The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The dates shown in this calendar are subject to change at any time by official action of Cornell University.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media Services at Cornell University.
It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell's Title IX coordinator (assistant director, gender equity) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801 (telephone: 607 255-3976; TDD: 607 255-7665).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801. Other questions or requests for special assistance may also be directed to that office.

CORNELL UNIVERSITY—GENERAL INFORMATION

Introduction

Courses of Study contains information primarily concerned with academic resources and procedures, college and department programs, interdisciplinary programs, and undergraduate and graduate course offerings of the university. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. A student handbook describing life at Cornell will be distributed to all new incoming students. In addition, each new student receives the Policy Notebook, which summarizes pertinent university policy. Students should consult with their college's advising office for specific information on academic policies and procedures, degree programs and requirements.

Student responsibility and regulations. The Campus Code of Conduct describes the regulations and policies for maintaining public order on campus. The Code of Academic Integrity and other statements of student responsibility are set forth in the Policy Notebook. Publications are available for viewing on CUINFO, on the World Wide Web, the university's electronic information system, and in print at the various university libraries, the Student Life Union, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices. The following is a list of offices and information sources for admission information:

Undergraduate admissions. Information pertinent to prospective applicants is available from the Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 607–255–5241.

Graduate School. Information pertaining to admission to the Graduate School may be obtained by contacting the Graduate School, B2 Caldwell Hall, Ithaca, NY 14853–2602, 607–255–4894.

Medical College and Graduate School of Medical Sciences. Information regarding admissions is available from the Office of Admissions, 1300 York Avenue, New York, NY 10021, 212–746–1067.

CUINFO ON THE WORLD WIDE WEB

It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO, Cornell's electronic information source, and in the Course and Time Roster and the Course and Room Roster, published each semester by the Office of the University Registrar. You may access CUINFO through the World Wide Web. The URL is: http://www.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS

The course levels have been assigned as follows:

- 100-level course—introductory course, no prerequisites, open to all qualified students
- 200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites
- 300-level course—upper-division course, open to juniors and seniors, prerequisites
- 400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent
- 500-level course—graduate level (e.g., management, law, veterinary medicine)
- 600-level course—graduate-level course, open to upper-division students
- 700-level course—graduate-level course
- 800-level course—master's level, thesis, research
- 900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate and graduate-level courses

- Agriculture and Life Sciences
- Architecture, Art, and Planning
- Arts and Sciences
- Biological Sciences
- Engineering
- Hotel Administration
- Human Ecology
- Industrial and Labor Relations
- Nutritional Sciences
- Officer Education

Group 2: Graduate professional divisions

- Law
- Management
- Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell's accreditation can be found at http://www.ipr.cornell.edu/Accreditation/Status. Requests to review additional documentation supporting Cornell's accreditation should be addressed to the Vice President for Academic Programs, Planning and Budgeting, Cornell University, 455 Day Hall, Ithaca, NY 14853–2801, rge2@cornell.edu.

Advanced Placement

CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

a. Achieving the requisite score on a departmental examination at Cornell (usually given during orientation week) or from the Advanced Placement Examination from the College Entrance Examination Board (CEEB). The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 7.

b. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have
Some departments review each request individually. Some departments accept credit from virtually all accredited colleges, some do not. Credit for international credentials is evaluated individually (see below).

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, take the appropriate Advanced Placement Examination offered by the College Entrance Examination Board in Princeton, New Jersey, to qualify for credit as in paragraph 1 above.

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement and recommends AP credit for those who meet the standards. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

Advanced placement examinations. Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school office (see below: "Forwarding of scores and transcripts").

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of departmental examinations are shown on page 7.

Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see below: "Forwarding of scores and transcripts").

Chemistry

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department. Chemistry 207–208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215–216, a nine-credit sequence that includes quantitative and qualitative analysis. Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand with Mrs. Virginia Marcus, in 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 138 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215–216 and should consult the Chemistry 215 instructor.

Latin. Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course will be given six advanced placement credits.

Greek and Modern Greek. Credit and placement are determined on the basis of a departmental examination. For Ancient Greek, a student who is permitted to register in a 300-level course will be given six advanced placement credits. For Modern Greek, a student who is determined by the examiner to be at an advanced level will be given six advanced placement credits.

Computer Science

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or half the distribution requirement in mathematics for students in the College of Arts and Sciences. Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100.

†Cornell Advanced Standing Examination. Contact the Department of Modern Languages, 203 Morrill Hall.
students are strongly urged to take the departmental placement test. To take the
departmental examination, students must sign up beforehand in the Undergraduate Office,
303 Upson Hall.

English
The English department will grant 3 credits to students who score 4 or 5 on the CEEB
Advanced Placement Examination. The credits are granted automatically: no
application to the department is required.

Students who receive scores of 700 or better on the CEEB SAT II examination in English
composition, or a 3 or 4 on the CEEB SAT II examination in literature, or a 4 or 5 on the
CEEB Advanced Placement Examination are eligible to enroll, space permitting, in the
following English freshman writing seminars: 270, 271, 272.

Advanced placement credits may not be used to fulfill requirements of the English major or
distribution requirements of the College of Arts and Sciences.

Mathematics
The Cornell calculus sequences discussed below are described under “Basic Sequences”
in the Department of Mathematics section of this catalog.

The regular freshman calculus courses at Cornell do not differ substantially from
calculus courses given in many high schools, and it is best to avoid repeating material that
has already been covered at an appropriate level. Secondary school students who have
had the equivalent of at least one semester of analytic geometry and calculus should, if
possible, take one of the CEEB’s two Advanced Placement Examinations (calculus AB or
calculus BC) during their senior year.

The following rules do not apply to students being admitted to the College of Engineering.
See the college’s brochure for a detailed statement.

Students with a grade of 4 or 5 on the BC examination may take the appropriate third-
semester course (Mathematics 213, 221, or 293), but students entering Mathematics 293
may have to make up some material on partial differentiation. Students with a 3 on the BC
examination or a 4 or 5 on the AB examination may take the appropriate second-semester course (Math-
ematics 112 or 192). Students with a 2 on the BC examination or a 3 on the AB examination may take
one of the second-semester courses (Mathematics 112 or 192). Advanced placement credit will be awarded appropriately;
however, no credit will be granted for a grade of 1 on the BC or 1 or 2 on the AB examination.

A grade of 3 or higher on the BC examination satisfies the distribution requirement in
mathematics for students in the College of Arts and Sciences.

Note, however, that the grade of 3 is not sufficient for a full year of advanced place-
ment credit in mathematics.

The placement examination in mathematics is offered at Cornell only during orientation
week and should be taken by students who
1) have had at least a semester of calculus but did not take a CEEB Advanced Placement Examination;
2) have received a 2 on the BC examination or a 3 on the AB examination and want to
enter the upper sequence; or
3) believe that the placement assigned on the strength of the CEEB Advanced Placement Examination is not high enough in their
case.

Students are strongly urged to take the departmental placement test even if they feel that
their grasp of the material is uncertain.

The grade on this test does not become part of a student’s record. No advance registration
for the departmental examination is necessary.

Modern Languages
Students who have studied a language for two or more years and want to continue study in
that language at Cornell must present the results of a placement test. In cases where no
placement test exists for a particular language, the Department of Modern Languages
designates a professor to handle placement for that language. Students should contact Prof.
Carol Rosen, director of undergraduate studies, at 255-0722. Students who have had a
year of formal study or substantial informal study since they last took a placement test
should take the examination again during orientation week if they plan to continue
course work.

Advanced standing credit may be entered on a student’s record as follows:

1. For students with a score of 4 or 5 on the language Advanced Placement Examination
   of the CEEB, three credits are granted, and they are eligible to take Cornell’s Advanced
   Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of
   six credits.

2. Students who achieve a minimum score of 65 on the language placement test given
during orientation week are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding
   performance on this examination can result in a maximum of six credits.

3. For formal language work at an accredited
college, credit is considered by the department on submission of a transcript and
   may be entered on the student’s Cornell record.

4. Native speakers of languages other than
   English may, on examination by the appropriate professor, be granted a
   maximum of six credits if they can
demonstrate proficiency equivalent to
   course work on the 200 level or above at Cornell. Additional credit will be
   considered only for those who pursue
   advanced work in their native language.

Information about times and places to take placement tests is available in the orientation
booklet, from Academic and Career Counseling
Services, and from the Department of Modern Languages. For more information,
see the College of Arts and Sciences section on language course placement, or contact the
Department of Modern Languages, 203 Morrill Hall.

Music
Advanced placement and credit are awarded only in music theory and only on the basis of
a comprehensive examination administered by the Department of Music, normally during
orientation week. If special arrangements are made, the examination may be administered at
other times during the academic year.

All students interested in taking this examination should consult Professor E. Murray, 311
Lincoln Hall (telephone: 607/255-4675). Inquiries may be directed to the Department of Music,
104 Lincoln Hall (telephone: 607/255-4097).

Physics
Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics
C), certain international examinations, or the
departmental examination (which may be
taken during orientation week or at other
times as arranged). For information about the
departmental examination, students should
consult the director of undergraduate studies,
Professor R. S. Galik, 101 Clark Hall, or the
department chair.

Physics B. Students earning a score of 4 or 5
may receive eight credits for Physics 101 and
102. Those earning a score of 5 in physics B
with a score of 4 or 5 in calculus BC may
choose to accept four credits in Physics 112 or
207 instead of eight credits in Physics 101 and
102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics. Students earning a score of 4 or 5
may receive four credits for Physics 112 or 207, or placement into Physics
116 with no AP credit.

Physics C—Electricity and Magnetism:
Students earning a score of 5 may choose four
credits for Physics 213, or placement into
Physics 217 with no AP credit.

A student planning a major in Physics or
Applied and Engineering Physics and who is
eligible for AP credit should consult with his/
hers adviser or the department representative.

Advanced placement into a next-in-sequence
course depends on the completion of the
appropriate mathematics prerequisites before
enrolling. To qualify for advanced placement
credit, it is not necessary to continue the study of
physics.

General information and advice may be
obtained from Professor R. S. Galik, 101 Clark
Hall, or from the Department of Physics, 109
Clark Hall.

ADVANCED PLACEMENT AND
CREDIT FOR INTERNATIONAL
CREDENTIALS
Following are the policies currently in effect
for G.C.E. "A" Level Examinations and
International Baccalaurate Higher Level
Examinations. Accepted students holding any
other secondary school credentials are urged
to sit for the Advanced Placement Examina-
tions of the College Entrance Examination
Board or for the departmental examinations
offered during orientation week. Students
requiring further information concerning
advanced standing credit for foreign creden-
tials may contact the Associate Director,
Undergraduate International Admissions.

General Certificate of Education (GCE)
Advanced ("A") Level Examination passes
are awarded advanced standing and credit.
Students must present the original or a
certified copy of their examination certificate
University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester. Cornell University does not allow persons who are not registered with the university in a timely manner to attend classes. The university reserves the right to require unauthorized, unregistered persons who attend classes or in other ways seek to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place prior to the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student’s advisor and an appropriate representative of the department offering the course (an instructor, department staff member or college registrar, depending on the college). The completed and signed form must be returned to the student’s college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

</tbody>
</table>

*Consult the college office for special considerations and requirements.
†Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.

AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will...
not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

A student may withdraw from the university at the end of a period of authorized leave. Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division’s director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4380).

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to ID validation day. All other charges, credits, and payments will
STUDENT HEALTH INSURANCE

It is a Cornell University policy, by a university board of trustees decision, that all full-time students have health insurance coverage while enrolled at Cornell.

The student health plan offers extensive coverage at a reasonable cost for students and their eligible dependents. Plan benefit information will be mailed to all registered students (including students registered in absen) in their July bursar bill. If you decide that you have adequate coverage and want to waive the student health plan, a waiver form with proof of other coverage must be submitted to the student insurance office before the August 29 deadline. All full-time registered students, including students registered in absentia, will be automatically billed and enrolled in the student health plan if a completed waiver is not received by the deadline. Because of policy restrictions, the plan is nonrefundable after the deadline (except for dependents who no longer meet eligibility requirements).

Students enrolled in the student health plan may also enroll their eligible dependents for an additional charge. Enrollment deadline is September 30.

A five-month graduate plan is available for those students who finish their degree requirements before the start of the spring semester. The deadline for application is prior to the start of the spring semester.

To obtain additional information about the Cornell University health plan, please contact the insurance carrier directly at 1-800-859-8475. E-mail: SICU@cornell.edu

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND ABSENCES

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up an examination, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.
FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Room Roster and the Course and Time Roster, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar’s examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar’s office without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar’s office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period. The university policies governing study period and final examinations are:

   a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation or conference) be conducted or due during the period set aside for final examinations.

   b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.

   c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return of the examination.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A + to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>4.3</td>
</tr>
<tr>
<td>A</td>
<td>4.0</td>
</tr>
<tr>
<td>A-</td>
<td>3.7</td>
</tr>
<tr>
<td>B+</td>
<td>3.5</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
</tr>
<tr>
<td>B-</td>
<td>2.7</td>
</tr>
<tr>
<td>C+</td>
<td>2.3</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
</tr>
<tr>
<td>C-</td>
<td>1.7</td>
</tr>
<tr>
<td>D+</td>
<td>1.3</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
</tr>
<tr>
<td>D-</td>
<td>0.7</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
</tbody>
</table>

This is how a term average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
<th>Quality</th>
<th>Credits</th>
<th>Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry 103</td>
<td>B+</td>
<td>3.3</td>
<td>3</td>
<td>4</td>
<td>9.9</td>
</tr>
<tr>
<td>English 151</td>
<td>C-</td>
<td>1.7</td>
<td>3</td>
<td>4</td>
<td>5.1</td>
</tr>
<tr>
<td>DEA 145</td>
<td>B</td>
<td>3.0</td>
<td>4</td>
<td>6</td>
<td>12.0</td>
</tr>
<tr>
<td>CEE 100</td>
<td>B</td>
<td>3.0</td>
<td>3</td>
<td>6</td>
<td>9.0</td>
</tr>
<tr>
<td>DEA 111</td>
<td>C</td>
<td>2.0</td>
<td>3</td>
<td>3</td>
<td>6.0</td>
</tr>
</tbody>
</table>

Total: 16 42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

Resolved, that:

A. the S-U system have symbol equivalents such as uniform within the university: “S” means C- or above; “U” means D-, D-, or failure.

B. S-U options be chosen by the student during the first three weeks of the term.

C. The Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.

D. Course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades.

The rules for the S-U option are further defined by each of the academic units. They are as follows:

Agriculture and Life Sciences (A) Must have 100 credit hours with A, B, C, D grades.

(b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

Architecture, Art, and Planning. (a) All courses specifically required for a degree excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire course is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission.
A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

**CHANGES IN GRADES**

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

**OFFICIAL TRANSCRIPTS**

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, 222 Day Hall. There is a $2.00 fee per transcript.

**University Requirements for Graduation**

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

**PHYSICAL EDUCATION**

**Classes**

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

**Swim Test**

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

**STUDENT RESPONSIBILITIES**

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

**Student Records Policy**

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an
educational institution or party acting on its behalf. The law gives students the right to:

a) inspect and review their education records;

b) challenge contents of education records;

c) a hearing if the challenge is unsatisfactory;

d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;

e) prevent disclosure of personally identifiable information;

f) secure a copy of the institutional policy which includes the location of all education records**; and

g) file complaints with the Department of Education concerning institutional failure to comply with the act.

*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration each academic year. Students may rescind their no release request at any time in writing to the office of the university registrar.

### POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university’s policy on student educational records, and the U.S. Department of Education’s Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

- Student social security number
- Student identification number
- Courses elected
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing
- Academic and disciplinary actions
- Student or administrative committees

The most recent student educational records from previous educational agency or institution

Financial arrangements between the student and the university

Any other education record containing personally identifiable information

### Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to new and transfer students and is also available from the office of the dean of faculty. The policy is published in the Policy Notebook, available free of charge from the office of the dean of students.

### PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects.

Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects.

Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review.

Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee’s Executive Secretary, 120 Day Hall (255-5013). The guidelines are also available at the World Wide Web address www.osp.cornell.edu

### USE OF ANIMALS FOR COURSES

**Guidelines for Faculty and Students With Respect to the Use of Animals in Instruction**

**Background:** On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

**Guidelines**

1. For demonstrating certain principles and procedures the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery or in other experimental procedures, the course description that appears in the Announcement “Courses of Study” should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor in each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.

6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Director of the Cornell Center for Research Animal Resources (253-3520).

### Interdisciplinary Centers, Programs, and Studies

**ANDREW D. WHITE PROFESSORS-AT-LARGE**

726 University Avenue (255-0832).

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

**Term Ending in 1998**

Diaconis, Persi, mathematical statistician

Levertov, Denise, poet and critical writer

**Term Ending in 1999**

Mitchell, Juliet, psychoanalyst and feminist theorist

Mosse, George, historian
Analysis (and Differential Equations)

The Cornell Center for the Environment (CfE), with the goals of enhancing the quality of life, the conservation of natural resources for a sustainable future. The Center serves as a hub for interdisciplinary environmental research; and coordinates outreach programs to enhance the quality of life, encouraging economic vitality, and promoting the conservation of natural resources for a sustainable future. The Center serves as a clearinghouse for environmental information; initiates environmental courses and curricula at both the graduate and undergraduate levels; facilitates interdisciplinary environmental research; and coordinates outreach programs that assist state, federal, and local government, private organizations, businesses, and individuals in assessing and solving environmental problems.

**Programs of Study**

Various departments, centers, and institutes across the campus are involved in teaching and research of potential interest to students wishing to pursue environmental studies. A brochure listing undergraduate environmental course offerings is available from the Center (telephone: 255-7535, www.http://www.cfe.cornell.edu/coursebook/, or email: cufe@cornell.edu). Students with this interest most often study in one of the following areas:

- Agricultural and Biological Engineering
- Agricultural, Resource, and Managerial Economics
- Architecture
- Biology and Society
- City and Regional Planning
- Civil and Environmental Engineering
- Design and Environmental Analysis
- Development Sociology
- Ecology and Evolutionary Biology
- Environmental Toxicology
- Natural Resources
- Plant Pathology
- Regional Science
- Rural Sociology
- Science and Technology Studies
- Soil, Crop, and Atmospheric Sciences

Program options for focusing on environmental issues are offered in a number of departments: (1) ecosystems science through the Section of Ecology and Systematics; and the Department of Natural Resources; (2) remote sensing through the Departments of Civil and Environmental Engineering; and Soil, Crop, and Atmospheric Sciences; (3) water resources primarily through the Department of Agricultural and Biological Engineering; (4) waste management through the Departments of Environmental Engineering; Agricultural and Biological Engineering; and Agricultural, Resource and Managerial Economics; (5) environmental policy through Toxicology, Natural Resources, and City and Regional Planning; (6) and biological resources through the Division of Biological Sciences.

The graduate field of environmental toxicology offers a multidisciplinary science program leading to a Ph.D. or M.S. degree. The three major areas of concentration in the program are: cellular and molecular toxicology; food and nutritional toxicology; and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry and private research institutes and governmental agencies. Page 29 lists the courses and describes the program in more detail.

In response to a demand for individuals who can bridge the gap between the technical, social, and managerial aspects of environmental problems, a new multidisciplinary Master of Professional Studies (Age.) degree program in environmental management will begin in September, 1997. In this curriculum, students will undertake preparation in the fields of Natural Resources; Agricultural Economics; Soil, Crop, and Atmospheric Sciences; Agricultural and Biological Engineering; and Development Sociology will be eligible to undertake a concentration in environmental management. Students in this program will be expected to take courses that will enhance or build upon their education and in addition will enroll in a common core of courses in science and technology of environmental management; environmental systems and social systems; environmental and resource economics, environmental regulation; and an intensive field project. These core courses are intended to provide students with the knowledge, skills, and insights that will enable them to function effectively as managers at various levels in the private, public, and voluntary sectors.

An undergraduate program in the Science of Earth Systems, available to students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering, highlights the study of the Earth as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The curriculum coalesces Cornell's strengths across a broad range of earth and environmental sciences to prepare students with a rigorous scientific foundation for the study of the Earth system. The program is described in more detail on page 21.

Student employment opportunities are available through programs in the Center for the Environment. The core programs include the Water Resources Institute; the Institute for Comparative and Environmental Toxicology; the Cornell Waste Management Institute; and the Institute for Resource Information Systems. Other programs of the Center include the Cornell Institute for Research in Chemical Ecology, the Watershed Science and Management Initiative; the Cornell Program in Environmental Sciences for Educators and Youth; the Cornell Program on Breast Cancer and Environmental Risk Factors in New York State; the Work and Environment Initiative; the Cornell Local Government Program; the Ocean Resources and Ecosystems Program; and the Cornell Program on Environmental Conflict Management.

Students interested in the environment will also find many organizations, resources, and activities beyond the classroom setting at Cornell. The CfE sponsors guest lecturers and co-hosts conferences with a variety of departments across the campus. Providing a forum for the diversity of environmental interests and perspectives, the student-produced publication, CfE's The Cornell Forum for Environmental Issues, seeks to promote the sharing of environmental information within and around the Cornell community. Other environmental organizations on campus include, but are not limited to, the Compost Club, Cornell Greens, Cornell Laboratory of Ornithology, Earthrise Committee (Ecology House), and Eco-Justice.

**THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES**

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies was established in 1961 to encourage, coordinate, and support comparative and interdisciplinary research on international subjects and was named for its founder in 1991. It is one of the largest and most diverse centers in the United States. Currently it oversees six Title VI National Resource Centers (East Asia, Latin American Studies, Slavic and East European Studies Program, South Asia, Southeast Asia, and Western Societies), as well as sixteen topical programs and the university study-abroad program. More than 500 faculty members voluntarily collaborate in the center's programs and well over 300 graduate students are involved directly in its international programs. Undergraduate concentrations in International Relations and Modern European Societies serve 285 students.

Cornell is committed to the application and expansion of its resources to study the global community in all its complexity. These resources include a faculty of preeminent scholars and teachers, excellent research facilities, ability to teach forty-five languages, and a library system with more than 2,500,000
Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Psychology, Linguistics, and Philosophy, as well as Modern Languages and Mathematics (College of Arts & Sciences), Computer Science (College of Arts & Sciences and College of Engineering), Human Development & Family Studies (College of Human Ecology), Neurobiology & Behavior (Division of Biological Sciences), Education (College of Agriculture and Life Sciences), and the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see “Cognitive Studies Concentration” in the College of Arts and Sciences section. Contact Sue Wurster (255-6431 or cogst@cornell.edu).

Graduate Programs

At the graduate level Cornell offers a graduate field minor in cognitive studies. Cornell’s unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, or Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Carol Rosen, director of graduate studies, 311 Morrill Hall, (255-0722; cgrl@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section “Special Programs and Interdisciplinary Studies.”
CORNELL ABROAD

WWW home page: http://www.einaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a broad range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree, at a cost that is generally no greater than for study on campus.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in approximately 40 countries. The following list includes those programs chosen most frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA
Botswana, Cameroon, Kenya, Tanzania: School for International Training;
Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);
Kenya: Wildlife Management (School for Field Studies); Kenya Semester Program (St. Lawrence University);

ASIA
China: Peking and Nanjing Universities (CIEE);
Hong Kong: Chinese University of Hong Kong;
Indonesia: Institut Keguruan Dar Ilmu Pendidikan (IKIP) in Malang (CIEE);
Japan: *Kyoto Center for Japanese Studies through a Stanford University-led consortium, and various other university programs;
Korea: Yonsei University;
Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;
Thailand: Khon Kaen University (CIEE);
Vietnam: University of Hanoi (CIEE)

AUSTRALIA
Australia National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales, Sydney; University of New

England, Armidale; University of Queensland, Brisbane; University of Wollongong; University of Western Australia, Perth; School for International Training; Sydney Internship (Boston University);

EUROPE
Denmark: *Denmark's International Study Program (DIS);
France: *EDUCO (Cornell and Duke in Paris) at Universite de Paris VII, Paris I, Institut d’Etudes Politiques de Paris (Sciences Po); Critical Studies Program at the University of Paris (CIEE);
Germany: various university-based study abroad programs including the Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg;
Greece: College Year in Athens;
Ireland: University of Limerick; Trinity College and University College, Dublin;
Italy: Cornell College of Art, Architecture and Planning Program in Rome; Intercollegiate Center for Classical Studies in Rome; programs in Florence and other cities;
Russia: St. Petersburg University (CIEE); Moscow International University (American Council of Teachers of Russian);
Spain: *Cornell-Michigan-Penn program at the University of Seville;
Sweden: *Swedish Child Care and Family Policy Internship at the University of Goteborg, Agricultural College of Sweden, Uppsala; The Swedish Program at the University of Stockholm;
United Kingdom: *Direct enrollment at: University of Bath; University of Birmingham; University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Lancaster; University of Manchester; University of Nottingham; Oxford University; University of Reading; University of St. Andrews, University of Sussex; University of Warwick; University of York; University of London: King's College, University College, Imperial College of Science and Technology, and the London School of Economics and Political Science; School of Oriental and African Studies, School of Slavonic and East European Studies.
Students studying at these 22 British universities enjoy admissions, advising, and counseling services, as well as an array of cultural activities, provided by the Cornell-Brown-Penn London Centre.

LATIN AMERICA, CENTRAL AMERICA, AND THE CARIBBEAN
Costa Rica: School for Field Study; Universidad National (Heredia);
Ecuador and Jamaica: Partnership for Service Learning;
Honduras: Escuela Agricola Panamericana (Zamorano);
Mexico: Instituto Tecnologico y de Estudios Superiores de Monterrey; Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana;

MIDDLE EAST
Egypt: American University in Cairo;
Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;
Morocco: School for International Training

Other Locations
Cornell students are not limited to the locations listed above. In recent years, they have also studied in Argentina, Austria, Brazil, Colombia, Czech Republic, Dominican Republic, India, New Zealand, the Philippines, Poland, Puerto Rico, Switzerland, Turkey, Venezuela, and elsewhere.

Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad; they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least 20 hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count student abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended, especially for students enrolling in non-English speaking universities.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available in the Cornell Abroad Office, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, ask questions of the staff, and meet with the associate director to gather information. The Cornell Abroad website is a good place to browse through program offerings and links to universities worldwide. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a one-page written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both college study abroad and faculty advisers, Arts and Sciences, Human Ecology, and Industrial and Labor Relations students submit applications to their college for forwarding to Cornell Abroad, Agriculture and Life Sciences, Architecture, Art and Planning, Engineering and Hotel Administration, students submit applications directly to Cornell Abroad. Cornell Abroad reviews all applications and forwards them to programs and universities as necessary. All
Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. Students are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students can enroll for a full load of courses abroad, according to the standards of their home institution, and normally receive 30 credits per semester, or 12 to 20 credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the names of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available outside universities in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Israel, Italy, Japan, Korea, Netherlands, People's Republic of China, and Sweden. Cornell students who participate in such non-university enrollment programs in a non-English-speaking country with English-language coursework are required to take at least one language course per semester as part of their program of study. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in university halls of residence, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs
Students studying abroad on Cornell programs in Copenhagen, Goteborg, Kyoto, Nepal, Paris, Seville, and the United Kingdom in 1997–98 pay a uniform study abroad tuition of $13,800 per semester, which covers, tuition, housing, orientation, some field trips and excursions. Meals and airfare may also be included in particular Cornell programs. Students studying abroad on all other programs in 1997–98 pay the tuition and other costs charged by their programs, and a Cornell international program tuition of $3,200 per semester or $6,000 for the full academic year. The international program tuition covers the direct and indirect costs of study abroad to the university, including financial aid for study abroad students.

Financial Aid
All students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for financial aid, consistent with general university policy; this applies to all programs, whether run directly by Cornell or not.

Security Abroad and Related Issues
The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by Cornell and universities other than Cornell; they are advised to inquire about those institutions' policies regarding the completion of academic work and the financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs will also consider the completion of academic programs even under unusual circumstances and have tuition refund policies that contain a prorated formula.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad (474 Uris Hall); Beatrice B. Szekely Ph.D., associate director; Elizabeth R. Ohkido, student services; Kathy Lynch, accounts coordinator. The Cornell Abroad library contains an extensive collection of university catalogs, study abroad program brochures, course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and study abroad. In the event of an emergency, students, staff, and faculty can contact programs in a series of information meetings that is announced in the Cornell Daily Sun. Please consult the Cornell Abroad World Wide Web home page at http://www.cuinabroad.cornell.edu/abroad.
Tuition
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing
Apartments are rented at the Cornell Center during the academic year and during the summer. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

Applications
Application forms are available from the Cornell-in-Washington office at 471 Hollister Hall. Applications should be submitted the semester prior to participation.

Information
Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information on externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 471 Hollister Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

**CORNELL INSTITUTE FOR PUBLIC AFFAIRS**

473 Hollister Hall (255-8018)

The Cornell Institute for Public Affairs (CIPA) is a university-wide two-year graduate professional program leading to a Master of Public Administration degree. Its mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. We use Cornell's cutting-edge strengths as a major research university to understand rapidly evolving public interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Examples of Cornell's extraordinary breadth of policy-related specialties include science and technology; health, education, and social services administration; agricultural policy; nutrition; international development; environmental studies; peace studies; labor relations; city and regional planning; and ethics in public life. These areas of expertise provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's colleges as well as the Cornell Law School, with whom a joint M.P.A./J.D. degree is offered, and the Johnson Graduate School of Management. The CIPA program has been developed to offer both a sound foundation in the principles, tools, and techniques for a career and leadership in public affairs and the flexibility to accommodate and encourage the special policy-related interests of its students.

The curriculum is structured into three parts: four required core courses taken by all CIPA Fellows; area requirements focused on developing the wide variety of skills necessary for the public policy professional; and sectoral specialties, focused on the particular interest of the Fellow and leading to a thesis.

The Core Courses
These courses have been developed specially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 720) This course is designed to give students the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

CIPA II: Public Political Economy (ECON 639 or CEE 528) Techniques of economic analysis are used to understand the need for various public programs, to estimate the value of new programs and policies, to explore desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621) This course is focused on the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (SOC 526) This course incorporates the study of analytic methods, expert statistics, and simulation models, to study the structure of public programs and to assess their consequences.

**The Area Requirements**
In addition to the four core courses, Fellows must also complete satisfactorily a series of foundation subject or area requirements that are essential to the training of public policy professionals. These areas are: methodology, politics and policy, economics, math and statistics, finance, regulation, ethics, and public law.

**The Sectoral Specialty**
At least three courses taken by individual Fellows will be in their sectoral specialty or "concentration." These are widely divergent and depend on the unique interests and background of the individual student.

**The CIPA Thesis**
Each Fellow must complete a thesis that applies the conceptual tools, theories, and analytical techniques to a problem in the Fellow's area of sectoral expertise. As the culmination of each M.P.A. course of study, this thesis must be both critical and creative, reflecting the Fellow's ability to identify, analyze, and generate supportable solutions to important public policy questions.

**Additional Requirements**
All M.P.A. candidates must spend four semesters in residence to complete the degree.

**The Faculty**
In addition to our four core faculty members (Richard E. Schuler, director, economics and civil and environmental engineering; Steven Caldwell, sociology; Arch Dotson, government; and David Lewis, city and regional planning) who offer the four core courses and advise the Fellows in the development of their programs of study, more than one hundred faculty members from nearly all colleges at Cornell participate in the graduate field of public affairs and policy, and they are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

**Special Programs**
A combined four-year MPA/JD degree program is available. For selected Cornell undergraduates who are accepted by the end of their junior year, a combined five-year bachelors/MPA program can be arranged.

**Application**
Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. Students requesting aid; however, must submit applications by March 1 for consideration. For an application or more information, contact Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: cipa@cornell.edu; web site: www.cipa.cornell.edu/cipa/).

**Financial Support**
As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any one student full support. Therefore, applicants are encouraged to explore and exploit all available sources of external funding.

For an application or more information, contact Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: cipa@cornell.edu).

**CORNELL PLANTATIONS**

One Plantations Road (255-3020)
e-mail: cu_plantations@cornell.edu

A place of exceptional diversity and opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its nearly 3,000 acres include the woodlands and gorges bordering campus, as well as specialized gardens and the 100+ acre arboretum that features a field flower meadow and trees and shrubs native to New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines that include agronomy, biology, ecology and systematics, entomology, floriculture and ornamental horticulture, fruit and vegetable science, geology, landscape architecture, natural resources, plant breeding, and plant pathology. While much of Cornell Plantations'
resources are on or near campus, several thousand acres in and around Tompkins County. EPL aims to enrich existing departments with dilemmas and responsibilities for the public world, ways of thinking that are realistic and urgent problems of the real world. In politics and the law, we confront questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In ethics and the environment, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, and climate change.

The university-wide Program on Ethics & Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing anything of their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics & Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central educational interests lie elsewhere, whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually serious and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under “Special Programs and Interdisciplinary Studies”).

**EPL Core Courses**

- PHIL 246 Ethics and the World Environment
- PHIL 247 Ethics and Public Life
- PHIL 294/GOVT 294 Global Thinking
- PHIL 342 Law, Society, and Morality
- PHIL 343 Political Obligation and Civil Disobedience
- GOVT 469/Law 469 Limiting War: The Morality of State Violence
- GOVT 412 Voting and Political Participation
- GOVT 466/PHIL 468 Law and Gender Discrimination
- GOVT 468/PHIL 368 Global Climate and Global Justice
- GOVT 491/492 Normative Elements of International Relations

**Related Courses**

- B&SOC 206/S&T/S 206 Ethics and the Environment
- CEH 356 Economics of Welfare Policy
- CRP 549 Ethics and Practical Judgment in Planning Practice
- ENGR 341/AGN 350 Engineering Ethics
- GOVT 474/PHIL 446 Topics in Social and Political Philosophy
- HSS 658 Ethics, Public Policy, and American Society
- IILRR 306 Women at Work
- ILRBC 401 My Brother’s Keeper
- ILRBC 482 Ethics at Work
- ILRBC 488 Liberty and Justice For All
- ILRBC 604 Theories of Equality and Their Application in the Workplace
- LAW 655 International Human Rights
- LAW 667 Law and Ethics of Lawyering
- LAW 718 Ethnics Conflict and International Law
- NBER 578 Business Ethics
- NTR 407 Religion, Ethics, and the Environment
- NTR 411 Seminar in Environmental Ethics
- PHIL 145 Contemporary Moral Issues
- PHIL 241 Ethics
- PHIL 245 Ethics and Health Care
- PHIL 246 Ethics and the Environment
- PHIL 341 Ethical Theory
- PHIL 344 History of Ethics: Ancient and Medieval
- PHIL 345 History of Ethics: Modern
- PHIL 346 Modern Political Philosophy

**Program in Real Estate**

219 West Sibley Hall (255–1748)

The two-year Master of Professional Studies (MPS) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate is housed at the School of Hotel Administration, which serves as the integrating organizational unit for financial management and administration of academic real estate activities on and off campus. The Field of Real Estate is a committee of faculty members from several different colleges that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of coursework needed to complete the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Core courses in financial management, economics, real estate finance and investment, market analysis, project development, housing economics, regulation, and environmental issues will be required during the first year of study. During the second year, students take additional core courses and elective courses in their areas of concentration. Many concentration options are possible, which are structured from the hundreds of related courses taught at Cornell University (e.g., an international real estate concentration).

**Admissions**

Admissions procedures for the MPS (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must complete a bachelor’s degree with a good academic record. They must achieve the Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student’s academic and professional work must be submitted. There is no experience requirement for admission. Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores.

For more information, contact Professor Robert Abrams, director of the Program in Real Estate (607–255–1748) or Professor Matthew Drennan, director of graduate studies (607–257–7276) or e-mail real_estate@cornell.edu.

**Science of Earth Systems: An Inter-College Program**

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying each of these individual systems in isolation. The interconnection of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

A new major, Science of Earth Systems (SES), is now available for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program...
of study emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell’s strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Students can enter the major in the College of Agriculture and Life Sciences and in the College of Arts and Sciences. In the College of Engineering, the SES program is one of two options in the Geological Sciences major.

The SES Curriculum

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In addition, students take a two-credit SES Colloquium, which is designed to introduce students about the field and to provide a sense of community for SES students and faculty from the several colleges. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic math and science sequences.

The SES program provides strong preparation for graduate school in any one of the Earth systems sciences and related engineering fields. The major can also serve as excellent preparation for an advanced degree in environmental law or policy, a teaching degree, or for employment in one of many environmentally oriented careers with the B.S. degree.

The requirements for the major are summarized as follows:

1. MATH 191, 192 (or MATH 111, 112)
2. Two calculus-based physics courses:
   (e.g., PHYS 207–208);
3. Two introductory chemistry courses:
   (e.g., CHEM 207–208);
4. Two biology courses: (e.g., BIO G 101/103-102/104 or BIO G 109–110);
5. Two additional courses in higher mathematics and/or basic sciences;
6. Colloquium in the Science of Earth Systems (SYS 101 or 102);
7. Four core courses in the Science of Earth Systems (SYS 301, 302, 321, and 402);
8. Two additional courses in basic math or sciences (for B.A.);
9. Four intermediate to advanced-level courses approved by the SES Curriculum Committee. These courses should build on the core sequence and include upper-level courses with prerequisites in the basic sciences and mathematics. The selection of these courses can be used to prepare for careers or graduate study in specific environmental science disciplines such as geology, hydrological sciences, biogeochemistry, ecology, oceanography, and atmospheric sciences. Effective combinations of these disciplines are also possible.

SES Course Descriptions

Note: Class meeting times are accurate at the time of publication. If changes are necessary, new information will be provided as soon as possible.

**SES 101-102 Science of Earth Systems Colloquium (enroll in ABEN 120–121, GEOL 122–124, or SCAS 101–102)**
101, fall; 102, spring. 2 credits each term. S-U grade only. 101 is prerequisite for 102. One lecture, one recitation. T 1:25. Staff.

Weekly seminars, field trips, and hands-on learning experiences in current topics in the study of the earth system. Introduces the student to scientific issues relating to understanding our planet and managing the environment. (http://www.scas.cit.cornell.edu/ses/)

**SES 301 Climate Dynamics (enroll in ASTRO 331 or SCAS 331)**
Fall. 4 credits. Prerequisite: Math 112 or 192 or equivalent. Lecs, M W F 1:25; rec, W 2:50. K. Cook, P. Gierasch.
The purpose of this course is to develop a physical understanding of the climate system. Processes that determine climate and contribute to its change are discussed, including comparisons with the climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

**SES 302 Evolution of the Earth System (enroll in GEOL 302 or SCAS 332)**
Spring. 4 credits. Prerequisites: Math 112 or 192 and Chem 207 or equivalent, or instructor’s approval. Lecs, M W F 11:15; recitation TBA. W. White, B. Isacks, W. Allmon, K. Cook.
The co-evolution of life and the earth system over three time scales: origin of the earth and life and earth’s early history; plate tectonics, continental drift and climate changes during the past billion years; and mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting the paleontological, geochemical, and tectonic information preserved in the rock record. (http://www.geo.cornell.edu/geology/classes/ses302.html)

**SES 321 Biogeochemistry (enroll in GEOL 321 or NTRSES 321)**
Fall. 4 credits. Prerequisites: college-level biology and chemistry. Lecs T R 12:20–2:15. L. Derry and J. Yavitt.
The cycling of elements at the earth’s surface through biologically governed processes and fluxes. Topics include weathering and acid-base chemistry, nutrient limitation and recycling in terrestrial and marine systems, anthropogenic pollution, isostopic tracers, and mathematical modeling of element fluxes.

**SES 402 Mechanics in the Earth and Environmental Sciences (enroll in ABEN 385)**
Spring. 2 credits. Prerequisites: 2 semesters of calculus. Lecs, M W F 10:10-11:00; rec, F TBA. P. Baveye, J.-Y. Parlange, W. Brutsaert.
The study of the earth and the environment requires an understanding of the physical processes within and at the surface of the earth. This course encourages the students to develop a broad working knowledge of mechanics and its application to the earth and environmental sciences, providing the background necessary to study the professional literature.

**Advising**

Students will be matched with an SES adviser according to the student’s interests and the college in which the student is enrolled. The adviser will assist the student in selecting the four upper-level courses required by the SES Program. Several example curricula have been designed as guides for students in each of the colleges, to demonstrate how the college and SES Program requirements are met.

**Entering the SES Program**

Transfers into the program during the freshman and sophomore years will be relatively straightforward for students who have already begun a calculus sequence and have taken courses in the basic sciences. Other interested students, either junior- or senior-level science and math students or those from other fields, should contact an SES adviser to explore the possibility of entering the SES program.

For more information on the SES program and classes, see the Web page (http://www.geo.cornell.edu/SES/SES_home.html) and contact:

- College of Agriculture and Life Sciences: K. H. Cook (Soil, Crop, and Atmospheric Sciences), R. W. Howarth (Ecology and Systemsatics), J. Parlange (Agricultural and Biological Engineering);
- College of Arts and Sciences: T. Dawson (Biological Sciences), P. Gierasch (Astronomy), B. L. Isacks (Geological Sciences);
- College of Engineering: W. Brutsaert (Civil and Environmental Engineering), B. L. Isacks (Geological Sciences), M. Kelley (Electrical Engineering), J. Parlange (Agricultural and Biological Engineering).

**DEPARTMENT OF STATISTICAL SCIENCE**

610 Rhodes Hall (255–8066)
The University-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels. Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related course work. Students in the Field of Statistics plan their graduate program in consultation with their Special Committee. For detailed information on opportunities for graduate study, students should contact the director of graduate studies, 610 Rhodes Hall. The department also offers an undergraduate program through the Biometrics Unit in the College of Agriculture and Life Sciences. Undergraduate majors and certificate programs are currently under development for other colleges. For information, contact the undergraduate coordinator, Professor Steven Schwager (424 Warren Hall, 255–1644). Statistics courses offered by the department listed below will fill distribution requirements in many of the colleges.
The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider BTRY 601-602 or BTRY 215.

**STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)**

Fall or spring. 1–3 credits. S-U grades only.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**STBTRY 495 Statistical Consulting (enroll in BTRY 495)**

Spring. 2 credits. S-U grades only.

Limited to undergraduates. Prerequisites or co-requisites: BTRY 409 and 602 or permission of instructor.

Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

**STBTRY 400 Biometry Seminar (enroll in BTRY 400)**

Fall or spring. 1 credit. S-U grades only.

Prerequisite: BTRY 200 or by permission of the instructor.

Students will attend weekly seminar; the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take course twice.

**STBTRY 408 Theory of Probability (enroll in BTRY 408)**

Fall. 4 credits. Prerequisite: MATH 112, 122 or 192, or permission of instructor.

An introduction to probability theory, foundations, combinatorics, random variables and their probability distributions, expectations, generating functions and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

**STBTRY 409 Theory of Statistics (enroll in BTRY 409)**

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

**STBTRY 602 Statistical Methods II (enroll in BTRY 602)**

Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.

A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation, multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs: comparing two or more regression lines; and analysis of covariance.

Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

**STBTRY 603 Statistical Methods III (enroll in BTRY 603)**

Fall or spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1997–98; next offered spring 1999.

Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

**STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)**

Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1998–99.

Applications of experimental design including such advanced designs as split plot, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

**STBTRY 607 Nonparametric and Distribution-Free Statistical Methods (enroll in BTRY 607)**

Spring. 1/3 of the term. 1 credit. S-U grades only. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1998–99.

Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented; sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs, comparisons among several means; correlation and regression; goodness-of-fit, and tests based on randomization of the data.

**STBTRY 639 Epidemiology Seminar (enroll in BTRY 639)**

Spring. 1 credit. Variable. S-U grades only. Permission of instructor. This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**STBTRY 662 Mathematical Ecology (enroll in BTRY 662)**

Fall. 3 credits. S-U grades only. Prerequisites: a year of calculus and a course in statistics.

Mathematical and statistical analysis of populations and communities: theory and
methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

**STBTRY 672 Topics in Environmental Statistics (enroll in OR&E 672 or BTRY 672)**

Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor. This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

**STBTRY 682 Statistical Methods for Molecular Biology (enroll in BTRY 682)**

Spring. 2 credits. S-U only. Prerequisite: permission of instructor. Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary. The course may be repeated for credit.

**STBTRY 694 Graduate Special Topics in Biometry and Statistics (enroll in BTRY 694)**

Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**STBTRY 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)**

Fall, spring, or summer. 1–3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

**STBTRY 717 Linear Models (enroll in BTRY 717)**

Spring. 3 credits. S-U grades only. Prerequisites: BTRY 409 or equivalent and BTRY 417 and 602. Offered alternate years. Not offered 1997–98; next offered spring 1999. Analysis of variance and estimation procedures for unequal-subclass-numbers data. Cell means models for the 1-way classification, nested classifications, and the 2-way crossed classification, both with and without interactions; introduction to multinormal variables and the distribution of quadratic forms. The general linear model (in matrix and vector form), estimability, and testable hypotheses. Overparameterized models, restricted models, multifactor cases, covariables, computing.

**STBTRY 795 Statistical Consulting (enroll in BTRY 795)**

Fall or spring. 2 credits. S-U grades only. Limited to graduate students. Participation in the Biometrics Unit consulting service; faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

**Engineering Statistics Unit**

**STENGR 270 Basic Engineering Probability and Statistics (enroll in ENGRD 270 or OR&IE 270)**

Fall or spring. 3 credits. Prerequisite: first-year calculus. This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

**STENGR 310 Introduction to Probability and Random Signals (enroll in ELE E 310)**

Spring. 4 credits. Prerequisite: Mathematics 294. This course may be used in place of Engr 270 to help satisfy the engineering distribution requirement. It can then also meet a system design requirement if 3 additional credits of field-approved or out-of-field elective are taken. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the probability of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions, nonlinear transformations of data, expectation, correlation, and the central limit theorem.

**STENGR 360 Engineering Probability and Statistics II (enroll in OR&E 360)**

Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, and reliability. Hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

**STENGR 361 Introductory Engineering Stochastic Processes I (enroll in OR&E 361)**

Spring. 4 credits. Prerequisite: OR&E 360 or equivalent. Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include Poisson process, Markov chains, renewal theory, models for queuing and reliability.

**STENGR 411 Random Signals in Communications and Signal Processing (enroll in ELE E 411)**

Fall. 3 credits. Prerequisite: ELE E 301 and 310 or permission of instructor. Introduction to models for random signals in discrete and continuous time, Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**STENGR 475 Regression (enroll in OR&E 475)**

Spring. First half of term. 2 credits. Prerequisite: ENGRD 270. Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

**STENGR 476 Experimental Design I (enroll in OR&E 476)**

**STENGR 511 Error-Control Codes (enroll in ELE E 521)**

Fall. 4 credits. Prerequisite: ELE E 301, 521, or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include Hamming codes, group codes, the standard array minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-Ramanujan-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

**STENGR 512 Fundamental Information Theory (enroll in ELE E 562)**

Fall. 4 credits. Prerequisite: ELE E 310 or equivalent. Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multitermed configurations. Gaussian sources and channels.

**STENGR 513 Communication Networks (enroll in ELE E 563)**

Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor. Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets: using various protocols, TDMA. Flow control and capacity assignment algorithms for wideband circuit-switched and ATM networks.

**STENGR 514 Decision Making and Estimation (enroll in ELE E 564)**

Fall. 4 credits. Prerequisite: ELE E 411. Coregistration in ELE E 411. An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communications, detection, pattern recognition, and statistical signal processing. Topics include Bayes, minimax and Neyman-Pearson decision theories; Bayes and maximimum likelihood point estimation; Cramer-Rao bound efficient and consistent estimation; spectral estimation, and robust models for signal extraction.

**STENGR 517 Artificial Neural Networks (enroll in ELE E 577)**

Fall. 4 credits. Prerequisites: ELE E 310; ELE E 411 recommended.
Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide our primary analytical approach to design and analysis of neural networks. The course will cover mathematical and computer-based design capabilities of feedback-forward nets (multilayer perceptrons) that can serve as pattern classifiers.

STENGR 523 Introductory Engineering Stochastic Process I (enroll in OR&IE 523)
Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

STENGR 560 Engineering Probability and Statistics II (enroll in OR&IE 360)
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and to simulate models for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

STENGR 561 Queuing Theory and Its Applications (enroll in OR&IE 561)
Spring. 3 credits. Prerequisite: OR&IE 561 or permission of instructor.

STENGR 563 Applied Time-Series Analysis (enroll in OR&IE 563)
Fall. 3 credits. Prerequisites: OR&IE 361 and OR&IE 270, or permission of instructor. Not offered 1997–98.
The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

STENGR 570 Statistical Analysis of Reliability Data (enroll in OR&IE 570)
Spring. 3 credits. Prerequisite: OR&IE 475 or OR&IE 563 or equivalent. Not offered 1997–98.

STENGR 577 Quality Control (enroll in OR&IE 577)

STENGR 580 Design and Analysis of Simulated Systems (enroll in OR&IE 580)
Fall. 4 credits. Prerequisites: programming experience and OR&IE 360/560, or permission of instructor. Note: OR&IE 360/560 may be taken concurrently.
Digital computer programs to simulate the operation of complex discrete, systems in time. Modeling, program organization, pseudo-random-variable generation, simulation languages, statistical considerations, applications to a variety of problem areas.

STENGR 585 Probability (enroll in OR&IE 585)
Spring. 4 credits. Prerequisite: one semester calculus-based probability course.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

STENGR 586 Applied Stochastic Processes (enroll in OR&IE 586)
Fall. 4 credits. Prerequisite: one semester calculus-based probability course.
An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

STENGR 590 Reliability Data (enroll in OR&IE 590)
Fall. 3 credits. Prerequisite: OR&IE 360/560 may be taken concurrently.
The second course in reliability and quality control covers reliability data. Topics include survival data, estimation and hypothesis testing. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

STENGR 672 Selected Topics in Environmental Statistics (enroll in OR&IE 672 or ENGR 672)
Fall or spring. 2 credits. Prerequisite: ENGR 270 or equivalent.
This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

Mathematical Statistics and Probability Unit

STENGR 670 Statistical Principles (enroll in OR&IE 670)
Fall. 4 credits. Prerequisite: Real analysis at the level of Math 413 and a previous one-semester course in calculus-based probability.
Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

STENGR 671 Intermediate Applied Statistics (enroll in OR&IE 671)
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent.
Review of distribution theory of special interest in statistics, normal, chi-square, binomial Poisson, t, and F; introduction to statistical decision theory, sufficient statistics, theory of minimum variance unbiased point estimation, maximum likelihood and Bayes estimation, hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

STENGR 672 Selected Topics (enroll in MATH 672)
Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221. Some knowledge of multivariate calculus helpful but not necessary.
Classical and recently developed statistical procedures are discussed in a framework that emphasizes the basic principles of statistical inference and the rationale underlying the choice of these procedures in various settings. These settings include problems of estimation, hypothesis testing, and sample selection.

STENGR 673 Simulation (enroll in MATH 673)
Fall. 4 credits. Prerequisite: Mathematics 471 or equivalent and knowledge of linear algebra such as taught in Mathematics 221.
This is a second-semester undergraduate course on probability. It covers topics from
renewal theory, martingales, discrete and continuous time Markov chains, Brownian motion and related diffusion processes, and applications to queueing theory and finance. Theoretical as well as applied aspects of the subject will be emphasized.

STMath 671-672 Probability Theory (enroll in MATH 671-672)
671 fall; 672 spring. 4 credits each.
Prerequisite: a knowledge of Lebesgue integration theory, or at least on the real line. Students can learn this material by taking parts of Mathematics 413-414 or 521. Prerequisite for Mathematics 672; Mathematics 671.

STMath 674 Introduction to Mathematical Statistics (enroll in MATH 674)
Spring. 4 credits. Prerequisite: Mathematics 671 or permission of instructor.
Topics include an introduction to the theory of point estimation, consistence, efficiency, sufficiency, and the method of maximum likelihood. Convexity and basic concepts of decision theory are introduced. Concepts of sequential methods may be discussed.

STMath 771-772 Seminar in Probability and Statistics (enroll in MATH 771-772)
771 fall; and 772 spring. 4 credits each.

STMath 777-778 Stochastic Processes (enroll in MATH 777-778)
777 fall; and 778 spring. 4 credits each.

Social Statistics Unit
STSSC 210 Statistical Reasoning I (enroll in ILRST 210)
Fall or spring. 3 credits. An introduction to the basic concepts of statistics and data analysis. Descriptive methods, mathematical models and inference procedures for univariate and bivariate data. Basic statistical designs, and introduction to probability and applications of the Binomial and Normal distributions. Estimation, confidence intervals and tests of significance for a population mean and proportion, simple linear regression, correlation and two-way contingency tables. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSSC 211 Statistical Reasoning II (enroll in ILRST 211)
Fall or spring. 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course.
A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include: statistical inference, simple linear regression, multiple linear regression, elements of time series analysis, and sample-survey design. Computer packages are used throughout the course.

STSSC 310 Statistical Sampling (enroll in ILRST 310)
Spring. 3 credits. Prerequisite: ILRST 211 or equivalent.
Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Course includes an applied project.

STSSC 311 Practical Matrix Algebra (enroll in ILRST 311)
3 credits.
A primer on matrices and matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis and for other "research methods" courses in various other disciplines. One goal of this course is to provide students with enough knowledge of basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norms); matrix inversion; linear transformation; eigenvalues; matrix decompositions; ellipsoids and distances; some applications of matrices.

STSSC 312 Applied Regression Methods (enroll in ILRST 312)
Fall. 3 credits. Prerequisite: ILRST 211 or equivalent.
Topics include; simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

STSSC 410 Techniques of Multivariate Analysis (enroll in ILRST 410)
Spring. 3 credits. Prerequisite: ILRST 312 or equivalent.
Topics include: multivariate normal distribution; sample geometry and multivariate distances; and several multivariate means, variances, and covariances. Students are instructed in the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSSC 510 Statistical Methods for the Social Sciences I (enroll in ILRST 510)
Fall. 3 credits.
A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation. Students are instructed in the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSSC 511 Statistical Methods for the Social Sciences II (enroll in ILRST 511)
Fall or spring. 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course.
A second course in statistics that emphasizes applications to the social sciences. Topics include: simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

STSSC 610 Seminar in Modern Data Analysis (enroll in ILRST 610)
3 credits. Prerequisite: two statistics courses or permission of instructor. Not offered 1997-98.
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, data reexpression, philosophy of data analysis, robust methods, statistical graphics, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices, and some experience using a computer.

STSSC 611 Statistical Consulting (enroll in ILRST 611)
3 credits. Prerequisite: linear algebra, knowledge of a programming language, and statistics at least through multiple regression. Not offered 1997-98.
A survey of new aspects of statistical computing. Topics include: basic numerical methods, numerical linear algebra, nonlinear statistical methods, matrix factorization, data reexpression, philosophy of data analysis, robust methods, statistical graphics, regression methods, and diagnostics. Designed for graduate students in the statistical sciences and related fields interested in new advances. Students may be instructed to write programs in a programming language of their choice.

STSSC 612 Statistical Classification Methods (enroll in ILRST 612)
3 credits. Prerequisite: ILRST 312 or equivalent, or permission of instructor. Not offered 1997-98.
An introduction to a variety of statistical techniques that assign objects to categories on the basis of observed characteristics of the objects. Course topics include (but are not limited to): discriminant analysis and its extensions and variations; nearest neighbor methods, classification and regression trees (CART); neural networks (for classification; and estimation of error of classification rules).
This course gives the probabilistic and statistical background for meaningful simultaneous equation models, nonlinear variables, dynamic regression models, linear squares, specification tests, instrumental conditional distributions, distributions theory, moments, transformations, hypothesis testing and econometrics; the testing, asymptotic test theory, and nonnested method of maximum likelihood, generalized computer software to gain experience.

This course covers the following topics: loss functions and utility theory, prior information and subjective probability, coherence, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, ancillarity, conditional properties of statistical procedures, and Barndorff-Nielsen's exact likelihood theory.

This course covers the following topics: loss functions and utility theory, prior information and subjective probability, coherence, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, ancillarity, conditional properties of statistical procedures, and Barndorff-Nielsen's exact likelihood theory.

Spring. 3 credits. Prerequisites: ILRST 210, ILRST 211 or ILRST 510, ILRST 511 or equivalent.

Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

This course covers the following topics: loss functions and utility theory, prior information and subjective probability, coherence, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, ancillarity, conditional properties of statistical procedures, and Barndorff-Nielsen's exact likelihood theory.

Spring. 3 credits. Prerequisites: ILRST 560 or equivalent.

This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include: components of expert systems, neural networks, regression-based systems, probability-based systems, uncertainty measures, dependency models, Bayesian and Markov networks, propagation of uncertainties, learning from data, and examples of applications. Students will use computer software to gain experience.

Spring. 4 credits. Prerequisite: Econometrics 519.

This course is a continuation of Econometrics 519 (Econometrics I) covering (1) statistics, estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing and (2) econometrics: the general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

Fall. 4 credits. Prerequisites: Economics 319-320 or permission of instructor.

This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics to be covered are (1) probability theory; probability spaces, random variables, distributions, moments, transformations, conditional distributions, distributions theory and the multinomial distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; (2) statistics; sample statistics, sufficiency, exponential families of distributions. Further topics in statistics will be considered in Economics 520.

Spring. 3 credits. Letter grade or S-U. Prerequisite: ILRST 312 or equivalent, or permission of instructor.

A course on regression for students in statistical sciences and related fields. Attempts to narrow the gap between the theory and practical application of the linear regression model. Classical and recently developed statistical procedures are discussed. Students will be expected to read articles and thoroughly analyze real-life data sets using computer-packaged programs. Topics include role of variables in regression equation, regression diagnostics (outliers, leverage points, influential observations, generalized linear models, errors in variables, and multicollinearity).

Spring. 3 credits. Prerequisite: ILRST 560 or equivalent.

This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include: components of expert systems, neural networks, regression-based systems, probability-based systems, uncertainty measures, dependency models, Bayesian and Markov networks, propagation of uncertainties, learning from data, and examples of applications. Students will use computer software to gain experience.

Spring. 3 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.

Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models, parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including unit root tests, cointegration, and permanent vs. transitory components.
PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY

213 Rice Hall (255-8008)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

Graduate Studies

The major in the graduate Field of Environmental Toxicology promotes training leading to the M.S. or Ph.D. degrees. It provides both breadth and depth in environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Specialization tracks include cellular and molecular toxicology, nutritional and food toxicology, ecotoxicology and environmental chemistry, and a minor concentration of risk assessment, management, and public policy. Research of the faculty associated with the program is focused on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) and with the ecosystems with which these organisms are associated.

Courses

Courses in environmental toxicology are cosponsored by the university academic departments and are open to all graduate students and to those undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below, and details of course content are provided elsewhere in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255-8008, e-mail: envtox@cornell.edu.

Tox 751 Professional Responsibilities of Toxicologists (Biological Sciences 751)
Tox 899 Master's Thesis and Research
Tox 999 Doctoral Thesis and Research

VISUAL STUDIES

Studio G, 726 University Ave. (255–6770) or Sb20A Center for Theatre Arts (254–2782)

Visual Studies as a distinct area of intellectual activity comprehends the analysis of visual forms, especially symbolic visual forms, from a range of historical, scientific, sociological, and aesthetic points of view. Images can be analyzed within a variety of contexts and by means of a variety of methods, and their study is therefore ideally conceived of in interdisciplinary terms. And since the creation of images has an important bearing on their analysis, visual studies concerns itself with practice as well as theory.

In addition to the courses listed below, which represent only a sampling of formal curricular offerings pertinent to visual studies, interested students should refer to the extensive offerings in Art, Architecture, Communications, Computer Science, History of Art, Design and Environmental Analysis, Theatre Arts, and the annual listings of offerings in the Society for the Humanities. Students interested in pursuing visual studies as an area of study should propose an "Independent Major in Visual Studies" following the same procedures as for any independent major in the school of Arts and Sciences. For additional information, contact Marilyn Kivchin (Theatre Arts).

Courses

Some of these courses may not be taught in 1997–98. For information about availability consult the appropriate departmental listings.

An Introduction to Architecture (Architecture 132)
Art and Politics in Twentieth-Century Latin America (History 424)
Art and Visual Thinking (Textiles and Apparel 125)
Asian American Images on Film (Asian American Studies 437)
African Cinema (African Studies 435)
Art, Design, and Visual Thinking (Textiles and Apparel 125)
Blacks in Communication Media (African Studies 303)
Chicanos and Film: Representations of La Raza (English 242)
Color, Form, Space (Art 110)
Contemporary French Culture Through Film (French 291)
Computer Art (Art 171)
Computer Graphics and Visualization (Architecture 374 and Computer Science 417)
Computer Vision (Electrical Engineering 547)
Design I and II (Design and Environmental Analysis 101–102)
Ethics in Media (Communications 420)
Fiction and Film in France (French Literature 499)
Film and Performance (Theatre Arts 413)
Framing Other Cultures (Anthropology 290 and Theatre Arts 290)
Fundamentals of 16-mm Filmmaking (Theatre Arts 377)
The Geometry of Tilings, Polyhedral and Structural Engineering (Mathematics 151)
German Film (German Studies 396)
Theatre Arts 396)

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, consumer economics and housing (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and business management. This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales and marketing. Areas of specialization include business management and marketing, farm business management and finance, and food industry management.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and related fields. Specialization is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Consumer economics and housing. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect these relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employed.

Sociology. The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas

Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the African Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs

Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registrar program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

### PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.

2. Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing. Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence.

3. Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.

4. Certain subjects are especially useful in specialized legal careers. For some, a broad scientific background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully.
These are the crucial tools for a sound legal education and a successful career. The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences. It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY
Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student’s other interests.

Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell University Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor’s and M.D. degrees. This is not a traditional “seven year program”; separate application to the Medical College is required. Further information about this procedure is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York, 14853-1601.

PREVETERINARY STUDY
There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admission to the College of Veterinary Medicine at Cornell, obtained by writing to the Office of Student Services, College of Veterinary Medicine, Cornell University, C-106 Schurman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor’s and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.
ADMINISTRATION
Daryl B. Lund, dean
Brian F. Chabot, associate dean
Vacant, assistant dean for public affairs
H. Dean Sutphin, associate dean and director of academic programs
Donald R. Viands, associate director of academic programs
W. Ronnie Coffman, associate dean and director of research
Anthony M. Shelton, associate director of academic programs
Donald R. Viands, associate director of academic programs
H. Dean Sutphin, associate dean and director of cooperative extension
R. David Smith, associate director of cooperative extension
Norman T. Uphoff, director of international agriculture
James E. Haldeman, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Mary Milks, Patricia Austic, Leora Shelley
Admissions: Randy Stewart, Laurie Gillespie
Career development: William Alberta, Amy Benedict-Martin, Sheri Mahaney
Minority programs: Catherine Thompson

Department Chairs
Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall
Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Communication: C. J. Glynn, Kennedy Hall
Education: D. H. Monk, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Floriculture and ornamental horticulture: T. C. Weiler, Plant Science Building
Food science: D. Miller, Stocking Hall
Fruit and vegetable science: H. C. Wien, Plant Science Building
Natural resources: J. P. Lassoie, Fernow Hall
Plant breeding and biometry: E. D. Earle, Emerson Hall
Plant pathology: S. A. Slack, Plant Science Building
Rural sociology: D. L. Brown, Warren Hall
Soil, crop and atmospheric sciences: J. M. Duxbury, Emerson Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills. The college’s programs fall into three major areas:

• Science and technology
• Management
• Communication and education

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:

• Agriculture (production and marketing)
• Biological Sciences
• Community, Human and Rural Resources
• Environment
• Food and Nutrition
• International

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harford and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Office of Counseling and Advising, Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)], H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering, J. A. Bartsch, Riley-Robb Hall
Agricultural Economics, R. N. Boisvert, Warren Hall
Animal Breeding, E. J. Pollak, Morrison Hall
Animal Science, R. L. Quaas, Morrison Hall
*Biochemistry, Molecular and Cell Biology, P. A. Karplus, Biotechnology Building
Biometry, N. S. Altman, Warren Hall
Communication, M. A. Shapiro, Kennedy Hall
Development Sociology, P. McMichael, Warren Hall
*Ecology and Evolutionary Biology, R. W. Howarth, Conson Hall
Education [also M.A.T.], J. D. Deshler, Kennedy Hall
Entomology, J. G. Scott, Comstock Hall
Environmental Toxicology, A. Yen, Rice Hall
Floriculture and Ornamental Horticulture, N. L. Bassuk, Plant Science Building
Food Science and Technology, J. H. Hotchkiss, Stocking Hall
*Genetics and Development, M. L. Goldberg, Biotechnology Building
International Agriculture and Rural Development [M.P.S. (Agr.)], R. W. Blake, Morrison Hall
International Development, N. T. Uphoff, Caldwell Hall
Landscape Architecture [M.L.A.], L. J. Mirin, W. Sibley Hall
*Microbiology, S. C. Winans, Wing Hall
Natural Resources, M. E. Krasny, Fernow Hall
Departmental Programs

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120
   b. Minimum with letter grade: 100 (number with S-U grades pro-rated for transfer students)
   c. Maximum independent study, teaching experience, internships: 15 (pro-rated for transfer students)
   d. Minimum College of Agriculture and Life Sciences credits (includes transfer credit): 55
   e. Maximum from endowed colleges without experience, internships: 15 (pro-rated for transfer students)
   f. Maximum transferred in: 55; minimum at Cornell: 60

Note: Credits received for physical education and for certain other courses, such as Mathematics 109, Education 005 and LSC courses, do not count toward the 120 hours but are included on the transcript and in the grade-point average.

Credit Earned While in High School
Transfer credit will not be accepted for the Project Advance Programs. If a student is enrolled in a college/university course, during his/her high school years, transfer credit will be given only if certain criteria are met:
1. Course must be a standard course taught by a post-secondary institution.
2. High school must be a satellite location, one of several options available to all students taking the course.
3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
4. Students must be enrolled for college credit and pay college tuition.
5. Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met no transfer credit will be given. Written verification may be necessary.

2. Residence
   a. Normally, eight full-time semesters
   b. Seven semesters, if all other degree requirements are met, with a grade-point average of 2.0 or above
   c. Minimum of 12 credits per semester
   d. Minimum of two semesters, including the final semester prior to graduation, in the College of Agriculture and Life Sciences (residency in the Internal Transfer Division [ITD] does not count toward residency in the college)
   e. Students who have completed 8 semesters in residence at Cornell, including two in the college, and who have 8 or fewer credits remaining for graduation may petition for approval to complete this work elsewhere.

3. Physical Education (see note at 1f)
   a. Completion of university requirement for two semesters of work
   b. Transfer students may be exempt from part or all of the requirement.

Note: Requests for exemption should be made in writing to the University Faculty Committee on Physical Education. Requests for postponement should be referred to Alan Gannett, Teagle Hall (255-1866). Medical postponement requests must go through Gannett Clinic.

4. Grade-Point Average (GPA)
   a. Cumulative GPA: 1.7 or above must be maintained
   b. Final semester GPA: 1.7 on a minimum of 12 credits in final term before graduation.

Note: GPA includes only grades earned at Cornell after matriculating into the college.

5. Distribution
   The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competence in particular skills. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe, through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will impact their work and role in society.

Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial or not necessary for the major cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline such as Education 005, will not be counted.

Group A: Physical Sciences. 9 credits of 100- or 200-level courses, in at least two disciplines, including at least one course in chemistry or physics.

Chemistry

Mathematics (excluding Education 005, Mathematics 101 and 109)

Education 115

Soil, Crop and Atmospheric Sciences 131

Astronomy

Geology

Statistics (Including ARME 210, ILRST 210)

*The college mathematics requirement is described below.

Group B: Biological Sciences. 9 credits, including 6 of introductory biological science (introductory courses include BIO 101-104, 105, 106, 109, 110.)

Biological Sciences (excluding 152, 160, 200 [unless permission of associate director of the division of Biological Sciences is obtained], 202, 205, 206, 208, 209, 301 or 307)
Animal Sciences 100, 221, 300, 301
Entomology 212
Nutritional Sciences 262
Plant Breeding 201, 225
Plant Pathology 309, 401

Group C: Social Sciences and Humanities.
12 credits (6 in each of the following two categories):

Social Sciences. 100- through 400-level courses in the following departments (excluding Freshman Seminars):
- Anthropology
- Archaeology
- Communication 116, 120, 410, 418, 420, 422
- Economics (excluding all ARME courses except 100)
- Education 271, 311, 317, 370, 378
- Government
- Psychology
- Sociology (including ARME 416, Rural Sociology except Rs 100, 175, 318, 442)
- Humanities. 100- through 400-level courses in the following departments (excluding Freshman Seminars and language courses):
  - Africana Studies (literature and history)
  - Asian American Studies
  - Asian and Near Eastern Studies (literature and history)
  - Classics
  - Comparative Literature
  - English (literature only)
  - French
  - German
  - Italian
  - Russian
  - Spanish (literature only)
  - History
  - History of Art/History of Architecture
  - LA 282
  - Music
  - Theatre Arts (theory, literature, and history only)
  - Natural Resources 411
  - Philosophy (also Natural Resources 407)
  - Religious Studies
  - Rural Sociology 100, 175, 318, 442
  - WOMNS/S&T 444

Group D: Written and Oral Expression.
9 credits, of which at least 6 must be in written expression, selected from the following:
- Freshman Seminars
- Communication 117, 201, 350, 352, 260 (was 360), 263 (was 363), 365

6. Mathematics
The faculty requires minimum competency in mathematics as a prerequisite to satisfactory completion of a degree. As a measure of competency in mathematics, all entering undergraduates and transfer students, including those presenting advanced placement or transfer credit in college calculus, must take the college’s math proficiency exam. The exam is administered free of charge just prior to the start of classes each semester. It consists of fifty sample questions covering arithmetic, algebra, geometry, trigonometry, and basic calculus.

The score divides students into three groups, with specific graduation requirements and placement information.

Mathematics requirements and placement suggestions:

Group I Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score suggests calculus skill level (MATH 111, 191, 193).

Group II Students in this group MUST complete one "math course at Cornell." Placement score suggests skill level for EDUC 115, MATH 105, or BTRY 101.

Group III Students in this group must take EDUC 005, remedial level math in their first semester. Students must also complete an additional "math course at Cornell."

* Math courses at Cornell that may be used to fulfill math requirement:

- All courses in the Math department (excluding 101 and 109)
- EDUC 115
- Biometry 101

Transfer credit for mathematics

Most college-level math courses in a transfer student's record will be transferred (limit 6 hours into Group A of the college distribution). Transfer students are held for the results of the math exam and must satisfy the college's math requirement determined by his or her score. Students entering with AP calculus credit are also held for the results of the math exam and must satisfy the college's math requirement determined by his or her score.

7. Faculty Adviser
   - Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study for the college distribution. Students must be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or advisor key, is provided by the faculty adviser to the student after approval of the choice of courses.
   - Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or advisor key, is provided by the faculty adviser to the student after approval of the choice of courses.
   - All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

8. Progress toward the Degree
   - The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a Summary of Record form.

b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students must notify the College Registrar of their intent to return for the eighth semester. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduate) or September 15th (for January graduate). The adviser signs the application after verifying that the requirements for the major have been completed. The college later signs after verifying that the college requirements have been met.

STUDENTS

Undergraduate enrollment is approximately 3,000, with about 50 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 new transfer students are enrolled. Members of the faculty of the college serve as chairs of the special committees of about 1,000 graduate students.

Admission

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula.

Most students come from New York State, but about 30 percent come from other parts of the United States or abroad. About half of the undergraduates are women. Approximately 20 percent are identified as members of minority ethnic groups.

Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request, meeting with a faculty member in the proposed area of study and submitting a letter explaining reasons for making the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of study. Academic achievement is also considered. Students are seldom allowed to transfer during their freshman year.

In some cases a student may be referred to the Internal Transfer Division to study for one semester before entering the college. A second semester is considered under unusual
circumstances. During this trial semester the student must achieve a predetermined average (usually 2.7) and take approved courses to assure acceptance.

Special Students
A limited number of non-degree candidates who want to take selected courses in the college are admitted each year. Applicants should submit the standard Cornell application, a resume of their work experience, and a list of the courses they want to take. For more information and guidelines, students should contact the Admissions Office, 177 Roberts Hall.

Off-Campus Students
Programs in which students study off campus but enroll for Cornell credit include SEA semester, field study in human ecology or industrial and labor relations, Albany programs, Cornell-in-Washington, student teaching, IPM internship, and clinical microbiology internship. Students intending to receive Cornell credit for work done off campus should inform the college registrar at the time of enrolling for courses to ensure that proper registration will occur.

Off-Campus Courses
Students in CALS are to be registered for at least twelve (12) credits of course work each semester. It is expected that students will not be enrolled in course work at another institution while they are enrolled at CALS.

Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells college. Other exceptions would be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee would approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. Enrolling in a course at another college to avoid taking it at Cornell is discouraged.

Leaves of Absence
A student who finds it necessary to leave the university before the end of a semester should make a written request for a leave of absence or withdrawal. Such action is necessary to clear the record of the term and, if not taken, may adversely affect the student's subsequent readmission to the university. Students leaving at the end of any semester, whether temporarily or permanently, should file a standard leave of absence/withdrawal petition form, available in the Counseling and Advising Office.

An approved leave is considered an interruption in study, with the student's place in the college being held without requiring application for readmission. A database is maintained by the Counseling and Advising Office to send materials at the appropriate time for the student to pre-enroll for courses when returning to the college. A leave of absence may be extended by contacting the Counseling and Advising Office. Students must petition for a leave of absence and they are issued in two ways: Voluntary leaves are issued for students in good academic standing, and these students may return to the college with no restrictions. Restricted leaves are issued when students are not in good academic standing. A student must petition to return from a restricted leave. Information and petitions are available in the Counseling and Advising Office, 140 Roberts Hall.

Withdrawal
A student who finds it necessary to leave the university permanently should file a petition for withdrew last day if the student is in good standing. Students who have withdrawn and who later decide to return must apply to the Admissions Office.

Graduating and Diplomas
Graduating seniors must complete the Application to Graduate (see the aforementioned details in Part 8c.) Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

ADVISING AND COUNSELING SERVICES
Faculty members in the college of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members can and should be an important source of information and advice on both academic and personal matters. Thus, they consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for aid in developing a program of study.

The Counseling and Advising Office coordinates the faculty advising program, serves as the college’s central undergraduate advising office, and offers counseling to students. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, commencement activities, and the activities of two student organizations, Ho-Nun-De-Kah, the college’s honor society, and CALS Student Organization Network. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances.

The staff is available on a walk-in basis, as well as by appointment.

The Office of Minority Programs serves to recruit, admit, and monitor influence policy on behalf of all minority students within the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American students. In the most recent academic year (1996–1997), this population represented approximately 20 percent of the college’s undergraduate population. In addition, we are charged with monitoring and programming for the Educational Opportunity Program and Prehealth Collegiate Science and Technology Entry Program, and some involvement with the Faculty Committee on Human Diversity. The Educational Opportunity Program (EOP) and the Collegiate Science and Technology Entry Program (CSTEP) are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college. State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall.

Within the university, the Office of Minority Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Skills Center, and the State Programs Office. Other university connections include the Undergraduate Admissions Office and the Office of Financial Aid regarding the concerns of the minority student population.

The duties of the Office of Minority Programs are primarily carried out by the director with a part-time assistant, part-time support staff, and 10 to 12 peer advisers. Together, the staff acts as a major advocacy and advising group and informational and referral center. Its constituency includes students, faculty, and the public.

Given the college's policy on non-exclusively programming, the Office of Minority Programs is a complement for some functions that serve the college’s entire population. Presently, that includes reading non-minority applicant folders, serving as the Prehealth Program adviser and liaison, and providing ongoing support at all levels for the Office of Counseling and Advising.

The Office of Career Development offers a variety of helpful services in a friendly environment to all students and alumni of the college. Career development includes self-awareness and assessment, career exploration, decision making, and job search. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change.

The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of several hundred college alumni who have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. Active on-campus recruiting program brings more than 80 employers to campus each year to interview students for full-time and summer jobs.

The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years and beyond. For further information, students should contact Bill Alberta and the staff in 177 Roberts Hall.
**Financial aid** is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall, after students have a financial aid package established through the university office in Day Hall. Grants are processed through the university’s Office of Financial Aid.

**Academic Integrity Policy**

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings: students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1) Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2) Students are guilty of violating the code if they:
   - knowingly represent the work of others as their own
   - use or obtain unauthorized assistance in any academic work
   - give fraudulent assistance to another student
   - fabricate data in support of laboratory or field work
   - forge a signature to certify completion or approval
   - submit the same work for two different courses without advance permission
   - knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
   - in any other manner violate the principle of absolute integrity

3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4) Faculty members fulfill their responsibility to:
   - maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   - make clear the conditions under which examinations are to be given
   - make clear the consequences of violating any aspects of the code
   - provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
   - state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
   - approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   - monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides for informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor D. Grossman is the current chair. Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board.

General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising office, 140 Roberts Hall.

**ACADEMIC POLICIES AND PROCEDURES**

**Records**

The college registrar maintains for each student a complete record of academic achievement. A permanent record is maintained for each matriculated student and updated whenever new information becomes available. Staff members in Roberts Hall are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the summary of record form.

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee:

- reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
- receives and acts upon petitions from individual students asking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
- acts upon readmission requests from persons whose previous enrollment was terminated by the college
- notifies the petitioner in writing of the action taken by the committee

Good academic standing means a student is eligible for, or has been allowed to register and enroll in, academic course work for the current semester. Whether an individual student is in good academic standing is determined by the college registrar and the Committee on Academic Achievement and Petitions. (See academic deficiency policies, below.)

A petition to be exempt from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising office, 140 Roberts Hall. Counselors are available to assist with the process.

A petition is usually prepared with the assistance of a student’s faculty adviser, whose signature is required. The adviser’s recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

**Registration Procedures**

All students must register with the university and “check-in” with this college at the beginning of each semester. Check-in materials are available in 140 Roberts Hall as announced each term by the University Registrar.

**Course Enrollment Procedures**

To enroll in courses, students will receive information from the university registrar; plan a schedule in consultation with their adviser; and pre-enroll by computer, through CoursEnroll in “Just the Facts” on the Bear Access menu. Pre-enrollment is not valid until entering the student’s individual code, or adviser key, into the computer. Adviser keys change each semester and are obtained from the adviser to his or her advisee.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar’s Office, 140 Roberts Hall. Students who will be studying off campus should file the Intent to Study Off Campus form to ensure that proper registration will occur. These forms are available in the Registrar’s Office in 140 Roberts Hall.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be non-credit.

Students must not enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed, then the instructor files a manual grade form to the college registrar. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.
Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all course work for the first semester is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar’s Office, 140 Roberts Hall, on an official form provided for that purpose.

Add/Drop/Changes are made by filing properly signed forms in the Registrar’s Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to add or to drop a course.

Students may add courses during the first three weeks of the term and may drop courses and change grading options or credit hours where applicable until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions. Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester.

If the petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student’s record and a W (for “withdrawal”) is recorded on the transcript.

Grade Reports

Grade reports for the fall term are included in spring term check-in materials; grade reports for the spring term are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

Academic Deficiency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. In case of students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings to students, placing them on probation, suspending them, decreeing that they may not reregister, granting them leaves of absence, and advising them to withdraw.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- (1.7) or higher are prima facie evidence of satisfactory progress.

HONORS PROGRAM

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least 45 credits, at least 35 at the University of Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.

Interested students must make written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student’s grade-point average, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with honors.

Unless otherwise indicated in the following area descriptions, the research report in the form of a thesis or journal article should be submitted to the honors committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be approved in one of the program areas as approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, D. L. Brown, P. A. Johnson.

The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member’s commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student’s sponsor and the honors committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

Biological Sciences

Students interested in the honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See “Independent Research and Honors Program” in the Biological Sciences section of this catalog for complete details. Applications and details pertaining to the program requirements may be obtained from the Division’s Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behman Biology Center, 216 Stimson Hall.

Entomology

Faculty committee: B. L. Peckarsky, chair

An honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems.
Short life cycles, unique physiologies and development patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for honors study.

The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

1. Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
2. Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty advisor will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members' areas of expertise.)
3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
4. Present a completed application to the chair of the entomology honors committee no later than the end of the third week of the first semester of the senior year. Earlier submission is encouraged.
5. Submit a brief progress report, approved by the project supervisor, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
6. Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Juggatae seminar) in the last semester of the senior year.
7. Submit two copies of the final project report (honors thesis) to the chair of the entomology area honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to the student one week before the last day of class. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

**Natural Resources**

Faculty committee: M. E. Krasny, chair; B. A. Knuth, J. P. Lassoie, E. L. Mills

The honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes, (2) fish and wildlife biology and management; and (3) resource policy, management, and human dimensions. The subject matter and nature of the research experience may be quite varied, but require the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:

- Register for the honors program in the junior year or earlier.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the form of a conventional master's thesis or scientific paper ready for journal submission. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department's honors program committee.
- Take the lead role for meeting each of the above expectations.

**Nutritional Sciences**

Faculty committee: M. N. Kazarinoff, R. S. Parker

The honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for honors, they need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors research projects are designed for work in progress until the project has been fully completed, an outline of activities for both years is given below. Letters of invitation are sent to upcoming seniors during the summer.

**Junior Year**

**Fall Semester** Course No: NS 398 (1 credit, S-U): Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problem.

**Spring Semester** Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made and orientation to supportive services available through DNS are made. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research,
2. to develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

**Senior Year**

**Fall Semester** Students will register under the number NS 499 (2-4 credits, LET, by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research **early in the fall semester at the latest**. The objective for the semester will be to complete most of the hands-on research/data acquisition.

**Spring Semester** Students will again register under course number NS 499 for 2-4 credits LET, by arrangement with their research mentors. Much of the allotted time will be spent on data analysis and on writing the honors thesis.

Several important deadlines should be noted.

1. **Last week in March**: The names of thesis readers** are to be in the hands of the honors committee.
2. **Third to fourth week of April**: A final draft of the thesis is handed to the readers.
3. **First to second week of May**: Scheduled seminars for oral presentations of each student's research.
4. **Last day of classes**: Final form of the thesis is handed to the honors chairman.

To help students meet these deadlines, students register for NS 498 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations of completed research.

*Grade is determined by each student's mentor.

**Two readers knowledgeable in the area of the student's research topic to be chosen by the honors committee and faculty advisers.

**Physical Sciences**

Faculty committee: C. E. McCulloch, chair; G. W. Fick, J.-Y. Parlange, S. S. H. Rizvi

The honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the Departments of Agricultural and Biological Engineering, Soil, Crop, and Atmospheric Sciences; Food Science; or in the Biometrics Unit.
Students must be enrolled in the program for a minimum of two semesters and must also enroll in the appropriate departmental independent study course for a total of at least 6 credits. They must submit a report of their research, usually in the form of a journal article, to the honors committee by three weeks before the end of classes of the semester in which they expect to graduate. Details of the program can be obtained from the chair of the physical sciences honors committee.

**Plant Sciences**

Faculty committee: R. L. Obendorf, chair; L. L. Creasy, A. M. Petrovics, W. A. Sinclair

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a project proposal (2-3 pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objectives (and how they will be tested); methodology and experimental plan, necessary space, equipment and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible. Successful completion of the honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. It must be accepted by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor stating that the student is graduated with honors. The honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the Director of Academic Programs and to the College Registrar that the student be graduated with honors. One copy of the accepted report will be returned to the student with review comments from the committee.

**Social Sciences**

Faculty committee: R. V. Lewenstein, chair; K. A. Strike, M. J. Pfeffer, W. H. Lesser

Students are accepted into the social sciences honors program of the College of Agriculture and Life Sciences after meeting all the criteria described above, after evaluation of the student's written application, and on approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser during the first semester of the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement. The proposal must be 5-10 typed, double-spaced pages in length and include the following sections:

- **Research Topic**: State the problem to be studied or the topic of interest. Review the relevant literature and the background of the problem or topic; include a more extensive bibliography.

- **Research Questions/Empirical Hypotheses**: Specify the questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.

- **Research Methods**: Discuss the models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.

- **Expected Significance**: State what new knowledge or information is likely to be forthcoming and why it is important.

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for independent study directed by the faculty adviser in conjunction with an honors project.

Honors degrees are awarded upon approval of the honors thesis by the social science honors committee. Honors theses should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported in the literature. The models, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research. Honors theses should be written according to the form of any standard journal within the appropriate fields. Three copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

**INTERCOLLEGE PROGRAMS**

The College of Agriculture and Life Sciences does not participate in any dual-degree programs. Study for the Bachelor of Science is the only undergraduate degree program offered.

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college faculty adviser, in 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

**Students who have been offered admission to the S. C. Johnson Graduate School of Management** upon completion of the B.S. degree in Agriculture and Life Sciences may accept a program of independent study in their senior year if it is approved by their college faculty adviser as part of their undergraduate program. In certain cases an "upset" tuition charge, equal to the endowed undergraduate tuition rate, will be applied for undergraduate statutory college students taking excess credit hours from endowed colleges and schools. Inquiries should be directed to the university bursar.

**Students in the Field Program in Agricultural and Biological Engineering** are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition rate in the junior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

**The Program in Landscape Architecture** is cosponsored by the Department of Floriculture and Ornamental Horticulture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning. The program offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program.

**The Division of Nutritional Sciences** is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate nutrition major is based in the College of Human Ecology, and the graduate nutrition and agriculture major is based in the College of Agriculture and Life Sciences. Students may study nutrition in areas such as animal sciences; food industry management; food science; microbiology; nutrition, food, and agriculture; and fruit or vegetable science. Students may also plan a concentration in biological sciences or a concentration in general studies in agriculture to include a human nutrition component.

**The Department of Science and Technology Studies** is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. The program draws its students, faculty, and research staff from the various divisions of the university, including the College of Agriculture and Life Sciences. It offers an interdisciplinary undergraduate major in Biology and Society. A general studies major may be planned in consultation with a faculty adviser to fulfill a biology and society program. Further information, including a list of courses, may be obtained from the undergraduate office, 275 Clark Hall.
The American Indian Program (AIP) is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indian peoples and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, literature and the arts, and cultural preservation. Their research, teaching, and outreach efforts within the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program publishes its own multidisciplinary journal, Native Americas, and sponsors conferences, guest lectures, and forums on important local, national, and international issues. Akwesasne, the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: Rural Sociology 100 (Introduction to American Indian Studies) and Rural Sociology 175 (Issues in Contemporary American Indian Studies), plus three other courses selected from the following course listing: ANTHR 230, ANTHR 665, ENGL 260, ENGL 269, ENGL 278, ENGL 659, ENGL 669, ENGL 687, HIST 200, HIST 276, HIST 277, HIST 370, HIST 429, HIST 624, R SOC 100, R SOC 175, R SOC 318, R SOC 440, R SOC 442), for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 300 Caldwell or consult with K. Shanley, associate director of academic development, American Indian Program, 300 Caldwell Hall, 255-8402.

Science of Earth Systems (SES) is a new program for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program emphasizes an objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The program, detailed in more detail in the "Interdisciplinary Centers, Programs, and Studies" and the CALS "Interdepartmental and Intercollege Courses" sections, coalesces Cornell's teaching and research strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of our complex, highly interactive earth.

The SES curriculum includes a freshman/sophomore emphasis on strong preparation in mathematics, physics, chemistry, and biology. In the junior and senior years, students take a set of common SES core courses and an additional set of four advanced disciplinary or interdisciplinary courses that build on the basic sequences. Students wishing to explore the new field are encouraged to enroll in the SES Colloquium (register for ABEN 120-121, GEOE 123-124, or SCAS 101-102). (See the Courses of Study section mentioned above for course descriptions.)

Several interdisciplinary tracks are available within the SES program, and these are chosen by the student according to interests and career goals. This tracking is accomplished through the selection of courses beyond the core sequence. These courses build on the program's instructional core and generally include junior and senior level courses with prerequisites in the basic sciences and mathematics. Effective tracks can be designed to prepare students for careers or graduate study in specific environmental science disciplines including atmospheric sciences, hydrology, biogeochemistry, ecology, oceanography, and geophysics. Meaningful and effective combinations of these disciplines are also possible. The selection of these sequences must be approved by the SES Coordinating Committee to ensure that depth as well as breadth is attained.

The SES courses are listed in the college's "Interdepartmental and Intercollege Courses" section. For more information, see the website at http://www.ge.cornell.edu/sez/sez_home.html.

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the director of the program through the ICET office, 16 Farnow Hall. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEAR) is an interdisciplinary intercollege center with teaching, research, and extension components affiliated with the College of Agriculture and Life Sciences and the School of Civil and Environmental Engineering. A description of the program and general information is available from the director through the CLEAR office in Hollister Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

An Intent to Study Off Campus form should be filed with the college registrar before leaving campus. Tuition may be reduced. In some cases stipends or cost of living allowances are provided. If receiving financial aid, students should consult the Office of Financial Aid and clear all accounts with the bursar prior to departure.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three two-credit components offered by professors-in-residence. An internship experience, supervised by an internship committee, provides up to six additional academic credits. Independent study and research courses offered by the various departments in DSL and/or courses offered by academic institutions in the Albany areas may be elected.

Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.

Applications are collected and processed by the ALS Career Development Office (177 Roberts Hall) in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Seniors should note that the last term average must be 1.7 or above.

All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The paper required in each section constitutes an independent study project to be directed and evaluated by a Cornell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the Career Development Office, 177 Roberts Hall.

Cornell-in-Washington

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: 1) courses in public policy, and 2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through...
and approved by, the Cornell-in-Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 19 or inquire at 471 Hollister Hall, 255-4000.

**SEA Semester**
The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, study, and research. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is twelve weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA’s two sailing vessels: the R/V Westward, or the R/V Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall, 607-255-3717.

**Internships**
Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluating student performance.

For internships not governed by an established internship course, the student must be placed in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits. In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar’s Office, 146 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the major degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The 6-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the course content and in evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit nor in cases where the student has received financial remuneration.

All students enrolling for an internship must file an Independent Study, Research, Teaching, or Internship form with the Office of the Dean of the College Registrar. If the study is to take place off campus, the Intent to Study Off Campus form should also be filed with the college registrar.

**Overseas Academic Programs**
All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study. The Cornell Abroad program is open to students in all colleges of the university. Students in the College of Agriculture and Life Sciences should consult with their faculty advisor and the college Study Abroad Adviser to ensure that credit received for academic work abroad will meet requirements for graduation. The Study Abroad Adviser is in the Counseling and Advising office, 146 Roberts Hall, and has walk-in hours scheduled to advise students on study abroad options.

Students in the College of Agriculture and Life Sciences are eligible to participate in three student exchange programs. Applications are accepted by sophomores to spend their junior year at one of the following universities:

**Agriculture College of Sweden at Uppsala**
In this exchange program, one Cornell student and one Uppsala student "switch places" for the year. The Cornell student will travel to Sweden in mid-June to live and work with an agriculture-related family, get acquainted with the customs, and become familiar with the language. Swedish language classes begin in mid-August in Uppsala, and regular classes begin in mid-October. The academic year ends in June.

**Instituto Tecnologico de Estudios Superiores de Monterrey (ITESM)**
This program exchanges one Cornell student and one ITESM student for one full year or two students for one semester each. The student will travel to Mexico in the middle of June and begin Spanish language classes immediately. After completing the classes in August, there is time for a week or two of travel before the fall semester begins. The spring semester ends in May.

**Nanyang Technological University in Singapore**
This program exchanges two Cornell students for two Nanyang students for one full year and is available to Communication majors only. Courses are taught in English. The academic year is divided into two semesters of sixteen weeks each with a ten-week vacation following each semester. Semester One runs from July through October and Semester Two runs from January through April.

For additional information on these programs, see the CALS Study Abroad Adviser, 140 Roberts Hall.

**MAJOR FIELDS OF STUDY**
The college curriculum emphasizes the biological and physical sciences and the technology basic to the study of agriculture and life sciences. The sixteen major program areas reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each program area are different, but all students must meet minimum distribution requirements of the college.
bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that reflect their concentration, such as environmental engineering or biomedical engineering. Students planning for medical school also take organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills.

Specific course requirements and other information for the Agricultural and Biological Engineering joint program are in the College of Engineering section in this publication.

The department also offers two technology programs: environmental systems technology and agricultural systems technology. The two technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students can have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomechanical engineering, management consulting, and international agriculture.

In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomechanical engineering, management consulting, and international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students can have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomechanical engineering, management consulting, and international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students can have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Biological Sciences

Biology is a popular subject at many universities for a variety of reasons. It is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services in the division's Office for Academic Affairs and the Behrman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology, biochemistry; cell biology; ecology and evolutionary biology; general biology; genetics and development; microbiology; neurobiology and behavior; and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Stimson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

Communication

A generation ago, college graduates were thought to be equipped with the knowledge and skills needed to carry them through their entire career. Today we know that the single most important thing we can prepare you for is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change. The amount of information the public receives and is expected to understand in the 21st century is change.

The communication major is a program with a strong core (eight courses) of contemporary communication knowledge, theory, and practice. The series of freshman required courses include:

Fall semester:
Comm 120 Contemporary Mass Communication
Comm 121 Investigating Communication

Spring semester:
Comm 116 Communication in Social Relationships
Comm 117 Writing about Communication

This set of courses will provide you with a basic understanding of communication and the communication process. The courses also provide a unique opportunity to link practical application (such as writing and critical analysis) with up-to-date research and knowledge about communication. During the sophomore year, communication majors take:

Fall semester:
Comm 201 Oral Communication
Comm 230 Visual Communication

Spring semester:
Comm 253 Information Gathering and Writing
Comm 282 Communication Industry Research

After completing the eight courses in the core curriculum, you can choose to concentrate your advanced study in one of four focus areas:

• Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science and agricultural issues, as well as public perceptions of risk.)

• Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)

• Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)

• Communication as a Social Science. (Study of communication research and methods with emphasis on communication as a new social science discipline.)

The department requires that all majors take 18 credits (six courses) in communication after the core curriculum. Detailed information on the distribution of these courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the necessity for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and within society at large. Both are critical to successful careers and enlightened citizenship in the twenty-first century.

Education

The focus of the Department of Education is on the improvement and teaching of education within school and nonschool settings, as well as on the role of education in society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Study at the undergraduate level is structured around a core curriculum:

• An introductory course in current educational issues (Education 101) (3 credits)

• Course work in the social, philosophical, psychological, and social foundations of education (e.g., Education 271, 311, 317, 370, 378, 472, 477) (12 credits)

• Supervised field experience (e.g., Education 240 for non-majors and Education 420 for majors) (1–4 credits)

• A capstone course to integrate the students' undergraduate experience (Education 495) (2 credits)

Three specializations and three certification programs are available within the department.

Agricultural, extension, and adult education. Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture, science, and technology in public schools, the Cooperative Extension service, and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. Students take a college program that includes a balance of courses in education as well as courses in a technical area of agriculture/biotechnology, community/economic development, natural resources, human ecology, or communication. Education courses prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on one or more of these areas: agricultural education, extension education, or adult education. As an alternative, students may elect to major in one of the college's technical departments and develop a complementary program of study in one or more of the three areas of agricultural, extension, and adult education. Further information is available from the agricultural, extension, and adult education coordinator, Kennedy Hall (Tel: 607-255-7755).

Educational psychology. Studies in educational psychology have traditionally focused on teaching and learning in schools. Yet schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises, broadly defined. While graduate study is required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for leadership in educational work or for many post-baccalaureate positions. Educational psychologists develop and supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials for publishers; develop tests for educational and
Professional associations; evaluate social
educational research organizations.
Total of 20-25 hours in educational psychology
Systems Design and Development; Human
adviser a student may design a program in
Relations; Individual and Social Development;
or the Educational Psychology of Human
Development.

Students interested in careers in educational
psychology should apply for admission to the
Department of Education. For more informa-
tion regarding a concentration in educational
psychology, contact: Coordinator, Educational
Psychology Program, Education Department,
Kennedy Hall (Tel: 607-255-9258).

General Education. The concentration in
general education is appropriate for students
seeking a solid foundation in the disciplines
underlying the education professions.

Students will take courses in areas such as the
art of teaching, philosophy of education,
social foundations of education, curriculum
and instruction, methods of teaching, the
instructional applications of microcompu-
ters and related areas. Graduates of the
concentration in general education may
continue their studies in various areas of
education or pursue careers in educational
and human resource areas in business and
industry, the human services, or government
agencies. There are growing opportunities for
employment of education graduates in the
human resource management areas of
agribusiness firms. Further information about
the general undergraduate education is
available from the undergraduate coordinator
(Tel: 607-255-9269).

Teacher Certification
Students at Cornell may pursue secondary
grade 7-12 teaching credentials in agriculture,
mathematics, biology, chemistry, physics,
easphalt science, and general science.

Agriculture. Students completing the
registered program as undergraduates in
agriculture are eligible to teach agricultural
subjects, introduction to occupations,
occupational science or math, and introduc-
tory technology for grades 7 and 8. Passing
scores on the National Teacher Examination
(NTE) or New York State Teacher Certification
Exam (NYSTCE) and one year of agricultural
work experience are required for provisional
certification, which is valid for five years. The
master's degree required for permanent
certification as a school administrator is
usually recognized in other states.
The program is unique in that it is specifically
designed to prepare administrators for small
and rural school districts. Course work, the
internship, and the doctoral dissertation are all
oriented toward addressing the practical
problems that characterize such districts and
to prepare candidates to assume a leadership
position in them. To earn certification, a
student must complete at least one year of
full-time, on-campus study followed by a
one-year, half-time administrative internship in
a cooperating school district. To be eligible
for this program, students should possess
the equivalent of a master's degree, have a
satisfactory graduate and undergraduate
record, three years of teaching experience,
and the recommendation of his or her
superintendent of schools.

For more information, contact the coordinator
for Administrator Certification Program (Tel:
607-255-7758).

Entomology
The entomology curriculum provides students
with a basic background in biological and
environmental sciences, with a special
emphasis on the study of insects. Majors may
pursue graduate studies in entomology or
related sciences upon completion of the B. S.
degree. Alternatively, students may immedi-
ately begin careers in various aspects of basic
or applied insect biology including integrated
pest management, insect pathology, environ-
mental assessment, medical or veterinary
entomology, insect toxicology, apiculture,
insect systematics, or insect ecology. Because
of the diversity of career options, the major
includes a common core of requirements
allowing flexibility in electives selected by
students in consultation with their advisers.

Specific Requirements
Basic Sciences
College mathematics, including a course in
calculus
A year of physics
Chemistry 103-208 or 207-208
Chemistry 257 (organic)

General Biology
Introductory Biology
Biological Sciences 281 (Genetics)
A choice of one: Biological Sciences 261
(Principles of Ecology) or
Biological Sciences 350 or 331 (Principles
of Biochemistry)
Biological Sciences 387 (Evolutionary
Biology)

Entomology
Entomology 212 (Insect Biology)
Entomology 322 (Insect Morphology)
Entomology 351 (Insect Systematics)
Entomology 483 (Insect Physiology)

It is strongly recommended that students who
wish to undertake graduate training in
entomology include coursework beyond the
minimum in their program, including
enrollment in more than one of the general
biology courses, and in other entomology
courses on more specialized topics.

Food Science
The mission of the Food Science Program is to
educate students for careers in food science
and technology. Graduates are prepared for
entry level positions in industry, government,
and research organizations or for advanced
study in food sciences and related disciplines.

Food scientists qualify for satisfying careers
which focus on ensuring the sustainable
availability of a safe, nutritious, affordable,
and high quality food supply for people
throughout New York State, the nation, and
the world.

Students choose one of five specialization
options: 1) Basic Food Science, 2) Food
Engineering, 3) Food Processing, 4) Food
Industry Operations and Management,
5) Food Biotechnology. The first three
options meet minimum curriculum standards
set by the Institute of Food Technologists, the
premier professional society for food
scientists. Students choose an option based
on individual interests and career goals. The
choice should be made as early as possible.

The first two years of the program are focused
on establishing a solid background in the
physical and biological sciences, math, and
communication. Required courses include
chemistry (intro and organic), biology,
microbiology, calculus, physics, freshman
seminar, food science, and nutrition. The
second two years emphasize the application
of basic science and technology to the
processing, storage, distribution, marketing,
and final preparation of foods. Required
courses include Food Engineering Principles,
Unit Operations in Food Manufacturing, Food
Safety Assurance, Food Chemistry, Sensory
Evaluation of Foods, Food Microbiology,
and statistics. Students choose electives to satisfy
college distribution requirements and
individual interests.

Students are strongly encouraged to partici-
pate in research supervised by a faculty
member and/or to work as an intern in a food
company during summers. Most faculty in the
department have active research programs and
welcome participation by undergraduate
students. Students may receive academic
credit or wages for undergraduate research
on campus. Many food companies recruit on
campus for their summer internship programs.
These internships are excellent opportunities
for students to gain experience and establish
contacts for future employment.
A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available on campus for training, research, and employment.

**Landscape Architecture**

Landscape Architecture focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the environment. The program's unique place within the university promotes interaction among the areas of horticulture, architecture, and city and regional planning. The program is co-sponsored by the colleges of Agriculture and Life Sciences and Architecture, Art, and Planning.

The course of study prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from urban design and housing to parks and garden design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of several parts: core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site, landscapes and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

**Dual Degree Options**

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

**Study Abroad**

The faculty encourages study abroad and has two formally structured programs. The *Denmark International Study* (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The *Rome Program* is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Master of Landscape Architecture Advanced Degree Program. The two-year Master of Landscape Architecture (M.L.A.-A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a Bachelor’s Degree in Landscape Architecture or Architecture from an accredited program.

The objective of the two-year (M.L.A.-A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted some flexibility in establishing programs that take full advantage of the teaching and research resources of the university.

Students admitted to the two-year M.L.A.-A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. This must include at least two advanced studies, a graduate seminar, two concentrations, and a thesis.

Undergraduate Concentration for Non-Majors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher.

Required.
Visual Studies (choose one):
Arch 11 Introduction to Architectural Design (4 cr)
Art 121 Introduction to Painting (3 cr)
Art 141 Introduction to Sculpture (3 cr)
Art 151 Introduction to Drawing (3 cr)
Art 158 Conceptual Drawing (3 cr)
Art 159 Life and Still-Life (3 cr)
Art 161 Photography I (3 cr)
DAE 101 Design I: Fundamentals (3 cr)
DFA 114 Drawing (3 cr)
LA 141 Grounding in Landscape Architecture (3 cr)
The Landscape
LA 282 The American Landscape (3 cr)
Electives (choose two):
LA 261 Urban Archaeology (3 cr)
LA 262 Laboratory in Landscape Archaeology
LA 360 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years [1997-98/1999-2000]
LA 363 American Indians, Planners, and Public Policy (3 cr)
LANAR 525 History of American Landscape Architecture (3 cr)
LA 569 Archeology in Preservation Planning and Design (3 cr) offered alternative years [1997-98]

+Distribution Elective
Natural Resources

The undergraduate curriculum is designed to provide an enduring and broadly applicable education. The focus of study is on the systems that yield our renewable natural resources (water, forests, fish, and wildlife) and includes emphasis on both the ecological and human dimensions of resource management. Students are encouraged to understand the scientific, ethical, and societal basis of the protection and management of renewable resources through the application of ecological principles and knowledge of social needs.

Required Core Curriculum

Students who desire to graduate with a specialization in Natural Resources are expected to complete, as a minimum, the courses specified in the following two-part Core Curriculum. First is a broad group of courses taken primarily outside the department, which, as their presentation suggests (Groups A–D), also fulfill this college’s course distribution requirements described on page 30.

Group A - Physical Sciences

Mathematics—2 courses 6-8
Chemistry—2 courses 7-8

Group B - Biological Sciences

Introductory biology (BIOG 101–104 or 105–106) 8 cr. hours
General ecology—1 course

Group C - Social Sciences

3 credits in addition to
3 credits in economics

Humanities

6 credits in addition to a course in
"normative" ethics (NTRES 407, 411 or PHIL 241, 246, or 247)

Group D - Written and Oral Expression

Freshman Writing Seminars—2 courses
Oral communications—1 course

Courses outside the Distribution Groups

Statistics—1 course
Computer applications or programming—1 course

The Core Curriculum’s second portion is composed entirely of courses offered by the Department of Natural Resources; a minimum of 19 hours in department courses is required.

YEAR 1

One of 2 introductory courses:
NTRES 100 Principles of Conservation (Fall, 3 cr.)
NTRES 201 Environmental Conservation (Spr., 3 cr.)

YEAR 2

both courses listed:
NTRES 210 Introductory Field Biology (Fall, 4 cr.)
NTRES 253 Applied Ecology and Ecosystem Management (Spr., 3 cr.)

YEARS 3 AND 4

At least 9 credit hours from selected upper-level courses, with a minimum of 3 credit hours in ecology and 3 credit hours in management emphasis. Consult the current course list at http://www.dnr.cornell.edu/ ungrad or in G12 Femow Hall for courses meeting this requirement.

Students pursuing this specialization have remaining approximately 40 credit hours available to develop one or more concentrations of their choice within or outside this field.

Students who wish to do so may specialize further in natural resource ecology and management (including wildlife, fishery, forest, and aquatic sciences), or natural resource policy, management, and human dimensions.

Opportunities for field-oriented studies are available at Cornell’s nearby Arnot Teaching and Research Forest, the Cornell Biological Field Station on Oneida Lake near Syracuse, as well as at numerous natural areas near campus. An honors program is available for qualified students.

Students should seek relevant work experience to complement their academic studies.

Nutrition, Food, and Agriculture

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health...
and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships between human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed great demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas as diverse as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose electives in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health: Concepts and Controversies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physiocochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 332 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, and the life sciences.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom. Many students engage in laboratory or field research with a faculty member for academic credit. The honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for jobs in industry, government, or supplementing the core requirements with additional courses in the areas of their interest.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607-255-2628.

