of the language requirement.

This course is intended primarily for students who speak some Chinese (e.g., at home), but who have had little or no formal training. The focus is on characters, reading comprehension, basic composition, standard grammar,

and reading aloud with standard Chinese ('Mandarin') pronunciation.

CHIN 111-112 Beginning Cantonese (Spoken)

111, fall; 112, spring. 3 credits each term. Prerequisites: for Chinese 112, Chinese 111 or equivalent. Chinese 111-112 only satisfies the qualification portion of the language requirement if the student can also demonstrate a comparable reading ability. Staff.

A course in conversational standard Cantonese (as spoken in Hong Kong and Canton) for beginners. Students need not have a Mandarin background to take this course, but those with elementary reading skills will also be introduced to Cantonese (character) writing.

CHIN 113-114 Beginning Reading for Cantonese Speakers

113, fall, 114, spring. 3 credits each term. Prerequisites: everyday conversational ability in Cantonese. Completion of 114 satisfies the qualification portion of the language requirement. Staff.

This course is designed primarily for students who speak some Cantonese (e.g., at home), but who have had little or no formal training in writing. The focus is on characters, reading comprehension, standard grammar, and reading aloud with Cantonese pronunciation.

CHIN 201-202 Intermediate Standard Chinese ('Mandarin') @

201, fall or summer, 202, spring or summer. 4 credits each term. Prerequisites: for Chinese 201, Chinese 102 with a grade of C+ or above or equivalent; for Chinese 202, Chinese 201 or equivalent. Satisfactory completion of Chinese 201 fulfills the proficiency portion of the language requirement. Staff.

Continuing instruction in written and spoken Chinese with particular emphasis on consolidating basic conversational skills and improving reading confidence and depth.

CHIN 209-210 Intermediate Reading and Writing @

209, fall; 210, spring. 4 credits each term. Prerequisites: for Chinese 209, Chinese 110 or equivalent; Chinese 210, Chinese 209. Satisfactory completion of 209 fulfills the proficiency portion of the language requirement. After completing 210, students may only take 400-level courses in Chinese. P. Wang and staff.

Continuing focus on reading and writing for students with spoken background in standard Chinese; introduction of personal letter writing and other types of composition.

CHIN 215 Mandarin for Cantonese Speakers

Fall or spring. 3 credits each term. Prerequisites: basic conversational Cantonese and Chinese 114 or the equivalent. Native or near-native Cantonese (speakers/readers) will be allowed in this course. Not offered 1996-97. Staff.

Continuing instruction in spoken Cantonese and in characters (Cantonese and Mandarin), reading comprehension, and reading aloud with Cantonese pronunciation.

CHIN 301-302 Advanced Mandarin I @

301, fall; 302, spring. 4 credits each term. Prerequisites: for Chinese 301, Chinese 202 or equivalent; for Chinese 302, Chinese 301. P. Wang, F. Lee and staff.

Continuing instruction in spoken Chinese and in various genres and styles of written Chinese.

CHIN 303-304 Advanced Mandarin Conversation @

303, fall; 304, spring. 1 credit each term. Prerequisites: Chinese 201-202 or equivalent or permission from instructor. S-U grades only. Staff.

Conversation and reading practice for students who wish to maintain language skills. Guided conversation and oral composition and translation. Corrective pronunciation drills.

CHIN 411-412 Advanced Chinese: Focus on Fiction

411, fall; 412, spring. 4 credits each term. Prerequisites: for Chinese 411, Chinese 302 or equivalent; for Chinese 412, Chinese 411. Q. Teng.

Reading, discussion, and composition focused on fiction and belles lettres. An important goal of this course is to introduce various genres of written Chinese.

CHIN 413-414 Advanced Chinese: Focus on Current Events

413, fall; 414, spring. 3 credits each term. Prerequisites: for Chinese 413, Chinese 412 or equivalent or permission of instructor; for Chinese 414, Chinese 413. S-U grades only. P. Wang and staff.

Reading and discussion, with a focus on current events. One of the goals of this course is to build reading confidence and speed. The content will partially be determined by student need and interest.

CHIN 425 Special Topics

Fall or spring, according to demand. 4 credits. Prerequisite: permission of instructor. J. Wheatley and staff.

A number of different topics in advanced Chinese language, advertised the previous semester, will be offered under this title to accommodate the needs of advanced or specialized students, and take advantage of faculty interests. Topics include: correspondence and composition, excerpts from classical novels, Chinese documents, xiesheng comedy routines, etc. May be repeated for credit.

FALCON (Full-year Asian Language Concentration)

For full information, brochures, etc., see the FALCON secretary or J. Wheatley in Morrill Hall (e-mail: jkw3@cornell.edu).

CHIN 450 Introductory Intensive Mandarin

Summer only. 8 credits. Completion of 160 fulfills the qualification portion of the language requirement. J. Wheatley and staff.

Introduction to spoken and written Mandarin. Lectures on linguistic and cultural matters, intensive drills with native speakers, and laboratory work. Students who complete this course with a grade of at least B are normally eligible to enroll in Chinese 201.

CHIN 161-162 Intensive Mandarin @

161, fall; 162, spring. 16 credits each term. Prerequisites: for Chinese 161, Chinese 160 or equivalent or permission of instructor, for Chinese 162, Chinese 161. Satisfactory completion of Chinese 161 fulfills the proficiency portion of the language requirement. J. Wheatley, Q. Teng, F. Lee.
Czech

**Fees.** A small fee may be charged for photocopied texts for course work.

**CZECH 131-132 Elementary Czech**
131, fall; 132, spring. 3 credits each term.
Prerequisite: for Czech 132, Czech 131 or equivalent. This language series (131-132) cannot be used to satisfy the language requirement. K. Krivinkova. Covers all language skills: speaking, listening comprehension, reading, and writing.

**CZECH 133-134 Continuing Czech**
133, fall; 134, spring. 3 credits each term.
Prerequisite: for Czech 133, Czech 132 or equivalent; for Czech 134, Czech 133. Satisfactory completion of Czech 124 fulfills the qualification portion of the language requirement. K. Krivinkova. An intermediate conversation and reading course.

Danish

**Fees.** A small fee may be charged for photocopied texts for course work.

**DANISH 131-132 Elementary Danish**
131, fall, 132, spring. 3 credits each term.
Prerequisite: for Danish 132, Danish 131 or equivalent. This language series cannot be used to satisfy the language requirement. P. M. Mitchell. Covers all language skills: speaking, listening comprehension, reading, and writing.

Dutch

**Fees.** A small fee may be charged for photocopied texts for course work.

**DUTCH 121-122 Elementary Dutch**
121, fall or summer; 122, spring or summer. 4 credits each term.
Prerequisite: permission of instructor. M. Briggs. Intensive practice in listening, speaking, reading, and writing basic Dutch in meaningful contexts. The course also offers insight into Dutch language, culture, and society.

**DUTCH 123 Continuing Dutch**
Fall. 4 credits each term. Prerequisite: Dutch 122 or equivalent. Satisfactory completion of Dutch 123 fulfills the qualification portion of the language requirement. M. Briggs. Improves language skills, such as fluency and pronunciation, focusing on verbal communication skills, offering a wide range of readings and sharpening listening skills based on Dutch and Dutch-speaking cultures.

**DUTCH 203 Intermediate Composition and Conversation**
Spring. 3 credits. Prerequisite: Qualification in Dutch or permission of instructor. M. Briggs. Improved control of Dutch grammatical structures and vocabulary through guided conversation, compositions and reading, drawing on all Dutch-speaking cultures.

**DUTCH 204 Intermediate Composition and Conversation**
Fall. 3 credits. Prerequisite: Dutch 203 or permission of instructor. M. Briggs. This course aims to emphasize written and oral application of accurate, idiomatic Dutch. Reading of authentic material of newspapers, literature, and history, with emphasis on Dutch seventeenth-century culture and its influence on the Americas. Taught in Dutch.

English

**Intensive English Program, see p. 543.**

**English for Academic Purposes**

**Fees.** A small fee may be charged for photocopied texts for course work.

**ENGLF 205 English as a Second Language**
Fall. 4 credits. Prerequisite: placement by examination. S. Schaffzin. Designed for those who have completed ENGLF 203 and who need further practice, particularly in writing. Individual conferences are also included.

**ENGLF 206 English as a Second Language**
Spring. 3 credits. Prerequisite: ENGLF 205 or placement by examination. S. Schaffzin. An all-skills course emphasizing listening and speaking, with some writing practice. Students also meet individually with the instructor.

**ENGLF 209 English as a Second Language**
Fall or spring. 1 credit. Prerequisite: permission of instructor. S. Schaffzin. Practice in classroom speaking and informal conversational English tests for gaining information. Students also practice giving informal presentations. Individual conferences with the instructor.

**ENGLF 210 English as a Second Language**
Spring. 1 credit. Prerequisite: permission of instructor. D. Campbell. Academic writing with emphasis on improving organization, grammar, vocabulary, and style through the writing and revision of short papers relevant to students' fields. Frequent individual conferences supplement class work.

**ENGLF 211 English as a Second Language**
Fall. spring, or summer. 3 credits. Prerequisite: placement by examination. D. Campbell. Writing in English, language proficiency required. Emphasis on understanding and organization of English texts; for student interaction and intensive practice in informal presentations. Individual conferences supplement class work.

**ENGLF 213 Written English for Non-Native Speakers**
Fall. 3 credits. Prerequisite: permission of instructor. S. Schaffzin. Designed for those whose writing fluency is sufficient for them to carry on regular academic work but who want to refine and develop their ability to express themselves clearly and effectively. Individual conferences supplement class work.

Freshman Writing Seminar

**ENGLB 215-216 English for Later Bilinguals**
For description, see freshman writing seminar brochure.

French

For information on language placement and transfer credit, contact C. Waldron (403 Morrill Hall, 255-0702). For literature and advanced language courses see Romance Studies. For information on the literature and area studies tracks of the French major, see Romance Studies; for the linguistics track, see French under Linguistics of Particular Languages.

**Study Abroad in France**

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the Departments of Romance Studies and Modern Languages facilitates the transfer of credit. Information about these plans is available from Professor Jacques Béreau, director of undergraduate studies in Romance Studies. For a description of the Study Abroad programs in Paris and in Geneva, see the listing under the Department of Romance Studies.

**Fees.** Depending on the course, a small fee may be charged for photocopied texts for course work.

**FRDML 101 Basic Course I**
Summer only. 6 credits. M. J. Highfield and staff.

An introductory course offering opportunities for student interaction and intensive practice in listening to, speaking, reading, and writing basic French in meaningful contexts. Students who have previously studied French must take the language placement test (LPT) or receive permission from the instructor before registering for this course.

**FRDML 121 Elementary French**
Fall or spring. 4 credits. Spring enrollment limited. No prerequisites. Students who have studied French before must take the language placement test (LPT). Intended for beginning students or those placed by examination. C. Sparfel, M. J. Highfield, and staff.

The four recitation sections per week offer the opportunity for student interaction and intensive practice in listening to, speaking, reading, and writing basic French in meaningful contexts. Lectures offer insights into French language, culture, and society.

**FRDML 122 Elementary French**
Fall or spring. 4 credits. Prerequisite: French 121, LPT score 37-44, or SAT II 370-480. Students who receive an LPT score of 56 after French 122 attain qualification and may enter the 200-level
sequence, otherwise, satisfactory completion of French 123 is required for qualification. M. J. Highfield, C. Sparfel and staff.

The goal of French 122 is to build on the students’ elementary knowledge of French so that they can function in basic situations in a French-speaking culture. Sections continue to provide intensive, context-specific practice in speaking, listening, reading, and writing. Lectures address cultural and linguistic issues.

**FRDML 123 Continuing French**
Fall, spring, or summer. 4 credits. Limited to students who have previously studied French and have an LPP score 45-55 or SAT II 490-590. Satisfactory completion of French 123 fulfills the qualification portion of the language requirement. C. Waldron and staff.

French 123 is an all-skills course designed to improve pronunciation, oral communication, and reading ability; to establish a groundwork for correct writing; and to provide a substantial grammar review. The approach in the course encourages the student to see a foreign language as something more than a bunch of skills to be memorized. The course features authentic texts, a functional grammar, and exchange students from France who visit the sections.

**FRDML 200 Intermediate Reading and Writing**
Fall or spring. 3 credits. Prerequisite: qualification in French (French 123, LPP score 56-64, or SAT II 600-680). Satisfactory completion of French 200 fulfills the proficiency portion of the language requirement. C. Sparfel.

A language course based on contemporary reading material. Strengthening of reading and writing skills; review and expansion of vocabulary and grammar. Taught in French.

**FRDML 203 Intermediate Composition and Conversation I**
Fall, spring, or summer. 3 credits. Prerequisite: qualification in French (French 123, LPP score 56-64, or SAT II 600-680). Satisfactory completion of French 203 fulfills the proficiency portion of the language requirement. I. Daly, A. Grandjean-Levy.

**FRDML 205 Intermediate French: le francais multicolore**
Fall. 3 credits. Prerequisite: qualification in French (French 123, LPP score 56-64, or SAT II 600-680). Satisfactory completion of French 205 fulfills the proficiency portion of the language requirement and can be used to satisfy the breadth requirement. N. Gabriel.

**FRDML 213 Intermediate Composition and Conversation II**
Fall, spring, or summer. 3 credits. Enrollment limited. Prerequisite: proficiency in French (French 200, 203, or 205), permission of instructor, or placement by Cornell Advanced Standing Examination (CASE) offered by the Department of Modern Languages. This course, or its equivalent, is required for admission to the Cornell Abroad program. I. Daly, M. J. Highfield and staff.

Emphasis on improving oral and written expression of accurate, idiomatic French along with enrichment of vocabulary and treatment of specific problems of grammar. Contemporary readings, newspaper articles on current events, television news, movies, and guest speakers will provide a basis for the course content. (Varying emphasis on the elements according to section.) Taught in French.

**FRDML 303 French through Current Events**
Fall. 4 credits. Limited to 14 students. Prerequisite: Q++ on CASE exam, French 213, or permission of instructor. A. Grandjean-Levy.

All-skills course. Current events, contemporary French political, social, and cultural life constitute the medium in which the language is studied. Students will subscribe to two French weeklies and watch daily French satellite news broadcasts. An e-mail account is necessary as certain information will be accessed through Internet. Some research on issues related to the news will be required for essays, papers, and production of a TV news broadcast.

**FRDML 305 French through Film**
Fall and spring. 4 credits. Prerequisite: Q++ on CASE exam, French 213, or permission of instructor. C. Waldron.

Analysis of French contemporary films and related readings. Used as a means of studying the language. Particular emphasis on the culture and historical context as it relates to French contemporary society. Additionally, guest speakers will provide enrichment on selected topics.

**FRDML 306 French for Reading—Graduate Students**
Spring and summer. 3 credits. Limited to graduate students. Designed for those with little or no background in French, this course's primary aim is to develop skill in reading French. Grammar basics, extensive vocabulary, and strategies for reading in a foreign language are covered. Some flexibility in selecting texts according to fields of interest is offered.

**German**
For literature courses see German Studies.

**The German Major**
See German Studies.

**Study Abroad**
See German Studies.

**German Area Studies Major**
See German Studies.

**Honors.**
The honors program in German is open to superior students who want to work independently in an area of their own choice. Students are free to select any faculty member of the Field of Germanic Studies (in the case of area studies majors, the appropriate member of their committee) to assist them in designing their honors program, to supervise their work, and to help them select a suitable topic for an honors essay. The independent study courses, German 451 and 452, may form part of the program.

**Freshman Writing Seminar Requirement**
See German Studies.

**Fecs.**
Depending on the course, a small fee may be charged for photocopied texts for course work.

**GERLA 121 Elementary German I**
Fall or spring. 4 credits. Intended for students with no prior experience in German or with a language placement test (LPG) score no higher than 36. D. McGraw, G. Lischke and staff.

Language practice in small groups provides a thorough grounding in listening, speaking, reading, and writing German. Weekly lectures cover grammar, reading, and cultural information.

**GERLA 122 Elementary German II**
Fall or spring. 4 credits. Prerequisite: German 121, LPG score 37-44, or SAT II 370-450. Students who obtain an LPG score of 56 after German 122 attain qualification and may enter the 200-level sequence; otherwise, successful completion of German 123 is required for qualification. D. McGraw and staff.

Language practice in small groups provides thorough grounding in listening, speaking, reading, and writing German. Weekly lectures cover grammar, reading, and cultural information.

**GERLA 123 Continuing German**
Fall or spring. 4 credits. Limited to students who have previously studied German and have an LPG score 45-55 or SAT II 460-570. Satisfactory completion of German 123 fulfills the qualification portion of the language requirement. G. Appel and staff.

An all-skills (listening, speaking, reading, and writing) review course designed for students with some previous German instruction. Small groups. Course work prepares participants for study at the 200 level.

**GERLA 203 Intermediate Conversation and Composition**
Fall or spring. 3 credits. Prerequisite: qualification in German (German 123, LPG score 56-64, or SAT II 580-670). G. Lischke, D. Hobbs, G. Valk.

Conversation; review of selected points of grammar, composition; reading of literary and non-literary texts; discussion of current events, videos, and group projects’ emphasis on development of accurate and idiomatic expression. Fulfills language proficiency requirement.

**GERLA 204 Intermediate Conversation and Composition**
Fall or spring. 3 credits. Prerequisite: German 203 or permission of instructor. G. Valk, G. Lischke.

Emphasis on improving oral and written expression of idiomatic German. Enrichment of vocabulary and appropriate use of language in conversational context. Material consists of readings in contemporary prose, articles on current events, videos, and group projects.
### GERLA 303–304 Advanced Conversation and Composition

303, fall; 304, spring. 4 credits each term. Prerequisites: for German 303, German 204 or equivalent; for German 304, German 303 or equivalent. G. Valk and staff.

303: Emphasis on increasing the students' oral and written command of German. Study of the language in different text types, such as newspaper, magazine, and literary texts. Discussion of current events and literary texts provides background on the history, politics, and social conflicts of German-speaking countries.

304: Course materials include DIE ZEIT, other German newspaper/magazine articles, and two contemporary novels. Emphasis on vocabulary development pertinent to issues of today's German-speaking countries. Students have the opportunity to research material for class presentation, lead discussions, and share their interests/special fields with the group.

### GERLA 306 Zeitungsdutsch

Fall. 4 credits. Prerequisite: German 304 or equivalent. G. Valk.

Analysis of various German daily and weekly newspapers with special emphasis on stylistic differences in journalism; discussion of current events. Students have the opportunity to research material for class presentation, lead discussions, and share their interests/special fields with the group.

### GERLA 631–632 Elementary Reading I, II

631, fall; 632, spring. 3 credits each term. Limited to graduate students. Prerequisite: for German 632, German 631 or equivalent. D. Hobbs.

Intended primarily for beginners with little or no previous German knowledge. Emphasis in 631 on acquiring basic German reading skills. Emphasis in 632 on development of the specialized vocabulary of student's field of study.

### Modern Greek

See listings under Classics.

### Modern Hebrew

See listings under Near Eastern Studies.

### Hindi

**Fees.** A small fee may be charged for photocopied texts for course work.

**HINDI 101–102 Elementary Hindi-Urdu**

101, fall; 102, spring. 6 credits each term. Prerequisite: for Hindi 102, Hindi 101 or equivalent. C. Fairbanks.

A semi-intensive course for students without prior exposure to Hindi-Urdu or a closely related language. A thorough grounding is given in all language skills: listening, speaking, reading, and writing. Completion of this sequence will provide a thorough grounding in all the language skills: listening, speaking, reading, and writing. Completion of this sequence, including satisfactory performance on an examination given at the end of Hindi 110, will constitute a level of performance equal to that of the 101–102 sequence, and will thus be considered to fulfill qualification for 200-level Hindi-Urdu courses. Check with instructor regarding placement.

**[HINDI 201–202 Intermediate Hindi Reading & Composition @]**

201, fall; 202, spring. 3 credits each term. Prerequisites: for Hindi 201, Hindi 102; for Hindi 202, Hindi 201 or permission of instructor. Not offered 1996–97. C. Fairbanks.

A semi-intensive course for students without prior experience in Hindi-Urdu or a closely related language. A thorough grounding is given in basic language skills: listening, speaking, and writing. Completion of this sequence will provide a thorough grounding in all the language skills: listening, speaking, reading, and writing. Completion of this sequence, including satisfactory performance on an examination given at the end of Hindi 202, will constitute a level of performance equal to that of the 101–102 sequence, and will thus be considered to fulfill qualification for 200-level Hindi-Urdu courses. Check with instructor regarding placement.

**HINDI 301–302 Advanced Hindi Literature @**

301, fall; 302, spring. 4 credits each term. Prerequisites: for Hindi 301, Hindi 202; for Hindi 302, Hindi 301 or equivalent. Not offered 1996–97. C. Fairbanks.

Emphasis on increasing the students' oral and written command of Hindi-Urdu. Emphasis in 301 on developing the students' conversational aspect of the language. In 302, the focus shifts to reading skills and the main text used is a popular novel.

**HINDI 303–304 Advanced Composition and Conversation @**

303, fall; 304, spring. 4 credits each term. Prerequisites: for Hindi 303, Hindi 204 or equivalent; for Hindi 304, Hindi 303 or equivalent. C. Fairbanks.

**HINDI 305–306 Advanced Hindi Readings @**

305, fall; 306, spring. 4 credits each term. Prerequisites: for Hindi 305, Hindi 202 or equivalent; for Hindi 306, Hindi 305 or equivalent. Not offered 1996–97. C. Fairbanks.

Students who have completed Indonesian 205–206 or equivalent are eligible to apply for a summer program in the Advanced Indonesian Abroad Program. Further information is available from Professor John Wolff (307 Morrill Hall, 255-0733).

**Fees.** A small fee may be charged for photocopied texts for course work.

**INDO 121–122 Elementary Indonesian**

121, fall; 122, spring. 4 credits each term. Prerequisites: for Indonesian 122, Indonesian 121. J. Wolff and staff.

A thorough grounding is given in basic speaking and listening skills with an introduction to reading.

**INDO 123 Continuing Indonesian**

Fall. 4 credits. Prerequisite: Indonesian 122 or equivalent. Satisfactory completion of Indonesian 123 fulfills the qualification portion of the language requirement.

**INDO 201–202 Intermediate Indonesian Composition and Conversation @**

201, fall; 202, spring. 3 credits each term. Prerequisites: for Indonesian 201, Indonesian 122; for Indonesian 202, Indonesian 201 or permission of instructor. Not offered 1996–97. C. Fairbanks.

**INDO 203–204 Intermediate Composition and Conversation @**

203, fall; 204, spring. 3 credits each term. Prerequisites: for Indonesian 203, Indonesian 123; for Indonesian 204, Indonesian 203 or permission of instructor. J. Wolff and staff.

**INDO 205-206 Intermediate Indonesian**

205, fall; 206, spring. 3 credits each term. Prerequisites: for Indonesian 205, Indonesian 125 or equivalent; for Indonesian 206: Indonesian 205 or equivalent. Satisfactory completion of Indonesian 205 fulfills the proficiency portion of the language requirement.

**INDO 301–302 Advanced Readings in Indonesian and Malay**

301, fall; 302, spring. 4 credits each term. Prerequisites: for Indonesian 301, Indonesian 205 or equivalent; for Indonesian 302, Indonesian 301. Not offered 1996–97. J. Wolff and staff.

**INDO 303–304 Advanced Indonesian Conversation and Composition**

303, fall; 304, spring. 4 credits each term. Prerequisites: for Indonesian 303, Indonesian 206; for Indonesian 304, Indonesian 303 or equivalent. Not offered 1996–97. J. Wolff and staff.

**INDO 305–306 Directed Individual Study**

305, fall; 306, spring. 2-4 credits. Prerequisites: Indonesian 301–302 and 303–304 or equivalent knowledge of Indonesian or Malay. J. Wolff.

A practical language course on an advanced level in which the student will read materials in their own field of interest, write reports, and meet with the instructor for two hours a week for two credits and twice a week for four credits.

**INDO 401–402 Advanced Readings in Indonesian and Malay Literature**

401, fall; 402, spring. 4 credits each term. Prerequisites: for Indonesian 401, Indonesian 302 or equivalent; for Indonesian 402, Indonesian 401 or
ITALA 123 Continuing Italian
Fall, spring, or summer. 4 credits. Limited to students who have previously studied Italian and have an LPI score 45–55 or SAT II 450–550. Satisfactory completion of Italian 123 fulfills the qualification portion of the language requirement. J. Scarpella. Italian 123 is an all-skills course designed to improve speaking and reading ability, to establish a groundwork for correct writing, and to provide a substantial grammar review.

ITALA 203-204 Intermediate Composition and Conversation
203, fall or spring; 204, fall or spring. 3 credits each term. Prerequisites: for Italian 203, qualification in Italian; for Italian 204, 203 or equivalent. P. Swenson and staff. Guided conversation, composition, reading, pronunciation, and grammar review emphasizing the development of accurate and idiomatic expression in the language.

ITALA 313 Advanced Italian: Language in Italian Culture
Spring. 3 credits. Prerequisite: Italian 204 or equivalent or permission of instructor. Italian 313 is not prerequisite to Italian 314 and may be taken after Italian 314. P. Swenson. Further development of all skills. Readings and discussions center on two themes: (1) contemporary Italian life and (2) the Italian language, its origins, evolution, and present state, including the role of the dialect. Emphasis on vocabulary building and awareness of stylistic levels.

ITALA 314 Advanced Italian: Language and Social Issues
Fall. 3 credits. Prerequisite: Italian 204 or equivalent. Italian 315 is not prerequisite to Italian 314 and may be taken after Italian 314. S. Stewart. Further development of all skills, with emphasis on self-expression. Content: evolution and crisis in Italian politics, values, and national identity, the background of European unification, Social movements, issues, and attitudes, especially as reflected in the mass media.

ITALA 631 Readings in Italian Opera Libretti
Spring. 2 credits. For graduate students only. Prerequisite: permission of instructor. Offered concurrently with appropriate seminars in the Department of Music. Not offered 1996–97.

JAPAN 101-102 Elementary Japanese
101, fall; 102, spring. 4 credits each term. Prerequisite for Japanese 102. Japanese 101 or placement by the instructor during registration. Intended for beginners or for those who have been placed in the course by examination. Staff. A thorough grounding is given in all the language skills at beginning level: listening, speaking, reading, and writing.

JAPAN 123 Accelerated Introductory Japanese
Fall. 6 credits. Prerequisite: placement by the instructor at beginning of semester. Staff. Accelerated training in listening, speaking, reading, and writing for students who have already acquired a limited facility in Japanese through residence in Japan or brief formal study, but who require additional training to qualify for admission to Japanese 102. Attend Japanese 101 lectures. Offered if enrollment is sufficient.

JAPAN 141-142 Beginning Japanese at a Moderate Pace
141, fall; 142, spring. 4 credits each term. Not offered 1996–97. R. Sukle, N. Nakada. Beginning-level training in listening, speaking, and basic reading and writing. This series of 'Moderate Pace' courses provides an alternate choice for students who find it difficult to schedule the more intensive 101–102 sequence into their schedules: MBA students, engineering students, hotel school students, art college students, and others. Can be followed by the 543–544 and 545–546 sequences. Covers material equivalent to the intensive summer course, Japanese 160.

JAPAN 201-202 Intermediate Japanese Reading I & II
201, fall; 202, spring. 2 or 3 credits each term. Students who are currently taking or who have already completed Japanese 203 and 204 register for 2 credits and attend the W drill and the F lecture; other students register for 3 credits (with permission of instructor) and attend the W drill and the M, W, F lectures. Prerequisites: for Japanese 201, Japanese 102 or placement by the instructor during registration; for Japanese 202, Japanese 201 and 203 or placement by the instructor during registration. Staff. Reading of elementary texts emphasizing practical materials, with development of writing skills.

JAPAN 203-204 Intermediate Japanese Conversation & Translation
203, fall and summer; 204, spring and summer. 4 credits each term. Prerequisites: for Japanese 203, Japanese 102 or placement by the instructor during registration; for Japanese 204, Japanese 203 or placement by the instructor during registration. Staff. Training in listening and speaking for students who have acquired basic oral proficiency. Students are strongly encouraged to enroll in Japanese 201–202 concurrently.
Training in listening, speaking, reading, and writing for those students who have acquired a basic beginning-level command. Provides an alternate choice for students who find it difficult to schedule the more intensive Japanese 201/203 and 202/204 into their schedules: MBA students, engineering students, hotel school students, arts college students, and others. Can be followed by Japanese 341-342.

**JAPAN 301-302 Intermediate Japanese**

Reading and writing for those students intending to take the fall and to take other courses simultaneously. Formal completion of Javanese 134 fulfills the qualification portion of the language requirement. J. Wolff and staff.

**JAVANES**

A small fee may be charged for photocopied texts for use in the course.

**JAVA 131-132 Elementary Javanese**

A practical language course on an intermediate level in which the students will find their knowledge about languages enriched and are often stimulated to embark on further foreign language study. Students interested in learning more about linguistics and its relationship to other disciplines in the humanities and social sciences are encouraged to take Linguistics Three or Four years in many regular Japanese programs.

KOREA 201-202 Intermediate Korean Reading @ 201, fall; 202, spring. 3 credits each term. Prerequisites: for Korean 201, Korean 102; for Korean 202, Korean 201. Staff. Continuing instruction in spoken and written Korean.

KOREA 203-204 Intermediate Composition and Conversation @ 203, fall; 204, spring. 3 credits each term. Prerequisites: for Korean 203, Korean 202; for Korean 204, Korean 203. Staff. Letter writing and other forms of composition.

KOREA 301-302 Advanced Korean @ 301, fall; 302, spring. 4 credits each term. Prerequisites: for Korean 301, Korean 202; for Korean 302, 301 or permission by instructor. H. Diffloth and staff. Reading of advanced texts, including newspapers and Chinese character material, together with advanced drill on the spoken language.

Languages Fees. A small fee may be charged for photocopied texts for course work.

LANG 300 Independent Language Study Fall or spring. 1-4 credits. Prerequisite: permission of instructor.

LANG 301 Teaching Second Languages Fall. 3 credits. Note: this course will count as out-of-college credit for College of Arts and Sciences undergraduates. J. Lantolf. This course is designed primarily for graduate teaching assistants in the Department of Modern Languages who have no prior experience in the teaching of foreign and second languages. It is also open to others interested in language teaching methodology. The course has a general component relevant to the teaching of all second languages as well as a language-specific component tailored to the pedagogical needs of particular languages. Topics include: observing and reflecting upon the language classroom; principles and research in second-language learning; teaching grammar, pronunciation, and vocabulary; teaching reading, writing, and speaking; teaching for proficiency; discourse and language functions; materials preparation; the task-based syllabus, lesson plans; evaluation and testing, student errors and teacher feedback; point and integrative tests; learner attitude, aptitude, motivation, and individual differences; learning strategies, individual and small group activities and collaborative learning; culture in the language classroom; and the role of technology in the language classroom.

Nepali Study Abroad in Nepal Cornell and the central campus of the Nepalese national university—Tribhuvan—at Kirtipur, Kathmandu, co-sponsor an academic year in Nepal. North American students study and live with Nepalese students who come from outside the Kathmandu Valley to Tribhuvan University. Students may participate in one or two semesters. Courses are offered both at Tribhuvan University and at the Cornell-Nepal Study Program House adjacent to the university. All courses are officially taught in English. A five-week, in-country orientation program includes classes in intensive oral conversation, cultural orientation programs, and a ten-day field trip and trek. Semester course offerings include some reading and writing with Chinese characters. If in doubt about eligibility, see instructor.

KOREA 301-302 Advanced Korean 301, fall; 302, spring. 4 credits each term. Prerequisites: for Korean 301, Korean 202 or placement by instructor; for Korean 302, Korean 301 or placement by instructor. H. Diffloth and staff. Reading of advanced texts, including newspapers and Chinese character material, together with advanced drill on the spoken language.

Languages Fees. A small fee may be charged for photocopied texts for course work.

LANG 300 Independent Language Study Fall or spring. 1-4 credits. Prerequisite: permission of instructor.

LANG 301 Teaching Second Languages Fall. 3 credits. Note: this course will count as out-of-college credit for College of Arts and Sciences undergraduates. J. Lantolf. This course is designed primarily for graduate teaching assistants in the Department of Modern Languages who have no prior experience in the teaching of foreign and second languages. It is also open to others interested in language teaching methodology. The course has a general component relevant to the teaching of all second languages as well as a language-specific component tailored to the pedagogical needs of particular languages. Topics include: observing and reflecting upon the language classroom; principles and research in second-language learning; teaching grammar, pronunciation, and vocabulary; teaching reading, writing, and speaking; teaching for proficiency; discourse and language functions; materials preparation; the task-based syllabus, lesson plans; evaluation and testing, student errors and teacher feedback; point and integrative tests; learner attitude, aptitude, motivation, and individual differences; learning strategies, individual and small group activities and collaborative learning; culture in the language classroom; and the role of technology in the language classroom.

A five-week, in-country orientation program includes classes in intensive oral conversation, cultural orientation programs, and a ten-day field trip and trek. Semester course offerings include

Nepali language (Tibetan and/or Newari languages also possible), contemporary issues in Nepalese studies, and related research design and methods in sociology/anthropology and ecology/environment, and guided field research.

Juniors and seniors in good academic standing from any major field may participate. Students must have a desire to study on the other side of the world, to participate in a multicultural program, and to undertake rigorous field research. No experience in Nepal is necessary and instruction is in English, but some prior Nepali language study is strongly recommended. Students interested in the study abroad in Nepal program should consult with the Cornell Abroad office (474 Uris Hall) for further information.

Fees. A small fee may be charged for photocopied texts for course work.

NEPAL 101-102 Elementary Nepali 101, fall; 102, spring. 6 credits each term. Prerequisite: for Nepali 102, 101 or examination. S. Oja. Intended for beginners. The emphasis is on basic grammar, speaking and comprehension skills, utilizing culturally appropriate materials and texts. Devanagari script for reading and writing is also introduced.

NEPAL 160 Intensive Nepali Summer only. 10 credits. Intended for beginners. Offered alternate years. Offered 1997. S. Oja. Emphasis will be on the spoken language, in dialogues, exercises, and conversation practice. In addition, however, special attention is given to assisting students to develop vocabularies and abilities appropriate to their unique professional needs. Reading and writing practice use both colloquial and scholarly materials in the Nepali (Devanagari) script.

NEPAL 201-202 Intermediate Nepali Conversation @ 201, fall; 202, spring. 3 credits each term. Prerequisites: for Nepali 201, Nepali 102 or examination; for Nepali 202, Nepali 201 or examination. S. Oja. Intermediate instruction in spoken grammar and verbal comprehension skills, with special attention to developing technical vocabularies and other verbal skills appropriate to students’ professional fields.

NEPAL 203-204 Intermediate Nepali Composition @ 203, fall; 204, spring. 3 credits each term. Prerequisites: for Nepali 203, Nepali 102 or examination; for Nepali 204, Nepali 203 or examination. S. Oja. A systematic review of written grammar and reading comprehension, with special attention to the technical vocabularies, necessary writing skills, and published materials typical of advanced students’ professional fields.

NEPAL 301-302 Advanced Nepali 301, fall; 302, spring. 3 credits each term. Prerequisite: Nepali 204 or permission of instructor. S. Oja. Reading of advanced texts, together with advanced drill on the spoken language.
A thorough grounding is given in all the grammatical structure. Familiarity with canonical texts of Theravada Buddhism. Practice.

Conversational grammar review with special course.

Covers all language skills: speaking, listening, reading, and writing.

Pali
Fees. A small fee may be charged for photocopied texts for course work.

[PALI 131-132 Elementary Pali]
131, fall, 132, spring. 3 credits each term. This language series cannot be used to satisfy the language requirement. Not offered 1996-97. J. Gair.
131 is an introduction to the language of the canonical texts of Theravada Buddhism. Reading of authentic texts of Theravada Buddhism. Emphasis on both content and grammatical structure. Familiarity with Sanskrit is not required. 132 is a continuation of 131 with further readings.

Polish
Fees. A small fee may be charged for photocopied texts for course work.

POLISH 131-132 Elementary Polish
131, fall, 132, spring. 3 credits each term. Prerequisite: for Polish 132, Polish 131 or equivalent. This language series (131-132) cannot be used to satisfy the language requirement. Offered alternate years. E. Domisch.
Covers all language skills: speaking, listening comprehension, reading, and writing.

[POLISH 133-134 Continuing Polish]
133, fall, 134, spring. 3 credits each term. Prerequisites: for Polish 133, Polish 132 or equivalent; for Polish 134, Polish 133 or equivalent. Satisfactory completion of Polish 134 fulfills the qualification portion of the language requirement. Offered alternate years. Not offered 1996-97. Staff.
An intermediate conversation and reading course.

Portuguese
Fees. A small fee may be charged for photocopied texts for course work.

[PORT 121-122 Elementary Portuguese]
121, fall; 122, spring. 4 credits each term. Intended for beginners. Students may attain qualification upon completion of 122 by achieving a satisfactory score on a special examination. J. Oliviera.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

[PORT 203-204 Intermediate Composition and Conversation]
203, fall; 204, spring. 3 credits each term. Prerequisites: for Portuguese 203, Portuguese 122 or permission of instructor; for Portuguese 204, Portuguese 203 or permission of instructor. J. Oliviera.
Conversational grammar review with special attention to pronunciation and the development of accurate and idiomatic oral expression. Includes readings in contemporary Portuguese and Brazilian prose and writing practice.

[PORT 303-304 Advanced Composition and Conversation]
303, fall; 304, spring. 4 credits each term. Prerequisites: for Portuguese 303, Portuguese 204 or equivalent; for Portuguese 304, Portuguese 303 or equivalent. J. Oliviera.
Quechua
Fees. A small fee may be charged for photocopied texts for course work.

QUECH 131-132 Elementary Quechua
131, fall; 132, spring. 3 credits each term. Prerequisite: qualification in Spanish. This language series (131-132) cannot be used to satisfy the language requirement. L. Morató-Peña.
A beginning conversation course in the Cuzco dialect of Quechua.

QUECH 133-134 Continuing Quechua
133, fall; 134, spring. 3 credits each term. Prerequisites: for Quechua 133, Quechua 131-132 or equivalent; for Quechua 134, Quechua 133 or equivalent. Satisfactory completion of Quechua 134 fulfills the qualification portion of the language requirement. L. Morató-Peña.
An intermediate conversation and reading course. Study of the Huarocho manuscript.

[QUECH 135-136 Quechua Writing Lab]
135, fall; 136, spring. 1 credit each term. Prerequisite: for Quechua 132, Quechua 131 or equivalent. Letter grade only. L. Morató-Peña.
Computer-assisted drill and writing instruction in elementary Quechua.

Românian
Fees. A small fee may be charged for photocopied texts for course work.

[ROMAN 131-132 Elementary Romanian]
131, fall; 132, spring. Offered according to demand. 3 credits. Prerequisite: for Romanian 132, Romanian 131 or equivalent. This language series (131-132) cannot be used to satisfy the language requirement. Not offered 1996-97. Staff.
Covers all language skills: speaking, listening comprehension, reading, and writing.

[ROMAN 133-134 Continuing Romanian]
133, fall; 134, spring. Offered according to demand. 3 credits. Prerequisite for Romanian 133, Romanian 132 or equivalent. Satisfactory completion of Romanian 134 fulfills the qualification portion of the language requirement. Not offered 1996-97.
An intermediate conversation and reading course.

Russian
For literature courses see Russian Literature.
The Russian Major
See Russian Literature.

Study Abroad
Cornell is an affiliated institution in the Council on International Education Exchange program for Russian language study in St. Petersburg and other Russian cities. Cornell students also frequently go on the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from Professor Patricia Carden or Diane Williams, 236 Goldwin Smith Hall.

Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay.

Freshman Writing Seminar Requirement
See Russian Literature.

Russian Studies Major
See “Special Programs and Interdisciplinary Studies,” which follows the department listings.

Fees. A small fee may be charged for photocopied texts for course work.

RUSSA 103-104 Conversation Practice
103, fall; 104, spring. 2 credits each term. Must enroll in one section of 103 and one section of 121, in the fall; and one section of 104 and one section of 122 in the spring. L. Paperno.

RUSSA 121-122 Elementary Russian
121, fall or summer; 122, spring or summer. 4 credits each term. May be taken alone and qualification will be achieved with satisfactory completion of 121-122; or may be taken concurrently with 103-104 and qualification will be achieved at completion of 122-104. K. Krivinkova, V. Tsimerberov.
A thorough grounding is given in all the language skills: listening, speaking, reading, and writing.

RUSSA 123 Continuing Russian
Fall. 4 credits. Limited to students who have previously studied Russian or been placed by department. Satisfactory completion of Russian 123 fulfills the qualification portion of the language requirements. V. Tsimerberov, S. Paperno, L. Paperno.
A course designed to prepare students for study at the 200 level. Passing this course is equivalent to qualification. Authentic Russian materials are used: TV, books, etc.

RUSSA 203-204 Intermediate Composition and Conversation
203, fall; 204, spring. 3 credits each term. Prerequisites: for Russian 203, qualification in Russian (Russian 123 or placement by department); for Russian 204, Russian 203 or equivalent. L. Paperno, S. Paperno, V. Tsimerberov.
Guided conversation, composition, reading, pronunciation, and grammar review, emphasizing the development of accurate and idiomatic expression in the language.

RUSSA 205-206 Reading Russian Press
205, fall; 206, spring. 2 credits each term. Prerequisite: qualification in Russian (Russian 123 or placement by department).
Both semesters must be taken in order to satisfy the proficiency level for the language requirement. This course cannot be used to satisfy the humanities requirement. Staff.
Reading unabridged articles on a variety of topics from current Russian periodicals.

Note: Students placed in the 200-level courses also have the option of taking courses in introductory literature; see separate listings under Russian Studies. Cornell students also frequently go on the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from Professor Patricia Carden or Diane Williams, 236 Goldwin Smith Hall.

Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay.
RUSSA 303–304 Advanced Composition and Conversation
303, fall; 304, spring. 4 credits each term. Prerequisites: for Russian 303, Russian 204 or equivalent; for Russian 304, Russian 303 or equivalent. L. Paperno, S. Paperno, V. Tsimberov.
Writing, reading, and conversation: viewing and reading authentic language materials; current Russian films (feature and documentary), newspapers, TV programs, and other materials are used.

RUSSA 305–306 Directed Individual Study
305, fall; 306, spring. 2 credits each term. Prerequisite: placement by the department. Staff.
This course is intended for students with special needs (e.g., children of Russian immigrants who speak Russian at home) that cannot be met by any other Russian course.

RUSSA 309–310 Advanced Reading
309, fall; 310, spring. 4 credits each term. Prerequisite: for Russian 309, Russian 204; for Russian 310, Russian 309 or equivalent. L. Paperno.
The purpose of the course is to teach advanced reading skills. The weekly reading assignment is 40–40 pages of unabridged Russian prose (non-fiction) of the 20th century. The discussion of the reading is conducted entirely in Russian and is centered around the content of the assigned selection.

RUSSA 413–414 Advanced Conversation and Stylistics
413, fall; 414, spring. 2 credits each term. Prerequisite: for Russian 413, Russian 303–304 or the equivalent, for Russian 414, Russian 413 or equivalent. V. Tsimberov.
Discussion of authentic unabridged Russian texts and films (feature or documentary) in a variety of nonliterary styles and genres.

RUSSA 633–634 Russian for Russian Specialists
633, fall; 634, spring. 2 credits each term. Prerequisite: four years of college Russian. For graduate and advanced undergraduate students. S. Paperno.
The course is designed for students who specialize in an area of Russian studies requiring fine active control of the language. Fine points of syntax, usage, and style are discussed.

Sanskrit
See listings under Asian Studies.

Serbo-Croatian
Fees. A small fee may be charged for photocopied texts for course work.

[SEBCR 131–132 Elementary Serbo-Croatian]
131, fall; 132, spring. 3 credits each term. Prerequisite for Serbo-Croatian 132: Serbo-Croatian 131 or equivalent. This language sequence (131–132) cannot be used to satisfy the language requirement. Offered alternate years. Not offered 1996–97.
W. Browne.
Covers all language skills: speaking, listening comprehension, reading, and writing.

SEBCR 133–134 Continuing Serbo-Croatian
133, fall; 134, spring. 3 credits each term. Prerequisites: for Serbo-Croatian 133, Serbo-Croatian 132 or equivalent; for Serbo-Croatian 134, Serbo-Croatian 133 or equivalent. Satisfactory completion of Serbo-Croatian 134 fulfills the qualification portion of the language requirement. Offered alternate years. K. Bättig.
An intermediate conversation and reading course.

Sinhala (Sinhalese)
Fees. A small fee may be charged for photocopied texts for course work.

SINHA 101–102 Elementary Sinhala
101, fall; 102, spring. 6 credits each term. Prerequisite: for Sinhala 102, Sinhala 101 or equivalent. M. Rodrigo.
A semi-intensive course for beginners. A thorough grounding is given in all the language skills; listening, speaking, reading, and writing.

[SINHA 160 Intensive Sinhala]
Summer only. 10 credits. Intended for beginners. Offered alternate years. Offered 1998.
Emphasis is on the spoken (colloquial) language, the writing system is introduced and used to present all Sinhala materials, with additional reading practice with colloquial materials. A foundation is laid for later study of the written language (literary Sinhala).

SINHA 201–202 Intermediate Sinhala Reading @
201, fall; 202, spring. 3 credits each term. Prerequisites: for Sinhala 201, Sinhala 102, for Sinhala 202, Sinhala 201 or equivalent. M. Rodrigo.

SINHA 203–204 Intermediate Composition and Conversation @
203, fall; 204, spring. 3 credits each term. Prerequisites: for Sinhala 203, Sinhala 102 or permission of instructor; for Sinhala 204, Sinhala 203 or equivalent. M. Rodrigo.

Spanish
For advanced Spanish language and literature courses see Romance Studies.

Study Abroad in Spain
Cornell, the University of Michigan and the University of Pennsylvania cosponsor an academic year in Spain program. Students enrolled in this program spend the first four weeks before the fall semester begins in a residential college located on the campus of the University of Madrid, where they take a course in Spanish language and contemporary society and take advantage of special lectures and field trips to Madrid and Castile. This course carries three credits. In early October the program moves to Seville, where students enroll in as many regular classes at the University of Seville as their language competence and general education permit. Their academic work is supplemented by courses designed explicitly for the program by Seville faculty, as well as a seminar regularly offered by the resident director, who is chosen from the faculty of either Cornell, Michigan or Pennsylvania. The special courses normally include history of art and architecture, Spanish composition and syntax, and modern Spanish history. In Seville students live with selected families. Cornell-Michigan-Pennsylvania also maintains a center in Seville, which is used by students for special seminars, tutorials, lectures, and informal gatherings.
Applicants are expected to have at least completed Spanish 204 prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. Students interested in the study abroad program should consult with the Cornell Abroad office for further information (474 Uris Hall, 255–6224).
Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

Important information about registration for Spanish classes
The Spanish Program offers a number of elementary and intermediate courses to satisfy the needs of students with a variety of backgrounds; students are urged to register for the appropriate level by at least 14 days before the start of classes. Spanish 202, 213 and 201, 203, 213 are offered by the resident director, who is chosen from the faculty of either Cornell, Michigan or Pennsylvania. For advanced Spanish language and literature courses see Romance Studies.

SPAND 101 Basic Course I
Summer only. 6 credits. Prerequisite: no Spanish.
This course is intended for students with absolutely no experience in Spanish. (Spanish 123 and 203 are usually offered in the summer concurrently with 101 for students with prior experience.) Spanish 101 provides a thorough grounding in all language skills. Language practice in small groups. Lectures cover grammar, reading, and cultural information.

SPAND 112 Elementary Spanish: Review and Continuation
Summer only. 3 credits. Prerequisite: Spanish 101.
This course is designed for students who have taken some Spanish and who have a placement score of 37–44 or SAT II 370–450. It provides a basic review and then moves on to cover new material for the remainder of the term. Students who have taken Spanish 121 may enroll for this course. As part of the final exam, students take the LPS and, according to their score, may place into Spanish 123 (score below 56) or receive qualification (56 or above), and placement into the 200-level courses. Evening prelim.
SPAND 121-122 Elementary Spanish
121, fall; 122, spring. 4 credits each term.
Prerequisite: for Spanish 122, Spanish 121.
2. Ignacia A. Tio.
This course is intended for students with no
experience in Spanish. (Students who have
previously studied 2 or more years of Spanish
are not eligible for 121 unless they have an
LPS score lower than 37 or SAT II lower than 370.) The course provides a thorough
grounding in all language skills. Language
practice in small groups. Lectures cover
grammar, reading, and cultural information.
Evening prelims.

SPAND 123 Continuing Spanish
Fall, spring, or summer. 4 credits.
Prerequisite: Spanish 122, or
an LPS score 45–55 or SAT II 460–580.
M. K. Redmond, L. Morató-Peña, A. Tío and
staff.
An all-skills course designed to prepare
students for study at the 200 level. Satisfactory
completion of Spanish 123 fulfills the
qualification portion of the language
requirement. Evening prelim.

SPAND 200 Spanish for English/Spanish
Bilinguals
Fall or spring. 3 credits.
Prerequisite: LPS score 56–64, SAT II 590–680, CASE
placement, or permission of instructor.
D. Cruz de Jesús.
A course designed to expand bilingual
students’ knowledge of Spanish by providing
them with ample opportunities to develop and
improve each of the basic language skills.

SPAND 203 Intermediate Composition and
Conversation
Fall, spring, or summer. 3 credits.
Prerequisite: qualification in Spanish
(Spanish 123, LPS score 56–64, or SAT II 590–680). Not available to students who have
Conversational grammar review with special
attention to the development of accurate and
idiomatic oral expression. Includes readings in
contemporary Spanish prose and practice in
writing.

SPAND 204 Intermediate Composition
and Conversation
Fall or spring. 3 credits.
Prerequisite: Spanish 203 or permission of instructor.
E. Dozier, N. Maldonado.
Practice in conversation with emphasis on
improving oral and written command of
Spanish. Includes treatment of specific
problems in grammar, expository writing,
and readings in contemporary prose.

SPAND 213 Intermediate Spanish for the
Medical and Health Professions
Fall or spring. 3 credits.
Prerequisite: qualification in Spanish (Spanish 123, LPS
score 56–64, or SAT II 590–680) or
permission of instructor. Not available to students who have taken Spanish 203.
A. Tío.
Conversational grammar review, with
dialogues, debates, compositions, and
readings on health-related themes. Special
attention is given to relevant cultural
differences. Fulfills proficiency requirement.

SPAND 310 Advanced Conversation and
Pronunciation
Spring. 2 credits.
Prerequisite: Spanish 204 or equivalent. Z. Iguina.
A conversation course with intensive oral
practice obtained through the production of
video programs. Study of the fundamental
aspects of communication in the standard
spoken and written Spanish, with some focus
on dialectal variations. Weekly phonetics labs
to improve pronunciation.

Swahili
See listings under Africana Studies and
Research Center.

Swedish
Fees. A small fee may be charged for
photocopied texts for course work.

SWED 121-122 Elementary Swedish
121, fall; 122, spring. 4 credits each term.
Prerequisite: for Swedish 122, Swedish
121 or equivalent. L. Trancik.
The aim of this course is to develop skills in
listening, speaking, reading and writing within
Sweden’s cultural context. Interactive
computer programs are used in these courses.

SWED 123 Continuing Swedish
Fall. 4 credits. Prerequisite: Swedish 122 or
equivalent. L. Trancik.
Development of skills in spoken and written
Swedish within Sweden’s cultural context.

SWED 203 Intermediate Swedish
Spring. 3 credits. Prerequisite: Swedish
123 or permission of instructor. L. Trancik.
Intermediate to advanced level instruction
utilizing audio-visual material and text to
enhance language comprehension.

SWED 204 Advanced Swedish
Fall. 3 credits. Prerequisite: Swedish 203 or
permission of instructor. Taught in
Swedish. L. Trancik.
Emphasis on improving oral and written
expression of Swedish, including vocabulary,
readings in contemporary prose, treatment of
specific problems in grammar, and presenta­
tion of videos and films.

Tagalog
Fees. A small fee may be charged for
photocopied texts for course work.

TAG 121-122 Elementary Tagalog
121, fall; 122, spring. 4 credits each term.
Prerequisite: for Tagalog 122, Tagalog
121. J. Wolff and staff.
A thorough grounding is given in basic
speaking and listening skills with an introduc­
tion to reading.

TAG 123 Continuing Tagalog
Fall. 4 credits. Prerequisite: Tagalog 122 or
equivalent. Satisfactory completion of
Tagalog 123 fulfills the qualification
portion of the language requirement.
J. Wolff and staff.
Improves speaking skills, such as fluency and
pronunciation, focusing on verbal communica­
tion skills; offers a wide range of readings;
and sharpens listening skills.

TAG 205-206 Intermediate Tagalog @
205, fall; 206, spring. 3 credits each term.
Prerequisites: for Tagalog 205, Tagalog
123 or equivalent; for Tagalog 206, Tagalog
205 or equivalent. Satisfactory
completion of Tagalog 205 fulfills the
proficiency portion of the language
requirement. J. Wolff and staff.
This course develops all four skills: reading,
writing, speaking, and comprehension.

Tamil
Fees. A small fee may be charged for
photocopied texts for course work.

[TAMIL 101-102 Elementary Tamil
101, fall; 102, spring. 6 credits each term.
Prerequisite: for Tamil 102, Tamil 101 or
A thorough grounding is given in all the
language skills: listening, speaking, reading,
and writing.]

TAMIL 201-202 Intermediate Tamil
Conversation
201, fall; 202, spring. 3 credits each term.
Prerequisites: for Tamil 201, Tamil 102 or
permission of instructor; for 202, Tamil 201 or
permission of instructor. M. Rodrigo.
Intermediate instruction in spoken grammar
and verbal comprehension skills with special
attention to developing technical vocabularies
and other verbal skills appropriate to the
students’ professional fields.

[TAMIL 203-204 Intermediate Tamil
Composition
203, fall; 204, spring. 3 credits each term.
Prerequisites: for Tamil 203, Tamil 102 or
permission of instructor; for 204, Tamil 203 or
M. Rodrigo.
A systematic review of written grammar
and reading comprehension, with special attention
to the technical vocabularies, necessary
writing skills, and published materials typical of
advanced students’ professional fields.]

Thailand
Fees. A small fee may be charged for
photocopied texts for course work.

THAI 101-102 Elementary Thai
101, fall; 102, spring. 6 credits each term.
Prerequisite: for Thai 102, Thai 101 or
equivalent. Intended for beginners or
students placed by examination. N. Jagacinski.
A thorough grounding is given in all the
language skills: listening, speaking, reading,
and writing.

THAI 201-202 Intermediate Thai Reading
201, fall; 202, spring. 3 credits each term.
Prerequisites: for Thai 201, Thai 102, for
Thai 202, Thai 201 or equivalent.
N. Jagacinski.

THAI 203-204 Intermediate Composition
and Conversation @
203, fall; 204, spring. 3 credits each term.
Prerequisites: for Thai 203, Thai 102, for
Thai 204, Thai 203. N. Jagacinski.

THAI 301-302 Advanced Thai @
301, fall; 302, spring. 4 credits each term.
Prerequisite: Thai 202 or equivalent.
N. Jagacinski.
Selected readings in Thai writings in various
fields.

THAI 303-304 Thai Literature
303, fall; 304, spring. 4 credits each term.
Prerequisite: Thai 302 or equivalent.
N. Jagacinski.
Reading of significant novels, short stories,
and poetry written since 1850.
MAIMATHEMATICS 463

THAI 401-402 Directed Individual Study 401, fall; 402, spring. 4 credits each term. For advanced students or students with special problems or interests. Prerequisite: permission of instructor. N. Jagacinski.

Ukrainian Fecs. A small fee may be charged for photocopied texts for course work.

[UKRAIN 131–132 Elementary Ukrainian 131, fall; 132, spring. 3 credits each term. Prerequisite: for Ukrainian 132, Ukrainian 131, or equivalent. This language series cannot be used to satisfy the language requirement. Not offered 1996–97. Covers all language skills: speaking, listening, comprehension, reading, and writing.]

Urdu See listings under Hindi.

Vietnamese Fecs. A small fee may be charged for photocopied texts for course work.

VIET 101–102 Elementary Vietnamese 101, fall; 102, spring. 6 credits each term. Prerequisite: for Vietnamese 102. Vietnamese 101 or equivalent. Intended for beginners or students placed by examination. Satisfactory completion of Vietnamese 102 fulfills the qualification portion of the language requirement.

VIET 201–202 Intermediate Vietnamese 201, fall; 202, spring. 3 credits each term. Prerequisites: for Vietnamese 201. Vietnamese 102 or equivalent; for Vietnamese 202. Vietnamese 201. T. Tranviet. Continuing instruction in spoken and written Vietnamese.

VIET 203–204 Intermediate Vietnamese Composition and Reading 203, fall; 204, spring. 3 credits each term. Prerequisite: permission of instructor only. T. Tranviet. Designed for students and "native" speakers of Vietnamese whose speaking and listening are at the advanced level, but who still need to improve writing and reading skills.

VIET 301–302 Advanced Vietnamese 301, fall or spring; 302, fall or spring. 4 credits each term. Prerequisites: for Vietnamese 301, Vietnamese 202 or permission of instructor; for Vietnamese 302, Vietnamese 301. T. Tranviet. Continuing instruction in spoken and written Vietnamese; emphasis on enlarging vocabulary, increasing reading speed, and reading various genres and styles of prose.

VIET 401–402 Directed Individual Study 401, fall; 402, spring. 2–4 credits variable each term. Prerequisite: permission of instructor. Intended for advanced students. T. Tranviet. Various topics according to need.

Welsh Fecs. A small fee may be charged for photocopied texts for course work.

WELSH 411 Readings In Modern Welsh Fall. 2 credits. Prerequisite: permission of instructor. W. Harbert. Topics are selected on the basis of student needs.

Yoruba Fecs. A small fee may be charged for photocopied texts for course work.

YORUB 121–122 Elementary Yoruba (also Africana Studies and Research Center 121–122) For description, see ASRC 121–122, sec. 01.

YORUB 123–203 Continuing Yoruba (also Africana Studies and Research Center 123–203) For description, see ASRC 123–203, sec. 01.

Mathematics is the subject matter of modern science; basic training in the discipline is essential for those who want to understand, as well as for those who want to take part in, the important scientific developments of our time. Acquaintance with mathematics is also extremely useful for students in the social sciences and valuable for anyone interested in the full range of human culture and the ways of knowing the universe in which we live. The Department of Mathematics faculty has strong groups specializing in algebra, number theory, real and complex analysis, Lie groups, topology and geometry, logic, probability and statistics, mathematical physics, and applied mathematics. Related departments at Cornell have specialists in computer science, operations research, linear programming, and game theory, and courses in these topics can be integrated readily into the mathematics major.

The department offers a rich variety of undergraduate courses, and many of its beginning graduate courses are suitable for advanced undergraduates as well. Under some conditions, a student may carry out an independent reading and research project for college credit under the supervision of a faculty member.

Members of the department are available to discuss with students the appropriate course for their levels of ability and interest, and students are urged to avail themselves of this help.

Students who want to take any of the courses numbered 300 or above are invited to confer, before registering, with the instructor concerned. The level of a course is indicated by the first digit of the course number; roughly, 1, 2, indicate undergraduate courses; 3, 4, upperclass courses; 5, 6, graduate courses. The subject matter of courses is often indicated by the second digit: 0, general; 1, 2, analysis; 3, 4, algebra; 5, 6, topology and geometry; 7, probability and statistics; 8, logic; 9, other.

Midterm grades, when required, will be S or U only, except in special circumstances. In all 600-level courses, all grades will be S-U only, with the exception of 690. In courses with numbers below 600, students will receive letter grades, with the exception of mathematics majors who have requested an S-U grade.

Advanced Placement Secondary school students are strongly urged to take one of the two advanced placement examinations of the College Entrance Examination Board in their senior year. Freshmen who have had some calculus but who have not taken an advanced placement examination should take the placement examination in mathematics offered at Cornell just before the beginning of classes in the fall. It is most important that anyone with any knowledge of calculus carefully read "Advanced Placement," p. 5.

The Major The mathematics major adapts to a number of purposes. It can emphasize the theoretical or the applied. It can be appropriate for professionals and nonprofessionals alike. It can be broad or narrow. Questions concerning the major should be brought to a departmental representative.

Prerequisites: The traditional prerequisites are Mathematics 221–222 or 293–294. A unit on infinite series is required. Such a unit is normally offered in Mathematics 112, 122, and 192. Normally students will be admitted to the major only when they have grades of B- or better in all sophomore-level mathematics courses they have taken. Alternative prerequisites are Mathematics 213, 231, normally with grades of B+ or better.

Requirements There are five requirements for the major:

1) Computer Science 100. Students are urged to take this course before the end of the sophomore year.

2) Two courses in algebra. Eligible courses are Mathematics 451 or 433, 432 or 434 or 352, 336.

3) Two courses in analysis. Eligible courses are Mathematics 321, 411 or 413, 412 or 414, 418, 420, 422, 423, 427, 428.

4) Further high-level mathematical courses. Any one of the following is sufficient:
To be considered for high honors, a student usually will be expected to write a Senior Thesis, and present it orally to the department. This project is carried out during the senior year under the supervision of a member of the Mathematics department faculty. Students interested in high honors should consult their major advisers and the Mathematics major director during the second semester of their junior year.

**Teacher Education in Science and Mathematics (TESM)**

Students at Cornell may pursue teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. TESM is a university program jointly conducted by the departments of education and mathematics. Although TESM offers options for undergraduate and graduate study, most students enroll in a five-year program, which combines an undergraduate major in mathematics or one of the sciences with a one-year Master of Arts in Teaching (MAT). Students from any college at Cornell are eligible to apply to the program as undergraduates. Students who complete their undergraduate studies and their student teaching are eligible for provisional teaching certification from the State Education Department, effective for five years. Students completing the graduate program can earn the master's degree required for permanent certification.

For more information, contact the TESM Student Support Specialist at 255-9255 or the program coordinator, D. Trumbull (Education) 255-3108 or, in Mathematics, A. Solomon 255-3854.

**Distribution Requirement**

Visually all Mathematics courses can be used to satisfy the Group 4a (Mathematics or Computer Science) Distribution Requirement I (for students through the class of 1995) or the Quantitative and Formal Reasoning part of Distribution Requirement II (beginning with students in the class of 1996). Explicit exceptions are noted in the beginning of the Arts and Sciences section of the Courses of Study.

**Basic Sequences**

**Precalculus**

To prepare students for calculus

1. Algebra and trigonometry

2. Algebra, analytic geometry, elements of calculus

*Mathematics 109 and ALS 5 do not carry credit for graduation.

**Students who want a second semester of mathematics after ALS 115 may take Mathematics 105 or if they need more calculus, 111.

**Courses with Overlapping Content**

Because the department offers many courses with overlapping content, students must choose their courses carefully to ensure that they will receive credit for each course they take. Listed below are groups of courses with similar content. Students will receive credit for only one of the courses in each group.

1. Finite mathematics and calculus for biology majors

2. Other possible finite mathematics and calculus sequence

**Special-Purpose Sequences**

- Students who want to take two semesters of calculus are advised to take the first two semesters of one of the three calculus sequences. It is also possible to follow Mathematics 106 with 112 or 122.

Switching between calculus sequences is often difficult, especially at the 200 level. Students should not attempt such a switch without consulting the associate chair.
### Undergraduate Course Offerings

<table>
<thead>
<tr>
<th>Course</th>
<th>Description</th>
<th>Credits</th>
<th>Prerequisites</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 101 History of Mathematics</td>
<td>This course is designed for liberal arts students, including those who may be “math-averse.” It aims to provide a broad understanding of mathematical concepts and their applications in real-world contexts.</td>
<td>4</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 102 Calculus for Engineers</td>
<td>This course is intended for students who have had previous experience with calculus. It covers the fundamentals of differential and integral calculus, including applications.</td>
<td>4</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 103 Calculus for Engineers</td>
<td>This course covers the fundamentals of differential and integral calculus, including applications.</td>
<td>4</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 104 Calculus for Engineers</td>
<td>This course is designed for students who have previous knowledge of calculus. It covers advanced topics in differential and integral calculus, including applications.</td>
<td>4</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 105 Finite Mathematics for Biologists</td>
<td>This course is oriented towards students who are interested in biological sciences but may not require advanced mathematics. It covers discrete mathematics, including logic, sets, and probability.</td>
<td>3</td>
<td>Mathematics 105 or 109 or ALS 115 or permission of instructor. (A strong background in functions is required.)</td>
</tr>
<tr>
<td>MATH 106 Calculus for Biologists</td>
<td>This course is designed for students who require a strong foundation in calculus for their future studies in biology. It covers the fundamentals of differential and integral calculus, including applications.</td>
<td>3</td>
<td>Mathematics 111, rather than 106, is recommended for those planning to take 112.*</td>
</tr>
<tr>
<td>MATH 107 Pre-Calculus Mathematics</td>
<td>This course is intended for students who need a strong foundation in mathematics before taking calculus. It covers algebra, trigonometry, logarithms, and exponents.</td>
<td>3</td>
<td>Transcript credits only; cannot be used toward graduation.</td>
</tr>
<tr>
<td>MATH 108 Introduction to Calculus</td>
<td>This course is designed to provide a gentle introduction to calculus for students who are new to the subject. It covers the fundamentals of differential and integral calculus.</td>
<td>4</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 109 Calculus and Analytic Geometry</td>
<td>This course covers the fundamentals of differential and integral calculus, as well as analytic geometry.</td>
<td>4</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 110 Linear Algebra</td>
<td>This course focuses on the theory and methods of linear algebra, including systems of linear equations, matrices, and vector spaces.</td>
<td>3</td>
<td>Mathematics 112, 122, or 192.*</td>
</tr>
<tr>
<td>MATH 111 Calculus</td>
<td>This course covers the fundamentals of differential and integral calculus, including applications.</td>
<td>4</td>
<td>Mathematics 109 or three years of high school mathematics, including trigonometry.*</td>
</tr>
</tbody>
</table>

*See the list of courses with overlapping content at the end of the introduction. |
Mathematical content missing in applied courses (e.g., uniform convergence, dominated convergence, complete orthonormal sets) will be thoroughly explained in the course and at the working level.

MATH 221 Linear Algebra and Calculus
Fall, spring, or summer. 4 credits.
Prerequisites: Mathematics 192 plus a knowledge of computer programming equivalent to that taught in Engineering Common Courses 100.*

MATH 231 Linear Algebra
Spring. 4 credits. Prerequisite: Mathematics 111 or equivalent.*
Vectors, matrices, and linear transformations, affine and Euclidean spaces, transformation of matrices, and eigenvalues.

MATH 281 Formal Logic (also Philosophy 331)
For description, see Philosophy 331.

MATH 293 Engineering Mathematics
Fall, spring, or summer. 4 credits.
Prerequisites: Mathematics 221-222, or Mathematics 293-294.
Introduction to partial differential equations, Fourier series, and boundary value problems, with applications. Matrix theory and linear algebra, inner product spaces. May include computer use in solving problems.

MATH 294 Engineering Mathematics
Fall, spring, or summer. 4 credits.
Prerequisite: Mathematics 293.* (Beginning Spring 1997)
Introduction to partial differential equations, Fourier series, and boundary value problems, with applications. Matrix theory and linear algebra, inner product spaces. May include computer use in solving problems.

MATH 321 Applicable Analysis
Spring. 4 credits. Prerequisites: Mathematics 284, or 221 and 222, or 213 and 231. Graduate students who need mathematics extensively in their work and who have had solid courses in calculus and complex variables should take Mathematics 515-516. With less preparation they should take Mathematics 420 (or 321)-422-423.* (This was formerly Mathematics 421 and has a substantial overlap with MATH 420.)
A survey of some of the mathematical techniques that are of primary use in applications to the physical sciences and engineering. The primary mathematical tool explored in harmonic analysis, including Fourier Series and Fourier Integral, Laplace Transform. The applications will be principally to boundary value problems for ordinary and partial differential equations. Moderately advanced mathematics will be used but explained as the course progresses at an elementary level. Much of the formal mathematical content missing in applied courses (e.g., uniform convergence, dominated convergence, complete orthonormal sets) will be thoroughly explained in the course and at the working level.

MATH 322 Algebra and Number Theory
Fall. 4 credits. Prerequisites: one year of calculus and one course from Mathematics 221, 231, and 294. Mathematics 332 does not satisfy prerequisites for courses numbered 500 and above.*
Various topics from modern algebra and number theory, usually including rings, fields, and finite groups. Motivation and examples are derived mostly from geometry, arithmetic, and congruence problems on the integers.

MATH 336 Applicable Algebra
Spring. 4 credits. Prerequisites: Math­
ematics 221, 294, or 231.
An introduction to concepts and methods of abstract algebra that are of importance in science and engineering. Applications of the theory to concrete problems will be stressed. Each year the course will treat aspects usually chosen from the following topics: partially ordered sets, lattices, graph theory, and Boolean algebras; finite machines and languages; applications of groups, fields, and modular arithmetic, such as Latin squares, elementary, or fast Fourier transform; difference equations. Additional topics may be chosen by the instructor.

MATH 356 Groups and Geometry
Spring. 4 credits. Prerequisites: Math­
ematics 221-222, or Math 293-294.
Groups were introduced in the nineteenth century as the set of symmetries of an algebraic or geometric object, and this viewpoint is a central one in modern mathematics. This course studies Euclidean and non-Euclidean (especially hyperbolic) geometry in terms of the groups of symme­tries of the relevant spaces. Prior knowledge of groups is not a prerequisite. One aim is to give students experience in modern algebra and geometry (including the geometry of complex numbers) and a sense of the unity of mathematics. Topics will be chosen from the 400-level courses. Special care is taken in learning to write proofs. Groups of transformations. Subgroups and cosets. Homomorphisms and isomorphisms. Orbits and fixed points. Frieze groups and wallpaper groups and associated tessellations of the Euclidean plane. Geometry and trigonometry of the hyperbolic plane. Tessellations of the hyperbolic plane.

MATH 401 Honors Seminar: Topics in Modern Mathematics
Spring. 4 credits.
This course is a participatory seminar primarily aimed at senior and junior mathematics majors to some of the challenging problems and areas of modern mathematics. The seminar will help students develop research and expository skills in mathematics, which is important for careers in any field that makes significant use of the mathematical sciences (i.e., pure or applied mathematics, physical or biological sciences, business and industry, medicine). The content will vary from year to year.

*MATH 403 History of Mathematics #
Spring. 4 credits. Prerequisites: two courses in mathematics above 300, or permission of instructor.
Survey of the development of mathematics from antiquity to the present, with an emphasis on the achievements, problems, and mathematical viewpoints of each historical period and the evolution of such basic concepts as number, geometry, construction, and proof. Readings from original sources in translation. Students will be required to give oral and written reports.

MATH 405 Mathematical Exposition
Fall. 3 credits. Not offered 1996-97. Expected to be offered 1997-98.
A seminar in mathematics and its applications to other fields. Students are asked to have had at least two years of college-level mathematics. Course work will consist of discussions, written projects, and student talks. The content of these discussions, projects, and talks will vary, to be determined by the instructor in consultation with the students.

MATH 408 Mathematics in Perspective
Spring. 4 credits. Prerequisite: consent of instructor (intended for senior mathematics majors and other students with strong mathematics backgrounds).
The purpose of this course is for students to step back and to form an overview of the mathematics they have learned.

MATH 411-412 Introduction to Analysis
Fall, winter, spring. 4 credits. [412 Not offered 1996-97; expected to be offered 1997-98]. Prerequisite: Mathematics 222. Prerequisite for Mathematics 412: 411 or 413. Students who need measure theory and Lebesgue integration for advanced probability courses should take Mathematics 413-414 or arrange to audit the first few weeks of Mathematics 521. Under­graduates who plan to attend graduate school in mathematics should take 413-414.
An introduction to the theory of functions of real variables, stressing rigorous logical development of the subject rather than techniques of applications. Topics include Euclidean spaces, the real number system, continuous and differentiable functions, Riemann integral, uniform convergence and approximation theorems. Fourier series, calculus in several variables, and differential forms.

MATH 413-414 Introduction to Analysis
Fall, winter, spring. 4 credits each.
Prerequisite: Mathematics 222. Prerequi­site for Mathematics 414: Mathematics 413. Honors version of Mathematics 411-412. 413 proceeds at a faster pace than 411. The second semester includes an introduction to the Lebesgue integral.

MATH 418 Introduction to the Theory of Functions of One Complex Variable
Spring. 4 credits. Prerequisite: Mathematics 222 or 294 or 213. May be offered only in summer.
A rigorous introduction to complex variable theory. Complex numbers. Differential and integral calculus for functions of a complex variable, including Cauchy's theorem and the calculus of residues. Elements of conformal mapping.

*See the list of courses with overlapping content at the end of the introduction.
MATH 420 Applicable Analysis
Fall or spring. 4 credits. Prerequisites: high level of performance in Mathematics 296; or 221 and 222; or permission of instructor. Graduate students who need mathematics extensively in their work and who have had solid courses in calculus and complex variables should take Mathematics 515–516. With less preparation they should take Mathematics 420 (or 321)–422–423.* Ordinary differential equations in one and higher dimensions: qualitative, analytic, and numerical methods, with physical applications. Some important partial differential equations (heat equation, wave equation, and vibrating membrane) and their connections with Fourier series and the Laplacian. Vector calculus and Stokes Theorem, with applications to electromagnetism. Mathematics 420 has substantial overlapping content with Mathematics 321, but more strongly emphasizes the mathematical properties of solutions of ordinary differential equations and the approximation to such solutions by numerical and computer methods.

MATH 422 Applicable Analysis
Fall or spring. 4 credits. Prerequisite: Mathematics 420 or 321. Complex variables, Fourier transforms, Laplace transforms. Additional topics may include: An introduction to generalized functions. Applications to partial differential equations.

MATH 423 Applicable Analysis
Spring. 4 credits. Prerequisite: Mathematics 420 or 321; however, students who have not taken 422 should talk to the instructor before taking this course. Normal vector fields, elementary Hilbert space theory. Projections. Fredholm’s alternative. Eigenfunction expansions. Applications to elliptic partial differential equations and to integral equations.

MATH 425 Numerical Solutions of Differential Equations
Spring. 4 credits. Prerequisites: Mathematics 420 or 321, one course numbered 300 or higher in mathematics, or permission of instructor. Methods and basic theory for the numerical solution of ordinary and partial differential equations. Linear multistep methods. Runge-Kutta methods, and the problem of stiffness for ordinary differential equations. Finite difference methods and Galerkin finite element methods for partial differential equations. Homework will involve use of a computer.

MATH 427 Introduction to Ordinary Differential Equations
Fall. 4 credits. Prerequisite: Mathematics 222 or 294, one course numbered 300 or higher in mathematics, or permission of instructor. Covers the basic existence, uniqueness, and stability theory together with methods of solution and methods of approximation. Topics include singularity points, series solutions, Sturm-Liouville theory, transform methods, approximation methods, and application to physical problems.

MATH 428 Introduction to Partial Differential Equations
Spring. 4 credits. Prerequisite: Mathematics 222 or 294 or permission of instructor. Topics selected from first-order quasilinear equations, classification of second-order equations, with emphasis on maximum principles, existence, uniqueness, stability Fourier series methods, approximation methods.

MATH 431-432 Introduction to Algebra
431, fall or spring; 432, spring. 4 credits each. Prerequisites: Mathematics 221 or 231. Prerequisite for Mathematics 432. Mathematics 431 or 433. Undergraduates who plan to attend graduate school in mathematics should take 433–434.* 431: An introduction to linear algebra, including the study of vector spaces, linear transformations, matrices, and systems of linear equations; quadratic forms and inner product spaces; canonical forms for various classes of matrices and linear transformations; determinants. 432: A discussion of various topics in abstract algebra, including groups, rings, and fields, factorization of polynomials and integers, congruences, and the structure of finitely generated modules over Euclidean domains with application to canonical forms of matrices.

MATH 433-434 Introduction to Algebra
433, fall; 434, spring. 4 credits each. Prerequisites: Mathematics 221 or 231. Prerequisite for Mathematics 434. Mathematics 433. Honors version of Mathematics 431–432. Mathematics 433–434 will be more theoretical and rigorous than 431–432 and will include additional material such as multilinear and exterior algebra.

