The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media and Technology Services at Cornell University.
Courses of Study

1998 - 1999

Cornell University

Volume 90 of the series "Cornell University" consists of ten catalogs, of which this is number seven, dated August 3, 1998. Issued once in January, once in February, once in March, once in May, once in June, once in July, three times in August, and once in November. Published by Media Services, Cornell University, Comstock Hall, Ithaca, NY 14853-0901. Periodicals postage paid at Ithaca, New York.

Postmaster: Send address changes to Cornell University, University Registrar, 222 Day Hall, Ithaca, NY 14853-2801.
Cornell University Executive Officers

Hunter R. Rawlings III, president
Don M. Randel, provost
Antonio M. Gotto Jr., provost for medical affairs
Frederick A. Rogers, senior vice president and chief financial officer
Carolyn N. Ainslie, vice president for budgeting and planning
Harold D. Craft Jr., vice president for facilities and campus services
Henrik N. Dulce, vice president for university relations
James J. Mingle, university counsel and secretary of the corporation
vacant, vice president for information technologies
Susan H. Murphy, vice president for student and academic services
Mary George Opperman, vice president for human resources
Inge T. Reichenbach, vice president for alumni affairs and development
Yoke San Reynolds, vice president for financial affairs and university controller
Winnie Taylor, associate provost
J. Robert Cooke, dean of the university faculty
Walter I. Cohen, vice provost
Cutberto Garza, vice provost
Robert C. Richardson, vice provost

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to Cornell’s Title IX coordinator (assistant director, gender equity) at the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853–2801 (telephone: 607 255–3976; TDD: 607 255–7065).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853–2801. Other questions or requests for special assistance may also be directed to that office.

Printed on recycled paper.
8/98 40M WP MS70559
Introduction

Courses of Study contains information primarily concerned with academic resources and procedures, college and department programs, interdisciplinary programs, and undergraduate and graduate course offerings of the university. Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City. A student handbook describing life at Cornell will be distributed to all new incoming students. In addition, each new student receives the Policy Notebook, which summarizes pertinent university policy. Students should consult with their college's advising office for specific information on academic policies and procedures, degree programs and requirements.

Student responsibility and regulations. The Campus Code of Conduct describes the regulations and policies for maintaining public order on campus. The Code of Academic Integrity and other statements of student responsibility are set forth in the Policy Notebook. Publications are available for viewing on CUINFO, the World Wide Web, the university's electronic information system, and in print at the various university libraries, the Student Life Union, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

The following is a list of offices and information sources for admission information:

Undergraduate admissions. Information pertinent to prospective applicants is available from the Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488, 607-255-5241.

Graduate School. Information pertaining to admission to the Graduate School may be obtained by contacting the Graduate School, B2 Caldwell Hall, Ithaca, NY 14853-2602, 607-255-4884.

College of Veterinary Medicine. Admission information is available from the Admissions Office, Schurman Hall, Cornell University, Ithaca, NY 14853-6401, 607-255-7000.

Medical College and Graduate School of Medical Sciences. Information regarding admissions is available from the Office of Admissions, 1300 York Avenue, New York, NY 10021, 212-746-1067.

CUINFO ON THE WORLD WIDE WEB
It is not possible to keep this single-volume course list completely up-to-date. The most current information regarding course schedules, sections, rooms, credits, and registration procedures may be found on CUINFO. Cornell's electronic information source, and in the Course and Time Roster and the Course and Room Roster, published each semester by the Office of the University Registrar. You may access CUINFO through the World Wide Web. The URL is http://www.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS
The course levels have been assigned as follows:

100-level course—introductory course, no prerequisites, open to all qualified students
200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites
300-level course—upper-division course, open to juniors and seniors, prerequisites
400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent
500-level course—professional level (e.g., management, law, veterinary medicine)
600-level course—graduate-level course, open to upper-division students
700-level course—graduate-level course
800-level course—master's level, thesis, research
900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences
Architecture, Art, and Planning
Arts and Sciences
Biological Sciences
Engineering
Hotel Administration
Human Ecology
Industrial and Labor Relations
Nutritional Sciences
Officer Education

Group 2: Graduate professional divisions

Law
Management
Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0-999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell's accreditation can be found at http://www.ipr.cornell.edu/Accreditation/Status. Requests to review additional documentation supporting Cornell's accreditation should be addressed to the Michael Matier, Office of Planning and Budget, Cornell University, 440 Day Hall, Ithaca, NY 14855-2801, mwm5@cornell.edu.

Advanced Placement

CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

a. Achieving the requisite score on a departmental examination at Cornell (usually given during orientation week) or from the Advanced Placement Examinations from the College Entrance Examination Board (CEEB). The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 15.

b. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have
formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

Credit for international credentials is evaluated individually (see below).

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a transcript of such work. Students who have taken such courses may, however, take the appropriate Advanced Placement Examination offered by the College Entrance Examination Board in Princeton, New Jersey, to qualify for credit as in paragraph a above.

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department of instruction within the university sets the standards of achievement that must be met for advanced placement and recommends AP credit for those who meet the standards. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

Advanced placement examinations. Entering freshmen should have their scores from College Board Advanced Placement Examinations sent to their college or school office (see below, "Forwarding of scores and transcripts").

Departmental advanced standing examinations. In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of departmental examinations are shown on page 7.

Transfer of credit. Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to individual school and college guidelines. Because policy for using advanced placement credit varies according to each college’s or school’s professional goals, students should consult their college or school office to determine how they may use such credit.

Foreign credentials. Information regarding Cornell’s advanced standing policy for foreign credentials may be obtained by contacting the Associate Director of International Admissions, Cornell degree should send transcripts and course descriptions to their college or school office before enrollment for clarification of the advanced standing policy.

Written inquiries. Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.

**Forwarding of scores and transcripts.** Entering freshmen should have their advanced placement test scores sent to their school or college registrar’s office.

- **College of Agriculture and Life Sciences** 177 Roberts Hall
- **College of Architecture, Art, and Planning** B2 West Sibley Hall
- **College of Arts and Sciences** 55 Goldwin Smith Hall
- **College of Engineering** 170 Ulin Hall
- **School of Hotel Administration** 138 Statler Hall
- **College of Human Ecology** N101 Van Rensselaer Hall
- **School of Industrial and Labor Relations** 101 Ives Hall

**Determination of credit and placement.** The table on page 7 provides information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

**Biological Sciences**

The Division of Biological Sciences grants advanced placement credits and exemption from introductory biology courses based on superior performance on the CEEB Advanced Placement Examination in biology.

Any student who earns a score of 5 on this examination may elect to receive eight credits and be permitted exemption from all introductory biology courses.

Students not majoring in biological sciences who score a 4 or 5 may receive, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Arts and Sciences and a portion of the general B distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, credits may be applied to the Group 1 distribution area in accordance with regulations stipulated by the college.

Biological sciences majors who receive a score of 5 may receive eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101–102, 101/103, 102/104, or 105–104 or 105 or 106 (Biological Sciences, Lectured and Laboratory). These students should consult information available in the Biological Sciences 101–104 course office (1140 Comstock Hall) and in the Biology Center (216 Sinton Hall) to determine which semester to take to complete the introductory biology requirement. For students in doubt, Biological Sciences 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

**Chemistry**

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207–208, an eight-credit sequence that includes qualitative analysis, or Chemistry 215–216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing credits in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in 131 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 138 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215–216 and should consult the Chemistry 215 instructor.

**Classics**

For advanced placement and credit in Latin and Greek, students should consult the Department of Classics, 120 Goldwin Smith Hall.

**Latin.** Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course will be given six advanced placement credits.

**Greek and Modern Greek.** Credit and placement are determined on the basis of a departmental examination. For Ancient Greek, a student who is permitted to register in a 300-level course will be given six advanced placement credits. For Modern Greek, a student will be permitted by the examiner to be at an advanced level will be given six advanced placement credits.

**Computer Science**

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or half the distribution requirement in mathematics for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100. These students are strongly urged to take the...

†Cornell Advanced Standing Examination. Contact the Department of Modern Languages, 203 Morrill Hall.
The grade on this test does not become part of a student's record. No advance registration for the departmental examination is necessary.

**Modern Languages**

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See "Placement Tests and Advanced Placement credit" under "Foreign Language Requirements" in the Arts and Sciences section of this catalog. Students who have had a year of formal study or substantial informal study since they last took a placement test should take the examination again during orientation week if they plan to continue course work.

Advanced standing credit may be entered on a student's record as follows:

1) For students with a score of 4 or 5 on the Advanced Placement Examination of the CEEB, three credits are granted, and they are eligible to take Cornell's Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

2) Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

3) For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student's Cornell record.

4) Native speakers of languages other than English may, on examination by the appropriate professor, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language.

Information about times and places to take placement tests is available in the orientation booklet from Academic and Career Counseling Services on the Web at: https://www.cornell.edu/cas/branch_center/ or from the Department of Modern Languages. For more information, see the College of Arts and Sciences section on course language placement, or contact the Department of Modern Languages, 203 Morrill Hall.

**Music**

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music. Normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor E. Murray, 311 Lincoln Hall (telephone: 607/255-4075). Inquiries may be directed to the Department of Music, 104 Lincoln Hall (telephone: 607/255-4077).

**Physics**

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C), certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, Professor J. T. Rogers, 101 Clark Hall, or the department chair.

Physics B. Students earning a score of 4 or 5 may receive eight credits for Physics 101 and 102. Those earning a score of 5 in physics B with a score of 4 or 5 in calculus BC may choose to accept four credits in Physics 112 or 207 instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics: Students earning a score of 4 or 5 may receive four credits for Physics 112 or 207, or placement into Physics 116 with no AP credit.

Physics C—Electricity and Magnetism: Students earning a score of 5 may receive four credits for Physics 213.

A student planning a major in Physics or Applied Engineering Physics who is eligible for AP credit should consult with his/her adviser or the department representative.

Advanced placement into a next-in-sequence course depends on the completion of the appropriate mathematics prerequisites before enrolling. To qualify for advanced placement credit, it is not necessary to continue the study of physics.

General information and advice may be obtained from Professor J. T. Rogers, 101 Clark Hall, or from the Department of Physics, 109 Clark Hall.

**ADVANCED PLACEMENT AND CREDIT FOR INTERNATIONAL CREDENTIALS**

Following are the policies currently in effect for G.C.E. A-level Examinations and International Baccalaureate Higher Level Examinations. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week. Students requiring further information concerning advanced standing credit for foreign credentials may contact the Associate Director, Undergraduate International Admissions.

**General Certificate of Education (GCE)**

Advanced ("A") Level Examination passes are awarded advanced standing and credit. Students must present the original or a certified copy of their examination certificate to the Associate Director, International Admissions, in order to receive credit. The following overseas examinations are recognized by Cornell as equivalent in standard to GCE "A" Levels:

- Matriculation examination of the University of Hong Kong (Advanced Level)
- Advanced Level examination of the University of Hong Kong
University Registration

University registration is the official recognition of a student's relationship with the university and is the basic authorization for a student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health regulations and requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to ensure the state regulations through registration procedures. The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must
- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, the Office of the Provost, or the Bursar.

International Baccalaureate (IB) Higher Level Examination passes are awarded advanced standing and credit as follows. The original or a certified copy of the examination results must be shown to the Associate Director, International Admissions.

Auditing Courses

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

Leaves and Withdrawals

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time. Students should inform their college of intent to return.
A student may withdraw from the university at the student's discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave. Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the Internal Transfer Division, 220 Day Hall (255-4386).

Other Tuition and Fees

In-absentia fees
Graduate $200 per term
Undergraduate 15 per term
Law and Management 75 per term

The amount, time, and manner of payment of tuition, fees, or other charges may be changed at any time without notice.

*Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The graduate application fee is $65. Application to the Johnson Graduate School of Management costs $90 (domestic), $120 (international).

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 50 percent; sixth week, 60 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 50 percent; sixth week, 60 percent; seventh week to the end of the semester, 100 percent.

100% charge 10/27/98 3/25/99

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student’s application for admission.
Payments
An individual who has outstanding indebtedness to the university will not be allowed to register* or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student’s bill by several departments and offices of the university. Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-2336; fax: 607/255-0542). E-mail: UCCO_Bursar@cornell.edu

*For specific exceptions, see “Bursar and CornellCard Procedures,” published by the Office of the Bursar, 260 Day Hall.

STUDENT HEALTH INSURANCE
It is a Cornell University policy, by a university board of trustees decision, that all full-time students have health insurance coverage while enrolled at Cornell. The student health plan offers extensive coverage at a reasonable cost for students and their eligible dependents. Plan benefit information will be mailed to all registered students (including students registered in absentia) in their July bursar bill. If you decide that you have adequate coverage and want to waive the student health plan, a waiver form with proof of other coverage must be submitted to the student insurance office before the August 29 deadline. All full-time registered students, including students registered in absentia, will be automatically billed and enrolled in the student health plan if a completed waiver is not received by the deadline. Because of policy restrictions, the plan is nonrefundable after the deadline (except for dependents who no longer meet eligibility requirements).

Students enrolled in the student health plan may also enroll their eligible dependents for an additional charge. Enrollment deadline is September 30.

A five-month graduate plan is available for those students who finish their degree requirements before the start of the spring semester. The deadline for application is prior to the start of the spring semester.

A payment plan option is available. Deadline for application is September 30. To obtain additional information about the Cornell University health plan and the payment plan option, please contact the insurance carrier directly at 1-800-859-8474. E-mail: SICU@cornell.edu

Class Attendance, Meeting Times, and Examinations

CLASS ATTENDANCE AND ABSENCEs
Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

Absences because of religious beliefs. In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up an examination, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hours in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar’s examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.
**General Rules Governing Final Examinations**

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.
2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.
3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change will be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.
4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.
5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.
6. Faculty can require students to submit papers during the week preceding the study period.
7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

**The university policies governing study period and final examinations are:**

a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation or conference) be conducted or due during the period set aside for final examinations.

b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one twenty-four hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.

c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

**Evening Preliminary Examinations**

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

**Grading Guidelines**

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-; F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents. These are the quality-point equivalents:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality-Point Equivalents</th>
</tr>
</thead>
<tbody>
<tr>
<td>A+</td>
<td>+4.3</td>
</tr>
<tr>
<td>A</td>
<td>+3.3</td>
</tr>
<tr>
<td>A-</td>
<td>+2.0</td>
</tr>
<tr>
<td>B+</td>
<td>+3.0</td>
</tr>
<tr>
<td>B</td>
<td>+2.0</td>
</tr>
<tr>
<td>B-</td>
<td>+1.0</td>
</tr>
<tr>
<td>C+</td>
<td>+2.3</td>
</tr>
<tr>
<td>C</td>
<td>+1.7</td>
</tr>
<tr>
<td>C-</td>
<td>+0.7</td>
</tr>
<tr>
<td>D+</td>
<td>+1.3</td>
</tr>
<tr>
<td>D</td>
<td>+1.0</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
</tr>
</tbody>
</table>

This is how a term average is computed:

```
Quality  Credits  Credits Product
Course   Grade Points
Chemistry 103  B+  3.3  x  3  =  9.9
English 151  C-  1.7  x  3  =  5.1
DEA 145   B  3.0  x  4  = 12.0
CEH 100   B  3.0  x  3  =  9.0
DEA 111   C  2.0  x  3  =  6.0
```

Total 16 42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

**S-U Grades**

On September 6, 1972, the Faculty Council of Representatives passed the following legislation.

"Resolved, that:
A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D-, or fail.
B. S-U options be chosen by the student during the first three weeks of the term.
C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.
D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:

-Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

-Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor is required only in those courses so designated in the course catalog. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

-Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may not be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first week of classes. (c) Decision is irrevocable after first 3 weeks of term.

**Graduate School.** (a) Seminars and Thesis Research courses are usually graded S/U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S/U only if offered as S/U option.

-Hotel. (a) Maximum of four free-elective credits per term. (b) Exceptions are by petition only.

-Human Ecology. (a) Not part of student's major. (b) May be used in the 15 hours required outside the major in Human Ecology courses. (c) Not part of 39 hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U
grading in specific courses if approved by Educational Policies Committee. (e) Only juniors and seniors may take courses in which both letter grades and S-U are options. (f) Sophomores may take courses in which S-U is offered but letter grades are not offered. (g) Freshmen enrolled in English 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirements. (h) Total of four S-U courses during student's college career.

Industrial and Labor Relations. (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including I&LR directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A + to D-) credits. (c) Student must also be in good academic standing. (d) A "U" is considered the equivalent of an "F" in determining a student's academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (a) There are four courses in the veterinary core curriculum that are offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on a S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:

1) the student has a substantial equity at a passing level in the course with respect to work completed, and
2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, reasons for requesting one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the reason for the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the time allowed, and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, 222 Day Hall. There is a $2.00 fee per transcript.

University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses. A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

PHYSICAL EDUCATION

Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should see the director of the assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation process. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.

STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student's responsibility to know how far they have progressed in meeting those requirements at every stage of their academic career.

STUDENT RECORDS POLICY

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to:

1) inspect and review their education records;
2) challenge contents of education records;
3) a hearing if the challenge is unsatisfactory;
4) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;
5) prevent disclosure of personally identifiable information;
6) secure a copy of the institutional policy which includes the location of all education records**; and
7) file complaints with the Department of Education concerning institutional failure to comply with the act.

*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, Student and height and weight of members of athletic teams) degrees earned and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the
office of the university registrar in writing within 10 days of the date of official university registration. Students may rescind their no release request at any time in writing to the office of the university registrar.

POLICY ON POSTING OF STUDENT INFORMATION

In compliance with the university’s policy on student educational records, and the U.S. Department of Education’s Family Educational Rights and Privacy Act of 1974 (FERPA), restricted student information may not be posted.

Accordingly, the following student information is considered restricted and therefore may not be posted:

- Student social security number
- Student identification number
- Courses elected
- Grades earned
- Grade point average
- Class rank
- Date of birth
- Place of birth
- Home telephone listing
- Academic and disciplinary actions
- Student or administrative committees
- The most recent student educational records from previous educational agency or institution
- Financial arrangements between the student and the university
- Any other education record containing personally identifiable information

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects.

Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review. Inquiries, communications, and requests for guidelines should be directed to the committee’s Executive Secretary, 120 Day Hall (255-2945). The guidelines are also available at the World Wide Web address www.osp.cornell.edu

USE OF ANIMALS FOR COURSES

Guidelines for Faculty and Students With Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines
1. For demonstrating certain principles and procedures, the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.
2. For courses in which vertebrate animals are to be used in dissection, surgery or in other experimental procedures, the course description that appears in the Announcement “Courses of Study” should alert students to this fact.
3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor in each course.
4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.
5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.
6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.
7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.
8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Director of the Cornell Center for Research Animal Resources (253-3520).

Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE
PROFESSORS-AT-LARGE

726 University Avenue (255-0852)

The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for six- year term and are full members of the faculty when in residence.

Term Ending in 1999
Mitchell, Juliet, psychoanalyst and feminist theorist
Mosse, George, historian
Press, Frank, geophysicist, science and technology adviser
Seeger, Anthony, ethnomusicologist

Term Ending in 2000
Berry, Michael, physicist

Term Ending in 2001
Pingree, David, historian of science

Term Ending in 2002
Chartier, Roger, cultural historian
Ernst, Richard R., physical chemist
Goodall, Jane, primatologist
Tobias, Phillip V., paleoanthropologist

Term Ending in 2003
Morrison, Toni, novelist
Rabinovich, Itamar, historian of the Middle East, diplomat

Term Ending in 2004
Bal, Mieke, cultural analyst
Cleese, John, writer and actor
MacDonald, David W., zoologist
Silajdzic, Haris, diplomat

CENTER FOR APPLIED MATHEMATICS

657 Frank H. T. Rhodes Hall (255-4335)
The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of
the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

### Selected Applied Mathematics Courses

#### Basic Graduate Courses in Mathematics and Applied Mathematics

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>

**CENTER FOR THE ENVIRONMENT**

Rice Hall (255-7555)

The Cornell Center for the Environment (CEn) is committed to research, teaching, and outreach focused on environmental issues,
with the goals of enhancing the quality of life, encouraging economic vitality, and promoting the conservation of natural resources for a sustainable future. The Center serves as a clearinghouse for environmental information, initiates environmental courses and curricula at both the graduate and undergraduate levels; facilitates interdisciplinary environmental research; and coordinates outreach programs that assist state, federal, and local government, private organizations, businesses, and individuals in assessing and solving environmental problems.

**Programs of Study**

Various departments, centers, and institutes across the campus are involved in teaching and research of potential interest to students wishing to pursue environmental studies. A brochure listing undergraduate environmental course offerings is available from the Center (telephone: 255-7535, www.http://www.cfe.cornell.edu/coursebook/ or email: cucfe@cornell.edu). Students with this interest most often study in one of the following areas:

- Agricultural and Biological Engineering
- Agricultural, Resource, and Managerial Economics
- Architecture
- Biology and Society
- City and Regional Planning
- Civil and Environmental Engineering
- Design and Environmental Analysis
- Development Sociology
- Ecology and Evolutionary Biology
- Environmental Toxicology
- Natural Resources
- Plant Pathology
- Regional Science
- Rural Sociology
- Science and Technology Studies
- Soil, Crop, and Atmospheric Sciences

Program options for focusing on environmental issues are offered in a number of departments: (1) ecosystems science through the Section of Ecology and Systematics; and the Department of Natural Resources; (2) remote sensing through the Departments of Civil and Environmental Engineering; and Soil, Crop, and Atmospheric Sciences; (3) water resources primarily through the Department of Agricultural and Biological Engineering; (4) waste management through the Departments of Environmental Engineering; Agricultural and Biological Engineering; and Agricultural, Resource and Managerial Economics; (5) environmental policy through Toxicology; Natural Resources; and City and Regional Planning; (5) and biological resources through the Division of Biological Sciences.

The graduate field of environmental toxicology offers a multidisciplinary science program leading to a Ph.D. or M.S. degree. The three major areas of concentration in the program are: comparative and environmental toxicology, food and nutritional toxicology, and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry and private research institutes and governmental agencies. Pages 28-29 list the courses and describes the program in more detail.

In response to a demand for individuals who can bridge the gap between the technical, social, and managerial aspects of environmental problems, a new multidisciplinary Master of Professional Studies (Agr.) degree program in environmental management was created. In this curriculum, students with undergraduate preparation in the fields of Natural Resources; Agricultural Economics; Crop, Soil, and Atmospheric Sciences; Agricultural and Biological Engineering; and Development Sociology are eligible to undertake a concentration in environmental management. Students in this program are expected to take courses that will enhance or build upon their undergraduate education and in addition enroll in a common core of courses in science and technology of environmental management; environmental systems and social systems; environmental and resource economics; environmental regulation; and an intensive field project. These core courses are intended to provide students with the knowledge, skills, and insights that will enable them to function effectively as managers at various levels in the private, public, and voluntary sectors.

An undergraduate program in the Science of Earth Systems, available to students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering, highlights the study of the Earth as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The curriculum coalesces Cornell's strengths across a broad range of earth and environmental sciences to provide students with a rigorous scientific foundation for the study of the Earth system. The program is described in more detail on pages 21-22.

Student employment opportunities are available through programs in the Center for the Environment. The core programs include the Water Resources Institute; the Institute for Comparative and Environmental Toxicology; the Cornell Watershed Management Institute; and the Institute for Resource and Ecosystems Systems. Other programs of the Center include the Cornell Institute for Research in Chemical Ecology; the Watershed Science and Management Initiative; the Cornell Program in Environmental Sciences for Educators and Youth; the Cornell Program on Breast Cancer and Environmental Risk Factors in New York State; the Work and Environment Initiative; the Ocean Resources and Ecosystems Program; and the Cornell Program on Environmental Conflict Management.

Students interested in the environment will also find many organizations, resources, and activities beyond the classroom setting at Cornell. The CIE sponsors guest lecturers and co-hosts international conferences with a variety of departments across the campus. Providing a forum for the diversity of environmental interests and perspectives, the student-produced publication, *URSUS: The Cornell Forum for Environmental Issues*, seeks to promote the sharing of environmental information within and around the Cornell community. Other environmental organizations on campus include, but are not limited to, the Compost Club, Cornell Greens, Cornell Laboratory of Ornithology, Earthrise Committee (Ecology House), and Eco-Justice.
rather than allowing them to lapse, the center continues to support those that show promise to keep the voluntary faculty groups operating together until new outside funding can be acquired. The center is also responsible for the International Students and Scholars Office.

For additional information on current programs, publications, and courses, contact

The Mario Einaudi Center for International Studies
Cornell University

FAX 607/254-5000

cogst@comell.edu

Gender and Global Change:
310 Triphammer Rd.

Cornell Food and Nutrition Policy Program:
David Sahn, director
308 Savage Hall

Current programs coordinated by the Einaudi Center include the following:

Master of Professional Studies in International Development:
Norman Uphoff, field representative
B31 Warren Hall

A program intended for midcareer practitioners is sponsored by the center and leads to a Master of Professional Studies in International Development. Interested individuals should apply through the Graduate School.

Program on International Relations:
Matthew Evangelista, director
160 Uris Hall

Undergraduates interested in an international relations concentration should see Professor Evangelista or Mr. Christoph Kunkel.

Cornell Abroad:
Richard Gaulton, director
474 Uris Hall

International Students and Scholars:
Jerry Wilcox, director
B50 Caldwell Hall

COGNITIVE STUDIES
235 Uris Hall (255-6431) (cogst@cornell.edu)

Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The comparison between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Psychology, Linguistics, and Philosophy, as well as Modern Languages and Mathematics (College of Arts & Sciences), Computer Science (College of Arts & Sciences and College of Engineering), Human Development (College of Human Ecology), Neurobiology & Behavior (Division of Biological Sciences), Education (College of Agriculture and Life Sciences), and the Johnson Graduate School of Management.

Undergraduate Programs
An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Sue Wurster (255-6431 or cogst@cornell.edu).

Graduate Programs
At the graduate level Cornell offers a graduate field minor in cognitive studies. Cornell's unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, or Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Carol Rosen, director of graduate studies, 511 Morrill Hall, (255-0722; cgrl@cornell.edu), or Sue Wurster, Administrative Assistant, 235 Uris Hall, Office of Cognitive Studies (255-6431, cogst@cornell.edu).

Courses
Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies."

CORNELL ABROAD
474 Uris Hall 607/255-6224, fax 607/255-8700, e-mail: CUAbroad@cornell.edu
WWW home page: http://www.einaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a broad range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree, at a cost that is generally no greater than for study on campus.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD
Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in approximately 40 countries. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA

Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE);

Kenya: Wildlife Management (School for Field Studies), Kenya Semester Program (St. Lawrence University);
ASIA
China: Chinese University of Hong Kong; Inter-University Program for Chinese Language Studies at Tsinghua, Peking, and Nanjing Universities (CIEE); International Chinese Language Program at National Taiwan University;
India: School for International Training;
Indonesia: Institut Keguruan Dan Ilmu Pendidikan (IKIP) in Malang (CIEE);
Japan: *Kyoto Center for Japanese Studies; various university programs;
Korea: Yonsei University;
Nepal: *Cornell-Nepal Study Program (Samyukta Adhyayan Karikam Nepal) at Tribhuvan University;
Thailand: Khon Kaen University (CIEE);
Vietnam: University of Hanoi (CIEE)

AUSTRALIA
Australian National University, Canberra; University of Sydney; University of Melbourne; University of New South Wales; Sydney Institute, University of New England, Armidale; University of Queensland, Brisbane; University of Wollongong; University of Western Australia, Perth; School for International Training; Sydney Internship (Boston University);

EUROPE
Denmark: *Denmark's International Study Program (DIS);
France: *EDUCO (Cornell and Duke in Paris) at Universite de Paris VII, Paris I, Institut d'Etudes Politiques de Paris (*Sciences Po*); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University);
Germany: various university-based study abroad programs including the Berlin Consortium for German Studies at the Free University of Berlin; Wayne State University in Munich and Freiburg;
Greece: College Year in Athens;
Ireland: University of Limerick, Trinity College and University College, Dublin;
Italy: Cornell College of Art, Architecture and Planning Program in Rome; Bologna Cooperative Studies Program; Intercollegiate Center for Classical Studies in Rome; programs in Florence and other cities;
Netherlands: Leiden University; University of Maastricht, Center for European Studies;
Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian);
Spain: *Cornell-Michigan-Penn program at the University of Seville;
Sweden: *Swedish Child Care and Family Policy Internship at the University of Goteborg; Agricultural College of Sweden, Uppsala; The Swedish Program at the University of Stockholm;

United Kingdom: *Direct enrollment at: University of Bath; University of Birmingham; University of Bristol; Cambridge University; University of East Anglia; University of Edinburgh; University of Glasgow; University of Lancaster; University of Manchester; University of Nottingham; Oxford University; University of Reading; University of St. Andrews; University of Sussex; University of Warwick; University of London: King's College, University College, Imperial College of Science and Technology; and the London School of Economics and Political Science, School of Oriental and African Studies, School of Slavonic and East European Studies.

Other Locations
Argentina and Chile: various university-based study abroad programs through the University of Illinois or SUNY College at Plattsburgh;
Belize, Brazil, Chile: School of International Training;
Costa Rica: Organization for Tropical Studies (OTS) Undergraduate Semester Abroad in tropical biology; School for Field Study; Universidad National (Heredia);
Ecuador and Jamaica: Partnership for Service Learning;
Honduras: Escuela Agropecuaria Panamericana (Zamorano);
Mexico: Instituto Tecnologico y de Estudios Superiores de Monterrey (ITESM) Universidad de las Americas-Puebla (UDLA); Universidad Iberoamericana; School for Field Studies in Baja California;

MIDDLE EAST
Egypt: American University in Cairo;
Israel: Ben-Gurion University; Haifa University; Hebrew University of Jerusalem; Tel Aviv University;
Morocco: School for International Training;

Other Locations
Cornell students are by no means limited to the locations listed above. In recent years, they have studied in Austria, Czech Republic, Dominican Republic, India, New Zealand, the Philippines, Poland, Portugal, Switzerland, Turkey, Venezuela, and elsewhere.

Who Studies Abroad
Students from all seven undergraduate colleges and from all major fields study abroad; they are generally expected to have a cumulative grade point average of 3.0 or above. More than 500 undergraduates studied abroad last year. Because the colleges usually require that students complete at least sixty hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually not able to count student abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended, especially for students enrolling in non-English speaking universities.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally by other institutions—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, ask questions of the staff, and meet with the associate director to gather information. The Cornell Abroad website is a good place to browse through program offerings and to explore links to universities worldwide. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both college study abroad and faculty advisers.

Registration, Credit Transfer, and Grades
Students who apply through Cornell Abroad to programs approved by their colleges, as outlined above, remain registered at Cornell during study abroad. They are eligible for financial aid and receive full academic credit for pre-approved courses of study completed with satisfactory grades. Students enroll for a
full load of courses abroad, according to the standards of the foreign institution, and normally receive 30 credits per year, or 12 to 20 credits per semester. The colleges review coursework taken abroad and make the final decisions concerning credit transfer and distribution. When study abroad credit has been transferred, the transcript will indicate the name of the courses taken, the grades received, and the total credits earned for each semester. The foreign grades are not translated into the Cornell/American grading system, nor are they averaged into the Cornell grade point average.

Foreign Language Requirements
Study abroad programs in non-English-speaking countries that offer direct enrollment in universities generally require at least two years, or the equivalent, of college-level language study. Students should make firm plans for any requisite language courses early in their freshman year. English-language study abroad programs are increasingly available outside universities in non-English-speaking countries—for example, Belgium, Denmark, Egypt, France, Hong Kong, Indonesia, Italy, Japan, Korea, Netherlands, People’s Republic of China, and Sweden. Cornell students who participate in such non-university programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in university halls of residence, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.

Costs
Students studying abroad on Cornell programs in Copenhagen, Gothenburg, Kyoto, Nepal, Paris, Seville, and the United Kingdom in 1996-97 pay a uniform study abroad tuition of $14,200 per semester, which covers, tuition, housing, orientation, some field trips and excursions. Meals and airfare may also be included in particular Cornell programs. Students studying abroad on all other programs in 1996-97 pay the tuitions and other costs charged by their programs, and a Cornell international fee of $5,300 per semester or $6,200 for the full academic year. The international program tuition covers the direct and indirect costs of study abroad to the university, including financial aid for all study abroad students.

Financial Aid
Students who are accepted for study abroad during the academic year or semester, having applied through Cornell Abroad, are eligible for financial aid, consistent with general university policy; this applies to all programs, whether run directly by Cornell or not. Students who have transferred into Cornell with 60 or more credit hours are not likely to receive aid for study abroad assuming they would thereby need more than eight semesters to earn the undergraduate degree.

Security Abroad and Related Issues
The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretation of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of State Office of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell; they are advised to inquire about those institutions’ policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad (474 Uris Hall). Richard Gauleron, director; Beatrice B. Szekely Ph.D., associate director; Elizabeth R. Okihoro, enrollment manager; Kathy Lynch, accounts coordinator. The Cornell Abroad library contains an extensive collection of written and computer accessed university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. In the early weeks of every semester, faculty, students, and staff discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad World Wide Web home page at http://www.ciaonline.cornell.edu/cabroad

College Study Abroad Advisers
Agriculture and Life Sciences: Bonnie Shelley, assistant director of Counseling and Advising, 140 Roberts Hall; Joani H. Art, and Planning. Professor John Forester, associate dean, 129 Sibley; Arts and Sciences: Dr. Maria Terrell, assistant dean, 55 Goldwin Smith Hall; Engineering. Dan Maloney Hahn, 157 Olin Hall; Engineering. Professor Richard Penner, 1828 Statler Hall, Human Ecology. Dr. Mary Rhodes, registrar, N101 Martha Van Rensselaer; Industrial and Labor Relations: Laura Lewis, student development specialist, 101 Ives Hall.

CORNELL-IN-WASHINGTON PROGRAM
471 Holister Hall (255-4690)
Cornell-in-Washington is a program that offers students from all colleges within the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation’s political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington’s rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history, literature, art, and the full range of the American humanistic tradition. The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and 2) studies in the American experience. Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor; twenty-seven residential units for students and faculty are on the upper floors.

The Cornell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credit toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

Tuition
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

Housing
Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate plans, a refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.
Applications
Application forms are available from the Cornell-in-Washington office at 471 Hollister Hall. Applications should be submitted the semester prior to participation.

Information
Regular information meetings are held on campus in early October and March. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 471 Hollister Hall (607) 255-4090, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

CORNELL INSTITUTE FOR PUBLIC AFFAIRS
473 Hollister Hall (255-8018)
The Cornell Institute for Public Affairs (CIPA) is a university-wide two-year graduate professional program leading to a Master of Public Affairs Administration degree. Its mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. We use Cornell's cutting-edge strengths as a major research university to understand rapidly evolving public interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Examples of Cornell's extraordinary breadth of policy-related specialties include science and technology, health, education, and social services administration, agricultural policy, nutrition, international development, environmental studies, peace studies, labor relations; city and regional planning; and ethics in public life. These areas of expertise provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's colleges as well as the Cornell Law School, with whom a joint M.P.A./J.D. degree is offered, and the Johnson Graduate School of Management.

The CIPA program has been developed to offer both a sound foundation in the principles, tools, and techniques for a career and leadership in public affairs and the flexibility to accommodate and encourage the special policy-related interests of its students.

The curriculum is structured into three parts: four required core courses taken by all CIPA Fellows; area requirements focused on developing the wide variety of skills necessary for the public policy professional; and sectoral specialties, focused on the particular interest of the Fellow and leading to a thesis.

The Core Courses
These courses have been developed specially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of programs, their supporting institutions, and their effective administration. They will also provide strategies for implementing change in complex heterogeneous societies.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 720) This course is designed to give students the basic management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

CIPA II: Public Political Economy (ECON 639 or CEE 528) Techniques of economic analysis are used to understand the need for various public programs, to estimate the value of new programs and policies, and to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621) This course is focused on the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (SOC 526) This course incorporates the study of analytic methods, especially the use of statistics and simulation models, to study the structure of public programs and to assess their consequences.

The Area Requirements
In addition to the four core courses, Fellows must also complete satisfactorily a series of foundation subject area requirements that are essential to the training of public policy professionals. These areas are: methodology, politics and policy, economics, math and statistics, finance, regulation, ethics, and public law.