**Plant Sciences**

Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, course in plant disease management, and horticultural sciences, including floriculture and ornamental horticulture, and fruit and vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs beginning as freshmen. Others may prefer to start in the general plant sciences curriculum and specialize after exploring the program offerings.

Plant sciences is a multidisciplinary program, sponsored by the Department of Plant Breeding in Emerson Hall, and the Departments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, Plant Pathology, and the Section of Plant Biology, located in the Plant Science Building.

**General plant science** is intended for students whose interest in studying plants has not yet centered in any one of the specializations within the area. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree. Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension agents, as teachers, and as research technicians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in other departments. In addition, another area of science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture, food science, or agricultural, resource, and business management.

Undergraduates are encouraged to obtain practical experience, which may involve internship and/or research under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

**Floriculture and ornamental horticulture** applies principles of plant science and business management to the production and marketing of florist, nursery, and turfgrass crops, as well as to the selection and management of plants in both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, landscape management, botanical gardens and arboretas, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:

- BIO G 109 and 110, Biological Principles or an equivalent course
- CHEM 103 or 207 and 208 or an equivalent course
- HORT 101, Introduction to Horticultural Science
- HORT 102, General Horticulture
- HORT 230, Woody Plant Materials
- HORT 243, (BIO PL 243), Taxonomy of Cultivated Plants
- HORT 300 and 301, Garden and Interior Plants
- HORT 400, Principles of Plant Propagation
- BIOPL 241, Plant Biology (Introductory Botany)
- BIOPL 242, Plant Physiology (lecture)
- BIOPL 244, Plant Physiology (laboratory)
- SCAS 260, Introduction to Soil Science
- ENTR 241, Applied Entomology
- PLPA 241, Plant Diseases and Disease Management or PL PA 401, Basic Plant Pathology

Although mastery of these subject areas is considered essential for students planning to enter a floriculture or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser.

With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell. No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 141, 142, 282, 315, 316, 317, 318, 410, 480. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either floriculture or landscape horticulture, or they may study generally across the specialization. Concentration in floriculture prepares students for careers in management of florist and greenhouse crop production, crops in controlled environment agriculture, and wholesale- and retail-florist marketing. Specialization in landscape horticulture trains students for careers in nursery-crop production, turfgrass management, golf course management, exterior and interior landscape contracting and service, retail- and wholesale-marketing of nursery products and services, public and botanical garden and arboretum management, urban horticulture, agroforestry, arboriculture, and related areas. Some students choose to pursue a general program in floriculture and landscape horticulture, including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student advisers and from the undergraduate program coordinator.
Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, horticultural business management, or general horticultural science. A core of management courses also is strongly recommended for students planning horticultural business careers. Students are also encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geology, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed science. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged! Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs.

Questions concerning the undergraduate curriculum, advising, and related manners should be addressed to Professor Carl F. Gortzig, Undergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 23 Plant Science Building, Rm. 216, Ithaca, New York 14853-5508; telephone: 607-255-1787; e-mail: cfg@cornell.edu.

The department's office is 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building; greenhouse and laboratory facilities at the Kemper Post Laboratory, the Test Garden, the Turfgrass Research Field and Laboratory, and freehand drawing studios in Mann Library.

Plant biology provides undergraduates with preparation for graduate study in the plant sciences that stresses basic, rather than applied, research. In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied areas that seem appropriate. Options include molecular biology, plant physiology, plant biology, genetics, cytology, organic chemistry, biochemistry, anatomy, taxonomy, ecology, and evolution, and statistics. A core of courses, including mathematics, plant biology and physiology, and cytology, is strongly suggested. However, different specialties within plant biology afford a flexible curriculum.

Plant genetics and breeding provides undergraduates with (1) preparation for graduate study leading to advanced degrees in plant breeding and plant genetics and (2) preparation for work in producing and marketing plant varieties and making varietal recommendations, for positions in seed analysis, regulation, and quality control, and for work in biotechnology laboratories.

In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied fields best suited to his or her individual goals. Options include plant breeding and plant genetics; genetics, cytology, and cytogenticist; statistics; organic chemistry and plant physiology; plant anatomy, ecology, taxonomy, and physiology; crop production; plant pathology; entomology; and molecular biology and biotechnology.

Students are encouraged to gain hands-on experience in plant genetics and breeding by conducting independent research under direction of a faculty adviser and/or by working for a faculty member on his/her research. Field, greenhouse, and laboratory facilities are available.

Plant pathology is the study of the causes of plant diseases, the mechanisms of the interactions of disease-causing agents and plants, and the methods of preventing or controlling plant diseases. For most students, a concentration in plant pathology as an undergraduate prepares them for graduate study in plant pathology or another field of plant science. However, this concentration also prepares students for careers as technical representatives for agribusiness, as Cooperative Extension agents, as state or federal regulatory agents, or as research technicians in laboratories of plant pathology, mycology, microbiology, and biotechnology.

Courses include chemistry, mathematics, introductory biology, botany, plant physiology, and introductory plant pathology. Additional courses in plant pathology, courses, and other relevant courses from other fields are selected according to the particular interests of the student. Options include entomology; plant breeding; pomology; vegetable crops; floriculture and ornamental horticulture; and soil, crop, and atmospheric sciences.

Plant protection is offered for students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. This concentration can prepare students for careers in agribusiness, the agricultural industry, Cooperative Extension, pest management consulting, state and federal regulatory work, and a variety of other technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the professional specialization: botany and plant physiology, general ecology, soils, crop science, and microbial ecology. Additional courses in introductory entomology, introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended.

In addition, a number of other subjects pertinent to plant protection are recommended, depending upon the student's interests: agricultural economics, agricultural and biological engineering, soil, crop, and atmospheric sciences; biochemistry; communication; pathology and entomology; general physics; genetics; meteorology; mycology; pesticides in the environment; and plant anatomy. Employment involving practical experience in students between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency.

Pomology (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops.

New York is a national leader in fruit production. Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, agricultural business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for knowledgeable students can be found in fruit production, marketing, sales and service, research, teaching, and extension.

Vegetable crops is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegetables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including: horticultural research, teaching, extension, processing, and marketing. A faculty adviser assists individual students in the selection of courses, which usually include: general horticulture, soils, botany, vegetable types and identification, vegetable production, and post-harvest handling or marketing. Additional course work depends upon the interest of the student, and may include: vegetable physiology, plant breeding; entomology; plant pathology; weed science; ecology; soil, crop, and atmospheric sciences; mycology; agricultural economics; international agriculture; and agricultural and biological engineering.

The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater awareness of environmental and health issues is driving a change toward farming practices that depend less upon agricultural chemicals than in the recent past. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

Rural Sociology

Technological, economic, demographic, and environmental change have affected social processes, and each has major impacts on individuals, social groups, and societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings.
Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, rural sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialty with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the theory and methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with rural development, the undergraduate program emphasizes acquisition of skills as well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become interested in each of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Developmental Societies, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for providing instruction in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, faculty members maintain strong ties with the college in the college as well as with the International Agriculture Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the undergraduate faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain working relations with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to complement their course work by electing courses in these other departments and programs, thereby rounding out their educations by acquiring different perspectives. The courses offered in rural sociology can be grouped in three broad categories: development sociology; population, environment, and society; and social data and policy analysis. All students majoring in Rural Sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required.

The focus area in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background of development in both the advanced and developing countries. Students normally select a set of elective courses in which either domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of policies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes for development in nonmetropolitan settings in the United States, (3) analysis of agriculture change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

Courses in the population, environment, and society focus area provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of population distribution and population characteristics in the United States and the developing world, (3) the relationships between social structure and the biophysical environment, (4) the relationships between population change and natural resource utilization in development, and (5) the impacts of public policy interventions on population size, growth and composition or on nature and biodiversity. Students normally select the elective courses for the major in such a way as to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide (1) knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

**Soil, Crop, and Atmospheric Sciences**

The Department of Soil, Crop, and Atmospheric Sciences provides instruction in five specializations: atmospheric science, agronomy, crop science, science of earth systems, and soil science. Employment opportunities are centered with practical experience, and the faculty of the department and the Career Development office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in some of these specializations.

**Atmospheric science** is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic properties and processes of the atmosphere. All students are required to complete a minimum of five semesters of calculus, two semesters of physics, a semester each of chemistry, computer science, and statistics; and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in specialized areas of meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science. Students are encouraged to take additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.

**Agronomy** combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of his or her curriculum to meet specific interests and goals. Some students pursue a double major in agronomy and international agriculture.

**Crop science** is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students who graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

**Science of Earth Systems** integrates atmospheric and soil science as well as other earth studies to develop a scientific basis for managing the basic resources of the planet.
This is an interdisciplinary program described in detail elsewhere (see index).

**Soil science** is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues of agricultural and environmental and agriculture management related to soil. Students take 18 credits in soil science, including 4 credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as 6 credits of crop science to satisfy the major.

### Special Programs in Agriculture and Life Sciences

**General Studies.** Some students are interested in pursuing a general education in the agricultural sciences. Others are uncertain about career objectives in agriculture and the life sciences. The opportunity to develop an independent major in general studies in agriculture and the life sciences is available for such students. In consultation with a faculty advisor, they may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one or several academic units of the university.

Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes, and the analytical ability that a general education fosters. A course of study for a special program must be planned with and approved by a college faculty advisor. Information on the options and names of faculty advisors prepared to advise in general studies programs is available in the Counseling and Advising office, 140 Roberts Hall.

General studies include production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plant and animal systems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences, and social sciences. Advanced courses may be selected from the areas of individual interest or career aspiration.

**International Agriculture** provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural modernization in low-income countries. The student typically specializes in a particular region and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socio-economic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist. Study of a foreign language is required.

In addition to the college distribution requirements, students in International Agriculture must take a minimum of 30 credits toward the major. A minimum of 7 credits in International Agriculture and 3 credits in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

### ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

**Dean's List.** Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:

1. a minimum course load for the semester of 12 letter-graded credits;
2. achievement of a semester GPA of at least 3.50; and
3. achievement of an 'A' grade, or a 'C-' or better grade in each course including physical education, with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up 'T' grades.

**Bachelor of Science with Distinction.** Students who rank in the top 10 percent of the college's graduates on the basis of the GPA for the last 60 credits completed at Cornell will be graduated with distinction.

**Bachelor of Science with Honors.** Students will graduate with a bachelor of science degree with honors when, in addition to having completed all the graduation requirements, they have satisfactorily completed the honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Honors Program.

**Ho-Nun-De-Kah.** Founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 10 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

**Gamma Sigma Delta** is an honor society of faculty and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also promotes academic excellence through sponsorship of special programs in the three colleges.

**Phi Kappa Phi** is an honor society that recognizes outstanding scholarship in all academic disciplines. Members are nominated from among juniors, seniors, graduate students, and faculty. Seniors must be in the top 10 percent of their class, and juniors in the top 5 percent of their class to be eligible.

**Sigma Xi** is an honor society that recognizes outstanding achievements in research. It was founded at Cornell University in 1906. Its membership is selected mainly from graduate students, faculty, and alumni who have made "noteworthy achievement as an original investigator in a field of pure or applied science". Seniors who have demonstrated research aptitude with publishable independent investigations are also eligible for associate membership.

### DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Divisions of Biological Sciences and Nutritional Sciences.

Descriptions of courses, both undergraduate and graduate, are given by department, arranged in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Annoucement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

### INTERDEPARTMENTAL/INTERCOLLEGE COURSES

**American Indian Studies**

American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 (enroll for Rural Sociology 100) and American Indian Studies 175 (enroll for Rural Sociology 175), plus three other courses selected from the American Indian Studies
AIS 100 American Indian Studies: An Introduction (enroll for Rural Sociology 100) Fall. 3 credits. S-U grades optional. W 7:30–10:30 p.m. R. W. Venables. Early American Indian history and the postcontact period will be reviewed with an emphasis given to developments since 1789. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered with guest lecturers and media presentations.

AIS 175 Issues in contemporary American Indian Societies (enroll for Rural Sociology 175) Spring. 3 credits. S-U grades optional. W 7:30–10:30 p.m. R. W. Venables. This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations.

AIS 209 Political History of American Indians in the U.S. (enroll for History 209)

AIS 230 Cultures of Native North America (enroll for Anthropology 230)

AIS 260 Introduction to American Indian Literatures (enroll for English 260)

AIS 261 Urban Archaeology (enroll for Landscape Architecture 261)

AIS 269 Topics in American Indian Literature (enroll for English 269)

AIS 276 American Indian History 1500-1850 (enroll for History 276)

AIS 277 American Indian History since 1850 (enroll for History 277)

AIS 278 Native American Poetry (enroll for English 278)

AIS 318 Ethnomedicine of the Iroquois (enroll for Rural Sociology 318)

AIS 329 Indians, Settlers, and Slaves in the South (enroll for History 329)

AIS 360 Preindustrial Cities and Towns of North America (enroll for Landscape Architecture 360)

AIS 363 American Indians, Planners, and Public Policy (enroll for Landscape Architecture 363)

AIS 367 American Indian Tribal Governments (enroll for Rural Sociology 367)

AIS 370 Resistance and Adaptation: Native American Responses to the Conquest (enroll for History 370)

AIS 429 Undergraduate Seminar in Indians of Eastern North America (enroll for History 429)

AIS 442 American Indian Philosophies: Selected Topics (enroll for Rural Sociology 442)

AIS 471 American Indian Women's Literature (enroll for English 471)

AIS 494 Special Topics in American Indian Studies

AIS 624 Graduate Seminar in American Indian History (enroll for History 624)

AIS 659 Trickster in American Indian Literature and Culture (enroll for English 659)

AIS 665 Native American Contributions to Anthropological Thought (enroll for Anthropology 665)

AIS 687 American Indian Literature: Issues of Transition, Collaboration and Alternate Discourse (enroll for English 687)

Science of Earth Systems

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth System, and understanding their various interactions is crucial for understanding our environment.

A new major in the Science of Earth Systems (SES) is now available for students in the College of Agriculture and Life Sciences. As described in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog, SES is an intercollege major which is also accessible to students in the Colleges of Engineering and Arts and Sciences.

The Science of Earth Systems provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations.

For complete information about the SES major, see the Web site at http://www.geo.cornell.edu/SES/SES_home.html

For more information, contact a contact a SES adviser to explore the possibility of entering the SES major in the College of Agriculture and Life Sciences. K. H. Cook (SCAS), T. E. Dawson (Ecology and Systematics), L. O. Hedin (Biological Sciences), Y.-Y. Parmage (ABEN), S. J. Riha (SCAS), and J. Yavitt (NTRES).

Science of Earth Systems Courses

SES 101/102 Science of Earth Systems Colloquium (enroll for ABEN 120/121, GEO 123/124, or SCAS 101/102)

SES 301 Climate Dynamics (enroll for ASTRO 331 or SCAS 331)

SES 302 Evolution of the Earth System (enroll for GEO 302 or SCAS 332)

SES 321 Biogeochemistry (enroll for GEO 321 or NTRES 321)

SES 402 Mechanics in the Earth and Environmental Sciences (enroll for ABEN 385)

Department of Statistical Science

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth System, and understanding their various interactions is crucial for understanding our environment.

A new major in the Science of Earth Systems (SES) is now available for students in the College of Agriculture and Life Sciences. As described in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog, SES is an intercollege major which is also accessible to students in the Colleges of Engineering and Arts and Sciences.

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In addition, students take a two-credit SES Colloquium (SES 101, 102). In the junior and senior years, students take a set of common SES core courses (SES 301, 302, 402) and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The SES program provides strong preparation for graduate school in any one of the Earth Systems sciences and related engineering fields, in addition to preparing students for a wide variety of careers in environmental work with the B.S. degree. The SES major also provides a sound background for students who are interested in careers in fields such as environmental law and policy with a strong scientific understanding of the environment.

For complete information about the SES major, see the Web site at http://www.geo.cornell.edu/SES/SES_home.html

For more information, contact a contact a SES adviser to explore the possibility of entering the SES major in the College of Agriculture and Life Sciences. K. H. Cook (SCAS), T. E. Dawson (Ecology and Systematics), L. O. Hedin (Biological Sciences), Y.-Y. Parmage (ABEN), S. J. Riha (SCAS), and J. Yavitt (NTRES).

Science of Earth Systems Courses

SES 101/102 Science of Earth Systems Colloquium (enroll for ABEN 120/121, GEO 123/124, or SCAS 101/102)

SES 301 Climate Dynamics (enroll for ASTRO 331 or SCAS 331)

SES 302 Evolution of the Earth System (enroll for GEO 302 or SCAS 332)

SES 321 Biogeochemistry (enroll for GEO 321 or NTRES 321)

SES 402 Mechanics in the Earth and Environmental Sciences (enroll for ABEN 385)

Department of Statistical Science
Agricultural and Biological Engineering

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ABEN 102 Introduction to Microcomputer Applications
Fall or spring. 3 credits. S-U grades optional. Mac or PC labs available. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance to a laboratory section. Lec, W 12:20-1:10, labs, M 1:25-4:25 or T 7:30-10:30 p.m., or T 7:25-8:25 or W 7:45-8:45 or 7:30-10:30 p.m., or R 1:25-4:25 p.m. Fee: $15. 1 evening prelim. P. E. Hillman.

Introduction to application packages on microcomputers. Laboratories provide experience with word processing, spreadsheets, database management, presentation graphics, and a choice between Web page authoring or one of Mann Library’s workshops (e.g., Photoshop). An independent project related to the student’s major is required. Mac and PC labs cover the same software material. These packages and others such as desktop publishing, multimedia, statistical software, searching the Internet for information are discussed and demonstrated in the lectures, as well as computer hardware and operating systems.

ABEN 104 Introduction to Programming in Java and Fortran

An introductory course in computer programming with an emphasis on handling data and algorithm development. Problem sets are on topics of general interest. The first third of the course utilizes Fortran 90 to introduce students to procedural programming concepts and style. For the remainder of the course, students will be introduced to object-oriented programming using Java. Students are expected to spend 5 to 8 hours outside their scheduled laboratory periods to complete problem sets. No prior knowledge of computers or computer language is necessary.

ABEN 110 Introduction to Metal Fabrication Techniques
Spring. 3 credits. Each lab limited to 18 students. Lec, T 8:00-9:05, labs T or R 8:30-9:25, M or T 7:30–8:25, T 1:25–2:25, R 1:25–2:25, or W 7:45–8:45, or 7:30–10:30 p.m., or R 1:25–4:25 p.m. Fee: $15. 1 evening prelim. P. E. Hillman.

Weekly one-hour seminars followed by one-hour discussion of current topics in the study of the earth systems. Introduces the student to scientific issues relating to understanding our planet and managing the environment.

ABEN 122 Introduction to Wood Construction
Fall. 3 credits. Each lab limited to 15 students. Lecs, T R 9:05-10:00, labs, T R 1:25-2:25, or W 1:25-2:25, or 7:30-10:30 p.m., or R 1:25-4:25 p.m.

An introductory course in wood construction. To include site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and block construction. Each student will plan and construct an approved carpentry project.

ABEN 151 Introduction to Computing
Fall. 4 credits. Prerequisite: Math 191 or equivalent (cow-registra­tion permissible). Lecs, T R 11:15-12:05, labs, T 8:00-9:00, R 12:20–2:15, R 3:30-4:25, R 12:20–2:15, R 3:30-4:25, R 12:20–2:15; sec, M 7:30–8:20 p.m., 8:30–9:20 p.m., W 7:30–8:20 p.m., W 8:30–9:20 p.m., each lab and recitation section limited to 22 students. D. J. Aneshansley.

An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. A structured programming language is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed.

ABEN 200 Life after Graduation

A forum to discuss the curriculum requirements of the Agricultural and Biological Engineering programs and the contemporary and future role of agricultural and biological engineers in society. A required course for freshmen majors in Agricultural and Biological Engineering. A series of seminars will be given by practicing engineers, Cornell faculty members, alumni, and students. Students are expected to develop personalized, written career plans and select future courses to meet their career goals.

ABEN 250 Engineering Applications in Biological Systems (also Engineering Distribution 250)
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. Lec, MWF 12:20. B. A. Ahner.

Case studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental problems, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ABEN 301 Energy Systems

Introduction to energy systems with emphasis on quantifying costs and alternative systems for conversion of environmental inputs into useful forms of energy. Course will cover solar energy, small-scale hydropower, wind, bio-conversion processes, house energy balances, energy crops and the public policy implications of alternative energy sources. Use of spreadsheet sheets will be extensive.

ABEN 305 Principles of Navigation (also Nav B 301)
Fall. 4 credits. Four classes each week (lecture-recitation-project work). Lecs, MWF 8:00-8:50; lab, R 8:00 or 9:05, J.-Y. Parlange.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, time, star identification, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed.

ABEN 310 Advanced Metal Fabrication Techniques
Spring. 1 credit (2-credit option available). Prerequisite: ABEN 110 or permission of instructor. Lab, F 1:25–4:30. T. J. Cook.

Principles and practices extending beyond the scope of ABEN 110. To include out-of-position, high carbon steel and cast iron welding. Soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma-arc and oxy cutting of metals. Planning, development, and fabrication of a metal construction project for the 2 credit option.
ABEN 331 Environmental Control for Agricultural Production Systems
Fall. 3 credits. Lecs., MWF 12:20-1:10. 2 evening prelms. K. G. Gebremedhin.
The focus of the course is modeling and solution of practical problems related to
designs of cooling, heating, air conditioning and distribution systems; design of heat
exchangers; ventilation design of livestock housing, greenhouses, and fruit and vegetable
storage facilities for control of temperature, humidity and/or air quality. Engineering
principles and linear programming concepts and applications are introduced at
the beginning of the course to the extent of solving problems in the allocation of
resources among competing alternatives and choosing the most economical system.
The course includes a semester-long project that provides a real-life design experience.
ABEN 350 Biological and Environmental Transport Processes
Fall. 3 credits. Prerequisites: MATH 294 and PHYS 162 (Computer-aided registered
Integration of heat and mass transfer in the context of biological and environmental systems.
Emphasis on the physical understanding of transport processes and simplified reaction
rates with application examples from plant and animal biology, the environment (soil/
water/air), and industrial processing of food and biomaterials.
ABEN 351 Computational Tools for Engineers
Spring. 3 credits. S-U or letter grade optional. Prerequisite: completion of the
undergraduate engineering math sequence or permission of instructor. Labs, MWF 2:30. J. R. Cooke.
This laboratory course provides a hands-on exposure to contemporary engineering software applications with
from applied mathematics and the engineering sciences. The symbolic computational software,
Mathematica, is the focus of the class. Topics from Math 191-294 and more
advanced topics relevant to the upper-level undergraduate curriculum and research are
treated.
ABEN 365 Properties of Biological Materials
Spring. 3 credits. S-U or letter grade optional. Prerequisites: one semester of math and
Mechanics and structural properties of biological materials. Mechanical damage of
animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of
materials and interpretation of test results. Development and implementation of experimental techniques for
obtaining engineering properties and the use of this information in a design process.
ABEN 367 Introduction to Biological Engineering
Spring. 3 credits. Prerequisites: one year each calculus and introductory biology;
minimum one term each college chemistry and physics (freshmen. S-U
grades optional. Lecs., T R 10:10; lab R or F 1:25-4:25. J. B. Hunter.
Explores the use of engineering principles to solve biological problems in the context of
laboratory experiments. Topics may include artificial organs, neuromuscular electrical
signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue;
and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for
engineering and life science students. Field trips, demonstrations, and readings in current
literature.
ABEN 371 Hydrology and the Environment (also Civil, Crop, and Atmospheric Sciences 371 and
Geology 204)
Spring. 3 credits. Prerequisite: one
course in calculus. 2 lecs., 1 lab, Lecs., T R 9:05; lab, S. S. Vahdani; P. C. Baveye, J.-Y. Parlange, M. F. Walter,
L. Cathles.
Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in
the natural environment. Includes precipitation, infiltration, evapotranspiration, ground
water, surface runoff, river meandering, floods, and droughts. Case studies, short field
trips, computer programs, and laboratories.
ABEN 385 Mechanics In the Earth and Environmental Sciences
Spring. 4 credits. S-U option. Lecs., MWF 11:15; sec, W 2:30-4:25. P. Baveye,
J.-Y. Parlange, and W. Brouwer.
The study of the earth and the environment requires an understanding of transport and other
physical processes within and at the surface of the earth. This course encourages the students to develop
knowledge of mechanics and its application to the earth and environmental sciences,
providing the background necessary to study the professional literature.
ABEN 425 Science and Technology of Environmental Management
Fall. 3 credits. Prerequisite: graduate or senior. Letter only. Lecs., T R 2:55-4:10.
W. J. Jewell.
Quantitative description of decline in environmental quality caused by human
activities, and exploration of science and technology solutions to pollution and their
limits. Tools used by engineers and scientists to understand the environment will be used to
focus on water quality problems (two-thirds), air quality (one-sixth) and land quality (one-
sixth).
ABEN 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: junior standing and above. Lecs., T R 12:25-2:15;
An in-depth treatment of the principles of aquaculture: fish biology, waste treatment,
engineering design, fish health, nutrition, processing, etc. This course is intended to
build upon the undergraduate’s previous course background and interests. Supervised
“hands-on” laboratory experiences. An ABEN 496 capstone design project can also be taken in
conjunction with this course.
ABEN 450 Instrument Design: Signal Processing and Data Acquisition
Fall. 4 credits. Prerequisites: Linear
Differential Equations, physics or electrical science, computer programming and use
An introduction to static and dynamic characteristics of electronic sensors, transduc-
ers, digital and analog signal conditioning circuits and conversion techniques, data
acquisition and instrument control with personal computers are considered. Biologi-
cal and agricultural examples of instrument problems and designs are used. A capstone
design project is an option with this course. See instructor for details. This course satisfies
the capstone design experience requirement.
ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes
Spring. 3 credits. Prerequisites: Computer Programming (ABEN 151 or CS 100) and
heat and mass transfer (ABEN 350 or equivalent). Lecs., MW 11:15; computation
disc/lab; F 11:15. A. K. Datta.
Introduction to simulation-based design as an alternative to prototype-based design.
Analysis and optimization of complex real-life processes using an industry-standard physics-
based computational software on a supercomputer. Biomedical processes and
industrial food processing applications of heat and mass transfer are covered. Computational
topics introduce the finite-element method, pre-
and post-processing, and pitfalls of using
computational software. Students choose their
own term project, which is the major part of the
course (no final exam). The course satisfies
the College of Engineering upper-
level computing application requirement. It also satisfies the capstone design experience
requirement.
ABEN 454 Physiological Engineering
Fall. 3 credits. Corequisite: fluid
Engineering analysis and design in the
physiology of animals and humans. Use of
engineering principles to study how animals
work in nature and to intervene in physiologi-
cal functions. The two major engineering
themes are: frequency analysis as applied to
neural conduction, sound processing, vision,
and image processing; and systematics as applied to cardiovascular and respiratory
systems, biomechanics, and bird flight.
Laboratories involve experiments, field trips, and live animal demonstrations. An ABEN 496 capstone
design project can also be taken in conjunction with this course.
ABEN 456 Biomechanics of Plants
Fall. 3 credits. Prerequisites: upper
division undergraduate or graduate status,
completion of introductory sequence in
biology and one year of calculus, or
permission of instructor. S-U or letter
grade optional. Lecs., T R 11:15-12:05; disc.,
An engineering approach is taken to plant
t form and function following the text, Plant
Biomechanics. Topics include: mechanical
behavior of materials, effect of geometry on
mechanical behavior solutions for water
reactions, plant cell walls, mechanical behavior of
tissues, mechanical attributes of organs,
the plant body, fluid mechanics and biomechanics
and plant evolution.
ABEN 471 Geohydrology (also Civil and
Environmental Engineering 431 and
Geology 445)
Fall. 3 credits. Prerequisites: Mathematics
294 and Engr 202. 2 lecs., 1 disc., lecture,
field trip. W. Brutsaert, L. M. Cathles,
J.-Y. Parlange, T. S. Steenhuis.
intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

**ABEN 473 Watershed Engineering**
Fall. 3 credits. Prerequisite: Fluid Mechanics or Hydrology. Lecs, T R 9:05; disc, R 1:25-4:30. M. A. Walter. Engineering principles are applied to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. This course satisfies the capstone design experience requirement.

**ABEN 474 Drainage and Irrigation Design**
Spring. 3 credits. Prerequisite: Fluid Mechanics or Hydrology. Lecs, M W F 12:20. T. S. Steenhuis and L. D. Geohring. This course will focus on design of drainage and irrigation systems for agriculture and non-agricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the capstone design experience requirement.

**ABEN 475 Environmental Systems Analysis**
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Lecs, M W F 1:25-2:15. D. A. Haith. System analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and computer-aided procedures (search techniques, linear programming, dynamic programming, and separable programming) to evaluate management alternatives. Applications include pollution control and resource management problems.

**ABEN 476 Solid Waste Engineering**
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lecs, M W F 1:25. D. A. Haith. Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; hazardous waste management. Emphasis on quantitative analyses.

**ABEN 477 Treatment and Disposal of Agricultural Wastes**
Fall. 3 credits. Prerequisites: One environmental science course and at least junior-level standing, or permission of instructor. T R 2:30-3:45. Not offered 1999-98. W. J. Jewell. Overview of pollution problems in agriculture, legal restrictions, and technologies used to control pollution. Biological, physical, and chemical processes are applied to solve problems associated with animal wastes, food production, and food and fiber processing.

**ABEN 478 Ecological Engineering**
Spring. 3 credits. Prerequisite: Junior-level environmental quality engineering course or equivalent. Lecs, T R 2:30-3:45. W. J. Jewell. Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, hydraulic applications of plants, wastewater farming, sludge and industrial residue application, and soil restoration. Bioremediation of toxins, and biofilters for air purification are examples of pollution control systems that depend on natural processes. Pollution control mechanisms in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

**ABEN 481 Design of Wood Structures**
Spring. 3 credits. Prerequisite: ENG 202. Lecs, M W F 12:20 (Holister Hall). K. G. Gebremedhin. Two evening prelims. Computer-aided and manual computation procedures of engineering wood structures. Topics include national design codes; estimation of design loads (dead, live, wind, snow, and seismic properties of wood and wood products; designs of beams, columns, trusses, frames, arches, bridges, diaphragms; connections, and special wood structural systems. Engineering judgment and individual responsibility in engineering design are also emphasized. The course includes a semester-long project that provides a real-life engineering design experience.

**ABEN 482 Bioenvironmental Engineering**
Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent. Lecs, T R 11:15, lab, W 1:25-4:35. L. D. Albright. Analysis and design of structures to modify the thermal and aerial environment of animals and plants. Environmental requirements of animals and plants, and the design of buildings to act as buffers between biological systems and climate. Heat flow, air flow, psychrometrics, energy balances, temperature biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

**ABEN 491 Highway Engineering (also Civil and Environmental Engineering 462)**
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently). Lecs, T R 10:30; lab, T 1:25-4:35; L. H. Irwin. An introduction to highway engineering with an emphasis on design. Students will work in teams to apply theories and design criteria used in professional practice to several highway design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors and psychology, hydrology and drainage design, highway materials, pavement design, and maintenance. This course satisfies the capstone design experience requirement.

**ABEN 494 Special Topics in Agricultural and Biological Engineering**
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged.

The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**ABEN 496 Senior Design in Agricultural and Biological Engineering**
Fall and spring. 1-3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Note: Completing an independent study form is required to register. Hours to be arranged. Staff. Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN course (for an approved ABEN course, see ABEN Undergraduate Program publication).

**ABEN 497 Individual Study in Agricultural and Biological Engineering**
Fall and spring. 1-4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff. Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided in the latter case, that adequate facilities can be obtained.

**ABEN 498 Undergraduate Teaching Assistantship**
Fall and spring. 1-4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff. The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments and regularly discusses objectives and techniques with the faculty member in charge of the course.

**ABEN 499 Undergraduate Research**
Fall and spring. 1-3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed. Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff. Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**ABEN 501-502 M.P.S. Project**
Fall and spring. 1-6 credits. Required of each M.P.S. candidate in the field. Hours to be arranged. ABEN graduate faculty. A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.
ABEN 551-552 Agricultural and Biological Engineering Design Project
Fall and spring. 3-6 credits. Prerequisite: admission to the M.Eng. (Agr.) degree program. Hours to be arranged. ABEN graduate faculty.
Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 5 credits are required for the Master of Engineering degree.
Students should register for 551 their first semester and complete any additional design project credits with 552. If more than 6 design projects credit is desired in one semester, both 551 and 552 may be taken.

ABEN 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: Linear differential equations, introductory chemistry and introductory physics, or permission of instructor. Not offered 1997-98. D. J. Aneshansley.
Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.

ABEN 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: Mathematik 293 or equivalent. Lecs, R 2:30-4:30. J.-Y. Parlange.
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability analysis) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations).

ABEN 671 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lecs, R 3:35-4:50 (first meeting—TBA after that).
J.-Y. Parlange.
The course encompasses the full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered alternatively with Civil and Environmental Engineering 653—a complementary, but not identical, course.

ABEN 672 Drainage
Theory of water and solute flow in aquifers, hillslopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined. Laboratories are used for hands-on experience with measurement of soil parameters and for actual drainage design. This course satisfies the capstone design experience requirement.

ABEN 677 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1997-98. Lecs, TR 2:30-3:45. W. J. Jewell.
Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are used in design problems with animal wastes, food production, and food and fiber processing. A semester-long design project is required. This course satisfies the capstone design experience requirement.

ABEN 678 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus. Lecs, MWF 2:30. D. A. Haith.
Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include urban and rural runoff, lake eutrophication, groundwater water loading from land disposal sites, pesticides and nutrients in agricultural drainage, irrigation return flows, and watershed stream flow and sediment yield.

ABEN 680 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&M 310 or permission of instructor. Lecs, MWF 11:15. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

ABEN 682 Pavement Engineering (also Civil and Environmental Engineering 643)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering. Lecs, W 1:25-2:15. L. H. Irwin.
Application of geotechnical engineering principles to the selection of materials and the design of highway and airfield pavements, computer-based methods for pavement design, structural evaluation of pavements, and pavement systems management. Topics of discussion will include bituminous mixture design, base course, soil stabilization methods, seal-coat design, design of flexible and rigid pavements, pavement design for frost conditions; and pavement evaluation using nondestructive test methods. Laboratory will provide a case study of pavement systems management.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. ABEN graduate faculty.
The department teaches "trial" courses under this number. Offerings vary by semester, and will advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. ABEN graduate faculty.
Topics are arranged by the staff at the beginning of the term.

ABEN 700 General Seminar
Fall. 1 credit. S-U grades only. M (time to be announced). Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

ABEN 750 Orientation for Research
Fall. 1 credit. Limited to newly joining graduate students. S-U grades only. Lecs, first 7 weeks, R 3:35-4:25. Remainder to be arranged. J. A. Bartsch.
An introduction to departmental research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

ABEN 754 Sociotechnical Aspects of Watershed Development (also ARME 754 and Government 644)
Examines watershed development and its relation to agriculture, irrigation and other activities within its basin. Provides an introduction to sociotechnical systems and the relation of social, technical and economic processes within watersheds, including political and administrative aspects. Provides an opportunity to examine systematically the interaction of various aspects of watershed management and design in developing countries.

ABEN 771 Soil and Water Engineering Seminar
Fall and spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours to be arranged. T. S. Steenhuis, J.-Y. Parlange and M. F. Walter.
Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

ABEN 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. Staff.
Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations. Hours to be arranged.

ABEN 782 Advanced Production Systems Seminar
Fall and spring. 2 credits. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. Staff.
Advanced analysis and design of production systems with emphasis on environmental science, engineering, economics, and biological responses. Hours to be arranged.
Agricultural, Resource, and Managerial Economics

Courses by Subject

ABEN 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. J. R. Cooke.

The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

ABEN 800 Master's-level Thesis Research
Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

ABEN 900 Graduate-level Thesis Research
Fall and spring. 1–15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research before the "A" exam is passed.

ABEN 901 Doctoral-level Thesis Research
Fall and spring. 1–15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of adviser. S-U grades. ABEN graduate faculty.

ABEM 100 Tradeoffs in Global Economic Issues: There's No Free Lunch

In this course students learn why a free lunch does not exist, analyze tradeoffs, and critically evaluate the impact of economic changes in global economic issues. Economic concepts will be used to assess tradeoffs in such issues as economic growth and natural resource availability; business profit making and corporate stewardship; international free trade and domestic protectionism; population growth and food production, safety, and service. Articles, case studies, experiments, and simulation will be used to evaluate these tradeoffs and relate the issues to the role of business in a global economy.

ABER 210 Introductory Statistics
Fall. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Lecs. M W F 1:25–2:15; sec T 10:10–12:05, 12:20–2:15 (2 secs), or 2:30–4:25 (3 secs); W 10:10–12:05 or 2:30–4:25 (3 secs); or R 12:20–2:15 (2 secs) or 2:30–4:25 (3 secs). 3 evening prelims C. van Es.

An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

ABER 220 Introduction to Business Management
Spring. 3 credits. Lecs. M W F 10:10–11:00; sec M 12:20–2:15, 2:30–4:25 (2 secs), 7:30–9:25 p.m. (2 secs); T 10:10–12:05 (2 secs), 12:20–2:15 (2 secs); W 7:30–9:25 p.m. (2 secs); or R 10:10–12:05 (2 secs), or 12:20–2:15 (2 secs). In the weeks sections are held, there will be no W lecture.

2 evening prelims. J. M. Hagen.

This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with regard to current issues such as globalization, ethics, quality, and strategic alliances. Case studies and guest executives are an important part of the course.

ABER 221 Financial Accounting

Staff.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, financial statements, underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base of publicly held companies; introduction to financial information on the World Wide Web.
ARME 320 Business Law I
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lecs, M W F 9:05–9:55, 1 evening prelim. D. A. Grossman. Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, property, and the landlord-tenant relationship.

ARME 321 Business Law II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law. Lecs, T R 10:10–11:25. A. A. Knoblach. The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, like employment discrimination, secured transactions, product liability, unfair competition, and electronic media law.

ARME 323 Managerial Accounting
Fall. 3 credits. Prerequisite: ARME 221 or equivalent. Lecs, M W 12:20–1:10; disc, R 10:10–12:05 (2 secs), or 12:20–2:15 (2 secs). E. L. LaDue. An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Limited use of electronic spreadsheets.

ARME 324 Financial Management
Spring. 4 credits. Prerequisite: ARME 220 or equivalent. Recommended: ARME 221 or 210 or equivalents. Lecs, M W F 9:05–9:55; disc, W 2:30–4:25 or R 10:10–12:05, 12:20–2:15, or 2:30–4:25, or F 10:10–12:05 or 12:20–2:15. 2 evening prelims. R. L. Streeter. Focuses on three major questions facing management: how to evaluate capital investment decisions, how to raise the capital to finance the firm, and how to generate sufficient cash flows to meet the firm’s cash obligations. Major topics include methods to analyze investment decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management. Microcomputers are used for analyzing financial problems. Previous computer experience is preferred, but optional instruction offered.

ARME 325 Personal Enterprise and Small Business Management
Spring. 3 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no add or drop after second class meeting. Lecs, T R 11:40–12:55. D. Streeter. Acquaints students with the challenging role of small business in the global economy. Special emphasis on the problems of planning, starting, managing a new business, including strategic planning, marketing, financing, and managing growth. Term project, development of a business plan, is done in teams of no fewer than three. Case studies and visiting entrepreneurs illustrate various small business issues.

ARME 326 Human Resource Management in Small Businesses
Fall. 3 credits. Prerequisite: ARME 220 or ARME 302 or equivalent. S-U grades optional. Lecs, T R 10:10–11:25. R. A. Milligan. An introduction to the management of human resources in small businesses. The focus is on developing and utilizing all of the capabilities of all small business personnel including owners, family, and employees. Topics include recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized.

ARME 340 Futures and Options Trading
Spring. 3 credits. Prerequisites: ECON 101. S-U grades optional. Lecs, T R 10:10–11:25. W. H. Lessier. The focus of the course is on the use of agricultural futures and options as marketing and management tools. A primary objective is to understand how companies, financial institutions, and farm businesses can employ hedging strategies to manage risk. Students will participate in a simulated trading exercise in which they will use real-time price and market information and input from industry experts to manage a hedge position.

ARME 342 Marketing Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: ARME 240 and ECON 101–102. Lecs, M W F 10:10–11; disc, R 12:20–2:15 (2 secs) or 2:30–4:25 (2 secs), F 10:10–12:05 (2 secs), or 12:20–2:15 (2 secs). In weeks discs are held, there will be no F lecture. R. D. Christy. Deals with the central link between marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the management aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public policy and ethical dimensions of marketing are examined.

ARME 347 Marketing Fruits, Vegetables, and Ornamental Products
Fall. 3 credits. S-U grades optional. A mandatory 2-day field trip. Estimated cost of field trip, $50. Lecs, M W F 12:20–1:10. Not offered 1997–98. Staff. A study of fruits, vegetables, and ornamental products of the horticultural product market orders in the Northeast, and an actual farm consulting and study trip and upon return from trip. A paper, critical-thinking management context. Topics include recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized.

ARME 380 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" for complete catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.

ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving
Fall. 3 credits. 5 half-day field trips. On days field trips are taken, class ends at 5:30. Prerequisite: ARME 302 or equivalent. Lecs, T R 12:20–1:10; disc, R 1:25–4:25. G. J. Connerman. A capstone seminar/workshop designed for juniors and seniors who plan to return to the family business or home farm or to take positions in banking, credit, or agribusiness, as well as those who wish to establish entrepreneurial businesses. The objective of the course is to pull together interdisciplinary knowledge and apply it in a problem-solving, critical-thinking management context. Topics include managerial analysis and strategic planning, human resource management, and business and family arrangements.

ARME 403 Farm Management Study Trip
Spring. 1 credit. Prerequisite: ARME 302. Open by application only. Secs, arranged. B. L. Anderson. A special program to study production and management systems in diverse agricultural regions of the U.S. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

ARME 404 Advanced Agricultural Finance Seminar
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W 2:30–4:25. E. L. LaDue. A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a field trip to observe FSA financing during fall term, a two- to four-day trip to financial institutions in the Northeast, and an actual farm consulting and credit analysis experience in the spring term.

ARME 405 Farm Finance
Spring. 4 credits. Prerequisite: ARME 302 or equivalent. Lecs, M W F 9:05–9:55; disc, T 2:30–4:25. E. L. LaDue. The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

ARME 406 Farm and Rural Real Estate Appraisal
Spring, weeks 7–15. 2 credits. Limited to 40 students. Prerequisites: ARME 302 or equivalent and permission of instructor. Lecs, R 11:15–12:05; sec, R 1:25–4:25. 6 half-day field trips, 1 all-day field trip. On days of field trips, class ends at 5:30. G. J. Connerman. The basic concepts and principles involved in appraisal. Factors governing the price of
farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.

ARME 410 Business Statistics
Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lecs. M W F 11:15-12:05. 2 evening prelms. C. van Es.

This course focuses on fourator topics useful to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. The course will involve a student research project designed to give experience in collecting and interpreting data.

ARME 411 Introduction to Econometrics
Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lecs. T R 10:10-11:25. L. S. Willett.

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed and simultaneous equation models are introduced. Students are required to specify, estimate, and report the results of an empirical model using econometric methods.

ARME 412 Introduction to Mathematical Programming
Fall. 3 credits. Primarily for juniors, seniors, and H.S. degree candidates. Prerequisite: ARME 210 or equivalent. Lecs. T R 11:40-12:55. J. E. Pratt.

This is a course in applied linear programming. Following a review of linear algebra, the emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of economic problems. Standard LP problems such as work scheduling, blending, resource allocation, capital budgeting, transportation and financial planning, inventory management, etc., will be studied. Integer and nonlinear programming will be introduced, if time permits.

ARME 415 Price Analysis (also Economics 415)
Fall. 3 credits. Primarily for juniors, seniors, and H.S. degree candidates. Prerequisite: ECON 313 or CEH 210 or equivalent, ARME 210 or equivalent. Lecs. M W F 9:05-9:55. H. M. Kaiser.

The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

ARME 416 Demographic Analysis in Business and Government (also Rural Sociology 331)
Spring. 3 credits. S-U with permission of instructor. Prerequisite: RSCS 213 or a statistics course. Lecs. W F 1:25-2:15; lab M 1:25-2:15 or 2:30-3:20; W. Brown.

For description, see RSCS 331.

ARME 417 Decision Models for Small and Large Firms
Spring. 3 credits. Prerequisites: ARME 210 and ECON 101 or equivalents. Lecs. T R 2:30-3:20; lab W 2:30-4:25 C. L. van Es and D. H. Streeter.

The course is focused on economic and statistical models of decision analysis and their application in large and small business settings. It will be shown how use of models can improve the decision process by helping the decision-maker understand the structure of the decision, incorporate subjective probabilities as a way to portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis will be emphasized, as well as the need to combine both quantitative and qualitative considerations in decision-making. Cases will be drawn from small business scenarios, the public research arena, and corporate settings. Implementing decision models with computers will be the focus of lab sessions.

ARME 422 Estate Planning
Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. M. C. Peeler.

ARME 424 Business Policy
Fall. 3 credits. Limited to seniors majoring in business management and marketing. T R 8:40-9:55; 10:10-11:25 or 12:30-1:40. B. L. Anderson.

An integrating course that examines business policy formulation and implementation from the standpoint of the board and chief executive of an organization. Focusing on decision making and leadership. The course is built around a series of cases and several guest executives. Emphasizes improving oral and written communication skills.

ARME 425 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: ARME 325 or NBM 300 and permission of instructor. Term project work will amount to approximately $100 per team. Lecs. W M 2:30-4:25.

Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

ARME 426 Cooperative Management and Strategies
Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, $450. Lecs. M W F 12:20-1:10. 2-day field trip required. B. L. Anderson.

Investigates the unique aspects of cooperative, membership, and for-profit organizations. Issues are approached from the point of view of management, board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of corporate strategies, management, financing, and marketing in cooperative, membership, and for-profit organizations. Primary focus is on operating cooperatives in agriculture although alternative types of cooperative organizations are discussed, such as credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

ARME 428 Technology: Management and Economic Issues (also Economics 428)
Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. Limited to juniors and seniors. Not offered 1997-98. R. J. Kalter.

Designed to acquaint students with the role of technology in modern society, business, and education. Emphasis is placed on the context for managerial analysis and decisions with respect to technological adoption. Topics include the historical influence of technology on economic structure and activity, contemporary technological trends, implications for business managers, adoption and diffusion, public acceptance, implications for future structural and spatial organization of economic activity, impediments to technological advancement, and public policy considerations.

ARME 430 International Trade Policy
Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents. Lecs. T R 1:25–2:40. Optional disc to be arranged. D. R. Lee.

This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy in primary commodities, and to both developed and developing countries are also emphasized.

ARME 431 Food and Agricultural Policies

The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The international role of agricultural trade and agricultural policies in other countries is emphasized.

ARME 443 Food-Industry Management
Fall. 4 credits. Limited to juniors and seniors. Prerequisite: ARME 448 or 342 or permission of instructor. Lecs. T R 10:10–11:25; sect T 12:25–2:40. G. A. German.

A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising, distribution, and international trade are included. Guest speakers from the food industry present case-study solutions at the Tuesday session.

ARME 446 Food Marketing Colloquium
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructors. S-U grades only. R 12:25–2:40. G. A. German, E. W. McLaughlin, and D. J. Perosio.

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced
topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intersession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

**ARME 447 Food Marketing Colloquium**
ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken, including an international trip during January intersession and a five-day trip to the Food Marketing Institute Convention in Chicago during the first week in May. Students will prepare research topics on various aspects of the food industry.

**ARME 448 Food Merchandising**
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. Lecs, T R 10:10–11:25. G. A. German and D. J. Perosio.
Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

**ARME 449 Global Marketing Strategy**
This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

**ARME 450 Resource Economics (also Economics 450)**
Fall. 3 credits. Prerequisites: MATH 111 and ECON 313. Lecs, M W F 2:30–3:20. J. M. Zorn.
Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

**ARME 451 Environmental Economics and Policy (also Economics 408)**
This course applies economic concepts to public decision making about environmental commodities and natural resources. Emphasis will be placed on exploring the two leading economic paradigms of allocating public goods: the conventional economic approach, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of non-market valuation techniques; and a property rights/institutional perspective. Ecological economics concepts will also be examined.

**ARME 464 Economics of Agricultural Development (also Economics 464)**
Spring. 3 credits. Prerequisites: ECON 101–102, or permission of instructor. Lecs, T R 11:40–12:55. R. D. Christy.
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

**ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics**
Fall or spring. 4 credits maximum. S-U grade. optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

**ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics**
Fall or spring. Variable credit. S-U grade optional. Students must register with an Independent Study form (available in 140 Roberts Hall). To be used for special projects designed by faculty members.

**ARME 498 Supervised Teaching Experience**
Fall or spring. 1–3 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**ARME 499 Undergraduate Research**
Fall, spring, or summer. 1–4 credits. Limited to students with grade-point averages of at least 2.7. Prerequisite: written permission of the staff member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grade optional. Staff. Permits outstanding undergraduates to carry out independent research that is necessary under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

**ARME 605 Agricultural Finance and Capital Management**
Fall. 3 credits. Prerequisite: ARME 405 or equivalent. Offered alternate years. Not offered fall 1997; next offered fall 1998. $35 charge for reading materials; no text. T R 8:40–9:55. E. L. LaDue and L. W. Tauer.
Advanced topics in capital management and financing of agriculture. Special emphasis on current issues. Examines farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, firm growth, inflation, loan evaluation, and selected topics on financing agriculture in developing countries.

**ARME 608 Production Economics (also Economics 408)**
Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lecs, M W F 10:10–11. L. W. Tauer.
The theory of production economics with emphasis on applications to agriculture. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

**ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also Economics 430)**
Spring. 4 credits. Prerequisites: ARME 608 or CERH 603, ECON 313, or equivalent intermediate micro theory incorporating calculus. Lecs, T R 8:50–9:55. H. de Gorter and staff.
The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

**ARME 640 Analysis of Agricultural Markets (also Economics 440)**
Fall, weeks 1–7 (ends Oct. 16). 2 credits. Prerequisites: ARME 441 and 415 or equivalents. Lecs, T R 2:30–4:25. W. G. Tomek.
This course is about agricultural product markets. Focus is placed on their distinguishing characteristics, consumer behavior, market structure, performance, models of price determination, and selected topics related to price behavior.

**ARME 641 Commodity Futures Markets (also Economics 441)**
This course is primarily about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for understanding hedging, speculation, and public-policy issues.

**ARME 651 Environmental and Resource Economics**
Spring. 4 credits. Limited to graduate students. Lecs, T R 10:10-11:25. W. D. Schulze.

Applied welfare economics with specific applications to environmental and resource issues. Review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and costs— including property value and wage hedonic approaches, travel models and contingent valuation—are covered. Survey/data collection methods are described in detail. Explore innovative market mechanisms for resolving public good, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. ARME 651 is a core course for the Environmental Management concentration/option.

**ARME 652 Land Economics Problems (co-listed with Civil and Environmental Engineering 529)**
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. W 7:30-9.25 p.m. D. J. Allee. Special work on any subject in the field of land and resource economics.

**ARME 660 The World's Food**

Designed to introduce first-year graduate students to food economics, the world food situation, and the linkages between food, population, and employment in developing countries. Among the topics considered are the extent of hunger, income and dietary change, colonization growth, and the outlook for feeding an eventual population of 10-12 billion.

**ARME 665 Food and Nutrition Policy (also Nutritional Sciences 685)**
Spring. 3 credits. Prerequisites: Introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lecs, M W 2:30-3:40. D. Sahn and P. Dorosh.

For description, see NS 685.

**ARME 666 Economics of Development (also Economics 466)**
Spring. 3 credits. Prerequisites: ECON 513 and 314 or permission of instructor. S-U grades optional. Lecs, T R 11:40-12:55. S. C. Kyle.

The course is designed as an introduction to the economics of development at the graduate level. The course is split into two major sections, the first dealing with the micro-economics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal will be to illuminate the particular features of low-income countries which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.

**ARME 694 Graduate Special Topics in Agricultural, Resource, and Managerial Economics**
Fall or spring. 4 credits maximum. S-U grades optional. Staff.

The department offers "special topics" courses under this number. Offerings vary by semester, and will be advertised by the department.

**ARME 698 Supervised Graduate Teaching Experience**
Fall or spring. 1-3 credits. Total of 4 credits maximum during graduate program. Students must register with an independent study form (available in 140 Roberts Hall). Open only to graduate students. Undergraduates should enroll in ARME 498. S-U grades optional. Prerequisite: permission of instructor. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching laboratories and tutorials. Students are expected to achieve at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

**ARME 699 M.P.S. Research**
1-6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

**ARME 700 Individual Study in Agricultural, Resource, and Managerial Economics**
Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff.

This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

**ARME 708 Advanced Production Economics**
Fall. 3 credits. Prerequisite: ARME 608, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Offered fall 1997 and 1999. Not offered fall 1998. Hours to be arranged. R. N. Boisvert.

Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, factor substitution. Developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

**ARME 710 Econometrics I**
Spring. 4 credits. Prerequisite: matrix algebra and statistics at the level of BTRY 417 and 601 (BTRY 409 or ECON 619 preferred). Undergraduate students must have permission of instructor. Lecs, T R 2:30-4:25. W. G. Tomek.

This intermediate-level course covers selected statistical models and associated estimators used in econometrics, dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous equation models, and models with non spherical error terms and specification errors. Students seeking an introduction to econometrics should take ARME 411.

**ARME 711 Econometrics II**
Fall. 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended. Lecs, M W 10:10-12:05. T. D. Mount.

Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating non-sample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables and latent variables.

**ARME 712 Quantitative Methods I**
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. Lecs, M W 8:40-9:55; sec, F 9:05-9:55. R. N. Boisvert.

A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications are made to agricultural, resource, and regional economic problems.

**ARME 713 Quantitative Methods II**

This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of numerical and econometric analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

**ARME 714 Experimental Economics**

The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods, externalities, and voting; information and uncertainty; and economic anomalies.

Students must design, implement, and write a paper describing their own experiment testing an economic theory.
ARME 717 Research Methods in Agricultural Economics  
Discussion of the research process and scientific method as applied in agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

ARME 730 Seminar on International Trade Policy, Agriculture, Resources and Development  
Spring. 3 credits. Limited to graduate students. Prerequisites: ARME 630 or equivalent. Offered alternate years. Offered spring 1998 and 2000. Not offered spring 1999. Hours to be arranged. D. R. Lee.  
This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including trade liberalization, trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

ARME 731 Seminar on the Political Economy of Agriculture and Trade  

ARME 740 Agricultural Markets and Public Policy  
Spring. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Recommended: ARME 640. T R 12:20–2:15. W. H. Lesser. Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination schemes in agriculture. Topics can be adjusted to students’ interests.

ARME 741 Space, Trade, and Commodity Analysis  
Principal topics are spatial micro-economics of the firm, spatial pricing and location decisions, the forms of spatial competition, and quantitative methods for spatial analyses, which include techniques for finding spatial equilibriums and selected network optimization algorithms.

ARME 750 Resource Economics  
Fall. 4 credits. Prerequisites: ECON 609 and 618, or ARME 713. Lect, T R 2:30–4:25. J. M. Conrad.  
Optimal control and other methods of dynamic optimization will be used to study the allocation and management of natural resources.

ARME 751 Environmental Economics  
Spring. 4 credits. Prerequisites: ECON 609 and 618, or ARME 713. S-U grades optional. Hours to be arranged. R. N. Boisvert and L. D. Chapman. Economic theory will be applied to the problems of managing environmental quality. Static and dynamic forms of externality, decisions to preserve or develop natural environments, and methods of valuation will be presented.

ARME 754 Sociotechnical Aspects of Watershed Development (also Agricultural and Biological Engineering 754, and Government 644)  
Spring. 2 or 3 credits. S-U grades optional. T. Steenhuis, M. Walter, N. Uphoff, and staff.  
For description, see ABEN 754.

ARME 763 Macro Policy in Developing Countries  
Spring. 3 credits. Prerequisites: ECON 609, 610, 613 (may be taken concurrently), or permission of instructor. Offered alternate years. Not offered spring 1998; next offered spring 1999. Lect; T 2:45–4:25. S. C. Kyle.  
This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.

ANIMAL SCIENCE 61
AN SC 215 Exotic Avian Husbandry and Development
Spring. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or Bio G 103, 104 or equivalent. Lec, M 2:30-4:30. J. Parks and D. Muscarella.
Natural history, care, management, health and breeding of exotic species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: 3 years of college biology. Lecs, T R 9:05; sec. T W R or F 2-4:35. J. E. Parks.
An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grade optional. Lecs, T R 10:10; lab, W or R 2-4:25. D. M. Galton and T. Batchelder.
Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351 and AN SC 455.

AN SC 251 Dairy Cattle Selection
Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lecs, T R 9:05; lab, R 1:25-4:25. C. Collyer.
Selection, management, feeding, breeding, and training of light horses.

AN SC 290 Meat Science (also Food Science 290)
Fall. 2 or 3 credits. Lecs, T R 11:15; lab, M or R 12:20-3:20. D. H. Beermann and staff. Lecture only, 2 credits; lecture plus lab, 3 credits; lab cannot be taken without lecture.
Introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal surgery, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture and quality control. An all-day field trip to commercial meat plants is taken.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year of introductory biology. Lecs, M W F 10:10. J. E. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity, emphasis on physiological mechanisms and application to genetic improvement and conservation programs. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in AN SC 300 required to register. Labs, M W or F 1:25-4:25. Each lab limited to 30 students. J. E. Parks.
Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOP 312)
Spring. 2 credits. Prerequisites: introductory course in animal physiology, at least one animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15. E. F. A. Olenburs and K. A. Houpt.
The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interaction, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 312 Applied Cattle Nutrition
Spring. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent) Dairy Fellows enrollment during AN SC 455. Lecs, M W F 10:10; lab, M or T 1:25-4:25. M. E. Van Amburgh.
An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. (General Nutrient, Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for advanced juniors, seniors, and entering graduate students.

AN SC 321 Applied Animal Genetics Seminar
Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20. P. A. Olenburs and E. J. Pollak.
Topics of interest related to the genetic definition and control of quantitative and qualitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture-discussion-type format.

AN SC 322 Applied Animal Genetics-Laboratory
Fall. 1 credit. Prerequisite: concurrent registration in AN SC 321 or instructor's permission. S-U grades only. M 2-4:25. P. A. Olenburs and F. J. Poliak.
Many genetic concepts addressed in AN SC 321 are explored in depth using a computer-assisted instruction environment. Mendelian inheritance of qualitative traits, detection of carriers of recessive genes, artificial selection, inbreeding and heterosis, design and evaluation of genetic improvement and conservation programs, and role of population size are among the topics considered.

AN SC 323 Equine Genetics
Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Disc, T 1:25-2:15. P. A. Olenburs and staff.
Topics of equine genetics will be presented and discussed. Independent laboratory research, a short written paper, and an oral presentation will be important parts of this course. Lecture topics may include the genetic aspects of color, abnormalities, metabolic diseases, unsoundness, and performance.

AN SC 330 Commercial Poultry Production
Spring. 3 credits. Prerequisites: AN SC 100, 150, and 230 or permission of instructor. Offered alternate years. Next offered spring 1998, 2000; not offered spring 1999, 2001. M 2-4:25 (occasional field trips run past 4 p.m.) K. Keshavarz.
The course emphasizes production and business management aspects of commercial poultry farm operation and is designed to acquaint the student with current technology involved in commercial poultry production.

AN SC 341 Physiology of Lactation
Spring. 3 credits. Prerequisite: AN SC 150 or AN SC 300 or equivalent. Lecs, T R 9:05; lab R 2-4:25. Staff.
The physiology of milk production is covered with emphasis on mammary gland development, anatomy, hormonal control of milk secretion, and the biosynthesis of milk constituents. The dairy cow serves as the model system, but all livestock species are considered.

AN SC 351 Dairy Herd Management
Spring. 4 credits. Prerequisites: AN SC 250 or permission of instructor. Recommended: ARME 302. Lecs, M W F 11:15; labs, M or R 1:25-4:25, and F (alternate weeks) 1:25-4:25. D. M. Galton and T. L. Batchelder.
Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 360 Beef Cattle
Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with the management skills through computerized
simulation and working directly with cattle. Students are required to spend several days during the semester feeding and caring for cattle and observing calving.

AN SC 365 Equine Nutrition
Fall. 2 credits. Prerequisites: AN SC 100, 212, and 265. S-U grades optional. Lec, T R 8–8:50. H. F. Hintz.
The principles of nutrition for horses will be presented. Digestive physiology, sources of nutrients, feeding regimes for various classes of horses and interactions of nutrition and diseases will be discussed.

AN SC 370 Swine Nutrition and Management
X. G. Lei and K. Roniker.
This course focuses on swine nutrition, feeding, and management. Lectures are integrated based nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environmental, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratories, animal projects, and problem troubleshooting are offered.

AN SC 380 Sheep
The breeding, feeding, management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a practical knowledge of sheep production as well as the scientific background for improved practices.

AN SC 390 Animal Growth Biology
Fall. 2 credits. Not open to freshmen; sophomores by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology. AN SC 212 and 221. Lec, R 1:25–3:20; sec, F 1:25–2:15.
D. H. Beermann and staff.
A detailed discussion of the morphological and physiological aspects of growth of domestic and laboratory animals. Overview of the cycle and early embryo growth pattern, differentiation and cellular aspects of tissue development and growth, maternal influences on fetal growth and allometric patterns of postnatal growth are discussed. Endocrine, genetic and nutritional influences on protein and lipid metabolism, nutrient requirements and composition of growth will be emphasized.

AN SC 400 Tropical Livestock Production
An analysis of constraints on livestock production in developing countries of the tropics, with specific objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Primes: Laboratory examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.

AN SC 401 Dairy Production Seminar
Spring. 1 credit. Limited to juniors and seniors. D. E. Bauman.
Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences
Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

AN SC 403 Tropical Forages
A. N. Pell.
An overview of tropical grassland, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior; problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15.
R. E. Austic and D. E. Bauman.
A fundamental approach to nutrition focusing on the metabolic rate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to induct the student into the fundamental principles of nutrition and metabolism through an integration of nutrition, biochemistry, and physiology.

AN SC 412 Livestock and the Environment
Spring. 2 or 4 credits. No prerequisite for 2 credits; with permission of the instructor, students who have taken or are concurrently taking AN SC 312 can sign up for 2 additional credits for completing an independent project on whole-farm environmental planning. Lec, T R 11:15–12:05. Disc, TBA for the 2 extra credits.
D. G. Fox and R. E. Pitt.
This course will explore environmental issues surrounding livestock and the environment, including competition with humans for food resources, impact of livestock on human health, and impact of livestock farms on environmental/community problems, including odor, and pathogens and excess nutrient effects on water quality. Those taking 2 additional credits will use computer software tools to evaluate aspects of whole-farm nutrient and environmental management on case study farms. Data collection and analysis will continue throughout the semester.

AN SC 414 Ethics and Animal Science
Fall. 2 credits. Enrollment limited to seniors only. Lecs, M 12:20; disc, W 12:20–1:10. One evening session (7–9 pm, Oct. 1): Susceptible to Kindness, Miss Ever's Boys. The Tuskegee Syphilis Study. Mandatory farm tour (9 am–1 pm, Saturday, Sept. 27). D. J. Cherney and A. van Tienhoven.
An exploration of the place of humans in the biological world, origins and development of ethics and morality, specism, animals for research, transgenic animals, animal husbandry, and its ethical dilemmas. A book review, participation in discussions, and a final project of the student's choice will be used to evaluate the performance of the student.

AN SC 415 Poultry Nutrition
Spring. 1 credit. Prerequisite: AN SC 212 or permission of instructor. Not offered spring 1998. Lec, F 11:15. R. E. Austic.
A practical consideration of principles of nutrition applied to feeding poultry, including use of linear programming techniques in diet formulation.

AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 50 students. Lec, R 12:20; sec, M 2–4:25. E. J. Pollak.
A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra program for problem solving.

AN SC 425 Gamete Physiology and Fertilization
J. E. Parks.
Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocyte, gamete transport and interaction with male and female reproductive tract; and cytoplasmic, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation and fertilization.

AN SC 427 Fundamentals of Endocrinology
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05.
P. A. Johnson.
Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 455 Dairy Nutrition and Health
Fall. 3 credits. Prerequisite: AN SC 351 and permission of instructor. Lecs, M W F 9:05; lab, M or T 2:00–4:25. D. M. Galton, L. E. Chase and T. L. Batchelor.
Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of
997-1998

The program is designed for undergraduates who have a stronger interest in dairy farming. The objective is to gain further understanding of the integration and application of dairy farm management principles and practices with respect to progressive dairying and related industries.

**AN SC 457 Livestock Fellowship**
Spring. 2 credits. Prerequisite: Permission of instructor. Not offered spring 1998. S-U grades only. Lec, F 1:00-4:25. A program for students with particular interests in meat animal production, beef cattle, sheep, and swine. Objectives are to gain a thorough understanding of the production of these species and their integration in various farm management situations. Students will participate in extension education programs and have contact with livestock producers as well as the agribusiness organizations important to livestock production.

**AN SC 490 Commercial Meat Processing**

D. H. Beermann.
A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat ingredients; their functional properties; various processing methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.

**AN SC 494 Special Topics in Animal Science**
Fall or spring. 4 credits maximum. Prerequisite: Undergraduate standing. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**AN SC 498 Undergraduate Teaching**
Fall or spring. 1, 2 or 3 credits; limited to two experiences under graduate teaching career. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a faculty member or laboratory teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

**AN SC 499 Undergraduate Research**
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to receive pertinent literature, prepare a project outline, conduct the research, and prepare a report.

**AN SC 601 Amino Acids (also NS 601)**
A course emphasizing the dynamic aspects of protein digestion, absorption, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the requirements for amino acids.

**AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)**
This course focuses on the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression, regulation, and mammalian health disorders associated with individual elements. Methodology and facility of mineral research is also discussed.

**AN SC 604 Vitamins (also NS 604)**
Fall. 2 credits. Lec, T R 10:10. G. F. Combs, Jr.
Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

**AN SC 605 Ruminant Nutrition: Microbial Ecology and Forage Chemistry**
Ruminant nutrition, microbial ecology, fiber digestion, forage chemistry, and rumen function.

**AN SC 610 Seminar**
Fall and spring. 1 credit. S-U grades only.

**AN SC 611 Field of Nutrition Seminar**
Fall and spring. No credit. No grades given.

Lectures on current research in nutrition.

**AN SC 620 Seminar in Animal Breeding**
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours to be arranged.

**AN SC 621 Seminar: Endo/Reprod Biology**
Fall and spring. 1 credit. Prerequisites: Permission of instructor. Registration limited to graduate students. S-U grades only. Lec, W 4:00. W. B. Butler and staff. Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

**AN SC 625 Nutritional Toxicology (also TOX 625)**
Toxic doses of nutrients and interference with the metabolism of nutrients by other toxic compounds represent the two principal branches of the course. Introduction to poisons plants and general toxicology will be provided. Course will focus on poisons found in feeds and foods.

**AN SC 630 Bioenergetics/Nutritional Physiology**
Spring. 3 credits. Prerequisites: AN SC 410 and biochemistry or physiology, or permission of instructor. S-U grades optional. Offered alternate years. Not offered spring 1997, 1999. Lec, M W F 10:10. A. W. Bell and D. E. Bauman.
An integrated systems approach to the nutritional physiology and energy metabolism of productive animals. Emphasis on extracellular regulation of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

**AN SC 640 Individual Study in Animal Science**
Fall or spring. 1 or more credits. S-U grades optional. Hours to be arranged. Staff.
Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.
A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on techniques used in conducting research in nutrition and physiology (e.g., subcloning, mutagenesis of DNA, RT-PCR, DNA sequencing and analysis, analysis of gene expression, protein expression). Animal science and mammalian biology provide the context for the experiments. Lectures will introduce laboratory exercises, supplement laboratory topics, and discuss selected readings from the literature. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

For students admitted to candidacy after the ‘A’ exam has been passed.

The program of study in biology is offered by the Division of Biological Sciences. For course descriptions, see the section on the Division of Biological Sciences.

COMM 116 Communication in Social Relationships

Spring or summer. 3 credits. Not open to first-semester freshmen. Spring: Lecs, M W F 1:25–2:15, C. Trumbo.
An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 117 Writing about Communication

Spring. 3 credits. Concurrent enrollment in COMM 110 required. TR 10:10–11:25, L. VanBuskirk and staff. Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students’ ability to gather information, to analyze information, to integrate ideas about communication, and to express those ideas clearly and cogently.

COMM 120 Contemporary Mass Communication

Fall. Lecs, M W F 12:20–1:10, J. Shanahan and D. G. McDonald. The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students’ personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 121 Investigating Communication

An examination of research methods in communication, with particular emphasis on the mass communication process. Exercises in writing, speaking, and working in small groups focus on topics such as gender, depictions, violence in the media, and social roles.

COMM 191 Topics in Communication

Summer. 1–3 credits. Hours to be arranged. Staff. Study of topics in communication at lower-division level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

COMM 201 Oral Communication

Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Druckman, T. Russo, R. Thompson, and staff.

Theories and practical exercises in self-confidence and competence in research, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate

Fall. 3 credits. T R 10:10–11:25, P. Stepp. The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

COMM 204 Effective Listening

Fall and spring. 3 credits. Limited to 25 nonfreshman students per section. B. Earle. No students accepted or allowed to drop after the second week of classes. Lecs, M 2:55–4:10, sec, W 1:25–2:40, 2:55–4:10, R 1:25–2:40, 2:55–4:10, R. Thompson. Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students’ listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 230 Visual Communication

An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV, newspapers, documentaries, entertainment movies, print and interactive media are used to develop a theoretical

Related Courses in Other Departments

Introductory Animal Physiology Laboratory (BIOAP 319)

Milk Quality (FOOD 351)
Agriculture in the Developing Nations (INTAG 602)
Lipids (NS 602)
Basic Immunology, Lectures (BIOG 305)

A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on techniques used in conducting research in nutrition and physiology (e.g., subcloning, mutagenesis of DNA, RT-PCR, DNA sequencing and analysis, analysis of gene expression, protein expression). Animal science and mammalian biology provide the context for the experiments. Lectures will introduce laboratory exercises, supplement laboratory topics, and discuss selected readings from the literature. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

For students admitted to candidacy after the ‘A’ exam has been passed.

The program of study in biology is offered by the Division of Biological Sciences. For course descriptions, see the section on the Division of Biological Sciences.

COMM 116 Communication in Social Relationships

Spring or summer. 3 credits. Not open to first-semester freshmen. Spring: Lecs, M W F 1:25–2:15, C. Trumbo.
An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 117 Writing about Communication

Spring. 3 credits. Concurrent enrollment in COMM 110 required. TR 10:10–11:25, L. VanBuskirk and staff. Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students’ ability to gather information, to analyze information, to integrate ideas about communication, and to express those ideas clearly and cogently.

COMM 120 Contemporary Mass Communication

Fall. Lecs, M W F 12:20–1:10, J. Shanahan and D. G. McDonald. The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students’ personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 121 Investigating Communication

An examination of research methods in communication, with particular emphasis on the mass communication process. Exercises in writing, speaking, and working in small groups focus on topics such as gender, depictions, violence in the media, and social roles.

COMM 191 Topics in Communication

Summer. 1–3 credits. Hours to be arranged. Staff. Study of topics in communication at lower-division level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

COMM 201 Oral Communication

Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Druckman, T. Russo, R. Thompson, and staff.

Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate

Fall. 3 credits. T R 10:10–11:25, P. Stepp. The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

COMM 204 Effective Listening

Fall and spring. 3 credits. Limited to 25 nonfreshman students per section. B. Earle. No students accepted or allowed to drop after the second week of classes. Lecs, M 2:55–4:10, sec, W 1:25–2:40, 2:55–4:10, R 1:25–2:40, 2:55–4:10, R. Thompson. Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students’ listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 230 Visual Communication

An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV, newspapers, documentaries, entertainment movies, print and interactive media are used to develop a theoretical
framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 232 Art of Publication
Fall. 3 credits. Each lab limited to 24 nonfreshman students. Students missing the first two classes without university excuse are dropped so others may register. Project materials cost $75-$100. Lecs. M W 10:10-11:00 or 11:15-12:05; labs M 2:30-4:25, W 2:30-4:25. M. Toor.

A basic course designed to explore visual concepts that increase communication effectiveness through the printed word. The importance of selecting and coordinating format, layout, typography, and illustrations is stressed. Lectures, in-class laboratory assignments, and outside projects examine opportunities and problems in publication design and desktop publishing.

COMM 240 Communication Systems and Technologies
Spring. 3 credits. T R 10:10-12:05. D. G. McDonald.

An exploration of the nature of communication systems and technologies. Topics include a brief history of communication and information technologies, descriptions of the uses, and impacts of technologies within the social system, and an introduction to electronic message design and construction. Lab includes practical application of course topics.

COMM 250 Newswriting for Newspapers
Fall, spring. 3 credits. Limited to 25 students. Prerequisite: Major in communication, or permission of instructor. Keyboarding ability essential. Students missing first two classes without university excuse will be dropped. Lecs., M W 9:05-9:55; labs, R 2:30-4:25 or F 9:05-11:00. Staff.

Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on newswriting as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

COMM 253 Information Gathering and Presentation

Students learn how to locate information from data bases, inventories, and printed materials, to evaluate it, and to present it in written, tabular, and graphic form. Formats include media stories, research reports, and materials for public information. Special emphasis is placed on presenting numerical information and on writing for specific audiences.

COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 35 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lec 01, M W F 9:05-9:55; Lec 02, M W F 10:10-11:00. Spring: M W F 9:05-9:55. Sections to be announced. L. Cowdery.

An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instructions, descriptions, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media, or writing for scientists.

COMM 263 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lecs. F 11:15-12:05; Fall: Sec M 12:20-2:15, W 10:10-12:05; Spring: Sec M 12:20-2:15, W 10:10-12:05. L. Van Buskirk and staff.

Students write as members of different organizations, in the position of supervisor, subordinate, colleague, and representative of business, government, community, and other organizations. Emphasis on adapting tone to the audience and the purpose of the message. Weekly writing assignments include various kinds of internal and external reports, memoranda, proposals, and letters. Assignments based on the Exxon Valdez oil spill and other case studies.

COMM 272 Principles of Public Relations and Advertising
Summer. 3 credits. Not open to freshmen. Staff.

Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society. The economic system, and organizations. Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

COMM 273 Communication Institutions

A survey of the history, organization, and social importance of communication institutions. Institutions to be analyzed include advertising/PR, media industries, propaganda and political communication, news/journalism, and new technologies. Cases and examples will be drawn from areas relevant to CALS programs, including environment, agricultural policy and land use. Communication 116 or 120 are suggested but not required.

COMM 274 Communication Industry Research
Spring. 3 credits. Prerequisite: COMM 116, 120, 121. Lecs., M W 12:20-1:10; labs, F 9:05-11:00 or F 9:05-11:00. D. G. McDonald and J. Shanahan.

Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. Van Buskirk.

The course explores the personal, career, social, and economic implications of gender categories. Topics include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences

Environmental problems...public health issues...scientific research... In each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the World Wide Web, communication helps define social issues and research issues. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking
Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors and seniors during fall and spring. Lecs. M W 11:15-12:05; sec., T 2:30-4:25, W 12:20-2:15, R 10:10-12:05. B. Earle.

The study and practice of oral and written communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentation skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of one-year trial basis. Hours to be arranged. P. Stepp.

Students will learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided into four groups according to level of experience; therefore it may be repeated to a maximum of 8 credits.

COMM 315 Introduction to Health Communication
Fall. 3 credits. COMM 116 or COMM 120 or permission of instructor. Juniors and seniors only. M W F 10:10. Not offered 1997-98. Staff.

An overview of health communication, examining topics such as physician-patient relationships, the role of support groups, communication in health care organizations, cultural differences in health beliefs and communication, and public health campaigns. Instruction techniques include class discussion, presentations, and group projects.

COMM 330 Information Systems Management and Use
Spring. 2 credits. Prerequisite: COMM 240. Offered even-numbered years. M W F 1:25. A. Plummer.

An overview of information systems, examining topics such as organizational structures, roles of support groups, communication in health care organizations, cultural differences in health beliefs and communication, and public health campaigns. Instruction techniques include class discussion, presentations, and group projects.

COMM 342 Electronic Media
Spring or summer. 3 credits. Limited to 21 communication majors. Prerequisite: COMM 120. Lecs., T R 1:25-2:40. T. Russo.

The process of audio and video message design and production is explored. Emphasis is on development of skills needed for the
creation of effective audio/video production. Students complete exercises designed to develop specific competencies and work on productions from conception through completion.

COMM 350 Writing for Magazines
Fall or spring. 3 credits. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive off-class writing assignments. Fall: M 1:25-4:25; spring: T R 12:20-1:50. W. Ward and staff.

A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media
Fall. 3 credits. Not open to freshmen. Prerequisite: one college-level writing course. Lecs. M W 9:05; lab, W 12:20-2:15. 2:30-4:25 B. Lewenstein.

How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 368 Text Editing and Management
Fall. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: COMM 250, 260, 263, 350 or 352. M W F 12:20-1:10. L. Coadwyre.

How to guide a manuscript from draft to presentation. Topics include production, copy editing and design, document management, and editorial decision making. Publications include books, magazines, newsletters, and promotional and educational materials for internal and external use. Appropriate for those who will oversee publications as part of their work.

COMM 376 Planning Communication Campaigns
Spring. 3 credits. Limited to 20 juniors and seniors. Prerequisite: COMM 116 or 120 or permission of instructor. T R 10:10-11:25. D. F. Schwartz.

Overviews theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign design are reviewed. Class discussions focus on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

COMM 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. B. Lewenstein.

COMM 382 Communication Research Design
Spring. 3 credits. Lecs. T R 3:35; lab, W 2:30-4:25. Prerequisite: COMM 282 or equivalent. Course in statistics (may be concurrent). J. P. Yarbrough.

Discussion of advanced communication research methods. Emphasis on research design and measurement techniques. Final paper will be a complete research proposal for a senior or Honors thesis in Communication.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Limited to 10-15 Program in Speech and Debate members. Permission of instructor required. Hours to be arranged. P. Stepp.

Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

COMM 410 Organizational Behavior and Communication
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent. Lec. M W 11:15-12:05; Sec 01, W 2:30-4:25; Sec 02, F 10:00-12:05. D. Schwartz.

Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab.

COMM 411 Leadership from a Communication Perspective

Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

COMM 418 Communication and Persuasion
Spring. 3 credits. Prerequisite: COMM 116 and 120 or introductory psychology or social psychology. M W 2:55-4:10 (one evening mid-semester prelim). Not offered 1997-98. M. Shapiro.

The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication/advertisements, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes

The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied for Third World and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues. Lectures concurrent with COMM 620; graduate students should enroll in COMM 620.

COMM 421 Communication and the Environment
Spring. 3 credits. Limited to 20 junior, senior, or graduate students or permission of the instructor. Lec. T R 2:55-4:10. Not offered 1997-98. J. Shanahan.

Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television
Fall. 3 credits. Prerequisites: Introductory psychology and COMM 120. M W F 12:20-1:10 (one evening mid-semester prelim). M. Shapiro.

A survey of knowledge about the psychological influence of television and other audio-visual communication technologies. Topics may include the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. T R 2:55-4:10. R. Colle.

The role of communication in development programs, particularly in Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

COMM 426 Impact of Communication Technologies
Fall. 3 credits. M W 2:55-4:10 P. Yarbrough.

Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examine the effects of previous communication innovations from cave painting to television. Lectures concurrent with COMM 626; graduate students should enroll in COMM 626.

COMM 428 Communication Law
Spring. 3 credits. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec. M W F 11:15-12:05 D. Grossman.
A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regulation, access, electronic media and other issues of current interest.

COMM 439 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lee, T R 11:15-12:05; lab T 12:20-2:15. G. Gay
An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.

COMM 440 Computer Mediated Communication: Theory and Practice
Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 640; graduate students should enroll in COMM 640.

COMM 446 Public Communication of Science and Technology
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. M W 2:55-4:10. Not offered 1997-98. B. Lewenstein
Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. The existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 476 Communication Fellows Program
Spring. 2 credits. M 2:55-4:10. Prerequisites: permission of instructor; limited to Communication seniors selected based on goals and academic preparation. B. O. Earle
A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies and policy makers. Fee charged.

COMM 488 Risk Communication
Spring. 3 credits. T R 2:55-4:10. C. Scherer
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.

COMM 490 Senior Thesis in Communication
Fall, spring. 3 credits; may be repeated for a maximum of 6 credits. Prerequisite: Comm 382. Staff
Seniors conduct research based on a thesis proposal written in COMM 382. Supervision provided by a member of the Communication graduate faculty assisted by a Ph.D. candidate. Thesis will be reviewed by faculty readers before approval.

COMM 494 Special Topics in Communication
Fall, spring, summer, and intercession. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 498 Internship
Fall, spring, summer, and intercession. 1-3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: Limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic advisor. S-U grades only.
Structured: on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of 6 credits total may be earned; no more than 3 per internship but flexibility allows 6 for 1 credit each, 3 for 2 credits each, or 2 for 3 credits each. Internship must be approved in advance by the student's academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1–3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).
Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498 Communication Teaching Experience
Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall).
Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall).
Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientifically controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Behavior and Communication
Fall. 3 credits. Not offered 1997-98. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 610 Seminar in Organizational Communication
Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Lee, M W 11:15-12:05; lab, F 10:10-12:05. Not offered 1997-98. D. Schwartz
Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory psychology or social psychology or introductory research methods course. M W 2:55-4:10. Not offered 1997-98. M. Shapiro
The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.
COMM 620 Public Opinion and Social Processes
Fall. 3 credits. T R 10:10-11:25. C. Glynn.
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public polls and trends in public opinion on specific issues.

COMM 622 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research-methods course. M W F 12:20-1:10. M. Shapiro.
A survey of knowledge about the psychological influence of television and other audio-visual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual realities. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

COMM 624 Communication in the Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. T R 2:55-4:10. R. D. Colle.
The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 626 Impact of Communication Technologies
Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 426; graduate students enroll in COMM 626.

COMM 639 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lect. T R 11:15-12:05; lab, T 12:20-2:15. G. Gay.
An overview of multimedia technologies (voice, text, graphics, video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representation, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation.

COMM 640 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Prerequisite: permission of instructor. Lect. T R 11:15-12:05; lab, T 12:20-2:15. G. Gay.
Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of perception and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 440; graduate students should enroll in COMM 640.

COMM 676 Communication Planning for Social and Behavioral Change
Spring. 3 credits. T R 10:10-12:05. R. D. Colle.
Overview theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into an integrated communication plan.

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; others by permission of instructor. M W F 9:05-11:00. D. McDonald and J. Shahanan.
A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Seminar in Communication Research
Spring. 3 credits. Prerequisite: graduate students in communication; others by permission of instructor. M W 3:55-4:10. M. Shapiro.
An introduction to theory and research in the mental processes of the communicating individual. Discussions and readings may include how individuals process and remember communication information, how communication information is used in decision processes, how motivation influences processing of mass communication information, and how attitudes form and change.

COMM 682 Methods of Communication Research
An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to final report. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lect. M 6:00 p.m.-9:00 p.m. D. McDonald.
Experience in quantitative research techniques. The course provides an introduction to and multi-disciplinary research through examination of the procedures, techniques and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 684 Qualitative Methods in Communication Research
Spring. 3 credits. M W 8:40-9:55. B. Lewenstein.
This course explores the nature of communication research and the place of qualitative methods in that research. Through readings, discussions, and papers, students will examine the various techniques of qualitative research, gaining both an introduction to those methods and an appreciation of when those methods are appropriate for addressing particular issues in communication.

COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)
Spring. 4 credits. S-U grades optional. Charge for materials, $45. F 9:05-12:05; lab to be arranged. Staff.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

COMM 686 Risk Communication
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 486; graduate students should enroll in COMM 686.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Hours to be arranged. Staff.
Some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1-3 credits variable. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 700 MPS Project Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

Project research for Master of Professional Studies (Communication) students.

COMM 794 Seminar in Communication Issues
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.

Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor.

Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once.

Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1–3 credits.

Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.

Small-group or individual research based on original, empirical, data-based designs regarding, topical issues in communication not otherwise examined in a graduate field course.

COMM 800 Master's-Level Thesis Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

Thesis research for Master of Science (Communication) students.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1–9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisites: completion of "A" exam; permission of committee chair.

Dissertation research for doctoral candidates.

EDUC 700 MPS Project Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

Project research for doctoral candidates.

EDUC 705 Basic Review Mathematics
Fall or spring. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lec, M W F 8:00 or 9:05. S. C. Piliero.

Review of concepts necessary for success in EDUC 115 and basic statistics courses. Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and right-triangle trigonometry. Considerable emphasis is placed on learning mathematics for understanding and on solving word problems.

EDUC 101 Introduction to Education

An introduction to the field of education that is structured around an examination of three contemporary policy issues. The issues are chosen to help students understand important aspects of formal schooling systems (e.g., the public school, colleges, and universities) as well as nonformal educational activities (e.g., adult education, extension education, and community education). The course is taught by two members of the faculty and is designed for students seeking a self-contained introduction to education that can also lead to additional study in the field.

EDUC 115 Introductory College Mathematics
Fall or spring. 4 credits. M W F 11:15 or 12:20. S. C. Piliero.

Designed for students wishing to fulfill distribution requirements and/or prepare for study in calculus. This course offers a nontraditional approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical, and symbolic representations of functions and their transformations. Students will use Function Probe®, a multi-representational software for the Macintosh, in a collaborative, computer-based lab setting.

EDUC 120 Education for Empowerment
Spring. 1–3 credits. T R 1:25-2:40. J. D. Deshler and R. E. Steele.

A modular course; with each module spanning 5 weeks for 1 credit. Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 210 Psychology of Learning and Memory
Fall. 3 credits. Prerequisite: introductory psychology. Not offered 1997–98. J. A. Dunn.

This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.

EDUC 212 Psychological Foundations of Education
Spring. 2–3 credits. S-U option available. Prerequisite: introductory psychology. W 2–4:25 plus times to be arranged. J. A. Dunn.

A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 240 The Art of Teaching

This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from laboratory situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 247 Instructional/Informational Application of Microcomputers and Related Technologies
Fall and spring. 2–3 credits. Not available to students who have completed ABEN 102 or NR 107. T R 2:30–3:20. lab to be arranged. Staff.

The primary goal of the course is to develop conceptual understandings of instructional/informational applications of microcomputers and teach introductory to intermediate-level skills. Class instruction will relate to microcomputer and networked applications in both formal and informal educational/training settings. Independent study project required for third credit.

EDUC 271 Sociology of Education

An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

EDUC 311 Educational Psychology

This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, context and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course
is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.

**EDUC 317 Psychology of Adolescence**  
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15-12:05; Friday section to be arranged. D. E. Schrader.  
This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescent development are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.

**EDUC 331 Careers in Agriculture, Extension, and Adult Education**  
Fall. 1–3 credits. Letter grade only. M 2:00–4:25. J. D. Deshler, D. E. Foster, and G. J. Applebee.  
This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

**EDUC 332 Instructional Methods in Formal and Non-formal Education**  
Selection, practice, and evaluation of methods in formal and non-formal education will be stressed. The course will focus on both general teaching strategies and methodology unique to teaching in schools and non-formal settings. Course activities include micro-teaching and field experience during arranged times.)

**EDUC 335 Youth Organizations**  
Spring. 3 credits. T R 10:10–11:00; lab to be arranged. Staff.  
The role of selected youth organizations in providing educational experiences for youth. Factors affecting membership, purposes, design, operation, and administration are surveyed, emphasizing the roles an adult volunteer leader may play. The course is designed to give students an in-depth, learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

**EDUC 370 Issues in Educational Policy**  
An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity; student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C, requirements for College of Agriculture and Life Sciences.

**EDUC 378 Political Economy of Education**  
A policy-oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational activities. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

**EDUC 380 Independent Honors Research in Social Science**  
Fall or spring. 1–6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 5 credits may be earned in the honors program. Staff.

**EDUC 401 T&P Physical Environment**  
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 1:25–4:25. V. N. Rockcastle.  
A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and techniques for teaching. An individual research project with the assistance of a teacher, environmental educator, and those for whom physical science seems difficult or uninviting.

**EDUC 402 Knowing and Learning in Science, Mathematics, and Agriscience**  
Fall. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. M W 2:30–4:25. D. J. Trumbull and C. A. Conroy.  
Students examine both current notions in the philosophy and history of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours a week in an appropriate educational setting.

**EDUC 403 Observing and Teaching Science, Mathematics, and Agriscience**  
Spring. 4 credits. Prerequisites: Enrollment in a Cornell teacher education program or permission of the instructor. W. S. Carlsen and C. A. Conroy.  
Designed for prospective secondary teachers, this course provides a multiple-perspective orientation to the culture of schools and the work of teaching science and mathematics. Students spend 6-8 hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions planning, delivery and evaluation of instruction, classroom management, and other issues such as equity, tracking, and classroom language.

**EDUC 404 Mathematics of Gender (also Women's Studies 407/807)**  
Fall. 3 credits. Not offered 1997–98. J. Confrey.  
Course will examine the research on women's participation and performance in mathematics, gender differences in fields including psychometric measures of mathematical

**EDUC 411 Introduction to Educational Measurement**  
Fall. 3 credits. Not offered 1997–98. Staff.  
Presents practices and theories of the measurement of human knowledge and performance. Students will be expected to acquire the practical skills of planning and constructing tests for a variety of purposes, interpreting and using test results, evaluating commercially available instruments, and the like. Students will also be expected to discuss intelligently a myriad of social, ethical, legal, and technical issues associated with educational testing. One course in statistics or concurrent registration in Education 352 is recommended but is not required.

**EDUC 413 Psychology of Human Interaction**  
Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. Fee, S. T R 10:10–12:05. D. E. Hedlund. Designed to develop an understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

**EDUC 414 Counseling Psychology**  
Spring. 4 credits. Prerequisites: Introductory psychology, social or personality psychology. T R 10:10–12:05. D. E. Hedlund. The processes of counseling are examined from various theoretical perspectives. Typical adult counseling issues are examined, and implications are drawn for counseling strategies with an adult population, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

**EDUC 420 Field Experience**  
Fall or spring. 1–4 credits. S-U grades optional. Undergraduate students attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.  
Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate the field experience.

**EDUC 430 Special Problems in Agricultural Education**  
Fall, spring, or summer. 1–3 credits. Letter grade only. W 12:20–1:10. C. A. Conroy.  
An opportunity to study individually selected problems in agricultural education.

**EDUC 432 Teaching Agriculture: Methods, Materials, Practice**  
Fall. 9 credits. Prerequisites: EDUC 332 and concurrent registration in EDUC 430 and 497. M T W R F 8:00–3:00. R. E. Steele and C. A. Conroy. Directed participation in teaching agriculture at the secondary school level. Program includes a five-day intensive on-campus
period and periodic seminars addressing selected methods and materials in teaching agriculture, combined with a 14-week period in an off-campus student teaching center. Includes evaluation of area resources, instructional materials and facilities, planning and executing instruction, directing work experience, and advising youth organizations.

EDUC 445 Curriculum Design Workshop
Summer. 3 credits. G. J. Posner.
A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

EDUC 447 Curriculum Design Laboratory: A Technology-Intensive Course
Spring or summer. 3 credits.
W. S. Carlsen.
A project-focused introduction to course design, from needs assessment, through materials development to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project will vary from year to year. Students are expected to make extensive use of computer software, writing, design, management, and communications. The summer section of 447 will be smaller and we anticipate that, rather than working on a single class project, students will undertake curriculum development projects of their own design.

EDUC 472 Philosophy of Education
Fall. 3 credits. T. R. 3:30-4:45. K. A. Strike.
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

EDUC 475 Epistemology and Teaching
This course emphasizes the critical examination of recent debates in philosophy of science concerning the nature of scientific knowledge and scientific inquiry. It applies these inquiries to such questions as the organization of curricular materials, the nature of effective science teaching, and the role of scientific knowledge in the deliberations of a liberal democracy.

EDUC 477 Law and Educational Policy
Fall. 3 credits. M. 2:30-4:25. K. A. Strike.
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

EDUC 483 Comparative Studies in Adult Education
Spring. 3 credits. S-U grades optional. T R 3:35-5:00. J. D. Deshler.
Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

EDUC 494 Special Topics in Education
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the departmental seminar committee, and the same course will not be offered more than twice under this number.

EDUC 495 Senior Seminar
Spring. 2 credits. Education majors or permission of instructors. S-U only. To be arranged. Undergraduate Coordinator for the department.
This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty will be involved in selecting the issues and providing guidance for the seminar, students will be expected to provide the initiative and leadership in the classroom.

EDUC 497 Individual Study in Education
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498 Undergraduate Teaching
Fall or spring. 1 or 2 credits. 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
Participating students assist in teaching a course or may undertake tutorial lab time under the general supervision of a faculty member. New topics are available each semester. Students are expected to meet regularly with a discussion or laboratory section to gain teaching experience, and regularly discuss objectives, techniques, and subject matter with the professor in charge.

EDUC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 501 Communication Workshop
Summer and intersession. 2-3 credits. S-U grades optional. M. D. Glock.
The course focuses on skills enabling individuals to cope with such concerns as motivation, dealing with difficult persons, criticizing productively, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings. The ongoing dynamics of the course necessitate intense participation over a period of time, not provided by regularly scheduled fifty-minute class periods. Additional auto­tutorial lab time is scheduled. Appropriate for anyone who works with people.

EDUC 507 Science and Environment for Teachers
Summer. 3 credits. S-U option. Prerequi­site: contact instructor for details.
W. S. Carlsen.
This three-week inservice program for secondary and middle school science teachers focuses on biological, chemical, and hydro­logical methods of water monitoring and watershed dynamics. Participants also use remote sensing, work with computers, investigate topics in science, technology and society; learn pedagogical techniques that are consistent with science reform initiatives; and discuss and develop new types of assessment.

EDUC 513 Interpersonal Interaction
Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources. A workshop design is required for the second credit. Participants must bring a tape recorder to class.

EDUC 523 Food and Fiber Across the Curriculum
Summer. 0-3 credits. D. E. Foster and staff.
An intensive five-day course designed to help New York State educators and administrators implement the New York Agriculture in the Classroom program and understand the complexity of New York's leading industry. Participants learn how instructional materials and experiences with our food-fiber system can be used to teach students language arts, mathematics, science, and social studies. One credit is earned by class attendance and participation. Two credits require one additional project. Three credits require two additional projects.

EDUC 547 Instructional Development in Higher Education
Summer. 2 credits. D. G. Way.
For both the beginning and experienced teacher in higher education, this course will focus on four course teaching skills: course design and planning, classroom experience, evaluating student learning and providing effective feedback, and instructional development activities. Students will choose one of these areas to focus on, based on interest and experience, and develop an instructional development plan to accomplish identified goals.
EDUC 548 Effective College Teaching
Spring. 1–3 credits. S-U grade option. T 5:00–7:00. D. J. Trumbull and H. D. Surpin.

This course is designed to help participants become more effective college teachers. It will examine the basic principles of learning, identify different learning styles, and explore a variety of teaching techniques, methods, and technological tools. Participants will also learn how to design a course and improve their effectiveness as teachers.

EDUC 601 Secondary Science and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics program. M 200 R F 8:00–9:00. W. S. Carlsen, J. G. Posner, A. Solomon, M. S. Slack, and D. J. Trumbull.

Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

EDUC 602 Teaching Science/ Mathematics: Methods, Materials, Practice
Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M 200 R F 9:00–3:00. W. S. Carlsen and staff.

The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the semester require students to use those theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

EDUC 603 Teaching Mathematics
Fall. 3 credits. Offered alternate years. T 10:10–11:25. J. Confrey.

Current research in mathematics education will be examined in order to develop a picture of the mathematics classroom that integrates subject matter, student conceptions, affective variables, and issues in the social context of learning mathematics. Special topics will include research on problem solving, reasoning, and metacognition, and research on teaching.

EDUC 606 Seminar in Science and Mathematics Education
Fall. 1 credit. S-U grades only. T 4:30–5:30. J. Confrey.

Explores topics in science and mathematics education. The focus of the seminar changes each year.

EDUC 609 Methods for Interpretive Research
Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. M 2:30–4:00. D. J. Trumbull.

This course examines some of the methods for doing educational interpretive research. An interpretive research perspective attends to the complex interactions between researcher, researched, and contexts and accepts the centrality of interpretation in the conduct of human affairs. This perspective imposes some unique demands on researchers wishing to justify the quality of their projects. In the class, students will practice methods for gathering and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

EDUC 611 Educational Psychology

A basic survey course for graduate students. Emphasis on psychological factors involved in human learning and the educational process. Set in a broad-based conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those selecting an introduction to educational psychology or a refresher course in contemporary educational psychology.

EDUC 614 Epistemological Development and Reflective Thought

Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

EDUC 615 Self and Interpersonal Development and Education

Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, and how such theories explain students' understanding of themselves and others' actions in educational contexts.

EDUC 620 Internship in Education
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. An opportunity for practical experience in educational professions development.

EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. S-U grades optional. Staff.

The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work experience programs and articulation with JPTA and VENID. Field interviews are required. A prerequisite for Course II, EDUC 622.

EDUC 622 Work-Experience Coordinator Certification Course II
Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Coordinator Certification Course I. Staff.

The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 630 Special Problems in Agricultural Education
Fall or spring; may also be offered in summer. 1–3 credits. S-U grades optional. Hours to be announced. Staff.

The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural and occupational education. Designed for experienced teachers.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Spring. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. M 8:00–9:55. C. A. Conroy.

The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

[EDUC 633 Program Planning in Agricultural, Extension, and Adult Education
Fall. 3 credits. Field trip. Lec, T 2:00–4:25; lab, to be announced. Not offered 1997–98. R. E. Steele.

Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and processes of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.]

EDUC 644 Curriculum Theory and Analysis

An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 647 Instructional Technologies: Analysis and Practices
Fall. 2–4 credits. Prerequisite: skills in statistics and research design. Letter grade only. Lec, R 2:30–3:20; lab and seminar to be announced. Not offered 1997–98. D. D. Peasley.

Current research and literature on instructional computing and related technologies in the public and private sectors will be examined. Students complete a group research project on educational technologies and meet for five seminar sessions to earn credits. The research experience includes design, data collection, input, analysis, and synthesis. Concurrent attendance in ED 247 Modules A and B is required (2 credits); or the modules may be taken as a prerequisite.]
EDUC 651 Developing a Research Proposal
Study of procedures for developing and writing a research proposal. Emphasis will be given to identifying a significant topic, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided with some assistance in constructing a brief proposal of their own.

EDUC 661 Administration of Educational Organizations
Fall. 3 credits. W 3:35–6:00. E. J. Haller. Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of schools as organizations.

EDUC 664 Educational Finance
An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as “Who pays?” and “Who benefits?” will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

EDUC 665 Administrative Decision Making
An introduction to decision-making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and non-formal education.

EDUC 668 Foundations of Extension Adult Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. M 9:05–12:05. J. D. Deshler.
An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationships of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

EDUC 682 Community Education and Development
An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685)
Spring. 4 credits. S-U grades optional. Charge for materials, $45. F 9:05–12:05; lab to be arranged. R. D. Colle and J. D. Deshler.
Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

EDUC 690 Research Seminar
Fall and/or spring. No credit. G. J. Posner and A. J. Posner.
Presentation of current research in the field of education by graduate students and staff. Opportunities to discuss methodology, findings, and other aspects of research.

EDUC 694 Special Topics in Education
Fall, spring, or summer. 1–3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. Staff.
Topics to be announced.

EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. 2–3 credits. Fall: M W 11:15. J. Dunn. Spring: T 2:00–4:50. S-U grades optional. This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.

EDUC 714 Moral Development and Education
This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis will be placed on development from adolescence through adulthood.

EDUC 715 Seminar in Psychology and Education
Selected topics focusing on the interaction of theoretical and research developments in psychology and education.

EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00–4:25. R. E. Ripple and J. D. Deshler.
Deals with adult learning and teaching behavior from points of view of educational psychology, and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 720 Seminar in Agricultural, Extension, and Adult Education
Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 745 Seminar in Curriculum Theory and Research
Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. T 2:30–5:00. G. J. Posner.
Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.

EDUC 762 Practicum in Quantitative Educational Research
Spring. 3 credits. Prerequisite: one course in elementary statistics or permission of instructor. S-U grades only. E. J. Haller.
For students interested in learning about the process of formulating and carrying out a piece of quantitative empirical research. Studies will focus on an educational problem of the student's choice. Seminar participants will have access to large, nationally representative data sets that will permit them to conduct high-quality, publishable studies of U.S. schools, students, teachers, and parents. In the process they will learn some of the costs and benefits of secondary data analysis and gain some familiarity with analyses using a major statistical package.

EDUC 772 Seminar in Philosophy of Education
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 9:00–11:00. K. A. Strike.
Topics to be announced.

EDUC 783 Comparative Extension Education Systems
Summer. 3 credits. S-U option. D. M. Ewert.
Extension education in the developing nations is studied using, as an analytical frame of reference, a hypothetical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, training and research-extension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.
biological control. What is it and when should it be used? This course covers a diversity of types of biological control including use of parasitoids, predators, pathogens, and competitors as well as plant breeding to control pests from microbes to weeds to invertebrates to vertebrates. This presentation is intended for students curious about controlling pests without using synthetic chemicals.)

An introduction to the external and internal anatomy of insects, with emphasis on the comparative and functional aspects. The laboratory is devoted largely to dissection.

An introduction to the behavior of insects, this course will cover both the individual sensory and physiological mechanisms that are the basis of insect behavior, along with aspects of foraging, courtship, and parental care of insects. Insects are the most diverse organisms on earth, with equally diverse behavior. A basic understanding of insect behavior is necessary for all aspects of entomology, both basic and applied.

An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.

The ecology of arthropods of medical and veterinary importance in temperate and tropical regions of the world with emphasis on the role they play in causation or transmission of disease. The laboratory involves 2 field trips, techniques of collection and identification, dissections, methods of transmission, means of identification of a blood pathogen and the source of a blood meal.

[ENTOM 370 Pesticides, the Environment, and Human Health (also Toxicology 370)] Fall. 2 credits. Prerequisites: BIO G 101–102 or equivalent. Offered alternate years. Not offered fall 1997 and 1999; next offered fall 1998. Lecs, T R 9:05. J. G. Scott.
A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

**ENTOM 441 Seminar in Insect Pest Management**

Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 212 or 444 or permission of instructor. S-U grades only. Offered alternate years. Not offered spring 1999; next offered spring 1998 and 2000. Hour arranged. M. P. Hoffmann and A. M. Shelton. Discussion and analysis of current topics in insect pest management.

**ENTOM 444 Integrated Pest Management (also Plant Pathology 444)**

Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 441, and PL PA 301 or their equivalents or permission of instructor. Lecs, M W F 9:05; labs M or T 1:25–4:25. P. Arneson. Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

**ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOES 452)**

Spring. 3 credits. Prerequisites: one year of introductory biology; BIOES 261; CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Offered alternate years. Not offered spring 1998 and 2000; next offered spring 1999. Lecs, M W F 11:15. P. P. Feeny. Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals; especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

**ENTOM 453 Principles and Practice of Historical Biogeography (also BIOPL 453)**

Fall. 3 credits. Prerequisite: A course in systematics or permission of instructor. S-U grades optional. Offered alternate years. Not offered fall 1998; next offered fall 1999 and 1997. Lecs, T R 10:10; disc, 1 hr/week to be arranged. Staff. A survey of the theories of historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological and phylogenetic analytical methods. Geological and palaeontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.

**ENTOM 455 Insect Ecology, Lectures (also BIOES 455)**

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Offered alternate years. Not offered fall 1998; next offered fall 1997 and 1999. Lecs, M W F 11:15. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**ENTOM 456 Stream Ecology (also BIOES 456 and NTRES 456)**

Spring. 4 credits. Prerequisites: BIOES 261. S-U grades optional. Offered alternate years. Not offered spring 1998 and 2000; next offered spring 1999. Lecs, T R 9:05; labs, M T W or R 1:25–4:25. B. L. Peckarsky and M. B. Bain. Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. Lab: A field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessment.

**ENTOM 463 Invertebrate Pathology**

Spring. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Offered alternate years. Not offered spring 1999; next offered spring 1998 and 2000. Lecs, M W F 9:05; lab, W 1:25–4:25. A. E. Hajek. Lecture presents principles of pathology as applied to invertebrates. Topics explored include non-infectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microinjection, electrophoresis, immunoassay, density gradient centrifugation, soil extraction, and computer simulation.

**ENTOM 470 Ecological Genetics (also BIOPL 470)**

Spring. 4 credits. Prerequisites: BIOES 278 or permission of instructor. S-U grades optional. Offered alternate years. Not offered spring 1998 and 2000; next offered spring 1999. Lecs, T R 10:10–11:30; disc, 1 hr/week to be arranged. Staff. A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotype plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

**ENTOM 471 Freshwater Invertebrate Biology**

**ENTOM 477 Biological Control**

Fall. 3 credits. Prerequisites: ENTOM 212, BIOES 261, and permission of instructor. Offered alternate years. Not offered fall 1998; next offered fall 1997 and 1999. Lecs, T R 9:05; lab T 1:25–4:15. M. J. Tauber. Approach and procedures in biological control of arthropod pests and weeds. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.