MATH 436 Applications of Abstract Algebra
Spring. 4 credits. Prerequisites: Linear algebra (Math 231 or higher); Math 336 is not a prerequisite; familiarity with elementary algebra or number theory such as Math 332 would be helpful. The course is intended for students who would like to learn modern algebra and its applications outside of mathematics. There will be a large emphasis on applications as the relevant modern algebras. Frequently, the applications involve or were made possible by the advent of computers. Students who already know the modern algebra covered in the course may still find the applications to be of interest. Specific topics will be chosen by the instructor. The algebra typically includes items drawn from: elementary number theory, polynomials and ring theory, monoids and group theory, real closed fields and ordered fields, Groebner bases, algebraic geometry, field theory. The applications and related topics typically include items drawn from: complexity theory, coding theory, encryption, discrete and fast Fourier transform, primality testing, factoring integers and polynomials, root counting and isolation, solving systems of polynomial equations, formal language theory and automata. Math 336 and 436 may overlap in choice of material. Where they overlap, the coverage in Math 436 will be of greater depth appropriate to a 400-level course. Students cannot get credit for both Math 336 and Math 436.

MATH 451 Euclidean and Spherical Geometry
Fall. 4 credits. Prerequisite: Mathematics 221 or 231 or permission of instructor. Topics from Euclidean and spherical (non-Euclidean) geometry. A non-lecture, seminar-style course organized around student participation.

MATH 452 Classical Geometries
Spring. 4 credits. Prerequisites: Mathematics 221 or its equivalent. This is an introduction to hyperbolic, spherical, and projective geometry—the classical geometries that developed as Euclidean geometry was better understood. For example, the historical problem of the independence of Euclid’s fifth postulate is understood when the existence of the hyperbolic plane is realized. Straightedge (and compass) constructions and stereographic projection in Euclidean geometry can be understood within the structure of projective geometry. Topics in hyperbolic geometry include models of the hyperbolic plane and relations to spherical geometry. Topics in projective geometry include homogeneous coordinates and the classical theorems about conics and configurations of points and lines. Optional topics include principles of perspective drawing, finite projective planes, orthogonal Latin squares, and the cross ratio.

MATH 453 Introduction to Topology
Fall. 4 credits. Prerequisite: Mathematics 411 and 221, or permission of instructor. Basic point set topology, connectedness, compactness, metric spaces, fundamental group. Application of these concepts to surfaces such as the torus, the Klein bottle, the Moebius band.

MATH 454 Introduction to Differential Geometry
Spring. 4 credits. Prerequisites: Mathematics 222 or 294, plus at least one mathematics course numbered 300 or above. Mathematics 453 is not a prerequisite. Differential geometry of curves and surfaces. Curvature, geodesics, differential forms. Introduction to n-dimensional Riemannian manifolds. This material provides some background for the study of general relativity, connections with the latter will be indicated.

MATH 455 Applicable Geometry
Fall. 4 credits. Not offered 1996-97. Expected to be offered 1997-98. In general, this course will cover various applicable topics to be chosen from among the geometry of convex bodies, polyhedra, algebraic curves and surfaces, rigid motions, crystallographic patterns, projections and similar topics. Computational aspects of geometry will be included where appropriate.

MATH 457 Basic Probability
Fall. 4 credits. Prerequisite: Mathematics 221. May be used as a terminal course in basic probability. Intended primarily for those who will continue with Mathematics 472. Topics include combinations, important probability laws, expectations, moments, moment-generating functions, limit theorems. Emphasis is on development of derivations and on development of use in statistical applications. See also the description of Mathematics 571.

*See the list of courses with overlapping content at the end of the introduction.
MATH 472 Statistics
Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221. Some knowledge of multivariate calculus helpful but not necessary.

This is a second-semester undergraduate course on probability. It covers topics from renewal theory, martingales, discrete and continuous time Markov chains, Brownian motion and related diffusion processes, and applications to queuing theory and finance. Theoretical as well as applied aspects of the subject will be emphasized.

MATH 474 Basic Stochastic Processes
Spring. 4 credits. Prerequisites: Mathematics 471 or equivalent and knowledge of linear algebra such as taught in Mathematics 221.

This is a second-semester undergraduate course on probability. It covers topics from renewal theory, martingales, discrete and continuous time Markov chains, Brownian motion and related diffusion processes, and applications to queuing theory and finance. Theoretical as well as applied aspects of the subject will be emphasized.

MATH 481 Mathematical Logic (also Philosophy 431)
Spring. 4 credits. Prerequisite: Mathematics 221.

MATH 482 Intensional Logics and Alternatives to Classical Logics
(Also Philosophy 436)
Not offered 1996-97.

For description, see PHIL 436.

MATH 486 Applied Logic (Also COM S 486)
Spring. 4 credits. Prerequisites: Mathematics 222 or 204; COM S 100, and some additional course in mathematics or theoretical computer science. 2 lecs, 1 lab to be arranged.

MATH 487 Applied Logic II
Spring. 4 credits. Not offered 1996-97. Expected to be offered 1997-98. Prerequisite: Mathematics 221 or equivalent.

Intuitionistic propositional and predicate logic. Natural deduction and tableaux as proof procedures. Curry partial application structures. Their polynomial extensions as procedures. Curry partial application.

Application to consistency proofs. Term extraction as the context for understanding compilers and interpreters for application languages such as LISP, NUPRL, MIRANDA, etc.

MATH 490 Supervised Reading and Research
Fall, spring, or summer. 1-6 credits. Supervised reading and research by arrangement with individual professors. Not applicable for material currently available in regularly scheduled courses.

Graduate Courses
Students interested in taking graduate courses in mathematics should consult the department for further course details, times, and possible changes in courses as described below.

MATH 508 Mathematics for Secondary School Teachers
Spring or summer. 1-6 credits. Prerequisite: secondary school mathematics teacher, graduate standing, or permission of instructor. May not be taught every semester.

An examination of the principles underlying the content of the secondary school mathematics curriculum, including connections with the history of mathematics and current mathematics research.

MATH 511-512 Real and Complex Analysis
511, fall; 512, spring. 4 credits each. Prerequisite: measure and integration; functional analysis. 512: complex analysis, Fourier analysis, and distribution theory.

MATH 513-514 Topics in Analysis
513, fall; 514, spring. 4 credits each.

MATH 515-516 Mathematical Methods in Physics
515, fall; 516, spring. 4 credits each. Intended for graduate students in physics or related fields who have had a strong advanced calculus course and at least two years of general physics. A knowledge of the elements of finite dimensional vector space theory, complex variables, separation of variables in partial differential equations, and Fourier series will be assumed. The course overlaps with parts of Mathematics 321-422-423. Undergraduates will be admitted only with permission of instructor. Mathematics 515 is a prerequisite for 516.

Topics designed to give a working knowledge of the principal mathematical methods used in advanced physics. A brief discussion of some basic notions: metric space, vector space, linearity, continuity, integration. Generalized functions (Schauder distributions). Fourier series and integral equations. Saddle point method. Linear operators. Differential operators and integral operators, the equations and eigenvalue problems connected with them and the special functions arising from them. Elements of group theory. The rotation group and its representations.

MATH 517 Dynamical Systems

MATH 518 Smooth Ergodic Theory

MATH 519-520 Partial Differential Equations
519, fall; 520, spring. 4 credits each. Basic theory of partial differential equations.

MATH 522 Applied Functional Analysis
Spring. 4 credits.

Basic theory of Hilbert and Banach spaces and operators on them. Applications.

MATH 531-532-534 Algebra
531, fall; 532, spring; 534, not offered 1996-97. 4 credits each.

531: finite groups, field extensions, Galois theory, rings and algebras, tensor and exterior algebra. 532: Wedderburn structure theorem, Brauer group, group cohomology, 534: Dedekind domains, primary decomposition, Hilbert basis theorem, local rings.

MATH 537 Analytic Number Theory
Fall. Prerequisites: Math 511, 521, 431. Topics: The Prime Number Theorem. Primes in Arithmetic Progressions. The Large Sieve. The Large Sieve.

MATH 549 Lie Algebras
Fall. 4 credits.

MATH 550 Lie Groups

MATH 551 Introductory Algebraic Topology
Spring. 4 credits.

Fundamental group and covering spaces. Homology theories for complexes and spaces.

MATH 552 Differentiable Manifolds
552, fall; 553, spring. Prerequisites: advanced calculus, linear algebra (Mathematics 431), point set topology (Mathematics 453). This is an introduction to differential geometry and differential topology at the level of the beginning graduate student.

Topological manifolds. Smooth manifolds, immersions and embeddings, tangent bundles, fiber bundles, vector fields and dynamical...

**[MATH 561 Geometric Topology]**

Fall. 4 credits. Not offered 1996–97. Expected to be offered 1997–98. An introduction to some of the more geometric aspects of topology and its connections with group theory. Possible topics: surface theory, 3-manifolds, knot theory, geometric and combinatorial group theory, hyperbolic groups, hyperbolic manifolds.

**[MATH 562 Riemannian Geometry]**

**MATH 571-572 Probability Theory**

571; fall, 572; spring. 4 credits each. Prerequisite: a knowledge of Lebesgue integration theory, at least on the real line. Students can learn this material by taking parts of Mathematics 413–414 or 521. Prerequisite for Mathematics 572: Mathematics 571.

**MATH 574-575 Introduction to Mathematical Statistics**

574; spring, 575; fall. 4 credits each. Prerequisites: Mathematics 571 or permission of instructor.

574: Topics include an introduction to the theory of point estimation, consistency, efficiency, sufficiency, and the method of maximum likelihood. Convexity and basic concepts of decision theory are introduced.

575: Topics include an introduction to the theory of point estimation, consistency, efficiency, sufficiency, and the method of maximum likelihood. Convexity and basic concepts of decision theory are introduced. Concepts of sequential methods may be discussed. 575: The classical theory of optimal tests of hypotheses and their power; the theory of confidence sets. The preferred sequence is 574–575.

**MATH 581 Logic**

Spring. 4 credits.

Basic topics in mathematical logic, including propositional and predicate calculus, formal number theory and recursive functions, completeness and incompleteness theorems. Other topics as time permits.
automatic theorem proving, formal semantics of programming and specification languages, linear logic, constructivism (intuitionism), non-standard analysis. The student is expected to be familiar with the standard results in graduate level mathematical logic.

**MATH 690 Supervised Reading and Research**
Variable credit (maximum 6 each term).

**MATH 701-702 Oliver Club Seminar**

**MATH 703-704 Olivetti Club Seminar**

**MATH 707-708 Seminar in Mathematics Education**

**MATH 711-712 Seminar in Analysis**

**MATH 713 Seminar in Analytic Dynamics**

**MATH 727-728 Seminar in Numerical Analysis**

**MATH 731-732 Seminar in Algebra**

**MATH 733-734 Seminar in Combinatorial and Algebraic Geometry**

**MATH 749-750 Seminar in Lie Groups**

**MATH 751-752 Topics in Geometry and Topology**

**MATH 767-768 Seminar in Combinatorial and Algebraic Geometry**

**MATH 778 Reading Seminar in Dynamical Systems**

Cornell University Wind Symphony

Information about requirements, rehearsal hours, and conditions for academic credit can be found in the following listings for the Department of Music. Announcements of auditions are posted during registration each fall term and, where appropriate, each spring term as well.

The university is also home to many student-run musical organizations, including the Big Red Marching Band and Big Red Pep Band, the Cornell Savoyards, and several a cappella groups. Information about these groups is available through the Department of Music office, 104 Lincoln Hall (255-4097).

The Department of Music and the Faculty Committee on Music sponsor more than one hundred formal and informal concerts each year by Cornell's ensembles, faculty, and students and by distinguished visiting artists. The great majority of concerts are free and open to the public. Lectures and concerts are listed in special monthly posters, CUNYINFO and other campus media.

**Nonmajors**

In addition to its performing, instructional, and concert activities, the department offers numerous courses for nonmajors, many of which carry no prerequisites and presuppose no previous formal training in music. Consult the following course listings, and for further information apply to the department office, 104 Lincoln Hall (255-4097), or to the director of undergraduate studies.

**The Major**

Two options are available to the student planning to major in music. Each carries the study of music to an advanced level through the integration of performance, music theory, and music history. Option I is a general course, not necessarily oriented toward eventual graduate or professional work in music. Option II is a more specialized and concentrated program, suitable for students who want to prepare for graduate or professional work in music.

All students contemplating a major in music under either option should arrange for placement examinations and advising in the department as early as possible, usually during the fall orientation period. Information is available from the director of undergraduate studies, Professor Martin Hatch, 104 Lincoln Hall (255-5049), or from the chair, 110 Lincoln Hall (255-3671). All students are expected to have chosen an adviser from among the department faculty at the time of application for major status.

**Option I** presupposes some musical background before entering Cornell. Prerequisites for admission to the major are completion of Music 152 and 154, at the latest by the end of the sophomore year (the freshman year is preferable), with an overall grade of B- or better in each course. For further information, apply to the department office, 104 Lincoln Hall (255-3671).

The requirements for the Bachelor of Arts degree with a major in music under Option I comprise the following:

1) in music theory: Music 251, 252, 253, 254, 351, 352, and one of the following: Music 451, 452, 453, 454, 456, 463.

2) in music history: sixteen credits in courses numbered 381 or above listed under Music in History and Culture. At least three of these courses must be drawn from the four-course sequence Music 381–384.

3) in performance: four semesters of participation in a musical organization or ensemble sponsored by the Department of Music.

**Option II** presupposes considerable musical study before entering Cornell. Prerequisites for admission into the Option II program are previous acceptance as an Option I major and satisfactory completion of Music 252 and 254, normally by the end of the sophomore year. Students must apply to the department for formal acceptance as an Option II major. An Option II major concentrates in one of the four areas listed below. For Option II in performance, exceptional promise must be demonstrated, in part, by a successful solo recital before the end of the sophomore year.

The requirements for the Bachelor of Arts degree with a major in music under Option II are:

1) completion of all the requirements for Option I, except as noted below, and

2) in addition:

a) in performance:

1) the requirement for four semesters of participation in a musical organization or ensemble is waived (but such majors are expected to participate actively in chamber and other ensembles sponsored by the department);

2) sixteen credits in individual instruction in the student's major instrument, or voice, earned by taking Music 391–392 throughout the junior and senior years.

b) in theory and composition or in history: twelve additional credits in this area of concentration at the 300 level or above, of which either four may be earned in Music 301 or 302 when taken once for four credits, or eight may be earned in Music 401–402.

**Honor.** The honors program in music is intended to provide special distinction for the department's ablest undergraduate majors. Qualified students are invited to become candidates by the faculty early in the second semester of their junior year. As soon as possible thereafter, the student forms a committee of three or more faculty members to guide and evaluate the honors work. In the senior year the candidate enrolls in Music 401–402 with the chair of the honors committee as instructor. Candidates will be encouraged to formulate programs that allow them to demonstrate their musical and scholarly abilities, culminating in an honors thesis, composition, or recital, to be presented not later than April 1 of the senior year. A comprehensive examination administered by the candidate's committee is held not later than May 1. The level of honors conferred is based primarily on the candidate's performance in the honors program, and secondarily on the candidate's overall record in departmental courses and activities.
Distribution Requirement
College of Arts and Sciences students may apply either one or two Music Department courses toward the distribution requirement in Group 4 (humanities and the arts). Neither freshman seminars nor advanced placement credit count toward this requirement.

If one music course is counted for distribution, it must count at least 3 credits, and it may not be in musical performance (Music 321-322, 391-392) or in organizations and ensembles (Music 331 through 346 and 421 through 448).

If two music courses are counted for distribution, they must total at least 6 credits, and at least one of the courses must be academic, not performance-oriented. The second “course,” however, may comprise either up to 4 credits earned in performance (Music 321-322, 391-392) or up to 3 credits earned in organizations and ensembles (Music 331 through 346 and 421 through 448), but not both.

Facilities
Music Library. The Music Library, in Lincoln Hall, has an excellent collection of standard research tools. Its holdings consist of approximately one hundred thousand books, periodicals, and scores and forty thousand sound and video recordings. Particularly noteworthy are the collections of opera from all periods; twentieth-century scores and recordings; a large microfilm collection of Renaissance sources, both theoretical and musical; and a collection of eighteenth-century chamber music. In addition, the Department of Rare Books, in the Kroch Library, houses a collection of early printed books on music and musical manuscripts.

Concert Halls. The Department of Music sponsors more than one hundred concerts annually. Cornell’s principal concert halls are Bailey Hall Auditorium (about 2,000), Alice Statler Auditorium (about 900), Sage Chapel (about 800) and Barnes Hall Auditorium (about 280).

Rehearsal Spaces. The orchestras and bands rehearse in Bailey Hall, Barnes Hall, and Barton Hall; the Jazz Ensembles, Gamelan, and Chamber Ensembles rehearse in Lincoln Hall; and the choral ensembles are quartered in Sage Chapel. Eleven practice studios in Lincoln Hall are available for individual practice by pianists, vocalists, and instrumentalists.

Twenty-two grand pianos and eight upright or studio pianos are housed in Cornell’s offices, classrooms, and rehearsal spaces. In addition, our Center for Keyboard Studies includes two concert grand pianos (Steinway and Mason & Hamlin), two eighteenth-century fortepiano replicas (copies of Johann Andreas Stein and Anton Walter), an original Broadwood grand piano from 1827, a Bosendorfer grand piano from 1842, one Dowd and one Hubbard harpsichord, and a Challis clavichord. Barnes Hall houses a chamber organ by Derwood Crocker, a large Aeolian Skinner Organ is located in Sage Chapel, and there is a Helmholtz Wolff tracker organ in Arabel Taylor Chapel.

Digital/Electronic Equipment. A Macintosh Master studio is available for graduate student use (hours to be arranged) and occasional independent study use. The software used is Performer, Mosaic, Finale, and several Opcode patch editor/librarians. The instruments include a Yamaha RX88 MIDI Controller keyboard, a Yamaha TX82 FM synthesizer, an E-Mu Proteus XR, a Casio FZ 104 sampler and various other synthesizers. In addition, there are two MIDI systems with additional instruments, including a Korg M1 synthesizer and an Akai S900 sampler.

Freshman Seminars
MUSIC 111 Sound, Sense, and Ideas
Divas, Priests, and Warriors: fall and spring. 3 credits. S. Moore. Words and Music.
The history of music resounds with the stories of people, real or imagined—composers, pop stars, or opera characters—who have taken on mythic status. We will explore truths and fictions that permeate some of the more common myths: the performing diva (like Madonna), clawing her way to the top and dominating by whim and determination, the genius-priest (Beethoven, Wagner, or Jim Morrison) leading the masses to redemption; the proud artist (Beethoven, Mozart, Schubert, Mahler, the Beatles, and others). The readings will offer a wide context for thinking and writing about music.

Words and Music. This seminar will explore various kinds of relationships between words and music. In speaking, writing, or even thinking about music, we rely on language to express the structure and meaning of a complex non-verbal art. How do we use words to communicate about music? And what strategies do composers adopt in setting words to music—as in song or opera—or in “explaining” the meaning of their instrumental compositions through titles or programs? We will look at works of many periods and styles by Monteverdi, Handel, Mozart, Schubert, Berlioz, Mahler, the Beatles, and others. The readings will offer a wide context for thinking and writing about music.

MUSIC 106 Introduction to Music Theory
3 credits. Prerequisite: Music 105 with grade of B- or better. Limited to 50 students. Not offered 1996-97.

MUSIC 107 Medieval to Mozart
Fall. 3 credits. Prerequisite: ability to read music or concurrent enrollment in Music 100. M W 11:15-12:05, plus one hour to be arranged. N. Zaslaw.

The history of western Europe from the earliest notation of Gregorian chant in the 10th century to the music of Haydn and Mozart at the end of the 18th century. Among other repertories and composers surveyed will be primitive polyphony, the Notre Dame School, the troubadours, trouvères and Minnesingers, Machaut, Dufay, Ockeghem, Josquin, the madrigal, Gabrieli, Monteverdi, Scarlatti, Purcell, Corelli, Vivaldi, Bach, Handel, D. Scarlatti, Rameau, and Gluck.

MUSIC 108 Beethoven to Bernstein
Spring. 3 credits. Prerequisite: ability to read music or concurrent enrollment in Music 100. M W F 11:15-12:05. R. Harris-Warrick.

The history of western art music in all genres from the beginning of the 19th century to the present.

MUSIC 120 Learning Music through Digital Technology
Fall or spring. 3 credits. Enrollment limited. Prerequisite: permission of instructor. D. Borden.

A survey of Western art music in all genres from the beginning of the 19th century to the present.

MUSIC 101 The Art of Music
Fall. 3 credits. M W 11:15-12:05. 1-hour disc to be arranged. M. Hatch.

MUSIC 103 Introduction to the Musics of the World
Spring. 3 credits. No previous training in music required. T R 11:15-12:05 plus 1 hr. to be arranged. H. DeFerranti.

An introduction to music cultures from selected regions of the world. The course examines both the elements of musical styles and the features of society that influence music. Listening assignments and projects that investigate the cultural context of music are major components of the course.

MUSIC 105 Introduction to Music Theory
Fall or summer, spring. 3 credits. Fall, M W 10:10-11:00 plus two hours to be arranged. Experience in reading music is highly recommended. Fall, M. Scudder; spring, S. Tucker.

An elementary, self-contained introduction to music theory emphasizing fundamental musical techniques, theoretical concepts, and their application. Intervals, scales, triads; basic concepts of tonality; extensive listening to music in various styles; analysis of representative works of Bach, Mozart, Haydn and Beethoven.

MUSIC 115 Popular Musics Today
**MUSIC 201 Dictation: intervals, rhythms; longer melodies; including diatonic modulation. Score reading: 3 parts using treble, alto, and bass clefs. Musical terms: nuance and expression marks.**

**MUSIC 220 Learning Countercounter through Digital Technology**
Spring. 3 credits. Enrollment limited. Prerequisite: Music 252 or equivalent, and concurrent enrollment in Music 253. MWF 10:10-11:00. R. Sierra. This course is a study of traditional contrapuntal techniques from the thirteenth century to the present, with emphasis on invention and fugue. Synthesizers, samplers, MIDI, and music software will be covered. There are three classroom concerts, some analysis and a final public concert.

**MUSIC 239 Introduction to Improvisational Theory**
Spring. 2 credits. Prerequisite: permission of instructor. Intended for performers in "jazz" and related styles. K. Hester. Analysis of representative works by Debussy, Bartok, Webern, Hindemith, Schoenberg, and Stravinsky, as well as more recent composers. Composition of short pieces in various styles.

**MUSIC 353 Musicianship V**

**MUSIC 451 Counterpoint**
Spring. 4 credits. Prerequisite: Music 251 or permission of instructor. S. Stucky. Composition in the polyphonic vocal style of the late Renaissance.

**MUSIC 452 Topics in Music Analysis**
Spring. 4 credits. Prerequisite: Music 251 or permission of instructor. J. Webster. A survey of important analytical approaches to tonal music, including thematic-motivic relations, phrase-rhythm, large-scale paragraph construction, structural-tonal voice-leading, and relations among the movements in a multimovement work.

**MUSIC 453 Introduction to Improvisational Theory**
Fall. 4 credits. Prerequisite: Music 251 or permission of instructor. Not offered 1996–97. K. Hester. Study and performance of modal, and blues harmonic resources; introduction to the formal structures in which these resources are embodied. Includes ear training, work at the keyboard, composing short pieces, and analyzing selected representative works of popular music and African-American art music from 1940 to 1970.

**MUSIC 454 Composition**
Fall. 4 credits. Prerequisite: Music 251 or permission of instructor. W 1:25-4:25. D. Borden. Composition using models from Baroque, Classical, and twentieth-century music, including MIDI studio techniques. Collaboration with student choreographers and filmmakers is encouraged.

**MUSIC 456 Orchestration**
Spring. 4 credits. Prerequisite: Music 251 or permission of instructor. Not offered 1996–97. R. Sierra. Orchestration based on nineteenth- and twentieth-century models.

**MUSIC 463 Conducting**
Spring. 4 credits. Prerequisite: Music 251 or permission of instructor. Not offered 1996–97. M. Scatterday. Fundamentals of score reading, score analysis, rehearsal procedures and conducting technique; instrumental and choral contexts.
Music In History and Culture

[MUSIC 222] A Survey of Jazz
Spring. 3 credits. Enrollment limited. Not offered 1996-97. K. Hester. This course will trace the evolution of jazz historically from its African roots to the current diverse spectrum of improvisational styles that form popular, Neoclassic, and Innovative contemporary jazz music.

[MUSIC 245] Gamelan in Indonesian History and Cultures
Fall. 3 credits. No previous knowledge of musical notation or performance experience necessary. M W F 1:25-2:15. M. Hatch. An introduction to Gamelan through its art. Elementary techniques of performance on the Javanese gamelan, a general introduction to Indonesian history and cultures, and the socio-cultural contexts for the arts there. Several short papers and one longer research report are required.

[MUSIC 261] Bach and Handel
Fall. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. M W 2:55-4:10. N. Zaslav. Bach's music, product of a provincial life, and Handel's music, product of a cosmopolitan life, will be compared. Genres studied will include works for keyboard instruments, chamber music, concertos, cantatas, operas, oratorios, anthems, and esoterica.

[MUSIC 262] Haydn and Mozart
Fall. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 1996-97. N. Zaslav, J. Webster.

[MUSIC 283] Beethoven
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. J. Webster. A survey of Beethoven's life, works, and influence. While the primary focus will be his musical style and its development, the course will also cover social-cultural factors and the psychology and reception of genius.

[MUSIC 284] Musical Romances
Spring. 3 credits. Prerequisite: any 3-credit course in music or permission of instructor. Not offered 1996-97. D. Rosen.

[MUSIC 274] Opera
Fall. 3 credits. M W F 10:10-11:00. R. Harris-Warrick. An introduction to major works of the operatic repertory, with discussion of texts and theatrical performances as well as music. Video recordings will be an integral part of the course; trips to live performances will be scheduled where possible.

[MUSIC 275] The Choral Tradition
Spring. 3 credits. Prerequisite: any three-credit course in music or permission of instructor. Not offered 1996-97. A survey of representative works, both sacred and secular, in the Western choral tradition from the Middle Ages to the twentieth century. Class will include discussion of performances as well as historical and stylistic issues, and will be integrated with local concert offerings whenever possible.

[MUSIC 276] The Orchestra and Its Music
Spring. 3 credits. Prerequisite: any three-credit music course or permission of instructor. N. Zaslav. The music of, and the social structures supporting, large instrumental ensembles in the Western world, including Italian court festivals of the 16th century, string bands of the 17th century, Lully's ascendancy at Paris and Versailles, and music of Purcell, Corelli, Vivaldi, Bach, Handel, Haydn, Mozart, Beethoven, Schubert, Schumann, Mendelssohn, Berlioz, Liszt, Wagner, Brahms, Tchaikovsky, Bruckner, Mahler, Strauss, Stravinsky, Schoenberg, Webern, Bartók, Shostakovich, Messiaen, Copland, Sessions, Carter, Stucky, and Sierra.

Music History Courses for Majors and Qualified Non-Majors
Prerequisite: Music 152 or permission of instructor. Intended primarily for music majors, these courses investigate significant topics and repertories from each period in some detail. Each course includes presentations, readings, oral and written papers, and analyses.

[MUSIC 381] Music in Western Europe to 1700

[MUSIC 382] Music of the Eighteenth Century

[MUSIC 383] Music of the Nineteenth Century
Fall. 4 credits. T R 10:10-11:25. D. Rosen. A chronological survey of nineteenth-century music from Beethoven through Puccini, including reference to its cultural and historical context.

[MUSIC 384] Music of the Twentieth Century
Spring. 4 credits. T R 10:10-11:25. R. Sierra. A systematic study of music from the turn of the century to the present. Historical context will be an integral part of the course.

[MUSIC 386] Historical Performance Practicum
Spring. 4 credits. M. Bilson, S. Monosoff. The study of 18th- and 19th-century instrumental performance practices, with special emphasis on the string quartets of Haydn and the piano trios of Schubert. Open to qualified performers.

[MUSIC 398-399] Independent Study in Music History
398, Fall; 399, Spring. 4 credits. Prerequisite: Music 152 and permission of instructor. Staff. Advanced study of various topics in music history. Students enrolling in Music 398-399 participate in, but do not register for, an approved 200-level music history course and, in addition, pursue independent research and writing projects.

[MUSIC 413] African American Music Innovators
Spring. 4 credits. Permission of instructor. Not offered 1996-97. This course examines and experiments with methods of analyzing, appreciating, and understanding innovative art forms. Students will write three reports (with transcription, music examples or some form of accurate analytical charting, where appropriate), utilizing different perspectives on African American Music.

Fall. 4 credits. Prerequisite: any 3-credit music course or permission of instructor. T R 1:25-2:40. H. deFerranti. Basic principles of style in four different genres of Japanese instrumental and vocal music, as well as the social and historical circumstances of their development as performance traditions. Consideration of typical repertory and performance practice, as well as issues of cultural definition, representation, and the negotiation of authority that pertain to perceptions of "tradition" in Japanese performing arts.

Independent Study

[MUSIC 301-302] Independent Study in Music
301, Fall; 302, Spring. Credit to be arranged. Prerequisite: departmental approval. Presupposes experience in the proposed area of study. Staff.

Honors Program

[MUSIC 401-402] Honors in Music
401, Fall; 402, Spring. 4 credits each term. Limited to honors candidates in their senior year. Staff.

Musical Performance

Cornell faculty members offer individual instruction in voice, organ, harpsichord, piano and fortepiano, violin, viola, cello, viola da gamba, and some brass instruments to those students advanced enough to do college-level work in these instruments. Lessons are available by audition only. They may be taken either without credit or, through Music 321-322, with credit. Other instruments may sometimes be studied for credit outside Cornell, but also by audition only (see Music 321h-322h). Cornell does not offer instruction at the beginner's level.

Lessons for beginners: The Music Department can recommend outside teachers for those who wish to begin studying voice or an instrument. No credit is available for beginning instruction.

Auditions: Auditions are held at the beginning of each term for lessons for advanced students. Contact the Department of Music office (104 Lincoln Hall) for information.

Fees: The fee for a one-half hour lesson weekly, without credit, is $150 per term. For a one-hour lesson (or two half-hour lessons) weekly, without credit, the fee is $300. The fee in Music 321-322 for a one-hour lesson (or two half-hour lessons) for credit is $225 per term. All fees are non-refundable once lessons begin, even if the course is subsequently dropped.

Scholarships: Music majors receive a scholarship equal to the lesson fee listed above. Members of the department-sponsored organizations and ensembles may, with the permission of the director of the organization, receive a scholarship of up to one-half the Cornell fee for the type of lessons chosen during the term. (These scholarships are...
ARTS AND SCIENCES - 1996-1997

intended only for lessons in the student's primary performing medium.) Scholarship forms, available in the Music Department office, are to be returned to the office within the first three weeks of classes.

Practice rooms. Practice-room fees for twelve hours weekly are $50 per term and for six hours weekly are $40 per term for a room with a piano. Practice-room fees for twelve hours weekly are $25 per term and for six hours weekly are $15 per term for a room without a piano. The fee for the use of the pipe organ is $50 for twelve hours weekly and $40 for six hours weekly. All fees are non-refundable.

Earning credit. For every 4 credits earned in Music 321-322, the student must have earned, or currently be earning, at least 3 credits in another music course (excluding freshman seminars, Music 321-322, 331 through 340, 391-392, or 421 through 440). These 3 credits must be earned prior to, or simultaneously with the first 2 credits in 321-322; they cannot be applied retroactively. Transfer credit for appropriate music courses already taken elsewhere may be used to satisfy this requirement with the approval of the department.

Lessons taken outside Cornell. Under certain conditions, advanced students may earn credit for lessons taken outside Cornell. An audition is required, and no credit can be granted for beginning instruction. For further information, read the description of Music 321h-322h and contact the Music Department office.

MUSIC 321-322 Individual Instruction in Voice, Organ, Harpsichord, Piano, Strings, Woodwinds, and Brass
Prerequisite: Advanced students may register only after a successful audition with the instructor, usually scheduled during the first week of classes. Students may register for this course in successive years.
Students, at the sole discretion of the instructor, earn 2 credits each term for a one-hour lesson (or two half-hour lessons) weekly accompanied by an appropriate practice schedule.

MUSIC 321a-322a Individual Instruction in Voice
321a, fall; 322a, spring. 2 credits each term. Prerequisite: successful audition during registration. Music 201 must be taken by the end of the third semester of lessons. Limited enrollment. J. Kellock.
The Vocal Coaching Program offers noncredit lessons to members of the choral ensembles.

MUSIC 321b-322b Individual Instruction in Organ
321b, fall; 322b, spring. 2 credits each term. Prerequisite: successful audition. A. Richards.

MUSIC 321c-322c Individual Instruction in Piano
321c, fall; 322c, spring. 2 credits each term. Prerequisite: successful audition. M. Bilson, X. Bjerken and staff.

MUSIC 321d-322d Individual Instruction in Harpsichord
321d, fall; 322d, spring. 2 credits each term. Prerequisite: successful audition. A. Richards.

MUSIC 321e-322e Individual Instruction in Violin or Viola
321e, fall; 322e, spring. 2 credits each term. Prerequisite: successful audition. Staff, fall; S. Monosoff, spring.

MUSIC 321f-322f Individual Instruction in Cello
321f, fall; 322f, spring. 2 credits each term. Prerequisite: successful audition. Staff.

MUSIC 321g-322g Individual Instruction in Brass
321g, fall; 322g, spring. 2 credits each term. Prerequisite: successful audition. M. Scatterday.

MUSIC 321h-322h Individual Instruction outside Cornell
321h, fall; 322h, spring. 2 credits each term. Prerequisite: successful audition. All the standard orchestral and band instruments and guitar may be taken as credit with outside teachers. This course is available primarily for the study of instruments not taught at Cornell and for the use of those who for reasons of space cannot be admitted to Music 321g-322g.
Priority approval and audit by a member of the faculty in the department is required. For information and a list of approved teachers, consult the department office, 104 Lincoln Hall.

MUSIC 391-392 Advanced Individual Instruction
391, fall; 392, spring. 4 credits each term. Open only to juniors and seniors majoring in music under Option II with concentration in performance and to graduate students. Option II majors whose lessons must be taken outside Cornell may apply to the department for financial assistance toward the cost of lessons; $150 per semester will normally be awarded to such students and a larger amount may be awarded under certain circumstances. Music 391 is not a prerequisite to 392.

Musical Organizations and Ensembles
Students may participate in musical organizations and ensembles throughout the year. Permission of the instructor is required, and admission is by audition only, except that the Sage Chapel Choir and the Cornell Gamelan Ensemble are open to all students without prior audition. Registration is permitted in two of these courses simultaneously and students may register in successive years, but no student may earn more than 6 credits in these courses. Membership in these musical organizations and ensembles is also open to qualified students who wish to participate without earning credit.

MUSIC 331-332 Sage Chapel Choir
331, fall; 332, spring. 1 credit. No audition for admission. M 7–9. Staff

MUSIC 333-334 Cornell Chorus or Glee Club
333, fall; 334, spring. 1 credit. Prerequisite: permission of instructor. Chorus (treble voices): W 5:15–7:15 p.m. plus 2 hours to be arranged. Glee Club (mens voices): W 7:30–9:30 p.m., plus 2 hours to be arranged. S. Tucker.

MUSIC 335-336 Cornell Symphony Orchestra
335, fall; 336, spring. 1 credit. Prerequisite: permission of instructor. W 7:30–10:00 p.m. Fall, E. Murray; spring, J. Hsu.

MUSIC 337 Wind Symphony
Fall. 1 credit. Prerequisite: permission of instructor. M W 4:45–6:30. M. Scatterday and D. Conn.

MUSIC 338 Symphonic Band
Spring. 1 credit. Prerequisite: permission of instructor. M W 4:45–6:30. M. Scatterday and D. Conn.

MUSIC 339-340 Cornell Jazz Ensembles
339, fall; 340, spring. 1 credit. Prerequisite: permission of instructor. W 6–8 p.m. K. Hester.

MUSIC 342 Wind Ensemble
Spring. 1 credit. Prerequisite: permission of instructor. M 7:30–9:30 and R 4:45–6:30. M. Scatterday.

MUSIC 345–346 Introduction to the Gamelan
Concentrated instruction for beginning students in elementary techniques of performance on the Indonesian gamelan. Music 245 is a 3-credit course that complements the instruction in gamelan by an introduction to Indonesian history and cultures.

MUSIC 421-422 Cornell Chamber Orchestra
421, fall; 422 spring. 1 credit. Prerequisite: permission of instructor. R 5–6:30 p.m. J. Hsu.
Study and performance of the chamber symphonies of Haydn, Mozart, and their contemporaries. For strings, woodwinds, and horns. More recent music may also be included in the spring.

MUSIC 439-440 Chamber Winds
439, fall; 440 spring. 1 credit each term. Prerequisites: enrollment in Symphonic Band, Wind Symphony or Wind Ensemble in the same semester as this course AND permission of instructor only. Fall, T R 4:45–6:30 p.m. Spring, T R 4:45–6:30 p.m. M. Scatterday, D. Conn.
A flexible instrumentation ensemble performing original woodwind, brass, and percussion music from Gabrieli brass choirs and Mozart serenades through more contemporary works such as Stravinsky’s Octet or L’Histoire Du Soldat. The ensemble will perform on wind symphony, symphonic band and wind ensemble concerts in addition to several chamber concerts throughout the year.

MUSIC 439-440 Experimental Lab Ensemble
439 fall; 440 spring. 1 credit each term. Permission of instructor. W 8:30–10:30 p.m. K. Hester.

MUSIC 441-442 Chamber Music Ensemble
441, fall; 442, spring. 1 credit. Prerequisite: permission of instructor. M 5:30–7:00. Fall, J. Hsu, spring, S. Monosoff.
The Monday ensemble will study and perform chamber music works from quartets to octets depending upon personnel. Smaller ensembles will study and perform duos, trios,
or quartets. Pianists, string and wind players are welcome.

MUSIC 443-444 Choral
443 fall; 444 spring. 1 credit each term. Prerequisite: permission of instructor. 4:30-6:15 p.m. S. Tucker and staff. Study and performance of selected choral music for mixed voices.

MUSIC 445-446 Cornell Gamelan Ensemble
445 fall; 446 spring. 1 credit each term. Enrollment limited. Prerequisite: Music 245 or 345-346, or permission of instructor. 7:30-10:00 p.m. M. Hatch. Advanced performance on the Javanese gamelan. Tape recordings of gamelan and elementary number notation are provided. Some instruction by Indonesian musicians is offered in most years.

MUSIC 447-448 Chamber Signers
447; fall; 448, spring. 1 credit each term. Permission of instructor. F. 4:15-6:15. Plus 2 hours to be arranged. S. Tucker.

Graduate Courses
Open to qualified undergraduates with permission of instructor.

MUSIC 601 Introduction to Bibliography and Research
Fall. 4 credits. M: 1:25-4. L. Coral. This course explores the nature of the discipline and introduces the many types of bibliographic tools needed to pursue research in music.

MUSIC 602 Analytical Technique
Spring. 4 credits. J. Webster. A critical survey of various analytical methods in current use. Frequent analytical assignments and class presentations.

[MUSIC 603 Editorial Practice
Spring. 4 credits. Not offered 1996-97.]

MUSIC 604 Ethnomusicology: Areas of Study and Methods of Analysis
Spring. 4 credits. Open to graduate students in anthropology, linguistics, psychology, sociology, and other cognate fields with permission of instructor.

MUSIC 605 Historical Performance Practicum
Spring. 4 credits. M. Bilson. This course is an introduction to MIDI for students who are already at an advanced level in music composition.

MUSIC 614-615 Experiencing Music: Performing Art in Early America
Fall, spring. 4 credits. L. Coral. This course examines the history of music performance from the early American colonies through the American Revolution. Major topics include performance practices of the period, and questions of periodization and the canon, specifically the problematic division between 'classical' and 'romantic' as it has been applied to the repertory from this period. Topics will include the sublime and the beautiful, the picturesque and the grotesque, landscape aesthetics and the English garden, Witz and the fragment, fantasy, constructions of gender, and Gothic horror.

[MUSIC 654 Topics in Post-tonal Theory and Analysis
Spring. 4 credits. Not offered 1996-97.]

[MUSIC 657-659 Chemisorption
657; fall, 659; spring. 4 credits each term. F: 1:25-4:00 p.m. plus 1 hour to be arranged. R. Sierra, S. Stucky.

MUSIC 674 German Opera (also German Studies 672)
Fall. 4 credits. A. Groos. See German Studies for description.

[MUSIC 677 Mozart: His Life, Works, and Times (also German 757)
Fall. 4 credits. Not offered 1996-97.]

[MUSIC 680 Topics in Ethnomusicology
Spring. 4 credits. M. Hatch. Not offered 1996-97.]

[MUSIC 681 Seminar in Medieval Music
Fall. 4 credits. M. 1:25-4:00. Not offered 1996-97.]

[MUSIC 684 Seminar in Renaissance Music
Fall. 4 credits. W. 1:25-4:25. R. Harris-Warrick.

Topics: the music of Josquin Desprez and his contemporaries.

[MUSIC 685 Seminar in Baroque Music

MUSIC 688 Seminar in Classical Music
Spring. 4 credits. N. Zaslav. Bibliographical, musical, and conceptual aspects of the Küchel Catalogue of Mozart's works. Students will study what has been done in the two centuries since Mozart's death and attempt to resolve a variety of problems about the nature and extent of his music.

[MUSIC 689 Seminar in Music of the Romantic Era
Fall, spring. 4 credits. Not offered 1996-97.]

[MUSIC 690 Seminar in Music of the Twentieth Century
Spring. 4 credits. Not offered 1996-97.]

[MUSIC 691-692 Historical Performance 691, fall, 692, spring. 4 credits each term. Prerequisites: consent of instructor. Hours to be arranged. Fall, M. Bilson; spring, M. Bilson and S. Monosoff. Lessons on the major instrument with supplementary study and research on related subjects.

[MUSIC 693 Seminar in Performance Practice
Fall or spring. 4 credits. Not offered 1996-97.]

[MUSIC 697-698 Independent Study and Research
697, fall, 698, spring. Credit to be arranged. Staff.

[MUSIC 785-786 History of Music Theory
785, fall; 786, spring. 4 credits each term. Not offered 1996-97.]

MUSIC 787 History and Criticism
Spring. 4 credits. A. Richards. Topic for 1997: Crossing the Classic/Romantic Divide. An introduction to late 18th- and early 19th-century German aesthetics and music criticism, considering the impact of English thought and literature on German aesthetics of the period, and questioning
2. Two 200-level NES survey courses, one whose chronological parameters fall within the period 3000 B.C.E to 600 C.E., and one whose chronological parameters fall within the period 600 C.E. to the present. The following are examples (a complete list can be obtained in the department office):

- 3000 B.C.E to 600 C.E.
- NES 223, Introduction to the Bible
- NES 263, Introduction to Biblical History and Archaeology
- NES 248, Introduction to Classical Jewish History
- 600 C.E. to the present
- NES 233, The Lyrics of Love and Death: Medieval Hebrew and Arabic Poetry in Translation
- NES 257, Islamic History 600-1258
- NES 258, Islamic History 1258-1914
- NES 294, Modern History of the Near East

3. At least two NES courses at the 300 level or above (only one of which may be NES 301, 302, 311, or 312).

Prospective majors should discuss their plans with the director of undergraduate studies before formally enrolling in the department. To qualify as a major, a cumulative grade average of C or better is required.

Honors. Candidates for the degree of Bachelor of Arts with honors in Near Eastern Studies must fulfill the requirements of the appropriate major study and enroll in the honors course, NES 499, in the fall and spring semesters of their senior year. For admission to the honors program, candidates must have a cumulative average of B+ or better and have demonstrated superior performance overall in Near Eastern Studies courses. After consulting their major adviser, candidates should submit an outline of their proposed honors work to the department during the second semester of their junior year.

Study abroad. Near Eastern Studies majors may choose to study in the Near East in their junior year. There are various academic programs in the countries of the Near East that are recognized by the Department of Near Eastern Studies and that allow for the transfer of credit. Archaeological field work on Cornell-sponsored projects in the Near East or recognized field schools in Israel may also qualify for course credit.

Freshman Seminar

NES 127 What’s Love Got To Do With It? Marriage and Courtship in the Hebrew Bible

NES 143 Jewish Travelers Through the Ages

Fall. 3 credits. Enrollment limited to 17 students. A. Brener.

The highroads of history are always a fascinating place, and never more so than in the first-hand accounts that have come down to us from Jewish travelers throughout the ages. These accounts, most written originally in Hebrew, open a window upon Jewish life not always visible in the standard texts of classical Judaism. Over the course of the semester we will meet with a wide variety of Jewish wayfarers, following them into the farthest reaches of the then-known world and learning much about their history and culture in route. We will also have a chance to trace the origins of certain key legends in Judaism, such as the Samilation River and the Lost Ten Tribes, and to experience their impact upon the medieval imagination.

Special attention will be given to the use of language and metaphor in these works and to the way in which biblical narratives helped shape their creation. The reading of first-hand accounts will be interspersed with short stories and poems that give creative expression to the sensibilities and experience of the twentieth century and ponder the essence of searching and quest. Each text will be placed in its proper historical context through class discussions and short reading assignments. All readings in English.

Language Courses

NES 101-102 Elementary Modern Hebrew I and II (also Jewish Studies 105-106)

101, fall; 102, spring. 6 credits each term. Prerequisite for NES 102: 101 or permission of instructor. Satisfactory completion of NES 102 fulfills the qualification portion of the language requirement. Enrollment limited to 15 students in each section. S. Shoer.

The course provides a thorough grounding in reading, writing, grammar, oral comprehension and speaking. Students who complete the course will be able to function in basic situations in a Hebrew-speaking environment.

NES 111-112 Elementary Arabic I and II

111, fall; 112, spring. Enrollment limited to 15 in each session. 6 credits each term. Prerequisite for Arabic 112: Arabic 111 or permission of instructor. M. Younes.

The course provides a thorough grounding in all language skills: listening, speaking, reading, and writing. It starts with spoken Arabic and gradually introduces Modern Standard Arabic in the form of listening, reading, and writing texts. Emphasis will be on learning the language through using it in meaningful contexts. The student who successfully completes the two-semester sequence will be able to: 1) understand and actively participate in simple conversations involving basic practical and social situations (introductions, greetings, school, home and family, work, simple instructions, etc.) 2) read Arabic material of limited complexity and variety (simple narrative and descriptive texts, directions, etc.) 3) write notes and short letters describing an event or a personal experience. An important objective of the course is to familiarize students with basic facts about the geography, history, and culture of the Arab world.

NES 201-202 Intermediate Modern Hebrew I and II (also Jewish Studies 201-202)

201, fall; 202, spring. Enrollment limited to 15 students in each section. 4 credits each term. Prerequisites for NES 201, 202 or permission of instructor: for NES 202, 201 or permission of instructor. N. Scharf.

A sequel to NES 101-102. Continued development of reading, writing, grammar, oral comprehension, and speaking skills. The course introduces Hebrew literature and Israeli culture through the use of texts and audio-visual materials.

NES 211-212 Intermediate Arabic I and II

211, fall; 212, spring. Enrollment limited to 15 students in each section. 4 credits each term. Prerequisites: for NES 211, one year of Arabic or permission of instructor; for NES 212, 211 or permission of instructor. M. Younes, B. Hamad.

A sequel to NES 111-112. Continued development of the four language skills through extensive use of graded materials on a wide variety of topics. Increasing attention will be given to developing native-like pronunciation and grammatical accuracy, but the main focus will be on developing communication skills. The student who successfully completes 212 will be able to: 1) understand and express himself or herself in Arabic in situations beyond the basic needs; 2) read and comprehend written Arabic of average difficulty; 3) write a letter, a summary of a report or a reading selection. An appreciation of Arabic literature and culture will be sought through the use of authentic materials.

NES 217-218 Intermediate Turkish I and II

217, fall; 218, spring. Limited to 15 students. 4 credits each term. Not offered 1996-97. L. Peirce.

NES 301-302 Advanced Modern Hebrew I and II (also Jewish Studies 301-302)

301, fall; 302, spring. Limited to 15 students. 4 credits each term. Prerequisite for NES 301: 302 or equivalent, with permission of instructor. Prerequisite for NES 302: 301 or equivalent, with permission of instructor. This sequence may be used to fulfill the humanities distribution requirement in literature. Limited to 15 students. N. Scharf.

Advanced study of Hebrew through the analysis of literary texts and expository prose. This course employs a double perspective: language is viewed through literature and literature through language. Students will develop composition skills by studying language structures, idioms, and various registers of style.

NES 311 Advanced Arabic I

Fall. 4 credits. Prerequisite: NES 212 or permission of instructor. Limited to 15 students. B. Hamad.

Students will be introduced to authentic, unedited Arabic language materials ranging from short stories and novels to political speeches and writings. Emphasis will be on developing fluency in oral expression through lively discussions of socially and politically provocative issues that are presented in the reading selections. A primary objective will be increased accuracy in pronunciation and grammar.

NES 312 Advanced Arabic II

Spring. 4 credits. Limited to 15 students. Prerequisite: NES 311, or permission of instructor. B. Hamad.

An advanced course in Arabic literary texts, taught in the Arabic language. Using exercises and drills in Arabic for Advanced Learners, this course seeks to: 1) acquaint the student with a body of authentic literary texts chosen for their cultural significance and appropriateness for the student's reading
ability; 2) introduce the student to some important literary and grammatical analysis of these texts; 3) hone his or her ability in modern Arabic oral presentation and written composition. Educational and cultural videos may be used to illustrate some of the materials presented in class.

NES 315 Arabic Writing
Fall. 4 credits. Enrollment limited to 15 students. B. Hamad.
This course satisfies the needs of students (native and non-native speakers of Arabic) who have completed at least four semesters of Arabic study at the college level. We will deal with a wide range of authentic materials chosen for their cultural significance and appropriateness for student abilities. Emphasis will be placed on developing writing skills through analysis of the structure of the language, particularly its syntax and morphology. Writing tasks will include dictation, translation from English into Arabic (and vice versa), as well as guided and free composition, such as writing personal and business letters, summaries, and short reports.

NES 330-331 Hieroglyphic Egyptian I and II
330, fall; 331, spring. 4 credits. Not offered 1996-97. G. Rendsburg.

NES 333-334 Elementary Akkadian I and II (also NES 633-634)
333, fall; 334, spring. 4 credits each term. Prerequisite for NES 334: 333 or permission of instructor. Prerequisite for NES 634: 633 or permission of instructor. Not offered 1996-97. D. Owen.

NES 335-336 Readings in Akkadian Texts (also NES 635-636)
335, fall; 636, spring. 4 credits. Prerequisite for NES 336: 335 or permission of instructor. Prerequisite for NES 636: 635 or permission of instructor. Not offered 1996-97. D. Owen.

NES 337-338 Ugaritic I and II
337, fall; 338, spring. 4 credits. Prerequisite: Knowledge of another Semitic language (preferably Hebrew). Not offered 1996-97. G. Rendsburg.

NES 412 Introduction to Arabic Linguistics (also DMLL 512)
Spring. 4 credits. Prerequisites: one year of Arabic and an introductory course in linguistics or permission of instructor. Not offered 1996-97.

NES 416 Structure of the Arabic Language (also LING 416)
Spring. 4 credits. Prerequisite: NES 112 or one year of Arabic. M. Younes.
The course deals with the history of Arabic and its place in the Semitic language family, the sociolinguistic situation in the Arab world (diglossia), Arabic phonology (sounds, emphasis, syllable structure, and related processes), morphology (verb forms and derivational patterns), and syntax (basic sentence structures, cases, and moods).

NES 420 Readings in Biblical Hebrew Prose (also JWST 420 and RELST 420)
Fall. 4 credits. Prerequisite: one year of Hebrew, Biblical or modern. Course may be repeated for credit. Not offered 1996-97. G. Rendsburg.

NES 433 Introductory Sumerian I (also NES 631)
Spring. 4 credits each semester. Prerequisite: permission of instructor. Not offered 1996-97. D. Owen.

NES 434 Introductory Sumerian II (also NES 632)

NES 435-436 Aramaic I-II (also JWST 435-436)
435, fall; 436, spring. 4 credits each term. Prerequisite: knowledge of Hebrew. Enrollment limited to 15 students. G. Rendsburg.
A two-semester sequence in the Aramaic language. A panoply of Aramaic materials is read during the course, including selections from ancient Aramaic inscriptions, the biblical books of Ezra and Daniel, Qurman texts, the Targumim, and the Talmud. Explorations of grammar, syntax, and vocabulary will be based on the linguistic data that occur in the readings.

NES 625 West Semitic Inscriptions
Fall. 4 credits. Prerequisite: knowledge of Hebrew. Not offered 1996-97. G. Rendsburg.

NES 631 Introductory Sumerian I (also NES 433)
Spring. 4 credits. Prerequisite: permission of instructor. Not offered 1996-97. D. Owen.

NES 632 Introductory Sumerian II (also NES 434)

NES 633-634 Elementary Akkadian I and II (also NES 333-334)
633, fall; 634, spring. 4 credits each term. Prerequisite for NES 634: 633 or permission of instructor. Prerequisite for NES 635: 634 or permission of instructor. Not offered 1996-97. D. Owen.

NES 635-636 Readings in Akkadian Texts (also NES 635-636)

NES 637-638 Ugaritic I and II (also NES 337-338)
337, fall; 338, spring. 4 credits. Prerequisite: Knowledge of another Semitic language (preferably Hebrew). Not offered 1996-97. G. Rendsburg.

Archaeology

NES 261 Ancient Sea-faring (also Archaeology 275)

NES 263 Introduction to Biblical History and Archaeology (also Archaeology 263, Jewish Studies 263, and Religious Studies 264)

NES 264 Agriculture and Society in the Ancient Near East

NES 361 Interconnections in the Eastern Mediterranean World in Antiquity

NES 366 The History and Archaeology of the Ancient Near East (also Archaeology 310)

NES 367 The History and Archaeology of Ancient Egypt

Civilization

NES 197-198 Introduction to Near Eastern Civilization (also Jewish Studies 197 and Religious Studies 197-198)
Fall. 3 credits each term. Required for all NES department majors. NES 197 or 198 and any other NES course will constitute a sequence to fulfill the distribution requirement in either the social sciences or humanities, depending on the second course used in combination with NES 197 or 198. Not offered 1996-97. R. Brann.

NES 224 Arabs and Jews: Cultures in Confluence and Conflict (also JWST 234, RELST 234, and COM L 234)
Fall. 3 credits. R. Brann.
This course examines the cultural and historical interaction between Arabs and Jews from the emergence of Islam in the seventh century down to the contemporary Middle East. The first part of the course will focus on the period of classical Islamic civilization and medieval Judaism under the orbit of Islam. The interaction of the two cultures (scriptural, spiritual, intellectual, literary, communal, and interpersonal) will be studied through readings of primary texts (in translation). The second part of the course deals with the cultural reawakening and the development of national consciousness of the two peoples in the last two centuries, discussing in detail the evolution of the conflict between Arabs and Jews in the Middle East and the ways in which that conflict is reflected in cultural life. We will also consider the role of historical memory in the modern conflict in light of the record of pre-modern interaction.

NES 251 Introduction to Islam: Religion, Politics, and Society (also RELST 252)
Spring. 3 credits. H. Berg.
In this course we shall examine the Islamic religious tradition from its inception to the present. The first part of the course will focus on the message and style of the Qur'an, the life and experience of the Prophet Muhammad, and the major beliefs and practices of Islam. We shall then turn to political, religious, and legal developments in the early centuries of Islam. The third part of the course will deal with theological, philosophical, and mystical movements in the Islamic empire. Finally, we will examine a few specific modern social issues and political movements, such as feminism and Islam, the rise of fundamentalism, and African-American Muslim movements.

NES 296 Gender and Sexuality in Early Christianity (also RELST 297)
Spring. 3 credits. C. Baker.
In this course we will explore varieties of early Christianity through the lens of gender and sexuality. We will examine the ways in which ideas and images of masculinity, femininity, and gender ambiguity were used by early Christian writers in shaping their
messages and refuting their opponents. Ascension and conversion, veiling and unveiling, cross-dressing and Gnostic androgyny will be among the topics considered, and our sources will range from the New Testament and Church Fathers to Jewish Midrash, Greek medical texts, and Roman Catacomb graffiti. Current interdisciplinary studies on gender, ideology, sexuality, and power will aid us in developing our analytical approaches to the ancient materials.

[NES 281] Gender and Society in the Muslim Middle East (also Religious Studies 281, Women's Studies 281) @

[NES 298] Contemporary Palestinian Society (also GOVT 252) @
Spring. 3 credits. S. Tamari.
A survey of the social dynamics of Palestinian society in the 20th century, including the centrality of the land question and conflict with the movement to create a Jewish national home; the formation of Palestinian national identity in the context of Mediterranean, Arab, Islamic, and regional forces; class, faction, and kinship as determinants of the evolution of modern Palestine; the two Palestinian formations: the Palestinian diaspora and "native" society; state formation and civil society in the post-Oslo period.

[NES 339] Muslims, Christians, and Jews in Islamic Spain: Literature and Society (also CRP 495 Sec. 28) @
Spring. 4 credits. Enrollment limited to 20 students. S. Tamari.
The urban question in a Middle Eastern context; the debate about the Islamic city; theoretical paradigms from third world urbanization; cultural dynamics of Middle Eastern cities; rural-urban migrations and their impact on the morphology of the Middle Eastern city; the informal economy; case studies from the Maghreb countries, Egypt, Turkey, Iran, and the Arab Levant.

[NES 339] Muslims, Christians, and Jews in Islamic Spain: Literature and Society (also RELST 339, COM L 334, RELST 334, SPANL 339) @

[NES 344] Seminar on Jewish Mysticism (also RELST 344 and JWST 342) @
Fall. 4 credits. Enrollment limited to 20 students. Not offered 1996-97. Staff.
This course will deal with an intensive study of certain essential problems in the history of Jewish mysticism from the Rabbincic period to the early Middle Ages. Knowledge of Hebrew is not required.

[NES 345] Gender and Judaism (WOMSN 347, RELST 343 and JWST 347)
Spring. 4 credits. Enrollment limited to 25 students. C. Baker.
How does Judaism structure the roles of women and men differently? What are the historical roots of these roles and their various contemporary manifestations? How are traditional roles and symbols of both women and men being questioned by the contemporary Jewish feminist movement? This course offers a view of Judaism through the lens of contemporary gender issues, with a particular emphasis on feminist revisioning of Judaism. We will begin with an introduction to Judaism as a religious tradition of women and men, and then discuss specific issues in greater depth, presenting both origins and historical development and contemporary images and practice. Issues covered will include the differing roles of women and men in traditional Judaism, the gendered body in Judaism, Jewish feminism, family and sexuality, and the gender of God.

[NES 351] Introduction to Islamic Law (also NES 651, RELST 350, HIST 3725 @

[NES 357] Islamic Law and Society @

[NES 397] Problems of Urbanization in the Middle East (also CRP 495 Sec. 28) @
Spring. 4 credits. Enrollment limited to 20 students. S. Tamari.
The urban question in a Middle Eastern context; the debate about the Islamic city; theoretical paradigms from third world urbanization; cultural dynamics of Middle Eastern cities; rural-urban migrations and their impact on the morphology of the Middle Eastern city; the informal economy; case studies from the Maghreb countries, Egypt, Turkey, Iran, and the Arab Levant.

[NES 639] Muslims, Christians, and Jews in Islamic Spain: Literature and Society (also COM L 639 and SPANL 699)

[NES 294] Modern History of the Near East: Changing Politics, Society, and Ideas (also Government 358 and JWST 344) @
Fall. 4 credits. C. Baker.
A survey of the major developments in Jewish history between the destruction of the first temple in 586 B.C.E. to the rise of Islam. Topics will include the return under Ezra and Nehemiah, the encounter with Hellenism; the Antiochene persecutions; the growth of Roman influence; the rebirth of 70 C.E., the rise of such sects as the Sadducees, the Pharisees, and Essenes; the conflict with early Christianity; and the nature of rabbinic Judaism.

[NES 249] Introduction to Modern Jewish History (also JWST 245) @
Spring. 3 credits. Staff.
A survey of the major developments in Jewish history between the expulsion from Spain (1492) until 1950. Topics will include the growth of mysticism and Hasidism; the development of Eastern European Jewry; the impact of emancipation; the rise of Jewish pluralism, e.g., Reform Judaism; Conservative Judaism, Neo-Orthodoxy; the character of modern anti-Semitism; the origins and growth of American Jewry; and the beginnings of political Zionism.

[NES 257] Islamic History: 600-1258 (also HIST 248 and RELST 258) @
Judentums; the rise and importance of Jewish intellectual currents that impacted upon metaphysical and ethical challenge; the subjects to be covered are: the Kantian history, primarily in its western European altered the course and shape of Jewish religious reform; the historicism; biblical criticism; the rise of Hegelian challenge and the impact of NES 347 Seminar on 19th-Century to modern antisemitism.

Attention will also be paid to the importance of the sociology of knowledge in modern studies of these societies and systems.

This course examines relations between women and men by focusing on the manner in which one 16th-century community in the Middle East functioned through its court. By analyzing actual court cases, we will explore issues such as marriage and divorce, property rights, sexuality and its regulation, access to communal and domestic space and the control of knowledge. We will be particularly interested in the question of whether normative codes of law (religious, state) were compatible with the individual's sense of moral worth and self interest, hence we will also be concerned with relations between the individual and the community, and between the community and the state. This course will examine patterns of international relations in the Middle East in the 20th century, with special reference to the Arab-Israel and Iran-Iraq conflicts. These conflicts will be treated as part of a Middle East system, whose other main elements are the interaction between domestic and external politics, inter-Arab relations, and the involvement of extra-regional powers.
Nes 315 Arabic Writing @ Fall 4 credits. B. Hamad.

For description, see Nes 315 under Near Eastern Language.

Nes 339 Muslims, Christians, and Jews in Islamic Spain: Literature and Society (also JWST 339, COMP LIT 334, RELST 334, SPAN LIT 339) @ # Spring 4 credits. R. Scharf.

For description, see Nes 339 under Near Eastern Studies Civilization.

Nes 400 Seminar in Advanced Hebrew (also JWST 400) @ Fall and spring 4 credits. Prerequisite: Nep 302/Jwst 302 or permission of instructor. Enrollment limited to 15 students. N. Scharf.

Continuation of work done in Nes/Jwst 302, with less emphasis on the study of grammar. We will read and discuss texts of cultural relevance, using articles published in Israeli newspapers and works by authors in each of the three principal genres: poetry, theater and novels. The course may be repeated for credit with permission of instructor.

Nes 402 Seminar in Hebrew Literature and Poetics (also Jewish Studies 402) @ Spring 4 credits. Prerequisites: Nes 301 or equivalent and permission of instructor. Not offered 1996-97. R. Brann.

Nes 420 Readings in Biblical Hebrew Prose (also JWST 420 and RELST 420) @ # Fall 4 credits. Not offered 1996-97. G. Rendsburg.

Nes 421 Readings in Biblical Hebrew Poetry (also JWST 421 and RELST 421) @ # Spring 4 credits. Prerequisite for Nes 421: one year of Biblical or Modern Hebrew. Course may be repeated for credit. Not offered 1996-97. G. Rendsburg.

Nes 428 Medieval Hebrew Biblical Exegesis (also JWST 428, NES 624, and RELST 428) @ # Fall 4 credits. Prerequisite: permission of instructor. Enrollment limited to 20 students. Not offered 1996-97. R. Brann.

Nes 435 Readings in Judeo-Arabic: Medieval Judeo-Arabic and Hebrew Poetics (also Jewish Studies 435) @ # Spring. 4 credits. Prerequisite: Arabic 212, Hebrew 202, or equivalents. Designed for graduate students but open to undergraduates with permission of instructor. Entire sequence may be repeated for credit; readings will vary from year to year. Not offered 1996-97. R. Brann.

Nes 620 Readings in Medieval Hebrew Poetry and Prose (also JWST 620) Fall and spring. 4 credits each semester. Prerequisite: permission of instructor. R. Brann.

Critical readings in medieval Hebrew lyrical and literary poetry and imaginative rhymed prose from tenth-century Muslim Spain to Renaissance and Baroque Italy. Course may be repeated for credit.

Nes 624 Medieval Hebrew Biblical Exegesis (also JWST 428, and RELST 428) Fall 4 credits. Prerequisite: permission of instructor. Enrollment limited to 10 students. Not offered 1996-97. R. Brann.

Nes 627 The Song of Songs (also Religious Studies 627 and Jewish Studies 627) Fall. 4 credits. Prerequisite: knowledge of Hebrew. Not offered 1996-97. G. Rendsburg.

Nes 628 Genesis (also Nes 228 and Jewish Studies 628) Fall. 4 credits. Not offered 1996-97. G. Rendsburg.

Nes 630 Readings in Judeo-Arabic: Medieval Judeo-Arabic and Hebrew Poetics Fall and spring. 4 credits. Prerequisites: Arabic 212, Hebrew 202 or equivalents. Designed for graduate students but open to undergraduates with permission of instructor. May be repeated for credit; readings will vary from year to year. R. Brann.

This course will study the most important texts of Hebrew and Judeo-Arabic poetics composed during the Middle Ages, from 900 until 1200 for the neo-classical poets of the Arabic and Andalusian traditions, and later medieval poetic schools centering on the norms of Renaissance rhetoric down to 1600. How each tradition understood the distinction between secular and devotional poetry, and separated "truthful" from "feigning" verse will be examined. The course will also consider the relationship between poetry and music as defined by different compositional schools and how the poetics of the Hebrew Bible was re-read by each literary center. Finally, the interplay between intrinsic poetics and extrinsic poetic influences in Iraq, Spain, Provence and Italy will be studied.

Nes 499 Independent Study, Honors Fall and spring. Variable credit. Prerequisite: permission of instructor.

Nes 499 Independent Study, Undergraduate Level Fall and/or spring. Variable credit. Prerequisite: permission of instructor.

Nes 681-692 Independent Study, Graduate Level Fall or spring. Variable credit. Prerequisite: permission of instructor.

The Program of Jewish Studies

The Program of Jewish Studies encompasses a broad spectrum of disciplines that includes civilization, history, language, literature, philology, and religion. The program offers students the opportunity to take a wide variety of courses in Jewish Studies whose subjects are not represented in the Department of Near Eastern Studies. Students interested in planning a program in Jewish Studies should consult with the director, Professor David A. Owen, 360 Rockefeller Hall. For complete listings and descriptions, see Program of Jewish Studies under "Special Programs and Interdisciplinary Studies."

Jwst 251 The Holocaust: The Destruction of European Jewry Fall. 3 credits. Enrollment limited to 100 students. H. Lupovitch.

Jwst 352 The Transformation of European Jewry Spring. 4 credits. H. Lupovitch.

Jwst 450 Undergraduate Seminar in Recent American History (also History 440) Fall. 4 credits. Permission of instructor required. Not offered 1996-97. R. Polenberg.

Jwst 478 Jewish-American Writing (also Eng 478 and Amer Sts 478) Fall. 4 credits. Permission of the instructor required. Enrollment limited to 15 students. J. Porte.

Jwst 491-492 Independent Study: Undergraduate Fall or spring. Variable credit. Prerequisite: permission of instructor.

Jwst 499 Independent Study: Honors Fall and spring. Variable credit. Prerequisite: permission of instructor.

The study of philosophy provides students with an opportunity to become familiar with some of the ideas and texts in the history of thought while developing analytical skills that are valuable in practical as well as academic affairs. It affords the excitement and satisfaction that come from understanding and working toward solutions of intellectual problems. The curriculum includes offerings in the history of philosophy, logic, philosophy of science, ethics, social and political philosophy, metaphysics, and theory of knowledge. An introductory course numbered in the 100s or 200s is suitable for beginning study in the field. Sections of Philosophy 100 are part of the freshman writing seminar program; they are taught by various members of the staff on a variety of philosophical topics, and because of their small size (seventeen students at most) they provide ample opportunity for discussion. Students who want a broad introduction to philosophy may take Philosophy 101, but many students with special interests may find that the best introduction to philosophy is a 200-level course in some particular area of philosophy; such courses have no prerequisites and are usually open to freshmen.

The Major
Students expecting to major in philosophy should begin their study of it in their freshman or sophomore year. Admission to the major is granted by the director of undergraduate studies of the department on the basis of a student's work during the first two years. Normally the student must have completed two philosophy courses with grades of B or better. Eight philosophy courses are required for the major. They must include at least one course in ancient philosophy (Philosophy 210 or 211, or a course with a large component on Plato or Aristotle), at least one course in classical modern metaphysics and epistemology (Philosophy 212 or a course on the empiricists, the rationalists, or Kant), and a minimum of three courses numbered above 200. Students admitted to the major after fall 1996 will be required to take a minimum of six philosophy courses numbered above 200, and may not count more than one section of Philosophy 100 toward the major. A course in formal logic (e.g., Philosophy 231), while not required, is especially recommended for majors or prospective majors.

Philosophy majors must also complete at least 8 credits of course work in related subject approved by their major advisers. Occasionally majors may serve as teaching or research aides, working with faculty members familiar with their work.

Honors. A candidate for honors in philosophy must be a philosophy major with an average of B+ or better for all work in philosophy. In either or both terms of the senior year a candidate for honors enrolls in Philosophy 490 and undertakes research leading to the writing of an honors essay by the end of the final term. Honors students normally need to take Philosophy 490 both terms of their senior year in order to write a satisfactory honors essay. Philosophy 490 does not count toward the eight philosophy courses required for the major. Prospective candidates should apply at the philosophy department office, 218 Goldwin Smith Hall.

Feas
In some courses there may be a small fee for photocopying materials to be handed out to students.

Introductory Courses
These courses have no prerequisites, all are open to freshmen.

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PHIL 100 Freshman Writing Seminars in Philosophy
Fall and spring. 3 credits. Consult the brochure listing freshman writing seminars prepared by the John S. Knight Writing Program.

PHIL 101 Introduction to Philosophy (by petition for breadth requirement)
Fall and spring. 3 credits. Fall: T R 11:40-12:55. Z. Szabo.
An introduction to central topics of philosophy. We will discuss questions of epistemology (what can we know for sure? what is the difference between rational belief and dogmatism?), philosophy of mind (is your mind just the same as your brain? do you really have free will?), and ethics (what makes acts morally wrong? what social inequalities are unjust?). Readings will be chosen from classic and contemporary writers.

PHIL 104 Historical Perspectives in Philosophy
Fall and spring. 3 credits. Fall: M W F 9:05-9:55. N. Sturgeon. This course covers some of the central problems of philosophy, such as the existence of God, our knowledge of the external world, the mind-body problem, free will and the foundations of morality.

PHIL 131 Logic, Evidence, and Argument
Fall. 3 credits. M W F 9:05-9:55. S. MacDonald.
An introduction to the concepts and skills central to critical reading and thinking. The course aims at providing a general understanding of the nature of reasoning and argument and developing skills for identifying, analyzing, and evaluating arguments found in ordinary language. Students are expected to attain facility with two different formal systems for representing and evaluating arguments—propositional logic and traditional syllogistic logic—and acquire the ability to apply these systems in the analysis and evaluation of ordinary reasoning. This course examines the nature and structure of argument with the aim of developing formal methods for analyzing and evaluating the sorts of reasoning we encounter and use in everyday discourse.

PHIL 145 Contemporary Moral Issues
Spring. 3 credits. M W F 2:30-3:20. R. Miller.
An examination of central moral issues in American politics today. At what point, if any, is abortion wrong, and in what circumstances should it be legal? What should be done to reduce economic, racial and sexual inequalities? For example, is there a moral justification for affirmative action programs? for social welfare programs? What are the limits of the right to free speech? Do they protect pornography? racist speech? When is it right to go to war? What obligations do U.S. citizens have to immigrants? to people in poor countries? We will analyze the answers and arguments of moral philosophers, political leaders and judges, through both lectures and discussion sections.

PHIL 201 Philosophical Problems
Fall. 4 credits. M W F 10:10-11:00. C. Ginet.
This course will discuss the following well-known puzzles: Zeno's paradoxes of motion (the Racecourse, the Arrow, the Stadium) and of plurality; the paradox of the heap, the paradox of the surprise examination, the prisoner's dilemma, Newcomb's problem, and the paradox of the liar. These puzzles present us with reasoning that is paradoxical in the sense that, although it seems clear that there must be something wrong with the reasoning, it is not easy to see what it is. Studying such puzzles is not only an intriguing exercise in itself but can show us interesting things about such basic concepts as those of space, time, motion, truth, knowledge, rational choice, and causation.

PHIL 210 Ancient Thought #

PHIL 211 Ancient Philosophy #
Fall. 4 credits. No prerequisites. T R 1:25-2:40. G. Fine.
This course explores the origins of Western philosophy, as it emerged in Ancient Greece and Rome. We will explore some of the central ideas of the presocratics, Socrates, Plato, Aristotle, and the post-Aristotelians (Epicureans, Stoics, and Skeptics). Questions to be considered include: What is the nature and limits of knowledge? How reliable is perception? What are the basic entities in the universe-atoms? Platonic Forms? Aristotelian substances? Is moral knowledge possible? Why be moral? What is the nature of happiness and what sort of life will make people happy? Do human beings have free will? This course has no prerequisites.

PHIL 212 Modern Philosophy #
Spring. 4 credits. M W F 10:10-11:00. S. Shoemaker.
A survey of major philosophical problems in metaphysics and the theory of knowledge in seventeenth and eighteenth century European philosophy. Readings from Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume, and Kant.

PHIL 213 Existentialism and Literature [also Comparative Literature 213]

PHIL 214 Philosophical Issues in Christian Thought #
PHIL 231 Introduction to Formal Logic  
Fall. 4 credits. M W F 2:30-3:20.  
H. Hodes.  
The logic of truth-functional connectives and the universal and existential quantifiers: analysis of English statements in terms of a formal language; evaluation of deductive reasoning in terms of such an analysis.

PHIL 241 Ethics (by petition for breath requirement)  
Spring. 4 credits. M W F 1:25-2:15.  
T. H. Irwin.  
Introduction to the philosophical study of major moral questions—for example: Are all values relative, or are there some objective moral values? Have we ever any good reason to care about the interests of other people? Do people have rights with which governments should not interfere, even to advance the general welfare? What inequalities are unjust? The course discusses general issues in moral philosophy, together with some of their implications for particular current moral controversies, such as the debates over abortion, reverse discrimination, and policies reducing economic inequality. Readings from major philosophers of the past, as well as contemporary sources.

PHIL 242 Social and Political Theory (by petition for breath requirement)  
(also Government 260)  

PHIL 243 Aesthetics  

PHIL 244 Philosophy and Literature  

PHIL 245 Ethics and Health Care  
Fall. 4 credits. Normally offered also in the six-week summer session. Open to sophomores, juniors, and seniors. M W F 11:15-12:05. K. Jones.  
This course is an introduction to the ethical issues surrounding health care. Topic include: (1) the professional-patient relationship, (2) justice in health care, (3) autonomy, quality of life, personhood and their relation to issues such as abortion and euthanasia.

PHIL 246 Ethics and the Environment  
Spring. 4 credits. Open to all undergraduates. Permission of instructor required for graduate students. T R 1:25-2:40.  
H. Shue.  
Critical philosophical analysis of the conceptual frameworks in which policies affecting the environment are formulated and judged. Topics include the nature of ethics and the possibility of knowledge in ethics: the nature and extent of individual and social obligation to distant people, future generations, nonhuman animals and nonsentient things (e.g., the ecosystem); the origin of environmental problems and the range of options for their solution.

PHIL 247 Ethics and Public Life  

PHIL 261 Knowledge and Reality  
Spring. 4 credits. M W F 2:30-3:20.  
J. Stanley.  
Do you know that this course description exists? Do you know that there are other people, or could they be just robots? Do these questions even make sense to ask? In this class, we will investigate, at an introductory level, the philosophical problem of skepticism. Our first aim will be to discover the causes which have led philosophers into skeptical positions. We will then read and evaluate various attempts to demonstrate the incoherence of skeptical positions.

PHIL 262 Philosophy of Mind  
Fall. 4 credits. T R 10:10-11:25.  
S. Shoemaker.  
A study of philosophical issues concerning the place of mind in the physical world, including the mind-body problem (are thoughts and experiences physical entities?), the problem of knowledge of other minds (how can we know that others have minds and are not mere automata?), the possibility of artificial intelligence (can computers think?), and the problem of personal identity (what makes you the same person you were ten years ago?). Readings from classic and contemporary sources.

PHIL 263 Religion and Reason  
Spring. 4 credits. M W F 1:25-2:15.  
S. MacDonald.  
This course examines the conception (shared by several major world religions) of God as an absolutely perfect being (APB). The course aims at answering such questions as: What attributes must an APB have? Must an APB have a mind, be a person, care for human beings? Is the concept of an APB internally coherent? Is the existence of an APB compatible with the presence of evil in the world and with the existence of human freedom? Does human morality depend in some important way on the existence or nature of an APB? Do we have reason to believe that an APB actually exists?

PHIL 266 Science and Human Nature (also Science and Technology Studies 286)  
Spring. 4 credits. M W F 11:15-12:05.  
R. Boyd.  
An examination of attempts in the biological and social sciences to offer scientific theories of human nature and human potential to and apply such theories to explain important social and psychological phenomena.