The Sectoral Specialty
At least three courses taken by individual Fellows will be in their sectoral specialty or "concentration." These widely divergent and depend on the unique interests and background of the individual student.

The CIPA Thesis
Each Fellow must complete a thesis that applies the conceptual tools, theories, and analytical techniques to a problem in the Fellow's area of sectoral expertise. As the culmination of each M.P.A. course of study, this thesis must be both critical and creative, reflecting the Fellow's ability to identify, analyze, and generate supportable solutions to important public policy questions.

Additional Requirements
All M.P.A. candidates must spend four semesters in residence to complete the degree.

The Faculty
In addition to our four core faculty members (Richard E. Schuler, director, economics and civil and environmental engineering; Steven Caldwell, sociology; Arch Dotson, government; and David Lewis, city and regional planning) who offer the four core courses and advise the Fellows in the development of their programs of study, more than one hundred faculty members from nearly all colleges at Cornell participate in the graduate field of public affairs and policy, and they are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

Special Programs
A combined four-year MPA/JD degree program is available. For selected Cornell undergraduates who are accepted by the end of their junior year, a combined five-year bachelor/master's program can be arranged.

Application
Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. Students requesting aid, however, must submit applications by March 1 for consideration. For an application or more information, contact Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018, fax: 607-255-5240, e-mail: cipa@cornell.edu, web site: www.cipa.cornell.edu).

Financial Support
As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any one student full support. Therefore, applicants are encouraged to explore and exploit all available sources of external funding.

For an application or more information, contact Cornell Institute for Public Affairs, 473 Hollister Hall (phone: 607-255-8018, fax: 607-255-5240, e-mail: cipa@cornell.edu).

CORNELL PLANTATIONS
One Plantations Road (255-3020)
e-mail: cu_plantations@cornell.edu

A place of exceptional diversity and opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its 3,000+ acres include the woodlands and gorges bordering campus, as well as specialized gardens and the 100-acre arboretum that features a field flower meadow and trees and shrubs hardy in central New York State. Cornell Plantations provides unique outdoor laboratories and plant collections for Cornell's academic programs and research in disciplines that include agronomy, biology, ecology and systematics, entomology, horticulture and ornamental horticulture, fruit and vegetable science, geology, landscape architecture, natural resources, plant breeding, and plant pathology. While much of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas for classes and research can be made by calling Cornell Plantations.
Students are encouraged to volunteer as photographers, authors, tour guides, and gardeners. Maps, information, publications, and class brochures (for non-credit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Non-credit courses in horticulture, plant science, geology, tree-hand drawing, and other natural history topics are offered throughout the year. A one-credit seminar series (HORT 480) is offered each fall. And a three-credit course, HORT 485 Public Garden Management, is offered every other spring semester.

PROGRAM ON ETHICS AND PUBLIC LIFE

119 Stimson Hall (255-8515)
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of property and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell’s initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing anything of their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics and Public Life. On the contrary, we seek to enrich and sharpen the discussion of ethical issues by students whose central educational interests lie elsewhere, but whose work and lives will nevertheless confront them with dilemmas and responsibilities for which a university education should prepare them. EPL aims to enrich existing departments with courses that are intellectually serious and practically fruitful at the same time. It offers a concentration in Law and Society (see separate listing under “Special Programs and Interdisciplinary Studies”).

EPL Core Courses

PHIL 246 Ethics and the World Environment
PHIL 247 Ethics and Public Life
PHIL 294/GOVT 294 Global Thinking @
PHIL 342 Law, Society, and Morality
PHIL 343 Political Obligation and Civil Disobedience
GOVT 469/Phil 369 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation
GOVT 460/WOMN 466/Law 648 Feminism and Gender Discrimination
GOVT 468/Phil 368 Global Climate and Global Justice

GOVT 491/691 Normative Elements of International Relations

Related Courses

B&SOC 206/S&TS 206 Ethics and the Environment
CEP 352 Economics of Welfare Policy
CPY 549 Ethics and Practical Judgment in Planning Practice
ENGR 360/S&TS 360 Engineering Ethics
GOVT 474/PHIL 446 Topics in Social and Political Philosophy
HSS 658 Ethics, Public Policy, and American Society
ILHR 360 Women at Work
ILRC 401 My Brother’s Keeper
ILRC 488 Ethics at Work
ILRC 488 Liberty and Justice For All
ILRRC 604 Theories of Equality and Their Application in the Workplace
LAW 655 International Human Rights
LAW 667 Law and Ethics of Lawyering
LAW 718 Ethic Conflict and International Law
NBA 578 Business Ethics
NTRES 407 Religion, Ethics, and the Environment
NTRES 411 Seminar in Environmental Ethics
PHIL 145 Contemporary Moral Issues
PHIL 241 Ethics
PHIL 245 Ethics and Health Care
PHIL 246 Ethics and the Environment
PHIL 341 Ethics and Public Affairs
PHIL 344 History of Ethics: Ancient and Medieval @
PHIL 345 History of Ethics: Modern @
PHIL 346 Modern Political Philosophy
Henry Shue, director, 119 Stimson Hall, 255-8515; Henry Shue, Wyn and William Y. Hutchinson Professor of Ethics and Public Life; Kathryn Abrams, Professor of Law.

PROGRAM IN REAL ESTATE

114 West Sibley Hall (255-7110)
The two-year Master of Professional Studies (MPS) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the ion or early stages of their careers. Two entities provide support for the degree program. The Program in Real Estate exists at Cornell University to serve as the integrating organizational unit for financial management and administration of academic real estate activities on and off campus. The Field of Real Estate is a committee of faculty members from several different colleges that is directly involved in the design and administration of the real estate curriculum.

The professional study of real estate is concerned with the finance, exchange, development, management, marketing, and many other aspects of the real estate business. Real estate professionals also bring an understanding of the long-range social, political, ethical, and environmental implications of decisions about real estate. The 62 credit hours of course work earned to earn the degree provide a comprehensive and lasting foundation for professional careers in real estate.

Core courses in financial management, economics, real estate finance and investment, market analysis, project development, housing and environmental issues will be required during the first year of study. During the second year, students take additional core courses and elective courses in their areas of concentration. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., an international real estate concentration).

Admissions

Admissions procedures for the MPS (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must have completed a bachelor’s degree with a good academic record. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student’s academic and professional work must be submitted. There is no work experience requirement for admission. Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores.

For more information, contact Professor Robert Abrams, director of the Program in Real Estate (607-255-7110) or Professor Matthew Drennan, director of graduate studies (607-257-7276) or E-mail real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTER-COLLEGE PROGRAM

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we must understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system, and understanding their various interactions is crucial for understanding our environment.

A new major, Science of Earth Systems (SES), is now available for students in the Colleges of Agriculture and Life Sciences, and Arts and Sciences. The SES program of study emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell’s strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century. Students can enter the major in the College of Agriculture and Life Sciences and in the College of Arts and Sciences. In the College of Engineering, the SES program is one of two options in the Geological Sciences major. It is also an option in Agricultural and Biological Engineering.
The SES Curriculum

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In addition, students take a two-credit SES Colloquium, which is designed to inform students about the field and to provide a sense of community for SES students. Graduates receive a B.S. degree.

The requirements for the major are summarized as follows:

1. MATH 191, 192 (or MATH 111, 112)
2. Two calculus-based physics courses: (e.g., PHYS 207–208).
3. Two introductory chemistry courses: (e.g., CHEM 207–208).
4. Two biology courses: (e.g., BIO G 101/102 or equivalent, or Chem 207–208).
5. Two additional courses in higher mathematics and/or basic sciences and/or GEOL 201.
8. Three intermediate to advanced-level courses approved by the SES Curriculum Committee. These courses should build on the core sequence and include upper-level courses with prerequisites in the basic sciences and mathematics. The selection of these courses can be used to prepare for careers or graduate study in specific environmental science disciplines such as geology, hydrological sciences, biogeochemistry, ecology, oceanography, and atmospheric sciences. Effective combinations of these disciplines are also possible.

SES Course Descriptions

Note: Class meeting times are accurate at the time of publication. If changes are necessary, new information will be provided as soon as possible.

SES 101-102 Science of Earth Systems Colloquium (enroll in ABEN 120-121, GEOL 123-124, or SCAS 101-102)
101, fall; 102, spring. 2 credits each term. S-U grade only. 101 is not prerequisite for 102. One lecture, one recitation. T 1-2:50.
Weekly seminars, field trips, and hands-on learning experiences in current topics in the study of the earth system. Introduces the student to scientific issues relating to understanding our planet and managing the environment. (http://wwwscas.cit.cornell.edu/SES/)

SES 301 Climate Dynamics (enroll in ASTRG 331 or SCAS 331)
Fall. 4 credits. Prerequisite: Math 112 or 192 or equivalent. Lecs, M W F 1:25; rec, W 2:50. K. Cook, P. Gierasch.
The purpose of this course is to develop a physical understanding of the climate system. Processes that determine climate and contribute to its change are discussed, including comparisons with the climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

SES 302 Evolution of the Earth System (enroll in GEOL 302 or SCAS 332)
Spring. 4 credits. Prerequisites: Math 112 or 192 and Chem 207 or equivalent, or instructor's approval. Lecs, M W F 11:15; recitation TBA. W. White, B. Isacks, W. Allmon, K. Cook.
The co-evolution of life and the earth system over three time scales: origin of the earth and life and earth's early history, plate tectonics, continental drift and climate changes during the past billion years; and mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting the paleontological, geochemical, and tectonic information preserved in the rock record. (http://www.geo.cornell.edu/geology/classes/SES302.html)

SES 321 Biogeochemistry (enroll in GEOL 321 or NTRES 321)
Fall. 4 credits. Prerequisites: college-level biology and chemistry. Lecs R 12; 2:15; L. Derry and J. Yavitt.
The cycling of elements at the earth's surface through biologically governed processes and fluxes. Topics include nutrient cycling and acid-base chemistry, nutrient limitation and recycling in terrestrial and marine systems, anthropogenic pollution, isotopic tracers, and mathematical modeling of element fluxes.

SES 402 Mechanics in the Earth and Environmental Sciences (enroll in ABEN 390)
The study of the earth and the environment requires an understanding of transport and other physical processes within and at the surface of the earth. This course encourages the students to develop a broad working knowledge of mechanics and its application to the earth and environmental sciences, providing the background necessary to study the professional literature.

Advising

Students will be matched with an SES adviser according to the student's interests and the college in which the student is enrolled. The adviser will assist the student in selecting the four upper-level courses required by the SES Program. Several example curricula have been designed as guides for students in each of the colleges, to demonstrate how the college and SES Program requirements are met.

Entering the SES Program

Transfers into the program during the freshman and sophomore years will be relatively straightforward for students who have already begun a calculus sequence and have taken courses in the basic sciences. Other interested students, either junior- or senior-level science and math students or those from other fields, should contact an SES adviser to explore the possibility of entering the SES program.

For more information on the SES program and classes, see the Web page (http://www.geo.cornell.edu/SES/SES_home.html) and contact:

College of Agriculture and Life Sciences: K. H. Cook (Soil, Crop, and Atmospheric Sciences), R. W. Howarth (Ecology and Systematics), J. Parlang (Agricultural and Biological Engineering);

College of Arts and Sciences: T. Dawson or L. Hedlin (Ecology and Systematics), P. Gierasch (Astronomy), B. L. Isacks or R. Kay (Geological Sciences).

College of Engineering: W. Brusait (Civil and Environmental Engineering), B. L. Isacks or R. Kay (Geological Sciences), M. Kelley (Electrical Engineering), J. Parlang (Agricultural and Biological Engineering).

DEPARTMENT OF STATISTICAL SCIENCE

612 Rhodes Hall (255-8066)

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels.

Statistics courses are currently offered by the department listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through the Department of Biometrics in the College of Agriculture and Life Sciences. Statistical computing consulting is available through a

The department is organized into four units: Biometrics, Engineering Statistics, Mathematical Statistics, and Social Statistics. The areas covered include agricultural statistics; biostatistics; economic and social statistics; epidemiology; marketing and quality control; reliability; probability theory; sampling theory; statistical computing; statistical design; statistical theory; and stochastic processes and their applications.

Course designations

The following course identifiers are used to designate the courses offered by the separate units: Biometrics Unit (CALS), STBTRY, Engineering Statistics Unit (ENGR), STENG; Mathematical Statistics Unit (ARTS), STMATH; Social Statistics Unit (ILLR), STSOC. To enroll in one of the courses see the listing for the appropriate college.

Descriptions of undergraduate and graduate courses are listed below.

Biometrics Unit

STBTRY 200 Statistics and the World We Live In (enroll in BTRY 200)

Spring. 3 credits.

Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

STBTRY 215 Introduction to Statistical Methods (enroll in BTRY 215)

Fall. 3 credits. Prerequisite: BTRY 200 or prior experience in data collection and interpretation.

Statistical methods are developed and used to analyze data arising from the biological sciences. Topics include point and confidence interval estimation, hypothesis testing, t-tests, correlation, simple linear regression, and analysis of variance and multiple regression. Statistical computing is taught and used throughout the course. Emphasis is on proper use of statistical methodology and interpretation of statistical analyses.

STBTRY 400 Biometry Seminar (enroll in BTRY 400)

Fall or spring. 1 credit. S-U grades only. Prerequisite: BTRY 409 or BTRY 602 or permission of instructor.

Students will attend weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take course twice.

STBTRY 408 Theory of Probability (enroll in BTRY 408)

Fall. 4 credits. Prerequisite: MATH 112, 122 or 192, or permission of instructor.

An introduction to probability theory, foundations, combinatorics, random variables and their probability distributions, expectations, generating functions and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

STBTRY 409 Theory of Statistics (enroll in BTRY 409)

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of statistics and statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider BTRY 601-602 or BTRY 215.

STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)

Fall or spring. 1–3 credits. S-U grades optional.

A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

STBTRY 498 Statistical Consulting (enroll in BTRY 498)

Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or corequisites: BTRY 409 and 602 or permission of instructor.

Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)

Fall or spring. 1–3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

STBTRY 499 Undergraduate Research (enroll in BTRY 499)

Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research.

Students must register with an Independent Study form (available in 140 Roberts Hall).

STBTRY 600 Statistics Seminar (enroll in BTRY 600)

Fall or spring. 1 credit. S-U grades only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

STBTRY 601 Statistical Methods I (enroll in BTRY 601)

Fall or summer. 4 credits. Limited to graduate students, others by permission of the instructor.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-sample analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

STBTRY 602 Statistical Methods II (enroll in BTRY 602)

Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.

A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques, least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria; principles of experimental design, analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

STBTRY 603 Statistical Methods III (enroll in BTRY 603)

Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor.

Offered alternate years. Not offered spring 2000. Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)

Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor.

Offered alternate years. Not offered 1998–99, next offered spring 2000. Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

STBTRY 607 Nonparametric and Distribution-Free Statistical Methods (enroll in BTRY 607)

Spring. 1/3 of the term. 1 credit. S-U grades only. Prerequisite: BTRY 601 or equivalent. Offered alternate years. Not offered 1998–99, next offered spring 2000.

Nonparametric and distribution-free alternative to normal-theory testing procedures are presented; sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs, comparisons among several means; correlation and regression; goodness-of-fit; and tests based on randomization of the data.

STBTRY 639 Epidemiology Seminar (enroll in BTRY 639)

Fall. 1 credit. S-U grades only. Permission of instructor.

This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

STBTRY 662 Mathematical Ecology (enroll in BTRY 662)

Fall. 3 credits. S-U grades optional.

Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

**STBTRY 762 Topics in Environmental Statistics** (enroll in BTRY 672 or BTRY 672)
Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.
This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

**[STBTRY 682 Statistical Methods for Molecular Biology (enroll in BTRY 682)](http://www.example.edu)**
Spring. 2 credits. S-U only. Prerequisite: permission of instructor. Not offered 1998-99.
Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary. The course may be repeated for credit.

**STBTRY 694 Graduate Special Topics in Biometry and Statistics** (enroll in BTRY 694)
Fall or spring. 1–3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**STBTRY 697 Individual Graduate Study in Biometry and Statistics** (enroll in BTRY 697)
Fall, spring, or summer. 1–3 credits. S-U grades optional. Consists of individual tutorial study discussed by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

**STBTRY 717 Linear and Generalized Linear Models** (enroll in BTRY 717)
Spring. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 417 and 602 or equivalents. Offered alternate years.
Statistical modelling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood, and generalized estimating equations. The use of link functions and generalized linear models to accommodate nonlinear models and non-normally distributed data. The use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

**STBTRY 795 Statistical Consulting** (enroll in BTRY 795)
Fall or spring. 2 credits. S-U grades only. Limited to graduate students. Participation in the Department of Biometrics consulting service; faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually start from semester to semester, the course may be repeated for credit.

**STBTRY 798 Graduate Supervised Teaching** (enroll in BTRY 798)
Fall and spring. 2–4 credits. S-U only. Permission of instructor and chair of special committee plus at least 2 advanced courses in statistics and biometry. Students assigned in teaching a course appropriate to their previous training. Students will meet with a discussion section, prepare course materials, and assist in grading. Credit hours will be determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

**Engineering Statistics Unit**

**STENGR 270 Basic Engineering Probability and Statistics** (enroll in ENGR 270 or OR&IE 270)
Fall or spring. 3 credits. Prerequisite: first-year calculus. This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

**STENGR 310 Introduction to Probability and Random Signals** (enroll in ELE E 310)
Spring. 4 credits. Prerequisite: Mathematics 294. This course may be used in place of Engr 270 to help satisfy the engineering distribution requirement. Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions; nonlinear transformations of data; expectation, correlation, and the central limit theorem.

**STENGR 320 Optimization I** (enroll in OR&IE 320)
Fall. 4 credits. Prerequisite: MATH 221 or 294. Formulation of linear programming problems and solution by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning.

**STENGR 321 Optimization II** (enroll in OR&IE 321)
Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent. A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerous applications.

**STENGR 360 Engineering Probability and Statistics** (enroll in OR&IE 360)
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to develop models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

**STENGR 431 Discrete Models** (enroll in OR&IE 431)
Fall. 4 credits. Prerequisite: OR&IE 330 and COM S 211 or permission of instructor. Basic concepts of graphs, networks, and discrete optimization. Fundamental modes and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling sales man problem, and network design.

**STENGR 435 Introduction to Game Theory** (enroll in OR&IE 435)
Spring. 3 credits. A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

**STENGR 476 Applied Linear Statistical Models** (enroll in ORIE 476)
Spring. First half of term. 2 credits. Prerequisite: OR&IE 270. Multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

**STENGR 511 Error-Control Codes** (enroll in ELE E 561)
Fall. 4 credits. Prerequisite: ELE E 301, 521, or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array minimum-distance codes, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

**STENGR 560 Engineering Probability and Statistics II (enroll in OR&IE 360)**
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent.
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

**STENGR 561 Queuing Theory and Its Applications (enroll in OR&IE 561)**
Spring. 3 credits. Prerequisite: OR&IE 361 or permission of instructor.

**STENGR 562 Inventory Theory (enroll in OR&IE 562)**
Spring. 4 credits. Prerequisites: OR&IE 361 and OR&IE 270, or permission of instructor.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experimental learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

**STENGR 563 Applied Time-Series Analysis (enroll in OR&IE 563)**
Fall. 3 credits. Prerequisites: OR&IE 361 and OR&IE 270, or permission of instructor. Not offered 1998-99.
The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

**STENGR 564 Introductory Engineering Stochastic Processes II (enroll in OR&IE 564)**
Fall. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462.
Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

**STENGR 575 Experimental Design (enroll in OR&IE 576)**
Randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

**STENGR 576 Regression (enroll in OR&IE 576)**
Spring. Second half of term. Prerequisite: OR&IE 476.
Nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, regression with correlated errors. Computing in MINITAB OR SAS.

**STENGR 577 Quality Control (enroll in OR&IE 577)**

**STENGR 580 Design and Analysis of Simulated Systems (enroll in OR&IE 580)**
Fall. 4 credits. Prerequisites: programing experience and OR&IE 360/560, or permission of instructor. Note: OR&IE 360/560 may be taken concurrently.
Digital computer programs to simulate the operation of complex discrete, systems in time. Modeling, program organization, pseudo-random-variable generation, simulation languages, statistical considerations, applications to a variety of problem areas.

**STENGR 630 Mathematical Programming I (enroll in OR&IE 630)**

**STENGR 632 Nonlinear Programming (enroll in OR&IE 632)**
Fall. 3 credits. Prerequisite: OR&IE 630.
Necessary and sufficient conditions for unconstrained and constrained optima.
Duality theory. Computational methods for unconstrained (e.g., gradient projection) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.
STENGR 650  Applied Stochastic Processes (enroll in OR&IE 650)  Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that present the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

STENGR 651  Probability (enroll in OR&IE 651)  Spring. 4 credits. Prerequisite: real analysis at the level of Math 413 and a previous one-semester course in calculus-based probability. Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

STENGR 662  Advanced Stochastic Processes (enroll in OR&IE 662)  Spring. 3 credits. Prerequisite: OR&IE 651 or equivalent. Brownian motion, martingales, Markov processes, and topics selected from: diffusions, stationary processes, point processes, weak convergence for stochastic processes, and applications to diffusion approximations. Levy processes, regenerative phenomena, random walks, and stochastic integrals.

STENGR 670  Statistical Principles (enroll in OR&IE 670)  Fall. 4 credits. Co-requisite: OR&IE 650 or equivalent. Review of distribution theory of special interest in statistics; normal, chi-square, binomial Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemmas and likelihood ratio principle; confidence interval construction; introduction to linear models.

STENGR 672  Selected Topics in Environmental Statistics (enroll in OR&IE 672 or ENGR 672)  Fall or spring. 2 credits. Prerequisite: ENGR 270 or equivalent. This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

Mathematical Statistics and Probability Unit

STMATH 171  Statistical Theory and Applications to the Real World (enroll in MATH 171)  Fall, spring, or summer. 4 credits. Prerequisite: high school mathematics. This introductory statistics course will discuss techniques for analyzing data occurring in the real world and the mathematical and philosophical justification for these techniques. Topics include population and sample distributions, central limit theorem, and statistical theories of point estimation, confidence intervals, and testing hypotheses. The linear model, and the least squares estimator. The course concludes with a discussion of tests and estimates for regression and analysis of variance (if time permits). The computer will be used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem.

STMATH 471  Basic Probability (enroll in MATH 471)  Fall. 4 credits. Prerequisite: Mathematics 221. May be used as a terminal course in basic probability. Intended primarily for those who will continue with Mathematics 472. Topics include combinations, important probability laws, expectations, moment-generating functions, limit theorems. Emphasis is on diverse applications and on development of use in statistical applications. See also the description of Mathematics 571.

STMATH 472  Statistics (enroll in MATH 472)  Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221. Some knowledge of multivariate calculus helpful but not necessary. Classical and recently developed statistical procedures are discussed in a framework that emphasizes the basic principles of statistical inference and the rationale underlying the choice of these procedures in various settings. These settings include problems of estimation, hypothesis testing, large sample theory.

STMATH 474  Basic Stochastic Processes (enroll in MATH 474)  Spring. 4 credits. Prerequisites: Mathematics 471 or equivalent and knowledge of linear algebra such as taught in Mathematics 221. Not offered 1998-99. This is a second-semester undergraduate course in probability. It covers topics from renewal theory, martingales, discrete and continuous time Markov chains, Brownian motion and related diffusion processes, and applications to queuing theory and finance. Theoretical as well as applied aspects of the subject will be emphasized.

STMATH 671-672  Probability Theory (enroll in MATH 671-672)  671 fall; 672 spring. 4 credits each. Prerequisite: knowledge of Lebesgue integration theory, at least on the real line. Students can learn this material by taking parts of Mathematics 413-414 or 521. Prerequisite for Mathematics 672; Mathematics 671.

STMATH 674  Introduction to Mathematical Statistics (enroll in MATH 674)  Spring. 4 credits. Prerequisite: Mathematics 671 or permission of instructor. Topics include an introduction to the theory of point estimation, consistency, efficiency, sufficiency, and the method of maximum likelihood. Convexity and basic concepts of decision theory are introduced. Concepts of sequential methods may be discussed.

STMATH 771-772  Seminar in Probability and Statistics (enroll in MATH 771-772)  Fall and spring. 4 credits each.

STMATH 777-778  Stochastic Processes (enroll in MATH 777-778)  777 fall; and 778 spring. 4 credits each.

Social Statistics Unit

STSOC 210  Statistical Reasoning I (enroll in ILRST 210)  Fall or spring. 3 credits. Attendance at weekly discussion section is required. An introduction to the basic concepts of statistics and data analysis. Descriptive methods, normal theory models and inference procedures for univariate and bivariate data. Basic statistical designs, an introduction to probability and applications of the Binomial and Normal distributions. Estimation, confidence intervals and tests of significance for a single population mean and proportion, the difference in two population means and proportions, simple linear regression, correlation and two-way contingency tables. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSOC 211  Statistical Reasoning II (enroll in ILRST 211)  Fall or spring. 3 credits. Prerequisite: ILRST 210 or suitable introductory statistics course. A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include: statistical inference; simple linear regression; multiple linear regression; logistic regression; and analysis of variance. Computer packages are used throughout the course.

STSOC 310  Statistical Sampling (enroll in ILRST 310)  Spring. 3 credits. Prerequisite: two terms of statistics. Theory and application of statistical sampling, especially in regard to sample design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences, and business. Course includes an applied project.
STSOC 311 Practical Matrix Algebra (enroll in ILRST 311)
3 credits.
Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis and for other "research methods" courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norm); matrix inversion; linear transformation; eigenvalues; matrix decompositions, ellipsoids and distances; some applications of matrices.

STSOC 312 Applied Regression Methods (enroll in ILRST 312)
Fall, 3 credits. Prerequisite: ILRST 211 or ILRST 211 or equivalent courses.
Matrix algebra necessary to analyze regression models is reviewed. Multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models are covered. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.

STSOC 313 Design and Analysis of Experiments (enroll in ILRST 313)
3 credits. Prerequisite: ILRST 211 or equivalent. Not offered 1998-99.
The statistical design and analysis of comparative experiments including completely randomized, factorials, randomized block, latin squares and split-unit designs including crossover and repeated measures. Application of statistical design to research problems. Analyses to compare treatment groups including ANOVA, ANCOVA, contrasts and multiple comparison procedures. Computer packages are used.

STSOC 314 Graphical Methods for Data Analysis (enroll in ILRST 314)
3 credits. Prerequisite: ILRST 211 or equivalent. Not offered 1998-99.
Classical and recently developed graphical methods for data analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data. Includes study of current computer programs and methods expected to be practical in the near future- graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis; the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.

STSOC 410 Techniques of Multivariate Analysis (enroll in ILRST 410)
3 credits. Prerequisite: ILRST 312 or equivalent. Not offered 1998-99.
Techniques of multivariate statistical analysis discussed and illustrated by examples from various fields. We emphasize application, but theory will not be ignored. Deviation from assumptions and the rationale for choices among techniques are discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Participants should have some knowledge of matrix notation. Topics include: multivariate normal distribution; sample geometry and multivariate distances; inference about a mean vector; comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis; and multivariate multiple regression.

STSOC 411 Statistical Analysis of Qualitative Data (enroll in ILRST 411)
Spring 1999. 3 credits. Prerequisite: two statistics courses or permission of instructor.
An advanced undergraduate and beginning graduate course. Includes treatment of association between qualitative variables, contingency tables, log-linear models, binary ordinal, and multinomial regression models; limit dependent variables.

STSOC 499 Directed Studies (undergraduate) (enroll in ILRST 499)
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

STSOC 510 Statistical Methods for the Social Sciences I (enroll in ILRST 510)
Fall, 3 credits.
A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSOC 511 Statistical Methods for the Social Sciences II (enroll in ILRST 511)
Fall or spring, 3 credits. Prerequisite: ILRST 510 or equivalent introductory statistics course.
A second course in statistics that emphasizes applications to the social sciences. Topics include: simple linear regression, multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

STSOC 610 Seminar in Modern Data Analysis (enroll in ILRST 610)
5 credits. Prerequisite: two statistics courses or permission of instructor. Not offered 1998-99.
An advanced survey of modern data analysis methods. Topics include exploratory data analysis, data reexpression, philosophy of data analysis, robust methods, statistical graphics, regression methods, and diagnostics. Extensive outside readings cover recent and historical work. Participants should have some knowledge of multiple regression, including the use of matrices, and some experience using a computer.

STSOC 611 Statistical Consulting (enroll in ILRST 611)
3 credits. Prerequisite: linear algebra, knowledge of a programming language, and statistics at least through multiple regression. Not offered 1998-99.
A survey of new aspects of statistical computing. Topics include: basic numerical methods, numerical linear algebra, nonlinear statistical methods, numerical integration and approximated density estimation. Additional special topics may include: Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computation, computing environ-

STSOC 612 Statistical Classification Methods (enroll in ILRST 612)
3 credits. Prerequisite: ILRST 312 or equivalent, or permission of instructor. Not offered 1998-99.
An introduction to a variety of statistical techniques that assign objects to categories on the basis of observed characteristics of the objects. Course topics include (but are not limited to): discriminant analysis and its extensions and variations; nearest neighbor methods, classification and regression trees (CART); neural networks for classification, and estimation of error of classification rules.

STSOC 613 Bayesian and Conditional Inference (enroll in ILRST 613)
Spring, 3 credits. Prerequisites: graduate level courses equivalent to OR&IE 670 and OR&IE 651 or permission of instructor.
This course covers the following topics: loss functions and utility theory, prior information and subjective probability, coherency, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computations, ancillarity properties of statistical procedures, and Barnardoff-Nielsen's exact likelihood theory.

STSOC 614 Structural Equations with Latent Variables (enroll in ILRST 614)
Fall, 3 credits. Prerequisites: ILRST 210, ILRST 211 or ILRST 510, ILRST 511 or equivalent.
Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, we will treat them as special cases of the common model. Another goal of the course is to emphasize the application of these techniques.

STSOC 615 Expert Systems and Probabilistic Network Models (enroll in ILRST 615)
3 credits. S-U only. Prerequisite: OR&IE 560 or an equivalent course in probability and statistics. Not offered in 1998-99.
This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include: components of expert systems, rule-based expert systems, probability-based expert systems, uncertainty measures, dependency models, Bayesian and Markov networks, propagation of uncertainties, learning structure from data, and examples of applications. Students will use computer software to gain experience.

STSOC 630 Econometrics II (enroll in ECON 620)
Spring, 4 credits. Prerequisite: Econometrics 519.
This course is a continuation of Econometrics 519 (Econometrics I) covering (1) statistics; estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing and (2) econometrics; the
general linear model, generalized least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

**STSOC 639 Econometrics I (enroll in Econ 619)**

Fall. 4 credits. Prerequisites: Economics 319–320 or permission of instructor.

This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics to be covered are (1) probability theory, probability spaces, random variables, distributions, moments, transformations, conditional distributions, distributions theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; (2) statistics; sample statistics, sufficiency, exponential families of distributions. Further topics in statistics will be considered in Economics 520.

**STSOC 711 Robust Regression (enroll in ILRST 711)**

5 credits. S-U or letter grade. Prerequisite: ILRST 312 or equivalent, or permission of instructor. Not offered 1998-99.

Regression models are simplifications of reality; we rarely expect the model to be exactly true. In many applications of regression, however, small changes in a model, a model assumption, or a data point, can have very large effects on the results. Regression analysis is viewed in this course as a cyclical process, which takes inputs and produces outputs in an iterative or cyclical way; a way in which the outputs can be used to diagnose, validate, criticize, and possibly alter the inputs. As such, this course is an attempt to narrow the gap between the theory and practice of regression analysis. In this course we discuss classical methods as well as a recently-developed general framework for assessing the sensitivity of the outputs to small changes in the input. Students are expected to be able to perform through analyses of real-life data using computer packages. Topics to be discussed include: role of variables in a regression equation, regression outliers and influential observations, robust regression, alternatives to least squares (e.g., LMS, LAV, IRLS), error-in-variables models, and generalized linear models.

**STSOC 712 Theory of Sampling (enroll in ILRST 712)**

3 credits. Prerequisite: calculus and at least one semester of mathematical statistics. Not offered in 1998-99. Sampling theory from the viewpoint of mathematical statistics. The first part of the course focuses on the classical or "design" approach; the second part on the more recent "model-based" approach. Attention is paid to recent process in the field.

**STSOC 713 Counting Processes with Statistical Applications (enroll in ILRST 713)**

3 credits. Prerequisite: a course at the technical level of Math 572 and 574 or permission of instructor. Not offered in 1998-99.

The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. We will formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. We will examine the martingale dynamics for point processes relevant to life-history data. Both parametric and nonparametric inference for multiplicative intensity models will be considered. The large sample properties of the proposed procedures will be discussed. We will also discuss extensions of functional central limit theorems for martingales.

**STSOC 714 Topics in Modern Statistical Distribution Theory (enroll in ILRST 714)**

3 credits. Prerequisite: courses equivalent to OR&IE 651 or Math 571, and BTRY 409 or OR&IE 570. Not offered in 1998-99.

Recent research has revealed vast territories of distribution theory that are unfamiliar to most statisticians. Provides an introduction to three topics underlying this "modern" theory: infinite divisibility, decomposability, and stability; characterization of distributions; extensions of univariate distributions to multivariate distributions.

**STSOC 715 Likelihood Inference (enroll in ILRST 715)**

Fall. 3 credits. Prerequisite: graduate courses equivalent to OR&IE 670.

In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

**STSOC 716 Statistical Consulting (enroll in ILRST 716)**

Fall or spring. 2 credits. Prerequisites: limited to graduate students. S-U grades only. Not offered in 1998-99.

A course in practical consulting on "real-world" statistical problems. Under the supervision of the instructor(s), students will hear problems presented by clients (usually faculty and students from other fields) and will collaborate in proposing a statistical model, analyzing data, and interpreting results. Statistical computing will be used as needed.

**STSOC 730 Advanced Topics in Econometrics II (enroll in ECON 720)**

Spring. 4 credits. Prerequisites: Econometrics 519–520 or permission of instructor.

Advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

**STSOC 731 Time Series Econometrics (enroll in ECON 721)**

Fall. 4 credits. Prerequisites: Economics 519–520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA (p,q) models, spectral density analysis, and vector autoregressive models; parametric and semi-parametric estimation; current developments in distributional theory; estimation and testing in models with integrated regressors including, unit root tests, cointegration, and permanent vs. transitory components.

**STSOC 739 Advanced Topics in Econometrics I (enroll in ECON 719)**

Fall. 4 credits. Prerequisites: Economics 519–520 or permission of instructor.

Advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

**STSOC 799 Directed Studies (Graduate) (enroll in ILRST 799)**

For description, see section, Collective Bargaining, Labor Law, and Labor History.

**PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY**

213 Rice Hall (255-8006)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad disciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

**Graduate Studies**

The graduate Field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology, nutritional and food toxicology; ecotoxicology, and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by the faculty associated with the program focuses on the effects of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

**Courses**

Courses in environmental toxicology are cosponsored by the university academic...
departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the cosponsoring department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255-8008, e-mail: envtox@cornell.edu, www.ccf.cornell.edu/icec.

Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in more than one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. (Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.)

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, Policy Analysis and Management (College of Human Ecology), industrial and labor relations, and sociology.

Applied economics and business management. This program is designed to prepare students for a career in business or in public service. Emphasis is placed on the application of economic theory and management principles. Graduates of this program typically choose careers in investment banking or finance or with firms offering opportunities in sales, marketing, and consulting. Areas of specialization include business management and marketing, food industry management, agribusiness management, and farm business management and finance.

Economics. This program provides a broad view of that social science concerned with the description and analysis of the production, distribution, and consumption of goods and services, the understanding of monetary systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.
Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities; more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Policy Analysis and Management. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of individual workers; negotiation and conflict resolution; and the economic and technological changes that affect the jobs that people perform. Finally, it embraces the many regulations and regulatory agencies created by our society to protect and help both employer and employed.