**ENTOM 483 Insect Physiology**

Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Offered alternate years. Not offered fall 1997 and 1999; next offered fall 1998. Lecs, M W F 9:05; lab, W 1:25–4:25. C. Gilbert. An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The student will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

**ENTOM 490 Toxicology of Insecticides (also Toxicology 490)**

**ENTOM 494 Special Topics in Entomology**

Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**ENTOM 497 Individual Study in Entomology**

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

**ENTOM 498 Undergraduate Teaching**

Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Entomology 631 Systematics of the Coleoptera
Summer. 3 credits. Max enrollment 18 students, 4 week summer session.
Prerequisites: an introductory course in insect taxonomy and permission of instructor.
Labs, M T W R F 9-4; Saturday field trips. Q. D. Wheeler.
A comprehensive review of the comparative morphology, phylogenetic relationships,
classification, natural history, and distribution of the Coleoptera, including adult and
immature stages. Laboratory practice in identification and methods for collection and
study of beetles. A collection is required.

Entomology 632 Advanced Coleopterology
Summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional.
Lab, to be arranged. Q. D. Wheeler.
An advanced course on the phylogeny and classification of selected subfamilies of
Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or
beyond. Taught by authority on taxon of interest, frequently including a visiting scholar.
Can be repeated for credit.

Entomology 634 Special Topics in Systematic Entomology
Fall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff.
Lectures on the classification, evolution, and bioecology of selected taxa, with accompany­
ing laboratory studies on identification and comparative morphology. Collections sometimes required.

Entomology 640 Applied Ecology and Pest Management
Spring. 3 credits. Prerequisites: ENTOM 441 and a course in statistics. Recom­
Lecs, T R 1:25-2:40. Staff.
Theory and quantitative methods for characterizing anthropod population dynamics for research and pest management purposes. Course evaluates biological and climatic factors influencing population numbers, development, dispersal, and plant response to anthropod pests. Special topics include development of sampling methodology and simulation modeling.

Entomology 662 Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Not offered spring 1998 and 2000; next offered spring 1999. Hours to be arranged. M. J. Tauber.

Entomology 672 Seminar in Aquatic Ecology
Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471 or BIOES 261, 462. S-U grades optional. Offered alternate years. Not offered spring 1999, next offered spring 1998 and 2000. Hours to be arranged. B. L. Peckarsky.
Discussion and analysis of current topics in the ecology of streams, lakes and marine
ecosystems, including student-generated synthesis of key papers in the literature.

Entomology 685 Seminar in Insect Physiology
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Not offered spring 1999; next offered spring 1998 and 2000. Hours to be arranged. C. Gilbert.

Entomology 707 Individual Study for Graduate Students
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research. Staff.

Entomology 709 Teaching Entomology
Credit to be arranged. Staff. Teaching entomology or for extension training.

Entomology 800 Master's-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

Entomology 900 Doctoral-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

Jugatae Seminar
Fall and spring. A seminar conducted by Jugatae, the entomology club of Cornell University, to
discuss topics of interest to its members and guests. All interested undergraduate and
graduate students are encouraged to attend.

FLORICULTURE AND ORNAMENTAL HORTICULTURE
Floriculture and Ornamental Horticulture courses are listed under Horticultural Sciences.

Freehand Drawing and Scientific Illustration
Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture and are described in the section "Freehand Drawing and Scientific Illustration."

FOOD SCIENCE
This course explores the application of science and technology to foods.
D. P. Brown.
A series of seminars on current technological and regulatory developments in food science.
Field trips to four commercial food manufacturing/processing plants and one food
research organization will be used to illustrate the application of current technologies.
A course project, using the Food Science Alumni Network, will be required.

Food Science
Spring. 1 credit. S-U grades only.

Food Choices and Issues
Spring. 2 credits. S-U grades optional.

Food Science
Fall and spring. 2 credits. Prerequisite: one course each in chemistry and biology. M W
11:15-12:05. J. H. Hotchkiss.
A comprehensive introduction to the principles and practice of food science and
technology. Topics include: chemistry of foods; nutritional significance; food formulation,
preservation, and processing; microbiology and fermentations; composition and
processing of food commodities; and contemporary issues including food safety,
regulation, and world food needs. Interrela­
tionships between the chemical, physical,
nutritional and quality properties of foods as affected by formulation, processing, and
packaging are stressed.

Food Analysis
Spring. 3 credits. Prerequisite: CHEM 208 or equivalent. Lecs, M W 12:20, lab, F
Introduces tests used by food analysts for fats, proteins, carbohydrates, and selected minor
nutrients. Emphasis is on understanding and use of good analytical techniques, including
gavimetric, volumetric, chromatographic and spectrophotometric methods. A special project
for the total analysis of a complex food provides experience in technique selection,
work scheduling, and execution.

Kosher and Halal Food Regulations
Spring. 2 credits. Sophomore standing and above. M 7:30-9:35 p.m.
J. M. Regenstein.
A comprehensive introduction to kosher and halal foods in the American food industry with
some coverage of home practices. The kosher
food laws, their origin, and their application in modern food processing will be examined. The nature of the kosher supervision industry in America will be described. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions striking down laws in the state of New Jersey and the City of Baltimore. Some aspects of ethnic foods will also be considered.

FOOD 290 Meat Science (also Animal Science 290)
Fall. 2 or 3 credits. Lecs, T R 11:15-12:05 p.m.; lab, M or R 12:20-3:20. Lab cannot be taken without lecture. D. H. Beermann.

An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat plants is taken.

FOOD 311 Milk and Frozen Desserts

Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting consumer acceptance.

FOOD 321 Food Engineering Principles
Fall. 3 credits. Prerequisites: FOOD 200 and Introductory Physics. M W F 9:05-9:55. S. S. H. Rizvi.

Introduces the engineering principles underlying food processes and equipment. Topics covered include the fundamentals of heat and mass transport, including fluid mechanics, heat transfer, refrigeration, and psychrometry.

FOOD 322 Food Engineering Laboratory
Spring. 2 credits. Prerequisite: FOOD 321. Lab, T or W 1:25-4:00; lec, T 12:20. S. S. H. Rizvi.

Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration, and psychrometry.

FOOD 351 Milk Quality
Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. F 12:20. D. K. Bandler and D. P. Brown.

Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storable dairy products.

FOOD 390 Food Microbiology Lectures
Fall. 2 credits. Prerequisites: BIOMI 290 and 291. M W 12:20-1:10. R. A. Lefford.

The major families of microorganisms of importance in foods are studied, with emphasis on the roles of those organisms in food preservation, food fermentations, and public health.

FOOD 395 Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 291. Graduate students must have permission of the instructor. M W 2:00-4:25. J. M. Brown.

Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing, and control of food products, and practice in the application of a systematic approach to controlling the safety of foods.

FOOD 396 Food Safety Assurance

This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on Hazard Analysis Critical Control Point (HACCP) programs, total quality management, and the application of current technologies in reducing the incidence of foodborne illness. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

FOOD 400 Senior Seminar in Food Science and Technology

Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 401 Concepts of Product Development

A discussion of the frequency of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Food Waste Management
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. Lec, M 12:20-2:15; lab, M 2:30-4:25. J. M. Regenstein.

Introduction to the principles and practices related to managing wastes from food plants through reduction, reuse, recycling, and composting. Some broader areas of waste management impacting the food industry will also be discussed. Includes field trips which may take all afternoon.

FOOD 406 Cheese and Other Fermented Dairy Foods

Principles and practices of fermentation and processing techniques as they apply to cheeses, cultured dairy foods, beer, and related products. Labs will feature unit processes and tastings.

FOOD 409 Food Chemistry
Spring. 3 credits. Prerequisite: BIOBM 330 or 331. M W F 9:05-9:55. Staff.

The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (dairy, meat, fruits and vegetables, cereals and legumes) are described.

FOOD 410 Sensory Evaluations of Foods
Fall. 3 credits. Prerequisite: statistics. M W F 10-11:00. H. T. Lawless.

Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, statistical methods for analyzing results, and establishing a full-service sensory evaluation program.

FOOD 419 Principles of Food Packaging

The chemical and physical properties and manufacture of the basic materials used to construct packaging and their influence on shelf life are presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

FOOD 499 Senior Seminar in Food Science and Technology

Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 431 Concepts of Food Science and Technology
Fall. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. M W 11:15-12:05. J. H. Hotchkiss.

A discussion of the frequency of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Food Waste Management
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. Lec, M 12:20-2:15; lab, M 2:30-4:25. J. M. Regenstein.

Introduction to the principles and practices related to managing wastes from food plants through reduction, reuse, recycling, and composting. Some broader areas of waste management impacting the food industry will also be discussed. Includes field trips which may take all afternoon.

FOOD 406 Cheese and Other Fermented Dairy Foods

Principles and practices of fermentation and processing techniques as they apply to cheeses, cultured dairy foods, beer, and related products. Labs will feature unit processes and tastings.

FOOD 409 Food Chemistry
Spring. 3 credits. Prerequisite: BIOBM 330 or 331. M W F 9:05-9:55. Staff.

The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (dairy, meat, fruits and vegetables, cereals and legumes) are described.

FOOD 410 Sensory Evaluations of Foods
Fall. 3 credits. Prerequisite: statistics. M W F 10-11:00. H. T. Lawless.

Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, statistical methods for analyzing results, and establishing a full-service sensory evaluation program.

FOOD 419 Principles of Food Packaging

The chemical and physical properties and manufacture of the basic materials used to construct packaging and their influence on shelf life are presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

FOOD 499 Senior Seminar in Food Science and Technology

Students prepare and present a seminar on a topic of current interest in food science and technology.

FOOD 431 Concepts of Food Science and Technology
Fall. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. M W 11:15-12:05. J. H. Hotchkiss.

A discussion of the frequency of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Food Waste Management
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. M W 11:15-12:05. J. H. Hotchkiss.

A discussion of the frequency of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Food Waste Management
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. M W 11:15-12:05. J. H. Hotchkiss.

A discussion of the frequency of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

FOOD 405 Food Waste Management
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. M W 11:15-12:05. J. H. Hotchkiss.

A discussion of the frequency of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.
An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and to understand the processes that produced them. Topics will include the psychology and chemistry of bouquets, taste, and aroma; the microbiology of fermentation and spoilage; and the sensory properties of wines from different grape varieties, viticultural practices, and wine making techniques.

**FOOD 447 International Postharvest Food Systems**
Fall. 2 or 3 credits. Prerequisite: freshman chemistry. S-U grades optional.
T R 10:10-11:00. M. C. Bourne and staff. An interdisciplinary course designed for all undergraduate and graduate students in CALS. Describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

**FOOD 450 Fundamentals of Food Law**
Spring. 2 credits. Offered alternate years. J. M. Regenstein.
Introduction to the complex array of federal and state statutes and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and an U.S. Department of Agriculture regulations, but the course also will refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.

**FOOD 456 Advanced Concepts in Sensory Evaluation**
H. T. Lawless.
Readings and discussions of primary source materials in sensory evaluation, including historical perspectives, psychophysics, perceptual biochemistry, information processing. Concepts influencing detection of sensory differences, use of rating scales, and characterization of sensory properties will be emphasized.

**FOOD 490 Commercial Meat Processing**
(also Animal Science 490)
A study of the classification, formulation, and production of commercially available processed meat products. Physical and chemical characteristics of meat and nonmeat ingredients; their functional properties; various processing methodologies; microbiology; packaging, handling, and storage; and quality assurance are discussed.

**FOOD 494 Special Topics in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be offered both by the department and by student groups, and the same course will not be offered more than twice under this number.

**FOOD 497 Individual Study In Food Science**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. Students may be changed, the course may be repeated for credit.

**FOOD 498 Undergraduate Teaching Experience**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only. Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor.

**FOOD 499 Undergraduate Research In Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Students conduct original research directed by a food science faculty member.

**FOOD 600 Seminar**
Fall and spring. 1 credit. Required of all food science graduate students. S-U grades only. T 4:30-5:20.

**FOOD 604 Chemistry of Dairy Products**
Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor. Offered alternate years. Not offered fall 1997 or 1999; next offered fall 1998. F 1:25-3:30. D. M. Barbano.
A detailed study of milk constituents and their properties. Properties of various milk constituents and related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

**FOOD 605 Physical Chemistry of Food Components**
Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. Offered alternate years. Not offered fall 1997 or 1999; next offered fall 1998. M W 10:10. J. W. Brady.
This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels; and water binding of foods.

**FOOD 607 Advanced Food Microbiology**
Spring. 2 credits. Prerequisites: food microbiology, genetics (preferred). Offered alternate years. M W 11:15. C. A. Barin.
There have been great advances in applying the modern tools of molecular biology to the detection of microorganisms and their metabolites. The primary emphasis of this course will be to review current developments in the theory and application of nucleic acid and antibody-based detection systems, especially as they concern food safety. In addition, other approaches, including measurement of impedance, ATP, and endotoxins, will be discussed.

**FOOD 612 Electroanalytical Chemistry**
Fall. 2 credits. T R 11:30-12:25. R. A. Durst.
An advanced course in sensory and instrumental analysis of flavors, flavor chemistry, and flavor applications in foods for food scientists and those in related fields concerned with human food perception and consumption. The course will survey taste, aroma and volatile flavors, and trigeminal stimuli from the perspectives of chemical structures, methods of analysis, uses and interactions in food systems, and consumer acceptance.

**FOOD 620 Food Carbohydrates**
(also Animal Science 490)
Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOBM 330 or equivalent. Offered alternate years. T R 10:10. B. A. Lewis and J. W. Brady.
A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

**FOOD 665 Engineering Properties of Foods**
Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. Offered alternate years. T R 12:20-1:10. S. S. H. Rizvi and S. J. Mulvaney.
Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.
FOOD 694  Special Topics In Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and
will be advertised by the department. Courses offered under the number will be approved
by the department curriculum committee, and the same course will not be offered more than
twice under this number.

FOOD 698  Graduate Teaching Experience
Fall and spring. 1 to 3 credits. S-U grades only. Staff.
A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

FR DR 211  Freehand drawing and Illustration
Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. Not offered 1997-98. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05. MT W R F. R. J. Lambert.
Progression to the complete illustrations. Subject matter largely from sketchbooks, still life, and imagination.
Composition, perspective, and ways of rendering in different media are considered.

FR DR 214  Watercolor
Spring. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05. MT W R F. R. J. Lambert.
A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

FR DR 316  Advanced Drawing
Fall or spring. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 6 hours to be arranged. R. J. Lambert.
For students who want to attain proficiency in a particular type of illustration or technique.

FR DR 417  Scientific Illustration
Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered 1997-98. R. J. Lambert.
A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE
See Horticultural Sciences.

HORTICULTURAL SCIENCES
Horticultural science courses at Cornell are taught by the faculty of the Department of Floriculture and Ornamental Horticulture and the Department of Fruit and Vegetable Science.

Floriculture and Ornamental Horticulture

FRUIT and VEGETABLE Science

Courses by Subject:
General horticulture: 101, 102
Public garden management: 485
Crop production:
Agroforestry: 415
Controller environment agriculture: 410, 411, 412, 413
Fruit: 200, 442, 444, 445, 450
Greenhouse: 410, 411, 412, 413
Nursery: 400, 420
Turfgrass: 330, 475
Vegetable: 225, 456, 460
Extension education: 629
Horticultural physiology: 400, 450, 455, 456, 460, 462, 615, 620
Independent study, research, and teaching: 470, 495, 496, 497, 498, 499, 500, 605, 700, 800, 900
Internships: 496
Landscape horticulture: 435, 440, 485, 491
Plant materials: 230, 243, 300, 301, 335, 430
Plant propagation: 400
Postharvest physiology: 325, 625, 630
Sales and service businesses: 425
Seminar: 495, 602, 630, 636
Special topics: 470, 494, 629, 630, 635, 694
Turfgrass management: 330, 475
Vegetable types and varieties: 220, 465

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HORT 101  Introduction to Horticultural Science
Fall. 4 credits. Lect, M W F 10:10; lab W 1:25-4:25. C. F. Gortzig.
An introduction to horticulture in all of its components: floriculture, nursery, landscape horticulture, turfgrass management, fruit and vegetable science, urban horticulture, and related professional and commercial fields. A survey of the component fields of plant science also is provided. Emphasis is on the history, geography, and literature of the field; the structure and organization of the component industries, institutions, and professions; and the role of science and technology in the continuing development of horticultural practice. Field trips, including one three-day field trip (cost approximately $150.00), are taken to horticultural firms, institutions, and historic sites.

HORT 102  General Horticulture
Spring. 4 credits. Each lab limited to 25 students. Lect, M W F 10:10; lab M T or W 2:45-4:25. L. D. Topoleski.
Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

HORT 200  Introductory Pomology
Fall. 3 credits. S-U grades optional. Lect, T R 10:10; lab, T 1:25-4:25. I. A. Merwin.
A survey of fruit science, emphasizing the natural history, botany, physiology, and production of edible fruits in temperate-climate areas. Topics include varietal breeding and propagation, environmental and sustainability issues, and practical methods of fruit production. Labs and field trips will provide hands-on experience and tours of regional orchards.
A study of the trees, shrubs, ground covers, vegetable and weed seeds, seedlings, nutrient deficiencies, vegetable judging, grading, and grade defects.

**HORT 225 Vegetable Production**

A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

**HORT 230 Woody Plant Materials**

A study of a trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

**HORT 243 Taxonomy of Cultivated Plants**
Fall. 3 credits. Prerequisite: One year of introductory biology or written permission of instructor. May not be taken for credit after BIOL 248. Next offered 1998–99. Lec, M W 10:10–11:00; lab, W 1:25–4:25. M. A. Luckow.

A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

**HORT 300 Garden and Interior Plants I**

A study of ornamental plants used in garden and interior situations. The first seven weeks are devoted to a further study of interior plants, with emphasis on specialized groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants, such as tulips, daffodils, crocuses, and irises, as well as other spring-blooming bulbs and perennial plants. Outdoor laboratories emphasize practical gardening activities appropriate to the spring season.

**HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops**
Spring. 3 credits. Offered alternate years. Lec, M W 9:05; lab T 1:25–4:25. L. L. Creasy.

A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transporation requirements of selected horticulture crops are covered.

**HORT 330 Turfgrass Management**

Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, and nutrition in the management of turfgrass sites.

**HORT 335 Woody Plant Materials for Landscape Use**

A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

**HORT 400 Principles of Plant Propagation**
Fall. 3 credits. Prerequisites: BIOL 242 and 244 or another course in plant physiology. Lec, T R 9:05; lab, R 1:25–4:25. K. W. Mudge.

Sexual (seed) propagation and asexual (vegetative) propagation including cutting, graftage, tissue culture, layering and specialized vegetative reproductive structure.

Physiological, environmental, and anatomical principles are stressed in lecture and hands-on experience in laboratories. Examples include both temperate as well as tropical horticultural, agronomic, and forestry crops.

**HORT 410 Principles of Controlled Environment Agriculture (CEA)**
Spring. 3 credits. Prerequisite: permission of instructor. Letter grade only. Corequisite: HORT 410. Lab 3 hours per week as scheduled. R. W. Langhans.

Application of computer software to operations management and environmental management of a CEA facility—including specifications for facilities, optimization of resource inputs (e.g., energy, fertilizer), crop programming, efficient space use, labor efficiency (time and motion), and inventory management.

**HORT 415 Principles and Practices of Agroforestry**
Fall. 3 credits. Prerequisites: senior or graduate standing and permission of instructor. Fee for lecture-laboratory manual: $100. Lec, M W F 9:05; lab, M 2-4:25. K. W. Mudge, J. P. Lassoie.

An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement.).

**HORT 420 Principles of Nursery-Crop Production**
Fall. 4 credits. Prerequisite: HORT 400. Lec, M W F 9:05; lab, M 2-4:25. Field trips. G. L. Good.

Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.
HORT 425 Horticultural Sales and Service Businesses
Spring. 4 credits. Fee for course manual $20. Prerequisites: ARME 240 or a similar course in marketing, or permission of instructor. Weekly laboratory and field trips to commercial operations and one 3–4-day field trip to a metropolitan area (cost approximately $130.00) are taken. Lecs, M W F 10:10; lab, W 1:25–4:25. C. F. Gottzig. A study of the application of horticultural, marketing, and management principles and practices in the operation of horticultural sales and service firms, e.g., garden centers, retail florist and nursery stores, wholesale marketing operations, mail-order businesses, mass markets, interior and outdoor landscape-service and related firms.

HORT 430 Special Topics in Ornamental Plants
Fall or spring. Credit and hours to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: HORT 230, 301, 303, 335, or equivalent, and permission of instructor. R. G. Mower. Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.

HORT 435 Landscape Management
Fall. 4 credits. Prerequisites: HORT 230 or 335, and BIO PL 241 or permission of instructor. Not offered 1997–98. Lecs, M W F 12:20; lab, T 1:25–4:25. A study of the practices involved in the planting and maintenance of woody ornamental plants in the landscape. The major emphases will be on planting and post-planting techniques, water and fertilization management, pruning, and general tree care. The lectures will focus on the physiological bases for essential management principles. Labs have a hands-on focus.

HORT 440 Restoration Ecology
Fall. Offered odd years: 1997, 1999. Weeks 1–10. 3 credits. Prerequisite: upper division or graduate standing. Letter grade only. Lecs, T R 10:10; lab, F 1:25–4:25. T. H. Whittaker. An inquiry based approach to the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend, one field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

HORT 442 Berry Crops: Culture and Management
Fall. 3 credits. Offered even years. Lecs, M W F 9:05; lab, M 1:25–4:25. Not offered spring 1998. C. M. Petrovic. A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed. Frequent field trips enhance classroom activities.

HORT 444 Applied Viticulture
Fall. 3 credits. Not offered fall 1998. Lecs, T R 9:05; lab, R 2:45–4:25. L. L. Cressy. Grape production and post-production practices with emphasis on the Great Lakes and Finger Lakes regions. We will examine grape varieties, site selection, and vine management as affected by geography, meteorology and vine anatomy/physiology. Protection of vines and grapes from injury by cultural, chemical, and natural means will also be explored. Frequent field trips offer hands-on experience in vineyard practices, marketing and processing.

HORT 445 Orchard Management
Spring. 3 credits. Prerequisite: HORT 200. S-U grades offered. Offered every year. Not offered 1999. Lecs, T R 10:10; lab T 1:25–4:25. A. Merwin. The science of tree fruit production in temperate climates, including site evaluation and improvement, fruit variety and rootstock selection, tree propagation, planting, pruning, and training systems, the physiology of flowering and fruit development, dormancy and cold hardiness, tree nutrition and water relations, fruit harvesting and storage, and integrated pest management. Emphasis is on agroecological principles and hands-on practice in orchard lab-sessions and field trips.

HORT 450 Soil Management and Nutrition of Perennial Crops

HORT 455 Fertility Management and Nutrition of Vegetable Crops
Fall. 3 credits. Prerequisite: any college-level chemistry course. Lecs, M W 10:10; lab/disc, M 2–4:25. Not offered fall 1997. The course deals with both major, secondary and minor elements including fertilization programs, interpretation of tissue and soil analyses, nutrient interactions, induced deficiencies, toxicities as well as the effects of organic matter, crop residues, and specific crop sequences. Selected topics are considered with respect to the current literature, experimental techniques, and applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

HORT 460 Plant-Plant Interactions
Spring. 3 credits. Prerequisite: any crop production course or permission of instructor. Lecs, T R 9:05; lab/disc, M 2–4:25. Offered alternate years. Offered 1998. The manner in which plants interfere or positively interact is examined for the management of cropping systems. Competitive and chemical interactions are considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Examples will be taken from both temperate and tropical monoculture and intercropping systems.

HORT 462 Vegetable Crop Physiology
Spring. 3 credits. Prerequisites HORT 225 and BIOLPL 242. Lecs, T R 9:05; lab/disc, M 2–4:25. Offered alternate years. Not offered spring 1998; next offered spring 1999. H. C. Wien. Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yield. Processes of flower induction, fruit set, fruit growth, and the relationships between vegetative and reproductive growth are covered. Laboratory emphasizes practical hands-on greenhouse experiments and small group discussions.

HORT 465 Vegetable Varieties and Their Evaluation
Fall. 3 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades offered. Lecs, W F 8; lab, F 1:25–4:25. Offered alternate years. Not offered fall 1998. D. W. Wolfe and A. Rangarajan. Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

HORT 470 Special Topics in Pomology
Spring. 3 credits. Open to undergraduates by permission. Hours to be arranged. Staff. Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

HORT 475 Golf Course Management
Fall. 2 credits. Prerequisite: HORT 300 or equivalent. Offered odd years, fall 1997, fall 1999. Lecs to be arranged. A. M. Petrovic. Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management, and financial operations. Analysis of a central New York golf courses will provide the basis for discussion.

HORT 485 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301; HORT 230 or HORT 335. Offered alternate spring semesters. Lecs, T R 10:10–11:00; lab, T R 11:15–12:05. Two-and-one-half-day field trip to visit other botanical gardens and arboreta. D. A. Bakow. The course will explore the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Included will be separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

HORT 491 Design and Plant Establishment in the Urban Environment [also LA 491]
Fall. 3 credits. Prerequisites: HORT 230 or 335 or permission of instructor. Lecs, T R 12:20; lab, T 1:25–4:25. N. L. Bassuk and P. J. Trowbridge.
This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the environmental constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design, followed by specifications and graphic details, will be produced to implement these practices. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

HORT 494 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Prerequisites: permission of instructor(s) for each term. Staff.

HORT 495 Undergraduate Seminar
Undergraduate participation in weekly departmental seminars. May be taken four times for one credit per semester. S-U grades only.

HORT 496 Internship in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser. In advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Robert Hall) signed by the faculty member who will supervise their study and assign their grade. Hours to be arranged. Staff.

HORT 497 Independent Study in Horticultural Sciences
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours to be arranged. Staff.

HORT 499 Undergraduate Teaching Experience
Fall or spring. Credit variable. S-U grades only. Prerequisite: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours to be arranged. Staff.

HORT 499 Undergraduate Research
Fall or spring. Credit variable. S-U grades only. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours to be arranged. Staff.

HORT 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1-6 credits. (6 credits maximum toward MPS (Agriculture) degree). S-U grades optional. Staff. A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Professional Colloquium Series/PHON
Spring. 1 credit. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours to be arranged. Staff.

HORT 602 Seminar in Fruit and Vegetable Science
Fall or spring. 1 credit. S-U grades only. R 4:00. C. B. Watkins. Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring in horticulture and vegetable systems. Undergraduate students must register under HORT 405 Sect. 1.

HORT 615 Quantitative Methods in Horticultural Research

HORT 620 Woody Plant Physiology
Spring. 4 credits. BIOL, BIOLM 331. CHEM 357, or equivalent, or permission of instructor. Letter grades only. Lec, T R 8:40-9:55. Disc, T 1:25-4:25. T. H. Whitlow.

HORT 625 Advanced Postharvest Physiology of Horticultural Crops
Spring. 3 credits. Prerequisite: BIOL 242 and/or HORT 325. Offered alternate years. Not offered spring 1999. Lec, T R 10:10; disc, to be arranged. P. M. Ludford.

HORT 630 Current Topics in Postharvest Horticulture

HORT 635 Tools for Thought
Fall. 1 credit. Prerequisite: permission of instructor. Staff. Offered alternate years. Hours to be arranged. Staff.

HORT 636 Current Topics in Horticulture
1 credit. S-U grades only. Section 01: Fruit and Vegetable Science. Staff. Fall or spring. 1 hour per week, to be arranged. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

HORT 640 Summer Internship
6 credits. Offered alternate years. Staff. Fall or spring. Credit variable. S-U grades only. R 4:00. C. B. Watkins. Summer internships consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring in horticulture and vegetable systems. Undergraduate students must register under HORT 405 Sect. 1.
Section 02: Floriculture and Ornamental Horticulture. T. C. Weiler and staff. Fall. 1 hour per week, to be arranged. Graduate students only. Undergraduates should enroll in HORT 495 (Section 02). Each week a staff member will develop a dialogue with students on a topic of current mutual interest. Topics and discussion leaders change by week and semester; topics will encompass planting design, exterior and interior landscape management, turfgrass management, urban horticulture, nursery management, plant materials, stress physiology, weed science, root zone ecology, horticultural sales and service business operation, and controlled environment agriculture. Brief reading assignments may be distributed for completion by the next class.

HORT 694 Special Topics in Horticulture Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Sec 01, Floriculture. Sec 02, Fruit and Vegetable Science. Staff. The department teaches “trial” courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the same course number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

HORT 700 Graduate Teaching Experience Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science Fall or spring. Credit to be arranged. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy Fall or spring. Credit to be arranged. S-U grades only.

INTERNATIONAL AGRICULTURE
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. F 1:25-3:20. R. W. Everett. A forum to discuss both contemporary and future world food issues and the need for an integrated, multidisciplinary team approach in helping farmers and rural development planners adjust to the ever-changing food needs of the world.

INTAG 402 Agriculture in Tropical America
Fall. 2 credits. Prerequisite: Upper class or graduate standing. F 1:25-3:20. H. D. Thurston and staff. A preparatory course for participation in International Agriculture 602. Physical resources, vegetation, history, crop and animal production, and various social and economic aspects of agriculture in tropical America will be discussed.

INTAG 403 Traditional Agriculture in Developing Countries

Today, perhaps over half of the world’s arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millions with few outside inputs. Many of these practices have been forgotten in developed countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

INTAG 599 International Agriculture and Rural Development Project Paper
Fall and spring. 1-6 credits. Limited to M.P.S. candidates in the fields of International Agriculture and Rural Development (IARD) and International Development (ID). S-U grades only. Staff.

INTAG 602 Agriculture in the Developing Nations
Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructor. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenses. T R 2:30-4:25 until mid-year only; R. W. Blake and staff. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also Government 692)
Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

INTAG 650 Special Topics in International Agricultural and Rural Development
Fall or spring. 1 credit. Staff. A seminar for new themes of agricultural and rural development. Offered occasionally. Specific content varies.

INTAG 665 Training and Development: Theory and Practice (also Communication 685, Education 685 and Industrial and Labor Relations 688)
Spring and summer. 4 credits. S-U grades optional. Charge for materials $45. Lec, F 9:05-12:05; lab, 1 hour per week, to be arranged. At Communication Graduate Center. R. Colle, M. Ewert, D. Deshler.

Analysis, design, and administration of training programs for the development of human resources in small-scale rural, health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

INTAG 694 Graduate Special Topics in INTAG
Fall or spring. 1-4 credits. S-U or letter option. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 703 Seminar for Special Projects in Agricultural and Rural Development
Fall and spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Ag.) degree program and majoring in international agricultural and rural development. Others with permission of the director of graduate field studies in IARD. S-U grades only. M 12:20-2:15. R. W. Blake and staff. The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

Special Topics in International Nutrition (NS 699)
LANDSCAPE ARCHITECTURE

LA 141 Grounding in Landscape Architecture
Fall. 3 credits. Limited to 15 students. Letter grade only. Completion of drafting supplies, about $200. Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approximately 20 students. Freshman landscape architecture majors or permission of instructor. Completion of basic drafting equipment, fees, and supplies, about $250. Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participant to the design principles, design materials, planting design, and graphics.

LA 201 Medium of the Landscape
Fall. 5 credits. Limited to landscape architecture majors. Cost of basic drafting equipment, supplies and fees, about $200; expenses for field trip, about $250. This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water and vegetation.

LA 202 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250. This course will focus upon the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

LA 261 Urban Archaeology (also CRP 261)
Fall. 3 credits. Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

LA 262 Laboratory in Landscape Archaeology (also CRP 262)
Spring. 3 credits. Prerequisites: LA 261 or CRP 261 or permission of instructor. Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 282 The American Landscape
Spring. 3 credits. An interdisciplinary survey of the environmental and cultural history of the American landscape, including perceptions of landscape as expressed in paintings, photographs, and literature. The history of landscape to culture, landscape use, and the history of regional and national landscapes are general topics, all seen within the context of the history of the environment.

LA 301 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250. Course participants will be engaged in the art and science of site-scaled design. This includes gardens, parks, and residential projects, their design and technical solutions.

LA 302 Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250. The studio will engage course participants in service-oriented community design projects. Theories of place-making, community and participatory design and planning, and sustainability will be explored through practice-based learning. Students will be expected to do considerable field work in the community-at-large.

LA 315 Site Engineering I
Spring (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the development of a working knowledge of site grading, site layout, site irrigation, site layout, and road alignment. This course will confront the problems and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detail material prototypes and models and have the option of developing computer-generated drawings.

LA 318 Site Construction II
Spring (2nd seven weeks of semester). 2 credits. Prerequisite: LA 317 or permission of instructor. Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students will develop a site survey and measured drawings as necessary to develop the comprehensive project.

LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360)
Fall. 3 credits. Offered alternate years. Students will examine various transformation processes that occurred in American Indian and Euro-American landscapes. The focus will be on the development and history of the city. The course will provide a historical overview of the development of the American city.

LA 363/547 American Indians, Planners, and Public Policy (also CRP 363/547)
Spring. 3 credits. Students will examine the history of the environment and the role of American Indians in landscape design. This includes gardens, parks, and residential projects, their design and technical solutions.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students. This course will design a working knowledge of various computer software applications (AutoCAD, LandCAD, GIS, etc.) with emphasis on AutoCAD and LandCAD. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

LA 412 Professional Practice
Spring. 1 credit. This course provides the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing, professional services, office and project management, construction management, computers in the profession, and ethics.
LA 480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481 and 581) Fall. 3 credits. A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

LA 483 Design Criticism Fall. 3 credits. A practicum in writing environmental design criticism. Emphasis on impressionistic writing, on analytical descriptions and interpretations or works, and on the role of criticism in environmental design discourse.

LA 486 Community Design Workshop Spring. 3 credits. Permission of instructor. S-U grades optional. This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects including parks, greenways, public spaces, playgrounds, gardens and urban design. This course will enable students to both study and experience design and implementation skills at all levels of the design process. Community design and workshop series. Students will learn skills related to community design in a series of workshops and work on a real project with a community.

LA 487 Experiential Community Design Fall. 3 credits. Permission of instructor. S-U grades optional. This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects including parks, greenways, public spaces, playgrounds, gardens and urban design. This course will enable students to both study and experience design and implementation skills at all levels of the design process. Community design and workshop series. Students will learn skills related to community design in a series of workshops and work on a real project with a community.

LA 491 Design and Plant Establishment in the Urban Environment (also HORT 491) Fall. 3 credits. Prerequisites: HORT 230 or permission of instructor. This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design, followed by specifications and graphic details, will be produced to implement these practices. Cost of supplies, about $50; expenses for field trips, about $50. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

LA 494 Special Topics in Landscape Architecture Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 497 Individual Study in Landscape Architecture Fall or spring. 1–5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grade only. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

LA 501 Composition and Theory Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. Field trip about $250. Basic principles of natural and cultural processes within contemporary design applied to the practice of landscape architecture. Projects focus on the relationship between measurement, process, experience and form at multiple scales of intervention.

LA 502 Composition and Theory Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250. The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.

LA 505 Graphic Communication I Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor. Basic skills in graphic presentation, including pencil-and-ink drawing and drafting techniques applicable to landscape architecture projects. Basic design in freehand drawing, orthographic projection, axonometric projection, and lettering are covered in the course.

LA 506 Graphic Communication II Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor. Course will focus on modes of landscape representation from ideation to presentation. Projects will in many cases correspond with LA 502 design projects. Representation modes include orthographic drawing; concept modelling; composite drawings; visual books.

LANAR 524 History of European Landscape Architecture Fall. 3 credits. Offered through the College of Architecture, Art, and Planning.

LANAR 525 History of American Landscape Architecture Fall. 3 credits. Offered through the College of Architecture, Art, and Planning.

[LA 545 The Parks and Fora of Imperial Rome] Spring. 3 credits. Offered alternate years. Offered spring 1999. Prerequisites: Advanced standing in a design field, classics or history of art, or by permission of the instructor. This advanced seminar is seeking students in classics, art history, archaeology, landscape architecture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome.

[LA 569 Archaeology in Preservation Planning and Design (also CRP 569)] Fall. 3 credits. Offered alternate years. Next offered 1998-99. In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and landscape decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

LA 590 Theory Seminar Fall. 3 credits. For graduate students in their last year of study. Seminar in contemporary landscape design theory.

LA 601 Integrating Theory and Practice I Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250. The studio will focus on site-scaled projects that engage cultural and natural systems. Theories of place-making, sustainable design and landscape representation will be critically explored through design projects that derive from and affirm a sense of site and place. The integration of site knowledge and site construction aims to support a deepening level of correspondence between design and site.

LA 602 Integrating Theory and Practice II Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250. The studio will build on the LA601 subject matter with increasing emphasis placed on construction and technology and the expression of design solutions that grow from and affirm a sense of site and place. Social, cultural, physical and environmental factors and their relationship to site design and planning will be critically explored through theory and practice.

LA 615 Site Engineering I Spring. (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the development of a working knowledge of site
grading, earthwork, storm-water management, site irrigation, site layout, and road alignment.

**LA 616 Site Engineering II**  
Fall. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 615 or permission of instructor. Lectures and studio projects dealing with earthwork estimating, storm-water management, site surveys, site layout, site irrigation and horizontal and vertical road alignment.

**LA 617 Site Construction I**  
Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detail material prototypes and models and have the option of developing computer-generated drawings.

**LA 618 Site Construction II**  
Spring. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 617 or permission of instructor. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a site survey and measured drawings as necessary to develop the comprehensive project.

**LA 619 Advanced Site Grading**  
Spring (2nd seven weeks of semester). 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615. Grading skills and knowledge applied as a design component of site planning projects.

**LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)**  
Fall. 3 credits. Offered alternate years. Offered 1997-98; not offered 1999-2000. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

**LA 680 Graduate Seminar in Landscape Architecture**  
Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional. Topical subjects in landscape architectural design, theory, or technology. Seminar topics and group study not considered in other courses.

**LA 694 Special Topics in Landscape Architecture**  
Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

**LA 701 Urban Design and Planning: Design of Cities in the Electronic Age (also CRP 555)**  
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250. Application of urban design and planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

**LA 702 Advanced Design Studio**  
Spring. 5 credits. This advanced studio provides the opportunity to explore issues of contemporary landscape architecture and integrate related fields. Topics examined include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

**LA 800 Master's Thesis in Landscape Architecture**  
Fall or spring. 9 credits. Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

**NATIONAL RESOURCES**

**Note:** class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**NTRES 101 The Environment**  
Fall. 2 or 3 credits. Letter grade only. M W F 9:05; 1 hr disc to be arranged. Staff. The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

**NTRES 104 Natural History Information Management Concepts**  
Spring. 1 credit. Letter grade only. T 9:05. A. N. Moen. Natural history information management concepts using electronic technology to provide global access to information resources will be introduced. Students will learn how to access and prepare hypertext and multimedia files of natural history information and related information processing techniques for research and education.

**NTRES 105 Natural History Information Management Applications**  
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 104 (or concurrent registration) and permission of instructor fall term. A. N. Moen. Natural history information will be used to learn computer-based information management skills and to produce information resources for use in other courses in the Department of Natural Resources. Sections will include: (1) Natural History of Plants; (2) Natural History of Animals; and (3) Decision Aids for Laboratory and Field Identification.

**NTRES 201 Environmental Conservation Applications**  
Spring. 3 credits. M W F 12:20; 1 hr disc sec to be arranged. T. J. Fahey. As the end of the 20th century approaches, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course will stimulate you to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media so that you will have a firmer basis for responsible citizenship and action on environmental issues.

**NTRES 204 Natural Resource Modeling Concepts**  
Spring. 1 credit. Letter grade only. R 9:05. Prerequisite. NTRES 104 or permission of instructor. A. N. Moen. Basic concepts underlying resource modeling in natural resources are introduced, and selected models illustrate specific biophysical, population, and simulation models.

**NTRES 205 Natural Resource Modeling Applications**  
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 204 (or concurrent registration), one course in computer programming and permission of instructor fall term. A. N. Moen. Students may enroll for variable credits in biophysical modeling, population modeling, and simulation modeling sections. Original programs are designed by the students and become part of the information resources in the Cooperative Learning Center. Sections will include: (1) Biophysical Modeling in Natural Resources; (2) Simulation Modeling in Natural Resources; and (3) Population Modeling in Natural Resources.

**NTRES 210 Introductory Field Biology**  
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight field trips required. Cost of
A course for majors and nonmajors, focusing on the integration of field marks, songs and calls, and habitat cues. Topics covered will include the choice and effective use of field guides, binoculars, and other aids to bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for estimating and surveying songbird populations.

**NTRES 300 International Environmental Issues**

Fall. 3 credits. Junior standing or above. Not offered fall 1997. T R 9:05-9:55; 1 hr disc sec to be arranged. R. J. McNeil. Lectures will survey international environmental issues, with some attention to causes and to solutions. Case studies will include such subjects as whales and whaling, tropical deforestation, endangered species and biodiversity, Law of the Sea, Antarctica, ozone depletion, global warming. Institutions such as treaties, development banks, international law, and trade agreements will be examined. Perspectives will include primarily ecology, secondarily ethics, economics, law.

**NTRES 301 Forest Ecology**

Fall. 3 credits. Prerequisite: Introductory Biology. M W F 11:15. T. J. Fahey. A comprehensive treatment of forest structure, form, and functions that emphasizes forest ecosystems. Topics include paleoecology of forests, eco-physiology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

**NTRES 302 Forest Ecology Laboratory**

Fall. 1 credit. Cost of weekend trip approximately $30. Concurrent enrollment in NTRES 301 required. M 12:20-4:25. T. J. Fahey. Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

**NTRES 303 Woodlot Management and Maple Syrup Production**

Spring. 3 credits. Letter grade only. Lec T R 10:10-11:00; lab R 12:20-4:25. T. J. Fahey. A practical, field-oriented course emphasizing principles and practices of multiple purpose management of small nonindustrial private forest land in the northeastern United States, including the production of maple syrup.

**NTRES 304 Wildlife Ecology Concepts**

Spring. 1 credit. Letter grade only. M W F 11:15. (1st 1/3 of the semester). A. N. Moen. The main concepts underlying wildlife behavior, physiology, nutrition, and energetics are discussed in an ecological context as a basis for further study in the NTRES 305 sections associated with this course.

**NTRES 305 Wildlife Ecology Applications**

Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 304 (or concurrent registration) and permission of instructor fall term. Field research and computer simulations provide in-depth study in wildlife behavior, physiology, nutrition, and energetics sections in cooperative learning environment. All students publish their findings on the information system in the Cooperative Learning Center. Sections will include: (1) Wildlife Behavior; (2) Wildlife Physiology; (3) Wildlife Nutrition; and (4) Wildlife Energetics.

**NTRES 306 Coastal and Oceanic Law and Policy**

Summer. 2 credits. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation) $900. Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study at that requires extensive use of the laboratory’s library and personnel is assigned. The week concludes with a mock hearing.

**NTRES 308 Natural Resources Management**

Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. B. A. Kruth. Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate organismal, environmental, social and institutional dimensions of management through case studies. Grades are based on individual and group performance.

**NTRES 309 Natural Resource Management in American Indian Nations**

Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and American Indian Program. S. M. Penningroth. This course examines resource management in territories belonging to American Indian nations. Topics include history, sovereignty, religious significance of the environment, and intellectual property. Case examples of traditional Indian management techniques as well as contemporary resource management issues are presented.

**NTRES 321 Introduction to Biogeochemistry (also GEOL 321, SES 321)**

Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. Lec. T R 12:20-1:10; lab. F 2:00-4:25. J. B. Yavitt and L. A. Derry. Control and function of the Earth’s global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bioactive metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.
Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

**NTER 404 Wildlife Population Applications**

Spring. 1 credit. Letter grade only. Prerequisite: NTRES 402 or permission of instructor. M W F 11:15. (second 1/3 of the semester). A. N. Moen. The main concepts underlying population dynamics of free-ranging species are discussed in an ecological context as a basis for further study in the NTRES 405 sections associated with this course. The emphasis is on analytical population models rather than descriptive population parameters.

**NTRES 410 Wildlife Management Concepts and Applications**

Spring. 3 credits. Prerequisites: broad background in biology, NTRES 304 (Wildlife Species Ecology) or NTRES 404 (Wildlife Populations Ecology). This course is open to seniors and graduate students. M W F 9:05. A. Moen. In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, management information systems, and preparation of computer-based landscape files. Local field trips are taken.

**NTER 411 Seminar in Environmental Ethics**

Fall. 3 credits. For graduate students, seniors, and juniors. S-U grades optional. W 1:25–3:50. Moral concerns relative to the natural environment and agriculture. In successive years, the seminar will focus on such topics as (1) animal rights vs. ecosystem concerns, (2) natural resource management and the concept of the public interest, (3) doing environmental ethics in a democratic and pluralistic society, and, (4) land use ethics.

**NTRES 415 Principles and Practices of Agroforestry (also Hort 415)**

Spring. 3 credits. Prerequisites: senior or graduate standing. S-U option. Lee, M W 10:10–11:00; lab, W 1:25–4:25. K. Mudge and J. Lassoie. An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic standpoint. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement).

**NTER 417 Wetland Resources**

Summer. 2 credits. Prerequisite: one year of college biology. A special 1-week course offered at Cornell’s Shallows Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $900. An examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including fresh- and salt water-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and role of indigenous species in the dominant insect and vertebrate associations.
NTRES 418 Wetland Ecology and Management—Lecture
Fall. 3 credits. (Students may not receive credit for NTRES 418 and NTRES 417)
Wetland Resources, Shoals Marine Laboratory summer course.) T R 12:20-1:35. B. L. Bedford.
Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 419 Wetland Ecology and Management—Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20-4:25. One weekend fieldtrip required.
An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the flora, fauna, soils, and hydrology of wetlands within the region; (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification and delineation. Some exercises will require written reports.

NTRES 420 Ecological Principles for Aquatic Resource Management
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. M W F 9:05-9:55. R. Schneider.
In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussion will integrate scientific literature with current management issues. Topics include linkages between water variability and community composition and organism life histories; influence of water movement on dispersal and migration mechanisms; and the potential role of nutrient transport and water availability to community dynamics.

NTRES 428 Landscape Impact Analysis
Spring. 3 credits. Prerequisites: one introductory course in ecology or equivalent and junior standing; one advanced course in ecology or equivalent. T R 1:25-4:20. B. Bedford.
The course explores environmental impact assessment (EIA) from the perspective of the watershed, landscape, or region rather than the individual development project. It provides an overview of the EIA process as it is implemented within various governmental and development agencies here and abroad; examines diverse conceptual frameworks for landscape impact analysis; and exposes students to modern tools for evaluating landscapes.

NTRES 438 Fishery Management
Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include setting goals and objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

NTRES 442 Techniques in Fishery Science
Fall. 3 credits. Limited to 15 upperclass and graduate fishery students. Cost of field trips, no more than $30. Offered alternate odd years. Next offered fall 1999. T R 1:25-4:25; 2 or more weekend field trips and 1 mid-week field trip.
C. G. Smith.
Emphasis is on methods for collecting and analyzing data from fish populations and their habitat. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.

NTRES 450 Conservation Biology
Fall. 3 credits. Prerequisite: a reasonable biology background. Limited to first 30 seniors, plus graduate students. Lec, T 10:10-12:05, disc, R 10:10 or 11:15. T. A. Gavin.
Emphasis will be on biological topics that are important to the maintenance of biological diversity. Examples include population viability analysis, and the analysis of the demography and genetics of small populations as they are affected by habitat fragmentation and isolation. Students will gain thorough familiarity with these concepts and their potential application through lectures, discussion, and use of computer models. This course is intended primarily for students with a background in college biology. Students with no college biology background should enroll in BIOES 257.

NTRES 456 Stream Ecology (also ENTOM 456, BIOES 456)
Spring. 4 credits. Prerequisites: None; BIOES 261 recommended. Offered alternate years. Next offered spring 1999. Lec, T R 9:00-9:55, Lab, M T W Th or R 1:25-4:25. M. Bain and B. Peckarsky.
Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. Lab: A field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessments.

NTRES 471 Management of Terrestrial Habitats
Spring or summer. 2 credits. Prerequisites: NTRES 210, 304; statistics recommended; junior standing or above. Lec/ Lab: W 1-2-4. C. R. Smith.
A landscape ecological approach will be used to introduce students to habitat concepts and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats at a variety of temporal and spatial scales. Field trips will be taken to areas managed by both public and private land management organizations. An introduction to use of the Global Positioning System (GPS) is included.

NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, T. Brown, L. F. Buck, D. J. Decker, J. Gilliet, B. Knuth, J. McNeil, J. Schelhas.
Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 494 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 495 Individual Study in Fish and Wildlife Biology and Management
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. M. Bain, T. Gavin, C. Krueger, R. Malecki, E. Mills, A. Moen, M. Olson, M. Richardson, L. Rudstam, C. Smith.
Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 496 Individual Study in Ecology and Management of Landscapes
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, T. Fahey, M. Krasny, J. Lassoe, R. Schneider, P. Smallidge, J. Yavitt.
Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 498 Teaching in Natural Resources
Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insights into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 500 Professional Projects—M.P.S.
Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.

NTRES 601 Seminar on Selected Topics in Fishery Biology and Aquatic Science
Fall or spring. 1 credit. S-U grades only. T 3:35-4:25; disc sec, T 4:30-5:00.
Selected readings and discussions of research and/or current problems in fishery and aquatic sciences.
NTRES 604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades optional. M 3:00—4:30. Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

NTRES 607 Ecotoxicology (Toxicology 607)
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. Next offered spring 1998. M W F 11:15—12:05. J. W. Gillett. Lectures, readings, and special guest talks on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

NTRES 610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610)
Fall. 3 credits. Prerequisites: biochemistry and animal physiology. Letter grade only. M W F 11:15—12:05. J. W. Gillett. Introduction to toxicology concepts of toxicity, exposure and biological responses to toxicants, methods of assessing toxicity; factors affecting outcomes, specific sources of toxicants (including air pollution, agriculture, industrial and commercial processes, natural occurring toxicants, and social poisons), risk assessment and regulation of toxic materials.

NTRES 612 Wildlife Science Seminar
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Check with department for availability. Discussion of individual research or current problems in wildlife science.

NTRES 615 Case Studies and Special Topics in Agroforestry
Fall. 2 credits. Prerequisites: NTRES/HORT 415 or permission of instructor. S-U only. Hours to be arranged. L. E. Buck, J. P. Lassoie. Interdisciplinary groups of students examine case study examples of agroforestry practices in developed and developing countries. Specific topical areas are examined in depth, leading to development of a team-written report and a class presentation. Extensive library research and participation in small group discussions are required.

NTRES 616 Forest Science and Management Seminar
Fall and spring. 1 credit. Permission of instructor. Check with department for availability. Selected readings and discussions of research and/or current problems in forest science and management.

NTRES 618 Critical Issues in Conservation and Sustainable Development
Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30—4:25. J. Schelhas. Establishes a theoretical foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and the development for human needs. Students will work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

NTRES 619 Field Practicum in Conservation and Sustainable Development
Spring. 3 credits. Prerequisites: NTRES 618; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes two-week field study trip to a Latin American country in January. J. Schelhas. An interdisciplinary study of a conservation and development problem in Latin America. The course will use an interdisciplinary research methodology that includes group problem identification, individual or small group research projects, and synthesis of group work to identify key conservation issues and research priorities for a selected site.

NTRES 629 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 698 Current Topics: Environmental Toxicology (Toxicology 698)
Fall, spring. 1—3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

NTRES 699 Graduate Individual Study in Natural Resources
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. NTRES Graduate Faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 800 Master's Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.

NTRES 900 Graduate-Level Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students in a Ph.D. program only before the 'A' exam has been passed. S-U grades only.

NTRES 901 Doctoral-Level Thesis Research
Fall and spring. Credit to be arranged. For students admitted to candidacy after the 'A' exam has been passed. S-U grades only.

Related Courses in Other Departments

Environment and Society (R SOC 324, 440, 495)
Ecology and Biology (ENTOM 456, 470, 471; BIOEC 263, 272, 273, 450, 452, 456, 461, 482, 471, 472, 475, 476, 478)
Environmental Law, Ethics, and Philosophy (S&T 206, CRP 451, PHIL 241, 246, 247, 381)
Human Systems and Communication (COMM 352, 363, 421)
Physical Sciences (ABEN 435, 475, SCAS 260, 371, 483, GEOL 103, 104, CEE 432)
Public Policy and Politics (GOVT 427, 428, BIO & SOC 461; CEE 529)
Resource Economics (ARME 100, 250, 450, 451; ECON 309)
Spatial Data Interpretation (SCAS 420, 461, 620, 660)

PLANT BREEDING

Biometry courses are listed under Department of Statistical Science in "Interdisciplinary Centers, Programs, and Studies" in the front section of this catalog.

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production
Spring. 2 credits. Prerequisite: one year of introductory biology or permission of instructor. Lecs, T R 11:15. S. R. McCouch.

This course provides an introduction to Plant Breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B—Biological Sciences.

PL BR 401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor. Lecs, T R 10:10. E. D. Earle.
Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of these techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed. Six written assignments and a term paper are required.

**PL BR 402 Plant Tissue Culture Laboratory**
Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) and permission of instructor. W 1:25-4:25 (alternate weeks) plus 1 hr to be arranged. E. D. Earle Laboratory exercises complementing Plant Breeding 401. Techniques for establishing, evaluating, and utilizing plant organ, tissue, and cell cultures will be covered. Experiments will use a broad range of plant materials.

**[PL BR 446 Plant Cytogenetics Laboratory]**
Spring. 2 credits. S-U grades optional. Prerequisites: BIOGD 281 or PL BR 225. Will be offered as a one-month module during the spring of 1998. Time to be arranged later. Check with department for further information. K. N. Watanabe. This course provides fundamental knowledge and techniques in plant cytogenetics. Emphasis will be on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. Specific topics will be covered by invited lecturers.

**PL BR 494 Special Topics in Plant Breeding**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**PL BR 496 Internship in Plant Breeding**
Fall or spring. Credits variable. May be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the student and another member who will supervise their study and assign their grades and credits. S-U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

**PL BR 497 Individual Study in Plant Breeding**
Fall or spring. Credits variable. May be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

**PL BR 498 Undergraduate Teaching**
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

**PL BR 499 Undergraduate Research**
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

**PL BR 603 Methods of Plant Breeding**
Fall. 3 credits. Prerequisites: BIOGD 281 or PL BR 225 or equivalent and an introductory course in crop production. M W F 9:05. M. E. Smith. A comprehensive examination of plant breeding methods, including inbreeding and population improvement methods. Operational details and practical limitations for each method will be considered, as will suitability for major breeding objectives (agronomic characteristics, quality, and biotic and abiotic stress tolerance). The goal is to familiarize students with tools available to plant breeders, criteria for choosing among them, and options for creatively modifying them for specific situations.

**PL BR 604 Methods of Plant Breeding Laboratory**
Fall. 2 credits. Prerequisite: PL BR 603 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson. Fall fields to plant breeding programs involve discussion of breeding methods used, overall goals, selection techniques, soil and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

**PL BR 605 Advanced Plant Genetics**
Spring. 3 credits. S-U grades optional. Prerequisites: BIOGD 281, PL BR 225, or equivalent. Lecs, M W F 11:15-12:05. M. M. Kyle. This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytogenetics, mating behavior and barriers, and aspects of population and quantitative genetics.

**PL BR 622 Seminar**
Fall or spring. 1 credit. S-U grades only. T 12:20. Staff and graduate students.

**PL BR 629 Special Topics in Plant Science Extension**
Spring. 2 credits. F 1:25-4:25. W. D. Pardee. Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

**PL BR 650 Special Problems in Research and Teaching**
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

**PL BR 653.1 Concepts and Techniques in Plant Molecular Biology**
Fall. 1 credit. S-U grades optional. Prerequisites: BIOGD 281 and BIOBM 332 or 330 or their equivalent. Recommended: BIOBM 351. Lecs, M W F 10:10-11:00 (12 lecs). Sept. 3-Sept. 29. D. Stern and J. Steffens.

A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, production, DNA-protein interactions, and use of antibodies.

**PL BR 653.2 Plant Biotechnology (also Plant Pathology 663 and BIO PL 653.2)**
Fall. 1 credit. S-U grades optional. Prerequisite: BIO PL 653.1 or permission of instructor. E. D. Earle and M. Zaitlin. This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

**PL BR 653.3 Plant Genome Organization**
Fall or spring. 1 or more credits. Staff. Emphasis is on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed
PL BR 717 Quantitative Genetics in Plant Breeding
Fall. 3 credits. S-U grades only. Prerequisites: PL BR 603 and BTRY 601. Offered even years. T R 8:30-9:55. Not offered fall 1997; next offered fall 1998.
D. R. Viands.
Discussion of quantitative genetics to help make decisions for more efficient plant breeding. Specific topics include components of variance (estimated from mating designs), gene pool development, linkage, heritability, phenotypic and genotypic correlation coefficients, and theoretical gain from selection. During one period, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.

PL BR 718 Breeding for Pest Resistance
Spring. 3 credits. Prerequisites: BIOGD 281 or PL BR 225, and PL BR 603 required. An introductory course in Plant Pathology and/or Entomology also highly recommended. Lec, T R 10:10-11:30.
M. A. Mutschler.
A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance stability of genetic resistance mechanisms, and the use of biochemical/physiological/molecular tools in breeding for pest resistance.

PL BR 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students working on a master's thesis.

PL BR 900 Graduate-Level Dissertation Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

PL BR 901 Doctoral-Level Dissertation Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

PL PA 101 Freshman Writing Seminar: Posts, Pesticides, People, and Politics
Fall. 3 credits. Limited to 17 students. Offered fall 1997. Lec, M W F 8:00-8:50. P. A. Arneson.
This seminar examines the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachel Carson's classic, "Silent Spring," we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

PL PA 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Climate
Spring. 3 credits. Limited to 17 students. Lec, T R 8:30-9:50.
C. A. Laurence.
This seminar provides an opportunity to learn more about the biological, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at levels of single sentences to term papers.

PL PA 201 Magical Mushrooms, Mischievous Molds
Spring. 2 credits. S-U optional. Lec, T R 11:15.
G. W. Hudler.
A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals are emphasized.

PL PA 241 Plant Diseases and Disease Management
Spring. 4 credits. Prerequisite: one year of biology. Lec, M W F 11:15; lab, T or W 1:25.
P. A. Arneson.
An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

PL PA 209 Introductory Mycology
Fall. 3 credits. Prerequisite: one year of biology or equivalent. Concurrent registration in PL PA 319 is recommended.
J. R. Aist.
An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

PL PA 319 Field Mycology
Fall. 1 credit. Prerequisite: permission of instructor. R. P. Korf.
Study of mushrooms and other fungi on field excursions followed by 7 evening labs devoted to lectures and identification and study of collected specimens. Emphasis on ecology, biology, and means of identification. Grades are determined on basis of laboratory final.

PL PA 401 Basic Plant Pathology
Fall. 4 credits. Prerequisite: one year of biology and BIO S 241 or equivalent. Recommended: general microbiology, plant physiology. Lecs, T R 11:10; lab, T or W 1:25.
W. A. Sinclair.
Principles and practice of plant pathology. Lectures and labs are coordinated to consider types of plant pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, and control of disease in crops and ornamental plants. Focus on attack and plant defense, vector relationships, epidemiology, disease forecasting, loss assessment, and disease control. This course prepares students for graduate-level work in plant pathology.

PL PA 407 Nature of Sensing and Response (Also BIO G 407)
Spring. 3 credits. Prerequisites: BIO BM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIO GD 281. Lec, T R 10:10-11:25.
T. P. Delaney.
The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensory information to appropriate responses. A wide variety of response systems will be identified to show their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, development and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

PL PA 411 Plant Disease Diagnosis
Fall. 3 credits. Prerequisite: PL PA 241 or their equivalents. Lecs, M W 11:15; labs, T 1:25-4:25.
G. W. Hudler.
A method for diagnosis of plant disease is presented with emphasis on contemporary laboratory techniques and effective use of the literature.

PL PA 443 Pathology of Trees and Shrubs
Fall. 3 credits. Prerequisites: PL PA 241 or equivalents. Lecs, M W 11:15; labs, T 1:25-4:25. Not offered fall 1997.
G. W. Hudler.
For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases of trees and shrubs. Forest, shade, and ornamental plants are considered.

PL PA 444 Integrated Pest Management
Fall. 4 credits. Prerequisites: BIO ES 261, ENTOM 212 or 241, or PL PA 241 or their equivalents or permission of instructor. P. A. Arneson.
Lectures integrate the principles of pest control, ecology, and economics in the management of pest-crop systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of
Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogens and plant populations, and population genetics of pathogens. The discussion section is used for examining current plant pathology literature and other exercises complementary to lecture material.

**PL PA 705** Phytovirology
Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. Not offered 1997–98. M. Zaitlin.

This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

**PL PA 706** Phytonematology
Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent; permission of instructor. G. S. Abawi.

Primarily deals with plant-parasitic nematodes, their damage, and management options. Topics covered include morphology, anatomy and taxonomy, methods of extraction and quantification, biology and ecology, assessment of pathogenicity, plant damage and mechanisms involved; interactions with other pests; role in soil health; and control measures.

**PL PA 707** Phytobacteriology
Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; introductory plant pathology. Offered alternate years. S. V. Beer.

A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease, methods for manipulation of the pathogens, and recent developments in phytobacteriology. The current state of knowledge of important phytopathogenic genera, including their genetics and mechanisms of pathogenesis is reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

**PL PA 709** Phytomycology
Spring. 2 credits. For graduate students with a major or minor in mycology or plant pathology; others by permission. Prerequisites: PL PA 401 and 309 or equivalents, or permission of instructor. Lec: F 1:25–2:30; lab, 2:30–4:30. J. W. Lorbeer.

Provides basic information on the biology of plant pathogenic fungi with emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

**PL PA 715** Phytovirology Laboratory
Spring. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. Not offered 1997–98. M. Zaitlin.
PL PA 735 Advanced Plant Virology  
Spring. 3 credits. Prerequisite: permission of instructor. 3 lecs, hours to be arranged. M. Zaitlin.  
Topics in plant virology, with an emphasis placed on student discussion of current literature. Topics included are viral infection process, viral and viroid replication, viral recombination, viral movement, viral genes and their products, cross protection, detection of viruses, molecular approaches to resistance and the use of viruses as vectors for introducing genetic material into plants.

PL PA 738 Genetics and Development of Pathogens Fall. 2 credits. Prerequisite: BIOGD 281 or equivalent. Hours to be arranged. Not offered 1997-98. B. G. Turgeon, O. C. Yoder.  
Classical and molecular approaches to the study of fungal genetics are discussed. Recently developed molecular technology is highlighted, with emphasis on transformation systems, gene disruption and replacement, gene expression, stability of transforming DNA, native transposons and plasmids, karyotyping by chromosome separation, and secretion of heterologous proteins. Application of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity), the mitotic and meiotic cell cycles, and conidium formation is described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of plant pathogenic fungi such as Cochliobolus heterostrophus and Magnaporthe grisea and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

PL PA 739 Advanced Mycology  
Fall. 4 credits. Prerequisites: PL PA 509 or equivalent, a course in genetics, and permission of instructor. Offered odd-year fall semesters. R. P. Korf.  
A detailed study of the taxonomy, nomenclature, and life cycle biology of four major groups of fungi (rusts, smuts, peronosporales, and fungi imperfecti).

PL PA 788 Research in Molecular Plant Pathology  
Fall and spring. 2, 4, or 6 credits. Prerequisite: permission of instructor. S-U grades only. S. V. Beer.  
Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

PL PA 797 Special Topics  
Fall or spring. 1-5 credits. S-U grades optional.  
An opportunity for independent study of a special topic.

PL PA 798 Graduate Teaching Experience  
Fall or spring. 1-5 credits. S-U grades. Hours to be arranged. Staff. Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800 Master's-Level Thesis Research  
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.  
For students working on a master's degree.

PL PA 900 Graduate-Level Thesis Research  
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.  
For students in a Ph.D. program who have not passed the "A" exam.

PL PA 901 Doctoral-Level Thesis Research  
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.  
For doctoral candidates who have passed the "A" exam.

POMOLOGY (FRUIT SCIENCE)  
See Horticultural Sciences.

RURAL SOCIOLOGY  
Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 100 American Indian Studies: An Introduction (also American Indian Studies 100)  
Fall. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables.  
This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations.

R SOC 101 Introduction to Sociology  
Fall, spring or summer. 3 credits. Lecs. T R 10:10-11:00; sec, various times. C. C. Geisler and staff.  
A survey of concepts and theories in sociology and an examination of social forces and institutions shaping modern societies. The major topics include culture and socialization, social stratification and social class, age, race, ethnic and gender inequality, deviance and social control, religious, education, and occupation organizations, urbanization and demographic change, social change and social movements, bureaucracy, environmentalism, and the uses of sociology.

R SOC 175 Issues in Contemporary American Indian Societies (also American Indian Studies 175)  
Spring. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables.  
Early American Indian history and the postcontact period will be reviewed with an emphasis given to developments since 1789.

Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered, with guest lecturers and media presentations.

R SOC 200 Social Problems  
This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing elements of these theories. The theoretical framework is then applied to analyses of a variety of social problems, and these may vary semester to semester. Examples of social problems are homelessness, teenage pregnancy, deindustrialization, and homicide, among others. Emphasis in the course will be given to how social problems are measured, and students will be given an opportunity to test theories with data analysis.

R SOC 201 Population Dynamics  
Spring. 3 credits. S-U grades optional. ALS students must register for this course as R SOC 201. T R 8:40-9:55. J. M. Styczos or L. B. Williams.  
This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and migration) and social and economic issues. Discussion will cover special topics related to population growth and distribution, including marriage and family formation, labor force participation, urban growth and urbanization resource allocation, and the environment.

R SOC 205 International Development  
Spring. 3 credits. M W F 10:10-11:00. P. D. McMichael.  
New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grassroots activism.

R SOC 206 Gender and Society (also Women's Studies 206)  
Spring. 3 credits. Lecs. M W F 11:15-12:05; sec, various times. Staff. Course will familiarize students with origins of gender hierarchies, social and behavioral similarities and differences between females and males, and degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Guest lecturers will be met through lectures, readings, films, participant observation and personal experiences.
The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

**R SOC 208 Technology and Society**
Fall. 3 credits. Offered alternate years. Not offered fall 1997; next offered fall 1998. M W F 10:10–11:00. C. C. Geisler. The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

**R SOC 213 Social Indicators, Data Management, and Analysis**
Fall. 3 credits. T R 11:40–12:55. P. R. Eberts or L. B. Williams. A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and government informants and other low-cost techniques, will be examined using personal computers.

**R SOC 220 Sociology of Health of Latinos and Ethnic Minorities (also Latino Studies Program 220)**
Fall. 3 credits. S-U grades optional. Enrollment is limited to 40. T R 10:10–11:25. P. A. Parra. Discusses the health status of Latinos in the United States. Specifically, it will explore in-group diversity such as migration, economic status and the influence of culture and the environment on health status and access to health care. Although focus is on Latino population, discussion encompasses other minorities who face similar problems.

**R SOC 301 Theories of Society**
Fall. 3 credits. Prerequisites: rural sociology or sociology course. S-U grades optional. M W F 11:15–12:05. P. K. Gellert. An introduction to the "classical" sociological theorists for seniors, juniors, and beginning graduate students. Emphasis on (I) the central concepts of the sociological tradition, (2) major classical theorists (Marx, Durkheim, Weber) and contemporary counterparts. The relevance of these theories of society to current events and social problems will be stressed.

**R SOC 318 Ethnohistory of the Northern Iroquois (also American Indian Studies 318)**
Fall. 3 credits. S-U grades optional. Not offered 1997–98. T 1:25–4:25. R. W. Venables. The development of Iroquois (Haudenosaunee) history and culture is traceable to the present day.

**R SOC 321 Environment and Society (also Sciences and Technology Studies 324)**
Spring or summer. 3 credits. M W F 1:25–2:15. M. J. Pfeffer. The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like conservationism, ecocentrism, ecological feminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships between substantive and philosophical/theoretical issues.

**R SOC 331 Demographic Analysis in Business and Government (also Agricultural Economics 416)**
Spring. 3 credits. With permission of instructor. Prerequisite: R SOC 213 or a statistics course. Lee, W F 1:25–2:15, Lab, M 1:25, 2:30, W. Brown. An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines.

**R SOC 336 Rural Areas in Metropolitan Society**
Fall. 3 credits. S-U grades optional. Prerequisite: a social science course. Offered alternate years. Not offered fall 1997 and 1999; next offered fall 1998. T R 11:40–12:55. D. L. Brown. This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity, increased societal interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group projects in rural communities.

**R SOC 340 Food and Agriculture in Modern Society**
Spring. 3 credits. Prerequisite: one course in social science (CALS Group C). S-U optional. T R 8:40–9:55. G. W. Gillespie. Our changing food and agriculture system will be examined from a sociological perspective. What are their major trends as we approach the twenty-first century? What are its social, human health, and environmental issues? What are its potential development strategies and what do these imply for rural communities, urban areas, and the environment?

**R SOC 367 American Indian Tribal Governments (also American Indian Studies 367)**
Fall. 3 credits. S-U option. Lec, T R 2:55–4:10. D. Hinshaw. This course focuses on the structure of contemporary tribal governments and the ways in which these governments approach the issues confronting their constituents. The effects of European contact on traditional political organizations are detailed, as are the present day relationships of tribal governments to federal and state governments.

**R SOC 370 Comparative Issues in Social Stratification**
Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25–2:40 or T R 8:40–9:55 (depending on professor). T. A. Lyon or S. Feldman. This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, race, ethnicity, and sexuality in assessing the patterns, meaning and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

**R SOC 380 Independent Honors Research in Social Science**
Fall and spring. 1–6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative, M. Pfeffer.

**R SOC 408 Human Fertility in Developing Nations (also Biology and Society 404)**

**R SOC 410 Population and Environment**
Spring. 3 credits. Offered alternate years. T R 10:10–11:25. J. M. Stycos. A voluminous new literature is emerging, attempting to trace the connections between population dynamics and environmental change. The seminars will be devoted to a critical examination of this literature, stressing population change both as cause and consequence of environmental factors. In addition, the social and economic forces that mediate the population-environment relation will be examined.

**R SOC 418 Population Policy (also Biology and Society 414)**
Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Offered alternate years. T R 10:10–11:25. J. M. Stycos. The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.

**R SOC 425 Gender Relations, Gender Ideologies, and Social Change**
examines how gender ideologies, work-family linkages and the transformation of work and the labor process are based upon as well as to help transform gender relations. The course gives attention to the particularity of place and time as these help to situate gender relations in the different state, regional, and global configurations that contextualize and configure everyday life.

[R SOC 430 Migration and Population Redistribution
Fall. 3 credits. Prerequisite: undergraduates, urban sociology course or permission of instructor. Offered alternate years. Not offered 1997-98. T R 8:40-9:55. D. L. Brown.
This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic interrelationships are emphasized as are implications of changes in local and regional population structure and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relations are investigated. Techniques and measurement issues associated with the analysis of migration and population distribution are discussed.

[R SOC 431 Social Demography of Minorities
Ethnic conflict and accommodation is examined in diverse settings (societies and historical periods). Demographic indicators (such as residential segregation, marital patterns, mortality and fertility differentials, and occupational mobility) of underlying social conditions serve as the principal vehicle for evaluating the status of ethnic relations.

[R SOC 436 Successful Aging: Issues and Social Policy in the 1990s
6-week Summer session. 3 credits. M-F 10:00-11:15. P. Taeitz.
This course aims to correct the misconceptions about aging and to free ourselves of the stereotypes that older persons are members of a single, homogeneous category. Successful aging in the 1990s and beyond is the central focus of the course. The response of the public and private sectors to the rapidly growing older population is examined in view of the imbalance between the strengths and capacities of older persons and the lack of role opportunities in society to utilize and reward their talents and abilities. Films and fieldtrips.

[R SOC 437 Aging and Aging Social Policy in the 1990s
Fall. 3 credits. Prerequisite: R SOC 101 or its equivalent. Not offered fall 1997. T R 11:40-12:55. Staff.
An analysis of the "graying" of America and the responses of the public and private sectors to this demographic change. Examines the interplay between basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements by the elderly.

[R SOC 438 Social Demography
This course surveys the methods, theories, and problems of population studies. Attention is directed to the social, economic, and cultural determinants and consequences of population growth, distribution, and change. The core areas of demography, fertility, mortality, and migration are studied. Comparisons are made between developed and developing areas and between Africa, Asia, and Latin America.

[R SOC 440 The Social Impact of Resource Development
Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and provide a tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.

[R SOC 442 American Indian Philosophies: Selected Topics (also American Indian Studies 442)
This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

[R SOC 490 Society and Survival
Fall. 3 credits. Prerequisite: introductory sociology course or permission of instructor. Not offered 1997-98. T R 2:55-4:10. D. T. Gurak.
Course surveys existing theories, methodological techniques, and research results relating to how social, economic and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policy-related applications in different societies is assessed. Attention is given to the problems associated with interpreting causality in morbidity and mortality data.

[R SOC 492 Contemporary Issues: Seminars: Developments in the Pacific Rim
Pacific Rim dynamics challenge U.S. supremacy, Western conceptions of modernization, and "Third World" unity. We relate these trends to regional political, economic, and cultural forces, including the Japanese model, the "Newly Industrializing Countries" (e.g., South Korea, Taiwan), the "third tier" countries (e.g., Indonesia, the Philippines), and emerging Chinese markets.

[R SOC 494 Special Topics in Rural Sociology
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offered on a trial by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[R SOC 495 Population, Environment, and Development in Sub-Saharan Africa
In the past three decades, countries in sub-Saharan Africa have experienced rapid population growth, weak economic growth, and growing environmental problems. This course examines how these problems are interrelated and looks at possible solutions. After reviewing trends in population environment and development within the region, the course focuses on specific problems, including urbanization, health and survival, population pressure and sustainable agriculture, refugees, and gender/family/community structures.

[R SOC 497 Independent Study in Rural Sociology
Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional. In some cases students may include reading course, research experience, or public service experience.

[R SOC 560 Managing Local Environmental Systems: Social Perspectives and Research Bases
Fall. 3 credits. S-U optional. Enrollment limited to 15. W 2:55-4:25. Staff.
Course is for students with diverse backgrounds: undergrads, grads, people in professional careers, others with interest in environmental issue identification, resolution and management. Course discussions include ecological, social, economic and local government perspectives. Via lab exercises throughout the semester, student will have opportunities to apply the concepts and principles of these perspectives to analysis of specific local environmental management problems. Readings, lectures, and a course project are mandatory.

[R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development
Fall. 3 credits. Letter grade only. Prerequisite: Graduate student. Lect. R 7:00-10:00 p.m. P. R. Eberts.
A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: 1) planning and structural changes and policymaking; 2) participatory processes for generating community development; and 3) planning and planning strategies as mechanisms for creating community development opportunities.

[R SOC 603 Classical Sociological Theory
Fall. 4 credits. Offered alternate years. S-U grades optional. Prerequisites: open to graduate students and undergraduates with permission of instructor. T R 2:55-4:10. M. J. Pfeffer.
Students will review the main streams of classical sociological thought, focusing on the work of Weber, Durkheim, and Marx. Course materials include original texts and secondary literature, used to examine the concepts, methods and explanation in classical sociological thought. Important objectives of the course will be to identify the philosophical and conceptual core of the discipline and to critically evaluate the relevance of the classical
This course surveys major twentieth-century theories to contemporary social change and the interaction between political and economic institutions. Major topics covered will include mid-century development. The structure and dynamics of rural communities are examined in a comparative historical framework focusing on continuities and divergences among imperialist and post-colonial settings. Major topics include classical theories of rural social organization and their re-orientation in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.

[R SOC 604 Theories of Social Change
D. P. McMichael.
This course surveys major twentieth-century social theories, focusing on lineages from classical theory and on theories relevant to understanding the processes of social change. Major topics covered will include mid-century functionalism, conflict theories, neo-Marxism, neo-Weberianism, substantive economic sociology, and world-systems theory. Other topics, such as the "new sociology of culture," critical theory, structuration theory, neofunctionalism, the new methodological individualism, and the macro-micro link, will be covered briefly.]

[R SOC 606 Contemporary Sociological Theories of Development
P. K. Gellert.
Development is now understood to include life expectancy, health and education in addition to material well-being, and it remains a problem everywhere, in both the rich and poor countries, and within them, for regions and communities. Sociological explanations of development have recently crystallized around three competing positions: political economy, rational choice institutionalism, and sociological structuralism. The course will focus on these theories, their antecedents and close cousins, and their research and policy implications.]

[R SOC 618 Research Design I
First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with a discussion of factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.]

[R SOC 619 Research Design II
J. D. Francis.
The second part of the two-semester sequence in introductory graduate methods, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several statistical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.]

[R SOC 625 State, Economy, and Society
Spring. 3 credits. Offered alternate years. TR 1:25–4:25. P. D. McMichael.
Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and historical methodologies. Substantive themes concern political-economic restructuring in world regions, and the interaction between national and global processes.

[R SOC 630 Field Research Methods and Strategies
Fall. 3 credits. TR 8:40–9:55. L. B. Williams.
The course will cover a variety of methods: structured surveys, focus groups, in-depth interviews, participant observation, archival record analysis, among others. Frameworks by which research questions can be matched with appropriate field methodologies, choice of sample, data collection, etc., will be discussed. Assessment of strengths and weaknesses of various strategies of field research. Discussion of practical matters such as fieldworker recruitment and training, and data processing issues and ethics of field work.]

[R SOC 640 Community and Changing Property Institutions
The seminar acquaints students with the evolution of property rights, from antiquity to the present, and features a number of property debates (the biological basis of ownership; private versus public ownership; property and value, the so-called "tragedy of the commons"; the "new" property). Readings explore land use regulation and property rights, common property issues, opposing land ethics, and new property forms in the future.]

[R SOC 641 Politics and Economics of Rural and Regional Development
Spring. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Offered alternate years. M 12:20–2:50. T. A. Lyon.
A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.]

[R SOC 643 Land Reform Old and New
Land reform continues to be a major cornerstone of development planning. Between 1980 and 1995 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.]

[R SOC 645 Rural Economy and Society
Fall. 3 credits. Offered alternate years. W 1:25–4:25. S. Feldman.
Employing a sociology of knowledge perspective and comparative approach within the social sciences, this course will review and analyze contemporary themes in feminist epistemological critiques of sociological
methods and knowledge systems. It will begin by identifying what constitutes mainstream explanations within the social sciences, introduce early feminist challenges to androcentric paradigms, move to examine the philosophy and androcentrism, and explore philosophical assumptions. We will examine studies that address issues of class, race, ethnicity, and constructions of otherness. Then questions are explored with a view to assessing various approaches to field, archival, and survey research. Underlying approaches for rationalism to positivism.

[R SOC 675 Global Patterns of International Migration]
Fall. 3 credits. Offered alternate years. Not offered 1997–98. M 7:30–10:30 p.m. Staff.

International migration to the United States and other countries has increased in recent decades. What accounts for this trend in an era when large-scale international migration is supposed to have ended and what are the implications of immigration for receiving countries? Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspective. Several migration systems are examined, including those of North America and the European Community. Policies shaping immigration are also reviewed.

[R SOC 694 Special Topics in Rural Sociology]
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[R SOC 715 Comparative Research Methods]

This seminar focuses on the comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

[R SOC 718 Multidimensional Measurement and Classification]
Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. Offered alternate years. T R 12:20–2:15. J. D. Francis.

An advanced course in measurement and scaling, building from work by Thurstone, Guttman and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.

[R SOC 719 Logistic and Log Linear Models]
Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. Offered alternate years. T R 12:20–2:15. J. D. Francis.

The first part of the course considers multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.

[R SOC 721 Sociology of Environment and Development]

This course examines society/environment relations in the contemporary environmental discourse and in sociology. Students evaluate such topics as sustainability, science and ethics, and the definition of nature. The central objective is to evaluate sociological theories' treatment of the problems of environmentalism. Subsidiary objectives include the identification of key sociological issues in contemporary environmentalism, and review of environmental themes in sociological theory.

[R SOC 725 The Sociology of "Third World" States]

This course examines how processes of political and economic restructuring have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization and trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism and fundamentalism as these reconfigure national and regional alliances and practices and shape interpretations of current processes of resistance, change, and terms of intervention and exchange.

[R SOC 730 Sociology of Global Change]

Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multi-layered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which

[R SOC 741 Community Development and Local Control]

Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."

[R SOC 791 Teaching Experience]
Fall or spring. 1–3 credits. Limited to graduate students. S-U grades only. Participation in the ongoing teaching program of the department.

[R SOC 800 Master's-Level Thesis Research]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted specifically to a Master's program.

[R SOC 872 Development Sociology]
Limited to master's and doctoral degree candidates with permission of the graduate faculty. S-U grades optional.

[R SOC 900 Graduate-Level Thesis Research]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

[R SOC 901 Doctoral-Level Thesis Research]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

Related Courses in Other Departments
(Others may be added)

Introduction to Sociology (SOC 101)
Population Dynamics (SOC 205)
Social Analysis of Ecological Change (S&TS 660 and BASOC 460)
Gender Relations, Gender Ideologies, and Social Change (WMNS 624)

Summer Session Courses
Introduction to Sociology (6-week session)
Environment and Society (3-week session)
Successful Aging: Today and Tomorrow (6-week session)
SOIL, CROP, AND ATMOSPHERIC SCIENCES

Atmospheric Science: 101/102, 131, 250, 331, T. A. LaRue, M. B. McBride, J. Mt. Pleasant, 610, 612, 613, 614, 642, 690, 691, 820, 920, 921
Crop Science: 311, 312, 314, 315, 317, 608, 950, 951
447, 451, 456, 457, 635, 646, 652, 692, 850

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject

Crop Science: 311, 312, 314, 315, 317, 608, 610, 612, 613, 614, 642, 690, 691, 820, 920, 921
Environmental Information and Analysis: 398, 420, 461, 620, 660, 675

General Courses

SCAS 190 Sustainable Agriculture
Fall. Credits variable; 2 or 3. Limited to 60 students. S-U grades optional. Lec, R 10:10; labs, M 2:00–4:25, T 10:10–12:35, G. W. Fick.
This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes management concepts that conserve or renew those resources for continuing benefit to society. The information is general, yet it is relevant to non-majors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the World Wide Web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

SCAS 494 Special Topics in Soil, Crop and Atmospheric Sciences (undergraduate level)
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and the same course is not offered more than twice under this number.

SCAS 497 Individual Study in Soil, Crop, and Atmospheric Sciences
Fall or spring. 1–6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

SCAS 498 Teaching Experience in Soil Science, Crop Science, and Atmospheric Science
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Teaching experience in soil science, crop science, or atmospheric science is obtained by assisting in the instruction of a departmental course.

SCAS 499 Undergraduate Research
Fall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, atmospheric science, or soil science.

SCAS 694 Special Topics in Soil, Crop and Atmospheric Sciences (graduate level)
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and the same course is not offered more than twice under this number.

SCAS 695 Planning and Reporting Research
Spring. 2 credits. Prerequisite: graduate student status or permission of the instructor. Limited to 10 students. Lec to be announced. G. W. Fick.
This course is designed to prepare students in the SCAS Department and closely related fields for planning their research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either thesis proposals, grant proposals, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

Atmospheric Science

SCAS 101/102 Science of Earth Systems Colloquium (also ABEN 120/121, GEOL 123/124)
Fall and spring. 2 credits. Lec, T 1:25–4:10. K. H. Cook, S. J. Riha. Weekly seminars, field trips, and hands-on experiences introducing the student to the scientific study of our planet and human interactions with the environment.

SCAS 131 Basic Principles of Meteorology
Fall. 3 credits. Lecs, T R 11:15; lab, T W or R 1:25–4:25 and M W 7:00–9:30 p.m. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere; heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

SCAS 250 Meteorological Observations and Instruments
Methods and principles of meteorological measurements and observations, including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorders and data logging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination. Lab fee, $50.

SCAS 331 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lecs, M W F 1:25–2:15; disc, W 2:30. K. H. Cook, P. J. Gierasch.
Processes that determine climate and contribute to its change are discussed, including comparisons with climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

SCAS 332 Evolution of the Earth System (also SES 303, GEOL 302)
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs, to be announced; disc, to be announced. B. Isacks and others.
Co-evolution of life and the earth system: Earth's early history; plate tectonics, continental drift and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

SCAS 333 Micrometeorology
D. S. Wilks.
The relationships of radiant energy, temperature, wind, and moisture in the atmosphere near the ground. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined, with emphasis on the energy balance.

SCAS 341 Atmospheric Thermodynamics and Hydrostatics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 9:05–10:55. M. W. Wysocki.
Introduction to the thermodynamics and hydrostatics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

SCAS 342 Atmospheric Dynamics
Spring. 3 credits. Prerequisites: one year each of calculus and physics. M W F 10:10. W. W. Knapp.
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.
SCAS 353 Application of FORTRAN in Meteorology
Fall. 3 credits. Prerequisites: SCAS 131 plus one computer programming course. Lec. T R 12:20-1:10; lab, F 1:25-3:20. M. W. Wysocki. An introduction to numerical techniques using FORTRAN to solve meteorological problems. No previous experience with FORTRAN is expected.

SCAS 345 Synoptic Meteorology I
Fall. 3 credits. Prerequisites: SCAS 341 and concurrent enrollment in SCAS 342. Lecs. T R 9:05, lab, M 1:25–3:25. M. W. Wysocki. Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course will strengthen previously introduced meteorological concepts that will be applied to forecasting mid-latitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

SCAS 350 Application of FORTRAN in Meteorology
Fall. 3 credits. Prerequisites: SCAS 131 plus one computer programming course. Lec. T R 12:20-1:10; lab, F 1:25-3:20. M. W. Wysocki. An introduction to numerical techniques using FORTRAN to solve meteorological problems. No previous experience with FORTRAN is expected.

SCAS 343 Statistical Methods in Meteorology
Fall. 3 credits. Prerequisite: a introductory course in statistics (e.g., BTRY 215 or ARME 310) and calculi. T R 10:10–11:25. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

SCAS 344 Tropical Meteorology
Spring. 3 credits. Prerequisites: SCAS 342 or instructor's approval. Offered alternate years. Next offered spring 1998. MWF 11:15–12:05. K. H. Cook. Structure and dynamics of the tropical atmosphere on a wide range of time and space scales, e.g., large-scale convective systems to planetary waves. Topics include hurricanes, monsoon circulation, and El Nino.

SCAS 346 Modeling the Earth System
Spring. 3 credits. Prerequisites: Programming knowledge and instructor's approval. Offered alternate years. Offered spring 1999. T R 12:20–1:35. K. H. Cook. Project-oriented exploration of aspects of the Earth System through computer modeling. Intended primarily for science majors with computing experience, preferably in FORTRAN. Lectures focus on facilitating student projects, discussing basic concepts governing the Earth system dynamics, and evaluating complex models. Students develop a model on a topic of their choice.

SCAS 447 Physical Meteorology
Fall. 3 credits. Prerequisites: a year each of calculus and physics. Offered alternate years. Offered fall 1997. MWF 10:10. W. W. Knapp. Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.
considered. The impact of tropical cropping systems on the environment are evaluated.

**SCAS 315 Weed Science**

Fall. 3 credits. Prerequisite: introductory course in biology or botany. Lecs, T R 9:05; lab, T W 2–4:25. Staff.

Principles of weed science are examined. Emphasis is on (a) weed ecology, (b) chemistry of herbicides in relation to effects on the environment and plant growth, and (c) control of weeds in crops. Laboratory covers weed identification and ecology, herbicide selectivity, symptomology, and behavior in soil.

**SCAS 317 Seed Science and Technology**

Fall. 3 credits. Prerequisite: BIOL 241 or equivalent. Offered alternate years. Offered fall 1997. Not offered fall 1998. Lecs, T R 11:15; lab, R 1:25–4:25. 2 all-day field trips will be scheduled during the semester. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.) The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

**SCAS 608 Water Status in Plants and Soils**

Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Offered alternate years. Offered fall 1997. Lec, 1 hour to be arranged; lab, R 1:25–4:25 or as arranged. T. L. Setter.

Techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

**SCAS 610 Physiology of Environmental Stresses**

A study of the responses of plants to environmental stress, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

**SCAS 612 Seed Physiology**

Spring. 3 credits. Prerequisite: plant physiology. T R 8:30–9:55. R. L. Obendorf.

Morphology, physiology, and biochemistry of cereal, legume, and oil-seed formation, composition, storage, and germination. Emphasis is on the deposition of seed reserves during seed formation, stabilization of reserves during storage, and mobilization of reserves during germination. Topics range from on-farm problems to molecular mechanisms.

**SCAS 613 Physiology and Ecology of Yield**

Spring. 3 credits. Prerequisite: plant physiology. MWF 12:20. T. L. Setter.

**SCAS 614 Research Methods in Weed Physiology**

Spring. 2 credits. Prerequisite: SCAS 315 or equivalent. Offered alternate years. Next offered spring 1998. Staff.

Examination of a variety of modern techniques used to study herbicide absorption, translocation, metabolism, mode of action, and mechanism of resistance. Experiments will also be designed to study herbicide behavior and detection in soils. Laboratories will be accompanied by short lectures pertinent to experimental topics.

**SCAS 642 Plant Mineral Nutrition (ALSO BIO PL 642)**

A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements will be emphasized to illustrate the above topics.

**SCAS 690 Root-Soil Interactions**

Fall or spring. 1–2 credits. S-U grades optional. Hours to be arranged. R. W. Zobel.

A topic dealing with root-soil interaction will be selected during the first meeting of the term. Students will prepare one or two seminars based on published work on the topic. Possible topics include root genetics, root morphology, conservation tillage, and soil temperature.

**SCAS 691 Special Topics in Crop Science**

Fall or spring. 1–6 credits. S-U grades optional. Hours to be arranged. T. L. Setter.

Study of topics in crop science that are more specialized or different from other courses. Special topics vary and will depend on staff and student interests.

**SCAS 820 Master’s-Level Thesis**

Fall or spring. 1–6 credits. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master’s program.

**SCAS 860 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)**

Fall. 3 credits. Prerequisite: permission of instructor. Lecs, T R 9:05–9:55; lab, T W 1:25–4:25. S. D. DeGloria.

A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aircraft imagery to discriminate, measure, inventory, and monitor environmental resources.
SCAS 675 Modeling the Soil-Plant-Atmosphere System
S. J. Riha.
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.

Soil Science

SCAS 260 Introduction to Soil Science
Spring. 4 credits. Prerequisite: CHEM 103, 207 or 215. S-U grades optional. Lecs, M W F 9:05, lab, M T W or R 1:25. Staff.
A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application to solving soil management problems. The laboratory exercises stress quantitative measurement of soil properties.

SCAS 321 Soil and Water Management
Spring. 3 credits. Prerequisites: SCAS 190 or 260. S-U grades optional. Lecs, T R 11:15–12:05; lab, R 2:30–4:30.
H. M. van Es.
Course intended to introduce students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

SCAS 362 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R. 1:25–4:25; all day field trip required. R. B. Bryant and J. M. Galbraith.
The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

SCAS 363 Intermediate Soil Science I: Genesis, Classification, and Survey
Fall, weeks 1–7. 2 credits. Prerequisite: SCAS 260. Lecs, M W F 10:10, lab, W 1:25–4:25. One all day field trip is required. R. B. Bryant and J. M. Galbraith.
Factors and processes of soil formation. Principles of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Course ends at mid-semester and is part of a sequence of three Intermediate Soil Science courses.

SCAS 365 Environmental Chemistry: Soil, Air, and Water
Spring. 3 credits. Prerequisites: CHEM 207–208. Lecs, M W F 10:10–11:00.
M. B. McBride.
An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a gas exchange surface. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

SCAS 371 Hydrology and the Environment (also ABEN 371 and GEOL 204)
Spring. 3 credits. Students enrolled in the statutory colleges must enroll in ABEN 371 or SCAS 371. Prerequisite: 1 course in calculus. Lecs, T R 9:05–lab, F 1:25–3:20.
Introduction to the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.

SCAS 372 Soil Fertility Management
Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor. S-U grades optional. M W F 9:05. D. R. Boullion.
An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and manure in crop production.

[SCAS 373 Soil, Water, and Aquatic Plants]

SCAS 365 Biogeochemical Cycles, Agriculture, and the Environment
Spring. 2 credits. Prerequisites: CHEM 103 or 207 and SCAS 260 or equivalent. Lecs, T R 11:15; lab, R 1:25–4:25. Not offered 1997–98. Staff.
The success or failure of soil and water management is manifested in streams, wetlands, lakes, and aquifers. Chemical and biological changes downstream are studied and related to agricultural management techniques upstream. Basic chemical and physiological processes are presented and used to suggest appropriate responses to water management problems.

SCAS 471 Properties and Appraisal of Soils of the Tropics
A. VanWambeke.
The course examines the conditions in which soils form, and considers ecological, geological and vegetation factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and the preservation of the environment examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to salt-affected soils, paddy, and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems.

SCAS 473 Ecology of Agricultural Systems (also BIOES 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 371 or permission of instructor. S-U grades optional. Offered alternate years. Offered fall 1997. Lec and disc, T R 2:30–3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips.
A. G. Power and staff.
Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

SCAS 483 Environmental Biophysics
Fall. 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor. Lecs, M W F 11:15. S. J. Riha.
Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

SCAS 663 Pedology
Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Textbook recommended, not required. Offered odd spring semesters; every other year.
J. M. Duxbury.

SCAS 666 Advanced Soil Microbiology
Fall. 1 credit. Prerequisite: SCAS 365 or permission of instructor. S-U grades only for graduate students. T 12:20.
M. Alexander.
Discussions of current topics in special areas of soil microbiology. Particular attention is given to biodegradation, bioremediation and fate of chemicals.

SCAS 667 Advanced Soil Physics
Spring. 3 credits. Prerequisites: One year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Offered alternate years. Offered spring 1998. Hours to be arranged. P. C. Baveye.
A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on
fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoints. Mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

**SCAS 669 Organic Matter—Soils, Sediments, and Waters**

Spring. 2 or 3 credits (with discussion) credits. Prerequisites: SCAS 260 and CHEM 357-358 or equivalent. T R 9:05; disc, W 12:55-2:15. J. M. Duxbury. A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

**SCAS 671 Soil Chemistry**

Fall 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years. Offered fall 1997. Lecs, M W F 10:10. M. B. McBride. A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter will be emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, will be described.

**SCAS 692 Special Topics in Soil Science**

Fall or spring. 1–6 credits. S-U grades optional. Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interest.

**SCAS 880 Master’s-Level Thesis Research in Soil Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master’s program.

**SCAS 890 Graduate-Level Dissertation Research in Soil Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the “A” exam has been passed.

**SCAS 891 Doctoral-Level Dissertation Research in Soil Science**

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the “A” exam has been passed.

Zobel, Richard W. Ph.D., U. of California at Davis. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
ADMINISTRATION
Anthony Vidler, dean
John F. Forester, associate dean
Laurie Roberts, director of public affairs
Cynthia K. Prescott, director of administrative operations
Reginald D. Ryder, director of minority educational affairs
Donna L. Kuhar, registrar
Elizabeth A. Cutter, director of admissions
Margaret Webster, curator of visual resources facility
Helen Johnson, director of career office

FACULTY ADVISERS
Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

Students in the fine arts department are assigned faculty advisers for the first year. Students may then choose advisers in their major area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:

Kent L. Hubbell, chair, Department of Architecture
Porus Olpadwala, chair, Department of City and Regional Planning

Roberto Bertoia, chair, Department of Art.

DEGREE PROGRAMS

Graduate-level programs are offered in art, architectural programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college’s courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture, and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library are located in Sibley Hall.

The Department of Art is housed in Olive Tjaden Hall.

Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Café, a student eatery and lounge, is located in the basement of Sibley Dome.

The college has three darkrooms that are available for general use by students in the college and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

NOTE: renovations of the college buildings will temporarily relocate some of the aforementioned facilities. More information on the current location of college facilities can be obtained by contacting the individual departments.

Through the generosity of the late William H. Miller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries
The Fine Arts Library, in Sibley Hall, serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning and landscape architecture.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, in Sibley Hall contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 400,000 slides.

The facilities of the libraries of other schools and departments on campus are also used to house visiting teachers and guests of the college.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Rome Program
The College of Architecture, Art, and Planning’s Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the famous Palazzo Lazzaroni in the center of the historical city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome’s famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in liberal arts, architecture, fine arts, and planning. Full course loads are
available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings.

COLLEGE ACADEMIC POLICIES
Ownership of Student Work
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Hall gallery and the John Hartell Gallery. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards
Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have a weighted average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) Required leave of absence: Academic Deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on final warning or required to take a leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the Student Records Committee. The student must submit evidence that the student is employed, must submit a letter from an employer. If a student chooses to register for courses, either extramurally or with another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average. Readmission to the college is at the discretion of the Student Records Committee. Application for spring-term readmission must be made by November 15, and application for fall-term readmission must be made by April 15. Refer to the Architecture, Art & Planning Handbook (Whitebook) for further information regarding required leave of absence.

4) Required withdrawal: May Not Reregister, College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient.

A cumulative average of at least C- (1.7) is required for graduation.

ARCHITECTURE

Professional Degree Program
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence of courses in design, consisting of studio work augmented by lectures and seminars dealing with theory and method, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, visual studies, environmental science, structures, and building technology provide a base for the work in design.

In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through detailed further studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Rome Program
The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, introduction to history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program
For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute Arch 601-602 or 603-604 for Arch 501-502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field secretary for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501-502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including Arch 601-602 or 603-604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

### Alternative Programs

#### Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

#### Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic back-
grounds, offers the opportunity for a vigorous exploration of architecture and its history.

**Admission requirements.** Two years of undergraduate study, Arch 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

**Procedure.** Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, 135 East Sibley Hall, Ithaca, New York 14853–6701.

**Curriculum.** A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: Arch 380 through Arch 399
2) 12 credits in 600-level architectural history seminars: Arch 681 through Arch 699; or 8 credits in a 600-level seminar plus Arch 499, offered for honors candidates only
3) One 300-, 400-, or 600-level course in architectural theory
4) 24 credits in electives selected in consultation with the student's adviser
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

**Honors program.** Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than A– in all history of architecture courses taken at the 300 level, and have completed an honors thesis (Arch 499) deemed to be of distinguished quality by the history of architecture faculty.

**Dual Degree Options.** Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree; with this special sequential degree arrangement that time is shortened to one year.

**Summer Term in Architecture**

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, including thesis, are offered at first- through fifth-year levels in Ithaca. Normally there is a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

At the graduate level participation in the summer program cannot be undertaken without the consent of the student's Special Committee.

Furniture design, architectural structures, and computer visualization may be offered as elective courses, contingent upon student interest and faculty availability.

The department offers a Career Discovery Program in Architecture for high school students and undergraduates interested in exploring the possibility of a career in architecture.

**Architectural Design**

Courses in brackets are not offered this year.

A studio fee of $65 is charged each semester for every design course (these fees are subject to change).

**Sequence Courses**

**ARCH 101 Design I**

Fall. 6 credits. Limited to department students.

An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

**ARCH 102 Design II**

Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

**ARCH 201-202 Design III and IV**

Fall and spring. 6 credits each term. Coregistration in Architecture 231–232 and completion of Architecture 151–152 required. Limited to department students. Prerequisite for Architecture 201 is Architecture 102 and Architecture 152. Prerequisite for Architecture 202 is Architecture 201.

**ARCH 301–302 Design V and VI**

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 301 is Architecture 202. Prerequisite for Architecture 302 is Architecture 301.

**ARCH 401–402 Design VII and VIII**

Fall and spring. 6 credits each term. Limited to department students. Prerequisite for Architecture 401 is Architecture 302. Prerequisite for Architecture 402 is Architecture 401.

Programs in architectural design, urban design, or architectural technology and environmental science, etc.

**ARCH 501 Design IX**

Fall or spring. 6 credits. Limited to department students. Prerequisite: Architecture 402.

Programs in architectural design, building typology investigations, and research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis is followed by tutorial work with the student's advisory committee.

**ARCH 502 Design X—Thesis**

Fall or spring. 8 credits. Prerequisite: Architecture 501 or Architecture 500 and Architecture 510. Required of B.Arch. candidates who must satisfactorily complete a thesis. Students accepted for admission to the Overlap Program are exempt from the thesis requirement.

**ARCH 601–602 Special Program in Architectural Design**

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

**ARCH 603–604 Special Program in Urban Design**

Fall and spring. 9 credits each term. Limited to students who have been accepted into the Overlap Program. Registration by petition only.

**Graduate Courses**

**ARCH 701–702 Problems in Architectural Design**

Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

**ARCH 703–704 Problems in Urban Design**

Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

**ARCH 801 Thesis or Research in Architectural Design**

Fall or spring. 9 credits. Prerequisite: Architecture 701 and Architecture 702. Required of B.Arch. students whose major concentration is architectural design.

**ARCH 802 Thesis or Research in Urban Design**

Fall or spring. 9 credits. Prerequisite: Architecture 705 and Architecture 704. Second-year design course for graduate students whose major concentration is regional design.
Elective Design Courses

ARCH 103-104 Elective Design Studio
103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for Architecture 103: permission of instructor required. Prerequisite for Architecture 104: Architecture 103 and permission of instructor.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 200, 300, 400, 500 Elective Design
Fall or spring. 6 credits. Open by permission to transfer students who have not been assigned to a sequence course. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Prerequisite for Architecture 500 is Architecture 402.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. Independent study.

Related Courses and Seminars

ARCH 110 Introduction to Architecture: Design Studio
Summer. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum, 3). For students in the Rome program only.

This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits.

An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the precontract phase through construction. Application of computer technology in preparing specifications.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with Architecture 500. Prerequisite for Architecture 500 is Architecture 402. Architecture 500 will be considered equivalent to Architecture 501 when taken concurrently with Architecture 510 during a foreign summer program or in Rome.

Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for but not limited to graduate students in the Architectural Design and Urban Design Program. Required for first-year graduate students in design.

ARCH 611-612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students in urban design.

Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.

The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students.

A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year level students and above.

Field and figure (interrelation of parts as dominated by the general character of the whole) is the theme for studying numerous issues relevant to the design of elevations and facades. The first part of the seminar is lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding to the issues addressed.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year level students and above.

Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and
with emphasis on the structures of criticism in An inquiry into the fundamental principles of architectural criticism in theory and practice.

ARCH 634 Column, Wall, Elevation, Facades: A Study of the Vertical Surface in Architecture
Fall or spring. 3 credits. Limited to third-year level students and above. For description, see ARCH 334.

ARCH 635 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 636 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 639 Principles of Design Process
Fall or spring. Limited to third-year architecture students and above. Students in other colleges must have permission of instructor. Not offered every year. Analysis of the major theories and techniques of design developed during the past fifteen years, with special emphasis on application to the solution of whole problems in architectural design.

ARCH 641 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered every year. Gardening and architecture: urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 642 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 643 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of Architecture 231-232. Not offered every year. A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 644 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year. This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythical and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

ARCH 645 Architecture and the Mythic System
Spring 445, 446, 447, or 448 can substitute with permission of instructor.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year. This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year. This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myth and beliefs about "evil eye."

[ARCH 647-648 (667-668) Architecture in Its Cultural Context I and II 647, fall; 648, spring. 4 credits each term. Prerequisite: permission of instructor. Not offered 1997-98. Fall term, theory; spring term, problem solving and method. An examination of the relationship between form and more general beliefs about the power of vision in utopian society. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.]

ARCH 649 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: Architecture 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

Visual Studies
Darkroom fees charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: Architecture 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.
ARCH 251 Introductory Photo I (also Art 161)
Fall or spring. 3 credits each term.
For description see Art 161.

ARCH 351 Photography II (also Art 261)
Spring. 4 credits. Prerequisites: Architecture 251 or Art 161, or permission of instructor.
For description see Art 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit.
Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year.
Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form.
Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor.
Topics to be announced before preregistration.

ARCH 465 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 262 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.
Independent study.

ARCH 463 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 263, 264, and 363 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form.
Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer scientists. 2 lectures, 1 recitation. D. Greenberg. Not offered every year.
Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology will be presented. Technical fundamentals of computer graphics capabilities will be emphasized. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education itself. The course will be heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization (also Computer Science 417)
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 262, and 361, and 362 or permission of instructor. Not offered every year.

ARCH 375 Practicum in Computer Graphics (also Computer Science 418)
Two or three programming assignments dealing with sophisticated interactive vector graphics programs on calligraphic displays and solid-image generation on raster graphics displays.

ARCH 379 Design by Computer
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 377 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animations. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 261, 361, and 362 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.
ARCH 477-478 Special Projects in Computer Graphics
Fall, spring. Variable credit (maximum, 4). Limited to third-year students and above. Prerequisites: Architecture 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor. Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector and color raster displays.

Graduate Courses
ARCH 761-762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only. Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum, 12). Limited to architectural science graduate students. Independent study.

Architectural History
The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take Architecture 181–182 in the first year, and three additional courses from the 380–399 series, preferably in the third and fourth years. Seminars and advanced undergraduate and graduate students do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

Sequence Courses
ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain. The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of Architecture 181. The history of the built environment as social and cultural expression from more recent times to the present. Themes, theories, and ideas are addressed in greater detail for architecture and urban design leading to the present.

Directed Electives
ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381 Greek and Roman Architecture and Urbanism
Fall or spring. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The course considers change and transformation of building types and their elements within the general context of social demands.

ARCH 383 The City
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. This course looks at the development of urban form and urban consciousness from the bronze age to the industrial revolution. It studies conceptions of the city, competing urban paradigms, images of cities both real and fictive, as well as the religious and cultural practices associated with city design.

ARCH 384 The Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. This course focuses on the leading architects and theorists of the Renaissance from within the context of the political and cultural developments in Italy from 1300 to the mid-sixteenth century. The course also investigates specific architectural problems faced by designers and patrons of the time and questions of architectural patronage, practices, and theories.

ARCH 385 Magnificent Utility—Architecture, Politics, and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. This course considers the design and realization of monumental buildings in the context of politics and urbanism from the medieval period to the present. It examines the role of architecture in the creation of power and the construction of identity within complex urban environments.

ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. An examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization will be emphasized. The course considers the rhetoric of modernist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernism, and Jugendstil.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intents of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in the service of the state during the 1930s.

ARCH 389 Architecture, Revolution and Tradition
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. From early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism—the doctrine of unlimited government controlled—was challenged; Enlightenment attitudes—commitments to human reason, science and education—gained ascendancy. This course considers architectural and urban design in these times of tumult and those efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392 Modern Architecture On Film
Fall or spring. 3 credits. Prerequisites: Architecture 181–182 or permission of instructor. Not offered every year. An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus will vary each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.
ARCH 393 The Cumulative City
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Well established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economics were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 395 Contemporary Issues in the Built Environment
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. A consideration of how certain social, cultural, political, ethical, and economic issues are manifest in the architectural and built environments of the United States. Overarching issues will be examined through case studies such as the question of monuments and monumentality in a contemporary, multicultural society through the Vietnam Memorial in Washington, D.C., Holocaust museums and memorials, and the preservation of the Audubon Ballroom as a memorial to Malcolm X. Historical concerns and examples will be brought to bear on these contemporary manifestations of preservation, monumentality, gender, class, professional responsibility, and ethics and design as a collaborative art. A course for architects, planners, and preservationists but also clients and users of buildings and landscape.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year. Topic to be announced.

Courses In Preservation

ARCH 583 Measured Drawing (also CRP 567)
For description, see CRP 567.

ARCH 584 Problems in Contemporary Preservation Practice (also CRP 563)
For description, see CRP 563.

ARCH 585 Perspectives on Preservation (also CRP 562)
For description, see CRP 562.

ARCH 586 Documentation for Preservation (also CRP 560)
For description, see CRP 560.

ARCH 587 Building Materials Conservation (also CRP 564)
For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses (also CRP 561)
For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism

ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of instructor. Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism program.

ARCH 682 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 683 Seminar in the History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 686 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 688 Seminar in the History of the Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 690 Seminar in American Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 12). Prerequisite: permission of instructor. Independent study for graduate students.

ARCH 899 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in Arch 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 12). Independent study for the doctoral degree.
ART

Undergraduate Program
The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives. The curriculum in art is a program of study within the College of Architecture, Art, and Planning.

The undergraduate curriculum in art is an excellent background for a career in applied art although no specific technical courses are offered in such areas as interior design, fashion, or commercial art. All members of the faculty in the Department of Art are active, practicing artists, whose work represents a broad range of expression.

A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student will be assigned an adviser in both colleges, of their dual degree program, to provide needed guidance. As a candidate for two degrees you must satisfy all requirements for both degrees. At least 67 of the total credits must come from courses offered in the Department of Art and an additional 6 credits of History of World Art. In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met.

It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fifth year.

Bachelor of Fine Arts Degree Requirements

Credits and Distribution
130 credits are required for the BFA degree. A minimum of 67 are taken in the Department of Art and an additional 6 credits of Survey of World Art. A minimum of 49 are taken outside the department.

Curriculum
Students are expected to take an average course load of 16 credits per semester during their four years. No more than three studio courses may be taken in any one semester. Studio courses may be repeated for elective credit. All students must take at least one studio course a semester unless there are exceptional circumstances expressed in the form of a petition. Any request to deviate from the standard curriculum must be petitioned prior to the act.

Specific Course Requirements
By the end of the second year, students must have completed an introductory course in each of the areas of painting, sculpture, printmaking, and photography and four drawing courses. By the end of the third year, all students must have completed an additional 12 credits beyond the introductory level in three of the four areas.

Concentration
Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, or photography or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students must complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)
The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Thesis)
Sculpture: ART 141, 241, 341, 342, 441, 442 (Thesis)
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Thesis)
Photography: ART 161, 261, 263/264/265 (1 of 3), 461, 462
and one of the following: ART 264, and 265

Dual Concentration
If a student is interested in studying in more than one area, he or she may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students must take 23 credits in the first area of concentration. Students must take 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration
Total Credits
Painting: ART 121, 221, 321, 421, 422
Sculpture: ART 141, 241, 341, 441, 442
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432
Photography: ART 161, 261, 263/264/265 (1 of 3), 461, 462
Second Area of Concentration
Total Credits
Drawing: ART 151, 152, 251, 252, repeat 251
Painting: ART 121, 221, 321, 322

Sculpture: ART 141, 241, 341, 442
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331
Photography: ART 161, 261, 263/264/265 (2 of 3)

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration
The combined media program enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

The required courses for the concentration in Combined Media (33 credits) are:

100 and 200 level studios
ART 1__, 2__

200 and 300 level studios
ART 2__, 3__, 5__, 3__, 3__, (2 of 4)
Pre-Thesis and Thesis
ART 481, 482

Out-of-college studio electives
(minimum of 2)
OCE Studio, OCE Studio
Total
33 credits

Note: The total number of in/out-of-college elective credits required will be adjusted to allow for the additional credits required of the combined media concentration.

Out-of-College Requirements
A minimum of 49 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All BFA students are required to take 12 credits in the History of Art. One course must be taken in each of the following areas:

Elective: Any art history elective at the 300 level or above or any architectural history elective.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the
Rome Program
Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the art department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors may also attend the Rome Program. Students wishing to spend two consecutive semesters in Rome are encouraged to do so. In both cases students must petition for special consideration. This petition must include the proposed course schedule for both semesters and must show signatures of approval by the adviser in the student's area of concentration, the department chair, and by the Rome Program adviser.

Students may not take more than 16 credits a semester in the Rome Program. Only four studio credits may be taken in any one semester. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

For those students matriculating in fall of 1997:
Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; ART 112, History of World Art; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 113, History of World Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement:

The M.F.A. Program

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of sixty credits. Transfer credit for graduate work done elsewhere or in the summer session is not acceptable. The curriculum leading to the master’s degree is flexible to accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students is greater than one-to-one, allowing exceptional opportunity for individual mentoring. Graduate students are provided individual studios and have 24-hour access to specialized studios and labs. Graduate students in art may enroll in introductory or advanced courses in any field of study offered at the university: specialty courses in writing, stagecraft, cinema, and music are available as well as general education courses in the history of art, philosophy, anthropology, and so forth. Fifteen credits are required in each term; of these, nine credits are in studio work, and three credits are in Graduate Seminar (ART 611, 612, 613, 614). Students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written thesis, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees. To take advantage of the special opportunities afforded by summer study, the department has developed several summer-only courses.

Guidelines for Independent Study

A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four
Courses in Theory and Criticism

ART 111 *Introductory Art Seminar*  
Fall. 1 credit. S-U only. Limited to B.F.A. students. Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed.

ART 112 *History of World Art*  
Fall. 3 credits. This fall-quarter course will survey world art from the Paleolithic era to the present. While primary emphasis will be placed upon the art and architecture of the western tradition, lectures on the visual arts outside that tradition will also be presented. The course will emphasize major monuments, important trends and developments, and critical approaches to the art of the past and present.

ART 113 *History of World Art*  
Spring. 3 credits. Continuation of Art 112.

ART 214 *Art and the Multicultural Experience*  
Fall. 3 credits. This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by under-represented American minority cultural groups.

ART 310 *Pictorial Analysis*  
Fall or spring. 3 credits. A lecture course using historical illustrative material which is presented in a comparative, nonchronological order for the purpose of examining how each painting uses principles that are constant throughout art history. The foundations of these principles are studied separately as the elements of abstract order. These elements are to be demonstrated by original compositions that proceed sequentially from relatively simple arrangements to those of maturity.

ART 312 *Modern Art in Italy*  
Fall or spring. 3 credits. Rome Program only. This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed, post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries and museums will introduce students to the exchange between artists, dealers and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

ART 317 *History of Art in Rome: Early Christian to the Baroque Age*  
Fall. 4 credits. Rome Program only. General survey of the early Christian period to the fantastic vision of Parinisi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 318 *History of Art in Rome: Renaissance in Rome and Florence*  
Spring. 4 credits. Rome Program only. A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

ART 419 *Independent Study/Supervised Readings in Art*  
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to be pursued under the supervision of a faculty member.

ART 611 *Professional Skills for the Visual Artist*  
Fall. 3 credits. Limited to MFA students. This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 *Recent Practice in the Visual Arts*  
Spring. 3 credits. Limited to MFA students. This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial will be discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 *On-Line Publication for the Visual Artist*  
Fall. 3 credits. Limited to MFA students. This course is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student will interview a contemporary visual artist. These interviews will be illustrated with digital images of each artist’s work and combined in an on-line magazine. Additionally each student will learn to create a home page on the World Wide Web.

ART 614 *Contemporary Theory in the Visual Arts*  
Spring. 3 credits. Limited to MFA students. This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics will vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

### Studio Courses in Painting

under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 721-722, 821-822 Graduate Painting**

721 Fall, 722 Spring, first-year M.F.A. students. 9 credits. 821 Fall, 822 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

**Studio Courses in Printmaking**

Fees for printmaking courses:

- **Art**: 131, 132, 133: $55
- **Intaglio**: 231, 431.1, 432.2, 439.1: $65
- **Lithography**: 233, 431.2, 432.2, 439.2: $85
- **Screenprinting**: 232, 431.3, 432.3, 439.3: $45

**ART 131 Introductory Intaglio**

Fall and spring. 3 credits.

A basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

**ART 132 Introductory Graphics**

Fall and spring. 3 credits.

An introduction to the two-dimensional thought process and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochir, and screen printing.

**ART 133 Introductory Lithography**

Fall and spring. 3 credits.

The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.

**ART 231 Intaglio II**

Spring. 4 credits. Prerequisite: Art 131.

A studio course in advanced etching techniques. Further study of printmaking. Students will explore design projects and the use of graphic materials, including collage, pochir, and screen printing.

**ART 232 Advanced Screen Printing**

Fall. 4 credits. Prerequisite: Art 132.

An exploration of the screen printing process as it applies to the Fine Arts. Students will develop skills in multicolor printing using transparent inks and additives. Stencils will be made by the handcut and the photo process.

**ART 233 Lithography II**

Spring. 4 credits. Prerequisite: Art 133.

The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

**ART 331 Printmaking III**

Fall or spring. 4 credits. Prerequisite: Art 231, 232, or 233 or permission of instructor.

Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

**ART 332 Printmaking IV**

Fall. 4 credits. Prerequisite: Art 331 or permission of instructor.

Continuation and expansion of Art 331.

**ART 431 Pre-Thesis in Printmaking**

Fall or spring. 6 credits. Prerequisites: 341 or 342.

Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 432 Thesis in Printmaking**

Fall or spring. 6 credits. Prerequisite: Art 431.

Advanced printmaking project to demonstrate creative ability and technical proficiency.

**ART 439 Independent Studio in Printmaking**

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in printmaking allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 731-732, 831-832 Graduate Printmaking**

731 Fall, 732 Spring, first-year M.F.A. students. 9 credits. 831 Fall, 832 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

**Studio Courses in Sculpture**

Fees for sculpture courses:

- **141**: $50
- **241, 341, 342, 343, 441, 442**: $75

**ART 141 Introductory Sculpture**

Fall, spring, or summer. 3 credits.

A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plastiline, building directly in plaster, casting in plaster, and constructing in wood and metal.

**ART 241 Sculpture II**

Fall or spring. 4 credits. Prerequisites: Art 141, or an Arch design studio, or permission of instructor.

Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

**ART 341 Sculpture III**

Fall or spring. 4 credits. Prerequisite: Art 241 or permission of instructor.

Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 342 Sculpture IV**

Fall or spring. 4 credits. Prerequisite: Art 341 or permission of instructor.

Continuation and expansion of Art 341.

**ART 343 Sculpture V**

Fall or spring. 4 credits. Prerequisite: Art 342 or permission of instructor.

Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

**ART 441 Pre-Thesis in Sculpture**

Fall or spring. 6 credits. Prerequisite: Art 343.

Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

**ART 442 Thesis in Sculpture**

Fall or spring. 6 credits. Prerequisite: Art 441.

Advanced sculpture project to demonstrate creative ability and technical proficiency.

**ART 449 Independent Studio in Sculpture**

Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in sculpture allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 741-742, 841-842 Graduate Sculpture**

741 Fall, 742 Spring, first-year M.F.A. students. 9 credits. 841 Fall, 842 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

**Studio Courses in Photography**

Darkroom fees for photography courses:

- Fee for B & W courses: $80.00
- Fee for color courses: $160.00
- Fee for an additional B & W course taken the same term: $25.00
- Fee for an additional color course taken the same term: $105.00

**ART 161 Photography I (also Architecture 251)**

Fall, spring, or summer. 3 credits. Prerequisite: Art 31 or permission of instructor. A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photography imagery.

**ART 168 Black-and-White Photography**

Summer. 3 credits. Three-week session only.

Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.
ART 169 Color Photography
Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261 Photography II (also Architecture 351)
Fall, spring, or summer. 4 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor. A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography
Fall, spring, or summer. 4 credits. Prerequisite: Art 161 or Architecture 251, or permission of instructor. A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 264 Photo Processes
Fall, spring, or summer. 4 credits. Prerequisite: Art 161 or Architecture 251, or permission of instructor. A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

ART 265 Studio Photography
Fall or spring. 4 credits. Prerequisite: Art 161 or Architecture 251, or permission of instructor. A course in the use of medium- and large-format cameras that explores technique, highlights the utility of large-format cameras for personal expression both in the studio and outdoors.

ART 481 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 261, 263. A studio course intended for photography majors and other qualified students.

ART 482 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 481. A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 489 Independent Studio in Photography
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 761-762, 861-862 Graduate Photography
761 Fall, 762 Spring, first-year M.F.A. students. 9 credits. 861 Fall, 862 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing

 Fees for drawing courses:
151, 152, 251, 252, 459: $25

ART 151 Drawing I
Fall, spring, or summer. 3 credits. A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: Art 151. A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of Art 151 concentrating on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

ART 156 Conceptual Drawing
Summer. 3 credits. Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing
Summer. 3 credits. The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 251 Drawing III
Fall. 3 credits. Prerequisites: Art 152. An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisites: Art 251. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

Special Studio Courses

Course fees:
171, 271, 272, 479: $105
481, 482, 489: $70

ART 171 Electronic Imaging in Art
Fall or spring. 3 credits. An introductory studio course using the computer as a tool for making art. Students will explore various approaches to 2-D image creation using software programs for still image generation and processing.

ART 271 Electronic 3-D Modeling and Animation
Fall or spring. 4 credits. Prerequisite: Art 171. A studio course in creating 3-D still and animated visualizations using computers and 3-D software for storyboarding, object modeling, animation, and rendering.

ART 272 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: Art 171. A studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production.

ART 372 Special Topics in Art Studio
Fall, spring, or summer. Variable credit. An exploration of a particular theme or project.

ART 379 Independent Studio in Rome for Non-Majors
Fall and spring. 4 credits variable. Prerequisite: student must be a junior in good standing, and have the written permission of the instructor. Rome Program only. Independent studio in Rome allows non-art majors the opportunity to pursue special interests in Fine Arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 400 Rome Studio
Fall or spring. 4 credits. Prerequisite: permission of instructor. Fee: $25. Rome Program only. The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. Art 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.
ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work.
The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: 481 and written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work.
The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489 Independent Studio in Combined Media
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CITY AND REGIONAL PLANNING

The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies
The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements
Requirements for Graduation: URS requirements include (1) eight semesters of residence, (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) free electives, (9) a minimum of 34 courses. The university requires students to complete two semesters of physical education.

1. General education
   a. Freshman writing seminars: 2 courses
   b. Foreign language: 3 courses or qualification in one foreign language
   c. Distribution Requirements: 9 courses

Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1–4.

Group 1: Physical and biological sciences (2–3 courses required)
Group 2: Quantitative and formal reasoning (1–2 courses required)
Group 3: Social sciences and history (2–3 courses required)
Group 4: Humanities and the arts (2–3 courses required)

Advanced Placement Credit
Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4.

Grades of S-U courses applied to distribution requirements are not acceptable.

2. Required Courses for the Major in Urban and Regional Studies: 5 courses
   - CRP 100: The American City
   - CRP 101: The Global City: People, Production, and Planning in the Third World
   - CRP 320: Introduction to Statistical Reasoning for Urban and Regional Analysis (statistics course)
   - Micro Economics course (at least 3 credits, from approved list)
   - Architecture course (at least 3 credits, from approved list)
   - Approved List of Micro Economics and Architecture Courses
   - Micro Economics:
     - CE&H 110: Introductory Micro Economics
   - CE&H 210: Intermediate Micro Economics
   - ECON 101: Introduction to Micro Economics
   - ECON 203: Micro Economics
   - ECON 313: Intermediate Micro Economics

Architecture:
   - ARCH 131: An Introduction to Architecture I
   - ARCH 132: An Introduction to Architecture II
   - ARCH 181: History of Architecture I
   - ARCH 182: History of Architecture II

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses
   - A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis
     - Design
       - CRP 415: Gender Issues in Planning and Architecture
     - Economics
       - CRP 400: Introduction to Urban and Regional Theory
       - CRP 401: Seminar in Urban Political Economy
       - CRP 404: Urban Economics
     - CRP 417: Industrial Restructuring: Implications for State and Local Policy

NOTE: This requirement may not be satisfied with the same course taken to complete the micro-economics course requirement under B.
   - c. Environment
     - CRP 380: Environmental Politics
     - CRP 451: Environmental Law
   - d. History
     - CRP 261: Urban Archaeology
     - CRP 360: Pre-Industrial Cities and Towns of North America
     - CRP 361: Seminar in American Urban History
     - CRP 461: Methods of Archival Research
     - CRP 462: The American Planning Tradition
   - e. Politics/Policy
     - CRP 314: Planning, Power, and Decision Making
     - CRP 315: The Progressive City
     - CRP 363: American Indians, Planners, and Public Policy
     - CRP 413: Planning and Political Economy I
     - CRP 448: Social Policy and Social Welfare
Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or project requirement is made for a M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences can earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational opportunities. Nonacademic qualifications are also important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students
In most cases, transfer applicants should no longer be attending high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before applying for admission.

For transfer application and financial aid, forms are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850-2488. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation.

Prospective transfers should have taken at least 6 credits of college-level coursework in English. In addition, students should have taken basic college-level courses distributed across the natural and social sciences, humanities, and mathematics. Applicants whose previous coursework closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transfer. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor John Forester, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, New York 14853-6701 (telephone: 607-255-4613).

The Graduate Program in City and Regional Planning

The major concentrations of course work in city and regional planning are in the following areas:

Built environment and urban development planning is concerned with physical facilities: the social, economic, and environmental forces that affect their design; and the process of development, plan making and administration.

History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.

Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.

Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, countering plant closings and more general regional decline and stimulating more equitable programs of socioeconomic change and development.

International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems.

Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), for a two-year program; the Master of Arts (M.A.) in historic preservation planning, for a two-year program; and, in special cases, the Master of Professional Studies (International Development) (M.P.S.I.D.), for the twelve-month international planning program.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.
This seminar examines various bases of world. Their origins, roles, and shortcomings are examined. The urban economy. focus on urban problems and opportunities facing the world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 101 The Global City: People, Production, and Planning in the Third World
Spring. 3 credits. S-U grades optional for out-of-department students only.
A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings are examined. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 161 Urban Archaeology
For description, see LA 261.

CRP 254 Planning, Power, and Decision Making
Fall. 3 credits.
This seminar examines various bases of political and professional power. We ask, What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings, which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

CRP 360 Pre-Industrial Cities and Towns of North America (also LA 360)
Fall. 3 credits. S-U grades optional. For description, see LA 360.

CRP 361 Seminar in Urban History (also CRP 362)
Fall or spring. 3 credits. Prerequisite: permission of instructor. Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, process of urbanization, urban reform movements, and intellectual and social responses to the city.

CRP 363 American Indians, Planners, and Public Policy (also CRP 547, LA 363, and LA 547)
Spring. 3 credits.
For description, see LA 363.

CRP 370 The Regional Question: The Case of Italy
Fall. 3 credits. Rome Program only. Economists, sociologists, and planners have written extensively about severe regional inequalities and regional development planning in Italy. This literature offers a route to understanding why some regions remain less developed than others. We will look at the case of "the third Italy," which includes several highly successful manufacturing regions in the north, and at southern Italy, which is underdeveloped. Introduced by a series of lectures, the course will include field trips to Naples and to the industrial districts of the North.

CRP 380 Environmental Politics
Spring. 4 credits.
Examines the politics of public decisions affecting the environment. Focuses on the role played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.

CRP 400 Introduction to Urban and Regional Theory
Fall. 4 credits. Open to juniors and seniors.
Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

CRP 401 Seminar in Urban Political Economy
Spring. 4 credits. Prerequisites: introductory economics or sociology, for BRS students, CRP 400 also.
The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and direct discussions on outstanding texts, write book reviews, and prepare brief reports.

CRP 404 Urban Economics (also CRP 604)
Fall or spring. 4 credits. Prerequisite: basic economics. Not offered 1997–98. Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.

CRP 408 Introduction to Urban Geographic Information Systems (GIS) (also CRP 608)
Spring. 4 credits. Letter grade. Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course will focus on GIS in the social sciences. Many of the exercises and examples will be based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues to be covered include: fundamentals of spatial analysis, overview of GIS technology and applications; designing a GIS project, gathering and analyzing data; and creating thematic maps.

CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)
Fall. 4 credits. A basic introduction to new issues arising from the way in which international economic shifts are affecting diverse United States localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

CRP 421 Introduction to Computers in Planning (also CRP 522)
Fall. 4 credits. Not offered 1997–98. Students learn how to use microcomputers and software packages in the planning and problem-solving processes. Included are word processing, spreadsheets, mapping, and other types of packages that are useful for other classes and for professional work in the field. (WordPerfect, Lotus 1-2-3, dBase and MapGIS are examples of packages that have been taught in previous years.)

CRP 442 The Sociology of Science
For description, see S&T 442.

CRP 448 Social Policy and Social Welfare (also CRP 548)
Spring. 4 credits.
This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course will introduce principles that guide the development of social policy including fairness and justice. Various conceptions of society will be examined with reference to their influence on the extent and nature of social welfare provision, comparing the U.S. and other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and workfare) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provisions and how they are administered.
A lecture course that introduces the spatial aspects from those for undergraduates.

CRP 453 Environmental Aspects of International Planning (also CRP 683) Fall. 3 credits.
This seminar will examine the roles of diverse environmental actors-international organizations, national bureaucracies, scientific communities, NGOs, and social movement organizations in shaping environmental debates and designing conservation and remediation policies in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

CRP 457 Community Service Fieldwork Fall or spring. 4 credits variable. Permission is granted by instructor. Undergraduates work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

CRP 461 Methods of Archival Research Fall. 3 credits.
Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

CRP 477 Issues in African Development (also CRP 677) Fall and spring. 1 credit. S-U only. This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 481 Principles of Spatial Design and Aesthetics (also CRP 681 and Landscape Architecture 480) Fall. 3 credits. Course enrollment is restricted to planning and landscape architecture students unless special permission is granted by instructor. A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetics principles and theories of design are investigated for different types of urban spaces illustrated by a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 490 Student-Faculty Research Fall or spring. 1-6 credits. Limited to undergraduate students in Urban and Regional Studies Program. S-U grades only. Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 492 Honors Thesis Research Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty. Each selected student works with his or her thesis adviser.

CRP 493 Honors Thesis Writing Fall or spring. 4 credits. Prerequisite: Completion of CRP 492. Each selected student works with his or her thesis adviser.

CRP 495 Special Topics Fall, spring, summer. 4 credits. Hours to be arranged.

[CRP 495.27 Cuban Transitions: The Search for Development Alternatives Fall. 3 credits. Open to sophomores, juniors, seniors. No prerequisites. Not offered 1997-98] Cuba is a symbol, it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy within a Caribbean context. Cuba’s relations with other nations and their impacts on Cuban development will be emphasized. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students will learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

CRP 497 Supervised Readings Fall or spring. Variable 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

Graduate Courses and Seminars Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499.

CRP 500 Introductory Workshop Fall. 2 credits. First-year MRP students. A short, intensive workshop course designed to engage entering MRP students and selected faculty in a simulated real world planning problem. Group problem solving, oral and written report presentation, and graphics.

CRP 508 Real Estate Marketing and Management Spring. 3 credits. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of city and regional planning, and the perspective of the public and nonprofit sectors is the perspective of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course will also cover the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513 Planning Practice and Urban Structure Seminar Fall. 4 credits. This introductory graduate seminar has several objectives. It exposes students to the theory and history of (1) planning, administration, and related public intervention in urban affairs, (2) the growth and development of cities, and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for Planning and Local Policy (also CRP 617) Fall. 4 credits. For description, see CRP 417.

CRP 520 Statistical and Mathematical Concepts for Planning Fall. 3 or 4 credits. An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis Fall or spring. 4 credits. Limited to undergraduate students in the Urban and Regional Studies Program majors who may enroll in courses numbered 500 and above. Prerequisite: permission of the instructor.

CRP 522 Introduction to Computers in Planning Fall or spring. 4 credits. Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

CRP 532 Real Estate Development Process Fall. 3 credits. The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of
property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

CRP 541 The Politics of Technical Decisions I (also Government 628 and Science and Technology Studies 415)  
Spring. 4 credits. For description, see S&T 415.

CRP 545 Introduction to Public Policy Analysis and Management  
For description, see CRP 321.

CRP 546 Conflict Resolution in Community and Environment  
Fall. 3 credits.  
This course will explore the theories and techniques of conflict resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363, LA 363, and LA 547)  
Spring. 3 credits. For description, see LA 363.

CRP 548 Social Policy and Social Welfare (also CRP 448)  
Spring. 4 credits. For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning  
Spring. 4 credits variable.  
An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451)  
Fall. 4 credits. For description, see CRP 451.

CRP 552 Urban Land-Use Planning I  
Fall. 3 credits.  
Surveys, analyses, and plan-making techniques for guiding physical development of urban areas, location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II  
Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.  
In-depth consideration of special issues in urban land-use planning, such as industrial districts, large-scale integrated development, Planned Unit Development, public and institutional facilities, open space, land banking, central business districts, neighborhoods, energy impacts, transportation impacts, and others.

CRP 555 Urban Systems Studio (also Landscape Architecture 701)  
Fall. 5 credits. Prerequisite: permission of instructor. Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban design plans. Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 557 City Planning Design Studio  
Spring. 4 credits. Prerequisite: previous design course or permission of instructor. A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop  
Fall and spring. 4 credits. S-U only.  
Students work on issues such as housing, traffic and parking, economic development, zoning, and related planning issues, with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560 Documentation for Preservation (also Architecture 586)  
Fall or spring. 3 credits.  
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 588)  
Fall or spring. 4 credits.  
Techniques for the preparation of surveys of historic structures and districts, identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation (also Architecture 585)  
Fall. 3 credits.  
Introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also Architecture 584)  
Spring. Variable credit.  
A review and critique of ongoing preservation projects and an appreciation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also Architecture 587)  
Spring. 3 credits. Open to juniors, seniors, and graduate students. A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation  
Fall or spring. Variable credit. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 567 Measured Drawing (also Architecture 583)  
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology on Preservation Planning and Landscape (also LA 569)  
Fall. 3 credits. Offered alternate years. Not offered 1997–98. For description, see LA 569.

CRP 581 Principles of Spatial Design and Aesthetics (also Landscape Architecture 480)  
For description, see CRP 481.

CRP 604 Urban Economics  
Not offered 1997–98. For description, see CRP 404.

CRP 605 Urban Public Finance  
Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics. An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. Part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources utilized by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

CRP 606 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)  
Spring. 4 credits. Letter grade. For description, see CRP 406.

CRP 614 Gender and International Development (also Women's Studies 614)  
Spring. 3 credits. Not offered 1997–98. This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.
The course focuses on what the market can or cannot accomplish in terms of guiding interactions. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibilization, the erosion of nation states as economic units, and the formation of trade blocs and global institutions.

CRP 620 Planning Analysis
Spring. 4 credits.
A survey of commonly used techniques for analyzing various aspects of subnational socioeconomic systems. Emphasizes planning applications.

CRP 631 Local Economic Policy—Field Workshop
Fall. 4 credits.
A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis, interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

CRP 635 Workshop: State Economic Development Strategies
Spring. 4 credits. S-U grades optional.
The purpose of this course/workshop is twofold: 1) to provide students with research tools useful in developing state-level economic development strategies; and 2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm specific subsidies. The course will consist of lecture and discussion meetings. The workshop sessions will include exercises in qualitative information gathering on economic development topics, use of the census in combination with geographic information systems for analysis and presentation, and shift-share analysis.

CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-I: Historical and Theoretical Perspective
Fall. 4 credits variable.
Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for urban-rural and regional interactions will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World-II: Current Policy Perspective
Spring. 4 credits variable.
The course focuses on what the market can or cannot accomplish in terms of guiding economic industrial, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are drawn for Third World regional development policy drawn from the experience.

CRP 642 Critical Theory and the Micro-politics of Practice
Spring. 4 credits variable.
Trying to "solve problems," planners and policy analysts set agendas, shape participation, negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of ordinary speech and action.

CRP 653 Legal Aspects of Land-Use Planning
Spring. 3 credits. Not offered 1997–98
Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 655 Real Estate Project Workshop
Spring. 4 credits. Required for MPS in Real Estate. Limited to 20 students. Field trip: $250. Prerequisites: MPS in Real Estate core courses. J. deRoos and M. Schack.
The Real Estate Project Workshop integrates the required elements of the Master of Real Estate Program into a unified whole. The course will focus on the preparation of a development plan for a specific parcel in an urban setting. Working in teams, students will examine project feasibility, project marketing, physical planning and design, the legal and social fabric of the community, and the place of the development in the urban fabric. Professional-quality reports are expected for oral and written presentation.

CRP 657 Real Estate Law
Fall. 3 credits. Letter grade.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Discussion of current legal issues affecting real estate industry.

CRP 661 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1–4 credits. Prerequisite: CRP 561
Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 662 Seminar in American Urban History (also CRP 361)
Spring. 3 credits. Prerequisite: permission of instructor.
For description, see CRP 361.

CRP 663 Historic Preservation Law
Spring. 3 credits. Offered alternate years. Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation.

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation
Fall. 3 credits.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665 Preservation Planning and Urban Change
Fall. 3 credits.
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 666 Pre-Industrial Cities and Towns of North America (also LA 666)
Spring. 3 credits. S-U grades optional.
For description, see LA 666.

CRP 670 Regional Planning and Development In Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only.
The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 675 Seminar in Project Planning in Developing Countries
Spring. 4 credits.
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use these elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U grades only.
For description, see CRP 477.

CRP 683 Environmental Aspects of International Planning (also CRP 483)
Fall. 3 credits.
For description, see CRP 483.

CRP 703 Contemporary Theories of Regional Development
Fall or spring. 4 credits.
An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of...
basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

CRP 711 Planning and Organization Theory
Fall or spring. 4 credits.
Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

CRP 720 Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits.
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 730 Methods of Regional Science and Planning I
Fall or spring. 4 credits variable.
An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. The spring semester emphasizes statistical and econometric models.

CRP 731 Methods of Regional Science and Planning II
Fall or spring. 4 credits.
See CRP 730. The fall semester will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

CRP 732 Methods of Regional Science and Planning III
Fall or spring. 3 credits. Prerequisites: CRP 730 and CRP 731 or permission of the instructor.
An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric models and CGE models will be discussed. The GAMS software package will be used in related computer exercises.

CRP 790 Professional Planning Colloquium I
Fall. 1 credit.
Visiting lecturers treat problems and opportunities in the practice of planning. Topics to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester's end.

CRP 791 Master's Thesis in Regional Science
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty.

CRP 792 Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits variable. S-U grades optional.

CRP 794 Planning Internships
Fall, spring, or summer. 1–12 credits.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salared internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795 Master's Thesis in Preservation Planning
Fall or spring. 1–6 credits.

CRP 796 Colloquium Journal Publication Workshop
Fall or spring. 2 credits. S-U grades only. Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 variable credits. Limited to graduate students. Prerequisites: permission of instructor.

CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit.
Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

CRP 800 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. Prerequisite: CRP 500. The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intratropical distribution of population and economic activity are reviewed.

CRP 801 Advanced Seminar in Urban and Regional Theory II
Spring. 3 credits. Prerequisite: CRP 800. A continuation of City and Regional Planning 800, concentrating on recent developments.

CRP 810 Advanced Planning Theory
Fall. 3 credits. Prerequisite: CRP 500 or 710.
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 830 Seminar in Regional Sciences, Planning, and Policy Analysis
Fall or spring. Variable–4 credits. S-U grades only.
This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890 Planning Research Seminar I
Fall or spring. 2 credits.
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced graduate students, faculty members, and visitors.

CRP 892 Doctoral Dissertation
Fall or spring. 1–2 credits.

Special Topic Courses
Fall or spring. Variable credit.
Typical topics are:

CRP 609 Urban and Regional Theory
CRP 619 Planning Theory and Politics
CRP 629 Quantitative Methods and Analysis
CRP 639 Regional Development Planning
CRP 649 Social-Policy Planning
CRP 659 Urban Development Planning
CRP 669 History and Preservation
CRP 679 Planning and Developing Regions
CRP 689 Environmental Planning
CRP 699 Regional Science

CRP 779 Landscape Architecture
Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences (in association with the Department of Floriculture and Ornamental Horticulture) and the College of Architecture, Art, and Planning.

The Program
Program faculty: M. I. Adleman, S. Baugher, K. L. Gleason, H. Gottfried, chair; P. Horrigan, D. W. Krall, L. J. Mirin, R. T. Trancik, P. J. Trowbridge, K. A. Wolf. Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field.
The major is composed of several parts: core courses related to professional education in Landscape Architecture, a concentration in a subject related to the core courses, and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, and 6 resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information
*LA 141 Grounding In Landscape Architecture
  Fall. 3 credits.
*LA 142 Grounding In Landscape Architecture
  Spring. 4 credits.
*LA 201 Medium of the Landscape
  Fall. 5 credits.
*LA 202 Medium of the Landscape
  Spring. 3 credits.
*LA 281 Urban Archaeology (also CRP 261)
  Fall. 3 credits.
*LA 282 The American Landscape
  Spring. 3 credits.
*LA 292 Creating a Second Nature
  Spring. 3 credits.
*LA 301 Integrating Theory and Practice
  Fall. 5 credits.
*LA 302 Integrating Theory and Practice
  Spring. 5 credits.
*LA 315 Site Engineering I
  Spring. 2 credits. Weeks 1-7.
*LA 316 Site Engineering II
  Fall. 2 credits. Weeks 8-15.
*LA 317 Site Construction I
  Fall. 2 credits. Weeks 1-7.
*LA 318 Site Construction II
  Spring. 2 credits. Weeks 8-15.
*LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)
  Fall. 3 credits. Offered alternate years 1997-98/1999-00.
*LA 363 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)
  Spring. 3 credits.
*LA 402 Urban Design in Virtual Space
  Spring. 5 credits.
*LA 410 Computer Applications in Landscape Architecture
  Fall or spring. 3 credits.
*LA 412 Professional Practice
  Spring. 1 credit.
*LA 480 Principles of Spatial Design and Aesthetics (also CRP 481/501)
  Fall. 3 credits.
*LA 483 Design Criticism
  Spring. 3 credits.
*LA 486 Community Design Workshop
  Spring. 3 credits.
*LA 487 Experiential Community Design
  Fall. 3 credits.
*LA 491 Design and Plant Establishment in the Urban Environment (also HORT 491)
  Fall. 3 credits.
*LA 494 Special Topics in Landscape Architecture
  Fall or spring. 1-3 credits.
LANAR 497 Individual Study in Landscape Architecture
  Spring. 1-5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin.
  Work on special topics by individuals or small groups.
*LA 498 Undergraduate Teaching
  Fall or spring. 1-2 credits.
*LA 501 Composition and Theory
  Fall. 5 credits.
*LA 502 Composition and Theory
  Spring. 5 credits.
*LA 505 Graphic Communication I
  Fall. 3 credits.
*LA 506 Graphic Communication II
  Spring. 3 credits. Not offered 1997-98.
[LANAR 520 Contemporary Issues in Landscape Architecture
  Fall. 2 credits. S-U grades only. Not offered 1997-98. L. Mirin.
  Presentations on topics that are current and significant to the environmental design and planning fields. Issues are discussed from a landscape architecture point of view by practitioners and researchers representing a range of professions.]
LANAR 524 History of European Landscape Architecture
  Spring. 3 credits. L. Mirin.
  A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, plazas, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

[LANAR 525 History of American Landscape Architecture
  Fall. 3 credits. Not offered 1997-98. L. Mirin.
  Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape; the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.]
*LA 545 The Parks and Fora of Imperial Rome
  Spring. 3 credits.
*LA 559 Archaeology on Preservation Planning and Landscape (also CRP 569)
*LA 590 Thesis Seminar
  Fall. 3 credits.
*LA 601 Integrating Theory and Practice
  Fall. 5 credits. Limited to graduate students.
*LA 602 Integrating Theory and Practice
  Spring. 5 credits.
*LA 615 Site Engineering I
  Spring. 2 credits. Weeks 1-7.
*LA 616 Site Engineering II
  Fall. 2 credits. Weeks 8-15.
*LA 617 Site Construction I
  Fall. 2 credits. Weeks 1-7.
*LA 618 Site Construction II
  Spring. 2 credits. Weeks 8-15.
*LA 619 Advanced Site Grading
  Spring. 2 credits. Weeks 8-15.
*LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)
  Fall. 3 credits. Offered alternate years 1997-98/1999-00.
*LA 680 Graduate Seminar in Landscape Architecture
  Fall or spring. 1-3 credits.
*LA 694 Special Topics in Landscape Architecture
  Fall or spring. 1-3 credits.
*LA 698 Undergraduate Teaching
  Fall or spring. 1-2 credits.
*LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
  Fall. 5 credits.
*LA 702 Advanced Design Studio
  Spring. 5 credits.
*LA 800 Master's Thesis in Landscape Architecture
  Fall or spring. 9 credits.
  *Offered through the College of Agriculture and Life Sciences.

</table>
The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

The Division of Biological Sciences is composed of seven sections: Biochemistry, Molecular and Cell Biology, Ecology and Systematics, Genetics and Development, Microbiology, Neurobiology and Behavior, Physiology, Plant Biology; and, in addition, the L. H. Bailey Hortorium and the Shoals Marine Laboratory.

Student services are provided by the division’s Office for Academic Affairs and the Behrman Biology Center, both located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisors. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides academic advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Westward.

FACULTY

Other Teaching Personnel

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107-108, or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences 109-110, 101 and 103 plus 102 and 104, 105-106 or 107-108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

Note: Biological Sciences 101-102-103-104 should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.
USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in courses offered through the Division of Biological Sciences should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.

2. The Division of Biological Sciences conforms to the rules for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Fred Quimby, at 253-3516. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course.

THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, in 200 S Rush Hall.

Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a program of study area and to assure satisfactory progress toward completion of the major. Acceptance requires completion of the course sequences in introductory biology, chemistry, and mathematics (see requirements 1-3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Cornell cumulative grade-point average is required, and final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on a provisional basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Students are not encouraged to continue with the major in biological sciences unless performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.

The requirements for the biological sciences major are listed below. These courses, with the exception of the language requirement, should be taken for a letter grade, unless the course is offered for S/U grades only.

1) Introductory biology for majors (one year):
   - Biological Sciences 101 and 103 plus 102 and 104, or 105-106.
   - Biological Sciences 107-108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (CEEB). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101 and 103, 102 and 104, or 103-104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216 Stimson Hall) to determine which semester to take to complete the introductory biology requirement.

2) General chemistry (one year):
   - Chemistry 207-208, or 103-208, or 215-216.

3) College mathematics (one year): two semesters of calculus (Mathematics 111-112, 191-192, or their equivalents) or one semester of calculus (Mathematics 106, 111, 191, or equivalents) plus either Mathematics 110 or Statistics and Biometry 101. Education 115 may not be used to fulfill any part of this requirement.

4) Organic chemistry:
   - Chemistry 257 and 251, or 357-358 and 251, or 357-358 and 301, or 559-360 and 251, or 359-360 and 301.

5) Physics:
   - Physics 207-208, 112-213, or 101-102.

6) Genetics:
   - Biological Sciences 281.

7) Biochemistry:
   - Biological Sciences 330, 331 and 332, or 333.

8) Evolutionary Biology:
   - Biological Sciences 278.

9) A program of study selected from the outline below.

10) Foreign language: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) obtaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers. The possible programs of study are listed below.

1) Animal Physiology: BIOAP 311, Introductory Animal Physiology, Lectures; BIOAP 313, Histology. The Biology of Tissues, BIOAP 316, Cellular Physiology, and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and
provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical sciences or other fields involving new approaches to research in Graded independently. The specific sections offered in any semester may vary. The labs are organized as half-semester sections that are prerequisites have not changed. This course (4 credits) BIOBM 430 was formerly listed as Quantitative Chemistry. BIOBM 430 is strongly recommended: 4 credits of biochemistry laboratory courses (BIOBM 430 below) and Physical Chemistry (Chemistry 389–390 or 287–288 or 287–390 or 389–288). Note that Chemistry 288 is designed for biologists. It is recommended that students interested in graduate work in biochemistry take the more rigorous organic chemistry and physics sequences (Chemistry 357–358 or 359–360 and Physics 207–208), six credits of organic chemistry laboratory, and a third semester in preparation for the more rigorous physical chemistry sequence (Chemistry 389–390). Students interested in biochemistry should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are also urged to complete introductory biology in their freshman year.

Note: BIOBM 430 was formerly listed as BIOBM 630. The course content and prerequisites have not changed. This course is organized as half-semester sections that are graded independently. The specific sections offered in any semester may vary. The labs emphasize qualitative and quantitative aspects of modern approaches to research in biochemistry, molecular and cell biology.

3) Molecular and Cell Biology: BIOBM 432, Survey of Cell Biology; 4 credits of BIOBM 430 (formerly BIOBM 630). Laboratories in Biochemistry, Molecular and Cell Biology, and at least 7 additional credits of courses that have a cellular biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following list (underlined courses are recommended as providing breadth in molecular and cell biology): BIOAP 619, Lipids; BIOAP 658, Molecular Mechanisms of Hormone Action; BIOBM 434, Applications of Molecular Biology; BIOBM 439, Laboratory Research in Biochemistry, Molecular and Cell Biology; BIOBM 437, Oncogenes and Cancer Viruses; BIOBM 651, Protein Structure and Function; BIOBM 652, Membranes and Bioenergetics; BIOBM 653, Biosynthesis of Macromolecules; BIOBM 655, Mechanisms of Metabolic Regulation and Mammalian Gene Expression; BIOBM 656, Cell Biology; BIOBM 659, The Nucleus; BIOG 406, Sensing and Responding in Biological Systems; BIOG 385, Developmental Biology; BIOG 483, Molecular Aspects of Development; BIOG 484, Molecular Evolution; BIOG 486, Advanced Eukaryotic Genetics; BIOG 488, Molecular Genetic Analysis; BIOG 682, Fertilization and the Early Embryo. BIOI 343, Molecular Biology and Genetic Biotechnology; BIOI 347, Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOI 444, Plant Cell Biology; BIOI 641, Laboratory in Plant Molecular Biology; BIOI 652, Plant Molecular Biology II; BIOI 290, General Microbiology; Lectures: BIOI 291, General Microbiology. Laboratory: BIOI 408, Viruses and Disease; BIOI 485, Bacterial Genetics; BIOI 692, Protein and Nucleic Acid Interactions; BIOIN 222, Neurobiology and Behavior II: Introduction to Neurobiology; BIOIN 325, Neurodegenerative Diseases; Molecular Aspects, BIOMN 425, Natural History of Ion Channels; BIOMN 495, Molecular and Genetic Approaches to Neurosciences; BIOMN 497, Neurochemistry and Molecular Neurobiology. Students interested in cell biology should complete a year of introductory chemistry other than Chemistry 103–104 before the start of their sophomore year. Students are strongly encouraged to take one of the 5-credit options of Biochemistry (331 and 332 or 330 and 334).

4) Ecology and Evolutionary Biology: BIOES 261, Ecology and the Environment, and 10 credits from the following course list, including at least one course from each group:

(a) BIOMI 241, Introductory Botany; BIOMI 274, The Vertebrates: Structure, Function, and Evolution; BIOMI 373, Biology of the Marine Invertebrates; BIOMI 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOMI 471, Mammalogy; BIOMI 472, Herpetology; BIOMI 475, Ornithology; BIOMI 476, Biology of Fishes; ENTOM 212, Insect Biology.

Note: One 400-level, 4-credit course (including 4 credits from BIOI 346) offered at Shools Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

Note: The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

5) General Biology: The Program of Study in General Biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences in addition to other courses toward requirements 1–8 above. These 13 credits must include:

1) one course each from those required for at least three of the eight other programs of study (see pages 152–154),
2) a course with a laboratory, and
3) a minimum of two upper-level (300 and above) courses of two or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIOI 341 may not count as the lab course. BIOG 498 may not be used to fulfill the requirements of this program of study. BIOG 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

6) Genetics and Development: A minimum of 13 credits, usually chosen from the following courses: BIOG 385, Developmental Biology; BIOG 387, Developmental Aspects of Evolution; BIOG 389, Embryology; BIOG 480, Seminar in Developmental Biology; BIOG 481, Population Genetics; BIOG 482, Human Genes and Society; BIOG 483, Molecular Aspects of Development; BIOG 484, Molecular Evolution; BIOG 486, Advanced Eukaryotic Genetics; BIOG 488, Molecular Genetic Analysis (up to 3 credits); BIOI 485, Bacterial Genetics; BIOIN 493, Developmental Neurobiology; BIOI 343, Molecular Biology and Genetic Engineering of Plants.

Students may also choose from the following courses to complete the 13-credit requirement: BIOG 682, Fertilization and Early Development. BIOG 684, Advanced Topics in Population Genetics; BIOG 687, Developmental Genetics; BIOG 683, Biosynthesis of Macromolecules; BIOG 639, The Nucleus; BIOE 663, Theoretical Population Genetics; BIOI 694, Genetics of Diverse Bacteria; BIOI 641, Laboratory in Plant Molecular Biology; BIOI 644, Plant Growth and Development; BIOI 652, Plant Molecular Biology II; BIOI 655, Plant Molecular Biology I; PL BR 606, Advanced Plant Genetics.

Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIOG 499, Undergraduate Research in Biology, with approval of the faculty adviser.

7) Microbiology: BIOI 290, General Microbiology, Lectures; BIOI 291, General Microbiology, Laboratory; BIOI 300, Seminar in Microbiology; and at least three courses chosen from the following: BIOI 391, Advanced
Microbiology Laboratory; BIOMI 415, Bacterial Diversity; BIOMI 416, Bacterial Physiology; and BIOMI 485, Bacterial Genetics.

8) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BION 221 and 222) with discussion section (4 credits per term), and 7 additional credits, among which must be a course from the neurobiology and behavior offerings—BION 420, BIO G 499, and BION 720 may not be used as this neurobiology and behavior course. However, these readings and independent research courses may form the majority of credits (beyond those provided by the advanced neurobiology and behavior course) required to complete the Program of Study in Neurobiology and Behavior. Option (a) may not be used to fulfill the requirements of this program of study.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BION 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W365 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

9) Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take Introductory Botany (BIOP 242 and 244). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training—BIOP 242 and 244, Plant Physiology, Lectures and Laboratory; BIOP 247, Ethnobotany; BIOP 248, Taxonomy of Vascular Plants; BIOP 342 and 344, Plant Physiology, Lectures and Laboratory; BIOP 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOP 345, Plant Anatomy; BIOP 444, Plant Cell Biology; BIOP 445, Photosynthesis; BIOP 447, Molecular Systematics; BIOP 448, Plant Evolution and the Fossil Record; BIOS 463 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOS 466 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIOP 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOP 241, Introductory Botany; BIOP 242 and 244, Plant Ecology, Lectures and Laboratory; BIOP 342 and 344, Plant Physiology, Lectures and Laboratory; BIOP 346, Algal Physiology; BIOP 444, Plant Cell Biology; BIOP 468, Plant Molecular Biology; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

10) Independent Option: A special program for students interested in nutrition is available under this option. Students interested in courses in biochemistry should contact the Office for Academic Affairs (200 Stimson Hall) for further information. In addition, students who want to undertake a course of study not covered by the nine existing programs of study or the special program may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee procedures will be available in the Office for Academic Affairs, 200 Stimson Hall.

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an aspect of study within a program of study. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals and the resources and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) with the written permission of the faculty supervisor. Students register for this course in 200 Stimson Hall. Any faculty member in the Division of Biological Sciences may act as a supervisor. Supervisor supervisors outside the division are acceptable only if a faculty member of the Division agrees to take full responsibility for the quality of the work. Students may not earn credit for research conducted outside of Cornell. Information on research activities and undergraduate research opportunities is available in the Behrman Biology Center, 216 Stimson Hall.

Research credits may not be used in completion of the following program of study areas: animal physiology; biochemistry; cell biology; ecology and evolutionary biology; microbiology; plant biology. Up to 3 credits of research may be used to complete the Program of Study in general biology and genetics and development, and 4 credits of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office for Academic Affairs, 200 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences (BIO G) 499 (Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation. In addition, candidates must have a Cornell faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Students may also work with Cornell faculty supervisors outside the division. Students who select supervisors outside the division must arrange for a faculty member of the division to serve as cosigner of the research. The division cosigner must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences (BIO G) 499 (Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during the two semesters prior to submission of an acceptable honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended.

Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of the senior year. Students who are considering study abroad during their junior year should consult with a member of the Honors Program Committee during their sophomore year to plan a reasonable schedule for research honors. The Honors Program requires that student participants attend honors seminars in which they give oral presentations during the first and second semesters of their senior year. Students who are conducting research away from campus during the senior year should consult with a member of the Honors Committee no later than the beginning of the first semester of their junior year. Details pertaining to theses due dates, seminars, and other requirements may be obtained from the chair of the Honors Program Committee or from the Office for Academic Affairs, 200 Stimson Hall. Information on research activities is available in the Behrman Biology Center, 216 Stimson Hall. Deviation from any of the requirements of the Honors Program requires a petition in the form of a letter to the Honors Program Committee, c/o 200 Stimson Hall.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum, to division-wide requirements, and to the programs of study are made by the Curriculum Committee of the division. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.
### INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOBM; Ecology and Systematics, BIOES; Genetics and Development, BIOGD; Microbiology, BIOMI; Neurobiology and Behavior, BIOMB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.

Note: Biological sciences courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

### GENERAL COURSES (BIO G)

The Division of Biological Sciences teaches three introductory biology course sequences during the academic year: Bio G 101–104, Bio G 105–106, and Bio G 109–110; and one during the eight-week summer session: Bio G 107–108. Bio G 101–104, 105–106, and 107–108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meets the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. Bio G 109–110 is a course sequence intended for non-majors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

#### BIO G 101–102 Biological Sciences, Lectures

- **Fall:** 101, 2 credits each term.
  - Prerequisite: concurrent enrollment in Bio G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after Bio G 105–106 or 109–110. S–U grades optional, with permission of instructor. Lecs, M W F 9:05 or 10:10.
- **Spring:** 102, 2 credits each term.
  - **Lectures:** 102, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 25 and Nov. 11; spring, Feb. 19 and Apr. 2. K. K. Adler.

- **Fall:** 101, designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory and discussions of plant and animal systems are integrated.
BIO G 103-104 Biological Sciences, Laboratory
103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104. In case of ucn Concept of permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W or F 1:25-4:25, M or W 7:30-10:30 p.m., or F 8:00-11:00. One 3-hour lab each week and a weekly rec for dissections, special lecture, and staff. BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instruction in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, immunology, invertebrate diversity, population plant growth and development, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor. Dissection of several invertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO G 105-106 Introductory Biology
105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. Estimated cost for dissection kit $11. S-U grades optional, with permission of instructor. Lect, T 9:05 (1st lec of term, R 28 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff. Designed primarily for biology majors, preprofessional arts, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester include population biology, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved and live invertebrate dissection). Students who plan to concentrate in anatomy and physiology should take this course. Because of the strong emphasis on organismal biology, there are dissections. Students who object to dissections should plan to take Bio G 101-104. The course uses an autotutorial format and is designed to meet upper-division credit requirements in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who take the course must respect deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

BIO G 107-108 General Biology
Summer (8-week session): 107, weeks 1-4; 108, weeks 5-8. 4 credits each. Prerequisite: one year of college or permission of instructor. BIO G 101-103, 105, or 107 is a prerequisite for 108. Fee. $25 for weeks 1-4; $15 for weeks 5-8. Lect, M-R 9-12, labs, M T W R 1:30-4:30, F 9-12. Staff. Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organism system level. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school.

BIO G 109-110 Biological Principles
109, fall; 110, spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or 105 is prerequisite to 110 unless written permission is obtained from the instructor; and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an exemption is obtained from the instructor. May not be taken for credit after BIO G 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology, but may not be used as an introductory course for the major in biological sciences. Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology. Letter grade only. Lect, M W F 9:05 or 10:10; lab, M T W R F 2-4:25 or T 10:10-12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 25 and Nov. 11; spring, Feb. 19 and Apr. 2. R. Turgeon, M. Taylor, C. Eberhard, and staff. Students who do not plan to major in biology may take this broad introductory course in modern biology. It is not a course in social biology but addresses itself to biological principles with academic rigor. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of vertebrate, invertebrate and plant material (observation required).

BIO G 152 Special Topics in Biology
Spring, 1 credit. Limited to 30 students. Prerequisites: superior performance in BIO G 100 or equivalent and concurrent enrollment in BIO G 102, 106, or 110, or written permission of instructor. S-U grades only. This course may not be used in fulfillment of college distribution requirements. Lect, T 3:35; occasional field trips to be arranged. Guest lecturers discuss topics in their field of research interest. R. Turgeon, C. C. Eberhard, staff, and guest lecturers.

This course is designed to complement introductory biology by providing an opportunity for deeper exploration of selected topics of interest. Class involvement and discussion are encouraged.

BIO G 170 Evolution of the Earth and Life (also Geological Sciences 102)

BIO G 200 Special Studies in Biology
Fall, spring, or summer. 1-3 credits. Prerequisites: transfer- or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 200. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be used in fulfillment of college distribution requirements except by permission of the associate director of the division.

BIO G 202 The Diversity of Life
Fall. 3 credits. S-U grades optional. Lect, M W F to be arranged. J. J. Davis, J. J. Doyle, E. Rodriguez. The course focuses on three primary themes: 1) the range of biotic diversity; 2) the principles of systematics that underlie the description; 3) the relationship of the human species to biotic diversity.

BIO G 207 Evolution (also History 287 and Science and Technology Studies 287)
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOES 278. Does not meet the evolutionary biology requirement for the biological sciences major. S-U grades only. This course may not be used in fulfillment of college distribution requirements. Lect, T 10:10 or disc, 1 hour each week to be arranged. W. B. Provine, Summer.
(also Science and Technology Studies 287): Lecs/disc, M-F 8:30-9:45.
A. S. Kondrashov.

Evaluating the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology, and exploring the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIO G 208 Drawing the Human Figure
Summer (6-week session). 3 credits. Labs, M T W 3:00-5:15. K. Kucharski. Human anatomy. Emphasis on learning specific anatomical relations to the skeletal and muscular systems as approached through observation and drawing practices.

BIO G 209 Introduction to Natural Science Illustration
Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs, T R 6:30-9-30 p.m. B. S. King. An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also Veterinary Microbiology 315)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:30-9:55. J. A. Marsh. A survey of immunology, with emphasis on the biological functions of the immune response.

BIO G 400 Undergraduate Seminar in Biology
Fall or spring. Variable credit (1-3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Sem to be arranged. Staff. From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For students interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under appropriate section.

BIO G 401 Introduction to Scanning Electron Microscopy
Fall or spring, weeks 1-8. 1 credit. Limited to 8 students (fall). 12 students (spring). Prerequisite: permission of instructor. S-U grades optional. Lec, M 10:10; lab, T R or F 9:05-12:15 or T W or R 1:25-4:25. Fee may be charged. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.

BIO G 403 Transmission Electron Microscopy for Biologists
Fall. 1.5 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOPH 345 or 443, or written permission of instructor. S-U grades optional. Lec, T 11:15; labs, M W or T R 1:25-4:25. Two sections: Section 01, 1 credit, weeks 1-4; Section 02, 3 credits, weeks 5-12. Students may register for one or both sections. Fee may be charged. M. V. Parthasarathy. Section 01, 1 credit, weeks 1-4, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials this section features cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

BIO G 405 Neotropics: Introduction to Their Biology
Fall. 2 credits. Limited to 18 students. Prerequisites: BIOES 261 or equivalent, and permission of instructor. Sem, W 7:30-9:30 p.m. P. H. Wrege, A. S. Flecker. This seminar is a cherry-picked survey of the biology of selected biomes of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn the basic characteristics and phenomena important to an understanding of neotropical biology, to gain firsthand knowledge of the resources available at Cornell for the pursuit of this knowledge, and to learn how to organize and execute a meaningful seminar presentation.

BIO G 407 Nature of Sensing and Response (also PLPA 407) (formerly Bio Sci 268)
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Lec, T R 10:10-11:25. T. P. Delaney.

An examination of the responses of organisms and cells to their surroundings illustrates how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. This course explores a variety of responses to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryotic and animal systems for environmental sensing, control of development and responses during disease. Discussions examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed in certain diseases.

BIO G 431 Frontiers in Biophysics
Fall. 1/2 credits. S-U grades only. Lec to be arranged. D. Shalloway and staff. An overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

BIO G 450 Light and Video Microscopy for Biologists
Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lecs, T R 1:25-2:30; lab, R 2:30-4:30. A. O. Wayne.

A theoretical and practical review of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

BIO G 467 Seminar in the History of Biology (also History, Biology and Society 447, and Science and Technology Studies 447)
Summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine. Specific topic changes each year.

BIO G 469 Food, Agriculture, and Society (also Biology and Society 469 and Science and Technology Studies 469)
Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lecs, T R 1:25-2:40. A. G. Power.

A multidisciplinary course dealing with the social and environmental impacts of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

BIO G 498 Teaching Experience
Fall or spring. 3-4 credits. Enrollment limited. Prerequisites: previous experience in teaching and enrollment in the course to be taught or equivalent, and written permission of instructor. Students in the College of Arts and Sciences may count credits from this course toward the 120 credits required for graduation. S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105-106; BIOAP 311, 313, 319; BIOBM 330, 331; BIOES 274, 475; and BIOM 291, 292.
BIO G 499 Undergraduate Research in Biology
Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office for Academic Affairs in 200 Stimson Hall. Each student must submit an independent study proposal and get approval of proposed research project during course registration. (Special forms for this purpose are available in the college offices and in 200 Stimson Hall.) Any faculty member in the Division of Biological Sciences may act as a supervisor. Cornell faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as co-sponsor, taking full responsibility for the quality of the work. Supervisors outside of Cornell must be acceptable. S-U grades optional. Hours to be arranged. Staff.

Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credit may not be used in completion of the following programs of study: animal physiology; microbiology; plant physiology; and evolution. Students may not be used to fulfill the requirements of any Program of Study in the biological sciences major.

BIO G 606 Freeze-Fracture Technique
Spring, weeks 9-14. 1 credit. Prerequisites: BIO G 403 or equivalent, and permission of instructor. S-U grades optional. Hours to be arranged. Staff.

Principles of freeze-fracturing and freeze-substitution technique, freezing artifacts, and interpretation of images.

BIO G 705 Advanced Immunology Lectures (also Veterinary Microbiology 705)
Fall. 3 credits. Prerequisite: BIO G 305 or permission of instructor. Offered alternate years. Lecs. MWF 9:05. Coordinator: R. G. Bell. Coverage at an advanced level of molecular and cellular immunology.

BIO G 706 Immunology of Infectious Diseases and Tumors (also Veterinary Microbiology 719)
Spring. 3 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1997-98. Lec. R 11:15-12:15. Coordinator: R. G. Bell. Coverage at an advanced level of the immunology of diseases caused by selected bacteria, viruses, protozoa, and helminths, and tumor immunology.

Related Courses in Other Departments

Medicine and Civilization (Biology and Society 322)
Pathogenic Bacteriology and Mycology (Biological Sciences [BIOM] 404 and Veterinary Microbiology 318)
Viruses and Disease (Biological Sciences [BIOM] 408 and Veterinary Microbiology 408)

ANIMAL PHYSIOLOGY (BIOAP)

BIOAP 212 Human Physiology for Non-Biology Majors
Spring, 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any Program of Study in the biological sciences major.

Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs as members of their families. Taught by staff of research physiologists and cooperating physicians.

BIOAP 214 Biological Basis of Sex Differences (also Biology and Society 214 and Women's Studies 214)
Fall. 3 credits. Limited to non-biology majors and human, sophomore, and junior biology majors; senior biology majors may register with permission of instructor. Prerequisite: one year of introductory biology. S-U grades optional. Offered alternate years. Not offered 1997-98.

J. E. Fortune.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction, where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed. The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

BIOAP 311 Introductory Animal Physiology, Lectures (also Veterinary Physiology 346)
Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent courses in physics. S-U grades optional, with permission of instructor. Lecs. M, W F 11:15. Evening prelims: Sept. 23 and Oct. 30. E. R. Loew and staff.

A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

BIOAP 312 Farm Animal Behavior (also Animal Science 306)
The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communications, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

BIOAP 313 Histology: The Biology of the Tissues
Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331, or their equivalents; and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Lecs. M, W, F 12:30-2:15; labs, T R 1:25-2:30. Evening prelims: Oct. 2 and Nov. 6. C. Wahl.

Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Dynamic interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

BIOAP 316 Cellular Physiology
Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 352 or 333. Lecs. M, W F 9:05; lab, M or T 1:25-5:00. Evening prelims: Feb. 24, Apr. 2, and April 28. A. Quaroni and staff.

Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function in vivo and in vitro. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

BIOAP 319 Animal Physiology Experimentation
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lecs. R 12:20; lab, M or W 12:20-5:00 (includes disc section). R. A. Corradino.

A series of student-conducted in vitro and in vitro experiments designed to illustrate basic physiological processes with emphasis on relevance to humans, and to introduce students to physiology research.
techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive functions. Experimental resources include live animals, frogs, rats, and rabbits, which are euthanized after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

**BIOAP 419 Advanced Animal Physiology Experimentation**

Spring. 3 credits. Prerequisite: BIOAP 319 previous semester or permission of instructor. Limited to 12 students selected on the basis of project proposals. Lab to be arranged. Coordinator and advisor: R. A. Corradino. Advanced research on selected aspects of laboratories conducted in BIOAP 319, Animal Physiology Experimentation. Close supervision is provided.

**BIOAP 486 Mammalian Physiology**

Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in T9 026 Vet Research Tower before the first class. Lecs, T R 10:10. R. A. Corradino. The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems; recurrent themes in physiology; design of multicellular animals; mammalian fluid compartments; homeostasis, membrane and epithelial transport; electrophysiology; cardiovascular physiology, gastrointestinal physiology; renal physiology; and acid/base. The lectures incorporate clinical correlations whenever appropriate. Occasional guest lecturers talk about work and careers in basic research and/or clinical medicine. Recommended for biological sciences majors, pre-med and pre-vet students, and beginning graduate students in physiology, nutrition, and animal science.

**BIOAP 619 Lipids (also Nutritional Sciences 602)**

Fall. 2 credits. Lecs, T R 11:15. A. Bensadoun. Advanced course on biochemical, metabolic, and nutritional aspects of lipids. Emphasis is placed on critical analysis of current topics in lipid methodology; lipid absorption; lipoprotein secretion, molecular structure, and catalolysis; molecular biology, function and regulation of lipoprotein receptors; mechanism of hormonal regulation of lipolysis and fatty acid synthesis; and cholesterol metabolism and atherosclerosis.

**BIOAP 658 Molecular Mechanisms of Hormone Action**

Spring. 2 credits. Prerequisite: permission of instructor. Minimum enrollment of 6 required. Offered alternate years. Lecs, T R 10:10. R. A. Corradino. An advanced course developed from the current literature on general endocrine mechanisms. Primarily a lecture course with student discussion.

**BIOAP 710-718 Special Topics in Physiology**

Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics. One topic offered fall 1997: topics to be offered announced for spring 1998.

**BIOAP 711 Readings in Applied Animal Behavior**

Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Lec, 1 hour each week to be arranged. K. A. Houpt.

**BIOAP 719 Graduate Research in Animal Physiology (also Veterinary Physiology 620)**

Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours to be arranged. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

**BIOAP 757 Current Concepts in Reproductive Biology**

Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Offered alternate years. Lec/disc, T R 10:10-12:05. J. E. Fortune, W. R. Butler, and staff. A team-taught survey course in reproductive physiology/endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

**BIOAP 811 Advanced Physiological Methods I**

Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: P. W. Nathanielisz. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

**BIOAP 812 Advanced Physiological Methods II**

Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Coordinator: P. W. Nathanielisz. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

**BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY**

**BIOBM 132 Orientation Lectures in Biochemistry**

Spring, weeks 1-5. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lecs, S 10:10-11:00, for first three S of semester. Section chair and staff. Discussions by six professors about their research and promising areas for research in the future.

**BIOBM 233 Introduction to Biomolecular Structure**

Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lecs, T R 2:30-3:30. S. E. Ealick. This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interaction between the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms...
determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

[BIOBM 320 Physics of Life (also Applied and Engincers 320)]

[BIOBM 330-332 Principles of Biochemistry]
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture (333) during the summer. Individualized instruction is offered to a maximum of approximately 250 students each semester. Lectures given full semester (331) and spring semester (332).

[BIOBM 330 Principles of Biochemistry, Individualized Instruction]
Fall or spring. 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 253 or 257 or 357-358 or equivalent, or permission of instructor. Concurrent registration in BIOBM 330 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only. Hours to be arranged. Evening prelims: fall, Oct. 7 and Nov. 6; spring, Feb. 26 and Apr. 2. J. F. Blankenship, G. S. Albrecht, P. C. Hinkle, P. A. Karplus, and staff. Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, and protein synthesis. An introduction to gene cloning. No formal lectures; autotutorial format; discussion sessions on three research papers on protein structure and function.

[BIOBM 331 Principles of Biochemistry: Proteins and Metabolism]
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 253 or 257 or 357-358 or equivalent, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Lecs. M W 10:10. Evening prelim. Oct. 21. G. W. Feigena.
The chemical reactions important to biology, and the enzymes that catalyze these reactions, are discussed in an integrated format. Topics include methods for studying proteins, protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

[BIOBM 332 Principles of Biochemistry: Molecular Biology]
Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades optional, with permission of instructor. Lecs. T R 12:20. J. M. Calvo. A comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

Section 02 Experimental Proteins and Enzymology
Experiments include purification of enzymes by ion exchange chromatography and affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

Section 03 Experimental Cell Biology
Spring only. 2 credits. T. T. Huffman.
Experiments include culture of animal cells, transfection, immunofluorescence microscopy, and evaluation of cellular stress responses using radioisotope labeling methods.

[BIOBM 432 Survey of Cell Biology]
Spring. 3 credits. Prerequisite: BIOBM 330, 331, or 332, and previous or concurrent registration in 332, or equivalent. S-U grades optional for graduate students only. Lect. M W 8:40-9:50. W. J. Brown and staff. A survey of a wide array of topics focusing on the general properties of eucaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOGD 483, BIOBM 632, 636, and 639.

[BIOBM 433 Biotechnology: Molecular Basis (formerly BIOBM 434)]
Summer (5-week session). 3 credits. Prerequisite: BIOBM 330 or 331 and 332 or 333 or equivalent. Lec to be arranged. S. Ely. This course provides a detailed account of the biochemistry and molecular biology behind recent biotechnological advances and commercial introductions. Topics include the use of transgenic bacteria in bioremediation and for insect control, of transgenic plants to produce novel biopesticide delivery and protection systems, and the engineering of plants and animals for production of pharmaceutical and other valuable materials.

[BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry (formerly BIOBM 430)]
Spring. 3 credits. Enrollment limited to 36 students with preference given to seniors and students concentrating in biochemistry or molecular and cell biology. Prerequisites: BIOBM 330 or 333 or 332 or equivalent. Lec to be arranged. S. Ely. This is a capstone course designed to help students integrate information from disciplines such as biochemistry, molecular biology, cell biology, genetics, immunology, virology, microbiology, and plant biology. Students in groups of three investigate some practical applications of molecular biology, with an emphasis on underlying basic principles. Examples of topics include introducing genes into bacteria, plants, and animals; importance of model organisms in producing useful substances such as vaccines, enzymes, hormones, and drugs; transgenic animals; engineering plants resistant to insects; mapping and cloning disease genes; DNA-based diagnosis of genetic diseases; gene therapy; and genome projects. By the
end of the term, students have consulted a variety of texts and reference works and explored databases, web sites, personal interviews, and the telephone as ways of getting information. In addition, students present oral presentations and create a Web site.

BIOBM 435-436 Undergraduate Biochemistry Seminar

435; Fall; 436; spring. 1 credit each term. May be repeated for credit. Limited to upper-grade undergraduate preregistration only.

BIOBM 330 or 333 or 331 and 332 or written permission of instructor. S-U grades only. Sem to be arranged. Organizational meeting first W of each semester at 4 p.m.

BIOBM 631 Protein Structure and Function

Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 or organic chemistry. Recommended: physical chemistry. S-U grades optional. Lect., M W F 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

BIOBM 632 Membranes and Bioenergetics

Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Lect., T R 11:15.

P. C. Hinke.

Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.

BIOBM 633 Biosynthesis of Macromolecules

Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also Nutritional Sciences 635)

Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and CHEM 358 or 360; or permission of instructor. Offered alternate years. Not offered 1997-98. Lect., T R 9:05.

M. N. Kazarinoff, N. Noy, P. Stover.

Molecular mechanisms by which sensory, hormonal, and nutritional inputs cause changes in enzyme activity in order to regulate metabolic transformations. Emphasis is on gene expression, protein modification, and allosteric effects using examples from mammalian systems. Consideration of identification and characterization of regulatory steps in metabolism from both theoretical and practical aspects.

BIOBM 636 Cell Biology

Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, or their equivalents. Lect., T R 9:05.

A. P. Bretcher.

Lectures covering current topics in cell biology, including a detailed discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, junctions, the cell cycle, and related topics. Together with BIOBM 632 and 639, this course provides broad coverage of the cell biology subject area.

BIOBM 637 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 638)

Fall. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 or equivalent. Lect., M W F 9:05. Evening prelins to be arranged. W. J. Arion.

The elements and dynamics of energy metabolism in humans and higher animals are developed systematically through biochemical characterizations of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes in vivo are analyzed in the contexts of selected physiologic and pathologic stresses.
replacement, molecular replacement, model building, refinement, and structure interpretation.

**BIOBM 750 Cancer Cell Biology (also Veterinary Pathology 750)**
Spring. 3 credits. Prerequisite: BIOBM 350 or 353 or 351 and 332 or equivalent. Offered every other year. Lects to be arranged. J. Guan, R. Levine, B. Pauli, A. Yen.

Course covers molecular, cellular and genetic aspects of cancer. The course is divided into three sections: The first section addresses general cell biology, progression and metastasis; the second section looks at cell-matrix and cell-cell interactions in cancer; and, the third section focuses on cell cycle. For a detailed course description, see the Division of Biological Sciences "Course Supplement."

**BIOBM 751 Ethical Issues and Professional Responsibilities (also Toxicology 751 and Science and Technology Studies 751)**
Spring. 2 credits. Limited to graduate students beyond first year. S-U grades only. Sem, W 2:30-3:15. Additional sections may be offered. Organizational meeting will be held on Wednesday, Jan. 21, 2:50 P.M., in 180 Biotechnology Building. J. M. Fessenden MacDonald. Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics to be discussed include regulations; data selection, manipulation, and representation; fraud, misconduct, and whistle-blowing; conflicts of interest and commitment; authorship, ownership, and intellectual properties; peer review and confidentiality; scientific response to external pressure; legal liabilities; and professional codes of ethics.

**BIOBM 830 Biochemistry Seminar**
Fall or spring. No credit. Sem, F 4-6:00.

Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration limited to graduate students in Biochemistry, Molecular and Cell Biology.

**BIOBM 831 Advanced Biochemical Methods I**
Fall. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades optional. Labs and disc, 12 hours each week to be arranged. Organizational meeting first R of semester, 10:10. B. M. Tyler and staff.

This course emphasizes experimental design and the concepts implicit in current approaches to research in biochemistry and cell biology. Students are required to read papers and participate actively in discussions in order to design their own protocols before performing experiments using the techniques most common in the recent literature of these fields.

**BIOBM 832 Advanced Biochemical Methods II**
Spring. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only. Lab to be arranged. Staff (Coordinator: P. A. Karpplus, graduate faculty representative).

Research in the laboratories of two or three different professors chosen by the student. Arrangements are made jointly between the graduate field representative and the research adviser.

**BIOBM 833 Research Seminar in Biochemistry**
Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only. Sem, M 12:20-1:30. T. C. Huffaker, W. J. Brown, J. T. Lis.

Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

**BIOBM 835-836 Methods and Logic in Biochemistry, Molecular and Cell Biology**
835, fall; 836, spring. 1 credit each term. Limited to first-year graduate students majoring in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Sem and disc to be arranged. Fall: S. E. Ealick, G. P. Hess; spring: Staff.

A seminar course with critical discussion by students of original research papers. A variety of topics in biochemistry, molecular and cell biology are covered.

**Related Courses in Other Departments**

**BIOES 154 The Sea: An Introduction to Oceanography (also Geological Sciences 104)**
Spring. 3 or 4 credits (+credit option includes one 2 1/2 hour laboratory each week). S-U grades optional. Lecs, T R 11:40-12:55; labs, M or W 2:00-2:45, or M 7:30-9:35 p.m. C. H. Greene, W. M. White.

A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine-sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

**BIOES 261 Ecology and the Environment**
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. N. G. Hairston, Jr., P. P. Feeny.

An introduction to principles of ecology concerning the interactions between organisms and their environment. The course covers both terrestrial and aquatic ecology, drawing examples from both plant and animal studies. Phenomena that occur at the individual, population, community, and ecosystem levels of organization are discussed. Ecological principles are extensively applied to current environmental problems and issues.

**BIOES 263 Field Ecology**
Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 154. Lecs, R 1:25; lab, F 12:20-5:00; 1 weekend field trip to the Hudson Valley. A small fee may be required for field trips. P. L. Marks.

Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

**BIOES 264 Birds in Biology, Lectures**

Using birds as a starting point, this course aims at bringing exciting new insights in bird biology to non-majors. Bird research has often generated new insights in the biological sciences. Starting from studies on birds, a number of topics from a variety of biological disciplines can be addressed. These include problems from behavioral ecology (mating systems, sperm competition, extra-pair paternity, territorial behavior, song), from population ecology (population dynamics, micro-evolution, competition), from evolutionary biology (trade-offs in life history theory, optimal clutch size) and from conservation biology (biodiversity, habitat fragmentation, inbreeding.)

**BIOES 266 Birds in Biology, Laboratory**
Spring. 1 credit. Limited to 40 students. Intended for students with no background in biology. Prerequisite: concurrent enrollment in BIOES 264. S-U grades optional. Lab, S 9:05-12:05; some all-day field trips to be arranged. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. Not offered 1997-98. A. A. Dhondi.

Laboratories supplement the lecture course and provide hands-on experience. Laboratories include field trips, some field-research experience, and work in the Cornell bird collections.

**BIOES 267 Introduction to Conservation Biology**
Fall. 3 credits. May not be taken for credit after NTRES 440. S-U grades optional. Lecs, M W 9:05; disc, one hour each week to be arranged. A. S. Tewksbury, J. W. Fitzpatrick.

An exploration of biological concepts related to conserving the Earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, palaeoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

**BIOES 373 Biology of the Marine Invertebrates**

Fall. 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Offered alternate years. Lecs, M W F 10:10; lab, W 1:25–4:25; optional field trip to Shoals Marine Laboratory. $60 fee for optional field trip. C. D. Harvell.

An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shoals field trip is an excellent opportunity to study representatives of most of the major phyla in their natural habitat. Laboratory demonstrations on campus involve live marine and freshwater invertebrates.

**BIOES 452 Herbivores and Plants: Chemical Ecology and Coevolution (also Entomology 452)**

Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997–98. Lecs, M W F 11:15. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. P. P. Feeny.

Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants, evolutionary hypotheses for ecological patterns of resistance and attack, and implications for human food and agriculture.

**BIOES 455 Insect Ecology (also Entomology 455)**

Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or knowledge of another taxon. S-U grades optional. Offered alternate years. Lecs, M W F 11:15. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**BIOES 456 Stream Ecology (also Entomology 456 and Natural Resources 456)**

Lectures address the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences; plant, invertebrate; and fish community structure; nutrient cycling; trophic dynamics, colonization and succession; community dynamics; conservation; and the impacts of disturbances. Lab: A field project includes designs, experimentation, techniques and hypotheses testing related to environmental assessment.
BIOLOGICAL SCIENCES - 1997–1998

This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

[BIOES 464 Macroevolution] Spring. 4 credits. Limited to 25 students. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Lectures, T R 10:10–11:25; 1 disc hour each week to be arranged. A. R. McCune. An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origins and fate of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involve data and approaches from genetics, systematics, paleoecology, development, and ecology.

[BIOES 465 Plant Ecology and Population Biology, Laboratory] Fall. 1 credit. Prerequisite: concurrent enrollment in BIOES 463. Offered alternate years. Not offered 1997–98. Lab, F 12:00–5:00. M. A. Geber, P. L. Marks. Laboratory and field exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

[BIOES 466 Physiological Plant Ecology, Lectures (also BIOPL 466)] Spring. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Lab, F 8:40–10:55; 1 disc hour each week to be arranged. E. C. M. Fernandes. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/week in additional lab time for this course.

[BIOES 468 Physiological Plant Ecology, Laboratory (also BIOPL 468)] Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Offered alternate years. Lab, W 1:25–4:25, plus additional lab hours to be arranged. T. E. Dawson. A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/week in additional lab time for this course.

[BIOES 470 Ecological Genetics (also Entomology 470)] Spring. 4 credits. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997–98. Lectures, T R 10:10–11:25; 1 disc hour each week to be arranged. Staff. A study of the relationships between genetic and ecological processes in populations. Topics include consequences of genetic variation in age-structured populations; demographic concepts of fitness; evaluation of methods for measuring genetic variation and natural selection on ecologically important traits; genetics of competitive ability and predator avoidance; genetic and ecological aspects of phenotypic plasticity; character displacement; maintenance of genetic variability; limits to selection. How theory can be used to formulate hypotheses about evolutionary mechanisms in natural populations is considered and experiments designed to test such hypotheses are evaluated.

[BIOES 471 Mammalogy] Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1997–98. Lab, F 12:20–2:20; lab, M T W F 1:25–4:25; 1 weekend field trip required. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee, $15. Staff. Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

[BIOES 472 Herpetology] Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1997–98. Lectures, T R 12:20; labs, M W or T R 1:25–4:25; occasional field trips and special projects. Fee, $15. Staff. Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior, and physiology. Laboratory includes systematics, functional morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments.

[BIOES 473 Ecology of Agricultural Systems (also Soil, Crop, and Atmospheric Sciences 473)] Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997–98. Lectures and labs, T R 2:30–3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. A. G. Power, E. C. M. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics, agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

[BIOES 474 Laboratory and Field Methods in Human Biology (also Anthropology 474)] Spring. 5 credits. Limited to 16 students with permission of instructor obtained by preregistering in E241 Conson. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years. Not offered 1997–98. Lectures, T R 10:10–12:05; additional hours to be arranged. Independent research project required. K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of physical anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal and living subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist. Case studies on the dissection of a profused (dead) nonhuman primate, usually a macaque or baboon. Students attend demonstrations of the dissection prepared by the prosector (a hired graduate student).

[BIOES 475 Ornithology] Fall. 4 credits. Limited to 30 students, with permission of instructor obtained by preregistering in E241 Conson. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1997–98. Lectures, T R 12:20–2:20; occasional field trips and special projects. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee, $15. D. W. Winkler.

Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and systematic identification of avian families of the world and species of New York. Independent projects emphasize research skills.

[BIOES 476 Biology of Fishes] Fall. 4 credits. Limited to 24 students. Recommended: BIOES 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of...
An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive observations or experiments. The systematics and dissection laboratories use preserved specimens.)

[BIOES 478 Ecosystem Biology] Spring. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grades optional. Offered alternate years. Not offered 1997–98. Lecs and discs, T R 10:10–12:05. L. O. Hedlin, R. W. Howarth. Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems, such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.)

[BIOES 479 Paleobiology (also Geological Sciences 479)] Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 274, GEOL 375, BIOES 373, or permission of instructor. Offered alternate years. Lecs, M W F 12:20. J. L. Cisne and H. F. A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

[BIOES 660 Field Studies in Ecology and Systematics] Fall or spring. Variable credit. Prerequisites: BIOES 261, a tuxon-oriented course, and permission of instructor. S-U grades optional. Offered alternate years. Lecs and field trips to be arranged. Estimated costs: to be announced. Staff. This course provides students with opportunities to learn field techniques and new biotas by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors in the Division’s “Course Supplement” issued at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

Section 01: Life Histories of Marine and Freshwater Invertebrates
Fall. 2 credits. Prerequisite: Undergraduates must have previous experience or course work with marine or freshwater invertebrates. Offered alternate years. Not offered 1997–98. Two extended weekend field trips in early September and October. Fee: $100 (to help cover transportation and housing at Shools Marine Lab). C. D. Harvell, N. G. Hairston, Jr. Field trips to the Shools Marine Lab and Shackleton Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.

Section 02: Graduate Field Course in Ecology
Spring. 3 credits. Restricted to graduate students. Offered alternate years. A fee will be required to help cover food and lodging for trip to Florida. P. L. Marks, R. B. Root.
The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida for the first half of the field course in early September and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.

[BIOES 661 Environmental Policy (also ALS 661 and Biology and Society 461)] Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. S. D. Pimentel. This course uses an interdisciplinary approach to focus on complex environmental problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The team spends two semesters preparing a scientific report for publication in Science or BioScience.

[BIOES 663 Theoretical Population Genetics] Fall. 3 credits. Prerequisites: knowledge of basic population genetics (e.g., BIOGD 481), and some mathematics (e.g., MATH 111). Prerequisites for graduate students: permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Not offered 1997–98. Lec, 2 hours each week to be arranged; lab (computer), 3 hours each week to be arranged. A. S. Kondrashov. Theoretical population genetics (TPG) is one of the areas of current evolutionary biology. The course explains why TPG is successful in its domain and what its limitations are. Students analyze the effects of seven elementary factors of population dynamics (mutation, selection, drift, migration, segregation, recombination, and non-random mating). Consideration of biologically-relevant situations when several factors act simultaneously (migration-drift, mutation-selection-drift, segregation-recombination-selection, etc.) leads to understanding the changes of not only the population state, but of the "rules of the game" themselves (evolution of reproductive isolation, life history, recombination, mutability, etc.). Students study in detail several topics of general biological interest (maintenance of quantitative variability, evolution of aging, and sexual selection). Active use of computers in analyzing the models, but no formal training in programing required.)

[BIOES 668 Principles of Biogeochemistry] Spring. 4 credits. Limited to 20 students. Prerequisite: solid background in ecology, environmental chemistry, or related environmental sciences. Permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Lecs and discs, T R 10:10–12:05. R. W. Howarth, L. O. Hedlin. Lectures cover the biotic controls on the chemistry of the environment and the chemical control of ecosystem function. Emphasis is on cycles of major elements and minor elements globally and in selected ecosystems, stressing the coupling of element cycles. A comparative approach is used to illustrate similarities and differences in element cycling among ecosystems. Analysis of both theoretical and applied issues, including global atmospheric changes and factors controlling the acidification of lakes and soils.

[BIOES 669 Plant Ecology Seminar] Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Sem to be arranged. Staff. Includes review of current literature, student research, and selected topics of interest to participants.

[BIOES 670 Graduate Seminar in Vertebrate Biology] Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades only. Sem to be arranged. Staff. Seminar presentations and discussions by students on areas of current research in vertebrate biology. Topics vary from semester to semester.

[BIOES 672 Graduate Seminar in Physiological Ecology] Spring. 2 credits. May be repeated for credit. Limited to 12 students. Prerequisite: a course in plant or animal physiology. Permission required for undergraduates. S-U grades only. Offered alternate years. Sem, 2 hours each week to be arranged. T. E. Dawson and staff. Discussion of topics on water balance, energetics, and temperature regulation emphasize parallels and contrasts in the relations of animals and plants to their biophysical environments. Readings are taken from the primary literature and are biophysical, ecological, and evolutionary in scope. Each student leads a discussion and prepares a written review of a topic, drawing on the primary literature of his or her own research interests.

[BIOES 673 Human Evolution: Concepts, History, and Theory (also Anthropology 673)] Fall. 3 credits. Prerequisite: one year of introductory biology, ANTHR 101, or permission of instructor. Offered alternate years. Not offered 1997–98. Lec, M 2:30; sem and disc, W 7:30–9:30 p.m. K. A. R. Kennedy. The historical background of present-day concepts of man's evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.
BIOES 760 Special Topics in Evolution and Ecology
Fall or spring. 1–3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

BIOES 767 Current Topics in Ecology and Evolutionary Biology
Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lects and discs, T R 8–9:55; 1 weekend field trip. Staff. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-lead discussions of topics in areas of current importance.

GENETICS AND DEVELOPMENT (BIOGD)

BIOGD 184 Understanding Genetics
Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any Program of Study in the biological sciences major. S-U grades optional. Offered alternate years. Not offered 1997–98. Lects, M W F 9:05. T. D. Fox. An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.

BIOGD 281 Genetics
Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Lects, T R 10:10–12:05; labs, W or F 2:30–4:25; additional hours to be arranged. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Problem-solving sessions strongly recommended. T or W 8:30–9:45 (additional session to be arranged if necessary). T. D. Fox, M. L. Goldberg, R. J. MacIntyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

BIOGD 282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent. Permission of instructor required for students who have taken BIOGD 281. S-U grades optional. Lects, M W F 10:10 (lects, also F 10:10 1st 3 weeks only); disc, R 10:10 or F 10:10 or 11:15. R. A. Calvo. A course designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

BIOGD 385 Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 281. Lects, M W F 11:15. K. J. Kemphues. An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

BIOGD 387 Developmental Aspects of Evolution
Fall. 2 credits. Prerequisite: BIOGD 281. S-U grades optional. Offered alternate years. Lects, T R to be arranged. A. W. Blackler. An examination of the developmental mechanisms that underlie evolutionary change and organismal diversity and of the developmental constraints that contribute to evolutionary conservatism.

BIOGD 389 Embryology
Spring. 3 credits. Preference given to seniors. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Lects, T R 10:10; labs, T or R 2–4:25. A. W. Blackler. A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

BIOGD 480 Seminar in Developmental Biology
Spring. 1 credit. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOGD 281. S-U grades only. Sem to be arranged. Staff.

BIOGD 481 Population Genetics
Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Lects, M W F 10:10; disc, M 2:30 or T 1:25. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 482 Human Genetics and Society
Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and development. Prerequisites: BIOGD 281 and BIOBM 330 or 333 or 335 and 332, and written permission of instructor. S-U grades optional. Disc, T 2:30–4:25 and R 2:30–3:30. R. A. Calvo, H. T. Stinson. Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are new reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, presymptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and the therapy for genetic diseases. Students lead most discussions. There is a major writing component in the course.
[BIODG 483 Molecular Aspects of Development]
Spring. 3 credits. Prerequisites: BIODG 281, BIOMM 332 (preferred) or 330 or 333; and BIODG 385. Offered alternate years. Not offered 1997–98. Lecs, T R 2:30–4:00. M. F. Wolfner.

An advanced course in developmental biology, with emphasis on the role of fruit fly development under normal and abnormal conditions. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular events such as cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, results and their interpretation.

[BIODG 484 Molecular Evolution]
Spring. 3 credits. Prerequisites: BIODG 281 and organic chemistry. Offered alternate years. Lecs, T R 11:15. R. J. MacIntyre.

An analysis of evolutionary changes in proteins and nucleic acids. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.

[BIODG 485 Bacterial Genetics (also BIOMI 485)]
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIODG 281. Recommended: BIOMI 290 and BIOMI 330 or 331 and 332 or 333. Lecs, W 7:30–9:25 p.m. V. J. Stewart.

For course description, see BIOMI 485.

[BIODG 486 Advanced Eukaryotic Genetics]
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIODG 281, BIOMM 330 or 333 or 331 and 332. S-U grades optional. Lecs, T R 12:20–1:25 and R 12:20–1:10; disc R 12:25–1:25 or F 11:15–1:30. E. E. Alani.

The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as cell cycle control or protein secretion, and then the basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, chromosome organization, and protein trafficking.

[BIODG 488 Molecular Genetic Analysis]
Fall or spring. 3 credits. May be repeated for credit. Limited to 10 students. Prerequisites: BIODG 281 and written permission of instructor. Interview with instructor (8716 or bjs14@cornell.edu). S-U grades optional for graduate students only. Labs, T R 1:25–4:25; additional three hours each week to be arranged. B. J. Sneath.

Course teaches the basic principles of fruit fly development and provides students with hands-on research experience in modern experimental genetic methods. The course involves examining a collection of female-sterile Drosophila melanogaster mutants for P-element mutations disrupting early embryonic development. Utilizing mutant and cytoskeletal structures of mutants are characterized using fluorescence microscopy. The disrupted genes are cloned and sequenced using molecular genetic techniques. Antibodies against the gene products are prepared for immunofluorescence localization. A maximum of 3 credits may be used to fulfill the requirements in the Program of Study in Genetics and Development.

[BIODG 682 Fertilization and the Early Embryo]

This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization, pronuclear fusion, triggering mitosis, cleavage divisions, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture, and midblastula transition.

[BIODG 684 Advanced Topics in Population Genetics]

An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

[BIODG 685 Advanced Bacterial Genetics (BIOMI 485)]
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIODG 281 or equivalent, BIOMM 330 or 331 and 332 or 333, and permission of instructor. Recommended: BIOMI 290 or equivalent. Not offered 1997–98. Lec, W 7:30–9:25; disc, R 10:10–11:00. V. J. Stewart.

For course description, see BIOMI 485.

[BIODG 687 Developmental Genetics]

Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in Drosophila, Caenorhabditis, and mouse. Possible topics include pattern formation, cell lineage, neuronal development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are given the opportunity to discuss each topic in class.

[BIODG 780 Current Topics in Genetics]
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics. Written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Sem to be arranged. Staff.

A seminar course with critical presentations and discussion of students' original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

[BIODG 781 Problems in Genetics and Development]
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc to be arranged. Staff.

An introduction to the research literature in selected areas through weekly problem sets and discussions.

[BIODG 782—783 Current Genetics/Development Topics]
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Not offered 1997–98. Staff.

[BIODG 786 Research Seminar in Genetics and Development]
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Lecs, W 12:20–1:30. S-U grades only. K. J. Kemphues.

Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

[BIODG 787 Seminar in Genetics and Development]
Fall and spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, M 4–5:00. Staff.

Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

MICROBIOLOGY (BIOMI)

BIOMI 192 Microorganisms on the Planet Earth
A course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaebacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

BIOMI 290 General Microbiology Lectures
Fall, spring, or summer (6-week session). 2 or 3 credits (2 credits if taken after BIOMI 192). Prerequisites: one year of introductory biology for majors and one year of college chemistry, or equivalent. Recommended: concurrent registration in BIOMI 291. Lect. M W F 11:15. D. R. Bond, S. M. Merkel.
A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and immunology and medical microbiology.

BIOMI 291 General Microbiology Laboratory
Fall or spring. 2 credits. Summer (6-week session). 2 or 3 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Lect. F 10:10 or 12:20; labs, M W 12:20-1:25 or 2:30-4:25, or T R 10:10-12:05, 12:20-2:15, or 2:30-4:25. C. M. Rehkugler.
A study of the basic principles and techniques of laboratory practice in microbiology; and fundamentals necessary for further work in the subject.

BIOMI 292 General Microbiology Discussion
Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Disc. to be arranged. C. M. Rehkugler.
A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 300 Seminar in Microbiology
Spring. 1 credit. Required of biological science students in the microbiology program of study. Strongly recommended for students considering the microbiology program of study. S-U grades only. Sem. W 12:20. Staff.
A series of lectures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on the Cornell campus.

BIOMI 391 Advanced Microbiology Laboratory
A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology, 2) physiology, 3) genetics, and 4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 398 Environmental Microbiology (also Soil, Crop, and Atmospheric [BIOL] 398)
Spring. 3 credits. Prerequisites: BIOES 261 or BIOMI 290 or SCAS 260 or permission of instructor. Lect. M W F 10:10. M. Alexander, W. C. Ghirose, E. L. Madsen. The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutants, wastewater treatment, and environmental biotechnology.

BIOMI 404 Pathogenic Bacteriology and Mycology
This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality, interactions of host, pathogen and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapies and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular level.

BIOMI 406 Clinical Microbiology
Fall and spring. 15 credits each semester. Prerequisite: permission of instructor. Lect. T R 8:25-10:25. R. P. Mortlock.
Training and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis is on developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of clinical microbiology. This is a full-time program taking place in September to August of the student's senior year.

BIOMI 408 Viruses and Disease (also Veterinary Microbiology [BIOL] 417)
Spring. 3 credits. Prerequisites: BIOMI 290, 291; BIO G 305; and permission of instructor. Recommended: BIOMG 281. Offered alternate years. Lect. M W 7:30 p.m. J. Case.
The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

BIOMI 415 Bacterial Diversity
Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Lect. M W F 11:15. S. H. Zinder.
A consideration of the diversity of microbiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 416 Bacterial Physiology
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333, or their equivalents. S-U grades optional for students not specializing in the microbiology program of study. Lect. M W F 11:15. J. P. Shapleigh.
The concern is with the physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

BIOMI 417 Medical Parasitology (also Veterinary Microbiology, Immunology and Parasitology [BIOL] 431)
A systematic study of anthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

BIOMI 485 Bacterial Genetics
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOMG 281. Recommended: BIOMI 290 and BIOMI 330 or 331 and 332 or 333. Lect. M W 7:30-9:25 p.m. V. J. Stewart.
Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants, genetic exchange, recombination and mapping, complementation, epistasis and suppression, transposons; gene expression and regulation; and genetics of bacterial pathogenesis.
BIOMI 652 [Section 03] Molecular Plant-Microbe Interactions (BIOPL 652, Sec 03)
Spring. 1 credit. Prerequisites: BIOGD 281, BIOM 330 or 331 or 335, and BIOPL 653 (section 01) or their equivalents. S-U grades optional. Lecs, M W F 10:10 (12 hrs) Mar. 25-Apr. 20. S. C. Winans.
For course description, see BIOMI 652, Sec 03.

BIOMI 685 Advanced Bacterial Genetics
Fall. 2 credits. Limited to graduate students; see BIOMI 495. Prerequisites: BIOMG 301 or equivalent. BIOM 330 or 331 or 332 or equivalent. Permission of instructor recommended. BIOM 280 or equivalent. Not offered 1997–98. Lecs, T R 9:10–11.25. J. D. Helmann.
The physical and chemical bases of protein-nucleic acid interactions are explored including both theory and specific examples. Proteins considered include bacterial nonspecific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombinases, topoisomerases, DNA repair enzymes, and nucleases.

BIOMI 692 Protein-Nucleic Acid Interactions
Spring. 3 credits. Prerequisites: BIOM 330 or 331 or 333 or 635. Lecs, T R 10:10–11.25. J. D. Helmann.
The physical and chemical bases of protein-nucleic acid interactions are explored including both theory and specific examples. Proteins considered include bacterial nonspecific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombinases, topoisomerases, DNA repair enzymes, and nucleases.

BIOMI 694 Genetics of Diverse Bacteria
Spring. 3 credits. Prerequisite: BIOM 485 or equivalent. Lecs, M W 2:30–3:45. S. C. Winans.
Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.

BIOMI 791 Advanced Topics in Bacterial Genetics
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Disc. T 4–5:00. Fall. S. C. Winans; spring. V. J. Stewart.
Discussion and critical evaluation of selections from the contemporary literature in bacterial genetics and molecular biology.

BIOMI 795-796 Current Topics in Microbiology
Fall, 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lects to be arranged. Staff.
Lectures and seminars on special topics in microbiology.

BIOMI 797 Graduate Seminar in Microbiology
Fall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students are expected to lead discussions on recent primary literature in microbiology. S-U grades only. Sem to be arranged. Staff.

BIOMI 798 Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. Sem to be arranged. Staff.
A seminar relating to the research activities of those enrolled. Students who have completed the BIOMI 797 series requirement are required to present a seminar concerning their research interests and activities at least once each year.

BIOMI 799 Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem to be arranged. Staff.

NEUROBIOLOGY AND BEHAVIOR

BIOMB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits (4 credits with one discussion per week; 5 credits with two discussions per week and participation in the Writing in the Majors program). S-U or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit discussion section is limited to 15 students. Students must be enrolled in the 5-credit option. Staff. A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

BIOMB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisites: one year of introductory biology for majors and one year of chemistry. May be taken independently of BIOMB 222. S-U grades optional. Lecs, M W F 12:20; disc to be arranged. P. W. Sherman and staff.
A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIOMB 222 Hormones and Behavior (also Psychology 332)
Spring. 3 or 4 credits; the 4-credit option involves a one-hour section once a week in which students are expected to read original papers in the field and participate in discussion. Limited to juniors and seniors; open to sophomores only by permission. Prerequisites: BIOMB 221 or 222 or one year of introductory biology plus a course in psychology. S-U grades optional. Lecs/disc to be arranged. E. Adkins-Regan.
Following a review of the neural and endocrine systems, this course connects endocrine physiology to specific behaviors observed in various species, including humans. Although the relationship between sexual physiology and behavior is strongly emphasized, the lectures also describe hormonal contributions to parental behavior, aggression, stress, learning and memory, homeostasis, and biology rhythms. Topics for the discussion sections are chosen by the students within the context of hormonal influences on behavior.
BIONB 324 Biopsychology Laboratory (also Psychology 324)  
Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology, BIONB 222 and PSYC 123 and 222; and permission of instructor. Labs, T R 1:25-4:25. Staff.  
Experiments designed to provide research experience in animal behavior (including learning and its disorders and hormonal mechanisms). A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

BIONB 325 Neurodiseases—Molecular Aspects  
Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGID 201, BIOBM 350, or 331; co-registration in one of the two is acceptable. S-U grades optional. Lecs, T R 9:05; disc, T 2:30. T. R. Podleski.  
The intent of this course is to teach students how to use recombinant DNA techniques for the study of disease and injury. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using this approach, for example Alzheimer's, Huntington's, color blindness, affective disorders, disorders affecting ion channels, and muscular dystrophies. In addition to the molecular studies, when appropriate, the course is devoted to discussions of other aspects of the diseases. Emphasis is placed on how these studies provide a useful approach to studying the nervous system by exposing the functions of genes that would be difficult to identify in other ways.

BIONB 326 The Visual System  
Spring. 4 credits. Prerequisite: BIONB 222 or BIOPH 311, or permission of instructor. S-U grades optional. Offered alternate years. Lecs, M W F 10:10; disc, 1 hour each week to be arranged. H. C. Howland.  
The visual systems of vertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, structure and function of higher visual centers, and ocular development.

BIONB 328 Biopsychology of Learning and Memory (also Psychology 332)  
Spring. 3 credits. Prerequisites: one of biology and either a course in biopsychology or BIONB 222. Lecs, M W F 11:15. Staff.  
This course surveys the approaches that have been or are currently being used in order to understand the biological bases for learning and memory. Topics include invertebrate "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

BIONB 329 Drugs and the Brain  
Spring. 3 credits. Prerequisites: BIONB 222 or equivalent and permission of instructor. S-U grades optional. Offered alternate years. Lecs, T R 10:10-11:25; disc to be arranged. R. Harris-Warrick.  
An introduction to neuropharmacology. After a brief introduction to pharmacology, there is discussion of the major neurotransmitter families. Topics include the biological actions of the major psychoactive drugs on the brain, including cocaine, amphetamines, alcohol, psychedelics, marijuana, antidepressants and antipsychotics.

BIONB 396 Introduction to Sensory Systems (also Psychology 396 and 696)  
Spring. 3 or 4 credits (4 credits with term paper). Requirements: 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or biopsychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Offered alternate years. Not offered 1997-98. Lecs, M W F 10:10. B. P. Halpern. This course is taught using the Socratic method, in which the instructor asks questions of the students. Students read, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. Classroom discussion can increase, but not decrease, a student's final grade. There are two preliminary exams and a final exam. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory systems and auditory, visonic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. Two or more textbooks, and a course packet of reproduced articles are used. At the level of An Introduction to the Physiology of Hearing, 2nd edition, by J. O. Pickles, Physiological acoustics, neural coding, and psychoacoustics, by W. L. Gulick, G. A. Gescheider, and R. D. Frisina, The Retina. An approachable part of the brain, by J. F. Dowling, Handbook of Physiology—The Nervous System. III. Sensory Processes, edited by J. M. Brookhard and V. B. Mountcastle.

BIONB 420 Topics in Neurobiology and Behavior  
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. To be arranged. Staff.  
Courses on selected topics in neurobiology and behavior, can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also Psychology 431 and 631)  
Fall. 3 or 4 credits (4 credits with term paper). Limited to 10 students. Prerequisites: introductory course in biology or psychology, plus a second course in perception, neurobiology, cognition, or biopsychology. No auditors. S-U grades optional. Offered alternate years. Lecs, T R 10:10-11:25. B. P. Halpern. A literature-based examination of post-maturational changes in the perceptual, structural, and physiological characteristics of sensory, motor, and auditory systems. Emphasis is on human data, with non-human information included when especially relevant. The course examines the current developments in human sensory prosthetic devices and regeneration of receptor structures. Brief written statements (preferably by electronic mail) of questions and problems related to each set of assigned readings are required at least one day in advance of each class meeting. This course is taught using the Socratic Method, in which the instructor asks questions of the students. Students are expected to come to each class having already done, and thought about, the assigned readings.

BIONB 422 Modelling Behavioral Evolution  
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, one course in probability or statistics, and permission by instructor (Office: W309 Mudd Hall; phone: 254-4352). This course is open to advanced undergraduates and graduate students. S-U grades optional. Not offered 1997-98. Lecs, T R 2:30-4:00; computer lab, one class period per week to be arranged. K. H. Reeve.  
This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population genetics (including quantitative genetics), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by application to problems in optimal foraging, sexual selection, sex ratio, animal communication, and the evolution cooperation and conflict within animal social groups. Students learn to assess critically recent evolutionary theories of animal behavior, as well as to develop and testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required.)

BIONB 423 Neurogenetics  
Fall. 3 credits. Limited to junior, senior, and graduate students. Prerequisites: permission of instructor, one year of introductory biology or equivalent, and BIOGID 281. Strongly recommended: BIONB 222. S-U grades optional. Offered alternate years. Not offered 1997-98. Lecs, T R 2:30; disc, R 3:35. Staff.  
Readings, discussions, and student presentations focus on the uses of genetics for the study of the nervous system. Emphasis is on recent advances in genetic and molecular biological techniques and their application to the study of neural development and behavior. Both invertebrate and vertebrate systems are discussed, and main consideration is given to the fruit fly and the mouse. Readings are taken primarily from original journal articles.

BIONB 424 Neuroethology (also Psychology 424)  
In the 1950s through the 1970s, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolutionary analysis, and careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist's mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of acoustic communication in insects and in...
vertebrates, echolocation in bats and sound localization in owls, electroreception and electrolocation, and visual processing. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts. Assigned readings include original articles from the scientific literature. A term paper or equivalent is required. Recitations scheduled in class.

**BIONB 425 Natural History of Ion Channels**

Course takes a broad view of ion channels and cellular bioelectricity, with emphasis on the gene superfamily including voltage-gated channels. Evolutionary divergence is considered across phylogenetic history and tissue differentiation. Functional and structural variety, particularly in neural cells, examined from modern electrophysiological and molecular biological perspectives. Contributions to behavioral plasticity and neural development are considered.

**Bio NB 426 Animal Communication**
Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 221. Offered alternate years. Lecs, T R 2:30–4:25; disc, one hour each week to be arranged. T. D. Scefas

A detailed examination of the study of communication by non-human animals. The course begins with an exploration of different conceptual frameworks used in the study of communication, then turns to specific studies of the mechanisms, ontogeny, functional design, and evolutionary history of the signaling systems used by animals. The class considers how communication provides humans with a window on the minds of other animals. Readings are drawn from the primary literature.

**BIONB 427 Animal Social Behavior**
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOES 261 or 278, and advance permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Lec and disc, T R 2:30–4:25. S. T. Emlen

An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, spacing systems, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.

**BIONB 428 Topics in Behavior**
Fall or spring. 2–4 credits. (Credits based on number of lectures and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) May be repeated for credit. Prerequisite: undergraduates. S-U grades optional.

Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, bio-rhythms, and communication. Topics, instructors, and time of organizational meeting are listed in the division's catalog supplement issued at the beginning of each semester.

**BIONB 429 Olfaction and Taste: Structure and Function (also Psychology 429)**
Spring. 3 or 4 credits. (4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: a 300-level course in biopsychology or equivalent. Offered alternate years. Lecs, T R 9:05. B. P. Halpern

The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes as well as at the molecular level. Function is examined primarily in its neurophysiological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of Smell and Taste in Health and Disease, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. D. Snow; The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.