PHIL 294 Global Thinking (also Government 294)  
Fall. 4 credits. T R 1:25-2:40, plus disc.  
H. Shue.  
The analysis taught in this course is global in two different respects: international subjects and interdisciplinary methods. We look in detail at two of the most important and most difficult issues facing international society, devoting approximately half the course to each case: (1) when, if ever, should other nations intervene militarily into ethnic conflict like that in Bosnia? and (2) what, if anything, should industrialized nations and industrializing nations respectively do to reduce the emissions that cause climate change? On military intervention, we bring together political science, law, and ethics: on climate change, we bring together atmospheric chemistry, economics, and ethics. The course is team-taught by 4-5 faculty researchers from the fields listed.

Intermediate or Advanced Courses

Some of these courses have prerequisites.

PHIL 309 Plato  
Not offered 1996-97.

PHIL 310 Aristotle  

PHIL 311 Modern Rationalism  
Spring. 4 credits. Prerequisites: at least one previous course in philosophy, at the 200-level or above. T R 2:55-4:10.  
G. Fine.  
This course will focus on the metaphysics and epistemology of Descartes, Spinoza, and Leibniz. Topics to be considered include: scepticism and the nature of knowledge; innate ideas and innate knowledge; substance; freedom; necessity and contingency; determinism; causation; proofs for the existence of God; mind and body.

PHIL 312 Modern Empiricism  

PHIL 314 Ancient Philosophy: The World of Plato and the World of Ordinary Life  

PHIL 315 Medieval Philosophy  
Spring. 4 credits. M W F 10:10-11:00.  
S. MacDonald.  
A survey of some main themes and major figures in medieval philosophy. Some attention will be given to the general development of philosophy in the thousand years separating late antiquity and the Renaissance, but the emphasis will be on the close reading and analysis of representative texts.

Readings (in English translation) may include Augustine, Boethius, Anselm, Abelard, Aquinas, Scotus, and Ockham and address topics in metaphysics, epistemology, ethics, and philosophical theology.

PHIL 316 Kant  

PHIL 317 Hegel  

PHIL 318 Twentieth-Century Philosophy  
Not offered 1996-97.

PHIL 319 Philosophy of Marx  

PHIL 331 Formal Logic  
Spring. 4 credits. T R 10:10-11:25.  
Z. Stabò.  
Topics: soundness and completeness of first-order logic, further model-theoretic results about first-order logic (Lowenheim-Skolem theorem, compactness, Lindström's theorem), first-order Peano Arithmetic, Gödel's incompleteness theorems. If time permits, we will discuss issues about second-order logic as well.

PHIL 332 Philosophy of Language  
Fall. 4 credits. Prerequisite: at least one previous course in philosophy. T R 2:55-4:10.  
J. Stanley.  
Twentieth-century Anglo-American philosophy is also known as linguistic philosophy. There are many reasons for this nomenclature, but one reason is the stunning insights into (and debates about) the nature of linguistic meaning in this century by philosophers. By discussing some of the classic works in twentieth-century philosophy of language by authors such as Frege, Russell, Strawson, Kripke, Grice, and Davidson, this class provides an introduction at an advanced level to some of these important discussions. Topics to be discussed include the sense/reference distinction, communication and objectivity, negative existentials, the causal theory of reference.
PHIL 340 Ethical Theory (also Women's Studies 341)
Spring. 4 credits. T R 11:40-12:55.
K. Jones.
Like much of contemporary feminist theory, feminist ethics begins with the assumption that ethical theory was fully adequate to address feminist concerns. All that needed to be done was to take the resources of ethical theory and apply them to hitherto overlooked questions, such as abortion, affirmative action, justice in the family, and pornography. However, this project assumes that the theories themselves are not gender biased. This claim has been challenged. In particular, it has been argued that traditional ethical theory overlooks the situatedness of agents and devalues emotions and relations to particular others. We will critically examine these claims and their challenge to ethical theory to see whether it is the principal moral concept to be the concept of "duty." In addition, we will examine the view, argued for by Carol Gilligan, that women speak with a distinctive ethical voice — a voice of care, rather than justice. Gilligan's work raises the problem of whether their representational content exhausts their phenomenal character, and whether material accounts of mind can do justice to their "subjective" character ("what it is like" to have them).

PHIL 341 Topics in the Philosophy of Religion

PHIL 343 Resistance and Responsibility (also Law 767)

PHIL 344 History of Ethics: Ancient and Medieval
Fall. 4 credits. No prerequisites. M W F 12:50–1:15.
T. H. Irwin.
The development of moral theory in Greek, Roman, and medieval philosophers. Topics include: Socrates and his questions about morality; the different answers of Plato, Aristotle, and the Stoics; and the influence of Christian thought. Main questions: happiness, welfare, and the human good; the virtues; self-interest and the interests of others; love, friendship and morality; theories of human nature and their relevance to ethics; comparisons and contrasts with modern moral theory. Readings mainly from Plato, Aristotle, the Stoics, St. Paul, St. Augustine, St. Thomas Aquinas.

PHIL 345 History of Ethics: Modern
T. H. Irwin.
A continuation to Philosophy 344. Hobbes's challenge to Greek and Christian ethics, responses to Hobbes, self-interest and the interests of others, the place of reason and sentiment in ethics, the objectivity of ethics, different conceptions of the right and the good, utilitarianism and its critics, and radical critiques of morality. Readings mainly from Hobbes, Butler, Hume, Kant, Sidgwick, Nietzsche, Bradley, and Rawls.

PHIL 346 Modern Political Philosophy (also Government 462)

PHIL 348 Metaphysics and Epistemology

PHIL 356 Philosophy of Mind
Spring. 4 credits. M W F 1:25–2:15.
S. Shoemaker.
The nature of consciousness, with special attention to the nature of sensations and perceptual experiences. Topics will include the questions of what sort of representational content sensations and experiences have, whether their representational content exhausts their phenomenal character, and whether materialist accounts of mind can do justice to their "subjective" character ("what it is like" to have them).

PHIL 363 Topics in the Philosophy of Religion

PHIL 368 Global Climate and Global Justice (also Government 368)
Fall. 4 credits. T R 2:55–4:10.
H. Shue.
Ongoing international negotiations under the Framework Convention on Climate Change, adopted to deal with "global warming," are producing conflicts between rich states and poor states, and between oil producers and soil consumers, about who ought to bear which proportion of the costs of any economic changes necessary either to slow the predicted rate of climate change or to adapt to rapid change. What is fair when rich and poor cooperate to deal with a common but long-term and uncertain threat? This course critically examines a variety of views about international and intergenerational justice.

PHIL 369 Limiting War: The Morality of Modern State Violence (also Government 469)

PHIL 381 Philosophy of Science: Knowledge and Objectivity (also Science and Technology Studies 381)
Fall. 4 credits. W 7:30–9:30 p.m.
R. Boyd.
An examination of central epistemological and metaphysical issues raised by scientific theorizing: the nature of evidence; scientific objectivity; the nature of theories, models, and paradigms; and the character of scientific revolutions.

PHIL 382 Philosophy and Psychology

PHIL 384 Philosophy of Physics

PHIL 387 Philosophy of Mathematics
Fall. 4 credits. T R 1:25–2:40.
Z. Szabo.
A straightforward interpretation of many mathematical statements entails that they cannot be true unless certain entities (numbers, triangles, sets, etc.) exist. But what mathematics tells us about these entities makes it difficult to accommodate them into modest ontologies. There seem to be only three possibilities: to give up modesty and accept the existence of these entities, to give up the standard semantics for mathematical statements, or to give up the belief that many mathematical statements are true. In this course we will examine the merits of each of these theoretical choices.

PHIL 388 Philosophy of Science: Evidence and Explanation

PHIL 389 Philosophy of Science
Fall or spring. Credit to be arranged.
To be taken only in exceptional circumstances. Must be arranged by the student with his or her adviser and the faculty member who has agreed to direct the study.

Advanced Courses and Seminars
These courses are offered primarily for majors and graduate students.

PHIL 395 Majors Seminar

PHIL 409 German Philosophical Texts

PHIL 410 Latin Philosophical Texts
Fall and spring. Variable credit. Prerequisites: knowledge of Latin and permission of instructor. Hours to be arranged.
S. MacDonald.
Reading of philosophical texts in the original Latin.

PHIL 411 Greek Philosophical Texts (also Classics 311)
Fall and spring. Variable credit. Prerequisites: knowledge of Greek and permission of instructor. Hours to be arranged.
T. Irwin.
Reading of philosophical texts in the original Greek.

PHIL 412 Medieval Philosophy

PHIL 413 Topics in Ancient Philosophy

PHIL 414 German Philosophy after Kant

PHIL 415 Special Topics in the History of Philosophy

PHIL 416 Modern Philosophy

PHIL 417 Deductive Logic (also Mathematics 481)

PHIL 418 Intensional Logic (also Mathematics 483)

PHIL 427 Topics in the Philosophy of Language

PHIL 431 Contemporary Ethical Theory
Spring. 4 credits. M W F 1:25–2:40.
N. Sturgeon.
Topic for spring: Moral Realism and its Critics.

PHIL 432 Ethics and Value Theory (also Sociology for Humanities 404)
Fall. 4 credits. Not offered 1996–97.

PHIL 433 Contemporary Legal Theory (also Law 710)

PHIL 440 Topics in Social and Political Philosophy (also Government 474)
Spring. 4 credits. T R 2:55–4:10.
R. Miller, H. Shue, N. Hirschmann.
Topic for 1997: Community, Nation and Morality. Although the moral point of view is often taken to transcend ties to particular
groups, actual political choices often express the chooser's ties to a nationality, state, community, religion or racial or ethnic group. To what extent are such choices morally legitimate? Do such choices, located in particular identities, conflict with universalist moral principles, e.g., principles requiring equal respect for all? Our discussions will include such topics as: the role of community in liberalism and in critiques of liberal individualism; the nature of nationality and community and their role in both individual identity and political justice; multiculturalism and separatism, including specific issues of race, gender and sexuality; the moral status of patriotism; justice and international inequality. Readings will include work by Taylor, Rawls, Sandel, Genshaw, Gilligan, Okin, MacIntyre, Nagel, Kymlicka, West, David Miller, and the instructors. The course will have a seminar format. It is intended for both advanced undergraduates and graduate students.

PHIL 490 Special Studies in Philosophy
Fall and spring. 4 credits. Open only to honors students in their senior year. See Honors description at front of Philosophy section.

PHIL 611 Ancient Philosophy
Fall. 4 credits. G. Fine. Fall. M 4:30-6:30.
Topic: TBA.

PHIL 619 History of Philosophy #

PHIL 633 Philosophy of Language
Spring. 4 credits. M 7:30-9:30 p.m. Z. Szabó.
Topic: the concept of truth. We will discuss Tarski's theory of truth in detail and then turn to contemporary correspondence, coherence, pragmatist and deflationary accounts.

PHIL 641 Ethics and Value Theory
Not offered 1996-97.

PHIL 661 Theory of Knowledge
Fall and spring. 4 credits. Fall. R 4:30-6:30. K. Jones.
Topic for Fall: an examination of the epistemological status of testimony. Questions to be addressed include: How significant is testimony as a source of knowledge? Can we defend a default stance of trust in testimony? What is the role of testimony in scientific and in moral knowledge?

PHIL 662 Philosophy of Mind
Fall. 4 credits. W 4:30-6:30. S. Shoemaker.

PHIL 664 Metaphysics
Fall. 4 credits. T 4:40-6:30. C. Ginot.
Topic for fall 1996: Free will and responsibility.

PHIL 668 Philosophy of Science
Spring. 4 credits. W 7:30-9:30. R. Boyd.
Topic: Naturalism in philosophy.

PHIL 700 Informal Study
Fall or spring. Credit to be arranged. To be taken by graduate students only in exceptional circumstances and by arrangement made by the student with his or her Special Committee and the faculty member who has agreed to direct the study.

PHIL 773 Proseminar in Cognitive Studies (also Cognitive Studies 773, Linguistics 773, and Computer Sciences 773)
Fall. 2 credits. Fall: R grade.
For description, see COGST 773.

PHIL 774 Proseminar in Cognitive Studies (also Linguistics 774)
For description, see COGST 774.

PHYSICS

The Department of Physics offers a full range of university-level work in physics, from general education courses for nonscientists to terminal physics courses. The three-term sequence 112-213-214 or its honors version, 115-217-218, is recommended for engineers and physics majors. Physics 214 and 218 are placing an increasing emphasis on use of the computer for homework, laboratory exercises, and projects; some knowledge about computing, perhaps at the level of Computer Science 99 or 101, is desirable.

Courses beyond the introductory level that might be of interest to nonmajors include: Physics 316, Modern Physics I; Physics 330, Modern Experimental Optics; and Physics 360, Electronic Circuits.

Advanced placement and credit are offered as outlined in "Advanced Placement of Freshmen," or students may consult Professor Galik, the director of undergraduate studies, as should students requesting transfer credit for physics courses taken at another college.

The Major
The major program is constructed to accommodate students who wish to prepare for professional work or graduate work in physics as well as those who wish to complete their major program in the field of physics but have other post-graduate goals.

Students who wish to major in physics are advised to start the physics sequence in the first term of their freshman year. (Note that students who have had introductory calculus may take Physics 112 with co-registration in Mathematics 191.) The major program can still be completed with a second-term start, but flexibility in future course scheduling is reduced.

Prospective majors are urged to make an early appointment at the physics office for advice in program planning. Acceptance into the major program is normally granted upon completion of a year of physics and mathematics courses at Cornell with all course grades at the B- level or higher. The department office will give advice in the matter of selecting a major faculty adviser. Details of the major course program are worked out in consultation between the student and major adviser.

Physics Core
Common to all major programs is a requirement to complete a core of physics courses. In addition to the three-term introductory sequence (Physics 112-213-214 or Physics 116-217-218), the core includes five upper-level courses—a two-course sequence in modern physics (Physics 316-317), (b) at least three semester hours of laboratory work selected from Physics 310, 330, 360, 410. Astronomy 410, (c) an intermediate course in classical mechanics, and (d) an intermediate course in electromagnetism.
Accompanying these physics courses should be work in mathematics through at least Mathematics 294 or 222. Students following the professional/graduate school channel are expected to complete at least one additional year of applicable mathematics (Applied and Engineering Physics 321–322 or Mathematics 420/421–422).

In addition to the core, each physics major must complete 15 semester hours of credit in an area of concentration which has been agreed upon by the student and major faculty adviser.

**Concentration within Physics**
A student who wishes to pursue professional or graduate work in physics or a closely related field should follow a concentration within the field of physics. For those students with a strong secondary school preparation, the sequence Physics 116–217–218 is encouraged. Core courses in mechanics and electromagnetism will normally be Physics 318 and Physics 327, respectively. The minimum 15 hours beyond the core must be composed of physics courses with numbers greater than 300 and must include the senior laboratory course Physics 410. This means a physics concentration needs a minimum of 7 credit hours of laboratory work to complete the requirements. The accompanying table shows several typical course sequences by means of which the major requirements may be completed. The primary distinction among students who may follow the different sequences is the amount and level of pre-college work in calculus and physics. Changes in these typical patterns will be common, as agreed upon between student and major faculty adviser.

**Concentration outside Physics**
The concentration will reflect the student's interest in some area related to physics. The array of courses that comprise the concentration must have internal coherence. The array will normally be worked out in conference with the major faculty adviser and must be approved by the adviser. Of the required 15 hours credit beyond the core, at least 8 credits must be in courses numbered above 300. Students have chosen to concentrate in such topics as chemical physics, astrophysics, natural sciences, history and philosophy of science, computer science, meteorology, or econometrics. A combined biology-chemistry concentration is appropriate for pre-medical students or those who wish to prepare for work in biophysics. Students interested in a career in the teaching of science should consider the Teacher Education in Science and Mathematics (TESM) program, which is administered by the Department of Education and is described in detail in the College of Agriculture and Life Sciences section of this catalog. A concentration in "science education" would then typically include Education 402 and 403, both part of TESM, and two or more courses designed to broaden the student's background in general science and mathematics.

For students with concentrations outside physics, the core requirements in mechanics and electromagnetism can be appropriately met with Physics 314 and Physics 323, respectively.

Students with an astronomy concentration who might continue in that field in graduate school should use Astronomy 410, 431, 432 as part of the concentration, they are encouraged to use Physics 318 and 327 to satisfy the core requirements in mechanics and electromagnetism.

**Foreign Language Requirement**
Students interested in eventual graduate work in physics are advised to meet this College of Arts and Sciences requirement with work in French, German, or Russian.

**Honors**
A student may be granted honors in physics upon the recommendation of the Physics Advisers Committee of the physics faculty. There is no particular course structure or thesis requirement for honors.

**Double Majors**
Double majors including physics are possible and not at all uncommon. It should be noted, however, that if a student wishes to complete a major in physics as well as a major in one or more other subjects, any course used to satisfy a requirement of the second major may not be used also in satisfaction of any physics major requirement.

**Courses with Overlapping Content**
Because the department offers several courses with overlapping content, students should select courses carefully to meet the needs of their academic programs and to ensure credit for each course they take. Listed below are several typical course sequences by means of which the major requirements may be completed. The primary distinction among students who may follow the different sequences is the amount and level of pre-college work in calculus and physics. Changes in these typical patterns will be common, as agreed upon between student and major faculty adviser.

**Courses Prerequisites**
Prerequisites are specified in physics course descriptions to illustrate the materials that students should have mastered. Students who plan to program different from those suggested by the prerequisite ordering are urged to discuss their preparation and background with a physics adviser or with the instructor in the course. In many cases an appropriate individual program can be worked out without exact adherence to the stated prerequisites.

- For majors with concentrations outside physics, there will be a wide variation in individual programs, arranged to best match the field of concentration.
- Crossovers between the two sequences 112–213–214 and 116–217–218 are possible, although the combination 112–213–218 is difficult. Physics 207 may be substituted for Physics 112. Students taking 217 after 112 should coregister for 216.
- Exceptionally well-prepared students may be able to begin work at Cornell with Physics 217. Such students should come to the department office for advice in planning a course program.
- Physics electives include 360, 444, 454, 525, 553, 561, 572, the senior seminars 481–483, Astronomy 332 or 431–432, and AE&EP 343, 436.
- Physics 318 is a junior level course. Exceptionally well-prepared sophomores must obtain approval of the instructor before enrolling.

**Courses**
Listed days and times are not definite but are unlikely to change. Days and times will not be listed for 600-level courses.

**PHYS 101–102 General Physics**
101, fall; 102, spring; 101, 102, summer 4-week or 8-week session. 4 credits each term. General introductory physics for non-physics for non-physics majors.

**Prerequisites:** Three years of high school mathematics, including some trigonometry. A student without high school physics
PHYS 190 Supplemental Introductory Laboratory
Fall, spring. 1 credit. Times by arrangement with instructor. S/U only. (First offered spring 1996) Enrollment limited to students who have all of the following: (i) three transfer credits for introductory physics lecture material; (ii) a degree requirement of the laboratory component of that introductory course; (iii) approval of the director of undergraduate studies; (iv) permission of the lecturer of that course at Cornell. Enrollment limited. A Physics 190 Permission Form must be filed in 121 Clark Hall with the physics department course coordinator. Students perform the laboratory component of the introductory courses (Physics 112, 213, 214) to complement the lecture-related course credit acquired elsewhere. Those wishing to take the equivalent of one of these introductory courses at another institution should receive prior approval from the director of undergraduate studies.

PHYS 200 Art, Archaeology, and Analysis (also Engineering 185, MAE 285, Archaeology 285, English 285, and Art 372)
For description, see ENGR 185.

PHYS 201 Why the Sky is Blue: Aspects of the Physical World
Fall. 3 credits. Lec. T R 2:55-4:10, rec. W 2:30-3:20 or W 3:35-4:25. A. Sadoff. This is a descriptive physics course aimed specifically at the non-science student. There is an emphasis on the ideas of modern physics where the emphasis is both historical and thematic. The methodology of science and the nature of evidence is emphasized. An overriding theme is the character of physical laws as shown through the great principles of symmetry and conservation. While there are a few computational problems assigned, the purpose is to help students understand the concepts rather than to master problem-solving techniques. At the level of Physics for Poets by March.

PHYS 202 The World According to Physics—The Way Things Work
Summer-Semester session. 3 credits. Prerequisite: three years of high school mathematics, including some trigonometry. M-F 10:00-12:00; laboratories 2 afternoons per week to be arranged. L. N. Hand. An attempt to explain how and when natural scientists can come to conclusions with confidence. The first part of the course deals in a constructive way with the basic ideas of probability theory and explains why it is that in large systems likely events can become overwhelmingly likely. An introduction to mechanics and to heat as probabilistic mechanics follows. In this way, interested students are given a nontrivial understanding of the second law of thermodynamics, that putative bridge between C. P. Snow's two cultures. Another physical theory, quantum mechanics, in which chance occurs—though in a somewhat mysterious way—is touched on. Approximately five self-paced laboratory experiments will be included.

PHYS 204 Physics of Musical Sound
Spring. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra. E. Cassel. Many features of the production, propagation, and perception of musical sound may be understood in terms of important concepts in physics. Topics covered will include the mechanism of tone production in musical instruments, different qualities of musical scales and tuning, some basic principles of room acoustics and reproduction of sound, and aspects of the mechanism of hearing. There will be some lab activities using computers to sample the frequency spectrum of various sounds and wave forms. At the level of The Science of Sound, by T. D. Rossing.

PHYS 205 Reasoning about Luck
Fall. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra. Lec. M W 2:30-4:00, five one-hour labs to be arranged, rec. T 2:30-4:00. L. N. Hand. An attempt to explain how and when natural scientists can come to conclusions with confidence. The first part of the course deals in a constructive way with the basic ideas of probability theory and explains why it is that in large systems likely events can become overwhelmingly likely. An introduction to mechanics and to heat as probabilistic mechanics follows. In this way, interested students are given a nontrivial understanding of the second law of thermodynamics, that putative bridge between C. P. Snow's two cultures. Another physical theory, quantum mechanics, in which chance occurs—though in a somewhat mysterious way—is touched on. Approximately five self-paced laboratory experiments will be included.
also examine important concepts involved in military strategy and arms control. Much attention will be given to the problem and mechanisms of control of proliferation and weapons of mass destruction. Assignments emphasize quantitative reasoning skills as well as the technical subject matter.

PHYS 207-208 Fundamentals of Physics
207, fall; 208, spring. 4 credits each term. Prerequisites for Physics 207: high school physics plus Mathematics 111 or 191, or substantial previous contact with introductory calculus, combined with coregistration in a math course approved by instructor. Prerequisites for Physics 208: Physics 207 or 112 or 101 and at least coregistration in Mathematics 112 or 192. Physics 207-208 is a two-semester introduction to physics with emphasis on tools generally applicable in the sciences, intended for students majoring in a physical science, mathematics, or an analytically oriented biological science. Lec. M W F 9:05–9:55 or 11:15–12:05; two rec. and one lab each week. Evening exams. Fall, R. Littauer, spring, D. Fiecher.

207: Mechanics, conservation laws, waves, and topics from thermal physics, fluids, acoustics and properties of matter.
208: Electricity and magnetism, and topics from modern and special relativity, quantum and nuclear physics. At the level of Fundamentals of Physics, extended by Halliday, Resnick, and Walker.

PHYS 209 Relativity and Chaos
Fall. 3 credits. Intended for nonscientists; does not serve as a prerequisite for further science courses. Assumes no scientific background but will use high school algebra. Lec. M W F 2:30–3:20; rec. T 2:30–3:20 or T 3:35–4:25. N. D. Mermin.

We will examine two revolutionary fields of classical physics, one venerable and one relatively recent: the special theory of relativity will be developed, with a view to understanding how certain simple but apparently contradictory facts about light lead to extraordinary insights into the nature of time, and to a newer subject of "chaos" will be explored, with a view to seeing how extremely simple rules can lead to behavior of breathtaking complexity.

PHYS 210 Randomness in Classical and Quantum Physics

We will examine two areas of physics where randomness plays a role: the classical probability theory of gamblers, and its relation to subjects from the nature of coincidence to the direction of the flow of time, and the quantum theory, which promotes randomness from a consequence of human ignorance to a fundamental aspect of the physical world, leading to Einstein's celebrated rejection of a dice-throwing God and his more disturbing complaint about "spooky actions at a distance."

PHYS 213 Physics II: Heat/ Electromagnetism

PHYS 214 Physics III: Optics, Waves, and Particles
Fall, spring, (summer, 6 week session). 4 credits. Primarily for students of engineering and for prospective physics majors. Prerequisites: Physics 213 and coregistration in the continuation of the mathematics sequence. Lec. T R 9:05–9:55 or 11:15–12:05. Two rec. each week and one 3-hour lab alternate weeks. Evening exams. Fall, A. Rosen. Physics of wave phenomena, electromagnetic waves, interference and diffraction effects, wave properties of particles and introduction to quantum physics. Course includes computer use in solving problems and labs. At the level of Physics for Scientists and Engineers, by Tipler.

PHYS 216 Introduction to Special Relativity
Fall, spring, based upon preregistration. 1 credit. S-U only. Enrollment may be limited. Course will be completed within first four to five weeks of term. Coregistration in this course is a requirement for registration in Physics 217, unless the student has taken a relativity course at the level of Physics 116 or Astronomy 106. Prerequisite: Physics 112 or Physics 207 or permission of instructor. Lec. T R 8:00–8:50. Fall, P. Drell; spring, staff. Introduction to Einstein's Theory of Special Relativity: Galilean and Lorentz transformations, the concept of simultaneity, time dilation and Lorentz contraction, the relativistic transformations of velocity, momentum and energy, and relativistic invariance in the laws of physics. At the level of An Introduction to Mechanics by Kleppner and Kolenkow or Space and Time in Special Relativity by Mermin.

PHYS 217 Physics II: Electricity and Magnetism
Fall, spring. 4 credits. Enrollment may be limited. Intended for students who have done very well in Physics 112 or 116 and in mathematics and who desire a more analytic treatment than that of Physics 213. Prospective physics majors are encouraged to select Physics 217. Prerequisites: approval of student's adviser and permission of instructor. Placement quiz may be given early in the semester, permitting those students who find Physics 217 too abstract or analytical to transfer into Physics 215, which they can do without difficulty at that time. Vector calculus will be taught in this course, but previous contact, especially with the operations grad, div, and curl, is helpful. It is assumed the student has seen special relativity in Physics 116 or is currently enrolled in Physics 216. It is also assumed that the student has covered the material of Mathematics 192 and is coregistered in Mathematics 293 or the equivalent. Lec. M W F 10:10–11:00. Fall, B. Gittelman; spring, K. Berkelman. At the level of Electricity and Magnetism, by Purcell (Vol. 2, Berkeley Physics Series).

PHYS 218 Physics III: Waves and Thermodynamics
Fall, spring. 4 credits. Enrollment may be limited. A special section of Physics 214. Conditions governing enrollment are similar to those of Physics 217. Lec. M W F 11:15–12:05. Fall, J. Brock; spring, staff. Topics covered in recent years have included oscillators, mechanical waves, waves at interfaces, standing waves, guided electromagnetic waves, guided waves, scattering, interference and diffraction, geometric optics, the doppler effect, and an introduction to matter waves. Evening exams may be scheduled. A more rigorous version of Physics 214. At the level of Physics of Waves by Heald.

PHYS 310 Intermediate Experimental Physics
Spring. 3 credits. Enrollment may be limited. Prerequisite: Physics 208 or 213. Labs T W 1:25–4:25. Students select from a variety of experiments. An individual, independent approach is encouraged. Facilities of the Physics 410 lab are available for some experiments.

PHYS 314 Intermediate Mechanics
Spring. 4 credits. Prerequisites: Physics 208 or 214 (or equivalent) and Math 294 (or equivalent); Applied and Engineering Physics 322 or coregistration in Mathematics 420/421 recommended. Intended for physics majors with concentration outside of physics or astronomy. Physics 318 covers similar material at a more analytical level. Lec. M W F 10:10–11:00, rec. F 1:25–2:15. C. Franch. Includes Newtonian mechanics, Lagrange and Hamilton formulations, central forces, rigid body motion, and small oscillations. At the level of Classical Dynamics by Marion and Thornton.

PHYS 316-317 Modern Physics I and II
3 credits each term (216, fall; 317, spring). Physics 317, fall. The two courses comprise a two-term sequence and it is assumed that majors registering in Physics 316 will continue with Physics 317. Prerequisites: Physics 316. Physics 314 or 218, and coregistration in at least Mathematics 294 or equivalent; Physics 317: Physics 316. Lec. M W F 9:05–9:55, rec. T 2:30–3:20. Fall, 316 R. Patterson; 317 N. W. Ashcroft; spring, staff. Introduction to the physics of microscopic phenomena, emphasizing the use of elementary quantum and statistical mechanics. Physics 316:突破 classical concepts in microphysics, light quanta and matter waves; Schrödinger equation and solutions in 1 and 3 dimensions; hydrogen atom, exclusion principle, the periodic table at the level of Modern Physics from A to Z by Bohr. Physics 317: Classical and quantum statistical mechanics; molecules, solid state physics; nuclear physics and radioactivity; elementary particle physics at the level of An Introduction to Quantum Physics by French.

PHYS 318 Analytical Mechanics
Spring. 4 credits. Prerequisites: Physics 116 or permission of instructor; Applied and Engineering Physics 321 or Mathematics 420/421. Intended for junior physics

Newton's mechanics of particles and systems of particles, including rigid bodies; oscillating systems; gravitation and planetary motion; moving coordinate systems; Euler's equations; Lagrange and Hamilton formulations; normal modes and normal coordinates, introduction to chaos. At the level of Mechanics by Landau and Physics 318 Lecture Notes by Hand and Finch. Supplementary reading will be assigned.

PHYS 322 Intermediate Electricity and Magnetism
Fall. 4 credits. Prerequisites: Physics 208 or 214 (or equivalent) and Math 294 (or equivalent); coregistration in Applied and Engineering Physics 321 or Math 420/421 recommended. Intended for physics majors with concentration outside of physics or astronomy. Physics 322 covers similar material at a more analytical level. Lec. M W F 11:15-12:05, rec. F 2:30-3:20. G. F. Dugan.

Includes electro/magnetostatics, boundary value problems, dielectric and magnetic media, Maxwell's Equations, and electromagnetic waves, and an introduction to special relativity.

PHYS 327 Advanced Electricity and Magnetism
Fall. 4 credits. Prerequisites: Physics 217/218 or permission of instructor; coregistration in Applied and Engineering Physics 321 or Mathematics 420/421. Intended for physics majors concentrating in physics or astronomy. Physics 327 covers similar material at a less demanding level. N.B.: Physics 327 assumes knowledge of the material at the level of Physics 217. Lec. M W F 11:15-12:05, rec. F 2:30-3:20. V. Ambegaokar.

Electro/magneto-statics-vector and scalar potentials, Laplace's Equation and boundary value problems, field differences, radiation-solutions to Maxwell's Equations, energy-momentum of radiation; electrodynamics in media; special relativity-transformations, four vectors, particle kinematics and dynamics, relativistic electrodynamics. At the level of Introduction to Electrodynamics by Griffiths.

PHYS 330 Modern Experimental Optics (also A&EP 330)

A practical laboratory course in basic and modern optics. The seven projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology, and engineering. The students will also be introduced to digital imaging and image processing techniques. At the level of Modern Optics by Guenther.

PHYS 341 Thermodynamics and Statistical Physics

PHYS 360 Electronic Circuits (also A&EP 363)
Fall, spring. 4 credits. Prerequisites: Physics 208 or 213 or permission of the instructor. No previous experience with electronics assumed, however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term is usually less crowded. Lec. M 2:30-4:25, Labs. T R or W 1:25-4:25 (also evening labs M W 7:30-10:30 spring). Fall. E. Kirkland; spring. R. Thorne.

Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging. At the level of Microelectronic Circuits by Sedra.

PHYS 400 Informal Advanced Laboratory
Fall, spring (summer, 6 week session) Variable to 3 credits. Prerequisites: two years of physics or permission of instructor. Lab T W 1:25-4:25. Fall. W. Ho; spring. D. Hartill.

Experiments and techniques for gaining confidence in one or more areas, as listed under Physics 410, may be done to fill the student's special requirements.

PHYS 410 Advanced Experimental Physics
Fall, spring. 4 credits. Limited to seniors except by special permission. Prerequisites: Physics 214 (or 213 or 330 or 360) plus 318 and 327, or permission of instructor. Lec. M 2:30-4:25, Lab T W 1:25-4:25. Fall. W. Ho; spring. D. Hartill.

Selected topics in experimental concepts and techniques. About seventy different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, nuclear physics. The student performs three to six diverse experiments, depending on difficulty, selected to meet individual needs and interests. Independent work is stressed.

PHYS 443 Introductory Quantum Mechanics

Introduction to concepts and techniques of quantum mechanics, at the level of Quantum Mechanics, by Cohen-Tannoudji.

PHYS 444 Nuclear and High-Energy Particle Physics

Behavior of high-energy particles and radiation; elementary particles; basic properties of accelerators and detectors; general symmetries and conservation laws. At the level of Concepts of Particle Physics, by Gottfried and Weissskopf.

PHYS 454 Introductory Solid-State Physics

An introduction to modern solid-state physics, including crystal structure, lattice vibrations, electron theory of metals and semiconductors, and selected topics from magnetic properties, optical properties, superconductivity, and defects. At the level of Introduction to Solid State Physics, by Kittel, and Solid State Physics, by Ashcroft and Mermin.

PHYS 455 Geometrical Concepts in Physics
Spring. 3 credits. Prerequisite: Physics 327 and at least coregistration in Physics 318 or permission of instructor. Not offered spring 1997. Usually offered every other spring. Lec. T R 10:10-11:25.

Geometrical methods are an essential tool in modern theoretical physics and also provide deep insights into classical physics—electrodynamics, thermodynamics, mechanics, special and general relativity. This course will introduce basic concepts from topology and differential geometry, emphasize calculational methods and illustrate their utility by drawing examples from these areas of physics. In particular, we shall cover manifolds, differential forms, vector bundles, homotopy, homology and Lie groups. At the level of Geometrical Methods of Mathematical Physics by Schutz.

PHYS 480 Computational Physics (also Phys 680 and Astro 690)
Spring. 3 credits. S-U grades only. Prerequisites: The course assumes a good background in "mathematical methods for physics," and the ability to write programs in Fortran or C. No previous knowledge of numerical analysis is assumed. Lec. T R 10:10-11:25. Not offered in 1996-97.

A course designed to familiarize students with numerical techniques for solving diverse problems in physics and related fields. The problems will be drawn from many different branches of physics, but the emphasis will be on common techniques of solution. Numerical techniques discussed in the course will include ordinary and partial differential equations, linear algebra and eigenvalue problems, Monte Carlo techniques, solving
nonlinear equations, fast Fourier transforms, etc. In contrast to traditional numerical analysis courses, the flavor of the course will be "how-to," rather than theoretical. No theorems will be proved. Students will be expected to solve, both individually and in small teams, assigned numerical exercises.

PHYS 481-489 Special Topics Seminar Offerings are announced each term. 2 and 3 credits. Limited to senior physics majors and those who receive permission of instructor. S-U grades only.

PHYS 490 Independent Study in Physics Fall or spring. Variable to 4 credits. Ordinarily limited to seniors. Prerequisite: permission of professor who will direct proposed work. A copy of Request for Independent Study form must be filed with physics department course coordinator, 121 Clark Hall. Individual project work (reading or laboratory) in any branch of physics.

PHYS 500 Informal Graduate Laboratory Fall, spring, summer. Variable to 2 credits. By permission of instructor.

PHYS 510 Advanced Experimental Physics Fall, spring, summer. 3 credits. Lab. T W 1:25-2:45. Fall. W. Ho; spring, D. Harill. About seventy different experiments are available in acoustics, optics, spectroscopy, electrical circuits, electronics and ionics, magnetic resonance, X-rays, low temperature, solid state, cosmic rays, nuclear physics. Students perform four to eight experiments selected to meet individual needs. Independent work is stressed. An optional lecture associated with Physics 410, M 2:30-4:25 is available. It includes lectures on techniques used in experiments in the advanced laboratory and on current research topics.

PHYS 520 Projects in Experimental Physics Fall, spring, summer. Variable to 3 credits. To be supervised by faculty member. Students must advise department course coordinator of faculty member responsible for their project. Prerequisite: Physics 510.

Projects of modern topical interest that involve some independent development work by students. Opportunity for more initiative in experimental work than is possible in Physics 510.

[PHYS 525 Physics of Black Holes, White Dwarfs, and Neutron Stars (also Astronomy 511)]

PHYS 551 Classical Mechanics Spring. 3 credits. Prerequisite: an undergraduate course in classical mechanics at the level of books by K. S. yon or J. B. Marion. Lect. T R 10:10-11:10. Rec. R 2:30-3:30. Lagrangian and Hamiltonian formulation of classical mechanics, with modern applications in nonlinear dynamics. Foundations will be taught at the level of Mechanics, by Scheck.

PHYS 553-554 General Relativity (also Astronomy 509-510) 553, fall; 554, spring. 4 credits. Prerequisite: knowledge of special relativity, at the level of Classical Mechanics, by Goldstein. Lect. T R 1:25-2:40. S. Teukolsky. Physics 553 is a systematic introduction to Einstein's theory, with emphasis on modern coordinate-free methods of computation. Topics include: general relativity, modern differential geometry, foundations of general relativity, laws of physics in the presence of a gravitational field, experimental tests of gravitational theories. At the level of Gravitation, by Misner. A continuation of 553 that emphasizes applications to astrophysics and cosmology. Topics include relativistic stars, gravitational collapse and black holes, gravitational waves, cosmology.

PHYS 561 Classical Electrodynamics Fall. 3 credits. Lect. T R 8:30-9:55. Y. Elser. Maxwell's equations, electromagnetic potentials, electrodynamics of continuous media (selected topics), special relativity, radiation theory. At the level of Classical Electrodynamics, by Jackson.

PHYS 562 Statistical Physics Spring. 4 credits. Primarily for graduate students. Prerequisites: a good knowledge of quantum mechanics (at the level of Merzbacher), classical mechanics (at the level of Marion), and statistical mechanics (at the level of Reif). Lect. M W F 9:05-9:55. N. Ashcroft. Macroscopic or thermodynamic concepts including the laws of thermodynamics, thermodynamic functions, thermodynamic stability, and the thermodynamics of phase equilibria. Microscopic concepts including 1-, 2-, and N-particle quantum states; the microcanonical, canonical, and grand-canonical distributions; Bose-Einstein, Fermi-Dirac and Boltzmann statistics; the density-matrix. The microscopic-macroscopic connection. Applications include spin systems—the Ising and related models; strongly correlated fluids, and lattice-gases, including distribution and correlation functions, thermodynamic perturbation theory and introduction to critical phenomena; dense Fermi- and Bose-systems; linear response of quantum and classical systems; transport properties and the Boltzmann equation. At the level of Statistical Mechanics by Pathria or Statistical Mechanics of Phase Transition by Yeonans.

PHYS 572 Quantum Mechanics I Fall. 4 credits. Lect. M W F 11:15-12:05. D. Cassell. General principles of quantum mechanics, formulated in the language of Dirac. Systems with few degrees of freedom: hydrogen, including fine and hyperfine structure; the deuteron and neutron-proton scattering, helium. Theory of symmetries, perturbations and collisions will be developed as needed to analyze phenomena displayed by these systems. At the level of Quantum Mechanics by Landau and Lifshitz. A knowledge of the subject at the level of Phys 445 will be assumed, but the course will be self-contained.

PHYS 635 Solid-State Physics I Fall. 3 credits. Prerequisites: A good undergraduate solid-state physics course, such as Physics 574. R. Sibbbee. A survey of the basics of the physics of solids. Metals, crystal structures, electron and phonon states, semiconductors, some advanced topics. At the level of Physics of Amorphous Materials by Elliott.

PHYS 636 Solid-State Physics II Spring. 3 credits. Prerequisite: Physics 635. C. Henley. A continuation of Physics 635; magnetism, superconductivity, broken symmetries, elementary excitations, and other topics in quantum condensed matter physics not covered in Solid State Physics by Ashcroft and Mermin, such as topological defects, superfuids, the quantum Hall effect, mesoscopic quantum transport theory, disordered systems, Anderson localization and other metal insulator transitions.

[PHYS 646 High-Energy Particle Physics Spring. 3 credits. Not offered 1996-97. Next offered spring 1998. Topics of current interest, such as high-energy electromagnetic and neutrino interactions, electron positron annihilation, and high-energy hadronic reactions, are surveyed. Lectures and reading material are at the level of Introduction to High Energy Physics, by Perkins.]

Note: Only S-U grades will be given in courses numbered 650 or above.

PHYS 681 Relativistic Quantum Field Theory I Fall. 3 credits. S-U grades only. T.-M. Yan. Topics to be covered include consequences of causality and Lorentz invariance, field quantization, perturbation theory, calculation of cross sections and decay rates, and an introduction to radiative corrections and renormalization with applications to electromagnetic and weak interactions.
This course is a continuation of Physics 651 and introduces more advanced methods and concepts in quantum field theory. Topics include functional integral methods, quantization of non-abelian gauge theories, the renormalization group, dispersion relations, and spontaneous symmetry breaking. Applications to the electroweak theory and quantum chromodynamics are emphasized. At the level of Field Theory: Modern Primer by Ramond.

PHYS 653 Statistical Physics
Fall. 3 credits. Normally taken by graduate students in their second or later years. Prerequisites: Competence in the basic principles of quantum mechanics, statistical physics at the level of Physics 562, and thermodynamics. S-U grades only. E. Siggia.

Survey of topics in modern statistical physics: Dynamical statistical physics (kinetic theory, Boltzmann equation, hydrodynamics), theory of simple fluids, scaling theories and the renormalization group, phase transitions in disordered systems, pattern formation in nonlinear systems, percolation theory.

PHYS 654 Theory of Many-Particle Systems
Spring. 3 credits. Prerequisites: Physics 562, 635, 653, and 655. S-U grades only.

Equilibrium and transport properties of microscopic systems of many particles studied at zero and finite temperatures. Formalisms such as thermodynamic Green’s functions are introduced and applied to such topics as normal and superconducting Fermi systems, superfluidity, magnetism, insulating crystals.

PHYS 661 Advanced Topics in High Energy Particle Theory
Fall. 3 credits. Prerequisites: Physics 652. S-U grades only. P. Aryges.

This course will present advanced topics of current research interest. Subject matter will vary from year to year. Some likely topics are two-dimensional conformal field theory with applications to string theory and condensed matter physics, applications of the electroweak theory, lattice gauge theory, mathematical methods (e.g. group theory), perturbative quantum chromodynamics, anomalies and geometry, current algebra, heavy quark physics, heavy quark symmetry and phenomenological issues beyond the standard model.

PHYS 665 Topics in Theoretical Astrophysics
For description, see ASTRO 699.

PHYS 670 Instrumentation Seminar
Spring. 2 credits. S-U grades only. Conceptual, design, and performance of innovative instrumentation in condensed matter and elementary particle physics.

PHYS 680 Computational Physics (also Astronomy 680)
Not offered spring 1997.

PHYS 681-689 Special Topics
Offerings are announced each term. Typical topics are group theory, analyticity in particle physics, weak interactions, superfluids, stellar evolution, surface physics, Monte Carlo methods, low-temperature physics, magnetic resonance, phase transitions, and the renormalization group.

PHYS 690 Independent Study in Physics
Fall or spring. Variable to 4 credits. Students must advise department course coordinator, 121 Clark Hall, of faculty member responsible for grading their project. S-U grades only. Special graduate study in some branch of physics, either theoretical or experimental, under the direction of any professorial member of the staff.

PSYCHOLOGY

The major areas of psychology represented in the department are perceptual and cognitive psychology, biopsychology, and personality and social psychology. These areas are very broadly defined, and the courses are quite diverse. Biopsychology includes such things as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Perceptual and cognitive psychology includes such concepts as perception, attention, memory, and psycholinguistics. Personality and social psychology is represented by courses in social psychology and personality (such as Psychology and Law, Judgment and Decision Making, and Social Construction of Gender), as well as courses in fieldwork and psychopathology. In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

The Major
Admission to the major is granted to any student in good standing in the college who has passed three or more psychology courses at Cornell. The approved list includes such courses as animal learning, neuropsychology, interactions between hormones, other biochemical processes, and behavior. Perceptual and cognitive psychology includes such concepts as perception, attention, memory, and psycholinguistics. Personality and social psychology is represented by courses in social psychology and personality (such as Psychology and Law, Judgment and Decision Making, and Social Construction of Gender), as well as courses in fieldwork and psychopathology. In addition to the three major areas mentioned above, the department also emphasizes the statistical and logical analysis of psychological data and problems.

The department requires students to observe the following limits on fieldwork, independent study, and teaching.

1) Undergraduates may not serve as teaching assistants for psychology courses if they are serving as teaching assistants for any other course during the same semester.

2) An undergraduate psychology major cannot apply more than 12 of the credits earned in independent study (including honors work) and fieldwork toward the 40 credits required by the major.

Statistics requirement. Proficiency in statistics can be demonstrated in any one of the several ways listed below.

1) Passing Psychology 350.

2) Passing an approved course or course sequence in statistics in some other department at Cornell. The approved list of courses and sequences may change. It has usually included Sociology 301, and the sequences Education 352 and 353, and Industrial and Labor Relations 210 and 211. Requests that a particular course be added to this list may be made to Professor Galovich.

3) Passing a course or course sequence in statistics at some other college, university, or college-level summer school. The course or sequence must be equivalent to at least 6 semester credits. The description of the course from the college catalog
and the title and author of the textbook used must be submitted to Professor Gilovich for approval.

4) Passing an exemption examination. This examination can be given at virtually any time during the academic year if the student gives notice at least one week before. Students who have completed a theoretical statistics course in a department of mathematics or engineering and who wish to demonstrate competence in applied statistics usually find this option the easiest. Students planning this option should discuss it in advance with Professor Gilovich.

Concentration in biopsychology. Psychology majors interested in psychology as a biological science can elect to specialize in biopsychology. Students in this concentration must meet all of the general requirements for the major in psychology and must also demonstrate a solid grounding in biology; the physical sciences, including at least one introductory chemistry; and mathematics. Students will design with their advisors an integrated program in biopsychology built around course work in psychological, chemical, anatomical, and ecological determinants of human and nonhuman behavior offered by the Department of Psychology. Additional courses in physiology, anatomy, biochemistry, neurochemistry, neurobiology, and behavioral biology may be designated as part of the psychology major after consultation between the student and his or her biopsychology adviser.

Concentration in personality and social psychology. This concentration is offered in cooperation with the Department of Soci­ology. Psychology majors who wish to specialize in social psychology are expected to meet the general requirements set by their department, including statistics. To ensure a solid interdisciplinary grounding, students in the concentration will also be permitted to include some major courses in sociology and related fields. Advisers will assist students in the selection of a coherent set of courses from social organization, cultural anthropology, experimental social methodology, and several aspects of personality and social psychology. Seniors in the concentration may elect advanced and graduate seminars, with the permission of the instructor.

Undergraduate honors program. The honors program is designed for those exceptionally able students who wish to pursue an intensive and independent program of research in psychology. Successful participation in this program serves as evidence of the student's facility in the two most important skills of an academic psychologist: the capacity to acquire and integrate a substantial body of theoretical and factual material and the ability to engage in creative research activity. All qualified students planning on a graduate education in psychology or other academic fields should consider the honors program seriously. The program offers most students the closest contact and consultation with faculty that they will receive during their time at Cornell.

The core of the honors program is a research project that the student carries out in close collaboration with a faculty member in the field of psychology. It is assumed that most students will do so while enrolled in Psychology 470 (Undergraduate Research in Psychology). A written report of the research is to be given to the chair of the honors committee (currently Professor Khurana) toward the end of the last semester of the student's senior year. An oral defense of the thesis is then given before a committee of three faculty members, and the student presents his or her work in a public forum. Final honors standing (summa cum laude, magna cum laude, cum laude) is indicated on the student's diploma. The T. A. Ryan Award, accompanied by a cash prize, is awarded to the student who demonstrates the best honors project in a given year.

A student may formally apply to the honors program at any time during the senior year provided that she or he is actively engaged in independent research. However, students must do so by the second week of November. Applications should be given to Professor Khurana and should be made directly by the student.

Distribution Requirement

The distribution requirement in the social sciences is satisfied by any two courses in psychology with the exception of Psychology 123, 290, 307, 322, 324, 326, 332, 350, 361, 396, 410, 420, 422, 424, 425, 429, 431, 440, 441, 470, 471, 472, 473, 475, 478, 479, 491, 492.

Note: The Department of Psychology has listed all days and times for each course that we offer. If there should be changes in the days, times, or semester that a course is offered, we will post the necessary changes throughout the department and in the supplements of the Course and Time and Course and Room Rosters. Changes are also available on the World Wide Web site, http://comp9.psych.cornell.edu

Courses

**PSYCH 101 Introduction to Psychology: The Frontiers of Psychological Inquiry**

Fall. 3 credits. Students who would like to take a discussion seminar should also enroll in Psychology 103. M W F 10:10. J. B. Maas.

The study of human behavior. Topics include brain functioning and mind control, psychophysiology of sleep and dreaming, psychological testing, perception, learning, cognition, memory, language, motivation, personality, abnormal behavior, psychotherapy, social psychology, and other aspects of applied psychology. Emphasis is on developing skills to critically evaluate claims made about human behavior.

**PSYCH 103 Introductory Psychology Seminars**

Fall. 1 credit. Limited to 300 students. Prerequisite: concurrent enrollment in Psychology 101. Hours to be arranged. 12 different time options. J. B. Maas and staff.

A weekly seminar that may be taken in addition to Psychology 101 to provide an in-depth exploration of selected areas in the field of psychology. Involves extensive discussion and a term paper related to the seminar topic. Choice of seminar topics and meeting times will be available at the second lecture of Psychology 101.

**PSYCH 125 Introduction to Biopsychology**

Fall. 3 credits. No prerequisites. Can be used to satisfy the psychology major breadth requirement and as an alternative prerequisite for upper-level biopsychology courses. Students who would like to take a discussion/demonstration seminar should also enroll in Psych 125; a one hour per week one-credit section. M W F 10:10. D. Gudemuth.

An introduction to psychology from a biological perspective, including both evolutionary and physiological approaches to behavior. Topics include the structure, function, and development of the nervous system, genetic and biochemical bases of behavior, hormones and behavior, biological bases of learning, cognition, communication, and language, and the ecology and evolution of social organization and social development.

**PSYCH 128 Introduction to Psychology: Personality and Social Behavior**

Summer only. 3 credits. M-F 10:10–11:15. Staff.

Personality: the behavioral similarities and differences among people and how they develop; Freudian, learning, and humanistic theories of personality; research in personality; and personality assessment through testing. Social behavior: how people behave in interactions with others, persuasion, attraction, aggression, and conformity. How personality and social behavior influence each other and cause many interesting social and psychological phenomena.

Introductory courses in cognitive psychology. Each of the following four courses (205, 209, 214, 215) provides an introduction to a major area of study within cognitive psychology. These courses are independent of one another, and none has any prerequisites. Students may take any one of the courses or any combination of them (including all four). Courses may be taken in any order or simultaneously.

**PSYCH 205 Perception**

Spring. 3 credits. Open to first-year students. Graduate students, see Psychology 605. T R 11:40-12:55. J. E. Cutting.

One of four introductory courses in cognitive psychology. Basic perceptual concepts and phenomena are discussed with emphasis on stimulus variables and sensory mechanisms. All sensory modalities are considered. Visual and auditory perception are discussed in detail.
PSYCH 209 Developmental Psychology
Spring. 4 credits. Graduate students, see Psychology 709. T R 10:10-11:25. F. C. Keil.
One of four introductory courses in cognition and perception. A comprehensive introduction to current thinking and research in developmental psychology that approaches problems primarily from a cognitive perspective. The course focuses on the development of perception, action, cognition, emotion, personality, social understanding, language, and moral reasoning.

PSYCH 214 Issues in Cognitive Psychology
Fall. 3 credits. Sophomore standing required. Limited to 125 students. Graduate students, see Psychology 614. M W F 10:10. B. Khurana.
Various approaches to the study of cognition will be discussed. Basic concepts in how perception, action, cognition, emotion, personality, social understanding, language, and moral reasoning.

PSYCH 215 Psychology of Language (also Linguistics 215)
Fall. 3 or 4 credits (4-credit option involves term paper). Graduate students, see Psychology 715. M W F 11:15. M. Spivey-Knowlton.
One of four introductory courses in cognitive psychology. Introduction to the psychological study of language. Covers research in spoken language comprehension and production, reading, and language acquisition.

Introductory courses in social and personality psychology.

PSYCH 265 Psychology and Law
Fall. 3 credits. M W F 1:25. D. A. Dunning.
This course examines the implications of psychological theory and methods for law and the criminal justice system. We concentrate on psychological research on legal topics (e.g., confession, eyewitness testimony, jury decision making, homicide, aggression, the prison system), social issues (e.g., death penalty, affirmative action), as well as on psychologists as participants in the legal system (e.g., assessing insanity and dangerousness and for expert testimony).

PSYCH 275 Introduction to Personality Psychology
An introduction to research and theory in personality psychology, emphasizing contemporary approaches. Topics include the dynamics, structure, and assessment of personality as well as personality development and change. Biological and sociocultural influences on personality are also considered.

PSYCH 277 Social Construction of Gender (also Women's Studies 277)
Spring. 3 credits. Limited to 400 students. T R 2:55-4:10. S. L. Bem.
This course addresses the broad question of how an individual's gender and sexuality are constructed. Although some attention is given to biological perspectives, the course emphasizes the cultural and psychological processes by which male and female newborns are transformed into "masculine" and "feminine" adults. In addition to being interdisciplinary, the course is also oriented to questioning the "naturalness" of not only masculinity and femininity, but also heterosexuality as well. Among some of the many topics discussed the male-centeredness of the social world, the intersections of gender and race, are psychological androgyny, equilibration relationships, gender-liberated child-rearing, female sexuality, sexual harassment, and homophobia.

PSYCH 280 Introduction to Social Psychology
Spring. 3 or 4 credits; the optional (or fourth) credit is for participation in a limited enrollment discussion section. T R 10:10-11:25. T. D. Gilovich.
An introduction to research and theory in social psychology. Topics include processing of social information, social influence, persuasion, and attitude change; social interaction and group phenomena. The application of social psychological knowledge to current events will also be discussed.

PSYCH 286 Psychology of Law
The course surveys traditional and contemporary approaches to motivational behavior from Aristotle to Freud to Skinner to Lorenz. It also draws upon field studies, laboratory analyses, clinical cases, and stages to establish a scientific basis for motivation analysis. Normal and pathological feedings will serve as a target behavior.

PSYCH 290 Motivation
The course surveys traditional and contemporary approaches to motivation. It draws upon field studies, laboratory analyses, clinical cases, and developmental stages to establish a scientific basis for motivation analysis. Normal and pathological feedings will serve as a target behavior.

PSYCH 292 Intelligence
A scientific overview of the controversial issues that surround intelligence tests and what they measure. Topics include the history of testing, correlates of test scores, alternative approaches to mental ability, genetic and environmental contributions to diversity in intelligence, effects of schooling, worldwide IQ gains, cultural factors and group differences.

PSYCH 305 Visual Perception
Fall. 4 credits. Limited to 20 students. Prerequisite: Psychology 205 or permission of instructor. M W F 10:10. J. E. Cutting.
A detailed examination of pictures and their comparison to the real world. Linear perspective in Renaissance art, photography, cinema and video will be discussed in light of contemporary research in perception and cognition.

PSYCH 307 Chemosensory Perception
Fall. 3 or 4 credits; the optional (or fourth) credit is for an independent laboratory project. Registration for the 4-credit option requires permission of the instructor; students will read, analyze, and discuss difficult original and recently published papers on a topic. Limited to 30 students. Graduate students, see Psychology 607. Not offered 1996-97. T R 9:05. B. P. Halpern.
An examination of basic theory, data, and processes for perception of the chemosensory environment. After a very brief (about two weeks) lecture survey of the anatomy and physiology of human taste and olfaction, the remainder of the course uses the Socratic method, in which the instructor asks questions of the students, to cover topics such as chemosensory psychophysics, saliva, chemosensory bases for the tastes of foods, taste-smell interactions, chemosensory function in neonates and in the aged, temporal aspects of tasting, a place that can be acted upon, and organization of the world into meaningful objects and events.

PSYCH 311 Introduction to Human Memory
Spring. 3 credits. Limited to 40 students. Some familiarity with statistical methods and experimental design and with the study of cognitive psychology is desirable. Graduate students, see Psychology 611. T R 11:40-12:55. B. Khurana.
This course offers an overview of experimental findings and theoretical issues in the study of human memory. Coverage includes topics such as the nature of memory, various memory systems, coding and retrieval processes, practice and habit acquisition, organization for learning and memory, interference and forgetting, models of memory, memory dysfunction and its relation to normal memory.

PSYCH 316 Auditory Perception
Fall. 3 or 4 credits; the 4-credit option involves a laboratory project or paper. Prerequisite: Psychology 205, 209, 214, or 215 (other psycholinguistics, or biology courses could serve as prerequisite with permission of the instructor). Limited to 30 students. Graduate students, see Psychology 716. T R 10:10-11:25. C. L. Krumhansl.
Basic approaches to the perception of auditory information, with special consider-
ation of complex patterns such as speech, music, and environmental sounds.

**PSYCH 322 Hormones and Behavior (also BIONB 322)**

Spring. 3 or 4 credits; the 4-credit option involves a research project done once a week in which students will be expected to read original papers in the field and participate in discussion. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: BIONB 221 or 222 and introductory biology plus a course in psychology. S-U grades optional. Graduate students, see Psychology 722. M W F 1:25-2:15.

D. Gudermuth.

Following a review of the neural and endocrine systems, this course connects endocrine physiology to specific behaviors observed in various species, including humans. Although the relationship between sexual physiology and behavior is strongly emphasized, the lectures also describe hormonal contributions to parental behavior, aggression, stress, learning and memory, homeostasis and biological rhythms. Topics for the discussion sessions are chosen by the students within the context of hormonal influences on behavior.

**PSYCH 324 Biopsychology Laboratory (also BIONB 324)**

Fall. 4 credits. Limited to 20 juniors and seniors. Prerequisites: Psychology 123 or BIONB 221 or 222, and permission of instructor. T R 1:25-4:25. T. J. DeVoogd. Experiments designed to provide experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included.

**PSYCH 325 Psychopathology**

Fall. 4 credits. Prerequisite: Psychology 123. M W F 11:15. K. L. Lockhart.

This course examines the nature and symptoms of the major forms of psychopathology. Etiological factors are studied from a variety of different perspectives, e.g., psychologi cal, biological, and socio-cultural. Treatment approaches to psychopathology are covered in weekly discussion sections.

**PSYCH 326 Evolution of Human Behavior**

Fall. 4 credits. Prerequisite: Psychology 123, or an introductory biology course, or an introductory anthropological course. Graduate students, see Psychology 626. T R 2:55-4:10. R. E. Johnston.

A broad comparative approach to the behavior of animals and humans with special emphasis on the evolution of human behavior. Topics covered will vary but will include some of the following: human evolution, evolutionary and sociobiological theory, animal communication, nonverbal communication, language, cognitive capacities, social behavior and organization, cooperation and competition, sexual behavior, mating and marriage systems, aggression, warfare.

**PSYCH 327 Fieldwork in Psychopathology and the Helping Relationship**

Fall. Spring. 3 or 4 credits. Prerequisites: Psychology 325 or HDFS 370 and concurrent registration in 325 or HDFS 370 and permission of instructor. S-U grades only. Students do not enroll in advance for this course. Field placement assignments are made during the first two weeks of the semester. Students who have already taken Psychology 325 or HDFS 370 must contact the instructor during the first week of the semester. Enrollment is limited by the fieldwork placements available. Fee, $25 each semester. T R 12:20-1:10. K. L. Lockhart and staff.

This is a year-long lecture and discussion course. The year-long commitment is mandatory. Psychology 328 will be for students taking the course a second time. An "R" grade will be assigned in the fall semester, and a S-U grade will only be assigned in the spring semester. An introductory fieldwork course for students currently enrolled in or who have taken Psychology 325 or HDFS 370. Fieldwork placements include the school system, psychiatric institutions, halfway houses, and other mental health oriented facilities. In addition to fieldwork, weekly supervisory/seminar meetings are held to discuss fieldwork issues and assigned readings.

**PSYCH 328 Continuing Fieldwork in Psychopathology and the Helping Relationship**

Fall, spring. 4 credits. Prerequisites: Psychology 325, 327, or HDFS 370 and permission of instructor. S-U grades only. May not be taken more than twice. Students do not enroll in advance for this course. Fee, $25 each semester. T R 12:20-1:10. K. L. Lockhart and staff.

Designed to allow students who have done fieldwork as part of Psychology 327 to continue their field placements or begin new field placements for academic credit. An "R" grade will be assigned in the fall semester, and a S-U grade will only be assigned in the spring semester.

**PSYCH 332 Biopsychology of Learning and Memory (also BIONB 332)**

Spring. 3 credits. Prerequisites: one year of biology and either a biopsychology class or BIONB 222. Limited to 60 students. Graduate students, see Psychology 632. M W F 11:15. T. J. DeVoogd.

This course will survey the approaches that have been developed in order to understand the biological bases for learning and memory. Topics will include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathophysiology. Many of the readings will be from primary literature.

**PSYCH 342 Human Perception: Applications to Computer Graphics, Art and Visual Display**

Fall. 3 or 4 credits. The 4-credit option involves a term paper. Prerequisite: Psychology 101 or permission of instructor. Psychology 205 strongly recommended. Graduate students, see Psychology 642. T R 11:40-12:55. Not offered 1996-97.

D. J. Feig.

Our present technology allows us to transmit and display information over a variety of media. To make the most of these media, it is important to consider the limitations and abilities of the human observer. The course will consider a number of applied aspects of human perception with an emphasis on the display of visual information. Topics to be covered include: "Three-dimensional" display systems, color theory, spatial and temporal limitations of the visual systems, attempts at subliminal communication, and "visual" effects in film and television.

**PSYCH 347 Psychology of Visual Communications**

Spring. 3 credits. Limited to 15 students. Prerequisites: Psychology 101 and permission of instructor. R 10:10-12:05. J. B. Mass.

An exploration of theories of education, communication, perception, attitude, and behavior change as they relate to the effectiveness of visual communication systems. Emphasis is on the use of photography and computer graphics to deliver educational messages.

**PSYCH 350 Statistics and Research Design**

Fall. 4 credits. Limited to 120 students. M W F 2:30-3:20. T. D. Gilovich.

Acquaints the student with the basic concepts of statistical description (measures of average, variation, correlation, etc.) and more important, develops an understanding of statistical inference. Emphasis is placed on those statistical methods of principal relevance to psychology and related behavioral sciences.

**PSYCH 361 Biopsychology of Normal and Abnormal Behavior (also Nutritional Sciences 361)**

Fall. 3 credits. Prerequisites: an introductory biology course and an introductory psychology course, or permission of instructor. S-U grades optional. Juniors and seniors only. M W F 9:05-9:55. Not offered 1996-97.

B. J. Strupp.

A critical evaluation of factors thought to underlie normal and abnormal behavior and/or cognitive functioning. Psychological, biological, and societal influences will be integrated. Topics include: (1) psychiatric disorders (depression and eating disorders); (2) the psychobiology of learning, memory, and intelligence; (3) nutritional influences on behavior (sugar, food additives, malnutrition, dieting); (4) cognitive dysfunction (e.g., amnesia, Alzheimer's disease); and (5) developmental and environmental toxins and drugs of abuse.

**PSYCH 380 Community Mental Health (also Human Service Studies 380)**

Summer only. 3 or 4 credits (4-credit option involves term paper). M-F 10:00-11:15. Staff.

Basic concepts in the field of community mental health. Social models of mental illness, epidemiology, the role of culture and social class in mental illness, public attitudes, and civil liberties.

**PSYCH 396 Introduction to Sensory Systems (also BIONB 396)**

Spring. 3 or 4 credits (4 credits with term paper). Registration for the 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or biopsychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students will be expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Offered alternate years. Graduate students, see Psychology 396. Not offered 1996-97. M W F 10:10.

B. P. Halpem.

The course will be taught using the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and
discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. Classroom discussion can increase, but not decrease, a student's final grade. There are two preliminary exams. The principles and limitations of major methods used to examine sensory systems will be considered. General principles of sensory systems, and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, thermoreception) will be selected for special attention. Two or more textbooks and a course packet of reproduced articles will be used. An Introduction to the Physiology of Hearing, 2nd edition by J. O. Pickles, Hearing: Physiological Acoustics, Neural Coding, and Psychoa­stics, by W. L. Gulick, G. A. Gescheider, and B. D. Fridline, The Retina: An Approachable Part of the Brain, edited by J. M. Brookhard and V. B. Mountcastle will be used.

PSYCH 402 Current Research on Psychopathology and the Family
Spring. 4 credits. Limited to 20 students.

PSYCH 404 Psychopathology and the Family
Spring. 4 credits. Limited to 20 students.
Prerequisite: Psychology 325 or HSDF 370 and permission of the instructor. M 1:25-4:25. K. Lockhart.

PSYCH 410 Undergraduate Seminar in Psychology
Fall or spring. 2 credits. Nonmajors may be admitted, but psychology majors are given priority. Times to be arranged.
Staff.
Information on specific sections for each term, including instructor, prerequisites, and time and place, may be obtained from the Department of Psychology office, 211 Urs Hall.

PSYCH 412 Laboratory in Cognition and Perception
Spring. 4 credits. Limited to 15 students.
Prerequisite: statistics and one course in cognition or perception is recommended.

A laboratory course is designed to introduce students to experiential methods in perception and cognitive psychology. Students will take part in a number of classic experiments and develop at least one independent project. Computers will be available and data analysis projects (e.g., experiments whose computer literacy is not required. Projects will be selected from the areas of visual perception, pattern recognition, memory, and concept learning.

PSYCH 413 Information Processing: Conscious and Non-conscious
Spring. 4 credits. Prerequisites: at least one course in experimental psychology, and permission of instructor. Psychology 350 or equivalent will be useful for evaluating empirical articles. Not offered 1996-97. R 10:10-12:35. B. Khurana.

In the past decade or so, a not-so-quiet revolution has been taking place in the field of cognition regarding the problem of conscious mental computation. Data have come from patients with striking neuropsychological syndromes or phenomena, e.g., "blindsight" in which patients can respond to visual stimuli without the conscious experience of vision or the "amnesic" syndrome in which patients show intact learning and memory without the awareness of the learning encounters. This signature of independent mental computations has also been amply demonstrated in normal individuals in laboratory settings. We will critically evaluate the theoretical worth and empirical justification of the distinction between "conscious" and "non-conscious" mental computations in normal and patient populations. Weekly readings will be from, but not limited to, topics such as visual processes, face recognition, spatial attention, explicit and implicit memory, and control processes. Students will be required to: (1) lead and participate in advanced level discussions of classic and current papers, (b) submit weekly summaries of the assigned readings, and (c) write a term paper on a topic of their interest. Students should be prepared to read extensively, think analytically, discuss cogently, and write succinctly.

PSYCH 414 Comparative Cognition
Spring. 3 credits. Prerequisites: Psychology 205, 209, 214, or permission of instructor. Graduate students, see Psychology 714. M W F 11:15-12:05. F. C. Keil.

Students who take this course will get a survey of how cognitive processes are evaluated, as are models of conceptual computational approaches to understanding perception and cognition. We will explore linear systems analysis, connectionist models, dynamical systems, and production systems, but we will also examine a few non-computer models of how complex sensory information gets represented in these models, as well as how it gets processed. This course will cover computational accounts of language processing, language acquisition, concept formation, and visual development, among others. Students will complete a final project that applies a computational model to some perceptual/cognitive phenomena.

PSYCH 417 The Origins of Thought and Knowledge
Fall. 4 credits. Prerequisites: Psychology 205, 209, 214, or permission of instructor. Graduate students, see Psychology 717. M 1:25-4:25. F. C. Keil.

An in-depth analysis of current theories concerning the growth of thought and knowledge in childhood. Several controversies will be discussed in detail, including: Are mental abilities organized in local domains or modules that have their own patterns of development, or is cognitive development a more general process? Do comparative studies with other species and evolutionary models provide any useful insights into cognitive development in humans? Are there qualitative restructurings of thought and knowledge with development, or is the process more continuous in nature? What restrictions should these developmental considerations place on models of thought and knowledge in adults?

PSYCH 418 Psychology of Music
Spring. 3 or 4 credits, depending on whether student elects to do an independent project, as an independent study, or senior standing with major in psychology or music and some background in both, or permission of instructor. Graduate students, see Psychology 618. M W 2:55-4:10. L. Knuttmann.

Detailed analysis of topics in the psychology of music, including theories of consonance, perception of tonal-harmonic structure, memory for music, and effects of musical training. Emphasis given to systematic methodologies.
PSYCHOLOGY 495

[PSYCH 419] Neural Networks Laboratory
Spring. 4 credits. Prerequisites: at least one course in biology or biological psychology, one year of calculus, and permission of instructor. Limited to 15 students. Graduate students, see Psychology 619. Not offered 1996-97. T R 2:55-5:00. D. Field.

The course will take a hands-on approach to understanding the limitations and successful applications of neural networks to problems in cognitive and biological psychology. A variety of neural network architectures will be discussed and explored using computer simulations. Applications of networks to perceptual recognition and representation will be emphasized. We will consider the class of problems that different networks can solve and consider the accuracy with which they model real nervous systems. Students will complete weekly lab reports and develop an independent project demonstrating the application of a neural network to a problem discussed in the course.

[PSYCH 420] Laboratory in Neuroethology (also BIONB 420)
Spring. 1 credit. Prerequisite: BIONB 424 or Psychology 424 or equivalent. Permission of instructor required. Lab: M 12:20-5:00. Not offered 1996-97. C. D. Hopkins. Design and assessment of laboratory experiments for BIONB 424/PSYCH 424, this course will illustrate principles of neuroethology: sensory processing, neuroanatomy, and behavioral analysis. Students will participate in six laboratory exercises scheduled throughout the semester. Labs will be open from 12:20 until 5:00 p.m. on Mondays and Wednesdays. Labs will be done in groups of two. Students in this course will learn the fundamentals of electrophysiology, neuroanatomy, and behavior through a series of six laboratory exercises using electric fish, Drosophila, crayfish and Limulus, bats and moths.

[PSYCH 422] Developmental Biopsychology
Fall. 4 credits. Prerequisites: a course in introductory biology or biopsychology and a course in biopsychology or neurobiology (such as Psychology 123 or BIONB 221). Graduate students, see Psychology 622. Not offered 1996-97. M W F 9:05-9:55. B. L. Finlay. We will discuss the development and evolution of the brain to the development of behavior. Topics include how neurons are generated, find targets, and establish connections; the emergence of reflexive and complex behavior; how experience affects the developing brain; evolutionary perspectives on the development of perception, memory, and communication systems; and abnormal development.

[PSYCH 424] Neuroethology (also BIONB 424)
Spring. 3 credits. Prerequisites: BIONB 221 and 222. S-U grades optional for graduate students only. T R 9:05-11:00. R 9:05-9:55. Classes will be held on T R at 9:05-11:00. Thursday's class will run for one hour. Recitations will be scheduled in class. Not offered 1996-97. C. D. Hopkins.

In the 1950's-1970's ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolution and careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course will review the current status of research in neuroethology, including: mechanisms of acoustic communication in insects and in vertebrates; echolocation in bats and sound localization in other animals, especially related to the logical and electrophysiological mechanisms and methods of communication; and visual processing. In addition, it will review studies of the neural systems involved in decision making, in initiating action, and in coordinating body acts. Assigned readings will include original articles from the scientific literature. A term paper/poster on neuroethology will be required.

PSYCH 425 Cognitive Neuroscience
Fall. 3 or 4 credits (4-credit option includes a discussion section and requires an additional paper). Prerequisites: a course to study modern physiological mechanisms of perception, memory, and communication in the vertebrate and invertebrate nervous system. The importance of evolutionary and mechanistic approaches for understanding the human behavior and cognition will be stressed. This course will cover issues in cognitive neuroscience: mechanisms of perception, particularly vision, and the neuropsychology of everyday acts involving complex cognitive skills such as recognition of individuals, navigation in the world, language, memory, and social interaction.

PSYCH 429 Obliteration and Taste: Structure and Function (also BIONB 429)
Fall. 3 or 4 credits (4-credit option requires a term paper or research project). The research project can, but does not need to, study nonhuman vertebrates. Preference given to junior and senior psychology and biology majors and graduate students. Prerequisite: one 300-level course in biopsychology or equivalent. Core: Psychology 629. Not offered 1996-97. T R 9:05. B. P. Halpern. The structural and functional characteristics of olfaction and taste will be explored by reading and discussing current literature in these areas. Structure will be examined at the light levels of electron microscopes as well as at the molecular level. Function will be primarily neurophysiological and biochemical aspects. The emphasis will be on vertebrates, especially air-breathing vertebrates in the case of olfaction, but there will be some coverage of invertebrates. A textbook and a course packet of reproduced articles will be used. At the level of Smell and Taste in Health and Disease, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow; The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.

PSYCH 431 Effects of Aging on Sensory and Perceptual Systems (also BIONB 431)
Fall. 3 or 4 credits; the optional (or fourth) credit involves a term paper. Prerequisites: an introductory course in biology or psychology, plus a second course in perception or neurobiology or cognition or psychology. No auditors. Limited to 25 students. Graduate students, see Psychology 631. Not offered 1996-97. T R 10:10-11:25. B. P. Halpern. A literature-based examination of post-maturational changes in the perceptual, structural, and physiological characteristics of somesthetic, chemosensory, visual, and auditory systems. Emphasis will be on human data, with non-human information included where especially relevant. Studies of developments in human sensory prosthetic devices, and in regeneration of receptor structures, will be examined. Brief written statements (by electronic mail) of questions and problems related to each set of assigned readings will be required at least one day in advance of each class meeting. This course will be taught using the Socratic Method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with the subject matter of the course. Students are expected to come to each class having already done, and thought about, the assigned readings.

PSYCH 436 Language Development (also Human Development and Family Studies 436 and Linguistics 436)
Spring. 4 credits. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. Open to undergraduates and graduate students. S-U grades optional. Graduate students will also meet for additional advanced discussion of course content. Graduate students should also enroll under BIONB 710 (Linguistics 700) (2 credits). Not offered 1996-97. T R 3:10-4:25. B. Lust.

This course is a survey of basic issues, methods, and research in the study of first language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental linguistic issues of "universal grammar" and the biological foundations for acquisition are discussed, as are the issues of relations between language and thought. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

PSYCH 440 The Brain and Sleep
Fall. 4 credits. Prerequisites: At least Psychology 123 or BIONB 221. A course in biology, biopsychology or neurobiology in particular, BIONB 222 is recommended. S-U grades optional. Graduate students, see Psychology 640. T R 10:10-11:25. H. S. Porte.

Taking a comparative evolutionary perspective—Do insects sleep? Do fish sleep?—This course examines the neural events that instigate, maintain, and disturb the states and rhythms of sleep in various species. Emphasizing human data where possible, special topics will include sleep deprivation and the biological functions of sleep, the sleep-related role in learning and memory; biologically interesting deviations from normal sleep. A cognitive neuroscience of sleep will take shape as we look at sleep's psychological correlates—including dreams in REM-sleep— in light of what we know about the brain and sleep.
PSYCH 441 Laboratory in Sleep and Dreaming
Spring. 4 credits. Prerequisites: Psychology 440 or comparable preparation, and permission of the instructor during preregistration. Laboratory fee: $35. W 7:30-10:30 p.m. H. S. Porte. Emphasizing the neurobiology of sleep state, the course will be a laboratory study of human sleep and dreaming. Serving as both experimenter and subject, each student will learn the rationale and techniques of electroencephalography and other bioelectric measurement of state. Using computerized data analysis, students will complete weekly laboratory reports and a collaborative term project. Sleep recordings will be done during the day or evening when possible. Occasional overnight recording sessions will follow the regular class meeting.

PSYCH 450 The Lenses of Gender (also Women's Studies 450)
Fall. 4 credits. Permission of instructor. Previous coursework in Women's Studies strongly recommended. Limited to 15 seniors and graduate students. No preregistration. Interested students should attend the first class session. Graduate students, see Psychology/Women's Studies 650. Not offered 1996-97. W 2:30-4:30. S. L. Bern. This seminar analyzes the ideological, institutional, and psychological mechanisms that are responsible for the social reproduction of male power in Western—and especially American—culture. It is very interdisciplinary, covering material from biology, history, anthropology, law, sociology, psychology, psychiatry, philosophy, and feminist theory. As much as the central focus of the seminar is on gender, it does not analyze gender in isolation but looks also at its interactions with race and (especially) sexuality. Students must write a final exam, a term paper, plus weekly commentaries on the readings.