Sociology. The program provides disciplined understanding of society and social issues. The insights and analytical skills you will acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Society and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas
Courses in areas directly related to these business programs are found in many of the university departments. For example, quantitative methods may be studied in the departments of Mathematics and Computer Science, and courses in public administration are found in the departments of Government, and City and Regional Planning. There are additional programs that allow students with an interest in business to focus on a particular geographic area. Examples are the Latin American Studies Program, the South Asia Program, and the Africana Studies and Research Center. Such interdisciplinary programs as the Program on Science, Technology, and Society and the various programs in international agriculture provide additional opportunities for study of interest to business students.

Combined Degree Programs
Because Cornell has the Samuel Curtis Johnson Graduate School of Management, special opportunities exist for highly qualified undergraduates to combine their undergraduate programs with graduate study in that school. Students in the double-registration program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

### PRELAW STUDY

Law schools do not prescribe any particular prelaw program, nor do they require any specific undergraduate courses as do medical schools. Law touches nearly every phase of human activity, and there is practically no subject that cannot be considered of value to the lawyer. Therefore, no undergraduate course of study is totally inappropriate. Students contemplating legal careers should be guided by certain principles, however, when selecting college courses.

1. **Interest encourages scholarship, and students will derive the greatest benefit from those studies that stimulate their interest.**

2. **Of first importance to the lawyer is the ability to express thoughts clearly and cogently in both speech and writing.** Freshman writing seminars, required of nearly all Cornell freshmen, are designed to develop these skills. English literature and composition, and communication courses, also serve this purpose. Logic and mathematics develop exactness of thought. Also of value are economics, history, government, and sociology, because of their close relation to law and their influence on its development and ethics, and philosophy, because of the influence of philosophic reasoning on legal reasoning and jurisprudence. Psychology leads to an understanding of human nature and mental behavior. Some knowledge of the principles of accounting and of the sciences such as chemistry, physics, biology, and engineering is recommended and will prove of practical value to the lawyer in general practice in the modern world.

3. **Cultural subjects, though they may have no direct bearing on law or a legal career, will expand students' interests; help cultivate a wider appreciation of literature, art, and music; and make better-educated and well-rounded persons.**

4. **Certain subjects are especially useful in specialized legal careers. For some, a broad science background—for example, in agriculture, chemistry, physics, or engineering—when coupled with training in law, may furnish qualifications necessary for specialized work with the government, for counseling certain types of businesses, or for a career as a patent lawyer. A business background may be helpful for those planning to specialize in corporate or tax practice. Students who anticipate practice involving labor law and legislation might consider undergraduate study in the School of Industrial and Labor Relations. Whatever course of study is chosen, the important goals are to acquire perspective, social awareness, and a critical cast of mind; to develop the ability to think logically and analytically; and to express thoughts clearly and forcefully. These are the crucial tools for a sound legal education and a successful career.**

The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences. It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

### PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests.
Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends so to a great extent on the student's other interests. Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell University Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. This is not a traditional "seven year program", separate application to the Medical College is required. Further information about this procedure is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York, 14853-1601.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curriculum.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S1–006 Schuman Hall, Ithaca, New York 14853–6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double-registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853–1601.
ADMINISTRATION
Daryl B. Lund, dean
Brian F. Chabot, associate dean
Kevin Mahaney, assistant dean for public affairs
H. Dean Sutphin, associate dean and director of academic programs
Donald R. Viands, associate director of academic programs
W. Ronnie Coffman, associate dean and director of research
Anthony M. Shelton, associate director of research
Daniel J. Decker, associate director of research
D. Merrill Ewert, associate dean and director of cooperative extension
R. David Smith, associate director of cooperative extension
Norman T. Uphoff, director of international agriculture
James E. Haldeman, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Mary Milks, Patricia Austic, Leora Tripodi
Admissions: Randy Stewart, Laurie Geslip, Jason Locke, Anne LaFave
Career development: William Alberta, Amy Benedict-Martin, Sheri Mahaney
Minority programs: Catherine Thompson

Department Chairs
Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall
Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Biometrics Unit: N. S. Altman, Warren Hall
Communication: C. J. Glynn, Kennedy Hall
Education: D. H. Monk, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Floriculture and ornamental horticulture: T. C. Weiler, Plant Science Building
Food science: D. Miller, Stocking Hall
Fruit and vegetable science: H. C. Wien, Plant Science Building
Landscape Architecture: H. W. Gottfried, Kennedy Hall
Natural resources: J. P. Lassoie, Fernow Hall
Plant breeding: E. D. Earle, Emerson Hall
Plant pathology: S. A. Slack, Plant Science Building
Rural sociology: D. L. Brown, Warren Hall

Soil, crop and atmospheric sciences: J. M. Duxbury, Emerson Hall
Statistical sciences: C. E. McCulloch, Warren Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the development and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:

• Agriculture (production and marketing)
• Biological Sciences
• Community, Human and Rural Resources
• Environment
• Food and Nutrition
• International

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harvard and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Office of Counseling and Advising, the Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture [M.P.S. (Agr.)], H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering, J. A. Bartsch, Riley-Robb Hall
Agricultural Economics, R. N. Boisvert, Warren Hall
Animal Breeding, E. J. Pollak, Morrison Hall
Animal Science, R. L. Quaas, Morrison Hall
Biochemistry, Molecular and Cell Biology; P. A. Karplus, Biotechnology Building
Biometry, S. J. Schwager, Warren Hall
Biological Sciences, P. A. Karplus, Biotechnology Building
Biometrics, M. A. Shapiro, Kennedy Hall
Development Sociology, P. McMichael, Warren Hall
Ecology and Evolutionary Biology, D. W. Winkler, Corson Hall
Education [also M.A.T.], D. E. Hedlund, Kennedy Hall
Entomology, J. K. Liebherr, Comstock Hall
Environmental Toxicology, A. Yen, Rice Hall
Floriculture and Ornamental Horticulture, N. L. Bassuk, Plant Science Building
Food Science and Technology, J. H. Hotchkiss, Stocking Hall
Genetics and Development, T. D. Fox, Biotechnology Building
International Agriculture and Rural Development [M.P.S. (Agr.)], R. W. Blake, Morrison Hall
International Development, N. T. Uphoff, Caldwell Hall
Landscape Architecture [M.L.A.], R. T. Trancik, Kennedy Hall
Microbiology, S. C. Winans, Wing Hall
Natural Resources, M. E. Krasny, Fernow Hall

*Neurobiology and Behavior, S. T. Enlen, Seeley-Mudd Hall

Nutritional Sciences, G. F. Combs, Jr., Martha Van Rensselaer Hall

*Physiology, S. S. Suarez, Vet Research Tower

*Plant Biology, T. G. Owens, Plant Science Building

Plant Breeding, M. E. Sorrells, Bradfield Hall

Plant Pathology, J. W. Lorbeer, Plant Science Building

Plant Protection [M.P.S. (Agr.)], W. E. Fry, Plant Science Building

Pomology, I. A. Merwin, Plant Science Building

Soil, Crop and Atmospheric Sciences, J. H. Cherry, Emerson Hall

Statistics, M. T. Wells, Caldwell Hall

Vegetable Crops, P. M. Ludford, Plant Science Building

*Zoology, J. W. Hermanson, Schurman Hall

*Division of Biological Sciences

Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in sixteen major fields. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations within the major field.

Agricultural and Biological Engineering: R. E. Pitt, 318 Riley-Robb Hall

Agricultural, Resource, and Managerial Economics: D. A. Grossman, 204 Warren Hall

Animal Sciences: E. J. Pollak, B-47 Morrison Hall

Atmospheric Sciences: D. S. Wilks, 1113 Bradfield Hall

Biological Sciences, Division of: J. J. Doyle, 200 Stimson Hall, B. E. Cornella, 216 Stimson Biometry and Statistics: S. J. Schwager, 424 Warren Hall

Communication: B. O. Earle, 332 Kennedy Hall

Education: G. J. Posner, 416 Kennedy Hall

Entomology: Q. D. Wheeler, 3136 Comstock Hall

Floriculture and Ornamental Horticulture: K. W. Mudge, 20 Plant Science Building

Food Science: J. M. Brown, 101 Stocking Hall

Landscape Architecture: P. J. Trowbridge, 442 Kennedy Hall

Natural Resources: T. J. Fahey, 120 Even Hall

Nutrition, Food, and Agriculture: C. A. Bisogni, 334 MVR Hall

Plant Science Units (Plant Biology, Genetics and Breeding, Pathology/Protection, Pomology, Vegetable Crops): D. R. Viands, 140 Roberts Hall

Rural Sociology: L. Williams, 220 Warren Hall

Soil, Crop and Atmospheric Sciences: G. W. Pick, 505 Bradfield Hall

Special Programs in Agriculture and Life Sciences: L. A. Ryan, 140 Roberts Hall

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120
   b. Minimum at Cornell: 60: Maximum transferred in: 60
   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in the distribution and appropriate transfer credit)
   d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional charge: 55 (includes credit used in the distribution AND failed courses)
   e. Minimum with letter grade: 100 (number of S-U grades prorated for transfer students)
   f. Maximum independent study, teaching experience, internships: 15 (pro-rated for transfer students)
   g. Credit for physical education does not count toward the 120 credit or the minimum 12 credits for full-time status (see #6).

2. Residence
   a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester, counting physical education. Remedial courses (see #1A) are counted.
   b. A minimum of seven semesters is required, with a GPA of 2.0 or greater.
   c. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in Internal Transfer Division.
   d. The final semester before graduation must be in residence at Cornell as a full-time student in good academic standing (see #3 B).

Exception: Students with 8 or fewer credits remaining for graduation and with circumstances that prevent full-time study, may petition for approval to complete remaining credits at another institution or part-time in CALS.

Students participating in the employee degree program may petition for part-time enrollment.

3. Grade-point Average (GPA)
   a. Cumulative GPA: 1.70 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.
   b. Final semester: 1.70 or above based on a minimum of 12 credits, or 2.00 or above if graduating in 7 semesters.

4. Distribution

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe; through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will impact their work and role in society. Through development of written and oral expression skills, students master the essentials of effective communication.

Credits received for independent study, field, teaching, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline, such as Education 005, will not be counted.

Group A: Physical Sciences. 9 credits of 100- or 200-level courses, in at least two disciplines, including at least one course in chemistry or physics.

Chemistry

Physics

*Mathematics (excluding Education 005, Mathematics 101 and 109)

Education 115

Soil, Crop and Atmospheric Sciences 131

Astronomy

Geology

Statistics and Biometry (including ARME 210, ILRST 210)

*The college mathematics requirement is described below.

Group B: Biological Sciences. 9 credits, to include 6 of introductory biological science (introductionary courses include BIO 101-104, 105, 106, 109, 110.)

Biological Sciences (excluding 152, 160, 200 [unless permission of associate director of the division of Biological Sciences is obtained], 200, 209, or 367)

Animal Sciences 101, 221, 300, 301

Entomology 212

Nutritional Sciences 262

Plant Breeding 201, 225

Plant Pathology 309, 401

Group C: Social Sciences and Humanities. 12 credits (6 in each of the following two categories):

Social Sciences. 100- through 400-level courses in the following departments (excluding Freshman Seminars):

Anthropology

Archaeology

ARME 100, 416

CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)

Communication 110, 120, 410, 418, 420, 422

Economics (excluding all ARME courses)

Education 271, 311, 317, 370, 378

Government

HDFS 150 (cannot receive credit for this course and Soc 243)
Students scoring in Group II or Group III of the college math proficiency exam must take a "math course at Cornell", regardless of transfer or AP math credit.

*Math courses at Cornell that may be used to fulfill math requirement:

All courses in the Mathematics department (except 101 and 109)

EDUC 115

Biometry 101

6. Physical Education

a. Pass a required swim test, administered during orientation.

b. Two courses with a satisfactory grade (courses do not count toward 120 credits for graduation or the minimum 12 credits for full-time study).

c. Students are expected to complete the physical education requirement in their first two semesters at Cornell.

d. Transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college.

Faculty Advising

a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study courses appropriate to the degree programs offered by the college.

b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CourseEnroll on the Bear Access menu. Pre-enrollment by computer is not valid until the student’s individual code is entered. This code, or adviser key, is provided to the student by the faculty adviser after approval of the choice of courses.

c. All academic plans, such as acceleration and graduate study, should be made in consultation with the student’s faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

Progress toward the Degree

a. The progress of each student toward meeting the degree requirements is recorded each term in the college Registrar’s office on a Summary of Record form.

b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entered to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent to return for the eighth semester. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduate) or September 15th (for January graduate). The adviser signs the application after verifying that the requirements for the major have been completed. The college registrar signs after verifying that the college requirements have been met.

Credit Earned While in High School

Transfer credit will not be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college/university course during his/her high school years, transfer credit will be given only if certain criteria are met:

1. Course must be a standard course taught by a post-secondary institution.

2. High school must be a satellite location, one of several options available to all students taking the course.

3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.

4. Students must be enrolled for college credit and pay college tuition.

5. Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met no transfer credit will be given. Written verification may be necessary.

STUDENTS

Undergraduate enrollment is approximately 3,100, with about 56 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 new transfer students are enrolled. Members of the faculty of the college serve as chairs of the special committees of about 900 graduate students.

Admission

The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college’s various curricula.

Most students come from New York State, but about 30 percent come from other parts of the United States or abroad. About half of the undergraduates are women. Approximately 20 percent are identified as members of minority ethnic groups.

Transfer Students

Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

A Cornell student in good standing may apply for intra-university transfer to pursue a course of study unavailable in his or her current college. Guidelines are available in the Admissions Office of the College of Agriculture and Life Sciences, 177 Roberts Hall. The procedure includes filing a transfer request, meeting with a faculty member in the proposed area of study and submitting a letter explaining reasons for making the transfer.

Consideration is given to students who have demonstrated an interest in their intended field of study, by taking appropriate prerequisite courses and courses within this area of
considered. Students are seldom allowed to study. Academic achievement is also assured acceptance. (usually 2.7) and take approved courses to student must achieve a predetermined average semester is considered under unusual... tion, a resume of their work experience, and a college are admitted each year. Applicants who want to take selected courses in the campus should inform the college registrar at time of enrolling for courses to ensure that students will not be enrolled in course work at another institution... Graduation and Diplomas Graduating seniors must complete the Application to Graduate (see the aforementioned details in Part c "Progress toward the Degree."). Diplomas are distributed to those who have completed the degree requirements and have been approved by the college faculty. After the commencement ceremony at Schoellkopf Field in May, graduates return to the Ag Quad to obtain their diplomas. For January and August graduates, diplomas are mailed.

ADVISING AND COUNSELING SERVICES Faculty members in the college of Agriculture and Life Sciences recognize that students need information and advice to make intelligent decisions while they are in college. They believe that personal contact on a one-to-one basis is an important way to identify individual differences and needs of students. Faculty members believe that they can and should be an important source of information and advice on both academic and personal matters. Thus, they consider advising to be an important and integral part of the undergraduate program. Each student enrolled in the college is assigned to a faculty adviser in his or her major field of study for assistance and guidance in developing a program of study. The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in undergraduate study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, commencement activities, and the activities of two student organizations, Ho-Nun-De-Kah, the college's honor society, and SONet, the CALS Student Organization Network. Students seek counseling and advising on a variety of issues including academic problems, course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an emphasis on college policies and guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment.

The Office of Minority Programs serves to recruit, admit, and monitor and influence policy on behalf of all minority students within the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American students. In the past academic year (1997-1998), this population represented approximately 20 percent of the college's undergraduate population. In addition, we are charged with monitoring and programming for the Educational Opportunity Program and Prehealth Collegiate Science and Technology Entry Program, and we are part of the Academic Human Diversity and Resources Committee. The Educational Opportunity Program (EOP) and the Collegiate Science Technology Entry Program (CSTEP) are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall. Within the university, the Office of Minority Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Skills Center, and the State Programs Office. Other university connections include the Undergraduate Admissions Office and the Office of Financial Aid regarding the concerns of the minority student population. The duties of the Office of Minority Programs are primarily carried out by the director with an assistant, part-time support staff help, and 10 to 12 peer advisers. Together, the staff acts as a major advocacy and advising group and informational and referral center. Its constituency includes students, faculty, and the public. Given the college's policy on non-exclusory programming, the Office of Minority Programs is also responsible for some functions that serve the college's entire population. Presently, that includes reviewing non-minority applicant folders, serving as the Prehealth Program advocate, Post admission, and providing ongoing support at all levels for the Office of Counseling and Advising. The Office of Career Development offers a variety of helpful services in a friendly environment to all students and alumni of the college. Career development includes self-awareness and assessment, career exploration, decision making, and job search. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change. The Career Library contains an extensive collection of current and useful material, including career information books, extensive internship files, employer directories, and job listings. Alumni Career Link is a database of several hundred colleges and universities that have offered to help students and alumni with their career development in a variety of ways. Job search talks on topics such as resume writing, cover letter writing, and interview skills are presented throughout the semester and are available on videotape. An active on-campus recruiting program brings more than 80 employers to campus each year to interview students for full-time and summer jobs.
The office, in conjunction with a network of college faculty members, assists students throughout their undergraduate years and beyond. For further information, students should contact Bill Alberta and the staff in 177 Roberts Hall.

Financial aid is administered through the university office in Day Hall. Endowment funds and annual donations provide supplemental aid for students in the college who are eligible for aid. Information about these college grants is available from the Office of Academic Programs in Roberts Hall, after students have a financial aid package established through the university office in Day Hall. Grants are processed through the university’s Office of Financial Aid.

Academic Integrity Policy

The College of Agriculture and Life Sciences faculty, students, and administration support and abide by the university Code of Academic Integrity. Its principle is that absolute integrity is expected of every student in all academic undertakings. Students must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student’s failure to maintain academic integrity.

The maintenance of an atmosphere of academic honor and the fulfillment of the provisions of the code are the responsibility of the students and the faculty. Therefore, all students and faculty members shall refrain from any action that would violate the basic principles of this code.

1) Students assume responsibility for the content and integrity of their submitted work, such as papers, examinations, or reports.

2) Students are guilty of violating the code if they
   • knowingly represent the work of others as their own
   • use or obtain unauthorized assistance in any academic work
   • give fraudulent assistance to another student
   • fabricate data in support of laboratory or field work
   • forge a signature to certify completion or approval
   • submit the same work for two different courses without advance permission
   • knowingly deprive other students of library resources, laboratory equipment, computer programs, and similar aids
   • in any other manner violate the principle of absolute integrity.

3) Faculty members assume responsibility to make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4) Faculty members fulfill their responsibility to
   • maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
   • make clear the conditions under which examinations are to be given

   • make clear the consequences of violating any aspects of the code
   • provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what students can do independently
   • state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
   • approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
   • monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the student’s and the faculty member’s work must be their own and no one else’s

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides for informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows.

The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor D. Grossman is the current chair.

Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the chair of the hearing board. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising office, 140 Roberts Hall.

ACADEMIC POLICIES AND PROCEDURES

Records

The college registrar maintains for each student a complete record of academic achievement. A permanent record is maintained for each matriculated student and updated as new information becomes available. Staff are available to consult with students regarding the assignment of credit toward meeting distribution and elective requirements as listed on the Summary of Record form.

The Committee on Academic Achievement and Petitions is a college committee of six faculty and two student members. On behalf of the faculty, the committee
   • reviews, at the end of each semester and at other times as shall seem appropriate to the committee, the progress of students toward meeting graduation requirements
   • receives and acts upon petitions from individual students seeking for exceptions from particular academic regulations or requirements of the college, or for reconsideration of action previously taken by the committee
   • acts upon readmission requests from persons whose previous enrollment was terminated by the committee
   • notifies the petitioner in writing of the action taken by the committee

Good academic standing means a student is eligible for, or has been allowed to register and enroll in, academic course work for the current semester. Whether an individual student is in good academic standing is determined by the college registrar and the Committee on Academic Achievement and Petitions. (See academic deficiency policies, below.)

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising office, 140 Roberts Hall. Counselors are available to assist with the process.

A petition is usually prepared with the assistance of a student’s faculty adviser, whose signature is required. The adviser’s recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Registration Procedures

All students must register with the university and “check-in” with this college at the beginning of each semester. Check-in materials are available in 140 Roberts Hall as announced each term by the University Registrar.

Course Enrollment Procedures

To enroll in courses, students will receive information from the university registrar; plan a schedule in consultation with their adviser; and pre-enroll by computer, through CoursEnroll in “Just the Facts” on the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code into the computer. Adviser keys are provided by faculty advisers after a discussion of selections and requirements takes place. The key code changes each semester to require ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must file an independent study form, available in the college Registrar’s Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar’s Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of their GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must not enroll again for a course in which they received an incomplete or NGR.
Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the college registrar when a grade has been completed without further enrollment. The letter grade will receive an R at the end of the first time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on the official university course drop and add form.

Add/Drop/Changes are made by filing properly signed forms in the Registrar's Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to change course enrollment.

Students may add courses during the first three weeks of the term and change grading options or credit hours where applicable and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college committee on Academic Achievement and Petitions. Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester.

If a petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student's record and a W (for "withdrawal") is recorded on the transcript.

Grade Reports
Grade reports for the fall semester are included in spring semester check-in materials in January; grade reports for the spring semester are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

Academic Deficiency Policies
At the end of each semester, the committee on Academic Achievement and Petitions reviews the records of those students who, in any respect, are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing them on probation, granting them leaves of absence, advising them to withdraw, suspension, or expulsion.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- (1.7) or higher are prima facie evidence of satisfactory progress.

HONORS PROGRAM
The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 30 of the 55 at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.

Interested students must make written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in conducting the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with honors.

Unless otherwise indicated in the following area descriptions, the research report in the form of a thesis or journal article should be submitted to the honors committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

Animal Sciences
Faculty committee: W. B. Currie, chair; Y. R. Boisclair, D. L. Brown, P. A. Johnson

The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an awareness of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the honors committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 454 Morrison Hall.

Biological Sciences
Students interested in the honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors Program" in the Biological Sciences section of this catalog for complete details. Applications and details pertaining to the program requirements may be obtained from the division's Office for Academic Affairs, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall.

Entomology
Faculty committee: B. L. Peckarsky, chair

An honors program in the area of entomology may be pursued by any qualified student in
The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

- Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
- Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members’ areas of expertise.)
- Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
- Present a completed application to the chair of the entomology honors committee no later than the end of the third week of the first semester of the senior year. Earlier submission is encouraged.
- Submit a brief progress report, approved by the project supervisor, to the entomology honors committee by midterm of the semester in which the student will complete his or her graduation requirements.
- Present a formal seminar reporting the significant findings of the research to the Department of Entomology (preferably as a Jugatae seminar) in the last semester of the senior year.
- Submit two copies of the final project report (honors thesis) to the chair of the entomology honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

Natural Resources
Faculty committee: M. E. Krasny, chair; B. A. Knuth, J. P. Lassoie, E. L. Mills

The honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes, (2) fish and wildlife biology and management; and (3) resource policy, management, human dimensions, and environmental education. The subject matter and nature of the research experience may be quite varied, but require the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:
- Register for the honors program in the junior or senior year.
- Select a faculty adviser who will help identify and formulate a research problem.
- Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
- Describe and summarize the work in the format of a conventional master’s thesis or scientific paper ready for journal submission. About half of the theses have been published.
- Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department’s honors program committee.
- Take the lead role for meeting each of the above expectations.

Nutritional Sciences
Faculty committee: M. N. Kazarninoff, R. S. Parker

The honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for honors they need to consult with their academic advisers to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean’s list. Although honors research credits for spring semester junior or senior year students are available through DNS are made. Placements and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problems.

Fall Semester Course No: NS 398 (1 credit, S-I). Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problems.

Spring Semester Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made and orientation to supportive services available through DNS are made. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives: 1. to become familiar with literature and/or research methods appropriate to the problem for the honors research, 2. to develop a research proposal.

Senior Year

Fall Semester Students register under the number NS 499 (2-4 credits, L.I.T., by arrangement with their mentors). They may begin their research earlier than fall, e.g., during the summer, or even earlier, but should be prepared to begin research early in the fall semester at the latest. The objective for the semester will be to conclude most of the hands-on research/data acquisition.

Spring Semester Students will again register under course number NS 499 for 2-4 credits L.I.T., by arrangement with their research mentors. Much of the allotted time will be spent on data analysis and on writing the honors thesis.

Several important deadlines should be noted.
1. Last week in March: The names of thesis readers** must be in the hands of the honors committee.
2. Third to fourth week of April: A final draft of the thesis is handed to the readers.
3. First to second week of May: Scheduled seminars for oral presentations of each student’s research.
4. Last day of classes: Final form of the thesis is handed to the honors chairman.

To help students meet these deadlines, students register for NS 458 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or twice (depending on number of students) to practice oral presentations of completed research.

*Grade is determined by each student’s mentor.
**Two readers knowledgeable in the area of the student’s research topic to be chosen by the honors committee and faculty advisers.
The honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the departments of Agricultural and Biological Engineering or Food Science or Soil, Crop and Atmospheric Sciences or in the Biometrics Unit.

In addition to meeting the requirements of the college, the student is expected to:

- Enroll in the program for a minimum of two semesters.
- Enroll in the appropriate departmental Undergraduate Research course for a total of at least 6 credits.
- Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).

The thesis is usually written in the form of a research journal article or a master's thesis and must be submitted by three weeks before the end of classes of the semester in which graduation is expected.

Further details of the program can be obtained from the chair of the physical sciences honors committee.

**Plant Sciences**

Faculty committee: R. L. Obendorf, chair; L. L. Greasy, A. M. Petrovic, W. A. Sinclair

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a project proposal (2-3 pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan; necessary space, equipment, and supplies; and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student's undergraduate tenure is feasible.

Successful completion of the honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptance report must have been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by a letter from the research supervisor evaluating the research and, if appropriate, recommending graduation with honors.

The honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the Director of Academic Programs and to the College Registrar that the student be graduated with honors. One copy of the accepted report will be returned to the student with review comments from the committee.

**Social Sciences**

Faculty committee: R. D. Colle, chair; K. A. Strike, M. J. Pfeffer, W. H. Lesser

Students are accepted into the social sciences honors program of the College of Agriculture and Life Sciences after meeting all the criteria described above, after evaluation of the student’s written application, and upon approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis adviser the second week of the semester. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty adviser. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal should be 5-10 typed, double-spaced pages in length and include the following sections:

- **Research Topic:** State the problem to be studied or the topic of interest. Review the relevant literature and the background of the problem or topic; include a more extensive bibliography.
- **Research Questions/Empirical Hypotheses:** Specify the questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.
- **Research Methods:** Discuss the models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.
- **Expected Significance:** State what new knowledge or information is likely to be forthcoming and why it is important.

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for honors credit directed by the faculty adviser in conjunction with an honors project.

Honor's degrees are awarded upon approval of the honors thesis by the social science honors committee. The research should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reviewed in the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research. Honors theses should be written according to the form of any standard journal within the appropriate fields. Three copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supervisory letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

**INTERCOLLEGE PROGRAMS**

The College of Agriculture and Life Sciences does not participate in any dual-degree programs. Study for the Bachelor of Science is the only undergraduate degree program offered.

**The College of Veterinary Medicine** may accept students who are then permitted to double-register in their seventh or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

**Students who have been offered admission to the S. C. Johnson Graduate School of Management** upon completion of the B.S degree in Agriculture and Life Sciences may take a program of management courses in their senior year if it is approved by their college faculty adviser as part of their undergraduate program. In certain cases an "upset" tuition charge, equal to the endowed undergraduate tuition rate, will be applied for undergraduate statutory college students taking excess credit hours from endowed colleges and schools. Inquiries should be directed to the university bursar.

**Students in the Field Program in Agricultural and Biological Engineering** are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and jointly enrolled in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition in the junior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

**The Program in Landscape Architecture** is cosponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning. The program offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree program.

**The Division of Nutritional Sciences** is an intercollege unit affiliated with the College of Human Ecology and the College of Agriculture and Life Sciences. The undergraduate nutrition major is based in the College of Human Ecology, and the nutrition, food, and agriculture major is based in the College of Agriculture and Life Sciences. Students may study nutrition in areas such as animal sciences; food-industry management; food science; microbiology; nutrition, food, and agriculture; and fruit or vegetable science. Students may also plan a specialization in biological sciences or a concentration in general studies in agriculture to include a human nutrition component.
The Department of Science and Technology Studies is an academic unit that engages in teaching and research involving the interactions of science and technology with social and political institutions. The program draws its students, faculty, and research staff from the various divisions of the university, including the College of Agriculture and Life Sciences. It offers an interdisciplinary undergraduate program for its Biology and Society. A general studies major may be planned in consultation with a faculty adviser to fulfill a biology and society program. Further information, including a list of courses, may be obtained from the undergraduate office, 275 Clark Hall.

The American Indian Program (AIP) is a multidisciplinary intercollege program consisting of academic, research, extension, and student support components. Course work is intended to enhance students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

Research areas among faculty active in the program include Indian education, social and economic development, agriculture, environmental issues, history, literature, and the arts, and cultural preservation. Their research topics, which are highly relevant to Indian communities, will be of interest to Indian and non-Indian graduate students. Extension and outreach efforts within the program seek to develop solutions to problems identified by Indian communities and to facilitate the application of institutional resources, research, and expertise to community needs.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of SES 250, ANTH 230, R SOC 175 (Issues in Contemporary American Indian Societies), and SES 665 and 669. Students who plan to enroll in courses at the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of SES 250, ANTH 230, R SOC 175 (Issues in Contemporary American Indian Societies), and SES 665 and 669. Students who plan to enroll in courses at the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

Science of Earth Systems (SES) is a new program for students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The SES program emphasizes the objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. The program, described in more detail in the "Interdisciplinary Centers, Programs, and Studies" and the CALS "Interdepartmental and Intercollege Courses" sections, coalesces Cornell's teaching and research strengths across a broad range of environmental sciences to provide students with a rigorous scientific foundation for the study of our complex, highly interactive earth.

The SES curriculum includes a freshman/sophomore emphasis on strong preparation in mathematics, physics, chemistry, and biology. In the junior and senior years, students take a set of common SES core courses and an additional set of four advanced disciplinary or interdisciplinary courses that build on the basic sequences. Students wishing to explore their field of interest prior to enrollment in the SES colloquium (register for ABEN 120-121, GJET 125-126, or SCAS 101-102). (See the Courses of Study sections mentioned above for course descriptions.

Several interdisciplinary tracks are available within the SES program, and these are chosen by the student according to interests and career goals. This tracking is accomplished through the selection of courses beyond the core sequence. These courses build on the core sequence and generally include junior and senior level courses with prerequisites in the basic sciences and mathematics. Effective tracks can be designed to prepare students for careers in graduate study in specific environmental science disciplines including atmospheric sciences, hydrology, biogeochemistry, ecology, oceanography, and geophysics.

Meaningful and effective combinations of these disciplines are also possible. The selection of these course sequences must be approved by the SES Coordinating Committee to ensure that depth as well as breadth is attained.

The SES courses are listed in the college's "Interdepartmental and Intercollege Courses" section. For more information, see the web site at http://www.geo.cornell.edu/SES/SES_home.html

The Comparative and Environmental Toxicology Program is an interdisciplinary intercollege program with research, teaching, and cooperative extension components coordinated by the Institute for Comparative and Environmental Toxicology (ICET). Courses are cosponsored by academic departments in several colleges of the university. A description of the program and general information is available from the ICET office, 16 Fernow Hall. See also the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog. Students who plan to enroll in courses at the American Indian Residence House, offers undergraduate students a living environment that promotes intercultural exchange.

The Cornell Laboratory of Environmental Applications of Remote Sensing (CLEARs) is an interdisciplinary intercollege program with research, teaching, and extension components affiliated with the College of Agriculture and Life Sciences and the School of Civil and Environmental Engineering. A description of the program and general information is available from the director through the CLEARs office in Hollister Hall.

OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity.

Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three two-credit components and offered by professors-in-residence. An internship experience, supervised by an internship committee, provides up to six additional academic credits. Independent study and research courses offered by the various departments in ALS and/or courses offered by academic institutions in the Albany areas may be elected.

Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.

Applications are collected and processed by the ALS Career Development Office (177 Roberts Hall) in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Students should note that the last term average must be 1.7 or above.

All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The paper required in each section constitutes an independent study project to be directed and evaluated by a Cornell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the Career Development Office, 177 Roberts Hall.

Cornell-in-Washington

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program
offers two study options: 1) studies in public policy; and, 2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects under the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington program. Students in the College of Agriculture and Life Sciences must register for ALS 505, and cannot receive credit for the externship experience alone. For further information, see p. 19 or inquire at 471 Hollister Hall, 255-4090.

SEA Semester

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is twelve weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward, or the R/V Corwith Cramer. For more information, students should contact the Cornell Marine Programs office, G14 Stimson Hall (607-255-3717). ALS students should file the intent to study off campus form with the college registrar as early as possible to ensure proper registration and enrollment in courses.

Shoals Marine Laboratory

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its historic, geologic, and historical. Please refer to “Courses in Marine Science,” under the section on the Division of Biological Sciences, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stinson Hall, 607-255-5717.

Internships

Several departments in the college offer supervised internships for academic credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluating student performance. For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office, 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The 6-credit limit includes transfer credit and credit for internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or notated in cases where a professor is directly involved in determining both the course content and in evaluating a student's work. The awarding of credit will not be allowed in cases where a student brings to a professor a description of a past experience and requests credit. All students enrolling for an internship must file a letter to Independent Study, Research, Teaching or Internship form with the Office of the College Registrar.

International Exchange Programs in The College of Agriculture and Life Sciences

Any student whose grade point average is 2.75 or above and has completed one year of continuous study in CALS may apply to one of four international student exchange programs—the Instituto Tecnologico y de Estudios Superiores de Monterrey (ITESM) in Monterrey, Mexico, the Agricultural College of Sweden at Uppsala, Nanyang Technological University in Singapore, or the National University of Singapore (NUS). (Please note that the Nanyang program is for Communication majors only, and the NUS program is for Plant Sciences majors only.) CALS students may take courses relevant to their major and graduation requirements by earning a maximum of 15 transfer credits per semester. There can be no duplication of credit, and grades received must be C- or better.

These undergraduate exchange opportunities are for CALS students only. Students who are interested in international study but not in one of these CALS programs must meet with the Study Abroad Advisor and apply to study abroad through Cornell Abroad in 474 Uris Hall. Please refer to the Cornell Abroad section of Courses of Study. For more information on programs see the CALS Study Abroad Adviser in 140 Roberts Hall or visit our web site http://oap.cals.cornell.edu/CALS/International.html.

Instituto Tecnologico Y de Estudios Superiores de Monterrey (ITESM) Mexico

The College of Agriculture and Life Science and ITESM have had this agreement since 1993. This opportunity is for Communication majors only.

The language of instruction at Nanyang is English.

Students pay their regular tuition and fees to Cornell for their semester or year studying at Nanyang. Housing application and accommodations, insurance, books, travel and personal expenses will be the financial responsibility of the student. Documentation of health insurance coverage will be required.

National University of Singapore (NUS) The Plant Sciences department of the College of Agriculture and Life Sciences and the National University of Singapore signed this new agreement in October 1997. See the CALS Study Abroad advisor for further information.

MAJOR FIELDS OF STUDY

The college curriculum consists of sixteen major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.
The Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a joint Bachelor of Science degree from the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in agricultural and biological engineering are offered: environmental systems engineering, biological engineering, and agricultural engineering. Students take courses in mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the departments of agriculture and engineering in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal.

Students select other courses in the College of Engineering that reflect their concentration, such as engineering consulting or biomedical engineering. Students planning for medical school also take organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills. Specific course requirements and other information for the Agricultural and Biological Engineering joint program are in the College of Engineering section in this publication.

The department also offers two technology programs: environmental systems technology and agricultural systems technology. The technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies. The student develops his or her own program of advanced courses in focus courses in consultation with a faculty adviser, and may have an informal minor in an area such as communication, business, education, or international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In subject matter, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who appreciate the challenges facing society. The Department of Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges.

Specific course distribution requirements for the academic programs in environmental systems technology and agricultural systems technology include (for the engineering program, see the College of Engineering section).