**BIONB 491 Principles of Neurophysiology**
Fall. 3 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students. Lecs, M W 10:10; lab, M W T R 12:20–4:25; additional hours as arranged. B. J. Johnson

A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and the cellular basis for resting and action potentials and synaptic transmission. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

**BIONB 492 Sensory Function (also Psychology 492)**
Spring. 3 or 4 credits. (The 4-credit option involves a one-hour section once a week, in which students are expected to participate in discussion. The 4-credit option is not always offered.) Prerequisite: 600-level biopsychology or BIONB 222 or BIOAP 311, or permission of instructor. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Not offered 1997–98. Lecs, M W F 10:10; disc, hours to be arranged. B. P. Halpern, H. C. Howland

This course covers classical topics in sensory function such as vision, hearing, touch, and balance, as well as some more modern topics like sensory coding, location of stimulus sources in space, the development of sensory system, and nonclassical topics such as electronic and internal chemoreceptors. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. At the level of The Senses, edited by Barlow and Mollon, and An Introduction to the Physiology of Hearing, 2nd edition, by Pickles.

**BIONB 493 Developmental Neurobiology**
Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997–98. Lecs, T R 11:40–12:55. R. Booker

Lectures covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, How do nerve cells differentiate both morphologically and biochemically? The role of cues such as hormones and growth factors are discussed. Genes in developmental neurobiology are discussed. Readings are taken from original journal articles.

**BIONB 494 Comparative Vertebrate Neuroanatomy**

Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major segments: general principles of brain organization, and co-evolution of vertebrate brain and behavior.

**BIONB 495 Molecular and Genetic Approaches to Neuroscience**
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: BIONB 222 and BIOBM 320 or 352. Offered alternate years. Lecs, T R 2:55–4:10. D. Deitcher

Focus of the course is on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and student original research articles. Focus is on original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular function, neurotransmitter release, second messengers, and learning and memory.

**BIONB 496 Bioacoustic Signals in Animals and Man**
Spring. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: one year of introductory biology, PHYS 101–102 or 207–208, and permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997–98. Lecs, M W 9:05; lab to be arranged. C. W. Clark, R. R. Hoy

Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course teaches students about animal acoustic communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh
BION 497 Neurochemistry and Molecular Neurobiology
Fall or spring. Limited to 30 students. Prerequisites: BION 222 or either BIOB 330 or 331 and 332, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997-98. Lecs, T 9:05-10:10, disc, T 12:25-1:25. R. M. Harris-Warrick.

This course focuses primarily on the biochemistry/molecular biology of neurons. Emphasis is on the molecular properties of these cells that account for their unique function. The presynaptic regulation of release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Readings are selected primarily from research journals.

BION 623 Chemical Communication (also Chemistry 622)
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. Offered alternate years. Lecs, M W 1:25; disc, F 1:25. J. Meinwald, T. Eisner, W. L. Roelofs, and guest lecturers.

The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecologial, behavioral, and evolutionary principles. The discussion sessions focus on readings from the recent literature and involve student-led discussions of contemporary topics.

BION 626 Sex Differences in Brain and Behavior (also Psychology 524)
Spring. 2 credits. Limited to 12 students. Prerequisite: Permission of instructor. BION 322 or permission of instructor. Discs and sems to be arranged. Not offered 1997-98. T. J. DeVoogd.

A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

BION 720 Seminar in Advanced Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Staff.

Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topic. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

BION 721 Introductory Graduate Survey in Neurobiology and Behavior
Fall. 2 credits each term. Required of graduate students in neurobiology and behavior. Concurrent registration in BION 221 and 222 not required. S-U grades only. Lecs and discs, T R 11:15-12:05, alternate weeks. Staff.

Lectures by faculty and student-led discussions on topics of current importance in neurobiology and behavior. Topics are linked to the materials presented in BION 221 and 222. Class meets twice a week, every other week. Students are required to write four term papers, over the two semesters, on selected topics in two of three sub-areas: (1) cellular and molecular neurobiology; (2) integrative neurobiology; (3) behavior.

BION 723 Advanced Topics in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem to be arranged. Staff.

A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BION 724 Field Methods in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork to be arranged. Staff.

A seminar-field experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field methodology, data collection, and hypothesis testing are followed by an intensive period (ten days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BION 790 Advanced Topics in Cellular and Molecular Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: BION 222. S-U grades optional. Sem and disc to be arranged. Staff.

A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions for topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BION 792 Advanced Laboratory in Cellular and Molecular Neurobiology
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: BIOB 330 or 331 or equivalent, BION 491 or equivalent, and written permission of instructor. S-U grades optional. Lab to be arranged. Staff.

A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

BION 793 Advanced Topics in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Lab to be arranged. Staff.

A course designed to provide in-depth knowledge of current research in anatomical and physiological basis of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BION 794 Advanced Laboratory Techniques in Integrative Neurobiology
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview. Lab to be arranged. Staff.

A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

PLANT BIOLOGY (BIOPL)

BIOPL 240  Green World/Blue Planet (formerly Plants and Global Issues)
Spring. 3 credits. S-U grades optional. Lecs, TR 11:00–1:20, T. G. Owens and staff. Prerequisite: one year of introductory biology or the equivalent.

BIOPL 241  Introductory Botany
Fall. 3 credits. Lecs, TR 9:05; lab, MW 10:30–12:55. K. J. Nicklas. Special introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in banding and preparing material for identification. First and second weeks of laboratory are field trips, starting with the first day of class. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOPL 242  Plant Physiology, Lectures
Spring. 3 credits. Primarily for undergraduates in agricultural sciences, but also for any Biological Sciences students wanting to know about plant function. Suitable as a second-level course for nonmajors to satisfy the biology distribution requirement. Prerequisites: one year of introductory biology and/or BIOPL 241. Recommended: one year introductory chemistry. Concurrent enrollment in BIOPL 244 required of undergraduates except those majoring in the social sciences and humanities, for whom it is recommended. May not be taken for credit after BIOPL 342 except by written permission of instructor. Lecs, M W F 10:10. P. J. Davies. How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport, mineral nutrition; growth and development—hormones, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering.

BIOPL 243  Taxonomy of Cultivated Plants (Crop Plant Identification 243)
Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Offered alternate years. Lecs, TR 11:15; lab, MW 10:10; labs, W 2–4:25. M. A. Luckow. A study of crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport, mineral nutrition; growth and development—hormones, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering.

BIOPL 244  Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 344. Disc and lab, M T W or R 11:00–2:25. Staff. Experiments exemplify concepts covered in BIOPL 242 and concentrate in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

BIOPL 245  Plant Biology
Summer (6-week session). 3 credits. Limited to 24 students. Lecs, M-F 11:30–12:45, labs, M W 2–5:00. S. Williams. Introductory botany to demonstrate basic biological principles. Emphasizes structure, reproduction, and classification of flowering plants. Most of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack botany background are expected to work more closely with the instructor on supplemental instructional materials.

BIOPL 246  Plants and Civilization
Fall. 3 credits. S-U grades optional. Lecs, TR 11:15; disc, R 12:20 or 1:25. D. M. Bates. An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

BIOPL 247  Ethnobotany (formerly BIOPL 246, Plants and Civilization)
Fall. 3 credits. S-U grades optional. Lecs, TR 11:15; disc, R 12:20 or 1:25. D. M. Bates. A consideration of the principles, methods, and issues of ethnobotany. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.

BIOPL 248  Taxonomy of Vascular Plants
Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after BIOPL 243. S-U grades optional. Lecs, M W F 9:05, lab, W or R 11:00–2:25. J. D. Davis. An introductory botany classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOPL 341  Plants in Laboratory Teaching
Fall. 2 credits. Limited to 16 students. Prerequisite: one year of introductory biology. S-U grades optional. Disc and lab, TR 3:10–4:30. D. J. Paolillo. This course is intended for science education students who intend to teach biology at the high school level. The focus is on how to use plants in the biology laboratory in interesting ways, with particular emphasis on using plants to demonstrate basic biological principles. Hands-on experience is provided in experimental setup and performance. Additional emphasis given to experimental design, data collection and analysis, and actual experience in a high school biology teaching laboratory.

BIOPL 342  Plant Physiology, Lectures
Spring. 3 credits. Prerequisites: one year of introductory biology and either concurrent enrollment in BIOPL 344 or written permission of instructor. May not be taken for credit after BIOPL 242 unless written permission is obtained from instructor. Lecs, T R 10:10–11:25. T. G. Owens. An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and reproduction of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOPL 343  Molecular Biology and Genetic Engineering of Plants
Fall. 3 credits. Prerequisite: one year general biology or permission of instructor. S-U grades optional. Lecs, T R 11:15. M. E. Nasrallah. An introduction to current studies involving recombinant DNA technology and its application to the analysis of basic plant processes. The course emphasizes genetic transformation methodology, molecular genetic approaches to the study of selected plant systems, and prospects for plant improvement using biotechnology. The course is directed at undergraduates who wish to become familiar with plants as experimental organisms. Selected topics attempt to illustrate the uniqueness of plant life and how it differs from other systems.

BIOPL 344  Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 342. May not be taken for credit after BIOPL 244. Similar to BIOPL 244 but at a more advanced level. Lab, W 1:25–4:25; disc, W 12:20. Staff. Experiments exemplify concepts covered in BIOPL 342 and offer a variety of biological and biochemical techniques, including use of small amounts of radioisotopes, with emphasis on experimental design.

BIOPL 345  Plant Anatomy
Fall. 4 credits. Limited to 15 students. Prerequisite: one year of introductory biology or a semester of botany. Offered alternate years. Lecs, M W 9:05, labs, M W 2–4:25. D. J. Paolillo. A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOPL 346  Algal Physiology
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and BIOPL 242 or 342, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1997–98. Lecs, T R 8:30–9:55. T. G. Owens. This course takes an interdisciplinary approach to the study of algae with an emphasis on the physiology, biochemistry, and ecology of this diverse group of organisms. The algal classes are briefly described with consideration of traditional and emerging criteria for classification of the algae.
majority of the course focuses on interactions of algae with the physical/chemical environment, uptake of inorganic compounds, algal photosynthesis, metabolic strategies, and population dynamics of planktonic algae and benthic macrophytes. There is no laboratory section with this course.

**BIOL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants**

Fall. 2 credits. Limited to 24 students. Prerequisite: BIOL 343 or permission of instructor. Concurrent enrollment is BIOL 342 encouraged. S-U grades optional. Lab, W 12:25–4:25.

M. E. Nausheralah.

The laboratory provides experience in handling and experimenting with the plant Arabidopsis thaliana. Selected experiments include the preparation and analysis of nucleic acids, methods used in the detection and isolation of plant genes, analysis of gene expression using antibody and nucleic acid probes, mutant isolation, and methods of gene transfer to plants.

**BIOL 348 The Healing Forest**

Spring. 2 credits. Prerequisites: BIOL 247 or BIOL 241, 243, or 248 or permission of instructor. Lect/disc, R 2:30–4:25.

An ethnobotanical consideration of the role of plants in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

**BIOL 440 Phylogenetic Systematics**

Fall. 4 credits. Limited to 24 students.

Prerequisite: graduate standing or permission of instructor. Offered alternate years. Not offered 1997–98. Lect, T R 10:10; labs, T R 2:00–4:25.

K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to classical cladistics using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

**BIOL 441 Systematics and Evolution of Crops**

Fall. 2 credits. Prerequisite: an advanced-level course in the plant sciences with taxonomic content or permission of instructor. Offered alternate years. Not offered 1997–98. Lect, R 12:20–2:15.

D. M. Bates.

An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultivars, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexploited plant resources are among the topics considered.

**BIOL 442 Current Topics in Ethnobiology**

Fall. 2 or 4 credits (4 credits with an independent research component and term paper).

Explorations of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnohistory, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.

**BIOL 443 Topics and Research Methods in Systematics**

Fall or spring. 1–2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. A series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester.

**BIOL 444 Plant Cell Biology**

Fall. 4 credits. Limited to 24 students.

Prerequisites: one year of introductory biology or permission of instructor. Lects, M W F 9:05; lab, M or W 1:25–4:25.

R. O. Wayne.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

**BIOL 445 Photosynthesis**

Fall. 3 credits. Prerequisites: CHEM 104 or 208, MATH 106 or 111, and either PHYS 102 or 208 or permission of instructor. Offered alternate years. Not offered 1997–98. Lects, M W F 10:10. T. G. Owens.

A detailed study of the processes by which plants use light energy to grow. Structure of the photosynthetic apparatus, light absorption and antenna processes, photochemistry, and electron transport are emphasized. The course incorporates biophysical, biochemical, physiological, and molecular aspects of photosynthesis. Photosynthetic carbon metabolism is not covered in detail. Discussions include relevant material in bacterial, algal, and higher-plant photosynthesis.

**BIOL 447 Molecular Systematics**

Fall. 3 credits. Prerequisites: BIOES 278 or BIOGD 281 or BIOBM 332, or written permission of instructor. Offered alternate years.

The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phylogeny reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelar genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

**BIOL 448 Plant Evolution and the Fossil Record**

Spring. 3 credits. Prerequisite: BIOL 241 or equivalent, or permission of instructor. Offered alternate years. Not offered 1997–98. Lects, T R 9:05; lab, R 12:20–2:15. L. J. Crepet.

An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

**BIOL 453 Principles and Practice of Historical Biogeography (also Entomology 453)**

Fall. 3 credits. Prerequisite: a course in systematic or paleontology of instructor. S-U grades optional. Offered alternate years. Lects, T R 10:10; lab/disc, R 2:30–4:25. J. K. Liebher, M. A. Luckow.

This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.

**BIOL 466 Physiological Plant Ecology, Lectures (also BIOES 466)**

Spring. 3 credits. Limited to 35 students.

Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Lects, T R 10:10–11:25; optional disc to be arranged. T. E. Dawson.

For course description, see BIOES 466.

**BIOL 468 Physiological Plant Ecology, Laboratory (also BIOES 468)**

Spring. 2 credits. Limited to 15 students.

Prerequisite: previous or concurrent enrollment in BIOL 466. Offered alternate years. Lab, T 12:25–4:25, plus additional lab hours to be arranged; 1 weekend field trip required. Fee, $15. T. E. Dawson.

For course description, see BIOES 468.

**BIOL 461 Laboratory in Plant Molecular Biology**

Spring. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. Students (including graduate students) must preregister by Nov. 29, in the Section of Plant Biology office (Room 228, Plant Science Building). S-U grades optional. Lab, T 9:05–4:30. J. B. Nasrallah, M. R. Hanson, S. D. Tanksley.

Selected experiments on genome organization, gene expression, and gene transfer in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

**BIOL 642 Plant Mineral Nutrition (also Soil, Crop, and Atmospheric Sciences 642)**

A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.
BIOL 643 Plant Physiology, Advanced Laboratory Techniques
Spring. 4 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only. Offered alternate years. Lab, T or W 8–5:00; disc, M 4:30–5:30. Staff.
An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes: fluorescence microscopy, infrared CO₂ analysis, gel electrophoresis and Western blots, cellular electrode measurements, microtiter plate technology for enzyme assays, sensitive growth measurements, HPLC and GC-MS, and computer interfacing with laboratory equipment.

BIOL 644 Plant Growth and Development
Spring. 3 credits. Prerequisites: BIOL 345 and either 242 or 342 or their equivalents, or written permission of instructor. Offered alternate years. Lecs, M W F 9:05. P. J. Davids, D. J. Paolillo. Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apical tissue development, organ formation, embryonic development, gene regulation, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.

BIOL 645 Families of Tropical Flowering Plants
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered every three years. Not offered 1997–98. Lecs and disc, F 11:15. K. C. Nixon.
The families of flowering plants encountered solely or chiefly in tropical regions are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in the families for the student venturing into the tropics.

BIOL 646 Families of Tropical Flowering Plants: Field Laboratory
Intersession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: BIOL 243 or 248 or equivalent. Recommended. BIOL 645. S-U grades only. For more details and application, contact the L. H. Bailey Hortorium, 407 Mann Library. Offered every three years. Not offered 1997–98. K. C. Nixon.
An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with laboratory analysis of available materials in a "whole biology" context.

BIOL 647 Seminar in Systematic Botany
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of instructor required for undergraduates. S-U grades optional. Sem, T 11:15–1:10. Bailey Hortorium staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

BIOL 648 Plant Biochemistry
Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, lipids, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

BIOL 649 Transport of Solutes and Water in Plants
Fall. 3 credits. Prerequisite: BIOL 342 or equivalent. Offered alternate years. Lecs, T R 10:10–11:30. R. M. Spanswick.
Transport of ions, water, and organic materials in plants; mechanisms of ion transport; relationships between ion transport and metabolism; ion uptake and transport in higher plants; phloem transport, and water relations of single cells and whole plants.

BIOL 651 Quantitative Whole-Plant Physiology
An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

BIOL 652 Plant Molecular Biology II
Spring. 1–4 credits (1 credit per section). Prerequisites: BIOLGD 281 and BIOMM 330 or 332, or their equivalents. Recommended: BIOMM 331. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Molecular Plant-Pathogen Interactions (also Plant Pathology 662)
An examination of the molecular properties that control the development of host-parasite interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

Section 02 Molecular Aspects of Plant Development
The molecular genetics of plant development. This module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature and the operation of the vegetative shoot apical meristem. The module is a companion to BIOL 653, Sec 04 (Plant Development I), which covers molecular aspects of reproductive development.

Section 03 Molecular Plant-Microbe Interactions (BIOMI 652)
Course focuses on the interactions of Agrobacterium and Rhizobium with plants. Topics on Agrobacterium-plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of Agrobacterium to produce transgenic plants. Topics on Rhizobium-plant interactions include regulation of nitrogenase activity and expression, organization and function of the sym plasmid, nodule development, and plant genetics involved in plant-microbe interaction.

Section 04 Plant Gene Evolution and Phylogeny
Practical applications of molecular systematics: evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and ology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns. The principles of distance and parsimony methods are described, and computer methods for reconstructing gene phylogenies are discussed.

BIOL 653 Plant Molecular Biology I
Fall. 1–5 credits (1 credit per section). Prerequisites: BIOLGD 281 and BIOMM 330 or 332, or their equivalents. Recommended: BIOMM 331. S-U grades optional.
A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Concepts and Techniques in Plant Molecular Biology (also Plant Breeding 653.1)
1 credit. Lecs, M W F 10:10 (12 lecs) Sept. 5-Sept. 29. J. Steffens, D. B. Stern.
A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, mutant production, DNA-protein interactions, and use of antibodies.

Section 02 Plant Biotechnology (also Plant Breeding 653.2 and Plant Pathology 663)
This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.
The module is a companion to BIOPL 652, signaling during pollination, and fertilization. This course covers the organization and measurement of nuclear DNA variation in plants as well as the development and exploitation of molecular markers for breedings and the isolation of genes underlying interesting phenotypes.

Section 04 Molecular Aspects of Plant Development I
1 credit. Lec, M W F 10:10 (12 lecs) Oct. 31-Nov. 26. J. B. Nasrallah. This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral cells and organs are discussed. Topics include the integration of environmental and developmental signals during the transition to flowering, the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Molecular Aspects of Plant Development II, which covers molecular aspects of vegetative development.

Section 05 Molecular Biology of Plant Organelles
1 credit. S-U grades optional. Lec, M W F 1:25 (12 lecs) Oct. 24-Dec. 1. M. R. Hanson (odd years), D. B. Stern (even years). An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization and expression of organelle genomes, RNA editing, organelle transformation, expression of nuclear genes for organelle proteins. Special topics include cytoplasmic male sterility and gene regulation during plastid development.

BIOL 654 Botanical Nomenclature
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Lect and disc to be arranged. Staff. An analysis of the International Code of Botanical Nomenclature and its application to various plant groups.

BIOL 656 Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOL 416 or equivalent background in evolution, or written permission of instructor. Lab and disc to be arranged. K. J. Niklas. A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOL 740 Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:15. Staff. Lectures on current research in plant biology, presented by visitors and staff.

BIOL 741 Problems in Plant Cell and Molecular Biology
Fall. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc to be arranged. Staff. An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOL 742 Current Topics in Plant Molecular Biology
Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology. Written permission of instructor required for undergraduates. S-U grades only. Sem. 1 hour each week to be arranged. Staff. A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

BIOL 743 Current Research in Plant Cell and Molecular Biology
Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program required for undergraduates. Lec to be arranged. Staff. An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOL 745 Current Topics in Systematics
Fall. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorum staff. A seminar with presentations and discussion by students of original research papers in systematic biology.

BIOL 746 Research Seminar in Systematic Botany
Spring. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorum staff. A student-led seminar presentation based on his or her thesis research or a related topic.

BIOL 749 Graduate Research in Botany
Fall or spring. Variable credit. May be repeated for credit. S-U grades only. Hours to be arranged. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOL 840 Current Topics in Plant Physiology
Fall or spring. 2 credits. May be repeated for credit. S-U grades only. Sem to be arranged. Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

COURSES IN MARINE SCIENCE
Cornell offers an extensive listing of undergraduate courses in marine science.

Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Division of Biological Sciences, the undergraduate specialization in Ocean Sciences offered through the course of the Earth Systems Program, and the summer program of courses offered by the Sholes Marine Laboratory. Further information on these programs can be found at Cornell Marine Programs Office, G14 Stimson Hall.

Undergraduate Specialization in Marine Biology and Oceanography
Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the area of marine biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOES 154, The Sea: An Introduction to Oceanography,
2) BIOES 364, Field Marine Science or a 400-level BIOES field course at the Sholes Marine Laboratory,
3) BIOES 402, Marine Ecology.

Undergraduate Specialization in Ocean Sciences
Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOES 373 Marine Invertebrate Zoology
2) BIOES 457 Limnology
3) BIOES 462 Marine Ecology
4) BIOES 478 Ecosystem Biology
5) BIOES 309 Coastal Ecology and Bioclimates
drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only based on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, ailologists, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Shoals Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Simson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). SML and SEA offer a joint SEA/Island semester for 18 credits, which combines both programs (Biosm 364, 365, 367, 368, 372).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

**BIOSM 160 The Oceanography of the Gulf of Maine**

**Summer. 4 credits. S-U grades optional.** Limited to 24 students. A special 2-week course offered aboard the **SSV Corwith Cramer** and at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02543. Estimated cost (includes tuition, room and board aboard ship and on the island, and ferry transportation), $3,140. Daily lectures, labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and nearshore environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend ten days aboard the Sea Education Association’s **SSV Corwith Cramer** and sail from Woods Hole, MA, to the island of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Shoals Marine Laboratory to collect data characteristic of the Isles of Shoals coastal environment.

**BIOSM 161 Introduction to Field Marine Science**

**Summer. 4 credits. S-U grades optional.** A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simson Hall. Estimated cost (includes tuition, room and board), $1,800. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are covered. Specific topics include beach, salt marsh, tidal mud flat, tide pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin bars.
of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans.

**BIOSM 327 Neurobiology of Animal Behavior**
Summer. 4 credits. Prerequisite: one year of college-level biology. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off the coast of Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $1,850. Daily labs, lectures, and fieldwork for 2 weeks. Recommended: course work in neurobiology, psychology, and animal behavior. S-U grades optional. Explore the neural mechanisms underlie all behaviors, from simple reflexes to complex social interactions. The functional elements of those mechanisms often are common to both vertebrate and invertebrate nervous systems.

**BIOSM 329 Ecology of Animal Behavior**
Summer. 4 credits. Prerequisite: one year of college-level biology. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $1,800. Daily labs, and fieldwork for 2 weeks. SML faculty.

**BIOSM 336 Field Marine Science**
Summer. 6 credits. Prerequisite: one year of college biology. A special 4-week course offered twice each summer at Cornell’s Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost includes tuition, room and board, $2,900. Daily lectures, labs, and fieldwork for 5 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

**BIOSM 363 Marine Biology for Teachers**
Designed to give an overview of living marine organisms, and educational resources of the marine environment.

**BIOSM 367 SEA Introduction to Maritime Studies**
4 credits. Prerequisite: one year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost includes tuition, room and board, $1,900. Predominantly for teachers, grades 6 through 12, interested in marine education. Designed to provide a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Students gain hands-on experience with a spectrum of modern research techniques for behavioral, systems, cellular, and molecular approaches. A visiting scientist program allows student interaction with research scientists.

**BIOSM 368 SEA Introduction to Coastal Oceanography**
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 367. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOSM 369 SEA Practical Marine Science**
4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practice of oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic costs are to be paid in place of regular Cornell tuition and fees: tuition for the entire 17-credit SEA Semester, about $8,500; room and board about $2,500.

Instructors for the SEA Semester include faculty of the Sea Education Association and the Woods Hole Oceanographic Institution and others.

**Shore Component (six weeks)**

**BIOSM 366 SEA Introduction to Oceanography**
3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole Research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

**BIOSM 367 SEA Introduction to Maritime Studies**
4 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 367. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

**BIOSM 368 SEA Introduction to Coastal Oceanography**
3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), marine engineering, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

**Sea Component (six weeks)**
Courses 369 and 370 take place aboard the R/V Westward, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V Corwith Cramer, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship’s company of thirty-four. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. Additional professional and support crew are frequently aboard. Up to twenty-four students round out the complement.

**BIOSM 369 SEA Practical Oceanography I**
4 credits. Prerequisite: BIOSM 366. A special 4-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $1,800. Daily labs, lectures, and fieldwork for 10 days. Recommended: course work in biology, physics, chemistry, and geology. Provides an introduction to the basic principles of marine biology, ecology, and oceanography. Students are trained in the practical application of oceanography techniques.
BIOSM 370 SEA Practical Oceanography II
4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student may assume responsibility directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed during the shore component.

BIOSM 372 SEA Practical Oceanography III
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

BIOSM 374 Field Ornithology (An Introduction)
Summer. 2 credits. Prerequisite: one year of college-level biology. S-U grades optional. A special one-week course offered at Sholes Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900. Daily lecs and lab for 1 week. SML staff. An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

BIOSM 402 Marine Pollution
Summer. 4 credits. Prerequisites: one year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900. Daily lecs and fieldwork for 2 weeks. SML staff. An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

BIOSM 409 Ciliophorology
Summer. 2 credits. Prerequisite: permission of instructor. A special 1-week course offered at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900. Daily lecs and lab for 1 week. SML faculty. A special course that examines ciliophoran biology in depth through lectures and laboratory exercises. Topics include a detailed look at the ciliate faunules found in such diverse habitats as salt marshes, sandy sediment interstitial spaces, the Gulf Stream and the Sargasso Sea, marine caves, and benthic hydrothermal vents. Laboratory focuses on examining silver stained specimens, and covers staining techniques, as well as back scattered and secondary SEM and TEM methodologies.

BIOSM 413 Adaptations of Marine Organisms
Summer. 6 credits. Prerequisite: BIOSM 364 or permission of instructor. S-U grades optional. A special 3-week course offered at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board) $2,700. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty. An introduction to the physiological ecology and functional morphology of marine plankton and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; accretion and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore physiology and procedures used to characterize the physical, chemical, and biotic environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in vivo functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

BIOSM 418 Tropical Marine Science
Summer. 8 credits. Limited to 12 students. Prerequisites: one year college-level biology; BioES 261 or BioSM 364 or equivalent, or BIOSM 366 or equivalent experience; recognized SCUBA certification; medical exam; and permission of instructor. fic lab, 2 weeks; 6 weeks monitoring study and individual research projects, field lecs, and computer analysis on computers. D. F. Shapiro. A special 8-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall, 265-3717. Estimated cost (includes room, board, tuition, and airfare) $4,000. For competent divers only. In addition to lectures and laboratories covering the basic principles of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects. This course applies skills learned in the Underwater Research course at Shoals Marine Laboratory.

BIOSM 449 Marine Botany: Ecology of Marine Plants
Summer. 4 credits. Prerequisite: BIOSM 364 or one year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,800. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. An overview of the major marine algal groups, including aspects of anatomy, morphology, development, life histories, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

BIOSM 477 Marine Vertebrates
Summer. 6 credits. Prerequisites: A course in vertebrate biology. S-U grades optional. A special 2-week course offered at Cornell's Sholes Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $2,700. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty. Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch biology, interpretation of life history and parameters from otolith microstructure, teleost skeleton muscle structure and function, population biology and the contemporary Gulf of Maine fishery, Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

ARKEO Archaeology of Maritime Communities (Archaeology 300: Individual Study in Archaeology)
Summer. 2 credits. Prerequisite: a special interest in history. A special 1-week course offered at Cornell's Sholes Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $950. Daily lecs, labs, and fieldwork for 1 week. SML faculty. Fieldwork on various sites and their adjacent offshore marine environments. Artifact analysis, preliminary conservation, and the proper recording of finds are emphasized. Methods of archaeological research, including the use of archives and historical materials, and publication methodologies as well as the larger questions in the discipline are discussed.
ARKEO Archaeology Underwater
(ARCH 319)
Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14, Stimson Hall. Estimated cost (includes tuition, room and board), $1,000. Daily lectures, labs, and fieldwork for 1 week. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

GEOL Marine and Coastal Geology
(Geological Sciences 213)
Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14, Stimson Hall. Estimated cost (includes tuition, room, and board), $900. Daily lectures, labs, and fieldwork for 1 week. SML faculty.

With “the New England coast” defined as beginning at the -200 meter isobath and proceeding westward, the course examines specific geological events and processes important in shaping the area’s bedrock and surficial sediments. Petrology, geophysics, and the Pleistocene geology of the region are integrated into a larger context. The geologic history of New England within the plate tectonic model is emphasized. Examination of insular geology is used to integrate micro-, meso-, and macro-scale geological evolution of continental margins in general. Marine geology is approached through basic geophysical exploration and bottom-sediment collection followed by data analysis and interpretation. Experience aboard a coastal research vessel is an integral part of the course.

NTRES Coastal and Oceanic Law and Policy Resources 306
Summer. 2 credits. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14, Stimson Hall. Estimated cost (includes tuition, room and board), $900. Daily lectures and disc for 1 week. SML faculty.

Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory’s library and personnel is assigned. The week concludes with a mock hearing.

NTRES Wetland Resources
(Natural Resources 417)
Summer. 2 credits. Prerequisite: one year of college-level biology. A special 1-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14, Stimson Hall. Estimated cost (includes tuition, room and board), $900. Daily lectures, labs, and fieldwork. SML faculty.

An examination of coastal and adjacent freshwater wetlands from historical, functional, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

FACULTY ROSTER

New York State College of Agriculture and Life Sciences

Adler, Krag K., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Alani, Eric E., Ph.D., Harvard U. Asst. Prof., Genetics and Development
Anderson, John M., Ph.D., New York U. Prof., Emeritus, Genetics and Development
Banks, Harlan P., Ph.D., Cornell U. Liberty Hyde Bailey Prof. of Botany Emeritus, Plant Biology
Bates, David M., Ph.D., U. of California at Los Angeles. Prof., Bailey Hortorum
Beyenbach, Klaus W., Ph.D., Washington State U. Prof., Physiology/Veterinary Physiology
Brans, Peter J., Ph.D., U. of Illinois. Prof., Genetics and Development
Cade, Thomas J., Ph.D., U. of California at Los Angeles. Prof., Emeritus, Ecology and Systematics
Calvo, Joseph M., Ph.D., Duke U. Prof., Environmental Sciences, Biochemistry, Molecular and Cell Biology
Chabot, Brian F., Ph.D., Duke U. Prof., Ecology and Systematics
Clayton, Roderick K., Ph.D., University of California Inst. of Technology. Prof Emeritus, Plant Biology
Corradino, Robert A., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Crepet, William L., Ph.D., Yale U. Prof., Bailey Hortorum
Daniel, Louise J., Ph.D., Cornell U. Prof., Emeritus, Biochemistry, Molecular and Cell Biology
Davies, Peter J., Ph.D., U. of Reading (England). Prof., Plant Biology
Davis, Jerrold I., Ph.D., U. of Washington. Assoc. Prof., Bailey Hortorum
Dhonet, André A., Ph.D., Ghent State U. (Belgium). Edwin H. Mengers Professor of Ornithology, Ecology and Systematics/Laboratory of Ornithology
Dondero, Norman C., Ph.D., Cornell U. Prof., Emeritus, Microbiology
Doyle, Jeffrey J., Ph.D., Indiana U. Assoc. Prof., Bailey Hortorum
Dress, William J., Ph.D., Cornell U. Prof., Emeritus, Bailey Hortorum
Ealick, Steven E., Ph.D., U. of Oklahoma. Prof., Biochemistry, Molecular and Cell Biology
Emlen, Stephen T., Ph.D., U. of Michigan. Jacob Gould Schurman Professor, Neurobiology and Behavior*
Fitzpatrick, John W., Ph.D., Princeton U. Prof., Ecology and Systematics/Laboratory of Ornithology
Flecker, Alexander, S., Ph.D., U. of Maryland. Asst. Prof., Ecology and Systematics
Fox, Thomas D., Ph.D., Harvard U. Prof., Genetics and Development
Ghiorse, William C., Ph.D., Rensselaer Polytechnic Inst. Prof., Microbiology
Gibson, Jane, Ph.D., U. of London (England). Prof. Emeritus, Biochemistry, Molecular and Cell Biology
Goldberg, Michael L., Ph.D., Stanford U. Prof., Genetics and Development
Hanson, Maureen R., Ph.D., Harvard U. Prof., Genetics and Development
Harrison, Richard G., Ph.D., Cornell U. Prof., Ecology and Systematics*
Harvill, Anthony W., Ph.D., Massachusetts Inst. of Technology/Woods Hole Oceanographic Institution. David R. Atkinson Professor in Ecology and Environmental Biology, Ecology and Systematics/Soil, Crop, and Atmospheric Sciences
Helmann, John D., Ph.D., U. of California at Berkeley. Assoc. Prof., Microbiology
Horie, C. Drew, Ph.D., Massachusetts Inst. of Technology/Woods Hole Oceanographic Institution. David R. Atkinson Professor in Ecology and Environmental Biology, Ecology and Systematics/Soil, Crop, and Atmospheric Sciences
Ishizaki, Eiji, Ph.D., Massachusetts Inst. of Technology/Woods Hole Oceanographic Institution. David R. Atkinson Professor in Ecology and Environmental Biology, Ecology and Systematics/Soil, Crop, and Atmospheric Sciences
Iwaniuk, Roman T., Ph.D., University of California Inst. of Technology. Prof Emeritus, Plant Biology
Keller, Elizabeth B., Ph.D., Cornell U. Prof., Emeritus, Biochemistry, Molecular and Cell Biology
Kemphues, Kenneth J., Ph.D., Indiana U. Prof., Genetics and Development
Kingsbury, John M., Ph.D., Harvard U. Prof., Emeritus, Plant Biology
Koeppe, J. Todd, Ph.D., Brandeis U. Prof., Biochemistry, Molecular and Cell Biology
Kravitz, H. I., Ph.D., U. of California at Los Angeles. Assoc. Prof., Physiology/Veterinary Physiology
Klucke, Melissa A., Ph.D., University of California Inst. of Technology. Prof Emeritus, Plant Biology
Koch, David R., Ph.D., Cornell U. Assoc. Prof., Bailey Hortorum
Koch, David R., Ph.D., Cornell U. Assoc. Prof., Bailey Hortorum

Booker, Ronald, Ph.D., Princeton U. Assoc. Prof., Neurobiology and Behavior
Brechtmann, Anthony P., Ph.D., Leeds U. (England). Prof., Biochemistry, Molecular and Cell Biology
Brown, William J., Ph.D., U. of Texas Health Science Center at Dallas. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Capanoica, Robert R., Sc.D., Massachusetts Inst. of Technology. Prof. Emeritus, Neurobiology and Behavior
Dawson, Todd E., Ph.D., U. of Washington. Assoc. Prof., Ecology and Systematics
Dechter, David, Ph.D., Harvard Med. School. Asst. Prof., Neurobiology and Behavior
Feigenson, Gerald W., Ph.D., California Inst. of Technology. Prof., Biochemistry, Molecular and Cell Biology
Geber, Monica A., Ph.D., U. of Utah. Asst. Prof., Ecology and Systematics
Gibson, Quentin H., Ph.D./D.Sc., Queen's U. (Northern Ireland). Greater Philadelphia Professor Emeritus in Biological Sciences, Biochemistry, Molecular and Cell Biology
Gillbert, Perry W., Ph.D., Cornell U. Prof. Emeritus, Neurobiology and Behavior
Halpern, Bruce P., Ph.D., Brown U. Prof., Neurobiology and Behavior/Psychology
Hedin, Lars O., Ph.D., Yale U. Asst. Prof., Ecology and Systematics
Heppel, Leon A., Ph.D., U. of California at Berkeley. Prof. Emeritus, Biochemistry, Molecular and Cell Biology
Hess, George P., Ph.D., U. of California at Berkeley. Prof., Biochemistry, Molecular and Cell Biology
Hinkle, Peter C., Ph.D., New York U. Prof., Neurobiology and Behavior
Huffaker, Tim C., Ph.D., Massachusetts Inst. of Technology. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Karplus, P. Andrew, Ph.D., U. of Washington. Assoc. Prof., Biochemistry, Molecular and Cell Biology
Kennedy, Kenneth A. R., Ph.D., U. of California at Berkeley. Prof., Ecology and Systematics
Leonard, Samuel L., Ph.D., U. of Wisconsin. Prof. Emeritus, Genetics and Development
McCobb, David, Ph.D., U. of Iowa. Asst. Prof., Neurobiology and Behavior
MacDonald, June M. Fessenden, Ph.D., Tufts U. Assoc. Prof., Biochemistry, Molecular and Cell Biology/Program on Science, Technology, and Society
McFarland, William N., Ph.D., U. of California at Los Angeles. Prof. Emeritus, Ecology and Systematics
Morin, James G., Ph.D., Harvard U. Prof., Ecology and Systematics
Nicholson, Linda, Ph.D., Florida State U. Asst. Prof., Biochemistry, Molecular and Cell Biology
Podleski, Thomas R., Ph.D., Columbia U. Prof., Neurobiology and Behavior
Provine, William B., Ph.D., U. of Chicago. Charles A. Alexander Professor of Biological Sciences, Ecology and Systematics/History
Salpeter, Miriam M., Ph.D., Cornell U. Prof., Neurobiology and Behavior/Applied and Engineering Physics
Seyler, Thomas D., Ph.D., Harvard U. Prof., Neurobiology and Behavior
Sherman, Paul W., Ph.D., U. of Michigan. Prof., Neurobiology and Behavior
Turgeon, Robert, Ph.D., Carleton U. (Canada). Prof., Plant Biology
Wallace, Bruce P., Columbia U. Prof. Emeritus, Genetics and Development
Wilson, David B., Ph.D., Stanford U. Prof., Biochemistry, Molecular and Cell Biology
Wolfner, Mariana F., Ph.D., Stanford U. Prof., Genetics and Development

Other Teaching Personnel
Albrecht, Genia S., Ph.D., U. of Washington. Sr. Lecturer, Biochemistry, Molecular and Cell Biology
Eberhard, Carolyn, Ph.D., Boston U. Sr. Lecturer, Plant Biology
Johnson, Bruce R., Ph.D., Boston U. Sr. Lecturer, Neurobiology and Behavior

Joint Appointees
Adkins-Regan, Elizabeth, Prof., Psychology/Neurobiology and Behavior
Levin, Simon A., Adjunct Prof., Princeton U./Ecology and Systematics
Likens, Gene E., Adjunct Prof., Institute of Ecosystem Studies/Ecology and Systematics

New York State College of Veterinary Medicine
Fortune, Joanne E., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology
Gasteiger, Edgar L., Ph.D., U. of Minnesota. Prof. Emeritus, Physiology
Gilmour, Robert F., Ph.D., SUNY Upstate Medical Center. Assoc. Prof., Physiology
Robertshaw, David, Ph.D., Glasgow U. (Scotland). Prof., Physiology/Veterinary Physiology
Tapper, Daniel N., Ph.D., Cornell U. Prof. Emeritus, Physiology/Veterinary Physiology
Wasserman, Robert H., Ph.D., Cornell U. Prof., Physiology/Veterinary Physiology/Nutritional Sciences

Other Teaching Personnel
Concannon, Patrick W., Ph.D., Cornell U. Sr. Lecturer, Physiology

Joint Appointees
Houpt, Katherine A., Prof., Veterinary Physiology
Houpt, T. Richard, Prof., Veterinary Physiology
Nathanielsz, Peter W., Leading Prof., Clinical Sciences/Veterinary Physiology
Wootton, John F., Prof., Veterinary Physiology

College of Engineering

Joint Appointees
Cisne, John L., Assoc. Prof., Geological Sciences/Biological Sciences
Jelinski, Lynn W. Prof., Biotechnology Program/Biological Sciences
Webb, Watt W., Prof., Applied and Engineering Physics/Biological Sciences

Division of Biological Sciences
Stinson, Harry T., Jr., Ph.D., Indiana U. Prof., Biological Sciences/Genetics and Development

Joint Appointees
Snedeker, Suzanne M., Asst. Prof., Center for the Environment/Biological Sciences

Division of Nutritional Sciences

Joint Appointees
Aron, William J., Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology
Bensadoun, Andre, Prof., Nutritional Sciences/Physiology
Kazarinoff, Michael N., Assoc. Prof., Nutritional Sciences/Biochemistry, Molecular and Cell Biology

Wright, Lemuel D., Ph.D., Oregon State Coll. Prof. Emeritus, Nutritional Sciences/Biochemistry, Molecular and Cell Biology

*Joint appointment with the College of Arts and Sciences

COLLEGE OF ENGINEERING

ADMINISTRATION
John E. Hopcroft, dean
Michael S. Isaacson, associate dean for research and graduate studies
Kenneth C. Hover, associate dean for undergraduate programs
Mark K. Spiro, associate dean for administration
Deborah Cox, assistant dean for student services
Marsha Pickens, assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.

Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.

Cornell programs and centers of special interest in engineering include the following:

Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.

Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.

Cornell High Energy Synchrontron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.

Materials Science Center. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.

National Astronomy and Ionosphere Center. The world's largest radio-telescope facility, operated by Cornell in Arecibo, Puerto Rico.

National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

Power Systems Engineering Research Center. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.

Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

SRC Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.

General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY
Bachelor of Science (B.S.) degrees are offered in the following areas:

Agricultural and Biological Engineering
Chemical Engineering
Civil Engineering
College Program
Computer Science
Electrical Engineering
Engineering Physics
Geological Sciences
Materials Science and Engineering
Mechanical Engineering
Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.

Students interested in bioengineering may arrange a suitable curriculum through a bioengineering option within one of the field programs or through the College Program.
Information about the bioengineering option is available in the Engineering Advising office, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering, the major offered by the Department of Agricultural and Biological Engineering, or the Science of Earth Systems (SES) option offered by the Department of Geological Sciences. Double majors combining environmental science and engineering are feasible.

*Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

°Freshman Writing Seminars are offered by over thirty different departments in sequence.

All students considering the environmental science and engineering option (designated by ENGRI) and are to be taken by engineering students.

In general, students intending to affiliate with the field program must have taken at least one year of calculus (MATH 191 or 193) before taking PHYS 213. CHEM 211 is a course designed for students who have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. To major in agricultural and biological engineering and become jointly enrolled in the Colleges of Agriculture and Life Sciences and Engineering, students must meet the requirements of the field program, including proficiency in swimming to satisfy this requirement. Technical Writing

In addition to the two Freshman Writing Seminars required, engineering students must take a course that includes a significant amount of technical and scientific writing. This course may be used to satisfy another graduation requirement. A student can fulfill the technical writing requirement by enrolling in an engineering course specifically designed to include a writing-intensive component or by taking a course in technical or scientific writing. Courses that currently satisfy this requirement are ENGRD/A&EP 264, CHEM E 432, COMM 352, COMM 360, COMM 363, ELE E 215, ENGRG E 350, ENGRG E 435, M&A E 427, M&A E 435, and M&A E 443-444 if both courses are taken. Students participating in the Engineering Cooperative Program may also arrange for a writing-intensive co-op experience to satisfy this requirement. Updated information on these approved courses may be obtained from the Engineering Advising office, 167 Olin Hall.

*Please note that enrollments are limited in COMM and ENGRG writing courses.

Computing

In either the first or second term of their freshman year, students normally take COMS 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, ENGRD/COM S 211 or 212, ENGRD/COM S 222, ENGRD/CEE 241, ENGRD/A&EP 264, ELE E 423, M&A E 389, M&A E 489, M&A E 575, M&A E 578, and M&A E 670. The recommended choice for students intending to enter the Field Program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 211, 222 or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 211 or 212; in Electrical Engineering, ENGRD 211; in Mechanical Engineering, M&A E 389, M&A E 489, M&A E 575, or M&A E 670; and in Operations Research and Engineering, ENGRD 211.

Engineering Distribution

Three engineering distribution courses (9 credits) are required. One course must be an Introduction to Engineering Course (designated by ENGRD) and is to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for current course offerings. The other two distribution courses must be selected from the following categories listed below. A student may use any one of the possible substitutions described.
from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No freshman seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- No more than 3 credits toward this requirement may be taken in category (d).
- At least two courses in either category (a) or (b) must be from the same field of study. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising office.

**a) Humanities or History**

American Studies 101, 201, 202
Architecture 131, 132, 181, 182
Art 317, 318
Africana Studies 202, 204, 205, 211, 280, 285, 304, 510, 561, 570, 381, 422, 425, 431, 432, 435, 455, 475, 483
Anthropology 290, 451, 452, 453, 455
Archeology (courses in Old World Archeology and 493)
Asian Studies (courses in Asian art, literature, religion or cultural history)
Biology and Society 201, 301, 306, 361, 382, 404, 442
Communication 116, 120, 314, 410, 416, 420
Consumer Economics and Housing (110, 111, 247, and any course having one or more of these as a prerequisite)
Design and Environmental Analysis 150, 250
Economics (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301-302 and not 101-102; unless they have had no calculus.)
Education 210, 212, 271, 311, 317, 378, 415, 477
Government (all courses)
Human Development and Family Studies (all courses)
Human Service Studies (all courses)
International and Comparative Labor Relations (all courses)
Labor Economics (all courses except 345 and 448)
LINGUISTICS (all courses)
Natural Resources 201
Organizational Behavior (all courses)
Rural Sociology (all courses)
Sociology (all courses)
Textiles and Apparel 245

2) **Materials science**

ENGRD 261, Introduction to Mechanical Properties of Materials

3) **Mechanics**

ENGRD 202, Mechanics of Solids

ENGRD 203, Dynamics

Students in the Field Program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) **Probability and statistics**

ENGRD 270, Basic Engineering Probability and Statistics

Students in the Field Program in Electrical Engineering may substitute ELE E 310 for ENGRD 270. Students in the Field Program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

5) **Electrical sciences**

ENGRD 210, Introduction to Electrical Systems

ENGRD 231, Introduction to Digital Systems

ENGRD 264, Computerized-Instrumentation Design

6) **Thermodynamics and energy balances**

ENGRD 219, Mass and Energy Balances

ENGRD 221, Thermodynamics

7) **Earth and life sciences**

ENGRD 201, Introduction to the Physics and Chemistry of the Earth

ENGRD 250, Engineering Applications in Biological Systems

8) **Biology and chemistry**

BIO G 101 and 105, Biological Sciences, Lecture and Laboratory

BIO G 105, Introductory Biology

BIO G 107, General Biology (summer only)

CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Chemical Engineering: ENGRD 219

Civil Engineering: ENGRD 202, and ENGRD 219 (for environmental option)

Computer Science: ENGRD 211 or ENGRD 212

Electrical Engineering: ENGRD 231 (co-enrollment in ELE E 232 strongly recommended)

Materials Science and Engineering: ENGRD 261

Mechanical Engineering: ENGRD 202

Operations Research and Engineering: ENGRD 270

**Liberal Studies Distribution**

The six required liberal studies courses (totaling at least 18 credits) may be chosen

**Russian Literature** (all courses)

Science and Technology Studies 233, 433, 444, 525

**Spanish Literature** (all courses)

Theater Arts (only courses in Theater Studies, film analysis and history)

**b) Social Sciences**

Agricultural Economics (ARME) 100, 250, 430, 431, 432, 450, 464

Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)

Archeology (all courses except those in Methodology and Technology)

Architecture 342

Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)

Biology and Society 201, 301, 406, 407

City and Regional Planning 100, 101, 314, 361, 382, 404, 442

Communication 116, 120, 314, 410, 416, 420

Consumer Economics and Housing (110, 111, 247, and any course having one or more of these as a prerequisite)

Design and Environmental Analysis 150, 250

Economics (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301-302 and not 101-102; unless they have had no calculus.)

Education 210, 212, 271, 311, 317, 378, 415, 477

Government (all courses)

Human Development and Family Studies (all courses)

Human Service Studies (all courses)

International and Comparative Labor Relations (all courses)

Labor Economics (all courses except 345 and 448)

LINGUISTICS (all courses)

Natural Resources 201

Organizational Behavior (all courses)

Rural Sociology (all courses)

Sociology (all courses)

Textiles and Apparel 245

c) Foreign Language
This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to 6 advanced placement credits equal to two courses according to these rules.

d) Expressive Arts
African Studies 303, 425, 430
Art (studio courses)
Biological Sciences 208, 209
Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)
Design and Environmental Analysis 101, 102, 114
Engineering (all Engineering Communications courses, which are designated ENGRC)
English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)
Floriculture (courses in Freehand Drawing and Scientific Illustration)
Industrial and Labor Relations 452
Music (courses in musical performance, musical organizations and ensembles; three 1-credit courses equals one course)
Theater Arts (all courses except those listed in category (a) above)

Electives
• Approved electives—six (6) credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:
1. One Introduction to Engineering course (ENGRI).
2. Engineering distribution courses.
3. Courses stressing written or oral communication.
4. Upper-level engineering courses.
5. Advanced courses in mathematics.
6. Rigorous courses in the biological and physical sciences.
7. Courses in business, economics, or language (when they serve the student’s educational and academic objectives).
8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
   • Field approved electives—Nine (9) credits (approved by engineering field program faculty and faculty advisers). Students should refer to the Field Program curricula for descriptions of courses that meet this category.
   • To ensure breadth of engineering studies, field programs will also include nine (9) hours of courses outside the field.

Social Issues of Technology
It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed within the “Science and Technology Studies” undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising Office
From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women’s Programs in Engineering office provide additional specialized services.

Freshman Year Requirements
By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:
• MATH 191 (or 193) and MATH 192
• Two of the following: CHEM 211, 207, 208, PHYS 112, 213, 214
• COM S 100
• Two (2) Freshman Writing Seminars
• One (1) Introduction to Engineering course (ENGRI designation)
• Two (2) Physical Education courses
*Students with an interest in pre-med, chemical engineering, the environmental option in civil engineering, or the science of earth systems option in geological sciences should enroll in the CHEM 207-208 sequence during their freshman year.*

Affiliation with a Field Program
Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field consultant's office in the field of their choice and completing the "Application for Field Affiliation" form. To affiliate with a field program, students must have a 2.0 cumulative grade point average and (2) have satisfied the field's course and grade requirements as specified below:

Field Program Courses and Minimum Grade Requirements
Agricultural and Biological Engineering
No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent.
Applied and Engineering Physics
2.7 GPA in all mathematics and physics courses
Chemical Engineering
No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses
Civil & Environmental Engineering
A 2.0 GPA in all engineering and science courses; for students in the civil engineering option a grade of C- in ENGRD 202, for students in the environmental option a grade of C- in ENGRD 219.
Computer Science
A grade of B- in COM S 280, ENGRD 211 or 212 and all mathematics courses
Electrical Engineering
A grade of C or better in all 200-level mathematics and physics courses, and either ELE E 210 or ENGRD 231
Geological Sciences
Good academic standing in the College of Engineering
Materials Sciences & Engineering
A grade of C in ENGRD 261
Mechanical & Aerospace Engineering
A grade of C- in mathematics and science courses and ENGRD 202
Operations Research
A grade of C- in MATH 191 (OR 193) and 192, and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation)

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

College Program
Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work.

Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a coherent program from professors in the proposed major and minor subject areas. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the
College Program should have a 3.0 cumulative grade point average. Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected non-engineering area. The combinations must clearly form an engineering education in scope and in substance and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives. Further information about the College Program may be obtained from the associate dean for undergraduate programs, 222 Carpenter Hall.

Important Note: Because no single standardized curriculum exists, the College Program is not accredited. College Program students who intend to seek legal licensing as a Professional Engineer should be aware that this non-accredited degree program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination.

**Bioengineering Option**

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least one from the bioengineering course list. Each student interested in the bioengineering option can request (through the Engineering Undergraduate Programs and Student Services office) a faculty consultant who will advise the student in course selection for this option. The bioengineering faculty consultant is in addition to the student's regular academic adviser.

A list of approved courses is available in the Engineering Advising office, 167 Olin Hall or in the Engineering Undergraduate Programs and Student Services office, 222 Carpenter Hall.

**International Programs**

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study. An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in the Engineering Advising office, 167 Olin Hall. Information on co-op programs abroad is available from the Engineering Professional Programs office in 148 Olin Hall.

**Dual Degree Option**

A special academic option, intended for superior undergraduate students, is a three-year program in which both a Bachelor of Arts and either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art and Planning may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those interested should contact the appropriate coordinators of dual degree programs at the following locations: 172 Goldwin Smith Hall (for Arts and Sciences); or 135 East Sibley Hall (for Architecture and Planning) and the associate dean for engineering undergraduate programs in 222 Carpenter Hall or in the Engineering Advising office, 167 Olin Hall.

**Double Major in Engineering**

The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field in the normal way and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Information is available from the Engineering Advising office, 167 Olin Hall, and the individual field consultant offices.

**Engineering Communications Program**

The ability to communicate effectively is an essential aspect of successful professional practice. The Engineering Communications Program offers instruction in written, oral, and visual presentation of information. Engineering Communications (ENGRG 380 and Communications for Engineering Managers (ENGRG 435) are three-credit seminars designed to give students a thorough introduction to these areas. Material from real-life engineering contexts is analyzed, and many assignments are presented as professional case studies. Students write and speak to audiences having different levels of technical expertise and deal with societal, organizational, and ethical issues in communications. These courses fulfill the college's technical writing requirement (see Requirements for Graduation). In addition to offering communications seminars, the program works with the engineering disciplines to integrate communications into technical courses. Occasionally, the program's instructors offer independent studies, projects in technical/professional communications, and courses on topics of special interest. The program awards several annual prizes for writing and oral presentations. For further information, contact the director, 465 Hollister Hall.

**Engineering Cooperative Program**

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid job co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

Sophomores in the upper half of their class are eligible to apply for the co-op program. (Students in computer science and agricultural and biological engineering-related enterprises are eligible although they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

**MASTER OF ENGINEERING DEGREE PROGRAMS**

One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The M.Eng. degrees and the academic fields under which they are described are listed below.

- M.Eng. (Aerospace): Mechanical and Aerospace Engineering
- M.Eng. (Agricultural and Biological): Agricultural and Biological Engineering
- M.Eng. (Chemical): Chemical Engineering
- M.Eng. (Civil & Environmental): Civil and Environmental Engineering
- M.Eng. (Computer Science): Computer Science
- M.Eng. (Electrical): Electrical Engineering
- M.Eng. (Engineering Physics): Applied and Engineering Physics
- M.Eng. (Geology): Geological Sciences
- M.Eng. (Materials): Materials Science and Engineering
- M.Eng. (Mechanical): Mechanical and Aerospace Engineering
- M.Eng. (Nuclear): Nuclear Science and Engineering
- M.Eng. (OR&IE): Operations Research and Industrial Engineering
Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be entered in any one of the fields listed above. This option is attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience.

An M.Eng. option of potential interest to engineers from all fields is the program in engineering management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng. (Civil & Environmental) degree. A new management option in the M.Eng. (Chemical) degree program is also available.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell applicants who will be, at the time of matriculation, eight or fewer credits short of a baccalaureate degree may petition for early admission. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Applicants from foreign universities must submit the results of the Graduate Record Examination aptitude tests and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the U.S. Industry-sponsored internships, which extend the program to two years, are also available to residents of the United States. Application forms and further information are available from the graduate field offices.

Cooperative Programs with the Johnson Graduate School of Management

Two programs culminate in both Master of Engineering and Master of Business Administration degrees. One, which Cornell students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The second program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A.

Undergraduate students at Cornell interested in the six-year program should seek advice and information from the department with whose field they intend to affiliate during their upperclass years. Information about admission to either program and about scholarship aid may be obtained from the Engineering Professional Programs office, 140 Olin Hall.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations; or
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways:

1) They may enroll in a more advanced course in the same subject right away.
2) They may substitute an elective course from a different area.
3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 or 193, 192, 293, and 294 are required.

First-term math (MATH 191 or 193). AP credit may be earned by:

• a score of 3 or 4 on the CEEB BC exam, or
• a score of 4 or 5 on the CEEB AB exam, or
• a passing score on the Cornell departmental exam for first-term math.

First-year math (through MATH 192). AP credit may be earned by:

• a score of 5 on the CEEB BC exam, or
• a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112. AP credit may be earned by:

• a score of 3 or 4 on the mechanics portion of the CEEB exam, or
• a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
• a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 293.

PHYS 213. Students, receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more information contact Professor Rich Galik, the departmental representative. His telephone number is 607/255-3633.

Chemistry: CHEM 207 or CHEM 211 is required.

CHEM 207 or CHEM 211. AP credits may be earned by:

• a score of 5 on the CEEB AP exam, or
• a passing score on the Cornell departmental exam for Chemistry.

Note: Students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in chemical engineering or materials science and engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty adviser.

Computing: COM S 100 is required. AP credit may be earned by:

• a score of 4 or 5 on the CEEB A or AB exam, or
• a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:

• eight credits will be offered to students who receive a 5 on the CEEB AP exam;
• six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office for Academic Affairs, Division of Biological Sciences, 200 Stimson Hall, to discuss proper placement.

Freshman Writing Seminar: Two Freshman Writing Seminars (for a total of six credits) are required.

AP credit for one Freshman Writing Seminar may be earned by a score of 5 on the CEEB AP English exam. A score of 4 on the AP English exam will earn a student three credits in English. These three credits cannot be applied toward the Freshman Writing Seminar requirement, but can be applied toward the expository arts category in the Liberal Studies Distribution requirement. AP credit earned in the humanities and social sciences cannot be used to fulfill the "upper level" liberal studies requirement.
Liberal Studies Distribution: Six courses beyond two Freshman Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.
2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to the Engineering Advising office, 167 Olin Hall. Those who wish to take departmental examinations do so during Orientation Week; permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Curriculum Committee in Academic Standards, Petitions, and Credit (ASPAC).

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from the Engineering Advising office, 167 Olin Hall.

Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

- To apply for transfer credit, students must complete and submit a transfer credit form (one form for each request), accompanied by a course description. Transfer credit forms are available from the Engineering Advising or Registrar's offices and should be submitted prior to enrollment. An official transcript from the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.
- To apply for transfer credit to satisfy requirements in mathematics, science, engineering courses, or Freshman Writing Seminars, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.
- Departmental approval is not required to apply for transfer credit which satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in the Engineering Advising office.
- Cornell does not award credit for courses in which a student has earned a grade of less than C. Schools and departments may stipulate a higher minimum grade.
- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination, as described in the Advanced Credit section.
- After matriculation, no more than 18 credits of transfer or Cornell extramural credit may be used to satisfy bachelor's degree requirements. Summer session courses taken at Cornell are not considered transfer credits.
- Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. No more than 72 transfer credits may be used to meet graduation requirements.
- A more detailed description of the college's regulations governing transfer credit may be found in the pamphlet, Advanced Placement and Transfer Credit for First-Year Engineering Students, as well as the Engineering Undergraduate Handbook, both available from the Engineering Advising office, 167 Olin Hall.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards,
Petitions, and Credit (ASPAC), and the actions of warning, stem warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 12 credits passed, including at least two courses from mathematics, science, and/or engineering;
2. a C- or better in the mathematics course;
3. a semester average of 2.0 or higher;
4. no F, U, or INC grades.

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stem warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 14 credits passed in courses that meet engineering degree requirements;
2. a C- or better in the mathematics course, if one was taken;
3. a semester average of 2.0 or higher;
4. no F, U, or INC grades.

Academic Progress

The total number of credits required for graduation range from 123 to 129, depending upon the field program. Therefore, an average semester credit load ranges from approximately 15 to 16 credits. Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 193), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once, in the following semester.

Success to complete a C- the second time will generally result in dismissal from the engineering program. Many advanced mathematics courses offer mathematics prerequisites, and having to repeat the prerequisite course may delay your progress in the mathematics curriculum.

Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 (without rounding) or higher with no failing, unsatisfactory, missing, or incomplete grades (even in physical education) and 12 credits or more of letter grades. Students may earn Dean's List status retroactively if they meet these criteria after making up incompletes according to college rules.

Graduating with Distinction and Honors Program

Graduating with Distinction

Merit students graduating with a Bachelor of Science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude. Cum laude requires a GPA of 3.50 (either overall or for the last four full-time semesters in Engineering); magna cum laude requires a GPA of 3.75 (based on all credits taken at Cornell); and summa cum laude requires a GPA of 4.0 (based on all credits taken at Cornell). Note: All GPA calculations are minimums and are not rounded.

Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of 3.50. (i.e., the student must also be eligible for one of the three: cum laude distinctions.) If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the major field may recommend that a student graduate with the additional diploma and transcript notation of “With Honors.” For more specific information, see the field program outline in this catalog.

S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one (1) course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elect S-U" course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed add/drop form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

Residence Requirements

Candidates for an undergraduate degree in engineering must also satisfy certain academic and non-academic requirements that pertain to full-time students at Cornell. They must also spend at least three semesters of time affiliated with an engineering field program or with the College Program.

Students who are voluntarily not enrolled at Cornell as full-time students may take individual courses extramurally through the School of Continuing Education and Summer Sessions. Students who have been required to take time off are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs are planned in consultation with the staff of the Engineering Advising office, who can provide information on credit evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division office. Students who wish to transfer out of the College of Engineering can apply at the Engineering Advising office application forms are available in 167 Olin Hall. Students who would enter the college as second-semester sophomores or later must be accepted by a field program as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer into engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in the Engineering Advising office, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows.

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through the Engineering Advising office, the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a conditional leave. This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are
Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition. No more than 18 credits earned while on leave can be used to meet degree requirements.

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks prior to the date the student plans to return to campus.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. In some cases students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student’s academic standing will also be subject to review both at the time the leave is granted and upon the student’s return.

Required Leave: A required leave of absence is imposed if the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is discretionary for courses that are only offered in the fall or the spring semester. Leaves are given when the probability of success is increased substantially by deferring the student’s return by one semester (or, in unusual circumstances, one year).

Rejoining the College
Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to the Engineering Advising office; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student’s activities while away from Cornell, detail any academic work completed during the leave, and explain the courses the student intends to take upon return.

Withdrawal from the College
A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each:

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through the Engineer-

AGRICULTURAL AND BIOLOGICAL ENGINEERING
Program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a joint Bachelor of Science degree from the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in Agricultural and Biological Engineering are offered: Environmental Systems Engineering, Biological Engineering, and Agricultural Engineering. All courses are in engineering, science, mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select application courses in the department in areas that include biotechnology, soil and water management, and environmental and facilities engineering. A state-of-the-art resume referral service is available for students who desire assistance in career and job-search matters. Nearly 300 national companies visit the campus annually to recruit technical graduates. Additional job opportunities are posted electronically, and a state-of-the-art résumé referral service is offered for a small fee. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Further information on all services is available from the Engineering Career Services office, 201 Carpenter Hall (255-5006); http://www.career.cornell.edu/ccs.

Bachelor of Science Curriculum
Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, energy and biodiversity; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate Engineering
The field program requirements are outlined below.

**Basic Subjects**

**Agricultural and Biological Engineering Honors Program**

**Eligibility**

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a Bachelor's degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

**Content**

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry and physics at the 400- and graduate level.

Note: No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Each applicant to the ABEN honors program must have an ABEN faculty advisor to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the College verifies the student's grade-point average, the student will be officially enrolled in the honors program.

**Master of Engineering (Agricultural and Biological) Degree Program**

The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include biological engineering, energy, environmental engineering, environmental management, food engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas. More information is available from the ABEN Student Services office, 207 Riley Robb Hall (255-2173), or by e-mail at abengradfield@cornell.edu.

**APPLIED AND ENGINEERING PHYSICS**

**Bachelor of Science Curriculum**

The undergraduate engineering physics curriculum is designed for students who want to pursue careers in research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine their physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureate is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, engineering management, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The engineering physics program fosters this breadth of opportunity because the student both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman introduction to engineering course); ENGRD 495, Engineering Instrumentation Design (a recommended sophomore engineering distribution course); AEE 330, Modern Experimental Optics (a junior/senior course); AEE 363, Electronic Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and AEE 438, Computational Engineering Physics (a senior computer laboratory).
Undergraduates who plan to enter the Field Program in Engineering Physics are advised to arrange their curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to take some computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director. In addition to the requirements of the Engineering Common Curriculum, the upperclass course requirements of the field program are as follows:

**Course** | **Credits**
--- | ---
A&EP 333, Mechanics of Particles and Solid Bodies | 4
A&EP 355, Intermediate Electromagnetism | 4
A&EP 356, Intermediate Electrodynamics | 4
A&EP 361, Introductory Quantum Mechanics | 4
A&EP 363, Electronic Circuits | 4
A&EP 423, Statistical Thermodynamics | 4
A&EP 434, Continuum Physics | 4
PHYS 410, Advanced Experimental Physics | 4
A&EP 321, Mathematical Physics I; or MATH 421 (applied mathematics) | 4
A&EP 322, Mathematical Physics II; or MATH 422 (applied mathematics) | 4
Applications of quantum mechanics† | 3 or 4
Four technical electives | 12–16

*The Engineering Common Curriculum allows students to take only 4 courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their latter years, and for best maintaining such options as a semester or year abroad, or early graduation.

†Some courses (though the list is not all-inclusive) that will satisfy this requirement are PHYS 444, Nuclear and High-Energy Particle Physics; PHYS 454, Introductory Solid-State Physics; A&EP 438, Computational Engineering Physics I; and Nonlinear Optics; A&EP 609, Nuclear Physics for Applications; ELE E 430, Lasers and Optical Electronics; and ELE E 531, Quantum Electronics I.

If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Areas of concentration.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of dual majors or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of technical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Michael S. Isaacson.

Electives need not be all formal course work: Qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide a sizable flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.

**Engineering Physics Honors Program Eligibility**

The Bachelor of Science degree with honors will be conferred on those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

**Content**

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of evaluation at each successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written consent to the A&EP associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.3.
Master of Engineering (Engineering Physics) Degree Program

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development, or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nano-structure science and technology. Core courses in this specialty include the microcharacterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 660). The design project may focus on such areas as semiconductor materials, device physics, nanostructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate course in physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 nor more than 12 credits)
2) an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3) a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng. (Engineering Physics) degree program should contact Professor H. Craighead.

APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based and interdepartment graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

CHEMICAL ENGINEERING

Bachelor of Science Curriculum

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take CHEM 208 during the freshman year. The program for the last three years, for students who have taken an Introduction to Engineering Course during the first year and entered Cornell Fall 1994 or later is as follows:

*The electives in semester seven and eight comprise 6 credits of field approved electives, and 5 credits of CHEM process or systems elective. CHEM process or systems electives include CHEM 564, Design of Chemical Reactors; CHEM 640, Polymeric Materials; CHEM 643, Introduction to Bioprocess Engineering; CHEM 656, Separations Using Membranes or Porous Solids; CHEM 661, Air Pollution Control.

Applying science electives include BIOM 290, General Microbiology Lectures; BIOM 330, 331, 332, and 333, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEM 640, Polymeric Materials; FOOD 409, Food Chemistry, MS&E 331, Structure of Materials; MS&E 332, Electrical and Magnetic Properties of Materials; MS&E 441, Microprocessing of Materials; MS&E 449, Introduction to Ceramics, MS&E 452, Properties of Solid Polymers; any A&EP course numbered 333 or above; any CHEM course numbered 301 or above; any PHYS course numbered 300 or above.

Students who entered before fall 1994 should contact the field office for a copy of the curriculum.

Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng. (Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and
elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include:

1) two courses in advanced chemical engineering fundamentals chosen from CHEM 711, 713, 731, 732, and 751

2) two courses in applied chemical engineering science chosen from CHEM 520, 564, 566, 640, 663, 656, and 661

3) a minimum of 3 credits of a design project, CHEM 565

Dean's certificate programs in Bioengineering, Engineering Management, Energy Engineering, and Manufacturing are available. A program offered jointly with the Food Science Department is also available, leading to both the Master of Engineering and the Master of Professional Studies degrees.

CIVIL AND ENVIRONMENTAL ENGINEERING

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, students may emphasize structural engineering, geotechnical engineering, hydraulics and hydrology, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, environmental and water resource systems, and hydraulics and hydrology. Sample curricula are available in the school office, 220 Hollister Hall.

Requirements for Admission to the Field:

Students planning to enter the Field Program in Civil and Environmental Engineering are required to complete either ENGRD 202, Mechanics of Solids (for those interested in the Civil option) or ENGRD 219, Mass and Energy Balances (for those interested in the Environmental option) before or during the sophomore year with a grade of C- or better. In addition, the field requires a grade point average of at least 2.0 in engineering and sciences courses and cumulatively for all courses.

Recommended Engineering Distribution Courses:

The recommended engineering distribution course for students planning to enter the environmental engineering option in ENGRD 202, Mechanics of Solids. Students entering the environmental option who have not taken ENGRD 202 will be required to do so as part of the Field Program.

Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;

ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;

ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;

ENGRD 211, Computers and Programming, for students interested in transportation.

Field Program:

These field program requirements will apply to all students in the Classes of 1998 and later.

Environmental Engineering Option

For the Field Program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

Courses Credits
ENGRD 241, Engineering Computation* 3
CHEM 357, Introductory Organic Chemistry 3
BIOMI 290, General Microbiology, Lectures 3
CEE 304, Uncertainty Analysis in Engineering† 4
CEE 323, Engineering Economics 3
CEE 331, Fluid Mechanics 4
CEE 341, Introduction to Geotechnical Engineering 4
CEE 351, Environmental Quality Engineering 3
ABEN 475, Environmental System Analysis 3

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRDC or approved Communications courses. If the technical communications course is taken as an express art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

*ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement.

†ENGRD 270 may be accepted (on petition) as a substitute for CEE 304 in the field program, but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.

Civil and Environmental Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.
2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGRG 470: Undergraduate Engineering Teaching or CEE 401: Undergraduate Teaching in CEE (1–3 credits per semester).

3. Advanced or graduate courses at the 500-level or above. The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

Procedures

Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the Associate Director for all but unusual proposals.

Master of Engineering (Civil) Degree Program

The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program’s 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, and it includes an intensive, full-time, three-week session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 503) and a two-course design project (CEE 501 and 502).
2) Specialization in a major—three to five courses in either environmental engineering, environmental and public systems engineering, geotechnical engineering, hydraulic engineering, remote sensing, structural engineering, or transportation engineering.
3) Two courses in a single related or minor area.
4) Technical electives (up to two courses).

Courses in the minor and electives may consist of graduate or advanced courses in fields related to the major, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the fourth term of study.

COMPUTER SCIENCE

Bachelor of Science Curriculum

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

For details, visit our web site at http://www.cs.cornell.edu/Info/ugrad

The Major

Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

• four semesters of calculus (MATH 111–122–221–222 or 191–192–293–294)
• two semesters of introductory computer programming (COM S 100 and ENGRD 211 or 212)
• a seven-course computer science core (ENGRD 222, COM S 280, 314, 381, 410, 414, and 482)
• two 400+ computer science electives, totaling at least 6 credits
• a computer science project course (COM S 413, 415, 418, 453, 465, or 473)
• a 3+ credit mathematical elective course (ORIE 270, MATH 300+, T&AM 300+, etc.)
• two 300+ courses (field approved electives) that are technical in nature and total at least six credits
• three courses which are related to one another from a discipline other than computer science. These courses must be numbered 300-level or greater and total at least eleven credits.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.

Computer Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:

• maintained a cumulative GPA ≥ 3.50
• qualified for cum laude honors in the College of Engineering
• completed 8 credit hours of COM S course work at or above the 500-level
• completed 6 credit hours of COM S 490 research with a COM S faculty member, (Spread over at least two semesters) obtaining grades of A- or better

Content

Honors courses may not be used to satisfy the COM S 400+ elective requirement or the COM S project requirement.

Timing

Honors' determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: <ugrad@cs.cornell.edu>

The subject line for this message should read "HONORS TRACK". Related questions may also be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255–0982.

Preparation

Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their
Bachelor of Science Curriculum

The undergraduate Field Program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline. Concentrations include computer engineering; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric physics; and semiconductor devices and applications.

Electrical Engineering Field Program

Students planning to enter the Field Program in Electrical Engineering must take ENGRD 231 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 231/ELE E 232 for students without advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entering the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ELE E 210) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

Field Required Courses

- ELE E 210, Introduction to Electrical Systems 3
- ELE E 215, Electrical Systems Laboratory 3
- ELE E 232, Practicum in Digital Systems 1
- ELE E 301, Electrical Signals and Systems I 3
- ELE E 303, Electromagnetic Fields and Waves 3
- ELE E 315, Electronic Circuit Design 4

Field Approved Electives (34-credit minimum in the following categories)

Electrical Engineering Electives 21 minimum
- Electives Outside Field (5 courses) 9 minimum
Total minimum field credits 51

ELE E 310 can be taken in place of ENGRD 270 or TAM 310 to satisfy the college application of probability and statistics requirement.

Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the first semester toward the degree in subsequent years. Students with advanced standing may take one or more graduate-level courses prior to graduation and may actually begin the fifth year Master of Electrical Engineering program in their last semester of undergraduate course work so long as 8 or fewer credits remain toward B.S. degree requirements and a 3.0 GPA has been maintained. Admission must be approved in advance of the last semester of undergraduate work.

Undergraduate Field Program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available in the electrical engineering undergraduate program office, or on the department web page at http://www.ee.cornell.edu.

Maximum technical course scheduling flexibility in the field program is possible for those students who do not complete their 6 credits of College Approved Electives prior to entry into the field program. Accordingly, intended electrical engineering students are advised to consider course selection carefully during their first three terms in engineering.

ELECTRICAL ENGINEERING

ELECTRICAL ENGINEERING

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be fulfilled on schedule.

For further details and assistance in planning a curriculum, students can consult with their advisors, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the first semester in the Field Program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical Engineering Handbook to remain active participants.

Past 20 years of the Electrical Engineering Honors Program Eligibility, Entry, and Continuation

A student may apply to enter the EE Honors Program as early as the beginning of the fifth semester and as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose
would consist of a one-credit seminar on the Honors Seminar for academic credit, but any student in the honors program is required to take the seminar during his or her junior year. The Honors Seminar enrollee will be required to write short papers on one of the topics covered in the seminar. Electrical Engineering faculty members will be expected to give a lecture or short series of lectures as part of the Honors Seminar at least every two or three years. Students in the honors program and other students may attend the Honors Seminar. Other students may attend the Honors Seminar for academic credit, but will be graded on an S/U basis for one credit hour.

Honors Project
Any student in the honors program is required to accumulate at least three credit hours from an honors project consisting either of research, teaching, or directed reading. All Honors Projects should place some emphasis on development of communication skills. A 3-credit teaching-oriented honors project would consist of a one-credit seminar on teaching coupled with two credit hours worth of classroom teaching at the level and intensity of Academic Excellence Workshop facilitators. Research- and reading-oriented honors projects, while similar to the senior projects we now offer, should require explicitly a certain amount of writing.

Additional Coursework
Any student in the honors program is required to take at least four credit hours of advanced ELE E field coursework that has at least a 300-level prerequisite. These four credit hours are in addition to any credit hours required as part of the ELE E field program. The program described above would require honors program participants to amass at least nine credit hours over and above the 126 credit hours required for a B.S. degree; thus an honors degree would require a minimum of 135 credit hours.

Master of Engineering (Electrical) Degree Program
The M.Eng (Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the M.S. degree mainly in its emphasis on engineering design and analysis skills rather than basic research. The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 8 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Although admission to the M.Eng (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

GEOLOGICAL SCIENCES

Bachelor of Science Curriculum
The Department of Geological Sciences offers two options in its field program, the GeoScience Option and the Science of Earth Systems (SES) Option. The GeoScience Option emphasizes the structure, composition, and evolution of our planet, while the SES Option is more concerned with environmental processes and the interactions of water, life, rock, and air that produce our planetary environment.

The GeoScience Option reveals the earth's turbulent history from the formation of our solar system to the plate tectonic cycles that dominate the earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system from the origin of life to the modern inter-glacial phase during which our species has so proliferated. Topics of study also include the processes responsible for earthquakes, volcanic eruptions, and mountain building.

The GeoScience Option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology, and careers in mineral and petroleum exploration or in environmental geology. Alternatively, it is a valuable major for a pre-law or pre-med student.

One additional field-required course and at least one field-approved elective must be taken. Students interested in geobiology or paleontology, or in exploration seismic records. High-pressure, high-temperature mineral, and element analyses, and extensive libraries and computer techniques from GEOL 434; or (d) An approved outdoor field course taught by another college or university (4-credit minimum).

A selection of field-approved electives may provide specializations in: geomorphology, including physical geology and environmental geology; geophysics, including regional-scale geophysics, environmental geophysics, and environmental geology; and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should choose one of the following economics courses among their liberal studies distribution courses. Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of GEO 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth's surface, instruments for highly precise isotopic and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral, and element analysis research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in

Geoscience Option
The GeoScience Option stresses a balanced overview of geological sciences with considerable flexibility in the student's area of specialization achieved by careful selection of field-approved electives. Students are required to take GEOL 201 (ENGRD 201) as an Engineering Distribution course. For students interested in geology or paleontology, BIO G 101-103-102/104 (or BIO G 109-110) are recommended. CHEM 208 may be substituted for PHYS 214.

The Geoscience Option requires the following courses: the introductory outdoor field course, GEOL 210 and 214, and the five core courses, GEOL 326, 355, 356, 375, and 388.

One additional field-required course and at least one field-approved elective must be GEOL 400 through 600-level courses. The core courses may be taken in any reasonable sequence, except that GEOL 355, which is offered in the fall, should be taken before GEOL 356, which is offered in the spring.

GEOL 326, 355, 356, 375 and 375 should be taken relatively early in the major program.

In addition, a requirement for an advanced outdoor field experience may be met by completing one of the following 4-credit options: (a) GEOL 491 (Geological Field Research, 2 credits each) with a significant component of field work; (b) GEOL 491 or 492 based on field observations obtained in GEOL 212 (Special January Field Trip, 2 credits) or GEOL 417 (Field Mapping in Argentina, 3 credits) for a combined 4 credit minimum; (c) GEOL 437 (Geophysical Field Methods, 3 credits) plus at least 1 credit of GEOL 491 or 492 using geophysical techniques: from GEOL 443; or (d) An approved outdoor field course taught by another college or university (4-credit minimum).

A selection of field-approved electives may provide specializations in: geophysics, including physical geology and mineralogy; geology (paleontology), and geology applied to petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should choose one of the following economics courses among their liberal studies distribution courses. Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of GEO 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth's surface, instruments for highly precise isotopic and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral, and element analysis research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in
Science of Earth Systems (SES) Option

The SES Option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. The aim is to prepare students for graduate study and careers across the broad spectrum of earth sciences required for successful understanding and management of our planet. The option provides a rigorous base of environmental science that strongly complements Cornell's programs in environmental and agricultural engineering. The SES Option makes an attractive double major with respect to either the Environmental Engineering Option offered by the Department of Civil and Environmental Engineering or the Agricultural Engineering major offered by the Department of Agricultural and Biological Engineering.

Students are required to take a second semester of chemistry, two semesters of biology, and ENGRD 201 (Physics and Chemistry of the Earth) as one of the Engineering Distribution courses. In addition, students must take one of the two-credit SES Colloquium, which is designed to inform students about the field and to provide a sense of community for SES students and faculty from the several colleges who participate in the SES program. The option requires a set of four core courses, normally taken in the junior or senior years, which provide breadth and integration. An additional set of four intermediate to advanced courses are selected to provide depth and a degree of specialization. These courses permit the student to specialize in atmospheric, hydrologic or ocean sciences, biogeochemistry, environmental geophysics, an approved combination of these areas, or a combination with courses in economics, government, or education in preparation for further study leading to careers in environmental law or management or K-12 education.

The field requirements for the SES Option are summarized as follows. CHEM 208 is required, and may be taken instead of PHYS 214. ENGRD 201 (GEOL 201) is a required engineering distribution course. The Field Program includes BIO G 101/103-102/104 or BIO G 109-110, the four SES core courses listed below, four additional courses selected with the advisor's approval to provide specialization in one or a combination of the areas covered by SES, and four other field-approved electives. Two of the specialization courses will count as field-required courses, and two as field-approved electives. At least three of the field-approved electives must be non-GEOL courses. The four core SES courses include the following:

- Areas of specialization include at present:
  - Climate Dynamics, the study of the physical and chemical processes producing Earth's climate system;
  - Ocean Sciences, the study of the biological, chemical and physical processes at work in the ocean;
  - Hydrological Sciences, the study of the interactions of rock, water, snow and ice on Earth's land surfaces;
  - Biogeochemistry, study of element cycling near Earth's surface and how organisms both mediate and benefit from these fluxes;
  - Environmental Geophysics, remote sensing of Earth's surface and subsurface applied to the study of the environment, global change, and natural hazards;

As alternatives to these specializations, students may select courses in Civil and Environmental Engineering (Environmental Option) or Agriculture and Biological Engineering to obtain a double Major in SES and in either of these two departments.

In addition to faculty in associated with the Department of Geological Sciences, faculty currently associated with the SES program include the following: P. Baveye (ABEN); W. Brutsaert (CEE); R. Bryant (SCAS); T. Dawson; (BIOES); P. Gerasch (ASTR); L. Hedin (BIOES); R. Howarth (BIOES, SCAS); M. Kelley (EE); J.-Y. Farlane (ABEN); W. Philpot, (CEE); S. Riba (SCAS); J. Yavitt (NTRES).

Geological Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Geological Sciences and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

In addition to the minimum graduation requirements, a student must:

1. take at least 9 credits above the minimum required for graduating and approved by the upperclass adviser;
2. have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies;
3. complete an honors thesis involving research (GEOL 491-492, 2 credits each) of breadth, depth, and quality.

Timing

A student interested in completing an honors thesis must, by the beginning of their seventh semester, have a written proposal of his/her honors project accepted by his/her adviser and the director of undergraduate studies.

Procedures

Each application to the Geological Sciences honors program must have a faculty adviser to supervise the honors program. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) is a one-year professional degree that provides students with intensive training for, and a fast-track into, careers in the burgeoning areas of environmental geoscience and resource exploration. Emphasis is on developing skills with cutting-edge geophysical and computational techniques for remote sensing, subsurface imaging, and modeling of subterranean fluid flow. Extensive facilities are available for GIS, image processing, and seismic and georadar field surveying.

Currently, program options include geohydrology and environmental geophysics. Under development is a new option in petroleum exploration, designed for those interested in careers in the resurgent oil exploration industry. Past design projects have included field studies in areas as diverse as the Finger Lakes and the Caribbean.

The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree programs can be found in the college's introductory section.
To continue in good standing in the Field of Materials Science and Engineering, students must:

1. Maintain an overall 2.0 term average.
2. Maintain an average of 2.3, with no grade of C prior to affiliation.
3. Complete MS&E 261 with a minimum grade of C prior to affiliation.

The department's core curriculum consists of all the required MS&E courses including the MS&E distribution course and the four courses comprising the student's area of specialization.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both the departments involved and students are urged to plan such curricula as early as possible.

Material Science and Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Materials Science and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

Content

The requirements for an honors degree in Materials Science and Engineering are:

1. Students must take at least nine credits above the minimum required for graduation in Materials Science and Engineering, so that the minimum number of credits for an honors degree is 135. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level, which must be approved by the upperclass advisers.
2. A senior honors thesis (eight credits) with a grade of at least an A.

Note: Undergraduates typically enter the Honors program at the beginning of their senior year (seventh semester), so that they must have a cumulative GPA equal to or greater than 3.50 at that point.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the Materials Science and Engineering honors program must have a faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the student's grade-point average is verified, the student will be officially enrolled in the honors program.

Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This program consists of 30 credits, including course work and a master's design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

MECHANICAL AND AEROSPACE ENGINEERING

Announcement of the Graduate School

Bachelor of Science Curriculum in Mechanical Engineering

The upperclass Field Program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), and the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering; heat, energy, and power engineering; and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomores who plan to enter the Mechanical Engineering Program take ENGRD 202 (also T&AM 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School is supportive of students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's adviser.

The requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:
The eleven required courses are:

- M&AE 212, Mechanical Properties and Processing of Engineering Materials
- M&AE 221, Thermodynamics
- M&AE 225, Mechanical Design and Synthesis
- T&AM 203, Dynamics
- ELE E 210, Introduction to Electrical Systems
- M&AE 323, Introductory Fluid Mechanics
- M&AE 324, Heat Transfer
- M&AE 325, Mechanical Design and Analysis
- M&AE 326, System Dynamics
- M&AE 427, Fluids/Heat Transfer Laboratory
- M&AE 428, Engineering Design

**Electives**

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

**Field Approved Electives**

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student.

Typically these are two courses chosen from an appropriate subset of the school's upper-class offering.

However, students can petition for approval of two related courses to form a custom concentration.

The standard concentrations are:

- Fluids/Aerospace Engineering, M&AE 305, 306, 423, 500, 507
- Thermo-Fluids M&AE 423, 449, 506
- Materials Processing M&AE 412, 514
- Mechanical Systems M&AE 389, 465, 467, 469, 478, 489
- Vehicle Engineering M&AE 386, 449, 486, 506, 507

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 464, 486, and 489.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and OR&E 270.

One of the field approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum.

Note that courses in economics, business, and organizations are not accepted. Advisers may approve such courses as approved electives.

**Approved Electives**

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences.

Recommendation on Humanities/Social Sciences Electives

Students are encouraged to build a program that includes studies in history of technology, societal impacts of technology, history, foreign languages, ethics, communications, political science, aesthetics, economics, architecture, and flexibility.

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of:

- a technical drawing course in high school or in a community college
- ENGRG 102, Drawing and Engineering Design
- another technical drawing course at Cornell, or
- a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 389 or 489.

The writing requirement of the Common Curriculum is satisfied by M&E 427.

Introduction to Electrical Systems (ELE E 210) may be replaced or supplemented by Electronic Circuits (PHYS 360).

A limited set of third-year courses is offered during the summer under the auspices of the Engineering Cooperative Program.

**Applicability**

The curriculum requirements described above apply to the Class of '98 and beyond. Graduates of the Class of '97 may choose to complete their studies under the previous requirements or those described above. Generally the Sibley School expects the Classes of '96 and '97 to use the requirements described above. More detailed materials describing the Mechanical Engineering Program can be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

**Preparation in Aerospace Engineering**

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

**Master of Engineering (Aerospace) Degree Program**

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, rarefied and non-equilibrium flows, combustion, dynamics and control, CFD, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of the following class; any subsequent changes must also be approved by the committee.

An individual student's curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.
The courses that constitute the major concentration must be graduate-level courses in aerospace engineering. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than those if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

**Master of Engineering (Mechanical) Degree Program**

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, energy and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, CFD, CAE, CAM, etc.

A coordinated program of courses for the entire year is approved by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of class; any subsequent changes must also be approved by the committee. An individual student's curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and enough technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the Manufacturing, Energy, or Electronic Packaging option programs leading to special dean's certificates in those areas.

**NUCLEAR SCIENCE AND ENGINEERING**

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. D. Clark, H. H. Fleischmann, D. A. Hammer, V. O. Kostroun, and S. C. McGuire

**Undergraduate Study**

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

**Master of Engineering (Nuclear) Degree Program**

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specialties. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics.

Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses are included in the 30-credit program:

- **Fall term**
  - NS&E 509, Nuclear Physics for Applications
  - A&EP 612, Nuclear Reactor Theory
  - A&EP 633, Nuclear Engineering
  - Technical elective

- **Spring term**
  - A&EP 651, Nuclear Measurements Laboratory
  - NS&E 545, Energy Seminar
  - Technical elective
  - Engineering design project

Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magneto-hydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- M&AE 651, Advanced Heat Transfer
- ELE E 581, Introduction to Plasma Physics
- ELE E 582, Basic Plasma Physics
- ELE E 471, Feedback Control Systems
- ELE E 472, Digital Control Systems
- A&EP 661, Microcharacterization
- NS&E 484, Introduction to Controlled Fusion: Principles and Technology
- NS&E 621, Radiation Effects In Microelectronics
- MS&E 459, Physics of Modern Materials Analysis

**Program for Applications of Nuclear Analytical Methods (PANAM)**

This new program was initiated in 1993-94. It provides for specialization by Ph.D. candidates with either a major or a minor in NS&E. For those with majors in non-nuclear fields who expect to use nuclear analytical methods in their research, the sequence NS&E 509-591-590 forms a suitable minor in NS&E. The laboratory course 551 has been offered since spring 1989. The lecture course 509, offered for the first time in 1993, covers nuclear physics without requiring quantum mechanics as a prerequisite. For NS&E majors, PANAM offers the opportunity to extend and develop new nuclear-analytical methods, for example, uses of cold neutrons and neutron-depth profiling with conversion electrons. They would normally follow the M.Eng. program in the first year, continue with advanced courses in the second year (including a full quantum-mechanical treatment of nuclear physics), and begin, as early as possible, independent projects as precursors to thesis research.
Bachelor of Science Curriculum in Operations Research and Industrial Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. Exceptional students interested in pursuing graduate study are encouraged to speak with their faculty advisers concerning an accelerated program of study.

A student who intends to enter the Field Program in Operations Research and Industrial Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

**Term 2, 3 or 4**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 211, Computers &amp; Programming or ENGRD 212, Structure and</td>
<td></td>
</tr>
<tr>
<td>Interpretation of Computer Programs</td>
<td>3</td>
</tr>
</tbody>
</table>

**Term 5**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>

</tr>
<tr>
<td>OR&amp;IE 360, Engineering Probability and Statistics II</td>
<td>4</td>
</tr>
</tbody>
</table>

A course in humanities and social sciences 3

Field-approved elective 3

**Term 6**

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 310, Industrial Systems Analysis</td>
<td>4</td>
</tr>
<tr>
<td>OR&amp;IE 321, Optimization II</td>
<td>4</td>
</tr>
<tr>
<td>OR&amp;IE 361, Introductory Engineering Stochastic Processes I</td>
<td>4</td>
</tr>
<tr>
<td>Behavioral science</td>
<td>3</td>
</tr>
</tbody>
</table>

Course in humanities and social sciences 3

The behavioral science requirement can be satisfied by any one of several courses, including the Johnson Graduate School of Management (JGSM) course, NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and ILROB 170, 171, and 320. The adviser must approve the selection in all cases.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Minimum credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 580, Design and Analysis of Simulated Systems</td>
<td>4</td>
</tr>
<tr>
<td>Three upperclass OR&amp;IE electives as described below</td>
<td>9</td>
</tr>
<tr>
<td>Two field-approved electives (at least 3 credits must be outside OR&amp;IE)</td>
<td>6</td>
</tr>
<tr>
<td>Two courses in humanities and social sciences</td>
<td>6</td>
</tr>
<tr>
<td>Two approved electives</td>
<td>6</td>
</tr>
</tbody>
</table>

Available OR&IE electives are as follows:

Manufacturing and distribution systems: OR&IE 416, 417, 451, 524, 525, and 562 and JGSM NBA 641

Optimization methods: OR&IE 431, 432, and 435

Applied probability and statistics: OR&IE 462, 475 (2 credits), 476 (2 credits), 561, 563, 575 (2 credits), and 577

Scholastic requirements for the field are a passing grade in every course, a grade of C- or better in ENGRD 211 and 270, OR&IE 310, 321, 350, 360, 361 (applies to Class of 1999 and later), an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR&IE field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term.

### Operations Research and Industrial Engineering Honors Program

**Eligibility**

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Operations Research and Industrial Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain an average of 2.0 or better for OR&IE courses for the OR&IE field program and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>
<th>Course</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE, or ENGRG 470: Undergraduate Technical Elective</td>
<td>2</td>
</tr>
</tbody>
</table>

### Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

### Procedures

Each application to the OR&IE honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the students faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student's program must also be approved by the associate director of undergraduate studies.

### Master of Engineering (OR&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of man-machine systems, information systems and control systems, and in the financial world.

### General Admission and Degree requirements

Eligibility procedures are described in the introductory "Degree Programs" section. The M.Eng.(OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Industrial Engineering. We also welcome applications from Cornell undergraduates in many other majors, or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in statistics and in computer programming (Pascal or C). Students interested in the Financial Engineering Option should contact the Financial Engineering Option Office in 201 Frank H. T. Rhodes Hall, 607-255-9128. Information concerning industrial internships can be obtained from the Master of Engineering Program Office, 148 Olin Hall.

### Fall Term

<table>
<thead>
<tr>

<td>minimum of 4</td>
</tr>
<tr>
<td>Technical electives</td>
<td>9</td>
</tr>
</tbody>
</table>
At least 12 credit hours of the electives specified above must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. Other restrictions apply. A minimum of 30 credits must be taken to complete the program.

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of ORIE 520, 523, and 560 will take other technical electives in their place):

### Fall term Credits
- ORIE 560, Engineering Probability and Statistics II \[4\]
- ORIE 520, Optimization I \[4\]
- ORIE 522, Topics in Linear Optimization \[1\]
- ORIE 516, Case Studies \[1\]
- ORIE 580, Design and Analysis of Simulated Systems \[4\]
- ORIE 893, Applied OR&IE Colloquium \[1\]
- M. Eng. Project \[1\]

### Spring term Credits
- ORIE 523, Introduction to Stochastic Processes I \[4\]
- ORIE 894, Applied OR&IE Colloquium \[1\]
- M.Eng. Project \[minimum of 4\]
- Technical electives \[6\]

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the Master of Engineering Handbook, which is available in Room 201, Frank H. T. Rhodes Hall.

The project requirement can be filled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals and other service industries.

**Cooperative Program with the Johnson Graduate School of Management**

Undergraduates majoring in operations research and industrial engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning such a combined B.S./M.Eng. /M.B.A. program can be completed in six years.

An advantage for OR&IE majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) An early start on meeting the business-degree requirements permits students accepted into the cooperative program to earn both the M.Eng.(OR&IE) and M.B.A. degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management.

In accordance with this program the candidate would qualify for the B.S. degree at the end of four years, the M.Eng.(OR&IE) degree at the end of five years, and the M.B.A. degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Frank H. T. Rhodes Hall, and at the admissions office of the Johnson Graduate School of Management.

In addition, there are two other programs that combine an M.Eng. (OR&IE) degree and an MBA degree from Cornell. The Twelve-Month MBA Program allows students to obtain both degrees in two academic years plus the intervening summer. The combined M.Eng.-MBA Program allows students to obtain both degrees in a total of five semesters.

### STATISTICAL SCIENCE DEPARTMENT

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

**THEORETICAL AND APPLIED MECHANICS**

**Undergraduate Study**

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

**College Program In Engineering Science**

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

**Master of Engineering (Engineering Mechanics) Degree Program**

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T&AM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.
ENGR 233/433 Topics in Engineering Communications

TBA. 3 credits.
Topics vary as the need and interest arise. Sample topics are: introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology and the law. Fulfills the college technical writing requirement.

ENGR 234/434 Independent Study in Engineering Communications

TBA. Variable credits (1–3). Credit and course level (234 or 434) determined by the amount and intellectual level of the work. Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical graphics, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

ENGR 301 Writing in Engineering

TBA. 1 credit. Prerequisite: permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. This course can only be taken in conjunction with a "writing-intensive" engineering class.

Some "writing-intensive" engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen independent writing of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

ENGR 350 Engineering Communications

Fall, spring, summer. 3 credits. Limited to 20 students per section.
Emphasizes technical and professional writing; also includes oral and visual presentation. Material from real-life engineering situations is analyzed, with case studies and assignments modeled on professional situations. Students learn to adapt language and formats—letters, memoranda, instructions, definitions, proposals, reports—to audiences having different needs and levels of technical expertise. Students also consider organizational and ethical aspects of the communications they encounter and produce. Taught as a workshop, with ample time for discussion. The goal throughout is clear, well-organized, responsible, and forceful professional communication. Fulfills the college technical writing requirement. Fee will be charged to cover photocopying costs.

ENGR 435 Communications for Engineering Managers

Fall, spring. 3 credits. Limited to 20 students per section.
Guidance and practice in professional writing through a variety of assignments, including case write-ups on management issues. Emphasizes working effectively in teams (topics include listening skills, team roles, and respectful disagreement) and communicating with a variety of audiences, particularly technical and managerial audiences. The course is taught as a workshop and focuses on oral as well as written communication skills. Fulfills the college technical writing requirement. Lab fee will be charged to cover photocopying costs.

Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or co-requisites.

ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also GEOL 201)

Spring. 3 credits. Prerequisites: MATH 191 and PHYS 112. L. M. Cathles. Formation of the solar system: accretion and evolution of the earth. The rock cycle: radioactive isotopes and the geological time scale, plate tectonics, rock and minerals, earth dynamics, mantle plumes. The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport. Weathering cycle: chemical cycles, CO₂ (weathering), rock cycle, controls on global temperature (CO₂ or ocean currents), oil and mineral resources.

ENGRD 202 Mechanics of Solids (also T&AM 202)

Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor. Principles of statics, force systems, and equilibrium: frameworks, mechanics of deformable bodies, stress analysis, statically indeterminate problems; mechanical properties of engineering materials; axial force, shear force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

ENGRD 203 Dynamics (also T&AM 203)

Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor. Newtonian dynamics of a particle, systems of particles, a rigid body. Kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigidity-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.

ENGRD 210 Introduction to Electrical Systems (also ELE E 210)

Fall, spring. 3 credits. Corequisites: MATH 293 and PHYS 212. Fundamental circuit elements and laws, circuit analysis techniques, and operational amplifiers circuits. Response of linear systems, with an introduction to complex frequency and phasors, forced response, average power, transfer function, and the frequency spectrum.

ENGRD 211 Computers and Programming (also COM S 211)

Fall, spring, summer. 3 credits. Credit will not be granted for both ENGRD/COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and analysis of algorithms. Java is the principal programming language.

ENGRD 212 Structure and Interpretation of Computer Programs (also COM S 212)

Fall, spring. 4 credits. Credit will not be granted for both ENGRD/COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. ENGRD/COM S 212 covers a wide range of topics in computer science and programming using advanced functional and object-oriented programming languages. ENGRD/COM S 211 focuses on strengthening programming skills in a more conventional programming language (Java), while still introducing important topics in computing. Either course is a suitable prerequisite for further study in the field. Appropriate transfers between ENGRD/COM S 211 and 212 (in either direction) are encouraged during the first few weeks of the semester.

ENGRD 219 Mass and Energy Balances (also CHEM E 219)

Fall. 3 credits. Co-requisite: physical or organic chemistry or permission of instructor. P. Clancy. Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multicomponent systems.

ENGRD 221 Thermodynamics (also M&AE 221)

Fall, spring. 3 credits. Prerequisites: MATH 192 and PHYS 112. The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, vapor and gas power systems, refrigeration and heat pump systems. Thermodynamics relations for simple, compressible substances. Gaseous reactions.

ENGRD 222 Introduction to Scientific Computation (also COM S 222)

Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or MATH 294). An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The Mathlab computing environment is used. Vectorization, efficiency, reliability, and
stability are stressed. Special lectures on parallel computation.

ENGRD 231 Introduction to Digital Systems
Fall, spring. 3 credits. Prerequisite: COM S 100.
An introduction to basic principles, design techniques, and methodology for communication, computer, and information systems, which process digital data streams. Includes Boolean algebra, integrated circuit components, switching circuits, and systems which provide computation, data, voice, and video service.

ENGRD 241 Engineering Computation
(also CEE 241)
Spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Co-requisite: MATH 294. J. F. Abel.
This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations are broached. Applications are drawn from different areas of engineering.

ENGRD 250 Engineering Applications in Biological Systems (also ABEN 250)
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. B. A. Ahnert.
Case studies of engineering problems in agricultural and biological systems, including animal and crop production, environmental problems, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ENGRD 261 Introduction to Mechanical Properties of Materials (also MAE 261)
Fall. 3 credits. S. L. Suss.
This course examines the relationship of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, strength, fracture resistance, creep resistance, or fatigue resistance. Failure-resistance design methods using fracture mechanics.

ENGRD 284 Computerized Instrumentation Design (also A&EE 284)
Fall, spring. 3 credits. Prerequisites: Engr tech 100 or COM S 100. Lec; 1 lab. Fall. T. C. Cook.
This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using an IBM-AT style computer (8088 running Windows). The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermostats, optical sensors, digital temperature control, non-linear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop the ability to write effective written communication skills in the context of science and engineering. A number of rhetorical principles will be presented that can produce clarity in communication without oversimplifying scientific issues. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics
(also OR&IE 270)
Fall, spring. 3 credits. Pre or co-requisite: MATH 298.
This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

Courses of General Interest
Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 102 Mechanical Drafting
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty-two per half-term. Recommended for students without mechanical drawing experience. S-U grades optional.
Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Computer-aided design is integral to the course-work and final design projects.

ENGRG 150 Engineering Seminar
Fall. 1 credit. First-year students only. S-U grades only.
Engineering freshmen meet regularly with their faculty advisors to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and study and examination skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 250 Technology in Society
(also ELE E 250, S&T S 250, HIS 250)
Fall. 3 credits. Meets humanities distribution requirement.
This course will investigate the history of technology in Europe and the United States from ancient times to the present. Topics include the economic and social aspects of industrialization; the myths of heroic inventors like Morse, Edison, and Ford; the government's regulation of technology, the origins of mass production, and the spread of the automobile and microelectronics cultures in the United States.

ENGRG 298 Inventing the Power and Information Society
(also ELE E 298 and S&T S 292)
Spring. 3 credits. Approved for humanities distribution, not as field electives.
Explores the history of electricity in society from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, and computers. Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, and the social relations of this technology.

ENGRG 323 Engineering Economics and Management
(also CEE 323)
Fall. 3 credits. Primarily for juniors and seniors. D. P. Loucks.
Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 356 Women in Engineering Career Planning Seminar
Spring. 1 credit. Limited to 25 students. S-U grades only. Not offered 1997-98.
Covers aspects of transition to the engineering profession and related issues especially of interest to women. Topics include career and life planning, the job-search process, interviewing strategies, juggling career and family, graduate education, sexual harassment and sexism in the workplace, professionalism, and networking. Corporate professionals and Cornell faculty and staff participate in class discussions.

ENGRG 360 Ethical Issues in Engineering
(also S&T S 360)
Spring. 3 credits. A humanities elective for engineering students. Open to sophomores.
A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Codes of ethics and ethical theory will be used to sort out conflicts the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class.

ENGRG 461 Entrepreneurship For Engineers
Fall. 3 credits. See MAE 461 for course description.

ENGRG 470 Undergraduate Engineering Teaching
Spring. 3 credits. Engineering juniors and seniors can now earn graduation credit while helping freshmen learn mathematics, physics, or engineering design. This course introduces apprentice teachers to collaborative learning, pedagogical theory, interpersonal/diversity issues, and practical tools for educational innovation. This course is an approved elective and can be applied toward the Honors Degree in Electrical Engineering. A 3.0 GPA is strongly recommended.
ENGRG 605 Fundamentals of Biomedical Engineering I
Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S/U grades optional for students not majoring or minoring in biomedical engineering. A series of four-week modules on specialized topics. Coordinator: M. L. Shuler.

605.1 Cellular Dynamics and Cancer

605.2 Physiological Systems

605.3 Biomaterials
1 credit. Lec. T R 1:25–2:40. Nov. 4–Dec. 4. C. C. Chu. The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/alloys, and ceramics and that are currently used in human body repair. After student’s completion of this module, they have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, and the current R/D activities in biomaterials, challenges that biomaterials are facing and future direction of R/D in biomaterials.

605.4 Biomedical Engineering Project
1 credit. Organizational Meeting. T 3:35–4:25. Nov. 4-Dec. 4. M. L. Shuler. Students will work in teams on a design problem of their choice related to development of a biomedical device or procedure. Each team will present an oral report and a written report.

ENGRG 606 Fundamentals of Biomedical Engineering II
Spring. 1–2 credits. Prerequisites: Graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S/U grades optional for students not majoring or minoring in biomedical engineering. A series of 1 and 2-credit modules on specialized topics. Coordinator: M. L. Shuler

606.1 Artificial Organs and Tissue Engineering
1 credit. Lec. T R 1:25–2:40. Jan. 20–Feb. 17. W. M. Saltzman. Prerequisite: ENGRG 605, Section 03 (Biomaterials). An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section will discuss the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regeneration guides), and hybrid cell-polymer implantable systems (e.g., engineered tissues).

606.2 Biomedical Instrumentation and Diagnostics

606.3 Biomechanics of Musculoskeletal Systems
2 credits. Lec. T R 1:25–4:40. March 31–April 30. D. I. Bartel, C. E. Farnum. Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb will be explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads will be discussed, and physical testing will be demonstrated. A computer model of the stifile (knee) joint will be created by combining knowledge of the anatomy and the mechanical environment.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&EP 110)
Fall, spring. 3 credits. The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Materials by Design (also MS&E 111)
Fall. 3 credits. E. P. Giannelis. Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves dissecting and analyzing various consumer products like a disposable camera or portable cassette player. Emphasis is placed on materials identification and their selection to perform an engineering function.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)
Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen. Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual blockbusting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Introduction to Environmental Systems (also CEE 113)
Fall. 3 credits. Not open (without instructor’s permission) to upper-division engineering students, who should take CEE 120 instead. C. A. Shoemaker. Introduction to analysis, management, and modeling of environmental systems. Discussion of physical, chemical, and biological processes affecting environmental quality. Use of computers to simulate environmental phenomena. Examples include management of water resources, ecosystems concepts, solid waste management, and water quality in surface and ground waters.