PSYCH 470 Undergraduate Research in Psychology
Fall or spring. 1-4 credits. S-U grades optional. Written permission from the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours to be arranged. Staff. Practice in planning, conducting, and reporting independent laboratory, field, and/or library research.

PSYCH 471 Advanced Undergraduate Research in Psychology
Fall or spring. 1-4 credits. S-U grades optional. Written permission of the staff member who will supervise the work and assign the grade must be included with the course enrollment material. Students should enroll in the section listed for that staff member. A section list is available from the Department of Psychology. Hours to be arranged. Staff. Advanced experience in planning, conducting, and reporting independent laboratory, field, and/or library research. One, and preferably two, semesters of Psychology 470 is required. The research should be more independent and/or involve more demanding technical skills than that carried out in Psychology 470.

PSYCH 472 Multiple Regression
Spring, weeks 1-7. 2 credits. Prerequisite: one solid semester of introductory statistics. Analysis of variance is helpful but not required. M W F 10:10.
R. B. Darlington. Uses and pitfalls of multiple regression in causal analysis, path analysis, and prediction. Emphasis on analyzing data collected under uncontrolled conditions. Includes collinearity, indicator variables, sets, adjusted and shrunken R², suppressors, hierarchical analysis, overcontrol, experimental design. Very little hands-on computer use; uses MYSTAT computer program.

PSYCH 473 General Linear Model
Spring, weeks 8-14. 2 credits. Prerequisite: Psychology 472 or equivalent. M W F 10:10. R. B. Darlington. Includes multivariate categorical variables, corrections for multiple tests, diagnostic methods, nonlinear relationships, interaction, main and simple effects, and basic power analysis. Emphasizes MYSTAT and SYSTAT, briefly discusses SAS PROC REG and SAS PROC GLM.

PSYCH 475 Multivariate Analysis of Psychological Data
Fall. 2 credits. Prerequisite: Psychology 473 or permission of instructor. Not offered 1996-97. R 10:10-12:05. R. B. Darlington. Students vote on topics to cover, choosing among nonparametric methods, time series, cluster analysis, multidimensional scaling, component analysis, factor analysis, MANOVA, canonical correlation, repeated measures, logistic regression, log-linear models, corrections for unreliability in regression, nesting, power analysis, influence analysis, and other topics. First class sketches all these topics before vote.

PSYCH 478 Psychometric Theory

PSYCH 479 Multisample Secondary Analysis
Fall, weeks 11-14. 1 credit. Prerequisite: Psychology 350 or equivalent. Not offered 1996-97. T R 10:10-12:05.
R. B. Darlington. Statistical methods for analyzing and integrating the results of many independent studies on related topics.

PSYCH 481 Advanced Social Psychology
Fall. 4 credits. Limited to 20 students, by application. Senior psychology majors have priority. Graduate students, see Psychology 681. T R 10:10-11:25. D. T. Regan. Selected topics in social psychology are examined in depth with an emphasis on the relationship between experimental research and the development of theory. Reading will be mostly primary sources. Among the theoretical approaches to social behavior we may discuss are social comparison theory, cognitive dissonance, attribution processes and social judgment, dramaturgy and impression management, and biological perspectives.

PSYCH 489 Seminar: Beliefs, Attitudes, and Ideologies
Spring. 4 credits. Prerequisites: one course in psychology or sociology and permission of instructor during preregistration. Seniors are given priority. W 2:30-4:30. D. J. Bem. For this seminar, we will examine some fundamental properties of beliefs and attitudes: how they are formed and changed, what psychological functions they serve for the individual, and how they coalesce into belief systems or ideologies. Second, we will examine a number of ideologies in detail: for example, the political ideologies of the American public, gender, sexual orientation, the ideological factors that promote anorexia in a society, the changing worldviews of "pro-choice" and "pro-life" activists, the ideologies of psychology and science, and more. Participants will also be encouraged (via brief writing assignments and a term paper) to explore one or more of their own ideologies.

PSYCH 491 Research Methods in Psychology
Spring. 4 credits. Enrollment limited to 25 students. Recommended: permission of instructor, Psychology 350, experience in upper-division psychology courses, or graduate standing. Graduate students, see Psychology 691. T R 10:10-11:25. D. A. Dunning. An intensive examination of the basic research methods used in social, personality, cognitive, and developmental psychology. The course will focus on designing and conducting experiments, i.e., how to turn vague theories into concrete and testable notions, evaluate studies, avoid common pitfalls, and, finally, remain ethical. Beyond learning methods of "correct" and rigorous experimentation, we will also discuss what makes a research study actually interesting. The course in addition, will cover test construction, survey methods, and "quasi experiments." Students will concentrate on completing a small research project in which they conduct an experiment, interpret its data, and write up the results.

PSYCH 492 Sensory Function (also BIONB 492)
Spring. 3 or 4 credits. The 4-credit option involves a one-hour section once a week, in which students are expected to participate in discussions. The 3-credit option is not always offered. Prerequisite: a 300-level course in biopsychology, or BIONB 222 or BIOAP 311, or permission of the instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Graduate students, see Psychology 692. Not offered 1996-97. M W F 10:10. B. P. Halpern and M. Howland. This course covers classical topics in sensory function such as vision, hearing, touch and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, the development of sensory systems, and non-classical topics such as electrosensory and internal chemoreceptors. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and physiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of The Senses, edited by Barlow and Mollon, and An Introduction to the Physiology of Hearing, 2nd edition, by Pickles.
Advanced Courses and Seminars

Advanced seminars are primarily for graduate students, but with the permission of the instructor they may be taken by qualified undergraduates. The selection of seminars to be offered each term is determined by the needs of the students.

A supplement describing these advanced seminars is available at the beginning of each semester and can be obtained from the department office (211 Uris Hall). The following courses may be offered either term and carry 4 credits unless otherwise indicated.

**PSYCH 510-511 Perception**
**PSYCH 512-514 Visual Perception**
**PSYCH 513 Learning**
**PSYCH 515 Motivation**
**PSYCH 516-518 Topics in Psycholinguistics**
**PSYCH 519-520 Cognition**
**PSYCH 521 Psychobiology**
**PSYCH 522 Topics in Perception and Cognition**
**PSYCH 523 Hormones and Behavior**
**PSYCH 524 Sex Differences in Brain and Behavior (also BIONB 626)**
**PSYCH 525 Mathematical Psychology**
**PSYCH 526 Topics in Biopsychology**
**PSYCH 527 Animal Behavior**
**PSYCH 528 Statistics in Current Psychological Research**
**PSYCH 529 Psychological Tests**
**PSYCH 530 Topics in Psychopathology and Personality**
**PSYCH 531 Distinguished Speakers**
**PSYCH 532 Experimental Social Psychology**

**PSYCH 600 General Research Seminar**
Fall or spring. No credit.

**PSYCH 605 Perception (also Psychology 205)**

**PSYCH 607 Chemosensory Perception (also Psychology 307)**

**PSYCH 609 Development of Perception (also Psychology 308)**

**PSYCH 611 Introduction to Human Memory (also Psychology 311)**

**PSYCH 612 Laboratory in Cognition and Perception (also Psychology 412)**

**PSYCH 613 Obesity and the Regulation of Body Weight (also Nutritional Sciences 315)**
Spring. 3 credits. Limited to 30 students. Prerequisites: one course in psychology and one course in nutrition. Undergraduate students may register with permission of instructor. S-U grades optional. Offered alternate years. Not offered 1996-97. T R 1:30-3:30. D. A. Levitsky.

This course is a multidisciplinary discussion of the causes, effects, and treatments of human obesity. Topics include the biopsychology of eating behavior, the genetics of obesity, the role of activity and energy metabolism, psychosocial determinants of obesity, anorexia nervosa, therapy and its effectiveness, and social discrimination.

**PSYCH 614 Issues In Cognitive Psychology (also Psychology 214)**
Fall. 4 credits. M W F 10:10. B. Khurana.

**PSYCH 615 Concepts, Categories, and Word Meaning (also Psychology 415)**

**PSYCH 616 Psychology of Music (also Psychology 418)**

**PSYCH 617 Neural Networks Laboratory (also Psychology 419)**

**PSYCH 618 Developmental Biopsychology (also Psychology 422)**

**PSYCH 619 Cognitive Neuroscience (also Psychology 425)**
Fall. 4 credits. M W F 9:05-9:55. B. L. Finlay.

**PSYCH 620 Evolution of Human Behavior (also Psychology 326)**
Fall. 4 credits. T R 2:55-4:10. R. E. Johnston.

**PSYCH 621 Obliteration and Taste: Structure and Function (also Psychology 429 and BIONB 429)**
Fall. 4 credits. T R 9:05. B. P. Halpern.

**PSYCH 622 Effects of Aging on Sensory and Perceptual Systems (also Psychology 431 and BIONB 431)**

**PSYCH 623 Biopsychology of Learning and Memory (also Psychology 332 and BIONB 332)**

**PSYCH 640 The Brain and Sleep (also Psychology 322)**
Fall. 4 credits. T R 10:10-11:25. H. S. Pore.

**PSYCH 641 Human Perception: Applications to Computer Graphics, Art, and Visual Display (also Psychology 342)**

**PSYCH 650 The Lenses of Gender (also Psychology 450 and Women's Studies 450 and Women's Studies 650)**
Fall. 4 credits. W 2:30-4:30. S. L. Bem.

**PSYCH 676 Motivation (also Psychology 270)**

**PSYCH 681 Advanced Social Psychology (also Psychology 481)**

**PSYCH 688 Seminar: Beliefs, Attitudes and Ideologies (also Psychology 489)**

**PSYCH 691 Research Methods in Psychology (also Psychology 491)**

**PSYCH 692 Sensory Function (also Psychology 492 and BIONB 492)**

**PSYCH 696 Introduction to Sensory Systems (also Psychology 396 and BIONB 396)**

**PSYCH 700 Research in Biopsychology**

**PSYCH 709 Developmental Psychology (also Psychology 209)**

**PSYCH 710 Research in Human Experimental Psychology**

**PSYCH 713 Information Processing: Conscious and Non-conscious (also Psychology 413)**

**PSYCH 714 Comparative Cognition (also Psychology 414)**

**PSYCH 715 Psychology of Language (also Psychology 215)**
Fall. 4 credits. M W F 11:15. M. Spivey-Knowlton.

**PSYCH 716 Auditory Perception (also Psychology 316)**
Fall. 4 credits. T R 10:10-11:25. C. L. Krumbhaumer.

**PSYCH 717 The Origins of Thought and Knowledge (also Psychology 417)**

**PSYCH 720 Research in Social Psychology and Personality**

**PSYCH 722 Hormones and Behavior (also Psychology 322 and BIONB 322)**
Summer Session Courses

The following courses are also frequently offered in the summer session, though not necessarily by the same instructor as during the academic year. Not all of these courses will be offered in a particular summer. Information regarding these courses and additional summer session offerings in psychology is available from the department before the end of the fall semester.

PSYCH 101 Introduction to Psychology: The Frontiers of Psychological Inquiry
PSYCH 123 Introduction to Biopsychology
PSYCH 128 Introduction to Psychology: Personality and Social Behavior
PSYCH 280 Introduction to Social Psychology
PSYCH 350 Statistics and Research Design
PSYCH 380 Community Mental Health (also Human Service Studies 380)

QUECHUA

See Modern Languages under Languanges and Linguistics

RELIGIOUS STUDIES MAJOR

See "Special Programs and Interdisciplinary Studies."

ROMANCE STUDIES

The Department of Romance Studies (Jonathan Titiler, chair) offers courses in French literature, Italian literature, and Spanish literature. In addition, the department's program includes courses in the French and Spanish languages, French linguistics, Spanish linguistics, semiotics, and French, Italian, and Hispanic culture. Through its course offerings and opportunities for independent study, the department seeks to encourage study of the interactions of the Romance literatures among themselves, with other literatures, and with other fields of inquiry.

French

The Major

The major in French is divided into three options: French Area Studies, French linguistics, and French literature. For a description of the linguistics option, see Modern Languages or Linguistics, French. The area studies and literature options are described below.

While prospective majors should try to plan their programs as far ahead as possible, especially if they intend to study abroad, no student will be refused admission merely because of a late start. Students wishing to major in French area studies or French literature should consult the director of undergraduate studies of the Department of Romance Studies, Professor Jacques Bereaud.

The Literature Option

The major in French, literature option, is designed to give students proficiency in the oral and written language, to acquaint them with French literature and culture, and to develop skills in literary analysis.

Admission

To be admitted to the major, students should have completed FRLLIT 201, 220, or 221 plus 222 and FRDML 213 or its equivalent by the end of their sophomore year.

For completion of the major, a student must:

(1) acquire a sound degree of competence in French language. This competence is demonstrated by the successful completion of French 301-312 or their equivalents, such as properly accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the adviser (this option applies only to 312).

(2) take six courses in French literature or civilization at the 300 level or above. These courses, selected in consultation with the student's major adviser, will include at least two pre-19th-century courses and at least one 400-level course.

(3) take two connected courses in one of the following related areas: literature, linguistics, comparative literature, history, history of art, music, government or another relevant discipline with a significant French component. Students who are double majors are exempted from this last requirement.

The French Area Studies Option

Admission

To be admitted to the major, students should have completed French Literature 201, 220, 221 or 224 plus French Language 213 or its equivalent by the end of their sophomore year.

For completion of the major, a student must:

(1) acquire a sound degree of competence in French language. This competence is demonstrated by the successful completion of French 301-312 or their equivalents, such as properly accredited study abroad or the passing of a special language test (the CASE examination) or the permission of the adviser (this option applies only to 312).

(2) take two courses in Romance Studies (literature or civilization) at the 300 level or above.

(3) take six courses at the 300 level or above in no more than three areas of interest such as—but not limited to—African Studies, anthropology, comparative literature, French literature, economics, government, history, history of art, linguistics, music, theater arts, women's studies. Each area must be represented by at least two courses, and each course must have a French component. At least one of these six courses should be at the 400 level.

Administration of French Area Studies

Students are admitted to the major by the director of undergraduate studies of the Department of Romance Studies, but will be
guided by their individual advisers. A copy of each student's program will be given to the director of undergraduate studies for approval and safekeeping.

Study Abroad in France

French majors or other interested students may study in France for one or two semesters during their junior year. Opting for one of several study-abroad plans recognized by the departments of Romance Studies, Modern Languages, and Linguistics facilitates the transfer of credit. Information about these plans is available from the director of undergraduate studies.

Students must be Cornell undergraduates with a strong academic record. The minimum French preparation is the completion of FRDML 213 or its equivalent in advanced credit or placement by the Cornell CASE examination. The taking of FRROM 301 and/or 312 is, however, strongly recommended. Students interested in studying in France are encouraged to complete the special benefits offered by EDUCO, the program in Paris cosponsored by Cornell and by Duke University. EDUCO offers advanced students a challenging course of study and the experience of total immersion in French life and culture in Paris. Participants in this program spend the year or the semester as fully matriculated students at the University of Paris and other institutions of higher learning in Paris, including the Institut d'Etudes Politiques (Sciences Po), selecting courses in many fields from the regular university course offerings. Students begin the academic year with an intensive three-week orientation into French history, society, and daily life. While it is possible to enroll in the EDUCO Program for one semester, admission will be given first to students planning to study abroad for the full academic year.

EDUCO maintains a center in Paris with appropriate support staff. The resident director, chosen annually from the Cornell and Duke faculties and the special seminar each semester, provides academic advice, and helps ensure the quality of the courses. The center, which includes a small library and word-processing facilities, is regularly used by students for special tutorials, seminars, and lectures, as well as informal gatherings.

Study Abroad in Geneva

French majors or other students with a commitment to international experience may study abroad in Geneva, Switzerland. Geneva is an especially appropriate location for students with an interest in international affairs, as many international organizations maintain offices there, among them the United Nations, the United Nations High Commission for Refugees, the World Health Organization, the International Labor Organization, the International Telecommunications Union, the World Intellectual Property Organization, the European Nuclear Research Center, and the ECNUM Center at Grand-Saconnex. Cornell students enroll full-time in the University of Geneva, where they take year-long courses in conjunction with Swiss students. They can choose classes in many subjects, including literature, economics and other social sciences, law, theology, psychology, education, architecture, physical education, and French language, civilization, and history.

Interested students may participate in internships at international organizations, and qualified participants are encouraged to work under the direction of officials on research studies that are of mutual interest. Beginning in mid-July, the University of Geneva offers four consecutive three-week language and civilization courses which prepare students for the mandatory French exam given in early October. Cornell students must attend the last of these sessions, from mid-September to early October, but earlier sessions are recommended for students who need additional language preparation.

Students interested in study abroad in Geneva should contact the Cornell Abroad office for further information.

Honors. The honors program encourages well-qualified students majoring in French literature or culture to do independent work in French outside the structure of courses. The preparation of the senior honors essay, generally spread over two terms, provides a unique learning opportunity, since it allows for wide reading and extensive rewriting to a degree not possible in the case of course papers. No special seminars or courses are required of honors students, but they will have regular meetings with the faculty advisers who have agreed to supervise their work. They may receive course credit by enrolling in French 429-430, but these independent study courses must be taken in addition to the courses that meet the minimum requirements for the major. At the end of the senior year, each honors student is examined orally on the honors essay by a jury consisting of his or her faculty adviser and two other faculty members. The awarding of honors is determined by the student's grade in the major and the quality of the honors essay.

Fees. Depending on the course, a small fee may be charged for copies of texts used in course work.

Language and Linguistics

Most language courses and French linguistics courses are offered by Modern Languages and Linguistics. Further language courses (conversation and advanced level), French linguistics courses, and all literature courses are listed below.

Note: Students placed in the 200-level courses have the option of taking language and/or literature courses, see listings under "Literature" for descriptions of the literature courses, any of which may be taken concurrently with French Language 200, 203, 205, or 213 (offered by Modern Languages and Linguistics) or Hotel Administration 206.

FRROM 310 Advanced French Conversation

Fall or spring. 2 credits. Limited to 15 students. Priority given to seniors. Prerequisite: FRDML 213 or Cornell Advanced Standing Examination (CASE). Fall or spring: J. Bereaud and staff. This course is based on discussion of articles published in the French press. A few audio and video recordings and films will also be used.

FRROM 312 Advanced French Conversation II

Fall or spring. 4 credits. Limited to 15 students. Prerequisite: FRROM 301 or Cornell Advanced Standing Examination (CASE). Fall or spring: J. Bereaud and staff.

Continuation of work done in FRROM 310. The objective of FRROM 310 is to teach students to speak and write correct French; in French 312 students will be expected to have a richer, more idiomatic and hopefully elegant command of the language.

Formal study of grammar will be discontinued, more attention will be devoted to the examination of texts and to oral presentations by students. Weekly papers as in French 301.

FRROM 410 Structure of French II (also FRDML 410)

Fall. 4 credits. Prerequisite: Permission of instructor. L. Waugh. For description, see FRDML 410.

Literature

FRLIT 201 Introduction to French Literature

Fall or spring. 3 credits. Limited to 15 students. Prerequisite: qualification in French (SAT II score of 600-650, LPS score of 56, or French 120).

D. Grossvogel and staff.

French 201, like all other 200-level French literature courses, satisfies the language requirement by giving proficiency in French; but French 201 and 221 are mutually exclusive.
Students with an SAT II score of 650 or more, or an LPF score of 60 or more, should take FRLIT 221.

French 201 is divided into small sections and is conducted in French. Papers can be written in French or in English.

French 201 is designed for students interested in improving their written and oral skills in French and also their literary proficiency. Texts have been chosen both for their literary merit and their manageable linguistic difficulty. Close scrutiny of the works and active class discussions will sharpen students' critical and analytical abilities. Different genres are covered (poetry, drama, and narrative prose); and the reading list will include authors such as Baudelaire, Beckett, Ionesco, Camus, and Duras.

FRLIT 220 French and Francophone Culture
Fall. 3 credits. Prerequisite: SAT II score of 640 and above, or LPF score of 60, or FRDM 200, 203 or 205. Conducted in French. J. Ngate.

This course serves as an introduction to French Area Studies. It provides an overview of Francophone culture and society from 1945 to the present. Readings will include a selection of articles dealing with issues of current concern in France; works by French and Maghrebin or African writers; poetry or drama; two films will also be discussed.

FRLIT 221 Modern French Literature #
Fall, spring or summer. 3 credits. Prerequisites: SAT II score of 640 and above, or LPF score of 60, or FRDM 200, 203, or 205. Conducted in French. Fall. D. Grossvogel and staff; spring. J. Ngate and staff.

This course, divided into small sections, is intended as a first introduction to French literature, the Modern Period. Texts have been chosen both as a function of their centrality to the traditional literary canon and with an eye to experimentation. The course considers literary genres (poetry, drama, the novel) as solicitations to read texts differently, with diverse claims and attention. The course is designed to satisfy a general interest in modern French literature as well as to prepare students to pursue a French major in literature. Readings will include works by Baudelaire, Apollinaire, Sainte, Ionesco, Beckett, Proust, Duras.

FRLIT 222 Early Modern French Literature #
Fall or spring. 3 credits. Prerequisite: FRLIT 201, 220, 221 or permission of the instructor. Required of all literature majors, but not limited to them. Conducted in French. D. Polacheck and staff: spring. staff.

Study of the classic literature of seventeenth century France (Corneille, Racine, Molière, Mme de Lafayette, La Fontaine) and of eighteenth-century enlightenment literature (Voltaire, Rousseau, Diderot, Beaumarchais). Special attention is paid to the ways in which these various works represent or deal with the shift from an aristocratic cultural code of values to modern bourgeois ideology and aesthetics. The course will also invite reflection on the status and centrality of female characters in classical and neo-classical French literature; it will attempt to trace the evolution from classical tragic heroines to more modern (but no less problematic) representations of women.

FRLIT 224 The French Experience: An Introduction (LPF 220)
Fall or spring. 3 credits. Fall: S. Kaplan, P. Lewis, and D. Polacheck; spring: R. Klein.

An examination of French society, culture, and institutions; how has French culture so distinctive? Its literature and its revolutions, its gastronomy and fashion, its painting, cathedrals, and cinema. Looking attentively at texts, images, and contexts from selected moments in the eighteenth, nineteenth, and twentieth centuries, we will attempt to unravel some of the defining enigmas of the French experience. Two lectures a week in English and one section (one section conducted in English, one in French). Readings available both in French and in English translation.

Note: Prerequisite for all 300-Level courses in French literature: FRLIT 201, 220, or 221.

FRLIT 231 French Civilization I: History, Culture, and Cinema
Fall. 4 credits. French 213 or Q++ on CASE exam or permission of instructor. Enrollment limited. Offered in 1997-98. J. Bereaud.

This course will investigate the past as it has shaped the present, focusing on some salient episodes which span twenty centuries of French history from the Roman occupation of Gaul to the events of May 1968. Three types of materials will be studied: a history text, documents of cultural significance (literature, art, popular culture), and a few films to help bring the past to life.

Students will select topics of personal interest for research and oral presentation in class; these topics could range from the investigation of historic figures such as Joan of Arc; Louis XIV, or Napoleon to the effects of recent wars on the national psyche, from the art of the stained glass windows of the medieval cathedrals to the technological revolution that prepared the way for the first flight of the Super sonic Concorde in 1969. Conducted in French. Note: This course is offered in alternation with French Civilization II: Contemporary France.

FRLIT 323 Francophone Fiction of the Maghreb
Fall. 4 credits. S. Tarrow.

The course will trace the development of francophone literature of the Maghreb from the 1930's, when the French celebrated a century of colonial power in North Africa, through the violent struggles for independence to the post-colonial period and the current civil war in Algeria. Texts will be selected from the works of authors such as Tahar Ben Jelloun, Rachid Boujedra, Albert Camus, Mohammed Dib, Assia Djebar, Kateb Yacine, Albert Memmi, Fatima Mernissi, Rachid Mimouni, Leila Sebbar. Topics will range from French colonialism and its aftermath to issues of language, religion, and gender. We will also focus on the role of fiction and its readings in a period of extreme political and social change. Readings in French, class discussion in English.

FRLIT 333 Contemporary French Thought
Spring. 4 credits. Conducted in French. R. Klein.

This course is intended to introduce students to the work of some of the major figures in contemporary French thought, in writing published since the events of May 1968. A broad range of topics and issues will be examined, with particular attention to those that have transformed traditional academic disciplines. Books have been selected not only with a view to their theoretical interest but with an eye to the quality of their French prose. Readings will include works by Levi-Strauss, Foucault, Cixous, Irigary, Kristeva, Derrida, Barthes, Baudrillard.

FRLIT 335 Romance to Revolution: The French Novel Before 1789
Spring. 4 credits. Prerequisite: FRLIT 201 or permission of instructor. Conducted in French. D. Polacheck.

In addition to considering formal questions relating to the development of the novel in French, this course will examine problems such as the appearance of narrative and historical consciousness, the representation of woman, and the relation between literature and society. Texts read will include those of such major writers as Rabelais, Montaigne, Mme de LaFayette, Prévert, Rousseau, Diderot, and Sade.

FRLIT 370 Perspectives on the Age of Enlightenment. "Enlightened" Literature # (also FRLIT 470)
Fall. 4 credits. A. Berger.

Through a reading of various works of the French 18th century (by Montesquieu, Voltaire, Diderot, Rousseau, Sade), we will study the emergence of new literary discourses and practices aiming at a "secularisation" of the literary field. In conjunction with the ideological and epistemological changes that took place under the name of Enlightenment.

FRLIT 391 Paris In Film and Literature
Fall. 4 credits. D. I. Grossvogel.

Over the years, Paris has been an obsessive inspiration for creative expression and, in particular, for writing and film making. This course will attempt to analyze, compare, and contrast the ways in which these two genres have translated that inspiration. The class will be conducted as a seminar, each film and each literary text being the subject of group discussion. Authors read will include Baudelaire, Apollinaire, Sartre, Duras, Modiano. Nine films will be shown.

FRLIT 398 Six French Poets
Spring. 4 credits. J. Ngate.

This introduction to modern French poetry will focus attention on six major figures: Baudelaire, Mallarmé, Verlaine, Valéry, Ponge, and Césaire. The aim of the course is to familiarize the student with the principal texts, the major themes, and the dominant forms of the work of these six influential figures. Emphasis will be placed on the close reading and careful analysis of selected poems.

FRLIT 416 Producing the Past: 17th-Century France, History and Literature (HIST 416)
Fall. 4 credits. C. Jouhaud.

For description, see HIST 416.

FRLIT 419-420 Special Topics in French Literature
Fall, spring. 2-4 credits each term. Prerequisite: permission of instructor. Staff.

Guided independent study of special topics.

FRLIT 429-430 Honors Work in French Literature
Fall, spring. 8 credits each year-long course. R grade fall semester, letter grade spring semester, with permission of the adviser. Open to juniors and seniors.

Consult the director of the honors program. J. Ngate and staff.
FRLIT 435 Aimé Césaire (also French 635)
Fall. 4 credits. J. Ngate.
A poet, a playwright, an essayist, and a statesman, Aimé Césaire has been a major figure in the French-speaking world and beyond since the end of World War II. This course aims not only to analyze his work but also to explore the nature of his relationships with writers of various literary traditions. (A reading knowledge of French is required).

FRLIT 436 Francophone African Fiction (also French 636) 
Spring. 4 credits. J. Ngate.
A critical look at the conditions of possibility, the nature, and the status of the African novel in French from the 1920s to the early 1980s. How successful has it been in contributing to the invention (or perhaps the re-invention) of Africa in French? What can be said about the Africaness of its Africans? The course will be taught in French and the readings will include works by established as well as less well-known novelists and by a variety of theorists.

FRLIT 454 Montaigne #
Spring. 4 credits. K. Long.
Emphasis is on Montaigne's history as a reader and writer and on the ongoing growth and inflections of his self-awareness; hence, also, on the invention and refinement of the essay as a literary form. Other topics touched on include Montaigne in his times (public life, travels, religion, the wars) and the influence of Montaigne on such later writers as Pascal and Gide.

FRLIT 470 Perspectives on The Age of Enlightenment. "Enlightened" Literature #
Fall. 4 credits. A. Berger. For description, see FRLIT 370.

FRLIT 490 The Roots of Modernism
Spring. 4 credits. Conducted in French. R. Klein.
The Modernist era in art, which is associated with movements like Cubism, Surrealism, and Dada, has its roots in "the Banquet Years," the effervescence fin de siècle in Europe that lasted until 1913. In France, the period includes writers like Jarry, Apollinaire, Gide, Valéry, Cocteau, Trara, and Proust. Composers such as Satie and Stravinsky, artists like Cézanne and Rousseau. In this course, individual works will be examined with an eye to their role as precursors of more familiar recent forms of artistic expression.

FRLIT 493 French Feminisms (also WOMNS 493)
Fall. 4 credits. Conducted in English. A. Berger.
This seminar will examine the political, theoretical, and literary concerns of contemporary French writers who have addressed "la question de la femme/la question du féminin." Readings will include representative texts by Simone de Beauvoir, Monique Wittig, Julia Kristeva, Jacques Lacan, Luce Irigaray, Jacques Derrida, and>Hélène Cixous.

FRLIT 635 Aimé Césaire (also FRLIT 435)
Fall. 4 credits. J. Ngate.
For description, see FRLIT 435.

FRLIT 636 Francophone African Fiction (also FRLIT 436)
Spring. 4 credits. J. Ngate.
For description, see FRLIT 436.

FRLIT 639-640 Special Topics in French Literature
639, fall; 640, spring. 4 credits each term.
Staff. Guided independent study for undergraduate students.

FRLIT 688 Baudelaire and Modern Criticism (also Comp Lit 680)
Spring. 4 credits. J. Culler.
For description, see COM L 680.

Italian
M. Migiel, director of undergraduate studies; B. Ballaro.
The Major
Students who wish to major in Italian should choose a faculty member to serve as a major adviser; the general plan and the details of the student's course of study will be worked out in consultation with the adviser. Italian majors are encouraged to take courses in related subjects such as history, art history, music, philosophy, anthropology, classics, linguistics, and other modern languages and literatures. While a major often occupies only the junior and senior years, it is wise for students to seek faculty advice about the major as early as possible.

Students who elect to major in Italian ordinarily should have completed Italian 201 by the end of their sophomore year. Exemptions can be made on the basis of an examination. Students majoring in Italian are expected to become conversant with a fair portion of the masterworks of Italian literature, to acquaint themselves with the outlines of Italian literary history, and to develop some skill in literary analysis. To this end, students will be expected to complete successfully 32 credits of Italian literature courses at the 300 level or higher, with papers to be written in Italian or English. Required courses for the major are ITALL 303, 304, and a course on Dante. ITALL 402, History of the Italian Language, and 403, Linguistic Structure of Italian, may be counted toward the 32 credits required for the major (an introductory linguistics course is a prerequisite of ITALL 402 and 403).

Students majoring in Italian will also be expected to acquire competence in the handling of the Italian language. That competence may be demonstrated by passing an oral and written examination to be arranged with the adviser.

Italian majors will also be required to complete successfully two courses in related fields (for example, Italian history, Italian art history, literary theory).

Italian majors may study in Italy, generally during their junior year, under any of those courses abroad and subject to the credit of the course program and of Rome. Students may enroll for a semester in the fall or spring. Courses regularly taught at the Palazzo Massimo include Italian language (beginning and intermediate); Architecture 500, 401, 402, 500, 502, Design Studio; Architecture 339 and 399, Special Topics in Architectural History; Architecture 458, Special Projects in Design Communications; Architecture 567, Contemporary Italian Culture; Architecture 510, Thesis Introduction; Art 251, 311, 322, and 371, and History of Art 251, Renaissance and Baroque Art in Rome.

To be eligible, students must have completed the first two years of their curriculum requirements and be in good academic standing.

Literature
Most language courses and Italian linguistics courses are offered by Modern Languages and Linguistics. Advanced language courses and all literature courses are listed below.

ITAL 201 Introduction to Italian Literature
Fall. 3 credits. Prerequisite: permission of instructor. Conducted in Italian. M. Migiel and staff.

In this course, students will develop their language skills in Italian by reading, discussing, and writing about short works of fiction (twentieth-century short stories in ITALL 201; twentieth-century novels in ITALL 202). ITALL 201 is not prerequisite to ITALL 202 or ITALL 205.

ITAL 205 Introduction to Italian Cinema
Spring. 3 credits. Permission of instructor. M. Migiel and staff.

Students will develop their language skills in Italian by reading, discussing, and writing about Italian films.

ITAL 303 Introduction to Medieval and Renaissance Literature #
Fall. 4 credits. Prerequisite: 201 or permission of the instructor. M. Migiel.

The course will focus on the major figures and texts of Italian medieval and Renaissance literature.

ITAL 323 Encounters with the Dead (also ITALL 623 and COM L 323/623)
Fall. 4 credits. M. Migiel.

Focusing on two epic works obsessed with death and with the dead (Dante Alighieri's Commedia [1321] and Claude Lanzmann's Shoah [1985]), this seminar will explore how Dante's poem and Lanzmann's film, often along analogous lines, address such issues as: the problems inherent in the representation of events; the search for a poetic/cinematic language adequate to convey experiences surpassing human comprehension; the creation of a narrating "I"; the "education" of the reader/spectator; national, political, and religious identities; the possibility of heroism; the place of women in the epic enterprise; the challenge of writing a conversion narrative bearing witness to the Creator vs. a post-Holocaust testimonial marked by a crisis of witnessing. Students may read in English translation or the original; Shoah will be shown with English subtitles. The seminar will be conducted in English.
ITALL 609 Misogyny and Its Readers (also ITALL 609 and Com L 449)
Spring. 4 credits. M. Migiel.
How do we know misogyny when we see it? Is it limited to the denigration and degradation of women, or can praise of women also be misogynistic? What if the author places anti-woman statements "in quotation marks"? Might some misogynistic works be just harmless literary jokes? How does awareness of historical context affect our reading of misogyny? How persuasive have women been in the defense of their sex? These are among the questions we will ask as we analyze Western discourses about women and identify the extent to which misogyny can be exposed as a form of misreading. We will look at classical, ecclesiastical, and medieval/Renaissance literary works; contemporary misogynistic attacks and the debates about them, and writings by contemporary feminist scholars of literature, history, and law. All works to be read in English; students who command the pertinent foreign languages may choose to read the texts in the original.

ITALL 419-420 Special Topics in Italian Literature
419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. M. Migiel.
Guided independent study of specific topics.

ITALL 429-430 Honors in Italian Literature
429 fall; 430, spring. 8 credits. Year-long course, R for fall semester; letter grade for spring semester. Limited to seniors. Prerequisite: permission of instructor. M. Migiel.

ITALL 609 Misogyny and Its Readers (also Com L 649)
Spring. 4 credits. M. Migiel.
For description, see ITALL 409.

ITALL 623 Encounters with the Dead
Fall. 4 credits. M. Migiel.
For description, see ITALL 323.

ITALL 639-640 Special Topics in Italian Literature
639, fall; 640, spring. 4 credits each term. Staff.

Spanish

The Major
The major is designed to give students proficiency in the oral and written language, to acquaint them with Hispanic culture, and to develop their skill in literary and linguistic analysis. Satisfactory completion of the major should enable students to meet language and literature requirements for teaching, to continue with graduate work in Spanish or other appropriate disciplines, or to satisfy standards for acceptance into the training programs of the government, social agencies, and business concerns. A Spanish major combined with another discipline may also allow a student to undertake preprofessional training for graduate study in law or medicine. Students interested in a Spanish major are encouraged to seek faculty advice as early as possible. For acceptance into the major, students should consult the director of undergraduate studies in Spanish—Professor García—who will admit them to the major and choose an adviser from the Spanish faculty. Spanish majors will then work out a plan of study in consultation with their advisers. Previous training and interests as well as vocational goals will be taken into account when the student's program of courses is determined.

SPANL 201 and SPAND 204 (or equivalent) are prerequisite to entering the major in Spanish. All majors will normally include the following core courses in their programs:

1) SPANR 311 and 312
2) SPANL 315, 316, 318

Spanish majors have great flexibility in devising their programs of study and areas of concentration. Some typical options of the major are:

1) Spanish literature, for which the program normally includes at least 20 credits of Spanish literature beyond the core courses. Literature majors are strongly urged to include in their programs courses in all the major periods of Hispanic literature.

2) A combination of literature and linguistics.

3) Either of the above options with a maximum of three (3) courses at the 200 level or other disciplines counted toward the major. Whichever option a student chooses, he or she is encouraged to enrich the major program by including a variety of courses from related fields or by combining Spanish with related fields, as in history, philosophy, sociology, anthropomology, art, music, Classics, English, comparative literature, and other foreign languages and literatures. The interdepartmental programs in Latin American Studies and Hispanic American Studies sponsor relevant courses in a variety of areas. The J. G. White Prize and Scholarships are available annually to students who achieve excellence in Spanish.

For the major in Spanish linguistics, see Department of Linguistics—Spanish.

Study abroad in Spain. Cornell and the University of Michigan cosponsor an academic year in Spain program. Students enrolled in this program spend the first three weeks before the fall semester begins in a residential college located on the campus of the University of Madrid, where they take a course in Spanish language and contemporary society and take advantage of special lectures and field trips in Madrid and Castile. This course carries three credits. In early October the program moves to Seville, where students enroll in as many regular classes offered at the University of Seville as their language competency and general education permit. Their academic work is supplemented by courses designed explicitly for the program by Seville faculty, as well as a seminar regularly offered by the Cornell professor, who is chosen from the faculty of either Cornell or Michigan. The special courses normally include history of art and architecture, Spanish composition and syntax, and modern Spanish history. In Seville students live with selected families or in a few cases in "colegios mayores." Cornell-Michigan also maintains a center in Seville, which is used by students for special seminars, tutorials, lectures, and informal gatherings.

Applicants are expected to have at least completed SPAN 204 prior to departure. Students are strongly encouraged to study abroad for the entire year rather than for one semester. Students interested in the study abroad program should consult with the Cornell Abroad office for further information.

Honor. Honors in Spanish may be achieved by superior students who want to undertake guided independent reading and research in an area of their choice. Students in the senior year select a member of the Spanish faculty to supervise their work and direct the writing of their honors essays (see Spanish 429-430).

Fees. Depending on the course, a small fee may be charged for film use or for copies of texts for course work.

Language
Most language courses and Spanish linguistic courses are offered by the Department of Modern Languages and the Department of Linguistics. Advanced language courses and all literature courses are listed below.

Note. Students placed in the 200-level courses have the option of taking language and/or literature courses; see listing under SPANL 201 for description of the literature course that may be taken concurrently with SPANL 203-204 (offered by Modern Languages).

SPANL 311 Advanced Composition and Conversation
Fall. 4 credits. Prerequisite: SPANL 204 or 212 or equivalent. M. Stycos and staff. Advanced language skills, developed through reading, grammar review, and intensive practice in speaking, writing, and translation. Analysis of present-day Spanish usage in a wide variety of oral and written texts.

SPANL 312 Advanced Composition and Conversation
Spring. 4 credits. M. Stycos and staff. Readings and class discussion will focus on the stylistic analysis of modern texts. Increased emphasis through weekly essays, on students' development of an effective Spanish prose style.

SPANL 366 Spanish in the United States (also LING 366)
Fall. 4 credits. M. Suñer.
For description, see Linguistics 366.

SPANL 407 Applied Linguistics: Spanish (also SPAND 407)
Spring. 4 credits. M. Suñer.
For description, see SPAND 407.

Literature
SPANL 201 Introduction to Hispanic Literature
Fall or spring. 3 credits. Prerequisite: qualification in Spanish or permission of instructor. The course is divided into small sections and is conducted mainly in Spanish. (Fulfills both the language proficiency requirement and, followed by a 300-level Spanish literature course, the humanities distribution requirement.) The literature course that normally follows SPANL 201 is either 316 or 318.) D. Castillo and staff.

SPANL 242 Introduction to U.S. Latino Literature (also LSP 240 and English Literature 240)
Fall. 3 credits. B. V. Olguín.
For description, see ENGL 240.
This course offers a survey of narratives, including novels, short fiction, essays, political/feminist manifestos and memoirs by representative Latina writers of various Latin American groups in the United States including, Chicana, Chilean, Cuban, Dominican, and Puerto Rican, among others. We will investigate the parallel development of a Latin American perspective on personal, social, and cultural issues alongside that of the U.S. ethnic liberation/revalorization movements of the 1960s through contemporary feminist activism and the proliferation of color movements. We will investigate these works as artistic attempts to deal with issues of culture, language and bilingualism, family, gender, sexuality, and domesticity among others. We will account for regional distinctions and contributions. Readings will include works by Julia Alvarez, Gloria Anzaldúa, Elena Castedo, Ana Castillo, Denise Chávez, Sandra Cisneros, Judith Ortiz Cofer, Cristina García, Nora Glickman, Nicholasa Mohr, Chelo Morales, Achy Obejas, Esmeralda Santiago, Ana Lydia Vega, Helen Viramontes, and others.

SPANL 201 Hispanic Theater Production
Fall or spring. 1-2 credits. S-U only. D. Castillo.

Students interested in Hispanic Theater Production develop a specific dramatic text for full-scale production. The course will involve selection of an appropriate text, close analysis of the literary aspects of the play, and group evaluation of its representational value and effectiveness. All students signing up for the course will be involved in some aspect of production, and will write a final paper as a course requirement. Credit will be variable depending upon student's role in play production: a minimum of 50 hours of work is required for one credit, a maximum of two credits will be awarded for a 100 hours or more of work.

Note: SPANL 316, 317, and 318 can be taken in any order. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor.

SPANL 315 Renaissance Hispanism: Spain and the Americas #
Fall or spring. 4 credits. Prerequisite: SPANL 315, 316, or 400. M. A. García-Canabal.

In Spain, the cultural revolution known as the Renaissance produced a glittering array of artistic works—both in literature and the arts—which gave rise to the term Golden Age. There was a "darker side" to the Renaissance, however, which juxtaposed the conquest of America with the establishment of the Inquisition and the expulsion of the Jews. The tale of these relations of exclusion and fascination with domination and communication with the other is recapitulated by the literature of the period, both from Spain and her colonies in the New World. A selection of canonical (and not-so-canonical) texts include Cervantes, de borja Núñez de Balboa, Martín de Echegaray, Gascó, de la Vega, San Juan de la Cruz, Cervantes, María de Zayas, Lope de Vega, Calderón, and others.

SPANL 316 Readings in Modern Spanish Literature
Fall or spring. 4 credits. Prerequisite: Spanish 201 or 4 years of high school Spanish or permission of instructor. Taught in Spanish. Fall: A. Monegal and J. Kronik; spring: M. Stycoos.

Readings and discussion of representative texts from Spain from the romantic period to the present. Bécquer, Galdós, Unamuno, García Lorca, Cela, and others.

SPANL 318 Readings in Spanish-American Literature #
Fall or spring. 4 credits. Fall: J. Piedra and M. Stycoos; spring: J. Kronik and J. Piedra.

Readings and discussion of representative texts of the nineteenth and twentieth centuries from Spanish America: Darío, Borges, Vallejo, Paz, Cortázar, García Márquez, and others. Note: The prerequisite for the following courses, unless otherwise indicated, is SPANL 315, 316, or 318, or permission of instructor.

SPANL 332 The Modern Drama in Spanish America #
Fall. 4 credits. Conducted in Spanish. J. Kronik.

Representative plays of recent decades from several Spanish American countries, including Puerto Rican and Latin American theatre of cruelty, and metatheater.

SPANL 334 Of Human Bondage: Narratives of Captivity from Cervantes to Garcia Marquez #
Fall. 4 credits. Prerequisite: SPANL 315 and 316 or SPANL 316 and 318. M. A. García-Canabal.

This course covers the theme of captivity in Cervantes, from his famous Historia del cautivo, in Don Quijote, Part I, to the stories of human bondage explored by his Novelas ejemplares. No other age resembles more the Mediterranean world of Algerian consorts and Christian captives, described by Cervantes, than the twentieth century with its official persecutions, its imprisonments and assassinations for dissenting political views. Paying particular attention to the erotic-po·litical connections that surface in these fictions, we will compare Cervantes's approach with that of a Spanish American social identity will be studied in the light of modern currents such as the epic theatre, the theater of the absurd, the theater of cruelty, and metatheater.

SPANL 335 Readings in Spanish-American Literature #
Fall. 4 credits. Prerequisite: SPANL 318. J. Tittler.

Readings and discussion of representative texts of the ninetieth and twentieth centuries from Spanish America: Darío, Borges, Vallejo, Paz, Cortázar, García Márquez, and others. Note: The prerequisite for the following courses, unless otherwise indicated, is SPANL 315, 316, or 318, or permission of instructor.

SPANL 392 The 20th-Century Vanguard Theater in Spain
Spring. 4 credits. J. Kronik.

A comprehensive review of the experimental theater written in Spain during the first third of this century. The experimental vein and the voices of protest in plays by Unamuno, Azorín, Grau, Valle-Inclán, García Lorca, and others will be examined in the light of the concept of the vanguard and in relation to modern dramatic theories. Readings of other European and North American plays will be included.

SPANL 396 Modern U.S. Latino Prose Fiction (also LSP 396)
Spring. 4 credits. Conducted in Spanish. D. Castillo.

A detailed examination of representative twentieth-century fictional works (novels, short stories, plays) by Latino/a authors. Discussion will be centered on such issues as the social and political concerns raised by the fiction and the authors' need to struggle with a double linguistic and cultural tradition. Authors may include: nicho La Moli, Piri Thomas, Rolando Hinojosa-Smith, Alejandro Morales, Tomás Rivera, Ron Arias, Dolores Prida, and Luis Valdez.

SPANL 397 Colombian Literature #
Fall. 4 credits. Conducted in Spanish. Prerequisite: SPANL 318. J. Titler.

Readings will consist of a mixture of Colombian classics such as Asón (Romance Studies 429), La vorágine, and García Márquez's Cien años de soledad, along with works by lesser studied authors. These will include writers who cultivate non-narrative genres, like the lyric poet Elvira Silva or the playwright Bueraviz, or who represent sectors of society that are traditionally under-represented, like women (Fanny Buitrago and Marcello Moreno), gays (Alvarez Gardeazabal), or Afro-Colombians (Zapata Oliva). The course will both depend on the notion of a national literature for its coherence and question that very principle.

SPANL 419-420 Special Topics in Hispanic Literature
419, fall; 420, spring. 2-4 credits each term. Prerequisite: permission of instructor. Guided independent study of specific topics. For undergraduates interested in special problems not covered in courses.

SPANL 429-430 Honors Work in Hispanic Literature
429, fall; 430, spring. 8 credits. Year-long course, R grade fall semester, letter grade spring semester. Prerequisite: permission of instructor. J. Kronik.

SPANL 472 Poetry of the 1990's (also COM L 472, ENGL 408, and GERST 472)
Fall. 4 credits. J. Monroe.

For description, see COM L 472.

SPANL 492 Latin American Women Writers (also WOMNS 481 and COM L 482)
Fall. 4 credits. Conducted in English. D. Castillo.

This course will provide a sampler of novels and short stories by and about Latin American women. We will look at the question of self-construction and issues such as the social and political concerns involved in a specifically Latin American feminine identity. All works will be read in translation. Students should read the originals of the works from the Spanish. Authors may include writers like Luisa Valenzuela (Argentina) and Rigoberta Menchú (Guatemala), or Afro-Colombians (Zapata Oliva). The course will both
SPANL 493 Violents of War in Modern Spanish Culture
Fall. 4 credits. A. Monegal.
This course addresses the problem of the representation (the writing, the painting, the film) of the disaster of war, and of different forms of horror and violence associated with it. We will study fictional and documentary narratives, and works that occupy a borderline position. Some of them refer to Spanish wars, such as Goya’s "The Disasters of War," Picasso’s "Guernica," and novels and documentaries about the Spanish Civil War, and others to wars abroad, such as Juan Goytisolo’s recent novel about the conflict in Bosnia. Theoretical readings will include texts by Bataille, Blanchot, Clausewitz, and Glucksman, among others. Conducted in Spanish.

SPANL 494 Maricoteoria/Queer Theory (also COM L 494)
Spring. 4 credits. J. Piedra.
Latin American perceptions of gay culture in and out of the closet with emphasis on twentieth-century literature in Spanish, but also alluding to previous centuries and texts from Brazil, as well as theoretical works from the Americas at large. Conducted in English and using translated works from Latin America, however, students can also read the originals in Spanish and/or Portuguese.

SPANL 606 Literature and Philosophy
Fall. 4 credits. Conducted in Spanish. C. Arroyo.
Study of the need to know the canonical texts of European philosophy—and theology—in order to read European literatures with rigor. The very notion of "rigorous reading," philosophical ideas about humans and the universe, and literary structure and character. Criteria of hierarchy according to philosophers and their reflections on the role of the woman, black, Indian, and new Christian in literature. Similar problems in the 20th century. Readings include: Aristotle, Aquinas, Erasmus, Huarte de San Juan, Tizó’s La prudencia en la mujer, La vida es sueno, Unamuno, Heidegger, Ortega, J. A. Valente.

SPANL 639-640 Special Topics in Hispanic Literature
639, fall; 640, spring. 2-4 credits each term.

SPANL 653 Guixotica Desire: Don Quijote and the Birth of the Modern Novel
Spring. 4 credits. M.A. Garcés.
Our seminar will undertake a detailed reading of Don Quijote using theoretical, socio-historical, psychoanalytic, and feminist perspectives on the novel. Recently documented as "a cultural ancestor of Freud," Cervantes is acclaimed for his exploration of madness and its relation to meaning, an inquiry that maps Don Quijote, The Glass Graduate, and The Colloquy of the Dogs, among other works which question stereotyped notions of fantasy and reality. This leads us to the enigma of love—so central to Cervantes—and to the problem of freedom, as represented by the hero, Don Quixote of La Mancha.

SPANL 674 Contemporary Poetry and Culture
Spring. 4 credits. J. Monroe.
For description, see COM L 674.

RUSSIAN

P. Carden, director of undergraduate studies [literature], 235 Goldwin Smith Hall, 255-8350; E. W. Browne, G. Gibian, N. Pollak, S. Senderovich, G. Shapiro

The Russian Major
Russian majors study Russian language, literature, and linguistics, emphasizing their specific interests. It is desirable, although not necessary, for prospective majors to complete Russian 121-122, 201-202, and 203-204 as freshmen and sophomores, since these courses are prerequisites to most of the junior and senior courses that count toward the major. Students may be admitted to the major upon satisfactory completion of Russian 122 or the equivalent. Those who elect to major in Russian should consult Professor Carden as soon as possible. For a major in Russian, students will be required to complete (1) Russian 301-302 or 303-304 or the equivalent, and (2) 18 credits from 300- and 400-level literature and linguistics courses, of which 12 credits must be in literature in the original Russian. Certain courses may, with the permission of the instructor, be taken for one additional hour’s credit. Such courses will involve a one-hour section each week with work in the Russian language. These courses count one hour each of credit toward the 12 courses of Russian literature in the original language required for the major.

Study Abroad
Cornell is an affiliated institution in the Council on International Educational Exchange program for Russian language study at St. Petersburg State University. Cornell students also frequently go on the American Council of Teachers of Russian program in Moscow and other Russian language programs. Opportunities are available for study during the summer, a single semester, or the full year. Further information is available from K. Krivinkova, in the Department of Modern Languages. Honors. Students taking honors in Russian undertake individual reading and research and write an honors essay. Fees. Depending on the course, a small fee may be charged for photocopied texts for course work.

Freshman writing seminar requirement. The following courses will satisfy the freshman writing seminar requirement: Russian 103, 104, and 105.

Russian and Soviet Studies Major
See "Special Programs and Interdisciplinary Studies," which follows the department listings.

Russian Literature
P. Carden (director of undergraduate studies, 235 Goldwin Smith Hall, 255-8350), G. Gibian, N. Pollak, S. Senderovich, G. Shapiro

The Department of Russian Literature offers a variety of courses: some with readings in English translation, others in the original Russian, or both. The connection between Russian history, society, and literature is particularly close, so instruction and discussion in class often include a variety of topics, such as culture and intellectual history, as well as literature. Several courses are interdisciplinary, cosponsored with the departments of History, Economics, Government, Comparative Literature, etc. Students interested in majoring in Russian are strongly urged to take Russian 121-122 as soon as possible, preferably in their first year, or by their second at the latest. Russian 203-204, offered by the Department of Modern Languages, and Russian 201-202, offered by the Department of Russian Literature, complete basic language instruction and introduce students to literature. A further sequence of literature courses in Russian follows Russian 202.

For further information about courses and majors, see Modern Languages.

RUSSL 103 Freshman Writing Seminar: Classics of Russian Thought and Literature
Fall or spring. 3 credits. Staff.

RUSSL 104 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces
Fall or spring. 3 credits. Staff.

RUSSL 105 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces
Fall or spring. 3 credits. Staff.

RUSSL 201-202 Readings in Russian Literature #
201, fall, 202, spring. 3 credits each term. Prerequisites: qualification in Russian; 201 is prerequisite to 202. Open to freshmen. Fall. N. Pollak, spring. G. Shapiro.
RUSSL 331 Introduction to Russian Poetry #
Fall. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students. S. Senderovich. A survey of Russian poetry with primary emphasis on the analysis of individual poems by major poets.

RUSSL 332 Russian Drama and Theatre (also Thetr 332) Fall. 4 credits. S. Senderovich. Selected topics. Discussion of a number of the most representative Russian plays of the nineteenth and twentieth centuries in chronological order. Introductions to the historical period, cultural atmosphere, literary trends, and crucial moments in the history of the Russian theatre will be especially emphasized. Among the works we will be studying will be Gogol's Inspector General, Ostrovsky's The Storm, and Chekhov's The Cherry Orchard. All will be available in English translation. Additional assignments in critical literature will be made for graduate students.

RUSSL 334 The Russian Short Story Fall. 4 credits. Prerequisites: Russian 202 or equivalent and permission of instructor. This course may be counted toward the 12 credits of Russian literature in the original language for the Russian major. Also open to graduate students. N. Poliak. A survey of two centuries of Russian story telling. Emphasis on the analysis of individual stories by major writers, on narrative structure, and on related landmarks of Russian literary criticism.

RUSSL 350 Education and the Philosophical Fantasies Spring. 4 credits. Not offered 1996-97. P. Carden. A major philosophical tradition has conceived of education as the whole of our lives. What we should do or be is seen as the result of every choice we make. The whole of our human contacts is understood as a school in which we form ourselves. This all-encompassing vision of education has been embodied in the works of the great philosopher-fantasists who use the forms of fiction to explore fundamental issues of education. In this course we will examine several key philosophical fantasies, among them Plato's Republic; Rousseau's Emile, and Tolstoy's War and Peace. Our aim will be to understand how the discourse on education became a central part of our Western tradition.

RUSSL 367 The Russian Novel (also Comparative Literature 367) # Spring. 4 credits. Also open to graduate students. Special discussion section for students who read Russian. G. Gibian. Sentimentalism, Romanticism, Realism, Modernism. Novels and short stories by Gogol, Turgenev, Tolstoy, Dostoevsky, Chekhov, and others. Readings in English translation.

RUSSL 368 Soviet Literature from Revolutionary Times to "Glasnost" Spring. 4 credits. Also open to graduate students. There will be a special section for students who read Russian. Not offered 1996-97.

A survey of Russian literature from the 1920s to the present day focusing on the most important writers and developments. Among the themes to be explored will be Russian Futurism, literature of the Second World War, the "thaw," the rise of the dissident movement and the introduction of "glasnost." Writers include Mayakovsky, Babel, Zamyatin, Platonov, Pasternak, Solzhenitsyn and others.

RUSSL 369 Dostoeyevsky # Fall. 4 credits. Not offered 1996-97.

RUSSL 373 Chekhov in the Context of Contemporary European Literature and Art # (also comparative Literature 376) Spring. 4 credits. S. Senderovich. Reading and discussion of Anton Chekhov's short stories in the context of the European art of the short story and painting of that era. The course is designed for nonspecialists as well as literature majors. All reading is in English translation.

RUSSL 377 Baltic Literature (also German Studies 377) Spring. 4 credits. I. Ezergailis. Estonia, Latvia, and Lithuania have created a rich literary tradition since the beginning of a written indigenous culture in the eleventh century. We will read texts from each of these literatures, selected for their quality, importance, and the availability of acceptable translations, representing, as much as possible, writers from the pre-Soviet independence period, those writing under Soviet rule, and emigres.

RUSSL 378 The Russian Connection (also Comparative Literature 379) # Spring. 4 credits. Not offered 1996-97. P. Carden. Our topic will be the development of a poetics of introspection in European prose in the course of the 19th century, culminating in two major Russian novels: Tolstoy's War and Peace and Dostoevsky's The Idiot. Among other works we will read: Constant's Adolphe, Sterndall's Charterhouse of Parma, and several short works relevant to the theme.

RUSSL 384 Dialogue In/As A Text (also Comparative Literature 384) Spring. 4 credits. Not offered 1996-97. P. Carden. An examination of the principle of dialogue and dialogism as it appears in fictional discourse. Using the theories of Mikhail Bakhtin as a point of departure, we will examine the use of dialogue as a form of discourse beginning with Plato's Phaedrus. Dostoevsky's novels Notes from Underground, The Possessed, and Brothers Karamazov will be discussed as dialogic, or polyphonic forms of discourse. Finally, we will discuss selected works of Gide, Sartr and Camus, who acknowledged their debt to Dostoevsky, to see if they are indeed polyphonic in structure.

RUSSL 385 Reading Nabokov (also Comparative Literature 385 and English 379) Fall. 4 credits. Not offered 1996-97. G. Shapiro. This course offers an exciting trip to the intricate world of Nabokovian fiction. After
establishing himself in Europe as a distinguished Russian writer, Nabokov, at the outbreak of WWII, came to the United States where he reestablished himself, this time as an American writer of world renown. In our analysis of the Nabokovian artistic universe, we shall focus on his two splendid achievements as a Russian writer, The Defense (1930) and Despair (1934) (both in their English form), and then examine the two widely read novels that he wrote in Ithaca while teaching literature at Cornell—Lolita (1955) and Pnin (1957).

RUSSL 389 Contemporary Literature in Central and East Europe (also Comparative Literature 389)
Spring. 4 credits. G. Gibian.
The course this year will study developments in literature (and to some extent in other areas of culture) in Hungary, Poland, Slovakia, and the Czech Republic in the most recent periods. We shall focus on novels and short stories, but some consideration will also be given to drama and poetry. No knowledge of Eastern European languages is required. The reading will be done in English translation.

RUSSL 393 Honors Essay Tutorial
Fall and spring. 8 credits. Must be taken in two consecutive semesters in senior year. Credit for the first semester will be awarded upon completion of second semester. For information, please see Director of Undergraduate Studies.

RUSSL 404 History and Nationality in Russian and Eastern Europe (also S Hum 404) #
Fall. 3 credits. Not offered 1996-97.
G. Gibian.
Ethnicity and nationality appear as the main forces behind the recent dramatic changes in Eastern Europe. The seminar addresses these issues in Russia, Czech Republic, and elsewhere, mainly from a literary perspective and also in the context of rising ethnic and national consciousness throughout the world.

RUSSL 409 Russian Stylistics
Fall. 4 credits. Also open to graduate students. Prerequisite: three years of Russian. Not offered 1996-97.
A few steps beyond normative grammar. Introduction to the subtleties of idiomatic Russian on the levels of morphology, syntax, vocabulary, and phonology. Introduction to the genres of live colloquial and written language. Development of writing skills through short assignments and their analyses. First notions of literary stylistics and their practical application.

RUSSL 427 Russian Formalism (also Comparative Literature 427)
Fall. 4 credits. Not offered 1996-97.
N. Pollak.
This is a course on Russian Formalism, a trend in literary interpretation that flourished in the 1910s and the first part of the 1920s. We will read the writings of such scholars as Tynianov, Eikhenbaum, Shklovsky, and Jakobson, as well as the works they studied. The course provides a historical examination of a school that gave rise to some of the most important movements in twentieth-century Western criticism—and in other disciplines, such as linguistics and anthropology. The course also provides both a look at classics of Russian literature and an approach to literature that has something to offer readers today. No knowledge of Russian is required.

RUSSL 431 Contemporary Russian Prose
Spring. 4 credits. Prerequisites: Russian 301–302 or 303–304, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major. Graduate students may audit the course. Not offered 1996-97. Staff.
This course is designed to acquaint students with the way Russian prose has developed during the past forty years. Although the emphasis will be on comprehension of the text, we will also discuss literary structure, modern literary history, social and political problems, and the ways in which life in the Soviet Union is reflected in its literature. Authors to be read include Viktor Nekrasov, Yuri Kazakov, Alexander Solzhenitsyn, Vlamin Shalamov, Abram Tertz (Andrei Sinyavsky), Vasily Abyuyon, and Tatyana Tolstaya. This course is specifically intended for third- and fourth-year Russian majors.

RUSSL 432 Pushkin #
Spring. 4 credits. Prerequisites: Russian 202 or equivalent, and permission of instructor. This course may be counted towards the 12 credits of Russian literature in the original language for the Russian major. Not offered 1996-97. S. Senderovich.
Reading in the original language and discussion of selected works by Pushkin: lyrics, narrative poems, and Eugene Onegin.

RUSSL 491 Reading Course: Russian Literature in the Original Language
Fall or spring. 1 credit each term. Prerequisite: permission of instructor. Staff.
This course is to be taken in conjunction with any Russian literature course in English translation. Students will receive one credit for reading and discussing works in Russian in addition to their normal course work.

RUSSL 492 Supervised Reading in Russian Literature
Fall or spring. 1–4 credits each term. Prerequisite: permission of instructor. Staff.

RUSSL 499 The Avant-Garde in Russian Literature and the Arts
Spring. 4 credits. Open to any student with permission of instructor. May be used in satisfaction of the twelve hours of reading in Russian required for the Russian major.
In this course we will examine closely representative short texts in Russian by such leading figures of the Russian avant-garde as Blok, Belyi, Remizov, Mayakovsky, Khlebnikov, Kruchenykh, and Babel. We will also examine related developments in theater, film, and the visual arts.

Graduate Seminars

RUSSL 603 Graduate Seminar: Neglected Masterpieces of Short Russian Prose
G. Gibian.
Nineteenth- and twentieth-century works chosen according to the needs of the students enrolled. Stress on skills useful in teaching Russian literature.

RUSSL 611 Supervised Reading and Research
Fall or spring. 2–4 credits. Prerequisite: permission of the department. Staff.

RUSSL 617-618 Russian Stylistics I and II
Not offered 1996-97.

RUSSL 619 Seventeenth-Century Russian Literature
Fall. 4 credits. G. Shapiro.
Seventeenth-century Russian literature is often studied together with Medieval literature. Is such an arrangement justified, or does seventeenth-century literature have its own problematic that makes it worth studying separately? In scholarship the seventeenth century is referred to as the Age of Baroque. Did Muscovite Russia experience its own Baroque, and if so, what are its unique features? These other important issues will be addressed in the seminar. In the course of the seminar a variety of concepts, genres, and themes characteristic for the epoch will be discussed. We will read the works of such authors as Simeon Polotsky, Silvester Medvedev, Karion Istomin, and the archpriest Avvakum.

RUSSL 620 Twentieth-Century Russian Poetry
Spring. 4 credits. Open to advanced undergraduates with permission of instructor. Not offered 1996-97
An in-depth study of the writings of selected twentieth-century poets. Authors may include Blok, Mandelstam, Pasternak, Tsvetayeva, and Khlebnikov.

RUSSL 621 Old Russian Literature
Spring. 4 credits. S. Senderovich.
A survey.

RUSSL 622 Eighteenth-Century Russian Literature
S. Senderovich.

RUSSL 624 Russian Romanticism
Spring. 4 credits. Taught in Russian.
Not offered 1996-97.
S. Sinyavsky.
A survey of concepts, themes, genres, and main individual contributions in Russian literature of the Age of Romanticism. The Age of Romanticism encompasses the first four decades of the nineteenth century. Zhukovsky, Batsushkov, Pushkin, Baratynsky, Gogol, and Lermontov are the major representatives of this style and the most important period of Russian literature. The emphasis is on poetry, its historical and theoretical problems. It was, above all, the golden age of Russian poetry, which prepared and deeply influenced the following age of great Russian prose. Turgenev, Tolstoy, Dostoevsky, and Chekhov, all full of allusions to the texts of the golden age and cannot be properly understood without it.

RUSSL 625 Russian Realism
Fall. 4 credits. P. Carden.
A study of the development of psychological realism in Russian prose of the nineteenth century, with some attention to the poetics tradition. In addition to reading representative works, we will pay attention to the historical background of the period. We will approach the works through the critical writings of...
This course will examine a selection of poems that have been particularly important for the tradition of Russian literature in the nineteenth and twentieth centuries. Our focus will include critical and literary responses to these poems as well as close readings.

RUSSL 626 The Tradition of Russian Literature, 1945-Present

RUSSL 696 Russian Symbolism
Fall. 4 credits. Not offered 1996-97.

RUSSL 698 Russian Modernism
Spring. 4 credits. P. Carden.

Vladimir Nabokov wrote much verse, several plays, numerous short stories, and nine novels in Russian before switching to English. He is known for his mastery of the Russian language and his skill in creating rich and diverse characters. 

RUSSL 699 Russian Asia
Spring. 4 credits. Open to advanced undergraduates.

Knowledge of Russian is highly desirable, but it is not necessary for this course.

RUSSL 701 Seminar in Twentieth-Century Russian Literature
Fall. 4 credits. Open to advanced undergraduates. Not offered 1996-97.

RUSSL 703 The Russian Nabokov
Fall. 4 credits. Open to advanced undergraduates. Not offered 1996-97.

Absurdism, a literary and philosophical movement, was a reaction to the perceived meaninglessness of life. It was characterized by a rejection of traditional values and a questioning of human existence.

RUSSL 705 Russian Intellectual History

RUSSL 706 The Russian Formalists
Spring. 4 credits. N. Pollock.

Gogol's artistic career from his "Ukrainian" cycles to Dead Souls. We will examine representative works from each of the major divisions of Gogol's early work, in particular from his cycles Evenings on a Farm near Dorove and Dead Souls. Although some of the readings will be done in English to enable the class to cover a significant amount of material, the class work will be focused on close analysis of the Russian text.

RUSSL 709 Seminar in Nineteenth-Century Russian Literature
Fall. 4 credits. Not offered 1996-97.

RUSSL 711 Seminar in Twentieth-Century Russian Literature
Fall. 4 credits. Open to advanced undergraduates. Not offered 1996-97.

RUSSL 713 The Russian Nabokov
Fall. 4 credits. Open to advanced undergraduates. Not offered 1996-97.

RUSSL 715 Russian Literature, 1917-1945
Fall. 4 credits. Not offered 1996-97.

SCIENCE AND TECHNOLOGY STUDIES

(Special Programs and Interdisciplinary Studies)

RUSSL 672 Russian Formalism (also Comparative Literature 627)

RUSSL 676 Russian Literature, 1945-Present

RUSSL 678 Russian Symbolism
Fall. 4 credits. Not offered 1996-97.

RUSSL 696 Russian Modernism
Spring. 4 credits. P. Carden.

RUSSL 699 Russian Modernism
Spring. 4 credits. P. Carden.

RUSSL 698 Russian Symbolism
Fall. 4 credits. Not offered 1996-97.

RUSSL 701 Seminar in Nineteenth-Century Russian Literature
Fall. 4 credits. Open to advanced undergraduates. Not offered 1996-97.

RUSSL 703 The Russian Nabokov
Fall. 4 credits. Open to advanced undergraduates. Not offered 1996-97.

RUSSL 705 Russian Intellectual History

RUSSL 706 The Russian Formalists
Spring. 4 credits. N. Pollock.

Gogol's artistic career from his "Ukrainian" cycles to Dead Souls. We will examine representative works from each of the major divisions of Gogol's early work, in particular from his cycles Evenings on a Farm near Dorove and Dead Souls. Although some of the readings will be done in English to enable the class to cover a significant amount of material, the class work will be focused on close analysis of the Russian text.
ways they have been drawn into discussions in-class writing, and assignments, students are of social change. Through reading, discussion, examine fundamental ecological ideas and the What ecological and social principles can 

[S&TS 525 Seminar in the History of Technology (also History 525)] Fall. 4 credits. Not offered 1996-97. R. Kline. Exploration of the history of technology in Europe and the United States from the eighteenth century to the present. Typical topics include the industrial revolution in Britain, the emergence of engineering as a profession, military support of technological change, labor and technology, the "incorporation" of science and engineering, technological utopias, cultural myths of engineers and inventors, social aspects of urbanization in the city and on the farm, post-war consumerism, and gender and technology. The interests of students and recent literature in the field will be considered in selecting the topics for the seminar.

[S&TS 644 Topics in the History of Women in Science] Fall. 4 credits. Offered odd fall semesters. M. W. Rossiter. This is a one-semester graduate seminar on selected topics in the history of women and gender in science and technology, covering mostly the U.S. in the 20th century but broadly defined to include earlier periods and other countries. It seeks to acquaint advanced students with some of the best recent literature on this topic and to identify and explore possible new topics. Weekly readings and a research paper.

[S&TS 660 Seminar in Historiographical Approaches to Sciences (also History 680)] Fall. 4 credits. For description, see History 680.

[S&TS 682 Topics in the Scientific Revolution (also History 682)] Fall. 4 credits. Not offered 1996-97. For description, see HIST 682.

[S&TS 777 Science, Technology and the Cold War] Fall. 4 credits. M. Dennis. Permission of instructor required for undergraduate students. This graduate seminar will examine the historical transformation wrought in the organization and practice of the physical, biomedical, and environmental sciences since 1945. How did military and federal patronage affect the development of the sciences, the organization of the postwar university, and the armed services? Students will read contemporary historical materials as well as primary texts to understand the development of particular institutions, technologies, and individuals. In addition to participation in the weekly discussion, each student will prepare a research paper for presentation to the seminar.
Philosophy

S&TS 205 Ethical Issues in Health and Medicine (also Biology and Society 205)
Fall. 4 credits.
For description, see B&SOC 205.

S&TS 206 Ethics and the Environment (also Biology and Society 206)
Spring. 4 credits.
For description, see B&SOC 206.

S&TS 286 Science and Human Nature (also Philosophy 286)
Spring. 4 credits.
For description, see PHIL 286.

S&TS 301 Philosophy of Science: Knowledge and Objectivity (also Philosophy 381)
Fall. 4 credits.
For description, see PHIL 381.

S&TS 384 Philosophy of Physics (also Philosophy 384)
Fall. 4 credits.
For description, see PHIL 384.

S&TS 481 Problems in the Philosophy of Science (also Philosophy 481)
For description, see PHIL 481.

S&TS 681 Philosophy of Science (also Philosophy 681)
Spring. 4 credits.
For description, see PHIL 681.

Social Studies of Science

S&TS 201 What Is Science?
Spring. 3 credits. T. Pinch. Limited to 50 students.
This course will introduce students to central ideas in Science and Technology Studies. Throughout we will be concerned to investigate how science intersects with and is shaped by society. We will ask whether there is a universal transcendent scientific method and if so what that method entails. We will explore in detail what goes into scientific observation, experimentation, and demonstration. We will look at the realities of scientific practice whether in laboratories or when science is taken up in other contexts such as the media, courtroom, and classroom. We will investigate scientific controversies, what goes into scientific expertise and how that expertise is to be viewed in a modern industrialized society. In questioning what science is, we will also be concerned with what science might be if its social arrangements were different. For example, would more women in science change the type of knowledge scientists produce? We will look at fringe sciences to evaluate alternatives to standard scientific method. Lastly, we will look at the relationship between technology and science and the role played by technology in science.

S&TS 350 Atomic Consequences: The Incorporation of Nuclear Weapons in Postwar America (also Government 305)
Spring. 4 credits. M. Dennis.
In this seminar, which will meet at 10 a.m. on Mondays, there is also a required screening session on W 7–10 p.m. in Ursi media room b. Films will generally last less than two hours, but some are longer. Viewing the movies is an essential part of the course. This course will be divided into two main parts. In the first, we will explore the development of nuclear weapons; from the Manhattan Project, the postwar development of thermonuclear weapons and civil defense, and more recent plans for strategic defense. Our focus will expand to cover the lives of scientists involved in shaping nuclear weapons. In the second part of the course, we will focus on the role of the scientific community in shaping national politics. We will look at how the bomb became part of American culture through the use of literature and film, as well as readings in primary historical documents and secondary analyses.

S&TS 352 Science Writing for the Mass Media (also Communication 352)
Fall. 3 credits.
For description, see COMM 352.

S&TS 360 Ethical Issues in Engineering (also Engineering 360)
Spring. 3 credits.
For description, see ENGR 360.

S&TS 390 Science in the American Polity, 1800–1960 (also Government 308)
Fall. 4 credits. M. Dennis.
How did America become a leading nation in scientific and technical research? This course charts the development of American science from its origins in gentlemanly societies in the early nineteenth century through the development of large-scale federally funded research or Big Science. Particular attention will be paid to the importance of government patronage in creating new social and intellectual spaces for research, the importance of medicine and the biomedical disciplines for the development of university-based research; the origins and expansion of research in corporations; and the role of war in the political economy of American science.

S&TS 391 Science in the American Polity, 1960–Now (also Government 309)
Spring. 4 credits. S. Jaspanoff.
This course explores the changing political relations between science, technology and the state in America from 1960 to the present. It focuses on the politics of choice involving science and technology in a variety of institutional settings, from Congress to courts and regulatory agencies. The tensions and contradictions between the concepts of science as an autonomous republic and as just another special interest provide the central theme for the course. Topics addressed will include research funding, technological controversies, scientific advice, citizen participation in science policy, and the use of experts in courts.

S&TS 401 Components and Systems: Engineering in a Social Context (also Mechanical and Aerospace Engineering)
Spring. 3 credits.
For description, see M&AE 400.

S&TS 401 Biology and Society: The Socioeconomic Context of Life (also Biology and Society 301)
Fall. 4 credits.
For description, see B&SOC 301.

[S&TS 402 Investigative Research on the Social Impact of Science (also Biology and Society 300)
Spring. 4 credits. Prerequisite: one year of science and permission of the instructor. Offered alternate years. Limited to 12.
P. J. Taylor.
Students choose a current issue in the social impact of biological or physical sciences and work through the steps of investigation from issue definition to primary data collection and interpretation to drafts of proposals and final reports of action. In a workshop setting, students comment on and learn from each other's projects and discuss case studies and articles, with occasional guest speakers and films.

[S&TS 406 Biotechnology and Law (also Biology and Society 406)
Fall. 4 credits. Limited to 16 students.
Recommended: a course in genetics or rDNA, a course in American government or law, or permission of instructor. Fee for course reading material. Not offered 1996-97.
S. Jaspanoff.
Biototechnology, with myriad applications in areas such as medicine and agriculture, is developing more rapidly than the social institutions that are capable of controlling it. This course explores the use and potential abuse of biotechnology in areas such as genetic screening and counseling, reproductive technologies, intentional release of genetically engineered organisms, patents, and ownership of human genes. Particular attention will be given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. A research paper is required.

[S&TS 407 Law, Science and Public Values (also Biology and Society 407 and Biology and Society 407)
Fall. 4 credits. S. Jaspanoff.
This course explores the varied interactions between science and the legal process that have developed in recent years as a result of attempts to bring greater public accountability to the use of science and technology. It examines the activities of both legislators and courts in controlling science and analyzes the values underlying these initiatives. Three major types of science-law interactions will be examined, with attention to the focus of the course: expert testimony in the courtroom, regulation of hazardous technologies, and legal control of professional standards in medicine and science. Specific topics include the regulation of toxic chemicals and nuclear power, controversies about biotechnology, reproductive technologies and biomedical research, and scientific misconduct.

[S&TS 412 The Politics of the Human Body
Spring. 3 credits. Not offered 1996-97.
Staff.
This course discusses the political character of scientific and technological interventions in the human body. We will examine the history of the control of sexuality and reproduction and then focus on the following intersections between politics, body, gender and technology: contraception, AIDS, in vitro fertilization, abortion, embryo research, prenatal screening, gene therapy, and birth technologies. Students will be encouraged to do small fieldwork projects based on interviews and written sources.

SCIENCE AND TECHNOLOGY STUDIES 509
S&TS 425 Global and Domestic Dimensions of Science and Technology Policy (also Government 468)  
Fall. 4 credits. Not offered 1996-97.  
Staff.

S&TS 427 Politics of Environmental Protection in America (also Government 427)  
Fall. 4 credits. Not offered 1996-97.
S. Jasanoff.
An introduction to the distinctive feature of environmental protection in America, focusing particularly on the role of law, science, and citizen activism in public policymaking. Readings from law, political science, and policy analysis will examine the changing role of expert agencies, courts, public interest groups, Congress, and the states in environmental politics since the late 1960s. Case studies of specific environmental controversies (nuclear power, siting, pesticides, endangered species) will be used to explore dominant public conceptions of risk and safety, regulatory costs and benefits, and the goals and instruments of environmental policy.