A. Basic Subjects Credits
1. Calculus 8
2. Chemistry 6
3. Physics 8
4. Introductory biological sciences 6
5. Computer applications 4
6. Statistics or probability 3
7. Written and oral expression 9

B. Advanced and Applied Subjects
1. Five courses in the environmental, agricultural, or biological sciences 15
2. Five engineering or technology courses at the 300 level or above; at least 9 credits in agricultural and biological engineering 15

C. Electives Additional courses to complete college requirements

D. Total (minimum) 120

For further details on the Agricultural and Biological Engineering and Technology programs, see the department's Undergraduate Programs brochure, available at 207 Riley-Robb Hall; contact the advising coordinator, Professor Ron Pitt, at 255-2492; or visit the department's web site at http://www.cals.cornell.edu/dept/aben

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science department has extensive facilities for animal production and well-lit laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a campus location.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisors. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, electives in courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation.

Animal management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may elect a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility of programs that can be developed to meet a student's career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Upperclass students whose academic records warrant it may, by arrangement with individual faculty members, engage in research (for credit, or for credit) and assist with teaching (for credit). The Dairy Management Fellows program offers an equally challenging but different type of experience for a highly select group of students.

Applied Economics and Business Management

The undergraduate program in applied economics and business management is based in the Department of Agricultural, Resource, and Managerial Economics. Courses in agricultural, resource, and managerial economics are supplemented with others in related areas such as computer science, economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics, and statistics.

Six areas of specialization are offered:

Agricultural economics is designed for students who have a special interest in the economics and management of businesses that provide services for the agricultural sector of the economy.

Agricultural and applied economics provides a general program in the economics of the agricultural sector and resource use.

It is an appropriate major for those students who (1) are interested in applied economics;
(2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics, and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sector.

**Business management and marketing** applies the concepts of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of businesses. Market analysis, sales, banking, merchandising, production management, and general business management are careers for which students may prepare.

**Environmental and resource economics** provides training for students interested in applying economic concepts to problems of the environment and resource use. This specialization is a good option for those wishing to take positions as analysts with agencies that have environmental responsibility or face environmental regulations.

**Farm business management and finance** is intended for students with farm experience who are interested in farming, farm management, or farm finance careers, in such positions as agricultural lenders, extensions specialists, or consultants.

**Food-industry management** is designed for students interested in management or sales positions with the processing, manufacturing, or distribution segments of the food industry. All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own unique set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of each individual student.

**Biological Sciences**

Biology is a popular subject at many universities for a variety of reasons: It is a science that is in an exciting phase of development, it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology, and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences at Cornell is offered by the Division of Biological Sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Students may pursue this major in the division's Office for Academic Affairs and the Behrman Biology Center are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand medical and biological sciences and pursue advanced studies in a specific area of biology. Programs of study include animal physiology, biochemistry, cell biology, ecology and evolutionary biology, general biology, genetics and development, microbiology, neurobiology and behavior, and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Programs Office (G14 Simson Hall, 255-3717) for academic advice and career counseling. For more details about the biology curriculum see the section in this catalog on the Division of Biological Sciences.

**Biometry and Statistics**

Biometry is the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of a statistician or biometrician can encompass teaching, consulting, and computing in almost any mix and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms. Salaries are usually excellent.

While satisfying course requirements for a major in biometry and statistics, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, computing, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take at least two computer science courses (e.g., Computer Science 100 and 211), mathematics courses (at least three semesters of calculus), and Biometry and Statistics 101, 102, 200, 215, 408-409, 417, 601-602, and 607, and Industrial and Labor Relations 310. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Steven J. Schwager for information.

**Communication**

A generation ago, college supposedly prepared you with the knowledge and skills you would need for your entire career. Today we know that the single most important thing we can prepare you for is change. The amount of information the public receives and is expected to understand is increasing exponentially. Communication is taking on a more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public, to interested individuals, and to decision-makers in organizations. Effective information management requires a thorough understanding of the communication process. When you graduate from our department, you will be better at the basic communication skills of speaking, writing, and listening. Equally important, as a communication major you will also understand:

- communication processes, such as how communication influences attitudes, opinions, and behaviors
- how communication systems work in our society and in others
- how to apply your understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core (eight courses) of contemporary communication knowledge, theory, and practice. Required freshman courses are:

**Fall semester**

Comm 120 Contemporary Mass Communication

Comm 121 Investigating Communication

**Spring semester**

Comm 116 Communication in Social Relationships

Comm 117 Writing about Communication

This set of courses will provide you with a basic understanding of communication and the communication process. The courses also provide a unique opportunity to link practical application (such as writing and critical analysis) with up-to-date research and knowledge about communication.

During the sophomore year, you will take:

**Fall semester**

Comm 201 Oral Communication

Comm 230 Visual Communication

**Spring semester**

Comm 253 Information Gathering and Presentation

Comm 282 Communication Industry Research

After completing the eight courses in the core curriculum, all majors take an additional six courses (18 credits) in communication. You can choose to concentrate your advanced study in one of four focus areas:

- Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science and agricultural issues, as well as public perceptions of risk.)
- Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)
- Communication as a Social Science. (Study of communication research and methods with emphasis on communication as a social science discipline.)
- Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and within society at large. Both are critical to successful
careers and enlightened citizenship in the twenty-first century.

**Education**

The focus of the Department of Education is on the improvement of teaching and learning within school and nonschool settings, as well as on the role of education in society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Study at the undergraduate level is structured around a core curriculum:

- An introductory course in current educational issues (Education 101) (3 credits)
- Course work in the social, philosophical, psychological, and social foundations of education (e.g., Education 271, 311, 317, 370, 378, 472, 477) (12 credits)
- Supervised field experience (e.g., Education 240 for non-majors and Education 120 for majors) (1–4 credits)
- A capstone course to integrate the student's undergraduate experience (Education 495) (2 credits)

Three specializations and three certification programs are available within the department.

**Agricultural, extension, and adult education.** Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching in secondary agriculture, science, and technology in public schools, the Cooperative Extension Service, and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. Students take a college program that includes a balance of courses in education as well as courses in a technical area of agriculture/biotechnology, community/economic development, natural resources, human ecology, or communication. Education courses prepare students to succeed as educators in a broad range of careers. Courses are selected to develop professional leadership and teaching competence. Students may elect to focus their study on one or more of these areas: agricultural education, extension education, or adult education. As an alternative, students may elect to major in one of the college’s technical departments and develop a complementary program of study in one or more of the three areas of agricultural, extension, or adult education. Further information is available from the agricultural, extension, and adult education coordinator, Kennedy Hall (Tel: 607-255-7755).

**Educational psychology.** Studies in educational psychology have traditionally focused on teaching and learning in schools. Yet schools are only one location in which teaching and learning take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises, broadly defined. While graduate study is required for many careers in psychology, an undergraduate emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions. Educational psychologists develop and/or supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials for publishers; develop tests for educational and professional associations; evaluate social programs; work in human resource management; and conduct applied research for educational institutions.

Students interested in concentrating their studies in educational psychology complete a total of 20–25 hours in educational psychology and related courses. Working with a faculty adviser, a student may design a program in one of a variety of applied areas: Instructional Systems Design; Human Development; or the Educational Psychology of Human Development.

Students interested in careers in educational psychology should apply for admission to the Department of Education. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall (Tel: 607-255-9258).

**General education.** The concentration in general education is appropriate for students seeking a solid foundation in the disciplines underlying the education professions. Students will take courses in areas such as the art of teaching, philosophy of education, social foundations of education, curriculum and instruction, statistics and research design, the instructional applications of microcomputers and related areas. Graduates of the concentration in general education may continue their studies in various areas of education or pursue careers in educational and human resource areas in business and industry, the human services, or government agencies. There are growing opportunities for employment of education graduates in the human resource management areas of agribusiness firms. Further information about the general undergraduate education is available from the undergraduate coordinator (Tel: 607-255-9269).

**Teacher Certification.** Students at Cornell may pursue secondary, grade 7–12 teaching credentials in agricultural education or a technical field of agriculture, mathematics, science, social studies, social science, psychology, earth science, and general science.

**Agriculture.** Students completing the registered program as undergraduates in agriculture are eligible to teach agricultural subjects, introduction to occupations, occupational science or math, and introductory technology for grades 7 and 8. Passing scores on the National Teacher Examination (NTE) or New York State Teacher Certification Exam (NYSTCE) and one year of agricultural work experience are required for provisional certification, which is valid for five years. The master's degree required for permanent certification is offered through graduate study at Cornell. Students who complete the required coursework may be dual-certified to teach selected science subjects and work as a work experience coordinator through direct application to the State Education Department. For more information, contact the coordinator for teacher certification (Tel: 607-255-9255).

**Science and Mathematics.** Students completing the registered program in science and mathematics may pursue secondary teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Students can begin the program as Cornell juniors or seniors by completing their undergraduate major in their subject matter and five courses in education. Students from all Cornell colleges may apply. In a year of graduate study, students are engaged in teaching and take additional math and/or science courses. Students may also begin their studies as graduate students. Typically, they will need three semesters of study to complete the Master of Arts in Teaching (M.A.T.), or at least four semesters of study to complete a Master of Science (M.S.). The M.S. degree requires a research thesis and usually takes four semesters. Either degree may be used to satisfy state requirements for permanent certification. Both degrees include graduate-level study in mathematics and the sciences. A special 12-month MAT is available for individuals who have an extensive background in science but need course work in education and student teaching to be eligible for teaching certification. Students who complete any graduate program option after passing NYSTCE, are eligible for provisional New York State certification. After completing two years of successful teaching and passing the state Content Specialty Test, MAT students receive permanent New York State certification. Students who have completed a bachelor's degree may begin the certification program at the graduate level. For more information, contact the coordinator for teacher education (Tel: 607-255-9255).

**Administrator Certification.** In the process of earning a Ph.D. in education, graduate students may also earn New York State certification as a school district administrator. This certificate is normally required of all candidates for a district-level position as a school administrator (e.g., superintendent, curriculum director, etc.). The certificate also makes its holder eligible for building-level positions as principal and vice principal. New York State certification as a school administrator is usually recognized in other states. The program is unique in that it is specifically designed to prepare administrators for small and rural school districts. Course work, the internship, and the doctoral dissertation are all oriented toward addressing the practical problems that characterize such districts and to prepare candidates to assume a leadership position in them. To earn certification, a student must complete at least one year of full-time, on-campus study followed by a one-year, half-time administrative internship in a cooperating school district. To be eligible for this program, students should possess the equivalent of a master's degree, satisfied student and undergraduate record, and three years of teaching experience. For more information, contact the coordinator for Administrator Certification Program (Tel: 607-255-7758).

**Entomology.** The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environ-
Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summers. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for undergraduate research on campus. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available on campus for training, research, and employment.

### Landscape Architecture

Landscape Architecture focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, architecture, and city and regional planning. The program is co-sponsored by the colleges of Agriculture and Life Sciences and Architecture, Art, and Planning.

The course of study prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from urban design and housing to parks and garden design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences; a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of several parts: core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

### Dual Degree Options

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

### Study Abroad

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third year graduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. This must include at least two advanced studios, a graduate seminar, a concentration, and a thesis.

**Undergraduate Concentration for Non-Majors**

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquires to professors H. Gottfried or S. Baugher. Required.

**Visual Studies (choose one):**

- Arch 11 Introduction to Architectural Design (4 cr)
- Art 121 Introduction to Painting (3 cr)
- Art 141 Introduction to Sculpture (3 cr)
- Art 151 Introduction to Drawing (3 cr)
- Art 158 Conceptual Drawing (3 cr)
- Art 159 Life and Still-Life (3 cr)
- Art 161 Photography I (3 cr)
- DEA 101 Design I: Fundamentals (3 cr)
- DEA 114 Drawing (3 cr)
- LA 141 Grounding in Landscape Architecture (3 cr)

**The Landscape**

- +LA 282 The American Landscape (3 cr)

**Electives (choose two):**

- +LA 261 Urban Archaeology (3 cr)
- +LA 262 Laboratory in Landscape Archaeology
- +LA 360 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years [1997-98/1999-2000]
- LA 363 American Indians, Planners, and Public Policy (3 cr)
- LANAR 525 History of American Landscape Architecture (3 cr)
- LA 569 Archeology in Preservation Planning and Design (3 cr) offered alternative years [1997-98]
- Distribution Elective

**Natural Resources**

The undergraduate curriculum is designed to provide an enduring and broadly applicable education. The focus of study is on the systems that yield our renewable natural resources (water, forests, fish, and wildlife) and includes emphasis on both the ecological and human dimensions of resource management. Students are encouraged to understand the scientific, ethical, and societal basis for the protection and management of renewable...
resources through the application of ecolog-
cal principles and knowledge of social needs.

**Required Core Curriculum**

Students who desire to graduate with a specializa-
tion in Natural Resources are expected to complete, as a minimum, the courses specified in the following two-part Core Curriculum. First is a broad group of courses taken primarily outside the depart-
ment, which, as their presentation suggests (Groups A–D), also fulfill this college’s course distribution requirements described on page 30.

**Group A - Physical Sciences**

- Mathematics—2 courses
- Chemistry—2 courses

**Total Hours**

- 6-8

**Group B - Biological Sciences**

- Introductory biology (BIOG 101-104 or 105-106)—8 cr. hours
- General ecology—1 course

**Total Hours**

- 8

**Group C - Social Sciences**

- 3 credits in addition to
- 3 credits in economics

**Total Hours**

- 6

**Humanities**

- 6 credits in addition to a course in “normative” ethics (NTRES 407, 411 or PHIL 241, 246, or 247)

**Total Hours**

- 9

**Group D - Written and Oral Expression**

- Freshman Writing Seminars—2 courses
- Oral communications—1 course

**Total Hours**

- 3

**Courses outside the Distribution Groups**

- Statistics—1 course
- Computer applications or programming—1 course

**Total Hours**

- 3

The Core Curriculum’s second portion is com-
pored entirely of courses offered by the Department of Natural Resources, a minimum of 19 hours in department courses is required.

**YEAR 1**

- Total Hours

**One of 2 introductory courses:**

- NTRES 100 Principles of Conservation (Fall, 3 cr.)
- NTRES 201 Environmental Conservation (Spr., 3 cr.)

**Total Hours**

- 3

**YEAR 2**

- both courses listed:

- NTRES 210 Introductory Field Biology (Fall, 4 cr.)
- NTRES 253 Applied Ecology and Ecosystem Management (Spr., 3 cr.)

**Total Hours**

- 4

**YEARS 3 AND 4**

At least 9 credit hours from selected upper-
level courses, with a minimum of 3 credit hours in ecology and 3 credit hours in management emphasis. Consult the current course list in G12 Fernow Hall for courses meeting this requirement.

Students pursuing this specialization have re-
mainig approximately 40 credit hours available to develop one or more concentra-
tions of their choice within or outside this field.

Students who wish to do so may specialize fur-
ther in natural resource ecology and manage-
ment (including wildlife, fishery, forest, and aquatic sciences), or natural resource policy, management, and human dimensions.

Opportunities for field-oriented studies are available at Cornell’s nearby Arnot Teaching and Research Forest, the Cornell Biological Field Station on Onondaga Lake near Syracuse, as well as at numerous natural areas near cam-
pus. An honors program is available for qualified students.

Students should seek relevant work experi-
ence to complement their academic studies.

**Nutrition, Food, and Agriculture**

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships between human nutrition and the agricultural and life sciences.

Growing public interest in health and nutrition has placed new demands upon food producers, processors, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interest. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health: Concepts and Controversies, NS 245 Social Science Perspectives in Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 552 Methods in Nutritional Sciences. In addition, students select a minimum of three advanced courses in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

All majors have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage-Kinzellberg Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in Martha Van Rensselaer Hall is used by students for study and small group discussion. The center contains class materials, computers, and audiovisual aids and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 355 MV, 607-255-2628.

**Plant Sciences**

Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture, and fruit and vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs beginning as freshmen. Others may prefer to start in the general plant sciences curriculum and specialize after completing the program offerings.

Plant sciences is a multidisciplinary program, sponsored by the Department of Plant Breeding in Emerson Hall, and the Depart-
ments of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, Plant Pathology, and the Section of Plant Biology, all located in the Plant Science Building.

**General plant science** is intended for students whose interest in studying plants has not yet centered on any one of the specializa-
tions within the area. Students may continue with this option throughout their undergradu-
ate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor's degree.

Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension agents, as teachers, and as research techni-
cians.

More than one hundred courses are offered that deal directly with some area of plant science. Other courses relating to plant science are offered in other departments. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture, food science, or agricultural, resource, and business management.
Undergraduates are encouraged to obtain practical experience, which may involve internship and/or research under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

**Floriculture and ornamental horticulture** applies principles of plant science and business management to the production and marketing of florist, nursery, and turfgrass crops, as well as to the selection and management of plants in both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, landscape design for public and botanical garden and arboretum, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:
- BIO G 109 and 110, Biological Principles or an equivalent course
- CHEM 206 or 207 and 208 or an equivalent course
- HORT 101, Introduction to Horticultural Science
- HORT 102, General Horticulture
- HORT 230, Woody Plant Materials
- HORT 243, (BIO PL 243), Taxonomy of Cultivated Plants
- HORT 300 and 301, Garden and Interior Plants I and II
- HORT 400, Principles of Plant Propagation
- BIOPL 241, Plant Biology (Introductory Botany)
- BIOPL 242, Plant Physiology (lecture)
- BIOPL 244, Plant Physiology (Laboratory)
- SCAS 260, Introduction to Soil Science
- ENTOM 241, Applied Entomology
- PLPA 241, Plant Diseases and Disease Management or PL PA 401, Basic Plant Pathology

Although mastery of these subject areas is considered essential for students planning to enter a floriculture or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student adviser.

With permission of the adviser, a transfer student may receive core curriculum credit for similar courses taken at other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture courses at Cornell.

No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 141, 142, 282, 315, 316, 317, 318, 410, 480. No other landscape architecture or freehand drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either floriculture or landscape horticulture, or they may study generally across the specialization. Concentration in floriculture prepares students for careers in management of florist and greenhouse crops production, crops in controlled environment agriculture, and wholesale- and retail-florist marketing. Specialization in landscape horticulture trains students for careers in nursery-crop production, turfgrass management, golf course management, exterior and interior landscape contracting and service, retail- and wholesale-marketing of nursery products and services, public and botanical garden and arboretum management, urban horticulture, agroforestry, arboriculture, and related areas. Some students choose to pursue a general program in floriculture and landscape horticulture, including courses in both areas. Similarly, programs in horticultural business management, research, teaching, extension and public education, and communications/journalism may be arranged across two specialization areas. Students wishing to prepare for graduate study may develop a program in basic sciences and their application in horticultural science. Lists of recommended courses for the areas of specialization are available from student advisors and from the undergraduate program coordinator.

Working with his or her faculty adviser, each student will tailor a program to achieve individual educational objectives in floriculture, landscape horticulture, horticultural business management, or general horticultural science.

A core and management courses also is strongly recommended for students planning horticultural business careers. Students are encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geology, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed science. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged.

Numerous opportunities to become familiar with the horticultural industries and professions are provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs.

Questions concerning the undergraduate curriculum, advising, and related matters should be addressed to Associate Professor Kenneth W. Mudge, Undergraduate Program Coordinator, Department of Floriculture and Ornamental Horticulture, 20 Plant Science Building, Ithaca, New York 14853-5908; telephone: 607-255-1794; e-mail: kmw2@cornell.edu.

The department's office is 20 Plant Science Building. Departmental facilities include classrooms and laboratories in the Plant Science Building, greenhouse and laboratory facilities at the Kenneth Post Laboratory, the Test Garden, the Turfgrass Research Field and Laboratory, and freehand drawing studios in Mann Library.

**Plant biology** provides undergraduates with preparation for graduate study in the plant sciences that stresses basic, rather than applied, research. In cooperation with an adviser, each student plans a curriculum with a concentration in basic sciences supplemented by courses in applied fields best suited to his or her individual goals. Options include plant breeding and plant genetics; cytology, and cytogenetics; plant anatomy, ecology, taxonomy, and physiology; crop production, plant pathology; entomology; and molecular biology and biotechnology.

Students are encouraged to gain hands-on experience in plant genetics and breeding by conducting independent research under direction of a faculty adviser and/or by working for a faculty member on his/her research. Field, greenhouse, and laboratory facilities are available.

**Plant pathology** is the study of the causes of plant diseases, the mechanisms of the interactions of disease-causing agents and plants, and the methods of preventing or controlling plant diseases. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of plant science. However, this concentration also prepares students for careers as technical representatives for agribusiness, as Cooperative Extension agents, as state or federal regulatory agents, or as research technicians in laboratories of plant pathology, mycology, microbiology, and biotechnology.

Courses include chemistry, mathematics, introductory biology, botany, plant physiology, and introductory plant pathology.

Additional plant pathology and other relevant courses from other fields are selected according to the particular interests of the student. Options include entomology, plant breeding, pomology, vegetable crops, floriculture and ornamental horticulture; and soil, crop, and atmospheric sciences.

**Plant protection** is offered for students who are interested in the management of plant pests. It includes the study of insects, diseases, weeds, vertebrate pests, and other factors that prevent maximum crop production. This concentration can prepare students for careers in agribusiness, the agrichemical industry, Cooperative Extension, pest management consulting, state and federal regulatory work, and a variety of technical positions. Although designed as a terminal program for students desiring a practical preparation in general plant protection, this specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

The following subjects are considered essential to the plant protection specialization: botany and plant physiology, general ecology, soils, crop science, and mycology.

Additional courses in introductory entomology, introductory plant pathology, plant disease control, weed science, and integrated pest management are recommended.

In addition, a number of other subjects pertinent to plant protection are recom-
mended, depending upon the student's interests: agricultural economics, agricultural and biological engineering; soil, crop, and atmospheric sciences; biochemistry, communication, pathology and entomology; general physics, genetics, meteorology, mycology, pest control, and plant anatomy. Employment involving practical experience in plant protection between the junior and senior years is encouraged. The job may be on a farm, at an experimental station, with an agrichemical company, or with a regulatory agency.

**Pomology (the science of fruit growing)** provides students with knowledge of the scientific and technological aspects of fruit production, marketing, sales and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.

**Vegetable crops** is offered for students with an interest in either applied or basic aspects of vegetable production. The high value of vegetables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including: horticultural research, teaching, extension, production, processing, and marketing. A faculty advisor assists individual students in the selection of courses, which usually include: general horticulture, soils, botany, vegetable types and identification, vegetable production, and post-harvest handling or marketing. Additional course work may be based on the interests of the student, and may include: vegetable physiology, plant breeding, entomology, plant pathology, weed science, ecology, soil, crop, and atmospheric sciences; nutritional science; agricultural economics; international agriculture; and agricultural and biological engineering.

The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Existing challenges are facing the industry. Greater awareness of environmental and health issues is driving a change toward farming practices that depend less upon agricultural chemicals than in the recent past. New technologies are being developed and implemented to help growers make this change while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and cultural practices that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching and research programs. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

**Rural Sociology**

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, rural sociology students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are: international agricultural development; community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technological change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students learn the methodology of sociology, and how to apply both to research and policy in their subject areas.

Recognizing that students are concerned with future career opportunities, the undergraduate program emphasizes acquisition of skills as well as general knowledge in preparation for jobs or further study upon graduation. Accordingly, students are expected to become involved in the application of theory, methodology, principles, and concepts in the analysis of practical problems.

Rural sociology offers degree programs at both the undergraduate and graduate levels (B.S., M.S., M.P.S., or Ph.D.). These programs are offered through the Department of Rural Sociology and the Graduate Field of Development Sociology, both of which are located in Warren Hall. For many years, the department and graduate field have been recognized as among the top programs in the country, and both are known for innovative program orientations. The department is particularly well known for its contribution in international as well as domestic aspects of community and rural development, environmental sociology, sociology of agriculture, population studies, and other topics. Faculty members in this department are committed to both quality instruction and research programs. Being located in a college of agriculture, faculty members maintain strong ties with the technical fields in the college as well as with the Interuniversity Program, the Biology and Society Program, the Cornell Institute for Social and Economic Research, the Community and Rural Development Institute, the Gender and Global Change Program, the Life Course Institute, the Rural Development Program, the Hispanic Studies Program, the Program on Science, Technology, and Society, and the Center for International Studies. Nearly half of the department faculty are associated with one or more area studies programs (the Southeast Asia Program, South Asia Program, Latin American Studies Program, East Asia Program, or the Institute for African Development). Department members also maintain and participate with faculty in the Department of Sociology and other social science units located in other colleges at Cornell. Students are encouraged to supplement their coursework by electing courses in these other departmental programs, thereby rounding out their educations by acquiring different perspectives.

The courses offered in rural sociology can be grouped in three broad categories: development sociology; population, environment, and society; and social data and policy analysis. All students majoring in Rural Sociology are required to take five core courses: an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 305), and statistics (R SOC 404). Four elective Rural Sociology courses are also required of all majors.

**The focus area in development sociology** provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses in either a domestic or international development is emphasized. These courses provide background in several aspects of development sociology, including: (1) an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, (2) analysis of the social structures and processes for development in nonmetropolitan settings in the United States, (3) analysis of the processes of agricultural change and development in industrialized and low-income countries, and (4) an understanding of the processes of technological development and change in agriculture and other rural industries in developed and developing countries.

Students are encouraged to complement courses in the department with course work in the history and economics of development, area studies, and the policy sciences.

**Courses in the population, environment, and society focus area** provide an understanding of (1) the causes and consequences of the major components of population change—fertility, mortality, and migration; (2) the major patterns of human migration and population characteristics in the United States and the developing world; (3) the relationships between social structure and the biophysical environment; (4) the relationships between human and natural resource utilization in development; and (5) impacts of public policy interventions on population size, growth and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the major in such a way as to stress either population studies or sociological aspects of natural resources and the environment.
Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide (1) knowledge of research methods, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a policy area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Soil, Crop, and Atmospheric Sciences

The Department of Soil, Crop, and Atmospheric Sciences provides instruction in five specializations: atmospheric science, agronomy, crop science, ecosystems, soil science, and policy sciences. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in some of these specializations.

Atmospheric science is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic properties and processes of the atmosphere. All students are required to complete a minimum of five semesters of calculus, two semesters of physics, a semester each of chemistry, computer science, and statistics, and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in specialized areas of meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science. Students are encouraged to choose additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.

Agronomy combines the study of crop production and soil management. It provides the student with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture.

Crop science is the application of basic biological and ecological science to the improvement and management of the world’s main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor’s degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

Science of Earth Systems integrates atmospheric and soil science as well as other earth studies to develop a scientific basis for managing the basic resources of the planet. This is an interdisciplinary program described in detail elsewhere (see field). Soil science is a basic discipline important in ecology, environmental, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agriculture management related to soils. Students take 6 credits in soil science, including 4 credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as 6 credits of crop science to satisfy the major.

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the general education requirements, this major may include a concentration of courses in one of several academic units of the college or university. Students completing this major are often planning a career in agriculturally related food and service enterprises. Many of the fast-growing occupations require the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural environment is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomy, sciences, biological sciences, and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information on the options and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

International Agriculture provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and the various world areas for which study programs exist. Study of a foreign language is required. In addition to the college distribution requirements, students in International Agriculture must take a minimum of 30 credits toward the major. A minimum of 7 credits in International Agriculture and 8 credits in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other programs of the college.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean’s List. Each semester, students are recognized for academic excellence by class inclusion in the Dean’s List. Eligibility for the Dean’s List in the College of Agriculture and Life Sciences is determined by the following criteria:

1) a minimum course load for the semester of 12 letter-graded credits;
2) achievement of a semester GPA of at least 3.50; and
3) achievement of an “S” grade, or a “C-” or better grade in each course (excluding physical education), with no Incompletes.

Dean’s List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

Bachelor of Science with Distinction. Students who rank in the top 10 percent of the college’s graduates on the basis of the GPA for the last 60 credits completed at Cornell will be graduated with distinction.

Bachelor of Science with Honors. Students will graduate with a bachelor of science degree with honors when, in addition to having completed all the graduation requirements, they have satisfactorily completed the honors program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Honors Program.

Ho-Nun-De-Ka, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 10 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship.
Indian attitudes toward the environment. The topics as the sovereign rights of Indian American Indian Studies is the instructional standing of the unique heritage of North academic department that offers them. course work that enhances students' under­ tanding of the American Indian Program. Graduate degree requirements and Nutritional Sciences. Graduate study is organized under graduate academic departments and units and also courses are arranged by department, in the Divisions of Biological Sciences. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered with guest lecturers and media presentations. Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Divisions of Biological Sciences and Nutritional Sciences. Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order. Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Annoucement of the Graduace School. Courses for graduate students are described in the section on the academic department that offers them.

DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Divisions of Biological Sciences and Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order. Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

INTERDEPARTMENTAL/ INTERCOLLEGE COURSES

American Indian Studies

American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 (enroll for Rural Sociology 100) and American Indian Studies 175 (enroll for Rural Sociology 175), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 300 Caldwell or consult with K. Shanley, associate director of academic development, American Indian Program, 300 Caldwell Hall.

AIS 100 American Indian Studies: An Introduction (enroll for Rural Sociology 100)

Fall. 3 credits. S-U grades optional. W 7:30-10:30 p.m. R. W. Venables. This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations.

AIS 175 Issues in contemporary American Indian Societies (enroll for Rural Sociology 175)

Spring. 3 credits. S-U grades optional. Lecs. W 7:30-9:30 p.m.; rec. various times. J. E. Barreiro. Early American History and the postcontact period will be reviewed with an emphasis given to developments since 1789. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered with guest lecturers and media presentations.

AIS 209 Political History of American Indians in the U.S. (enroll for History 209)

AIS 230 Cultures of Native North America (enroll for Anthropology 230)

AIS 260 Introduction to American Indian Literature (enroll for English 260)

AIS 261 Urban Archaeology (enroll for Landscape Architecture 261)

AIS 269 Topics in American Indian Literature (enroll for English 260)

AIS 276 American Indian History 1500-1850 (enroll for History 276)

AIS 277 American Indian History since 1850 (enroll for History 277)

AIS 278 Native American Poetry (enroll for English 278)

AIS 318 Ethnohistory of the Iroquois (enroll for Rural Sociology 318)

AIS 329 Indians, Settlers, and Slaves in the early South (enroll for History 329)

AIS 360 Preindustrial Cities and Towns of North America (enroll for Landscape Architecture 360)

AIS 363 American Indians, Planners, and Public Policy (enroll for Landscape Architecture 363)

AIS 367 American Indian Tribal Governments (enroll for Rural Sociology 367)

AIS 370 Resistance and Adaptation: Native American Responses to the Conquest (enroll for History 370)

AIS 429 Undergraduate Seminar in Indians of Eastern North America (enroll for History 429)

AIS 442 American Indian Philosophies: Selected Topics (enroll for Rural Sociology 442)

AIS 471 American Indian Women's Literature (enroll for English 471)

AIS 494 Special Topics in American Indian Studies

AIS 624 Graduate Seminar in American Indian History (enroll for History 624)

AIS 659 Trickster in American Indian Literature and Culture (enroll for English 659)

AIS 665 Native American Contributions to Anthropological Thought (enroll for Anthropology 665)

AIS 687 American Indian Literature: Issues of Transition, Collaboration and Alternate Discourse (enroll for English 687)

Science of Earth Systems

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth System, and understanding their various interactions is crucial for understanding our environment.

A new major in the Science of Earth Systems (SES) is now available for students in the College of Agriculture and Life Sciences. As described in the "Interdisciplinary Centers, Programs, and Studies" section at the front of this catalog, SES is an intercollege major which is also accessible to students in the Colleges of Engineering and Arts and Sciences.

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology during the freshman and sophomore years. In addition, students...
take a two-credit SES Colloquium (SES 101/102). In the junior and senior years, students take a set of common SES core courses (SES 301, 302, 321, 402) and an additional set of advanced interdisciplinary or interdisciplinary courses that build on the basic sequences.

The SES program provides strong preparation for graduate school in any one of the Earth Systems sciences and related engineering fields, in addition to preparing students for a wide variety of careers in environmental work with the B.S. degree. The SES major also provides a sound background for students who are interested in entering fields such as environmental law and policy with a strong scientific understanding of the environment.

For complete information about the SES major, see the Web site at http://www.geo.cornell.edu/aces/SES_home.html

For more information, contact a SES adviser to explore the possibility of entering the SES major in the College of Agriculture and Life Sciences: K. H. Cook (SCAS), T. E. Dawson (Ecology and Systematics), L. O. Hedin (Biological Sciences), J.-Y. Parlange (ABEN), S. J. Riha (SCAS), J. Yavitt (NTRES).

Science of Earth Systems Courses

SES 101/102 Science of Earth Systems Colloquium (enroll for ABEN 120/121, GEOL 122/124, or SCA 101/102)

SES 301 Climate Dynamics (enroll for ASTRO 331 or SCAS 331)

SES 302 Evolution of the Earth System (enroll for GEOL 302 or SCAS 332)

SES 321 Biogeochemistry (enroll for GEOL 321 or NTRES 321)

SES 402 Mechanics in the Earth and Environmental Sciences (enroll for ABEN 366)

Department of Statistical Science

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog (see p. 22).

NONDEPARTMENTAL COURSES

ALS 101 Transition and Success in Cornell

Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle (assisted by W. N. Alberta).

Discussion-oriented course to enable all new CALS students to enjoy their transition to and experience at Cornell. Lecture, discussion, guest speakers, and assignments that explore Cornell's history, services, and organizations will be used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 134 Emergency Medical Technician

Fall or spring. 3 credits. S-U grades optional. Prerequisite: none—but basic and advanced first aid recommended. Lect. M 2:00-5:30; lab, W 2:00-5:30.

G. J. Conneman and A. E. Gantert.

E.M.T. is an intensive 160-hour course taught throughout the fall and spring semesters.

Course includes training in C.P.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, medical emergencies, and defibrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Classes will be conducted in the Class of '44 classroom-fieldhouse.

ALS 400 Internship

Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only.

Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 500 Politics and Policy: Theory, Research, and Practice (also Hess 404 and GOVT 500)

Students in the College of Agriculture and Life Sciences must register for ALS 500.

S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology; (2) student externships; and (3) individual research papers or projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the appropriate office in Washington, 471 Hollister Hall.

ALS 661 Environmental Policy (also Biology and Society 461 and BioES 661)

Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students.

Prerequisite: permission of instructor. Sem R 2:30-4:30 p.m. D. Pimentel.

This course uses an interdisciplinary approach to focus on complex environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for policy makers in Science or BioScience.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

M. B. Timmons, L. P. Walker.

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ABEN 102 Introduction to Microcomputer Applications

Fall or spring. 3 credits. S-U grades optional. Mac or PC labs available. All students, including those pre-enrolled, must attend the first lecture to guarantee admittance to a laboratory section. Lec, W 12:20-1:10, labs, M 1:25-4:25 or 7:30-10:30 p.m. or T 1:25-4:25 or W 7:25-4:25 or 7:30-10:30 p.m., or R 1:25-4:25 p.m.

Fees: $15. P. E. Hillman.

Introduction to application packages on microcomputers. Laboratories provide experience with word processing, spreadsheets, database management, presentation graphics, and Web page authoring. An independent project related to the student's major is required. Mac and PC labs cover the same software materials. Other packages and others such as desktop publishing, multimedia, statistical software, searching the Internet for information are discussed and demonstrated in the lectures, as well as computer hardware and operating systems.

ABEN 104 Introduction to Programming in Java and Fortran

An introductory course in computer programming with an emphasis on handling data and algorithm development. Problem sets are on topics of general interest. The first third of the course utilizes Fortran 90 to introduce students to procedural programming concepts and style. For the remainder of the course, students will be introduced to object-oriented programming using Java. Students are expected to spend 6 to 8 hours outside their scheduled laboratory periods to complete problem sets. No prior knowledge of computers or computer language is necessary.

ABEN 110 Introduction to Metal Fabrication Techniques

Spring. 3 credits. Each lab limited to 18 students. Lec, T R 9:05; labs M T or R 1:25-4:25, M or T 7-10. T. J. Cook.

Emphasis on selection of proper materials and techniques to accommodate a variety of metal fabrication and maintenance projects. To include both hand and machine tools, fasteners, strengths of materials, classification and identification of metals, soldering, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

To view the rest of the content, please consult the original source.
A series of seminars will be given by A forum to discuss the career opportunities for An introduction to computer programming To include site selection and preparation, to meet their career goals. A required course carpentry project.