ENGR 114 An Introduction to Electrical Engineering Design
Spring. 3 credits. An introduction to electrical engineering and electronic circuit design. Students work in small groups on a series of electric circuit projects leading to the team design of a working fiber optic transmitter-receiver system. The laboratories and lectures introduce the concepts and principles of electronic circuits and focus upon circuits useful in the design project. Laboratory fee required.

ENGR 115 Engineering Application of Operations Research (also OR&IE 115)
Fall, spring. 3 credits. An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation) on conditions in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

ENGR 116 Modern Structures (also CEE 116)
Fall, spring. 3 credits. Staff. An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as spacecraft, skyscrapers, bridges, shell structures, and dams. The philosophy of engineering design and lessons learned from structural failures are also discussed. A semester project involves the design and construction of a small balsa-wood bridge.

ENGR 117 Introduction to Mechanical Engineering (also MAE 117)
Fall or spring to be determined. 3 credits. An introduction to topics of current interest in mechanical engineering. Specific topics vary
from offering to offering. Students are urged to check in Upson 112 for details.

ENGRI 118 Design Integration: A Portable CD Player (also MS&E 118 and T&AM 118)
Spring. 3 credits. W. Sachse.
This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGRI 120 Introduction to Biotechnology (also CHEM 120)
Fall. 3 credits. W. M. Saltzman.
Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the application of biotechnological processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

ENGRI 121 Fission, Fusion, and Radiation (also MS&E 121)
Spring. 3 credits. L. D. Brown.
Lecture-laboratory course on (1) the physical nature and biological effects of nuclear radiation; (2) benefits and hazards of nuclear energy; (3) light-water reactors, breeder reactors, and fusion reactors; and (4) uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's research reactor; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; and pulsed power generators for fusion research.

ENGRI 122 Earthquake! (also GEOL 122)
Fall. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGRI 124 Designing Materials for the Computer (also MS&E 124)
Spring. 3 credits. C. K. Ober.
Introduces the materials, processes and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices and displays. This course examines lithographic processing, metallization, diffusion, ion implantation, oxidation and other processes used in fabricating electronic devices and their packages. The technology of displays will be discussed including liquid crystal displays and light emitting devices.

ENGRI 125 Global Environment (also GEOL 125)
Fall. 3 credits. W. M. White, R. W. Kay.
Wise environmental management requires an understanding of natural chemical interactions. Examines natural chemical cycles among atmosphere, biosphere, hydrosphere, and the solid Earth, the impact of man's activity on them, including the greenhouse effect, ozone hole, acid rain, and water pollution. Laboratory sessions include environmental chemical analysis and computer simulation.

ENGRI 126 Introduction to Telecommunications
Fall. 3 credits. L. D. Brown.
This course introduces the technologies that underlie wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Moderns and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course will include both lectures and laboratory demonstrations. The students will have the opportunity to design communication systems, and to determine their performance through simulations.

ENGRI 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, MS&E 285, NSF&E 285, PHYS 200)
Spring. 3 credits. L. D. Brown.
Does not meet liberal studies distribution requirements.

D. Clark.
An interdepartmental course on application of techniques of physical sciences and engineering to cultural research. Archaeological artifacts or objects are discussed with a focus on historical and technical aspects of their creation and on their analysis by modern methods to deduce geographical origins, to date and authenticate objects, etc.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

Courses in agricultural and biological engineering will be found in the section listing the offerings of the College of Agriculture and Life Sciences and at the department web site <http://www.cals.cornell.edu/dept/abem>.

APPLIED AND ENGINEERING PHYSICS

A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGRI 110)
Fall, spring. 3 credits. This is a course in the Introduction to Engineering series.
For description, see ENGRI 110.

A&EP 264 Computer-Instrumentation Design (also ENGRD 264)
Fall, spring. 3 credits. Prerequisites: COM $ 100.
For description, see ENGRD 264.

Spring. 3 credits. Prerequisites: freshman and sophomore chemistry, physics, math.
Introduction to biophysics for engineers and students interested in bioengineering.

A&EP 321 Mathematical Physics I
Fall, summer. 3 credits. Prerequisite: MATH 294.
Intended for upper-level undergraduates in the physical sciences. Review of vector analysis; complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series, Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physicists, by Arfken; Mathematical Physics, by Bukov.

A&EP 322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321.
Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.
Partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions, integral equations, Fredholm equations, kernels, complex variables, theory, branch points and cuts, Riemann sheets, methods of steepest descent; tensors, contravariant and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physicists, by Arfken, Mathematical Physics, by Bukov.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Enrollment limited.
Prerequisites: PHYS 214 or equivalent. E. Bodenschatz.

A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology and engineering. The students will also be introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall. summer. 4 credits. Prerequisites: PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.

Newton's mechanics; constants of the motion; many-body systems; linear oscillations, variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thorton.)

A&EP 355 Intermediate Electromagnetism
Fall. summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.

Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.
A&EP 356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor. Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, and advanced topics in quantum mechanics. Emphasis on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318, coregistration in A&EP 322 or equivalent and in A&EP 350 or PHYS 326. A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed, however the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1 lec, 2 hrs. Fall: E. Kirkland; spring: J. Alexander. Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators and transistors). Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering I (also M&AE 458 and NS&E 403)
Fall. 3 credits. Prerequisite: PHYS 214 or MATH 254. For description see NS&E 403.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory thermodynamics and quantum mechanics plus one year of junior-level mathematics. Quantum statistical basis for equilibrium thermodynamics, microcanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics by Kittel and Kroemer, and Statistical Physics, by Rossouw.

A&EP 434 Continuum Physics

A&EP 438 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent or permission of instructor; co-registration in 361 permitted. Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot be solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 4 credits. Prerequisite: A&EP 361 or equivalent, co-enrollment in A&EP 423 or equivalent. An introduction to the physics of crystalline solids. Crystal structures: electronic states; lattice vibrations; metals, insulators and semiconductors. The majority of the course will address the foundations of the subject, but some time will be devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, and NS&E 484)
For description, see NS&E 484.

A&EP 490 Independent Study in Engineering Physics
Fall, spring. Credit to be arranged. Laboratory or tutorial work in any branch of engineering physics under the direction of a member of the faculty. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software development, theoretical design and analysis. Details to be arranged with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 422, 450 (or equivalent) Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course will concentrate on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices and mesoscopic quantum mechanical effects. Emphasis will be on the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 606 Introduction to Plasma Physics (also ELE E 581)
For description, see ELE E 581.

A&EP 607 Basic Plasma Physics (also ELE E 592)
For description, see ELE E 592.

A&EP 609 Nuclear Physics for Applications (also NS&E 509)
For description, see NS&E 509.

A&EP 612 Nuclear Reactor Theory
Fall. 4 credits. Prerequisites: a year of advanced calculus and some nuclear physics. Offered on demand. Physical theory of fission reactors. Fission and neutron interactions with matter; theory of neutron diffusion, slowing down, thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors. Reactor kinetics. At the level of Nuclear Reactor Theory, by Lamarch.

A&EP 633 Nuclear Reactor Engineering
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

A&EP 659 Nuclear Measurements Laboratory
Spring. 2 credits. Prerequisites: A&EP 606 (ELE E 581) or equivalent, or permission of instructor. Offered when demand warrants. Topics include (1) theoretical aspects of intense electron and ion beams, such as equilibria and stability, (2) technology of intense beam production, such as pulsed-power generator principles, and electron and ion diode operation; and (3) applications of intense beams, such as to controlled fusion, microwave generation, and laser pumping. Extensive discussion of experimental results.

A&EP 651 Nuclear Measurements Laboratory
Spring. 4 credits. Prerequisite: A&EP 609 or equivalent. Primarily for graduate students in nuclear fields. A less-intensive related course, NS&E 551, is intended for students in non-nuclear fields in which nuclear methods are used. Offered on demand. Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experience in radiation detection, attenuation, and measurement; activation analysis; neutron radiography; reactor physics. The TRIGA reactor and the Zero Power Reactor are used. At the level of Radiation Detection and Measurement, by Knoll.
CHEMICAL ENGINEERING

CHEM 112 Introduction to Chemical Engineering (also ENGR 112)
Fall. spring. 3 credits. Limited to freshmen. T. M. Dunnan, C. Cohen.
For description, see ENGR 112.

CHEM 120 Introduction to Biotechnology (also ENGR 120)
Fall. 3 credits. W. M. Saltzman.
For description, see ENGR 120.

CHEM 219 Mass and Energy Balances (also ENGRD 219)
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. P. Clancy.
For description, see ENGRD 219.

CHEM 301 Nonresident Lectures
Spring. 1 credit. P. Clancy.
Lecturers from industry and from selected departments of the university provide information to assist students in their post-graduate plans.

CHEM 313 Chemical Engineering Thermodynamics
Fall. 4 credits. Corequisite: physical chemistry. Z. Panagiotopoulos.

CHEM 323 Fluid Mechanics
Fall. 3 credits. Prerequisites: CHEM 219 and engineering mathematics sequence. P. H. Steen.

CHEM 324 Heat and Mass Transfer
Spring. 3 credits. Prerequisite: CHEM 523. W. L. Olbricht.

CHEM 332 Analysis of Separation Processes
Spring. 4 credits. Prerequisites: CHEM 313 and 332. K. E. Gubbins.
Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, absorption, membrane separations.

CHEM 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEM 313 and 332. D. L. Koch.
A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 391 Physical Chemistry I (also CHEM 391)
For description, see CHEM 301.

CHEM 432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. Staff.
Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 462 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEM 452. Staff.
A consideration of process and economic alternatives in selection of chemical processes; design and assessment.

CHEM 472 Process Control
Fall. 3 credits. Prerequisites: CHEM 324 and 390. J. R. Engstrom.
Analysis of the dynamics of chemical processes and design of feedback and feedforward control systems. Laplace transform techniques; stability analysis; frequency-response analysis. An introduction to multivariable control.

CHEM 481 Biomedical Engineering
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. M. Saltzman.
Special topics in biomedical engineering, including cell separation, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEM 490 Undergraduate Projects in Chemical Engineering
Fall. spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEM 491 Undergraduate Teaching in Chemical Engineering
Fall. spring. 1 credit. Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEM 520 Chemical, Pharmaceutical, and Food Processing
Spring. Variable to 3 credits. Prerequisite: seniors or M.Eng. students with one term of college chemistry. C. Cohen, M. L. Shuler, and S. Mulvaney.
This course consists of three equal parts, each worth one credit. The chemical part is open to non-chemical engineers only and covers process fundamentals, design, and control of continuous large-scale chemical processes. Pharmaceutical processing covers fermentation, purification, and sterilization. Food processing emphasizes food preservation principles and technology.

CHEM 562 Managing Chemical Process Design
Fall. 1 or 2 credits. Prerequisite: CHEM 462. K. F. Ackley.
Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHEM 564 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. P. Harriott.
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.
CHEM 565 Design Project
Fall, spring. 3 or 6 credits. Required for students in the M.Eng.(Chemical) program. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEM 590 Special Projects in Chemical Engineering
Fall, spring. Variable credit. Limited to graduate students. Non-thesis research or studies on special problems in chemical engineering.

CHEM 605 Fundamentals of Biomedical Engineering I (also ENGRG 605)
For description, see ENGRG 605.

CHEM 606 Fundamentals of Biomedical Engineering II (also ENGRG 606)
For description, see ENGRG 606.

CHEM 640 Polymeric Materials

CHEM 643 Introduction to Bioprocess Engineering
Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler. A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEM 645 Advanced Concepts in Biophysical Chemistry
Spring. 3 credits. Prerequisite: CHEM 643 or equivalent or permission of instructor. Not offered 1997-98. Fundamentals of biochemical and biomedical engineering, with added emphasis on cell and membrane biophysics. Topics include cell-surface receptor phenomena, protein diffusion, cell adhesion, membrane biophysics, cell motility and growth, mathematical immunology of living and infection, enzyme catalysis, biosorption, and genetically modified organisms.

CHEM 656 Separations Using Membranes or Porous Solids

CHEM 661 Air Pollution Control

CHEM 675 Synthetic Polymer Chemistry (also MSE 671 and CHEM 771)
Fall. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor. For description, see CHEM 671.

CHEM 681 Dynamics of Colloidal Systems
Fall. 3 credits. Prerequisite: basic understanding of thermodynamics and fluid dynamics. Offered alternate years. A. Z. Panagiotopoulos.

Fundamentals of the dynamics of colloidal systems under equilibrium and non-equilibrium conditions. Phase equilibrium of surfactant systems, thermodynamics of micelle formation, forces between colloidal particles, electrokinetics, hydrophobic interaction and aggregation, transport of surfactant in interfacial systems, stability of emulsions, and dynamics of thin films. Open to advanced undergraduates and graduate students from all fields.

CHEM 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 313 or equivalent. K. E. Gubbins. Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

CHEM 713 Chemical Kinetics and Dynamics

CHEM 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 323 and 324 or equivalent. D. L. Koch. Derivation of equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

CHEM 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHEM 731 or equivalent. P. H. Steen. Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEM 741 Selected Topics in Biochemical Engineering
Fall. 1 credit (may be repeated for credit). Prerequisite: CHEM 643 or permission of instructor. M. L. Shuler and W. M. Saltzman. Discussion of current topics and research in biochemical engineering for graduate students.

CHEM 745 Physical Polymer Science I

CHEM 751 Mathematical Methods of Chemical Engineering Analysis

CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years. P. H. Steen. Elements of stability and bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

CHEM 772 Theory of Molecular Liquids
Spring. 3 credits. Prerequisite: CHEM 711 or equivalent. Theory of intermolecular forces, and equilibrium and statistical mechanics for nonspherical molecules. Distribution functions. Applications to thermodynamics of such fluids using integral equation and perturbation theory techniques. Mixture properties, phase diagrams for mixtures with polar or quadrupolar components. Surface properties.

CHEM 774 Atomic Simulations of Materials
Spring. 3 credits. Prerequisite: competence in FORTRAN, PASCAL, or C. Prior knowledge of statistical mechanics helpful. Offered alternate years. A. Z. Panagiotopoulos. The statistical mechanical theory behind Monte-Carlo and Molecular-Dynamics computer-simulation techniques. Strong emphasis is placed on students writing their own MC and MD code. Calculation of distribution functions, thermodynamic, kinetic and structural properties. Introduction to the application of computer graphics to simulation. Interparticle force models of interatomic simulation of systems containing metals, semiconductors, and biological materials. Issues of code efficiency and vectorization.

CHEM 790 Seminar
Fall, spring. 1 credit each term. General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

CHEM 792 Advanced Seminar in Thermodynamics
Fall, spring. 1 credit. A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.
CHEME 890 Thesis Research
Fall, spring. Variable credit.
Thesis research for the M.S. degree in chemical engineering.

CHEME 990 Thesis Research
Fall, spring. Variable credit.
Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

General

CEE 113 Introduction to Environmental Systems (also ENGR 113)
Fall. 3 credits. C. A. Shoemaker.
For description, see ENGR 113.

CEE 116 Modern Structures (also ENGR 116)
Fall, spring. 3 credits. G. G. Deierlein and staff.
For description, see ENGR 116.

CEE 120 Readings on the Environment
Fall. 1 credit. C. A. Shoemaker.
A reading course from an introductory environmental text. Topics include structure and dynamics of ecosystems, water habitats and communities, water resources, toxic-waste pollution of surface and groundwater, international water pollution problems, energy resources, nuclear-waste disposal, hydroelectric power, environmental carcinogens. Not available to students receiving credit for ENGR 113 or Natural Resources 201.

CEE 241 Engineering Computation (also ENGR 241)
Spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. J. F. Abel.
For description, see ENGR 241.

CEE 304 Uncertainty Analysis in Engineering
Fall. 4 credits. Prerequisite: first-year calculus. J. R. Sedinger.
An introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. The course covers data presentation, probability theory, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, and models of vehicle arrivals.

CEE 309 Special Topics in Civil and Environmental Engineering
Fall, spring. 1–6 credits. Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 400 Senior Honors Thesis
Fall, spring. 1–6 credits. Staff.
Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401 Undergraduate Engineering Teaching in CEE
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Staff.
Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 501 Civil and Environmental Engineering Design Project I
Fall. 3 credits. Required for students in the M.Eng.(Civil) program. Staff.
Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

CEE 502 Civil and Environmental Engineering Design Project II
Spring. (work required during January intersession). 3 credits. Required for students in the M.Eng.(Civil) program. Prerequisite: CEE 501. Staff.
A continuation of CEE 501.

CEE 503 Professional Practice in Engineering
Spring. 3 credits. Required for and limited to students in the M.Eng.(Civil) program. Staff.
Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interrelations among the physical, social, economic, and ethical constraints on engineering design.

CEE 504 Environmental Law and Regulation
Spring. 3 credits. W. G. Sell.
The course is designed to provide an overview of environmental law, emphasizing aspects relevant to civil and environmental engineering. The focus is on issues of water supply, water pollution control, waste management and environmental remediation. This course is geared to students participating in the environmental management concentration. Class size will be limited to 25 students.

CEE 601 Water Resources and Environmental Engineering Seminar
Fall. 1 credit.
Presentation of topics of current interest.

Remote Sensing

CEE 411 Remote Sensing: Environmental Applications (also SCAS 461)
Spring. 3 credits. Prerequisite: permission of instructor. Staff.
A survey of how remote sensing and resource inventory methods are applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, invent, and monitor environmental resources.

CEE 611 Remote Sensing Fundamentals (also SCAS 660)
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1997–98.
W. D. Phlipot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors; sensor and ground-data aquisition; data analysis and interpretation; and project design.

CEE 615 Digital Image Processing
Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 109) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor. Not offered 1997–98; next offered 1998–99.
W. D. Phlipot.
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.

CEE 617 Project—Remote Sensing
On demand. 1–6 credits. W. D. Phlipot.
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 618 Special Topics—Remote Sensing
On demand. 1–6 credits. W. D. Phlipot.
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CEE 710 Research—Remote Sensing
On demand. 1–6 credits. W. D. Phlipot.
For students who want to work on one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 810 Thesis—Remote Sensing
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. W. D. Phlipot.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental and Public Systems

See also CEE 113, CEE 120, CEE 241, CEE 304, and CEE 597.

CEE 323 Engineering Economics and Management (also ENGRG 323)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits.
Primarily for juniors and seniors.
D. P. Loucks.
For description, see ENGRG 323.

CEE 423 Environmental Quality Systems Analysis
Spring. 3 credits. Prerequisites: MATH 294 and systems (CEE 323). Intended for undergraduates who have not taken OR&IE 520 or ARME 475. Most lectures concurrent with CEE 623.
C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the design and operation of facilities for managing the quality of surface and ground water. See CEE 623 for a description of environmental applications. CEE 423 students do additional work on optimization fundamentals and do not do the CEE 623 main design project.

CEE 528 Public Political Economy (also ECON 539)
Spring. 4 credits. R. E. Schuler.
For description, see ECON 539.
CEE 529 Water and Environmental Resources Problems and Policies
Spring. 3 credits. Intended primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. J. Allee and L. B. Dworsky.
Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

CEE 620 Water-Resources Systems I
Fall. 3 credits. Prerequisite: CEE 529 or equivalent. D. P. Loucks.
Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

[CEE 621 Water-Resources Systems II: Stochastic Hydrology
Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor. Not offered 1997-98 and 1998-99.
Course examines statistical, time series, and stochastic optimization methods used to address water resources problems. Statistical issues include maximum likelihood, and moments estimations, censored datasets and historical information; probability plotting; Bayesian inference, index flood methods; ARMA models; multivariate stochastic flow models; stochastic simulation; and reservoir-operation optimization models.]

CEE 623 Environmental Systems Engineering
Spring. 3 credits. Prerequisites: MATH 294 and optimization (ABEN 475, or ORIE 320/520) and probability and statistics (CEE 304 or ORIE 270), or permission of instructor. C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Applications include regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CEE 628 Environmental and Water Resources Systems Analysis Seminar
Spring. 1 credit. Prerequisite: permission of instructor. Staff.
Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 729 Special Topics in Environmental or Water Resources Systems Analysis
On demand. 1-6 credits. Staff. Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 820 Thesis—Environmental and Water Resource Systems
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Fluid Mechanics and Hydrology
See also CEE 241 and CEE 655.

CEE 331 Fluid Mechanics
Fall, usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). W. H. Brutsaert.
Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulent and transitional analyses, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

CEE 432 Hydrology
Fall. 3 credits. Prerequisite: CEE 331. M. L. Weber-Shirk.
Application of fluid-mechanical principles to problems of engineering practice and design-hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

CEE 431 Geohydrology (also GEO 445 and ABEN 471)
Fall. 3 credits. L. Cathles, W. H. Brutsaert.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, ground water hydrodynamics, soil water, and solute transport.

CEE 432 Hydrology
Spring. 3 credits. Prerequisite: CEE 331.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 632.

CEE 435 Coastal Engineering
Fall. 3 credits. Prerequisite: CEE 331. P. L. -F. Liu.
Introduction to wave water phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave phenomena to engineering design problems such as forces on coastal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.

CEE 630 Advanced Fluid Mechanics
Fall. 3 credits. Prerequisite: CEE 331.
Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of the Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass, and heat.

CEE 631 Flow and Contaminant Transport Modeling in Groundwater
Spring. 3 credits. Prerequisites: MATH 294 or equivalent. D. P. Loucks.

CEE 632 Hydrology
Spring. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. Physical and statistical prediction methods for design related to hydrologic processes. Hydro meteorology and evaporation. Infiltration and base flow. Surface runoff and channel routing. Linear and nonlinear hydrologic systems. Storage routing and unit hydrograph methods.

CEE 633 Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 331. W. H. Brutsaert.
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells, drought flows; infiltration, groundwater recharge; land subsidence; seawater intrusion, movable displacement; transient seepage in unsaturated materials.

CEE 634 Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 1997-98. W. H. Brutsaert.
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 635 Small and Finite Amplitude Water Waves
Spring. 3 credits. Prerequisite: CEE 435 or equivalent. P. L. -F. Liu.
Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.

CEE 636 Environmental Fluid Mechanics
Spring. 3 credits. Prerequisite: CEE 655 or permission of instructor. Offered alternate years. Not offered 1997-98. Staff.
Mass- and heat-transport processes in the environment and their interaction with pollutant discharges. Mechanics of discretely and continuously stratified fluids, internal

CxEE 638 Hydraulics Seminar
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L. - F. Liu. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CxEE 639 Special Topics in Hydraulics
On demand. 1-6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CxEE 732 Computational Hydraulics
Fall. 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Offered 1997. Staff. Numerical methods for solving hydraulics and fluid-mechanics problems. Solutions for elliptic, parabolic, and hyperbolic equations. Finite-difference, finite-element, and boundary-integral methods.

CxEE 735 Research in Hydraulics
On demand. 1-6 credits. Staff. The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge of the form of a research report.

CxEE 830 Thesis— Fluid Mechanics and Hydrology
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and eventually independently or in conjunction with others working on the same topic.

Geotechnical Engineering

CxEE 341 Introduction to Geotechnical Engineering

CxEE 640 Foundation Engineering
Fall. 3 credits. Prerequisite: CxEE 341. F. H. Kulhawy. Soil exploration, sampling, and in-situ testing techniques. Bearing capacity, stress distribution, and settlement. Design of shallow and deep foundations. Compaction and site preparation. Seepage and dewatering of foundation excavations.

CxEE 641 Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CxEE 341. T. D. O'Rourke. Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavations, cut, and open cut. Design problems stressing application of course material under field conditions of engineering practice.

CxEE 643 Pavement Engineering (also ABEN 692)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: CxEE 341 or equivalent. T. D. O'Rourke. Principles of hydrogeology, contaminant migration, and introduction to technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CxEE 648 Seminar in Geotechnical Engineering
Fall, spring. 1 credit. Staff. Presentation and discussion of topics in current research and practice in geotechnical engineering.

CxEE 649 Special Topics in Geotechnical Engineering
On demand. 1-6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CxEE 740 Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CxEE 341. Offered 1997-98 and 1998-99. H. E. Stewart. Detailed study of the physicochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Field-testing methods for determining properties based on laboratory testing. Laboratory sessions include in-situ field testing, simple index tests, and complete laboratory characterization of important soil properties.

CxEE 741 Rock Engineering
Spring. 3 credits. Prerequisite: CxEE 341 or permission of instructor. Recommended: ENGRD 202. Staff. Geological and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

CxEE 744 Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CxEE 640. Offered 1997-98, not offered 1998-99. F. H. Kulhawy. A continuation of CxEE 640, with detailed emphasis on special topics in soil-structure interaction. Topics typically include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

CxEE 745 Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. H. E. Stewart. Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions. Laboratory experiments and demonstrations using resonant column and a range of cyclic testing equipment.

CxEE 746 Embankment Dam Engineering

CxEE 749 Research in Geotechnical Engineering
On demand. 1-6 credits. Staff. For the student who wants to pursue a particular geotechnical topic in considerable depth.

CxEE 840 Thesis—Geotechnical Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental Engineering

CxEE 351 Environmental Quality Engineering
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. L. W. Lion. Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

CxEE 352 Water Supply Engineering

CxEE 453 Laboratory Research in Environmental Engineering
Spring. 3 credits. Prerequisites: CHEM 253, BIOMI 290, CxEE 351 or permission of instructor. M. L. Weber-Shirk. Laboratory investigations of reactor flow characteristics; acid rain/lake chemistry; contaminated soil-site assessment, risk assessment, and remediation; pollutant
dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized.

C.E.E. 651 Microbiology for Environmental Engineering
Fall. 2 credits. Prerequisite: one semester of college chemistry. J. M. Gossett.
A self-paced autotutorial introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Course work consists of assigned readings, study questions, and brief exams.

C.E.E. 652 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

C.E.E. 654 Aquatic Chemistry
Spring. 3 credits. Prerequisite: CEE 653 or CHEM 287-288 J. J. Bisogni.
Concepts of chemical equilibrium applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, precipitation, coordination and redox reactions, Eh-pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibrium computational techniques. In-depth coverage of topics covered in CEE 653.

C.E.E. 655 Pollutant Transport and Transformation in the Environment
Fall. 3 credits. Prerequisite: CEE 331 J. J. Bisogni.
Introduction to the physical transport and chemical and biochemical transformation processes that govern the fate and distribution of pollutants in the environment.

CEE 658 Sludge Treatment, Utilization, and Disposal
Spring. 3 credits. Prerequisite: CEE 352 or permission of instructor. Not offered 1997-98. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

CEE 659 Environmental Quality Engineering Seminar
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff.
Presentation and discussion of current research and design projects in environmental engineering.

C.E.E. 750 Research in Environmental Engineering
On demand. 1-6 credits. Staff.
For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

C.E.E. 755 Environmental Engineering Processes I
Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Biokinetic analysis and design of biological treatment processes.

C.E.E. 756 Environmental Engineering Processes II
Spring. 3 credits. Prerequisites: CEE 651 and 755, or permission of instructor. J. M. Gossett.
Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

C.E.E. 757 Environmental Engineering Processes Laboratory I
Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 653 and CEE 755. J. J. Bisogni.
Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

C.E.E. 758 Environmental Engineering Processes Laboratory II
Spring. 2 credits. Prerequisite: CEE 651 and concurrent enrollment in CEE 756. J. J. Bisogni.
Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; enumeration of bacteria.

C.E.E. 759 Special Topics in Environmental Engineering
On demand. 1-6 credits. Staff.
Supervised study in special topics not covered in formal courses.

C.E.E. 850 Thesis—Environmental Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
 Structural Engineering
See also CEE 116, CEE 241, CEE 304, and CEE 595.

CEE 371 Structural Behavior
Spring. 4 credits. Prerequisite: ENGRD 202. Staff.

CEE 372 Structural Analysis
Fall; usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: CEE 371. J. Abel.

CEE 473 Design of Concrete Structures
Fall. 4 credits. Prerequisites: CEE 372 or permission of instructor. K. Hover.
Behavior and design of reinforced concrete and prestressed concrete structures. Design project.

CEE 474 Design of Steel Structures
Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. T. Pekoz.
Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

CEE 477 Civil Engineering Materials
Spring. 4 credits. Prerequisite: ENGRD 202, ENGRD 261, PHYS 214 and CEE 371 (CEE 371 may be taken concurrently). P. Petrina.
Mechanical properties of concrete, metals, masonry, plastics, wood, and other structural materials. Stress-strain behavior and failure criteria. Nondestructive and destructive testing techniques for the evaluation of structures and the quality control of materials. Laboratory experiments.

CEE 672 Fundamentals of Structural Mechanics
Fall. 3 credits. M. D. Grigoriu.
Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, introduction to finite-element method.

CEE 673 Advanced Structural Analysis
Fall. 3 credits. Prerequisites: CEE 372 and computer programming. G. G. Deierlein.
Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

[CEE 675 Concrete Materials and Construction]
Spring. 3 credits. Prerequisite: CEE 376 or equivalent. Offered alternate years. Not offered 1997–98. K. C. Hover.
Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 677 Stochastic Mechanics
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. Not offered 1998–99; offered 1997–98. M. D. Grigoriu.
Review of concepts of probability theory, random processes, and random fields. Analytical and numerical methods for reliability analysis. Methods for solution of random eigenvalue problems, equilibrium of uncertain systems and systems with random imperfections, and propagation problems in stochastic systems. Applications include stochastic finite elements, probabilistic fracture mechanics, and dynamic Daniels systems.

CEE 680 Structural Engineering Seminar
Fall, spring. 1 credit. Limited to qualified seniors and graduate students. M. Grigoriu.
Presentation of topics of current interest in the field of structures.

[CEE 770 Engineering Fracture Mechanics]
Fall. 3 credits. Prerequisite: CEE 772 or permission of instructor. Offered alternate years. Offered 1998–99; not offered 1997–98. A. R. Ingraffea.

CEE 772 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (also T&M 666 and M&E 680)
Spring. 3 credits. Prerequisite: T&M 665.
For description, see M&E 680.

CEE 774 Advanced Concrete Structures I
Fall. 3 credits. Prerequisite: undergraduate course in concrete structures. S. L. Billington.
Role of material properties in structural performance; design code philosophies; behavior and design of reinforced and prestressed concrete structural sections; deflection prediction and control for RC and PC structures including load balancing for PC structures; continuity effects; serviceability issues; behavior and design of RC and PC slab systems; plastic truss (static failure) approach for torsion and shear; building framing systems.

CEE 775 Advanced Concrete Structures II
Spring. 3 credits. Prerequisite: CEE 774 or equivalent. Not offered 1997–98. Structural walls expressed in plastic truss approach to frame connections, corbels, brackets, and deep beams; anchorage behavior in PC beams; slender columns and biaxial bending; ductility and its enhancement for resisting severe loadings; composite construction, prestress loss calculations; strip method for design of slabs with unusual geometry; bridges and other structures; control of human error in design and construction.

CEE 776 Advanced Design of Metal Structures
Fall. 3 credits. Prerequisite: CEE 374 or equivalent. T. Pekoz.
Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.

[CEE 777 Advanced Behavior of Metal Structures]
Spring. 3 credits. Prerequisite: CEE 374 or equivalent. Offered 1998–99; not offered 1997–98. T. Pekoz.

CEE 779 Structural Dynamics and Earthquake Engineering
On demand. 1–6 credits. M. D. Grigoriu.
Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 783 Civil and Environmental Engineering Materials Project
On demand. 1–3 credits. K. C. Hover.
Individual projects or reading and study assignments involving engineering materials.

CEE 785 Research in Structural Engineering
On demand. 1–6 credits. Staff. Pursuit of a branch of structural engineering beyond what is covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 786 Special Topics in Structural Engineering
On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 880 Thesis—Structural Engineering
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff.
A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
Engineering Management

See also CEE 323 and CEE 453.

CEE 590 Project Management
Fall. 3 credits. Prerequisite: permission of instructor. M. A. Turnquist and F. J. Wayno. An introduction to the work and skills of management, especially for the management of projects. Planning, organizing, communicating, scheduling, controlling, and correcting will be covered in combination of lectures, readings, outside assignments, and in-class role-playing exercises.

CEE 591 Engineering Management Project
Fall. 3 credits. Prerequisite: permission of instructor. Staff. An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor. Staff. A continuation of CEE 591.

CEE 593 Engineering Management Methods I: Data, Information, and Modeling
Fall. 3 credits. Prerequisites: OR&IE 320 and OR&IE 270 or CEE 304 or equivalent. Staff. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project scheduling, quality control, forecasting, and resource allocation.

CEE 594 Engineering Management Methods II: Managing Uncertain Systems
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. L. K. Nozick. Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration and queuing. Simulation as a tool for analyzing uncertain systems. Projects and case studies to illustrate application of the methods.

CEE 595 Construction Planning and Operations
Fall. 3 credits. F. L. Bennett. A course on the fundamentals of construction planning: organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent. J. R. Stedinger. Course develops a working knowledge of risk terminology and reliability engineering, analytic tools used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the U.S., transportation risks, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 692 Special Topics in Engineering Management
On demand. 1-6 credits. Staff. Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 694 Research in Engineering Management
On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge in the form of a research report.

COMPUTER SCIENCE

The Department of Computer Science is part of both the College of Arts and Sciences and the College of Engineering.

COM S 099 Fundamental Programming Concepts
Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree. This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. The programming language used is Java. Students with previous programming experience should not take this course.

COM S 100 Introduction to Computer Programming
Fall, spring, summer. 4 credits. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is Java. COM S 100 also includes a brief introduction to Matlab. The course does not presume previous programming experience. Programming assignments are tested and run on interactive, stand-alone microcomputers. During the fall semester, two versions of COM S 100 are available as described below.

COM S 100a Introduction to Computer Programming
Standard version of COM S 100. No college-level mathematics is assumed. Register for COM S 100.

COM S 100b Introduction to Computer Programming
Prerequisite: MATH 111, 191 or equivalent. Offered fall only. Alternative version of COM S 100, emphasizing examples and applications involving continuous mathematics, including trigonometry and calculus. Register for COM S 100. COM S 100b is not always available at all COM S 100 lecture hours.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and ENGRD 102)
Fall. 3 credits. This course surveys the study of how the mind/brain works. We will examine how intelligent information processing can arise from biological and artificial systems. The course draws primarily from five disciplines that make major contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course will introduce the roles played by these disciplines in cognitive science. The second part of the course will focus on how each of these disciplines contributes to the study of five topics in cognitive science: language, categorization, memory, vision, and action.

COM S 113 Introduction to C
Fall, spring. 1 credit. Weeks 5-8. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 215 only if 113 is taken first. S-U grades only. A brief introduction to the C programming language and standard libraries. Unix accounts will be made available for students wishing to use that system for projects, but familiarity with Unix is not required. (Projects may be done using any modern implementation of C). COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall, spring. 1 credit. Weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. An introduction to Unix, including shell commands, emacs, the file system, and software tools like grep, find, make, awk, and perl. Knowledge of some programming language like Java, C, C++, Pascal, or Fortran is expected, but projects will not assume expertise in any particular language.

COM S 130 Creating Web Documents
Fall. 3 credits. Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students with little or no computer background to tools and techniques for creating interactive documents. Topics covered will include HTML authoring, scripting languages, interaction techniques, data mining, and incorporating sound, video, and images in documents.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Credit will not be granted for both ENGRD/COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and analysis of algorithms. Java is the principal programming language.

COM S 212 Structure and Interpretation of Computer Programs (also ENGRD 212)
Fall, spring. 4 credits. Credit will not be granted for both ENGRD/COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and
higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs.

ENGRD/COM S 212 covers a wide range of topics in computer science and programming using advanced functional and object-oriented programming languages. ENGRD/COM S 211 focuses on strengthening programming skills in a more conventional programming language (Java), while still introducing important topics in computing. Either course is a suitable prerequisite for further study in the field. Appropriate transfers between ENGRD/COM S 211 and 212 (in either direction) are encouraged during the first few weeks of the semester.

**COM S 213 C++ Programming**
Fall, spring. 2 credits. Prerequisite: COM S 211 or 212 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S/U grades only.

An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C.

Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

**COM S 222 Introduction to Scientific Computation (also ENGRD 222)**
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or MATH 294).

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and numerical solution of differential equations. The Matlab computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

**COM S 280 Discrete Structures**
Fall, spring. 4 credits. Prerequisite: COM S 211 or 212 or permission of instructor.

Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinators and discrete mathematics; covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets, graphs, and algebraic structures.

**COM S 314 Introduction to Digital Systems and Computer Organization**
Fall, spring. 4 credits. Prerequisite: COM S 211 or 212, or equivalent.

Introduction to computer organization. Topics include representation of information, machine code, instructions, processor organization, input/output devices, memory hierarchies, combinatorial and sequential circuits, data path and control unit design, and RISC pipelining. The course features several major projects, including a full RISC processor design.

**COM S 381 Introduction to Theory of Computing**
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.

Credit will be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction.

An introduction to modern theory of computing: automata theory, formal languages, and effective computability.

**COM S 400 The Science of Programming**
Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; next offered spring 1998.

The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

**COM S 410 Data Structures**
Fall, spring, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.

Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

**COM S 411 Programming Languages and Logics**
Fall. 4 credits. Prerequisite: COM S 410 or permission of instructor. Not offered every year; semester to be announced.

The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.

**COM S 412 Introduction to Compilers and Translators**
Spring. 3 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 413.

Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol-table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

**COM S 413 Practicum in Compilers and Translators**
Spring. 2 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 412.

A compiler implementation project related to COM S 412.

**COM S 414 Systems Programming and Operating Systems**
Fall, summer. 3 credits. Prerequisite: data. COM S 314 or permission of instructor.

An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

**COM S 415 Practicum in Operating Systems**
Fall. 2 credits. Prerequisite: COM S 410. Corequisite: COM S 414.

The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

**COM S 417 Computer Graphics and Visualization (also ARCH 374)**
Spring. 3 credits. Prerequisite: COM S 211 or 212.

An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

**COM S 418 Practicum in Computer Graphics (also ARCH 375)**

Programming assignments dealing with interactive computer graphics and visualization of scientific data.

**COM S 421 Numerical Analysis**
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming.

**COM S 432 Introduction to Database Systems**
Fall. 3 credits. Prerequisites: (ENGRD/COM S 211 or 212) and COM S 410. Recommended: COM S 213.

Introduction to modern relational database systems. Concepts covered include database design theory, query languages, storage structures, access methods, query processing and optimization.

The course primarily covers the internals of database systems, and includes an implementation project.

**COM S 433 Practicum in Database Systems**
Fall. 2 credits. Corequisite: COM S 432.

Students will implement a simple relational database system with coding assignments ranging from disk management to high-level query processing. This provides a thorough understanding of database system internals.
COM S 444 Distributed Systems and Algorithms
Fall. 4 credits. Prereq. or co-requisite: COM S 414 or permission of instructor. Not offered every year; next offered fall 1997.

The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies and paradigms necessary for understanding and designing distributed applications, with an emphasis on fault-tolerant computing. Theoretical concepts will be complemented with practical examples of their application in current distributed systems.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: (COM S 211 or COM S 212) and COM S 280 or equivalent.

A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Prerequisite: (COM S 211 or COM S 212) and COM S 280 or equivalent. Corequisite: COM S 472. Project portion of COM S 472. Topics include Common LISP programming, representation systems, deductive retrieval, databases and frame languages, and truth-maintenance-system implementations.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction.

A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring, summer. 4 credits. Prerequisites: COM S 410 and either 381 or 481, or permission of instructor.

Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 488 Applied Logic (also MATH 488)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science.

COM S 490 Independent Reading and Research
Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

COM S 501 Software Engineering: Technology and Technique
Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language.

An introduction to the problems of building large, reliable software systems and the methods, languages, and tools used in modern software development. Topics include software life-cycle models, software analysis and design, verification and validation, reliability, engineering ethics and professionalism. Programming topics include modularity, data abstraction, object-oriented programming, and effective use of C++. General techniques will be complemented with programming experience using industrial-strength languages and tools.

COM S 514 Distributed Systems
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. Practical issues in designing and implementing distributed software. Topics include local and wide-area network protocols, replicated data, dynamic reconfiguration, monitoring for and reacting to failures or recoveries, distributed computation, synchronization, and techniques for expressing coarse-grained parallelism at the application level.

COM S 515 Practicum in Distributed Systems
Fall or spring. 1-2 credits. Co-requisite: COM S 514.

The practical aspects of distributed systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year, at the discretion of the instructor.

COM S 516 High-performance Computer Architecture
Spring. 4 credits. Prerequisite: COM S 314 required; COM S 412 or 414 highly recommended.

Introduces techniques used in high-performance computer architecture. Covers pipelining of instruction execution to superscalar, superpipelined, and speculative architectures; memory system design, including caches, operating system support in the form of naming and protection schemes; introduction to parallel architectures.

COM S 519 Engineering Computer Networks
Fall. 4 credits. Prerequisites: COM S 214, 314, and 410, or permission of instructor.

Introduction to telephone, IP, and ATM networks. Techniques for system design and protocol layers. Detailed introduction to networking protocols in the areas of multiple access, switching, scheduling, routing, naming and addressing, error control, flow control, and traffic management. Overview of important protocols in the Internet and telephone networks. Protocol implementation techniques. The course is project-oriented and requires familiarity with C programming.

COM S 522 Software Tools for Computational Science
Spring. 4 credits. Prerequisites: a numerical analysis course such as COM S 222 or 421) or PHYS 480; willingness to work in Matlab and C or Fortran; interest in mathematics and the natural sciences. Not offered every year; semester to be announced.

Hands-on exploration of some of the principal software tools of computational science in use today. The course is divided into two-week segments: problem-solving environments, symbolic computing, software libraries, visualization, parallel computing, program transformations, and Web-based computing. Scientific themes are emphasized throughout, so that the ideas explored in the course may be of lasting value even if some of the particular tools used are destined to be short-lived.

COM S 572 Introduction to Automated Reasoning
Spring. 3 credits.

This course teaches the use of a modern theorem proving system such as Nuprl or PVS or HOL. It covers the underlying logic as well as system operation and style of use. Assignments and projects require the use of these systems on typical problems in software or hardware engineering and on the issues arising in creating a database of formalized mathematics.

COM S 601 System Concepts
Fall. 3 credits. Prerequisites: Open to students enrolled in the COM S Ph.D. program.

This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Graduate standing or permission of instructor.

A study of programming paradigms: functional, imperative, concurrent and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 314 and 412 or permission of instructor.

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.

Not offered every year; semester to be announced.

Advanced techniques in, and models of, concurrent systems. Synchronization of
concurrent processes; parallel programming languages; deadlock; verification.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor.
An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication mechanisms, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 618 Principles of Distributed Computing Message-Passing
Fall. 4 credits. Prerequisite: COM S 444 or permission of instructor.
This course focuses on research in message-passing distributed computing. It covers the fundamental problems and presents some of the latest results and open questions in message-passing systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor.
Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The Matlab system is used extensively.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years. Not offered 1997-98.
Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Previous exposure to numerical analysis, mathematical analysis including Fourier methods, and differential equations. Offered in even-numbered years.
Finite difference and spectral methods for the solution of differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, the treatment of boundary conditions, and modified methods. This course combines theory and programming (in Matlab), emphasizing fundamental principles more than applications.

COM S 631 Multimedia Systems
Fall. 4 credits. Prerequisites: COM S 414 or permission of instructor.
Hardware and software issues involved in computer manipulation of audio, video, and images. Topics include media capture, representation, compression, editing, processing, storage, and transportation.
Introduction of the personal computer as a laboratory aid. Technical report writing and communication skills.

ELE E 232 Practicum in Digital Systems
Fall and spring. 1 credit. Pre- or co-require: ENGRD 231. Laboratory projects in the design and implementation of combinational and sequential digital systems for computations, communications, and information distribution.

ELE E 250 Technology in Society (also ENGRG 250 and S&T S 250)
Fall. 3 credits. Approved for humanities distribution. For description, see ENGRG 250.

ELE E 291–292 Sophomore Electrical Engineering Project
291, fall; 292, spring. 1–8 credits. Limited to sophomores in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration.

ELE E 298 Inventing the Power and Information Society (also ENGRG 298)
Spring. 3 credits. Approved for humanities distribution. For description, see ENGRG 298.

ELE E 301 Electrical Signals and Systems I
Fall. 3 credits. Prerequisites: a grade of at least C+ in ENGRD 210 and C in MATH 293 and 294. Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and z transforms; convolution; FFTs and DFTs; applications to modulation, filtering, and sampling.

ELE E 302 Introduction to Digital Signal Processing
Spring. 4 credits. Prerequisite: ELE E 301. The use of digital technology to store, change, and create sounds and pictures, digital signal processing (DSP), one of the most significant technological developments in the last half-century. This course presents the mathematical concepts necessary to develop a clear and intuitive understanding of the key concepts in DSP. These include sampling, quantization, Fourier analysis, and digital filtering.

ELE E 303 Electromagnetic Fields and Waves
Fall. 3 credits. Prerequisites: grades of C or better in PHY 213, 214 and MATH 294; Maxwell’s equations in integral and differential form; wave equation; plane electromagnetic waves; phase and group velocities; Poynting’s theorem, complex dielectric constant, dispersive media, wave reflection and transmission; dielectric and conducting interfaces, guided waves on transmission lines; transient pulse propagation; elementary dipole antenna.

ELE E 306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits. Prerequisites: PHYS 214 and MATH 284. Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ELE E 308 Fundamentals of Computer Engineering
Spring. 4 credits. Prerequisite: ENGRD 231, ELE E 232 and ENGRG/COM S 211. This course provides a fundamental understanding of computer systems, including their integration into embedded systems. Topics covered include assembly language programming, machine code generated by compilers, high-level language data structures, computer organization, CISC and RISC computer architectures, floating point arithmetic, I/O, and memory hierarchy.

ELE E 310 Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: MATH 294. This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement. It can then also meet a field breadth requirement if 3 additional credits of field approved or out-of-field elective are taken. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions; nonlinear transformations of data; expectation, correlation, and the central limit theorem.

ELE E 311 Electrical Engineering Honors Seminar
Spring. 2 credits variable. Students registered for this course are required to attend all of the colloquia lectures. Concise summary papers, (maximum of three pages) are required. Honors students who take the seminar for letter grade are required to write two summary papers. Those non-honors students who take the seminar pass/fail are only required to write one summary paper. Each paper may review any of the topics presented during the term.

ELE E 315 Electronic Circuit Design
Fall. 4 credits. Prerequisites ELE E 210 and ELE E 215. Design of electronic circuits for computers, signal processing, communication, microelectronics, optoelectronics, measurements and control. Analog, digital, and mixed signals Design of building blocks and design with building blocks. Methodology based on estimation, hand calculation, and circuit simulation. PC based on data acquisition, analysis and simulation. Weekly laboratory sessions.

ELE E 360 Ethical Issues in Engineering (also ENGRG 360 and S&T S 360)
Spring. 3 credits. A social science elective for engineering students. For description, see ENGRG 360.

ELE E 391–392 Junior Electrical Engineering Project
391; fall; 392, spring. 1–8 credits. Limited to juniors in Engineering. Individual study and project work, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty.
member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration.

**ELE E 411 Random Signals in Communications and Signal Processing**

Fall. 3 credits. Prerequisite: ELE E 301 and 310 or equivalent.

Introduction to models for random signals in discrete and continuous time. Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

**ELE E 416 Global Position System Theory and Design**

Spring. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of the instructor. 4 design credits.

A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

**ELE E 423 Computer Methods in Digital Signal Processing**

Fall. 4 credits. Prerequisite: ELE E 302.

Satisfies undergraduate computer-applications requirement.

**ELE E 425 Digital Signal Processing**

Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 302.

**ELE E 426 Applications of Signal Processing**

Spring. 3 or 4 credits. Prerequisite: ELE E 425.

Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

**ELE E 430 Lasers and Optical Electronics**

Fall. 4 credits with lab; may be taken for 3 credits without lab. Prerequisite: ELE E 303 or equivalent.

An introduction to the operation of lasers and devices based nonlinear and linear optics. Material covered includes diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

**ELE E 433 Microwave Integrated Circuits**

Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.

An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

**ELE E 439 VLSI Digital System Design**

Fall. 4 credits. Prerequisites: ENGRD 231, ELE E 232 and ELE 315, (See ELE E 539)

Custom CMOS VLSI design as seen by a system designer. Design and structured design methodologies for digital VLSI systems. Topics include MOS transistors, design rules for MOS integrated circuits, implementation of common digital components, clocking disciplines for VLSI, tools for computer-aided design, system design for performance, and novel architectures for VLSI systems.

**ELE E 445 Computer Networks and Telecommunications**

Fall. 3 credits. Prerequisites: ELE E 308 (or COM S 314) and a course in probability.

Design, analysis, and implementation of local area networks, wide area networks, and telecommunications systems; circuit switching, packet switching; broad band switching; protocols, asynchronous transfer mode systems.

**ELE E 451-452 Electric Power Systems I and II**

Fall '97; Spring. 3 credits each term. Prerequisite: ELE E 301.

The objective is to acquaint the student with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and methods will be explored. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics and system protection.

**ELE E 455-456 Integrated Circuit Design**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 recommended as a corequisite.

**ELE E 457 Silicon Semiconductor Electronics**

Fall. 4 credits with lab. Prerequisites: ELE E 315 and ELE E 306 or equivalent.

**ELE E 467 Communication Systems I**

Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 310. Suggested co-requisite: ELE E 411.

An introduction to analog and digital modulation and demodulation techniques. Topics include: analog signal representation and filtering; analog amplitude modulation (AM) and frequency modulation (FM); digital pulse amplitude modulation (PAM), digital transmission via carrier modulation; amplitude-shift keying (ASK), phase-shift keying (PSK), quadrature amplitude modulation (QAM); fundamentals of random processes, white Gaussian noise; error probabilities of analog modulation techniques; error probabilities for digital transmission through additive white Gaussian noise (AWGN) channels.

**ELE E 468 Communication Systems II**

Spring. 4 credits. Prerequisite: ELE E 467 or permission of instructor. Suggested prerequisite: ELE E 411.

Fundamentals of digital communications. Topics include: digital source coding, Huffman coding, sampling, quantization, analog source coding; optimum receivers for digital transmission through additive white Gaussian noise (AWGN) channels, matched filters, channel capacity and error control coding, digital transmission through bandlimited AWGN channels, inter-symbol interference (ISI), equalization techniques; phase-locked loops (PLL), trellis-coded modulation (TCM); spread-spectrum communication systems.

**ELE E 471 Feedback Control Systems (also M & AE 471)**

Fall. 4 credits. Prerequisite: ELE E 301 or permission of instructor.

Analysis techniques, performance specifications, and analog feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root-locus and frequency response methods. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic process.

**ELE E 472 Digital Control Systems**

Spring. 4 credits. Prerequisite: ELE E 471 or permission of instructor.

Analysis and design of feedback control systems using digital devices to implement compensation. Z-transforms and linear algebra are the major mathematical tools. Topics include: state realizations, digitizations of analog systems, least-squares system identification, state feedback control, observers, combined observer-controller, and algebraic-control design. Assignments will consist of reports on computer-aided controller design and digitally simulated evaluation.
ELE E 475 Computer Structures
Fall. 4 credits. Prerequisites: ELE E 308 or COS M 314, ENGRD 231 and ELE E 235 or permission of instructor.
Methods of designing digital computers and the hardware-software interface to the systems they function with. Topics include control sequencer and data path design, memory and I/O organization, interfacing, and interrupt hardware design. Laboratory groups will design and build a small digital computer. User-programmable logic devices will be employed for circuit implementation.

ELE E 476 Digital Systems Design Using Microcontrollers
Spring. 4 credits. Prerequisite: ELE E 308 or COS M 511 or ELE E 475 strongly recommended.
Design of real-time digital systems using microprocessor-based embedded controllers. Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The content focuses on the laboratory work, the lectures being used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed. The laboratory environment is that of ELE E 475 enhanced with the integrated single-board computer based on the 80C196KB microcontroller chip. Programming is in assembly language and (optionally) C.

[ELE E 482 Plasma Processing of Electronic Materials
Spring. 3 credits. Prerequisite: ELE E 303 or its equivalent. Not offered 1997–98
Fundamentals of plasma processes govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing will be discussed in detail.]

ELE E 484 Introduction to Controlled Fusion: Principles and Technology (also ASTRO 485)
Fall. 3 credits. Prerequisites: Physics through 214 or equivalent, introductory chemistry, introductory differential equations.
The structure and dynamics of the middle atmosphere and the ionosphere are surveyed. Topics include energy balance and thermal structure, global circulation patterns, ionization, production and loss of charged particles, coupling of the neutral atmosphere with electromagnetic fields, charged particle transports, and observation techniques.

ELE E 486 Electromagnetic Waves and Communication
Spring. 4 credits. Prerequisite: ELE E 303.
This course is recommended for students who wish to obtain a greater understanding of E & M aspects of the fundamentals of guided waves, high data rate electronics and wireless communication. Topics to be covered will include: Vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, propagation in different environments including interference and diffraction.

ELE E 487 Introduction to Antennas and Radar
Fall. 3 credits. Prerequisites: ELE E 301 and ELE E 364 or a grade of B or better in ELE E 363.
Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques.

ELE E 488 RF Circuits and Systems
Spring. 3 credits. Prerequisites: ELE E 315 or equivalent. 2 design credits. Lab credit.
Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

ELE E 490 Practicum in Systems Engineering
Fall only. 3 credits. Group II Electrical Engineering Lab + 1 credit of Engineering Design.
This course is designed for seniors and graduate students. May not be offered 1997–98.
For description, see NS&IE 484.

ELE E 485 Atmospheric and Ionospheric Physics (also ASTRO 485)
Fall. 3 credits. Prerequisites: Physics through 214 or equivalent, introductory chemistry, introductory differential equations.
The structure and dynamics of the middle atmosphere and the ionosphere are surveyed. Topics include energy balance and thermal structure, global circulation patterns, ionization, production and loss of charged particles, coupling of the neutral atmosphere with electromagnetic fields, charged particle transports, and observation techniques.

ELE E 486 Electromagnetic Waves and Communication
Spring. 4 credits. Prerequisite: ELE E 303.
This course is recommended for students who wish to obtain a greater understanding of E & M aspects of the fundamentals of guided waves, high data rate electronics and wireless mechanical systems to the micrometer/nanometer scale, material issues, and the integration of microelectronic structures and actuators with simple electronics. This is an interdisciplinary course on the fundamentals of microelectronics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ELE E 494 Distribution Automation and Control for Electric Power Networks
Spring. 4 credits.
Distribution automation is a system that enables an operator to monitor, control, and operate distribution systems in a real-time mode from remote locations. This course will cover modeling of distribution networks, three-phase unbalanced power flow analysis and short circuit calculations, state estimation, operation and control strategies, communication systems, and computer systems for distribution automation.

ELE E 495-499 Special Topics in Electrical Engineering
1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 515-516 Applied Signal Processing Systems Design
515, fall; 516, spring. Variable credits. Project-level design of systems in the area of signal processing and general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and coordinate ideas and resources with other students with related interest.

ELE E 521 Theory of Linear Systems
Fall. 4 credits. Prerequisite: ELE E 302 or permission of instructor. Recommended: a good background in linear algebra and real linear differential equations.
State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of Linear Systems, by T. Kailath.

ELE E 522 Nonlinear Systems: Analysis, Stability, Control, and Applications
Spring. 4 credits. Prerequisites: ELE E 521 or a solid background in linear algebra and real analysis strongly recommended but not required.
A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle’s Theorem, regions of attraction, slowly varying systems, advanced stability theory, Lyapunov redesign, applied nonlinear control, describing functions, averaging and singular perturbations, bifurcation analysis and control and application to physical systems.

ELE E 525 Adaptive Filtering in Communication Systems
Fall. 4 credits. Prerequisite: ELE E 468.
Fundamentals of an adaptive filter theory intended for digital communication systems applications. Traditional problem, e.g., channel equalization for systems with interference removal, is used to motivate adaptive filter design and to raise issues of current interest. Assignments will consist of reports on adoptive digital filter and simulated evaluation.
ELE E 526 Advanced Signal Processing  

ELE E 530 Fiber and Integrated Optics  
Spring. 4 credits with lab. Prerequisite: ELE E 303 or equivalent. Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensing. Wave equation solutions to the mode structure in waveguides, mode coupling, bandwidth limitation, optical sources based on semiconductors, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.  

ELE E 531 Quantum Electronics I  
Fall. 4 credits. Prerequisites: ELE E 306 and 407, or PHYS 443. A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.  

ELE E 532 Quantum Electronics II  
Spring. 4 credits. Prerequisite: ELE E 531 or permission of instructor. Not offered 1997–98. A continuation of ELE E 531. Topics include density matrix; nonlinear optical processes; properties of nonlinear optical materials; optical parametric oscillators; spontaneous and stimulated Raman and Brillouin processes; theory of coherence; pico- and femto-second optics; ultrafast processes in semiconductors and molecules; optical properties of semiconductor-doped glasses, quantum-well structures, and superlattices.)  

ELE E 533 Semiconductor Lasers  
Spring. 3 credits. Prerequisites: ELE E 430, ELE E 457, or permission of instructor. Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, traveling-wave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.  

ELE E 534 Microwave Solid State Devices  
Spring. 4 credits. Prerequisites: ELE E 433 and ELE E 457. May be taken for 3 credits without lab. Prerequisites: ELE E 433 and ELE E 457. Basic theory of operation of solid-state microwave and millimeter wave devices: field effect transistor (FET), high electron mobility transistor (HEMT), Schotky, IMPATT, Gunn, PIN, and tunnel devices. Emphasis on how to integrate these devices into practical circuits. Oscillators, amplifiers, and mixers will be fabricated and measured in the laboratory.  

ELE E 535 Semiconductor Physics  
Fall. 4 credits. Prerequisites: ELE E 457 and 407, or permission of instructor. Physics of materials and structures useful in semiconductor electronics and photonics: devices, including crystal structure, energy bands, effective mass, phonons, classical low-field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. On the level of Compound Semiconductor Device Physics by S. Tiwari.  

ELE E 536 VLSI Technology  
Spring. 4 credits. Prerequisites: ELE E 455 or ELE E 457 or ELE E 439 or permission of instructor. Microfabrication for silicon very large scale integrated circuits (VLSI), microelectromechanics (MEMS), compound semiconductor (CS), and optoelectronics. Lithography, diffusion, ion implantation, thin film deposition, and etching. Process integration for CMOS, BiCMOS, ELE E 447, ELE E 457, MEMS, CS, and optoelectronics. Hands-on MOS/MEMS fabrication, characterization, and simulation laboratory.  

ELE E 537 Computer System Packaging  
Spring. 4 credits. Prerequisites: ELE E 455 or ELE E 457 or ELE E 439, or permission of instructor. Physical integration of circuits, packages, boards, and full electronic systems. Computer (portable, desktop, cabinet levels) and telecommunication (cellular telephone, base station, switch level) system applications. Packaging architecture: electrical, optical signal distribution; power distribution; signal integrity; power, thermal management, mixed signals, manufacturing, measurements, and simulation. Case studies. Lectures include industry experts.  

ELE E 539 Practicum in VLSI Design  
Fall and spring (year-long course). 2 credits each semester. Prerequisites: ELE E 475 or consent of instructor. Corequisite: ELE E 439. A year-long implementation project related to ELE E 439. Students will design a chip and have it fabricated in the fall semester and test it for functionality and performance in the spring semester. Students are required to take the course both fall and spring.  

ELE E 541 Advanced Computer Architectures  
Fall. 3 credits. Prerequisite: ELE E 308 (or COM S 280 and 314). May not be offered 1997–98. Design and evaluation of processor architectures are examined in the light of actual implementations. Topics include parallel and pipelined architectures, interleaved memories, cache and virtual memories, L/O processors, vector and array processors, protection mechanisms, and RISC architectures.  

ELE E 542 Parallel Processing  
Spring. 3 credits. Prerequisite: ELE E 541. Not offered 1997–98. Parallel computer systems that are designed to provide a high computation rate for large specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multiprocessors and massively parallel processors are also discussed.  

ELE E 546 Broad Band Information Networks  
Spring. 3 credits. Prerequisite: ELE E 445 or consent of the instructor. 3 lecs. Evolution of network architectures for integrated voice, data, and video services; advances in switching with an emphasis on asynchronous transfer mode (ATM); performance modeling; traffic and network management.  

ELE E 547 Computer Vision  
Fall. 4 credits. Prerequisites: ELE E 308 (or COM S 280 and 314) or consent of instructor. Not offered 1997–98. Computer acquisition and analysis of images with emphasis on techniques for robot vision. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of image and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.  

ELE E 548 Digital Image Processing  
Spring. 3 credits. Prerequisites: ELE E 431, ELE E 445, familiarity with linear algebra. Introduction to image processing through seven major topics: perception, statistical modeling, transforms, enhancement, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis will be placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.  

ELE E 549 Visual Motion Seminar  
Spring. 1 credit. This seminar will provide an overview of motion as used in both coding and analysis of digital video, through examination of motion estimation and motion segmentation techniques. Topics include an introduction to digital video, techniques for computing motion, both block-based and pixel-based motion estimation, MPEG motion coding, Huasdoll-based motion estimation, motion-based tracking, and various techniques for motion segmentation. An emphasis will be placed on recent research results.  

ELE E 554 Advanced VLSI Circuit Design  

ELE E 555 Advanced Power Systems Analysis I  
Fall. 3 credits. Prerequisites: ELE E 451, ELE E 471. A course in numerical methods would be helpful. The course is designed for first-year graduate students. Not offered 1997–98. Topics include electromagnetic transients, synchronous machine modeling, synchronous machine control models, single-machine dynamic models, multimachine dynamic models, multimachine simulation using a differential-algebraic model, small-signal analysis of power systems, direct methods for stability analysis including potential energy boundary surface methods, regions of
attraction, exit point method and voltage stability using energy functions.]

ELE E 556 Advanced Power Systems Analysis II
Spring. 3 credits. Prerequisite: ELE E 451. Advanced topics in power system analysis. These include advanced control and analysis methods for dynamic contingencies such as voltage collapse and loss of synchronism, simulation methods for large-scale nonlinear analysis, methods for system protection with emphasis on digital relaying.

ELE E 558 Compound Semiconductor Electronics
Spring. 4 credits with lab. Prerequisites: ELE E 457 or equivalent. Electronic properties of advanced semiconductor device structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor field effect transistors (MOSFETs) and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical excitation and emission, and electrical characterization of compound semiconductor devices.

ELE E 561 Error-Control Codes
Fall. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

ELE E 562 Fundamental Information Theory
Fall. 4 credits. Prerequisite: ELE E 310 or equivalent. Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ELE E 563 Communication Networks
Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor. Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data. Flow control and capacity assignment algorithms for wideband circuit-switched and ATM networks. An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communications, detection, pattern recognition, and statistical signal processing. Topics include Bayes, minimax, and Neyman-Pearson decision theories; Bayes and maximum likelihood point estimation; Cramer-Rao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

ELE E 566 Wireless Networks
Spring. 4 credits. Prerequisites: ELE E 445 and ELE E 451. An introductory course in mobile and wireless networks. The course is targeted at the graduate level, but is open to undergraduates. The course covers fundamental techniques in design and operation of first and second generation wireless networks: cellular systems, medium access techniques, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air protocols (AMPS, IS-136, IS-95, GSM), wireless data networks (CDPD, Mobitex, Internet mobility, Personal Communication Services (PCS), etc.

ELE E 567 Topics in Digital Communications
Spring. Offered as 2 or 4 credits. Prerequisites: ELE E 562. Fundamental results in modern digital communication. Analytical and computational tools required to understand modern data communication, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

ELE E 567 Artificial Neural Networks
Fall. 4 credits. Prerequisites: ELE E 510; ELE E 411 recommended. Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide our primary analytical approach to design and analysis of neural networks. The course will cover mathematical and computer-based design capabilities of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers.

ELE E 581 Introduction to Plasma Physics (also A&EP 606)
Fall. 4 credits. Prerequisites: ELE E 303 and ELE E 304 or equivalent. First-year graduate-level course; open to exceptional seniors with permission of instructor. Plasma sustained particles in fields; drift-orbit theory; coulomb scattering, collisions; ambipolar diffusion; elementary transport theory; two-fluid and hydromagnetic equations; plasma oscillations and waves, GMA diagram; hydromagnetic stability, elementary applications to space physics, plasma technology, and controlled fusion.

ELE E 582 Basic Plasma Physics (also A&EP 607)
Spring. 4 credits. Prerequisites: ELE E 581 or A&EP 606. Boltzmann and Vlasov Equations; dielectric tensor; waves in magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

ELE E 583 Electrodynamics
Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 304 or equivalent. 3 lects. Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation, Electrodynamics of dispersive dielectric and magnetic media. At the level of Classical Electrodynamics, by Jackson.

ELE E 584 Microwave Theory
Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent. 3 lects, 1 rec. Theory of passive microwave devices. Modal analysis of inhomogeneous waveguides and cavities. Waveguide excitation, perturbation theory. Nonreciprocal waveguide devices. Scattering matrix analysis of multiport junctions, resonant cavities, directional couplers, circulators. Periodic waveguides, coupled-mode theory.

ELE E 585 Upper Atmosphere Physics II
(also ASTRO 576)
Spring. 3 credits. High-latitude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.

ELE E 587 Energy Seminar (also NS&E 545 and M&AE 545)
Fall and spring. 1 credit each semester. Students may take this seminar both fall and spring for credit. 1lec. Not offered 1997-98.
Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the University, and by outside experts. Examples of topics to be surveyed are energy resources, and economics, coal-based electricity generation; nuclear reactors; fossil fuels; energy conservation by users; and air-pollution control.

ELE E 588 Advanced Electromagnetic Wave Propagation and Scattering
Spring. 3 credits. Prerequisite: ELE E 487 and 581 or permission of instructor. Offered alternate years. Not offered 1997-98.
WK band and low-wave solutions of the wave equations; interactions between particles and waves, scattering of radio waves from random fluctuations in refractive index, scatter propagation, incoherent scatter from the ionosphere and its use as a diagnostic tool, scattering from unstable plasma waves, pulse compression and other radar probing techniques.

ELE E 593 Bioelectric Signal Analysis and Processing
Fall. 3 credits with lab. Prerequisites: ELE E 301, ELE E 315, and a knowledge of C programming and MATLAB. ELE E 425 helpful.
Measurement and computer-aided analysis of low-level biological signals in the presence of background noise. Electrocardiography, A/D conversion, filtering, signal conditioning, and
data compression techniques will be investigated using the human surface ECG as signal source. Pattern classification and microcontroller instrumentation design will be introduced. Final team design projects are required.

ELE E 594 Mobile Communication Systems
Spring. 4 credits. Prerequisite: ELE E 411; Corequisite: ELE E 468. Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include: cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations. Some lectures will be given by industry researchers.

ELE E 595-599 Graduate Topics in Electrical Engineering
1-4 credits. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 633 Radiation Effects in Microelectronics (also NS&E 621)
For description, see NS&E 621.

ELE E 681-692 Electrical Engineering Colloquium
691, fall; 692, spring. 1 credit each term. For students enrolled in the graduate Field of Electrical Engineering. Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ELE E 693-694 Master of Engineering Design
693, fall; 694, spring. 1-10 credits. For students enrolled in the M.Eng (Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate 6-digit course ID numbers.

ELE E 695-699 Graduate Topics in Electrical Engineering
1-6 credits. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned. See M.Eng. office for course registration procedure.

ELE E 781-792 Thesis Research
791, fall; 792, spring. 1-15 credits. For students enrolled in the master's or doctoral program.

GEOLOGICAL SCIENCES

Courses
For complete course descriptions, see the Geological Sciences listing in the College of Arts and Sciences section.

GEOL 101 Introductory Geological Sciences
Fall, spring, summer. 3 credits.

GEOL 102 Evolution of the Earth and Life
(Bio G 170)
Spring, summer. 3 credits.

GEOL 104 The Sea: An Introduction to Oceanography (BIO ES 154)
Spring, summer. 3 or 4 credits (4 credits with lab section).

GEOL 105 Writing on Rocks (Freshman Seminar)
Fall. 3 credits. See Freshman Seminar handbook for description.

GEOL 106 Vertebrate Fossil Preparation
Spring. 1 credit. Prerequisites: one introductory geology course or concurrent enrollment; class size is limited.

GEOL 107 How the Earth Works
Fall. 1 credit.

[GEOL 108 Geology and Society
Spring. 1 credit. May be taken concurrently with or after GEOL 101, 102, 104, 111, 201, or 206.]

GEOL 109 Dinosaurs
Fall. 1 credit.

GEOL 111 To Know the Earth and Build a Habitable Planet
Fall. 3 credits.

GEOL 122 Earthquake! (also ENGR 122)
Fall. 5 credits. For course description, see ENGR 122.

GEOL 123-124 Science of Earth Systems Colloquium (also ABEN 120-121, SCAS 101-102 and SES 101-102)
Fall. 3 credits. For course description, see ENGR 125.

GEOL 125 Global Environment (also ENGR 125)
Fall. 3 credits. For course description, see ENGR 125.

GEOL 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Spring. 3 credits. Prerequisites: MATH 191 and PHYS 112. For course description, see ENGRD 201.

GEOL 203 Natural Hazards and the Science of Complexity
Fall. 3 credits. 1 course in calculus.

GEOL 210 Introduction to Field Methods in Geological Sciences
Fall. 3 credits. Prerequisite: GEOL 101 or 201, or permission of instructor. Weekly field sessions. A weekend field trip.

GEOL 212 Special January Field Trip
Fall. 2 credits. Prerequisites: GEOL 101 or 201 or equivalent, and permission of instructor. Travel and subsistence expenses to be announced.

GEOL 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.

GEOL 214 Western Adirondack Field Course
Spring. 1 credit. Prerequisite: GEOL 210 or equivalent, or permission of instructor.

Junior, Senior, and Graduate Courses
Of the following, the core courses GEOL 326, 355, 356, 375, and 388 may be taken by B.S. candidates who have successfully completed GEOL 201 or the equivalent and by B.A. candidates who have completed GEOL 101 or the equivalent, or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

GEOL 302 Evolution of the Earth System (also SES 332 and SCAS 302)
For course description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies." in the front part of the catalog.

GEOL 321 Introduction to Biochemistry (also SES 321, NTRES 321)
Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology.

GEOL 326 Structural Geology
Spring. 4 credits. Prerequisite: GEOL 101 or 201, or permission of instructor.

GEOL 355 Mineralogy
Fall. 4 credits. Prerequisite: GEOL 101 or 201 and CHEM 207 or permission of instructor.

GEOL 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: GEOL 355.

GEOL 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: GEOL 101, 102, or 201.

GEOL 388 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent.

GEOL 411 Satellite Remote Sensing of Glaciers, Earthquakes, and Erosion
Fall. 3 credits.

GEOL 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: GEOL 210 and GEOL 326; Spanish desirable, but not required.

GEOL 423 Petroleum Geology
Fall. 3 credits. Recommended: GEOL 326. Offered alternate years.

GEOL 434 Reflection Seismology
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent.

GEOL 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor.

GEOL 445 Geohydrology (also ABEN 471 and CEE 431)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. For description, see CEE 431.

GEOL 452 X-ray Diffraction Techniques
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years.

[GEOL 453 Advanced Petrology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years. Not offered 1997-98.]

[GEOL 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1997-98.]
GEOL 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 102, or equivalent. Recommended: GEOL 356. Offered alternate years.

[GEOL 458 Volcanology
Spring. 3 credits. Corequisite: GEOL 356 or equivalent. Offered alternate years. Not offered 1997-98.]

GEOL 475 Special Topics in Oceanography
Spring, summer. 2-5 var. credits. Prerequisites: GEOL 104 or BIO ES 154 and permission of instructor.

[GEOL 476 Sedimentary Basins: Tectonics and Mechanics
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1997-98.]

[GEOL 477 Advanced Stratigraphy
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1997-98.]

GEOL 479 Paleobiology (also BIO ES 479)
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIO ES 274, 373, GEOL 375, or permission of instructor. Offered alternate years.

GEOL 481 Senior Survey of Earth Systems
Fall. 3 credits. Limited to seniors majoring in geological sciences.

GEOL 491-492 Undergraduate Research
Fall, spring. 1 or 2 credits variable.

GEOL 500 Design Project in Geohydrology
Fall, spring. 3–12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters.

GEOL 502 Case Histories in Groundwater Analysis
Spring. 4 credits.

[GEOL 622 Advanced Structural Geology
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years. Not offered 1997-98.]

[GEOL 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years. Not offered 1997-98.]

GEOL 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor.

[GEOL 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years. Not offered 1997-98.]

[GEOL 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years. Not offered 1997-98.]

GEOL 651 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years.

GEOL 656 Isotope Geochemistry
Spring 3 credits. Open to undergraduates. Prerequisites: GEOL 455 or permission of instructor. Offered alternate years.

GEOL 681 Geotectonics
Fall. 3 credits. Prerequisites: permission of instructor.

GEOL 695 Computer Methods in Geoscientific Studies
Fall, spring. 3 credits.

GEOL 700-799 Seminars and Special Work
Fall, spring. 1–3 credits. Prerequisite: permission of instructor. Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

[GEOL 722 Advanced Topics in Structural Geology
Not offered 1997–98.]

GEOL 731 Plate Tectonics and Geology
GEOL 733 Fractals and Chaos—Independent Studies
GEOL 751 Petrology and Geochemistry
GEOL 753 Advanced Topics in Mineral Physics
GEOL 755 Advanced Topics in Petrology and Tectonics
GEOL 757 Current Research in Petrology
GEOL 762 Advanced Topics in Petroleum Exploration
Fall.

[GEOL 771 Advanced Topics in Sedimentology and Stratigraphy
Not offered 1997–98.]

GEOL 773 Paleobiology
GEOL 775 Advanced Topics in Oceanography
Spring.

GEOL 780 Earthquake Record Reading
Fall.

GEOL 781 Geophysics, Exploration Seismology
GEOL 783 Advanced Topics in Geophysics
GEOL 789 Lithospheric Seismology (COCORP Seminar)
GEOL 793 Andes-Himalaya Seminar
GEOL 795 Low-Temperature Geochemistry
GEOL 796 Geochemistry of the Solid Earth
GEOL 797 Fluid-Rock Interactions
GEOL 799 Soil, Water, and Geology Seminar

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111 Materials by Design (also ENGR 111)
Fall. 3 credits. E. P. Giannelis. For description, see ENGR 111.

MS&E 118 Design Integration: A Portable CD Player (also ENGR 118)
Spring. 3 credits. W. Sachse. For description, see ENGR 118.

MS&E 124 Designing Materials for the Computer
Spring. 3 credits. Lectures. C. K. Ober. For description, see ENGR 124.

MS&E 222 Materials Chemistry
Spring. 3 credits. E. P. Giannelis. This course is designed to show how materials chemistry has enabled modern technology. Topics will include conducting polymers, organic LEDs, self-assembling materials, contact lithography, nanophase and nanocrystalline materials, catalysis, smart gels, dendrimers, buckytubes, aerogels, chemistry of surfaces, molecular magnets, biomimetic materials, and light harvesting polymers, inorganic polymers.

MS&E 261 Introduction to Mechanical Properties of Materials (also ENGR 261)
Fall. 3 credits. S. L. Sass. For description, see ENGR 261.

MS&E 265 Biological Materials and Their Synthetic Replacements
Fall. 3 credits. D. T. Grubb. From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course will consider a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials will be discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and bio-compatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities, will also be considered.

MS&E 277 The Substance of Civilization—Materials through the Ages
Spring. 3 credits. 2 lecs, 1 lab. Not offered 1997–98. S. L. Sass. Materials have enabled revolutionary advances in how we live, work, fight, travel, and play; hence the naming of eras after them—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern Western industrial civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between critical developments are identified and explored—for example, the relationship between materials, agriculture, and written languages in the fourth millennium B.C., and between the Exodus of the Hebrews, the general tumult in the Eastern Mediterranean, and the onset of the Iron Age, at the end of the second
millennium B.C. Early technologies will be illustrated with beautiful works of art. Lectures, demonstrations, and hands-on laboratory experiments, will elucidate the origin of the unique properties of materials such as polymers, ceramics, metals and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

**MS&E 285 Art, Archaeology, and Analysis (also AR&EO 286, ART 372, ENGR 185 and NS&E 285 and PHYS 200)**

Spring: 3 credits.

For description, see ENGR 185.

**MS&E 331/531 Structure of Materials**

**MS&E 332/532 Electrical and Magnetic Properties of Materials**

**MS&E 333 Research Involvement I**

Fall: 3 credits. Prerequisite: approval of course coordinator. Staff. Supervised independent research project in association with faculty members and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized.

**MS&E 334 Research Involvement II**

Spring: 3 credits. Prerequisite: approval of department. Staff. See MS&E 333 for description. May be a continuation of MS&E 333 or a one-semester affiliation with a research group.

**MS&E 335/535 Thermodynamics of Condensed Systems**

Fall: 4 credits. Prerequisites: MATH 293 and 294. M. O. Thompson. The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. Statistical mechanics is introduced and applied to the calculation of entropy and specific heat of ideal gases and solids. Examples of design and control of processes.

**MS&E 336/536 Kinetics, Diffusion, and Phase Transformations**

Spring: 3 credits. Prerequisite: MS&E 335 or permission of instructor. R. Dieckmann. Introduction to electrochemistry, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids; solidification, crystal growth, corrosion, recrystallization and gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties. One-third of course involves examples of design and control of processes.

**MS&E 345 Mechanical Properties and Processing of Engineering Materials (also MS&E 212)**

Spring: 3 credits. Prerequisite: ENGRD 202. N. Zabaras. For description, see MS&E 212.

**MS&E 414/514 Chemical Processing of Ceramics**

**MS&E 435 Senior Thesis I & II**

Fall and spring. 2-semester course. 8 credits. Staff. Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for thesis topics should be approved by the supervising faculty prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations are required. This course is required for graduation with honors.

**MS&E 441/448 Materials Design Concepts I & II**

447, fall; 448, spring. 2 credits each term. C. K. Ober, Y. Suzuki. Defines design in the field of materials science using Dieter's *Engineering Design*, Ashby's *Materials Selection in Engineering Design*, and other sources. Innovation, patent searching, and ANSYS standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral and written presentations. Proposal for design-study project in the fall semester. Completion of extensive design-study project in the spring semester. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise.

**MS&E 449 Introduction to Ceramics**

Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor. R. Dieckmann. Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

**MS&E 452 Properties of Solid Polymers**

**MS&E 454 Processing of Glass, Ceramic, and Glass-Ceramic Materials**

Spring. 3 credits. Offered alternate years. Recommended prerequisite: MS&E 449. R. Dieckmann.

Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosemitive materials, and powder processing and sintering of ceramics will be discussed. This course is team taught with scientists from the research and development laboratory of Corning Glass Works.

**MS&E 455 Introduction to Composite Materials (also MS&E 455 and T&AM 455)**

Spring. 4 credits. For description, see T&AM 455.

**MS&E 459 Physics of Modern Materials Analysis**

Spring. 3 credits. M. O. Thompson.

The interaction of ions, electrons, and photons with solids will be discussed. This course will be particularly important for students who are planning to use the electron microscope for their undergraduate or graduate research projects. The course will cover the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are relevant to understanding techniques of modern materials analysis. Principles of analysis techniques such as Auger electron spectroscopy, ion scattering, and secondary ion-mass spectroscopy. Design of experiments for near-surface analysis.

**MS&E 463 Principles of Electronic Packaging**

Spring. 3 credits. C. Y. Li.

Design, materials, and manufacturing needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

**MS&E 468 Undergraduate Teaching Involvement**

Fall and spring. Variable credit. MS&E faculty.

This course will give credit to students who help in the laboratory portions of ENGRI 111 or 124, ENGRD 261 or MS&E 277. The number of credits earned will be determined by the teaching load and will typically be 1 to 3 credits.

**MS&E 490 Independent Study**

Fall and spring. Variable credit. Individual faculty.

This course is meant for students who are not yet seniors and who have already taken MS&E 333 and MS&E 334, Research Involvement, and who want to do an intense research project.

**MS&E 495 Introduction to Group Theory with Applications**

Fall. 2 credits. Homework only. S-U only. R. L. Liboff.

Crystallographic space groups. Ligand field theory. Perlmutter’s theory, and Young diagrams. Oc3 and Su2(2) groups. Tensor representations and the Wigner-Eckart theorem. Application to degeneracy, selection rules, and band structure.

**[MS&E 501] Introduction to Electron Microscopy**

This course is for undergraduates and graduate students who are interested in getting a basic foundation in transmission electron microscopy and electron diffraction techniques. This course will be particularly important for students who are planning to use the electron microscope for their undergraduate or graduate research projects. Included will be electron optics, kinematical theory of diffraction, image contrast from crystal defects, high resolution lattice imaging, and the interpretation of electron diffraction patterns. Both theoretical and practical aspects of electron microscopy are discussed.

**Graduate-Level Professional Courses**

**[MS&E 516 Thin-Film Materials Science**

Fall. 3 credits. Offered alternate years. Not offered 1997–98. Staff.

This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The course will cover reactive thin films involving the formation of surface oxides, metallic silicides, and amalminides will be presented.

**[MS&E 518 Introduction to Electron Microscopy**

Fall. 3 credits. Prerequisite: MS&E 511 or permission of instructor. Offered alternate years. Not offered 1997–98. Staff. Basic optics and operation of scanning and transmission electron microscopes. Image formation, modes of contrast, and resolution in SEM and TEM. Electron diffraction. Images of perfect crystal and defects in two-beam diffraction contrast. Analytical microscopy; comparison of energy dispersive spectroscopy, wavelength dispersive spectroscopy and electron energy laser spectroscopy. Overview of specimen preparation and in-situ microscopy.

**[MS&E 520 Practical Electron Microscopy**

Fall. 3 credits. Corequisite: MS&E 518. Limited to 12 students. A fee will be charged for instrument usage. Offered alternate years. Not offered 1997–98. Staff.

Students will be instructed in the proper use of a scanning and a transmission electron microscope. All stages from initial alignment of the instrument to presentation of the results will be covered. Three or four projects will be completed, including obtaining atomic lattice fringe images and X-ray microanalysis.

**[MS&E 553-554 Special Project**

553, Fall; 554, spring. 6 credits each term. Master of Engineering research project.

**Graduate Core Courses**

**[MS&E 601 Thermodynamics of Materials**

Fall. 3 credits. Prerequisite: previous course in thermodynamics at level of MS&E 355. Staff.

**[MS&E 602 Elasticity, Plastic Flow, and Fractures**

Fall. 3 credits. Staff.

Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperatures over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

**[MS&E 603 Analytical Techniques for Materials Science**

Spring. 4 credits. Lab. M. O. Thompson.

Survey of atomic and structural analysis techniques as applied to surfaces and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopy, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.

**[MS&E 604 Diffusion and Phase Transformation: Kinetics in Condensed Matter**

Spring. 3 credits. Staff.

Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in solids, metallic and ionic. Phase stability and transformation; nucleation and growth, spinodal decomposition and displacive transformations. Phase coarsening processes, recrystallization and grain growth. Diffusion-controlled growth, interfacial reactions, moving-boundary problems. Grain-boundary migration controlled kinetics. At the level of *Diffusion in the Condensed State*, by Kirkaldy and Young.
Further Graduate Courses

MS&E 611 Modern Polymer Physics  Spring. 3 credits. Prerequisites: MS&E 452, CHEM 711, or equivalent. Offered alternate years. Not offered 1997–98. Modern engineering plastics and polymeric matrices for fiber-reinforced composite materials often demand more detailed knowledge of polymer structure and properties in the melt or solid state than is afforded by beginning courses that emphasize polymer solutions. This course is a fundamental approach to the structure and physical properties of polymers, copolymers, and polymer mixtures, including thermodynamics, phase equilibria, diffusion, kinetics of phase separation, and interfaces. At the level of Scaling Concepts in Polymer Physics by de Gennes.

MS&E 612 Solid-State Reactions  Fall. 3 credits. Offered alternate year. R. Dieckmann. Not offered 1997–98. Next offered 1998–99. Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficient) are examined. Reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick’s laws, point-defect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), demixing of materials in potential gradients, selected solid-state processes (internal reactions, etc.).

MS&E 614 Transmission Electron Microscopy  Spring. 3 credits. Prerequisite: MS&E 331 or equivalent level of knowledge of crystallography and diffraction. S. L. Sass. This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include specimen preparation, adjustment and calibration of the TEM, and image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, including Bloch waves and anomalous absorption, the contrast transfer function theory of phase contrast, and image modeling and analysis techniques for quantitative interpretation of data. Current texts are Loretto Electron Beam Analysis of Materials, 2nd ed., and Riemen Transmission Electron Microscopy, Physics of Image Formation.

MS&E 617 Solid State Electrochemistry  Fall. 3 credits. Prerequisite: MS&E 612 or permission of instructor. Offered alternate years. Not offered 1997–98; next offered 1999–2000. R. Dieckmann. Disorder in solids, thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations, technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Rickett.

MS&E 619 Superhard Materials  Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1997–98. A. L. Ruoff. The superhard materials include diamond, cubic boron nitride (possibly the new C₃N₃), and borderline, B₄C. The origin of their extreme hardness and their technological significance will be described. Commercial methods of synthesis of large crystals, powders, thin films and polycrystalline aggregates (by sintering at pressure) will be examined. Their chemical, optical and mechanical properties will be studied. Moreover, there is substantial potential for radiation-hard semi-conducting devices and the status of this area will be covered. At the level of Field, The Properties of Natural and Synthetic Diamonds, plus recent papers.

MS&E 524/624 Synthesis of Polymeric Materials  Spring. 3 credits. Alternate years. C. K. Ober. Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, and cationic mechanisms; ring opening and coordination routes. Statistical and Kinetic aspects of homopolymer and copolymer formation. Stereochemistry of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics will include liquid crystalline polymers, photoreactive materials, and supramolecular chemistry. At the level of Principles of Polymerization, by Odian.

MS&E 628 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)  Spring. 4 credits. Prerequisite: CHEM 605 or permission of instructor. F. DiSalvo. This course covers the third of a three-termed sequence. Interdisciplinary approach to solids. Topics include solid-state structure and x-ray diffraction, synthesis methods, defects in solids, phase diagrams, electronic structure, and chemical and physical properties of solid-state systems. Text: Solid State Chemistry and Its Applications, by West. Readings from inorganic chemistry and solid-state physics texts.

MS&E 671 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)  Spring. 4 credits. Chemistry faculty. For description, see CHEM 671.

Specialty Courses

MS&E 552 Introduction to Photonic Materials and Devices  Spring. 1 credit. M. Gupta. Introduces students to important subject material of great practical importance: (1) Optical thin film materials and devices (optical dielectric coatings, thickness measurements, high reflectance coatings and practical examples, etc.), (2) Compound semiconductor materials and devices (GaAs, GaN and ZnSe light emitting and detecting materials, quantum well design of high reflectance and antireflection coatings and practical examples, etc.), (3) Ferroelectric materials and devices (GaAs, GaN and ZnSe light emitting and detecting materials (electro-optic, piezoelectric, pyroelectric, acousto-optic properties and devices), (4) Guided wave materials and devices (fibers, waveguides, nonlinear effects and devices), (5) Optical information storage (optical storage, holographic storage, and optical communication (attenuation, dispersion, essential components, optical amplifiers, switching, etc.).

MS&E 703 Surfaces and Interfaces in Materials  Spring. 3 credits. J. M. Blakely. This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics and theory of rate processes will be assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface states, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation and other surface reactions.

MS&E 779 Special Studies in Materials Science  Fall, spring. Variable credit. Offered on demand. Staff. Supervised studies of special topics in materials science.

MS&E 798 Materials Science and Engineering Colloquium  Fall, spring. 1 credit each term. Credit limited to graduate students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects
of interest in materials sciences, especially in connection with new research.

M&AE 799 Materials Science Research Seminars
Fall, spring, 2 credits each term. For graduate students involved in research projects. Staff. Short presentations on research in progress by students and staff.

M&AE 800/801 Research in Materials Science
800, fall; 801, spring. Credit to be arranged. Staff. Independent research in materials science under the guidance of a member of the staff.

MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

M&AE 101 Naval Ship Systems
For description, see NAV S 202.

M&AE 102 Drawing and Engineering Design (also ENGRG 102)
Fall, spring, 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty-two students each half term. Recommended for students without previous mechanical drawing experience. Staff. For description, see ENGRG 102.

M&AE 117 Introduction to Mechanical Engineering (also ENGR 117)
Fall or spring, to be determined. 3 credits. For description, see ENGR 117.

M&AE 212 Mechanical Properties and Processing of Engineering Materials (also MS&E 345)
Spring. 4 credits. Prerequisite: ENGRD 202. Introduction to the broad range of mechanical behavior of materials and their processing. The mechanical properties of metals, ceramics, and composite materials are covered together with structural features and processing. Ideal work methods are introduced for the analysis of bulk deformation processes. Heat treatment of metals and alloys, phase diagrams, casting and quenching processes.

M&AE 221 Thermodynamics (also ENGRG 221)
Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112. For description, see ENGRG 221.

M&AE 225 Mechanical Design and Synthesis
Spring. 3 credits. Prerequisite: ENGRD 202. Lab fee. A hands-on laboratory, the use of machine tools, mechanical dissection, and a number of design projects provide direct experience of creative design synthesis.

M&AE 323 Introductory Fluid Mechanics
Fall. Usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202 and 203 and coregistration in 221, or permission of instructor.

Hydrostatics, conservation laws using control volume analysis and using differential analyses, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, compressible flow.

M&AE 324 Heat Transfer
Spring, may also be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Conduction of heat in steady and unsteady situations. Surfaces with fins and systems with heat sources. Forced and natural convection of heat arising from flow around bodies and through ducts. Heat exchangers. Emission and absorption of radiation; radiative transfer between surfaces.

M&AE 325 Mechanical Design and Analysis
Fall, usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRD 202, ENGRD 203, M&AE 212 and M&AE 225. Lab fee. Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&AE 326 System Dynamics
Spring, may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRD 203. Junior standing required. Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications, vibrations of single- and multidegree-of-freedom systems; feedback control systems, stability and nonlinear simulation and experimental studies of vibration and control systems.

M&AE 427 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&AE 323, 324. Fulfills the technical writing requirement. Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and the thermal sciences. Measurements of temperature, heat transfer, viscosity, drag, fluid-flow rate, effects of turbulence, air foil stall, two-phase flows and engine performance. Biweekly written assignments.

M&AE 428 Engineering Design
Fall. 2 credits. Prerequisite: completion of six semesters in mechanical engineering or equivalent. Survey of design principles used in industry. Examples taken from all areas of mechanical engineering. Special emphasis on the design process as used in industry to solve practical problems. Case studies presented by engineers employed in industry and government. Students also participate in a design project.

M&AE 429 Mechanical Systems, Design, Materials Processing, and Precision Engineering
Spring. 3 credits. Prerequisites: M&AE 325 or permission of instructor. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

M&AE 389 Computer-Aided Design
Fall. 3 credits. Limited to juniors and seniors. May be offered in Engineering Cooperative Program. Fulfills computer applications requirement. Course emphasizes the application of computers to the solution of mechanical engineering design problems. Topics include: geometry (space curves, splines, patches, solid modelling), computer graphics, and product rendering; analytical methods such as simulation, optimization, and curve fitting; and collaborative technologies such as the Web and computer supported collaborative work.

M&AE 412 Smash and Crash: Mechanics of Large Deformations
Prerequisites: M&AE 212, T&AM 455.
Severe loading is a defining feature of both materials processing and crashworthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not recoverable. In materials processing, the desire is to change the shape to manufacture components; in crashworthiness, it is to absorb the vehicle energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crush cage.

M&AE 417 Control of Robot Manipulators
Spring. 3 credits. Not offered 1997-98. Introductory course in the analysis and control of mechanical manipulators. Topics include spatial descriptions and transformations, manipulator kinematics, inverse manipulator kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators for manipulators, trajectory control, and compliant motion control. Various control strategies will be explored and analyzed, both graphically and mathematically, on a computer model of a simple manipulator.

M&AE 455 Introduction to Composite Materials (also MS&E 455 and T&AM 455)
Spring. 4 credits. For description, see T&AM 455.

M&AE 461 Entrepreneurship for Engineers (also ENGRG 461)
Spring. 3 credits. Enrollment open to seniors; others with permission of instructor. Enrollment may be limited. Course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include: competitive analysis, competitive strategy; business formation, bookkeeping; technology protection; human resource management; negotiation; business valuation; and manufacturing issues. Guest speakers will provide a real-life perspective on critical issues facing the entrepreneur. A term project will be the team development of a business plan for an innovative new venture and will require detail of manufacturing, support, and information systems as well as staffing and cost data.
M&A 464 Design for Manufacture
Spring. 3 credits. Prerequisites: M&A 212 and M&A 225. Fulfills field design requirement. Readings and class discussion will provide a context for the importance of design for manufacture and assembly in product development, manufacturing, and marketing. Lecture topics include DFMA design rules and applications; net present value analysis applied to product development; determination of manufacturing capability using statistical process control, and Taguchi design for experiment methodology to evaluate product/process improvements. A team design project will evaluate the manufacturability of a new or existing product.

M&A 465 Biomechanical Systems—Analysis and Design
Spring. 3 credits. Prerequisites: ENGRG 202 and 203. Enrollment limited. Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

M&A 467 Advanced Mechanical Analysis and Design
Fall. 3 or 4 credits. Evening examinations. Prerequisite: M&A 325 and M&A 326 or permission of instructor. Further application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems. Diverse examples from aerospace, automotive, and biomechanical fields, with emphasis on current machinery applications. Students have access to general-purpose software tools (such as MATLAB) as well as specialized computational codes (such as ANSYS) for analysis of stress and deformation. Term project.

M&A 469 Stress Analysis for Mechanical and Aerospace Design
Fall. 3 credits. Prerequisites: T&M 202 and M&A 325 or permission of instructor. Evening examinations. Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to analysis and design of mechanical and aerospace systems and components. Review of mechanics fundamentals and their application to classical problems. Introduction to modern computational methods (such as the finite element method) for analysis of stress and deformation. Term project.

M&A 478 Feedback Control Systems
For description, see ELF E 471.

M&A 486 Automotive Engineering Design
Spring. 4 credits. Prerequisite: M&A 428 and senior standing. Fulfills field design requirement.

M&A 489 Computer-Aided Design Project
Fall. 4 credits. Limited to seniors in mechanical engineering. Fulfills both field design and computer applications requirements. Requires extensive project in addition to course assignments. For description, see M&A 389.

M&A 511 Survey of Manufacturing Processes
Fall or spring, to be determined, may be offered in summer program. 3 credits. Prerequisites: graduate standing or permission of instructor. Not for M&A majors. Yield criteria and plastic flow: Manufacturing processes for engineering materials, including metals, polymers, ceramics and composites. Casting, forming, material removal and joining processes. Intended for non-mechanical engineers.

M&A 514 Introduction to Precision Engineering
Fall. 3 credits or 4 with laboratory. Prerequisites: ENGRG 102 and M&A 212, or 412, or permission of instructor. Variability in mechanical products arises primarily from the processes used to make and assemble parts; it must be accommodated in design and controlled in manufacturing. This course addresses form variability through studies of ideal-form modeling, form tolerancing, form measurement, and manufacturing process modeling (sources of form error). Central principles, practices, and limitations are summarized.

M&A 570 Intermediate Dynamics
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. 2 lecs. Introduction to analytical mechanics, virtual work, Lagrangian mechanics. Small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies.

M&A 577 Vibrations and Waves in Elastic Systems (also T&M 574)
Not offered 1997–98.

M&A 578 Feedback Control Systems Design and Implementation
Spring. 3 credits. Prerequisite: M&A 478 or ELE E 471, graduate standing, or permission of instructor. Fulfills the computer application requirement. Not offered 1997–98.

M&A 612 Materials Processing: Theory and Applications

M&A 613 Computational Methods in Materials Processing

M&A 615 Experiments in Materials Processing
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. This course will focus on experiments related to the mechanical properties of materials and experiments using various materials processing apparatus and will include a general introduction to sensors and instrumentation for engineering measurements. Testing for mechanical properties/model parameter characterization: inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and ironing. Formability experiments. Determination of heat transfer coefficients associated with quenching and solidification process. Fluidity measurements. Specimen design and fabrication. Although the focus is on metals and alloys attention is also given to polymers and ceramic materials.

M&A 625 Product Development
Spring. 4 credits. Prerequisite: graduate standing. Emphasis will be placed on the Product Realization Process for products based on advanced technologies and requiring concurrent engineering. Covers a wide range of methods and techniques used in the product development process: concurrent engineering, team organization, technologies to support collaboration, cognitive models of design, generation of product specifications, quality function deployment, conceptual design, configuration design, FAST/FMEA, and parametric design.

M&A 655 Composite Materials (also MS&E 655 and T&M 655)
Spring or fall. 4 credits. Prerequisite: M&A 511 and M&A 612.

M&A 665 Advanced Topics in Orthopaedic Biomechanics
On demand. 4 credits. Prerequisites: graduate standing, senior or concurrent registration in advanced courses in strength of materials or elasticity, and intermediate dynamics. Not offered 1997–98.

Advanced treatment of topics in the biomechanics of the musculoskeletal system. Force analysis of the musculoskeletal system under static and dynamic conditions, compact and trabecular bone as structural materials, structural analysis of bone-implant systems, remodeling of bone.
M&AE 670 Finite Element Analysis for Mechanical and Aerospace Design
Spring. 4 credits. Prerequisite: graduate standing, or permission of instructor.
Evening examinations.
Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as heat conduction). Primary emphasis on underlying mechanics and numerical methods. Secondary consideration of inherent capabilities and limitations of large-scale, general-purpose structural mechanics programs (such as ANSYS). Introduction to computational aspects through study of small, special-purpose programs and application of available general-purpose programs. Term project.

M&AE 677 Advanced Topics in Systems and Control
Spring. 4 credits. Prerequisite: M&AE 478 (ELE 471), ELE 521, graduate standing, or permission of instructor.
Modern topics in model based control pertaining to multi-input, multi-output systems. Emphasis on design techniques which result in closed loop systems that are insensitive to modeling errors. Topics include \( H \)-infinity and \( H_2 \) optimization, explicit models of uncertainty, gain scheduling, and the analysis of uncertain systems. Computer-aided design laboratory will include aerospace applications such as flight control, control of flexible space structures, and other topics depending on class interest.

M&AE 678 Optimal Control and Estimation
Fall, on demand. 3 credits. Prerequisite: M&AE 478, ELE 471, graduate standing, or permission of instructor; programming ability in FORTRAN, Pascal, or C.
Develops the theory of the design of modern multi-input–multi-output feedback control systems using optimal control techniques. Topics covered include trajectory optimization and the minimum principle, bang-bang optimal control solutions, Kalman filtering, LQR/LQG controller design, suboptimal control and estimation, and applications to regulator and tracking problems. Both linear and nonlinear systems, and continuous-time and discrete-time control, and considered.

M&AE 679 Modeling and Simulation of Dynamic Systems
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor.
Selected applications from diverse fields. Representation of continuous dynamic systems by state-variable models. Simulation by numerical integration using general-purpose languages (such as MATLAB) and simulation packages. Special topics in linear and nonlinear dynamics. Term project.

M&AE 680 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (also CEE 772 and T&M 666)
Spring. 4 credits. Prerequisite: T&M 663 Conceptual, theoretical, and practical bases for finite element analysis in solid and structural mechanics, such as the bending of beams, torsion of shafts, and two-dimensional elasticity. Topics include the methodology for obtaining a discretized system of equations from differential equations via weighted residuals, consistent application of boundary conditions, various types of elements including isoparametric elements, numerical integration of elemental quantities, error estimation, and (adaptive) mesh generation. Programming assignments using MATLAB and C codes provided by the instructor.

M&AE 715 Finite-Deformation Plasticity and Rheology and Their Applications in Materials Processing
Fall. 4 credits. Prerequisites: advanced graduate students. Introduction to Continuum Mechanics and Plasticity. Offered alternate years. Not offered 1997–98.

M&AE 305 Introduction to Aeronautics
Fall. 3 credits. Limited to upperclass engineers; others with permission of instructor.
Introduction to the concept of aircraft design. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Description and performance of propeller-driven and jet propulsion engines. Design studies focus on transonic passenger airplanes and small supersonic jets.

M&AE 306 Spacecraft Engineering
Spring. 3 credits. Upperclass engineering students.
Introduction to spacecraft design from launch, through orbital operation, to reentry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, and reentry. Emphasis on satellites orbiting the Earth. Series of guest lectures on current problems and trends in spacecraft operation and development.

M&AE 400 Components and Systems: Engineering in a Social Context (also S&T 400)
Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Serves as an approved elective but not as a field elective in mechanical engineering. Offered alternate years. This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), supersonic transport, and the automobile and its environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

M&AE 401 Components and Systems: Engineering in a Social Context
Spring. 4 credits. Prerequisites: senior standing, two years of college physics. Fulfills field design requirement. Offered alternate years. For description, see M&AE 400.

M&AE 423 Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisite: M&AE 323.
This course builds on the foundation of M&AE 323. Emphasis will be on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered will include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence and chaos.

M&AE 449 Combustion Engines
Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.
Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Air-standard analyses, chemical equilibrium, ideal-cycle analyses, deviations from ideal processes, combustion knock. Formation and control of undesirable exhaust emissions.

M&AE 458 Introduction to Nuclear Science and Engineering I (also A&EP 303, and NS&E 403)
For description, see NS&E 403.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484)
For description, see NS&E 484.

M&AE 506 Aerospace Propulsion Systems
Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years. Offered 1997–98. Application of thermodynamic and fluid-mechanic principles to design and performance of aerospace systems. Jet propulsion principles, including rockets. Electric propulsion. Future possibilities for improved performance.

M&AE 507 Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: M&AE 305 and M&AE 523 or permission of instructor. Offered alternate years. Not offered 1997–98.
M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

M&AE 602 Fluid Dynamics at High Reynolds Numbers
Spring. 4 credits. Prerequisite: M&AE 601. Navier-Stokes and Euler equations, integral formulas for fluid forces and moments on immersed bodies in compressible and incompressible viscous flows. Vorticity dynamics in compressible flows, Kelvin's theorem. Hjorth's theorem, Helmholtz decomposition of vector fields. Singularities, vortex filaments, vortex sheets, Biot-Savart relations. Image representations in terms of velocity or vector potentials. Topology of flows, general results in potential theory.

M&AE 603 Compressible Gas Dynamics
Fall. 4 credits. Graduate standing or permission of instructor. Fundamentals of compressible gas dynamics are described using the thermodynamics and fluid properties of the ideal gas. Ideal flow theory. Normal shock waves including Rankine-Hugoniot relations. Duct flows including effects of area, friction, and heat interaction. Oblique shock waves and Prandtl-Meyer expansion fans. Applications include high-speed aerodynamics, combustor design, and jet engines for materials processing.

M&AE 608 Physics of Fluids
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory, velocity distribution, collisions, Boltzmann equation. Quantum theory: postulates of quantum mechanics, internal structure, rigid rotator, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics, calculations of thermodynamic properties. Chemical rate processes.

M&AE 636 Elements of Computational Aerodynamics
Spring. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics. Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course consists of lectures with M&AE 756, but is more applications oriented and uses commercial software for all computational exercises.

M&AE 651 Advanced Heat Transfer
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Advanced treatment of conductive and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

M&AE 654 Radiation Heat Transfer

M&AE 732 Analysis of Turbulent Flows

M&AE 733 Stability of Fluid Flow

M&AE 734 Turbulence and Turbulent Flow
Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor. Not offered 1997-98. Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

M&AE 736 Theory of Computational Aerodynamics
Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.

M&AE 737 Computational Fluid Mechanics and Heat Transfer

Special Offerings

M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to undergraduate students. Prerequisite: permission of instructor. Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&AE 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Prerequisite or corequisite: M&AE 428. Fulfills field design requirement. Intended for individual students or small groups of students who want to pursue a particular design project outside of regular courses.

M&AE 545 Energy Seminar
For description, see ELE E 587.

M&AE 592 Seminar and Design Project in Aerospace Engineering
Fall, spring. 2 credits each term. Prerequisite: graduate standing or permission of instructor. Intended for students in M Eng (Aerospace) program. Introduction to topics of current research interest in aerospace engineering by Aerospace faculty and invited speakers. Individual design projects supervised by separate faculty members after introductory sessions.

M&AE 594 Manufacturing Seminar
For description, see ORIE E 693.

M&AE 690 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to graduate students.

M&AE 695 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Graduate standing and permission of instructor.
Special lectures by faculty members on topics of current research.

M&A & 791  Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects. Presentations on research in progress by faculty and students.

M&A & 799  Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend. Lectures by visiting scientists and Cornell faculty and staff on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&A & 890  Research In Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&A & 990  Research In Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

NUCLEAR SCIENCE AND ENGINEERING

A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A& E, 609, 612, 635, 688, and 651).

NS&E & 121  Fission, Fusion, and Radiation (also ENGR 121)
Spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGR 121.

NS&E & 285  Art, Archaeology, and Analysis (also ARKEO 285, ART 372, ENGR 185, M&E & 285 and PHYS 200)
For description, see ENGR 185.

NS&E & 403  Introduction to Nuclear Science and Engineering (also A& E, 403, and M&E & 485)
Fall. 3 credits. Prerequisite: Physics 214 and Mathematics 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field. Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering; nuclear structure, radioactivity, and reactions; interaction of radiation and matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of Introduction to Nuclear Engineering, by Lamash.

NS&E & 484  Introduction to Controlled Fusion: Principles and Technology (also ELE & 484, and A& E & 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 221, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: (i) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (ii) fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and (iii) an engineering analysis of proposed magnetic and/or intertial confinement fusion-reactor designs.

NS&E & 509  Nuclear Physics for Applications (also A& E & 609)
Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some upper-division physics desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. Offered on demand. A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Reactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vanc.