S&TS 431 Introduction to Science and Technology Policy (also Government 401)  
Fall. 4 credits. Not offered 1996-97.  
Staff.

S&TS 442 The Sociology of Science (also City and Regional Planning 442 and Biology and Society 342)  
Spring. 4 credits. T. J. Pinch.
A view of science less as an autonomous activity than as a social institution. We will discuss such issues as controversies in science, analysis of scientific text, gender and the social shaping of scientific knowledge.

S&TS 465 Scientific Rhetoric in Historical Perspective (also History 465 and Communication 465)  
For description, see HIST 465.

S&TS 466 Public Communication of Science and Technology (also Communication 466)  
Fall. 3 credits. Not offered 1996-97.  
For description, see COMM 466.

S&TS 467 Innovation: Theory and Policy  
Fall. 4 credits. Open to upper-level undergraduates and interested graduate students. Prerequisite: Economics 102 or permission of the instructor. J. Reppy.
In this course we will study the innovation process (that is, the introduction of new technology into practice) through the critical analysis of such issues as controversies in science, analysis of scientific text, gender and the social shaping of scientific knowledge.

S&TS 469 Food, Agriculture, and Society (also Biology and Society 469, and Biology General 469)  
Spring. 3 credits.  
For description, see BIO G 469.

S&TS 483 The Military and New Technology  
Spring. 4 credits. For description, see GOVT 483.

S&TS 490 The Integrity of Scientific Practice  
Fall. 4 credits. S. Hilgartner.
Recent scandals over scientific fraud, debates about financial conflicts of interest, disputes about the use of human and animal subjects, and tensions over ownership of data have raised concern about integrity in science. In addition, changes in the American research system—from the emergence of new university-industry relationships to the growth of electronic communication—pose new questions about who owns and controls research. The course addresses practices that present problems of integrity in research (e.g., fraud, secrecy, commercialization). It also examines how scientific practices affect the structural integrity of science as an institution. Through these complementary concepts of integrity, the course explores the connections between the conduct of science and its cultural authority.

S&TS 503 Professional Practice in Engineering  
Spring. 3 credits. Not offered 1996-97.  
For description, see ECE 503.

S&TS 532 Inside Technology: The Social Construction of Technology  
Spring. 4 credits. T. J. Pinch.
Rather than analyze the social impact of technology upon society, in this course we will investigate how society gets inside technology. In other words, is it possible that the very design of technologies embody assumptions about the nature of society? And, if so, are alternative technologies possible which embody different assumptions about society? Do engineers have implicit theories about society? Is technology gendered? How can we understand the interaction of society and technology? Throughout the course the arguments will be illustrated by detailed examinations of particular technologies, such as the ballistic missile, the bicycle, the electric car, and the refrigerator.

S&TS 526 Workshop on Law, Science, and Technology (also Government 626)  
S. Jasanoff.
Legal proceedings provide a powerful mechanism for deconstructing, and to some extent reconstructing, a society’s understanding about the nature and social role of expertise, the boundaries of science and technology, and the meaning or validity of scientific “facts.” Using a combination of primary legal materials and theoretical studies in science and technology, this course will explore how varying scientific realities are constructed in legal forums and what impact these constructions have on the social relations of science and technology. The course will also consider the policy implications of conflicting legal and scientific approaches to discovery and verification of scientific facts.

S&TS 627 Comparative Methods in Policy Analysis (also Government 627)  
Fall. 4 credits. Not offered 1996-97.  
S. Jasanoff.
Comparisons, at levels of analysis ranging from individual biographies to national decisionmaking, have emerged as an important methodological approach in policy analysis. Focusing primarily on historical and social studies of science and technology, this course seeks to enhance the student’s ability to carry out effective comparative analyses at a variety of research sites including laboratories, regulatory agencies, and new social movements. Work in structuralist as well as post-structuralist idioms will be examined in order to sharpen and refine notions such as national styles and political culture that have loomed large in the comparative literature on the politics of science and technology. Topical areas will include military research, biotechnology, and environmental controversies.

S&TS 631 Qualitative Research Methods for Studying Science  
Much has been learned about the nature of science by sociologists and anthropologists donning lab coats and studying scientists in action. In this course we will look at the methods used in this new wave of science studies. We will examine what can be learned by interviewing scientists, from videos and from detailed examinations of scientific texts. Students will gain hands-on experience by conducting a mini-project in which they investigate some aspect of scientific culture.

S&TS 645 Genetic Engineering: Politics and Society in Comparative Perspective (also Government 634)  
Spring. 4 credits. Instructor permission for upper-level undergraduates.  
S. Hilgartner.
Since its development, genetic engineering has been a passionately debated technology, creating high hopes for some and deep anxieties for others. This course will trace the conflicts and power struggles over genetic engineering from its origins to the present. We will use genetic engineering as a case to discuss some crucial issues in the relationships among science, technology, and politics: the political shaping of modern biology; the relationship between eugenics and molecular biology; the regulation of risks; the state and modern biotechnology-industry relationships; agriculture medicine; and biotechnology; the rise of bioethics, social movements, Green parties and technology; the socioeconomic impacts of genetic engineering; the Third World and biotechnology; and the politics of the Human Genome Project. We discuss how society deals with high-impact technologies and explore the question of the adequacy of the political-legal framework of contemporary “risk-society.”

S&TS 660 Social Analysis of Ecological Change (also Biology and Society 460 and Rural Sociology 660)  
Spring. 4 credits. Prerequisite: one year of science. Limited to 20 graduate students and seniors with permission of instructor. Not offered 1996-97.  
P. J. Taylor.
Scientific studies of ecological and social processes, together with interpretation of those studies by historians, sociologists, and anthropologists. Topics include ideas of nature, colonial conservation science, systems ecology, the tragedy of the commons, neo-Malthusianism, human ecology, local knowledge, nomadic pastoralism, political
ecology, women and eco-development, and global environmental discourse.)

[S&TS 662 Science and Social Theory]
Fall. 4 credits. Prerequisite: S&TS 442 or permission of the instructor. Limited to 15 students. Not offered 1996-97.

P. J. Taylor.
Issues in social theory, or more broadly, social thought, raised by historical and contemporary studies of science and technology. Focal theme for Fall 1996: Focal theme for fall 1996: Quantification of Social Life. Uneven and contradictory history and current developments concerning issues such as risk, epidemics, individuality, and modeling.

[S&TS 668 Computers, Law, and Social Change]
Spring. 4 credits. (Pending EPC approval). S. Jasanoﬀ.

[S&TS 688 International Environmental Policy (also Government 687)]
S. Jasanoﬀ.
This course examines the emergence of the environment as an important item on the political agenda in both the nation and the evolution of national and international policy responses to environmental issues. Analytically, the course attempts to deﬁne the characteristic effects of environmental policy and politics from different theoretical frameworks and to identify the factors that promote convergences and divergences among different national approaches to the same environmental problems. The scope of the course is therefore both cross-national and international, examining developing as well as industrialized countries. Particular attention is given to the role of legal and scientiﬁc institutions, processes, and instruments in the resolution of environmental controversies. Among the speciﬁc issues to be considered are chemical control, risk communication, export of hazards, stratospheric ozone depletion, and global climate change.

[S&TS 700 Special Topic 1: Science Studies and the Politics of Science]
Fall. 4 credits. Prerequisites: S&TS 711 or permission of the instructor. S. Jasanoﬀ.
Theoretical developments in science and technology studies have called attention to the contingent and socially embedded character of both knowledge claims and technological systems. Drawing on literature from several disciplines, this seminar explores the consequences of these ﬁndings for social and political studies of science. Issues and problems to be considered include trust and skepticism, political and legal agency, reﬂexive institutions, relativism and social action, science and norms, and the co-production of knowledge and social order.

[S&TS 700 Special Topic 2: Technology Transfer Issues]
Spring. 4 credits. J. Reppy.
The goal of this course is to develop a coherent analytical framework for analyzing technology transfer, using insights from economics, sociology and history, and to employ that framework to evaluate current policy issues. We will study the process of technology transfer in different contexts, ranging from intra-firm and intra-industry to technology transfer between civil and military sectors and between industrialized countries and LDCs. The readings will include a mix of theoretical writings and case studies.

[S&TS 711 Introduction to Science and Technology Studies]
Fall. 4 credits. R. Kline.
This introductory course will provide students with a foundation in the ﬁeld of science and technology studies. Using classic works as well as contemporary exemplars, seminar participants will chart the terrain of this new ﬁeld. Topics for discussion include, but are not limited to: historiography of science and technology and their relation to social studies of science and technology; laboratory studies; intellectual properties; science and the state; the role of instruments; ﬁeldwork; politics and technical knowledge; philosophy of science; sociological studies of science and technology; and popularization.

[S&TS 751 Ethical Issues and Professional Responsibilities (also Biological Sciences 751 and Toxicology 751)]
Fall or spring. 2 credits.
For description, see BIOBM 751.

Independent Study

[S&TS 399 Undergraduate Independent Study]
Fall or spring. 1-4 credits.
Please apply in 275 Clark Hall.

[S&TS 699 Graduate Independent Study]
Fall or spring. 2-4 credits.
Please apply in 275 Clark Hall.

[S&TS 700 Special Topics]
Spring. 3-4 credits.

Biology and Society Major

The Biology and Society major is ideally suited for students who wish to combine training in biology with exposure to perspectives from the social sciences and humanities on the social, political, and ethical aspects of modern biology. In addition to providing foundational training in basic biology, Biology and Society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Biology and Society major is offered to students enrolled in the College of Arts and Sciences and the College of Human Ecology. Undergraduates in the College of Agriculture and Life Sciences can develop an approved sequence of courses from the Biology and Society curriculum under general studies. The major is coordinated for students in all colleges through the Biology and Society ofﬁce. Students can get information, speciﬁc course requirements, and application procedures for the major from the ofﬁce in 275 Clark Hall, 255-6042.

A detailed listing of Biology and Society course offerings can be found in the Courses of Study section entitled Special Programs and Interdisciplinary Studies.

Concentration in Science and Technology Studies

S. Jasanoﬀ, chair; R. Boyd, Philosophy; P. Dear, History; M. A. Dennis, Science and Technology Studies, R. Kline, Electrical Engineering; B. Lewenstein, Communications; W. R. Lynn, Civil and Environmental Engineering; R. Miller, Philosophy; T. Pinch, Science and Technology Studies; A. G. Power, Ecology and Systematics; M. Rossiter, Science and Technology Studies; P. Taylor, Science and Technology Studies; and L. P. Williams, emeritus, Science and Technology Studies.

The undergraduate concentration in Science and Technology Studies (S&TS) is designed for students who wish to engage in a systematic, interdisciplinary exploration of the role of science and technology in modern societies. The concentration is intended for students with varied academic interests and career goals. It oﬀers majors in the natural sciences and engineering an opportunity to explore the social, political, and ethical implications of their selected ﬁelds of specialization. At the same time it oﬀers students majoring in the humanities and social sciences a chance to study the processes, products, and impacts of science and technology from varied disciplinary perspectives. Drawing on course offerings in several departments, programs, and colleges, the S&TS concentration permits students to develop an individualized program of study closely related to their major ﬁeld. S&TS courses are organized into three areas: history, philosophy, and social studies of science and technology.

To satisfy the requirements for the S&TS concentration, students must complete with letter grades a minimum of four courses selected from the course offerings listed for the major. At least one course should be chosen from the list of core courses. The remaining three courses should be chosen in consultation with an S&TS faculty adviser and must be drawn from at least two of the three areas.

Interested students may obtain further information about courses by contacting Stephen Hilgartner, faculty adviser, 255-9950 or the S&TS undergraduate oﬃce, 275 Clark Hall, 255-6047.

SINHALA (SINHALESE)

See Modern Languages under Languages and Linguistics.

SOCILOGY

The subject matter of sociology is human social organization and institutions. The Department of Sociology offers courses in social organization that include (among other issues) examination of inequality on the basis of race, ethnicity, income, and occupation; political behavior and public policy; social psychology and group processes; and contemporary social movements for change. Courses that analyze institutions include the family, politics and issues of public policy, the analysis of voluntary organizations, and the study of networks of political and organizational action.

The Department of Sociology offers the opportunity to develop fundamental theoretical insight and advanced research skills appropriate for the study of social behavior and institutions. Graduates of the department
take up careers in university, government, and business settings and in law, management, architecture, and other professions seeking men and women who demonstrate a disciplined understanding of society and social issues.

**Sociology Courses for Nonmajors**

Sociology provides students with particularly effective ways to understand the complexities of modern life. For many students, the undergraduate years are a last opportunity to gain the insights these fields have to offer. The Department of Sociology is continuing to design an array of beginning and advanced courses that convey a broad understanding of the methods and insights of sociological analysis—courses that will be of particular interest to undergraduates who may not major in sociology. First- and second-year students should note that the introductory courses (101, 103, 110, 115) provide substantial focus on the sociological analysis of major issues of public life. A list of pre-approved courses is maintained by the director of undergraduate studies, some of which are approved to count toward the major in sociology. Analysis of general education courses is available at the 200 level. Advanced undergraduates who are majors in other fields should also see, in particular, the descriptions of Sociology 303, 310, 354, 370, 380, for which there are no prerequisites other than junior or senior status.

**Related Courses in Other Departments**

Students interested in sociology should consult the course lists of the other social science departments in the College of Arts and Sciences (including Anthropology, Economics, Government, and Psychology) and of these other departments: Organizational Behavior (College of Industrial and Labor Relations), Human Development and Family Studies (College of Human Ecology), and Rural Sociology (College of Agriculture and Life Sciences).

**The Major**

Requirements for general sociology: (1) 101 and any other 100-level or 200-level course (excluding Freshman Writing Seminar) with a 2.5 minimum grade average; (2) no later than the junior year, the 301 and 303 methods courses; (3) one course in the department at the 400 level or higher (491 is recommended); and (4) 20 additional credits in sociology, of which 6 may be taken in related departments upon the approval of the student's major adviser. A list of pre-approved courses is maintained by the director of undergraduate studies, some of which are listed under "Related Courses."

**Requirements for honors:** Potential honors students are encouraged to begin taking the major the first semester of their sophomore year and to take at least 2 credits of Sociology 491, Independent Study, during their junior year. Honors students take Sociology 495–496 during their senior year. Graduation with honors requires a cumulative average of at least B+ in all sociology courses and the successful completion of an oral defense of the honors thesis. Interested students should consult the director of undergraduate studies no later than the second semester of their junior year.

**Cornell-in-Washington program.** Qualified sociology majors may include a semester in the Cornell-in-Washington program, in which students take courses and undertake a closely supervised internship. For further information, see p. 19.

**Supervised research.** Qualified sociology majors are invited to participate with faculty members in research. Such projects are usually initiated in one of two ways: the student may offer to assist the faculty member in an ongoing project, or the student may request that the faculty member supervise the execution of a project conceived by the student. In either case the student should enroll in Sociology 491. Interested students may direct inquiries to any faculty member.

**Society and Economy Concentration**

Sociology majors or students in other disciplines who wish to prepare for graduate study in any of the social sciences or in a profession (business, management, or law) may elect to acquire a concentration in society and economy (including international dimensions). This program is designed to provide training in economic sociology, formal organizations, and social science methods. The requirements for the concentration in society and economy include courses in economic sociology, formal organizations, and methods. For further information, consult Professor Victor Nee, 330 Uris Hall.

**Introductory Courses**

**SOC 101 Introduction to Sociology**

Fall and spring. 3 credits. Fall, H. A. Walker (spring: S. B. Caldwell) This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course will provide "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is assumed; necessary skills are covered in class and section meetings.

**SOC 103 Introduction to Sociology: Microsociology**

Spring. 3 credits. D. P. Hayes. An introduction to microsociology, focusing on social processes within small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

**SOC 110 Introduction to Economy and Society**

3 credits. Offered 1997–98. V. G. Nee. Modern social thought arose out of attempts to explain the relationship between economic development and the social transformations that gave rise to the contemporary world. Classical theorists from Karl Marx and Max Weber to Karl Polanyi focused their writings on emergent capitalist economies and societies. Contemporary social theorists likewise have continued to understand the interaction between capitalism and the social forces reacting against and emerging from modern economic development. From exchange and rational choice theories to network and institutional theory, a central theme in contemporary social thought has been the relationship between the economy and society, economic action and social structure, rationality and fundamental social processes. This course provides an introduction to social thought and research seeking to understand and explain the relationship between economy and society in the modern era.

**SOC 115 Utopia in Theory and Practice**

3 credits. Not offered 1996–97. D. Strang. This course examines different conceptions of the "ideal society" and efforts to realize them. We discuss the classic literary utopias, from Plato's Republic to More's Utopia to Bellamy's Looking Backward, and also the dystopias of Huxley and Orwell. We also examine social experiments like the nineteenth-century American intentional communities, various socialisms, and the design of contemporary political constitutions. Throughout, the emphasis is on two sociological questions: What leads people to conceive of particular social arrangements as ideal? How can we tell social structures that can work from those that cannot?

**SOC 203 Gender, Work, and Family (also Women's Studies 203)**

Fall. 3 credits. E. Bell. This line that divides men and women is one of the deepest and most firmly entrenched in societies. Many people believe that gender differences are natural and thus unchangeable, but most sociologists argue these differences are created and maintained by culture and social relationships. In this course, we will explore the social construction and maintenance of gender differences and inequalities, focusing primarily on the areas of work and family. Students of all levels (and genders) are welcome.

**SOC 204 Race and Ethnic Relations**

Fall. 3 credits. Prerequisite SOC 101, SOC 103, or R SOC 101. H. A. Walker. This course focuses on race and ethnic relations in contemporary perspective. It examines the social and behavioral implications of attributions of race and ethnicity in small group interactions, work, and the larger society. Topics: inequalities in income and employment, affirmative action, ethnic political mobilization, patterns of marriage and family formation.

**General Education Courses**

**SOC 215 Organizations: An Introduction**

Fall. 3 credits. S. Han. This is an introductory course in the study of organizations. We will start by taking a look at various examples of organizing, including a street gang in a Boston neighborhood, General von Moltke's Prussian army, a government agency, and an industrial corporation. These brief glimpses serve as exercises in looking behind and beyond diverse rhetoric from conventional organizational phenomena. We will consider these both from the inside and outside perspectives. The focus of the course is upon research scholarship, not the training of managers. Nonetheless, the analytical skills you will acquire are applicable to work in firms, government agencies, and nonprofit organizations.
SOC 220 Culture and Conflict in Organizations
Fall. 3 credits. P. Becker.
How do the organizations we belong to shape us? What is organizational identity and how does it come about? How do cultural beliefs shape organizations? What kinds of organizations strike us as legitimate and effective, and why? Organizations may be goal-directed problem-solvers, but they're also locations for storing and transmitting social facts, like the hierarchical relations among groups, and powerful ideas, including moral codes. Organizations may seem to evolve naturally, but are often shaped by internal conflicts or powerful outsiders. The first part of this course will examine theories of organizational culture and power; the second part will consist of case studies or organizations, businesses, religious denominations, little league teams, and social movement organizations.

[SOC 222 Social Policy and Organization in Health, Education, and Welfare
Fall. 3 credits. Not offered 1996-97. D. Strang.
Introduces the development of three central kinds of social policy: those concerned with delivering medical care, schooling the young, and providing for the economically vulnerable. The course treats the historical development of large-scale public programs, regulatory systems, or attempts to stimulate provide action; political struggles over social rights and the allocation of resources; and the organizations that are constructed to carry out policy. The focus is on American policy, but with considerable comparative attention to the health, education, and welfare programs of other nations.]

SOC 230 Knowledge and Power
Spring. 3 credits. D. Stark.
Modernity will be studied in this course by examining dual aspects of the rationalization of power 1) as attempts to bring ever-larger spheres of social action under rationalized control, and 2) as the production of rationalized justifications by which power is represented and legitimated. These processes will be examined in three historical settings: Frederick Winslow Taylor's schemes of "scientific management" at the turn of the century in the United States; the Leninist project of "scientific socialism" in Eastern Europe; and the International Monetary Fund's current project of "scientific capitalism" in contemporary post-socialist societies. Our century begins and ends with blueprints for making capitalism by design—but whereas Taylor's project was attempted in the microsphere at the level of the firm, current recipes attempt to shape entire national economies by making capitalism according to a plan.

SOC 235 Paradoxes of Cooperation and Collective Action
Fall. 3 credits. S. Kanazawa.
All theories of rational behavior predict that individuals will not voluntarily contribute to collective goods when they can receive the benefit without doing so; individuals will be freeriders unless they are somehow forced to contribute. Yet many examples of successful and seemingly voluntary collective action abound in natural settings. The same theories of rational behavior also largely overlook issues of self-image, identity, and commitment, yet most of us know how important these things are in our own behavior. How can we reconcile the theory with evidence?

We will focus on the paradoxes of cooperation and self-interest, rationality and commitment, self-image and self-enhancement.

[SOC 245 Social Inequality
Why do some people have a great deal of money and influence while others have barely enough to eat? Some degree of inequality among individuals exists in all modern industrial societies, and it is related to class, race, gender, and other social characteristics. This course focuses on the social systems that generate this inequality. We will learn how to analyze and interpret the processes that produce stratification, drawing on alternative theoretical viewpoints to aid in our understanding. Specific topics include class consciousness, class hierarchies, social mobility, income and poverty. Course structure will be a mixture of lectures and class discussion. Homework includes hands-on data analysis using computers. No prerequisites or experience necessary.]

[SOC 250 Religion and Public Life
This course explores how religion provides a basis for moral critique, political mobilization, and social identity in a diverse society. The first part introduces basic issues—definitions of religion, the sociological approach to the study of religion, religion and modernity. In the main body of the course, we will read studies of specific churches and organizations in the contemporary United States—examining such questions as: "How does religion provide a basis for gender identity and gender norms?" "What do religious groups and discourses contribute to public debate on issues ranging from economic justice to abortion?" "How do religious leaders mobilize citizens for social action in their communities?"

SOC 265 Latinos in the U.S. (also LSP 201)
Spring. 3 credits (4-credit option available). H. Velez.
Exploration and analysis of the Hispanic experience in the United States. An examination of sociohistorical background and economic, psychological, and political factors that converge to shape a Latino group identity in the United States. Perspectives are suggested and developed for understanding Hispanic migrations, the plight of Latinos in urban and rural areas, and the unique problems faced by the diverse Latino groups. Groups studied include Mexican Americans, Dominicans, Cubans, and Puerto Ricans.

[SOC 275 Women at Work (also Women's Studies 275)
Women have always contributed their labor to production and reproduction. With industrial development and the movement of market production out of the home and into the public sphere, however, women's work was relegated to the private sphere of the family. Recently this has changed as women seek employment outside the home. We will examine women's position and the role women play in the labor force, looking at data from both developed and developing societies. Specific topics will include sex differences in pay and sex segregation in the labor force, theoretical explanations from rational choice to Marxist feminism, the relationship between women's paid and unpaid labor, and the role of the state and government policy.]

SOC 285 Groups and Relationships
Spring. 3 credits. S. Kanazawa.
We will tackle the mysteries of human behavior and pursue a single question throughout this course. Why do human beings behave the way they do? We will first discuss several celebrated examples of seemingly unusual and bizarre behavior and then try to explain these with the help of selected social psychological theories: behavioralism, attribution theory, exchange theory and game theory. The emphasis will be on the application of the theories to explain empirical examples of human behavior.

[SOC 290 Social Psychology of Interpersonal Relations
The focus of this course is on the relationship between the individual and the social group. It will examine the way in which the individual shapes "society," and in turn, how society influences individual behavior. Topics include formation of self, influence and conformity, and the emergence of racial and gender differences in status and power.]

Methods and Statistics Courses

SOC 301 Evaluating Statistical Evidence
Fall. 3 credits. R. L. Breiger.
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

SOC 303 Design and Measurement
Spring. 4 credits. P. Becker.
Foundations of sociological analysis, issues arising from using humans as data sources, the quality of our primary data; methods of its collection; research designs in wide use and their limitations; pragmatic considerations in doing research on humans, organizations, communities, and nations.

Intermediate Courses

SOC 313 Social Networks and Social Structure (also SOC 513)
Spring. 4 credits. R. L. Breiger.
A critical survey of theories and techniques of structural analysis in sociology, centering on the usefulness of network analysis in providing integration of studies at different levels of generality. Applications in the areas of the sociology of organizations, community studies, social stratification, and dependence relations among nations. Emphasis on the mutual relevance of theories and operational research procedures.

SOC 315 Business Organization for the 1990s
In the last two decades, American business organizations have undergone a revolution in form and process. Corporatism has challenged the face of American management, and altered white-collar career paths. Large bureaucratic organizations are giving way to smaller firms that develop complex relations with each other rather than building from within. Japanese organizational styles and organizational reform strategies like Total Quality Management have become the buzzwords of the 1980s and 1990s. This
course discusses the new forms of business organization (and their manifestation in other domains, such as education and healthcare) that mark a crucial shift in the world of work and the way it shapes people's lives.

**SOC 326 Social Policy (also SOC 526)**  
Spring. 4 credits. S. B. Caldwell.  
The dramatic growth of the policy research sector and the institutional and intellectual forces that mark a changing relationship of social science to social policy in the United States. With an eye on that relationship, this course examines the development of social policy in several settings, examining the welfare, poverty, housing, crime, and health. The policy research sector itself—people, values, and institutions—is also surveyed.

**SOC 340 Health, Behavior, and Health Policy**  
This course examines the social contexts of physical and mental health, illness and medical care; its purpose is to explore the contributions of social science to health promotion and health policy. Topic areas include: social context of health, disease and illness; social organization of health services; use of health services; effectiveness of health service use; health promotion and disease prevention; and national health care policies.

**SOC 345 Gender Inequality**  
Gender inequality in contemporary perspective; emphasis on social origins of gender categories and implications of gender status for collective and individual behavior. Topics include inequalities in interpersonal relations, the family and work organizations, and implications of gender inequality for family violence, sexual harassment, and rape.

**SOC 350 Comparative Revolutions**  
For description, see GOVT 350.

**SOC 354 Law and the Social Order**  
3 credits. Offered 1997–98. B. L. Breiger.  
In what ways, if any, do laws and legal institutions make a difference to people who have disputes? How did law coming to be a modern profession? How do business organizations deal with legal ambiguity in constructing symbols of compliance with laws? How do networks of interpretive communities structure the authority of law? By exploring selected topics such as these, we seek to understand the distinctive contributions of sociology to the study of law and the social order.

**SOC 358 Modes of Institutional Analysis (also SOC 558)**  
Fall. 3 credits. D. Strang.  
Much social theory treats individual behavior as occurring within and shaped by "institutions." For example, discussions of American health care policy emphasize not only the preferences of physicians, businesses, and consumers, but also the institutional structure of American medicine that provides multiple veto points and makes broad cross-class coalitions difficult to build. This course will examine the main types of institutional analysis active in contemporary social science, including the sociology of institutions as cultural rules, political accounts of institutions as decision-making systems, and economic accounts of institutions as decision-making systems, and economic accounts of institutions as choice-theoretic equilibria. These approaches will be examined via the discussion of classic problems such as the bases of collective action, the construction of the rationalized actor, the diffusion of new models of appropriate behavior, and the explanation of cross-societal differences in national policies.

**SOC 370 Different Walks of Life: Sociology of Careers**  
Spring. 4 credits. S. Han.  
By examining various career paths, we will consider the implications of career as a continuous process of forming, maintaining, and changing positions. We will explore the differences and similarities among different career paths and lay out the patterns and structures of the career formation from a sociological point of view. We will also discuss the settings in which the career development takes place, giving some comparative attention to the ways of organizing careers in other societies.

**SOC 380 Gender, Ideology, and Culture**  
Spring. 4 credits. P. Becker.  
This course will explore representations of women in popular culture, including images, narratives, and religious practices. We will examine the interplay between popular culture and ideology, and look at how women "read" popular culture. The aim of the course is to enable students to think critically and analyze the effects of ideological representations of difference on personal identity construction, status, and power relationships. Readings are drawn mostly from sociology of culture and cultural studies; most texts deal with popular culture and gender in the 19th- and 20th-century United States.

**SOC 393 Introduction to Peace Studies**  
Not offered 1996–97. For description, see GOVT 393.

**Advanced Courses**

The following courses are intended for advanced undergraduates with substantial preparation as well as for graduate students in sociology and related disciplines. The prerequisite for all courses is 101 (an introductory course plus 301) or an equivalent statistics course. Students who are not sure whether their background is sufficient for a particular course should consult the professor in charge.

**SOC 410 Comparative Societal Analysis (also SOC 510)**  
Fall. 4 credits. D. Stark.  
This course examines contending analytic strategies for comparing institutions (and institutional configurations) across societies and social systems. How, for example, does the institutional analysis of the socialist economy contribute to our understanding of the specifics of modern capitalism? Special emphasis will be given to comparing transitions to socialism (in Eastern Europe and elsewhere) with transitions from authoritarianism in Latin America and Southern Europe.

**SOC 429 Culture and Agency (also SOC 529)**  
Spring. 3 credits. P. Becker.  
This course will look at the development of sociological theory on questions of culture and agency. Starting with various reflection or materialist approaches to culture that decenter agency, we will then follow the development of theories that explicitly link culture to actors and events in an attempt to account for both social reproduction and social change. The readings will cover a broad time span and a variety of intellectual approaches, including critical theory and cultural studies, but will center on the sociology of culture.

**SOC 434 The Sociology of Reproduction (also Women's Studies 435)**  
Spring. 4 credits. E. Bell.  
Women's biological potential to bear children and their childbearing experiences are socially constructed. The social context of women's reproductive capacity is one area in which women themselves are socially defined, and therefore within the potential to control women through the control of reproduction and childbirth. We will examine the social construction and control of reproduction using both empirical findings and theoretical arguments. Specific topics include: historical trends in fertility, the medicalization and medical control of conception and childbirth; biological versus social definitions of women as mothers; the role of state policy, and theoretical explanations of reproduction and gender stratification.

**SOC 438 Immigration and Ethnic Identity**  
Immigration has been a central process in the peopling of American society. The early immigration to the United States involved primarily the movement of European national groups. Since 1965, the mix of immigration has shifted to include increasing diversity of ethnic groups, especially from Latin America and Asia. As American society moves into an era of increasing ethnic diversity, the issue of ethnic boundaries and identity become increasingly complex and problematic. This course seeks to examine the causes of international immigration, the dynamics of immigrant incorporation into American society, and the making of new ethnic groups and identities.

**SOC 439 Philosophy of Social Sciences (also SOC 539)**  
Spring. 4 credits. S. Kanazawa.  
In this course, we will discuss issues related to science. We will first survey different approaches to science (positivism, realism, conventionalism, instrumentalism, pragmatism, and relativism), and then discuss questions such as: What is the purpose of science? What is the difference between science and engineering? Are there any differences between natural sciences and social sciences? What is theory? How do we evaluate theory? What is the relationship between theory and experiment? Do theories have to be realistic? How can we construct true theories from unrealistic assumptions? What is the difference between methodological individualism and methodological holism? What is the future of general theories in social sciences? Can one theory explain all human behavior at all times? Can social sciences ever be as good as natural sciences? This course will be ideal for graduate students in all fields of natural and social sciences, and advanced undergraduate students who go on to graduate school in natural or social sciences.
structure (occupational groups, labor markets, organizational demographics, social classes) and process (tracking, career trajectories, organizational demographics, social classes)
structure (occupational groups, labor markets, course.)
SOC 496 Honors Thesis: Senior Year
These courses are primarily for graduate students who wish to obtain research credit. Graduate Core Courses
Graduate Seminars
These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. Which seminars are to be offered any term is determined in part by the interests of the students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates those that are likely to be offered, but others may be added and some may be deleted. Students should check with the department before each term.

[SOC 501 Basic Problems in Sociology I]
Fall. 4 credits. R. L. Breiger.
Analysis of theory shaping current sociological research. Examination of several central problems in sociological inquiry providing an occasion for understanding tensions and continuities between classical and contemporary approaches, for indicating the prospects for unifying microsociological and macrosociological orientations, and for developing a critical appreciation of efforts to integrate theory and research.

[SOC 502 Basic Problems in Sociology II]
Spring. 4 credits. H. A. Walker.
Continuation of Sociology 501. Emphasis is on the logical analysis of theoretical perspectives, theories, and theoretical research programs shaping current sociological research. The course includes an introduction to basic concepts used in the logical analysis of theories and examines their application to specific theories and theoretical research programs. Strategies include functionalism, social exchange, and interactionism.

[SOC 505 Research Methods I: Logic of Social Inference]
Fall. 4 credits. Prerequisite: Sociology 505 or equivalent. S. Han.
A survey of methods for analyzing sociological data, including measurement error models, confirmatory factor analysis, panel models, and general structural equation methods. Readings from the sociological research literature will illustrate various methods. Periodic assignments on micro and mainframe computers will integrate theory, method, and data.

[SOC 507 Research Methods in Sociology III]
Fall. 4 credits. Prerequisite: Sociology 506. S. B. Caldwell.
Models and methods for the analysis of social dynamics. The course presents discrete-time methods for the analysis of time series and longitudinal data.

Graduate Seminars
These seminars are primarily for graduate students but may be taken by qualified advanced undergraduates who have permission of the instructor. Which seminars are to be offered any term is determined in part by the interests of the students, but it is unlikely that any seminar will be offered more frequently than every other year. The list below indicates those that are likely to be offered, but others may be added and some may be deleted. Students should check with the department before each term.

[SOC 508 Qualitative Methods]
This introductory graduate course will cover a range of qualitative methods, from fieldwork to cultural/interpretive methods. The course is designed to give students an introduction to a range of methods and techniques. Students will be required to engage in an ongoing research project on which they will report periodically throughout the course of the semester, in class discussions and in short papers that concentrate on solving concrete research problems.

[SOC 510 Comparative Societal Analysis (also SOC 410)]
Fall. 4 credits. D. Stark.
For description, see SOC 410.

[SOC 513 Social Networks and Social Structure (also SOC 313)]
4 credits. R. L. Breiger.

[SOC 524 Rational Choice Theory]
Rational choice perspective has gained popularity in all social sciences. The main focus in this course will be sociological rational choice, although we will discuss the work of economists, political scientists, psychologists, and others where relevant. We will first discuss the foundations of rational choice as a macro-sociological perspective, and emphasize the deductive derivation of various rational choice theories from this perspective. We will discuss the pioneering work of Coleman, Hechter and Willer as well as the more recent work by Heckathorn, Macy, Jasso, and others. We may have some guest speakers to talk about their current research.

[SOC 526 Social Policy (also SOC 326)]
Spring. 4 credits. S. B. Caldwell.

[SOC 529 Culture and Agency (also SOC 429)]
Spring. 4 credits. P. Becker.
For description, see SOC 429.

[SOC 530 Social Organization of Economic Action]
4 credits. Offered 1997–98. S. Han.
The issue of organizational boundary has been a central concern for both organizational sociology and economic sociology. The seminar approaches the issue, although it covers many other relevant literatures, mainly by playing two lines of argument against each other: transaction cost economics and transfer pricing problem. Meta-analytic techniques are also introduced, which are to be used for the final team project reviewing the empirical research on vertical integration.

[SOC 539 Philosophy of Social Sciences (also SOC 439)]
Spring. 4 credits. S. Kanazawa.
For course description, see SOC 439.

[SOC 555 Modes of Institutional Analysis (also SOC 358)]
Fall. 4 credits. D. Strang.

[SOC 565 Experimental Method in Social Sciences]
We will discuss laboratory experiments, not as a mere psychological research method to study human behavior, but as a means of testing scientific theories of micro (individuals), meso (groups and organizations), and macro (societal phenomena). The emphasis will be on the philosophical foundations and justifications for laboratory experiments (including the issues of internal and external validity, and artificiality and realism) rather than the detailed how-to instructions or statistical techniques of data analysis. We will read actual experimental studies, representing various designs, and discuss some ethical and other concerns in conducting laboratory experiments with human subjects.

[SOC 583 Transitions to Market Economies in Eastern Europe (also Management NRE 563)]
Spring. 4 credits. D. Stark.
This course examines the problems and prospects of transitions to markets in Eastern Europe. It introduces concepts for understanding the state socialist economy that is being transformed and analyzes important political developments since 1988. Topics include privatization, joint ventures, entrepreneurship, and labor relations in these changing economies.

[SOC 591 Special Seminars in Sociology]
Fall and spring. 2-4 credits. These graduate seminars will be offered irregularly. Topics, credit, and instructors will vary from semester to semester. Students should look at the sociology department bulletin board at the beginning of each semester for possible offerings.

[SOC 606-607 Sociology Colloquium]
Fall and spring. No credit. Required of all first-semester sociology graduate students.
A series of talks representative of current research interests in sociology, given by distinguished visitors and faculty members.

[SOC 608 Proseminar in Sociology]
Fall. One credit. Enrollment restricted to first-semester sociology graduate students. Discussions on the current state of sociology and on the research interests of the members of the field, given by members of the field.
SOC 660 Social Movements
For description, see GOVT 660.

[SOC 683 Social Interaction (also Psychology 683)]
D. P. Hayes.
Seminars: topics to be announced.

SOC 891-892 Graduate Research
891, fall; 892, spring. Up to 4 credits each term, to be arranged. Prerequisite: passing status and permission of a faculty member willing to supervise the project.

SOC 895-896 Thesis Research
895, fall; 896, spring. Up to 6 credits each term, to be arranged. Prerequisite: permission of thesis director.

THEATRE, FILM & DANCE

Through its courses and production laboratories, the department provides students with a wide range of opportunities in theatre, film, and dance. It offers a theatre arts major with concentration in theatre or film and a minor in dance. These majors educate students in accordance with the general liberal arts ethic of the college. The programs in dance and film and the advanced undergraduate theatre program provide some measure of professional preparation in those arts as well. The department encourages academic and studio participation by students from all disciplines and also provides the Cornell community with an opportunity to take part in its productions on an extracurricular basis.

Theatre Arts Major

Theatre Concentration
The theatre concentration offers studies in the history of theatre, dramatic theory and criticism, playwriting, acting, directing, design/technology, and stage management. Students interested in the Theatre Arts major should consult with Alison Van Dyke (Director of Undergraduate Studies, Theatre Arts).

Course requirements for theatre concentration:

1)  

<table>

</thead>
<tbody>
<tr>
<td>THETR 240</td>
<td>8</td>
</tr>
<tr>
<td>THETR 241</td>
<td></td>
</tr>
</tbody>
</table>

2) Four laboratory courses distributed as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>THETR 151</td>
<td>1-3</td>
</tr>
<tr>
<td>THETR 153, 253, or 353</td>
<td></td>
</tr>
<tr>
<td>Lab I, II, or III</td>
<td>1-3</td>
</tr>
</tbody>
</table>

3) Four courses in the area of Theatre Studies (see Theatre Studies section of theatre courses) chosen in the following manner:
   one course must be at 300 level
   one course must be at 400 level
   two additional courses at the 300 or above level
   one of the four courses must be pre-twentieth century.

4) Three courses (at least 9 credits) in other Theatre Arts courses chosen in consultation with the faculty advisor. Course taken to qualify for admission to the Advanced Undergraduate Theatre Program (described below) may also be used to fulfill this requirement.

5) Courses in which a student receives a grade below "C" cannot be used to fulfill the requirements for a Theatre Arts major.

The Advanced Undergraduate Theatre Program
The department offers advanced study in acting, directing, playwriting, design/technology, and stage management to students who qualify on the basis of outstanding achievement in course work. Criteria for admission to the AUTP is by the completion of the appropriate "track" of courses or equivalent experience and invitation of the faculty. Approval process will include a portfolio review and/or interview. The program provides students with intensive study in theatre as well as the opportunity to collaborate with professional faculty and guest artists. Department productions will be chosen to offer a unique experience to the individual student selected for the program. (For specific requirements please see listing of courses at end of department listings.)

Film
The study of film began in this department in the 1930s and continues to be based here. In the interim years, however, it has also spread into a significant number of other departments in the college: Africana studies, anthropology, Asian studies, comparative literature, English, German studies, history, psychology, and romance studies. This proliferation of courses has been accompanied by a comparable proliferation of perspectives and faculty concerns, e.g., the relationship of national cinemas to national literatures and specific cultures, film's relationships to myth and ideology, the use of film as historical evidence, film's efficacy as a rhetorical medium, and film's contribution to perennial issues in aesthetics, the history of the arts, and studies in cognition. In addition, courses in film production and the history and theory of film as an art are centered in this department.

This richness of courses and perspectives is matched by the ways in which students may make film the focus of their undergraduate studies. The four ways currently being used are as follows: 1) concentrating on film within a Theatre Arts major; 2) constructing an individually tailored Independent Major in film (including the possibility of placing film in tandem with another medium or discipline); 3) focusing on film as a College Scholar; and 4) concentrating in Visual Studies. Students interested in option 4 should consult Marilyn Rivchin (Theatre Arts) and/or Robert Ascher (Anthropology). Students interested in options 2 or 3 should consult Don Fredericksen (Theatre Arts) and Lynne Abel (director, College Scholar and Independent Major programs). Students interested in the first option should consult Don Fredericksen (director, Film Studies, Theatre Arts).

Film Concentration Requirements
The department's film concentration requires a total of 50 credits in film and related courses. Students should note that a number of film
fulfill the requirements for the major in less courses: Theatre Arts 375 and 376—are be in residence at Cornell during accordingly, in consultation with their major

These courses are: Theatre Arts 277, 377, 383, 413, 477, 493 and 653. Enrollment in each of these courses is limited by the nature of the work and by facilities. Enrollment in Theatre Arts 477 and 493 depends upon the quality of previous work in Theatre Arts 277, 377, 383 and/or 413; enrollment is not guaranteed. Majors without a strong interest in production can complete the production requirement with one course. Theatre Arts 277. Majors with a strong interest in production should begin instead with Theatre Arts 377, after they have taken Theatre Arts 274 in their sophomore year. The total credits in production courses cannot exceed twenty hours; this limit is strictly enforced.

1. A core of four film courses:

   THETR 274 Introduction to Film Analysis
   THETR 375 History and Theory of Commercial Narrative Film (offered alternate fall semesters)
   THETR 376 History and Theory of Documentary and Experimental Film (offered alternate fall semesters)
   THETR 277 Video Production I (offered alternate years, and summers)

   OR
   THETR 377 Fundamentals of 16mm Filmmaking

2. One of the following theatre courses:

   THETR 250 Fundamentals of Theatre Design/Technology
   THETR 280 Introduction to Acting
   THETR 398 Directing I (prerequisite THETR 280)

3. Four courses (15-16 credits) in film offered by Theatre Arts as below, or by other departments (with consent of adviser):

   THETR 290 Filming Other Cultures
   THETR 313 Japanese and Asian Film
   THETR 378 Soviet Film of 20s and French Film of 60s (offered alternate spring semesters)
   THETR 379 Documentary Film from 1945 to present (offered alternate spring semesters)
   THETR 383 Screenwriting
   THETR 395 Video: Art, Theory, Politics
   THETR 396 German Film (offered occasionally)

4) 15 credits of related coursework inside or outside of Theatre Arts (as approved by adviser). The courses chosen to fulfill this requirement should reinforce the student’s particular interest in film, and will not necessarily be film courses per se. For example, a student interested in the psychology of film, or in ethnographic film, or in film vis-a-vis intellectual or social history, will be encouraged to choose “related course work” accordingly.

5) With a grade of less than C, a course cannot be used toward the concentration.

6) Course work in production cannot exceed twenty credit hours.

Honors

Students who have at the end of their junior year a GPA above 3.4 in their film concentration courses and an overall GPA above 3.0 may elect to work for honors in film during their senior year. They should consult their adviser on this matter during the spring of their junior year. Theses may be undertaken in film analysis, filmmaking and screenwriting.

The Advanced Undergraduate Film Program

The department offers advanced study in filmmaking to students who qualify on the basis of outstanding achievement in film studies and film production courses. Acceptance to the AUTP and admission to the advanced film production course (THETR 493) will be determined by a committee of Film faculty in December of each year, based on applications from students who have a proposal (script or treatment) for a film or video project. Up to four of these students will also be selected to receive the Melville Shavelson Award to help fund their advanced film projects.

Film Study Abroad

The College of Arts and Sciences, through this department and in consort with a number of other colleges and universities, offers up to a full year of study at the Inter-University Center for Film and Critical Studies in Paris, France. The center’s program is theoretical, critical, and historical. It is most useful to students pursuing a major in film studies and serves as an intensive supplement to their Cornell film courses. Fluency in French is required, and Theatre Arts 274 and 375 are prerequisites. Inquiries should be addressed to Professor Frederickson, Cornell’s liaison with the center.

The Dance Program

The dance program offers courses in dance technique, improvisation, composition, performance, anatomical analysis of movement, and the history, theory, and criticism of dance. Technique courses include modern dance at four levels and ballet at three levels. Other dance forms, such as tap, historical dances, Japanese Noh, Indian, Javanese, and African dance are offered on a rotating basis. Courses in jazz and ballet aid the dance, taken through the Physical Education program, supplement these offerings. Technique classes develop strength, flexibility, coordination, and the ability to perceive and reproduce phrases of dance movement with clarity of rhythm, body design, and expression. The more advanced classes explore the possibility of performing complex phrases in various styles. Students may earn up to eight academic credits (one each semester) in technique classes. Students may also satisfy the physical education requirement by taking dance technique classes in the dance program. The schedule for all dance technique classes is available in the main office of the Center for Theatre Arts. Registration for technique classes takes place in Teagle Hall. Students taking technique for academic credit must also register through their own colleges. The faculty offer rehearsal and performance workshops in which they choreograph and rehearse original dances, performed in public concert. Admission to rehearsal and performance classes is by audition. Students may receive one academic credit (S-U grades only) when performing in student-faculty concerts by registering for THETR 155.

The Dance Major

To be admitted to the major, students must have completed two technique courses in modern dance or ballet at level II or above. Theatre Arts 233 or 305 (Explorations in Movement and Performance) and Theatre Arts 210 (Beginning Dance Composition and Music Resources). It is also recommended that Theatre Arts 201 (Dance Improvisation), Theatre Arts 250 (Fundamentals of Theatre Design and Technology), and Music 105 (Introduction to Music Theory) be taken before the junior year. The following requirements are expected of the major.

Prerequisites for the Major:

THETR 210 Beginning Dance Composition and Music Resources

THETR 233 or 305 Explorations in Movement and Performance

Two technique courses in modern dance or ballet at level II or above

Requirements for the Major:

Music 105 Introduction to Music Theory (or substitute at the appropriate level)

ONE course in historical dance, tap, jazz, a non-western form, folk dance, or ballroom dance

TWO semesters each of ballet and modern dance (in addition to the prerequisite)

THETR 155 Rehearsal and Performance

THETR 201 Dance Improvisation

THETR 250 Fundamentals of Design and Technology

THETR 310-311 Intermediate Dance Composition

SPANL 399 Spanish Film

THETR 413 Film and Performance

AS&RC 435 African Cinema

THETR 475 Seminar in the Cinema I (offered alternate spring semesters)

THETR 476 Seminar in the Cinema II (offered alternate spring semesters)

THETR 477 Intermediate Film and Video Projects

THETR 493 Advanced Film and Video Projects

THETR 563 Myth onto Film

THETR 413 Film and Performance

THETR 653 Myth onto Film

THETR 435 African Cinema

THETR 475 Seminar in the Cinema I

THETR 476 Seminar in the Cinema II

THETR 477 Intermediate Film and Video Projects

THETR 493 Advanced Film and Video Projects

THETR 563 Myth onto Film
THETR 312 Physical Analysis of Movement
3
THETR 314–315 Western Dance History
8
THETR 410 Advanced Dance Composition
4
THETR 418 Seminar in History of Dance (or other 400-level academic dance course).
4
THETR 491 Senior Project
4
Total
46–49

Students will be expected to perform in at least two concerts and to present at least two of their own dances, in addition to the senior project.

FRESHMAN WRITING SEMINARS

THETR 120 The Wild Ones: Rebellious Youth on Stage
Spring. 3 credits. R. Bechtel.
Throughout history, in many of the world’s most controversial dramatic texts, playwrights have thrust young heroes and antiheroes center stage. The scenes of rebellion and rebirth enacted in the theatre have often reflected similar upheavals in the society and culture of the time. This course will approach such plays and films as Natural Born Killers, Oedipus, Spring Awakening, and Hamlet as fractious cultural critiques, narratives of both rebellious youth and rebellious dramatists. Some of the contemporary cultural issues the course will explore through the plays are political correctness, violence in the media, and multiculturalism. Writing assignments will include play analyses, film reviews, and a short dramatic scene.

THETR 135 Blood, Horror and Revenge in Dramatic Representation
Fall. 3 credits. I. Shafer.
We will look at the bloody and fantastic revenge tragedy became the most popular form of dramatic entertainment at the precise moment when the most definitive prohibitions against personal revenge were made law in Elizabethan England? In this course we will look at both Elizabethan revenge tragedies such as Shakespeare’s Hamlet and contemporary films about revenge such as Stephen King’s Carrie to help us better understand what the blood and gore we love to watch has to do with the relationship between the individual and the state. Further, we will explore how that very delight and engagement in disgusting spectacles shapes and paradoxically mirrors our engagement in and coercion by forms of the political itself. Investigations which begin with questions of representation and seeing which take into account cultural phenomena such as revenge tragedy, legal regulations of spectacle, and the mechanics of creating and regulating violence on the screen will help us to access theories of theatre and cultural politics as well as more formal questions about theatrical and literary form.

THETR 145 “Shall We Dance?”: A History of the Stage and Film Musical
Fall and spring. 3 credits. Occasional screenings, W 7–9 pm. M. Gay.
From Busby Berkeley to Cats, there is no genre we love (or love to hate) more than the musical. Tracing its history on film and on stage throughout the 20th century, from the earliest sound films to the multi-million-dollar, hi-tech world of Andrew Lloyd Weber, we will consider issues such as adaptation (novel-to-stage, stage-to-film), the use of technology and the role of spectacle (including recent innovations), and the ways America has seen itself reflected in this genre; trying to answer the question of what it is that has made the musical so enduring. In addition, we will reconsider the musical through the lens of race and gender studies, linking issues such as early representations of African Americans and Asians on film to the recent controversies over Showboat and Miss Saigon, and use close readings of film and video to examine the portrayal of gender throughout the century, considering what ’gender’ has meant to creators of musicals, and how sexuality is mediated through dance and song (from pas de deux to sexy sample). While most of our emphasis will be on film and video screenings, we will also draw on supporting historical and theoretical material.

THETR 165 Theatre Behind Bars
Fall and spring. 3 credits. M. Mitchell.
The United States has the highest per capita imprisonment rate in the world with over four million people in prison, parole, in jail or in prison. This course will address the ethical, cultural and political aspects of imprisonment today through the lens of theatre by and about the imprisoned, especially contemporary works. We will examine issues of race, gender, and politics as they affect the prison. If possible, a direct link with prisoners studying theatre will be maintained through an exchange of correspondence and videotaped performance. Recent inmates may be guest speakers. The class will take a workshop approach to all writing assignments.

THETR 175 Make ’Em Laugh
Fall and spring. 3 credits. P. Reynolds.
The field of American popular entertainment, encompassing such forms as circus, vaudeville, theme parks and professional sport, has recently become the focus of much scholarly attention. This course will examine the various forms in their historical context in an effort to divine the manner in which they operate, examine the reasons for their initial success (and often subsequent failure) and determine their effect upon and within American popular culture. Special attention will be paid to modern forms of popular entertainment (e.g. Disneyworld, raves).

THETR 185 Film, Fantasy, and the Bard
Fall. 3 credits. E. Internam.
Today’s popular literature and film are often inspired by historical literary sources, and Shakespeare’s plays are especially rich in finding their way into current works. This course will examine Shakespeare, as realized in various forms of today’s film and popular literature (e.g. Don Quixote, King Lear, and A Midsummer Night’s Dream as envisioned by Shakespeare and as reinterpreted in the modern film and fantasy literature genres. Although the writing assignments will be primarily critical essays, students will be given the opportunity to write some fiction. Issues discussed might include how content relates to form, how it is literary or dramatic; how our modern sensibility affects our perception of the work; how themes are emphasized or de-emphasized depending on the historical and cultural biases of the audience; and how the liberties that Shakespeare may have taken with his source material compare to those taken currently with his works.

THETR 195 Bodies in Motion
Spring. 3 credits. J. Morgenroth.
Contexts as disparate as dance, mountain climbing, and basketball reveal a combination of sweaty exertion and surpassing grace. Through reading descriptions of dancers and athletes, explorers who have experienced physical hardship, bikers and hikers, planters and builders, as well as through observations of dancing, athletic events, and people moving in their daily lives, students will sharpen their powers of observing the body in action. Frequent, short writing assignments will give students the opportunity to recreate the vitality of movement in their own writing.

GENERAL SURVEY COURSES

THETR 230 Creating Theatre
Spring. 3 credits. K. Goetz and faculty.
An introduction to and collaborative experience in the world of theatrical production. Students will examine the creation of theatre onstage and backstage through lectures, demonstrations, discussions with various faculty and staff at the Center for Theatre Arts, and by attending department productions. Exposure to the various elements of theatre production will help students gain a new critical perspective of the performing arts. Some writing is required.

THETR 301 Mind and Memory: Explorations of Creativity in the Arts and Sciences (also English 301)
Spring. 4 credits. Limited to 40 students. For description, see English 301.

THETR 430 Introduction to Theatre Management
This class is designed to introduce students to the profession of theatre management. The class will be a project-oriented study of components of the field, such as marketing, fundraising, contracts, organizational structures, personnel management, accounting, and box office. The class will use the work of the Center for Theatre Arts as a case study, and faculty and staff of the Department of Theatre Arts will lead sessions on the various topic areas.

THETR 445 Text Analysis for Production: How to Get from the Text onto the Stage
Fall. 4 credits. Prerequisite: THETR 240 OR THETR 281 OR THETR 250 OR THETR 398, and permission of instructor.
Limited to 15 students. B. Levitt.
This course looks at the text as the central, essential source for production decisions made by the actor, the director, the designer and the dramaturg. Students will begin with playwrights such as Shakespeare, Chekhov, Williams, Pinter and Ionesco, then move on to works by unknown, contemporary authors for which no critical/historical material exists. Students will "present" their conclusions about the performance of the texts through project work as either an actor, director, designer or
dramaturg, as well as through two to three papers.

THEATRE STUDIES COURSES

THETR 223 The Comic Theater (also Comparative Literature 223 and Classics 223) #
Summer. 3 credits. J. Rusten.
For description, see Classics 223.

THETR 240 Introduction to Western Theatre I #
Fall. 4 credits. K. Burroughs.
A survey of the major developments in the theatre—playwriting, acting, staging, architecture, and dramaturgy—in classical Greece and Rome, medieval and Renaissance Europe. Representative plays will be read and discussed in their theatrical context.

THETR 241 Introduction to Western Theatre II #
Spring. 4 credits. K. Burroughs.
A survey of the major developments in the theatre—playwriting, acting, staging, architecture, and dramaturgy—since 1642. Among the areas considered will be French Neoclassicism and English Restoration, the eighteenth and nineteenth centuries in England, France, and Germany and the modern international stage. Representative plays will be read and discussed in their theatrical context.

THETR 330 The Comedy of Neil Simon (also English 334)
Summer. 3 credits. J. E. Gainor.
With a career spanning more than three decades, Neil Simon is both the most prolific and most successful American dramatist of all time. Ironically, his writing is virtually ignored by theatre scholars. This class will explore Simon's playwriting and the filmic adaptations of his plays, with an eye to their dramaturgy as well as to their status as products of late-twentieth-century American culture. This class will include required film screenings, schedule to be determined.

THETR 332 Russian Drama and Theatre (also Russian Literature 332)
Fall. 4 credits. S. Senderovich.
See Russian Literature 332 for description.

THETR 331 The Classical Theatre (also Comparative Literature 331) #
4 credits. Prerequisite: THETR 240 or permission of instructor. Not offered 1996–97. Staff.
This course will look at the major developments in Classical Greek and Roman theatre as well as possible assessments in the light of contemporary theory. Topics may include one or more of the following: the relation of the dramatic festivals to questions of democracy, the links between the Poetics and subsequent criticism, and more recent critical approaches to the dramatic texts.

THETR 332 Medieval and Renaissance Theatre (also Comparative Literature 332) #
4 credits. Prerequisites: THETR 240 or permission of instructor. Not offered 1996–97. Staff.
Besides the discussion of representative plays from these periods, this class may focus on questions such as the staging of medieval drama, the relation between the church and the community, and the ways in which historians and critics have interpreted the Renaissance, especially in light of Shakespeare's work. Representations of class, race, and gender on stage as well as in the audience will also be examined.

THETR 333 European Drama from the Neo-Classical to the Bourgeois (also Comparative Literature 333) #
Spring. 4 credits. Prerequisite: THETR 240 or 241. Not offered 1996–97. Staff.
The course will examine the explosion of dramatic forms and theories in pre- and post-revolutionary Europe. The class will also discuss the ways in which changes in theatre architecture and dramatic structure participate in the dynamics of change in European society that operate between the early seventeenth and the mid-nineteenth centuries.

THETR 335 The Modern and Contemporary Theatre (also Comparative Literature 337)
Spring. 4 credits. Prerequisites: THETR 240 or permission of instructor K. Burroughs.
A study of the drama and its cultural contexts from the late nineteenth century to the present. This course will raise questions about modern as well as postmodern theories of performance and the role of theatre in society. It may examine western style theatre in non-western settings.

THETR 336 American Drama and Theatre (also English 336)
4 credits. Limited to 25 students.

THETR 337 Contemporary American Drama and Theatre (also English 337)
Fall. 4 credits. Limited to 20 students.
J. E. Gainor.
A survey of American drama and theatre post-1960. Particular emphasis will be placed on plays by women and dramatists of color to explore questions of identity and theatrical responses to contemporary American culture.

THETR 345 The Tragic Theater (also Classics 345 and Comp. Literature 344)
Fall. 4 credits. Limited to 40 students.
F. Ahl.
See Classics 345 for description.

THETR 372 English Drama to 1700 (also English 372) #
Fall. 4 credits. Not offered 1996–97.
S. McMullin.
See English 372 for description.

THETR 373 English Drama from 1700 to the Present (also English 373)
Spring. 4 credits.
See English 373 for description.

THETR 420 Brecht, Artaud, Mueller, Wilson (also German Studies 430 and Comparative Literature 430)
Spring. 4 credits. D. Barthrick.
This course will explore in depth the writings and practices of four major twentieth-century theatrical artists: Bertolt Brecht, Antonin Artaud, Heiner Mueller, and Robert Wilson, in order to (a) map out differences and similarities among the four as representatives of avant-garde theatre and performance art; (b) situate their work in the political and cultural contexts out of which they emerged; and (c) explore their impact upon succeeding movements and artists of modern drama and cinema. A central focus of the course will be to explore the differing and changing notions of "avant-garde theater" as demonstrated in the work and reception of Brecht, Artaud, Mueller, and Wilson. Exploration of the work of these four artists will serve methodologically both to interrogate critically what has become competing strategies in the development of performance theater and avant-garde theater as well as to consider ways in which these models have been and could be synthesized.

THETR 425 Introduction to Dramaturgy and Dramatic Criticism
Fall. 4 credits. Prerequisite: THETR 240 & 241, or their equivalents. Limited to 15 students. J. E. Gainor.
What is dramaturgy? What does a dramaturg do? We will examine this position in the theatre in both historical and practical modes. The class will be primarily a practicum, involving dramaturgical work on departmental productions, participation with student playwrights on new script development, and practice in the writing of dramatic criticism.

THETR 431 Theory of the Theatre and Drama (also Comparative Literature 433) #
4 credits. Prerequisite: some theatre history and dramatic literature work at the 300 level or permission of instructor. Not offered 1996–97.
A survey of dramatic theory and theories of theatrical representation from Aristotle to the present.

THETR 432 Dramaturgy: Play and Period (also Comparative Literature 443) #
Inventing the Modern Drama. European theatre between 1870 and 1900.

THETR 435 Special Topics: Theories of Contemporary Performance (also Comparative Literature 438)
Fall. 4 credits. Limited to 15 students.
Prerequisite: permission of instructor. K. Burroughs.
A survey of the dramatic literature and the current performance traditions of contemporary France.

THETR 436 The Female Dramatic Tradition (also Women's Studies 433)
Spring. 4 credits. J. E. Gainor.
Is there a "female dramaturgy"? What is the female tradition in the theatre? The course will explore these questions through an investigation of texts by women dramatists, including Hrotsvitha, Apha Behn, and Caryl Churchill, as well as theory by such critics as Sue Ellen Case and Jill Dolan.

THETR 437 Seminar in Dramatic Criticism (also Theatre Arts 636)
4 credits. Prerequisite: open to qualified junior and senior departmental majors with permission of the instructor. Not offered 1996–97. Staff.

THETR 438 East and West German Drama
Fall. 4 credits. Not offered 1996–97.
D. Barthrick.
This course will cover the major historical and textual developments in German theatre from the end of World War II to the present. Leading dramatists from West and East Germany, Switzerland, and Austria (Brecht, Frisch, Durrenmatt, Weiss, Hochhuth, Muller, Braun, Kroetz, Handke, and others) will be
treated in the light of the political events and aesthetic-dramaturgical traditions from which they emerge and with which they are taking issue.

[THETR 600] Proseminar in Theatre Studies Spring. 4 credits. Limited to Theatre Arts graduate students. An introduction to the theory and methods involved in the study of the theatre as cultural and aesthetic practice.

[THETR 630] Special Topics (also Comparative Literature 632) 4 credits. Not offered 1996-97. Staff.

[THETR 636] Seminar in Dramatic Criticism (also Theatre Arts 437) 4 credits. Prerequisite: Permission of instructor. Not offered 1996-97. Staff.

[THETR 637] Seminar in Dramatic Theory (also Comparative Literature 638) 4 credits. Prerequisite: Permission of instructor. Not offered 1996-97. Staff.

Brecht’s theory and dramatic praxis will be examined in the light of a two-fold contexts: (1) the relation of selected plays and writings to the historical contingencies of the Weimar and exile periods in which they emerged; (2) in later periods: an analysis of the reception and various readings (postmodern, feminism, post-structuralism) of these same works by later writers and critical publics in Germany and the United States as a way of understanding the changing nature of aesthetic values in the postwar period. Special attention will be given to the importance of Marxism for Brecht’s art, as well as to the author’s role as a representative of the cultural avant-garde.

ACTING

[THETR 155] Rehearsal and Performance Fall or spring. 1-2 credits. 1 credit per production experience per term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the department’s scheduled auditions. Students should add this course only after they have been assigned roles. S-U grades only. The study, development, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assisting faculty and guest directors.

[THETR 205] Rehearsal Workshop Fall or spring. 2 credits. Limited to 30 students. Prerequisites: participation in a particular department production; and by permission. Staff. This course will enable students participating in a particular production to gain expertise and/or knowledge to contribute to that production. The focus of the class will depend on the needs of a particular production (history, choreography, textwork, dramaturgy, etc). The class allows students in a production to gain intensely on a particular aspect of that production in a non-pressurized learning environment.

[THETR 280] Introduction to Acting Fall or spring. 3 credits. Each section is limited to 16 students. Registration only through roster in department office, Center for Theatre Arts. A. VanDyke, K. Grant and staff. An introduction to the actor’s technique and performance skills, exploring the elements necessary to begin training as an actor, i.e., observation, concentration, and imagination. Focus will be on physical and vocal exercises, improvisation, and text and character. There is required play reading, play attendance, and some scene study.

[THETR 281] Acting I Fall or spring. 3 credits. Each section limited to 14 students. Prerequisites: THETR 280 and audition. Registration only through roster in department office, the Center for Theatre Arts. 281 is restricted to sophomores and above. B. Levitt and S. Cole. Practical exploration of the actor’s craft through improvisation and exercises in physical and psychological action. Scene study utilizing the plays of Williams, Inge, and Miller.

[THETR 283] Voice and Speech for Performance Fall. 2 credits. Limited to 12 students. Primarily for department majors. Prerequisite: permission of instructor. T. Jenkins. Registration only through department roster in the main office of the Center for Theatre Arts. Development of the speaking voice with additional emphasis on dramatic interpretation.

[THETR 284] Speech and Dialects for Performance Spring. 3 credits. Limited to 12 students. Primarily for department majors or advance undergraduate training program candidates. Prerequisites: THETR 281 and permission of instructor. Registration only through department roster in the main office of the Center for Theatre Arts. A. VanDyke. Development of speech and dialects in dramatic text.

[THETR 285] Creativity and the Actor Summer. 3 credits. Limited to 16 students. Although this course is focused particularly on the actor, creativity training is equally applicable to any area of performance (for example, sports, dance, music) and those areas relying on individual creativity such as writing and the visual arts. No previous experience or course work in the area of theatre is required. D. Feldshuh. Using mime, physical and vocal exercises, karate, Gestalt therapy, theatre games, and Zen meditation, this course will attempt to make the student more aware of how he/she participates in and can influence the creative process of acting and to assist the student toward a greater capacity for stage presence. The course will deal with hindrances to the creative response (stage fright, self-consciousness, manners, physical and vocal tension, emotional blocks), introduce the concepts of energy, stillness, and release, and explore the relationship between emotion, mind and body structure. It will attempt to give the individual tools with which the student may continue to expand his/her capacity for spontaneous, flexible, and believable acting.

[THETR 287] Summer Acting Workshop Summer. 3 credits. Limited to 16 students in a section. Levitt and staff. An introduction to the processes of acting. Practice in training techniques, rehearsal procedures, and methodology.

[THETR 380] Acting II Fall. 3 credits. Prerequisite: THETR 281 and audition. Limited to 12 students. S. Cole. A continuation of Acting I. Special consideration will be given to a physical approach to characterization utilizing the plays of Chekhov and Ibsen.

[THETR 381] Acting III: Advanced Scene Study Spring. 3 credits. Prerequisite: THETR 380 and audition. Limited to 10 students. Staff. This course focuses on advanced problems in language and period style (movement, bows, curtseys, and period dances). Monologues and scenes will be drawn from these playwrights: Shakespeare and Moliere.

[THETR 385] Musical Theatre Fall. 3 credits. Prerequisites: THETR 281 and permission of instructor. Limited to 10 students. K. Grant. Preparation, performance and critique of scenes from the repertoire of post-1960 musical theatre pieces. The course will also explore basic musical theatre dance styles, e.g., tap and jazz.

[THETR 386] Movement for the Actor Spring. 3 credits. Prerequisites: THETR 281 and permission of instructor. Limited to 10 students. R. Wilson.
Physical skills for the actor will be developed through work with LeCoq-based Neutral Mask corporeal mime, and physical acting techniques.

**THETR 400 Modern Performance Problems**
Fall. 4 credits. Prerequisites: THETR 240, 280, 281 and permission of instructor. Limited to 14 students. Not offered 1996-97. J. E. Gainor and R. Wilson. This class is a combination of play analysis and performance focused on the special problems of modern issues in modern dramatic material. Playwrights to be studied are Caryl Churchill, Sam Shepard, and Marsha Norman. The class will not only deal with some of the plays by these authors, but also critical writing and performance focused on the special problems of gender issues in modem dramatic material. Playwrights to be studied are Caryl Churchill, Sam Shepard, and Marsha Norman. You have an opportunity to learn by doing as you work with actors on a diverse range of material. Directors will cast from a company of student-actors who wish to earn credit by participating in three scenes and the writing of three papers. [Theatre Company]

**THETR 240 Fundamentals of Theatre**
Spring. 1-2 credits. The Theatre Laboratory Theatre Company is a group of student-actors who wish to earn credit by participating in three scenes directed by students taking THETR 498. The SLTC might be compared to playing in the band or singing in a university chorus. It is not a formal class. You have an opportunity to learn by doing as well as the opportunity to see your work on video tape and receive feedback from faculty members if you request it. Students enrolling in the SLTC for credit will earn 1 credit for 2 productions and 2 credits for 3 projects. The SLTC will also meet with directors once a week during class time.

**THETR 250 Fundamentals of Theatre Design and Technology**
Fall and spring. 4 credits. Open to first term freshmen. Limited to 12 students. Registration only through department roster in GTC 225. A minimum of one credit of Production Lab (THETR 151 or 251) is strongly recommended concurrently. K. Goetz, R. Archer, J. Johnson, C. Hatcher, C. Orr Brookhouse, and E. Intemann. An introduction to design and technology in the theatre. Lectures, discussion, and project work introduce the principles of designing scenery, costumes, lighting and sound, and the technical process of realizing designs on stage. Students are required to purchase materials, which the instructors will specify (approximate cost, $40).

**THETR 348 Advanced Playwriting**
Fall. 4 credits. Prerequisite: THETR 348 or permission of instructor. Not offered 1996-97. R. Wilson. A continuation of Theatre Arts 348, emphasizing advanced techniques and culminating in the composition of a full-length play.

**THETR 398 Fundamentals of Directing I**
Fall. 3 credits. Limited to 10 students. Prerequisite: permission of instructor. Special consideration is given to students who have completed THETR 280 or are intending to continue in the area of stage or screen directing. D. Feldshuh. Focused, practical exercises to teach the student fundamental staging techniques that bring a written text to theatrical life. A core objective of the course is to increase the student's awareness of why and how certain stage events communicate effectively to an audience. Each student will direct a number of exercises as well as a short scene. This course builds on the staging techniques learned in Fundamentals of Directing I. In this course each student will direct a series of projects and public presentations focusing on specific conceptual challenges. The student will develop an increased ability to articulate and defend directorial choices and learn to work with actors on a diverse range of material. Directors will cast from a company of actors to be auditioned early in the semester. Each actor in the company will earn one or two credits as part of Theatre Arts 155.02. [Theatre Company]

**THETR 399 Practicum in Directing**
Fall or spring. 1-4 credits. Prerequisites: THETR 240, 280, 398, 498, and permission of instructor. D. Feldshuh. This course will allow the student who has completed the prerequisites the opportunity to direct a full presentation of theatre in conjunction with a faculty mentor. It may also involve an internship with a prominent director on campus or the opportunity to assist direct a faculty or guest director. Although primarily practical in orientation, outside reading and a final written essay are frequently required.

**PLAYWRITING**

**THETR 348 Playwriting**
Fall. 4 credits. Limited to 12 students. Prerequisite: permission of instructor. R. Wilson. A laboratory for the discussion of student plays. Following exercises in dramatic structure and technique, students will be expected to complete a one-act play.

**THETR 250 Technical Production**
Fall and spring. 4 credits. Limited to 20 students. Prerequisite: THETR 240, 250, 280, 398, 498, and permission of instructor. K. Goetz. The use of sound as a medium of design for the theatre; research and creation of sound score, recording and engineering techniques, live effects and projects in live and studio sound production.

**THETR 252 Technical Production Studio I**
Fall. 3 credits. Limited to 6 students. Prerequisite: THETR 250 or 252 or permission of instructor. Students are required to purchase supplies (approximate cost $30.00). C. Hatcher. This course concentrates on designing lighting for different genres in various venues, developing the lighting design as a versatile artist. Personal style and artistic commitment will be stressed. The theory and practice of lighting design as a medium for artistic expression. This course will explore the aesthetic and mechanical aspects of light and their application in the theatre. Artistic style and viewpoint will also covered.

**THETR 364 Scenic Design Studio**
Fall. 3 credits. Students are required to purchase materials which the instructor will specify (approximate cost: $50.00). Limited to 10 students. J. Johnson. An exploration of the process of designing scenery for the live theatre. Emphasis on the analysis of the dramatic text, research, and the use of imagery to support dramatic intent of the playwright. Class projects will engage students in using a variety of mediums to explore how architecture, the arrangement of space, and elements of interior design are used dramatically. Class activities and projects are designed to encourage the development of student's innate expressive abilities. Experience in theatre production and graphic skills is helpful but not essential. May be repeated for credit.

**THETR 366 Costume Design Studio**
Spring. 3 credits. Students are required to purchase make-up kits which the instructor will provide (approximate cost: $50.00). Limited to 6 students. E. Intemann. Design of costumes for the theatre, concentrating on script and character analysis, period research, design elements, figure drawing and rendering skills, and an understanding of production style. May be repeated for credit.

**THETR 368 Sound Design Studio**
Spring. 4 credits. Limited enrollment to 12 students. Prerequisite: THETR 280 or permission of instructor. Students are required to purchase materials which the instructor will provide (approximate cost: $50.00). C. Hatcher. The use of sound as a medium of design for the theatre; research and creation of sound score, recording and engineering techniques, live effects and projects in live and studio sound production.

**THETR 400 Modern Performance Problems**
Fall. 4 credits. Prerequisites: THETR 240, 280, 398, and permission of instructor. Special consideration is given to students who have completed THETR 280 or are intending to continue in the area of stage or screen directing. D. Feldshuh. Focused, practical exercises to teach the student fundamental staging techniques that bring a written text to theatrical life. A core objective of the course is to increase the student's awareness of why and how certain stage events communicate effectively to an audience. Each student will direct a number of exercises as well as a short scene. This course builds on the staging techniques learned in Fundamentals of Directing I. In this course each student will direct a series of projects and public presentations focusing on specific conceptual challenges. The student will develop an increased ability to articulate and defend directorial choices and learn to work with actors on a diverse range of material. Directors will cast from a company of actors to be auditioned early in the semester. Each actor in the company will earn one or two credits as part of Theatre Arts 155.02. [Theatre Company]
Basic techniques of make-up for the stage including corrective, old age, and fantasy use of prosthetics, wigs, hair and hairpieces.

THETR 340 Theatrical Drafting and Technical Drawing Studio
Fall. 3 credits. Limited to 6 students. Prerequisite: THETR 250 or permission of instructor. R. Archer. Implementation of the fundamentals of drafting and technical drawing. Introduction of the concept of an individual style in the approach to drafting for the theatre. A series of projects to familiarize students with the convention and process of visualization and drafting.

THETR 352 Themed Entertainment: The Technical Perspective
Fall. 3 credits. Limited to 12 students. R. Archer. A broad-based inquiry into the integration of art and science in today's theme parks and interactive entertainment attractions. Papers, projects, and discussions will deal with planning and development aspects of large-scale entertainment projects including architecture, costume, set design, stage machinery, lighting, and model building. Focus will be on the specialized entertainment technologies that make these attractions work: audio and lighting design, ride and show control systems, and special effects.

THETR 354 Stagecraft Studio
Fall. 3 credits. A minimum of one credit of production laboratory (THETR 151 or 251) is strongly recommended concurrently. Prerequisite: THETR 250 or permission of instructor. R. Archer. An exploration of the techniques and practice of theatre operation, scenic construction, stage mechanics, rigging, painting, and model building.

THETR 356 Costume Construction Studio
Spring. 3 credits. A minimum of one credit of production laboratory (THETR 151 or 251) is strongly recommended concurrently. Prerequisite: THETR 250 or permission of instructor. Lab fee of $25 to be paid in cash. C. Orr Brookhouse. A project/lecture/discussion class in costume research, patterning, cutting, construction, and fitting.

Stage Management

THETR 153 Stage Management Production Laboratory I
Fall and spring. 1–2 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard. Practical experience in theatrical production as Assistant Stage Manager for a season production under the supervision of the faculty Production Manager. THETR 370 complements this course.

THETR 253 Stage Management Laboratory II
Fall and spring. 1–4 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard. Practical experience in theatrical production as Assistant Stage Manager for a season production under the supervision of the faculty Production Manager. THETR 370 complements this course.

THETR 353 Stage Management Laboratory III
Fall and spring. 1–4 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes. Prerequisite: permission of instructor. P. Lillard. Practical experience in theatrical production as Assistant Stage Manager for a season production under the supervision of the faculty Production Manager. THETR 370 complements this course.

THETR 370 Stage Management Laboratory IV
Fall. 2 credits. Prerequisite: THETR 250 or permission of instructor. R. Archer. Introduction to the concepts and techniques of stage management as they relate to specific areas of production. Development of relevant communication skills and an understanding of the production process as experienced by a working stage manager or assistant stage manager. THETR 153, 253, and 353 complement this course.

THETR 453 Stage Management Laboratory V
Fall and spring. 1–5 credits. May be repeated for credit. Before registering, students must attend orientation meeting in the Proscenium theatre at the Center for Theatre Arts at 7:30 p.m. on the first Tuesday of classes. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard. Practical experience in theatrical production as Stage Manager for a season production under the supervision of the faculty Production Manager.

Production Laboratories

THETR 151 Production Laboratory I
Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the Proscenium Theatre. P. Lillard, S. Brookhouse, N. Cross, C. Hatcher, C. Orr Brookhouse. Students register for sections by areas of interest: 01 Scenery, 02 Costumes, 03 Properties, 04 Lighting, 05 Sound. THETR 351 Production Laboratory III Fall and spring. 1–3 credits. May be repeated for credit. Orientation meeting on the first Tuesday of classes each semester at 7:30 p.m. in the CTA Proscenium Theatre. Prerequisite: THETR 251 or permission of instructor. P. Lillard, C. Hatcher, J. Johnson, C. Orr Brookhouse. This course provides practical experience in theatrical production, in a position of major responsibility on the production staff or as assistant to a faculty or guest designer.