Principles and practice of wood construction. To include site selection and preparation, drainage, water and septic development, footers and foundations, material properties, framing and roofing, comparison of alternatives to wood construction, use of hand and power tools, wood joining methods, fasteners, concrete work, and wood construction. Each student will plan and construct an approved carpentry project. 

Fall. 3 credits. Each lab limited to 15 students. Lab, T R 9:05; labs, T W R or 1:25–4:25, T or W 7–10. T. J. Cook.

A forum to discuss the career opportunities for engineering students and the activities and problems of interest in agricultural and engineering context. A structured program development, and data structure in an engineering curriculum. Recommended

Fall. 4 credits. Each lab limited to 22 students. Lab, T 2:30–4:30.

Fall. 3 credits. Prerequisite: college physics. Lab, T R 8:40–9:55.

Fall. 4 credits. Courses each week (lecture-recitation-project work). Lab, M W F 8:00–8:50; lab, R 8:00 or 9:05.

Fall. 4 credits. Coefficient of solar energy, small-scale hydro-power, wind, bio conversion processes, house energy balances, and the public policy implications of problem areas. Use of spreadsheets will be extensive.

Fall. 4 credits. Four classes each week (lecture-recitation-project work). Lab, M W F 8:00–8:50; lab, R 8:00 or 9:05.

Fall. 4 credits. Involves computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. A structured programming language is used, implemented on interactive personal computers, and applied to problems of interest in agricultural and biological engineering. No previous programming experience is assumed.

A forum to discuss the career opportunities for engineering students and the activities and curricula that will lead to these opportunities. A series of seminars will be given by practicing engineers, Cornell faculty members, alumni, career offices, and students. Students develop personalized, written career plans and select future courses to meet their career goals. A required course for freshmen majors in Agricultural and Biological Engineering.

Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Lab, T R 8:40–9:55, Lab, 1:25–4:25.

A forum to discuss the career opportunities for engineering students and the activities and curricula that will lead to these opportunities. A series of seminars will be given by practicing engineers, Cornell faculty members, alumni, career offices, and students. Students develop personalized, written career plans and select future courses to meet their career goals. A required course for freshmen majors in Agricultural and Biological Engineering.

Fall. 3 credits. Prerequisite: MATH 294 and course in calculus. 2 lecs, 1 lab. Lab, T R 10:10; lab, R or F 1:25–4:25. J. B. Hunter. 

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, medical imaging, diagnostic signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

Spring. 3 credits. Prerequisites: one semester of calculus and introductory biology; minimum one term each college chemistry and physics. Not open to freshmen. S-U grades optional. Lect, T R 12:00–1:10; lab, W 2:30–4:25 or F 2:30–4:25. J. A. Bartsch.

Integration of heat and mass transfer in the context of biological and environmental systems. Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant and animal biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, medical imaging, diagnostic signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

Spring. 3 credits. Prerequisites: one semester of coursework in biology, chemistry, and physics. Not open to freshmen. S-U grades optional. Lect, T R 12:00–1:10; lab, W 2:30–4:25 or F 2:30–4:25. J. B. Hunter.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, medical imaging, diagnostic signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

Spring. 3 credits. Prereqs: one semester of math and physics. Lab, T R 12:00–1:10; lab, W 2:30–4:25 or F 2:30–4:25. J. A. Bartsch.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, medical imaging, diagnostic signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.
ABEN 411 Biomass Processing: Modeling and Analysis
Spring. 3 credits. Prerequisites: ABEN 290, ABEN 350 (or any course in heat and mass transport), BIOM 331, 332, or BIOM 250. M. W. F 9:05. L. P. Walker. This course is designed to introduce students to how basic concepts from physical chemistry, enzyme and microbial kinetics, and transport phenomena are used to model biomass conversion and degradation processes. Examples of different agricultural and environmental processes are used to explore model development, solutions, and validation. There is a strong emphasis on the use of differential equations to model process dynamics.

ABEN 425 Science and Technology of Environmental Management
Fall. 3 credits. Prerequisite: graduate or senior. Letter only. Lec. T R 2:55–4:10. W. J. Jewell. Quantitative description of decline in environmental quality caused by human activities, and the integration of science and technology solutions to pollution and their limits. Tools used by engineers and scientists to understand the environment will be used to focus on water quality problems (two-thirds), air quality (one-sixth) and land quality (one-sixth).

ABEN 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: junior standing and above. Lec, T R 12:25–1:15; lab, R 2:30–4:25. M. B. Timmons. An in-depth treatment of the principles of aquaculture (fish biology, waste treatment, engineering design, feed, nutrition, processing, etc.). This course is intended to build upon the undergraduate's previous coursework and interests. Supervised "hands-on" laboratory experiences.

ABEN 449 Computational Tools for Engineers
Spring. 3 credits. S-U or letter grade optional. Prerequisite: completion of the undergraduate engineering math sequence or permission of instructor. Labs, M W F 2:30. J. R. Cooke. This laboratory course provides a hands-on exposure to contemporary engineering software with applications from applied mathematics and the engineering sciences. The symbolic computational software, Mathematica, provides the focus for the course. Topics from Math 191-294 and more advanced topics relevant to the upper-level undergraduate curriculum and research are treated.

ABEN 450 Instrument Design: Signal Processing and Data Acquisition
Fall. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming and use of spreadsheets. Lec, M W F 8:40–9:55, lab, M or W 2:25–3:25. D. J. Aneshansley. An introduction to static and dynamic characteristics of electronic sensors, transducers, digital and analog signal conditioning circuits and conversion techniques, data acquisition, and instrument control with personal computers are considered. Biological and agricultural examples of instrument problems and designs are used. A capstone design project is an option with this course; see instructor for details. This course satisfies the capstone design experience requirement.

ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or CS 100) and heat and mass transfer (ABEN 350 or equivalent). Lecs, M W 11:15, comput disc/lab: F 11:15. R. E. Pitt. Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using an industry-standard physics-based computational software on a supercomputer. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major part of the course (no final exam). The course satisfies the College of Engineering upper-level computing application requirement. It also satisfies the capstone design experience requirement.

ABEN 454 Physiological Engineering
Fall 3 credits. Corequisite: fluid mechanics. Lecs, T R 12:20–1:10; lab, T R 1:25–4:25. R. E. Pitt. Engineering analysis and design in the physiology of animals and humans. Use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: frequency analysis as applied to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations. An ABEN 490 capstone design project can also be taken in conjunction with this course.

ABEN 456 Biomechanics of Plants
Fall 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grade optional. Lec, T R 11:15–12:05; disc, W 3:35–4:25. J. R. Cooke and K. J. Niklas. An engineer takes to plant form and function following the text. Plant Biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics and plant evolution.

ABEN 471 Geohydrology (also Civil and Environmental Engineering 431 and Geology 446)

ABEN 473 Watershed Engineering
Fall 3 credits. Prerequisite: fluid mechanics or hydrology. Lecs, T R 9:05; disc, T R 1:25–4:30. M. F. Walker. Engineering principles are applied to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture conservation, drainage, and water supply. This course satisfies the capstone design experience requirement.

ABEN 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology. Lecs, M W F 12:20. T. S. Steenhuis and L. D. Geoehring. This course will focus on design of drainage and irrigation systems for agriculture and non-agricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used wherever possible. One major design project is required of each student. This course satisfies the capstone design experience requirement.

ABEN 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Lecs, M W F 1:25–2:15. D. A. Haith. Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of models into efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, and dynamic programming) to evaluate management alternatives. Applicable to water, air quality management, air pollution control, and solid waste management.

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lecs, M W F 1:25. D. A. Haith. Processing and design of facilities and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; hazardous waste management. Emphasis on quantitative analyses.

ABEN 477 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisites: one environmental science course and at least junior-level standing, or permission of instructor. T R 2:30–3:45. Not offered 1998–99. W. J. Jewell. Overview of pollution problems in agriculture, legal restrictions, and technologies used to control pollution. Biological, physical, and chemical processes are applied to solve problems associated with animal wastes, food production, and food and fiber processing.

ABEN 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Lecs, T R 2:30–3:45. W. J. Jewell. Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, hydropoponic plants, wastewater farming, sludge and industrial residue application to land, soil restoration.
bioremediation of toxics, and biofilters for air purification are examples of pollution control systems that depend on natural processes. Pollution control mechanisms in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

**ABEN 481 Design of Wood Structures**
Spring. 3 credits. Prerequisite: ENG 202. Lecs, M W F 12:20 (Hollister Hall). K. G. Gebremedhin. Prerequisites: Two evening prelims. Computer-aided and manual computation procedures of engineering wood structures. Topics include national design codes; estimation of design loads (dead, live, wind, snow, and seismic loads); mechanical properties of wood and wood products; design of beams, columns, trusses, frames, arches, bridges, diaphragms; connections, and special wood structural systems. Engineering judgment and responsibility. 3 credits maximum in engineering design course are also emphasized. The course includes a semester-long project that provides a real-life engineering design experience.

**ABEN 482 Bioenvironmental Engineering**
Spring. 3 credits. Prerequisites: ABEN 250 and 250, or equivalent. Lecs, T R 11:15; lab, W 12:54-2:25. L. D. Albright. Analysis and design of structures to modify the thermal and aerial environments of animals and plants. Environmental requirements of animals and plants, and the design of buildings to act as buffers between biological systems and weather. Heat flow, air flow, psychrometry, energy balances, temperature biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

**ABEN 491 Highway Engineering (also Civil and Environmental Engineering 462)**
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently). Lecs, T R 10:10; lab, T 1:25–4:25. L. H. Irwin. An introduction to highway engineering with an emphasis on design. Students will work in teams to apply the current standards and design criteria used in professional practice to several highway design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors and public safety, hydrology and drainage design, highway materials, pavement design, and maintenance. This course satisfies the capstone design experience requirement.

**ABEN 494 Special Topics in Agricultural and Biological Engineering**
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**ABEN 496 Senior Design in Agricultural and Biological Engineering**
Fall and spring. 1–3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Note: completing an independent study form is required to register. Hours to be arranged.
Staff. Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN course (for an approved ABEN course see ABEN Undergraduate Program publication).

**ABEN 497 Individual Study in Agricultural and Biological Engineering**
Fall and spring. 1–4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged.
Staff. Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student. In the latter case, that adequate facilities can be obtained.

**ABEN 498 Undergraduate Teaching**
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall).
Hours to be arranged.
Staff. The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

**ABEN 499 Undergraduate Research**
Fall and spring. 1–3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed; written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall).
Hours to be arranged.
Staff. Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review the pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

**ABEN 501–502 M.P.S. Project**
Fall and spring. 1–6 credits. Required of each M.P.S. candidate in the field. Hours to be arranged. ABEN graduate faculty. A comprehensive project emphasizing the application of scientific technology to the solution of a real problem.

**ABEN 551–552 Agricultural and Biological Engineering Design Project**
Fall and spring. 3–6 credits. Prerequisite: admission to the M.Eng. (Agri.) degree program. Hours to be arranged. ABEN graduate faculty.

Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and computer-aided design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551-552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than 6 design project credits are desired in one semester, both 551 and 552 may be taken.

**ABEN 625 Instrumentation: Sensors and Transducers**
Spring. 3 credits. Prerequisite: Mathematical 293 or equivalent. Lecs, R 2:30–4:30. J.-Y. Parlange. Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.

**ABEN 655 Thermodynamics and Its Applications**
Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent. Lecs, R 2:30–4:30. J.-Y. Parlange. Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications of soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations.

**ABEN 671 Analysis of the Flow of Water and Chemicals in Soils**
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics. Lecs, R 3:35–4:40 (first meeting—TBA after that). J.-Y. Parlange. The course encompasses the full range from simple to complex methods to describe the chemical and water flows on the surface, in the vadose zone, and through the aquifer. Current analytical, semi-analytical, and computer-based techniques are discussed. Both homogeneous and heterogeneous soils are analyzed. Offered: Civil and Environmental Engineering 653, or complementary, but not identical, course.

**ABEN 672 Drainage**
Spring. 4 credits. Prerequisites: ABEN 471 and two calculus courses. S-U grades optional. Offered alternate years. Lecs, M W F 12:20; lab, T 1:25–4:25. S. T. Sneath. Theory of water and solute flow in aquifers, hill slopes, and the vadose zone as it relates to artificial drainage is discussed. Drainage design as it relates to agricultural land, landfills, and land application sites will be critically reviewed. The importance of preferential flow and matrix flow on water quality of drainage waters is examined.
ABEN 677 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1998–99. Lecs, T R 2:30–3:45. W. J. Jewell. Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biological, physical, and chemical pollution control methods are used in design problems with animal wastes, food production, and food and fiber processing. A semester-long design project is required. This course satisfies the capstone design experience requirement.

ABEN 678 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus. Lecs, M W F 2:30. D. A. Haith. Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include urban nonpoint source runoff, lake eutrophication, groundwater waste loadings from land disposal sites, pesticides and nutrients in agricultural drainage, irrigation return flows, and watershed stream flow and sediment yield.

ABEN 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&SAM 310 or permission of instructor. Lecs, M W F 11:15. J. R. Cooke. Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.

ABEN 692 Pavement Engineering (also Civil and Environmental Engineering 643)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering is required. Lec, W 1:25–2:15. L. H. Irwin. Application of geotechnical engineering principles to the selection of materials and the design of highway and airfield pavements, computer-based methods for pavement design, structural evaluation of pavements, and pavement systems management. Topics of discussion will include bituminous mixture design, base courses; soil stabilization methods, seal coat design, design of flexible and rigid pavements; pavement design for frost conditions; and pavement evaluation using nondestructive test methods. Laboratory will provide a case study of pavement systems management.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. ABEN graduate faculty. The department teaches "trial" courses under this number. Offerings vary by semester, and will advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall or spring. 1–6 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. ABEN graduate faculty. Topics are arranged by the staff at the beginning of the term.

ABEN 700 General Seminar
Fall. 1 credit. S-U grades only. M (time to be announced). Staff. Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

ABEN 750 Orientation for Research
Fall. 1 credit. Limited to newly joining graduate students. S-U grades only. Lecs, first 7 weeks. M 3:35–4:25; remainder to be arranged. J. A. Bartsch. An introduction to ABEN research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

ABEN 754 Sociotechnical Aspects of Watershed Development (also Government 644)
Spring. 2–3 credits. S-U grades optional. T. Steenhus, M. Walter, N. Uphoff and R. Barker. Examines watershed development and its relation to agriculture, irrigation and other activities within its boundaries. Emphasis on social, technical and economic processes within watersheds, including political and administrative aspects. Provides an opportunity to examine systematically the interaction of various aspects of watershed management and design in developing countries.

ABEN 771 Soil and Water Engineering Seminar
Fall and spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours to be arranged. T. S. Steenhus. J.-Y. Parlange and M. F. Walker. Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

ABEN 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours to be arranged. Staff. Advanced analysis and design of production systems with emphasis on structural and environmental requirements, biological responses, and economic considerations. Hours to be arranged.

ABEN 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. J. R. Cooke. The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.
Agricultural, Resource, and Managerial Economics

ARME 210 Introductory Statistics
Fall. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Lecs, M W F 10:10-11:00, M 12:20-1-1:10 (2 secs), W 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); W 10:10-12:05 or 12:20-2:15 (3 secs); or R 12:20-2:15 (2 secs) or 2:30-4:25 (2 secs). 2 evening prelims. C. van Engelen.

An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

ARME 220 Introduction to Business Management

This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as globalization, ethics, quality, and strategic alliances. Case studies and guest executives are an important part of the course.

ARME 221 Financial Accounting
Spring. 3 credits. Not open to freshmen. Lecs, M W F 11:15-12:05 or 12:20-1-10; sec, M W F 10:10-12:05 (2 secs), 12:20-2:15, or 2:30-4:25; sec, M W F 10:10-12:05 or 12:20-2:15 (2 secs), 2:30-4:25 (2 secs), or 7:30-9:25 p.m. (2 secs); or R 10:10-12:05, 12:20-2:15, or 2:30-4:25. 2 evening prelims and a comprehensive final, weekly homework assignments, and a written case study and one project using an electronic spreadsheet. J. S. Hopkins.

A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control, accounting for business combinations, and analysis of financial statements. Emphasis is on the measurement of income, stockholders' equity, and the statement of cash flows. Limited use of a financial data base of publicly held companies; introduction to financial information on the World Wide Web.

ARME 240 Marketing
Fall. 3 credits. Lecs, M W F 10:10-11; secs, M W F 10:10-12:05; T 12:20-1-10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25; or W 12:20-1-10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25. 2 evening prelims and a term project on topics held during the semester. E. W. McLaughlin.

This course provides a broad introduction to the fundamentals of marketing. We will explore the components of an organization's strategic marketing program, including how to price, promote, and distribute goods, services, ideas, people, and places. We will examine specifically the role played by changing consumer preferences. Our primary emphasis will be placed on consumer goods industries. The principles and concepts from this course apply equally well to the marketing of goods and services in all sectors of the economy. Case study lectures, and current marketing applications from various companies will be presented and analyzed.

ARME 250 Environmental Economics

Concepts and methods used in the public and private analysis of environmental resources. Subjects include valuation, benefit-cost analysis, and ecological economics. Major current economic problems such as economic incentives in environmental policy, endangered species protection, forestry, energy use, world petroleum resources, and global warming. The growing world trade in resource-intensive manufactured products and the impact on income, employment, and pollution. Comparative resource use and environmental protection in industrialized and developing countries.

ARME 302 Farm Business Management
Fall. 4 credits. Not open to freshmen. This course is a prerequisite for ARME 402 and 405. Lecs, M W F 9:05-9:55, sec, W or R 1:25-4:25. On days farms are visited, the section period is 1:25-4:50. W. A. Knoblauch.

An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings, and machinery.

ARME 320 Business Law I
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lecs, M W F 9:05-9:55. 1 evening prelim. D. A. Grossman.

Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, property, and the landlord-tenant relationship.

ARME 321 Business Law II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law. Lecs, T R 8:40-9:55. D. A. Grossman.

The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, like employment discrimination, secured transactions, product liability, unfair competition, and international business law.

ARME 323 Managerial Accounting
Fall. 3 credits. Prerequisite: ARME 221 or equivalent. Lecs, M W 12:20-1-10; secs, M W F 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs), or R 10:10-12:05 or 12:20-2:15 (2 secs). 2 evening prelims, a third exam, weekly homework, one written case study, and one project using an electronic spreadsheet. J. S. Hopkins.

An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Use of electronic spreadsheets is required.

ARME 324 Financial Management
Spring. 4 credits. Prerequisite: ARME 220 or equivalent. Recommended: ARME 221 and 210 or equivalent. Lecs, M W F 10:10-12:05, 12:20-2:15, or 2:30-4:25, or R 10:10-12:05 or 12:20-2:15. 2 evening prelims. Staff.

Focuses on three major questions facing management: how to evaluate capital investment decisions, how to raise the capital to finance the firm, and how to generate sufficient cash flows to meet the firm's cash obligations. Major topics include methods to analyze investment decisions and the capital structure, valuation techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management. Microcomputers are used for analysis and decision making. Previous computer experience is preferred, but optional instruction offered.

ARME 325 Personal Enterprise and Small Business Management
Spring. 4 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no adds or drops after second class meeting. Lecs, T R 12:20-1-10; sec, W 2:30-4:25; Two additional hours to be arranged. D. Streeter.

Acquaints students with the challenging role of managing a small business in the global economy. Special emphasis on the problems of planning, starting, and managing a new business, including strategic planning, marketing, financing, and managing growth. Term project, development of a business plan, is done in teams of no fewer than three. Case studies and visiting entrepreneurs illustrate various small business issues.

ARME 326 Human Resource Management in Small Businesses
Fall. 3 credits. Prerequisite: ARME 220 or ARME 302 or equivalent. S-U grades optional. Lecs, T R 10:10-11:25 or 11:40-12:55. R. A. Milligan.

An introduction to the management of human resources in small businesses. The focus is on developing and utilizing all of the capabilities of all small business personnel including owners, family members, and employees. Topics include recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized.

ARME 327 Accounting for Entrepreneurs
Spring. 3 credits. This course is intended for non-ARME majors. Students may not receive credit for this course in addition to credit for ARME 221 and/or ARME 323. Lecs, T R 10:10-11:25; sec, W 2:30-5-20.

This course provides an introduction to the principles of accounting used by entrepreneurs who plan, direct, control, and make decisions about critical business activities in...
their companies. This course will provide future entrepreneurs with the requisite technical skills to accumulate, record, and communicate financial information about their businesses to internal and external parties of the firm. We will explore the principles of financial accounting (accounts receivable, inventory, fixed assets, liabilities, time value of money, investments, owners' equity) and managerial accounting (budgeting, product costing, inventory management, break-even analysis) as they apply to small businesses. Use of accounting software and the Internet will be required. This course is intended for students who have no prior accounting courses and who are preparing for an entrepreneurial career path.

ARME 328 Innovation and Dynamic Management (also Hotel Administration 418)
Spring. 3 credits. Limited to juniors and seniors. Lecs. T R 10:10-11:25. C. Enz. For description, see H ADM 418.

ARME 340 Futures and Options Trading
Spring. 3 credits. Prerequisite: ECON 101, 102, or 104; ARME 210 or equivalent. S-U grades optional. Lecs, T R 10:10-11:25. W. H. Lesser. The focus of the course is on the use of futures and options as risk management tools. Commodity, currency, and interest rate derivatives are covered from the perspective of the hedger, but those interested in arbitrage and speculation will get some insights as well. Students will participate in a simulated trading exercise in which they will use price and market information and input from industry experts to manage a hedge position.

ARME 342 Marketing Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: ARME 240 and ECON 101–102. Lecs, M W F 10:10-11:10; secs, R 12:20-2:15 (2 secs) or 2:30-4:25 (2 secs), F 10:10-12:05 (2 secs), or 12:20-2:15 (2 secs). In weeks secs are held, there will be no F lecture. R. D. Chisso. Deals with the theory and practice of marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the marketing aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public policy and ethical dimensions of marketing are examined.

ARME 346 Dairy Markets and Policy
Spring, weeks 1–7. 1 credit. Limited to juniors and seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. Lecs, R 2:30-4:25. M. Stephenson. An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy trends and demographics, world trade for dairy products, and policy issues. Class participation is expected as topics and new ideas are explored.

ARME 347 Strategic Marketing for Principal Products
Spring. 1 credit. Prerequisite: ARME 240. Lec, M 12:20-1:10. G. B. White. This course will emphasize applications in strategic marketing. Lectures focus on practical aspects of the planning, implementation, and control phases of the strategic marketing process. Students will develop a long-range marketing plan for a fruit, vegetable, greenhouse, nursery, or related horticultural firm.

ARME 380 Independent Honors Research in Social Science
Fall or spring. 1–6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.

ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving
Fall. 3 credits. 4 half-day field trips. 1 all-day field trip. In-person and online field trips are taken, class ends at 6:00. Prerequisite: ARME 302 or equivalent. Lecs, T R 12:20-1:10; sec, R 1:25-4:25. G. J. Conneen. A capstone seminar/workshop designed for juniors and seniors who plan to return to the family business or home farm or to take positions in banking, credit, or agribusiness, as well as those who wish to establish entrepreneurial businesses. The objective of the course is to allow together interdisciplinary knowledge and apply it in a problem-solving/critical-thinking management context. Topics include managerial analysis and strategic planning, human resource management, and business and family arrangements.

ARME 403 Farm Management Study Trip
Spring. 1 credit. Prerequisite: ARME 302. Open by application only. Secs, arranged. W. A. Kroblau. A special program to study production and management systems in diverse agricultural regions of the U.S. Includes a trip (usually taken during spring or fall, and in the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores and applies what was learned, is a requirement for completing the course.

ARME 404 Advanced Agricultural Finance Seminar
Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W 2:30-4:25. E. L. LaDue. A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an on-farm management and credit analysis experience in the spring term.

ARME 405 Farm Finance
Spring. 4 credits. Prerequisite: ARME 302 or equivalent. Lecs, M W F 9:05-9:55; sec, T 2:30-4:25. E. L. LaDue. The principles and applications used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statement, credit instruments, loan analysis, financial risk, and leasing.

ARME 406 Farm and Rural Real Estate Appraisal
Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lecs, M W F 11:15-12:05. E. L. LaDue. Evening prelims on Wednesday. This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied are: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. A brief introduction to non-parametric methods is also included. The course will involve a research project designed to give experience in collecting and interpreting data.

ARME 411 Introduction to Econometrics
Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lecs, T R 10:10-11:25. Staff. The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed and simultaneous equation models are introduced. Students are required to specify, estimate, and report the results of an empirical model using econometric methods.

ARME 412 Introduction to Mathematical Programming
Fall. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: ARME 210 or equivalent. Lecs, T R 11:40-12:55; secs, T or W 12:25-1:25. J. E. Pratt. This is a course in applied linear programming. Following a review of linear algebra, the emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of economic problems. Standard LP problems such as work scheduling, blending, resource allocation, capital budgeting, transportation and financial planning, inventory management, etc., will be studied. Integer and nonlinear programming will be introduced, if time permits.

ARME 415 Price Analysis (also Economics 415)
Fall. 3 credits. Prerequisites: ECON 313 or CEH 210 (PAM 200) or equivalent, ARME 210 or equivalent. Lecs, M W F 9:05-9:55. H. M. Kaiser. The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.
ARME 416 Demographic Analysis in Business and Government (also Rural Sociology 331)
Fall. 3 credits. S-U with permission of instructor. Prerequisites: ECON 101 or equivalents. Lecs, M W F 1:25-2:15; sec, M 1:25-2:15 or 2:30-3:20. W. Brown.
For description, see RSOC 331.

ARME 417 Decision Models for Small and Large Businesses
Spring. 3 credits. Prerequisites: ARME 210 or equivalents. Lecs, T R 2:30-3:20, lab W 2:30-4:25 or R 12:20-2:15. C. L. van Es and D. H. Streeter.
The course is focused on economic and statistical models of decision analysis and their application in large and small business settings. It will be shown how use of models can improve the decision process by helping the decision-maker understand the structure of the decision, incorporate subjective probabilities, and portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis will be emphasized, as well as the need to combine both quantitative and qualitative considerations in decision-making. Cases will be drawn from small business scenarios, the public policy arena, and corporate settings. Implementing decision models with computers will be the focus of lab sessions.

ARME 422 Estate Planning
Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. Lecs, M 3:35-4:25. D. A. Grossman.
Fourteen sessions on various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

ARME 424 Strategic Management (formerly Business Policy)
Fall. 3 credits. Limited to seniors majoring in business management and marketing. T R 8:40-9:55, 10:10-11:25 or 1:25-2:40. B. L. Anderson.
An integrating course that examines business policy formulation and implementation from the standpoint of the board and chief executive of an organization, focusing on decision making and leadership. The course is built around a series of cases and several guest executives. Emphasizes improving oral and written communication skills.

ARME 425 Small Business Management Workshop
Fall. 4 credits. Limited to seniors. Prerequisite: ARME 325 or NBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. Lecs, M W 2:30-4:25.
D. Streeter
Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles to an existing business and the witnessing of the results of firm-level decision making. Student teams meet with business owners and course staff at arranged times during the semester.

ARME 426 Cooperative Management and Strategies
Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, $55. Lecs, T R 10:10-11:15, 2:25-3:20. 2-day field trip required. B. L. Anderson.
Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of corporate strategies, management finance, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture although alternative types of cooperative organizations are discussed, such as: credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

ARME 430 International Trade Policy
Fall. 3 credits. Prerequisites: ECON 101-102 or equivalents. Lecs, T R 1:25-2:40. Optional section to be arranged. D. R. Lee.
This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Applications to current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are emphasized.

ARME 431 Food and Agricultural Policies
The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural policies that influence trade and foreign exchange programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

ARME 433 Food-Industry Management
Fall. 4 credits. Limited to juniors and seniors. Prerequisite: ARME 448 or 342 or permission of instructor. Lecs, T R 10:10-11:25; sec T 1:25-2:40. G. A. German.
A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday session.

ARME 446 Food Marketing Colloquium
Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructors. S-U grades only. B. L. Anderson, E. W. McLaughlin, and D. J. Perosio.
ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will prepare research topics on various aspects of the food industry.

ARME 447 Food Marketing Colloquium
Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructors. S-U grades only. B. L. Anderson, E. W. McLaughlin, G. A. German, and D. J. Perosio.
ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will prepare research topics on various aspects of the food industry.

ARME 448 Food Merchandising
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. Lecs, T R 10:10-11:25. G. A. German and D. J. Perosio.
Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

ARME 449 Global Marketing Strategy
Fall. 3 credits. Limited to seniors and graduate students. Lecs, T R 8:40-9:55. J. M. Hagen.
This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

ARME 450 Resource Economics (also Economics 450)
Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. Lecs, M W F 2:30-3:20. J. M. Conrad.
Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

ARME 451 Environmental Economics and Policy (also Economics 409)
Spring. 3 credits. Prerequisite: ECON 313 and calculus; ARME 250 recommended. Limited to undergraduate students. S-U grades optional. Lecs, M W F 2:25-4:10.
G. L. Poe.
This course explores the economic foundations for public decision making about environmental commodities and natural resources. Emphasis is placed on the two leading economic paradigms of allocating public goods: the conventional economic approach, with specific emphasis on market failure, externalities, and the use of market valuation techniques, and a property rights/institutional perspective. Ecological economic concepts will also be examined.
ARME 464 Economics of Agricultural Development (also Economics 464)
Spring. 3 credits. Prerequisites: ECON 101–102, or permission of instructor. Lecs, R 11:40–12:55; R. W. Schulze.
This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land revalorization in capital structure, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics
Fall or spring. 4 credits maximum. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics
To be used for special projects designed by faculty members.

ARME 498 Supervised Teaching Experience
Fall or spring. 1–3 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 154 Warren Hall). Staff.
Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 499 Undergraduate Research
Fall, spring, or summer. 1–4 credits. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 154 Warren Hall). S-U grades optional. Staff.
Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

ARME 605 Agricultural Finance and Capital Management
Fall. 3 credits. Prerequisite: ARME 405 or equivalent. Offered alternate years. Offered fall 1998 and fall 2000, not offered fall 1999. $35 charge for reading materials; no text. T R 8:40–9:55. E. L. LaDue.
Midterm micro theory and market behavior and management of agriculture. Special emphasis on current issues. Example topics: farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, firm growth, inflation, loan evaluation, and selected topics on financing agriculture in developing countries.

ARME 608 Production Economics (also Economics 408)
Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lecs, M W F 10:10–11. L. W. Tauer.
The theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also Economics 430)
Spring. 4 credits. Prerequisites: ARME 608 or E&EH 603, ECON 313, or equivalent intermediate microeconomic incorporation calculus. Lecs, T R 8–9:55. H. de Gorter and staff.
The first half of the course surveys the theories of welfare economics as a foundation for public policy analysis. Major issues addressed include the problem of social welfare measurement, the choice of welfare criteria, and the choice of market or nonmarket allocation. Basic concepts covered include measurement of welfare change, including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best optima. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on consumers, producers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the various trade policies employed by countries in international markets.

ARME 640 Analysis of Agricultural Markets (also Economics 440)
This course is about agricultural product markets. Focus is placed on their distinguishing characteristics, criteria for evaluating performance and models of price behavior including marketing margins.

ARME 641 Commodity Futures Markets (also Economics 441)
This course is primarily about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

ARME 651 Environmental and Resource Economics
Spring. 4 credits. Limited to graduate students. Lecs, T R 10:10–11:25. W. D. Schulze.
A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models and contingent valuation—are covered. Survey/data collection methods are described in detail. Explore innovative market mechanisms for resolving public good, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. ARME 651 is a core course for the Environmental Management concentration/option.

ARME 652 Land Economics Problems (co-listed with Civil and Environmental Engineering 529)
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. W 7:30–9:25 p.m. D. J. Allee. Special work on any subject in the field of land and resource economics.

ARME 660 The World's Food
Designed to introduce first-year graduate students to food economics, the world food situation, and the linkages between food, population, and employment in developing countries. Among the topics considered are the extent of hunger, income and dietary change, control of population growth, and the outlook for feeding an eventual population of 10–12 billion.

ARME 665 Food and Nutrition Policy (also Nutritional Sciences 685)
Spring. 3 credits. Prerequisites: introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lecs, M W 2:55–4:10. D. Sahm. For description, see NS 685.

ARME 666 Economics of Development (also Economics 465)
Spring. 3 credits. Prerequisites: ECON 313 and 314 or permission of instructor. S-U grades optional. Lecs, T R 1:25–2:40. S. C. Kyle. The course is designed as an introduction to the economics of development at the graduate level. The course will be split into two major sections, the first dealing with the microeconomics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal will be to illustrate the particular features of low-income countries which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.

ARME 667 Topics in Economic Development (also Economics 770)
Fall. 3 credits. Prerequisite: basic first-year courses in ECON, ARME, or instructor's permission. S-U grades optional. Lecs, T R 1:25–2:40. R. Kanbur.
This course is targeted to second-year graduate students. Topics covered will vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, debt. Examination will be by term paper.

ARME 694 Graduate Special Topics in Agricultural, Resource, and Managerial Economics
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

ARME 698 Supervised Graduate Teaching Experience
Fall or spring. 1–3 credits. Total of 4 credits maximum during graduate program. Students must register with an Independent Study form (available in 140 Roberts Hall). Open only to graduate students. Undergraduates should enroll in ARME 498. S-U grades optional. Prerequisite: permission of instructor. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections, preparing, assisting in, or teaching lectures and laboratories, and tutoring. Students are expected to actually teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 699 M.P.S. Research
1–6 credits. Prerequisite: registration as an M.P.S. student. Credit is granted for the M.P.S. project report. Staff.

ARME 700 Individual Study in Agricultural, Resource, and Managerial Economics
Fall or spring. Limited to graduate students. S-U grades optional. Credit, class hours, and other details arranged with a faculty member. Staff. This course is used for special projects designed by faculty members. More than one topic may be given each semester in different sections. The student must register in the section appropriate to the topic being covered; the section number is provided by the instructor.

ARME 708 Advanced Production Economics
Fall. 3 credits. Prerequisite: ARME 608, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Not offered fall 1998 and 2000. Next offered fall 1999. Hours to be arranged. R. N. Boisvert. Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economics, technical change, factor substitution. Developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

ARME 710 Econometrics I
Spring. 4 credits. Prerequisite: matrix algebra and statistics at the level of BTRY 417 and 601 (BTRY 409 or ECON 619 preferred). Use of the regression equation, hypothesis testing and specification errors. Students are expected to learn an introduction to econometrics that take ARME 411.

ARME 711 Econometrics II
Fall. 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended. Lecs. M W 10:10-12:05. T. D. Mount. Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating non-sample information and testing restrictions, diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables and latent variables.

ARME 712 Quantitative Methods I
Fall. 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. Lecs. M W F 8:40-9:55; sec. F. 9:05-9:55. R. N. Boisvert. A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models are discussed. Applications made to agricultural, resource, and regional economic problems.

ARME 713 Quantitative Methods II
Spring. 3 credits. Prerequisite: ECON 609. S-U grades optional. Lecs. M W F 9:05-9:55. J. M. M. de Gorter. This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

ARME 714 Experimental Economics
Fall. 4 credits. Prerequisite: ECON 609. Offered alternate years. Not offered fall 1998 and 2000. Next offered fall 1999. Lecs. to be arranged. W. D. Schulze. The course will survey both experimental economics methods and research as an approach to test economic theory. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auction auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets (testing auction institutions); market power (monopoly, oligopoly); bargaining, compensation and performance; public goods, externalities, and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

ARME 717 Research Methods in Agricultural Economics

ARME 731 Seminar on the Political Economy of Agriculture and Trade

ARME 735 Public Finance: Resource Allocation and Fiscal Policy (also Economics 735)
Fall. 4 credits. Time to be arranged. R. Kanbur. For description, see ECON 735.

ARME 740 Agricultural Markets and Public Policy
Spring, weeks 1–7. 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Recommended: ARME 640. T R 12:20–2:15. W. H. Lesser. Develops the concepts and methodology for applying and analyzing the effects of public-policy directives to the improvement of performance in the U.S. food marketing system. Prospective topics include a survey of industrial organization principles, antitrust and other legal controls, and coordination systems in agriculture. Topics can be adjusted to students' interests.