[NS&E & 545  Energy Seminar (also M&E & 545 and ELE & 507)
Not offered 1997–98. For description, see ELE E 587]

NS&E & 551  Nuclear Methods in Non-Nuclear Research Fields
Spring. 3 credits. Prerequisites: PHYS 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology, geology, chemistry, biology, materials science, and other non-nuclear fields in which nuclear methods are used. Open to qualified undergraduates. A more intensive related course, A& E 551, is intended for nuclear specialists. Offered on demand. Lectures on interaction of radiation with matter, radiation protection, and nuclear instruments. Experiments on radiation detection and measurement; electronic instrumentation, including computerized systems; activation analysis; and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on methods used in non-nuclear fields. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vance.

NS&E & 590  Independent Study
Fall, spring. 1–4 credits. Grade option letter or S-U. Independent study or project under guidance of a faculty member.

NS&E & 591  Project
Fall, spring. 1–6 credits. Master of Engineering or other project under guidance of a faculty member.

NS&E & 621  Radiation Effects in Microelectronics (also ELE & 633)
Fall. 1 to 3 credits. Prerequisite: ELE E 435 or permission of instructor. A seminar offered in alternate years intended for seniors and graduate students in engineering or applied physics. S-U or letter grade option. An introduction to the physical processes that underlie the malfunction and failure of microelectronic circuitry resulting from exposure to ionizing radiation. The roles testing and modeling play in improving circuit and device designs are included.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR&IE & 115  Engineering Application of Operations Research (also ENGR 115)
Fall, spring. 3 credits. Enrollment not open to OR&IE upperclass majors. For description see ENGR 115.

OR&IE & 270  Basic Engineering Probability and Statistics (also ENGRD 270)
Fall, spring, summer. 3 credits. Pre- or co-requisite: MATH 293. For description see ENGRD 270.

OR&IE & 310  Industrial Systems Analysis
Spring. 4 credits. Pre or co-requisite: ENGRD 270. Design of production facilities, including engineering economy, taxation effects, materials handling process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, process mapping, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control. Formerly listed as OR&IE 410.

OR&IE & 320  Optimization I
Fall. 4 credits. Prerequisite: MATH 221 or 294. Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

OR&IE & 321  Optimization II
Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent. A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

OR&IE & 350  Financial and Managerial Accounting
Fall. 4 credits. Principles of accounting, financial reports, financial-transactions analysis, financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of short-term decisions.
OR&IE 360 Engineering Probability and Statistics II
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

OR&IE 361 Introductory Engineering Stochastic Processes I
Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

OR&IE 416 Design of Manufacturing Systems
Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor.
Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures. Lab fee $15.

OR&IE 417 Material Handling Systems
Fall. 4 credits.
Design of the layout of processes and storage areas and the material-handling system for movement of items. Typical equipment used. Material flow analysis. The functions of identification control, storage, movement, batching, merging, and dispersion.

OR&IE 431 Discrete Models
Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor. Not offered 1997–98, next offered 1998–99.
Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

OR&IE 432 Nonlinear Optimization
Spring. 4 credits. Prerequisite: OR&IE 320.
Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra introduced as needed.

OR&IE 435 Introduction to Game Theory
Spring. 3 credits.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

OR&IE 451 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

OR&IE 462 Introductory Engineering Stochastic Processes II
Spring. 4 credits. Prerequisite: OR&IE 361 or equivalent. Not offered 1997–98, next offered 1999–00.
Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

OR&IE 475 Regression
Spring. First half of term. 2 credits.
Linear models; estimation and testing; confidence sets; diagnostics and residual analysis; variable selection and modeling.

OR&IE 476 Experimental Design I
Spring. Second half of term. 2 credits.
Prerequisite: OR&IE 475.

OR&IE 490 Teaching in OR&IE
Fall, spring. Credit to be arranged.
Prerequisite: permission of instructor.
This course involves working as a TA in an OR&IE course. The course instructor will assign credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

OR&IE 499 OR&IE Project
Fall, spring. Credit to be arranged.
Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually an organization. Opportunities in the course may be discussed with the associate director.

OR&IE 515 Design of Manufacturing Systems
Fall. 4 credits. Prerequisite: permission of instructor.
Limited to graduate students in Engineering and the Business School. For description, see OR&IE 416. Lab fee $15.

OR&IE 516 Case Studies
Fall. 1 credit. Limited to M.Eng. students in OR&IE.
Students are presented with unstructured problems that resemble real-world situations. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

OR&IE 520 Operations Research I: Optimization I
For description, see OR&IE 320.

OR&IE 521 Optimization II
For description, see OR&IE 321.

OR&IE 522 Operations Research I: Topics in Linear Optimization
Fall. 1 credit. Corequisite: OR&IE 320. Students who have already taken OR&IE 321 or 521 should not enroll. Limited to M.Eng. students in OR&IE.
An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

OR&IE 523 Operations Research II: Introduction to Stochastic Processes I
For description, see OR&IE 361.

OR&IE 525 Production Planning and Scheduling Theory and Practice
Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

OR&IE 526-529 Selected Topics in Applied Operations Research
Fall, spring. Credit to be arranged.
Prerequisite: permission of instructor.
Current topics dealing with applications of operations research.

OR&IE 535 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Lectures concurrent with OR&IE 451. For description see OR&IE 451.

OR&IE 550 Engineering Probability and Statistics II
For description, see OR&IE 360.

OR&IE 561 Queuing Theory and Its Applications
Fall. 3 credits. Prerequisite: OR&IE 361 or permission of instructor.

OR&IE 562 Inventory Theory
Spring. 4 credits. Prerequisite: OR&IE 321, 361, 416 or permission of instructor.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated
production and distribution system for a
global company. Applications are stressed throughout.

[ORIE 563 Applied Time-Series Analysis]
Fall. 3 credits. Prerequisites: ORIE 361 and ORIE 270, or permission of instructor. Not offered 1997-98, next offered 1998-99.
The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

[ORIE 564 Introductory Engineering Stochastic Processes II]
Spring. 4 credits. Prerequisite: ORIE 361 or equivalent. Lectures concurrent with ORIE 462. Not offered 1997-98; next offered 1998-99.
For description, see ORIE 462.

[ORIE 565 Applied Financial Engineering]
Spring. 4 credits. Limited to M.Eng. students.
This course has two components: a sequence of lectures and a project. The course will be co-listed with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng. project requirement.

[ORIE 567 Semester in Manufacturing Management (also NBA 660)]
Spring. 15 credits. Enrollment limited. Permission of instructor required. For description, see NBA 650.

[ORIE 567 Experimental Design II]

[ORIE 577 Quality Control]

[ORIE 580 Design and Analysis of Simulated Systems]
Fall. 4 credits. Prerequisites: programming experience and ORIE 360/560, or permission of instructor. Note: ORIE 360/560 may be taken concurrently.
Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo-random-variable generation, simulation language, statistical considerations; applications to a variety of problem areas.

[ORIE 599 Project]
Fall, spring. 5 credits. For M.Eng. students.
Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

[ORIE 625 Scheduling Theory]
Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and flow shops. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

[ORIE 626 Advanced Production and Inventory Planning]
Introduction to a variety of production and inventory control problems; the development of mathematical models corresponding to these problems; a study of approaches for finding solutions.

[ORIE 630 Mathematical Programming I]
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra.

[ORIE 631 Mathematical Programming II]
A continuation of ORIE 630. Introduction to nonlinear programming, interior-point methods for linear programming, complexity theory, and integer programming. Some discussion of dynamic programming, and elementary polyhedral theory.

[ORIE 632 Nonlinear Programming]
Fall. 3 credits. Prerequisite: ORIE 630. Not offered 1997-98; next offered 1998-99.
Necessary and sufficient conditions for unconstrained and constrained optima. Duality theory. Computational methods for constrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.

[ORIE 633 Graph Theory and Network Flows]
Spring. 3 credits. Prerequisite: permission of instructor.

[ORIE 634 Combinatorial Optimization]
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1997-98; next offered 1998-99.
Topics in combinatorics, graphs, and networks, including matching, matroids, polyhedral combinatorics, and optimization algorithms. Topics change each semester. This course may be taken more than once for credit.

[ORIE 635 Interior-Point Methods for Mathematical Programming]
Spring. 3 credits. Prerequisites: MATH 411 and ORIE 630, or permission of instructor.

[ORIE 636 Integer Programming]
Fall. 3 credits. Prerequisite: ORIE 630. Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

[ORIE 639 Polyhedral Convexity]
Spring. 3 credits. Prerequisite: basic knowledge of linear algebra. Not offered 1997-98; next offered 1998-99.

[ORIE 650 Applied Stochastic Processes]
Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes. Brownian motion, stationary processes, martingales, and point processes.

[ORIE 651 Probability]
Spring. 4 credits. Prerequisite: real analysis at the level of Math 413 and a previous one-semester course in calculus-based probability.
Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

[ORIE 662 Advanced Stochastic Processes]
Fall. 3 credits. Prerequisite: ORIE 651 or equivalent. Not offered 1997-98; next offered 1998-99.
Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.]
OR&IE 663 Time-Series Analysis
Fall. 3 credits. Prerequisite: OR&IE 650 or equivalent. Not offered 1997–98; next offered 1998–99.

OR&IE 670 Statistical Principles
Fall. 4 credits. Co-requisite: OR&IE 650 or equivalent.
Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson. Point, and interval estimation; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayesian estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction, introduction to linear models.

OR&IE 671 Intermediate Applied Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent.
Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

OR&IE 672 Selected Topics in Environmental Statistics (also BTRY 672)
Fall, spring. 2 credits. Prerequisite: ENGRI 270 or equivalent.
For description, see BTRY 672.

OR&IE 676 Statistical Analysis of Life Data
Fall. 3 credits. Prerequisite: OR&IE 671 or equivalent. Not offered 1997–98; next offered 1998–99.

OR&IE 678 Asymptotic Methods in Statistics
Fall. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 1997–98; next offered 1998–99.
Topics chosen from: large-sample behavior of MLEs and other estimates; chi-square, likelihood ration, and related tests; Pitman and Bahadur efficiency; LAN families and LAM estimates; statistical applications of Edgeworth expansions; adaptive estimation and semiparametric inference, rank statistics, EDF expansions; adaptive estimation and sample quantiles, nonparametric estimation, and smoothing.

OR&IE 680 Simulation
An advanced version of OR&IE 580, intended for Ph.D.-level students.

OR&IE 728-729 Selected Topics in Applied Operations Research
Fall, spring. Credit to be arranged.
Current research topics dealing with applications of operations research.

OR&IE 738-739 Selected Topics in Mathematical Programming
Fall, spring. Credit to be arranged.
Current research topics in mathematical programming.

OR&IE 768-769 Selected Topics in Applied Probability
Fall, spring. Credit to be arranged.
Topics chosen from current literature and research areas of the staff.

OR&IE 778-779 Selected Topics in Applied Statistics
Fall, spring. Credit to be arranged.
Topics chosen from current literature and research of the staff.

OR&IE 790 Special Investigations
Fall, spring. Credit to be arranged.
For individuals or small groups. Study of special topics or problems.

OR&IE 799 Thesis Research
Fall, spring. Credit to be arranged.
For individuals doing thesis research for master's or doctoral degrees.

OR&IE 891 Operations Research Graduate Colloquium
Fall, spring. 1 credit each term. A weekly 1-1/2 hour meeting devoted to presentations by distinguished visitors, by faculty members, and by advanced graduate students on topics of current research in the field of operations research.

OR&IE 893-894 Applied OR&IE Colloquium (also M&E 594)
Fall, spring. 1 credit each term. A weekly meeting for Master of Engineering students. Discussion of various topics on manufacturing with faculty members and outside speakers.

T&AM 118 Design Integration: A Portable CD Player (also MS&E and ENGR 118)
Spring. 3 credits.
For description, see ENGR 118.

T&AM 202 Mechanisms of Solids (also ENGRD 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.
For description, see ENGRD 202.

T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.
For description, see ENGRD 203.

THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 191 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191/193.
For description, see MATH 192.

T&AM 193 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 193.

T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in COM S 100.
For description, see MATH 293.

T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.
For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent.
Initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Special functions, linear partial differential equations. Introduction to probability and statistics. Use of computers to solve problems.

T&AM 311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310).
Introduction to complex variable theory. Cauchy's Integral theorem, Laurent series, Classification of singularities, Method of Residues. Applications include conformal mapping (Laplace equation), Laplace transform, Fourier transform, Fourier series, Transfer function, Solution and stability of Linear Systems. Examples are drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310–311) but open to exceptional undergraduates with permission of instructor.
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
Emphasis on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.
T&AM 612 Methods of Applied Mathematics III
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also M&AE 455 and MS&E 455)
Spring. 4 credits.
Introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design; manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591 Master of Engineering Design Project I
Fall. 3–6 credits.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II
Spring. 5–15 credits.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M&AE 655 and MS&E 655)
Spring. 4 credits.
Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits.
Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors, deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; boundary-value problems, e.g., plates, St. Venant’s solutions.

T&AM 664 Solid Mechanics II
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent.
Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity; plane stress, plane strain, anti-plane shear, Airy stress functions; linear viscoelasticity; cracks and dislocations; classical plasticity; thermoelasticity; three-dimensional elasticity.

T&AM 666 Finite Element Analysis for Mechanical, Structural, and Aerospace Applications (also CEE 772 and M&AE 690)
Spring. 3 credits. Prerequisite: T&AM 663.
For description, see M&AE 680.

T&AM 751 Continuum Mechanics and Thermodynamics
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.
Kinematics; conservation laws; the entropy inequality; constitutive relations; frame indifference, material symmetry; finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents. Offered alternate years. Not offered 1997–98.
Review of governing equations. Linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

T&AM 753 Fracture
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents. Offered alternate years.

T&AM 757 Inelasticity
Spring. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years.
Plasticity: dislocation slip systems; early experimental observations; general principles; limit analysis; solution of boundary-value problems, plastic waves, one- and three-dimensional. Visco-elasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents. Offered alternate years. Not offered 1997–98.
Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary boundary methods, sensitivity analysis.

T&AM 768 Elastic Waves
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 633 and 574 or equivalents. Offered alternate years. Not offered 1997–98.
An advanced course on dynamic stress analysis and wave propagation in elastic solids. Theory of elastodynamics, waves in isotropic and anisotropic medium; reflection and refraction; surface waves and waves in layered media, transient waves and methods of Lamb-Cagniard-Palmer; thick plate theories; vibrations of spheres; scattering of waves and dynamic stress concentrations.

Dynamics and Space Mechanics

T&AM 570 Intermediate Dynamics
Fall. 3 credits.

T&AM 574 Vibrations and Waves in Elastic Systems (also M&AE 577)
Spring. 4 credits. Prerequisites: T&AM 570 and 610. 3 lectures, one lab. Not offered 1997–98.

T&AM 578 Nonlinear Dynamics and Chaos
Spring. 3 credits. Prerequisite: Mathemati- cals/T&AM 293 or equivalent.
Introduction to nonlinear dynamics, with applications to physics, engineering, biology and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: One-dimensional systems. Bifurcations. Phase plane. Nonlinear oscillators. Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Advanced Dynamics
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years.
Not offered 1997–98.
Review of Lagrangian mechanics, Kane’s equations; Hamilton’s principle, the principle of least action, and related topics from the calculus of variations; Hamilton’s canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; Melnikov’s method.

GRADUATE SCHOOL

Walter Cohen, dean
Christine Ranney, associate dean
Eleanor S. Reynolds, associate dean
Hilary Ford, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee who usually has the primary responsibility for directing the student's thesis or dissertation research.

Students who want to use the university's facilities for intensive specialized training only and who do not want to become degree candidates may apply for admission as non-degree students.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher (600 for some fields);
2) a degree from a college or university in a country where the native language is English; or
3) two or more years of study in an undergraduate or graduate program in a country where the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08541, U.S.A.

Applications for fall admission for most fields in the Graduate School should be received by early January. Many fields, however, have different deadlines. Consult the Graduate School's application booklet for the closing date for each field.

Inquiries regarding admission and fellowships should be addressed to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, New York 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both the application and the Catalog may be obtained by contacting the individual graduate field offices or through the Graduate School, Caldwell Hall, Cornell University, Ithaca, New York 14853-2606. Both the application and the Catalog are available for viewing on the World Wide Web <http://www.gradschool.comell.edu/>.

Note: Programs leading to the degrees of Doctor of Law (J.D.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School. Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
ADMINISTRATION

David A. Dittman, dean
A. Neal Geller, associate dean for academic affairs
Judi Brownell, Richard J. and Monene P. Bradley director for graduate studies
Timothy Hinkin, director of undergraduate studies
Donald C. Bishop, associate dean of students and enrollment management
David W. Butler, associate dean for executive education
Margaret Haley Ferguson, director of financial services
James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center
Cheryl S. Farrell, director of minority programs and lecturer
Sandra K. Boothe, director of the professional master’s program
Katherine S. Margolis, director of academic information resources and training
Richard S. MacDonald, director of administrative services
Philippus Miller III, director of alumni affairs
Preston Clark, director of instructional support and visiting lecturer
Millie Reed, director of career services
Glenn Withiam, director of publications
Fred Conner, senior editor of the Cornell Hotel and Restaurant Administration Quarterly
Mark Adams, director of communications

DEGREE PROGRAMS

Hotel and Restaurant Administration

Degree
B.S.
M.M.H.
M.S.
Ph.D.

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school’s academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration’s Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 25,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library’s collections. Among the library’s special features are numerous computerized information resources, including NEXIS, Dow Jones, ABI/Inform, and The International Hospitality and Tourism Database, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library’s HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student. Please visit us and benefit from our collections and services.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university’s faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

UNDERGRADUATE CURRICULUM

The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school’s student handbook or course supplement (available in room 174 Statler Hall).

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;

2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses in the final semester), of 120 required and elective credits, as set forth in the table on the following page;

3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 560 on Cornell Placement Test; 3) pass 121 and 122 (9 credits) or the equivalent, and attain a minimum grade of at least C- in each (C or above for transfer credit from other institutions); or 4) pass 123 or the equivalent;

4) completion of two units of practice credit prior to the last term of residence, as defined on the following page;

5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 69 of the 120 credits needed for graduation, the selected concentration accounts for 12 credits, and 18 credits are allotted for distributive electives. The remaining 21 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 21-credit group of free-electives.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least seventy-five (75) credits at Cornell University, of which a minimum of sixty (60) must be in courses offered by the Hotel School, and nine (9) must be in distributive electives taken outside the Hotel School. Thus, a maximum of forty-five (45) hours in transfer credit may be allowed from other accredited colleges or universities, as follows:
In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others (including HA 243 and HA 174) generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Concentration courses may not transfer without the express written consent of the faculty in the area concerned. While such consent is rare, it is not impossible.

Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine (9) credits may transfer. The remaining nine (9) must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three (3) credits are taken at Cornell or transferred from elsewhere in each area.

Twenty-one (21) credits in free electives may transfer.

**Concentration**

While completing the required courses leading to the bachelor's degree, undergraduates in the school also must select a concentration: 12 elective credits in a major area of the core curriculum or, with the support of a faculty member, in a self-directed course of study.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

**Foreign Languages**

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

**Independent Study**

Students may conduct independent study projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H Adm 499 or 699 for more details.

**Practice-Credit Requirement**

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last semester. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school's Career Services Office, room 255 Statler Hall.

**Management-Intern Program**

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 academic credits, 1 practice credit, and may petition on an ad-hoc basis to have a portion of the academic credits applied toward their concentration. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the U.S. and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H Adm 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

**Study Abroad**

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Course of Study. Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's study-abroad faculty representative and the director of student services so that petition and credit-evaluation procedures are followed.

**Part-Time Study**

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

**Grading System**

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0, B to 3.0, C to 2.0, D to 1.0, F to 0. For good standing, the student must maintain a minimum average of 2.0. Of the free-elective courses, a maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis.

Students should be aware that a satisfactory grade equals "C" or above and an unsatisfactory grade equals "D+" or lower. Courses taken S-U may be counted only as free electives.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

COURSE SCHEDULE INFORMATION

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-5076.

MANAGEMENT OPERATION COURSES

H ADM 100 Principles of Management
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. R. Chase. An introductory survey course in management with orientation to the hospitality industry. The course is organized around the traditional management functions of planning, organizing, commanding, coordinating and controlling.

H ADM 102 Distinguished Management Lectures
Fall. 1 credit. Limited to hotel school students except by written permission. Elective. D. Dittman.
A series of lectures given by non-resident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.

H ADM 105 Rooms-Division Management
Fall and spring. 3 credits. Limited to hotel school students without permission. Elective. R. Rainsford.
Provides students with a comprehensive, well-rounded, fundamental understanding of rooms division operations and management in hotels. Operational areas include housekeeping, reservations, front desk (including check-in, check-out, Bellstand, operator and night audit). Managerial areas include yield management, human resource management, basic marketing and management principles, and organizational objectives.

H ADM 301 Strategic Management
Fall and spring. 3 credits. Limited to 45 juniors and seniors by permission. Prerequisites: H Adm 105, 115, 211, and 321, or equivalents. Required. R. Chase, C. Enz, P. Rainford.
Provides students with a comprehensive understanding of strategic management, emphasizing the value of analyzing environments and formulating strategies linked to environmental conditions, building on organizational strengths, and defending against organizational weaknesses. Emphasis also on handling ambiguous facts and analysis. Because of the group project nature of the course, the absolute drop deadline for all students is September 4 in the fall and January 23 in the spring.

H ADM 303 Club Management
Fall and spring. Fall, second week only; spring, first week only. 2 credits. Fall, limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H Adm 105, or equivalent. Elective. R. James.
The study of private membership clubs and club management. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topical coverage includes: tournament, facility, and recreation management; legal, financial, and legislative issues; human relations and resource, consideration, marketing, pricing policies, and quality standards. The deadline to drop is the mid-point of the course.

H ADM 305 Resort and Condominium Management
Fall. 3 credits. Not open to freshmen. Elective. M. Noden.
A lecture course in the operation of various types of resort hotels and condominiums. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and non-contract relationships with the travel industry, terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed.

H ADM 306 Franchising in the Hospitality Industry
Fall. 2 credits. Not open to freshmen. Elective. M. Noden.
A lecture course in the operation of various types of resort hotels and condominiums. Emphasis is on the promotion of business, the provision of facilities, services, and guest entertainment. Contract and non-contract relationships with the travel industry, terminology, rental-pool agreements, S.E.C. regulations, state statutory requirements, developer-management-owner contracts, and relationships in condominiums are reviewed.

H ADM 401 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 juniors, seniors, and graduate students, with preference given to hotel school seniors and second-year graduate students. Prerequisites: H Adm 115, 702, or equivalents. Elective. T. Simons.
Provides experience and coaching in a variety of settings in face-to-face negotiations. Students will develop skills and understanding through extensive role-play exercises and discussions, supported by conceptual and practical readings.

H ADM 402 Hospitality Management Seminar
Fall. 1 credit. Limited to 30 juniors and graduate students by permission. Students will be expected to register for H Adm 102. Elective. D. Dittman.
A weekly seminar with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the speaker’s area of expertise. The class is
relatively unstructured, and students are expected to participate in discussions.

H ADM 404 Entrepreneurship and Small Business Management
Fall and spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H Adm 321 or equivalent. Elective. P. Rainsford. Focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used. There will be a group project term, which will require student teams to serve as consultants to real businesses that have asked for help from the Small Business Administration. Because of the group project nature of the course, the absolute drop deadline for all students is September 4 in the fall and January 23 in the spring.

H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin. Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analysis.

H ADM 406 Integrated Studies in the Hospitality Industry
Fall and spring. 3 credits. Limited to hotel school seniors. Elective. Not offered fall 1997. R. Chase. Employs text readings, participation in a simulation of a hotel organization, and guest presentations to explore business missions, objectives, strategies, action plans, and evaluations. As an integrative, summary course, the areas of review and application will involve hotel and food service, marketing, organization, and finance.

H ADM 407 Seminar in Hotel Operations
Spring. 3 credits. Limited to 30 seniors. Estimated cost of field trip, $200. Elective. T. Cullen. Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-to-large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day “shadow assignments.”

H ADM 408 Introduction to Casino Operations
Spring. 2 credits. Limited to 45 juniors, seniors and graduate students. Estimated cost of field trip, $150. Elective. J. Kelly. Introduction to the multi-billion dollar gaming industry, including a historical overview of gaming and examination of legal, social, and economic issues within the industry. Reviews various games played in casinos, current trends, and the most popular casino destinations in the world. Special attention is devoted to the growth of casinos in cruise ships, Indian reservations, and on river boats in the U.S.

H ADM 409 Airline Management
Spring. 3 credits. Limited to 25 seniors and graduate students. Elective. M. Noden. Focuses on the airline and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

H ADM 501 Creative Management for Organizational Change
Spring. 3 credits. Limited to 24 students. Elective. Faculty. Through lecture, exercises, and group problem-solving sessions students will explore the characteristics of creative people, organizations, and processes, and obtain an inventory of their own creative ability, examine blocks to creativity and ways to overcome them, plan tactics for selling ideas, discuss methods for leading creative problem-solving meetings, and analyze strategies for producing organizational change. Organizational leaders will present problems for which students will develop creative solutions.

H ADM 503 Managing Across Cultural Boundaries
Fall and spring. 3 credits. Limited to 15 seniors and graduate students. Prerequisites: H Adm 121, 165, 301, 321, or graduate student status. Elective. T. Cullen. Contributes to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and issues that confront managers working in foreign countries; and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

H ADM 605 Best Practices for High Performance and the Management of Change
Fall and spring. 3 credits. Professional master’s elective. Not offered fall 1997. C. Enz. Explores the dynamics of identifying and implementing “best practices” to renew organizations and enhance performance. Examines how to introduce planned change to implement the practices. Emphasis placed on the diagnosis and design of human resource initiatives to achieve improved organizational performance.

H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master’s requirement. T. Cullin. An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 702 Human Behavior in Organizations
Fall. 3 credits. Professional master’s requirement. T. Hinkin. An integrative theoretical application, designed to increase interpersonal and managerial effectiveness. Emphasis on personality and perception, decision making, motivation, power, group process, and diversity management.

H ADM 801 Seminar in Hospitality and Service Inquiry
Fall. 3 credits. Elective. C. Lundberg. This seminar introduces academic graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating findings. The implications and consequences of one’s choices and tradeoffs among the alternative philosophical, ideological, and pragmatic perspectives and approaches of doing inquiry will be emphasized.
Students will develop and conduct a culture audit in a business. Class discussion, case analysis, and field experience.

H ADM 711 Human Resources Management
Spring. 3 credits. Professional master's requirement. C. Lundberg.
Focuses on the development of human resources management skills and exploration of the dilemmas and responsibilities of leadership. Uses managerial perspective with emphasis on the effects that managerial activities have on recruitment, selection, and retention systems. Individual decision-making and integration abilities will be assessed. Case studies, exercises, and simulations.

FINANCIAL MANAGEMENT COURSES

H ADM 120 Survey of Financial Management
Spring. 2 credits. Limited to non-hotel school students. Elective. Faculty.
A survey of basic principles of financial management, investment management, and financial analysis. Designed for the student who desires a basic general knowledge of financial decision making.

H ADM 121 Financial Accounting
Fall and spring. 3 credits. Limited to hotel school students. Required. D. Ferguson.
The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.

H ADM 123 Financial Accounting Principles
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. C. Lundberg.

H ADM 125 Finance
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. L. Canina, G. Swanson.
Corporate finance topics include time value of money, financial markets, interest rates, financial statement analysis and planning, working capital policy and management, risk and return, risk management, security valuation models, cost of capital, capital budgeting, capital structure, dividend policy, and creative finance.

H ADM 211 Managerial Accounting
Fall. 3 credits. Prerequisites: H Adm 121 and 175, or equivalents. Required. G. Pobelter.
Focuses on the use of accounting information for management decision making and control. Topics include product costing, management control systems and performance measurement.

H ADM 221 Human Resources Management
Fall. 3 credits. Prerequisites: H Adm 21, 221, or equivalents. Required. S. Carvell.
Provides students with accounting cash flow information for financial planning, capital structure decisions, capital budgeting, evaluation and short-term and long-term financial decision making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall. 3 credits. Prerequisites: H Adm 121, 221 and 222, or permission of instructor. Required. J. Eyster.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital budgeting, decision-making, equity and debt financing structures, and operating agreement forms. Students analyze hospitality operations and projects and present their findings in management report form.

H ADM 322 Principles of Investment Management
Fall. Limited to non-hotel school students. Hotel school students or those with a background in economics, quantitative analysis, and computers are advised to enroll in H Adm 424. Elective. A. Arbel.
An introductory course covering institutional and analytical aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including students' participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 321, or equivalent. Elective. J. deRoos.
Focuses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return, feasibility and appraisal processes, equity and debt financing vehicles to include joint ventures, limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises, workout strategies for distressed properties, trends in international hotel franchising; and ethical issues of real estate development. Presentations of hospitality industry real estate practitioners.

H ADM 324 International Financial Management
Fall and spring. 3 credits. Prerequisites: H Adm 121, 221, 222, or equivalents, micro and macroeconomics. Elective. J. Eyster.
Focuses on the international aspects of financial management important to the hospitality industry with the intention of designing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

Functional areas within hospitality organizations; and b) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 313 Training in the Hospitality Industry
Fall. 3 credits. Limited to 24 students. Prerequisite: H Adm 211. Elective. B. Tracey.
Training is one of the primary activities for coping with a continuously changing environment. It also is one of the fundamental responsibilities of all hospitality managers. Students will learn the major theoretical and practical issues associated with program design, development, implementation, and evaluation. Semester-long project with one or more hospitality organizations.

H ADM 412 Managing Organizational Change
Spring. 3 credits. Prerequisite: H Adm 211 or equivalent. Elective. Faculty.
Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 414 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel school juniors, seniors, and graduate students. Elective. C. Lundberg.
Applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 415 Managerial Leadership in the 1990s
Students become participant observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers, associates and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, associates, freshmen, and Cornell employees. The absolute deadline for adding or dropping the course is 12:00 noon on the first day of class.

H ADM 416 Special Studies in the Management of Human Resources: Service Cultures
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H Adm 211 or equivalent. Elective. Faculty.
Assists students in understanding the role of human resource management and maintaining effective service-driven operations. Emphasis will be placed on the diagnosis and design of human resource initiatives to achieve strong service cultures and improve organizational performance. Topics include the management of emotions, monitoring and measuring the corporate culture for service, and the linkage of human resource practices to service vision, organizational design, and strategic objectives.
H ADM 326 Corporate Finance  
Fall. 3 credits. Limited to juniors and seniors. Prerequisite: H Adm 321.  
Elective. S. Carvell.  
In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

H ADM 421 Internal Control in Hospitality Operations  
Fall. 3 credits. Limited to 30 students. Prerequisite: H Adm 321, 722, or equivalents. Elective. Faculty.  
Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions  
Fall. 3 credits. Limited to 50 juniors, seniors and graduate students. Elective. A. Sciarabba.  
Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and single proprietors; financial information reporting to tax authorities and shareholders; and how they differ; use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

H ADM 423 Financial Management Policy  
Fall. 3 credits. Limited to 30 students; non-hotel students by permission of instructor. Prerequisite: H Adm 326 or 721. Elective. S. Carveil.  
Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management  
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective. A. Arbel.  
An in-depth analysis of financial instruments, investments and portfolio management including fixed income, equity securities, advanced valuation models, risk-return analysis, screening techniques, asset allocation, and active portfolio management and trading. Recent developments in investment research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 621 Hospitality Real Estate Finance  
Spring. 3 credits. Limited to graduate students. Prerequisite: H Adm 722, or equivalent. Elective. J. deRoes.  
For description, see H ADM 323. This graduate course includes the H Adm 323 lectures plus an hour-long discussion session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 624 Analysis and Interpretation of Financial Statements  
Spring. 3 credits. Limited to seniors and graduate students. Elective. G. Potter.  
Covers the financial accounting issues that are encountered in reporting the operations of corporate enterprises. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. Emphasis is on outsiders' views of the company and their decision making through interpretation of the statements.

H ADM 721 Financial Economics  
Fall. 3 credits. Professional master's requirement. L. Canina.  
Integrates corporate finance with the framework of valuation maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management  
Spring. 3 credits. Professional master's requirement. Faculty.  
Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT COURSES

H ADM 136 Food and Beverage Management  
Fall and spring. 4 credits. Limited to hotel school students. Required. G. Norkus.  
An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized.

H ADM 230 Introduction to Culinary Arts  
Fall and spring. 2 credits. Limited to non-hotel school students. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory. Absolute drop deadline for fall is September 8; spring drop deadline is January 30. Elective. T. Neuhaus.

Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are considering the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice  
Fall and spring. 4 credits. Prerequisite: H Adm 136. Attendance at first class is mandatory. Required. T. O'Connor, B. Richmond.  
Designed to introduce the student to food and beverage operations through three major components: fundamental food preparation and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They also will develop an awareness of potential production problems and how to troubleshoot them.

H ADM 237 Seminar in Culture and Cuisines  
Fall. 3 credits. Limited to 20 students. Prerequisites: H Adm 165 and 236, or permission of instructor. Elective. R. Spies.  
Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among foods of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 330 Seminar in Chain-Restaurant Operations  
Fall and spring. 4 credits. Prerequisite: H Adm 136 and 236, or permission of instructor. Elective. C. Muller, G. Norkus. Chain-affiliated restaurants account for an ever-increasing market share of all food service dollars. The growth of multi-unit chain operations brings out unique challenges, opportunities, and different orientations for restaurant management. This course will identify these present issues, the historical factors that have led to them, and the pending economic and organizational questions facing the chain restaurant segment. Case studies, company research, and a term project.

H ADM 331 Food Service Distribution Management  
Spring. 3 credits. Limited to 24 juniors, seniors, and graduate students; others by permission of instructor. Elective. E. Merberg.  
Provides an overview of the food service distribution industry: past, present, and future. Specific disciplines of food service distribution include marketing and sales, operations, routing, credit management practices, and financial management of the distribution center. Focus also on the newly emerging role of the "distributor consultant." Concept of developing business partnerships between food service distributors and food service distributors is stressed.
H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience
Spring. 3 credits. Field trip $200. Limited to 20 students. Prerequisites: H Adm 165 and 335, or permission of the instructor. Elective. T. Kelly.
Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic-reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

H ADM 333 Current Issues in Food Safety and Sanitation
Spring. Variable to 3 credits. Three-credit registration limited to 12 students. Elective. B. Richmond.
A study of current issues in food safety and sanitation, procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis; legal responsibilities related to food, food handlers, equipment and food facilities; home illness and other public-health concerns; and certification and training. Preparation for NFI/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

H ADM 334 Wine and Food Pairing Principles and Promotion
Fall. 2 credits. Limited to 20 seniors and graduate students. Prerequisite: H Adm 430 or permission of instructor. Elective. Faculty.
Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional and varietal wine styles; how foods' flavors can change a wine's flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food pairings to industry guests.

H ADM 335 Restaurant Management
Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H Adm 136 and 236. Approximate cost of utensils and manual, $75. Once enrolled, students may not drop the course without permission of instructor. Required. G. Traversi, S. Gould, B. Halloran, B. Lang, J. Ridley.
A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics related to the general management of restaurants, including issues in defining a service philosophy, improving profit margins, securing adequate supplies, identifying target markets, and planning for organization growth. The restaurant-laboratory is based on a hands-on managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant.

H ADM 337 Specialty Foods
Fall. 4 credits. Limited to juniors, seniors, and graduate students. Prerequisites for hotel undergraduates: H Adm 136 and 236. Elective. T. Neuhaus.
An advanced course covering finer points of cooking and baking. A culinary, chemical, and marketing perspective will be taken using principles of organoleptical food evaluation. Topics include menu preparation, garnishes, unusual vegetables and fruits, marinades, charcuterie, wild game, fermentations, and chocolates.

H ADM 338 Health and Fitness in the Resort Hotel and Spa Industry
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Two field trips, $75–100. Pre-requisites: core courses in food and beverage management and marketing. Elective. M. Tabacchi.
Emphasizes the management aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments and other spa programs; and personnel required, safety, legal and ethical issues, integration of nutritional menu items and their marketing and merchandising. Guest speakers.

H ADM 339 Airline Food Service Management
Spring. 3 credits. Field trip, $75–100. Prerequisites: H Adm 236, or permission of the instructor. Elective. M. Tabacchi.
Focuses on the challenge of preparing and distributing 20,000–30,000 meals per day to 20–30 different airline catering companies; reheating and re-melting, serving, and clearing those meals at 30,000 feet in confined space and short periods of time. Examines strategies, planning, and forecasting by airline, airline catering, and sales executives, as well as the effect of the economy and the airline's competition upon the types of meals served.

H ADM 430 Introduction to Wines
Fall and spring. 2 credits. Wine glass kit and course fee, $25.00. Limited to hotel school juniors, seniors, and graduate students, and senior and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be 21 years old by the first day of university classes. S–U grades only. Elective. S. Mutkoski, A. Nash.
An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

H ADM 431 Seminar in Independent Restaurant Operations Management
Fall and spring. 3 credits. Five field trips, $325. Limited to 20 students. Prerequisite: H Adm 136 and 236. Elective. Faculty.
Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students will visit and analyze various independently owned restaurant operations. Analysis covers the restaurant's concept (market), organization, ownership, management, physical structure, staff, front- and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

H ADM 432 Contemporary Healthy Foods
Fall. 3 credits. Field trip, $50. Limited to 20 seniors and graduate students, or by permission of instructor. Elective. M. Tabacchi.
Builds a greater awareness and understanding among nutrition and food service professionals of the origins and manifestations of today's health-conscious and reduced food service patron. Topics include the marriage of nutrition and the cuisine demanded by today's consumer, fresh produce, lean meats, and lack of fabricated diet foods. Menu design includes creativity and nutrient density of foods. Major emphasis is on preparation, marketing, merchandising and selling of healthy menus in Statler's outlets.

H ADM 433 Contract Food Service Management
Designed to explore and analyze food service management in business, industry, and health-care facilities, e.g., office/industrial complexes, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of food service organization structures, controls, systems design, equipment, and government/legal regulations. Readings, small group projects, presentations, discussions, and local site visits.

H ADM 434 Desserts Merchandising
Spring. 3 credits. Limited to 25 students. Prerequisite: H Adm 236, 230, or permission of the instructor. Elective. T. Neuhaus.
A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop large-scale production skills, become familiar with bakeshop utensils, and advertise and sell their products.

H ADM 435 Selection, Procurement, and Supply Management
Fall. 3 credits. Field trip, $5. Prerequisites: H Adm 136 and 230, or permission of the instructor. Elective. G. Norkus, R. Spies.
Expands upon the concepts of purchasing and supply management that were developed in H Adm 136 and 731. Designed to expose the student to two specific areas: the management of the procurement system and the major commodity groups that are germane to the operation of a hotel or foodservice operation. Lectures include the discussions on the comparison of the purchasing function in the hospitality industry to other industries,
distribution systems, legal and ethical implications in buyer-seller relationships, procurement options, buying strategy development, price protection programs, and other contemporary issues. Students work with the major entree food groups: meats, seafood, and poultry, with emphasis placed on identification, quality and condition, market form, yield tests, and cost analyses.

H ADM 436 Beverage Management
Fall and spring. 2 credits. Limited to 20 hotel school juniors, seniors, and graduate students. Prerequisite: H Adm 335 or 731. Elective. S. Matskoski, A. Nash.

Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and awareness of dram shop liability; staff training and responsible customer service; beverage pricing; food and wine pairings; wine list development; purchasing, storage, and service; wine and beverage costs, loss prevention, and creative beverage merchandising. Guest lecturers.

H ADM 437 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Limited to 20 students. Prerequisite: H Adm 335 or 731. Elective. R. Lang, H. Winslow.

Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management
Spring. 2 credits. Field trip, $150. Limited to 20 students. Prerequisite: H Adm 230 or permission of instructor. Elective. R. Spies.

Examines on- and off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special functions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 439 Wine: A Cultural and Historical Perspective
Fall and spring. 2 credits. Limited to 200 students. Elective. A. Nash.

Designed to provide students with a cultural and historical perspective on wine and its place in society. Topics include history, people, culture, production of wine in specific with the producing regions of the world, wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.

H ADM 533 Advanced Culinary Techniques
Spring. 2 credits. Limited to 18 students with written permission of instructor. Prerequisite: H Adm 436 or permission of the instructor. Elective. S. Matskoski.

Allows students to greatly broaden their culinary skills and awareness through advanced instruction in culinary skill and restaurant operations/management by one of the nation's foremost chefs (owners/managers).

H ADM 631 Case Studies in Multi-unit Restaurant Management
Fall. 3 credits. Limited to 20 graduate students, seniors by permission. Elective. C. Murphy.

Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and O.E.M.D. demand, corporate culture, operation planning and operations management, strategic planning and implementation, tactics and market responses, international expansion, work breakdowns, and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 633 Food Service Operations Management
Fall. 3 credits. Limited to 20 seniors and graduate students. Elective. T. O'Connor.

Applies fundamental concepts of marketing, financial analysis, food service production and management, and human resource principles that were addressed in previous courses. Combines theory and practice in all levels of a food service operation: basic knowledge, technical skills, and analytical skills. Manages by planning, implementing, critiquing, analyzing and adjusting food service operations. Designs and implements a training program for an opening staff and employees who will be rotating through different positions. Develops budgets, both projected and actual, for different food service operations. Employs a feasibility model for a particular food service concept and operation.

H ADM 731 Graduate Food and Beverage Management
Spring. 3 credits. Professional master's requirement. T. Kelly, T. O'Connor.

Focuses on the technical, managerial, and human resources skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and current and future issues affecting the food service industry.

MARKETING AND TOURISM

H ADM 240 Marketing Principles
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. A. Nash.

An introductory course providing a basic understanding of consumer purchase decision making, product planning, distribution, promotion, and pricing. Companies and their current marketing strategies will be examined to better understand these fundamental tenets of marketing and how they contribute to the crucial process of strategic planning.

H ADM 241 Marketing Principles
Fall and spring. 4 credits. Limited to non-hotel school students. Elective. Faculty.

For description, see H ADM 240. This course includes the H Adm 240 lectures plus section activities.

H ADM 243 Marketing Management for the Hospitality Industry
Fall and spring. 3 credits. Limited to hotel school students, not open to freshmen.

Required. J. Austin, M. Lynn.

Provides an overview of the discipline of marketing as it applies to the hospitality industry. Topics include understanding how a marketing strategy is devised, especially the relationship of company objectives, internal resources, the external operating environment, and how the special nature of service affects the development of marketing strategies in the hospitality industry.

H ADM 244 Tourism I
Fall. 3 credits. Not open to freshmen.

Elective. M. Noden.

An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 245 The Basics of Hotel Sales
Spring. 3 credits. Field trip, $50. Limited to 30 students. Prerequisite: H Adm 240/241/243, 741, or equivalent. Elective. S. Karuna Karan.

Emphasis on skills and knowledge leading to an understanding of the role of a successful property level sales person. Topics include roles of types of sales positions at the hotel level, tools necessary to make it up the ladder, operation of a hotel sales function, and differing buying strategies of market segments.

H ADM 246 Marketing Research
Fall and spring. 3 credits. Limited to 30 students. Prerequisites: introductory marketing or marketing management and an introductory course in quantitative methods for management.

Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing.

H ADM 247 Marketing Planning for Hotels
Fall. 3 credits. Prerequisite: H Adm 243, 741, or equivalent. Elective. Not offered 1997–98; not offered fall 1998.

Key variables in property level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor analysis, segment analysis, resource allocation, sales strategies and measurement of results. Upon completion of the course, the student should be able to design, develop, and implement a comprehensive, targeted, and action-oriented marketing plan for a lodging property.
H ADM 347 Consumer Behavior
Fall and spring. 3 credits. Limited to 55 juniors and seniors. Prerequisite: an introductory principles of marketing or marketing management course. Elective. M. Lynn. Introduces students to various causal processes underlying consumer behavior and their implications for hospitality marketing. Consumers responding to marketing communications and offerings depend on the consumers' perceptions, motivations, personalities, attitudes, group memberships, families, and cultures. Knowing how these factors influence consumers' reactions to marketing efforts will allow students to better anticipate and control those reactions.

H ADM 442 Marketing Communications
Spring. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev, P. Yesawich. Provides students with a managerial understanding of the use of a variety of marketing communication media, including advertising, sales promotion, public relations, direct marketing and out-of-home. Hospitality industry emphasized.

H ADM 444 Tourism II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 243, 244, or equivalents, or written permission of instructor. Elective. M. Noden. An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand prediction is examined and analyzed. Students are expected to engage in a wide range of discussion and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 445 Services Marketing
Fall and spring. 3 credits. Limited to undergraduate students. Prerequisite: a previous marketing course or permission of instructor. Elective. Not offered fall 1997. L. Renaghan. Students preparing for ownership or management positions will develop an understanding of services marketing principles applicable across entire service sector. Topics include marketing strategies of service firms, new marketing approaches, and the reformulation of traditional marketing principles from consumers and industrial goods marketing. Four case studies, guest lectures.

H ADM 447 Channels of Distribution in Tourism
Spring. 3 credits. Prerequisite: H Adm 343. Elective. M. Noden. Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Significant readings, guest lectures.

H ADM 449 International Marketing
Fall and spring. 3 credits. Limited to 25 students. Prerequisites: Micro and macroeconomics. Elective. Faculty. Develops understanding of international marketing with emphasis on hospitality, industry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

H ADM 441 Marketing Decision Models for Service Firms
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. Not offered fall 1997. Faculty. Introduces students to advanced data analysis and modelling methods used for decision making in hospitality marketing.

H ADM 442 Strategic Marketing
Fall. 3 credits. Limited to 20 graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective. C. Dev. Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, and development of a strategic marketing report.

H ADM 443 Marketing Research
Fall and spring. 3 credits. Limited to 20 graduate students. Prerequisites: principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. Not offered fall 1997. J. Austin. Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing. Advanced research topics, five lab sessions.

H ADM 444 Food and Beverage Marketing Strategy
Fall. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior three-credit marketing course. Elective. T. Kelly. Focuses on how to apply marketing, sales, and merchandising to the commercial food and beverage industry. Addresses developing a market segmentation based upon understanding the needs and wants of potential target markets, translating needs and wants into viable food service concept positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.

H ADM 445 Services Marketing
Fall and spring. 3 credits. Limited to graduate students. Prerequisite: previous marketing course, or permission of instructor. Elective. Not offered fall 1997. L. Renaghan. For description, see H ADM 445. This course includes the H ADM 445 lectures plus three case studies and a research paper.

H ADM 446 Marketing Planning For Hotels
Fall. 3 credits. Limited to graduate students. Prerequisite: H Adm 243, 741, or equivalents. Elective. Not offered 1997-98; next offered fall 1998. For description, see 346. This course includes the H ADM 346 lectures plus a theoretical paper.

H ADM 447 Consumer Behavior
Fall and spring. 3 credits. Limited to 55 graduate students. Prerequisite: introductory marketing principles or marketing management course. Elective. M. Lynn. For description, see H ADM 347.

H ADM 741 Marketing Management
Spring. 3 credits. Professional master's requirement. Faculty. Basic concepts and principles underlying marketing decision making and the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

PROPERTY ASSET MANAGEMENT COURSES

H ADM 255 Hotel Development and Planning
Spring. 3 credits. Limited to sophomores, juniors, and seniors. Required. R. Penner. An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria, construction management, and the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry processes, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 350 Real Estate Management
Fall. 3 credits. Elective. J. deRoos. Designed for students interested in the management of residential and commercial real estate. Overview of real estate economics, the relevant law, and different aspects of property management including leases and management contracts, accounting and finance, staffing, and building operations. Examples from several types of properties.

H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective. R. Penner. A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

H ADM 352 Hotel Planning and Interior Design
Spring. 3 credits. Field trip, $200; drawing supplies, $75. Limited to 12 students. Prerequisite: H Adm 351. Elective. R. Penner. A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the renovation of hotel guestrooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation. Drawing ability is essential.
H ADM 353 Food Service Facilities Design
Spring. 3 credits. Limited to 12 students. Prerequisites: H ADM 351 and 335 (co-registration is allowed) or food service experience is recommended. Elective. M. Redlin.
An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service area; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H ADM 351 or equivalent studio experience. Attendance at first class is mandatory. Elective. S. Curtis.
The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations
Fall. 3 credits. Prerequisite: H ADM 255. Required. M. Redlin.
An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Hospitality Risk Management
Spring. 3 credits. Limited to 30 hotel school juniors, seniors and graduate students. Elective. D. Stipanuk.
Risk management within the hospitality environment as applied to issues of control and risk financing. Issues in fire protection, customer and workplace safety, OSHA requirements, and customer and corporate security are analyzed. Basic elements of insurance and crisis management are discussed.

H ADM 357 Insurance and Risk Management
Fall and spring. 3 credits. Limited to 75 students per lecture. Prerequisite: an introductory accounting or business course. Elective G. Shankar.
A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and noninsurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.

H ADM 450 Principles of Real Estate
Fall. 3 credits. Limited to juniors and seniors. Elective. J. Corgel.
Approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.

H ADM 455 Special Topics in Properties Management
Spring. 3 credits. Limited to juniors, seniors and graduate students. Elective. D. Stipanuk.
The theme and instructor of the "special topics" course will change each year on the basis of current trends, student interest, and faculty expertise. See the school registrar or properties area coordinator for details about the current topics.

H ADM 456 Hospitality Facilities Management
Fall. 3 credits. Prerequisite: H ADM 355, 751, or permission of the instructor. Elective. Not offered 1997-98. Next offered fall 1998.
A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the World Wide Web.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Limited to seniors and graduate students. Elective. Not offered 1997-98; next offered fall 1998.
Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.

H ADM 458 Hospitality Real Estate
Spring. 3 credits. Prerequisite: H ADM 323, 450, or permission of instructor. Elective. J. Corgel.
Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income of hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of valuing real estate, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 461 Principles of Real Estate
Fall. 3 credits. Limited to graduate students. Elective. J. Corgel.
For description, see H ADM 450. This course includes the H ADM 450 lectures plus an hour-long recitation each week featuring guest speakers from industry, faculty from other colleges, and case studies. Comprehensive term project.

H ADM 658 Advanced Real Estate
Spring. 3 credits. Prerequisite: H ADM 523, 450 or 651. Co-requisite. Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow technique. Topics include: studies of rates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual mortgages. All types of residential and non-residential real estate are analyzed, however, special emphasis is placed on the analysis of hospitality properties.

H ADM 751 Properties Development and Planning
Spring. 3 credits. Professional master's requirement. J. Clark.
Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams will prepare the program documentation for a new hotel or one undergoing major rehabilitation in conjunction with other professional master's core courses.

COMMUNICATION COURSES

H ADM 165 Managerial Communication I
Fall and spring. 3 credits. Each lecture limited to 16 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters, including any ITD semesters. Required. D. Jameson, S. Blyson, S. Jones, Y. Kim. An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications. Students write a series of business documents and give several oral presentations.

H ADM 266 Intermediate French: Le Francais de l'Hotellerie et du Tourisme
Spring. 3 credits. Limited to 15 students. Prerequisite: French 123 or equivalent (CPT 560 or above), or permission of instructor. Elective. A. Grandjean-Levy. Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversa-
H ADM 364 Advanced Business Writing
Fall and spring. 3 credits. Limited to juniors, seniors, or graduate students, or written permission of instructor. Prerequisite for undergraduates: H Adm 165 (for hotel school students) or completion of student's freshman writing requirement. Elective. S. Jones, R. Steinhacker.

Focuses on the written communication that requires special persuasiveness and control of tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and human relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusals, rejections, and responses to complaints. A major topic is the planning and executing of a job-hunting campaign, for students prepare resumes, letters of application, and follow-up messages adapted to their individual needs.

H ADM 365 Managerial Communication II
Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not drop it, however, students may be allowed to drop before the first class meets if the area has a wait list and the vacancy can be filled. Students may drop between the first and second class if they 1) check first with the course chair, and 2) can find a replacement for their place in the course. Students may not drop after the second class unless they petition and present a case of extenuating circumstances. It is expected these cases would be rare. Prerequisites: Hotel undergraduates must have completed H Adm 165 and H Adm 115. Required. J. Brownell, E. Huetteman, Y. Kim, J. Lunley, B. Stevens.

A broad study of communication in a managerial context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

H ADM 463 Persuasive Communication in Organizations
Spring. 3 credits. Limited to 18 students. Prerequisites: H Adm 165 and 365 for hotel school undergraduates, or permission of instructor. Elective. Faculty.

Prerequisites: Proficiency in written communication will be thoroughly examined as they apply to persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking; also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

H ADM 661 Organizational Communication For Managers
Spring. 3 credits. Elective. B. Stevens.

Focuses on the complex interactions that occur when people communicate in organizations. Structured around the communication tasks managers must accomplish to be effective on the job. Business cases. Emphasis on design of effective communication strategies. Applications and experiential exercises help students perfect their ability to write, make oral presentations, and interact effectively with others in managerial contexts.

H ADM 761 Communication Modules

Elective modules cover topics related to the professional master's program benchmarks: written communication, presentational speaking, and group process/leadership. Additional topics in support of students' individual goals also may be offered. Topics include organizing ideas, revising and editing written documents, etc. Modules are available on a first-come, first-served basis, and are offered throughout the semester during the management development periods.

OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES

H ADM 170 Keyboarding on the Macintosh
Spring. 2 credits. Limited to 30 students. Elective. B. David.

An introduction to the computer and a beginning course in alphabetic and numeric keyboarding. Students learn word-processing skills during the second half of the course.

H ADM 174 Microcomputing

An introduction to microcomputing to develop functional computer fluency. Students develop skills in five generic areas: text, graphics, spreadsheet, presentation, and list processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows.

H ADM 175 Quantitative Methods
Fall and spring. 3 credits. Limited to 120 hotel school students. Co- or prerequisite: H Adm 174. Required. G. Thompson, D. Barrish.

An introduction to statistical and operations management methods appropriate for the hospitality industry. Topics include descriptive statistics, probability, correlation and regression, forecasting, decision analysis, quality control charts, and an introduction to yield management. Emphasis is on practical applications of the techniques to hospitality related problems.

H ADM 374 End-User Business Computing Tools
Spring. 3 credits. Limited to 20 students. Elective. R. Alvarez.

Explores the personal computer as a managerial tool. Concepts of spreadsheet modeling, database, and end-user computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on IBM computers.

H ADM 375 Hotel Computing Applications
Spring. 3 credits. Prerequisite: H Adm 174 or equivalent. Elective. R. Moore.

Introduces students from a management perspective to technology-based systems used in the hospitality industry which enhance guest service and support management decision making. Topics include following systems: global distribution, yield management, property management, communication networks (LANS and WANS); and food service management. Experience on systems widely used in hospitality industry and develops IBM PC knowledge and skills.

H ADM 474 Corporate Information Systems Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. R. Alvarez.

Explores ten key issues in information technology management through use of case studies of companies with relevant experience with the issues. A basic understanding of information technology, organizational behavior, and general management is advised.

H ADM 674 Service Operations Management
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: H Adm 775 or equivalent. Elective. G. Thompson.

The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, workforce management, and quality management. Intended for graduate students interested in services management.

H ADM 675 Yield Management
Spring. 3 credits. Prerequisites: H Adm 175, 771, or equivalent. Elective. S. Kimes.

Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal
management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 771 Graduate Quantitative Methods
Fall. 3 credits. Professional master's requirement. S. Kimes. Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management.

H ADM 772 Information Technology for Hospitality Managers
Fall. 3 credits. Professional master's requirement. R. Moore. Familiarizes students with issues surrounding the use of information technology in supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

LAW COURSES

H ADM 385 Business Law I
Spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Elective. Faculty. Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities.

H ADM 387 Business and Hospitality Law
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. Faculty. An integrated, chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

H ADM 485 Employment Discrimination Law for Managers
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. Faculty. Provides students with an understanding of anti-discrimination statutes and a framework for establishing the proper policies and procedures for complying with the law, avoiding liability, and maintaining positive employment relations.

H ADM 487 Real Estate Law
Fall. 3 credits. Recommended: completion of H Adm 387 preferred. Elective. Faculty. Familiarizes students with the nature and ownership of real estate. Describes interests in real estate and how title is transferred. Acquaints students with legal aspects of marketing residential and commercial real estate, including shopping center and commercial leases, real estate syndication, and subdividing real estate for development.

H ADM 681 The Interplay of Law and Ethics in Service Industry Management
Spring. 3 credits. Limited to 50 hotel graduate students; seniors and other graduate students by permission of instructor. Prerequisite: completion of all required professional master's first-year courses, or permission of instructor. Elective. Faculty. Involves students in ethical aspects of traditional law problems confronting service industry managers and executives within the areas of commerce, consumerism, administrative law and practice, regulation of anti-competitive practices, and federal and state securities regulation. The impact of the corporation on traditional notions of personal social responsibility will be stressed.

OTHER COURSES

H ADM 101 Microeconomics for the Service Industry
Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, others by permission of instructor. Required. M. Conlin, J. Wissink. Introduces the basic principles of microeconomics and teaches students how they apply to managers of enterprises associated with the hospitality industry. Emphasis on methods of market segmentation in the service industries, analyzing economic incentives involved in franchise arrangements, and the nature of competition in various segments of the hospitality industry.

H ADM 490 Housing and Feeding the Homeless
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O'Connor. Explores the public and private sector partnership in addressing the crisis of homelessness. Through lectures, readings, discussions, research, volunteerism, and a field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. The components of successful housing programs and food assistance programs will be analyzed.

Students taking the course for four credit hours will, in small groups, work with agencies providing services to homeless persons. They will analyze the agency's mission, identify a specific managerial challenge, and formulate an approach and solution to that challenge. This fieldwork will require approximately eight days during the semester.

Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency approximate three hours per week during the semester.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable credit (maximum, 4). Prerequisite: written permission. Elective. G. Pezzotti, Y. Kerr-Donovan. Elective board of directors of Hotel Ezra Cornell receive credit for academic coursework, and the development, organization, and management of the April "Hotel-for-a-Weekend." Students who are considering a board position may pre-enroll for the course and should speak with the instructor for additional information about board positions and required coursework. Election will take place in April after Hotel Ezra Cornell Weekend, at which time the HA 491 course enrollment will be finalized. Further information is available in the Student Services Office, 178B Statler Hall.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 3 credits. Limited to hotel school juniors and seniors with approval of the MIP faculty committee. Prerequisites: Students are expected to have completed H Adm 105, 115, 211, 221, 222, 150, 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended. H Adm 301, 321, 355, 355, and 365. Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H Adm 494. S-U grades only. Based on six performance evaluations. Elective. R. Chase.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H Adm 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefing, and oral presentation. Elective. R. Chase.

H ADM 495 Development and Management of Wellness in Business Organizations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, $25–50. Elective. J. Fascich. Designed to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which should increase the corporation's competitive edge.

H ADM 499 Undergraduate Independent Study
Fall and spring. Variable, to 4 credits. Elective. Faculty. Students are afforded an opportunity to pursue independent study projects under the direction of a faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

H ADM 690 Honors Monograph
Year-long course. 4 credits. Limited to professional master's students who: 1) either have a minimum GPA of 3.7 or are in the top 10 percent of the students in the year group in their first-year professional master's courses; 2) have given evidence of being a good writer by meeting all components of the written communication benchmark; and 3) obtained the approval of a brief topic proposal from the potential adviser. Elective. Faculty.
A special integrative course for students who write well and desire to explore in depth a topic of mutual interest to them and a faculty adviser of their choice. The approval of a second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

**H ADM 699 Graduate Independent Research**

Fall and spring. Credit to be arranged. Elective. Faculty. Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172 Statler.

**H ADM 791 Creating and Managing for Service Excellence**

Fall. 3 credits. Professional master’s requirement. S. Kimes. Focuses on developing a clear understanding of service excellence from multiple perspectives. Assisted by a faculty team from management, marketing, and operations, students will define, diagnose, design, measure, control, and change service excellence. Emphasis will be placed on critical decision making and strategic thinking.

**H ADM 793 Industry Mentorship Program**

Spring. No credits. S-U grades only. Professional master’s requirement. M. Redlin. Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

**H ADM 794 Management Development Component I, II, and III**

Year-long course. No credits. S-U grades only. Professional master’s requirement. J. Brownell, B. Chung, E. Huettman, D. Jameson. Individualized approach ensuring that all students meet program benchmarks in written communication, presentational speaking, and group process/leadership skills as well as identify and achieve individual goals. Begins with an assessment center weekend. Students then work with their advisors to complete a personal development plan. Assignments in core courses are used to benchmark students' skills and determine progress. Continues throughout the professional master’s program.

**H ADM 890 M.S. Thesis Research**

Fall and spring. Credit to be arranged.

**H ADM 990 Ph.D. Thesis Research**

Fall and spring. Credit to be arranged.

---

FACILITIES
The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, and human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by the College of Human Ecology and the College of Agriculture and Life Sciences, has space in Savage Hall and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and a computer-aided design laboratory; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; educational television studios; and a printing and reproduction facility. Also included are learning resource centers for career planning, field and international study; a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, phy, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

DIVISION OF STUDENT SERVICES
Brenda Bricker, director, Office of Admissions
Mary Rhodes, director and college registrar, Office of Student Services

Persons interested in undergraduate study in human ecology should contact the Office of Admissions, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department.

Matriculated students can find assistance with matters of academic credit, graduation requirements, academic advising, minority student advising, study abroad advising, career planning and placement, and personal counseling from the Office of Student Services, N101 Martha Van Rensselaer Hall. International students should contact their student counselor in the Office of Student Services.

The Students
The College of Human Ecology undergraduate enrollment is 1,326 with 56 percent in the upper division. About 350 students are graduated each year, and last year 291 freshmen and 113 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective. Approximately 75 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. Twenty-nine percent were identified as members of minority groups in 1996. Approximately 243 graduate students have members of the college's faculty chairing their special committees. The college awarded 59 master's degrees and 24 doctorates last year.

ACADEMIC PROGRAMS

Majors
Selection of a major begins with selection of career goals. In their freshman and sophomore years, students can explore ways to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The director of career services and the counselor for career development in the Office of Student Services (N101 Martha Van Rensselaer Hall) and resources in the Student Resource Center (N139 MVR) can help students through their career exploration process.

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. A student may satisfy the requirements of more than one major option. (The college urges students who satisfy more than one major or option to note this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options.

Design and Environmental Analysis (DEA): Interior design, facility planning and management, human environment relations.

Human Development and Family Studies (HDFS): Does not have separate options. Courses focus on cognitive, social, and personality development; phases of development; family studies and life course. The department administers an honors program for selected students.

Nutritional Sciences (NS): The division supervises the department major. (By careful planning, students may also meet the minimum academic requirements of the American Dietetic Association.) The division administers an honors program for selected students.

Policy Analysis and Management (PAM): The department supervises four majors: policy analysis and management, consumer economics and housing, human service studies, and policy analysis. Students majoring in human service studies may also meet the requirements of an accredited bachelor's degree program in social work. The consumer economics and housing, human service studies and the policy analysis majors will be terminated after spring, 2000.

Textiles and Apparel (TXA): Apparel design, apparel-textile management, fiber science.
It is possible to change majors. Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. It is important for a student to discuss a possible change of major with her or his faculty adviser or counselor. If the student decides to make a change, a completed change-of-major form (available from the Office of Student Services, N101 Martha Van Rensselaer Hall) will officially record the change so that a new adviser can be assigned to the student.

Students of Mature Status
The college recognizes that students who interrupted their formal education and are returning to school need different courses from those of younger undergraduates. To facilitate the education of mature students, defined as those twenty-four years old or older at first matriculation, the college has adopted certain procedures specifically for that group. The counselor for mature students in the Office of Student Services (N101 MVR) can provide information of interest to mature students.

Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms.

Mature students are encouraged to contact the director of the Continuing Education Information Service, B20 Day Hall, for information on resources available through that office.

Special Students
Students eligible for special status are those visiting from other institutions and interested in particular programs in the college, those with a bachelor's degree preparing for graduate study, those pursuing degrees in human ecology-related fields, or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree.

Empire State Students
Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs, B20 Day Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

**DESIGN AND ENVIRONMENTAL ANALYSIS**

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The Design Resource Center includes books, journals, newsletters, and materials samples for student use.

**Options**

The department offers undergraduate education in three professional areas: interior design, faculty planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER).

To take full advantage of the course sequence and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra-semesters to complete the program.

**Option I: Interior Design**

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based upon knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with one of the other options.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

**Option II: Facility Planning and Management**

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

**Option III: Human-Environment Relations**

Human-environment relations focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior, and to use that knowledge to help architects, planners, interior designers and product designers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, life-style, social class, and stage in life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility management and product design division of private companies. Human-environment relations is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in public, facility planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

**Academic Advising**

All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, Paul Eshelman, in E304 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the...
college to meet special needs helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work
All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN DEVELOPMENT AND FAMILY STUDIES
The programs of the Department of Human Development and Family Studies (HDFS) are concerned with how people develop throughout the life course. Of equal interest is the family as a context for individual development and as a part of the larger structure of society. An ecological perspective—the person in interaction with complex biological, situational, and environmental components of everyday life—is featured in many departmental courses.

Major social science disciplines concerned with the development of individuals and with the structure and function of families are represented among faculty members with backgrounds in psychology, sociology, history, and education. The department's programs of instruction, extension, and research provide diverse opportunities for students to prepare for career development or to acquire the bases for graduate study. Many of the department's majors are interested in clinical psychology, counseling, law, medicine, special education, or university teaching and research that require some graduate study. Others may go directly into employment in business or industry or take bachelor's-level positions such as youth counselors, day-care workers, personnel assistants, research technicians, and social program assistants.

Academic Advising
Every HDFS major is assigned a faculty adviser in the department, and advising conferences are required at least twice a year. An adviser helps plan the course work and consults with the student about career options. The adviser can also help students find special opportunities for individual study or experience outside the classroom. Although advisers must distribute pin numbers, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college. Students who need an adviser or who want to change advisers for any reason should check with the director of undergraduate studies, Joan Brumberg, or the department office, in NG14 Martha Van Rensselaer Hall.

Curriculum
HDFS majors usually combine a broad liberal education with a more specialized focus on either a problem of human concern or a substantive area of concentration. Areas of specialization available within HDFS include infant, child, adolescent, and adult development; abnormal development; family studies; and social-personality and cognitive development. Some students combine an HDFS major with premedical or prelaw training or with specialized work in an area outside the department, such as communication arts, nutrition, business, or social work.

During their first two years, students are expected to combine a variety of liberal arts courses with HDFS core courses HDFS 115 (Human Development); HDFS 150 (Families and the Life Course); and intermediate courses in phases of development, cognition, or social-personality. This encourages diversity yet ensures a common base for upper-level courses in the major. Courses within the department vary from lectures and discussions to research and independent study.

All students are encouraged to participate in an experiential learning course in their particular area of interest. The course may focus on a naturalistic or laboratory setting (e.g., nursery school, youth detention center, retirement home) or on a research setting (e.g., interviewing, administering tests, observing behavior).

An HDFS major also takes a number of upper-level departmental courses in particular areas as described in the Student Guide. Additional information is available in the HDFS Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Math Requirement
HDFS majors are required to fulfill a math requirement by passing Education 115 or demonstrating equivalent competency by scoring 650 or higher on the math SAT examination.

Teaching Certification Option
The cooperative Cornell HDFS-State University College at Cortland education program is designed to meet New York State certification requirements for teaching grades N–6 while simultaneously earning the Cornell bachelor's degree in HDFS. The program requires that the student spend three years at Cornell and the senior year and part of two summers registered in absentia at SUC Cortland. Students usually keep their Ithaca housing as Cortland is just 18 miles away and the one-semester teaching internship is based in Ithaca.

This highly selective undergraduate program offers an alternative to the option of seeking a master's degree in education after the undergraduate studies at Cortland have been completed. Students interested in the program should discuss the merits of each option with the Coordinator of Undergraduate Education in NG09 MVR.

Course work at Cornell must be carefully planned. Elective options will be somewhat limited because it will be necessary to consider the twenty-seven Cortland credits plus three education courses at Cornell as electives. The teaching certification program is not an option for external transfers entering as late as upper sophomore or junior year. More information is available in the department's Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Honors Program
The honors program leading to a Bachelor of Science degree with honors in HDFS is designed to provide in-depth research experience for students interested in graduate school and to challenge students who enjoy research. Interested students should consult the coordinator of the honors program during their sophomore year.

A grade-point average of 3.5 is required for entry into the program. Honors students must take an approved course in research design, preferably in the sophomore or junior year. Students spend part of their junior and senior year working on a thesis under faculty supervision, completing the project before April 15 of the senior year when the student's oral examination is held. More information is available in the department's Office of Undergraduate Education, NG14 Martha Van Rensselaer Hall.

Language Competency
The HDFS faculty believe that competence in a foreign language is an essential liberal arts goal for the educated HDFS student. Such exposure opens another culture for exploration at both the instrumental and expressive levels, helps students understand language itself, and encourages knowledge of language as a fundamental intellectual tool and as an essential communicative asset with potential applied benefits. While this is not a graduation requirement, it is strongly recommended that HDFS majors develop competency in a second language.

The following departments teach foreign languages or literature or both in the College of Arts and Sciences: Africana Studies and Research Center, Asian Studies, Classics, German Literature, Modern Languages and Linguistics, Near Eastern Studies, Romance Studies, and Russian Literature.

Work toward foreign language competency should be undertaken in the freshman and sophomore years. Please note that high school or transferred language courses can be used for advanced standing credit, even if the student does not want to do any further language work at Cornell.

Speakers of languages other than English may be awarded credit for their bilingual ability. Their English achievement is measured by the Test of English as a Foreign Language (TOEFL), a requirement for matriculation. Their performance in one other language learned outside the academic environment is measured by examination, and evidence of abilities in reading and writing, as well as speaking, is required. A maximum of 6 advanced placement credits are granted to students who demonstrate PROFICIENCY equivalent to course work at the 200 level or above at Cornell. Students may not earn credit both for PROFICIENCY in their native language and for studying English as a second language at Cornell.
Language Course Placement and Credit

Students who have had two or more years of high school study in a language may not register in any course in that language without being placed by examination. Nor may transfer students register without examination, even though they may have been given credit for language work elsewhere.

The type of examination depends on the language course and the level of achievement:

1) French, German, Italian, Russian, and Spanish courses: the standardized College Placement Test (CPT). Entering students who have not taken the CPT in high school and who want to continue their language study must take the CPT at Cornell during orientation week. Students may retake this examination at Cornell if they have studied the language a year or more since last taking the test. To do this, students register with the Academic and Career Counseling Services, 203 Barnes Hall, and pay a fee.

2) Latin (all courses except 105 and 107): departmental examination.

3) Greek (all courses except 101, 104, and 111): departmental examination.

4) Arabic: departmental examination.

5) Hebrew: departmental examination.

6) Other languages: special examinations: see the professor in charge.

7) High achievement (students with a CPT score of 650 or better in French, German, Hebrew, Italian, Russian, and Spanish): the Cornell Advanced Standing Examination (CASE).

An entering or continuing student with high achievement scores should take the Cornell Advanced Standing Examination (CASE).

See section on College of Arts and Sciences, Language Requirement, for further information.

POLICY ANALYSIS AND MANAGEMENT (FORMERLY CONSUMER ECONOMICS AND HOUSING AND HUMAN SERVICES STUDIES)

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have concentrated knowledge in one of three areas: family/social welfare, health, and consumer policy. Social welfare/family policy and management includes a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption and child neglect and abuse policies and programs through income maintenance and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility.

Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, health maintenance organizations, public health issues, and substance abuse policies. Consumer programs and policies include such regulatory or antitrust programs as advertising, product safety, food and drug safety, nutrition policies, the regulation of credit, insurance, telecommunications, mortgage, housing issues, and public utility markets and also deal with issues such as the invasion of privacy, internet security, and children's TV. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to college requirements, all PAM majors are expected to take core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Finance. Students will also be expected to develop a concentration of three courses in either social welfare/family, health, or consumer. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors will have the opportunity to participate in a departmentally approved experiential learning. Please check with the undergraduate advising coordinator, Professor Alan Mathios, for further details.

Consumer Economics and Housing, Human Service Studies, and Policy Analysis

The program in Policy Analysis and Management has been formed from three previous majors: Consumer Economics and Housing (CEH), Human Service Studies (HSS), and the interdisciplinary Policy Analysis program. The Department of Policy Analysis and Management is committed to maintaining these programs for students currently enrolled in them. PAM will offer majors in Consumer Economics and Housing, Policy Analysis, and Human Service Studies to students matriculating in spring 1997 or before and to transfer students who can complete the program by no later than spring 2000. Such students also have the choice of switching to the Policy Analysis and Management major. The department is not obligated to continue teaching courses required for the CEH, HSS, and PA majors or those required for accreditation in Social Work after spring semester 2000. Please see the Human Ecology Student Guide, 1997-98 and PAM director of undergraduate studies Alan Mathios, for further information.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Peter Schwartz (201 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin early to work with their advisers to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. The department is not responsible for loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

Key Policy for Apparel Design Studios

To allow design students access to studios for out-of-class work at any hour in which Van Rensselaer Hall is open, and to provide security for the studios, the department has
instituted a key policy. Each student in TXA 040, 145, 264, 367, 375, 425, 446, and 465 who submits a security deposit of $50 will be given a key to the studio in which his or her class is held. If any key is lost, the studio will be rekeyed, and the cost will come from the security deposit of the student who lost the key. At the end of each semester, the studio will be assessed for missing and damaged equipment. The total amount assessed will be deducted from the security deposits of all students assigned to that studio. If all keys are returned and no damage or theft is reported, the security deposits will be returned at the end of the semester. Students who do not wish to work in the studio outside of class hours may elect not to have a key and therefore will not be required to submit a security deposit. Under no circumstances will these students be admitted to the studio outside of class hours.

**Options**

Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structure of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous coursework, transfer students may need one or two extra semesters to fulfill the requirements of the major.

**Option I: Apparel Design**

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

**Option II: Apparel-Textile Management**

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

**Option III: Fiber Science**

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

**Career Opportunities**

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored community organizations. Recent graduates are working in the fields of new product development, design, management, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

**INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY**

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemical and physical biology, genetics, ecology, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Human Ecology Student Guide, available in the Office of Student Services, N101 Martha Van Rensselaer Hall. Academic advising is coordinated by the director of undergraduate studies, S. Kay Obendorf, 208 Martha Van Rensselaer Hall.

**INDIVIDUAL CURRICULUM**

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology coursework, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator.

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, Patti Papapietro, the individual curriculum coordinator in the Office of Student Services, N101 MVR, will provide direction in formally developing a program of study. Although the individual curriculum coordinator must sign the course enrollment schedule during course enrollment each term, a student has the responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

**SPECIAL OPPORTUNITIES**

Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, college-wide certificate programs, and joint programs with other schools and colleges at Cornell. Students may petition the college registrar to have concentrations that are formally recognized elsewhere within the university noted on their transcripts, when accompanied by appropriate documentation from the program.

**International Study**

Approximately 14 percent of the class of 1997 in Human Ecology studied abroad. Study abroad allows students to focus on international issues and intercultural understanding through sponsored programs of study abroad for which academic credit is available. Course work in a foreign institution will be planned to increase knowledge of the people and institutions of the country concerned; fieldwork may provide guided experience in family, community, or agency situations of the country concerned and in an area related to individual student interest in human ecology. Students should begin planning for their study abroad experience in their freshman or sophomore year. Opportunities for study abroad are available for human ecology students in several ways: through Cornell Abroad, through other U.S. college-sponsored programs abroad, and through direct enrollment in a foreign university. In all cases, students remain registered at Cornell during the overseas study, and their study abroad will be credited as part of their Cornell degree program. Application packets for study abroad can be obtained from an adviser who should be submitted to the study abroad adviser in the Office of Student Services, N101 Martha Van Rensselaer Hall. The Student Resource Center, N139 Martha Van Rensselaer Hall, has catalogs and other information about study abroad opportunities. The study abroad adviser is Mary Rhodes, N101 Martha Van Rensselaer Hall.

**Field Study, Internships, and Research Opportunities**

Field study, internships, and research opportunities allow students to receive academic credit for work that extends and complements their course of study. Through structured experiences facilitated by faculty...
Students strengthen their ability to integrate theory and practice and learn to reflect critically on their experience while broadening their understanding of diversity and complex societal issues. In existing courses and through individual and group projects, students develop an intellectual framework for understanding and solving problems in a variety of challenging settings. Placement opportunities are available in business, health, law, medicine, environmental analysis, education, nutrition, government, laboratories, textiles and apparel, design, social service and community settings. Students are encouraged to plan early for these opportunities.

To learn more, students should consult with their faculty adviser, professor, or undergraduate advising coordinator. They can also visit the Student Resource Center in N-139 MVR and explore listings of opportunities on the "Human Ecology Field Study Coordinator Program" available on Campus Access. New initiatives are encouraged. For further information, contact Kris Deluca-Beach, director of career services, N-101 MVR.

Multicultural Issues in Urban Affairs
Fall and spring semesters: HE 480
This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine a number of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Readings explore the focus on inner-city children and youth under a variety of multicultural-influenced conditions and contexts. Costs include travel to and from sites by public transportation at about $3.00-6.00 each week.

Communities in Multicultural Practice
Fall and spring semesters: HE 490
This course provides students with an understanding of community building processes and experiences. Students participate with children, youth, and their families in the South Bronx. Students immerse themselves in the history and community development efforts of the South Bronx. The South Bronx will be presented as a case study in successful community building with a focus on children and youth. Leaders will present their personal stories in the redevelopment of the South Bronx, creating over the course of the semester a tapestry of stories that make the abstract principles of economics, social, cultural, and political development come to life. Further grounding students in the real lives and conditions involved in the development of the South Bronx will be their participation in after-school programs involving children and youth in a variety of community-based settings. Students will mentor the children and learn about them and their needs, relating these to the content studied in the other two courses of the Urban Semester Program. Costs include public transportation costs to and from the various sites, about $3.00-6.00 each week.

The Winter Intersession in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building
Winter intersession: HE 402
Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx. In carrying out community service, students participate in a research project with the director of the Cornell in New York City program. In the 1995 intersession, six students mentored 12 children in an after-school program by documenting the community with photographs and stories. A photography exhibit was produced that is presently circulating. Other projects with Banana Kelly are available to students throughout the year. Please contact Dr. Sam Beck in the Cornell in New York City program office.

Fieldwork in Diversity and Professional Practice
Summer session: HE 406
Over the course of an eight-week summer session, students carry out research projects on the multicultural dynamics of professional practice by interning full time in settings of

Cornell in New York City
The Urban Semester Program in Multicultural Dynamics in Urban Affairs
Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. Experiential learning practices inform all courses of study. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses, HE 470, HE 480, and HE 490. Students learn by doing and through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and learn how to be agents of change.

Several majors in the college require internships or encourage field study. Check with the advisor or the program coordinator for more information. The Student Resource Center in N-139 MVR and the Field Study Coordinator in N-137 MVR can help you find opportunities and provide more information on departmental opportunities and enrolling in Cornell in New York City.

Multicultural Practice
Fall and spring semesters: HE 470
Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their experiences in their internships with a focus on multicultural issues, professional practice, and organizational culture.

Gerontology Concentration
Gerontology Certificate Program
This program develops students' understanding of and competence in dealing with the processes and issues of aging. Study in gerontology provides practical experience and preparation for professional work. Students draw on resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to their professional goals and interests. Contact the Gerontology Coordinator, Life Course Institute, 259 Martha Van Rensselaer Hall.

Teacher Certification in Home Economics
Students can combine any major in the college with additional coursework that leads to a home economics teacher certification (kindergarten through twelfth grade) in New York State and a number of other states. Interested students should contact the Office of Student Services in N101 Martha Van Rensselaer Hall.

Double-Registration Programs
Johnson Graduate School of Management
A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after the junior year. Successful applicants need the approval of the admissions office and the registrar in the College of Human Ecology. Accepted students should be aware that if the management course work taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

Law School
A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate study. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Because students accepted to this program will spend their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

Cornell Medical College
A limited number of highly qualified students from three Cornell divisions, including the
enrolled in methods and practice-teaching courses. Acceptance of Cornell students into program and that do not duplicate Cornell exceptions will be granted to Cornell students register for one course a term and may take Cornell students are eligible to register only in Cornell and only special fees to Wells College. Students pay regular tuition to may petition to enroll in courses at Wells spring semesters. The program is available only during the fall and spring semesters. For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

PLANNING A PROGRAM OF STUDY

Academic Advising

Students who choose to major in a particular department are assigned to a faculty adviser by that department's director of undergraduate studies. The director of undergraduate studies can help match a student's needs with the special interests of a faculty member. Students may change advisers as their own interests change and should see the director of undergraduate studies to discuss such a change. Faculty advisers, and counselors in the Office of Student Services (N101 Martha Van Rensselaer Hall), are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities.

Although advisers must provide the advising key number during course enrollment each term, it is the student's responsibility to make sure that her or his program meets graduation requirements for the major and the college. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

Completing Graduation Requirements

A summary of record is kept for each student in the Office of Student Services, N101 Martha Van Rensselaer Hall. At the beginning of fall term each continuing student receives a copy showing which major and degree requirements have already been met. It is important to check this summary and to bring any questions to the attention of the faculty advisor and the staff members in the Office of Student Services. A student may complete the requirements of more than one major.

Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Catalog. For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

Wells College

Full-time undergraduate students at Cornell may petition to enroll in courses at Wells College. Students pay regular tuition to Wells College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Wells College. Cornell students are eligible to register only in Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Wells College courses is on a space-available basis. Participation in this program is not guaranteed, and Wells College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, N101 Martha Van Rensselaer Hall.

REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college. Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to:

1) meet college credit and distribution requirements,
2) complete requirements for a major,
3) achieve a cumulative average of 1.7 (C–) or better,
4) fulfill residency requirements, and
5) complete two terms of physical education within the first two semesters.

College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there.

Category I General Distribution (37-41)

A. Natural Sciences (6)
B. Social Sciences (6)
C. Humanities (4) Language credit cannot be used in this area (See IV).
D. Written Communications (6) Must be Freshman Writing Seminars. At least one seminar must be in the humanities.
E. Quantitative and Analytical (3-7)
   1. Math competency equivalent to EDUC 115 (precalculus)
      a. AP of 3 or higher on AB test
      b. AP of 2 on BC test
      c. Math assessment test score equivalent to EDUC 115
      d. Pass a math course equivalent to or higher than EDUC 115
2. Statistics, advanced math, logic (4)
   ARME 310 Intro. Statistics (4)
F. Additional credits (12)
Category II Requirements in the Major
(number of credits vary by major)

Category III HUMEC Credits Outside the Major

May not include any HE 00 courses, HE 100, HE 101 or any 403 course. A maximum of three credits of special studies (400, 401, and 402), or of any internship credit may be used. A maximum of five credits of either HE 470 or HE 480 or HE 490 can be used.

Transfer students (external and internal) can combine transfer credit with credit earned in the college, or can prorate the number of credits to complete this requirement. (Refer to "Policies Related to College Requirements" in the Human Ecology Student Guide for details of the policy.)

Category IV Electives

Credits to complete 120 credits overall, exclusive of physical education.

Elective credits can be earned in Human Ecology or elsewhere. Students who earn more than 21 credits in endorsed divisions will be billed for the excess credits at the end of the term. Billable endorsed credits include endorsed courses taken in Category II.

Category V Physical Education

TOTAL credits (exclusive of PE) 120

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies

College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

Category I.D. Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. Students who score 5 on the Princeton AP Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

Category IV. There is no limit to the number of credits that may be taken in the state divisions of Cornell, and therefore students may choose to take additional state credits and graduate with more than 120 credits.

Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of F or U is received will be counted as part of the 21 endowed credits allowed. Students are not required to take elective credit in the endowed divisions.

Elective credits earned in Cornell's endowed divisions during summer session, in absentia credits, and transfer credits are counted as credits earned in the state divisions and therefore do not count as part of the 21 credits allowed in the endowed divisions in meeting the requirements of this section.

Not more than 21 credits in Categories II and IV may be taken in the endowed divisions of the university except under both of the following conditions:

1) The students must have senior status (must be in the final two semesters prior to graduation);
2) Payment must be made for each credit taken in excess of the 21 allowed, whether or not the courses are passed. For the fee per credit charge, students should call the Office of the Bursar.

Category I.D. Transfer students should have taken at least 6 credits in courses in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshmen writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculation.

Category III. External and internal transfer students can meet the requirement for course work outside the major in the College of Human Ecology by completion of either of the following:

1) 15 credits of work, outside their department, comprised of transfer credit and credit earned in the college, or
2) credits all taken in this college (no transfer credit is allowed to meet this requirement), on the basis of the status of the student's matriculation and prorated as follows:

Cornell Human Ecology Credits to Satisfy Work outside the Major

Status at Matriculation
Freshman (1-25 transfer credits) 15
Sophomore (26-55 transfer credits) 12
Junior (56-85 transfer credits) 9
Senior (86-120 transfer credits) 9

Note that transfer students are still responsible for completing a minimum of 40 human ecology credits under Category III.

Category IV. Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C will not transfer to meet human ecology degree requirements.

Category V. Transfer students who have had the equivalent of two semesters of college (and therefore enter as sophomores) are not required to take physical education at Cornell, regardless of whether they took physical education at their first college. Exemption from or postponement for medical reasons must be cleared by Gannett Health Center. For further information about exemption from, or postponement of, physical education, students should consult the Office of Physical Education in Teagle Hall.

Related Policies for Freshmen

Category V. Freshmen are required to take two semesters of physical education during their freshman year. Freshman transfer students entering with 12 or more credits have their physical education requirement reduced to one term.

Residency Requirements

All college curricula are planned to fit within an eight-semester program. An average schedule of 15 credits a semester (in addition to physical education) is considered standard, and if pursued for eight semesters will provide the credits needed for graduation. If the student completes all the requirements—for the major, for distribution, for total credits, and for cumulative average—in fewer than eight semesters, the degree may be conferred at the end of the semester in which the last requirements are met. Students who plan to receive their degrees early should notify the college registrar at the beginning of the semester so that their names can be placed on the list of degree candidates.

Sometimes a student (particularly a transfer student) may need an additional semester to complete a program. To register for a semester beyond the eighth, the student submits a general petition to the college registrar in the Office of Student Services, N101 Martha Van Rensselaer Hall. The petition should detail the reasons for wanting to enroll for the extra semester and include a list of courses planned for the additional semester. Such requests are usually granted when there appears to be no feasible way for the student to complete the professional curriculum or the degree requirements without the extra semester.

Freshmen entering the college with 15 transfer credits have seven semesters in which to complete the degree. Transfer students must complete at least 60 credits at Cornell.

Mature students (those at least twenty-four years old at the time of matriculation) are not required to petition the college registrar for approval to study beyond the usual eight semesters.

Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the Human Ecology Student Guide. Petition forms are available in the Office of Student Services, N101 Martha Van Rensselaer Hall.

PROCEDURES

Course Enrollment and Registration

Students are expected to complete course enrollment during specified times each semester. It is the student's responsibility to learn the dates of course enrollment.

Freshmen and transfer students enrolling in the university for the first time in the fall term request their courses during the summer before they arrive on campus. Enrollment materials are mailed to new students in May. Because new students starting at midyear do not have an opportunity to enroll in courses until after they arrive on campus, the college reserves places for them in human ecology courses. The orientation schedule given to all new students lists a specified time to enroll in such courses.

Continuing students enroll for fall semester in March–April, and for spring semester in October–November preceding the beginning of the term. They are notified of course
Enrollment Dates by poster, e-mail, and by notices in the Cornell Daily Sun. Course enrollment materials are available for continuing students via computer access to Just the Facts and in the Office of Student Services, N101 Martha Van Rensselaer Hall. For the first three weeks of the term, students have an opportunity to add courses in other divisions of the university as well as in human ecology.

Enrollment
Before or during course enrollment, students discuss their program plans with a faculty adviser or a college counselor in the Office of Student Services. For their advising sessions, students need the Course and Time Roster issued by the university registrar which also is available via computer on CUNIPO. Students must obtain an adviser key number from their departmental major faculty adviser, or if they have not declared a major, from a college counselor in N101 MVR.

Students complete their enrollment course requests by the deadline announced by the university registrar.

The following policies and procedures apply to course enrollment.

Permission of Instructor
Certain courses may be taken only with the permission of the instructor as indicated in Cornell University: Courses of Study. For such courses, students must request the instructor's permission during the CourseEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Students who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student must file with that school's registrar in 312 Malott Hall.

Special Studies Courses
Each department in the College of Human Ecology (DEA, HDFS, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of these courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. These courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair as well as the student's department adviser before submitting it to the Office of Student Services. The student also must complete a course registration form in the Office of Student Services. Special studies forms and instructions are available in the departmental offices.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

Course Loads
The normal course load in the college ranges from 12 to 18 credits. During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater.

Credits beyond 15 may be added during the first three weeks of the semester without special permission.

Students should avoid planning excessive work loads; the time required to keep abreast of courses tends to increase as the semester progresses. Courses cannot be dropped after the seventh week of classes without petitioning and by substantiating extenuating circumstances, so students should try to avoid the need to drop courses.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Student Services, N101 MVR.

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar for more information.)

Students of mature status may carry 6 to 11 credits without petitioning and may have their tuition prorated. However, at the beginning of each term, mature students planning to take a light course load should pick up a proration of tuition form from the Office of Student Services, fill it out, have it signed by the college registrar, and return it to the bursar's office in Day Hall.

Oversubscribed Courses
Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in Cornell University: Courses of Study. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Late Course Enrollment
Students who do not complete course enrollment during the course enrollment period usually must wait until the beginning of the semester to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in N101 MVR as soon as possible. The college registrar can explain available options on course enrollment procedures under such circumstances.

Important: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade option and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under Course Enrollment Changes.

At the beginning of the fall semester, each continuing student receives a copy of his or her summary of record from the Office of Student Services. This summary shows degree requirements that the student has completed. Students are responsible for assuring that their academic program meets degree requirements. They resolve any questions about degree requirements with the appropriate staff person in the Office of Student Services. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Student Services.

Late University Registration
A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due.

All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's Office will charge a late fee.

Students who fail to register by the third week of the term will be withdrawn from the university. Should withdrawn students wish to return, they must reapply throughout the admissions committee.

Course Enrollment Changes

Deadlines
• During the first three weeks of the term, courses may be added or dropped.
• From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor (instructor's signature on the add/drop form).
• From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
• From the eighth week of the term, no course charge may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantive medical evidence with the petition.
• A student who submits a petition after the seventh week of the term requesting permission to drop a course must attach a statement from his or her faculty adviser to that petition indicating whether or not the advisor supports the request.
After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add classes after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course. (See Petition Process, General Petition Form for information on the procedure.)

Procedures

It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new courses early makes it easier for the student to keep up with course work. Dropping an unneeded course early makes room in the course for other students who may need it for their academic programs.

Ideally, students evaluate their course work load carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for course enrollment are also required for course enrollment changes. For example, the instructor’s permission must be obtained for a course requiring it, and the same forms for special studies courses must be completed. Aside from the procedures listed below for course enrollment changes, all course change forms for nutritional science majors must be signed by the faculty department adviser.

Waiting List: The Office of Student Services maintains a waiting list of students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a waiting list, students must check in person every 48 hours with the Office of Student Services; names of students who do not check in are automatically dropped from the list.

Limited enrollment classes: Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

There is no charge for course changes. To make course changes during the first three weeks, a student takes the following five steps:

1) Obtains a course-change form from the Office of Student Services, N101 MVR.
2) Completes the form and takes it to the appropriate office for signature: for human ecology courses, the forms should be taken to the Office of Student Services; for courses outside the college, the forms should be taken to the appropriate departmental office in the other college.
3) Makes sure that his or her name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Asks the person recording the change to sign the form.
4) Submits all signed forms to the Office of Student Services, including the forms for out-of-college courses. Changed enrollments and the signed forms are filed in that office. If a student does not drop a course that he or she no longer attends, the student is in danger of receiving an F in the course.
5) Receives carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify later that the forms were filed.

To make course changes during the fourth through seventh weeks of the term, a student takes the following steps:

1) Completes the five steps listed above for changes made during the first three weeks.
2) Obtains the instructors' signatures on the course change form for human ecology courses.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section below, Petition Process.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

In absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing may study in absentia but will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval. Note that in absentia study and leave of absence status are mutually exclusive.

In absentia petition forms are available in the Office of Student Services, N101 MVR. The student completes the form, has it signed by his or her faculty adviser, attaches catalog descriptions for the courses that will be taken, then submits it to the Office of Student Services, N101 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and in absentia courses are applicable to the requirements of the college. A student's petition for more than 15 credits in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Office of Student Services in the College of Human Ecology. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. Only credits (not course names and grades) for in absentia courses will appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by requesting an extension in writing from the Office of Student Services. Note that in absentia study and leave of absence status are mutually exclusive.

A student considering a leave of absence is urged to discuss plans with a counselor in the Office of Student Services. The counselor can supply the necessary forms for the student to complete and file with the Office of Student Services, N101 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence
 Withdrawal
A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Student Services and filing a written notice of withdrawal in the Office of Student Services. A student considering such an action is urged to discuss plans with a counselor in the Office of Student Services, N101 MVR.

In some instances a student may be given a withdrawal by the college registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Petition Process
The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the "Course Enrollment Changes" section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Student Services, N101 MVR.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar in the Office of Student Services.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition must attach a statement from the student’s faculty adviser before CAS will consider the appeal.

S-U Grades
Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the Cornell University Courses of Study. Regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better, and that a grade of U be given for work below that level. No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student’s record. A student who is attempting to quality for the Dean’s List must take at least 12 credits for the usual A–F grades.

A student may take no more than four courses (or 12 credits) on an S-U basis during his or her college career; however, more than one S-U course may be taken in one semester. S-U courses may be taken only as electives or in the 15 credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or file an add/drop/change form in the Office of Student Services before the end of the third week of the term. Forms are available in the Office of Student Services. After the third week of the term, students can not change grade options.

Grades of Incomplete
A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor’s judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

Beginning fall 1984, a grade of incomplete may remain on a student’s official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student’s official transcript. If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of F or Incomplete, which has been signed by both the instructor and the student, must be submitted by the instructor to the Office of Student Services. This form is submitted with the final grade sheets whenever a grade of incomplete is given.

This form is for the student’s protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the student may, by notified the student, initiate the process by filling out and signing part of the form and turning it in to the Office of Student Services with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Office of Student Services to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student’s official transcript with an asterisk and the final grade received for the semester in which the student was registered for the course.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for working with the Office of Student Services (about two weeks after the work has been handed in) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

ACADEMIC HONORS
The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean’s List. Excellence in academic achievement is recognized each semester by placing on the Dean’s List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living—home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average. Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and Family Studies and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate
department or division. Students in other departments who wish to qualify for honors should contact Gret Atkin, NI15A Martha Van Rensselaer Hall, their sophomore year or the first semester of their junior year.

**Bachelor of Science with Distinction** recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for Bachelor of Science degrees in August, January or May of the same academic year.

Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines.

To be eligible for membership students must rank in the top ten percent of the senior class, or in the top five percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

**INTERDEPARTMENTAL COURSES**

**HE 100 Critical Reading and Thinking**

Fall, spring, or summer. 2 credits.

Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor only.

The objective of this course is to enable students to improve critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and writing skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

**HE 101 College Achievement Seminar**

6-week summer session. 2 credits.

Enrollment limited to and required of Prefreshman Summer Program students. S-U grades only.

The objective of this course is to enable freshmen and sophomores to succeed at Cornell. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

**THE URBAN SEMESTER PROGRAM IN NEW YORK CITY**

Sam Beck, Ph.D., director

The Urban Semester Program is a series of classes spanning the entire summer year. During either fall or spring semester students enroll in three classes focusing on the opportunities and barriers that a multicultural society presents and their articulation with professional, community, or public policy settings (15-credit residential program). Students intern three to four days each week and are encouraged to live in the Olin Hall dormitory of the Cornell University Medical College.

The three-week winter intersession course (1 credit) enables students to do fieldwork in New York City by working full time in community-based organizations or through research supervised by the director. In the eight-week summer semester (3 credits), students carry out research projects on the nature of professional practice by interning full time in settings of their choice. Students who seek to contribute to their own communities are encouraged to participate in any of the program offerings. Most students work with the program staff to locate internships. For further information contact the Urban Semester Program at (212) 746-2273 or the Student Resource Center, N-139 Martha Van Rensselaer Hall.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

- **Health and medicine**—New York Hospital/Cornell Medical Center, Chinatown Health Clinic, New York City Department of Public Health, Bellevue Hospital, Queens Medical Center for Women and Children, Community Health Project
- **Private and public law**—New Legal Defense and Education Fund, Neighborhood Defender Service of Harlem, Legal Aid, Puerto Rican Legal Defense and Education Fund, NAACP Legal Defense and Education Fund, Gay and Lesbian Anti-Violence Project, Kane Kessler, P.C.
- **Government and community agencies**—Women's Action Alliance, The Center for Puerto Rican Studies, New York City Commission on the Status of Women, New York City Council offices, Cornell University Cooperative Extension, New York City Department of Consumer Affairs
- **Private not-for-profit organizations**—Grant Street Settlement House, Neighborhood Housing Services, Abyssinian Baptist Church Development Corporation, University Settlement Society of New York, Urban Development Corporation, Greater Chinatown Community Association, Lesbian and Gay Community Services Center
- **Private and public schools**—United Federation of Teachers, Central Park East, River East, Manhattan Center for Math and Science, PS 41, City and Country, Churchill School, Little Red School House, St. Ann's School

**HE 401 Empirical Research**

Fall, spring, winter, and summer. 1-15 credits. Permission of instructor. S. Beck.

This course is available to juniors and seniors who wish to pursue a well-defined, independent research project sponsored by one or more faculty members. Honors projects are welcome. Such students must participate in the course work of HE 402, HE 406, or HE 408. Students must provide a project proposal no longer than five pages, an annotated bibliography representing the fields of interest to be researched or explored, and a letter of approval from one faculty member who will sponsor the investigation.

**HE 402 Supervised Fieldwork in Urban Affairs**

Winter. 1 credit. Limited to 12 students. Permission of instructor.

This course allows students to participate in Urban Semester Program research or internship opportunities in New York City. Research projects are carried out under the supervision of the program director and will include opportunities for field observation, interviewing, and library and archival inquiry, focused on socioeconomic processes in urban settings. Students interested in internships locate their own placements with assistance from the Urban Semester Program staff. Students keep a journal that reflects on their community service experiences with a focus on specific learning objectives. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall. Applications must be accompanied by a resume, a statement of learning objectives, a letter from the placement supporting the student's plan, and a rationale for participating in this activity. The research or community service must take place during the Cornell winter session period.

**HE 403 Teaching Apprenticeship**

Fall, spring, winter, and summer.

For study that includes assisting faculty with instruction. Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance.

**HE 406 Fieldwork in Professional Practice: Summer in the City**

Summer. 1-3 credits. 8-week session. Limited to 12 students.

This is a seminar that examines the culture of professional practice, how professionals think and behave, and the role of professionals in society through internships and weekly
discussions with practitioners in a variety of fields. Students will carry out fieldwork in internship placements by researching professional practice in New York City. They will interview a minimum of eight weeks in organizations and fields such as business, government, private not-for-profit services, education, medicine and health, law, media, and communications. Students locate their own internships with assistance from the Urban Semester Program staff. Applications and placement information are available in the College of Human Ecology Student Resource Center, N-139 Martha Van Rensselaer Hall.

HE 470 Multicultural Practice
Fall and spring semesters.
Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their experiences in their internships with a focus on multicultural issues, professional practice, and organizational culture.

HE 480 Multicultural Issues in Urban Affairs
Fall and spring semesters.
This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Readings will reflect the focus on inner-city children and youth under a variety of multicultural-influenced conditions and contexts. Costs include travel to and from sites by public transportation at about $3.00-6.00 each week.

HE 490 Communities in Multicultural Practice
Fall and spring semesters.
This course provides students with an understanding of community building processes and enables them to participate with children, youth, and their families in the South Bronx. Students immerse themselves in the history and community development efforts of the South Bronx. The South Bronx will be presented as a case study in successful community building with a focus on children and youth. Leaders will present their personal stories in the redevelopment of the South Bronx, creating over the course of the semester a tapestry of stories that make the abstract principles of economics, social, cultural, and political development come to life. Further grounding students in the real lives and conditions involved in the development of the South Bronx will be their participation in after-school programs involving children and youth in a variety of community-based settings. Students will interview the children about them and their needs, relating these to the content studied in the other two courses of the Urban Semester Program. Costs include public transportation costs to and from the various sites, about $3.00-6.00 each week.

DESIGN AND ENVIRONMENTAL ANALYSIS COURSES

F. Becker, chair; P. Eshelman, undergraduate advising coordinator; A. Hedge, director of graduate studies; A. Basinger, S. Danko, G. Evans, K. Gibson, R. Gilmore, J. Jennings, L. Laquatra, L. Maxwell, E. Schrank, W. Sims

Note: A minimal charge for photocopied course handouts may be required.

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

DEA 101 Design Studio I
Fall. 3 credits. Each section limited to 18 students. Permission of instructor required. Priority given to interior design majors. Option I majors must take DEA 101 in fall of their first year. Approximate cost of materials, $60. M W F 12:25-1:25; or TR 10:10-1:10. J. Mercer.
A studio course introducing the fundamental vocabulary and methods of two- and three-dimensional design. Students experiment with the development of form through problem-solving approaches.

DEA 102 Design Studio II
Spring. 3 credits. Permission of instructor required. Option I DEA majors only. B- or higher in DEA 101 required to register for this course. Option I majors must take DEA 102 and 115 concurrently. Approximate cost of materials, $200; shop fee, $10. M W F 12:25-1:25. P. Eshelman.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

DEA 111 Making a Difference: By Design
Students in any academic area examine how design affects their daily life and future profession. Course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, etc., who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics: nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision-making, and ecological issues.

DEA 115 Design Graphics
Spring. 2 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100. Permission of instructor only. M W F 8:00-11:00. K. Gibson.
A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

DEA 150 Introduction to Human-Environment Relations
Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and handicaps; person-environment fit for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; user-responsive design; participatory design programming; and post occupancy evaluation.

DEA 201 Design Studio III
Fall. 4 credits. Limited to 18 students. Prerequisites: DEA 101,102, and 115 (minimum grades of B-) Recommended: DEA 111 and 115. Coregistration in DEA 203 and DEA 251 is required. Minimum cost of materials, $150, shop fee, $10; optional field trip, approximately $100. diazo machine fee, $8. M W F 12:25-1:25. J. Jennings.
Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

DEA 202 Design Studio IV
Spring. 4 credits. Each section limited to 18 students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 111 and 204. Minimum cost of materials, $120; diazo machine fee, $8; field trip fee. M W F 12:20-1:25. R. Gilmore.
Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior design problems of limited complexity. Each problem of 3 to 5 weeks duration is structured to emphasize different aspects of the design process.

DEA 203 Design Communications
Fall. 1 credit. Priority given to DEA majors. Lab fee $10. M 7:30-9:55. J. Mercer.
Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

DEA 204 Introduction to Building Technology
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.
DEA 243 Inside Out: The American Everyday Interior (also Women's Studies 243)
A study of late nineteenth- and twentieth-century everyday interiors in socio-cultural contexts, with an emphasis on design problems, dissemination, consumer patterns, and gender issues. Topics include women's walls, power in the parlor, photographs as a mirror, the love of the colonial.

DEA 250 The Environment and Social Behavior
Fall. 3 credits. Limited to 16. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65, TR 2:55-4:10. G. Evans.
A combination seminar-and-lecture course for students interested in the social sciences, design, or design. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 251 History and Theory of the Interior Design Process
Fall. 3 credits. Limited 65. Prerequisites: priority given to DEA majors. MWF 9:05-9:55. J. Jennings.
An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements and theorists. Reading, discussion, analytical exercises, essays, examinations. Field trip.

DEA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Department faculty. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301 Design Studio V
Fall. 4 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204. Corequisite: DEA 303 and 459. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $100; diazo machine fee, $8. TR 12:20-4:25. P. Shelman.
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

DEA 302 Design Studio VI
Spring. 4 credits. Prerequisites: DEA 301 and 303 or permission of instructor. Corequisites: DEA 304 and DEA 305. Minimum cost of materials, $150; shop fee, $10; diazo machine fee, $8. MWF 1:25-4:25. K. Gibson.
Intermediate-level interior design studio with an introduction to computer applications, utilizing the microcomputer as a design tool in the process of creating and planning interior spaces. Continued development of design skills and problem solving in relation to a selection of problem types.

DEA 303 Introduction to Furnishings, Materials, and Finishes
Fall. 2 credits. W 7:30-9:25 p.m. R. Gilmore.
Basic understanding of furniture types and systems; interior products and equipment such as work-stations; window, wall, and floor coverings; ceiling systems and lighting; and materials. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

DEA 304 Introduction to Professional Practice of Interior Design
Spring. 1 credit. T 2:30-4:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational structures and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 305 Construction Documents and Detailing
Comprehensive study of drafting, detailing, schedules and specifications. Emphasis on drawing conventions, symbols, dimensioning, detailing of interior elements, terminology, construction methods and materials.

DEA 325 Human Factors: Ergonomics-Anthropometrics
Fall. 3 credits. Recommended: DEA 150. TR 8:40-9:55. A. Hedge.
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropometry, biomechanics, control/display design, work physiology, and motor performance. Course includes practical exercises and field project work.

DEA 349 Graphic Design
The fundamentals of lettering, typography, layout, presentation techniques and the functional and visual aspects of environmental graphics. Printing processes and the application of photography and illustration are also covered. A series of projects explores problems typical of the graphic design field, and in interior and exterior graphics, signing, and directional systems.