THETR 451 Production Laboratory IV
Fall and spring. 1–4 credits. May be repeated for credit. Prerequisite: admission to Advanced Undergraduate Theatre Program. P. Lillard, K. Goetz, C. Hatcher, J. Johnson, C. Orr Brookhouse. Practical experience in theatrical production, in the position of designer or in another position of major responsibility on the production staff.

INDEPENDENT STUDY, INTERNSHIPS AND HONORS

THETR 300 Independent Study
Summer, fall, or spring. 1–4 credits. Independent Study in the Theatre allows students the opportunity to pursue special interests not treated in regularly scheduled courses. A faculty member, who becomes the student's instructor for the course, must approve the students' program of study and agree to provide continuing supervision of the work. Students must prepare a proposal for independent study.

THETR 485 Undergraduate Internship
Fall, spring, or summer. 1–6 credits. To be eligible to enroll and receive credit for an internship, Theatre Arts students must either be majors or be admitted to the Advanced Undergraduate Theatre Program (AUTP). Students are responsible for arranging their own internships in consultation with the AUTP faculty in their area of choice prior to preregistration of the semester in which the internship is planned to take place. To receive credit for this course, it must be an unpaid internship; if it is a paid internship, it is possible to receive independent study (see TA 300) credit for it.

THETR 495 Honors Research Tutorial
Fall or spring. 2–8 credits. Limited to Theatre Arts seniors only. This course is the first of a two-semester sequence (the second is THETR 496). Up to eight credit hours and one grade will be given upon completion of second semester. The Theatre Arts honors program is for majors who have demonstrated exceptional ability in the major and who seek an opportunity to expand branches of their subject not represented in the regular curriculum or to gain experience in original research. To be a part of the honors program the student must maintain an average of 3.5 in departmental courses and an average of 3.0 in all courses. Students should consult with their advisers in their junior year if deciding to do honors. Admissions to honors is at the discretion of the departmental committee.
THETR 496 Honors Thesis Project
Fall or spring. 2-8 credits. Limited to Theatre seniors only.
This course is the second of a two-semester sequence (first is THETR 495). Up to eight credit hours and one grade will be given upon completion of second semester. See THETR 495 for further information.

FILM
THETR 274 Introduction to Film Analysis: Meaning and Value
Fall. 4 credits. Limited to thirty-five students. D. Fredericksen.
An intensive consideration of the ways films generate meaning and of the ways we attribute meaning and value to films. Discussion ranges over commercial narrative, documentary, and personal film modes. Prospective film majors should enroll in their sophomore year.

THETR 277 Video Production I
Spring, alternate years and occasionally in summer. 3 credits. Limited to 12 students. Permission of instructor. Open to sophomores, juniors, and seniors. M. Rivchin.
A hands-on video production course using Super-VHS cameras and editing equipment. Students will learn camera, lighting, sound recording, editing recording, editing and digital effects and techniques through a series of exercises. Strategies and ideas for documentary, dramatic and experimental work, music videos, etc., will be discussed before students plan, write, direct, shoot, and edit one short, individual project and one project of their choice. A $100 equipment maintenance fee per student will be collected in class. Students will spend approximately $50–100 for S-VHS and regular VHS videotapes, which they will own.

THETR 290 Filming Other Cultures (also Anthropology 290) @
Spring. 3 credits. Limited to 20 students, with preference given to those who have taken either Anthropology 102 or Theatre Arts 274. R. Archer.
For description, see Anthropology 290.

THETR 313 Japanese and Asian Film (also Comparative Literature 313) @
B. DeBari.
For description, see ASIAN 313.

THETR 375 History and Theory of the Commercial Narrative Film
Fall. 4 credits. D. Fredericksen.
Consideration of the broad patterns of narration in the history of the commercial narrative film, viewed as an artistic medium and as a system requiring the massive consumption of artifacts. Emphases placed upon the early articulation of a cinematic means of narration, realism as an artistic style, the nature and functions of popular film, and the modes of modernist and post-modernist "art cinema" narration. Major figures discussed include Griffith, Eisenstein, Murnau, Von Stroheim, Dreyer, Chaplin, Renoir, Ford, Hitchcock, Welles, Antonioni, Fellini, Bergman, Bunuel, Resnais, Godard, Janco and Herzog. Students majoring in film should have previously taken Theatre Arts 274.

[THETR 376 History and Theory of Documentary and Experimental Film
Fall. 4 credits. D. Fredericksen.
First, the history and theory of documentary film up to World War II. Major figures covered include Vertov, Flaherty, Ivens, Grierson, Lorenz, Riefenstahl, Capra, Hurwitz, and Jennings. Second, within the history and theory of the experimental and personal film, emphases: the avant-garde film of the twenties in Germany, France, U.S.S.R., and the U.S., the movement toward documentary practice in the thirties, and American experimental and personal film from the forties to the present. Major figures covered in this latter period include Deren, Brakhage, Baillie, Nelson, Hill, Snow, Pitt, J. Jordan, H. Smith, G. Nelson and Mekas.]

THETR 377 Fundamentals of 16mm Filmmaking
Fall. 4 credits. D. Fredericksen.
Intensive treatment of two distinct periods of radical innovation in film theory and history. Emphasis on the vital relationship between theory and practice in these two periods. Major figures include Eisenstein, Pudovkin, Vertov, Douzenkeno, and Room, in the Soviet 1920's; Godard, Truffaut, Resnais, Rohmer, Tati, Roux and Bresson in French 1960's.

THETR 378 Soviet Film of the 1920s and French Film of the 1960s
Spring. 4 credits. D. Fredericksen.

THETR 396 German Film (also English 395) @
Fall. 4 credits. D. Fredericksen.

THETR 413 Film and Performance
Spring. 4 credits. D. Fredericksen.

THETR 475 Seminar in the Cinema (also College Scholar Seminar)
Topic for 1998: Jung, film, and the process of self-knowledge. "Jung argued that film has been called our culture's most enduring psychological need, and it has been frequently offered as the raison d'être for liberal studies. C. G. Jung's answer to how one might know oneself is based on his claim that "image is psyche", his informing metaphor is depth. The seminar will trace the elaborations of this position in Jung, James Hillman, Russell
Thetr 476 Seminar in the Cinema II (also College Scholar Seminar and Religious Studies 476)
Spring. 4 credits. Prerequisite: limited to twenty students. Offered alternate years.
Topic for 1997: Film and Spiritual Questions.
This course will examine critically the writings of filmmakers who are so inclined. Special considerations are given to the Russian filmmaker Tarkovsky. Others to be considered include Dreyer, Bresson, Bergman, Herzog, Godard, Bertolucci, and Scorcese within the commercial narrative mode; Wright, Rohmer, and Gardner within the documental mode; and Bong, Baxilie, Brakhage, the Whitney's, and other essentially shamanistic filmmakers in the American personal form mode. Additional readings will be drawn from, among others, R. Torrance, M. Lipsey, M. Tucker, Richard Nielson, Campbell, S. Grubf, J. Edinger, and J. Hillman. The nature and functions of spiritual questions within artistic creation and liberal education will be questioned throughout the semester.

Thetr 477 Intermediate Film and Video Projects
Fall. 4 credits. Limited to 8 students. Prerequisites: Thetr 377 or 277 as minimum; preference given to those who have taken Thetr 383 (Screenwriting), 398 (Directing for the camera), and permission of instructor. Fee: $100 cinema maintenance fee to be collected in class. Film projects costs: $500-1000; video $50-$150.
M. Rivchin
This is a second-level 16mm filmmaking and video course designed to increase the student's knowledge and practice of cinematography, lighting, sync-sound filming and editing techniques; familiarity with negative film, and working with labs and sound houses. S-VHS video camera and editing methods, digital effects and mixing through a series of individual and group exercises. Each student will direct, shoot, edit one, and present a short film for classroom viewing.

Thetr 493 Advanced Film and Video Projects
Spring. 4 credits. Limited to 4 students, those selected to the Advanced Undergraduate Film Program by application in December. Prerequisite: Thetr 377 or 277, and 477; recommended: 383 (Screenwriting) and 398 (Directing 1).
M. Rivchin
This is a third-level film production course for those students who have already written and proposed a script, shot a documentary treatment, or storyboarded an experimental or animated film project. (Sponsored film proposals must be kept to a minimum of ten minutes.) The class will form two production crews, rotating as directors, cinematographers, and sound recordists for each other's projects. Students may also opt for shooting in film, transferring to and editing on videotape, or working entirely on videotape. Students will edit the films they write and direct, and will be individually responsible for all film flatbed editing, sound mixing, sound track mixing, A/B mixing, and digital work, or for video editing and mixing. A public screening for finished projects will be held at the end of the semester.

Thetr 653 Myths onto Film
For description, see ANTHR 653.

Thetr 699 German Film Theory (also German Studies 699 and Comparative Literature 699)
This course will examine critically the writings of major German film theories from the Weimar period to the present. Works by Bela Balazs, Rudolf Arnheim, Siegfried Kracauer, Walter Benjamin, Theodor Adorno, Max Horkheimer, Alexander Kluge, H. J. Sybener, Gertrud Koch, Thomas Elsaesser, and R.W.B. Lewis will be read and discussed in light of the following considerations: What are the cultural and political contexts out of which these ideas emerge and how are these theories addressing these contexts? How do these theories relate to the work coming out of other national traditions at the same time or to current debates in feminist, formalist, postmodern, and poststructuralist film theory. There will be film showings.

Dance
Thetr 123 Ballet I (also Physical Education 423)
Fall and spring. 0 or 1 credit. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Theatre Arts and Physical Education registration at Teagle Hall only. Fall. B. Suber; spring, Sec. 01: Suber, Sec. 02: Chu.
The fundamentals of classical ballet technique. Material covered includes all of the exercises at the barre and in the areas of port de bras, adage and petit and grande allegro. The acceleration of the class is determined by the ability of the majority of the class.

Thetr 124 Modern Dance I (also Physical Education 424)
Fall and spring. 0 or 1 credit. Theatre Arts and Physical Education registration at Teagle Hall only. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. Fall. Sec 01: J. Kovar, Sec 02: J. Self; spring, Sec 01 and 02: J. Self and J. Kovar.
The fundamentals of modern dance technique. Elementary dance movement phrases, with attention to rhythm, placement, and vitality of performance.

Thetr 155 Rehearsal and Performance
Fall and/or spring. 1-2 credits. 1 credit per production term up to 2 credits per term. Students must register for the course in the term in which credit is earned; requests for retroactive credit will not be honored. Limited to students who are assigned roles after tryouts at the dance program's auditions. Students should add this course only after they have been assigned roles. S/U grades only. This course develops the technique, improvisation, and performance of roles in departmental theatre or dance productions or the study and practice of directing as experienced in assistant and guest directors.

Thetr 200 Introduction to Dance
Fall. 3 credits. Attendance at dance concerts is required. Not offered 1996-97.

Thetr 201 Dance Improvisation
Fall. 3 credits. Limited to 12 students. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through department roster in the main office of the Center for Theatre Arts. Attendance at dance concerts is required. J. Morgenroth.
When the body knows when, where, and how to move without prior direction, we call that improvisation. This course offers the possibility of "training" one's movement instincts to respond with lightness, humor, grace, and spontaneity. Improvisational and group forms are covered. Includes some dance history.

Thetr 209 Introduction to African Dance (also AS&RC 209)
Fall. 3 credits. Not offered 1996-97.
An introduction to ancient African dance forms, origins, socio-economic and political significance, the state of the dances, changes and continuing relevance in contemporary times. This course will look at the evolution and significance of contemporary dance forms.

Thetr 210 Beginning Dance
Composition and Music Resources
Spring. 3 credits. Concurrent enrollment in a dance technique class at the appropriate level is required. Registration only through the department roster in the main office of the Center for Theatre Arts. Attendance at dance concerts is required. B. Suber.
Weekly assignments are designed to introduce students to basic elements of dance tradition-ally and currently used in the choreographic process. Problems are defined and explored through class improvisation as a way to encourage fresh, individual solutions. Students compose and present a series of short studies that are discussed and reworked before being performed at informal studio showings. The music resource faculty will introduce the class to contemporary music for modern dance and orient the class regarding problems and possibilities with sound collaborations. Students are required to attend campus dance activities for class discussion.

Thetr 211 Dance Movement Workshop
Summer. 3 credits. Limited to 15 students. For students with varied levels of training, including those with no experience. J. Kovar.
Students explore new ways of moving and creating dances and prepare short studies each week based on material covered in class. Modern dance technique, improvisation, and composition are covered. Students observe and discuss the main concerns of contemporary performance from the artist's/performer's perspective. Viewings of films, videotapes, and live performances.
This course continues the investigations of expected to bring the instructor's material to will be physically and mentally challenged by tion, and group games. This course requires semester. performance opportunities throughout the Explorations A with special emphasis on power, music and movement, and ritual and genderized movement, erotic power, spiritual THETR 305 Explorations in Movement and Performance A (also Physical Education 440) Fall. 0 or 1 credit. Limited to 16 students. Theatre Arts and physical education registration at Teagle Hall only. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. J. Self. This course is a physically demanding examination into a wide range of movement realms. Specific subjects covered are genderized movement, erotic power, spiritual power, music and movement, and ritual and performance. Techniques include extensive use of technique, improvisation, composition, and group games. This course requires an eagerness to investigate the nature of performance and explore unfamiliar territory in movement. THETR 306 Modern Dance III (also Physical Education 436) Fall and spring. 0 or 1 credit. May be repeated for credit. Limited to 16 students. Theatre Arts and physical education registration at Teagle Hall only. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. J. Self. This course continues the investigations of Explorations A with special emphasis on performance and ritual. The class will create performance opportunities throughout the semester. THETR 307 Asian Dance and Dance Drama @ Sec 01. Indian Dance. Fall. 0, 1 or 3 credits. May be repeated for credit. Theatre Arts and physical education registration at Teagle Hall only. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. D. Bor. This course is designed to give the student a practical working knowledge of Indian classical dance, specifically in the indigenous style of Orissa known as Odissi, the funda­ ments of which can be applied to other forms of Indian or Eastern dance. The high systematized technique is used to open and strengthen the body through specific exercises and movements and to develop grace and dexterity that can benefit all forms of dance. Emphasis will also be placed on rhythm expression. Sec 02. Japanese Noh Theatre. Not offered 1996–97. Sec 03. Indonesian Dance Theatre. Not offered 1996–97. THETR 308 Modern Dance IV (also Physical Education 438) Fall and spring. 0 or 1 credit. May be repeated for credit. Prerequisite: Modern Dance III or permission of instructor. Theatre Arts and physical education registration at Teagle Hall only. Satisfies PE requirement if taken as PE. Attendance at dance concerts is required. Fall: J. Self; spring: J. Morgenroth. A continuation of, and supplement to, Theatre Arts 306/Physical Education 436. THETR 310 Intermediate Dance Composition and Music Resources Fall and spring. 3-4 credits. Prerequisite: THETR 210. Attendance at dance concerts is required. J. Chu and A. Fogelsanger. The scheduled weekly meetings will be devoted to expanding the music vocabulary and skills of students through a survey of contemporary music for modern dance, discussion of the needs of musicians and choreographers in dance, and rhythmic studies. Students working on intermediate choreographic studies and projects to be presented in various performance situations. Work in progress will be critiqued by faculty and peers. Design problems in costumes and lighting will be approached, and students with particular interests in collaboration will have a forum in which to develop their ideas. THETR 311 Intermediate Projects in Dance Composition Spring. 3-4 credits. Prerequisite: THETR 310. Attendance at dance concerts is required. J. Chu. A continuation of THETR 310. THETR 312 Physical Analysis of Movement Fall. 3 credits. Not offered 1996–97. J. Morgenroth. This course is an examination of human movement with particular attention to dance movement. Readings in texts on human anatomy, physiology, and kinesiology and in Segravard's Human Movement Potential. Guest lectures by experts in anatomy and health areas. Practical and laboratory work. Demonstration of dissection.] THETR 314 Western Dance History I: Classical Ballet History as a Reflection of Western Ideology # Fall. 4 credits. Attendance at dance concerts is required. Not offered 1996–97. B. Suber. A critical survey of the history of classical ballet defining elements of classicism and determining why ballet is defined as classical. Consulting ballet texts as well as other less traditional sources and videotapes, the class will explore how ballet has perpetuated or confronted social issues of race, class, gender, sexuality, the body, and abuse. Included in this survey are the origins of classical ballet in the Renaissance court spectacles, the French Romantic and Russian Imperial periods, the revolution of the ballet stage fomented by Diaghilev's Ballets Russes at the turn of the century, and the "cross-over" post-modern choreographers Twyla Tharp and Mark Morris.] THETR 315 Western Dance History II: History of Modern Dance Spring. 4 credits. Attendance at dance concerts is required. Not offered 1996–97 J. Chu. This class will study the course of modern dance in the twentieth-century United States. We will examine each generation of dancers, starting with Isadora Duncan and ending with performers emerging today. Issues of gender, cultural identity, elitism, and democracy will be discussed.] THETR 317 Asian Dance I Spring. 0 or 1 credit. Prerequisite: THETR 307 or previous training in Odissi Classical Dance. Theatre Arts and Physical Education Registration at Teagle Hall only. Satisfies the PE requirement if taken as PE. Attendance at dance concerts is required. D. Bor. This course is a continuation of THETR 307. Odissi Classical Dance. Emphasis will be mainly on choreography as well as continuing to refine and perfect the basic movements learned in the preliminary course. We will meet twice weekly for movement classes, and an extra class will be arranged to learn the art of makeup. THETR 410 Advanced Dance Composition I Fall and spring. 3-4 credits. Prerequisite: THETR 310 and 311. Attendance at dance concerts is required. Fall: J. Chu and A. Fogelsanger; Spring: J. Morgenroth and A. Fogelsanger. Students work on advanced choreographic problems, to be presented in performance. Work in progress will be critiqued by faculty on a regular basis. THETR 411 Advanced Dance Composition II Fall and spring. 3-4 credits. Attendance at dance concerts is required. Fall: J. Chu and A. Fogelsanger. A continuation of THETR 410. THETR 418 Seminar in History of Dance & Fall. 4 credits. Prerequisite: General knowledge of dance history recommended. Attendance at dance performances required. J. Chu. Topic for 1996: Dance as Expression and Critique. In this course, we will study competing ways to understand dance: as a full-bodied expression of the dominant culture or as a critical, even angry alternative to it.
Our texts will include Japanese butoh theatre, American black dance, and modern dance in Germany. Our larger purpose will be to evaluate the project of modernism as it appears in dance. Throughout the course, we shall be considering whether high modernism is truly international, providing a universal forum for different visions of life, or whether it is a last-ditch version of imperialist ambition. Our view of this question should help us to evaluate the rival claims of postmodernism.

**THETR 490 Senior Paper in Dance**
Spring. 4 credits. Prerequisite: THETR 418, senior standing. Attendance at dance concerts is required. Under faculty direction, the student will write a senior paper in dance history, criticism, or theory.

**THETR 401 Senior Project in Dance**
Fall or spring. 4 credits. Prerequisite: THETR 410 or permission. This course is limited to senior dance majors only. Students who take this course will create a project in choreography and performance, dance film or video, dance pedagogy, or other appropriate area agreed upon with a member of the dance faculty. Senior projects that are to be performed, must be presented within one of the three regularly scheduled department concerts.

**Tracks toward admission into the advanced undergraduate theatre program**

**Design, Technology, and Stage Management**
Required for individuals interested in a Design, Technology, or Stage Management track:

- **THETR 250** Fundamentals of Theatre Design and Technology
- **THETR 151 and 251** Production Lab I and II (at least one credit of each)

Required for Scenic Design emphasis:

- **THETR 340** Theatrical Drafting and Technical Drawing Studio
- **THETR 351** Production Lab III (as Design Assistant)
- **THETR 354** Stagecraft Studio
- **THETR 364** Scene Design Studio

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Required for Costume Design emphasis:

- **THETR 254** Theatrical Make-up Studio
- **THETR 351** Production Lab III (as Design Assistant)
- **THETR 356** Costume Construction Studio
- **THETR 366** Costume Design Studio I

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Required for Lighting Design emphasis:

- **THETR 252** Technical Production Studio I
- **THETR 263** Computer-Aided Design for the Theatre
- **THETR 351** Production Lab III (as Student Electrician)
- **THETR 362** Lighting Design Studio I

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Required for Sound Design emphasis:

- **THETR 252** Technical Production Studio I
- **THETR 351** Production Lab III (as Student Sound Technician)

Required for Technical Direction emphasis:

- **THETR 252** Technical Production Studio I
- **THETR 256** Technical Production Studio II
- **THETR 350** Theatrical Drafting and Technical Drawing Studio
- **THETR 351** Production Lab III (as Assistant Technical Director)
- **THETR 354** Stagecraft Studio

Upon admission to the program: **THETR 451 Production Lab IV (at least 1 credit)**

Required for Stage Management emphasis:

- **THETR 253** or **THETR 353** Stage Management Lab II or III
- **THETR 280** Introduction to Acting
- **THETR 370** Stage Management Studio
- **THETR 398** Fundamentals of Directing I

Upon admission to the program: **THETR 453 Stage Management Lab IV (at least 1 credit)**

**Acting**
Required for ALL individuals interested in an acting track:

- **THETR 151 and THETR 251** Production Lab I and II (at least 2 combined credits)
- **THETR 240/241 Introduction to Western Theatre (1 Semester ONLY)**
- **THETR 250** Fundamentals of Design and Technology
- **THETR 280** Introduction to Acting

Required for Acting emphasis:

- **THETR 281** Acting I
- **THETR 283** Voice and Speech for Performance
- **THETR 284** Speech and Dialects for Performance
- **THETR 380** Acting II

Be accepted into THETR 381 Acting III

**Directing**
Required for ALL individuals interested in a directing track:

- **THETR 151 and THETR 251** Production Lab I and II (at least 2 combined credits)
- **THETR 240/241 Introduction to Western Theatre (1 Semester ONLY)**
- **THETR 250** Fundamentals of Design and Technology
- **THETR 280** Introduction to Acting
- **THETR 398** Directing I
- **THETR 498** Directing II

**Playwriting**
Required for ALL individuals interested in a playwriting track:

- **THETR 240/241 Introduction to Western Theatre (1 Semester ONLY)**
- **THETR 250** Fundamentals of Design and Technology
- **THETR 280** Introduction to Acting

Required for Playwriting emphasis:

- **THETR 348** Playwriting
- **THETR 349** Advanced Playwriting

Students in the advanced undergraduate theatre program may also elect to take THETR 485 (Undergraduate Internship) in addition to or in place of one production assignment.

**TURKISH**
See Department of Near Eastern Studies.

**UKRAINIAN**
See Modern Languages under Languages and Linguistics.

**URDU**
See Modern Languages, under "Hindi" under Languages and Linguistics.

**VIETNAMESE**
See Modern Languages under Languages and Linguistics.

**WELSH**
See Modern Languages under Languages and Linguistics.

**WOMEN'S STUDIES MAJOR**
See "Special Programs and Interdisciplinary Studies."

See Modern Languages under Languages and Linguistics.

**SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES**

**Africana Studies and Research Center**

The Africana Studies and Research Center is concerned with the examination of the history, culture, intellectual development, and social organization of Black people and cultures in the Americas, Africa, and the Caribbean. Its program is structured from an interdisciplinary and comparative perspective and presents a variety of subjects in focal areas of history, literature, social sciences, and African languages including Mandinka, Swahili, and Yoruba.

The center offers a unique and specialized program of study that leads to an undergraduate degree through the College of Arts and Sciences and a graduate degree, the Master of
Double Majors
In the case of double majors (as distinct from joint majors), students undertake to carry the full load of stipulated requirements for a major in each of the two departments they have selected.

Certificate in African Studies
In conjunction with the Institute for African Development, the Africana Studies and Research Center administers an undergraduate Certificate in African Studies program. The certificate is offered as a minor concentration available to students in all of the undergraduate colleges at Cornell. Many of the courses in the program might be used to fulfill other course distribution requirements. By pursuing this certificate, students acquire an interdisciplinary understanding of Africa. After developing a foundation of knowledge on the culture, society, and development of Africa in the core course “Africa: The Continent and Its People,” students pursue 15 credit hours in humanities or development studies track or a combination of two, including an additional core course, either “African Civilizations and Cultures” or “Contemporary African Development Issues.” The requirements for the certificate are a minimum of 18 credit hours, including the core courses.

Students interested in the Africana Studies major; Africana Studies and Research Center, a student must maintain a C+ cumulative average in all courses and a B+ average for the Africana major.

Joint Majors
The center encourages joint majors in the College of Arts and Sciences and in other colleges. Joint majors are individualized programs that must be worked out between the departments involved. The center’s undergraduate faculty representative, Professor Adams, will assist students in the design and coordination of joint major programs. However, in any joint major program, the center will require at least 16 credits be taken in Africana studies courses, including AS&RC 290.
AS&RC 172 The Education of Black Americans: Historical and Contemporary Issues
Spring. 3 credits. P. Kaurouma.
This course will be devoted to the history of educating Black Americans. Considerable attention will be given to contemporary issues. The major topics of focus will include an examination of the debates concerning the type of the education needed, public and private schooling efforts, the Africana Studies movement, community control issues, busing, affirmative action, re-segregation debates and new initiatives in education including vouchers, and charter schools.

AS&RC 191 Africa: The Continent and Its People @
Fall. 3 credits. L. Edmondson.
An introductory interdisciplinary course focusing on Africa's geographical, ecological, and demographic characteristics; indigenous institutions and values; the triple cultural heritage of Africanity, Islam, and Western civilization; main historical developments and transformations; social, political, economic, social, and cultural change. Africa's ties with the United States (from trans-Atlantic slavery to the present), its impact on the emerging world order, and its contribution to world civilization will also be explored.

AS&RC 202 Swahili Literature @
Fall. 4 credits. Prerequisite: Swahili 154.
Students gain mastery over spoken Swahili and are introduced to the predominant Swahili literary forms.

AS&RC 203 Sec 01 Intermediate Yoruba (also YORUB 203) @
Spring. 3 credits. Prerequisite: AS&RC 123, Sec. 01. V. Carstens and staff.
Intermediate conversation, grammar and composition.

AS&RC 204 History and Politics of Racism and Segregation
Spring. 4 credits. Staff.
The course will deal with historical and/or contemporary patterns of racism and segregation in Africa and the United States as case studies. The study will be undertaken within a theoretical framework that broadly defines racism and segregation and their implication.

AS&RC 205 African Civilizations and Culture # @
Spring. 3 credits. D. Ohadke.
May be used for history requirement. This course is concerned with the development of African civilizations and cultures from the earliest times to the present day, together with their contributions to world history. The aim is to promote the understanding of Africa and the appreciation of its cultural forms through the study of the continent's social, political, and economic structures. The approach is multidisciplinary. The course deals with the civilizations of North Africa, the Nile Basin, Ethiopia, Ghana, Mali, Songhai, Oyo, Benin, Kongo, and Nupe; and the kingdoms and empires of Sub-Saharan Africa (examples: Ancient Ghana, Mali, Songhai, Oyo, Benin, Kongo, and Nupe). Students will develop an understanding of African kinship systems; religions; healing systems, music, dance, political philosophy, and mechanisms of social control. The course also looks at the impact of Islam and Christianity on the development of African cultures.

AS&RC 231 African American Social and Political Thought
Spring. 3 credits. J. Turner.
This is an introductory course that will review and analyze the major theoretical and ideological formulations developed and espoused by Black people in the struggle for liberation. This semester we will focus specifically on the political philosophy and historical significance of Malcolm X, and the work and movement of Marcus Garvey, as the prime movers of nationalism and pan-Africanism among Black people in this century. Such themes as slave resistance, nationalism, Pan-Africanism, emigration, anti-imperialism, socialism and internal colonialism, and the political and social views of Black women will be discussed. Black political thought will be viewed in its development as responses to concrete conditions of oppression and expression.

AS&RC 271 Introduction to African Development (also CRP and Government 271) @
For description, see CRP 271.

AS&RC 280 Racism in American Society
Fall. 3 credits. J. Turner.
This course will be a topical treatment of the history and theory of racism in the United States. The course will begin with an examination of basic concepts and theories of racism. From there we will examine the history of racial groups in America, African-Americans, Native Americans, Asian Americans, and the Hispanic groups. Particular attention will be paid to the political economy of racism and the sociological and psychological forces relating to racism in America, with specific reference to the differences and intersections of race, class, gender, and ethnicity.

AS&RC 285 Black Theater and Dramatic Literature
Fall. 3 credits. K. Bowman.
This course is an introductory course in the history and literature of African American Drama at times incorporating drama from other parts of the African diaspora. It also provides an opportunity for students to cultivate an interest in individual and group presentation of Black dramatic material. Students who successfully complete this course will be granted preference for the limited enrollment in AS&RC 425 (Advanced Seminar in Black Theatre and Dramatic Literature), which produces a public performance in the spring.

AS&RC 290 The Sociology of the African-American Experience
Fall. 3 credits. J. Turner.
This is an introductory course to the field of Africana Studies. It assumes a historical/sociological approach to the examination of the African-American experience. The course surveys the African beginnings of human kind and the classical role of Black people in world civilization and the making of early culture. The course treats issues in the humanities, social sciences, and history. The course is required for all undergraduate students majoring at the Africana Center.

AS&RC 304 African American Art
Spring. 3 credits. S. Hassan.
This course investigates the different forms of African American artistic traditions in relation to their historical origins and socio-cultural context from the early days of slavery to the present time. The course will start with an overview of African art and the experiences of the Middle Passage and slavery in relation to African American traditions in the decorative arts including: pottery, architecture, ironwork, quiltsmaking, basketry. This is followed by a fine art survey starting with the eighteenth and nineteenth centuries, continuing through the early twentieth-century Harlem Renaissance up to the present. Certain issues related to African American arts and creativity such as "improvisation," "Black Aesthetic," and "Pan Africanism" will also be explored. Slides, films, film strips will be used extensively to illustrate topics discussed. Visits to museums and relevant current exhibitions may be arranged.

AS&RC 310 Art in African Culture and Society @
Fall. 3 credits. S. Hassan.
This course is a survey of the visual art and material cultural traditions of sub-Saharan Africa. It aims at investigating the different forms of visual artistic traditions in relation to their historical and sociocultural context. The symbolism and complexity of traditional art will be thoroughly analyzed. Topics include: the analysis of myth, ritual, and cosmology. In-depth analysis of particular African societies will be used to examine the relationship of the arts to indigenous concepts of time, space, color, form, and sociopolitical order. New and contemporary art forms associated with major socioeconomic changes and processes of assimilation and acculturation will also be explored. These include tourist art, popular art, and elite art.

AS&RC 311 Government and Politics in Africa @
Fall. 3 credits. A. Mazrui.

AS&RC 362 Global Perspectives on Gender
Spring. 4 credits. N. Assié-Lumumba.
The course will examine how forms of gender inequality have been shaped by international forces and structured by differences in national histories. The class will be taught by a rotating set of two faculty members from different departments. Contingent on the particular faculty member directing the course, the class will consider such issues as cross-cultural perspectives on gender; the history of work and family life in different societies; the gendered division of labor in local, national, and international economies; the impact of colonialism; the organized efforts of women to define gender relations; the role of the state in constructing an engendered economy and polity.
of migration and urbanization and their transformation into industrial laborers. Probes the transition from segregation to civil rights through the process of protest and the transformation of African Americans from second-class citizens to first-class citizens. The purpose is to understand the historical antecedents for the current socioeconomic, political, and cultural status of African Americans.

**AS&RC 380 African History: Earliest Times to 1800**

*Fall.* 3 credits. A. Bekerie.

This course covers the history of Africa from the origins of humankind, through the emergence of prehistoric societies and states, such as Egypt, Meroe, Mali, Bunyoro, the Swahili city-states and the Luba-Lunda complex, that had regional and international significance. Emphasis is placed on understanding the way in which historical ecological conditions, political developments, and religious change affected gender, class, and ethnic relations within these societies and their relations with other societies. The course also examines Africa's interaction with Islamic and European cultures up to 1800.

**AS&RC 381 African History, 1800-Present**

*Spring.* 3 credits. D. Ohadike.

This is a survey of African history in the nineteenth and twentieth centuries. Important topics include the European scramble and partition of Africa, resistance to European colonial conquest, African societies in the colonial period, independence and liberation movements, the rise of military regimes, gender relations and food security, the IMF and the debt crisis.

**AS&RC 404 Afrocentricity: Paradigm and Critical Readings**

*Fall.* 4 credits. A. Bekerie.

What is Afrocentricity? It is a theoretical framework designed to study and interpret the histories and cultures of peoples of Africa and African descent by locating them at the center of their own experiences, it is a method of knowing the life experiences of African peoples from the inside out. The course will examine—the writings of Asante, Kete, Clarke, Jean, Myers, Amin, Mazrui, Gates, Jean, Richards, Schlesinger and Thierno—the conception and depth of the paradigm, its relevance in the production and utilization of knowledge, particularly emancipatory knowledge, the history of the paradigm, and the debate it generates among a wide range of thinkers and scholars.

**AS&RC 410 African American Politics**

*Spring.* 4 credits. J. Turner.

The central thesis of African American politics has been its movements for political change and democratic access and human rights. This development in the seventeenth century is a complex political legacy. This course will conduct a close study of African American political practice and theoretical analysis of the American political system. Implications of the political systems for prospects and limitations to participation by Black people will be analyzed. Critical historical stages in the process of Black politics will be examined. The development of electoral offices in federal and state-wide politics, and the significant urban political power bases giving rise to African American mayoral politics in critical industrial centers, as well as rural hamlets will center the course. Presidential politics—the Jesse Jackson campaigns—and new political formations including Black Republicans/conservatives will constitute the emphasis on contemporary events. The course will review the development of the literature in African American politics.

**AS&RC 420 Public Policy and the African American Urban Community**

*4 credits.* J. Turner.

The socioeconomic conditions of the African American urban community will be the central focus of the course. Community development models will be explored in relationship to the social needs of the African American population. The changing configuration of internal organization of the African American community nationally will be examined.

**AS&RC 422 African Literature**

*Spring.* 4 credits. A. Adams.

May be used for Humanities Requirement. With such great focus, both inside and outside Africa, on issues of Africa’s “development,” what place do African literature influencing or influenced by the mundane realities of daily living faced by African people? Or does African literature concern itself with philosophical ideas and ideals that transcend those realities to embrace the general human condition? Or, does it do both? The texts that we will be reading this course will be approached in terms of these issues of “African development” and “the universal human experience.”

**AS&RC 425 Advanced Seminar in Black Theater and Dramatic Literature**

*Spring.* 4 credits. Enrollment limited. K. Bowman.

This course will be devoted to the study, rehearsal, production, and public performance of a play or plays drawn from the annals of Black American dramatic literature. Students will participate in all the various phases and categories of theatrical production, from acting to production crews to theater group management. A field trip to a Black Theater attraction in New York City will also be arranged if possible. Students who have successfully completed AS&RC 285 (Black Theater and Dramatic Literature) will be granted preference for the limited enrollment in this course.

**AS&RC 435 African Cinema (also Society for the Humanities 435)**

This course offers an overview of African cinema and filmmaking. It surveys historically the evolution of African cinema from its early days to the present. Through screening of selected African films, different trends within African cinema will be explored, such as "Return to the Sources" and the rediscovery of the pre-colonial past, the "Social Realist" narrative and critique of post-independence Africa; reconstructing the story of colonialism from the perspective of the colonized; and the entertainment genre. Techniques, style, and aesthetics of African cinema will also be discussed. The course offers a unique opportunity of looking at African culture and society, and at issues of social change, gender, class, tradition, and modernization through African eyes.

**AS&RC 451 Politics and Social Change in the Caribbean**

*Fall.* 4 credits. L. Edmondson.

A study of the historical, geostategic, political, economic, and social (including racial and cultural) forces bearing on African and international experiences of Caribbean societies. Special attention will be given to conflicting definitions and perceptions of the Caribbean; contending theories of Caribbean social structure and models of development, and continuing salient struggles for change and transformation; prospects of regional integration; and Caribbean challenges to the global system, especially with regard to the region's relations with the United States and the region's position in the "Third World in the context of the North-South cleavage.

**AS&RC 455 Modern Caribbean Literature**

*Fall.* 4 credits. A. Adams.

This course will examine the prose literature of the Caribbean islands. Through the reading of several novels and stories from the various languages and cultural strains that comprise the Caribbean societies, students will study the points of commonality and the diversity within this body of literature. The recurrence of certain historical, social, and cultural issues that link multi-ethnic Caribbean peoples will be analyzed in their varying manifestations across the linguistic and other boundaries to uncover the underlying shared experience.

**AS&RC 459 Educational Innovations in Africa and the African Diaspora (also Social Science 459 and Women's Studies 459)**

N. Assie-Lumumba.

This course deals with theories and concepts of planned change for social development and their application to educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African diaspora. The first part of the course will be concerned with the first stage of innovations from their inception to their implementation, resistance, diffusion, and impact on different social categories. The second part of the course will deal with concrete cases of educational innovations that trace the relation of educational institutions and change in curriculum development and medium of instruction. Historical and contemporary cases of educational innovations will be presented and analyzed. The case studies include the development of African Studies as a discipline, the creation and expansion of historically black institutions such as Lincoln University in Pennsylvania, Tuskegee Institute in Alabama, Spelman College in Georgia, and the Westside Preparatory School in Chicago. The African cases to be studied include education for self-reliance in Tanzania, African languages as a medium of instruction in Nigeria and Mali, and television as a medium of instruction in Cote d'Ivoire. Gender will be a main focus in the analysis of the agents and beneficiaries of the innovations.

**AS&RC 462 The Black Church: Resistance and Empowerment**

*Spring.* 4 credits. P. Kaurouma.

The course will be devoted to the study of the Black Church historically as the most viable institution in African American life. Consideration will be given to the African spiritual heritage, development of the rural and metropolitan churches, leadership in the
church, the African American worship experience, the range of issues and challenges confronting the church's future and the emergence of non-Christian Black churches. The instructor's lectures will be supplemented by audio-visuals and class discussion.

AS&RC 475 Black Leaders and Movements in African-American History
Fall. 4 credits. R. Harris.
Analyzes the personalities, ideas, and activities central to the struggle for African-American liberation from the eighteenth-century to the present. Emphasizes the history of leadership and the structure of protest movements with the goal of understanding current leadership needs and trends among African Americans.

AS&RC 478 Family and Society in Africa (also Women's Studies 478)
Fall. 4 credits. Not offered 1996-97.

The family as a social institution is structured according to socio-economic, historical, political, and cultural specificities. The topics to be discussed include the concepts of nuclear and extended family, the place and role of different age-groups and generations in the family, marriage and related issues, such as dowry, divorce, parenthood, childrearing, gender roles, class differences, "family planning." The course also deals with the impact of westernization, urbanization, and modern economy on the structure of the family in Africa. Finally, the course addresses the legacy of African family values in the African diaspora. Examples will be drawn from urban and rural communities.

AS&RC 479 Women & Gender Issues in Africa (also Women's Studies 479)
Spring. 3 credits. N. Assie-Lumumba.
There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited by men. According to another view, women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society, economically active and independent, possessing an economic and political independence. This seminar will discuss the status and role of women in Africa historically as well as in the contemporary period. Among the topics to be covered are: women in non-westernized/colonial societies, the impact of colonial policies on the status and position of women, gender and access to schooling, women's participation in the economy and politics, the attitudes of African women toward feminism, and the 1985 NGO and the United Nations Nairobi Conferences on women.

AS&RC 483 Themes in African History: Resistance Movements
Fall. 4 credits. D. Ohadikpe.
This course deals with African resistance to European colonial conquest and domination. It examines the organization, strategy, and historical importance of the resistance and liberation movements in Africa, together with their linkages with the civil rights movement in the United States to be made of films for illustrative purposes.

AS&RC 484 Political and Social Change in Southern Africa
Fall. 4 credits. Not offered 1996-97.
L. Edmondson.
This goal of the course is to investigate in depth the principles of aesthetics and philosophy of African visual arts. The course will offer a critical survey of the different writings and the growing body of research on this relatively new area of inquiry. The objectives of the course are to review how African aesthetics has been studied to date, to provide a critical analysis of the different approaches to the subject and related issues, and to suggest future directions of research. In-depth analysis of particular African societies will be used to examine the relationship of arts and aesthetics to indigenous concept of time, space, color, form, and sociopolitical order. In addition, issues related to African aesthetics and art such as style, gender, class, and social change will also be explored.

AS&RC 504 Political Change in Africa
Fall. 4 credits. A. Mazrui.
The study of Africa can be approached either dialectically (focusing on the tension between opposing forces) or thematically (focusing on themes as chapters of experience). This course will borrow from both those approaches. In their class assignments and examinations students are free to use either approach.

The first approach will explore the dialectic of African political change (continuity and change; tradition and modernity, dependency and liberation, foreign control and indigenous resistance and articulation of feminist thought; political intervention and the development of a new order; domestic and international political relations; the role of women in Africa).

The thematic approach will examine African Political Theory: race, consciousness and Pan-Africanism; contemporary political issues and interest groups; executive power; ethnicity; social Cleavage and the possibilities of African state and African in the world political order. The course also deals with the emergence of non-Christian Black churches. The First approach will explore the dialectic of African political change (continuity and change; tradition and modernity, dependency and liberation, foreign control and indigenous resistance and articulation of feminist thought; political intervention and the development of a new order; domestic and international political relations; the role of women in Africa).

AS&RC 510 Historiography and Sources: The Development of African-American History
Spring. 4 credits. Prerequisite: upperclass or graduate standing or permission of instructor. R. Harris.
Studies the way Black historians in particular have explained the African-American past. Examines the development of writing on African-American history from the earliest works to the present. Seeks to determine the principles for understanding African-American history. Acquaints students with the methodologies and sources central to understanding the African-American experience.

AS&RC 530 Womanist Writing in Africa and the Caribbean
Spring. 4 credits. A. Adams.
This course will explore the development of African-American culture and society from the earliest works to the present. Examines the development of writing on African-American history from the earliest works to the present. Seeks to determine the principles for understanding African-American history. Acquaints students with the methodologies and sources central to understanding the African-American experience.
design, methodology and means of gathering and analyzing data and will also address specific issues related to research and theoretical discourse in African, Caribbean, and African American humanities and social sciences.

The course will be coordinated and supervised by one professor (the Director of Graduate Studies or by rotation) but taught by three or four faculty per semester. Each participating faculty will be responsible for a topical segment of the course related to her/his areas of specialization or an area of interest pertaining to theory and methodology of Africana Studies.

Readings will be assigned and distributed in advance before each faculty presentation, to allow students to prepare for discussion. This course will allow first-year graduate students wider exposure to faculty and to the field of Africana Studies early in their tenure in the program, and thus help them make an informed decision regarding faculty advisor and topic for their thesis. Each student will be required to produce a bibliographic essay related to his or her thesis topic, and a fully developed thesis proposal as an end product of the course.

AS&RC 698-699 Thesis
698, fall; 699, spring. Limited to Africana Studies and Research Center graduate students.

**Agriculture, Food, and Society Concentration**

Agriculture, Food, and Society is an interdisciplinary concentration that is designed to introduce students to the study of agricultural and food issues from diverse perspectives within the liberal arts. The Agriculture, Food, and Society concentration seeks to make available to students a coherent program of study in which the role of agriculture in modern or prehistorical-historical and developed or developing societies can be understood in biological, social, scientific, and humanistic perspective. The concentration draws upon courses in several colleges—in particular, the Colleges of Arts and Sciences, Agriculture and Life Sciences, and Human Ecology.

The concentration is administered by a committee, the members of which are drawn from the faculty associated with the concentration. The members of this committee include faculty from each of the major colleges from which courses in the concentration are drawn. The work of the committee is carried out administratively through the Biology and Society Major. The office of the Biology and Society Major (275 Clark Hall) also provides a central location for students to receive information about relevant course offerings, upcoming seminars and presentations, faculty interests, and so on.

**Basic Requirements**
The requirements for the Agriculture, Food, and Society concentration are designed to ensure a broad background in the biological, socioeconomic, and humanistic dimensions of agricultural and food issues. These requirements include foundation courses in biology, the Senior Seminar Bio/S/B Soc/STS 469, Food, Agriculture, and Society, and the committee is supported by a minimum of 12 credits from the courses offerings.

Students enrolling in the Agriculture, Food, and Society concentration should take the following foundation courses in biology to prepare themselves for course work in agricultural and modern and prehistorical-historical intro­ductory biology sequence selected from Biological Sciences 109/110, 105/106, or 101-104. (Advanced placement in biology with a score of 4 or 5, or Biological Sciences 107/108, offered during the eight-week Cornell summer session, also satisfies the biological sciences requirement). These courses may be used to meet group 1 (physical or biological sciences) distribution sequence requirements in the College of Arts and Sciences.

It is recommended (but not required) that students in the Agriculture, Food, and Society concentration elect one or more freshman writing seminars with agriculturally related content to meet basic college requirements for graduation. The electives for the concentration, from which a minimum of five courses and 15 credits must be taken, are organized into three groups: agricultural and nutritional science, humanities, and social science/history. Students must select one agricultural and nutritional science course, one humanities course, and three social science or history courses. A maximum of six of the 15 credits may be earned in 100-level courses.

In addition, students are required to take the senior seminar, B&Soc/BioSci/STS 469, Food, Agriculture, and Society. Adjustments to these and other requirements of the concentration may be made with the approval of the student's Agriculture, Food, and Society faculty adviser.

**American Studies**

The Major
The major in American Studies, appropriate for a wide variety of future professions, is basically a program of coordinated study in the history, literature, and politics of the United States. Students choose two courses from the following: American Studies 101, American Studies 102, English 275, English 268, Government 111. Students who contemplate becoming American Studies majors are encouraged to speak with the chair as early as possible to arrange for a major adviser.

In consultation with their advisers, American Studies majors elect, in addition to the prerequisites, 36 credits (or nine courses) of work in American history, American literature, and American government. These courses must include courses in all of the three large periods into which the nation's development can be divided (defined for the purposes of the program as colonial, nineteenth century, and twentieth century). To gain both breadth and depth, they select as an area of concentration either a single period (or the connections between two of the periods) and take 1) at least 16 credits in one period and at least 8 credits in each of the two periods whose connections constitute the focus of the study and at least 8 credits in the third. Each student must take one of the adviser-approved seminars at the 400 or 600 level. When the subject matter is appropriate, such a seminar may count toward the fulfillment of the period requirements. Students divide their work among history, literature, and politics in whatever proportion serves their interests, so long as their advisers and their programs to be well-balanced. No more than 18 credits may be in any one department.

Beyond the core requirements for the major, 8 credits of work in the history or literature or both of another culture are required, students are also encouraged to take at least 4 credits in American thought, society, or culture studies from the perspective of another discipline such as anthropology, economics, history of art, or sociology. (This last 4-credit supplement may be satisfied outside the college.

Courses in American history that will satisfy the 36-credit requirement are offered by the Department of History, those in American literature are offered by the Department of English, the Department of Theatre Arts, and the Africana Studies and Research Center, those in American government are offered in the Department of Government. Occasionally a course that fits an individual student's program may be offered elsewhere. Substitution will depend on the adviser's approval. Advisers determine what courses count for the interdisciplinary seminar.

**Honors.** Candidates for honors must maintain an average of B+ in courses pertinent to the major. To be eligible for a degree with honors in American Studies, a student must in the senior year write an honors essay for American Studies 493, complete the Honors Essay Tutorial, and take an oral examination in the declared area of special interest.

**Cornell-in-Washington Program.** American Studies majors may apply to the Cornell-in-Washington program to take courses and participate in a closely supervised internship during a fall or spring semester. For further information, see Interdisciplinary Centers, Programs, and Studies or inquire at 471 Hollister Hall, 255-4690.

**AM ST 101 Introduction to American History**

**AM ST 102 Introduction to American History**

**AM ST 201 Popular Culture in the United States 1900-1945**
Fall. 4 credits. Not offered 1996-97. American Studies 201 will deal with American popular culture in the United States between the Spanish-American War and the end of World War II. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines and music, we will try to better understand the ways in which popular culture shapes and/or reflects...
American values. The course will also depict popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to "control" images and themes. Topics for 202 include: the Western; Cultural Heroes and the Cult of Individualism in the 1920s; The Hays Code and the Black Sox Scandal; Mae West and the "New Women"; Advertising in an Age of Consumption; Gangsters and G-Men; Jackie Robinson and the American Dilemma.

**AM ST 202 Popular Culture in the United States 1945 to Present**
Fall. 4 credits. TBA. G. Atschuler. American Studies 202 will treat the period from 1945 to the present. As we examine best-sellers, films, sports and television, radio, ads, newspapers, magazines and music, we will try to better understand the ways in which popular culture shapes and/or reflects American values. The course will also depict popular culture as "contested terrain," the place where social classes, racial and ethnic groups, women and men, the powerful and the less powerful, seek to "control" images and themes. Topics for 202 include: the "Honeymooners" and 1950's Television; soap operas; "Greaser" movies; Elvis, The Beatles and Guns 'n Roses; Gothic Romances; People Magazine and USA Today.

Center for Applied Mathematics

The Center for Applied Mathematics administers a broad-based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. This program is based on a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

A listing of selected graduate courses in applied mathematics can be found in the description of the center in "Interdisciplinary Centers, Programs, and Studies."

Asian American Studies Program

The Asian American Studies Program is a university-wide academic program housed administratively within the College of Arts and Sciences. Its aim is to promote teaching, research, and educational activities related to Asian Americans and to serve as a resource to the campus and regional communities. The program's undergraduate courses, offered within the program and cross-listed with departments in various colleges, meet distribution requirements and count toward a concentration in Asian American Studies. The program does not offer a graduate course of study, but students can undertake graduate work in Asian American Studies within selected disciplines of the university.

Undergraduate Concentration

The program's undergraduate concentration affords students an opportunity to develop a multidisciplinary approach to the study of Asians in America. The course of study stresses developments within the United States, but also underscores the transnational and comparative contexts of Asian America and the field's connections with African American, American Indian, Latino, and Women's Studies. Students must work with a faculty adviser from among the program's affiliated faculty and must complete at least fifteen (15) units of credits as follows: (a) AAS 110 and two (2) additional courses in Asian American Studies; (b) one (1) course in Africana, American Indian, Latino Studies, or Women's Studies; and (c) one (1) course in East Asian, South Asian, or Southeast Asian Studies. These courses must be approved by the student's faculty adviser, and they should address issues of race, gender, or the histories and cultures of Asian peoples. Students must file an application for the concentration with the Asian American Studies Program.

Resource Center

The program's Asian American Studies Resource Center provides meeting space for the more than twenty-five undergraduate student organizations of the Cornell Asian Pacific Student Union and the graduate student Asian Pacific American Graduate Association. It also holds a modest print collection of books, periodicals, and newspapers; a current news clip file; a comprehensive data base of publications on Asian Americans since 1977; and a sizable collection of videotapes on the Asian American experience.

Research

The program encourages faculty and student research on Asian Americans by sponsoring guest lectures, conferences, film festivals, readings, and exhibits. It also funds research projects and student travel to conferences and research sites. The Asian American Studies Workshop is the program's principal research initiative, engaging Cornell's faculty and students with invited faculty from other universities in a year-long intensive study of selected themes.

Affiliated Faculty

Gary Y. Okihiro, director; Benedict Anderson (Government), T. Chaloemtiarana (Southeast Asia Program), P. Chi (Consumer Economics and Housing), B. de Barry (Asian Studies), Shin-Kap Han (Sociology), Ved P. Kayastha (Kroch Library), J. V. Koschmann (History), D. R. McCann (Asian Studies), V. Munasinghe (Anthropology), V. Nee (Sociology), G. Okihiro, (History), R. E. Ripple (Education), N. Sakai (Asian Studies), Shirley Samuels (English), P. S. Sangren (Anthropology), A. M. Smith (Sociology), W. Taylor (Asian Studies), S. Tien (Gannett Health Center), S. Wong (English), D. Yeh (Vice President Student/Academic Services)

Courses

AAS 110 Introduction to Asian American Studies

Fall or spring. 3 credits. Interdisciplinary, cross-cultural introduction to Asian American Studies focusing on contemporary issues. Major themes include: identity and stereotyping, apportionment, community, education, migration and labor, and anti-Asianism. Coverage will be given to both Hawaii and the U.S. mainland, and to Asian Indians, Chinese, Filipinos, Hawaiians, Japanese, Koreans, and Southeast Asians.

AAS 213 Asian American History

For description, see HIST 213.

AAS 262 Asian American History

For description, see ENGL 262.

AAS 303 Asians in the Americas: A Comparative Perspective (also Anthropology 303)

Fall. 4 credits. The common perception of ethnicity is that it is a "natural" and an inevitable consequence of cultural difference. "Asians" overseas, in particular, have won repute as a people who cling tenaciously to their culture and refuse to assimilate into their host societies and cultures. But, who are the "Asians"? On what basis can we label Asians an ethnic group? Although there is a significant Asian presence in the Caribbean, the category "Asian" itself does not exist in the Caribbean. What does this say about the nature of categories that label and demarcate groups of people on the basis of alleged cultural and phenotypical characteristics? This course will examine the dynamics behind group identity, namely ethnicity, by comparing and contrasting the multicultural experience of Asian populations in the Caribbean and the United States. Ethnographic case studies will focus on the East Indian and Chinese experiences in the Caribbean and the Chinese, Korean, Japanese, Filipino, and Indian experiences in the United States.

AAS 350 The Art and Politics of Defining the Self in Media Images (also Theatre Arts 350)

Spring. 3 credits. Not offered 1996-97. The focus of this course is an exploration of the way films deal with the representation of people of poor within the American experience. Through the analysis of selected films and class discussions we will explore filmic representations of history, culture, class, gender, and identity.

AAS 412 Undergraduate Seminar in Asian American History (also History 412)

Spring. 4 credits. A reading and research seminar that will cover various topics in Asian American history. The topics will be the ideas of the "yellow peril" in European and American thought.

AAS 435 Asian American Images in Film

3 credits. Prerequisite: AAS 110 or permission of instructor. Not offered 1996-97. Examination of images of Asians in American film and television productions within their historical and socio-cultural contexts. Use of film and media theory to assess the impact of those images on both Asian and non-Asian American viewers. Students will be challenged to create, in video or on paper, images that avoid stereotypes and depict more realistically the Asian American experience.

AAS 478 Self and Nation in Asian-American Literature (also English 478)

Not offered 1996-97. A study of the ways in which Asian American writers have constructed discourses of self and nation. Topics will include nationalism, feminism, identity politics, and theories of minority discourse. In our reading of selected works of prose, poetry and drama by Chinese American, Filipino American, Japanese American and Korean American writers, we will be asking questions about the relation of these works to the moment of their production and reception, and the manner in which these textual representations engage with shifting cultural and political struggles. Writers under discussion may include: Carlos Bulosan, Theresa Hak Kyung Cha, Frank Chin, Jessica Hagedorn, David Henry Hwang, Maxine Hong Kingston, Joy Kogawa, David Mura.

AAS 495 Independent Study

Fall or spring. 1-4 credits. Topic and credit hours to be mutually arranged between faculty and student. Independent Study Forms must be approved by Asian American Studies Program Office.

Biology and Society Major

S. Jasanoj, chair; S. Hilgartner, director of undergraduate studies, colleges of Arts and Sciences and Agriculture and Life Sciences;
The Biology and Society major is ideally suited for students who wish to combine training in biology with exposure to perspectives from the social sciences and humanities on the social, political, and ethical aspects of modern biology. In addition to providing foundational training in basic biology, Biology and Society students obtain background in the social dimensions of modern biology and in the biological dimensions of contemporary social issues.

The Biology and Society major is offered to students enrolled in the College of Arts and Sciences and the College of Human Ecology. Undergraduates in the College of Agriculture and Life Sciences can develop an approved sequence of courses from the Biology and Society curriculum with other general studies. The major is coordinated for students in all colleges through the Biology and Society office. Students can get information, specific course requirements, and application procedures for the major from the under­graduate records office in 275 Clark Hall, 255-6047.

Because the major is multidisciplinary, students must attain a basic understanding of the several disciplines it comprises. The curriculum includes courses in ethics, mathematics, statistics, history, philosophy, and social studies of science and biology, and basic biology (e.g., genetics and development, biochemistry and molecular-cell biology, ecology, evolutionary biology) as well as integrative courses offered through Biology and Society. In addition, majors are required to take a core course and must develop a theme: a coherent and meaningful grouping of courses representative of their special interest in Biology and Society. Students should develop the theme and select the courses in consultation with a member of the Biology and Society faculty. Courses must be above the 100 level, at least 3 credits, and taken for a letter grade if used to fulfill a major requirement.

There are student advisers and faculty available (according to posted office hours or by appointment) in the Biology and Society offices, 275 Clark Hall or 278 Clark Hall, to answer questions and to provide assistance.

Admission to the Major

All students should have completed a year of college-level biology and submit an application during their sophomore year. Juniors are considered on a case-by-case basis. Upper­division applicants should realize the difficulties of completing the major requirements in fewer than two years. The application includes (1) a one-page statement explaining the student's intellectual interests in the Biology and Society major and why the major is consistent with the student's academic goals and interests; (2) the theme the student wishes to pursue in the major; (3) a tentative plan of courses fulfilling Biology and Society requirements, including courses taken and those the student plans to take; and (4) a transcript of work taken at Cornell University and elsewhere if applicable, current as of the date of application.

Acceptance into the major requires completion of the course sequence in introductory biology. Sophomores in the process of completing this prerequisite may be admitted to the major on a provisional basis. It is the student's responsibility to assure that final acceptance is granted upon satisfactory completion of the introductory biology sequence. Although only introductory biological science is a prerequisite for acceptance, students will find it useful to have completed some of the other requirements (listed below) by the end of their sophomore year, preferably in the first semester. Human Ecology students should also consult the current Human Ecology Guide and meet with the college advising coordinator, Kay Obendorf, 202 Martha Van Rensselaer Hall, 255-3151.

Major Requirements

1) Basic courses

A. Biological sciences 101-104 or 105-106 or 107-108 (prerequisite for admission to Biology and Society)

B. College calculus (one course)* Math 106, 111, 112 or any higher level calculus

Recommended but not required:
General chemistry (one year sequence) (prerequisite to biochemistry and other chemistry courses): Chemistry 103-104, 207-208, or 215-216

2) Foundation Courses (should be completed by end of junior year)

A. Ethics: One course; B&SOC 205 (also S&TS 205) or B&SOC 206 (also S&TS 206)

B. Social sciences/humanities foundation:
Two courses; one from any two of the following subject areas: History of Science; Philosophy of Science; Sociology of Science; Politics of Science; and Science Communication**

C. Biology foundation (Breadth requirement): Three courses; one from each of the following subject areas:
Ecology (BIO ES 261); Evolutionary Biology (BIO ES 278); Biochemistry, Molecular and Cell Biology (BIO BM 230 or 330 or 331 or 333); Microbiology (BIO MI 290); Genetics and Development (BIO GD 281 or 282 or Plant Breeding 225); Neurobiology and Behavior (BIO NB 221 or 222); Botany (BIO PL 241); and Anatomy and Physiology (BIO AP 311 or NS 341 but NOT BIO AP 212)

D. Biology foundation (Depth requirements): One biology course for which one of the above (2.C.) is a prerequisite

E. Statistics: One course selected from BTRY 200, ILR 210, BTRY 215, AG EC 310, EDUC 353, Soc 301, Psych 350, Econ 319, ORIE 370, BTRY 601, CRP 520

3) Core Course: (one course), Should be completed by end of junior year.

B&SOC 301 Biology and Society: The Social Construction of Life (also S&TS 401), or PHIL 286: Science and Human Nature (also S&TS 260)

4) Theme (five courses that correspond to the theme selected by the student). These courses must be above the 100-level, at least 3 credit hours and taken for a letter grade

A. Natural Science Issues/Biology Elective (two courses). Select from the list of B&SOC approved Natural Science Issues courses or choose course(s) with introductory biology as a prerequisite from: ALS, AN SC, BIOSCI, ENTOM, FOOD, HDFS, NS, NTRES, PL BR, PL PA, PSYCH, VTMED

B. Humanities/social sciences electives** (Two courses. Courses from the list of Senior Seminars may be used as theme electives if not used to meet another requirement)

C. Senior Seminar (One course taken senior year). Courses change yearly.

* Students may petition to take a second statistics course (an advanced course, in sequence with the same course used in the foundation) in place of the calculus requirement.

** Among the courses taken to meet the social sciences and humanities requirements (2.A, 2.B, 3, and 4.C), a minimum of two social science courses and two humanities courses must be chosen. History of biology/history of science and philosophy of science courses may be counted toward the humanities requirement for the major.

Themes in the Major

Biology and society students must elect a particular specialization within the major and select their courses accordingly. There are currently six recommended themes in the Biology and Society major: biology, behavior, and society; biology and humanities; biology and public policy; environment and society; food, agriculture, and society; and health and society. Students may also develop their own themes (which in recent years has included topics such as biotechnology and society, and agriculture, environment, and society) in consultation with their faculty advisor. Students are expected to select courses taken to meet the foundation, core, and theme requirements based on a coherent theme. Sample curricula for the recommended themes and for several student-developed themes are available in the Biology and Society office.

Independent Study

Projects under the direction of a biology and society faculty member are encouraged as part of the program of study in the student’s theme area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1-4 credits in Biology and Society.
Agriculture and Life Sciences may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.

The Honors Program
The honors program is designed to challenge academically talented undergraduate students whose major is Biology and Society (B&SoS). Students who enroll in the honors program are given an opportunity, with faculty guidance, to do independent study and research dealing with issues in biology and society. Students who participate in the program should find the experience intellectually stimulating and rewarding.

Selection of Students
Biology and Society majors are considered for entry into the honors program at the end of the spring semester before their senior year. Application forms for the honors program are available in the Biology and Society office, 275 Clark Hall. The honors program is available to Biology and Society majors from the College of Arts and Sciences. Biology and Society majors in the Colleges of Human Ecology and Agriculture and Life Sciences must be selected by an honors committee within their college. To qualify for the Biology and Society honors program, students must have an overall Cornell cumulative grade-point average not lower than 3.30, have formulated a research topic, and have found a project supervisor (with a Cornell appointment) and a Biology and Society faculty member willing to serve as their advisers. Applications will be reviewed by a committee headed by the director of undergraduate studies, who works closely with students directly of the outcome. Students will be permitted to register for the honors program only by permission of the department.

If, after admission to the honors program, a student fails to maintain a high scholastic average, or for any other reason is considered unsuited for honors work, the student reverts to candidacy for the regular Bachelor's degree. The student who does not continue in the honors program for the second semester will receive a letter grade at the end of their final term, whether or not they complete a thesis and whether or not they are recommended for honors.

Students should meet regularly with their project supervisor during the period of research and writing for the honors thesis. The responsibility for scheduling these meetings and for carrying out the research in timely fashion rests with the student. Advisers are expected to make themselves available for discussion and to offer advice on the plan of research, as well as provide critical and constructive comments on the written work as it is completed. They are not expected, however, to pursue students to ensure that the research and writing are being done on schedule.

The Honors Thesis
There is no prescribed length for a thesis, because different topics may require longer or shorter treatment. We have found that a successful thesis is normally in the range of 70-100 double-spaced pages. The thesis must be completed in a form satisfactory for purposes of evaluation and submitted by April 15 to the two thesis advisers and to one other faculty member appointed by the director of undergraduate studies. The thesis candidate must meet with the three readers for a formal defense of the thesis by April 29.

Two copies of the completed and defended thesis (suitably bound in a plastic or hard-backed cover), together with the advisers' recommendations, must be submitted to the director of undergraduate studies by May 13.

Following the formal defense, the thesis advisers will submit to the director of undergraduate studies a recommendation to include 1) the evaluation of the honors thesis by the three readers, 2) an evaluation of the student's academic record in the Biology and Society major, and 3) a recommendation for or against awarding honors, as well as a recommendation for the level of honors.

As the director of undergraduate studies may have little knowledge of the subject area of the thesis, recommendations should be carefully prepared to help ensure consistency within the honors program. If there is disagreement among the readers, the director of undergraduate studies shall make the final decision after consultation with the interested parties.

Summary of Important Dates
- Last week of spring semester junior year: Application for honors program submitted to 275 Clark Hall.
- April 15—Thesis completed in a form satisfactory for evaluation and submitted to the three readers.
- April 29—Thesis defense accomplished.
- May 13—Two bound copies of completed and defended thesis submitted to director of undergraduate studies.
- If these dates fall on a weekend, the deadline is the preceding Friday.

I. Freshman Writing Seminars

[B&SOC 103] In the Company of Animals
Spring. 3 credits. Not offered 1996-97.

[B&SOC 104] Ecosystems and Ego Systems
Spring. 3 credits.

[B&SOC 114] Ecology and Social Change (also Science and Technology Studies 114)
Spring. 3 credits. Not offered 1996-97. For description, see STS 114.

II. Foundation Courses

A. Ethics (select one)

[B&SOC 205] Ethical Issues in Health and Medicine (also Science and Technology Studies 205)
Fall. 4 credits. Limited to 125 students. Open to sophomores, juniors, and seniors. Prerequisites: none. S. Hilgartner.

In today's rapidly changing world of health and medicine, complex ethical issues arise in many contexts—from the private, interpersonal interactions between doctor and patient to the broad, mass-mediated controversies that make medicine into headline news. This course examines ethical problems and policy issues that arise in contemporary medicine, health care, and biomedical research. Tools for ethical analysis are applied to a variety of cases and fundamental questions in bioethics. Perspectives from social science, history, and law also inform the course. We will explore ethical questions that arise in a number of substantive contexts, including the doctor-patient relationship, medical decision making near the end of life, human experimentation, genetics and reproductive technology, public health, and the allocation of scarce resources.

[B&SOC 206] Ethics and the Environment (also Science and Technology Studies 206)
Spring. 4 credits. Limited to 50 students. Open to all undergraduates; permission of instructor required for freshmen. S. Hilgartner.

We address how ethical analysis is helpful in shaping our responses to environmental problems. Case studies will help us guide our assessments. We will be challenged to develop ethical solutions or approaches on our own and in groups. Major aims include: articulating the relationships between knowledge and values; exploring the ethical implications of different conceptions of "nature"; and distinguishing between ethics and economics, ecology, ideology, politics, and prudence or wisdom. A background in basic ecology OR environmental issues OR ethics is helpful.
ARTS AND SCIENCES - 1996-1997

B. Social Sciences/Humanities Foundation (2 courses, 1 from any 2 areas)

1. History of Science

BIOG 207 Evolution (also Science and Technology Studies 287 and History 287)
Fall. 3 credits. (May not be taken for credit after BIOES 378, Evolutionary Biology.) W. Provine.
For description, see BIOG 207.

HIST 282 Science in Western Civilization (also Science and Technology Studies 282)
Spring. 4 credits. M. Dennis.
For description, see HIST 282.

[HIST 465 Scientific Rhetoric in Historical Perspective (also Science and Technology Studies 465 and co-meeting with Communication 465)]
For description, see HIST 465.

S&T 390 Science in the American Polity: 1800-1960 (also GOVT 308)
Fall. 4 credits. M. Dennis.
For description, see S&T 390.

S&T 433 Comparative History of Science

S&T 444 Historical Issues of Gender and Science (also Women’s Studies 444)
For description, see S&T 444.

2. Philosophy of Science

PHIL 286 Science and Human Nature (also Science and Technology Studies 286)
Spring. 4 credits. May be used to meet the philosophy of science requirement if not used to meet the core course requirement.
For description, see PHIL 286.

PHIL 381 Philosophy of Science: Knowledge and Objectivity (also Science and Technology Studies 381)
Fall. 4 credits. Limited to 30 students. R. Boyd.
For description, see PHIL 381.

3. Sociology of Science

B&SOC 301 Biology and Society: The Social Construction of Life (also Science and Technology Studies 401)
Fall. 4 credits. Prerequisite: two semesters of social science or humanities and one year of introductory biology. Limited to 75 students. May be used to meet the sociology of science requirement if not used to meet the core course requirement. C. Cusins.
See Core Courses for description.

B&SOC 342 Sociology of Science (also Science and Technology Studies 442 and City and Regional Planning 442)
Not offered 1996-97.
For description, see S&T 442.

HSS 246 Major Determinants of Human Behavior
Fall. 3 credits.

[R SOC 208 Technology and Society]
Fall. 3 credits. Not offered 1996-97.

SOC 434 The Sociology of Reproduction (also Women’s Studies 435)
Spring. 4 credits.
For description, see SOC 434.

S&S 201 What Is Science?
Spring. 3 credits. T. Pinch.

4. Politics of Science

[B&SOC 406 Biotechnology and Law (also Science and Technology Studies 406)]
Fall. 4 credits. Limited to 16 students. Recommended: a course in genetics or rDNA, a course in American government or law, or permission of instructor. Fee for course reading materials. Not offered 1996-97. S. Jasanoff.

Biotechnology, with its myriad applications in areas such as medicine and agriculture, is developing more rapidly than the social institutions that are capable of controlling it. This course explores the use and potential abuse of biotechnology, from genetic screening and counseling, reproductive technologies, intentional release of genetically engineered organisms, patents, and ownership of human tissues. Particular attention will be given to evolving legal and management strategies for regulating the applications of biotechnology. Readings are from science, medicine, law, and public policy. A research paper is required.

[B&SOC 407 Law, Science, and Public Values (also Government 407 and Science and Technology Studies 407)]
Fall. 4 credits. S. Jasanoff.
This course explores the varied interactions between science and the legal process that have developed in recent years as a result of attempts to bring greater public accountability to the use of science and technology. It examines the activities of both legislatures and courts in controlling science and analyzes the values underlying these initiatives. Three major types of science-law interactions form the focus of the course: expert testimony in the courtroom, regulation of hazardous technologies, and legal control of professional standards in science and medicine. Specific topics include the regulation of toxic chemicals and nuclear power, controversies about biotechnology, reproductive technologies and biomedical research, and scientific misconduct.

S&T 391 Science in the American Polity: 1960-Now (also GOVT 309)
Spring. 4 credits. S. Jasanoff.
For description, see S&T 391.

[S&T 425 Global and Domestic Dimensions of Science and Technology Studies Policy (also Government 468)]
Fall. 4 credits. Not offered 1996-97.

[S&T 427 Politics of Environmental Protection in America (also GOVT 427)]
For description, see S&T 427.

[S&T 431 Introduction to Science and Technology Policy (also Government 401)]
Fall. 4 credits. Not offered 1996-97.

5. Science Communication

[B&SOC 300 Investigative Research on the Social Impact of Science (also Science and Technology Studies 402)]
Students choose a current issue in the social impact of biological or physical sciences and work through the steps of investigation from issue definition to spoken presentations and proposals for action. In a workshop setting, students comment on and learn from others' projects and discuss case studies and articles, with occasional guest speakers and films.

COMM 315 Introduction to Health Communication
Fall. 3 credits. A. Marshall.

COMM 352 Science Writing for the Mass Media (also Science and Technology Studies 352)
Fall. 3 credits. Not open to freshmen. Limited to 25 students. Prerequisite: one college writing course. B. Lewenstein.
For description, see COMM 352.

COMM 360 Scientific Writing for Public Information
Fall or spring. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: any college-level writing course.

COMM 421 Communication and the Environment
Spring. 3 credits. J. Shanahan.

[COMM 466 Public Communication of Science and Technology (also Science and Technology Studies 466)]
For description, see COMM 466.

[HIST 465 Scientific Rhetoric in Historical Perspective (also S&T 465 and co-meeting with COMM 465)]
For description, see HIST 465.

C. Biology Foundation (Breadth Requirement): Three courses, one from each of the following subject areas:

1. Biochemistry, Molecular and Cell Biology

[BIOMB 231 General Biochemistry]
Fall. 3 credits. Not offered 1996-97.

[BIOMB 330 Principles of Biochemistry, Individual Instruction]
Fall or spring. 4 credits.

[BIOMB 331 Principles of Biochemistry, Lectures]
Fall. 4 credits. (2 credits if taken after Biological Sciences 231.)

[NS 262 The Cell and the External World]
Spring. 3 credits.
2. Ecology

BIOES 261 Ecology and the Environment
Fall. 4 credits.

3. Genetics and Development

BIOD 211 Genetics
Fall, spring, or summer. 5 credits.

BIOD 222 Human Genetics
Spring. 3 credits. (2 credits if taken after Biological Sciences 281)

PL BR 222 Plant Genetics
Spring. 4 credits. Offered alternate years.

4. Evolutionary Biology

BIOES 278 Evolutionary Biology
Spring. 4 credits.

5. Microbiology

BIOM 209 General Microbiology
Lectures
Fall, spring, or summer. 3 credits.
Prerequisites: BIOMI 101–102 and 103–104 or CHEM 104 or 208, or equivalent. Recommended: concurrent registration in BIOMI 291.

BIOMI 290 General Microbiology
Laboratory
Fall, spring, or summer. 3 credits.
Prerequisites: BIOMI 101–102 and 103–104 or CHEM 104 or 208, or equivalent. Recommended: concurrent registration in BIOMI 291.

BIOMI 291 Laboratory Skills
Fall. 3 credits. Not open to freshmen. Limited to 10 students.

BIOMI 414 Human Microbiome
Fall. 3 credits. Offered alternate years.

2. Ecology

BIOES 261 Ecology and the Environment
Fall. 4 credits.

3. Genetics and Development

BIOD 211 Genetics
Fall, spring, or summer. 5 credits.

BIOD 222 Human Genetics
Spring. 3 credits. (2 credits if taken after Biological Sciences 281)

PL BR 222 Plant Genetics
Spring. 4 credits. Offered alternate years.

4. Evolutionary Biology

BIOES 278 Evolutionary Biology
Spring. 4 credits.

5. Microbiology

BIOM 209 General Microbiology
Lectures
Fall, spring, or summer. 3 credits.
Prerequisites: BIOMI 101–102 and 103–104 or CHEM 104 or 208, or equivalent. Recommended: concurrent registration in BIOMI 291.

BIOMI 290 General Microbiology
Laboratory
Fall, spring, or summer. 3 credits.
Prerequisites: BIOMI 101–102 and 103–104 or CHEM 104 or 208, or equivalent. Recommended: concurrent registration in BIOMI 291.

BIOMI 291 Laboratory Skills
Fall. 3 credits. Not open to freshmen. Limited to 20 students.

7. Botany

BIOL 241 Introductory Botany
Fall. 3 credits. Prerequisite: one year of introductory biology or permission of instructor.

8. Physiology and Anatomy

BIOAP 311 Introductory Animal Physiology, Lectures (also Veterinary Medicine 346)
Fall. 3 credits. Prerequisite: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics.

NS 341 Human Anatomy and Physiology
Spring. 4 credits.

D. Biology foundation (depth requirement): One course for which one of the above breadth requirement courses (2C) is a prerequisite.

E. Statistics (select one)

ARME 310 Introductory Statistics
Fall and spring. 4 credits.

BTRY 200 Statistics and the World We Live In
Fall. 3 credits.

BTRY 215 Introduction to Statistical Methods
Fall. 3 credits.

BTRY 601 Statistical Methods I
Fall. 4 credits.

CRP 320 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 3 credits.

ECON 219 Introduction to Statistics and Probability
Fall or spring. 4 credits. Prerequisites: Economics 101–102 and Mathematics 111–112.

[EDUC 352 Introduction to Educational Statistics
Spring. 3 credits. Prerequisite: Education 352 (1 credit) or concurrent registration. Not offered 1996–97.]

ILRST 210 Statistics: Statistical Reasoning
Fall and spring. 4 credits.

[ORIE 370
Fall. 4 credits. Not offered 1996–97.]

PSYCH 350 Statistics and Research Design
Fall. 4 credits.

SOC 301 Evaluating Statistical Evidence
Fall. 4 credits.

III. Core Courses

B&SOC 301 Biology and Society:
The Social Construction of Life (also Science and Technology Studies 401)
Fall. 4 credits. Prerequisite: two semesters of social science or humanities and one year of introductory biology or permission of instructor. Limited to 75 students. C. Cussins.

Critical thinking about the diverse influences shaping the life sciences. Topics include evolution and natural selection, heredity and genetic determinism, biotechnology and reproductive interventions. We interpret episodes, past and present, in biology in light of scientists' historical location, economic and political interests, use of language, and ideas about causality and responsibility. Readings, class activities, and written assignments are designed so that students develop interpretive skills and explore their own intellectual and practical responses to controversies in biology and society.

PHIL 286 Science and Human Nature (also Science and Technology Studies 286)
Spring. 4 credits.

For description, see PHIL 286.

IV. Themes

A. Natural Science Issues/Biology Elective (two courses). Select from the list of B&SOC approved Natural Science Issues courses or choose course(s) with intro biology as a prerequisite from: ALS, AN SC, BIOSCI, ENTO, FOOD, HDFS, NS, NTRES, PL BR, PL PA, PSYCH, VT MED.