ARME 741 Space, Trade, and Commodity Analysis
Spring, weeks 8–14. 2 credits. Limited to graduate students. Recommended: ARME 412 or equivalent, and ARME 640. Offered alternate years. Not offered spring 1999. Next offered spring 2000. T R 12:20–2:15. J. E. Pratt. Principal topics are transportation economics, spatial micro-economics of the firm, spatial pricing and location decisions, the forms of spatial competition, and quantitative methods for spatial analyses, which include techniques for finding spatial equilibria.
ANIMAL SCIENCE

AN SC 100 Domestic Animal Biology I
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; sec, T or W or R 2-4:25.
W. B. Currie, M. L. Thonney, and staff. An introduction to the science of raising animals in the context of commercial animal production. Lectures and labs address the biology of economically important species (morphology, anatomy, and physiology) and application of the biology to the management of animals within major livestock industries. Topics covered include fundamentals of anatomy, regulatory mechanisms, vital systems, diseases, and reproduction. Students will care for small numbers of cattle, sheep, pigs, and chickens in different phases of their life cycle to maximize hands-on contact. Living animals will be used noninvasively, and fresh organs and tissues from dead animals will be used in laboratories.

AN SC 105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers.
T 1:25 or W 12:20. R. C. Gorewit and D. J. Cherney. A forum to discuss the students' career planning and the contemporary and future roles of animals in relation to human needs.

AN SC 120 Animal Domestication and Behavior
Fall. 3 credits. T R 8:40-9:55.
E. A. Oltenacu. This Freshman/Wong Seminar will explore the relationship between humans and their domestic animals. Students will study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

AN SC 150 Domestic Animal Biology II
Spring. 4 credits. S-U grades optional.
Lec, M W F 9:05; lab/disc T W or R 2-4:25.
W. R. Butler and staff. Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and lactation to aspects of the production and care of domestic animals. Fresh tissues and organs from dead animals along with preserved specimens will be used in laboratories, exercises, and demonstrations.

AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M T W R or F 12:25-2:45. A. W. Bell and D. J. Cherney. An introduction to animal nutrition, including digestive physiology and metabolism of livestock and other species, nutrient properties and requirements for different aspects of animal production and performance, principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

AN SC 213 Nutrition of the Dog

AN SC 214 Nutrition of Exotic Animals
Spring, weeks 1-7. 1 credit. Prerequisite: AN SC 212. Offered alternate years. Next offered spring 2000; not offered spring 1999, 2001. Lec, W 7:30-9:25 p.m. H. F. Hintz. Principles of nutrition for exotic animals. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.

AN SC 215 Exotic Avian Husbandry and Propagation
Spring. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or Bio G 103, 104 or equivalent. Lec, M 2:30-4:30. J. M. Conrad, P. A. Oltenacu, J. E. Parks, and M. Muscarella. Natural history, care, management, health and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

AN SC 216 Nutrition of the Cat

AN SC 221 Introductory Animal Genetics
Spring. 3 credits. Prerequisite: a year of college biology, T R 9:05; sec, T W R or F 2-4:25. J. E. Pollak. An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 250 Dairy Cattle Principles
Fall. 3 credits. S-U grade optional. Lect, T R 10:10; lab, T or R 2-4:25. D. M. Galton and T. Batchelder. Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351 and AN SC 355.

AN SC 251 Dairy Cattle Selection
Fall. 2 credits. Prerequisite: AN SC 250 or equivalent. S-U grades optional. Lecs, T R 2-4:25. D. M. Galton. Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.
AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lec, T R 9:05–10:25. C. Collyer. Selection, management, feeding, breeding, and training of light horses.

AN SC 280 Molecular Biology in Agriculture and Medicine
Fall. 2 credits. Prerequisite: one year of introductory biology. Not offered 1998-99. Lec, T R 10:10. S. M. Quirk. The applications of molecular biology to animal research, animal agriculture, industry and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as transgenic animal production, mammalian cloning, genome projects, gene therapy and genomic screening. Ethical issues raised by use of these techniques will be discussed.

AN SC 290 Meat Science (also Food Science 290)
Fall. 2 or 3 credits. Lec, T R 11:15; lab, M-W-F 2:00–2:50. D. H. Beermann and staff. Lecture only, 2 credits; lecture plus lab, 3 credits; lab cannot be taken without lecture.

AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year of introductory biology. Lec, M W F 10:10. J. E. Parks. Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity, emphasis on physiological mechanisms and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, inspection, grading, curing, sausage manufacture and quality control. An all-day field trip to commercial meat plants is taken.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W or F 1:25-4:25. Each lab limited to 30 students. J. E. Parks. Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: introductory course in animal physiology; at least one animal production course or equivalent experience is recommended. S-U grades optional. Lec, T R 11:15. E. A. Oleniacu and K. A. Houpt. The behavior of production species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 321 Applied Animal Genetics Seminar
Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20. P. A. Oleniacu and F. J. Pollak. Topics of interest related to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture discussion-type format.

AN SC 322 Applied Animal Genetics-Laboratory
Fall. 1 credit. Prerequisite: concurrent registration in AN SC 321 or instructor's permission. S-U grades only. M 2:45-2:25. P. A. Oleniacu and F. J. Pollak. Many genetic concepts addressed in AN SC 321 are explored in depth using a computer-assisted instruction environment. Mendelian inheritance of qualitative traits, detection of carriers of recessive genes, artificial selection, inbreeding and heterosis, design and evaluation of genetic improvement and conservation programs, and role of population size are among the topics considered.

AN SC 323 Equine Genetics
Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Disc, T 1:25-2:15. P. A. Oleniacu and staff. Topics of equine genetics will be presented and discussed. Independent library research, a short written paper, and an oral presentation will be important parts of this course. Lecture topics may include the genetic aspects of color, abnormalities, metabolic diseases, unsoundness, and performance.

AN SC 330 Commercial Poultry Production
Spring. 2 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. Offered alternate years. Next offered spring 2000; not offered spring 1999, 2001. Lec, F 2-4 (occasional field trips run past 4 p.m.) K. Keshavarzi. The course emphasizes production and business management aspects of commercial poultry farm operation and is designed to acquaint the student with current technology involved in commercial poultry production.

AN SC 341 Biology of Lactation
Spring. 2 credits. Prerequisite: AN SC 100-190 or permission of instructor. Offered alternate years. Not offered spring 1999, 2001; next offered spring 2000. Lec, T R 9:05. Y. R. Boisclair and staff. A comprehensive survey of the biology of the mammary gland. Lectures cover: 1) Basic aspects such as anatomy and development of the mammary gland, biochemistry and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; 2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary context to the course, but examples from other mammals including humans will be used.

AN SC 351 Dairy Herd Management
Spring. 4 credits. Prerequisites: AN SC 250 or permission of instructor. Recommended: ARME 302. Lec, M W F 11:15; labs, M or R 1:25-4:25, F (alternate weeks) 1:25-4:25. D. M. Galton and T. L. Batchelder. Application of scientific principles to practical herd management with components of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 355 Dairy Nutrition and Health
Spring. 3 credits. Prerequisite: AN SC 250 and permission of instructor. Letter only. Lec, T R 9:05; lab, T or W 1:25-4:25. D. M. Galton, L. E. Chase and T. L. Batchelder. Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 360 Beef Cattle

AN SC 365 Equine Nutrition
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55. T. F. Hintz. The principles of nutrition for horses will be presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases will be discussed.

AN SC 370 Swine Nutrition and Management
Fall. 3 credits. Recommended: AN SC 212. Lec, T R 11:15; lab, T 2-4:25. X. G. Lei and K. Roneker. This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

AN SC 380 Sheep
Spring. 3 credits. Not offered spring 2000; next offered spring 1999, 2001. Lec, T R 10:10; sec, W 2:00-4:25. M. L. Thonney. Emphasis is on the management, and selection of sheep from a production-system approach. Lectures and laboratories are designed to give students a
practical knowledge of sheep production as well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

AN SC 392 Animal Growth Biology
Fall. 2 credits. Not open to freshmen; sophomore status by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology, AN SC 212 and 221 or equivalent. Lec, R 1:25-3:20; sec, F 1:25-2:15. H. Beermann and staff.
A detailed discussion of the morphological and physiological aspects of growth of domestic and laboratory animals. Overview of cell cycle and early embryo growth regulation, differentiation and cellular aspects of tissue development and growth, maternal influences on fetal growth and allometric patterns of postnatal growth are discussed. Endocrine, neuronal, and physiological influences on protein and lipid metabolism, nutrient requirements and composition of growth will be emphasized.

AN SC 400 Tropical Livestock Production
An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.

AN SC 401 Dairy Production Seminar
Spring. 1 credit. Limited to juniors and seniors. Disc, M 7:30 p.m. D. F. Bauman.
Capstone course where students, with the help of faculty members, complete a study of the research literature on topics of current interest in the dairy industry. Students then make an oral and a written report on their topic with emphasis on integrating theory and practice.

AN SC 402 Seminar in Animal Sciences
Review of literature pertinent to topics of animal science or reports of undergraduate research and Honors projects. Students present oral reports of their work for class discussion in addition to written reports.

AN SC 403 Tropical Forages
Spring. 2 credits. Limited to seniors and graduate students except by permission of instructor. Prerequisites: crop production and livestock nutrition. Offered alternate years. Not offered spring 2000; next offered spring 1999. Lecs, T R 10:10. A. N. Pell.
An overview of tropical grasslands, seeded pastures, and crop residues as feed resources; grass and legume characteristics; establishment and management of pastures; determination of feeding value of forages and crop residues; physiology of digestion of ruminants that affects feeding behavior, problems of chemical inhibitors in plants; and preservation of tropical forages as hay or silage.

AN SC 410 Nutritional Physiology and Metabolism
Fall. 3 credits. Prerequisites: biochemistry and physiology. M W F 11:15. R. E. Austic and D. E. Bauman.
A fundamental approach to nutrition focusing on the metabolic rate of nutrients and the interrelationships among nutrients, nutritional state, and metabolic processes. The overall goal is to increase understanding of metabolism and metabolic regulation through an integration of nutrition, biochemistry, and physiology.

AN SC 411 Applied Cattle Nutrition
Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent); AN SC 355 is encouraged. Lecs, M W F 10:10; lab, M or 1:25-4:25. M. E. Van Amburgh.
An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and Protein System) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for juniors, seniors, and entering graduate students.

AN SC 412 Livestock and the Environment
Spring. 2 or 4 credits. No prerequisite for 2 credits (weeks 1-7). With permission of the instructors, students who have taken AN SC 411 (formerly 312) can sign up for 4 credits (full semester) for completing an independent project on whole-farm environmental planning. Lec, T R 11:15-12:05. D. G. Fox and R. E. Pitt.
This course will explore controversial issues surrounding livestock and the environment, including competition with humans for food resources, livestock products on human health, and impact of livestock farms on environmental/community problems, including odor, and pathogens and excess nutrient effects on water quality. Those taking 2 additional credits will use computer software tools to evaluate aspects of whole-farm nutrient and environmental management on case study farms, with data collection and analysis continuing throughout the semester.

AN SC 414 Ethics and Animal Science
Fall. 2 credits. Enrollment limited to 40 students. Prerequisites: and seniors only. Lec. M 12:20; disc. W or F 12:20-1:10. One Saturday morning, required farm tour 9 a.m.-1 p.m., Saturday, September 5, 1998. D. J. Cherney and A. van Tienhoven.
Exploration of the place of humans in the biological world, origins of ethics and morality, speciesism, the use of animals for research and agricultural purposes, transgenic animals. A report on the farm tour, participation in discussion, and a project of the student's choice will be used to evaluate the performance of each student.

AN SC 420 Quantitative Animal Genetics
Spring. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lec, R 12:20; sec, M 2:45. E. J. Pollak.
A consideration of problems involved in improvement of animals through application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra program for problem solving.

AN SC 425 Gameo Physiology and Fertilization
Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cyclical, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation and fertilization.

AN SC 427 Fundamentals of Endocrinology
Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson.
Physiology and regulation of endocrine secretions. Neuroendocrine integration, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 456 Dairy Management Fellowship
Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 355, and permission of instructor. S-U grades only. Hours to be arranged. D. M. Galton and T. Batchelder.
The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 494 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades optional. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 496 Introduction to Research
Fall. 1 credit. S-U grades. Offered by permission of students undertaking Honors in Animal Science. Open to Honors students in other programs and those planning to pursue research, by permission of the instructor. Disc, M 12:20-1:10. R. W. Blake.
An exposure to the world of scientific research; identifying problems; devising hypotheses, realistic research plans; scientific writings and other forms of communication, including the publicizing of science; finding and managing reference materials; cost of
research, funding and beneficiaries; obligations imposed on investigators by society and regulatory agencies; responsibilities and freedom in scientific ethical issues that impact on scientific interactions between sponsors, investigators, professors, trainees and others. Students make oral presentations and prepare brief items of technical writing.

AN SC 497 Individual Study in Animal Science
Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2 or 3 credits; limited to two years during undergraduate career. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to enhance the student's knowledge. A participating student assists in teaching a course allied with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 601 Amino Acids (also NS 601)

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)
Fall. 2 credits. Prerequisites: biochemistry, physiology, and nutrition. Offered alternate years. Not offered fall 1999, 2001; next offered fall 1998, 2000. Lec T 2:20-4:25. X. G. Lei and G. F. Combs Jr. This course focuses on the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral metabolism and specific mechanisms of gene expression, regulation, and mammal health disorders associated with individual elements. Methodology and facility of mineral research is also discussed.

AN SC 604 Vitamins (also NS 604)
Fall. 2 credits. Lec, T R 10:10. G. F. Combs, Jr. Text-based discussion sessions on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

AN SC 606 Ruminant Nutrition: Microbial Ecology and Forage Chemistry

AN SC 610 Seminar
Fall and spring. 1 credit. S-U grades only.

AN SC 611 Field of Nutrition Seminar
Fall and spring. No credit. No grades given. Lectures on current research in nutrition.

AN SC 620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours to be arranged.

AN SC 621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lec, W 4:00. W. R. Butler and staff. Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 625 Nutritional Toxicology (also TOX 625)
Spring. 2 credits. Prerequisites: biochemistry and nutrition courses. S-U grades optional. Lec, W 12:25-2:15; lab/disc, W 1:25-3:05. D. L. Brown. Exploration of toxicological principles and a selective survey of natural food and feed toxicants. At the end of this course, students will understand relationships between nutrition and toxicology; be prepared to conduct research concerning the effects of naturally occurring toxicants; and be able to use multimedia to present their understanding of a class of toxicants. Occasionally, the class will take field trips. In addition, students will read printed and electronic communications and create STELLA simulation models and a system of Web pages related to a specific family of toxicants.

AN SC 630 Bioenergetics/Nutritional Physiology

AN SC 640 Individual Study in Animal Science
Fall or spring. 1 or more credits. S-U grades optional. Hours to be arranged. Staff. Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

AN SC 650 Molecular Techniques for Animal Biologists
Spring. 4 credits. Prerequisites: BIOBM 350 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Enrollment limited to 15 students. Lec, T 1:15; labs, T and R 1:25-4:25. Y. Boisclair and S. Quirk. A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on techniques used in conducting research in animal-related sciences such as nutrition and physiology (e.g., subcloning, mutagenesis of DNA, RT-PCR, DNA sequencing and analysis, analysis of gene expression, protein expression). Lectures will introduce laboratory exercises, supplement laboratory topics, and discuss selected readings from the literature. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

AN SC 694 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: graduate standing. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 720 Advanced Quantitative Genetics
Spring. 3 credits. Prerequisites: matrix algebra, linear models, and mathematical statistics. S-U grades optional. Offered alternate years. Next offered spring 1999, 2001; not offered spring 2000. Hours to be arranged. R. L. Quaas. This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model; linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made; i.e., inferences from posterior distributions.

AN SC 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students admitted specifically to a Master's program.
AN SC 900 Graduate-Level Thesis Research
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students in a Ph.D. program only before the 'A' exam has been passed.

AN SC 901 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students admitted to candidacy after the 'A' exam has been passed.

BIOLOGICAL SCIENCES
The program of study in biology is offered by the Division of Biological Sciences. For course descriptions, see the section on the Division of Biological Sciences.

BIOMETRY AND STATISTICS
The Department of Biometrics in Statistical Science offers the following courses in Biometry and Statistics. Students need to register under Course Listings: College of Agriculture and Life Sciences—Biometry and Statistics.

BTRY 90 Introduction to Biomathematics
Fall and spring. 1 credit. S-U grades only. Prerequisite: one year of college-preparatory high school algebra. Not offered 1998–99.
An introductory course on the use of mathematics, computing, probability, and statistics in the biological sciences. Throughout the course, biological examples are used to develop quantitative ideas. Topics, which may change from semester to semester, will be selected from those covered in Biometry 101. Each semester, a selection of topics from a list that includes basic statistics and probability, curve fitting, elementary matrix algebra, differentiation, integration, and difference and differential equations will be taught. The course will meet twice a week for 30 minutes. Each class will be followed by a computer laboratory for an hour and fifteen minutes, where the students will use Mathematica, a symbolic mathematics and graphics package to motivate, illustrate, and expand the concepts covered in class.

BTRY 101 Introduction to Biometry I
Fall. 4 credits. S-U grades optional. Prerequisite: EDUC 115 or equivalent. An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

BTRY 102 Introduction to Biometry II
Spring. 4 credits. S-U grades optional. Prerequisite: BTRY 1 or equivalent. This course is the continuation of Biometry 101 (formerly 102). It provides a more in-depth view of the use of mathematics, computing, and probability and statistics in the biological sciences. Topics covered include discrete and continuous models, applications of differential and integral calculus, optimization methods, matrix algebra, and Markov models.

BTRY 200 Statistics and the World We Live In (also STBTRY 200)
Spring. 3 credits.
Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

BTRY 215 Introduction to Statistical Methods (also BTRY 215)
Fall. 3 credits. Prerequisite: BTRY 200 or prior experience in data collection and interpretation.
Statistical methods are developed and used to analyze data arising from the biological sciences. Topics include point and confidence interval estimation, hypothesis testing, t-tests, correlation, simple linear regression, and analysis of variance and multiple regression. Statistical computing is taught and used throughout the course. Emphasis is on proper use of statistical methodology and interpretation of statistical analyses.

BTRY 400 Biometry Seminar (also STBTRY 400)
Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 409 or BTRY 602 or permission of instructor.
Students will attend weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can take course twice.

BTRY 408 Theory of Probability (also STBTRY 408)
Fall. 4 credits. Prerequisite: MATH 112, 122, or 192, or permission of instructor.
An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectation, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

BTRY 409 Theory of Statistics (also STBTRY 409)
Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.
The course is the continuation of BTRY 408 and is applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression. Students seeking applied courses in statistical methodology should consider BTRY 601–602 or BTRY 215.

BTRY 417 Matrix Algebra
Fall. 3 credits. Prerequisite: precalculus mathematics.
Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Rank, linear dependence, canonical forms, linear equations, generalized inverses and eigenvectors and vectors. Emphasis is on understanding basic ideas and on developing skills for applying matrix algebra.

BTRY 451 Mathematical Modeling of Populations
Fall. 3 credits. S-U grades optional. Prerequisites: MATH 112, BTRY 408, or equivalent. Offered alternate years. Not offered 1998–99; offered fall 1999.
This course will emphasize stochastic and deterministic models relevant to population genetics and population biology. Computer simulations and use of mathematical packages will be an integral part of the course.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)
Fall or spring. 1–3 credits. S-U grades optional.
A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495 Statistical Consulting (also STBTRY 495)
Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: BTRY 409 and 602 and permission of instructor.
Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)
Fall and spring 1–3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).
Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)
Fall and spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.
BTRY 499 Undergraduate Research (also STBTRY 499)
Fall or spring. 1-3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

BTRY 600 Statistics Seminar (also STBTRY 600)
Fall and spring. 1 credit. S-U grades only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

BTRY 601 Statistical Methods I (also STBTRY 601)
Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor.
Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computer programs produced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

BTRY 602 Statistical Methods II (also STBTRY 602)
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.
A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression; model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

BTRY 603 Statistical Methods III (also STBTRY 603)
Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 2000.
Categorical data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

BTRY 604 Statistical Methods IV: Applied Design (also STBTRY 604)
Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered 1998-99; next offered spring 2000.
Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

BTRY 607 Nonparametric and Distribution Free Statistical Methods (also STBTRY 607)
Nonparametric and distribution-free alternatives to normal-theory testing procedures are presented: sign or rank tests for one or two populations; analyses for completely randomized and randomized blocks designs; comparisons among several means; correlation and regression, goodness-of-fit; and tests based on randomization of the data.

BTRY 639 Epidemiology Seminar (also STBTRY 639)
Spring. 1 credit, variable. S-U grades only. Permission of instructor.
This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

BTRY 662 Mathematical Ecology (also STBTRY 662)
Fall. 3 credits. S-U grades optional. Prerequisites: a year of calculus and a course in statistics.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, computer simulation and analytical techniques.

BTRY 672 Topics in Environmental Statistics (also OR&IE 672 and STBTRY 672)
Fall and spring. 2 credits. S-U grades optional. Prerequisite: BTRY 601 or permission of the instructor.
This course is a discussion group focusing on topics and issues. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

BTRY 682 Statistical Methods for Molecular Biology (also STBTRY 682)
Spring. 2 credits. S-U only. Prerequisite: permission of instructor.
Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary. The course may be repeated for credit.

BTRY 694 Graduate Special Topics in Biometry and Statistics (also STBTRY 694)
Fall or spring. 1-3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 697 Individual Graduate Study in Biometry and Statistics (also STBTRY 697)
Fall, spring, or summer. 1-3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 717 Linear and Generalized Linear Models (also STBTRY 717)
Spring. 3 credits. S-U grades optional. Prerequisites: BTRY 409, BTRY 417 and 602 or equivalents. Offered alternate years. Offered spring 1999; not offered 2000.
Statistical modeling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, quasi-likelihood and generalized estimating equations. The use of link functions and generalized linear models to accommodate non-linear models and non-normally distributed data. The use of random effects to accommodate correlation structures in both linear mixed models and generalized linear mixed models and to model longitudinal data. Some use of software packages and illustrative examples.

BTRY 795 Statistical Consulting (also STBTRY 795)
Fall and spring. 2 credits. S-U grades only. Limited to graduate students.
Participation in the Department of Biometrics consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the services during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

BTRY 798 Graduate Supervised Teaching (also STBTRY 798)
Fall and spring. 2-4 credits. S-U only.
Permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry.
Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion section, prepare course materials, and assist in grading. Credit hours will be determined in consultation with the instructor, depending on the level of teaching and the quality of work expected.

BTRY 800 Master's Level Thesis Research
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.
Research at the M.S. level.

BTRY 900 Graduate Level Dissertation Research
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.
Research at the Ph.D. level.

BTRY 901 Doctoral Level Dissertation Research
Fall or spring. Credit to be arranged. S-U grades only.
COMMUNICATION

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

COMM 116 Communication in Social Relationships
Spring or summer. 3 credits. Spring: Lecs, M W F 1:25–2:15. Staff. An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in small contexts such as friendships, small groups, organizations, and health care settings.

COMM 117 Writing about Communication
Spring. 3 credits. Concurrent enrollment in COMM 116 required. T R 10:10–11:25. J. VanBuskirk and staff. Students develop skill in various writing styles and genres. The class explores communication practices and theories as they are observed and studied in personal and professional contexts. Assignments polish students' ability to gather information, to analyze and synthesize, to integrate ideas about communication, and to express those ideas clearly and cogently.

COMM 120 Contemporary Mass Communication
Fall or summer. Lecs, M W F 12:20–1:10. J. Shanahan. The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 121 Investigating Communication
Fall. 3 credits. Students must be enrolled concurrently in COMM 120. Lecs, T R 8:40–9:55, 10:10–11:25, 11:40–12:55 or 1:25–2:40. R. Ostman. An examination of research methods in communication, with particular emphasis on the mass communication process. Exercises in writing, interviewing, and working in small groups focus on topics such as gender depictions, violence in the media, and social roles.

COMM 191 Topics in Communication
Summer. 1–3 credits. Hours to be arranged. Staff. Study of topics in communication at lower-division level. Special emphasis on topics reflecting the expertise of visiting faculty available in summer session and on topics suitable for entry-level college students.

COMM 201 Oral Communication
Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. B. Earle, K. Berggren, T. Russo, R. Thompson, and staff. Through theory and practice students develop self-confidence and competence in researching, organizing, and presenting material to audiences. Students give four graded speeches, write short papers, perform speaker evaluations, and engage in other speech-related activities.

COMM 203 Argumentation and Debate
Fall or summer. 3 credits. T R 10:10–11:25. P. Stepp. The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

COMM 204 Effective Listening
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes. Lecs, M 2:55–4:10, sec, W 1:25–2:40, 2:55–4:10; R 1:25–2:40, 2:55–4:10. R. Thompson. Lecture and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include auditory, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 225 Visualizing Science and Technology
Spring. 3 credits. M W F 10:10. Not offered 1998-99. J. Trumbo. An introduction to the tools and processes used in the presentation of scientific and technical information. Particular attention will be devoted to the basic principles of design and communication as well as the media's role in delivering scientific or technical information. The presentation of science and technology in the media will also be explored.

COMM 230 Visual Communication

COMM 240 Communication Systems and Technologies
Spring. 3 credits. Lecs T 11:40–12:55, lab, T 1:25–2:40 or R 11:40–12:55. A. P. Chan. An exploration of the nature of communication systems and technologies. Topics include a brief history of communication and information technologies, descriptions of the uses, and impacts of technologies within the social system, and an introduction to electronic message design and construction. Lab includes practical application of course topics.

COMM 250 Newswriting for Newspapers
Fall, spring, or summer. 3 credits. Limited to 25 students. Staff. Writing and analyzing news stories. A study of the elements that make news, sources of news, interviewing, writing style and structure, press problems, and press-society relations. Concentration on news writing as it is practiced by newspapers in the United States. Two writing assignments each week, one done in class, one done out of class.

COMM 253 Information Gathering and Presentation
Spring. 3 credits. Prerequisite: COMM 117, COMM 121. Lecs, M W F 11:15; lab R 9:05–9:55, F 11:15–12:05 or F 2:40–3:35. L. Cowdery. Students learn how to locate information from data bases, interviews, and printed materials, to evaluate it, and to present it in written, tabular, and graphic form. Formats include media stories, research reports, and materials for public information. Special emphasis is placed on presenting numerical information and on writing for specific audiences.

COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Fall: Lecs 01, M W F 9:05–9:55, Lecs 02, M W F 10:10–11:00. Spring: Lecs 01, M W F 9:05–9:55 or Lecs 02, M W F 1:25–2:15. L. Cowdery. An intensive course in simplifying scientific and technical material for specific audiences within the general public. Weekly assignments include instruction, explanations, and summaries in such formats as the newsletter, brochure, and report. Audience analysis will be emphasized. Not oriented to the mass media.

COMM 263 Organizational Writing
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: one college-level writing course. Lecs, M F 11:15–12:05; Sec M 12:20–2:15, T 2:30–4:25. W 11:15–1:10. L. VanBuskirk and staff. Students write as members of different organizations, and as representatives of business, government, community, and other interests. Emphasis is on adapting tone to the audience, and to the requirements of the message. Writing assignments include reports, memos, proposals, and letters. Assignments are based on cases developed from current websites.

COMM 272 Principles of Public Relations
Summer. 3 credits. Not open to freshmen. Staff. Survey of the fields of public relations and advertising. Descriptions of organizations, jobs, and functions in the industry. The roles of public relations and advertising in society, the economic system, and organizations.
Psychological and sociological principles as bases for appeals. Strategies for media selection and message execution. Introduction to research and regulation.

[COMM 273 Communication Institutions]
Spring. 3 credits. Letter only. T R 11:40-12:55. Not offered 1998-99. J. Shanahan. A survey of the history, organization, and social importance of communication institutions. Institutions to be analyzed include advertising/PR, media industries, propaganda and political communication, news/journalism, and new technologies. Cases and examples will be drawn from areas relevant to CALS programs, including environment, agricultural policy, and land use. Communication 116 or 120 are suggested but not required.

[COMM 282 Communication Industry Research]
Spring. 3 credits. Prerequisite: COMM 116, 120, 121. Lec, M W 12:20-1:10; labs, F 9:05-11:00 or F 12:20-2:15. D. G. McDonald. Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

[COMM 284 Sex, Gender, and Communication]
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. Van Buskirk. The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

[COMM 285 Communication in Life Sciences]
Spring. 3 credits. M W F 10:10-11:05. B. Lewenstein. Environmental problems...public health issues...scientific research. In each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the World Wide Web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

[COMM 301 Business and Professional Speaking]
Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors and seniors during fall and spring. Lec, M W 11:15-12:05; sec, T 2:30-4:25, W 12:20-2:15; R 10:10-12:05. B. Earle. The study and practice of written and oral communication skills used in formal and informal situations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

[COMM 303 Speech and Debate Practicum]
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of one-year trial basis. Hours to be arranged. P. Stepp. Students will learn preparation for practice in CEDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided into four groups according to level of experience; therefore it may be repeated to a maximum of 9 credits.

[COMM 315 Introduction to Health Communication]
Fall. 3 credits. COMM 116 or COMM 120 or permission of instructor. Juniors and seniors only. T R 11:40-12:55. Staff. An overview of health communication, examining topics such as physician-patient relationships, communication and public health campaigns. Instructional techniques include class discussion, presentations, and group projects.

[COMM 330 Communication Technologies and Management of Information]
Fall. 3 credits. Prerequisite: COMM 240. Offered even-numbered years. T R 2:55-4:10. A. P. Chan. Appropriate use of communication and information technologies can facilitate the coordination, control, and management of information. This course surveys existing theories and practice of information management, integrating insights across communication, economics, management science, and sociology.

[COMM 331 Advanced Visual Communication]
Spring. 3 credits. Prerequisite: COMM 230 or permission of instructor. M W 2:55-4:10. J. Trumbo. Theories of visual communication will be examined and methods of analyzing visual media will be explored. Principles of perception and cognition, ethics, aesthetics and the principles of visual communication design will be addressed. Critical sensitivity toward the use of images will be enhanced through research, discussion, illustrated lecture and readings.

[COMM 350 Writing for Magazines]
Fall or spring. 3 credits. Limited to 25 juniors, seniors, and graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 1-25-4:25; spring: T R 8:40-9:55. W. Ward or staff. A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied, magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

[COMM 352 Science Writing for the Mass Media]

How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, simplicity, comprehensiveness, risk communication, and the history and social structure of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

[COMM 368 Text Editing and Management]
Fall. 3 credits. Limited to 25 junior, senior, or graduate students. Prerequisite: COMM 250, 260, 265, 350 or 352. M W F 12:20-1:10. L. Cowdery. How to guide a manuscript from draft to presentation. Topics include production, copy editing and design, document management, and editorial decision making. Publications include books, magazines, newsletters, and promotional and educational materials for internal and external use. Appropriate for those who will oversee publications as part of their work.

[COMM 376 Planning Communication Campaigns]
Spring. 3 credits. Prerequisites COMM 282 or equivalent social research course (may be taken concurrently). T R 10:10-11:25. J. P. Yarbrough. An overview of theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Students work closely with a client in designing a communication campaign.

[COMM 380 Independent Honors Research in Social Science]
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. R. D. Collie.

[COMM 382 Communication Research Design]
Spring. 3 credits. Lec, T R 3:35, lab, W 2:30-4:25. Prerequisite: COMM 282 or equivalent; one course in statistics (may be concurrent). C. Scherer. Discussion of advanced communication research methods. Emphasis on research design and measurement techniques. Final paper will be a complete research proposal for a senior or Honors thesis in Communication.

[COMM 405 Community Service Practicum]
Fall and spring. 2 credits. May be repeated for credit. Limited to 10-15 Program in Speech and Debate members; permission of instructor required. Hours to be arranged. P. Stepp. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.

[COMM 410 Organizational Behavior and Communication]
Fall. 3 credits. Labs limited to 15 junior, senior, or graduate students. Prerequisite: COMM 116 or equivalent. Lec, M W 11:15-12:05; Sec 01, W 12:20-4:25; Sec 02, F 10:10-12:05; Sec 03, F 10:10-12:05; Sec 04, 12:20-2:15; Sec 05, 12:20-2:15. Staff.
Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal, informal, and group communication networks and interpersonal communication in an organizational context. Case studies analyzed in lab.

COMM 411 Leadership from a Communication Perspective
Spring. 3 credits. Limited to 30 students. Lec. T R 1:25-2:40; lab. T 11:15-12:05. J. Shanahan. Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

COMM 418 Communication and Persuasion
Spring. 3 credits. Prerequisite: COMM 110 or COMM 120 or introductory psychology or social psychology. M W 2:55-4:10 (one evening mid-semester prelim). M. Shapiro. The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes
Fall. 3 credits. Lec. T R 10:10-11:25. Not offered 1998-99. C. Glynn. The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students will investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical approaches. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues.

COMM 421 Communication and the Environment
Spring. 3 credits. Lec. T R 11:40-12:55. J. Shanahan. Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media's impact in public perception of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology and COMM 120. M W F 12:20-1:10 (one evening mid-semester prelim). M. Shapiro. A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news programming, etc.) on the future forms of mass media including multimedia and virtual reality. Lectures concurrent in COMM 622; graduate students should enroll in COMM 622.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. T R 2:55-4:10. R. Colle. The role of communication in development programs, particularly in Third World. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

COMM 426 Impact of Communication Technologies
Fall. 3 credits. M W 2:55-4:10. P. Yarbrough. Examine emerging technologies of communication and the information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 626; graduate students should enroll in COMM 626.

COMM 428 Communication Law
Spring. 3 credits. Offered even-numbered years. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec. M W F 11:15-12:05. D. Grossman. A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, cable regulation, access, electronic media and other issues of current interest.

COMM 429 Legal Issues in Business and Electronic Communication
Spring. 3 credits. Prerequisite: COMM 428. Offered odd-numbered years. M W F 11:15-12:05. D. Grossman. The increase in commercial use of the Internet and new types of interactive electronic media in business create unique contexts for applying traditional principles of law. This course will examine the rights and responsibilities of parties involved in electronic commerce, including information security (guaranteeing confidentiality and effective record-keeping), electronic copyright and trademark, electronic commerce and EDI, rights in information content (copyright, trade secrets, trademarks and patents), regulation of information content (pornography and advertising) and regulation of on-line conduct (criminal liability and civil exposure).

COMM 439 Interactive Multimedia: Design Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lec. T R 11:15-12:05; lab T 12:20-2:15. G. Gay. An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representation, and information processing. The course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.

COMM 440 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Permission of instructor. Letter grade only. Lec. T R 11:15-12:05; lab. T 12:20-2:15. G. Gay. Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface design that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 640; graduate students should enroll in COMM 640.

COMM 466 Public Communication of Science and Technology
Spring. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. M W 2:55-4:10. B. Lewenstein. Explore the structure, meanings, and implications of "public communication of science and technology" (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.

COMM 476 Communication Fellows Program
Spring. 2 credits. M 2:55-4:10. Prerequisite: permission of instructor. Limited to communication seniors selected based on goals and academic preparation.

COMM 486 Risk Communication
Spring. 3 credits. Prerequisite: COMM 428. A seminar designed for juniors and seniors selected based on goals and academic preparation. A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate and public, administrative and policy makers. Fee charged.

COMM 488 Risk Communication
Spring. 3 credits. T R 2:55-4:10. D. Scherer. An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 686; graduate students should enroll in COMM 686.
COMM 490 Senior Thesis in Communication
Fall, spring. 3 credits; may be repeated for a maximum of 6 credits. Prerequisite: COMM 382. Staff.
Seniors conduct research based on a thesis proposal written in COMM 382. Supervision provided by a member of the Communication graduate faculty assisted by a Ph.D. candidate. Thesis will be reviewed by faculty readers before approval.