DEA 350 Human Factors: The Ambient Environment
Spring. 3 credits. Recommended: DEA 150. TR 8:40-9:55. A. Hedge.
An introduction to human-factors considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 374 Elements of Business for Non-Business Majors (also Hotel Administration 104)
Spring. 1 credit. Limited to 36. Weekend course. P. Rainsford.
Focus will be to provide hands-on skills and knowledge about how to start or run a small business. Especially appropriate for students interested in professional careers such as architecture, design, writing, art, engineering, law, and other service businesses. Course structure will use a computer-based management simulation game and will require students to work in management teams of six to start and operate a hotel. Introductory-level course. No previous business experience or computer knowledge required. Students are required to attend all sessions and complete a paper, which will be due a week after conclusion of the course.

DEA 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Department faculty. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the Counseling Office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisers and the instructor should register for one of the following subdivisions of independent study.

DEA 400 Directed Readings
For study that predominantly involves library research and independent reading.

DEA 401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

DEA 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.
DEA 403 Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

DEA 404 Design Studio VII
Advanced interior design studio organized around a series of interior design problems, 3 to 5 weeks in duration. Focus is on development of design skills and on competence in selecting a set of generic interior design problem types.

[DEA 405 Portfolio Preparation]
Students apply graphic design principles to develop a professional portfolio of their work. Also covered are resume writing and planning the job search, and the use of appropriate computer software and computer-aided graphic tools.

DEA 430 Furniture as a Social Art
Spring. 3 credits limited to 15. Prerequisite: DEA 250. S-U option. Cost of building materials: $150. Students must also sign up for 2 hours of DEA shop time each week for model building. M W 10:10-12:05. P. Eshelman.
The course examines furniture as a design process that emphasizes support of human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

[DEA 443 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior]
Spring (even-numbered years). 3 credits. Enrollment limited to 15. Prerequisite: DEA 250 or permission of instructor. S-U option. Field trips $30. M W F 1:25-4:25. F. Becker.
This course examines culture as a design process that supports human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

[DEA 444 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior]
Spring (even-numbered years). 3 credits. Enrollment limited to 15. Prerequisite: DEA 250 or permission of instructor. M W F 1:25-4:25. F. Becker, W. Sims.
This course examines culture as a design process that supports human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

DEA 451 Seminar in Facility Planning and Management
Series of seminars led by Cornell faculty and other facility management professionals. Topics include strategic space planning, space standards, office automation, project management, energy conservation, environmental protection and regulatory issues.

DEA 453 Planning and Managing the Workplace
Spring. 3 credits. Prerequisite: DEA 250 or permission of instructor. M 7:30-10:30. F. Becker.
Intended for students interested in planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including building, design, furniture and equipment and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered.

DEA 454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials, $100. M 1:25-4:25. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

DEA 455 Research Methods in Human-Environment Relations
Fall. 3 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25-2:15. G. Evans.
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459 Programming Methods in Design
Fall. 3 credits. T R 10:10-11:25. W. Sims.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problem and creation of new methods or techniques are emphasized.

DEA 470 Environmental Analysis I: Applied Ergonomic Methods
This course covers ergonomics methods and techniques and their application to the design of modern work environments. Emphasis is placed on understanding key concepts. Coverage includes conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems. This course is the undergraduate section of DEA 670, which will share the same lectures but will meet for an additional hour. DEA 670 will have additional readings and projects.

DEA 499 Design Studio VIII
Spring. 4 credits. Prerequisites: DEA 301, 302, 303, and 304. letter grade only. Minimum cost of materials, $150; diazo machine fee, $8 per semester. T R 12:20-4:25. S. Danko.
Design--problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and evaluation; design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Department faculty.
Independent advanced work by graduate students recommended by a special committee chair and approved by the head of the department and instructor.

[DEA 643 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior]
A course intended for graduate students who want a more thorough grounding in the history of vernacular interiors than is provided by DEA 443. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class hour each week, and do additional readings and projects.

DEA 645 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor. 4:30-7:30. S. Danko.
Focuses on thinking processes and techniques that support creative problem solving. Theories of creative behavior and critical thinking are examined. Course is highly participatory and experiential by design. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. Primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem-solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 648 Advanced Applications in Computer Graphics
Fall. 3 credits. Prerequisite: DEA 647. Spring: 12 graduate and advanced undergraduate students. Prerequisites for undergraduates: DEA 302 or permission of instructor. Minimum cost of materials $150. Lab fee $35. T R 9:05-12:05. K. Gibson.
Advanced use of computer technology to create and analyze interior environments. Emphasis will be on the use of 3-D modeling, animation, photorealistic rendering and...
with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 455 for more detail.

**DEA 458 Seminar on Facility Planning and Management**
Spring. 1 credit. For graduate students and advanced undergraduates interested in careers in facility planning and management. S-U grades only. M 3:35-4:25. F. Becker, W. Sims. Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic and tactical facility planning, space standards, project management, computer and facility management, facility maintenance and operations, energy conservation and building systems. See DEA 455 for more detail.

**DEA 459 The Environment and Social Behavior**
Fall. 4 credits. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:55-4:10. G. Evans. Intended for graduate students who want to make thorough grounding in the influence of environmental form on social behavior than is provided by DEA 250. Each student is required to attend DEA 250 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 250 for more detail.

**DEA 460 Design Theory Seminar**
Spring. 3 credits. Enrollment limited to 15 students. T R 10:10-11:30. J. Jennings. Directed toward advanced undergraduate and graduate students with interest in the theory of design. The purpose is to provide an understanding of major theoretical ideas underlying design movements of the twentieth century. Explores these ideas through readings, lectures by faculty and visitors, student presentations of research papers, and seminar discussions.

**DEA 469 Environmental Analysis I: Applied Ergonomics Methods**
Spring (even-numbered years). 4 credits. Enrollment limited to 20. Prerequisite: DEA 651. T R 2:55-4:10. A. Hedge. Intended for graduate students who want a more thorough grounding in applied ergonomics methods than is provided by DEA 470. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 470 for more detail.

**DEA 470 Environmental Analysis II: Indoor Air Quality Methods**
Spring (odd-numbered years). 3 credits. Enrollment limited to 20. Prerequisite: DEA 652. T R 10:10-11:25. A. Hedge. This course provides in-depth coverage of the nature of indoor air pollutants and techniques for analyzing indoor air quality in modern work environments. Emphasis is placed on understanding key concepts in environmental exposure, toxicology, epidemiology and on understanding the procedures for assessing indoor air quality conditions. Coverage also includes detailed consideration of the design of modern ventilation systems.

**DEA 489 Master's Thesis and Research**
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Department graduate faculty.

### HUMAN DEVELOPMENT AND FAMILY STUDIES COURSES

- **HDFS 115 Human Development**
  Fall or summer. 3 credits. S-U grades optional. M W F 1:25-2:15. S. Ceci. Provides a broad overview of theories, research methods, and current knowledge of human development from conception into adulthood. Course material primarily covers infancy and childhood with considerably less focus on adolescent and adult development. Topics include biological, intellectual, linguistic, social and emotional development as well as the cultural, social, and interpersonal contexts that affect developmental processes and outcomes in these domains.

- **HDFS 150 Families and the Life Course**
  Spring. 3 credits. S-U grades optional. M W F 1:25-2:15. E. Wethington. This course provides an introduction to social scientific research on family roles and functions. Topics include family history, how families change over the life course, and how families are influenced by cultural and economic forces.

- **HDFS 216 Human Development: Adulthood and Aging**
  Spring or summer. 3 credits. Prerequisite: HDFS 115. S-U grades optional. T R 2:55-4:10. Staff. Provides a broad overview of theories, issues, and research in the study of human development from early adulthood to late (adult) life (youth). Attention is focused on the interplay of biological and cognitive factors, interpersonal relationships, social structure, and cultural values in shaping the individual's development. The role of adolescence in both the individual's life course and the evolution of the culture as a whole is also considered. Familiar, peer group, educational, and work contexts for development are discussed.

- **HDFS 218 Human Development: Adolescence and Youth**
  Fall. 3 credits. Prerequisite: HDFS 115. S-U grades optional. M W F 9:05-9:55. S. Ceci. Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through late adulthood are
discussed. Both individual development within generations and differences among generations are emphasized.

**HDFS 241 History of Childhood in the United States**
Spring. Limited to 30 students. 3 credits. Not offered 1997-98. J. Brumberg. An examination of childhood and adolescence in various historical contexts: Puritan New England, slave plantations, evangelical revivals, the Western frontier, Victorian families, reform schools, early high schools and colleges, the sexual revolution of the 1920s, ink machines, the Depression and World War II, the 1950s, and more recent social and cultural changes affecting families. Students will evaluate continuities and changes in the lives of American children as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own childhood and adolescence. This course is designed to give students a humanities perspective (ethnographies to child psychology) central to many different disciplines.

**HDFS 242 Participation with Groups of Young Children**
Fall or spring. 4 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HDFS 115 and permission of instructor. S-U grades optional. W 10:10-12:05. J. Ross-Bernstein. This course is designed to integrate developmental theories with supervised experience in child care centers, with the intention of enhancing the student's abilities to understand and to relate effectively with young children. Participation, observation, reflection, reading, writing, and sharing of viewpoints are some of the means used to these ends. Placements are in local nurseries, day care centers, Head Start programs, and kindergartens.

**HDFS 243 Participation with Groups of Children, Ages 6-12**
Fall or spring. 4 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HDFS 115 and permission of instructor during preregistration. S-U grades optional. W 12:20-2:15. Not offered 1997-98. Staff. This course is designed to allow students to gain a working developmental perspective on the school-aged child (ages 6-12). Students will participate in area elementary schools for 6 hours per week as a classroom assistant, attend a weekly 2-hour resource and discussion seminar, and complete readings in developmental theory, current trends, and issues regarding children's learning and growth. The application of readings and discussions to the field experience via written assignments will give the student the opportunity for a well-integrated understanding of the school-aged child.

**HDFS 251 Social Gerontology: Aging and the Life Course**
Spring. 3 credits. Limited to 60 students. Prerequisites: HDFS 150 or equivalent to be determined by instructor. S-U grades optional. W 10:10-11:25. D. Dempster-McGinn. This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) An introduction to the field of gerontology, its history, theories, and research methods. (2) A brief overview of the physiological and psychological changes that accompany aging. (3) An analysis of the contexts (such as family, friends, social support, employment, volunteer work) in which individuals experience differences by gender, ethnicity, and social class. (4) The influences of society on the aging individual. Guest speakers will provide an introduction to various careers in the field of gerontology.

**HDFS 253 Gender and the Life Course**
Fall. Limited to 110 students. S-U grades optional. T R 10:10-11:40. P. Moen. This course examines the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between social change and individual lives, observing the significance of two key institutions—work and family—in shaping basic life choices and their consequences throughout the life course. Implications of key life trajectories and transitions for individual lives and for social policy will also be discussed.

**HDFS 258 History of Women in the Professions, 1800 to the Present**
Spring. 3 credits. S-U grades optional. Human ecology students must register for HDFS 258. T R 8:40-9:55. J. Brumberg. The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, reading, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different working opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

**HDFS 260 Personality Development (also Psychology 275)**
Fall 1997. 3 credits. T R 10:10-11:25. Spring 1999 C. Hazan. T R 12:20-1:45. 3 credits. Prerequisites: HDFS 115 or Psychology 101 or permission of instructor. Offered alternate years. An introduction to personality psychology, with an emphasis on personality development and contemporary research. Covers the major theories of personality, influences on personality development (including genetic, biological, experiential and environmental factors), and methods for assessing personality.

**HDFS 261 The Development of Social Behavior**
Spring. 3 credits. Prerequisite: HDFS 115 or Psychology 128. Offered alternate years. T R 1:25-2:40. C. Raven. Issues in the development of social behavior are viewed from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

**HDFS 284 Introduction to Sexual Minorities (also Women's Studies 285)**
Fall. 3 credits. Prerequisite: one social science course. S-U grades optional. M 3:00-5:00 p.m. B. Lust. This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexual questioning, and other sexual minorities. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Requirements include reaction papers to the readings.

**HDFS 300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged. Permission required. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students preparing a description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the coordinator of undergradaute studies, is filed at course registration or during the change of registration period.

**HDFS 313 Problematic Behavior in Adolescence**
Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101. HDFS 216 recommended. Not offered 1997-98. T R 2:55-4:10. J. Haukgaard. This course will explore several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors will be presented. Appropriate research will be reviewed, treatment and prevention strategies will be explored. An optional discussion section will be available to students who would like to prepare a paper to discuss readings and lectures in greater depth.

**HDFS 334 The Growth of the Mind**
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HDFS 635, a supplemental graduate seminar. Prerequisites: A course in human experimental psychology, statistics, or HDFS 115 or equivalent; or permission of the instructor. S-U grades optional. Offered alternate years. Not offered 1997-98. B. Lust. In this course the fundamental issues of cognition are introduced. What is the nature of human intelligence? of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to their final representation? What are the relations between language and thought? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates in the study of cognition are introduced and discussed throughout: for example, the roles of inattention and learning, the distinction between competence and performance, and the relation between...
induction and deduction in the acquisition of knowledge. Those psychological issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism. The course will analyze Piaget's comprehensive theory of cognitive development and empirical results. Current research in cognitive development will be contrasted.)

HDFS 344 Infant Behavior and Development
Fall 3 credits. Prerequisites: HDFS 115, a biology course, and a statistics course. Not open to freshmen. M W F 1:25–2:15. S. Robertson.

Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interconnectedness of these aspects of development will be strongly emphasized, as well as their relation to the biology of fetal and infant development. Topics with implications for general theories of development will be emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, the role of the environment in development). Conditions which put infants at risk for poor development (e.g., premature birth, exposure to environmental toxins, maternal depression) and topics with current social, ethical, or political implications (e.g., infant day care, fetal rights) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

HDFS 346 The Role and Meaning of Play
Fall 2 credits. Limited to 30 juniors and seniors. Prerequisite: HDFS 115. M T W F 7:30–9:25 p.m. J. Ross-Bernstein.
The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research, the student will explore the meanings and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

HDFS 347 Human Growth and Development: Biological and Behavioral Interactions (also Biology and Society 347 and Nutritional Sciences 347)
Spring 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HDFS 115 or Psychology 101. Offered alternate years. Limited to 150 students.

This course is concerned with the interrelationships between physical and psychological growth and development in humans during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

HDFS 348 Advanced Participation with Children
Spring. 4 or 8 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HDFS 244, 245, 342, 343, 331; and permission of instructor. Recommended: HDFS 346. S-U grades optional. T 12:20–2:15. J. Ross-Bernstein.

An advanced, supervised field-based course, designed to help children and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and instructor; to keep a journal; and to plan, carry out, and evaluate weekly activities for children in their placement. Conference group and readings focus on contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the class. Participation is in settings that serve typical and/or special needs children from two to ten years of age and provide education, care, or special-purpose interventions for them.

HDFS 353 Risk and Opportunity Factors in Childhood and Adolescence
Spring. 3 credits. Enrollment limited to 100 students. Prerequisites: HDFS 115 and HDFS 150. S-U grades optional. T R 1:25–4:20. J. Garbarino.

This course explores the meaning of risk and opportunity factors in the lives of children and youth. It begins from an understanding of risk accumulation and resilience as they relate to social policy, professional practice, and community development. The concept of "social toxicity" will be emphasized as it organizes central themes of the course. Assignments include writing research-based editorials and participating in a simulated public policy debate.

HDFS 354 Families in Cross-cultural Perspective
Spring. 3 credits. Prerequisites: HDFS 115 or HDFS 150 or Rural Sociology 101 or Anthropology 101 or 102, or Psychology 101 or equivalent. S-U grades optional. Not offered 1997–98. M W F 10:10–11:00. L. Lee.

This course will be taught with an emphasis on the life cycle of families and individuals. Focus will be on the rites/rituals, both subtle and obvious, that mark an individual's movement through the stages of life. The approach will be both anthropological and historical. Students will see correlations between diverse family forms in the United States and around the world.

HDFS 359 American Families in Historical Perspective (also Women's Studies 387, History 359, American Studies 359)

This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural conceptions of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate development theory, data drawn from the social sciences, and historical circumstances.

HDFS 362 Human Bonding
Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101. S-U grades optional. T R 1:25–2:40. C. Hazan.

The science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

HDFS 370 Experimental Psychopathology (also Psychology 325)
Fall. 4 credits. Limited to sophomores, juniors, and seniors. Prerequisites: HDFS 115, Psychology 101, or Education 110; a course in statistics (e.g., Psych 350, Soci 301, Educ 352 or 353, Ag Ec 310 or equivalent); and an introductory biology course. Letter grade only. M W F 11:15. M. Lenzenweger, Fall 1999–M. Lenzenweger.

A research-based survey of the cognitive, emotional, and biological aspects of psychopathology across the life span. The major mental illnesses will be covered, including schizophrenia, anxiety disorders, affective disorders, and personality disorders as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development, minimal attention to psychotherapy.

HDFS 397 Experimental Child Psychology
Fall. 4 credits. Prerequisites: HDFS 115 or Psychology 101 and one course in statistics. Intended primarily for students interested in entering graduate programs involving further research training. Limited to 16 students. M W 8:40–9:55. L. Lee.

A study of experimental methodology in research with children. Includes lectures, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.

HDFS 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: either HDFS 115, 150, and two intermediate level HDFS courses, or four courses in psychology or sociology. S-U grades optional. Not offered.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HDFS not otherwise provided through course work in the department or...
Although the required readings are primarily culture shape adolescent experience. Paper.

Research and independent study.

Empirical Research

Prerequisites: In addition to the general prerequisite courses, a statistics or methods course and at least one course directly linked to the area of study. Permission required.

For study that predominantly involves data collection and analysis, or laboratory or studio projects.

Supervised Fieldwork

Prerequisites: In addition to the general prerequisite courses, an observation or participation course. Permission required.

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

Teaching Apprenticeship

Prerequisites: In addition to the general prerequisite courses, students who have taken the course or equivalent and received a grade of B+ or higher. Permission required.

For study that includes assisting faculty with instruction.

Female Adolescence In Historical Perspective (also Women's Studies 438 and History 458)

Spring. 3 credits. Limited to 25 students. Prerequisites: HDFS 258 or 359 or a 300- or 400-level history or women's studies course. Permission of instructor required. T 2:20—4:25. J. Brumberg.

A reading, writing, and discussion course that will attempt to answer a basic historical question that has consequence for both contemporary educational theory and social policy: How has female adolescence in the United States changed in the past 200 years? The focus will be on the ways in which gender, class, ethnicity, and popular culture shape adolescent development. Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.

Language Development (also Psychology 436 and Linguistics 436)

Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HDFS/LING 635, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology or child psychology, cognitive development, or linguistics. S-U grades optional. Offered alternate years. T 3:35—4:25. B. Lust.

This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for language acquisition. The appropriate communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

Thinking and Reasoning

Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101. T 1:25—2:40. B. Koslowski.

The course will examine problem solving and transfer, pre-causal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and non-rational reasoning. The lecture runs through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

Infancy through Adolescence

The course will be an overview of current and classic issues and research in cognitive development. Central topics of both "hard cognition" (i.e., empirical and neuropsychological functioning) and "soft cognition" (e.g., problem solving, concepts and categories) will be covered. Selected topics will be linked to methodological issues and to important social issues such as cross-cultural cognitive development and putative racial and social class differences.

Internship In Educational Settings for Children

Fall or spring. 8—12 credits. Prerequisites: HDFS 115, 242, or 243 and 348. Recommended: HDFS 346. Permission of instructor required. S-U grades optional. J. Ross-Bernstein.

Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages two to ten and their families. Function as participants in varied settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

Nontraditional Families and Troubled Families

Fall. 3 credits. Limited to 30 students. Prerequisites: HDFS 115 and 150. Letter grades only. Not offered 1997—98. T R 8:40—9:55. J. Haugaard.

This is an advanced course designed to explore the functioning of families. The first part of the course examines social theory and how it relates to our understanding of all families. Four types of families are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child.)

Families and Social Policy

Spring. 3 credits. Prerequisite: one course in the area of the family and sociology. S-U grades optional. Not offered 1996—97. P. Moen.

An examination of the intended and unintended family consequences of governmental policies, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.

Health and Social Behavior

Fall. 3 credits. Prerequisites: HDFS 150, HSS 101, Sociology 101, or Rural Sociology 101 and a course in statistics. Letter grades only. T R 8:40—9:55. E. Wethington.

This course critically examines theories and empirical research on the relationships among social group membership, social status; physical and mental health; and family structure, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

Sexual Minorities and Human Development (also Women's Studies 467)

The first half of the course covers topics of a fairly general nature regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students will determine the content through their selection of particular topics that interest them. The success of the course depends on students feeling personally engaged and committed to the course content. Because of the multidisciplinary nature of the course, it is hoped that students from a variety of backgrounds in disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will feel comfortable in the course.

Neurobiology of Personality and Psychopathology

Fall. 3 credits. Limited to 30 students. Prerequisites: HDFS 115 or Psychology 101, Psychology of Psychopathology (HDFS 370 or Psychology 352), a semester of biology OR biological psychology. Letter grades only. Not offered 1997—98. T R 2:55—4:10. R. Depue.

For juniors and seniors who have an interest in the neurobiology of behavior. Course material is presented within an evolutionary biology perspective, where the development
of neurobehavioral responses as a means of adapting to critical internal and external stimuli. Focus is on the general role played by the biogenic amines (dopamine, norepinephrine, and serotonin) and opiates in personality and psychopathology. Specifically, the relation of dopamine and positive emotional stability, norepinephrine and negative emotionality, serotonin and behavioral stability, and opiates and social reward attachment is explored in the area of personality. The manner in which these neurotransmitters may also be involved in disorders of affect, anxiety, personality, obsessive-compulsion, and autism, respectively, is covered. The manner in which environmental influences across the lifespan may be coded in the brain and influence the development of personality and psychopathology is explored. Approximately 24-30 papers and chapters will be read and discussed.

**HDFS 467 Psycho-social Issues in Asian American Identity**

Spring. 3 credits. Enrollment limited to 50 students. Prerequisites: HDFS 115 or Psychology 101 or permission of instructor. S-U grades optional. W 7:30-9:25, L. Lee. The course will cover theories of identity and self and their usefulness in understanding identity formation for various ethnic groups within the AsianAmerican population. It will examine the impact of various societal forces, e.g., racism, stereotypes, etc. as well as life experiences, e.g., family values, etc. in shaping or contributing to the formation of identity or identities of Asian Americans.

**HDFS 470 Advanced Experimental Psychological Amorality**

Fall. 3 credits. Limited to 20 juniors or seniors, not open to graduate students. Prerequisites: HDFS 370, statistics (Psychology 350 preferred), introductory biology or neurobiology. Permission of instructor required. Letter grades only. TBA. Not offered 1997-98. M. Lenzenweger. This course is intended to be an opportunity for advanced undergraduate students (i.e., juniors and seniors) to explore rigorously and in depth the empirical research literature concerning several specific forms of severe psychopathology. The course will focus on schizophrenia, affective illness, and personality disorders. Each syndrome will be discussed in terms of phenomenological and classification issues, etiological factors, and developmental trajectory within the context of the diathesis-stress model of psychopathological development.

**HDFS 471 Child Development and Psychopathological**

Spring. 3 credits. Limited to 60 advanced-level students. Prerequisites: a basic course in psychology or instructor's permission. Letter grades only. Not offered 1997-98. T R 2:55-4:10. M. Haugard. This class will explore the development and process of mental, emotional, and behavioral disorders in children such as mental retardation, autism, and attention deficit disorders. Topics will include: (1) the classification of mental disorders, (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders, (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventive interventions. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.

**HDFS 473 Schizophrenia**

Fall. 3 credits. Limited to 25 students. Prerequisites: HDFS 370 OR Psychology 325, and a statistics course and a neurobiology course. Letter grades only. Offered alternating years. T R 10:10-11:25. M. Lenzenweger. This course will examine the nature of schizophrenia as a major mental illness in depth. The history of the illness will be traced from early observations through the most current nosological perspectives. Research data from a variety of relevant disciplines will be examined with a particular emphasis on etiology, course, and outcome of the illness. Perspectives from classification, behavioral genetics, neurobiology, psychology, and epidemiology will be integrated within an experimental psychopathology framework. This course will not focus on issues related to treatment or nontreatment approaches to the disorder.

**HDFS 482 Child Development and Social Policy**

Fall. 3 credits. Enrollment limited to 25 HDFS juniors and seniors or by permission of instructor. Prerequisites: HDFS 115, HDFS 150, and a course in statistics. HDFS 260 OR 261 strongly recommended. Letter grades only. Offered alternate years. Not offered 1997-98. T R 12:20-1:45. C. Raver. Course work and seminar discussion emphasize the integration of basic research in young child emotional development with intervention and prevention-oriented research. The course also examines theoretical models of the relations between risk and resilience in child development, family functioning, community and culture. Policies in the domains of parenting, early childhood education, family and community violence, poverty, and child care are analyzed. Broad questions regarding the identification of social problems and the design of solutions are considered within cultural and historical contexts.

**HDFS 498 Senior Honors Seminar**

Fall. 1 credit. Required for, and limited to, seniors in the HDFS honors program. S-U grades only. TBA. Staff. This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

**HDFS 499 Senior Honors Thesis**

Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty. Topics Courses

Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. This series of courses provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

**HDFS 215, 315, 415 Topics In Adolescent and Adult Development**

**HDFS 225, 335, 435 Topics In Cognitive Development**

**HDFS 245, 345, 445 Topics In Early-Childhood Development and Education**

**HDFS 255, 355, 455 Topics In Family Studies and the Life Course**

**HDFS 265, 365, 465 Topics In Social and Personality Development**

**HDFS 275, 375, 475 Topics In Developmental Psychopathology**

**HDFS 285, 385, 485 Topics In the Ecology of Human Development**

The Graduate Program

HDFS graduate courses are only open to undergraduates with instructor’s permission.

**General Courses**

**HDFS 610 Processes In Human Development**

Spring. 3 credits. Limited to 20 students. Open to graduate students and seniors in HDFS. Prerequisites: Psychology 101 or permission of instructor. Letter grades only. W 2:00-4:25. U. Bronfenbrenner. This course focuses on the development of human development as a function of organism-environment interaction through the life course. Topics to be examined will include the following: the ecology of cognitive development, developmentally instigative characteristics of persons and environments; developmental processes in males and females; activity and work as developmental processes; intimate relationships as contexts of development; developmental processes in adulthood. The final selection will be responsive to student interests.

**HDFS 617 Adolescence**

Spring. 3 credits. Not offered 1997-98. Staff. Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.

**HDFS 631 Cognitive Development**

Spring. 3 credits. Not offered 1997-98. Staff. Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.

**HDFS 649 Infant Development**

Fall. 3 credits. Not offered 1997-98. TBA. S. Robertson. Development in infancy will be examined through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues to be considered include the role of experience in early development, sensitive periods, continuity and discontinuity in development,
and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development will also be considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. The course will combine perspectives from developmental psychology and psychobiology.

[HDFS 650 Contemporary Family Theory and Research]
Fall. 3 credits. Not offered 1997–98.
E. Wethington.
Sociological and social psychological theories and research on the family are examined with reference to the relationship between the family and society. Topics change from year to year, but focus on the processes of socialization and social control, the reproduction of gender and social class across generations, changes in family "values" across time, the rise of divorce and single motherhood, family diversity, and the genesis of deviance and psychological disorder.

HDFS 660 Social Development
Spring. 3 credits. S-U grades optional.
C. Raver.
This course is designed to provide both broad and in-depth training in the areas of social and emotional development during infancy and childhood. It will cover most of the major topic areas and theoretical orientations. Consideration will be given to basic influences on socioemotional development—biological, social, and cultural. Coverage will include normative development as well as the origins and nature of individual differences. We will explore such fundamental issues and questions as: What is normal? What are emotions? What role do they play in the development and organization of personality? What are the effects of early social relationships on emotional regulation? When and how does the self-system emerge? Emphasis will be on the processes—both internal and external—that help determine the course and outcome of development.

[HDFS 670 Experimental Psychopathology]
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neurobiology or related biological science. Not offered 1997–98.
TBA. M. Lenzenwegner.
Overview of current theories and empirical research on functional and organically based psychological disorders. Topics to be covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.

Topical Seminars
Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

HDFS 618 Seminar in Adolescence and Adult Development
Topics include peer relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

HDFS 633 Seminar on Language Development
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

HDFS 635 Seminar in Cognitive Development
Topics include attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

HDFS 645 Seminar on Infancy
Focuses on selected topics in the developmental psychology and psychobiology of infancy (including fetal development). Special topics vary and depend in part on student interests.

HDFS 646 Seminar in Early-Childhood Development and Education
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

HDFS 655 Seminar in Family Studies and the Life Course
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

HDFS 665 Seminar in Personality and Social Development
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

HDFS 675 Seminar in Developmental Psychopathology
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

HDFS 685 Seminar in Human Development and Family Studies
Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

HDFS 690 Seminar on Ecology of Human Development
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individuated Special Instruction
HDFS 700-706 Special Studies for Graduate Students
Fall or spring. Credits and hours to be arranged. S-U grades at discretion of instructor.
Independent advanced work by graduate students recommended by their Special Committee chair with approval of the instructor.

HDFS 700 Directed Readings
For study that predominantly involves library research and independent study.

HDFS 701 Empirical Research
For study that predominantly involves collection and analysis of research data.

HDFS 702 Practicum
For study that predominantly involves field experience in community settings.

HDFS 703 Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

HDFS 704 Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

HDFS 705 Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

HDFS 706 Supervised Teaching
For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

HDFS 899 Master's Thesis and Research
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.

HDFS 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. S-U grades only. Prerequisite: permission of thesis adviser.

POLICY ANALYSIS AND MANAGEMENT

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PAM 100 Skills for Learning in the Field
(formerly HSS 100)
Fall and spring. 3–4 credits. Priority given to PAM students. Open to all levels, undergraduate and graduate. Limited to 30 students. T R 2:30–4:25. R. Bounous. Students learn to be self-directed learners and to integrate theory and experience. Topics include experiential learning, participant observation, interpersonal communication, critical analysis, and empowerment. These ideas and skills are learned through participation in CLASP, an adult literacy program.

PAM 180 Human Services in Contemporary Society
(formerly HSS 101)
Fall. 3 credits. Recommended for freshmen and first-year transfer students. T R 10:10–11:25. Staff.
A lecture and discussion course designed as an introduction to the community base of services. Current and historical human services are examined. Emphasis is placed on social services, education, health, and criminal justice. Barriers to delivery are discussed, such as racism, sexism, classism, sexual preference, physical disability, and age. Contemporary issues that impact on service delivery will also be discussed with attention to the interrelationship between direct and public service.

PAM 200 Intermediate Microeconomics (formerly CHN 210)
Fall or spring. 4 credits. Prerequisites: Econ 101 or equivalent. Fall: preference to sophomores and juniors. Spring: preference to juniors and seniors. M W F 11:15–12:05. B. Rosen.

A section is mandatory. Theory of demand and consumer behavior including classical and indifference curve analyses; theories of production and cost; models for the following markets—competitive, monopoly, monopolistic competition, oligopoly, and inputs; general equilibrium; welfare economics; public goods; risk.

PAM 201 Determinants of Behavior (formerly HSS 246)
Fall. 3 credits. Prerequisites: introductory sociology and introductory psychology and HDFS 115. Enrollment limited to 45. Priority given to social work majors. M W F 2:30–3:20. J. Mueller.

This course provides an interdisciplinary knowledge base for human service professionals. We examine behavior in the human environment from ecological, ethological, historical, cultural, and social system perspectives. Applications are made to professional practice at the micro level (counseling with individuals and families or other small groups) and at the macro level (social planning and policy formulation for vulnerable groups in our society).

PAM 202 Household and Family Demography (formerly HSS 226)
Fall. 3 credits. Prerequisite: QSOC 101 or equivalent. S-U grades optional. T R 2:30–3:45. M. Rendall.

This course identifies important trends in U.S. household and family structure, examines the demographic, social, and economic forces behind recent changes in household structure, and evaluates current and future consequences and policy implications of these changes for both households and society. Topics include historical and contemporary trends in the size and composition of families and households, trends in marriage, divorce, remarriage, contraception, childbearing, and living arrangements, and interrelationships between household division of labor. Policy implications of all of the above are also considered.

PAM 204 Applied Public Finance
Spring. 3 credits. Prerequisites: PAM 200 or equivalent. C. C. Miller.

The public sector now spends nearly $2 out of every $5 generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course will provide an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis will be presented with a focus on the role of public policy in improving economic efficiency, improving equity by altering the distribution of wealth and income, and promoting the goals of equity and social justice.

PAM 205 Research Methods (formerly HSS 292)

Sections TBA. W. Trochim.

Students will learn the logic and methods of social science research and develop skill in transforming issues of interest to them into researchable questions. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. PAM majors should take no later than their junior year.

PAM 206 Racism in American Society (formerly HSS 280)
Not offered Fall 1997. For description, see AS&RC 280.

PAM 220 Introduction to Management
Spring. 3 credits. D. Tobias and J. M. Walston.

This course includes a basic introduction to major management and related concepts of planning, organizing, controlling, leadership, and special topics within five major management contexts including individual, personal, groups/families, firms, not-for-profit organizations, and governments/communities.

PAM 221 Groups and Organizations (formerly HSS 220)
Spring. 3 credits. Enrollment limited to 125 students. M W F 10:10–11:00. L. Street.

A basic course in the social psychology of groups and human service organizations. Study of the human service organization focuses on individual, group, and organization interface in terms of such issues as the perception of roles, norms, communication, power, leadership, and other issues. Students are expected to learn about the basic concepts and propositions that provide insight into organizational issues that confront members of organizations. Exercises are used to heighten understanding of group and organizational behavior.

PAM 223 Consumers in the Market (formerly CEN 233)
Fall. 4 credits. Prerequisites: Econ 101 or equivalent. M W F 2:30–3:20. R. J. Avery.

A study of the structure and functioning of consumer retail markets with emphasis on the role and activities of the major players in these markets—firms, consumers, and governments. The nature and consequences of various types of market failures are studied from the perspective of the firm, the consumer, and the role of government. Case studies and outside lecturers are used to impart reality to the course.

PAM 230 Introduction to Policy Analysis
Fall. 3 credits. E. Peters and J. Zeigler.

Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science. Substantive issues in the public policy arena. Students will be introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course will focus on public policy analysis in the consumer, health, and family/social welfare areas and will also include an introduction to the technical skills required to undertake policy analysis.

PAM 270 Housing and Society (formerly CEH 247)
Spring. 3 credits. S-U grades optional. M W F 10:10–11:00. P. Chi.

A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

PAM 281 The Elements of Helping (formerly HSS 210)
Fall and spring. 3 credits. Limited to 50 students. Priority given to HSS majors. S-U. Prerequisite: Attendance at first class meeting mandatory. W 1:25–4:25. C. Miller.

An introduction to the theoretical and practical aspects of human service processes. Included is an overview of the helping relationship covering roles, characteristics, relationships, dilemmas, and career issues of helpers. The course focuses on understanding and development of helping skills. Through role playing and exercises, students deal with basics such as attending, listening, responding, empathy, respect, genuineness, and confronting. Other topics include self-awareness, learning, communication, and conflict management. The course includes an overview of some of the major theories of helping. The theory base underlying principles taught in the course is general systems theory.

PAM 300 Special Studies for Undergraduates (formerly CEN and HSS 300)
Fall or spring. Credit to be arranged. Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a comprehensive description of the study they want to undertake on a form available from the Student Services Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

PAM 301 Economic Organization of the Household (formerly CEN 232)
Fall. 3 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. T R 10:10–11:25. W. K. Bryant.

Economic models and theories help explain a wide variety of family and individual behavior. Topics include the demand for consumer goods and services; consumption and saving; time allocation in the household including labor supply, household production and leisure, human capital of the individual; fertility; marriage and divorce. Within each topic, uses of the material by public- and private-sector decision makers are discussed.

PAM 303 Ecology and Epidemiology of Health (formerly HSS 330)

Ecological and epidemiological approaches to the problems of achieving human health
within the physical, social, and mental environment. The course introduces epidemiological methods to the students and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, and chlamydia. Application of epidemiology to health care will be discussed.

PAM 305 Introduction to Multivariate Analysis (formerly CEH 307) Fall. 4 credits. Prerequisites: ARME 310 or ILRST 210 or equivalent. M W F 10:10–11:05. C. D. Harper. 

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple linear regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Factor analysis and analysis of variance will be covered as well. Section meets once a week.

PAM 310 Evaluation of Public Policies (formerly CEH 483) Fall. 3 credits. Prerequisites: Econ 101, PAM 200, or equivalent and an introductory statistics course. T R 11:40–12:55. B. Rosen.

This is an advanced course in economic policy analysis that builds on the material covered in PAM 330. Introduction to Policy Analysis. The course will use a series of policy examples to demonstrate the economic approach. Special topics in cost-benefit analysis and policy evaluation techniques will be developed when necessary for the example under study. Examples of topics that may be addressed include excise taxation, economic evaluations of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.

This course focuses on external and internal forces that drive consumer demand. Material in this course will cover the processes whereby consumers interpret market-provided information and the social forces impacting consumer purchase decisions. Particular emphasis will be placed on communication institutions in the market (advertising, the news, and other mass media) and the control of these institutions through government regulation. A select group of consumer policy issues will be covered, such as consumer evaluation of product safety and quality, food additives, consumer privacy, and socially responsible advertising.

Offers students the opportunity to explore family business topics such as business formation, growth and expansion, strategic management, professionalization, succession, locational choices, and family dynamics, conflicts, and relationships relative to the business. An overview of families who own businesses and the profiles of their businesses will be presented along with the examination of the course topics relative to the various stages of business activity including feasibility, start-up, ongoing maintenance, expansion or redirection, and exit or transfer. Case studies from the Harvard Business School series will be utilized to examine the course topics listed above. The course also provides an introduction to researching family businesses by surveying the conceptual issues and methodological approaches related to the study of family businesses.

Allows students to develop research skills by providing opportunities for hands-on survey and fieldwork. Topics and activities include research design, sampling, questionnaire development, and statistical analyses related to family-owned businesses; critical review of current research approach in relevant databases used in research business ownership; and implementation and completion of an actual survey of fieldwork project of selected family business owners, or the use of extant databases for descriptive analyses of family-owned businesses.

The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, basic economic and financial principles, returns to human resources, income and wealth analysis, the role of consumer and mortgage credit, financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, retirement and estate planning, and alternative forms of savings and investments.

Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as consumer and producer surplus, deadweight loss, rational for public policy, benefit-cost analysis, impact assessment, semi-experimental, quasi-experimental, and non-experimental designs; and the social ecology of policy analysis.

PAM 331 Introduction to Program Planning and Development (formerly HSS 433) Fall and spring. 3 credits. M W F 9:05–9:55. Staff.

The course provides an introduction to program planning and development in the delivery of human services. Models of program planning, development and delivery will be analyzed in relation to practice. The processes of conceptualizing a program and the context of planning and development (political, organizational, economic, and social) will be examined. Basic tools and techniques available to planners will be identified and selected skills developed. Issues related to ethics, power/authority, confidentiality, and accountability will be included. Professional roles and competencies needed will be highlighted throughout the course. Students may take the course for a fourth credit, which will require attending a discussion section every other week and observations of settings.

PAM 340 The Economics of Consumer Policy (formerly CEH 330) Fall. 4 credits. Open to juniors, seniors, and graduate students. Prerequisites: Econ 101, 102 or permission of instructor. Class packets on sale at Campus Store. T R 12:20–1:30. D. Lillard.

Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to write three short papers on each area of policy intervention discussed in class.

Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic theories of contract law, products liability, accident law and antitrust law, as well as the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

This course will look at the structure of financial markets in the United States. A number of different markets and institutions will be examined including banks, savings and loans, insurance companies, pension funds, government bond markets, credit unions, and finance companies. The principles underlying government regulation of these institutions will be explored, as well as management problems and concerns. The emphasis will be on learning the institutional environment, not on personal finance.

PAM 350 Contemporary Issues in Women's Health (formerly HSS 335) Fall. 3-4 credits. T R 12:20–1:35. A. Parrot.

This course will deal with the history of women in medicine and historical and cultural treatment of women's health problems. Health care research and the exclusion of women from research trials and protocols will also be addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations will also be discussed in depth. Students may take the course for a fourth credit, which will require attending a discussion section every other week and observations of settings.
facilities that provide a variety of women's health care (i.e., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaze class, women's self-defense class, etc.) on the alternate weeks.

PAM 351 Community Mental Health (formerly HSS 380)

Summer only. 3-4 credits.

Students become acquainted with basic concepts in the field of community mental health. Beginning with the injustices that served as a catalyst for community mental health movement, the course evaluates the ethical and practical challenges experienced by mental health professionals in the community. Other topics include social roles of mental illness, epidemiology, the role of culture and social class in mental illness, public attitudes, and civil liberties.

PAM 370 Wealth and Income (formerly CEH 355)

Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under PAM 600. Prerequisites: Econ 101–102 or equivalent. S-U grades optional. M/W/F 9:05–9:55. D. Lillard.

The wealth and income positions of American households are defined and described. Various statistics are employed to present conflicting pictures of the distribution of income using the same underlying data. Several models of economic determinants of income are presented and redistributive policies are discussed in the context of the economics of the political and philosophical positions for and against such policies.

PAM 371 Economics of Family Policy—Adults (formerly CEH 320) (also Economics 420)

Fall. 4 credits. Limited to 40 students. Junior or senior standing; non-PAM majors by permission of instructor. M/W/F 1:25–2:15. Not offered 1997–98. Staff.

This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.

PAM 372 Economics of Family Policy—Children (formerly CEH 321) (also Economics 421)

This course examines the economics of family policy issues that particularly affect children. This course focuses on a) the economic behavior that generates the policies and b) the economic incentives and behavior that result from the policies. Topics include child welfare, education, day care provision, child support, and adoption.

PAM 373 The Economics of Welfare Policy (formerly CEH 356)

Fall. 4 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. M/W/F 11:15–12:05. M. Rendall.

Using the tools of this course, this course examines welfare policy. Included are an examination of which populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of various welfare policies. Also evaluated are various proposals for welfare reform.

PAM 374 Urban Economics and Policy (formerly Economics 421)

Spring. 4 credits. Prerequisite: PAM 200 or equivalent. S-U grades optional. T/R 2:30–3:45. N. Kuty.

This course explores the economics of cities and urban problems. The course is a study of the location choices of firms and households, growth of cities, and determination of land rents. The urban policy issues explored in this course include housing, urban poverty, zoning, and community development.

PAM 375 Housing for the Elderly (formerly CEH 444)

Fall. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. T/R 2:55–4:10. P. Chi.

This is a service-based seminar that will allow students to explore, through a wide range of service experiences, the different ways community agencies adults to remain independent in such diversified residential settings as planned retirement housing, subsidized housing for the low-income elderly, home-sharing projects, ECHO housing, accessory apartments, shared group living projects, and continuing care retirement community. This seminar will focus on how the residential environment influences the ability of older adults to function independently while meeting their need for services. Throughout the seminar, students will be asked to reflect critically on how their service experience complements, challenges, or extends the course curriculum. The seminar will meet every week for 2 hours. Students are also required to have 4–6 hours of service a week, 4 during the weeks the seminar meets and 6 during the other weeks.

PAM 376 Housing, Neighborhood and Community (formerly CEH 445)

Spring. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. M/W/F 2:30–3:45. Not offered 1997–98. P. Chi.

A study of interrelationships between housing conditions, neighborhood transition, and community development. Both theoretical and empirical analyses are used on residential patterns, neighborhood change, and community power will be examined. Special attention is also given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.

PAM 380 Human Sexuality (formerly HSS 318)

Spring. 3 credits. Limited to 500 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science). Recommended: one course in biology. T/R 2:55–4:10. A. Parrott.

The aim of this course is to provide students with an understanding of the interactions and interpersonal relationships that influence sexual development and behavior. The course will focus on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Future trends in sexuality will be addressed. Biological and developmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural systems on the development of sexual needs, standards, and values. Research and theory in human sexuality will be explored in an interdisciplinary approach drawing on human and organizational behavior, biology, history, communication arts, education, research theory, law, sociology, and psychology.

PAM 381 Health-care Services and the Consumer (formerly HSS 325)

Fall. 3 credits. Prerequisite: an introductory course in human services or health or biology. S-U grades optional. T/R 12:20–1:45. Staff.

This course is an introduction to health care services and will present developments in the health field that affect the availability and kinds of health services. Emphasis is placed on interrelationships between types of practitioners, institutions, and agencies, and the part each can play in prevention, diagnosis, and treatment of disease and disability. Focus will include historical and current trends, quality health care, consumer issues, cultural concerns, ethical issues, politics and policies, and the contemporary problems of health care.

PAM 383 Social Welfare as a Social Institution (formerly HSS 370)

Fall. 3 credits. M/W/F 9:05–9:55. J. Allen.

A philosophical and historical introduction to social welfare services. The course reviews the historical, social, and political contexts within which social welfare programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and the ways in which policies are translated into social welfare programs. Basic issues in welfare are discussed through present program designs, public concerns, and the interrelationships and support of services in the community.

PAM 400-401-402 Special Studies for Undergraduates (formerly CEH and HSS 400)

Fall and spring. Credits to be arranged. S-U grades optional. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH, HSS, or PAM not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake, on a form available from the Student Services Office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies forms is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 400 Directed Readings (formerly CEH and HSS 400)

For study that predominantly involves library research and independent reading.
For study that predominantly involves data collection and analysis.

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

Prerequisite: Students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

Spring. 9 credits. Prerequisite: PAM 480 or 481-482 (482 may be taken concurrently). M 1:25-4:00. The process of change at the individual, family, and community level is a major theme of the senior seminar. The second theme, which is integrated throughout the course, concerns ethical principles and values that should inform professional practice. We will also discuss value dilemmas attendant on interventions to promote change at both the micro and macro levels of practice.

Fall. 3 credits. S-U grades optional. T R 12:20-2:15, L. Street. This course provides an introduction to the local political environment of human service agencies and programs. Special attention is given to how community issues are raised, debated, and resolved. Topics include the roles of service providers, local government officials, social movement organizations, federal and state agencies, the courts, and the news media. Previous or concurrent participation in community activities is desirable but not required.

Spring. 3 credits. S-U grades optional. Prerequisites: PAM 200 or equivalent or permission of instructor. T R 8:45-9:55. D. Kenkel. This course uses the tools of economics to provide a better understanding of health behavior and policy. One focus is on policies that promote public health, including education programs and cigarette and alcohol taxation. Policies that influence consumer choices about health care and health insurance are also considered.

Spring. 3 credits. S-U grades optional. Prerequisites: PAM 200 or equivalent or permission of instructor. T R 8:45-9:55. D. Kenkel. An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

Fall or spring. 4-7 credits. Prerequisites: any of the following (ARMH 310, ARME 411, BTRY 215, PAM 305, ECON 319, ECON 320); Basic Economics: ECON 101 or permission of either instructor. Open to juniors and seniors; limited to 100. S. Ceci, E. Peters. The course brings together the analytical tools and key models of economics and psychology to investigate issues raised by Hermstein and Murray's book The Bell Curve. The objective of the course is to bring research into the classroom by enabling students to understand and use (in the lab) the methods available for defining and assessing intelligence and its relationship to success in life and other social issues.

Spring. 3 credits. Limited to 20 students. T R 10:10-11:25. Not offered 1997-98. D. Barr. The course will take a theoretical world view of power and the historically colonial relationship between the American ruling class and other people. The three dimensions of power will be used as the framework for analysis. The relationships among social class, race, sex, and power will be under study. In addition, the class will explore the nature of empowerment and new theories of power and empowerment.

Spring. 3 credits. S-U grades optional. Limited to 20 juniors and seniors. T R 10:10-12:05. L. Street. This course is for students who are interested in understanding crime and crime-control policies. The purpose of the course is to learn how to think about crime problems in terms of their social, political, and human service contexts. The following topics are among those addressed in order to realize the objectives of the course: American culture and crime policy; criminal justice agency and system operations; criminal offending and victimization; race and crime; and community crime-control programs. These topics are examined from the point of criminal justice, social justice, and public health perspectives.

Spring. 3 credits. Prerequisite: PAM 383 or Government 111 or Sociology 141. S-U grades optional. M W 9:05-9:55. J. Allen. An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

Spring or fall. 4-7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: PAM 100. Precourse enrollment required. T 1:30-4:25. Staff. Students intern for a minimum of 10 hours a week in a human service organization and attend a weekly seminar or office hours with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experientially and, at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

Spring. 3 credits. Limited to 25 social work students. Prerequisites: introductory psychology, introductory sociology, one course in human development, grades of C+ or better in PAM 201 and 383. Lec M W 10:10-12:05 and Lab T R 9-5. R. Bounous, E. DeLara.

Fall. 9 credits. Limited to 25 social work students. Prerequisites: grade of B- or better in PAM 481 and satisfactory performance in fieldwork. M W 10:10-12:05 and Lab T R 9-5. R. Bounous, E. DeLara.

Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. Hours to be arranged. Department faculty.

This series of courses provides an opportunity for advanced undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.
PAM 600 Special Problems for Graduate Students (formerly CEH and HSS 600)
Fall and spring. Credits to be arranged. S-U grades optional. Staff of the course and the experience of the student. S-U grades optional. T R 12:20-1:35. E. Peters.

PAM 601 Research Workshop in Consumer Economics and Housing (formerly CEH 601)
Fall and spring. 1 credit. S-U grades only. W 12:10-1:30. Staff. Research workshop designed to provide a forum for graduate students in consumer economics and housing to present their research.

PAM 603 Teaching Experience (formerly HSS 603)
Fall and spring. 1-3 credits. S-U only. For students assisting faculty with instruction. The aspects of teaching and the degree of involvement vary depending on the needs of the course and the experience of the student. Does not apply to work for which students receive financial compensation.

PAM 604 Economics of Consumer Demand (formerly CEH 613) (also Economics 413)
Fall. 3 credits. Prerequisite: PAM 200, Economics 311 or 313, or concurrent enrollment in one of the three, and two semesters of calculus. S-U grades optional. T R 8:40-9:55. W. K. Bryant. Introduction to microeconomic level to theory and empirical research on household demand, consumption, and saving. Emphasis on the use of the theory in empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demographic scaling and translating, consumption and savings. As time allows, Becker and Lancaster models of demand will be introduced.

PAM 605 Economics of Household Behavior (formerly CEH 624) (also Economics 498)
Spring. 3 credits. Prerequisite: PAM 604 or Economics 609-610 or consent of instructor. S-U grades optional. T R 12:20-1:35. E. Peters. This course examines economic models of fertility, investment in children, family formation and dissolution, resource allocation within the household, and intergenerational transfers across households. Empirical applications of the models are presented for both developed and developing countries. Implications of the models for family policies such as child care subsidies, divorce laws, and family planning programs are also discussed.

PAM 606 Demographic Techniques (formerly CEH 606)
Fall. 3 credits. S-U grades optional. T R 12:20-1:35. M. Rendall. This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort and period analyses, sources and quality of demographic data, population estimation and projection, and stable population models.

PAM 607 Advanced Family Demography (formerly CEH 627)
Fall. 3 credits. Prerequisite: PAM 606 or equivalent. S-U grades optional. W 1:25-3:55. Offered alternate years. Offered 1997-98. M. Rendall. This course builds on the basic methods of dynamic population analysis covered in PAM 606, Demographic Techniques, extending them to the study of lives and populations structured not only by age and sex, but also by family status. The same or very similar methods apply to populations structured on other discrete dimensions (e.g., labor force status, region of residence, health status). Life-course analysis methods used to study the distribution of total lifetime are extended to the study of the distribution of total lifetime between family states. Methods for studying reproduction are extended to the study of kin and family sizes resulting from distributions of reproductive performance in the female population. Methods for studying individual lifetimes are also extended to the study of intersecting lifetimes, primarily through nuptiality. These are two-sex models or, more generally, models of interacting populations. Finally, household structure, fission, and fission are studied. This combines elements of interacting-population and kin-availability modeling, plus static population-comparison methods.

PAM 610 Introduction to Program Evaluation (formerly HSS 608)
Fall. 3 credits. J. Greene. This course provides a conceptual introduction to the theory and practice of social program evaluation. It is designed particularly but not exclusively for students planning a major or minor in HSS program evaluation and planning. The course emphasizes two major dimensions of evaluation: 1) its practical, real-world, political dimension and 2) its theoretical, methodological dimension. At the intersection of these two dimensions lie issues of evaluation’s purpose and role, which are also addressed in the course.

PAM 611 Program Evaluation and Planning—Topic course (formerly HSS 611)

PAM 612 Measurement for Program Evaluation and Research (formerly HSS 690)
Fall. 3 credits. E. Rodriguez. The course reviews measurement theory and its application to the evaluation of human service programs. Major topics include experimental, quasi-experimental, and nonexperimental research designs; basic sampling; measurement theory; and the theory of validity in research. Attention is given to issues that arise in the application of research designs to the evaluation of programs, including problems of randomization, causal inference, replication, and utilization of results. The central role of the general linear model in the statistical analysis of outcome evaluation is presented through case examples and computer simulation. Students will encounter examples of outcome evaluations from a range of disciplines including health, mental health, social welfare, criminal justice, social policy, and education.

PAM 614-615 Program Evaluation in Theory and Practice (formerly HSS 692-693)
Fall and spring. 3 credits each. M. Rendall. This course introduces participants to a range of approaches to the evaluation of human service programs. Students will encounter examples of outcome evaluations within a range of disciplines including health, mental health, social welfare, criminal justice, social policy, and education.

PAM 616 Strategies for Policy and Program Evaluation (formerly HSS 695)
Fall. 3 credits. Prerequisites: PAM 612 and 613 or 617 or equivalent. Offered alternate years. T R 9:00-10:15. M. Rendall. This course provides an introduction to the role of evaluation in policy and program decision-making. Students will learn about the process of planning, implementing, and using program evaluation and will develop skills in evaluation design, data collection, and analysis. The course will emphasize the application of evaluation methods to real-world problems and the interpretation of evaluation results.

PAM 617 Qualitative Methods for Program Evaluation (formerly HSS 696)
Spring. 3 credits. Prerequisites: PAM 612 and 613 or equivalent. T R 12:20-1:35. J. Greene. The course presents a qualitative approach to applied research and the evaluation of human service programs. Topics include the epistemological assumptions underlying this approach, questions of entry into setting, methods for data collection and data analysis, reporting, confidentiality of participants, and the ethics of qualitative inquiry. The course aims to help students understand how, when, and why a qualitative approach to social inquiry can be used appropriately, effectively, and ethically.
PAM 618 Seminar in Program Evaluation and Evaluative Research (formerly HSS 697)  
This ongoing seminar is topically organized according to student and faculty projects. Focuses on professional issues in evaluation practice, including consulting, ethics and standards, preparation of conference and publication materials, and various methodological issues.

PAM 620 Human Service Administration—Topic Course (formerly HSS 610)  

PAM 623 Consumer Decision Making (formerly CEN 639)  
Individual and family decision making with respect to their market purchases will be investigated from a multidisciplinary perspective. Topics to be covered in the course include cognitive theories of information processing, the group interaction in decision making, and the effect of advertising, imperfect information, and uncertainty on consumer product evaluation and purchase behavior. Special attention will be given to decision making by consumers in various market segments, e.g., low-income consumers, children, and the elderly. Specific attention will be paid to how consumers in these segments process marketer-provided information and their related consumption decisions.

PAM 630 Seminar in Program Planning and Evaluation (formerly HSS 668)  
Fall. Variable credit. T R 12:20–1:35. Staff.  
Topics include microlevel program planning, third-sector organizations, and intergovernmental influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human services are examined.

PAM 631 Ethics, Public Policy, and American Society (formerly HSS 658)  
Fall. 3 credits. M W 2:00–4:25. J. Ziegler.  
This course will explore current issues of ethics and public policy against a background of theories of ethical behavior. Questions of how public officials and managers of public and non-profit agencies and private enterprises act will be examined. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings will be drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential. Open to seniors and graduate students.

PAM 632 The Intergovernmental System: Analysis of Current Policy Issues (formerly HSS 664)  
Fall. 3 credits. Open to seniors who have had a course in American government and to graduate students. M W 10:10–12:00. J. Ziegler.  
This course offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Particular attention is paid to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy. General public administration theory is considered. Students work in teams on a policy/administrative research project and report to the class.

PAM 633 Social Policy and Program Planning in Human Services (formerly HSS 660)  
An examination of the policy process with an emphasis on the ways in which this process determines the allocation and distribution of social services in the fields of health, education, income security, employment, criminal justice, and housing. The relationship of the policy process to the political economy, to intergovernmental relations, and to social change at the national, regional, state, and local levels will be analyzed. To this end history, theory, cultural values and beliefs, and the structure of society will also be investigated. The role of evaluation in policy planning and implementation will be underscored. Current issues in policy, such as the role of the private and voluntary sectors, interest group politics, barriers and constraints to the development of effective policies, and the respective roles of consumers, clients, and human service professionals in the policy process will also be addressed.

PAM 640 Information and Regulation (formerly HSS 640) (also Economics 435)  
Spring. 3 credits. Prerequisite: PAM 604 or PAM 200 and two semesters of calculus. Class packets are on sale at Campus Store.

PAM 650 Health Administration—Topic course (formerly HSS 612)  
Topical Seminars and Practice  
Seminars and practice, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practice offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

PAM 651 Seminar in Mental Health Services (formerly HSS 613)  
Fall. 3 credits. Open to undergraduate seniors with instructor's approval. T 4:00–6:30. J. Mueller.  
Using lectures, case examples, and class discussions, we will look from both administrative and clinical perspectives at the organization and delivery of mental health services to the mentally ill, mentally infirm, or seriously emotionally and/or developmentally disabled. We will examine model programs for long-term community care and services designed to meet the special needs of ethnic/racial minorities, women, and homeless persons who are mentally impaired. State/federal partnerships will be discussed in terms of their impact on fiscal and human resources for both public and for-profit agencies.

PAM 652 Health Care Services: Consumer and Ethical Perspectives (formerly HSS 625)  
Fall. 3–4 credits. Limited to 30 students; undergraduates with permission of instructor. 4-credit option, may be used as Biology and Society Senior Seminar option. T 10:10–11:25. A. Parrott.  
The course will focus on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training, ethics of transplant surgery and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.

PAM 653 Health Economics and Policy (formerly CEN 632)  
This course provides a survey of research in health economics and its relevance for health policy. Models of health capital, household production, and insurance are developed and used to address public health policies and health insurance programs and reforms. Major issues in the economics of the health care sector are discussed, including the markets for physician services, hospital care and long-term care. Much of the course focuses on the U.S., but it will also review research on other countries, especially developing countries that face a much different set of health policy issues.

PAM 654 Legal Aspects of Health-Services Delivery (formerly HSS 627)  
Spring. 3 credits. Prerequisites: PAM 657 or permission of instructor. Staff.  
This course introduces principles of the law that are specifically applicable to health-service delivery. Topics considered include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges, and confidential communications.

PAM 655 Comparative Health-Care Systems (formerly HSS 630)  
Spring. 3 credits. Open to graduate students and a limited number of seniors with permission of instructor. M 7:30–10:00 p.m. P. F. O'Connor.  
An overview of health services is given within the larger context of the social and economic development policies of several industrialized democracies and developing countries. Sociocultural, economic, and epidemiologic factors are stressed as keys to the formulation of realistic strategies. Resource allocations for health services are assessed against the backdrop of changing rates of economic growth.

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care (formerly HSS 631)  
Spring. 3 credits. Prerequisite: PAM 657. T R 2:30–3:45. R. Battistella.  
The concept of primary care is used to enhance understanding of the direction and...
HUMAN ECOLOGY - 1997-1998

pursuit of ongoing changes in health services organization and financing. Pressures on
traditional indemnity insurance and solo fee-
for-service medicine are examined in the
context of the unmanaged to managed
delivery systems. The course is
divided into two parts: Part 1 examines
the development of health maintenance organiza-
tions and related forms of managed care
against the backdrop of larger public policy
concerns. Part 2 focuses on administrative
financial topics associated with the design,
marketing, and operation of managed delivery
systems in highly competitive markets.

Considerable attention is given to the
relationship between the physician and
management with respect to such subjects as medical
practice policies, productivity, quality assurance, and
outcome measurement. The consumer
health care behavior literature is reviewed in
the light of marketing strategies and utilization
control objectives. Many of the managerial
topics are amplified by field trips and a select
group of visiting speakers.

PAM 657 Health Care Organization
(formerly HSS 634)

Fall. 3 credits. Limited to 30 students.
Priority given to Sloan students or
permission of the instructor. T R 12:20-
1:35. R. Battistella.
The course will provide an introduction at the
graduate level to the organization of health
providers in the United States, the interrela-
tionships of different services, and major sources
and methods of paying for care. The course
will describe how health services are
structured in the United States and how these
different services interrelate along the
continuum of care. The student will describe and
analyze organization, delivery, and
financing issues from a variety of perspectives
using specific performance criteria (e.g.,
equity, quality, efficiency). Innovations by the
public and private sectors in the delivery and
reimbursement of health care will also be
presented.

PAM 658 Field Studies in Health
Administration and Planning
(formerly HSS 635)

Fall or spring. 1-4 credits. TBA. Staff.

Students interested in developing administrativa-
and program-planning research skills are
given an opportunity to evaluate an ongoing
phase of health care agency activity in the
light of sound administrative practice and
principles of good medical care. In planning
and carrying out the research, students work
closely with a skilled practicing administrator
and with members of the faculty.

PAM 659 Epidemiology, Clinical
Medicine, and Management
Interface Issues (formerly HSS 637)

Spring. 3 credits. T 3:45-6:15.
E. Rodgin.

This course explores from an empirical and
analytical framework the relationships
between epidemiology, clinical medicine, and
management. The course will review the
epidemiology, policy issues, and treatment of
selected health care services, and major issues
accounting for a significant percentage of utilization and cost of health
care services. In addition, students will have
an opportunity to explore issues of resources
allocation and continuous quality improve-
ment. The format for the class is lecture,
discussion, and case analysis.

PAM 660 Quality in Health Care
Organizations (formerly HSS 638)

Spring. 1 credit. TBA. A. Kabeenell.
The quality of health services—the extent to
which the appropriate and most effective care
is properly administered in the least costly
manner—is a topic of paramount importance
to patients. But, it is also a central concern of
the providers and managers of health services
and those who pay for care. It is also a
cornerstone of health care reform. Through
readings, lecture, discussion, and group work,
this course will acquaint the student with the
basic elements of managing quality in health
care organizations. Defining quality from
many perspectives; measuring performance
and detecting poor quality care;
traditional and progressive approaches to
managing quality including Continuous
Quality Improvement, and the politics of
quality, both within and outside the organiza-
tion.

PAM 661 Economics of Health and
Medical Care (formerly HSS 640)

Fall. 3 credits. T R 8:30-9:55. J. Kuder.
The course is designed for graduate students
who seek an understanding of the tools,
terminology, and way of thinking of economics
as it is applied to decision making in health
services delivery, administration, and policy.
The philosophy of the course approach is
based upon the often-quoted credo of John M.
Keynes, "The theory of economics does not
furnish a set of rules which immediately
applicable to policy. It is a
method rather than a doctrine, apparatus of
the mind, a technique of thinking which helps
its possessor to draw correct conclusions." The
basis of this approach will be the
economic reasoning and principles that are
applicable to health care applications. The course
subsequent to that of strategy setting at the CEO level will briefly discuss
the economics associated with the
providers and managers of health services
and those who pay for care and will also focus on
the many challenges that managers face in
making budgetary and other decisions.

PAM 662 Health Care Financial
Management I (formerly HSS 641)

Spring. 3 credits. T 10:10-12:40.
J. Kuder.
The course is designed to give graduate students
an intensive introduction to the issues and
techniques in the financial management of
health care providers. The course focuses on
the principles and practices of financial
management, including financial statement
analysis and interpretation, working capital
management, financial reporting, and the
measurement of financial performance. The course
also covers the role of financial management in
the health care industry and the impact of
economic and regulatory changes on financial
management practices.

PAM 663 Health Care Financial
Management II: Payment Systems
(formerly HSS 642)

Spring. 3 credits. Prerequisite: PAM 662.
The purpose of this course is to develop an
understanding of the theories in which health
care payment and reimbursement systems are
assessed and the techniques through which they
operate.

PAM 664 Information Resources
Management in Health and Human
Service Organizations (formerly HSS 645)

Spring. 3 credits. Prerequisite: PAM 662.
The course focuses on the nature of decision
making and decision support systems, sources of
information, and the strategic management
of information resources in organizations.
The seminar is topical, addressing current program evaluation and evaluative research and analysis and appraisal of current literature on multiple regression. The seminar focuses on This advanced course is intended for students student and the Special Committee. and residence units are arranged between the student and the agency, while course credit an internship is negotiated between the local levels in positions consistent with academic and professional goals. Opportuni­
determined by availability and students' Internship placement in human services is an opportunity for simulations so that students discussed from the perspective of leadership change within the work environment will be The introduction of new Readings include both new theoretical topics on the supply side include housing starts, mainte­
nance, and rehabilitation. Topics in housing finance such as mortgage choice, and the demand for home mortgage debt will be studied. Housing policy issues such as tax policy, housing for the elderly, fair housing, rent control, and zoning also will be ad­ressed.

PAM 674 Housing Economics (formerly GEN 648) Spring. 3 credits. Prerequisite: PAM 200 or Economics 311 or 313. M 1:25–3:55. N. Kutty. A survey of economic theory and empirical research related to housing markets. The course studies the demand and supply sides of the housing market as applications of microeconomic theory. Topics related to housing demand include tenure choice (decision to own or rent), household formation, mobility, and discrete choice models of housing demand. Topics on the supply side include housing starts, maintenance, and rehabilitation. Topics in housing finance such as mortgage choice, and the demand for home mortgage debt will be studied. Housing policy issues such as tax policy, housing for the elderly, fair housing, rent control, and zoning also will be addressed.

PAM 680 Leadership in the Human Services (formerly HSS 655) Spring. 3 credits. Limited to 20 students. S-U grades optional. T R 4:00–5:15. J. Mueller. Students in this seminar will study human service organizations in the context of their changing economic, political, ecological, and technological environments, and in terms of the leadership behaviors of administrators who are making successful adaptive responses to these changes. The introduction of new organizational forms and strategies for nurturing innovation and for effecting cultural change within the work environment will be discussed from the perspective of leadership roles at various organizational levels. Readings include both new theoretical literature and appraisal of current literature. The seminar format provides an opportunity for simulations so that students can enact and receive feedback on their own developing leadership skills.

PAM 704-705 Internship in Human Service Studies (formerly HSS 711-712) Fall, spring, or summer. 1–15 credits. S-U grades optional. Internship placement in human services is determined by availability and students' academic and professional goals. Opportuni­
ties are available in public and private human service organizations at the national, state, and local levels in positions consistent with students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

PAM 718 Advanced Seminar in Program Evaluation (formerly HSS 790) Fall, spring. 1–3 credits. S-U grades optional. This advanced course is intended for students with at least three courses in evaluation (PAM 612 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, addressing current issues of importance in the field.

PAM 799 MPS Problem Solving Project Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge for independent advanced work. S-U grades optional. PAM 899 Master's Thesis and Research (formerly CEH and HSS 899) Fall and spring. Credit to be arranged. PAM 999 Doctoral Thesis and Research (formerly CEH and HSS 999) Fall and spring. Credit to be arranged. Seminars and practica—PAM 618 and 620 (formerly HSS 697 and 698) Seminars and practica, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practica offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services. Topics Courses—PAM 611, 620, and 650 (formerly HSS 611, 610 and 612) Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. Hours to be arranged. This series of courses provides an opportunity for graduate students to explore an issue, a theme, or research in the areas of departments of concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

TEXTILES AND APPAREL COURSES

A. Lemley, chair, A. Netravali, director of graduate studies; P. Schwartz, director of undergraduate studies; S. Ashdown, C. C. Chu, C. Coffman, C. Jirousek, S. K. Obendorf, A. Racine, S. Watkins

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

TXA 114 Introduction to Computer-aided Design Fall and spring. 3 credits. Fall, T, W, or R 1:25–4:25. It is important for students on wait lists to attend the first class. Limit 12 per lab section. Priority given to TXA and DEA students. S-U grades optional. A. Racine

A studio course that focuses on using the microcomputer as a design tool. The command-driven AutoCAD software program is the medium of expression for creating, modifying, and plotting visual images. Students will develop two-dimensional surface designs based on historical and cultural sources for portfolios and display. Approximate cost of supplies is $800; lab fee $10.

TXA 125 Art, Design, and Visual Thinking Fall. 3 credits. S-U grades optional. Lecs M W F 12:20–1:10. C. Jirousek. An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an internet-based element, lectures emphasize the varieties of visual expression to be seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

TXA 145 Introduction to Apparel Design Spring. 4 credits. Limited to 36 students with 18 students per lab section; priority given to TXA majors or students transferring into TXA. Apparel design majors should take course during first year. Minimum cost of materials, $125; lab fee, $10. Lec T 1:25–4:25 and lab F 10:10–12:05 or lec R 1:25–4:25 and lab F 12:20–2:15. A. Racine. Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children’s apparel. Students develop a thorough understanding of principles and techniques needed to produce apparel.

TXA 217 Drawing the Clothed Figure Spring. 3 credits. Enrollment limited to 18 students. Prerequisite: a basic drawing course. Priority given to apparel design students. Letter grades only. Minimum cost of supplies $125.00. Lab fee: $30. T R 10:10–1:10. S. Watkins. To improve the student's ability to illustrate two-dimensionally the interaction of draped fabric and the human form and to develop awareness of clothing as a design medium. Emphasis is on development of techniques and skills in selected media necessary for the communication of design ideas.

TXA 237 Structural Fabric Design Fall. 3 credits. S-U grades optional. Prerequisite: TXA 135. Recommended: college algebra. Lecs M W F 9:05–9:55. A. Netravali. This course covers the elements of technical fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

TXA 246 Introduction to Functional Apparel Design Fall. 4 credits. Prerequisite: TXA 135 and TXA 145. Letter grades only. Minimum cost of materials, $125; lab fee, $10. T R 10:10–1:10. S. Watkins. This studio course applies the principles and processes of advanced pattern making and the theory of functional clothing to the development of sportswear, actionwear, and clothing for active leisure activities. Assigned problems will require students to use the design process...
to apply information about body structure, user needs (thermal protection and comfort, mobility, and visibility), and the nature of materials to the production of functional, fashionable apparel.

TXA 269 Style, Fashion, and the Apparel Industry
Spring (last seven weeks of semester). 2 credits. Prerequisite: TXA 125 and TXA 135. Not open to freshmen or those who have taken TXA 245. Lec M W 10:10-12:05. A. Racine.

Illustrated lectures will focus on changes in the U.S. apparel industry and fashion from the nineteenth century to the present day due to social forces, technological developments, and shifting demographics. The Cornell Costume Collection will be used for discussion. Students will write research papers on issues related to the apparel/textile complex.

TXA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the Student Services Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

TXA 331 Apparel Production and Management
Fall. 3 credits. Prerequisites: Economics 101 and 102 and an upper-division course in either apparel or textiles. T R 10:10-11:25. Staff.

Introduction to technical and economic aspects of textile and apparel production. Emphasis is on design and functioning of apparel manufacturing systems and their components. Analysis of efficient manufacturing methods such as Quick Response (QR), Just-in-Time (JIT) as applicable to apparel production, and use of computer technology in production and quality control will be included.

TXA 335 Fiber Science
Spring. 3 credits. Prerequisites: College chemistry and physics. Lecs M W 1:25. Lab M 2:30-4:25. A. Netravali.

This course covers fibers commonly used in various engineering, medical, and apparel applications. Topics include nature of polymer molecules, chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects (mechanical, optical, thermal, and frictional properties of fibers. Fiber uses such as composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, etc. will be discussed.

TXA 336 Fundamentals of Color and Dyeing
Fall. 3–4 credits. Prerequisite: College Natural Science Requirements. Fiber science students are required to take the lab. Lec M W F 1:25-4:25. C. C. Chu.

Color is an extremely important and useful factor in daily life. This course will emphasize theories and scientific principles of color, providing a framework for the use of colors in design, marketing, or research. How colorants are used to dye fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to non-textile majors. Guest lecturers from industry will provide the practical aspects of color in business.

TXA 367 Draping
Spring. 4 credits. Limited to 20 students. Prerequisite: TXA 125, TXA 246, and one drawing course. Minimum cost of materials, $125; lab fee, $10. M W 1:25-4:25. S. Ashdown.

This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. Through exercises, the principles and processes of draping, advanced flat pattern making, and fitting are studied. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 368 Computer-Aided Apparel Design
Spring (first seven weeks of semester). 2 credits. Prerequisite: TXA 114, TXA 125, TXA 246, and TXA 367. Students whose programs include field or international experience must elect to enroll in TXA 367 and TXA 368 in the same term. Recommended: two art or drawing courses. Minimum cost of materials, $125; lab fee, $10. M W F 10:10-12:05. A. Racine.

Intermediate apparel students prepared to challenge and refine their design skills will be presented with a variety of complex studio problems involving computer-aided apparel design and team work.

TXA 375 Color and Surface Design of Textiles
Fall. 4 credits. Recommended: TXA 114 and TXA 135. Minimum cost of other materials, $100; lab fee, $75. Limited to 15 students. T R 1:25-4:25. C. Jirousek.

Studio experience in the surface design of textiles combined with exercises in color theory. Textile projects will utilize techniques such as block printing, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work will be augmented by lectures on color and color theory illustrated by slides and textile examples.

TXA 400-401-402-403 Special Independent Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grade optional.

TXA 400 Directed Readings
For study that predominantly involves library research and independent reading.

TXA 401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

TXA 403 Teaching Apprenticeships
Fall or spring. 2–4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the overall academic program, and have permission of the instructor and the department chair. S-U grades optional. Staff.

Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

TXA 432 Product Quality Assessment

This course covers evaluation of fibers, yarns, fabrics, and garments, with emphasis on the meaning of standards, testing philosophy, quality control, and analysis. Day-to-day tests done in textile and apparel industry will be discussed. Laboratory sections will introduce students to various test methods, data generation for analysis, and evaluation.

TXA 436 Fiber Chemistry
Spring. 3 credits. S-U grade optional. Senior and first-year graduate students. Lecs M W F 10:10-11:00. C. C. Chu.

The chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyesters, nylons, acrylics, polylefins and spandex and their polymerization process are discussed. The general chemical and physical properties of each will be given. Degradation reactions for certain fibers such as polyolefins and acrylics will be discussed.

TXA 439 Biomedical Materials and Devices for Human Body Repair

Survey of materials and devices for repair of injured, diseased, or aged human tissues/ organs. It includes properties of synthetic and biological materials, wound healing processes, medical devices for repair of wounds, blood vessels, hearts, joints, bones, nerves, male impotence, vision/hearing/voice, and drug control/release.

TXA 444 Apparel/Textile Retailing and Distribution
Spring. 3 credits. S-U grades optional. Prerequisite: TXA 135 and ARME 240 or equivalent. Lec T R 2:30-3:45. P. Schwartz.

This course provides an overview of the business of design, production, distribution,
marketing, and merchandising of apparel and related products from a management perspective. The organization and structure of both domestic and international retailers is included along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies will be emphasized throughout.

TXA 446 Apparel Design: Intermediate Functional Clothing Design
Spring. 3 credits. Prerequisites: TXA 367 and TXA 246 or permission of instructor. Minimum cost of materials, $125; lab fee, $15. Not offered 1997–98. S. Watkins. Complex problems in functional apparel design will be studied with an emphasis on totally encapsulating clothing. Students will work in groups and individually to set design criteria and develop innovative solutions for current problems in protective apparel.

TXA 465 Apparel Design: Product Development and Presentation
Fall. 4 credits. Prerequisites: minimum of three drawing or art courses, TXA 367, TXA 368, and with TXA 375 or permission of instructor. Minimum cost of materials, $250; lab fee, $10. M W 10:10–1:10. S. Ashdown. Through studio problems in apparel design, students will investigate the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Some portfolio development included.

TXA 499 Honors Thesis Research
Fall and spring. 1–6 credits (maximum 6 credits for graduation). S-U grades optional. Prerequisite: TXA 246 or permission of instructor. TXA students who have been admitted to college honors program. Staff. Independent research leading to the honors thesis. College honors program guidelines are to be followed.

TXA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

TXA 620 Physical Properties of Fiber-Forming Polymers and Fibers
Spring. 3 credits. Prerequisite: permission of instructor. A. Nethawat. Formation and properties of fiber-forming polymers, rubber, glassy, and crystalline states and their interconnection. Fiber structure, relationship between chemical structure and physical properties of manufactured and natural fibers. Mechanical, thermal, and viscoelastic properties of fibers and testing methods will be discussed.

TXA 626 The Chemistry of Textile Finishes and Dyeing
Spring. 3 credits. S-U optional. Prerequisites: TXA 336 or equivalent and organic chemistry, or permission of instructor. Not offered 1997–98. C. C. Chu. Chemical aspects of textiles with emphasis on finishes and dyeing will be discussed. Industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency will be studied. The emphasis is on the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources and synthetic routes. The environmental impact of these textile chemicals and current federal regulation will be briefly discussed.

TXA 635 Special Topics in Textiles and Apparel
Fall. 3 credits. prerequisite: permission of instructor. Staff.

TXA 637 Research Seminars in Apparel Design
Fall and spring. 1 credit; S-U optional; repeat of course each semester is encouraged for all apparel design graduate students. Available to advanced undergraduate students with permission of individual instructor. Apparel Design faculty.

TXA 639 Mechanics of Fibrous Assemblies
Fall. 3 credits. Prerequisite: solid mechanics or permission of instructor. Not offered 1997–98. S. Watkins. A study of the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tension, shear, and compression stress; bending and buckling, and the mechanical behavior of nonwoven textile materials.

TXA 664 Human Factors: Anthropometrics and Apparel
Spring (even-numbered years). 3 credits. S-U grades optional. Limit 15. Prerequisite: permission of instructor. Open to advanced undergraduates. S. Ashdown. Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of fit; apparel sizing techniques; national and international sizing systems and standards; impact of sizing systems on various populations (elderly, handicapped, etc.).

TXA 675 Aesthetics and Meaning in World Dress
Spring. 3 credits; S-U grades optional. Prerequisite: TXA 125 or course in history of art, costume history, or other history. Offered alternate years. C. Jirousek. An examination of the aesthetic and social psychological relationship between body and clothing in the context of various cultures. Students will develop a research topic to be presented orally and in a term paper and will participate in the development of an exhibition.

TXA 899 Master's Thesis and Research
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Staff.

TXA 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Staff.

THE SCHOOL
The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 650 undergraduates and approximately 120 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

Ives Hall classroom building is expected to be complete for spring 1998. ILR students will return to modern, technologically advanced lecture halls and seminar rooms, as well as to a library enlarged in size and more useable for study. During the construction, ILR classes will meet in buildings near the Ives Hall complex of faculty and administrative offices. Lunches, receptions, parties, and activities will be organized to promote the continuing interaction of ILR students and faculty.

Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of recent entering classes, and minority students comprise about 25 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in the field, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES
More than 120 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 163 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION
Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History
In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies
This department offers specialization in human resource studies. Human Resources focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer applications to personnel, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the sociological environment of human resource management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor, for example, training, education, health, mobility, and immigration, the subject area also includes policies in private industry that relate to the demands for labor.

International and Comparative Labor Relations
International and Comparative Labor Relations is concerned with international and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as the newly industrializing countries in Asia and the Third World.

Labor Economics
Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public polices. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior
By studying individuals, groups, single organizations, and associations or organizations, persons in the field of Organizational Behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses on research methods in organizational research and general survey courses in both psychological and sociological research.

Social Statistics
Economic and Social Statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.
RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and faculty committees to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students will be provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to open access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances.

One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in the Johnson Graduate School of Management, earning their bachelor's degree in ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad.

A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State. The ILR program allows juniors and seniors who wish to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special in absentia registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to the school. Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

Leave of Absence or Withdrawal

If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

Curriculum Changes Effective Fall 1994 for Entering Class

FRESHMAN YEAR

Fall Semester

Freshman Writing Seminar 3
Introductory Microeconomics (ECON 101) 3
History of American Labor: Nineteenth Century (ILRBC 100) 3
Social and Psychological Foundations of Organizational Behavior I (ILRBC 170)* 3
ILR Colloquium (ILRDI 150) 1
Elective 3

Spring Semester

Freshman Writing Seminar 3
Introductory Macroeconomics 102 3
History of American Labor: Twentieth Century (ILRDC 101) 3
Social and Psychological Foundations of Organizational Behavior II (ILRBC 171)* 3
Elective 3

Physical Education, Fall and Spring

SOPHOMORE YEAR

Fall Semester

Statistics I (ILRST 210) 3
Development of Economic Institutions (ILRST 140) 3
Labor and Employment Law (ILRST 201) 3
Distribution: Cultural Perspectives 3
Elective 3

Spring Semester

Statistics II (ILRST 211) 3
Human Resource Management (ILRHR 260) 3
Economics of Wages and Employment (ILRST 240) 3
Distribution: Western Intellectual Tradition 3
Elective 3

JUNIOR AND SENIOR YEARS

Economic Security (ILRST 340) 3
Collective Bargaining (ILRST 300)* 3
Distribution: International and Comparative ILR 3
Distribution: Upper Division Writing 3
Distribution: Science and Technology 3
Advanced Organizational Behavior (ILRST 420) 3
ILR and General Electives 3
ILR Advanced Electives—27 credit hours in no fewer than 9 courses
General Electives—34 credit hours of which up to 22 hours may be freely elected in the university's endowed divisions

*New Course Numbers

Required Courses

(55 credits)

The curriculum prescribes the courses and subjects listed in the table above, to be taken in the terms indicated. In the senior year, all courses will be electives.

Elective Courses

(65 credits)

From the courses offered by the school, students must select a minimum of 27 credits of ILR elective courses. No more than 9 of these credits may be satisfied by ILR 499, Directed Studies, or ILR 497–498, Internships, or ILR 495, Honors Program.
Undergraduates are required to select one intensive writing course (each for a minimum of three credits) from a list of designated courses.

The remaining 34 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 34 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; and the School of Hotel Administration) must pay for each credit taken in excess of 34, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

SCHEDULING AND ATTENDANCE

Schedule Changes
Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

Class Attendance
It is each student's responsibility to attend all scheduled classes unless approved excuses have been given by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. An approved absence may be warranted by:
1) participation in authorized university activities such as athletic events, dramatic productions, or debates;
2) medical problems supported by a record of clinic or infirmary treatment;
3) serious illness or death in the immediate family;
4) other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

ACADEMIC STANDING AND GRADES

Academic Integrity
In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat.

Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:
1) knowingly representing the work of others as one's own;
2) using or obtaining unauthorized assistance in any academic work;
3) fabricating data in laboratory or field work;
4) giving fraudulent assistance to others;
5) fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

Dean's List
A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:
1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2) a minimum course load for the term of 12 letter-graded credits;
3) completion of all courses registered for at the beginning of the term;
4) satisfaction of all good-standing requirements.

Academic Standing
Good standing requires that all of the following criteria be met at the end of each term:
1) an average of C- (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2) no failing grades in any course, including physical education;
3) a cumulative average of C- (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.

Involuntary Separation from the School for Academic Reasons
A student may be denied permission to reregister at the end of any term when he or she has failed:
1) to establish good standing after a semester on warning;
2) to maintain an average of 1.7 in any term after a previous record of warning;
3) to achieve good standing after being on warning any two previous semesters;
4) two or more failures in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

S-U Grading Policy
An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:
1) the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2) students are limited to registering in two S-U courses a term;
3) S-U registration is limited to 4 credits for each course;
4) students registering for S-U grades must be in good standing;
5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average.

No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

Grades of Incomplete
A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work may be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.
SPECIAL ACADEMIC PROGRAMS

To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Dual Registration in the Johnson Graduate School of Management

Dual informal registration in the Johnson Graduate School of Management leads to a Bachelor of Science degree in industrial and labor relations and a master's degree in management after five years of study and is open to students who meet the requirements of the Johnson Graduate School of Management.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that the expectations of the Johnson Graduate School of Management and ILR curriculum requirements are fulfilled. Students interested in the very limited and selective program of the Johnson Graduate School of Management should contact the Admissions Office, 319 Malott Hall, and a counselor at the Office of Student Services.

Five-Year Master of Science Degree Program

With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish to concentrate study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships

The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor problems. A number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research and seminars on work experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honors Program

Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 3 credits in each term) to research, write, and then defend the thesis.

Study Abroad

Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The University currently has agreements with universities in Germany, Israel, England, and the Scandinavian countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, 474 Uris Hall.

Some study abroad programs require the development of language proficiency and preparation in appropriate courses at Cornell. Students should consult the Office of Student Services and Cornell Abroad in the freshman and sophomore years to be sure that they comply with the academic and procedural requirements for study abroad.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

This first semester of a two-semester sequence covers the major changes in the nature of work, the workplace, and the institutions involved in industrial relations in the United States through the end of the nineteenth century.

ILRBC 100 Introduction to U.S. Labor History: Nineteenth Century

Fall. 3 credits. C. Daniel, I. DeVault, N. Salvatore

This second semester of a two-semester sequence covers the major changes in the nature of work, the workplace, and the institutions involved in industrial relations in the United States from the end of the nineteenth century up to the present.

ILRBC 101 Introduction to U.S. Labor History: The Twentieth Century

Spring. 3 credits. Prerequisite: ILRBC 100. C. Daniel, I. DeVault, N. Salvatore

An undergraduate seminar whose topic changes depending on semester and instructor.

ILRBC 301 Labor Union Administration

Fall. 3 credits. Staff

Study and analysis of the structure and operations of American unions, including the complicated internal life of the organizations; the varied environments in which unions develop and grow or decline; the relationship of national unions, local unions, and members in the many different aspects of internal union government; the ways in which unions are set up to handle organizing, collective bargaining, contract administration, and political activity; and the widespread movement toward merger and consolidation of unions that began in the sixties and continues today. All of these will involve a study of union constitutions and other primary documents, in addition to secondary readings. Attention will be given to relevant legislation, current problems of unions, and the eternal problems of attaining union democracy.

ILRBC 302 Strangers and Citizens: Immigration and Labor in U.S. History

Fall or spring. 3 credits. I. DeVault

This course will explore immigrant workers' experiences in the 19th and 20th centuries from different perspectives. We will examine what it meant to the immigrants themselves to arrive as strangers in the United States, while also examining the ways in which pre-existing American groups defined these immigrants as "strangers." Similarly, we will look at U.S. citizens in their roles as gatekeepers of immigrants, detractors of immigrants, and as models for the aspirations of immigrants. Throughout the course our main examples will come from the industrial and union realms.

ILRBC 304 Seminar in American Labor and Social History

Fall or spring. 4 credits. Permission of instructor. C. Daniel, I. DeVault, N. Salvatore

An undergraduate seminar whose topic changes depending on semester and instructor.

ILRBC 305 Introduction to Labor Arbitration and Alternative Dispute Resolution

Fall. 3 credits. J. Gross

An introductory survey that focuses in part on the U.S. labor arbitration process in the private and public sectors (legal issues, discipline and discharge, contract language interpretation, remedies, and procedures) and in part on alternative dispute resolution systems in the United States and other countries. Student participation in class discussion is expected and assignments will include an original research paper.

ILRBC 384 Women and Unions (also WOMNS 384)

Fall or spring. 4 credits. I. DeVault

Will explore women's participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered will include women workers' relations with male-dominated unions, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.
ILRCB 385 The African-American Workers, 1865-1910: The Rural and Urban Experience
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. N. Salvatore.
Examines the history of blacks in America from Emancipation through the experience of the first generation after slavery, with a focus on the work experience. Topics will include the restructuring of work during Reconstruction, the relationship between work and black organizational developments, between black and white workers, and the nature of work in the agricultural south and in cities throughout the nation.

ILRCB 386 The African-American Workers, 1910-The Present: Race, Work and the City
Fall. 3 credits. Prerequisites: junior or senior. N. Salvatore.
Examines the history of blacks in America from the start of the Great Migration through the 1970s, with a focus on the work experience. Topics will include the effect of migration and urbanization on black workers, the nature of the relationship between black and white workers as influenced by depression and two world wars; and an examination of the effect of the Civil Rights movement on the economic circumstances of black workers.

ILRCB 401 My Brother's Keeper: Volunteerism and Philanthropy
Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.
The philosophy, practice, economics, and law of volunteering labor and donating money. Topics include altruism versus self-interest; why individuals volunteer labor and raise and donate money; the structure and practices of charitable organizations; the economic effects of voluntary labor and philanthropic gifts; and the law of raising and distributing money.

ILRCB 407 Contemporary Trade Union Movement
Spring. 3 credits. Prerequisites: Undergraduates, ILRCB 100, 101, graduate students ILRCB 502. R. Seeger, R. Hurd.
An examination of contemporary trade union issues, including union power, political action, collective bargaining, picketing, and organizing efforts. The course will cover structural, functional, and strategic aspects of contemporary unions. Speakers from the union movement will address the class.

ILRCB 482 Ethics at Work
Fall or spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold.
Major theories of ethics are examined, then applied to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, whistle-blowing, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 488 Liberty and Justice for All
Fall or spring. 3 credits. Prerequisite: junior or senior or permission of instructor. M. Gold.
Major theories of ethics are examined, then applied to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 495 Honors Program
Fall and spring (yearlong course). 5 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be planned; (c) a faculty member agrees to act as thesis supervisor; and (d) the candidate, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarship Committee.

ILRCB 497-498 Internship
Fall and spring. 497, 3 credits; 498, 6 credits. Stahl.
All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member's academic department before submission for approval by the director of Off-Campus Credit Programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded A+ to F, upon completion of a professionally appropriate learning experience, which is graded by the faculty sponsor.

ILRCB 499 Directed Studies
Fall and spring. 3 credits.
For individual research, conducted under the direction of a member of the faculty, in a special area of labor relations not covered by regular course offerings. Registration is normally limited to seniors who have demonstrated ability to undertake independent work. Eligible students should consult a counselor in the Office of Student Services at the time of course registration to arrange for formal submission of their projects for approval by the Academic Standards and Scholarship Committee.

ILRCB 500 Collective Bargaining
Fall. 3 credits. Open only to graduate students.
A comprehensive introduction to the industrial relations system of the United States. The negotiation, scope, and day-to-day administration of contracts, union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; U.S. industrial relations in international and comparative perspective.

ILRCB 501 Labor and Employment Law
Fall. 3 credits. Open only to graduate students. M. Gold, R. Lieberwitz, K. Stone.
A survey and analysis of the law governing labor relations and employees rights in the workplace. The first half of the course examines the legal framework within which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union democracy. Also serves as an introduction to judicial and administrative systems.

ILRCB 502 History of Industrial Relations in the United States since 1865
Spring. 3 credits. Open only to graduate students C. Daniel, L. DeVault, N. Salvatore.
This introductory survey course emphasizes historical developments in the twentieth century. Special studies include labor union struggles over organizational alternatives and such other topics as industrial conflict, the working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 504 Labor Economics
Fall and spring. 4 credits. Limited to 21 students. Prerequisites: undergraduates, ILRCB 200, 201 graduate students ILRCB 500 and 501; permission of instructor. J. Gross, R. Lieberwitz.
A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the handling of materials in briefs or oral presentation, the conduct of a mock arbitration hearing, and the preparation of arbitration opinions and post-hearing briefs.

ILRCB 506 The Economics of Collective Bargaining in Sports
Fall or spring. 3 credits. L. Kahn.
Surveys economic and industrial issues in the sports industry. Topics include: 1) salary determination, including free agency, salary caps, salary arbitration; 2) competitive balance and financial health of sports leagues; 3) anti-trust issues in sports; 4) labor disputes, union history, and contract administration issues in sports leagues; 5) discrimination in sports; 6) performance incentives.

ILRCB 507 Theories of Equality and Their Application in the Workplace
Spring. 3 credits. R. Lieberwitz.
An examination of the various aspects of equality in the workplace, focusing on issues of race, gender, and national origin, and the ways in which societal discrimination on these bases are institutionalized in the workplace. Theories attempting to define "equality" and specific workplace issues are studied, including the means for achieving equality at the workplace. The course entails a high level of student participation in class discussions, and assignments include a research paper.
ILRCB 605  Readings in the History of Industrial Relations in the United States
Fall. 3 credits. Limited to seniors and graduate students. C. Daniel, N. Salvatore.
A seminar covering, intensively, original and secondary sources and scholarly accounts for different periods in American history.

ILRCB 606  Theories of Industrial Relations Systems
Fall or spring. 3 credits. Limited to seniors and graduate students. Prerequisites: ILRCB 100, 101, 200; graduate students, ILRCB 500. H. Katz.
Will trace the evolution of theory and research on industrial relations. Topics include theories of the labor movement, institutional models and evidence regarding what unions do, the origins of internal labor markets and their relationship with unionization, models of strikes, empirical assessments of arbitration, research on union decline, and empirical evidence of the impacts of new technology.

ILRCB 607  Values in Law, Economics, and Industrial Relations
Fall and spring. 3 credits. Limited to 21 seniors. ILRCB 200, 201, 500, 501. J. Gross.
An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects will use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as: discrimination; law, economics and the state; work and business; power, conflict and protest; and rights and justice.

ILRCB 608  Special Topics in Collective Bargaining, Labor Law, and Legislation
Fall and spring. 3 credits. Prerequisites: ILRCB 201, 500, 501. M. Gold.
This seminar provides a basis for understanding the political, economic, and legal aspects of collective bargaining and highlights the interaction of these domains as they apply to unions and collective bargaining in the United States. Coverage includes the legal and institutional context in which collective bargaining occurs, the historical evolution of the legal context, and the empirical evidence, both recent and historical. Topics include the impact of case law on collective bargaining, legislative action and the political process, the labor movement, institutional models and ethnic differences, and major issues in current bargaining. The seminar will acquaint students with significant cases and documents related to the study of collective bargaining, and will provide an understanding of the role of academic research in the evolution of collective bargaining law and practice.

ILRCB 609  Special Topics: Labor Law Policy Seminar
Spring. 3 credits. K. Stone.
The United States collective bargaining system, which had its origins during the New Deal period, has come under intense attack. The intellectual premises of the system have been challenged by scholars on both the right and the left, and at the same time the decline in the labor movement has undermined its political support. This seminar will look at the theoretical attacks on the New Deal collective bargaining system and at some of the current proposals for its replacement. Some of the topics to be discussed: the theory of regulation embodied in the National Labor Relations Act; classical versus alternative concepts of labor markets and their policy ramifications; the emerging of the global economy and its ramifications for domestic labor regulation. There will also be discussion of alternative systems of labor regulation, such as found in West Germany, Sweden, and Japan.

ILRCB 650  Service Work and Workers in Historical Perspective
Fall or spring. 3 credits. I. DeVault.
This seminar will examine the development of a service economy in the United States. Readings will include general and theoretical works, but the main focus will be recent historical scholarship on specific occupations and situations in the "nonproductive" workforce. Students will explore primary sources for research on the subject and write research papers.

ILRCB 651  Industrial Relations in Transition
Spring. 3 credits. Limited to seniors and graduate students. H. Katz.
Consider the recent developments such as concession bargaining, worker participation programs, and the growth of nonunion firms in the United States. This course will review recent research and new theories arguing that such a transformation is under way. Course material will focus on industrial relations practice in the private sector in the United States, although some attention will also be given to developments in Europe, the United Kingdom, and Japan.

ILRCB 655  Employment Law
Spring. 3 credits. Prerequisites: ILRCB 201, 500. M. Gold.
This course examines the legal framework within which employers and employees interact. The course will focus on the relationship between the law and the workplace and will examine employment law in the United States. Topics covered will include: the regulation of wages and hours, the regulation of working conditions, the regulation of health and safety, the regulation of equal employment opportunity, the regulation of employee benefits, the regulation of the relationship between the employer and the employee, the regulation of the relationship between the employer and the government, and the regulation of the relationship between the employee and the government. The course will cover the following topics: the regulation of wages and hours, the regulation of working conditions, the regulation of health and safety, the regulation of equal employment opportunity, the regulation of employee benefits, the regulation of the relationship between the employer and the employee, the regulation of the relationship between the employer and the government, and the regulation of the relationship between the employee and the government.

ILRCB 657  Values in Law, Economics, and Industrial Relations
Fall and spring. 3 credits. Limited to 21 seniors. ILRCB 200, 201, 500, 501. J. Gross.
An examination of the often hidden values and assumptions that underlie the contemporary U.S. systems of employment law, work and business, and industrial relations. Classroom discussions and student research projects will use novels and short stories (as well as the literature of industrial and labor relations) to focus on issues such as: discrimination; law, economics and the state; work and business; power, conflict and protest; and rights and justice.

ILRCB 682  Seminar in Labor Relations Law and Legislation
Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. R. Lieberwitz.
Legal problems in public employment and other areas of labor relations affecting the public interest.

ILRCB 683  Research Seminar in the History of Industrial Relations
Fall or spring. 3 credits. Prerequisites: ILRCB 100 and 101, graduate students, ILRCB 502. C. Daniel, I. DeVault, N. Salvatore.
The areas of study are determined each semester by the instructor offering the seminar.

ILRCB 684  Employment Discrimination and the Law
Fall. 3 credits. Prerequisite: ILRCB 201/501 or equivalent. M. Gold.
This course provides an overview of employment discrimination law in the United States. The course will cover the following topics: the regulation of wages and hours, the regulation of working conditions, the regulation of health and safety, the regulation of equal employment opportunity, the regulation of employee benefits, the regulation of the relationship between the employer and the employee, the regulation of the relationship between the employer and the government, and the regulation of the relationship between the employee and the government.

ILRCB 685  Research Seminar on Trade Unions
Fall or spring. 3 credits. Prerequisite: ILRCB 200 or 500, permission of instructor. S. Kunvilla.
Designed to provide an analytical survey of recent research on trade unions in the United States. Major topics include changes in trade union activity, the role of trade union growth and decline, economic and non-economic effects of unions, internal union government, and commitment and participation in trade union activity. This is a research-oriented course.

ILRCB 686  Collective Bargaining in the Public Sector
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 200 and 201; graduate students, ILRCB 500 and 501. R. Hobdon.
An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to such matters as representation rights, unfair practices, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy and its formulation.

ILRCB 688  Constitutional Aspects of Labor Law
Spring. 3 credits. R. Lieberwitz.
The study of the United States Constitution as it applies in the workplace. This course will focus on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.

ILRCB 701  Theory and Research in Labor and Employment Relations
Spring. 3 credits. Open to graduate students who have had ILRCB 500 and ILRCB 723 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510. Staff.
This seminar is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature in the area of collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective and to identify and appraise the underlying paradigms used to study collective bargaining-related issues.

ILRCB 702  The Economics of Collective Bargaining
Spring. 3 credits. Prerequisites: ILRCB 500; ILRLE 540 (or their equivalents) and an understanding of multiple regression analysis; or permission of instructor. Staff.
This course focuses on both the empirical and open to analysis of unions and collective bargaining in our economy and on the economic forces that affect collective bargaining. The method is to identify and conceptualize the structural determinants of relative bargaining power. On this basis, the course examines both the economic outcomes of collective bargaining and current bargaining trends in a variety of industries. Tentative theoretical analyses of unionism (neoclassical, institutionalist) are compared. The statistical techniques and empirical results of research on the union effect on economic outcomes (wages, prices, inflation, productivity, earnings inequality) are also evaluated. The effect of technology, corporate structures, and public policy on union bargaining power is outlined.
and a number of case studies of collective bargaining in the private sector are reviewed. A term paper is required.

ILRBC 783 Seminar in American Labor History
Spring. 3 credits. Permission of instructor. W. Salvatore.
A reading and research seminar for graduate students that focuses on selected topics in nineteenth- and twentieth-century labor history. The topic changes each semester.

ILRBC 790 ILR M.P.S. Program
Fall and spring. 1–9 credits. Staff. Supervised research only for those enrolled in the ILR M.P.S. program.

ILRBC 798 Internship
Fall and spring. 1–3 credits. Designed to grant credit for individual research under direction of a faculty member by graduate students who have been selected for an internship. All requests for permission to register for ILRBC 798 must be approved by the faculty member who will supervise the project.

ILRBC 799 Directed Studies
Fall and spring. Credit to be arranged. For individual research conducted under the direction of a member of the faculty.

ILRBC 980 Workshop in Collective Bargaining, Labor Law, and Labor History
Fall and spring. 2 credits. Limited to M.S. and Ph.D. candidates in the department. S-U grades only. Staff. Designed to provide a forum for the presentation of current research being undertaken by faculty members and graduate students in the Department of Collective Bargaining, Labor Law, and Labor History, and by invited guests. All M.S. and Ph.D. candidates in the department who are at work on their theses are strongly urged to enroll. Each student in the course will be expected to make at least one presentation during the year, focusing on the formulation, design, execution, and results of that student’s thesis research.

HUMAN RESOURCE STUDIES

ILRHR 260 Human Resource Management
Fall and spring. 3 credits. Open only to ILR students; others by permission of instructor. R. Batt, M. Roehling.
An introductory overview of the management of human resources in organizations. Topics include human resource decisions dealing with staffing, employee development, work-system rewards, and employee relations. Emphasis is on (a) problem-solving and decision-making approaches; (b) operational methods, technologies, and practices; (c) application of relevant behavioral science theory and research; and (d) legislation and other environmental constraints having an important bearing on the effective utilization of human resources by an enterprise.

ILRHR 266 Personal Computer Basics
Fall, spring, and summer. 2 credits. Limited. Staff.
Provides basic skills in the use of IBM personal computers (PCs) using the Windows environment. Course covers basic hardware, terminology, fundamentals of Disk Operating System (DOS), Internet and Lexis Nexis, Windows 95, Microsoft Excel, Access, and Powerpoint. Emphasis is placed on hands-on experience using examples demonstrating human resource issues and PC-based solutions. This course is a prerequisite to several advanced Human Resource Management electives.

ILRHR 360 Human Resource Economics and Policy
A review of labor-market trends, data collection systems, and the consequences of public efforts to ensure that the employment potential of the nation’s human resources and to combat unemployment. The major segments of the nation’s educational training enterprise—public education, higher education, employer-provided training, apprenticeship, and special training programs for the disadvantaged—are examined. Special policy and programmatic issues pertaining to youth, rural workers, welfare reform, direct job creation, worker relocation, economic development, targeted tax credits, industrial policy, and “enterprise zone” proposals are examined. Comparisons are made with other nation’s human resources.

ILRHR 362 Career Development: Theory and Practice
Fall 1997, spring 1998. 2 credits. 7 weeks. Prerequisite: ILRHR 260 or permission of instructor. Limited to 30. S-U only. J. McPherson.
The components of career management: individual factors and organizational realities in the development of careers and organized programs for career management. Two complementary learning tasks required: information-gathering for career decision making based on self-assessment activities, and comprehension of research from economic, psychological, and social factors encountered as careers develop. Grade based on short writing assignments and research paper.

ILRHR 363 Leadership Seminar for Fraternities and Sororities
Spring 1998. 2 credits. S-U only. Permission of instructor. Staff.
Provide students with an opportunity to develop their leadership and management skills. The philosophy of the class is that fraternity and sorority houses are small businesses and the leadership must be able to manage and lead for them to succeed. The learning method will be “hands on” with participants working on weekly assignments that involve their application of lessons learned to their current job duties. Students will participate in class discussions and meetings with guest speakers and debrief sessions where they report the results of their use of the material obtained from class in their current situations.

ILRHR 366 Women at Work
Fall or spring. 3 or 4 credits. Prerequisite: ILRHR 260 or equivalent.
Various aspects of female occupational roles in twentieth-century United States. Social, and legal factors that influence women’s choice of careers, work socialization and training, and subsequent labor-market experiences are studied. Working women’s entry-level jobs, opportunities for advancement, and income are compared to men’s.

ILRHR 460 Human Resource Strategies for Entrepreneurial Firms
Fall or spring. 4 credits. Open to juniors and seniors. ILR 260 or permission of instructor. L. Cyr, T. Welbourne.
This class utilizes a semester-long case study that focuses on human resource issues and strategies for growing, entrepreneurial firms. Students solve weekly dilemmas by integrating their knowledge of the functional areas of human resource management with general management, human resource strategy, entrepreneurship, accounting/finance, marketing, public relations, and small business management. Creative solutions to problems are communicated to the class via role plays, formal presentations, special meetings, and class discussions. In addition to the semester-long case study, students work in teams to develop their own case of an existing company. The emphasis is on integration of concepts, application, and real-life business situations, and acquisition of general management skills and knowledge.

ILRHR 461 The Design of Work Systems: Comparative and Interdisciplinary Perspectives
Fall or spring. 3 credits. Prerequisite: ILR 260 or equivalent and consent of instructor. Limited to juniors and seniors. R. Batt.
Seminar designed to explore the state of knowledge and current research concerning the design and development of alternative work systems. Focus on understanding alternative approaches to work restructuring and their differential effects on firm competitiveness and employee welfare. The first half of the course considers classic texts on mass production, flexible specialization, sociotechnical systems, diversified quality production, and lean production. It compares these workplace models in their original national contexts and in subsequent transplants. Relevant research from economics, engineering, organizational behavior, human resources, and industrial relations is examined. The second half of the course considers these alternative approaches to restructuring in the context of specific manufacturing and service industries and occupational groups. Students are required to hand in weekly memos covering the readings, actively participate in seminar discussions, and write two research papers on topics relevant to the course.

ILRHR 466 Comparative Human Resource Management
Fall. 3 credits. L. Cyr, T. Welbourne.
Surveys human resource management practices in two key regions of the world: Western Europe and the Pacific Rim. The focus is on HR issues related to management of professional and managerial work forces such as selection and staffing, development, and appraisal and reward systems. Special attention is given to current changes and trends in the HRM area (e.g., unification of Europe, reform of Japanese firms). Implications for multinational operating in these countries will be discussed.