ASTRO 202 Our Home in the Solar System
Spring. 3 credits.

BIOAP 214 Biological Basis of Sex Differences (also Biology and Society 214 and Women's Studies 214)
Fall. 3 credits. For description, see BIOAP 214.

BIOES 275 Human Biology and Evolution (also Anthropology 275 and Nutritional Sciences 275)
Fall. 3 credits. Offered alternate years.

BIOL 346 Plants and Civilization
Spring. 3 credits.

HDFS 347 Human Growth and Development: Biological and Behavioral Interactions (also Biology and Society 347 and Nutritional Sciences 347)
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and Human Development and Family Studies 115 or Psychology 101. Offered alternate years.

A review of major patterns of physical growth from the fetal period through adolescence, with consideration of biological and socio-environmental determinants of growth as well as physical and psychological consequences of variations in growth patterns. An examination of normal patterns of growth is followed by an analysis of major sources of variations in growth (normal and atypical).

HDFS 370 Experimental Psychopathology

NS 222 Maternal and Child Nutrition
Spring. 3 credits.

NS 361 Biology of Normal and Abnormal Behavior (also Psychology 361)
Fall. 3 credits. For description, see NS 361.

[NS 650 Public Health Nutrition
Spring. 3 credits. Not offered 1996–97.]

NTRES 201 Environmental Conservation
Spring. 3 credits.

Examples of biology electives

AN SCI 300 Animal Reproduction and Development
Spring. 3 credits.

HDFS 466 Neurobiology of Personality and Psychopathy
Fall. 3 credits.

NS 331 Physiological and Biochemical Bases of Human Nutrition
Spring. 3 credits.

R. Humanities/Social Science elective (two courses)

Courses listed earlier as social science/humanities foundation courses (2.B.) are particularly appropriate as social science/humanities electives. However, a single course cannot be used to meet both requirements. Additional courses that are recommended as social science or humanities electives are:

Examples of social science electives

ARME 464 Economics of Agricultural Development
Spring. 3 credits.

ANTHRO 211 Nature and Culture
Spring. 3 credits.

[BIOS 673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)
Fall. 3 credits. Offered alternate years. Not offered 1996–97.
For description, see BIOS 673.]

CRP 480 Environmental Politics
Spring. 4 credits.

CRP 451/551 Environmental Law
Fall. 4 credits.
ARTS AND SCIENCES - 1996-1997

[HDFS 241 History of Childhood in the United States
Spring. 3 credits. Not offered 1996-97.]

[HDFS 258 The Historical Development of Women as Professionals, 1800 to the Present (also Women's Studies 238 and History 238)
Fall. 3 credits. Limited to 120 students.]

[HSS 315 Human Sexuality
Spring. 3 credits.]

[HSS 325 Health Care Services and the Consumer
Fall. 3 credits. Offered alternate years. Not offered 1996-97.]

[HSS 330 Ecology and Epidemiology of Health
Spring. 3 credits.]

[HSS 335 Contemporary Issues in Women's Health
Fall. 3 credits.]

[HSS 364 Health Care Organization—Providers and Reimbursement
Fall. 3 credits.]

[HSS 688 Long-Term Care and the Aged: Alternative Health and Social Services Delivery Systems
Spring. 3 credits.]

[NS 245 Social Science Perspectives on Human Nutrition
Fall. 3 credits.]

[NS 457 National and International Food Economics (also Economics 374)
Spring. 3 credits.]

[NTRES 300 International Environmental Issues
Fall. 4 credits.]

[PSYCH 328 Evolution of Human Behavior
Fall. 4 credits. Offered alternate years.]

[R SOC 201 Population Dynamics (also Sociology 205)
Spring. 3 credits.]

[R SOC 205 Rural Sociology and International Development
Spring. 3 credits.]

[R SOC 324 Environment and Society
Spring. 3 credits.]

[R SOC 490 Society and Survival
Fall. 3 credits. Not offered 1996-97.]

[Examples of humanities electives]

[NTRES 407 Religion, Ethics, and the Environment
Spring. 4 credits.]

[PHIL 241 Ethics (by petition for breadth requirement)
Spring. 4 credits.]

[PHIL 368 Global Climate and Global Justice (also Government 468)
Fall. 4 credits.]

[PHIL 381 Philosophy of Science (also Science & Technology Studies 681)
Spring. 4 credits. Not offered 1996-97. For description, see PHIL 681.]

[S&TS 626 Workshop on Law, Science, and Technology (also GOVT 626)
Spring. 4 credits. Enrollment limited. Permission of the instructor required. Not offered 1996-97.]

C. Senior Seminars

[B&SOC 451 AIDS and Society
Fall. 3 credits. Staff. Not offered 1996-97.]

[BIO G 487 Seminar in the History of Biology (also Biology & Society 447, History 415, and Science & Technology Studies 447)
Fall. 4 credits. Not offered 1996-97. For description, see BIO G 467.]

[BIO G 469 Food, Agriculture, and Society (also Biology & Society 469 and Science & Technology Studies 469)
Spring. 4 credits. For description, see BIO G 469.]

[BIOES 661 Environmental Policy (also Biology & Society 461 and Agriculture and Life Sciences 661)
Fall. Spring. 6 credits. For description, see BIOES 661.]

[CEH 444 Housing for the Elderly: A Service Learning Experience
Spring. 3 credits.]

[HDFS 466 Neurobiology of Personality and Psychopathology
Fall. 4 credits.]

[HDFS 470 Advanced Experimental Psychopathology
Fall. 3 credits.]

[HDFS 473 Schizophrenia
Fall. 3 credits. Not offered 1996-97. Permission of instructor required.]

[HDFS 610 Processes in Human Development
Spring. 3 credits.]

[HDFS 660 Social-emotional Development
Spring. 3 credits. Not offered 1996-97. Permission of instructor required for undergraduates.]

[HDFS 685 Seminar on "Critical Issues in Human Development: Research and Reality.
Spring. 3 credits. Not offered 1996-97. Permission of instructor required for undergraduates.]

[HSS 335 Contemporary Issues in Women's Health
Fall. 3 credits.]

[HSS 613 Seminar on Mental Health and Related Services
Fall. 3 credits.]

[HSS 625 Health Care Services: Consumer and Ethical Perspectives
Fall. 3/4 credits. Permission of instructor required. If using this course as a senior seminar, B&SOC majors must take it for 4 credits by writing a major paper. Enrollment limited—preference given to HSS students.]

[HSS 631 Managed Health Delivery Systems: Primary-Ambulatory Care
Spring. 3 credits.]

[NS 349 Geriatric Nutrition
Fall. 3 credits.]

[NS 421 Nutrition and Sport
Spring. 3 credits.

R SOC 408 Human Fertility in Developing Nations (also Biology & Society 404)
Spring. 3 credits. For description, see R SOC 408.]

[R SOC 418 Population Policy (also Biology & Society 414)
Spring. 3 credits. Not offered 1996-97. For description, see R SOC 418.]

[S&TS 406 Biotechnology and the Law (also Biology & Society 406)
Fall. 4 credits. S. Jasanoff. Not offered 1996-97. For description, see S&TS 406.]

[S&TS 412 Politics of the Human Body
Spring. 4 credits. Staff. Not offered 1996-97. For description, see S&TS 412.]

[S&TS 427 Politics of Environmental Protection in America (also Biology & Society 427 and Government 427)
Fall. 4 credits. S. Jasanoff. Not offered 1996-97. For description, see S&TS 427.]

[S&TS 490 Integrity of Scientific Practice
Fall. 4 credits. S. Hilgartner.]

[S&TS 626 Workshop on Law, Science and Technology (also Government 626)
Spring. 4 credits. S. Jasanoff. Not offered 1996-97. For description, see S&TS 626.]

[S&TS 645 Genetic Engineering: Politics and Society In Comparative Perspective (also Government 634)
Spring. 4 credits. S. Jasanoff. For description, see S&TS 645.]

[S&TS 660 Social Analysis of Ecological Change (also Biology & Society 460)
Spring. 4 credits. Permission of instructor required. Limited to graduate students and seniors. Not offered 1996-97. P. Taylor. For description, see S&TS 660.]

[S&TS 688 International Environmental Policy (also Government 687)
Spring. 4 credits. S. Jasanoff. Not offered 1996-97. For description, see S&TS 688.]

V. Other Courses

B&SOC 375 Independent Study
Fall or spring. 1-4 credits. Prerequisite: must have written permission of faculty supervisor and Biology and Society major. Projects under the direction of a Biology and Society faculty member are encouraged as part of the program of study within the student's concentration area. Applications for research projects are accepted by individual faculty members. Students may enroll for 1-4 credits in Biology and Society 375 (Independent Study) with written permission of the faculty supervisor and may elect either the letter grade or the S–U option. Students may elect to do an independent study project as an alternative to, or in advance of, an honors project. Applications and information on faculty research, scholarly activities, and undergraduate opportunities are available in the Biology and Society office, 275 Clark Hall. Independent study credits may not be used in completion of the major requirements.
B&SOC 400 Undergraduate Seminar

Fall or spring. Variable credit. May be repeated for credit.

From time to time, different seminars on topics of interest to undergraduates are offered. Topics and instructors are listed in the biology and society supplement issued at the beginning of each semester.

B&SOC 499 Honors Project

Fall and spring. 3-5 credits each term.

Open only to Biology and Society students in their junior or senior years. Students are required to complete two semesters of honors project research and to write an honors thesis. The project must include substantial research and the completed work should be of wider scope and greater originality than is normal for an upper-level course.

Students may take 3-5 credits per semester up to a maximum of 8 credits in B&SOC 499, Honors Project. Students should note that B&SOC 499 is to be taken in addition to those courses that constitute major requirements. The student and the project supervisor must reach clear agreement at the outset as to what sort of work will need to be completed during the first semester. Minimally, an honors thesis outline and bibliography should be accomplished. At the end of the first semester, a letter grade will be assigned and the advisers, in consultation with the Director of Undergraduate Studies, will evaluate whether or not the student should continue working on an honors project. Students who do continue in the honors program for the second semester will receive a letter grade at the end of their final term whether or not they complete a thesis and whether or not they are recommended for honors.

Applications and information are available in the Biology and Society office, 275 Clark Hall.

Cognitive Studies Program

F. Keil (psychology), B. Lust (human development and family studies, modern languages and linguistics), codirectors.

Important insights into issues of these kinds have been achieved in recent years as a result of the various cognitive studies disciplines converging in their theoretical and methodological approaches. It is this convergence, in fact, that warrants grouping the disciplines together under the single term "cognitive studies." Even greater progress can be expected in the future as a consequence of increasing cooperation among the disciplines.

Undergraduate Concentration

An interdisciplinary undergraduate concentration in Cognitive Studies is presently available to Cornell University undergraduates in the College of Arts and Sciences.

The undergraduate concentration in Cognitive Studies is designed to enable students to engage in a structured program directly related to the scientific study of cognition and the mind. The concentration provides a framework for the design of individually structured, supervised programs of study in this growing interdisciplinary field. Such programs of study serve as complements to course work in a single discipline as represented by an upper-level major requirement. It is considered crucial that students gain a strong background in their major, independent of their work in the concentration.

Students in any major of the College of Arts and Sciences are eligible to apply for this concentration. Independent majors and College Scholars may also apply. Students from other colleges may apply, but colleges vary in their procedures for formal recognition of this concentration. To enter the concentration formally, the student should consult with a member of the Cognitive Studies Undergraduate Concentration Committee (see below), who will assist the student with selection of a concentration adviser with expertise in the student's main areas of interest.

In addition to assisting in and approving the student's selection of courses, the concentration adviser serves as a general source of information about the field of cognitive studies, relevant resources around the university, and job and graduate school opportunities. The computer facility will help link resources from different laboratories across the Cornell campus.

Students who complete the concentration requirements will have their concentration in Cognitive Studies officially represented on their transcript. Students in good standing in the concentration will be eligible to compete for a limited number of summer research fellowships and travel awards to relevant conferences in the cognitive sciences. In addition, students who have completed all requirements for the concentration will be eligible for enrollment in the Graduate Proseminar in Cognitive Studies during their senior year (COGST 775-776).

Concentration Application Procedures.

The concentration requires that the student take several courses (usually a minimum of five) from more than one department/field. The selection of courses will be individually tailored according to the student's interests. An approved set of courses is listed in this section; however, this list can be expanded by the student in consultation with his or her adviser.

The student must gain approval for the selection of courses from his or her concentration adviser. The courses selected must form a coherent cluster that makes sense to both the adviser and the student. To be admitted to the concentration, the student must submit this Plan of Study to the Cognitive Studies undergraduate faculty committee for final approval.

Independent Research.

The concentration encourages each student to be involved in independent research that bears on research issues in cognitive studies, if possible. COGST 470 is available for this purpose. It is recommended that students report on their research activities in an annual undergraduate forum. The Undergraduate Concentration Committee is committed to helping students find an appropriate research placement when needed.

Initial inquiries concerning the undergraduate concentration should be made to the Cognitive Studies Program coordinator, Sue Wurster, cogst@cornell.edu, 255-6431, who will provide application materials and set up a meeting with a relevant member of the Undergraduate Concentration Committee.

The Committee for Undergraduate Concentration in Cognitive Studies consists of: Ramin Zabih, computer science, 5-3406, 5161 Uson Hall, RD2@cornell.edu; Molly Diesing, linguistics, 5-8635, 212 Morrill Hall, MD20@cornell.edu (96-97); Jason Stanley, philosophy, 5-6829, 216 Goldwin Smith, JCS27@cornell.edu (96-97); Beena Khurana, psychology, 5-6434, 282 Uris Hall, BK14@cornell.edu.

Graduate Minor

For information, consult the program office (273A Uris Hall, 255-6431, cogst@cornell.edu or the graduate field representative, Barbara Lust 255-0829, bl24@cornell.edu).
**Courses**

**Cognitive Studies**

**COGST 470 Undergraduate Research in Cognitive Studies**
- Fall or spring. 1–4 credits. S-U grade. Prerequisite: permission of instructor; open only to junior or senior students.

**COM S 486**
- Introduction to Cognitive Science
  - Spring. 4 credits.

**COM S 487**
- Applied Logic II
  - Spring. 4 credits.

**EDUC 310**
- Psychology of Learning and Memory
  - Spring. 3 credits. Not offered 1996-97.

**EDUC 311**
- Learning in Children
  - Spring. 3 credits.

**EDUC 312**
- Learning to Learn
  - Spring. 3 credits. Not offered 1996-97.

**HDFS 331**
- Learning in Children
  - Spring. 3 credits.

**HDFS 333**
- Cognitive Processes in Development
  - Spring. 3 credits.

**LING 401**
- Language Typology
  - Fall. 4 credits.

**LING 402**
- Semiotics and Language (also Comparative Literature 402)

**LING 403**
- Language Development

**LING 404**
- Concepts and Methods in Linguistics

**LING 405**
- Mathematical Methods for Linguistics
  - Fall. 4 credits. Not offered 1996-97.

**LING 406**
- Applied Linguistics
  - Spring. 3 credits.

**LING 407**
- Language and Cognition (also Psychology 407)

**LING 408**
- Language and Cognition (also Psychology 408)

**LING 409**
- Language and Cognition (also Psychology 409)

**LING 410**
- Language and Cognition (also Psychology 410)

**LING 411**
- Language and Cognition (also Psychology 411)

**LING 412**
- Language and Cognition (also Psychology 412)

**LING 413**
- Language and Cognition (also Psychology 413)

**LING 414**
- Language and Cognition (also Psychology 414)

**LING 415**
- Language and Cognition (also Psychology 415)

**LING 416**
- Language and Cognition (also Psychology 416)

**LING 417**
- Language and Cognition (also Psychology 417)

**LING 418**
- Language and Cognition (also Psychology 418)

**LING 419**
- Language and Cognition (also Psychology 419)

**LING 420**
- Language and Cognition (also Psychology 420)

**LING 421**
- Language and Cognition (also Psychology 421)

**LING 422**
- Language and Cognition (also Psychology 422)

**LING 423**
- Language and Cognition (also Psychology 423)

**LING 424**
- Language and Cognition (also Psychology 424)

**LING 425**

Freshman Writing Seminars

For information about the requirements for freshman writing seminars and descriptions of seminar offerings, see the John S. Knight Writing Program section, and consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in late October for the spring term.

Human Biology Program

J. Haas (nutritional sciences), director, 211 Savage Hall, 255-8001; J. Bertram (anatomy), B. Finlay (psychology), J. Fortune (physiology/women's studies), E. Frongillo (nutritional sciences), R. Johnston (psychology), K.A.R. Kennedy (ecology and systematics/anthropology), D. Levitsky (natural sciences), D. McGeen (ecology and systematics), P. W. Nathanisels (psychology), D. L. Pelletier (nutritional sciences), W. Provine (ecology and systematics/history), R. Ron (psychology), S. Robertson (human development and family studies), R. Savin-Williams (human development and family studies), M. Small (anthropology).

Human biology integrates the methods and theories of many disciplines, such as biological anthropology, nutrition, neurobiology, physiology, psychology, demography, ecology, genetics, and paleontology, into a comprehensive study of biological diversity in Homo sapiens. A central focus of this interdisciplinary approach to the study of human biology is an understanding of evolutionary processes that explain our biological variation through space and time. The program of study seeks to educate future biological scientists to address the concerns of a society that is becoming more demanding of the scientific community to place its specialized biological knowledge in a broad context. The human biology curriculum is of particular relevance to undergraduate students in premedical and predentistry programs, biological anthropology, nutrition, human development, ecology and systematics, psychology, physiology, genetics, and the health-related sciences. It serves to bring together students with a common interest in human biology from these diverse fields and to provide a forum for student-faculty interaction on various topics relating to human evolution and biological diversity.

Human biology is not a major but a curriculum of study that provides majors in various departments with a program for selecting elective courses that deal with the biology of the human species. Students in their junior year may develop a program of study in human biology while majoring in a number of different departmental fields.

Basic Requirements

The requirements for a program of study in human biology are designed to ensure sufficient background in physical sciences and mathematics to enable the student to pursue a wide range of interests in the fields of modern biological sciences, anthropology, and fields related to the evolution and physical diversity of the human species. Adjustments may be made in these requirements, depending upon the student's academic background and affiliation with colleges and schools within the university.

The basic requirements are one year of introductory biology (Biological Sciences 101-103 plus 102-104 or 105-106 or Biological Sciences 107-108 offered during the eight-week Cornell Summer Session); one year of general chemistry (Chemistry 103-104 or 207-208 or 215-216); one year of college mathematics (Mathematics 111-112 or 105-106 or 111-105); one course in genetics (Biological Sciences 268 or 282); one course in biochemistry (Biological Sciences 231, 330 or 331). It is recommended that students planning graduate study in biological anthropology, psychology, and related fields in the medical and nutritional sciences take a course in statistics. Students should consult their faculty adviser in human biology for help in selecting appropriate courses.

Elective courses should be taken that will enable the student to acquire breadth in the subject matter of human biology outside of their departmental major. Therefore only 6 of the 15 human biology elective credits may also fulfill requirements for the major. The Courses should be selected that also provide sufficient exposure to the integration of basic anatomical and physiological sciences with the behavior of individuals and groups within the context of evolutionary theory and ecology. The courses listed below are representative of the offerings in human biology and are included to assist the student in organizing a curriculum of study. They are organized into three groups that reflect the three levels of integration noted above:

1. human anatomy and physiology, (2) human behavior, and (3) human evolution and ecology. Students should choose at least one course from each of these areas of integration. It is anticipated that the student will include in a program of study at least one of the laboratory courses offered. It is expected that a student will take a minimum of 15 credits from among these courses.

There is no foreign language requirement for human biology beyond what is dictated by specific departments and colleges. The requirements for the human biology curriculum are set alongside requirements of the undergraduate majors as these are defined by different departments. Students with independent majors may design their own programs of study under the guidelines provided by their college. Although a student may indicate an interest in human biology in the freshman year and be able to obtain early guidance from a faculty adviser representing the curriculum of study, it is more usual for students to establish their course programs in the first semester of the junior year. The student may request one of the faculty advisers in his or her department who is listed as faculty in human biology to be their principal adviser, or he or she may have an adviser in the department of the major and seek the advice of a human biology faculty adviser in matters pertaining to satisfaction of the requirements. If necessary, the faculty adviser may represent both the major and the curriculum of study in human biology.

Courses

Human Anatomy and Physiology

BIO AP 214 The Biological Basis of Sex Differences (also Women's Studies 214) Fall. 3 credits.

BIO ES 274 Functional and Comparative Morphology of Vertebrates Spring. 4 credits.
**SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES**

**NS 347** Human Growth and Development: Biological and Behavioral Interactions (also Human Development and Family Studies 347 and Biology and Society 347)
- Spring. 3 credits.

**PSYCH 326** Evolution of Human Behavior
- Fall. 4 credits.

**PSYCH 425** Brain and Behavior
- Fall. 3 or 4 credits.
- Spring. 3 or 4 credits.

**R SOC 408** Human Fertility in Developing Nations (also B Soc 404)
- Spring. 3 credits.

**R SOC 438** Social Demography
- Fall. 3 credits.

**Human Evolution and Ecology**

**ANTHR 101** Introduction to Anthropology: Biological Perspectives on the Evolution of Humankind
- Fall. 3 credits.

**ANTHR 203** Early People: The Archaeological and Fossil Record (also Archaeology 203)
- Spring. 3 credits.

**ANTHR 390** Primate Behavior and Ecology
- Spring. 4 credits.

**ANTHR 391** The Evolution of the Human Life Cycle
- Spring. 4 credits.

**ANTHR 490** Primates and Evolution
- Spring. 4 credits.

**BIO ES 261** Ecology and the Environment
- Fall. 4 credits.

**BIO ES 272** Functional Ecology: How Animals Work
- Spring. 4 credits.

**BIO ES 275** Human Biology and Evolution (also Anthropology 275 and Nutritional Sciences 275)
- Fall. 3 credits.

**BIO ES 371** Human Paleontology (also Anthropology 371)
- Fall. 4 credits.

**BIO ES 378** Evolutionary Biology
- Spring. 4 credits.

**BIO ES 461** Population and Evolutionary Ecology
- Spring. 4 credits.

**BIO ES 464** Microevolution and Macroevolution
- Spring. 4 credits.

**BIO ES 470** Ecological Genetics (also Entomology 470)
- Spring. 4 credits.

**BIO ES 471** Mammalogy
- Fall. 4 credits.

**BIO GD 481** Population Genetics
- Fall. 4 credits.

**BIO GD 482** Human Genetics and Society
- Fall. 3 credits.

**BIO GD 484** Molecular Evolution
- Spring. 3 credits.

**BIO ES 673** Human Evolution: Concepts, History and Theory (also Anthropology 673)
- Fall. 3 credits.

**B&SOC 447** History of Biology-Evolution (also History 447)
- Fall. 4 credits.

**HSS 330** Ecology and Epidemiology of Health
- Spring. 3 credits.

**NS 306** Nutritional Problems of Developing Nations
- Fall. 3 credits.

**PSYCH 326** Evolution of Human Behavior
- Fall. 4 credits.

**R SOC 201** Population Dynamics
- Spring. 3 credits.

**VET MI 431** Medical Parasitology
- Fall. 2 credits.

**VET CS 684** Introduction to Epidemiology
- Fall. 3 credits.

**Independent Major Program**

Dean Lynne Abel, director, 55 Goldwin Smith Hall, 255-3586.

The Independent Major Program is described in the introductory section of Arts and Sciences.

**IM 351** Independent Study
- Fall or spring. 1-4 credits. Prerequisite: permission of the program office.

**IM 499** Honors Research
- Fall or spring. 1-8 credits. A maximum of 8 credits may be earned for honors research. Prerequisite: permission of program director. Each participant must submit a brief proposal approved by the honors committee.

**Intensive English Program**

This full-time, noncredit, nondegree program is designed to meet the requirements of foreign students who need to acquire proficiency in English to pursue university-level studies in the United States, as well as for visitors, personnel in business, the foreign students who need to acquire proficiency in English to pursue university-level studies in the United States, as well as for visitors, personnel in business, the hospitality industry, legal work, medicine, and others seeking competence in the language.

The intensive nature of the program leads to a command of the language in all its aspects-listening, speaking, reading, and writing—in the shortest possible time.

Integrated courses are offered both fall and spring semesters at all levels from low intermediate through high advanced.

Students who have gained full admission to or who are already registered in degree-granting programs at Cornell should consult the section "Modern Languages" for information regarding courses in English for Academic Purposes (series ENGLF).

The Intensive English Program is administered by the Department of Modern Languages, Cornell University, Morrill Hall, Ithaca, New York 14853-4701. U.S.A. Application materials and information are available directly from the program by calling 607/255-4863, or by faxing 607/255-7491. Internet e-mail is CUEIP@cornell.edu. Web pages is http://www.dmll.cornell.edu/iep/cueip.html.

**International Relations Concentration**

Matthew Evangelista, director

Integral to international relations is a focus on global issues and processes and an understanding of their impact on particular countries or geographic regions. Cornell's several undergraduate colleges and many departments offer courses that provide a strong grounding in the field as well as an opportunity to study more than 60 languages.

The concentration in international relations provides a curricular structure for undergraduate students with an interest in international law, economics, agriculture, trade, banking organizations, and government service, and in cross-cultural affairs or education. Students can major in just about anything and in addition "concentrate" in international relations. They can major in a field that the concentration in international relations closely complements (for example, history, government, economics, or anthropology) or they can major in some very different subject, including the sciences, and use the concentration to develop a separate expertise. Some students design an independent major in some aspect of international relations or comparative social or cultural studies.

**Course requirements for students entering Cornell in fall 1994 and after**

These requirements are designed to expose students to a broad range of perspectives in international relations while allowing them to tailor their course selections to specific interests. Courses throughout the university are grouped into four subject areas:

1. International Economics and Development
2. World Politics and Foreign Policy
3. Transnational Processes and Policies
4. Cultural Studies

Within these four subject areas, courses are also identified as "core" or "elective." Students must complete seven courses selected from the four groups according to one of two strategies. Option A emphasizes the politics and economics of international relations. Option B puts greater stress on culture. In choosing either option, students should ensure that they acquire familiarity with more than one geographic region or country.

**Option A:**
- One core course from Groups 1, 2, and 4
- One elective from Groups 1, 2, 3, and 4

**Option B:**
- One core course from Groups 1, 2, and 4
- One elective from either Group 1 or Group 2
- One elective from Group 3, and two additional electives from Group 3 or Group 4

Students should take note that many of the core courses have prerequisites. The list of electives here is representative but not complete. Many other courses throughout the university can qualify as electives for the IR Concentration.
Group 1: International Economics and Development

Core: Econ 363 International Economics (prereq. Econ 101-102)
Econ 361 International Trade Theory (prereq. 101-102, 313)
Econ 371 Economic Development (prereq. 101-102, 315)

Electives: Econ 367 Comparative Economic System: East & West
Econ 369 The Economy of China
Econ 375 Economic Problems of India
ILRIC 333 Western Europe, US, and Japan in a Changing World Economy

Group 2: World Politics and Foreign Policy

Core: Govt 181 Introduction to International Relations
Hist 314 History of American Foreign Policy, 1912-present

Electives: Govt 400 US Political Economy in Global Perspective
Govt 433 Politics of Economic Liberation in the Developing World

Group 3: Transnational Processes and Policies

[NO CORE]

Electives: B&Soc 460 Social Analysis of Ecological Change (seniors & grads)
B&Soc 461 Environmental Policy (seniors & grads)
INTAG 300 Perspectives in International Agriculture and Rural Development
Phil 294 Global Thinking
R Soc 438 Social Demography

Group 4: Cultural Studies

Core: Anthr 200 Cultural Diversity and Contemporary Issues
Anthr 321 Sex and Gender in Cross-Cultural Perspective
Anthr 460 Culture and International Order

Electives:
AS&RC 311 Govt & Politics in Africa
AS&RC 478 Family and Society in Africa
Anthr 345 Japanese Society
Asian 363 Contemporary Mass Culture in Japan and the US
Asian 385 Vietnamese Cultural Studies

Core: L 455 Caribbean Literature
Govt 332 Modern European Politics
Govt 346 Modern Japanese Politics
Govt 347 Govt & Politics of China
Govt 358 Modern History of Near East
Hist 449 Race & Class in Latin America
Hist 493 Problems in Modern Chinese History
NES 234 Arabs & Jews: Cultures in Confluence and Conflict

Language Requirement

IR Concentrators entering Cornell in fall 1994 and after are expected to complete additional language study beyond the College of Arts and Sciences degree requirement. This study can be accomplished in one of two ways:

1) Two years of one foreign language (proficiency plus one course)

2) Two languages at proficiency

Requirements for students entering Cornell prior to fall 1994:

1) Two courses in government:
   a) Government 181 or 281: Introduction to International Relations (spring).
   b) One appropriate 300-level government course, either in international relations or in the foreign policy of a particular country.

2) Two courses in economics:
   a) One from the following offerings: Economics 361* International Trade Theory and Policy (fall); Economics 362* International Monetary Theory and Policy (spring); Economics 363: International Economics (fall); Economics 371: Economic Development (fall).
   b) One from the following offerings: Economics 366: The Economies of Central Europe and the Former USSR (spring); Economics 367: Comparative Economic Systems (spring); Economics 370: Socialist Economies in Transition (fall); Economics 374: National and International Food Economics (spring).

   (*Students can take Economics 361 and 362 to fulfill the economics requirement.)

3) Two courses in history:
   a) History 314: History of American Foreign Policy, 1912 to the Present (spring).
   b) Any history course dealing with a modern nation or region other than the United States.

Typical choices among the sequences listed above would be to study European history and government and Economics 361, 362, or 367, or Third World history and government and Economics 371 and other listed economics courses. Under certain conditions, it may be possible to substitute other courses for those listed above. In addition, students are strongly encouraged to acquire full proficiency in a modern foreign language.

Study Abroad

IR Concentrators are strongly encouraged to study abroad to bring a practical dimension to their expertise in international issues. Those who choose this option will find the requirements for the concentration highly compatible with study abroad.

All courses used to fulfill the concentration requirements must be taken for a letter grade. Transcripts will reflect successful completion of the requirements for the concentration. In addition, students will receive a special certificate signed by the faculty coordinator of the international relations concentration. Students interested in pursuing the concentration should discuss it with their faculty adviser. To enroll and for further information, contact the Department of Government, McGraw Hall.

Center for International Studies

See Interdisciplinary Centers, Programs, and Studies.

Program of Jewish Studies

D. I. Owen, director (Ancient Near Eastern and Biblical History and Archaeology), C. Baker (Judaism and Christianity in late Antiquity), R. Brann (Judeo-Arabic Studies), N. Furman (Holocaust Studies), P. Hyams (Medieval Jewish History), D. LaCapra (Holocaust Studies), H. Lupovitch (European Jewish History), D. Polachek (Holocaust Studies), R. Polenberg (American-Jewish History), J. Porte (American-Jewish Writers), D. S. Powers (Arabic and Islamic Studies), G. Rendsburg (Biblical and Semitic Studies), N. Scharf (Hebrew language), D. Schwarz (Anglo-Jewish Literature), S. Shoer (Hebrew Language), Y. Szekely (Judaica Bibliography), J. Teitelbaum (Modern History of the Middle East).

The Program of Jewish Studies was founded as an extension of the Department of Semitic Languages and Literatures (now the Department of Near Eastern Studies) in 1973 and attained status as an intercollegiate program in 1976.

The program has grown out of the conviction that Judaic civilization merits its own comprehensive and thorough treatment and that proper understanding of any culture is inconceivable without adequate knowledge of the language, literature, and history of the people that created it. Accordingly, the offerings in the areas of Hebrew language and literature have been considerably expanded, and courses in ancient, medieval, and modern Jewish history have been added to the program.

It is a broadly based, interdisciplinary program, bringing together faculty from the various Cornell colleges.

The Program of Jewish Studies supports teaching and research in the overall area of Judaic Studies. It is a secular, academic program, the interests of which are diverse and cross-cultural. The program recognizes its special relationship to teaching and research in classical Judaica and Hebraica which are pursued by the members of the Department of Near Eastern Studies.

It presently enables students to obtain basic instruction and specialization in the fields of...
Courses Offered

JWST 105-106 Elementary Modern Hebrew I and II (also NES 101-102) 105 fall, 106 spring. 4 credits. S. Shorr. For description, see NES 101-102.

JWST 201-202 Intermediate Modern Hebrew I and II (also NES 201-202) 201 fall; 202 spring. 4 credits. N. Scharf. For description, see NES 201-202.

JWST 227 Introduction to the Prophets (also NES 227 and RELST 227) @ Fall. 3 credits. Enrollment limited to 140 students. G. Rendsburg. For description, see NES 227.

JWST 234 Arabs and Jews in Confluence and Conflict (also NES 234, RELST 234, and COMP LIT 234) @ Fall. 3 credits. R. Brann. For description, see NES 234.

JWST 244 Introduction to Ancient Judaism (also NES 244 and RELST 244) @ Spring. 3 credits. Enrollment limited to 140 students. G. Rendsburg. For description, see NES 244.

JWST 245 Introduction to Modern Jewish History (also NES 249) @ Spring. 3 credits. Staff. For description, see NES 249.

JWST 248 Introduction to Classical Jewish History (also RELST 248 and NES 248) @ Fall. 3 credits. C. Baker. For description, see NES 248.

JWST 251 The Holocaust: The Destruction of European Jewry Fall. 3 credits. Enrollment limited to 100 students. H. Lupovitch.

This course will survey the social, political, and ideological origins of the Nazi program to destroy European Jewry, and will examine the evolution and implementation of this program. Emphasis will be placed on the context out of which this episode unfolded, including the rise of political and racial anti-Semitism at the end of the nineteenth century, the political and social tensions of the inter-war period. In addition to examining the events of the Holocaust, this course will examine the impact of these events on perpetrators and victims. The course will also address topics pertinent to the post-Holocaust era, including the impact of the Eichmann Trial on Jews in the State of Israel and America, the hunt for Nazi war criminals, and the rise of Holocaust revisionism.

JWST 294 Modern History of the Near East: Changing Politics, Society, and Ideas (also GOVT 358 and NES 294) @ Fall. 4 credits. Fulfills the college distribution requirement in history or the social sciences. T. Trubek. For description, see NES 294.

JWST 301-302 Advanced Modern Hebrew I and II (also NES 301-302) 301 fall; 302 spring. 4 credits. N. Scharf. For description, see NES 301-302.

JWST 339 Muslims, Christians and Jews in Islamic Spain: Literature and Society (also NES 339, COM LIT 334, RELST 334, SPAN LIT 339) @ Spring. 4 credits. R. Brann.

JWST 342 Jewish Mysticism (also RELST 344 and NES 344) @ Fall. 4 credits. Enrollment limited to 20 students. Not offered 1996-97. Staff. For description, see NES 344.

JWST 344 The History of Early Christianity (also NES 324 and RELST 325) Fall. 4 credits. C. Baker. For description, see NES 344.

JWST 346 Seminar on 19th-Century Jewish Intellectual History (also NES 347 and RELST 346) Spring. 4 credits. Enrollment limited to 20 students. Staff. For description, see NES 347.

JWST 347 Gender and Judaism (also WOMNS 347, RELST 343, NES 345) Spring. 4 credits. Enrollment limited to 25 students. C. Baker. For description, see NES 345.

JWST 352 The Transformation of European Jewry Spring. 4 credits. H. Lupovitch. This course will examine the transformation of Jewish life during the last three centuries from the all-encompassing Jewish world of the middle ages into the compartmentalized Jewish experience of the modern world. The course will emphasize the impact of modern politics and society on aspects of Jewish communal life such as the political outlook of Jewish leadership, the expanding role of women, changes in Jewish family life, the status of the rabbinate, and the transformation of Jewish schools.

JWST 353 The Transformation of European Jewry Spring. 4 credits. H. Lupovitch.

JWST 354 Seminar in Advanced Hebrew (also NES 400) Fall and spring. 4 credits. Enrollment limited to 15 students. N. Scharf. For description, see NES 400.

JWST 435-436 Aramaic I & II (also NES 435-436) @ # 435, fall; 436, spring. 4 credits each term. Enrollment limited to 15 students. G. Rendsburg.

For description, see NES 435-436.

JWST 478 Jewish-American Writing (also ENGL 479 and AMER STDS 479) Fall. 4 credits. Enrollment limited to 15 students. J. Porte.

A study of American writing from about 1895 to the present that is concerned with the Jewish experience in the New World. Some topics to be covered: immigrant life, gender issues, the conflict between religious and secular outlooks, political affiliation, the Great Depression, the Group Theater, anti-Semitism, Jewish life in the suburbs, the effect of the Holocaust, the "renewal" of Yiddish culture and religious interest. Authors to be studied may include: Abraham Cahan, Anzia Yezierska, Fannie Hurst, Mike Gold, Henry Roth, Clifford Odets, Karl Shapiro, Lionel Trilling, Alfred Kazin, Saul Bellow, Bernard Malamud, Philip Roth, Ruth Whitman and Cynthia Ozick. There will be opportunities for research in secondary sources and we shall probably study some films on Jewish subjects (e.g., Hester Street and Crossing Delancy).

JWST 491-492 Independent Study—Undergraduate Fall and spring. Variable credit. Staff.

JWST 499 Independent Study—Honors Fall and spring. Variable credit. Staff.

JWST 620 Readings in Medieval Hebrew Poetry and Prose (also NES 620) Fall and spring. 4 credits. R. Brann. For description, see NES 620.

Courses Not offered 1996-97.

JWST 197-198 Introduction to Near Eastern Civilization (also NES 197-198 and RELST 197-198) @ #

JWST 223 Introduction to the Bible (also NES 223 and RELST 223) @ #

JWST 228-262 Genesis (also Near Eastern Studies 228 and Religious Studies 228) @ #

JWST 242 Jewish Literature and Thought in the Rabbinic Period (also NES 242, RELST 242 and CLASS 243) @ #

JWST 243 Classics of Hebrew Literature, a Survey: The Hebrew Literary Tradition (also Comparative Literature 231 and NES 231)

JWST 247 Introduction to Jewish Art and Archaeology from the Hellenistic to the Rabbinic Period (also CLASS 249, NES 247, RELST 247, ARKEO 247) @ #

JWST 250 Response to the Holocaust

JWST 261 Ancient Seafaring (also ARKEO 275 and NES 261) @ #

JWST 263 Introduction to Biblical History and Archaeology (also Archeology 263, Near Eastern Studies 263 and Religious Studies 264) @ #

JWST 264 Agriculture and Society in the Ancient Near East (also Near Eastern Studies 264) @ #

JWST 274 Jewish Civilization in Europe 1814-1939 (also RUSSL 274)

JWST 283 The Lyrics of Love and Death: Medieval Hebrew Poetry in Translation (also Comparative Literature 333 and NES 233) @ #

JWST 293 Judaism, Christianity and Islam in Comparative Perspective (also NES 293)

JWST 322 Undergraduate Seminar in Biblical Literature: Prophecy in Ancient Israel (also Near Eastern Studies 322)

JWST 340 Topics in Religion: Religious Symbols in Near Eastern Late Antiquity (also NES 320 and RELST 340) @ #

JWST 345 Letter, Novel, Dictionary: The Making of National Language (also COMP LIT 345 and NES 343) @ #

JWST 347 Gender and Judaism (WOMNS 347, RELST 343, NES 345)

JWST 348 Varieties of Judaism in the Graeco-Roman World (also Near Eastern Studies 348 and Religious Studies 348) @ #

JWST 350 The Jews of the Territory of the Soviet Union from 1881 to the Present (also RUS LIT 355)

JWST 361 Interconnections in the Eastern Mediterranean World in Antiquity (also Near Eastern Studies 361) @ #
Agriculture and Life Sciences students and Industrial and Labor Relations students may apply their three credits toward the writing requirements of their college. Students should always consult their college registrars to be certain that they understand their writing requirements.

Students who have already taken a freshman writing seminar, or who score "4" or "5" on the Princeton AP exam, or "700" or better on the English Composition or CEEB test may enroll, space permitting, in the following upper-level freshman writing seminars:

- English 270, 271, and 272.

Although there are no exemptions from college writing requirements, some students may fulfill all or part of their college's writing requirement through transfer credits or writing-course substitutions.

For work done at other institutions to be accepted as equivalent to freshman writing seminars, students should demonstrate that they have done a reasonably equivalent amount of writing in a formal course. (It is not sufficient to write, for example, one thirty-page term paper.) Students in the College of Engineering and the College of Arts and Sciences must file an "application for transfer evaluation" to request writing credit for such courses. Students in other colleges should consult their college registrars.

In unusual circumstances, upper-level students may petition to use a Cornell writing course other than a freshman writing seminar to satisfy part of their writing requirement. The John S. Knight Writing Program must approve all such petitions in advance.

For information about the requirements for freshman writing seminars and descriptions of seminar offerings, consult the John S. Knight Writing Program brochure, available from college registrars in August for the fall term and in late October for the spring term.

Teaching Writing

Each summer and fall, the program offers instruction in the teaching of writing to new staff members in the freshman writing seminars and other interested instructors. Teaching Writing I, offered in the summer, is primarily a course for graduate students; the same course is offered in the fall as Teaching Writing II. The program also sponsors a summer apprenticeship program for a limited number of graduate students, and a summer seminar for faculty members interested in the teaching of writing.

Writing Workshop

The John S. Knight Writing Program offers an Introduction to Writing in the University for freshmen (or transfer students needing writing credit) through the Writing Workshop. This course is designed for students who have had little training in composition or who have serious difficulty with writing assignments.

Writing 137 and 138 are graded S-U only, and students receiving a grade of S are normally granted credit toward their college writing requirements. Students in this course are considered to have junior status for the purposes of distribution requirements. However, this course might be appropriate, including non-native speakers of English scoring less than 600 on the TOEFL, should attend the assessment sessions offered by the Writing Workshop during orientation week each fall. The workshop also offers a Walk-In Service (see
following) to help students with problems in essay writing. The director is Joe Martin, senior lecturer in the Writing Workshop. The workshop offices are in 174 Rockefeller Hall, 255-6349.

The Walk-In Service

Through the Walk-In Service, the Writing Workshop offers tutoring assistance in writing to any student who needs help with a writing project. The Walk-In Service has tutors available during the academic year in 174 Rockefeller and north- and west-campus residential areas. The director is Mary Gilliland. For information contact the Writing Workshop, 174 Rockefeller Hall, 255-6349.

WRIT 137-138, 134 An Introduction to Writing in the University

137, fall; 138, spring; 134, summer.
3 credits each term. Each section limited to 12 students in the fall and spring, 6 students in the summer. S-U grades only.
Prerequisite: permission of instructor.
This writing seminar is designed for students who need more focused attention to order to master the expectations of academic writing. The course emphasizes the analytic and argumentative writing and critical reading essential for university-level work. With small classes and with weekly student/teacher conferences, each section is shaped to respond to the needs of students in that particular class.

WRIT 139-239 Workshops in English Composition II

Spring. 139, undergraduate students only; 239, graduate students only. 3 credits.
S-U grades only. Cannot fulfill any writing or distribution requirements. Prerequisite: permission of instructor.
These courses allow students the opportunity to resolve significant writing challenges that have interfered with their academic progress. Students work on writing projects on which to work. Instruction is in weekly tutorials. Interested students should come to 174 Rockefeller for more information.

Latin American Studies

The Latin American Studies Program encourages and coordinates faculty and student interests in Latin America. A variety of special lectures, films, and seminars supplement the regular course offerings. Graduate students may pursue a minor in Latin American Studies, while majoring in the field of their choice. Undergraduate students may fulfill a Latin American Studies Concentration by completing a minimum of 15 credits in Latin American studies courses combined with language proficiency in Quechua, Spanish, or Portuguese. Latin American courses are offered in the College of Agriculture and Life Sciences; the College of Architecture, Art, and Planning; College of Arts and Sciences, College of Human Ecology, and the School of Industrial and Labor Relations.

For further information and a current course listing, students should contact the program office at 255-3345 or 190 Uris Hall.

Latino Studies Program

472 Calder Hall

The Latino Studies Program is an interdisciplinary academic program that focuses on the contributions, concerns, and welfare of those persons of Latino origin who reside in the United States. It includes support for historical, linguistic, literary, social, economic, and political studies of this diverse group of Americans. To this end the program objectives are (1) to expand the available course curriculum by providing both undergraduate and graduate courses pertaining to Latino subject matters; (2) to enlarge the size of the Latino faculty at Cornell through permanent appointments and visiting appointments; and (3) to enhance the Latino academic environment on campus through support of such activities as lectures, conferences, seminars, exhibits, and research activities.

Undergraduate Concentration

The program's undergraduate concentration affords students an opportunity to develop a multidisciplinary approach to the study of Latinos in the United States. To complete an undergraduate concentration in Latino Studies, students must earn at least 15 credits including LSP 201/SOC 265: Latinos in the United States (offered each spring semester), and at least four other courses from the course list.

Students should make an attempt to achieve breadth and depth in the concentration and should include courses at the 300 and 400 level. Students pursuing the concentration must meet with the LSP Advisor and file an application with the Latino Studies Program office.

Resource Center

The Latino Studies Program Resource Center in 450 Caldwell Hall serves Cornell students, faculty, staff, and the wider local community. The Resource Center holds print and media material pertinent to U.S. Latino issues and also provides a meeting space for more than 25 Latino student organizations.

Courses

LSP 201/SOC 265 Latinos in the United States

Spring. 4 credits variable.
LSP 202/SPOAND 200 Spanish for Bilinguals

Spring. 3 credits.
LSP/SPANL 210 Introduction to Latino Studies

4 credits variable.
LSP/RSOC 220 Sociology of Health and Ethnic Minorities

3 credits.
LSP/ANTHRO 221 Ethnographies on Latino Culture

3 credits.

LSP/ENGL 240-SPANL 242 Introduction to U.S. Latino Literature

Fall. 3 credits.
LSP/ENGL/SPANL 241 Introduction to Chicano/a Poetry and Politics

3 credits.
LSP/ENGL/SPANL 242-244 Chicano/a and Film: Re-Presentations of La Raza

3 credits.
LSP/ENGL/SPANL/COML 243 Poetry and Politics in the Americas

4 credits.
LSP/SPANL 366 Spanish in the United States

4 credits.
LSP/SPANL 396 Modern Latino Prose

4 credits.
LSP/ENGL 442 Testimonial Narratives: U.S. Latinos at War

4 credits.
LSP 420/421 Independent Study

Permission of instructor. 2-4 credits variable.
LSP/ANTHRO 660 Latino Languages, Ideology, and Practice

4 credits.
LSP/ENGL 696 Writing Resistance: U.S. Minority and Third World Prisoner Discourses

Law and Society

P. R. Hyams, director, 119 Stimson Hall, 255-8515, ph3@cornell.edu. A. Aschauer (American Studies, History), R. Breiger (Sociology), C. Carmichael (Comparative Literature), D. A. Dunning (Psychology), G. Hay (Economics), P. Hyams (History), J. Sasanof (Science and Technology Studies), M. Katzemeier (Government), R. Miller (Philosophy), M. B. Norton (History), R. Polenberg (History), R. Powers (Near Eastern Studies), J. Rabkin (Government), A. Rutten (Government), L. Scheinman (Government)

The Law and Society Program offers an interdisciplinary concentration for undergraduates who are interested in the law from the perspectives of the social sciences and the humanities: anthropology, comparative literature, economics, government, history, philosophy, psychology, science and technology studies, and sociology. In addition, undergraduates in the College of Arts and Sciences can major in law and society through the Independent Major Program. Students who wish to graduate with a concentration in law and society should consult the director of the program or one of the advisers listed above to plan a coherent program of study. Such a program should ordinarily include at least four courses from the following list. Particular attention is drawn to GOVT 313 and PSYCH 265, which past students have often taken. Other courses may be substituted with the approval of the adviser. Inquiries can be directed to Mary Newhart, Administrative Assistant, 119 Stimson Hall, 255-8515, mjn3@cornell.edu.

Lesbian, Bisexual and Gay Studies

The field of Lesbian, Bisexual and Gay Studies is devoted to the interdisciplinary study of the social construction of sexuality. LBG Studies is founded on the premise that the social organization of sexuality is often best studied from the perspectives offered by those positions that have been excluded from established cultural norms.

In addition to offering a graduate minor, the field of LBG Studies now offers an undergraduate concentration, which is administered under the auspices of the Women's Studies Program and which consists of four courses from the list below. Although most of the courses in LBG Studies (including those on men) will probably fall within the umbrella of the Women's Studies Program and hence be crosslisted with it, not all of the courses in Women's Studies are sufficiently focused enough on the social construction of sexuality per se to be part of the LBG Studies concentration. To qualify for the concentration, courses must devote a significant portion of their time to sexuality and to questioning the cultural and historical institution of exclusive heterosexuality. Students selecting their four courses from the LBG Studies subset must identify their concentration as either LBG Studies or Women's Studies; they cannot double-count their credits and thereby use the same courses for both concentrations.

Students interested in the LBG Studies concentration should contact the Lesbian, Bisexual and Gay Studies Office in 379 Uris Hall.

Courses

ANTHR 200 Cultural Diversity and Contemporary Issues

Fall. 3 credits. J. Borneman.

For description, see ANTHR 200.

ANTHR 321 Sex and Gender in Cross-Cultural Perspective (also WOMNS 321)

Fall. 4 credits. K. March.

For description, see WOMNS 321.

[ENGL 355 Decadence (also WOMNS 355)

For description, see WOMNS 355.]

ENGL 377 Gay Fiction (also WOMNS 376)

Fall. 4 credits. E. Hanson.

For description, see WOMNS 376.

[ENGL 424 Studies in Renaissance Lyric

4 credits. B. Correll. Not offered 1996-97.]

[ENGL 654 Queer Theory (also WOMNS 654)

For description, see WOMNS 654.]

ENGL 655 Decadence (also WOMNS 655/COMP LIT 655)

Spring. 4 credits. E. Hanson.

For description, see WOMNS 656.
SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES 549

FRLT 493 French Feminisms (also WOMNS 493)
Fall. 4 credits. A. Berger.
For description, see WOMNS 493.

[GERST 413 The Women Around Freud (also WOMNS 413)]

GOVT 362 Politics of Sexuality (also WOMNS 262)
Spring. 4 credits. A. M. Smith.
For description, see WOMNS 262.

[HIST 377 Gender and Early Modern Europe (also WOMNS 377)]

PSYCH 277 Social Construction of Gender (also WOMNS 277)
Spring. 3 credits. S. Bem.
For description, see WOMNS 277.

PSYCH 450/650 Lenses of Gender (also WOMNS 450/650)
Fall. 4 credits. S. Bem.
For description, see WOMNS 450/650.

S HUM 416 Community and Unbelonging
Spring. 3 credits. C. Cesarino.
For description, see S HUM 416.

SPANL 400 Maricetorina/Queer Theory
Spring. 4 credits. J. Piedra.
For description, see SPANL 400.

THETR 337 Contemporary American Theatre (also ENG 337)
Fall. 4 credits. J. E. Gainor.
For description, see THETR 337.

THETR 436 The Female Dramatic Tradition (also WOMNS 433)
Spring. 4 credits. J. E. Gainor.
For description, see WOMNS 433.

WOMNS 210 Introduction to Feminist Theory
Fall. 4 credits. B. Martin.
For description, see WOMNS 210.

WOMNS 465 Feminist Theory/Lesbian Theory
Spring. 4 credits. B. Martin.
For description, see WOMNS 465.

[WOMNS 621 Lesbian, Gay, Bisexual Studies]

Medieval Studies

Undergraduates interested in Medieval Studies have an opportunity to take courses in the following areas of instruction: medieval Hebrew, Arabic, and Latin; Old English; Middle English, and Old Irish; Old Provencal and medieval French; medieval Spanish and Italian; Old Saxon, Old High German, Old Middle High German, Gothic, and Old Norse; Old Russian and Old Church Slavonic; comparative literature, medieval archaeology, art, and architecture; medieval history; Latin paleography; medieval philosophy; musicology; comparative Slavic linguistics, comparative Romance linguistics, and comparative Germanic linguistics.

Undergraduates who want to undertake an independent major or a concentration in Medieval Studies should consult the director of the program, 259 Goldwin Smith Hall, 255–8545.

Information for prospective graduate students is contained in the catalog of the Graduate School, in a brochure on Medieval Studies available from the field coordinator, and at Cornell’s site on the World Wide Web.

Graduate Seminars
Courses in various aspects of medieval studies are offered each year in numerous cooperating departments, including Asian Studies, Classics, Comparative Literature, English, German Studies, History, History of Art, Linguistics, Music, Near Eastern Studies, Philosophy, Romance Studies, Russian Literature and by the Society for the Humanities. An up-to-date listing of courses and their descriptions is available at the Medieval Studies office, 259 Goldwin Smith Hall.

Modern European Studies Concentration
Susan Tarrow, coordinator

Students from any college may choose an undergraduate concentration in Modern European Studies to complement any major in any college. The purpose of the concentration is to provide a coherent structure for students with an interest in interdisciplinary study in the field of European studies.

The concentration has three tracks: European politics, economics and society; modern European history; and European culture. The requirements for the concentration are:

1) Competence in at least one modern European language, Romance, Germanic or Slavic (i.e., completion of a 300-level course or equivalent with a grade of at least B-, or demonstration of an advanced level of competence in an oral proficiency interview test where available).

2) Completion of at least one course in each of the three areas listed below:

a) European Politics, Society and Economics

Anth 350 Anthropology of Europe
Econ 367 Comparative Economic Systems: Soviet Union and Europe
Econ 370 Socialist Economies in Transition
Govt 325 Eastern European Politics
Govt 332 Western European Politics
Govt 336 European Political Development
Govt 342 The New Europe
Govt 350 Comparative Revolutions
Soc 366 Transitions from State to Socialism

b) Modern European History

Hist 242 Europe since 1789
Hist 283 Europe in the Technological Age
Hist 353 Nineteenth-Century European Intellectual History
Hist 354 Twentieth-Century European Intellectual History
Hist 362 European Cultural History 1815–1870
Hist 363 European Cultural History 1870–1945
Hist 383 Europe 1900–1945
Hist 384 Europe 1945–68
Hist 385 Europe 1968–1990

3) Three additional courses in any of the three areas.

a) Courses in European and comparative politics, anthropology, sociology, women’s studies, and related courses in the School of Hotel Administration, the College of Agriculture and Life Sciences, and the School of Industrial and Labor Relations.

b) Courses in modern European history (post-1789).

c) Courses in (post-1789) English and European literatures, comparative literature, semiotics, fine arts, architecture, music, philosophy, film and theatre arts, and women’s studies. Only two courses may be used to satisfy requirements for both the major and the concentration. Courses satisfying the breadth and distribution requirements in the College of Arts and Sciences, however, may be applied to the concentration. Students completing a research project under the European Summer Research Program will receive a special commendation. All concentrators are encouraged to participate in the Language House Program, and to spend a semester or more in a program of study in Europe. Courses taken abroad may be applied to the concentration if they are approved for Cornell credit.

Under certain conditions, it may be possible to substitute other courses for those listed above.

a) Courses in European and comparative politics, anthropology, sociology, women’s studies, and related courses in the College of Hotel Administration, the College of Agriculture and Life Sciences, and the School of Industrial and Labor Relations.

b) Courses in modern European history (post-1789).

c) Courses in (post-1789) English and European literatures, comparative literature, semiotics, fine arts, architecture, music, philosophy, film and theatre arts, and women’s studies. Courses taken abroad may be applied to the concentration if they are approved for Cornell credit.
Undergraduates in the College of Arts and Sciences can major in European Studies through the Independent Major or College Scholar programs.

For a list of relevant courses and seminars, departmental advisors, and any further information, contact Susan Tarrow, coordinator of the Modern European Studies Concentration, at the Institute for European Studies, 120 Uris Hall (telephone 255-7592).

Religious Studies

The program in Religious Studies is designed to meet the needs of three classes of students: those seeking interesting courses on religious topics as free electives or to fulfill distribution requirements, those desiring a more systematic exposure to the study of religion as a major component of their liberal arts experience, and those planning to pursue advanced academic work in religious studies or allied disciplines or subdisciplines (e.g., history of religions, anthropology, religion and literature, religion and psychology, ethics, or theology, as well as certain geographical area studies). To all these students the program offers opportunities to acquire a fuller understanding and appreciation of one of the most fundamental aspects of human thought and behavior.

The Major in Religious Studies

To graduate as a major in Religious Studies a student must (1) complete with letter grades the program's two core courses, Religious Studies 101 (Understanding the Religions of the World) and Religious Studies 449 (History and Methods of the Academic Study of Religion), and (2) complete with letter grades eight additional courses approved for the major, at least four of them at the 300 level or above. The following specifications of this second requirement are designed to promote breadth (2a) and depth (2b) of study.

(2a) At least four of a major's eight additional courses are to be selected to ensure some familiarity with two or more different religions, religious traditions, or religious phenomena. These courses may be at the introductory or advanced levels. For example, "Introduction to Asian Religions" (Asian Studies 250) might lead a student to take "The Religious Traditions of India" (Asian Studies 351), and then to combine these with the two "Medieval Culture" courses (History 365 and 366). Or a student might take four unrelated courses such as "Introduction to the Bible" (Near Eastern Studies/Jewish Studies 223), "Religion and Reason" (Philosophy 263), "Myth, Ritual, and Symbol" (Anthropology 320), and "Islamic History: 1258-1914" (Near Eastern Studies 258) to gain a sense of the range of intellectual activity associated with the academic study of religious traditions and religious practices.

(2b) At least two of these eight additional courses are to be selected to ensure depth of coverage in one religion or one group of closely related religions, religious traditions, or religious phenomena. In the first illustrative case described above, the student might combine "The Religious Traditions of India" with "Indian Meditation Texts" (Asian Studies 460) or "Classical Indian Philosophical Systems" (Asian Studies/Classics 395) to acquire a measure of specialist strength in the religions of India. Alternatively, that student might combine "Introduction to Asian Religions" with one or more courses dealing with Buddhism, such as "Chinese Buddhism" (Asian Studies 350) or "Japanese Buddhism" (Asian Studies 359), to develop an appropriate depth along a different dimension.

No more than one of the courses chosen to meet requirement 2a may be used to satisfy requirement 2b.

To engage in the kind of focused study envisioned under 2b, a student will be expected to attain proficiency in a language other than English to gain access to relevant sources, primary or secondary. For example, a knowledge of Greek or Latin might be required for the study of Christianity (as well as Greek or Roman religions), of Hebrew or Arabic for Judaism; of Arabic for Islam; of Sanskrit or Hindi for Hinduism; of Pali or Chinese or Japanese for Buddhism. Religious phenomena like shamanism or totemism, though less firmly rooted in literary traditions, have generated substantial bodies of important scholarship in French and German, and an undergraduate major concentrating in this area of Religious Studies should be equipped to make independent use of such material. Courses used to satisfy this foreign-language proficiency requirement may not be applied to the course requirements described under 2a and 2b.

Most courses approved for the major are offered by cooperating departments within the College of Arts and Sciences; a comprehensive up-to-date list of these courses is maintained at the office of the Religious Studies Program, 259 Goldwin Smith Hall.

Given the multidisciplinary character of the program in Religious Studies, it is especially important for a prospective major to select a faculty adviser early on. A current list of faculty advisers is available from the program director. Once an adviser has been selected, students or small groups of honors students to whom it is assigned will be expected to develop an appropriate understanding of the major. The students will investigate the intellectual and historical backgrounds of the religious traditions of the world. Topics covered include personal piety, mysticism, myth, development of religious institutions, and growth of scriptural canon. Required for majors in Religious Studies.

RELST 101 Introduction to World Religions @

Fall. 3 credits. J. M. Law. A team-taught introduction to the contemporary study of religion and the religious traditions of the world. Topics covered include personal piety, mysticism, myth, development of religious institutions, and growth of scriptural canon. Required for majors in Religious Studies.

RELST 111 Biblical Law (also Comparative Literature 111)

Spring. 3 credits. J. M. Law. See Com L 111 for description.

RELST 130 The Search for the Historical Jesus (also NES 130) @

Summer. 3 credits. C. Carmichael. Who was Jesus? What did he really say and do? In this course we are concerned with the ways in which scholars approach these questions and the answers they obtain. We examine the social, political, economic and religious environments in which Jesus operated to provide a context for critical readings of the gospels and other early Christian texts. We then reconstruct the essential features of the original Jesus movement, which we compare and contrast with Cynic philosophy, the Greco-Roman gender system, the beliefs and practices of the early Church, and the social patterns and religious philosophies of small-scale societies.

RELST 201 Issues in Catholic Thought

Spring. 3 credits. E. Ondrako. This course will explore fundamental dynamics for the development of Catholic Christian thought from the New Testament to the present. The students will investigate the historical and intellectual grounds of Catholic thought in the ideas of several thinkers from the Eastern and Western traditions, such as John Chrysostom, Augustine, Thomas Aquinas, Bonaventure, J.H. Newman, K. Rahner, J. Congar, Paul VI and John Paul II. The course will include the main lines of thought from Vatican II. Since each historical era uncovers what it thinks to be new evidence and proposes new questions, the student will be expected to make connections of thought from the past and critically utilize these arguments as they bear upon the contemporary era. The format will be lectures and discussion.

RELST 202 The Greek New Testament (also Classics 202 and Near Eastern Studies 202)

Spring. 3 credits. Not offered 1996-97. For description see NES 220.1

RELST 213 Qur'an in Translation (also Near Eastern Studies 213)

Spring. H. Berg. See NES 213 for description.
RELST 214 Existentialism (also Philosophy 214)  
Spring. 4 Credits. A. Wood.  
See PHIL 214 for description.

RELST 222 Introduction to the Bible  
(also Near Eastern Studies 223 and Jewish Studies 223)  
Fall. 3 credits. Not offered 1996-97.  
G. Rendsburg.  
For description, see NES 223.

RELST 227 Introduction to the Prophets  
(also Jewish Studies 227, Near Eastern Studies 227)  
Fall. 3 credits. G. Rendsburg.  
See JWST 227 for description.

RELST 230 Monuments of Medieval Art  
(also Art History 230)  
Spring. 4 credits. R. G. Calkins.  
See Art H 230 for description.

RELST 234 Arabs and Jews: Cultures in Confluence  
(also Near Eastern Studies 234, Jewish Studies 234 and Comparative Literature 234)  
Fall. 3 credits. R. Brann.  
For description, see NES 234.

RELST 244 Introduction to Ancient Judaism  
(also Near Eastern Studies 244 and Jewish Studies 244)  
Spring. 3 credits. G. Rendsburg.  
See JWST 244 for description.

RELST 247 Introduction to Jewish Art and Archaeology  
(also Near Eastern Studies 247, Jewish Studies 247, Classics 249, Archaeology 247)  
Fall. 3 credits. Not offered 1996-97. Staff.  
For description, see ARKSO 247.

RELST 248 Introduction to Classical Jewish History  
(also Near Eastern Studies 248 and Jewish Studies 248)  
Fall. 3 credits. C. Baker.  
For description, see NES 248.

RELST 249 Religion and American Life  
(also Sociology 250)  
See Sociology 250 for description.

RELST 250 Introduction to Asian Religions  
(also Asian Studies 250)  
Spring. 3 credits. J. M. Law.  
For description, see NES 250.

RELST 252 Introduction to Islam: Religion, Politics, and Society  
(also Near Eastern Studies 251)  
Spring. 3 credits. H. Berg.  
For description, see NES 251.

RELST 257 Islamic History 600-1258  
(also Near Eastern Studies 257 and History 254)  
For description, see NES 257.

RELST 258 History of the Near East: 1250-1914  
(also Near Eastern Studies 258, History 248)  
Fall. 3 credits. L. Peirce.  
See NES 258 for description.

RELST 262 Religion and Reason  
(also Philosophy 263)  
Spring. 4 credits. S. MacDonald.  
See Phil 263 for description.

RELST 263 The Earlier Middle Ages  
(also History 263)  
Fall. 4 credits. J. J. John.  
For description, see History 263.

RELST 281 Gender and Society in the Muslim Near East  
(also Near Eastern Studies 281 and Women's Studies 281)  
Fall. 3 credits. Not offered 1996-97. L. Peirce.  
See NES 281 for description.

RELST 297 Gender and Sexuality in Early Christianity  
(also Near Eastern Studies 296)  
Spring. 3 credits. C. Baker.  
See NES 296 for description.

RELST 302 Myth, Ritual and Symbol  
(also Anthropology 320)  
Spring. 3 or 4 credits. D. Holmberg.  
See Anthro 320 for description.

RELST 322 Magic, Myth, Science and Religion  
(also Anthropology 322)  
Fall. 4 credits. T. Kirsch.  
For description, see ANTHR 322.

RELST 324 Law and Religion in the Bible  
(also Comparative Literature 324)  
Fall. 4 credits. Not offered 1996-97. C. M. Carmichael.  
See Com L 324 for description.

RELST 325 The History of Early Christianity  
(also Near Eastern Studies 324, Jewish Studies 344)  
Fall. 4 credits. C. Baker.  
See NES 324 for description.

RELST 326 Christianity and Judaism  
(also Comparative Literature 326)  
Spring. 4 credits. C. M. Carmichael.  
See Com L 326 for description.

RELST 327 Missions of Paul and His Successors  
(also Near Eastern Studies 327)  
Fall. 4 credits. Not offered 1996-97.  
For description, see NES 327.

RELST 328 Literature of the Old Testament  
(also Comparative Literature 328)  
Fall. 4 credits. C. Carmichael.  
For description, see COM L 328.

RELST 333 Greek and Roman Mystery Cults and Early Christianity  
(also Classics 333, Archaeology 333)  
Spring. 4 credits. K. Clinton.  
See Arkeo 333 for description.

RELST 334 Muslims, Christians and Jews in Islamic Spain: Literature and Society  
(also Near Eastern Studies 339 and Jewish Studies 339)  
Fall. 4 credits. R. Brann.  
See NES 339 for description.

RELST 337 The Medieval Illuminated Book  
(also Art History 336)  
Fall. 4 credits. Not offered 1996-97.  
R. G. Calkins.

RELST 342 Flemish Painting  
(also Art History 341)  
Fall. 4 credits. R. Calkins.  
See Art H 341 for description.

RELST 343 Gender and Judaism  
(also Near Eastern Studies 345 and Jewish Studies 347)  
Spring. 4 credits. C. Baker.  
For description, see NES 345.

RELST 344 Seminar on Jewish Mysticism  
(also Near Eastern Studies 344)  
Fall. 4 credits. Not offered 1996-97. Staff.  
For description, see NES 344.

RELST 345 Intellectual and Cultural Life of 19th Century Americans  
(also History 345)  
Fall. 4 credits. Not offered 1996-97.  
R. L. Moore.  
For description, see HIST 345.

RELST 346 Seminar on 19th-Century Jewish Intellectual History  
(also Near Eastern Studies 347 and Jewish Studies 346)  
Spring. 4 credits. Staff.  
For description, see NES 347.

RELST 349 Tantric Traditions  
(also Asian Studies 347)  
Fall. 4 credits. Not offered 1996-97.  
D. Gold.

RELST 352 Art as Spectacle: The Italian Baroque  
(also Art History 355)  
Spring. 4 credits. K-e. Barzman.  
For description, see Art H 355.

RELST 355 Japanese Religions  
(also Asian Studies 355)  
Fall. 4 credits. Not offered 1996-97.  
J. M. Law.  
For description, see Asian 355.

RELST 358 Literature and Religion: The Nature of the Mystical Text  
(also Comparative Literature 358)  
Fall. 4 credits. Not offered 1996-97.  
C. M. Arroyo.

RELST 405 Religious Objects and Sciences of Religion  
(also Society 405)  
Fall. 4 credits. D. Gold.  
Fulfils Religious Studies major requirement in lieu of RELST 449 (History and Methods of Academic Study of Religion).

This course will examine a number of experiments in the so-called "science of religions," focusing on the problems and potentialities offered by religious objects as the focus of a collective enterprise. It will look at the aesthetics involved in writing about religion, the dynamics of cumulative knowledge in the field, and the ways in which sciences of religion reflect cultural and institutional realities. Attention will be paid to both classical studies and contemporary work.

RELST 420 Readings in Biblical Hebrew Prose  
(also Near Eastern Studies 420 and Jewish Studies 420)  
Fall. 4 credits. Not offered 1996-97.  
G. Rendsburg.

RELST 421 Religious Reflections on the Human Body  
(also Asian Studies 421)  
J. M. Law.

RELST 426 New Testament Seminar  
(also Comparative Literature 426)  
C. M. Arroyo.  
See Com L 426 for description.

RELST 428 Medieval Hebrew Biblical Exegesis  
(also Near Eastern Studies 428)  
Fall. 4 credits. Not offered 1996-97.  
R. Brann.

SPECIAL PROGRAMS AND INTERDISCIPLINARY STUDIES 551

This course will examine a number of experiments in the so-called "science of religions," focusing on the problems and potentialities offered by religious objects as the focus of a collective enterprise. It will look at the aesthetics involved in writing about religion, the dynamics of cumulative knowledge in the field, and the ways in which sciences of religion reflect cultural and institutional realities. Attention will be paid to both classical studies and contemporary work.
The major in Russian and East European studies has the following requirements:

1) Proficiency in Russian or an East European language with one additional advanced (300-level) language or literature course. OR qualification in an East European language and qualification in another language useful for research in the area.*

*These requirements, in the case of some languages, may require study abroad or coursework completed at another institution.

2) At least one course relating to Russia or Eastern Europe, at the 200 level or above, in four of the following five departments: Government, Economics, History, Russian Literature and Sociology. Appropriate courses offered in other departments may be substituted for one of the above courses with the consent of the major adviser.

3) At least three additional courses at the 300 level or above, all from one of the following three departments: Government, History (within the History Department courses may be at the 250 level or above), or Russian Literature. One of the three courses must be at the 400 level or above. The three courses must be approved by the major adviser in the department of completion.

To apply for the major, students are directed to the Institute for European Studies (Slavic and East European Studies Program), 120 Uris Hall. Students should designate an adviser in the department where his or her work will be concentrated. Students are encouraged to study abroad and should discuss their plans with their advisers. For questions concerning the major or the Honors Program, students should consult with their major adviser or inquire at the Institute for European Studies.

**Honors Program in Russian and East European Studies**

I. Students entering the Russian and East European Studies Major Honors Program must have a cumulative average of at least 3.0, no grade below a B in courses connected with the major, and a cumulative average inside the major of at least 3.5. Students will form a special honors committee consisting of their major adviser and two other faculty members not necessarily from the Russian and East European area.

II. Honors candidates must complete an honors thesis project during the senior year. The topic should be developed and approved in consultation with their major adviser. Part of the research should include sources in Russian or an Eastern European language.

III. Students may earn a total of eight credits for the courses in the honors program and should register for the appropriate number in the department of their major adviser.

IV. Ordinarily, in the first term of the senior year, students who meet the prerequisites will do independent research and reading in a particular area under supervision of their major adviser.

V. In the second term of the senior year students will complete the honors project by a date set by the Slavic and East European Studies Program. Students should keep their committee members informed as their work progresses. Students will meet together with their whole honors committee to discuss the draft of the thesis or project and make recommendations for revision. When the project is completed, the committee will decide whether the project deserves honors and, if so, after reviewing their academic record, will recommend students for a Bachelor of Arts cum laude, magna cum laude, or summa cum laude. The committee will also assign a grade for the honors research course.

**Courses**

- [COM L 337 Modern and Contemporary Theatre (also Theatre Arts 335)]
  Spring. 4 credits. Not offered 1996-97

- [COM L 387 The Russian Novel (also Russian Literature 367)]
  Fall. 4 credits.

- [COM L 388 Marxist Cultural Theory (also German Literature 381 and Government 372)]
  4 credits. Not offered 1996-97

- [COM L 425 The Jew's Body (also Comparative Literature 625, German Studies 422/622 and Jewish Studies 422/632)]
  Spring. 4 credits. Readings will be primarily in English, though knowledge of another language (such as Hebrew and Yiddish or languages of the European Diaspora, such as German, Italian, French, Russian, Polish, etc.) could be helpful in certain contexts.

- [COM L 690 Marxism and Contemporary Theory]
  4 credits. Not offered 1996-97

- [CZECH 131-132 Elementary Czech]
  131, fall; 132, spring. 3 credits.

- [CZECH 133-134 Continuing Czech]
  133, fall; 134, spring. 3 credits.

- [ECON 329 Eastern Europe Today: Economics, Government, Culture (also Government 326 and Russian Literature 329)]
  Fall. 4 credits. Not offered 1996-97

- [ECON 366 The Economies of Central Europe and of the Former Soviet Union: from Central Planning to Markets]
  Fall or spring. 4 credits.

- [ECON 367 Comparative Economic Systems: East and West]
  Fall or spring. 4 credits.

- [ECON 370 Socialist Economies in Transition]
  Fall or spring.
ECON 381 Economics of Participation and Workers’ Management  
Fall or spring. 4 credits.

ECON 382 The Practice and Implementation of Self-Management  
Fall or spring. 4 credits.

ECON 681 Economics of Participation and Self-Management  
Fall or spring. 4 credits.

ECON 682 Seminar on Economics of Participation and Labor-Mediated Systems  
Fall or spring. 4 credits.

GERST 376 Contemporary Soviet Latvian Literature  
Fall. 4 credits. Taught in Latvian. Not offered 1996-97.

GERST 377 Baltic Literature  
Fall. 4 credits. Not offered 1996-97.

GERST 381 Marxist Cultural Theory (also Comparative Literature 381 and Government 372)  

GOVT 100.8 Power and Politics: The New Eastern Europe  

GOVT 231 Introduction to Comparative Government and Politics  
Spring. 4 credits.

GOVT 325 Government and Politics of Eastern Europe  

GOVT 326 Eastern Europe Today: Economics, Government, Culture  

GOVT 330 The Soviet Union: Politics, Economics, and Culture  
Not offered 1996-97.

GOVT 333 Government and Politics of the Former Soviet Union  
Fall. 4 credits.

GOVT 337 Marxism, Communism and Revolution  

GOVT 342 The New Europe  
Spring. 4 credits.

GOVT 350 Comparative Revolutions  
Spring. 4 credits.

GOVT 359 Soviet Foreign Policy  

GOVT 376 Rethinking Marx  

GOVT 394 Comparative Foreign Policy  
Spring. 4 credits.

GOVT 397 The United States and Russia  

GOVT 399 International Relations in the Former Soviet Union  
Fall. 4 credits. Not offered 1996-97.

GOVT 400.3 Post-Communism and Ethnic Mobilization  
4 credits.

GOVT 446 Comparative Communism  

GOVT 481 Foreign Policy of the U.S.S.R.  

GOVT 486 International Security: Soviet Security Policy  

GOVT 491 Conflict, Cooperation, and Norms: Ethical Issues in International Affairs  
Fall. 4 credits.

GOVT 637 Peasantry, State, and Revolutionary Socialism  

GOVT 639 Politics of the Soviet Union  
Fall. 4 credits. Not offered 1996-97.

GOVT 642 The Future of European Security  

GOVT 646 Issues in State Socialism  
Not offered 1996-97.

GOVT 657 Comparative Democratization  

GOVT 660 Social Movements, Collective Action, and Reform  
Fall. 4 credits.

GOVT 669 Modern Social Theory I  

GOVT 670 Modern Social Theory II  
Spring. 4 credits.

HIST 218 The Russian Military Effort and Foreign Policy  
Fall. 3 credits.

HIST 242 Europe Since 1789  

HIST 252 Russian History to 1800  
Fall. 4 credits.

HIST 253 Russian History Since 1800  
Spring. 4 credits.

HIST 290 Twentieth-Century Russia and the Soviet Union  
Spring. 4 credits.

HIST 352 The End of the Austro-Hungarian Monarchy, 1848-1919  

HIST 383 Europe 1900-1945  
Fall. 4 credits.

HIST 384 Europe, 1945-1968  
Fall. 4 credits. Not offered 1996-97.

HIST 385 Europe in the 20th Century: 1960-1990  
Spring. 4 credits.

HIST 415 The United States and Russia, 1780-1914

Spring. 4 credits.

HIST 677 Seminar in Russian History  
Fall. 4 credits.

HIST 678 Seminar in European Political History  
Spring. 4 credits.

HIST 679 Seminar in Comparative Foreign Policy  
Spring. 4 credits.

HIST 711 Seminar in Eastern Europe  
Spring. 4 credits.

HUNGR 131-132 Elementary Hungarian  

ILRIC 331 Comparative Industrial Relations Systems: Non-Western Countries  

ILRCB 606 Theories of Industrial Relations Systems  

NBA 583 Market Transitions in Eastern Europe  
Fall. 3 credits.

POLISH 131-132 Elementary Polish  
131, fall; 132, spring. 3 credits each term.

POLISH 133-134 Continuing Polish  
133, fall; 134, spring. 3 credits each term. Not offered 1996-97.

ROMAN 131-132 Elementary Romanian  
131, fall; 134, spring. 3 credits each term. Not offered 1996-97.