COMM 494 Special Topics in Communication
Fall, spring, or summer. 1–3 credits variable. S-U grades optional. Prerequisite: permission of instructor.
Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496 Internship
Fall, spring, summer, and intersession. 1–3 credits. Students must apply no later than the spring pre-course enrollment period for a fall internship or the fall pre-course enrollment period for a spring or summer internship. Prerequisites: limited to communication juniors or seniors, 3.0 cumulative average in communication courses, and approval of academic advisor. S-U grades only.
Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of 6 credits total may be earned; no more than 3 per internship but flexibility allows 6 for 1 credit each, 3 for 2 credits each, or 2 for 3 credits each. Internships must be approved in advance by the student's academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcast communication. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1–3 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498 Communication Teaching Experience
Fall or spring. 1–3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives, evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1–3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students will become familiar with an Independent Study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific: systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Behavior and Communication
Fall. 3 credits. Not offered 1998–99. Staff. Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 610 Seminar in Organizational Communication
Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor–employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory psychology or social psychology or introductory research methods course. M W 2:55–4:10. M. Shapiro.
The course focuses on theories of communication influence on persuasion and attitude change. Students become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

COMM 620 Public Opinion and Social Processes
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues.

COMM 622 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research-methods course. M W F 12:20–1:10. M. Shapiro. A survey of knowledge about the psychological influence of television and other audiovisual communication technologies. Topics may include: the history of concerns about television, and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

COMM 624 Communication in the Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. T R 2:55–4:10. R. D. Colle.
The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among methods of communication considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 626 Impact of Communication Technologies
Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 426; graduate students enroll in COMM 626.

COMM 639 Interactive Multimedia: Design and Research Issues
An overview of multimedia technologies (videodisk, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 439; graduate students enroll in COMM 639.

COMM 640 Computer Mediated Communication: Theory and Practice
Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that "serve human needs" while building feelings of competence, confidence, and satisfaction. Topics include theories and models of people and interactions, collaborative design issues, psychological and...
philosophical design considerations, and cultural and social issues. Lectures concurrent with COMM 440: graduate students should enroll in COMM 640.

COMM 641 Human-Computer Interaction
Spring. 3 credits. Offered odd-numbered years. M W 8:40-9:55. G. Gay. An examination of how people relate to, think about, and think with new communication technologies in schools, homes, and the workplace. Using assigned readings from multiple disciplines, data exercises, field studies, and case studies, students will study and critique aspects of human-computer interaction, social psychology, and other issues that shape the process and effectiveness of designing, implementing and using computer systems.

COMM 676 Communication Planning for Social and Behavioral Change
Spring. 3 credits. T R 10:10-12:05. R. D. Colle. Overview theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussions are on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into an integrated communication plan.

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students in communication; other instructor by permission of instructor. M W 8:40-9:55. J. Shanahan. A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Advanced Communication Theory
Spring. 3 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. Hours to be arranged. J. Shanahan. Development of, and contemporary issues in, communication theory. Discussion will include the interaction between communication and society, social groupings, and mental processing.

COMM 682 Methods of Communication Research

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lect. M 6:00 p.m.-9:00 p.m. Not offered 1998-99. D. McDonald. Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 684 Qualitative Methods in Communication Research
Spring. 3 credits. Offered even-numbered years. B. Lewenstein. This course explores the nature of communication research and the place of qualitative methods in that research. Through readings, discussions, and papers, students will examine the various techniques of qualitative research, gaining both an introduction to those methods and an appreciation of when those methods are appropriate for addressing particular issues in communication.

COMM 685 Training and Development: Theory and Practice (also Intercultural Agriculture 685 and EDUC 685)
Spring. 4 credits. S-U grades optional. Charge for materials, $45. F 9:05-12:05; lab to be arranged. Staff. Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

COMM 686 Risk Communication
Spring. 3 credits. T R 2:55-4:10. C. Scherer. An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Discussion will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 486; graduate students should enroll in COMM 686.

COMM 689 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Hours to be arranged. J. Shanahan and B. Lewenstein. Some weeks scholars from a wide variety of fields present varied topics in theory or research as it relates to communication; other weeks graduate students will present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor.

COMM 695 Training and Development
Fall and spring. 1-3 credits. Letter grade only. Prerequisite: permission of instructor.

COMM 696 Risk Communication
Fall and spring. 1-3 credits. Letter grade only. Prerequisite: permission of instructor.

COMM 697 Graduate Independent Study
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 698 Communication Teaching Laboratory
Fall and spring. 1-6 credits each semester. Limited to graduate students. Prerequisite: permission of instructor.

COMM 699 Graduate Research
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.

COMM 700 MPS Project Research
Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

COMM 781 Seminar in Psychology of Communication
Spring. 3 credits. Letter grade. Offered even-numbered years. Prerequisite: COMM 680 and 681 or equivalent graduate level theory in psychology or social psychology. Hours to be arranged. M. Shapiro. Discussion and analysis of selected current issues in the psychology of communicated. Students will discuss and synthesize current research and theory in the mental processing of communication.

COMM 794 Seminar in Communication Issues
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor. Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1-3 credits each semester. Limited to graduate students. Prerequisite: permission of faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty. Designed primarily for graduate students who wish experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1-3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.

COMM 800 Master's-Level Thesis Research
Fall or spring. 1-6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair.

COMM 901 Doctoral-Level Dissertation Research
Fall or spring. 1-9 credits. May be repeated for a maximum of 9 credits. S-U grades only. Prerequisites: completion of "A" exam; permission of committee chair.

Dissertation research for doctoral candidates.
EDUCATION

EDUC 005 Basic Review Mathematics
Fall or spring. 3 credits (this credit is not counted toward the 120 credits required for the degree). Lecs, M W F 8:00 or 9:05. S. C. Piliero. Review of concepts necessary for success in basic mathematics and statistics courses. Topics include problem solving, graphing, basic algebra skills, linear and quadratic functions, polynomial equations, exponents and logarithms, and right-triangle trigonometry. Considerable emphasis is placed on learning in course with understanding and on solving word problems.

EDUC 101 Introduction to Education
Fall. 3 credits. T R 11:40-12:55. G. J. Posner. An introduction to the field of education that is structured around an examination of three contemporary policy issues. The issues are chosen to help students understand important aspects of formal schooling systems (e.g., the public schools, colleges, and universities) as well as nonformal educational activities (e.g., adult education, extension education, and community education). The course is taught by two members of the faculty and is designed for students seeking a self-contained introduction to education that can also lead to additional study in the field.

EDUC 115 Introductory College Mathematics
Spring. 4 credits. M W F 11:15 or 12:20. S. C. Piliero. Designed for students wishing to fulfill distribution requirements and/or prepare for study in a college setting. This course offers a multi-representational approach to college-level precalculus mathematics, stressing conceptual understanding, problem solving, and applications in a technology-enhanced environment. Considerable emphasis is placed on numerical, graphical and symbolic representations of functions and their transformations. Students will use graphing calculators in a collaborative lab setting.

EDUC 120 Education for Empowerment
Spring. 1–3 credits. T R 1:25-2:40. J. D. Deshler and R. E. Steele. A modular course spanning 5 weeks for 1 credit. Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.

EDUC 210 Psychology of Learning and Memory
Fall. 3 credits. Prerequisite: introductory psychology. J. A. Dunn. This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.

EDUC 212 Psychological Foundations of Education
Spring and fall. 3 credits. S-U option available. Prerequisite: introductory psychology. W. S. Carben or J. D. Deshler. This course provides an introduction to the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.

EDUC 240 The Art of Teaching
Fall and spring. 3 credits. Fall: M 8-9:55 or T 10:10-12:05 or 2:30-4:25. D. J. Trumbull. Spring: M 8-9:55 or 12:20-1:25 or T 2:30-4:25 or W 12:20-2:15 or 2:30-4:25. G. J. Posner and staff. This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.

EDUC 271 Sociology of Education
Fall. 3 credits. S-U grades optional. T R 10:10-11:25. Staff. An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.

EDUC 311 Educational Psychology
Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W F 11:15-12:05. D. E. Schrader. This course applies psychological concepts to educational settings such as schools with a focus on understanding the interaction between people, context and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.

EDUC 317 Psychology of Adolescence
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W F 11:15-12:05; Friday section to be arranged. D. E. Schrader. This course surveys the nature of adolescent cognitive, emotional, and social self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.

EDUC 331 Careers in Agriculture, Extension, and Adult Education
Fall. 1–3 credits. Letter grade only. M 8:00-9:25. J. D. Deshler, D. E. Foster, and G. J. Applebee. This course will offer modules in three areas of teaching: Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one or more of the modules and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.

EDUC 332 Instructional Methods in AgriScience Education
Spring. 1–3 credits. Prerequisite: enrolled in a Cornell teacher education program or permission of instructor. R 2:00-4:25. C. A. Conroy. Selection, practice, and evaluation of methods in AgriScience education will be stressed. The course offers a modular approach to focus on teaching strategies and methodology unique to teaching in schools. Content will include program planning (Module I), experiential learning (Module II), and youth leadership (Module III). All students must enroll for one credit in Module I; students may be exempt from Modules II and III with permission of instructor. Participants will be required to participate in field experiences at arranged times.

EDUC 335 Youth Organizations
Spring. 3 credits. T R 10:10-11:25; lab to be arranged. Not offered spring 1998-99. R. E. Steele. Visionary, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership, purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning by doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

EDUC 370 Issues in Educational Policy
Spring. 3 credits. T R 10:10-11:25. K. A. Strike. An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity, student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

EDUC 378 Political Economy of Education
Fall. 3 credits. S-U grades optional. T R 10:10-11:25. Not offered spring 1998-99. R. E. Steele. An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity, student, parent, and teacher rights; and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

EDUC 399 Internship in AgriScience Education
Spring. 3 credits. Prerequisite: EDUC 332. J. A. Dunn. Practice in the field of agri-science education will be stress.
education settings will be examined including higher education and non-formal education.

EDUC 380 Independent Honors Research in Social Science
Fall or spring. 1-6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A minimum of 6 credits may be earned in the honors program. Staff.

EDUC 401 Our Physical Environment
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $T. T 1:25-4:25. V. N. Rockcastle.
A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding.

EDUC 402 Knowing and Learning in Science, Mathematics, and Agriscience
Fall. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. M W 2:30-4:25. D. J. Trumbull and R. E. Steele.
Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will comprise a minimum of three hours a week in an appropriate educational setting.

EDUC 403 Observing and Teaching Science, Mathematics, and Agriscience
Spring. 4 credits. Prerequisites: enrollment in a Cornell teacher education program or permission of the instructor. C. A. Conroy and S. C. Pillero.
Designed for prospective secondary teachers, this course provides a multiple-perspective orientation to the culture of schools and the work of teaching science and mathematics. Students spend 6-8 hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions focus on planning, delivery and evaluation of instruction classroom management, and other issues such as equity, tracking, and classroom language.

EDUC 413 Psychology of Human Interaction
Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. T R 10:10-12:05. D. F. Hedlund.
Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

EDUC 414 Counseling Psychology
Spring. 4 credits. Prerequisites: introductory psychology, social or personality psychology. T R 10:10-12:05. D. F. Hedlund.
The processes of counseling are examined from various theoretical perspectives. Typical counseling issues are examined, and implications are drawn for counseling strategies, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

EDUC 420 Field Experience
Fall or spring. 1-4 credits. S-U grades optional. Undergraduates must attach to their course enrollment material written permission from the faculty member who will supervise the work and assign the grade. Staff.
Students may engage in planned, semiprofessional, or professional practice in an educational enterprise. Each student prepares a plan of action including rationale, purposes, and procedures and arranges with a faculty member to supervise and evaluate the field experience.

EDUC 430 Special Problems in Agricultural Education
Fall, spring, or summer. 1-3 credits. Letter grade only. W 12:00-1:10. C. A. Conroy.
An opportunity to study individually selected problems in agricultural education.

EDUC 445 Curriculum Design Workshop
Summer. 3 credits. G. J. Posner.
A general practical approach to course planning. Readings, group discussions, workshops, and individual conferences centering on each student's project. This project consists of designing a course in a subject area for an age level and an institutional setting of the student's choosing.

EDUC 447 Curriculum Design Laboratory: A Technology-Intensive Course
Spring or summer. 3 credits. W. S. Carlsen.
A project-focused introduction to course design, from needs assessment, through materials development, to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project will vary from year to year. Students are expected to make extensive use of computer software writing, design, management, and communications. The summer section of 447 will be smaller and we anticipate that, rather than working on a single class project, students will undertake curriculum development projects of their own design.

EDUC 472 Philosophy of Education
Fall. 3 credits. T 2:30-4:25. K. A. Strike.
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the theory of knowledge are examined and linked to current educational issues.

EDUC 477 Law and Educational Policy
Fall. 3 credits. S-U. K. A. Strike.
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

EDUC 483 Comparative Studies in Adult Education
Spring. 3 credits. S-U grades optional. T R 3:35-5:00. J. D. Dess. Focuses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

EDUC 494 Special Topics in Education
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

EDUC 495 Senior Seminar
Spring. 2 credits. Education majors or permission of instructors. S-U only. To be arranged. Undergraduate coordinator for the department.
This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty will be involved in selecting the issues and providing guidance for the seminar, students will be expected to provide the initiative and leadership in the classroom.

EDUC 497 Individual Study in Education
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498 Undergraduate Teaching
Fall or spring. 1 or 2 credits; 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
Participating students assist in teaching a course aligned with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching observations, techniques, and subject matters with the professor in charge.

EDUC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and
EDUC 601 Secondary Science and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: consent of instructor. Letter grades only. For graduate students enrolled in one of the Teacher Education programs in science and mathematics. Program includes supervised student teaching in a school for five weeks.

EDUC 602 Teaching Science/Mathematics: Methods, Materials, Practice
Fall or spring. 5 credits. Prerequisite: consent of instructor. Letter grades only. This course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs. The second course for certification as a coordinator of diversified cooperative work experience programs. The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. Participants will practice methods for gathering and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

EDUC 606 Seminars in Science and Mathematics Education Certification Course I
Fall. 1 credit. S-U grades only. T 4:30-5:30. W. S. Carlsen and S. C. Piliero. Explores topics in science and mathematics education. The focus of the seminar changes each year.

EDUC 609 Methods for Interpretive Research
Spring. 3 credits. Prerequisite: course in research methods or measurement or permission of instructor. M W 2:30-4:00. Offered alternate years. Not offered 1998-99. D. J. Trumbull.

EDUC 614 Epistemological Development and Reflective Thought
Fall. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader. Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of conceptual development and their implications for educating diverse student populations, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

EDUC 615 Self and Interpersonal Development and Education

EDUC 620 Internship in Education
Fall or spring. 1-6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work. Staff. An opportunity for practical experience in educational professions development.

EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. S-U grades optional. Staff. The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience in the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

EDUC 611 Educational Psychology
EDUC 630 Special Problems in Agricultural Education
Fall or spring; may also be offered in summer. 1-3 credits. S-U grades optional. Hours to be announced. Staff. The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural and occupational education. Designed for experienced teachers.

EDUC 632 Teaching Agricultural, Extension, and Adult Education
Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Hours to be announced. C. A. Conroy. The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

EDUC 633 Program Planning in Agricultural, Extension, and Adult Education
Spring. 3 credits. Field trip. Lect., T R 10:10-11:25; lab, to be announced. R. E. Steele. Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objective, strategies, and sources of information, are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.

EDUC 644 Curriculum Theory and Analysis
Spring. 3 credits. M 1:25-4:25. G. J. Posner. An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course is based on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an indepth analysis of a curriculum. This course is the basic graduate course in curriculum.

EDUC 651 Developing a Research Proposal
Spring. 2 credits. Letter or S-U option. T R 3:35-4:25. Offered alternate years. C. A. Conroy and D. J. Trumbull. Study of procedures for developing and writing a research proposal. Emphasis will be given to identifying a significant topic, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided with some assistance in constructing a brief proposal of their own.

EDUC 661 Administration of Educational Organizations
Fall. 3 credits. W 3:35-6:00. Staff. Perspectives on the administration of educational organizations. Consideration of social, philosophical, and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of schools as organizations.

EDUC 664 Educational Finance
Fall. 3 credits. S-U grades optional. R 3:35-6:00. D. H. Monk. An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

EDUC 665 Administrative Decision Making
Spring. 3 credits. S-U grades optional. W 3:35-6:00. D. H. Monk. An introduction to decision making theory and its relevance to the field of educational administration. Attention will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and non-formal education.

EDUC 680 Foundations of Extension Adult Education
Fall. 3 credits. Limited to 20 students. S-U grades optional. F 9:05-12:05. J. D. Deshler. An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

EDUC 682 Community Education and Development
Fall. 3 credits. Limited to 25 students. Letter grade only. M 1:25-4:25. Offered fall 1998. Staff. An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

EDUC 685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685)
Spring. 2 credits. S-U grades optional. Charge for materials, $45. F 9:05-12:05; lab to be arranged. R. D. Golle and J. D. Deshler. Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

EDUC 694 Special Topics in Education
Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. Staff. Topics to be announced.

EDUC 711 Contemporary Issues in Educational Psychology
Fall and spring. Variable. 3 credits. S-U grades optional. Staff. Fall: hours to be announced. J. Dunn. Spring: T 2:00-4:30. This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.

EDUC 714 Moral Development and Education
Spring. 3 credits. S-U grades optional. M 12:20-2:15. D. E. Schrader. This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences, the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective, however, special emphasis will be placed on development from adolescence through adulthood.

EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00-4:25. R. E. Ripple and J. D. Deshler. Deals with adult development and learning behavior from points of view of educational psychology, and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education
Spring. 2 credits. S-U grades optional. R 8:00-9:55. Staff. Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

EDUC 748 Seminar in Curriculum Theory and Research
Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. T 2:30-5:00. Not offered 1998-99. G. J. Posner. Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.

EDUC 772 Seminar in Philosophy of Education
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 9:00-11:00. K. A. Strike. Topics to be announced.
EDUC 783 Comparative Extension Education Systems
Summer. 3 credits. S-U option.
D. M. Ewert.
Extension education in the developing nations is studied using, as an analytical frame of reference, a hypothetical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, training and research-extension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

EDUC 800 Master's-Level Thesis
Research
Fall or spring. Credit to be arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

EDUC 900 Doctoral-Level Thesis
Research
Fall or spring. Credit to be arranged. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

ENTOMOLOGY

Courses by Subject
Apiculture: 260, 264
Behavior: 215, 525, 471, 662
Ecology: 452, 455, 456, 470, 671, 672
Introductory courses: 201, 212, 215
Medical entomology and veterinary entomology: 352
Morphology: 322
Pathology: 463
Pest management: 241, 277, 441, 444, 477, 640
Physiology and toxicology: 370, 483, 490, 685
Systematics: 351, 455, 631, 652, 654

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

[ENTOM 201 Alien Empire: Bizarre Biology of Bugs]
Lecs. T R 10:10-11:00; labs T, W or R 1:25-2:15. Lab fee $35.
J. K. Liebherr.
Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. Laboratories in early fall include field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral and taxonomic categories is required.

[ENTOM 212 Insect Biology]
Fall. 4 credits. Prerequisites: BIO G 101–102 (may be taken concurrently) or equivalent. Lecs, W F 10:10-11:00; labs T, W or R 1:25-2:15. Lab fee $35.
J. K. Liebherr.
Introduces the science of entomology by focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral and taxonomic categories is required.

[ENTOM 215 Spider Biology: Life on a Silken Thread]
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lecs, M W 1:25-2:15.
L. S. Rayor.
An introduction to the fascinating world of spiders. Evolution, ecology, behavior, and physiology of spiders and their close kin will be explored from a modern perspective. Topics include identification of major spider families, spiders' unique use of silk, risky courtship, predatory behavior, diverse life styles, social spiders, and potential use in IPM.

[ENTOM 241 Applied Entomology]
Spring. 3 credits. Prerequisites: BIO G 101–102 or equivalent. Lecs, T R 10:10; lab/disc, T or W 12:20-3:15.
W. M. Tingey.
Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

[ENTOM 260 Introductory Beekeeping]
Fall. 2 credits. Lecs, T R 11:15.
R. A. Morse.
Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the insect senses are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

[ENTOM 264 Practical Beekeeping]
Fall. 1 credit. Limited to 20 students.
Prerequisite: ENTR 260 (may be taken concurrently). Lab, R 2:45–2:50. R. A. Morse.
This course consists of fourteen laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered include: management for pollen production, honey harvesting and processing, and disease identification and control.

[ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control]
Spring. 2 credits. S-U grades optional. Offered alternate years. Lecs, T R 12:25–1:15; lab demonstration; optional field trip. A. E. Hajek.
An introduction to the dynamic field of biological control. What is it and when should it be used? This course covers a diversity of types of biological control including use of parasites, predators, pathogens, and competitors as well as plant breeding to control pests from microbes to weeds to invertebrates to vertebrates. This presentation is intended for students curious about controlling pests without using synthetic chemicals.

[ENTOM 322 Comparative Insect Morphology]
Spring. 5 credits. Prerequisite: ENTR 212 or 241. Offered alternate years.

[ENTOM 325 Insect Behavior]
Insects are the most diverse organisms on earth, with equally diverse behavior. This course will explore the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include: insect learning, perceptual abilities, host finding strategies, predation, pollination, and examination of current issues in insect behavior.

[ENTOM 331 Introductory Insect Systematics]
Spring. 4 credits. Prerequisite: ENTR 212. Offered alternate years. Not offered spring 1999 and 2001; next offered spring 2000.
An introduction to the classification, evolutionary history, and diversity of insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics are a basis of insect classification. Insect collections are required.

[ENTOM 352 Medical and Veterinary Entomology]
Fall. 3 credits. Prerequisites: BIO G 101–102 or equivalent. S-U grades optional. Offered alternate years.
The ecology of arthropods of medical and veterinary importance in temperate and tropical regions of the world with emphasis on the role they play in causation or transmission of disease; the role of arthropods in the natural history of disease; and the role of arthropods in the pest control of disease. The course involves 2 field trips, techniques of collection and identification, dissections, methods of transmission, means of identification of a blood pathogen and the source of a blood meal.

[ENTOM 370 Pesticides, the Environment, and Human Health (also Toxicology 370)]
Fall. 2 credits. Prerequisites: BIO G 101–102 or equivalent. Offered alternate years.
Lecs, T R 9:00. J. G. Scott.
A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits,
regulation, politics, and current controversies associated with pesticide use.

[ENTOM 441 Seminar in Insect Pest Management]
Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S-U grades only. Offered alternate years. Not offered spring 1999 and 2000; next offered spring 2000. Hours to be arranged. M. P. Hoffmann and A. M. Shelton. Discussion and analysis of current topics in insect pest management.

[ENTOM 444 Integrated Pest Management (also Plant Pathology 444)]
Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 241 or their equivalents or permission of instructor. Lecs, M W F 9:05; labs M or T 1:25-4:25. P. Ameson and J. Losey. Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

[ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOES 452)]
Spring. 3 credits. Prerequisites: one year of introductory biology; BIOES 261, CHEM 257 or 357/358 and 251 or 301, or permission of instructor. Offered alternate years. Lecs, M W F 11:15. P. F. Feeny. Significance of chemical signaling in mediating interactions between plants and herbivorous animals: mechanisms and strategies of plant finding and exploitation by animals; especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

[ENTOM 453 Principles and Practice of Historical Biogeography (also BIOI 453)]
Fall. 3 credits. Prerequisite: a course in systematics or permission of instructors. S-U grades optional. Offered alternate years. Not offered fall 1998 and 2000; next offered fall 1999. Lecs, T R 10:10; lab T 1:25-4:30. J. K. Liebherr and M. Luckow. A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological and phylogenetic analytical methods. Geological and paleontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.

[ENTOM 455 Insect Ecology (also BIOES 455)]
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S-U grades optional. Offered alternate years. Not offered fall 1998 and 2000; next offered fall 1999. Lecs, M W F 11:15. R. B. Root. Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

[ENTOM 456 Stream Ecology (also BIOES 456 and NTRES 456)]
Spring. 4 credits. Limited to 45 students. Recommended: BIOES 261. S-U grades optional. Offered alternate years. Lecs, T R 9:05; labs, T W R 1:25-4:25. B. L. Peckarsky and M. B. Bain. Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics, conservation and the impacts of disturbances. Lab: A field project includes descriptive and experimental techniques and hypothesis testing related to environmental conditions.

[ENTOM 463 Invertebrate Pathology]
Spring. 4 credits. Prerequisites: one year of introductory biology. S-U grades optional. Offered alternate years. Not offered spring 1999 and 2001; next offered spring 2000. Lecs, M W F 9:05; lab, W 1:25-4:25. A. E. Hajek. Lecture presents principles of pathology as applied to invertebrates. Topics explored include non-infectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microscopy, electrophoresis, immunossay, density gradient centrifugation, soil extraction, and computer simulation.

[ENTOM 470 Ecological Genetics]
Spring. 3 credits. Prerequisites: BIOES 278 or permission of instructor. S-U grades optional. Offered alternate years. Not offered spring 1999 and 2001; next offered spring 2000. Lecs, M W F 1:10; disc 1 hr/wk to be arranged. C. M. Caillaud. A study of the genetic basis and evolution of ecologically important traits. Blending theory with an experimental approach to study evolution in nature, the course includes methods for measuring genetic variation and natural selection; biometrical and molecular analysis of genetic architecture, constraints and limits on evolution in natural populations; genetic aspects of coevolution, phenotypic plasticity, and conservation of endangered species. Examples are taken from studies of animals and plants.

[ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring]
Fall. 4 credits. Prerequisites: BIOES 261, CHEM 257 or 357/358, and BIOL 251 or 301; or BIOES 261, CHEM 257 or 357/358 and 251 or 301, or permission of instructor. Offered alternate years. Not offered fall 1998 and 2000; next offered fall 1999. Lecs, T R 10:10; disc 1 hr/wk to be arranged. C. M. Caillaud. A field project using freshwater invertebrates to monitor stream habitat quality.

[ENTOM 477 Biological Control]
Fall. 3 credits. Prerequisites: ENTOM 212, BIOES 261, and permission of instructor. Offered alternate years. Not offered fall 1998 and 2000; next offered fall 1999. Lecs, T R 9:05; lab T 1:25-4:15. M. J. Tauber. Approach and procedures in biological control of arthropod pests and weeds. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.

[ENTOM 483 Insect Physiology (also Toxicology 490)]
Spring. 4 credits. Prerequisites: general chemistry. S-U grades optional. Offered alternate years. Lecs, M W F 9:05; disc 1:25-2:15, day to be arranged. J. G. Scott. The history, metabolism, and mechanism of action of synthetic and naturally occurring insecticides. Mechanisms of insecticide resistance, evaluation of insecticide toxicity, and new approaches to insect control with biotechnology will be discussed.

[ENTOM 494 Special Topics in Entomology]
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the course name will not be offered more than twice under this number.

[ENTOM 497 Individual Study in Entomology]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

[ENTOM 498 Undergraduate Teaching]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

of freshwater invertebrates or conduct a project using freshwater invertebrates to biomonitor stream habitat quality.
ENTOM 631 Systematics of the Coleoptera
Summer. 3 credits. Limited to 18 students. 3 week summer session. Prerequisites: an introductory course in insect taxonomy and permission of instructor. Offered alternate years. Not offered summer 1999 and 2001; next offered summer 2000. Labs, M T W R F 9-4; Saturday field trips. R. D. Wheeler.

A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.

ENTOM 632 Advanced Coleopterology
Summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years. Not offered summer 1999 and 2001; next offered summer 2000. Lab, to be arranged. Q. D. Wheeler.

An advanced course on the phylogeny and classification of selected subclades of Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.

ENTOM 634 Special Topics in Systematic Entomology
Fall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor. Staff.

Lectures on the classification, evolution, and biogeography of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

ENTOM 640 Applied Ecology and Pest Management

Theory and quantitative methods for characterizing arthropod population dynamics for research and pest management purposes. Course evaluates biological and climatic factors influencing population numbers, development, dispersal, and plant response to arthropod pests. Special topics include development of sampling methodology and simulation modeling.

ENTOM 662 Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIONB 221 or equivalents. S-U grades optional. Offered alternate years. Not offered spring 2000 and 2002; next offered spring 2001. Hours to be arranged. M. J. Tauber.

ENTOM 672 Seminar in Aquatic Ecology
Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471 or BIONB 261, 462. S-U grades optional. Offered alternate years. Not offered spring 1999 and 2001; next offered spring 2000. Hours to be arranged. B. L. Peckarsky.

Discussion and analysis of current topics in the ecology of streams, lakes and marine ecosystems, including student-generated synthesis of key papers in the literature.

ENTOM 685 Seminar in Insect Physiology
Spring. 1 credit. S-U grades optional. Prerequisite: permission of instructor. Offered alternate years. Hours to be arranged. C. Gilbert.

ENTOM 707 Individual Study for Graduate Students
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 709 Teaching Entomology
Credit to be arranged. Staff. Teaching entomology or for extension training.

ENTOM 800 Master's-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

Jugatae Seminar
Fall and spring; taught on demand. 2 credits. Taught by authority on taxon of interest, frequently including a visiting scholar. A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FLORICULTURE AND ORNAMENTAL HORTICULTURE
Floriculture and Ornamental Horticulture courses are listed under Horticultural Sciences.

Freehand Drawing and Scientific Illustration
Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture and are described in the section “Freehand Drawing and Scientific Illustration.”

FOOD SCIENCE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

FOOD 101 Science and Technology of Foods
Fall. 1 credit. S-U grades only. M 1:25-2:15. J. H. Hotchkiss and staff.

This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice will be given.

FOOD 102 Exploring Food Processing

A series of seminars on current technological and regulatory developments in food science. Field trips to four commercial food manufacturing/processing plants and one food research organization will be used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, will be required.

FOOD 150 Food Choices and Issues

This course provides Cornell students with the knowledge needed to make healthy food choices. A systematic approach to food production, processing, distribution, and consumption will be presented. Each student will analyze the nutritional quality of his or her personal diet using a computer diet analysis program. Topics include relationships between diet and health, food processing, food safety, and discussions of contemporary issues relating to food quality, safety, and nutrition.

FOOD 200 Introductory Food Science
Fall. 3 credits. Prerequisite: one course each in chemistry and biology. MW 11:15-12:05, J. H. Hotchkiss.

A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods, nutritional significance, food formulation, preservation, and processing; microbiology and fermentations; composition and processing of food commodities; and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis
Spring. 3 credits. Prerequisite: CHEM 208 or equivalent. Lecs, W F 12:20, lab. M 12:00-1:20, R. Gravani.

Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry are discussed.

FOOD 250 Kosher and Halal Food Regulations
Spring. 2 credits. Sophomore standing and above. M 7:30-9:35 p.m. J. M. Regenstein.

A comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. The kosher food laws, their origin, and their application in modern food processing will be examined. The nature of the kosher supervision industry in America will be described. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions. Some aspects of ethnic foods will also be considered.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiological preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat-animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, and meat merchandising. An all-day field trip to commercial meat plants is taken.

**FOOD 311 Milk and Frozen Desserts**
Fall. 2 credits. Prerequisite: FOOD 322 or permission of instructor. Offered alternate years. R 12:20-4:25.
D. K. Bandler and D. P. Brown.
Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemical, microbiological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting consumer acceptance.

**FOOD 321 Food Engineering Principles**
Fall. 3 credits. Prerequisites: FOOD 200 and introductory physics. M W F 9:05-9:55. S. S. H. Rizvi.
Introduces the engineering principles underlying food and equipment. Topics covered include thermodynamics, mass and energy balance, fluid mechanics, and heat and mass transport.

**FOOD 322 Food Engineering Laboratory**
Spring. 2 credits. Prerequisite: FOOD 321. Lab, T or R 1:25-4:00; lec, T 12:20.
S. K. Sharma and S. S. H. Rizvi. Limited to 10 students in each lab session.
Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration and psychrometry.

**FOOD 351 Milk Quality**
Fall. 2 credits. Prerequisite: AN SCI 250 or equivalent or permission of instructor. F 12:20.
D. K. Bandler and D. P. Brown.
Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in manufacturing and marketing fresh and storable dairy products.

**FOOD 394 Applied and Food Microbiology**
Fall. 2-3 credits. Prerequisites: BIOM 290 and 291. M W F 12:20-1:10.
C. A. Batt.
A comprehensive survey of the roles that microorganisms play in safety and production of foods as well as their use in biotechnological processes. The biochemistry, genetics, and physiology of microorganisms involved in these various processes will be discussed. Advances in detection and control of microorganisms will also be covered.

**FOOD 395 Food Microbiology Laboratory**
Fall. 2 credits. Prerequisite: BIOM 291 or equivalent. M W 2:00-4:25.
J. M. Brown.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbiological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods.

**FOOD 396 Food Safety Assurance**
Spring. 2 credits. Prerequisite: MICRO 290 or permission of instructor. Offered alternate years. T R 9:05-9:55.
R. B. Gravani.
This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on Hazard Analysis Critical Control Point (HACCP) programs, total quality management, and the application of current technologies in reducing the incidence of foodborne illness. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

**FOOD 400 Senior Seminar in Food Science and Technology**
Students prepare and present a seminar on a topic of current interest in food science and technology.

**FOOD 401 Concepts of Product Development**
Spring. 2 credits. Prerequisite: FOOD 200 or equivalent. Offered alternate years. M W 11:15-12:05.
J. H. Hutchins.
A discussion of the sequence of events in developing and marketing new food products. Topics include packaging and labeling, food additive and ingredient regulations, taste panels, market testing, market research, and patents.

**FOOD 405 Food Waste Management**
Spring. 2 credits. Prerequisite: FOOD 200 or its equivalent. Offered alternate years. Lec, M 12:20-2:15; lab, M 2:30-4:25.
J. M. Regenstein.
Introduction to the principles and practices related to managing wastes from food plants through reduction, reuse, recycling, and composting. Some broader areas of waste management not specifically related to the food industry will also be discussed. Includes field trips which may take all afternoon.

**FOOD 406 Cheese and Other Fermented Dairy Foods**
Fall. 2 credits. Prerequisite: BIOM 330 or 331. M W F 9:05-9:55.
Staff.
The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

**FOOD 410 Sensory Evaluations of Foods**
Fall. 3 credits. Prerequisite: statistics. M W F 10-11:00.
H. T. Lawless.
Deals with the sensory techniques used in evaluating the flavor, color, and texture of foods and the evaluation of consumer acceptance. Includes methods for measuring these qualities, underlying psychological principles, and statistical methods for analyzing results.

**FOOD 415 Principles of Food Packaging**
J. H. Hutchins.
The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

**FOOD 419 Food Chemistry Laboratory**
Spring. 2 credits. Prerequisites: BIOBM 330 or 331 and concurrent registration in FOOD 460. W 12:20-4:30.
A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemical laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

**FOOD 423 Unit Operations in Food Manufacturing**
Fall. 4 credits. Intended for seniors and food science majors. Lec, T R 11:15-12:05; recitation, T 12:20; lab, 1:25-4:25 T or to be arranged. S. J. Mulvaney and S. K. Sharma.
An integrated approach to understanding food manufacturing operations. Topics include major unit operations used for thermalization, freezing and dehydration of foods. Emphasis is placed on the interplay between engineering design of processes and the physical and chemical transformations that occur as food is produced from various commodities. The impact of process conditions on product safety, overall quality, and storage stability are also considered.

**FOOD 430 Understanding Wine**
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 25, 1999) to enroll. S-U grades optional. T R 2:30-4:25.
An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that
produced them. Topics will include the physical and chemical properties of food, the microorganisms and enzymes that cause spoilage, and the sensory properties of wines from different grape varieties, viticultural practices, and wine making techniques.

**FOOD 447 International Postharvest Food Systems**
Fall. 2 or 3 credits. Prerequisite: freshman chemistry. S-U grades optional. T R 10:10-11:00. M. C. Bourne and staff.

An interdisciplinary course designed for all undergraduate and graduate students in CALS. Describes postharvest food losses and methods to reduce the loss. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish, biology and control of fungis, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

**FOOD 450 Fundamentals of Food Law**

Introduction to the complex array of federal and state laws and regulations that control the processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course also will refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.

**FOOD 456 Advanced Concepts in Sensory Evaluation**

Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research project is conducted on a current issue in sensory evaluation.

**FOOD 494 Special Topics in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**FOOD 497 Individual Study in Food Science**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

May include individual tutorial study, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.

**FOOD 498 Undergraduate Teaching Experience**
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades only.

Students assist in teaching a course appropriate to their previous training and experience. Students enrolled in this discussion or laboratory section and will regularly discuss objectives with the course instructor.