ROMAN 133-134 Continuing Romanian  
133, fall; 134, spring. 3 credits. Not offered 1996-97.

RUSSA 103-104 Conversation Practice  
103, fall; 104, spring. 2 credits each term.

RUSSA 105 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces  
Fall or spring. 3 credits.

RUSSA 106 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces  
Fall or spring. 3 credits.

RUSSA 137-138 Freshman Writing Seminar: Classics of Russian Thought and Literature  
Fall or spring. 3 credits.

RUSSA 106 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces  
Fall or spring. 3 credits.

RUSSA 107 Freshman Writing Seminar: Twentieth-Century Russian Literary Masterpieces  
Fall or spring. 3 credits.

RUSSA 108 Freshman Writing Seminar: Nineteenth-Century Russian Literary Masterpieces  
Fall or spring. 3 credits. Not offered 1996-97.

RUSSA 109 Russian Science Fiction  
Spring. 3 credits.

RUSSA 121-122 Elementary Russian  
121, fall or summer; 122, spring or summer. 4 credits each term.

RUSSA 123 Continuing Russian  
Fall. 4 credits.

RUSSA 201-202 Readings in Russian Literature  
201, fall; 202, spring. G. Shapiro. 3 credits each term.

RUSSA 203-204 Intermediate Composition and Conversation  
203, fall, spring, or summer; 204, spring. 3 credits each term.

RUSSA 205-206 Reading Russian Press  
205, fall; 206, spring. 2 credits each term.

RUSSA 207-208 Russian Phonetics for Beginners  
207, fall; 208, spring. 2 credits.

RUSSA 209-210 Themes from Russian Culture I  
Spring. 3 credits.

RUSSA 209-210 Themes from Russian Culture II  
Spring. 3 credits. Not offered 1996-97.
[RUSSL 301-302 Advanced Russian Grammar and Reading]
[RUSSL 303-304 Advanced Composition and Conversation]
303, fall; 304, spring. 4 credits each term.
[RUSSA 305-306 Directed Individual Study]
305, fall; 306, spring. 2 credits each term.
[RUSSL 309-310 Advanced Reading]
309, fall; 310, spring. 4 credits.
[RUSSL 331 Introduction to Russian Poetry #]
Fall. 4 credits. Not offered 1996-97.
[RUSSL 332 Russian Drama and Theatre (also Theatre Arts 332)]
Fall. 4 credits. Not offered 1996-97.
[RUSSL 333 Twentieth-Century Poetry]
[RUSSL 334 The Russian Short Story #]
Fall. 4 credits.
[RUSSL 335 Gogol #]
[RUSSL 350 Education and the Western Literary Tradition (also Comparative Literature 350 and College Scholar 350)]
[RUSSL 367 The Russian Novel #]
Fall. 4 credits.
[RUSSL 368 Soviet Literature from Revolutionary Times to "Glasnost"]
Spring. 4 credits.
[RUSSL 369 Dostoevsky #]
[RUSSL 371 Literature of the Third Wave]
[RUSSL 373 Chekhov in the Context of Contemporary European Literature and Art (also Comp 359)]
Fall. 4 credits. Not offered 1996-97.
[RUSSL 375 Literature of the Soviet Period 1917-1945]
Fall. 4 credits. Not offered 1996-97.
[RUSSL 376 Literature of the Soviet Period 1945-1985]
[RUSSL 379 The Russian Connection #]
[RUSSL 380 Soviet Dissident Literature]
Fall. 4 credits. Not offered 1996-97.
[RUSSL 385 Reading Nabokov (also Comp 385 and English 379)]
Spring. 4 credits.
[RUSSL 388 Ideas and Form in Novels of Social Inquiry (also Comparative Literature 388)]

Spring. 4 credits. Not offered 1996-97.]

THETR 378 Russian Films of the 1920s and French Films of the 1960s
Spring. 4 credits.

[THETR 662 Russian Drama and Theatre
(also Russian Literature 632)
4 credits. Not offered 1996-97.]

[UKRAN 131-132 Elementary Ukrainian
131, fall; 132, spring. 3 credits each term.
Not offered 1996-97.]

Society for the Humanities
Dominick LaCapra, Director
Fellows for 1996/97
Mikce Bai (University of Amsterdam)
Karen-edis Barznan (Cornell University)
Timothy Brennan (SUNY Stony Brook)
Susan Buck-Morss (Cornell University)
Cesare Casarino (SUNY Albany)
Lisa Duggan (New York University)
Daniel Gold (Cornell University)
Natalie Melas (Cornell University)
Keith Moxey (Barnard College/Columbia University)
Roy H. Sells (University of Geneva, Switzerland)
John Tagg (SUNY Binghamton)
Ernst van Alphen (University of Leiden)
Cathryn Vasseleu (University of New South Wales)
Sunn Shelley Wong (Cornell University)

The Society annually awards fellowships for research in the humanities. The Fellows offer, in line with their research, informal seminars intended to be exploratory or interdisciplinary. These seminars are open to graduate students, suitably qualified undergraduates, and interested auditors. Students who want credit for a seminar should formally register in their own college. Persons other than those officially enrolled may attend as visitors with permission of the Fellow. The theme for

1996/97 is Mapping and Remapping the Disciplines

S Hum 402 Cultures of Belief
Fall. 3 credits. Limited to 15 students.
T. Brennan.
The course explores cultures of location or belief rather than those of race, ethnicity, gender, national belonging or sexual preference, all of which refer to being, rather than to what one chooses or makes or becomes. We assume in multiculturalism that bodies of texts—certain constellations of texts—can be meaningfully grouped on the basis of group identities such as "African dance," "women's writing," "Hindi film," or even "third-world literature." It is possible to characterize the kinds of images, values, and messages produced by cultural formations as belief? What social mappings are possible once such studies of belief—cultures are systematically done? Examples will likely include drawings from the WPA years, Christian radio, and novels or memoirs of corporate heroism (Michael Milken, George Soros).

S Hum 403 Disciplining Walter Benjamin
(also Government 461)
Fall. 4 credits. Limited to 15 students.
S. Buck-Morss.
Walter Benjamin's writings on the experience of modernity demonstrate the arbitrariness of disciplinary boundaries, on the one hand, and the richness of their perspectival variations, on the other. Are his writings radicalizing the disciplines, or are the disciplines robbing his writings of their radical intent? We will read texts by Benjamin and contemporary texts about them.

S Hum 404 Are We the Nation? Constructions of Whiteness in American History and Politics
Fall. 3 credits. Limited to 15 students.
L. Duggan.
In this seminar, we will explore the new interdisciplinary scholarship on the construction of whiteness as a racial category in U.S. history and politics. We will consider how whiteness has functioned in relation to "Americanness," and how such U.S. categories have been embedded in global mappings of race, gender, sexuality, nationalism and (post)colonialism. We will critically investigate the political assumptions, theoretical approaches and methods underlying this emerging area of study. We will then raise questions about productive, possibly postdisciplinary approaches for new research, as we read and analyze student papers.

S Hum 405 Religious Objects and Sciences of Religion
(also Religious Studies 405)
Fall. 4 credits. Limited to 15 students.
D. Gold.
This course will examine a number of experiments in the so-called "science of religions," focusing on the problems and potentialities offered by religious objects as the focus of study. Attention will be paid to both classical studies and contemporary work.

S Hum 406 Cultural Difference (also Comparative Literature 406)
Fall. 4 credits. Limited to 15 students.
N. Melas.

S Hum 407 From Invention to Institution
Fall. 3 credits. Limited to 15 students.
J. Tagg.
This seminar will map the documentary rhetoric that coalesced in the economic, political and cultural crises of the 1930s. This will entail tracing other histories of documentation and discipline; of the technologies of state power; and of our investment in the power of horrors and the pleasures of the gaze.

S Hum 408 Geography, Literature and Critical Social Theory (also Comparative Literature 408 and English 430/635)
Fall. 4 credits. Permission of instructor. Limited to 15 students.
S. Wong.
"Time will tell," the old saying goes. But what is it that time tells? And what of that which "space" might tell? Beginning in the 19th century, the history of the globe's central themes of development and progress became the primary context for theorizing social life. Recently, scholars have been trying to restore the importance of space as a factor in the conduct and constitution of social life. Rather than taking space to be either fixed and immobile, or as the neutral setting of the making of history, space is being reconceived as a dynamic determinant and interpretive context for social life. Through readings in literature, geography, and critical social theory, we will be examining what spatial arrangements can reveal about the way we organize social life. Readings may include work by Italo Calvino, Carlos Bulosan, Ann Petry, Toni Morrison, David Turnbull, Derek Gregory, Gillian Rose, Guy Debord, and Walter Benjamin.
This seminar will consider the permutations of debates around the question of identity in theorizations of community. In particular, we will focus on attempts to conceive of non-identitarian communities within Continental European philosophical debates as well as within North American debates around the question of identity in the context of queer theory and politics. We will read from the works of philosophers and cultural theorists such as Heidegger, Arendt, Schmitt, Benjamin, Blanchot, Derrida, Agamben, Deleuze, Negri, Hardt, Guattari, Virno, Negri, Card, Wimmer, Bersani, Butler, Champagne. General knowledge of contemporary philosophy and cultural theory is recommended but not required.

This seminar has the format of an honors, MA, or doctoral thesis workshop. Between theory and a successfully completed dissertation lies the practice of interdisciplinary work with its tenacious problems of method as they complicate the definition of a theme, an object, disciplinary tools, clear goals, and an assessment of the newly acquired knowledge.

S Hum 415 Freedom and Slavery (also Government 467)

Sping. 4 credits. Limited to 15 students. S. Buck-Morss.

This course examines the development of the European idea of freedom within the context of the European institutionalization of slavery to reveal how the theory of freedom and the practice of slavery were inextricably connected. Readings in philosophy, history, critical theory, and cultural studies.

S Hum 416 Community and Unbelonging

Spring. 3 credits. Limited to 15 students. C. Casarino.

This seminar investigates the recent resurgence in theorizations of community. In particular, we will focus on attempts to conceive of non-identitarian communities within Continental European philosophical debates as well as within North American debates around the question of identity in the context of queer theory and politics. We will read from the works of philosophers and cultural theorists such as Heidegger, Arendt, Schmitt, Benjamin, Blanchot, Derrida, Agamben, Deleuze, Negri, Hardt, Guattari, Virno, Negri, Card, Wimmer, Bersani, Butler, Champagne. General knowledge of contemporary philosophy and cultural theory is recommended but not required.

S Hum 417 Global Culture and the Poetics of Hybridity (also Comparative Literature 417)

Spring. 4 credits. Reading knowledge of French recommended. Limited to 15 students. N. Melas.

This seminar will consider the permutations of world modernity (history, politics, philosophy, economics, sociology, linguistics, literature, rural sociology, and other faculty provide language and area studies) that foreground hybridity. We will be particularly concerned with 1) the possible relations between literary "wording" and the material conditions of the world it participates in, that is, between the geographical in geography and in literary forms 2) the status of difference and particularity in models of hybridity, especially as these relate to gender difference. Readings will be drawn from recent discussions of globalization, theories of hybridity and literary works chiefly from the Anglophone and Francophone Caribbean. Reading knowledge of French recommended but negotiable.

S Hum 418 Motivating History

Spring. 3 credits. Limited to 15 students. R. Myerson.

This seminar will examine the myth of objectivity in the writing of history. It will examine philosophical critiques of epistemology before analyzing texts drawn from the historical, anthropological, and literary history of art. It will include a discussion not only of the necessary introduction of subjectivity into historical narratives, but of how we may conceive of this process in the light of contemporary theory.

S Hum 419 Holocaust Effects

Spring. 3 credits. Limited to 15 students. E. van Alphen.

This seminar examines how the opposition between historical and imaginative discourse has determined not only the discussions in Holocaust studies, but also the kind of art, literature and historiography that has been produced about the Holocaust. Artists, writers and theorists who refuse the opposition by deconstructing it will be focused on, e.g., Boltanski, Armando, Salomon, Kiefer.

S Hum 420 Concepts of Light

Spring. 3 credits. Limited to 15 students. C. Vasseleu.

This seminar will be a philosophically based investigation of light as the medium of our visual imagery. Along with the association of illumination with literal meaning, and the metaphors of space and representation, light will be considered in terms of its architecture, movement, genealogy, communicability, penetrability, texture and energy.

S Hum 421 The Geography of Race (also English 407/637)

Spring. 4 credits. Permission of Instructor Required. Limited to 15 students. S. Buck-Morss.

The western frontier, the Marlboro Man, the open road, riding the rails—just a few of the defining topoi of an American understanding of space and of its role in the making of Americans. In recent years, the longstanding—and highly cherished—American romance with mobility has been retooled by its encounter with a postmodernist celebration of liminality, border-crossing and ephemeralism. This course looks at how this encounter holds both promises and perils for minority subject formation, and for the production and reception of Asian-American and African-American literature. Readings may include work by Gwendolyn Brooks, Carlos Bulosan, Joy Kogawa, Li-Young Lee, Bharati Mukherjee, Ann Petry, Frederick Douglass and Jamaica Kincaid.

South Asia Program

The South Asia Program coordinates research, teaching, and special campus events relating to Bangladesh, India, Pakistan, Nepal, and Sri Lanka. The program faculty includes members from a variety of disciplines, including agricultural economics, agricultural engineering, anthropology, archaeology, art, city and regional planning, communication, comparative religion, ecology and systematics, economics, English, government, history, history of art, human ecology, industrial and labor relations, international agriculture, linguistics, literature, philosophy, science, technology, and society. Undergraduates with a special interest in the region may major in Asian studies with a South Asia concentration, or complete a South Asia concentration with any other major. Graduate students may pursue the M.A. degree in Asian Studies with a concentration in South Asia. Languages offered are Bengali, Hindi, Nepali, Sinhala, Tamil, Urdu, Sanskrit, and Pali. Cornell is a class A member of the American Institute of Indian Studies (AIS), and undergraduates as well as graduate students are eligible for AIS fellowships and program fellowships in India. For courses available in South Asian studies and details on the major, see the Department of Asian Studies listing in this volume.

Students who want further information on courses and research opportunities should direct questions to the program office, 170 Uris Hall.

Southeast Asia Program

Southeast Asia studies at Cornell is included within the framework of the Department of Asian Studies. Seventeen full-time core faculty members in the colleges of Arts and Sciences, Business and Public Administration, and Agriculture and Life Sciences participate in an interdisciplinary program of teaching and research on the history, culture, and societies of the region stretching from Burma through the Philippines. An additional 18 lecturers and other faculty provide language and area instruction on Southeast Asia. Courses are offered in such fields as agricultural economics, anthropology, Asian studies, economics, finance, government, linguistics, music, and rural sociology.

Instruction is also offered in a wide variety of Southeast Asian languages: Burmese, Cambodian, Cebuano (Bisayan), Indonesian, Javanese, Tagalog, Thai, and Vietnamese, for which Foreign Language Area Studies Fellowships are available to U.S. citizens. Intensive instruction in Indonesian is offered in the Full-Year Asian Language Concentration (FALCON) which covers the beginning and intermediate levels. An intensive advanced Indonesian language program is held from June through August in Indonesia each summer. The formal program of study at Cornell is enriched by a diverse range of extracurricular activities, including an informal weekly brown bag seminar and concerts of the Gamelan Ensemble. The George McT. Kahin Center for Advanced Research on Southeast Asia is also the site for public lectures and other activities related to this area. The John M. Echols Collection on Southeast Asia, in Kroch Library, is the most comprehensive collection on this subject in America.

Undergraduates may major in Asian studies with a focus on Southeast Asia and its languages, or they may elect to take a concentration in Southeast Asia studies by completing 18 credits of course work. Students interested in exploring these opportunities should consult the director, Southeast Asia Program, 180 Uris Hall.

Statistics Center

The Cornell Statistics Center coordinates a university-wide program in statistics and probability. Students interested in graduate study in probability and statistics should apply.
Women's Studies Program

Women's Studies is an interdisciplinary program that seeks to deepen understanding of women's lives, culture, and history, in all of their complex multiplicities. Transformative as well as additive, women's studies challenges us to re-examine much of what we think we already know by providing an intellectual— and critical—feminist framework through which to view the intersections among gender, knowledge, and power. Thus, central to the curriculum in women's studies are such overarching notions as these:

(a) that definitions of gender—including those that privilege exclusive heterosexuality—are not natural or universal but are instead social constructions that vary across time and place, serve political ends, and have ideological underpinnings;

(b) that systems of gender inequality interact with other social inequalities, including those of class, race, ethnicity, sexual preference, and Western vs. non-Western cultures; and

(c) that even the most current knowledge derived from the humanities, social sciences, and natural sciences is not impartial, objective, or neutral as has been traditionally thought but instead emerges out of particular historical and political contexts.

Introduction to the Program

Women's Studies offers a concentration that requires students to complete a program of study that is interdisciplinary in scope—a program, in other words, that reflects both the breadth and the depth of women's studies scholarship. This program of study might be done either by supplementing the student's major with a carefully selected cluster of courses in that discipline or by pursuing a double major.

Requirements for a Women's Studies Major

1. Prerequisite courses: Before applying to the major, the student must complete any two Women's Studies courses with a grade of B- or better. Entry-level courses are typically offered at the 200-level. These courses would count both as prerequisites and as part of the women's studies major. Freshman writing seminars, in contrast, would count as prerequisite courses but not as part of the major.

2. Required course work:
   a. A minimum of 36 credits in women's studies is required for the major. No course in which the student has earned less than a C- can count toward these 36 credits. Although there are no single women's studies course that is required of all students, every major must complete a certain level of disciplinary grounding in the study of women's lives, culture, and history. This program of study must be developed in consultation with the student's advisor in women's studies and must include advanced seminars at the 300 level or above.
   b. Students must count up to three courses outside women's studies toward the major. If those courses are approved by the student's women's studies advisor as constituting a meaningful component of the student's women's studies curriculum. To facilitate the coordination of a women's studies major with other majors in the college, students may also count toward the major up to three women's studies courses that are simultaneously being counted toward a second major.

3. Honors Program: To graduate with honors, the major in women's studies must complete a senior thesis under the supervision of a women's studies faculty member and defend that thesis orally before an honors committee. To be eligible for honors, students must have at least a cumulative gpa of 3.5 on a scale of 4.0 in all coursework and a 3.3 average in all courses applying to their women's studies major. Students interested in the Honors Program should consult the Director of Undergraduate Studies (DUS) late in the spring semester of their junior year or very early in the fall semester of their senior year. For more information about the Honors Program, see WOMNS 400 and the "Guidelines for the Honors Thesis" available in the Women's Studies Program office.

The Women's Studies Concentration

Undergraduate students in any college at Cornell can concentrate in Women's Studies in conjunction with a major or minor elsewhere in the university. The concentration consists of four courses in Women's Studies completed with a grade of C- or above, no more than two of which can come from a single discipline and none of which should overlap with the major. Freshman writing seminars cannot be included within the four required courses. Students wishing to concentrate in Women's Studies should see the DUS.

The LBG Concentration

Women's Studies serves as home to the Lesbian, Bisexual, and Gay Studies Program, which offers an undergraduate concentration as well as a graduate minor. The LBG undergraduate concentration consists of four courses. The Women's Studies courses that may be used to fulfill the LBG concentration are 210, 262, 277, 321, 355, 376, 377, 413, 433, 450/650, 465, 493, 621, 654, and 656. For a complete listing of eligible courses that will fulfill this concentration please see the LBG Studies program catalog.

1. Freshman Writing Seminars

WOMNS 100.5 Language and Gender (also Linguistics 100.5)

Fall, 3 credits. K. Bernstock

What does it mean to speak "like a woman" or "like a man," or "like a girl," or "like a boy?" Even ten-year-olds in our culture approach similar communicative tasks in gender-differentiated ways: girls often get others to do things by saying things like "let's get some coat-hangers" whereas their male peers are more likely to say something like "get me a coat-hanger." How do race, social class, age, setting, and aims interact with
WOMNS 105 Feminine and Masculine Ideals in Japanese Culture (also Asian Studies 105)
Fall and spring. 3 credits. M. Sugimoto.
In its long history, Japanese culture has developed a large number of role models—the aristocrat, poet-priest, warrior, entertainer, "salary man," and "education mama"—and idealized them in its literature and art. Using these ideals as its subject matter, the seminar will give students practice in reading texts closely, analyzing ideas, and writing various types of papers. Through studying Japanese concepts of femininity and masculinity, the students will not only explore a new culture but will also gain new perspectives on their own cultures.

WOMNS 106 FWS: Women and Writing (also S & TS 117)
Fall and spring. 3 credits. Staff.
What is a woman? How does she confront her personal experience? Does she play a special role in history, in our definition of society, or to ascribe a role to her in our own written work? Individual sections will emphasize different aspects of the relation between women and writing. Which section to choose would depend on your own interest in exploring how women appear in private or public contexts, with an emphasis on design and literacy. Further information on specific sections is available in the English section office. Textual overlap is kept to a minimum so that students can take more than one Writing seminar during their time at Cornell.

WOMNS 178 FWS: Desire (also English 178)
Spring. 3 credits. E. Hanson.
In this course we will discuss some of the literary means of articulating "these pleasures which we lightly call physical," to borrow a phrase from Goethe. We will begin with the theory that sexual desire has a history, even a literary history, and we will examine some of its most influential modes: Platonic, Christian, romantic, decadent, psychoanalytic, and feminist. Because this is a course in lesbian and gay studies, we will focus on homosexuality almost every week, but we will also discuss hysteria, mysticism, masochism, gender-bending, pornography, cybersex, and other literary pleasures. For the course we will be drawn from a variety of genres and historical periods—from Plato's erotic dialogues to Freud's case study of Dora to Gayle Rubin's queer manifesto, "Thinking Sex." In short writing assignments, we will experiment with different expository styles to expand and complicate our vocabulary for discussing sexual desire.

II. Courses

WOMNS 203 Gender, Work, and Family (also Sociology 203)
Fall. 3 credits. T. Gitlin.
This four sections; you must enroll into one of these sections along with the principal course: Sec 1: F (11:15-12:05), Sec 2: F (11:15-12:05), Sec 3: R (11:15-12:05), Sec 4: R (10:10-11:00). E. Bell.
The line that divides men and women is one of the deepest and most firmly entrenched in societies. People believe that gender differences are natural and thus unchangeable, but most sociologists argue these differences. As texts are created and maintained by culture and social relationships. In this course, we will explore the social construction and maintenance of gender differences and inequalities, focusing primarily on the areas of work and family. Students of all levels (and genders) are welcome.

WOMNS 206 Gender and Society (also Rural Sociology 206)
Spring. 3 credits. N. Glasgow.
This course analyzes the evolution and diversity of socially constructed gender hierarchies, in the United States and internationally. The maintenance of gender inequalities in societal institutions, such as the family, the economy, politics, and religion, will be explored. A range of sociological theories and disciplinary perspectives are considered, including biological, psychological and psychoanalytic perspectives. Course objectives will be achieved through lectures, readings, films, class discussions, and personal experiences.

WOMNS 210 Introduction to Feminist Theory
Fall. 4 credits. C. A. Martin.
This course introduces students to critical approaches in feminist scholarship in the cultural, socioeconomic, and political situation of women. Particular attention will be paid to the conceptual challenges and dangers posed by attempts to study women without taking account of relations between race, class, and gender in ideological and social formations. Readings will draw on work in various disciplines and will include literary texts and visual images.

WOMNS 214 Biological Basis of Sex Differences (also Biological Sciences 214 and Biology and Society 214)
Fall. 3 credits. Prerequisite: One year introductory biology for non-biology majors and freshman & sophomore biology majors. Offered alternate years. J. Fortune.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction, where possible, special attention is given to studies of humans. Current evidence on the effects of gender on non-reproductive aspects of life (behavior, physical, and mental capacities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

WOMNS 215 Gender, Desire, and Sentimental Fictions (also Comparative Literature 214 and English 256)
Spring. 4 credits. E. Dillon.
A study of 18th- and 19th-century sentimental fiction in the U.S., we will consider how the genre describes the body of the woman in relation to the body politic in the new republic. The sentimental novel both confines women to a domestic sphere and begins to ascribe a political and ethical voice to women as keepers of hearth and home. We will consider the power of their voice, as well as its limitations, and critiques of sentimental ethics and sentimental aesthetics. Issues we will consider include the pre-history of the genre (the relation of sentimental fiction to conversion narratives and liberal political theory), the figure of the Republican mother, infanticide, race and sentimentalism, citizenship, embodied ethics, and sexuality and identification. Readings will include works by Susanna Rowson, Hannah Foster, Lydia Maria Child, Harriet Beecher Stowe, Emily Dickinson, Nathaniel Hawthorne, and Maria Susanna Cummins.

WOMNS 220 Women of Africa and of the Diaspora in Liberation Movements (also Africans 220, History 227)

WOMNS 227 Modern American Sex Roles in Historical Perspective (also History 227)

WOMNS 238 The Historical Development of Women as Professionals (1800-Present) (also Human Development and Family Studies 258, American Studies 258, and History 236)
Fall. 3 credits. Limited to 180 students. Not offered 1996-97. J. Brumberg.

WOMNS 243 Inside-Out: The American Everyday Interior (also Design and Environmental Analysis 243)
Spring. 3 credits. J. Jennings.
A study of late nineteenth and twentieth century everyday interiors in socio-cultural contexts, with an emphasis on design dissemination, consumer patterns and gender issues. In this course, the term "everyday" acknowledges the significance of vernacular interiors—interiors that are familiar and
ordinary to a vast majority of the American population. Nineteenth and twentieth century American vernacular interiors will be studied contextually, linking design with cultural interpretations. The course acknowledges the role of technology, the mass-production of interior architectural goods and furnishings, the availability of house designs for a wide variety of Americans, gender-biased consumer market and economy. In recognizing the people who designed and sold such interiors, and those who purchased them, the course embraces a large economic sphere, the middle class and those both below and above it, including the working classes and upwardly mobile professions. Gender distinctions are seen as a cultural category of analysis.

This course explores connections between language (use) and gender/sex systems, addressing such questions as the following. How do sex and gender affect the ways we speak, the ways we interpret and evaluate speech? How do cultural differences in women's and men's roles affect their language use, their relation to language change? What is meant by sexist language? How does conversation structure the social worlds of women and men? Readings draw from work in linguistics, anthropology, philosophy, psychology, literature, and general women's studies and feminist theory.

[**WOMNS 251 Twentieth-Century Women Novelists (also English 251)**](#) Spring. 4 credits. S. Samuels.

This course will be particularly concerned with how women write fiction and with some of the questions about women's experience, perspective, and language raised by recent feminist criticism. We will read works by Virginia Woolf, Edith Wharton, Toni Morrison, Louise Erdrich, Maxine Hong Kingston, and others.

[**WOMNS 252 Politics of Sexuality (also Government 352)**](#) Spring. 4 credits. A. M. Smith.

This course will serve as an introduction to lesbian, bisexual, and gay studies from a political perspective. In the first part of the course, we will examine Michel Foucault's conception of sexuality as a social construction that emerges as a sociopolitical problem only within specific historical conditions. We will turn to the historical research on sexual subcultures and the official regulation of sexuality which Foucault's work has inspired in the United States and Britain. In the final part of the course, we will discuss the current debates around identity politics, with a specific emphasis on the links between sexuality and race.

[**WOMNS 263 Interpreting Melodrama and the Woman's Film (also English 263)**](#) Spring. 4 credits. Students must be free to attend regular screenings of films and videos. Limited to 20 students. L. Bogel.

With some attention to melodrama's roots in nineteenth-century fiction and theatre and in twentieth-century fiction and popular Freudianism, we will work to define Hollywood's melodrama as both a genre and a way of viewing the world. Psychoanalytic and feminist analyses of melodrama will help us pose larger questions about gender and culture, about gendered spectatorship, about the relation of these films to American culture, about Hollywood's changing constructions of "woman," the "maternal," and the "feminine," and questions about pleasure, fantasy, and ideology in relation to the melodramatic heroine. Required weekly, evening screenings of such films as Stella Dallas, Show Boat, Rebecca, Mildred Pierce, The Women, *Imitation of Life*, *Secret Beyond the Door*, *All This and Heaven*, Too, *So Big*, and *Gaslight*. Regular critical readings, frequent viewing questions, two longer essays, no exam.

A survey of women's experiences in America from the seventeenth-century to the present. Among the topics to be discussed are women's familial roles, the changing nature of household work, the women's rights movement, employment of women outside the home, cultural and racial differences in women's experiences, and contemporary feminism.

[**WOMNS 275 Women in the Work Force (also Sociology 275)**](#) Spring. 4 credits.

Women have always contributed their labor to production and reproduction. However, with industrial development and the movement of market production out of the home and into the public sphere, women's work was relegated to the private sphere of the family. Recently this has changed as women seek employment outside the home. In this course we will examine women's positions and the role women play in the labor force, with a focus on more developed societies. Specific topics will include sex differences in pay and sex segregation in the labor force, theoretical explanations from rational choice to Marxist feminism, the relationship between women's paid and unpaid labor, and the role of the state and government policy.

[**WOMNS 277 Social Construction of Gender (also Psychology 277)**](#) Spring. 3 credits. Limited to 400 students. S. Bem.

This course addresses the broad question of how an individual's gender and sexuality are constructed. Although some attention is given to biological perspectives, the course emphasizes the cultural and psychological processes by which the male and female newborns are transformed into "masculine" and "feminine" adults. In addition to being interdisciplinary, the course is also oriented to questioning the "naturalness" of not only masculinity and femininity themselves, but exclusive homogeneity as well. Among some of the many topics discussed are the male-centeredness of the social world, the intersections of gender and race, psychological androgyny, egalitarian relationships, gender-liberated child-rearing, female sexuality, sexual harassment, and homophobia.

This course will offer a survey of literature and film by or about lesbians. We will examine how lesbian desire and identity are historically constructed through narrative. What does it mean to read as a lesbian? What are the various tropes and personae through which lesbian desire has been articulated? What has been the relationship of lesbianism to feminism? How is lesbian identity inflected by homophobia, sexism and racism? We will begin with a look at early paradigms for lesbian desire such as romantic friendship and sexual inversion, then move on to an extensive examination of lesbian feminism, and close with a discussion of desire and performativity. We will read fiction by Gertrude Stein, Radclyffe Hall, Willa Cather, Ellis, Sigmund Freud, Nella Larsen, Adrienne Rich, Monique Wittig, Alice Walker, Cherrie Moraga, Jeanette Winterstorm, and Djuna Barnes, as well as films by Tine Sage, Monica Truet, and Barber Werner Fassbinder. Students will be expected to attend a weekly film screening in addition to seminars.

[**WOMNS 281 Gender and Society in the Muslim Middle East (also Near Eastern Studies 281 and Religious Studies 281) **](#) @ 3 credits. Not offered 1996–97. L. Peirce.

[**WOMNS 285 Introduction to Sexual Minorities (also HDFS 284)**](#) Spring. 3 credits. Prerequisite: One social science course. Sections TBA. S. Savin-Williams.

This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexual questioning, and other sexual minority populations. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on transgender, gender, and class issues. Requirements include reaction papers to the readings.

[**WOMNS 305 Emotion, Gender, and Culture (also Anthropology 305)**](#) Spring. 4 credits. B. J. Isbell.

This course introduces students to the current anthropological perspective on the following topics: (1) cultural shaping of emotion and (2) acquisition and production of gender and sexuality. It is appropriate for students majoring in anthropology, psychology, cognitive studies, human development and family studies, and women's studies.

Historical exploration of African-American women from a sociopolitical perspective. Topics include women in Africa, slavery and freedom, sexuality, labor, the family, gender cross-racially that begins with the African background and ends at 1900.
An introduction to the study of sex roles cross-culturally and to anthropological theories of sex and gender. The course examines the relative positioning of the sexes in social, economic, political, and cultural aspects of culture; we emphasize the diversity in gender and prospects for change around the world. In addition to lectures and films or videos, participants will engage in small discussion sections (maximum enrollment of eight) to prepare several practical field exercises, short papers and critical assessments of other course materials.

WOMNS 341 Ethical Theory (also Philosophy 341)
Spring. 4 credits. K. Jones.

Like much of contemporary feminist theory, feminist ethics began with the assumption that ethical theory was fully adequate to address feminist concerns. All that needed to be done was to take the resources of ethical theory and apply them to hitherto overlooked questions, such as abortion, affirmative action, justice in the family, and pornography. This project assumes, however, that the theories themselves are not gender biased. This claim has been controversial, in particular, it has been argued that traditional ethical theory overlooks the situatedness of agents and devalues emotions and relations to particular others. We will critically examine these claims and steer to ethical theories that take the principal moral concept to be the concept of “duty”. In addition, we will examine the view, argued for by Carol Gilligan, that women speak with a distinctive ethical voice—a voice of care, rather than justice. Gilligan’s work raises the problem of what feminist ethics is: any move from “feminine” to “feminist” must be treated with great suspicion. It turns out that a wide variety of projects are currently being pursued under the rubric of feminist ethics and we will attempt to enlarge our understanding of what feminist ethics is and might become.

WOMNS 344 Male and Female in Chinese Society and Culture (also Anthropology 344)
Spring. 4 credits. S. P. Sangen.

This course explores the culture of gender, sex roles, and domestic relations in late imperial and modern Chinese societies. Readings and lectures range from ethnographic descriptions of the dynamics of Chinese family life, kin relations, and socialization to representations of male and female in mythologies and ritual activities. The course also considers developments subsequent to political changes in China. Although the course’s analytical focus is anthropological, readings will draw from the writings of historians, literary theorists, and political scientists as well. A premise of the course is that understanding sex and gender in China is essential to understanding Chinese culture and its most fundamental values. The course also aims to introduce students interested in China to techniques of anthropological analysis.

WOMNS 345 Gender Inequality (also Sociology 348)

This course is an introduction to the systematic study of gender inequality in contemporary society. While the issues we will examine and the historical roots of gender inequality, they are representative of more general concerns in the field of sociology, e.g., stratification, power, and conflict.

WOMNS 347 Gender and Judaism (also Near Eastern Studies 345, Religious Studies 347, and Jewish Studies 347)
Spring. 4 credits. C. Baker.

How does Judaism structure the roles of women and men differently? What are the historical roots of these roles and their various contemporary manifestations? How are traditional roles and symbols of both women and men being questioned by the contemporary Jewish feminist movement? This course offers a view of Judaism through the lens of contemporary gender issues, with a particular emphasis on the feminist revisioning of Judaism. We will begin with an introduction to Judaism as a religious tradition of women and men, and then discuss specific issues in greater depth, presenting both origins and historical developments of contemporary images and practice. Issues covered will include the differing roles of women and men in traditional Judaism, the gendered body in Judaism, Jewish feminism, family and sexuality, and the gender of God.

WOMNS 348 The Female Literary Tradition: Wollstonecraft to Woolf (also English 348)

WOMNS 349 Readings in Feminist Literary Theory (also English 349)
Spring. 4 credits. M. Hite.

We will be looking at the development of feminist theories of language and literary practice and especially at conflicts among competing accounts, with some attention to seminal (I use the word advisedly) essays by Lacan and Foucault. Writers include Fetterly, Showalter, and Gilbert and Cohn. We will also consider the various ways that decadence and sexual inversion, sodomy and satanism, homophobia and sexual encoding, androgyny and camp.

WOMNS 353 Feminism: State and Public Policy (also Government 353)
Fall. 4 credits. M. Katzenstein.

The course examines the aims and strategies of the feminist movement in the United States and the response of both society and the state to feminist claims. It is, thus, a course about political protest and the capacity of American political institutions to promote and shape, as well as to counter social change. In examining the law and political power, issues such as job discrimination, wage disparity, rape, abortion, etc., the course explores the contradictions between, and the congruence of, the dual ideals of individual choice and group equality. The course will focus particularly on the issue of how women’s interests are represented in the political process.

WOMNS 355 Decadence (also English 355)

"My existence is a scandal," Oscar Wilde once wrote, summing up in an epigram the effect of his carefully cultivated style of perversity and paradox. Through their valorization of aesthetics and all that was considered artificial, unnatural, or morbid, the so-called "decadent" writers of the late-nineteenth century sought to free the pleasures of beauty and sexual desire from their more conventional roots and morals. Although we will focus on Oscar Wilde, we will also read works by Charles Baudelaire, Paul Verlaine, J.-K. Huysmans, Renée Vivien, Leopold von Sacher-Masoch, Walter Pater, A. S. W.rousseau, and Djuna Barnes, as well as a few later writers such as Ronald Firbank and Djuna Barnes. We will also consider historical, theoretical, and early medical texts on sexuality. Because this is a course in lesbian and gay studies, we will focus primarily on the various ways that decadence became a powerful trope for the articulation of homosexuality and other proscribed sexual pleasures. Topics for discussion will include homophobia and sexual encoding, androgyny and sexual inversion, sodomy and satanism, lesbianism and vampirism, cultural and linguistic degeneration, hysteria and paranoia, masochism and mysticism, chastity and sublimation, Catholicism and Hellenism, and dandyism and camp.

WOMNS 357 American Families in Historical Context (also History 359, American Studies 359 and Human Development and Family Studies 359)
Spring. 3 credits. Prerequisite: Human Development and Family Studies 150 or one 200-level social science or history course. Students in endowed units must register for Women’s Studies 357 or History 359 or American Studies 359. J. Brumberg.

An introduction to, and overview of, problems and issues in the historical literature on American families and the family life cycle. Reading and lectures will demonstrate the pattern of American family experience in past time, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family in past time will deal with changing cultural conceptions of sexuality, sex role relationships, stages of life, and life events. Students will be required to do a major research paper on the history of their family, covering at least two generations and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

WOMNS 358 20th-Century Experimental Fiction by Women (also English 358)
Fall. 4 credits. M. Hite.

With only a few exceptions, the works of fiction that we associate with the two great avant-garde movements of the twentieth-century, modernism and postmodernism, were written by men. Does this mean that women writers prefer traditional modes of narration or are uneasy with innovation or have some sort of innate or acculturated affinity with realism or naturalism? This seminar will examine the cultural contexts that may bias readers against seeing what is genuinely new and exciting in works by female authors. As well as that the works themselves may not resemble works by accomplished experimental writers who are men—the difference that sexual differences may make. Writers include Virginia Woolf, H.D. (Hilda Doolitle), Djuna Barnes, Doris Lessing, Alice Walker, and Margaret Atwood.

WOMNS 362 Global Perspectives on Gender
Spring. 4 credits. N. Assie-Lumumba.
The course will examine how forms of gender inequality have been shaped by international forces and structured by differences in colonialism; the organized efforts of women to determine their roles; the role of the state in constructing an engendered economy and polity.

The task of this course is to analyze ancient Greek and Roman representations of women—some famous, some infamous, some nameless—within their historical and cultural contexts and the assumptions that underlie these representations. Literary, historical, legal, and artistic sources (in translation) and examining the historiographical and methodological problems the use of such evidence poses, the class will assess the changing social conditions that relate to the roles, status, and images of women in antiquity. Among the topics considered are: myth and ideology, women’s role in the family and society, views of the female body and female sexuality, the place of women in creative art.

Few topics generate heat so readily as gender relations and sexuality. Behind the current controversies lie decisions made in the first Christian centuries, and firming up in the course of the Middle Ages; these still affect all of us. Our attitudes and behaviors alike. This course studies Western attempts to deal with the problem of sexuality up to about 1500. The class will first clarify the church’s normative rules of law and theology. Armed with this framework, we then turn to more specific topics, including homosexuality, prostitution, rape/abduction and sexuality in medieval literature. The goal is to be able to compare the ideal model with the reality, and thus to assess the product of the medieval church passed on to Western culture and ourselves. No formal prerequisite, though some prior knowledge of medieval European history is desirable.

[WOMNS 370 19th-Century Novel (also English 370) #] Spring. 4 credits. E. Hanson.

Nineteenth-century novels are notorious for their marriage plots, narratives that presume that marriage or suicide is the only fate appropriate for women; nevertheless, the best of these novels offer rich insights into the psychology and social condition of women, as well as complex meditations on the social dynamics of sexuality and gender. Furthermore, the Victorian period saw an efflorescence of great literature written by women, especially in the form of the novel. We will discuss the relationship of gender to language and literary forms, to reading and writing as a practice, to the politics of marriage and family life, to capital and property, and to the rhetoric of love and sexual desire. We will focus on a few of the most memorable heroines of the period as they appear in the novels of Jane Austen, Charlotte Bronte, Leo Tolstoy, Gustave Flaubert, George Eliot, Thomas Hardy, and Kate Chopin.

[WOMNS 376 Gay Fiction (also English 377) #] Fall. 4 credits. E. Hanson.

This course offers an overview of male homoerotic narratives in literature and film. We will examine a number of texts from different historical and cultural sources to discuss the literary and cinematic construction of desire between men. The course is organized around the various gay personae that have been the most influential historical paradigms for the articulation of comradeship, sublimation, sexual encoding, the gay outlaw, decadence, psychoanalysis, AIDS, and sexual identification across race, gender, and class. We will discuss books by Plato, Christopher Marlowe, Samuel Beckett, E.M. Forester, Jean Genet, Reinaldo Arenas, and Tony Kushner, among others as well as films by Pier Paolo Pasolini, Derek Jarman, Pedro Almodovar, Rosa von Praunheim, Todd Haynes, and Marlon Riggs. Attendance at weekly film screenings is required.

[WOMNS 377 Gender in Early Modern Europe (also History 377) #] 4 credits. Enrollment is limited to 30. Not offered 1996-97. R. Weil.

[WOMNS 380 Gender, Ideology, and Culture (also Sociology 380) #] Spring. 4 credits. P. Becker.

This course will explore representations of women in popular culture, including images, narratives, and religious practices. We will examine the relationship between popular culture and ideology, and look at how women "read" popular culture. The aim of the course is to enable students to think critically and analyze the effects of ideological representations of women’s lives. We will cover the theoretical and methodological concerns that relate to the construction of the person as well as heavily upon women's lives and their representations to contrast men's and women's accounts and to underscore the special significance of women’s narratives in anthropology.

This course will explore women’s participation in the U.S. labor movement in the nineteenth and twentieth centuries. The class will cover issues such as women’s relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women unionists, and racial and ethnic differences in organizing, and the impact of societal stereotypes and expecta­tions.

[WOMNS 400 Senior Honors Thesis Fall and spring. 2-4 credits. For Women’s Studies seniors only. Permission of Women’s Studies faculty member required. Student must carry a GPA of 3.0 in all subjects and a 3.3 in Women’s Studies. Staff.

Both in the form of theses, and the nature and extent of contact between student and adviser, will depend on mutual agreement between the two. In one common scenario, the student will write an essay of approximately 50 pages in length, drafted and revised in a series of carefully planned stages over the course of two semesters, with an outline expected on approximately Sept. 15th and a draft of the first chapter on approximately November 15th. An "R" grade will be assigned at the end of the fall semester and a letter grade on completion of the project at the end of the spring semester.

[WOMNS 404 Women Artists (also History of Art 466) #] Spring. 4 credits. K. March.

This seminar examines works provided by diverse personal narratives into both the particularities of individual lives and into the wider social and cultural forms within which those lives unfold. We look at the place of lives histories in the development of visual anthropology as a discipline, in terms of both the theoretical and methodological concerns they raise. We focus upon the contemporary resurgence of interest in personal narratives as windows onto both the social and cultural construction of the person as well as heavily upon women's lives and their representations to contrast men's and women's accounts and to underscore the special significance of women's narratives in anthropology.

[WOMNS 407/607 Mathematics of Gender (also Education 494/694) Fall. 3 credits. J. Conrey.

This course reviews the literature on the participation of women in mathematics, computer fields, and mathematics-related fields. The course is divided into five sections of two-three weeks each, in which we will read and discuss the topics of women's participation in mathematics-related careers—mathematics as a critical filter; social influences on mathematics participation: parents, teachers, peers, role models, advertising bias, career choices; sex differences as deficiencies or hurdles: anxiety, attribution theory, spatial visualization; gender differences as under-recognized strengths: cooperative learning, imagination and creativity, connections and relations, integrated knowing; feminist views of epistemology and practice and their influence on the discussions of women's participation in mathematics; women in the academy and workplace: tenure, professional mathematicians, new approaches, the glass ceiling, funding, recognition, and opportunity. Participants will be asked to consider readings from the perspective of understanding, critical evaluation, reflection, and application toward action. The class will rely heavily on discussion and the exchange of "minutes" of the previous meetings.
How do we know misogyny when we see it? Is it limited to the denunciation and denigration of women, or can praise of women also be misogynistic? What if the author places anti-woman statements in "quotation marks"? Might some misogynistic works be just harmless literary jokes? How does awareness of historical context affect our reading of misogyny? How persuasive have women been in the defense of their sex? These are among the questions we will ask as we analyze Western discourses about women and identify the extent to which misogyny can be exposed as a form of misreading. We will look at classical, ecclesiastical, and medieval/Renaissance literary works; contemporary misogynistic attacks and the debates about them, and writings by contemporary feminist scholars of literature, history, and law. All works to be read in English; students who command the relevant foreign languages may choose to read the texts in the original.

WOMNS 413 Women Around Freud (also German Studies 413 and Comp Lit 412) # 4 credits. Not offered 1996–97. M. A. Martin.

The course will focus on Shakespeare's drama and poetry to examine questions of gender and sexuality in their historical contexts. Discussions will take up such issues as royal politics, market economies, samplary law, anti-theatrical pamphlets, spectacle and performance, cross-dressing, masculine identity, homoeroticism, and the situation of women. Students will also be introduced to representative critical approaches and debates (feminist, new historical, queer, post-structuralist, psychoanalytic).

WOMNS 431 Scenes of Female Enlightenment (also English 431) # Fall. 4 credits. M. Jacobus.

In the course we will explore the ways in which Enlightenment thinking about women and women's own concern with their rights and education during the late 18th Century interacts with an inquiry into femininity itself. How did the focus on sentimentality limit, shape, or enable, emancipatory feminist discourses? Starting with Rousseau's Nouvelle Éloise and Emile, we will trace the influence of Rousseau on a variety of 18th century sentimental and educational writers, including St-Pierre (Paul and Virginie), Edgeworth (Belinda), and Wollstonecraft (Vindication of the Rights of Women). If available, we will also read selections from women educators of the period, such as Mrs. Macaulay and Hannah More. Alongside novels of feminist protest by Wollstonecraft (The Wrongs of Woman) and Mary Hays (Memoirs of Emma Courtenay), we will explore other mother-daughter novels of the 1790's by Inchbald (A Simple Story) and Opie (The History of Miss Mary Moreby). As well as reading Diderot's The Nun and de Sade's Justine—works of the French Enlightenment and libertine Revolution, respectively—we will read Radcliffe's Romances and Motteux's Mysteries of Udolpho as the site of the gothic construction of female "enlightenment." Selected novels by Austen (Persuasion and Mansfield Park), and Burney (The Wanderer) will extend the course into the early 19th century novel. In a retrospective view of the feminist "Enlightenment" of the Revolutionary period.

WOMNS 433 The Female Dramatic Tradition (also Theatre Arts 436) Spring. 4 credits. J. E. Gainor.

How did the focus on sentimentality limit, shape, or enable, emancipatory feminist discourses? Starting with Rousseau's Nouvelle Éloise and Emile, we will trace the influence of Rousseau on a variety of 18th century sentimental and educational writers, including St-Pierre (Paul and Virginie), Edgeworth (Belinda), and Wollstonecraft (Vindication of the Rights of Women). If available, we will also read selections from women educators of the period, such as Mrs. Macaulay and Hannah More. Alongside novels of feminist protest by Wollstonecraft (The Wrongs of Woman) and Mary Hays (Memoirs of Emma Courtenay), we will explore other mother-daughter novels of the 1790's by Inchbald (A Simple Story) and Opie (The History of Miss Mary Moreby). As well as reading Diderot's The Nun and de Sade's Justine—works of the French Enlightenment and libertine Revolution, respectively—we will read Radcliffe's Romances and Motteux's Mysteries of Udolpho as the site of the gothic construction of female "enlightenment." Selected novels by Austen (Persuasion and Mansfield Park), and Burney (The Wanderer) will extend the course into the early 19th century novel. In a retrospective view of the feminist "Enlightenment" of the Revolutionary period.

WOMNS 435 The Sociology of Reproduction (also Sociology 434) Spring. 4 credits. E. Bell.

Women's biological potential to bear children and their childbearing experiences are socially constructed. The social context of women's reproductive capacity is one area in which women themselves are socially defined, and therefore, within this context lies the potential to control women through the control of reproduction and childbirth. We will examine the social construction and control of reproduction using both empirical findings and theoretical arguments. Specific topics include: historical trends in fertility; the medicalization and medical control of conception and childbirth; biological versus social definitions of women as mothers; the role of state policy; and theoretical explanations of reproduction and gender stratification.

WOMNS 438 Female Adolescence in Historical Perspective, 1815–1960 (also Human Development and Family Studies 417 and History 450) # Fall. 3 credits. J. Brumberg.

The changing nature of female adolescence in the United States is explored using nineteenth-century primary sources available in the Department of Manuscripts and University Archives. Olin Library multidisciplinary readings and discussions are designed to uncover the nature of women's childhood, patterns of authority within the family, cultural attitudes toward sexuality, female friendships, courtship patterns, and rites of passage into adulthood.

WOMNS 442 Feminist Politics and Policies in the United States and Western Europe (also Government 442) # Fall. 4 credits. M. Katzenstein/U. Liebert.

In both Western Europe and the United States, feminist organizations, as well as political policies that support gender equality are simultaneously under siege and yet, in certain ways, still vibrant. Through cross-national comparisons, we hope to assess the ways the strengths and weaknesses of feminist politics and policies can be traced to global processes, and/or to differences in individual state structures and state-society relationships. Our approach in this course is inductive: We begin by highlighting some important similarities and differences in gender policy. We then turn to a comparison of current conditions and an examination of the place of movement politics in the interaction of state and society. Finally, we consider the character and effect of global changes in the form of the internationalization of capital and the rise of global communication and networks.

WOMNS 444 Historical Issues of Gender and Science (also Science and Technology Studies 444) Fall. 4 credits. M. Rossetter.

This course is a one-semester survey of women's role in science and engineering from antiquity to the 1990's with special emphasis on the United States in the 20th century. Readings will include biographies and autobiographies of prominent women scientists, educational writings, and other primary sources as well as recent historical and sociological studies. By the end of the semester we should have attained a broad view of the problems that have faced women entering science and engineering in the past and those that still remain. There are no formal prerequisites for the course, although some knowledge of women's history and the history of science would be helpful. The course welcomes the participation of students from scientific and non-scientific backgrounds alike.

Works by such writers as Jane Austen, Elizabeth Gaskell, and Charlotte Bronte will be studied with particular attention to the development of a women's tradition in fiction, women writers' conceptions of themselves and their work, and their social and cultural situation.

WOMNS 447 Reading Freud: Gender, Race, and Psychoanalysis (also German Studies 447 and Comparative Literature 447) # Fall. 4 credits. B. Martin.

All of the primary readings are available in English. This course will trace the development of Freud's psychoanalytic theory and practice through a close reading of selected works of Sigmund Freud (Beginning with the Studies in Hysteria and concluding with Moses and Monotheism). This course will provide a general introduction to the basic concepts of Freudian psychoanalytic theory. Close attention will be paid to the cultural, scientific, as well as polemical literature on the ideas of race and gender in the late nineteenth century as one of the contexts in which psychoanalysis evolved.

WOMNS 450/650 The Lenses of Gender (also Anthropology 450/650) # Fall. 4 credits. Permission of instructor required. Limited to 15 seniors and graduate students. No preregistration; interested students should attend the first class. Graduate students sign up for Women's Studies/Psychology 650. S. Bem.

This seminar analyzes the ideological, institutional, and psychological mechanisms that are responsible for the social reproduction of male gender and especially American—culture. It is interdisciplinary, covering material from biology, history, anthropology, law, sociology, psychology, psychiatry, philosophy, and feminist theory. As much as the central focus
of the seminar is on gender, it does not analyze gender in isolation, but looks also at its intersections with race and (especially) sexuality. Students must write a final exam, a term paper, plus weekly commentaries on the readings.

This seminar examines representations of the Madonna and Child from the fourteenth and fifteenth centuries. The narrative scenes painted on marriage chests and other domestic furniture, biblical and historical heroines such as Judith and Lucretia, portraits of patrician women and courtesans, and violence to women in a political context. It will investigate the contemporary ideas about motherhood, beauty, sexuality, social presentation, and gender roles in society that inform these representations. We will discuss the discursive networks for interpreting them in feminist art history and theory (particularly in Renaissance studies). We will be concerned especially with how visual images are encoded with meaning, what kind of representations for social change with their historical context, and how they convey social constructs and ideology.

This course examines relations between women and men by focusing on the manner in which an 16th-century community in the Muslim Middle East functioned through its court. By analyzing actual court cases, we will explore issues such as marriage and divorce, property, right of inheritance, and its regulation, access to communal and domestic space and the control of knowledge. We will be particularly interested in the question of whether normative codes of law (religious, state) were compatible with the individual’s sense of moral worth and self interest; hence we will also be concerned with relations between the individual and the community, and between the community and the state. Previous course work in Islamic studies is helpful but not essential.

This course deals with theories and concepts of educational development and their application to educational innovations geared to promoting equal opportunity based on gender, race, and class in Africa and the African Diaspora. The first part of the course will be concerned with the stages of innovations from their inception to their implementation, resistance, diffusion and impact of different social categories. The second part of the course will deal with concrete cases of educational innovations such as the creation of educational institutions and change in curriculum development and medium of instruction. Historical and contemporary cases of educational innovations will be presented and analyzed. The case studies include the development of Africana Studies as a discipline, the creation and expansion of historically black institutions such as Lincoln University in Pennsylvania, Tuskegee Institute in Alabama, Spelman College in Georgia, and the Westside Preparatory School in Chicago. The African Cases to be studied include education for liberation in Tanzania, African languages as a medium of instruction in Nigeria and Mali, and television as a medium of instruction in Cote d’Ivoire. Gender will be a main focus in the analysis of the agents and beneficiaries of the innovations.

For years the women’s movement basing its claim to equality on the assertion that men and women are the same. Recently, however, feminist theorists have argued that there are deep, fundamental differences between the sexes: for instance, do women and men view morality differently? What effect does reproduction have on female consciousness? Does women’s work produce a particular epistemology, or “way of knowing”? How do gender, race, class, sexual orientation, etc., influence each other? Drawing on works from political science, psychology, sociology, literary criticism, and philosophy, we will examine a variety of contemporary methods and approaches to feminism, paying particular attention to the issue of “difference” and how claims of difference affect women’s claims to equality. In the process, we will examine the “politics” of feminist theory, and what feminism has to offer political science as a discipline.

An undergraduate seminar examining the relationship between gender and politics in the late Roman Republic and early Empire. Among the questions this course will address are: was politics the exclusive domain of men in Roman society (as is generally assumed) or does a broader definition of politics and an understanding of the various forms that political activity in ancient Rome might take allow a place for women in Roman political life? What role does gender have in Roman political discourse? Why do issues such as family, marriage and sexuality become subjects of political debate and legislation?

**[WOMNS 465 Feminist Theory/Lesbian Theory](https://example.com) @ 4 credits. C. A. Martin.

This seminar will explore developments in feminist theory, primarily in the United States from the 1950s through the mid-1990s. We will also trace the changing status of "lesbianism" in feminist theories over that same time period and examine its status in current constructions of "queer theory". What happens to the relationship between feminist theory and lesbian thought when "queer theory" emerges? The purpose of the course is to encourage critical, historically informed readings of what could be considered canonical texts and crucial junctures in Second Wave feminist thought, many of which remain unfamiliar even to Women’s Studies students. In our discussions, we will also examine certain strands of feminist thought became dominant at certain moments and why others were excluded and forgotten. I will choose readings from among such classics as Simone de Beauvoir’s *Second Sex*, Betty Friedan’s *The Feminine Mystique*, *Social Politics*, Shulamith Firestone’s *The Dialectic of Sex*, Sheila Rowbotham’s *Women and Revolution*, Angela Davis’s autobiography, Michele Barrett’s *Women’s Oppression Today*, Bell Hooks, * Ain’t I a Woman* and other essays, Heidi Hartmann’s *The Unhappy Marriage of Marxism and Feminism*, Juliet Mitchell’s *Women’s Estate and Psychoanalysis and Feminism*, Cherrie Moraga et al., *This Bridge Called My Back* and Moraga’s autobiographical/critical writings, Audre Lorde’s *Insider/Outsider and Zami*, Patricia Hill Collins, *Black Feminist Thought*, and others.

This course will introduce students to the major schools of feminist legal theory, including equality theory, difference theory, dominance theory, and anti-essentialism. It will then use these theories as a framework for examining several areas in which the law has attempted to address gender-specific injuries. These will include the workplace (sexual harassment, maternity leave, work/family conflict), the family (abortion, surrogacy), and violence against women (rape, spousal abuse, pornography). The course will emphasize analysis and critique of present political and legal responses and formulation of alternative responses. Some previous exposure to legal materials (case law, statutes) is useful but not required.

**[WOMNS 467 Sexual Minorities and Human Development (also HDFS 464)](https://example.com) @ 3 credits. Limited to 15 students. Permission of instructor required. R. Savin-Williams.

The first half of the course covers topics of a fairly general nature regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students will determine the content through their selection of particular topics that interest them. The success of the course depends on students feeling personally engaged and connected to the course content. Because of the multidisciplinary nature of the course, it is hoped that students from a variety of backgrounds in disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will feel comfortable in the course.

From Pocahontas to Shakes a Fast in Dances With Wolves, depictions of American Indian women rarely present their points of view.
Through a variety of genres—short fiction, autobiographies, poetry, and oral histories—we will listen to the voices of American Indian women; we will listen for their aesthetic and cultural values, as those values reflect Indian history in general, tribal histories and values, and their life stories. We will begin with works from or about nineteenth century life and proceed to an examination of works by such well-known Indian women writers as Beth Brant, Louise Erdrich, Leslie Silko, and Joy Harjo. We will explore questions such as: How does the image of Pochahantas affect the representation of other Indian women? Who are American Indian women activists, and have they written of their lives? What is the relationship between the woman in myths and legends and women in the real world? The student’s grade will be based on two formal papers and a number of informal writing assignments and reports.

[WOMNS 475 Studies in the Twentieth Century (also English 475)]

[WOMNS 478 Family and Society in Africa (also Africa 478)]
The family as a social institution is structured according to socioeconomic, historical, political, and cultural specificities. In this course, the topics to be discussed will include the concepts of nuclear and extended family, the place and role of different age-groups and generations in the family, marriage and related issues, such as dowry, divorce, parenthood, childbirth, sex roles, and class differences. This course will also deal with the impact of industrialization and of westernization on the structure of the family in Third World countries. Examples will be drawn from urban and rural communities in industrial western and agrarian/non-western societies.

[WOMNS 479 Women and Gender Issues in Africa (also African 479)]
Spring. 4 credits. Limited to 20 students. N. Assie-Lumumba.
There are two contrasting views of the status and role of women in Africa. One view portrays African women as dominated and exploited. According to another view, women have a favorable social position in Africa: indigenous ideologies consider women to be the foundation of society, they are economically active and independent and they have an identity independent of men. In this seminar, we will discuss the status and role of women in Africa historically as well as in the contemporary period. Among the topics to be covered are: women in non-westernized/prehistoric societies; the impact of colonial policies on the status of women; gender and access to schooling; women’s participation in the economy and politics; the attitudes of African women towards feminism; and the NGO and United Nations Nairobi Conferences on women.

[WOMNS 481 Latin American Women Writers (also Spanish 492 and Comparative Literature 482)]
Fall. 4 credits. Taught in English.
D. Castillo.
This course will provide a sampler of novels and short stories by and about Latin American women. We will look at the question of self-construction and issues such as the social and political concerns involved in a specifically Latin American feminine identity. All works will be read in translation (Romance Studies students should read originals of the works from the Spanish). Authors may include writers like Luisa Valenzuela (Argentina) and Rigoberta Menchú (Guatemala), Helena Parente Gunha and Clarice Lispector (Brazil), Heleno Varela and Elena Anzaldúa (U.S.A.), and Simone Schwarz-Bart (Guadeloupe).

[WOMNS 486 Women’s Poetry (also English 486)]
A study of the female poetical tradition and the myths surrounding the female poet in England and America, focusing on such nineteenth- and twentieth-century poets as Elizabeth Barrett Browning, Emily Dickinson, Elizabeth Bishop, and Sylvia Plath.

[WOMNS 490 English Honors Seminar: Mary Wollstonecraft and Mary Shelley (also English 491)]

[WOMNS 491 Women’s Studies Seminar (also English 491)]
Fall. 4 credits. D. Mermin.
Section I: Jane Austen
Open to students in the Honors Program in English in or outside the department, or by permission of the instructor. Students will read Austen’s novels, juvenilia, and letters, do research projects concerning the cultural circumstances in which the novels were produced, and consider various critical approaches. Requirements will include short close-reading papers, a research report, and a long final essay.
We will emphasize the fact that Austen is the first woman to enter the canon in English and consider both why that became possible at that particular time in literary history and what it has meant for later readings of Austen. Also such questions as how women novelists perceived themselves and were perceived by others; the interplay between gender and genre; marriage and property laws; women’s education; life in the gendered spaces of the country house; the qualities of literary heroines (and heroes) and the marriage plot; slavery and the anti-slavery movement as it was seen to parallel women’s issues; and the feminist re-reading of Austen.

[WOMNS 492 George Eliot (also English 491)]

[WOMNS 493 French Feminists (also French 493)]
Fall. 4 credits. A. Berger.
This course will examine the political, theoretical, and literary concerns of contemporary French writers who have addressed "la question de la femme/la question du féminin." Readings will include representative texts by Simone de Beauvoir, Monique Wittig, Julia Kristeva, Jacques Lacan, Luce Irigaray, Jacques Derrida, and Hélène Cixous. Taught in English.

[WOMNS 499 Directed Study]
Fall or spring. Variable credit. Prerequisites: one course in women’s studies and permission of a faculty member of the Women’s Studies Program Board. Staff.

[WOMNS 530 Womanist Writing in Africa and the Caribbean (also Africana 530)]
Spring. 4 credits. A. Adams.
Theoretical essays on the nature, relevance, and articulation of feminist thought from African and Caribbean writers will complement literary texts. Gender issues, as manifested both at home and in emigrant situations abroad, will be examined in texts by such writers as Sistren, Conde, Dangarembga, Aidoo, W. Amor, Mme. A. Racette, Kincaid, and W. Mandela. (Francophone works may be read in the original by individuals who so desire.)

[WOMNS 600 Special Topics in Feminist Theory: An Interdisciplinary Graduate Course in Women’s Studies (also French Literature 600)]
Fall and spring. 4 credits. This course is open to graduate students and undergraduate seniors who have obtained permission of instructor. Staff.
The purpose of this course is to expose graduate students to interdisciplinary approaches in Women’s Studies and feminist theory to a variety of topics or questions. While many of our graduate courses train students in highly specialized areas of feminist theory, this course students how to find common intellectual ground around a single topic from interdisciplinary perspectives without sacrificing the complexity of any disciplinary approach. The course is designed for graduate minors in Women’s Studies and students with a specialized interest in feminist theory. Although it is not required, the course is strongly recommended for students obtaining a graduate minor in Women’s Studies.

[WOMNS 608 African-American Women (also French Literature 608)]
A reading and discussion topics seminar focusing on the experiences of African-American women in nineteenth-century America, including the Caribbean. Topics include women in labor, abolitionism, women’s rights, sexuality and race relations, education and racial uplift, black women’s literature, marriage and family.

[WOMNS 613 The Political Economy of Gender and Work (also City and Regional Planning 613)]

[WOMNS 614 Gender and International Development (also City and Regional Planning 614)]
This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for this analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the global political economy and micro processes of development. Fourth, to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.)
K. Abrams.

C. A. Martin.

WOMNS 624 Seventeenth-Century Women Writers (also English 624) Not offered 1996-97. B. Correll

WOMNS 626 Graduate Seminar in the History of American Women (also History 626) Spring. 4 credits. Limited to graduate students. M. B. Norton. 
A reading and research seminar intended for graduate students. Major works in American women's history will be carefully scrutinized, and each student will prepare a lengthy research paper.

This seminar will explore the similarities and differences among many cultures' assumptions about the work of women as well as women's experiences in varying work circumstances throughout history. Comparative examples will be taken from the United States, Europe, and the Third World.

The only thing better than having sex is theorizing about it. In an effort to provide us with a more sophisticated language with which to examine lesbian and gay issues in literature and culture, this course will offer an introduction to the most influential trends in queer theory. The first few weeks of the course will focus on the psychoanalytic discourse of homosexuality, as it was conceived by Freud and revised and redeployed by lesbian and gay theorists. The second part of the course will concentrate on Foucault and various applications of social constructionism to lesbian and gay theory and feminism. In the final few weeks, we will discuss recent debates about sexuality and identity politics. We will discuss books and essays by Bersani, Butler, Cripp, de Laurets, Deluze, Freud, Foucault, Piss, Halpertin, Hocquenghm, Kincaid, Moraga, Rubin, Sedgwick, Watney, and Wittig, among others.

WOMNS 656 Decadence (also English 655 and Comparative Literature 655) Spring. 4 credits. E. Hanson. "My existence is a scandal," Oscar Wilde once wrote, summing up the effect of his carefully cultivated style of perversity and paradox. Through their valorization of estheticism and all that was considered

WOMNS 660 Gender in Nineteenth-Century America (also English 661) Fall. 4 credits. S. Samuels. 
A study of the relation between historical experience and literary texts. We will examine from the perspectives of both historical and literary analysis the rise of women writers, the novel's preoccupation with conflicts between woman and man, the cultural uses of feminism and antifeminism, and the impact of the new woman. Bringing traditional literary texts—novels and poetry—into dialogue with "nonliterary" writings like journalism, political treatises, social reform manifestos, and etiquette books, we will draw on the methods and theories of cultural history and literary criticism to ask how gender relations and the history of women bear on the plots, discourses, and images of literary texts. A tentative reading list would include Susannah Rowson's Charlotte Temple, Lydia Maria Child's The Mother's Book, Catherine Beecher's A Treatise on Domesticity, Nathaniel Hawthorne's The Blithedale Romance, Harriet Beecher Stowe's Uncle Tom's Cabin, Herman Melville's Pierre, poems by Emily Dickinson and Walt Whitman.

WOMNS 670 Feminist Political Theory (Graduate Seminar) (also Government 671) Fall. 4 credits. Open to undergraduates who have taken GOV/WS 463 or other courses in feminist theory and who have the permission of the instructor. N. Hirschmann. 
This graduate seminar will examine contemporary feminist theory from the perspective of political theory. We will study the work of feminist theorists who work specifically within the discipline of political science, as well as the specifically political dimensions of work not generally considered political theory. Though particular readings and topics will change from year to year in response to the most recent literature, in general the course will focus on questions of epistemology and methodology as a way to explore a variety of issues of relevance to feminism as an academic, intellectual, and political enterprise.

WOMNS 671 Feminist Methods (also Rural Sociology 671) Spring. 4 credits. S. Feldman. 
Employing a sociology of knowledge perspective and comparative approach within the social sciences, this course will review and analyze contemporary themes in the feminist epistemological critique of sociological methods. The course will begin by identifying what constitutes mainstream explanations with the social sciences, introduce early feminist challenges to androcentric paradigms, move to examine the philosophical and postmodern challenge, and then outline issues critical to "doing fieldwork." In the latter section, we will examine studies that address issues of class, race, ethnicity, and constructions of otherness.

This course will explore the intersections of theory and policy in feminist scholarship through the lenses of several issues of key importance in contemporary feminist politics. The course takes as its foundation the premise that most feminist issues need to be approached from a multidisciplinary perspective in order to be understood fully, and that feminist theory and policy are integrally related to one another. In 1994, focusing on such issues as domestic violence, pornography, welfare, and the military, we will approach each of these issues from a variety of theoretical and empirical perspectives in order to understand them in both the political and theoretical underpinnings of existing policy as well as the political and theoretical implications of various feminist prescriptions and policy change.

WOMNS 689 Topics in Women's Studies Fall or spring. Variable credits. Staff. Independent reading course for graduate students on topics not covered in regularly scheduled courses. Students develop a course of readings in consultation with a faculty member in the field of Women's Studies who has agreed to supervise the course work.

WOMNS 733 Literary Anti-Feminism (also English 733) Spring. 4 credits. L. Brown.

Writing Program
See "John S. Knight Writing Program."

Brown, Theodore C., Ph.D., Cornell U. Emeritus, History of Art
Brown, William W., Ph.D., Harvard U. Asst. Prof., Romance Studies/Comparative Literature
Browne, E. Waylees III, Ph.D., U. of Zagreb (Yugoslavia). Emeritus, Physics
Brunner, Joan Jacobs, Ph.D., U. of Virginia. Prof., Human Development and Family Studies/Women's Studies
Buck-Mors, Susan F., Ph.D., Geography/Comparative Literature/Biblical Studies
Burns, Joseph A., Ph.D., Cornell U. Emeritus, Computer Science
Burke, Valerie, Ph.D., U. of Michigan. Emeritus, Astronomy/Theoretical and Applied Mechanics/CRSR
Caldwell, Steven R., Ph.D., Cornell U. Assoc. Prof., Sociology
Calkins, Robert G., Ph.D., Harvard U. Emeritus, History of Art
Campbell, Donald B., Ph.D., Cornell U. Emeritus, Astronomy/NAIC
Caro, Jianguo, Ph.D., U. of Pennsylvania. Asst. Prof., Mathematics
Caputi, Anthony F., Ph.D., Cornell U. Emeritus, English/Comparative Literature
Carden, Patricia J., Ph.D., Columbia U. Emeritus, Russian Literature
Cardie, Claire, Ph.D., U. Mass. Asst. Prof., Comparative Literature
Cardmichael, Calum M., LLD, Glasgow U. (Scotland). Emeritus, Comparative Literature/Biblical Studies
Carpenter, Barry K., Ph.D., U. of Chicago, London (England). Emeritus, Chemistry
Chase, Cynthia Ph.D., Yale U. Emeritus, English
Chase, Stephen U., Ph.D., U. of Chicago. Emeritus, Mathematics
Chen, Zhe-Qing, Ph.D., Washington U. Asst. Prof., Mathematics
Chernoff, David, Ph.D., U. of California at Berkeley. Emeritus, Sociology
Christensen, Thomas, Ph.D., Columbia U. Emeritus, Philosophy/LASSP*
Cisneros, John L., Ph.D., U. of Chicago. Emeritus, Geological Sciences/INSTOC*
Rabkin, Jeremy A., Ph.D., Harvard U. Assoc. Prof., Government

Radzinowicz, Mary A., Ph.D., Columbia U. Jacob Gould Schurman Professor of English Emeritus, English

Ralph, Daniel C., Ph.D., Cornell U. Asst. Prof., Physics/LASSP*

Ramage, Andrew, Ph.D., Harvard U. Prof., History of Art

Randel, Desiree E., Ph.D., Princeton U. Given Foundation Professor of Musicology, Music

Rawlings III, Hunter R., Ph.D., Princeton U. Prof., Classics

Regan, Dennis T., Ph.D., Stanford U. Assoc. Prof., Psychology

Reagan, Elizabeth Atkins, Ph.D., U. of Pennsylvania. Prof., Psychology/Biological Sciences

Rendsburg, Gary, Ph.D., New York U. Prof., Biblical and Semitic Studies, Near Eastern Studies

Reppy, John D., Ph.D., Yale U. John L. Wetherill Professor of Physics, Physics/LASSP*

Rhodes, Frank H. T., Ph.D., U. of Birmingham (England). Prof., Geological Sciences

Richards, Annette D., Stanford U. Asst. Prof., Music

Richardson, Robert C., Ph.D., Duke U. F. R. Newman Professor of Physics, Physics/LNS

Rogers, Joseph T., Ph.D., U. of Rochester. Asst. Prof., Physics/LNS*

Roldán, Mary J., Ph.D., Harvard U. Prof., History

Rosen, Bernard C., Ph.D., Cornell U. Prof., Emeritus, Sociology

Rosen, Carol G., Ph.D., Stanford U. Prof., Modern Languages

Rosen, David, Ph.D., U. of California at Berkeley. Prof., Music

Rosenberg, Alan, Ph.D., U. of Chicago. Prof., Emeritus, Mathematics

Rosenberg, Edgar, Ph.D., Stanford U. Prof., English/Comparative Literature

Rothaus, Underhill Noll Professor of the History of Science, Science and Technology Studies

Rothaus, Oscar S., Ph.D., Princeton U. Prof., Mathematics

Rossiter, Martin A., Ph.D., Harvard U. Prof., Government

Ruiz, Jean-Paul, Ph.D., University of California at Los Angeles. Prof., History/Asian American Studies

Rumin, Philip, Ph.D., Yale U. Prof., Theatre Studies

Rutter, Andrew, Ph.D., Washington U. Asst. Prof., Government

Ryan, Thomas A., Ph.D., Cornell U. Prof., Emeritus, Psychology

Saccamano, Neil, Ph.D., Johns Hopkins U. Assoc. Prof., English

Sagan, Carl E., Ph.D., U. of Chicago. David C. Duncan Professor in the Physical Sciences, Physics/LASSP*

Sakai, Naoki, Ph.D., U. of California at Berkeley. Asst. Prof., Asian Studies

Salpeter, Edwin E., Ph.D., Birmingham U. (England). James Gilbert White Distin­guished Professor in the Physical Sciences, Physics/LASSP* 

Sakurai, Jun-ichi, Ph.D., U. of California at Berkeley. Asst. Prof., Asian Studies

Samuels, Shirley, Ph.D., U. of California at Berkeley. Assoc. Prof., English/Women’s Studies

Sander, Elizabeth, Ph.D., Cornell U. Prof., Government

Sanghvi, Sanjaya, Ph.D., Stanford U. Assoc. Prof., Anthropology

Santiago-Inzarrary, Vilma, Ph.D., New York U. Asst. Prof., Anthropology and Hispanic American Studies

Sawyer, Paul L., Ph.D., Columbia U. Prof., English

Schamis, Hector, Ph.D., Columbia U. Asst. Prof., Government

Schatz, Alfred H., Ph.D., New York U. Prof., Mathematics

Scheinerman, Lawrence, Ph.D., U. of Michigan. Prof., Government

Scheraga, Harold A., Ph.D., Duke U. George W. and Grace L. Todd Professor of Chemistry, Emeritus, Chemistry

Schneider, Fred B., Ph.D., SUNY at Stony Brook. Prof., Computer Science

Schuler, Richard E., Ph.D., Brown U. Prof., Economics/Engineering

Schwarz, Daniel R., Ph.D., Brown U. Prof., English

Seitz, Mark, Ph.D., U. of California at Berkeley. Prof., English

Sen, Shankar, Ph.D., Harvard U. Prof., Mathematics

Senderovich, Savely, Ph.D., New York U. Prof., Russian Literature

Seshadri, Praveen, Ph.D., U. of Wisconsin. Asst. Prof., Computer Science

Sethna, James P., Ph.D., Princeton U. Assoc. Prof., Physics/LASSP*

Sezne, Alain, D.E.S., U. de Paris-Sorbonne (France). Prof., Romance Studies

Shanley, Kathryn, Ph.D., U. of Michigan. Assoc. Prof., English

Shapiro, Gavriel, Ph.D., U. of Illinois at Urbana. Assoc. Prof., Russian Literature

Shaw, Harry E., Ph.D., U. of California at Berkeley. Prof., English

Shetler, Martin A., Ph.D., Harvard U. Prof., Government

Shell, Karl P. Stanford U. Robert Julius Thorne Professor of Economics, Economics

Shiraiishi, Takashi, Ph.D., Cornell U. Prof., History

Shoemaker, Sydney S., Ph.D., Cornell U. Susan Linn Sage Professor of Philosophy, Philosophy

Shore, Richard A., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Mathematics

Shue, Henry, Ph.D., Princeton U. Wynn and William Y. Hutchinson Professor of Ethics and Public Life

Shue, Vivienne B., Ph.D., Harvard U. Prof., Government

Siegel, James T., Ph.D., U. of California at Berkeley. Prof., Anthropology

Siegel, Sandra F., Ph.D., U. of Chicago. Prof., English

Sievers, Albert J. III, Ph.D., U. of California at Berkeley. Prof., Physics/LASSP*

Singh, Satinder, Ph.D., Harvard U. Prof., Physics/LASSP*

Silbey, Joel H., Ph.D., U. of Iowa. President

Shand, Philip, Ph.D., U. of California at Berkeley. Prof., Economics/Engineering

Sharma, Richard A., Ph.D., U. of California at Berkeley. Prof. Emeritus, Physics/LNS*

Smales, Roger, Ph.D., U. of Technology. Assoc. Prof., Computer Science

Smillie, John, Ph.D., U. of Chicago. Prof., Mathematics

Smith, Anna Marie, Ph.D., U. of Essex (England). Asst. Prof., Government