**FOOD 499 Undergraduate Research in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall).

Students conduct original research directed by a food science faculty member.

**FOOD 600 Food Science Forum (Seminar)**
Fall and spring. 1 credit. Required of all food science graduate students. S-U grades only. T 4:30-5:30.

**FOOD 604 Chemistry of Dairy Products**
Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor. Offered alternate years. F 1:25-3:25.

A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

**FOOD 605 Physical Chemistry of Food Components**
Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. Offered alternate years. M W 10:10. J. W. Brady.

This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics; colloidal properties; molecular interactions; foams, gels, and water binding of foods.

**FOOD 607 Advanced Food Microbiology**

There have been great advances in applying the modern tools of molecular biology to the detection of microorganisms and their metabolites. The primary emphasis of this course will be to review the recent developments in the theory and application of nucleic acid and antibody-based detection systems, excluding safety and safety, in addition, other approaches, including measurement of impedance, ATP, and endotoxins, will be discussed.

**FOOD 616 Flavors — Analysis and Application**

A consideration of the chemistry of carbohydrates, including sugars, starches,pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

**FOOD 620 Food Carbohydrates (also Nutritional Sciences 620)**

Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-chemical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

**FOOD 694 Special Topics in Food Science**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**FOOD 698 Graduate Teaching Experience**
Fall and spring. 1 to 3 credits. S-U grades only. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring. There will be assigned readings and discussion sessions on educational theory and practice throughout the term.
FR DR 211 Freehand Drawing and Illustration  
Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. Not offered 1998. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 MT W T R. R. J. Lambert.  
Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.

FR DR 214 Watercolor  
Spring. 2 credits. S-U grades optional. 4 studio hours scheduled in 2 hour units between 9:05 and 12:05 and 2 hours outside sketching. M T W R. R. J. Lambert.  
A survey of watercolor techniques. Subject matter largely still life, sketchbook, and on-the-spot outdoor painting.

FR DR 316 Advanced Drawing  
Fall. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 4 hours to be arranged. M R 9:05-12:05, 2 hours outside sketching. R. J. Lambert.  
For students who want to attain proficiency in a particular type of illustration or technique.

FR DR 417 Scientific Illustration  
Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered 1998-99. R. J. Lambert.  
A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproduction processes, including pen and ink, scratchboard, wash, and mixed media.

FR DR 900 Graduate-Level Thesis  
Research  
Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to doctoral students who have not passed the "A" exam, permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 800 Masters-Level Thesis  
Research  
Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to master's candidates, permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 901 Doctoral-Level Thesis  
Research  
Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to doctoral students who have passed the "A" exam, permission of Special Committee Chair. S-U grades only. Graduate faculty.

Related Courses in Other Departments

Introduction to Business Management (ARME 220)  
Marketing (ARME 240)  
Food Industry Management (ARME 443)  
Biological and Environmental Transport Processes (ABEN 390)  
Computer-Aided Engineering: Applications to Biomaterials and Food Processing (ABEN 453)  
Practical Aspects of Postharvest Handling of Horticultural Crops (HORT 325)

FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION  
Freehand Drawing is a program within the Department of Floriculture and Ornamental Horticulture. Other courses offered by the department are listed under Horticultural Sciences.

HORT 101 Introduction to Horticultural Science  
An introduction to horticulture in all of its components: nursery, landscape horticulture, turfgrass management, floriculture, controlled-environment agriculture, fruit and vegetable science, urban horticulture, and related professional and commercial fields. A survey of the component fields of plant science also is provided. Emphasis is on the history, geography, and literature of the field; the structure and organization of the component industries, institutions, and professions; and the role of science and technology in the continuing development of horticultural practice. Field trips, including one three-day field trip (cost approximately $130.00), may be taken to horticultural firms, institutions, and historic sites.

HORT 102 General Horticulture  
Spring. 4 credits. Each lab limited to 25 students. Lecs, M W F 10:10; lab M T or W 2—4:25. L. D. Topoleski.  
Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

HORT 200 Introductory Pomology  
A general introduction to pomology—the science and art of fruit growing. Lectures and discussion emphasize the natural history, ecology, botany, physiology, integrated pest management, and diverse production systems for fruits grown in temperate climate areas. Lab sessions and field-trips involve fruit anatomy and morphology, clonal selection and propagation, pest management and control techniques, fruit harvesting and storage, environmental and sustainability issues, WWW-based information on fruit growing, and hands-on practice in local orchards and vineyards.

HORT 220 Vegetable Types and Identification  
Seminar. 465, 469, 630. M. P. Pritts.  
Acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases and insects of vegetables, identification of vegetable and weed seeds, seedling, nutrient deficiencies, vegetable judging, grading, and grade defects.

HORT 290 Vegetable Physiology  
Spring. 4 credits. Each lab limited to 25 students. Lecs, M W F 10:10; lab M T or W 2—4:25. L. D. Topoleski.  
Acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.
HORT 225 Vegetable Production
Fall. 4 credits. Lecs, M W F 11:15; lab, W 2-4:25; 1 S fieldtrip and 3 fieldtrips (September). W 11:15-6:00. Lecs, M W F 11:15; lab T 2-4:25. R. G. Mower.
Intended for those interested in the production, processing, and marketing of vegetables. Topics include identification, techniques, and trends in the culture, harvesting and storage of the major vegetable crops. Field trips to conventional and organic farms and hands-on experience in growing vegetables in the laboratory are included.

HORT 230 Woody Plant Materials
A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

HORT 243 Taxonomy of Cultivated Plants
(Also BIOPL 243)
Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Offered even years; 1998-2000. Lecs, M W 10:10-11:00; lab, W 12:25-4:25. M. A. Luckow.
A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, in preparing and taxonomy literature, and to the elements of nomenclature:

HORT 300 Garden and Interior Plants I
Fall. 3 credits. Prerequisite: HORT 300 or permission of instructor. Fee for lecture-laboratory manual: $35. Lecs, T R 10:10; lab, T 2-4:25. R. G. Mower.
A study of ornamental plants used in garden and interior situations. The first seven weeks cover perennials, herbaceous annuals and perennials, with the laboratory devoted to various practical gardening activities. The remainder of the semester covers the major kinds of foliage and flowering plants used in the home and in other interior landscape situations. Emphasis is on identification, use, and general cultural requirements.

HORT 301 Garden and Interior Plants II
Spring. 3 credits. Prerequisite: HORT 300 or permission of instructor. Fee for lecture-laboratory manual: $35. Lecs, M W F 11:15; lab, M 2-4:25. R. G. Mower.
A continuation of Horticultural Sciences 300. The first seven weeks are devoted to a further study of interior plants, with emphasis on special groups of interior plants such as orchids, cacti and succulents, gesneriads, ferns, palms, and bromeliads. The second seven weeks are devoted to outdoor herbaceous plants, such as tulips, daffodils, crocuses, and iris, as well as other spring-blooming bulbs and perennial plants. Outdoor laboratories emphasize practical gardening activities appropriate to the spring season.

HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops
Spring. 3 credits. Offered alternate years. Lecs, M W F 8:00; lab R 2-4:25. T. C. Weiler.
A study of the effects of storage on quality and shelf life of various horticultural crops. Field trips to processing facilities and supermarkets to observe the handling of various fruits and vegetables.

HORT 330 Turfgrass Management
Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod. Covering situations. Emphasis is on winter identification and characteristics of turfgrass sites, and integrated pest management.

HORT 335 Woody Plant Materials for Landscape Use
A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

HORT 400 Principles of Plant Propagation
Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another course in plant physiology. Lecs, T R 9:05; lab, R 1:25-4:25. K. W. Mudge.
Sexual (seed) propagation and asexual (vegetative) propagation including cutting, grafting, tissue culture, layering and specialized vegetative reproductive structures. Physiological, environmental, and anatomical principles are covered and hands-on skills in laboratories. Examples include both temperate as well as tropical horticultural, agronomic, and forestry crops.

HORT 410 Principles of Controlled Environment Agriculture
(CEA)
Spring. 3 credits. Prerequisite: permission of instructor. Letter grade only.
One 1-day field trip, one 3-day field trip, $100. Lecs, T R 10:10-12:05. R. W. Langhans and staff.
Basics and issues related to managing agricultural production in environmentally-optimized facilities. Survey of CEA as an agricultural alternative, technology basics, systems and practices; world centers of production, structures, systems and equipment, materials and components, lighting, cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management, and human resource management.

HORT 411 Principles of Crop Production in Controlled Environments
Spring. 3 credits. Prerequisites or corequisites: HORT 410. Letter grade only.
One afternoon field trip plus all field trips listed for HORT 410 are required. Lecs, W F 8:00; lab R 2-4:25. T. C. Weiler.
Study of several controlled-environment agriculture (CEA) crops; including cut, pot and bedding ornamentals, vegetables and fruits briefly covered; emphasis on programmed harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops.

HORT 415 Principles and Practices of Agroforestry (also NTRES 415)
Spring. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S/U option. Lecs, M W 10:10; lab, W 1:25-4:25. K. W. Mudge.
An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, planting, pruning, measurement).

HORT 420 Principles of Nursery-Crop Production
Fall. 4 credits. Prerequisite: HORT 400.
Principles of commercial production of nursery crops to marketable stage, including postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

HORT 425 Horticultural Sales and Service Business
Fall. 4 credits. Fee for course manual $20. Prerequisites: ARME 240 or a similar course in marketing, or permission of instructor. Weekly laboratory field trips to commercial operations and one 3-4-day field trip to a metropolitan area (cost approximately $130.00) are taken. Lecs, M W 10:10; discussion W 12:20-1:10; lab, W 1:25-4:25. C. F. Gortzig.
A study of the application of horticultural, marketing, and management principles and practices in the operation of horticultural sales and service firms, e.g., garden centers, retail florist and nursery stores, wholesale marketing operations, mail-order businesses, mass markets, interior and outdoor landscape-service and related firms.

HORT 430 Special Topics in Ornamental Plants
Fall or spring. Credit and hours to be arranged. Primarily for upperclass Horticulture and ornamental horticulture majors. Prerequisites: HORT 230, 301, 335, or the equivalent, and permission of instructor. R. G. Mower.
Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.
HORT 435 Landscape Management
Fall. 4 credits. Prerequisites: HORT 230 or 335. Lec, M W F 9:05; lab, M 2:00-4:25. Offered every even years; 1998, 2000. W. C. Shellest.
A study of the practices involved in the maintenance of woody ornamental plants in the landscape. The major emphasis will be on post-harvest techniques, including water and fertilization management, weed management, pruning, and general tree care. Labs have a hands-on focus.

HORT 440 Restoration Ecology
An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

HORT 442 Berry Crops: Culture and Management
A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other minor small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed. Frequent field trips enhance classroom activities.

HORT 444 Applied Viticulture
Fall. 3 credits. Lecs, T R 9:05; lab, R 2:45. Next offered 1999. R. M. Pool.
Grape production and post-production practices with the Great Lakes and Finger Lakes regions. We will examine grape varieties, site selection, and vine management as affected by geography, meteorology and vine anatomy/physiology. Protection from insects and diseases from injury by cultural, chemical, and natural means will also be explored. Laboratory exercises and field trips offer hands-on experience in vineyard practices, marketing and processing.

HORT 445 Orchard Management
The science and technology of deciduous tree-fruit production. Topics include fundamental plant and fruit physiology, orchard renovation and design systems, nutrition, irrigation and freeze protection practices, tree pruning and training, post-harvest fruit storage, marketing and economic spreadsheet models, monitoring and decision systems for integrated pest management, and efficient utilization of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in certain topics. Previous coursework in pomology and other plant sciences is suggested, but not a prerequisite.

HORT 450 Soil Management and Nutrition of Perennial Crops
Fall. 3 credits. Fee for course materials $35. Lecs, M W F 8; lab, M 1:25–4:25. W. C. Shellest.
Fundamentals of mineral nutrition and soil management for perennial horticultural crops. Soil management effects on crop performance, nutrient relationships, and interaction with other components of crop production systems are emphasized. Mineral nutrition aspects deal with diagnostic techniques, interpretation of tissue and soil analyses, and nutrient requirements for optimizing crop performance.

HORT 455 Fertility Management and Nutrition of Vegetable Crops
Fall. 3 credits. Prerequisite: any college-level chemistry course. Not offered 1998–99. Lecs, M W 10:10; lab/disc, M 2:45. The course deals with both major, secondary and minor elements including fertilization programs, interpretation of tissue and soil analyses, nutrient interactions, induced deficiencies, toxicities as well as the effects of organic matter, crop residues, and specific crop sequences. The course emphasizes hands-on field and greenhouse experiments and small group discussions.

HORT 460 Plant-Plant Interactions
Spring. 3 credits. Prerequisite: any crop production on plant ecology course or permission of instructor. Lecs, T R 9:05; lab/disc, M 2:45. Not offered spring 1999. B. L. Krizek.
Mechanisms by which plants interfere or positively interact within the context of environmental conditions such as light, temperature, and fertility. Competitive and chemical interactions will be considered between weeds and crops, among crops in polyculture, and between individuals in monoculture. Most examples will be taken from temperate and tropical monoculture and intercropping systems, but principles for natural ecosystems will also be considered.

HORT 462 Vegetable Crop Physiology
Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yield. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and small group discussions.

HORT 465 Vegetable Varieties and Their Evaluation
Fall, weeks 1–7. 2 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades only. Lecs, W F 8; lab, F 1:25–4:25. Offered alternate years. Next offered fall 1999. D. W. Wolfe and A. Rangarajan.
Principles of vegetable variety evaluation and selection of the vegetables in relation to objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

HORT 470 Special Topics in Pomology
Spring. 3 credits. Open to undergraduates by permission. Hours to be arranged. Staff.
Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from one year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

HORT 470 Golf Course Management
Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Offered odd years: 1999. Lecs, F 1:25–4:25. A. M. Petrovic.
Advanced study in the management of golf course operations including selection of root zone and turf materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management and financial operations. Analysis of a central New York golf courses will provide the basis for discussion.

HORT 480 Plantations Seminar Series
Fall. 1 credit. S-U grade only. W 7:30 a.m. D. A. Rakow.
A 10-week series of seminars given by prominent speakers on a variety of horticultural, natural sciences, and human cultural themes.

HORT 485 Public Garden Management
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301; HORT 230 or HORT 335. Offered odd years: 1999, 2001. Lecs, T R 10:10-11:00; lab, T R 11:15–12:05. Two-and-one-half-day field trip to visit other botanical gardens and arboretum. D. A. Rakow.
The course will explore the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboretum. Included will be separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

HORT 491 Design and Plant Establishment in Urban Environment (also LA 491)
Fall. 3 credits. Prerequisites: HORT 230 or 335 or permission of instructor. Lecs, T R 12:20; lab, T 1:25–4:25. N. L. Bassoik and P. J. Trowbridge.
This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the environmental constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design, followed by specifications and graphic details, will be produced to implement these practices. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

HORT 494 Special Topics in Horticulure
Fall or spring. 4 credits maximum. S-U grades optional.

In Sections 01, 02, and 03, the departments teach "trial" courses under this number. Offerings may vary by semester, and will be advertised by the departments. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.
Section 01. Fruit and Vegetable Science

Section 02. Practical Problem-Solving Skills in Horticulture. Fall. 2 credits. Prerequisite: permission of instructor. Lec. M 12:20-1:10; Lab. W 2:00-4:25. C. P. Mazza.

Foundation for extension or similar career-oriented students. Application of horticultural science principles to practical situations. Techniques of synthesizing information from various scientific disciplines. Classes led by staff in several departments. Topics are interdisciplinary, drawing from expertise in horticulture (landscape and food), entomology, plant pathology, natural resources, and Cornell Plantations.

Section 03. Horticultural Practicum. Fall. 3 credits. Lab. R 1:25-4:25. D. A. Rakow and staff.

In Section 03, students will gain practice in developing specific manual skills under the direction of experienced Plantations' staff. Applied theory and practice for a variety of horticultural topics: integrated pest management, water, bog, and marsh gardening, bed preparation and planting perennials, tree planting, pruning techniques, small engine maintenance, rooftop and path construction, and dry stone wall construction.

HORT 495 Undergraduate Seminar

Undergraduate participation in weekly departmental seminar series. May be taken four times for one credit per semester. S-U grades only.

Section 01. Common Themes in Fruit and Vegetable Science (see HORT 602). Fall or spring. 1 credit. R4. C. B. Watkins. Graduate students should enroll in HORT 602.

Section 02. Current topics in Floriculture and Ornamental Horticulture. Fall. 1 credit. R 12:20. T. C. Weiler. Graduate students in Floriculture and Ornamental Horticulture should enroll in HORT 636 (Section 02).

HORT 496 Internship in Horticultural Sciences

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's advisor. In advance of participating in internship programs, students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours to arranged. Staff.

HORT 497 Independent Study in Horticultural Sciences

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form (available in 140 Roberts Hall) independent study in horticultural sciences under the direction of one or more faculty members. Hours to be arranged. Staff.

HORT 498 Undergraduate Teaching Experience

Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to arranged. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sessions, preparing and assisting in, or teaching laboratories, and tutoring.

HORT 499 Undergraduate Research

Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to arranged. Staff.

Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project

Fall or spring. 1-6 credits. (6 credits maximum toward MPS (Agriculture) degree). S-U grades optional. Staff.

A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research. This course is the capstone requirement of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Professional Colloquium Series/FDH

Spring. 1 credit. Prerequisite: primarily for graduate students in final year of studies, written permission from instructor required for undergraduates. Lec. M 12:20. D. J. Tennesen. Graduate students join distinguished visitors and Cornell staff members for weekly professional seminars on current teaching, research, and extension in floriculture and ornamental horticulture. Students will present a seminar based on their work. Often students use the presentations as part of their thesis defense and in preparation for job interviews.

HORT 602 Seminar in Fruit and Vegetable Science

Fall or spring. 1 credit. S-U grades only. R 4:00. A. Rangarajan and C. B. Watkins. Weekly seminars consist of graduate student research presentations on current research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in pomology or vegetable crops. Undergraduate students register under HORT 495 Sec 1.

HORT 615 Quantitative Methods in Horticultural Research

HORT 620 Woody Plant Physiology

Spring. 4 credits. BIOPL, BIOBM 331, CHEM 357, or equivalent, or permission of instructor. Letter grade only. Hours to arrange. T. R 8:40-10:55. Offered odd years, 1999, 2001. T. H. Whitlow. An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include evolution of the woody plant form, structure and function of the root and shoot, growth periodicity, dormancy, growth and its control, balance and allocation, root symbioses, and physiological responses to biotic and abiotic stress. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.

HORT 625 Advanced Postharvest Physiology of Horticultural Crops

Spring. 3 credits. Offered alternate years. BIOPL 242 and/or HORT 325. Lees, T R 10:10; disc, to be arranged. Staff.

Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.

HORT 629 Special Topics in Plant Science (Extension) (also Plant Breeding 629)

Spring. 1 credit. Offered alternate years. F 1:25-4:25. W. D. Pardee. Designed for graduate students and advanced undergraduate students to provide a broader knowledge of cooperative extension philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

HORT 630 Current Topics in Postharvest Horticulture

Spring. 1 credit. To graduate students only. S-U grades only. R 1:25-4:25. T. H. Whitlow. A discussion of readings from Kuhn, Popper, Waddington and others emphasizing application of the philosophy of science to the real world practices of scientists.

HORT 635 Tools for Thought

Fall. 1 credit. Open to graduate students only. S-U grades only. R 1:25-4:25. T. H. Whitlow. A discussion of readings from Kuhn, Popper, Waddington and others emphasizing application of the philosophy of science to the real world practices of scientists.

HORT 646 Current Topics in Horticulture

1 credit. S-U grades only.

Section 01: Fruit and Vegetable Science. Staff. Fall or spring. 1 hour per week, to be arranged. A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation relating to the chosen topic. Interested students should contact the designated instructor(s) for each term.

Section 02: Floriculture and Ornamental Horticulture. T. C. Weiler and staff. Fall. 1 hour per week, to be arranged. Graduate students only. Undergraduates should enroll in HORT 495 (Section 02). Each week a staff member will develop a dialogue with students on a topic of current mutual interest. Topics and discussion leaders change by week and semester; topics will encompass planting design, exterior and interior landscape management, turfgrass management, urban horticulture, nursery management, plant materials, stress physiology, weed science, root zone ecology, horticultural sales and
service business operation, and controlled environment agriculture. Brief reading assignments may be distributed for completion by the next class.

HORT 694 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Sec 01. Floriculture. Sec 02. Fruit and Vegetable Science. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

HORT 700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff.

INTAG 402 Agriculture in Tropical America
Fall. 2 credits. Prerequisite: upper class or graduate standing. F 1:25-3:20. R. W. Everett. A preparatory course for participation in International Agriculture 602. Physical resources, vegetation, history, crop and animal production, and various social and economic aspects of agriculture in tropical America will be discussed.

INTAG 403 Traditional Agriculture in Developing Countries
Fall. 1 credit. S-U only. T 8-8:50. H. D. Thurston, D. Bates, R. Blake, J. Lassoie, A. Power, F. Fernandez, T. Steenhuis. Today, perhaps over half of the world's arable land is farmed by traditional farmers. They developed sustainable agriculture practices which allowed them to produce food and fiber for millennia with few outside inputs. Many of these practices have been forgotten or lost in developing countries but are still used by many traditional, subsistence, or partially subsistence farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

INTAG 599 International Agriculture and Rural Development Project Paper
Fall and spring. 1-6 credits. Limited to M.P.S. candidates in the fields of International Agriculture and Rural Development (IARD) and International Development (ID). S-U grades only. Staff.

INTAG 602 Agriculture in the Developing Nations
Spring. 3 credits. Prerequisites: INTAG 500 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenses. F 2:30-4:25 until midterm only. R. W. Blake and staff. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among staff and students. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also Government 692)
Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

INTAG 650 Special Topics in International Agricultural and Rural Development
Fall or spring. 1 credit. Staff. A seminar for new themes of agricultural and rural development. Offered occasionally. Specific content varies.

INTAG 685 Training and Development: Theory and Practice (also Communication 685, Education 685 and Industrial and Labor Relations 658)
Spring and summer. 4 credits. S-U grades optional. Charge for materials $45. Lec. F 9:05-12:05; lab, 1 hour per week, to be arranged. At Communication Graduate Center. J. Coole and D. Deshler. Analysis, design, and administration of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

INTAG 694 Graduate Special Topics in INTAG
Fall or spring. 1-4 credits. S-U or letter option. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under this number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 703 Seminar for Special Projects in Agricultural and Rural Development
Fall and spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development, others with permission of the director of graduate field studies in IARD. S-U grades only. M 12:20-2:15. R. W. Blake and staff.

The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agriculture and rural development, with particular attention to interdisciplinary complexities.

LANDSCAPE ARCHITECTURE

LA 141 Grounding in Landscape Architecture
Fall. 3 credits. Limited to 15 students. Letter grade only. Cost of drafting supplies, about $200. Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment, fees and supplies, about $250. Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participant to the design process, design principles, construction materials, planting design, and graphics.

LA 201 Medium of the Landscape
Fall. 5 credits. Limited to landscape architecture majors; cost of basic drafting equipment, supplies and fees, about $200, expenses for field trip, about $250. This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water and vegetation.

LA 202 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250. This course will focus on the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

LA 251 Urban Archaeology (also CRP 261)
Fall. 3 credits. Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how our urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

LA 262 Laboratory in Landscape Archaeology (also CRP 262)
Spring. 3 credits. Prerequisites: LA 261 or CRP 261 or permission of instructor. Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 282 The American Landscape
Spring. 3 credits. An interdisciplinary survey of the environmental and cultural history of the American landscape, including perceptions of landscape as expressed in paintings, photographs, and literature. Landscape values, the relation of landscape to culture, landscape use, and the history of regional and national landscapes are general topics, all seen within the context of the history of the environment.

LA 292 Creating a Second Nature
Spring. 3 credits. Offered alternate years. Offered spring 1998. Prerequisites: none, but ARKEO 100, ANTHR 100 or CLASSICS/HISTORY OF ART 220 recommended. What can archaeological investigation tell us about the landscape of cultures that spent much of their civic and private lives out of doors? This course introduces the evidence for the markets, parks, gardens, fields and burial places central to daily life in the ancient Near East and Classical world.

LA 301 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250. Course participants will be engaged in the art and science of site-scaled design. This includes relating construction and planting details to concepts and program.

LA 302 Community Design Studio: Integrating Theory and Practice
Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250. The studio will engage course participants in service-oriented experiential community design projects. Theories of place-making, community and participatory design and planning, and sustainability will be explored through hands-on learning. Students will be expected to do considerable field work in the community-at-large. Studio theme for 1998-99: Landscapes for learning.

LA 315 Site Engineering I
Spring (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. Lectures and studio projects focusing on the professional skills and knowledge required to professionally and creatively develop grading plans for project-scale site design.

LA 316 Site Engineering II
Fall (2nd seven weeks of semester). 2 credits. Prerequisite: LA 315 or permission of instructor. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 317 Site Construction I
Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects.

LA 363/547 American Indians, Planners, and Public Policy (also CRP 363/547)
Spring. 3 credits. Offered alternate years. Next offered 1999-2000. Various American Indian civilizations as well as diverse European cultures have all exerted their influence on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

LA 365 Pre-Industrial Cities and Towns of North America (also CRP 360 and CRP 666 and LA 666)
Fall. 3 credits. Offered alternate years. Limit distribution only. Various American Indian civilizations and European cultures have all exerted their influence on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

LA 402 Urban Design in Virtual Space
Spring. 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250. A sequence of projects introducing students to advanced skills in large-scale urban design, including 3d computer modeling and digital design media as tools for shaping the form of the city.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Offered to Landscape Architecture students only. Limited to 15 students. This course is designed to develop a working knowledge of various computer software applications with emphasis on Autocad. The course will explore other applications relevant to land-use planning and the profession of Landscape Architecture.

LA 412 Professional Practice
Spring. 1 credit. Presents the student with a comprehensive understanding of the role of the professional landscape architect and the problems and opportunities one may encounter in an office or other professional situations. Topics discussed include practice diversity, marketing professional services, office and project management, construction management, computers in the profession, and ethics.
LA 480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481 and 581)
Fall. 3 credits.
A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

LA 483 Design Criticism
Fall. 3 credits.
A practicum in writing environmental design criticism. Emphasis on impressionistic writing, analytical descriptions and interpretations or works and on the role of criticism in environmental design discourse.

LA 486 Community Design Workshop
Spring. 3 credits. Permission of instructor. S-U grades optional. Not offered every semester.
This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Community design and workshop series. Students will learn and practice skills related to community planning primarily through work on a real project in partnership with a community group.

LA 487 Experiential Community Design
Fall. 3 credits. Permission of instructor. S-U grades optional. Not offered every semester.
This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Community design and workshop series. Students will learn and practice skills related to community planning primarily through work on a real project in partnership with a community group.

LA 491 Design and Plant Establishment in the Urban Environment (also Agriculture 491T)
Fall. 3 credits. Prerequisites: HORT 230 or permission of instructor. Cost of supplies, about $50; expenses for field trips, about $50.
This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design, followed by specifications and graphic details, will be produced to implement these practices. Cost of supplies, about $50; expenses for field trips, about $50. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

LA 494 Special Topics in Landscape Architecture
Fall or spring. 1-3 credits, may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 497 Individual Study in Landscape Architecture
Fall or spring. 1-5 credits; may be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.

LA 498 Undergraduate Teaching
Fall or spring. 1-2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.

LA 501 Composition and Theory
Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. Field trip about $250. Basic principles of natural and cultural processes within contemporary design applied to the practice of landscape architecture. Projects focus on the relationship between measurement, process, experience and form at multiple scales of intervention.

LA 520 Composition and Theory
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250, expenses for field trip, about $250.
The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, given in the course, and graphic expression introduced in LA 501.

LA 505 Landscape Representation I
Fall. 3 credits. Prerequisite: concurrent enrollment in LA 501 or permission of instructor.
Basic skills in landscape architectural design communication, including pencil-and-ink drawing, drafting techniques, orthographic projection, axonometric projection. Lettering, modeling analysis and concept drawing.

LA 506 Graphic Communication II
Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor. Not offered every year.
The studio will focus on modes of landscape representation from ideation to presentation. Projects will in many cases correspond with a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome.

LANAR 525 History of American Landscape Architecture*
Fall. 3 credits.
*Offered through the College of Architecture, Art, and Planning.

[LA 545 The Parks and Fora of Imperial Rome
Spring. 3 credits. Offered alternate years. Offered spring 1999. Prerequisites: advanced standing in a design field, classics or history of art, or by permission of the instructor.
This advanced seminar is seeking students in classics, art history, archaeology, landscape architecture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome.]

LA 569 Archaeology in Preservation Planning and Design (also CRP 569)
Fall. 3 credits. Offered alternate years. In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.

LA 590 Theory Seminar
Fall. 3 credits.
For graduate students in their last year of study and seniors. Seminar in contemporary landscape design theory.

LA 601 Integrating Theory and Practice I
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250.
The studio will focus on site-scaled projects that engage cultural and natural systems. Theories of place-making, sustainable design and landscape representation will be critically explored through design projects that derive from and affirm a sense of site and place. The integration of site knowledge and site construction aims to support and deepen level of correspondence between design and site.

LA 602 Integrating Theory and Practice II
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250, expenses for field trip, about $250.
The studio will build on the LA601 subject matter with increasing emphasis placed on construction and technology and the expression of design solutions that grow from and affirm a sense of site and place. Social, cultural, physical and historical factors and their relationship to site design and planning will be critically explored through theory and practice.

LA 615 Site Engineering I
Spring. (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 616 Site Engineering II
Fall. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 615 or permission of instructor.
Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 617 Site Construction I
Fall (1st seven weeks of semester). 2 credits. Prerequisite: LA 617 or permission of instructor.
The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will construct detailed landscape prototypes and models and have the option of developing computer-generated drawings.

LA 618 Site Construction II
Spring. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 617 or permission of instructor.
Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a process of self-criticism related to measured drawings specific to the comprehensive project.

LA 619 Advanced Site Grading
Spring (2nd seven weeks of semester). 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615.
Grading skills and knowledge applied as a design component of site planning projects.

LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)
Fall. 3 credits. Offered alternate years. Not offered 1999-2000.
Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in its own unique way as they created their own built environments.

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1–3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

LA 694 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits; may be repeated for credit. S-U grades optional.
Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250, expenses for field trip, about $250. Application of urban design and town-planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702 Advanced Design Studio
Spring. 5 credits.
This advanced studio provides the opportunity to explore issues of contemporary landscape architecture and integrate related fields. Topics examined include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

LA 800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits.
Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will soon provide new information as soon as possible.

NTRES 100 Principles of Conservation
Fall. 3 credits. Limited to first-year students specializing in natural resources. Letter grade only. M W F 9:05; 1 hr disc to be arranged. R. J. McNeil.
The nature of natural resources, how they are managed, and their interactions with individuals and society are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

NTRES 101 The Environment
Fall. 2 or 3 credits. Letter grade only. M 7:30-9:30 p.m. Optional 1 hr disc sec to be arranged. Not offered fall 1998. R. I. Bedford.
An overview of Earth's environmental problems. Lectures are presented by a series of Cornell's most authoritative and by visiting experts. A major theme of the course is that environmental problems, and their solutions, are not isolated technical problems, but rather are interrelated social, political, ethical, ecological and economic problems.)

NTRES 104 Natural History Information Management Concepts
Spring. 1 credit. Letter grade only. T 9:05. A. N. Moen.
Natural history information management concepts utilizing existing technology to provide global access to information resources will be introduced. Students will learn how to access and prepare hypertext and multimedia files of natural history information and related information processing techniques for research and education.

NTRES 105 Natural History Information Management Applications
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 104 (or concurrent registration) and permission of instructor fall term. A. N. Moen.
Natural history information will be used to learn computer-based information management skills and to produce information resources for use in the field. Course in the Department of Natural Resources. Sections will include: (1) Natural History of Plants; (2) Natural History of Animals; and (3) Decision Aids for Laboratory and Field Identification.

NTRES 201 Environmental Conservation
Spring. 3 credits. M W F 12:20; 1 hr disc sec to be arranged. Staff.
As the end of the 20th century approaches, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course will stimulate you to go beyond the simplistic portraits of the environmental dilemma offered by the mass media so that you will have a firmer basis for responsible citizenship and action on environmental issues.

NTRES 204 Natural Resource Modeling Concepts
Spring. 1 credit. Letter grade only. R 9:05. Prerequisite. NTRES 104 or permission of instructor. A. N. Moen.
Basic concepts underlying computer modeling in natural resources are introduced, and selected models illustrate specific biophysical, population, and simulation models.

NTRES 205 Natural Resource Modeling Applications
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisite: NTRES 104 (or concurrent registration), one course in computer programming and permission of instructor fall term. A. N. Moen.
Students may enroll for variable credits in biophysical modeling, population modeling, and simulation modeling sections. Original programs are designed by the students and become part of the information resources in the Cooperative Learning Center. Sections will include: (1) Biophysical Modeling in Natural Resources; (2) Simulation Modeling in Natural Resources; and (3) Population Modeling in Natural Resources.

NTRES 210 Introductory Field Biology
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent.
Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of these events are emphasized.
management of small nonindustrial private forest land in the northeastern United States, including the production of maple syrup.)

**NTRES 304 Wildlife Ecology Concepts**
Spring. 1 credit. Letter grade only. M W F 11:15. (1st 1/3 of the semester). A. N. Moen.
The main concepts underlying wildlife behavior, physiology, nutrition, and energetics are discussed in an ecological context as a basis for further study in the NTRES 305 sections associated with this course.

**NTRES 305 Wildlife Ecology Applications**
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 304 (or concurrent registration) and permission of instructor fall term.
Field research and computer simulations provide in-depth study in wildlife behavior, physiology, nutrition, and energetics sections in cooperative learning environment. All students publish their findings on the information system in the Cooperative Learning Center. Sections will include: (1) Wildlife Behavior; (2) Wildlife Physiology; (3) Wildlife Nutrition; and (4) Wildlife Energetics.

**NTRES 306 Coastal and Oceanic Law and Policy**
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Simson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $500.
Intended for professionals interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

**NTRES 308 Natural Resources Management**
Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. B. A. Knuth. Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

**NTRES 309 Natural Resource Management in American Indian Nations**
Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and American Indian Program. S. M. Penningroth.
This course examines resource management in territories belonging to American Indian nations. Topics include history, sovereignty, religious significance of the environment, and intellectual property. Case examples of traditional Indian management techniques as well as contemporary resource management issues are presented.

**NTRES 321 Introduction to Biogeochemistry (also GEOL 321, SES 321)**
Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. Lec, T R 12:20–1:10; lab, T R 10:10–11:00 to be announced. J. B. Yavitt and L. A. Derry. Control and function of the Earth's global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, bio-active metals, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

**NTRES 350 Ecological Dimensions of Global Change**
Spring. 3 credits. Prerequisites: college-level courses in biology and chemistry. M W F 12:20–1:10, disc sec; M or W 1:25–2:15. J. B. Yavitt.
Human accelerated environmental changes threaten the integrity of nature. This course explains the ecological principles that comprise this threat. Topics include increasing air temperature, atmospheric carbon dioxide and other gases, and pollution. Discussions explore the likely future behavior of nature given different global change scenarios.

**NTRES 400 International Environmental Issues**
Fall. 4 credits. Limited to about 40 undergraduates plus graduate students. Prerequisite: junior standing or above. T R 10:10–12:05.
International aspects of the preservation and development of environment and natural resources. Concepts include development, resource ownership, exploitation, compensation, and preservation. Cultural differences in attitudes and behavior toward environment. Management practices under different cultural, economic, and social systems. Will cover current issues such as acid precipitation; management of migratory whales, fish, and waterfowl; Antarctic development; global climate and energy issues; and preservation of tropical rainforests and endangered species. Lecture and discussion, term paper, and examinations. Priority to seniors, a few graduate students, others providing best mix of backgrounds, others with special needs, natural resources majors.

**NTRES 401 Environmental and Natural Resources Policies**
Fall or spring. 3 or 4 credits. Prerequisites: junior standing and participation in Cornell-in-Washington Program. Not offered every year. Check with department for availability.
Concepts and principles fundamental to the environmental policy process and central to decision making in the natural resources arena, particularly at the national and international levels. Role of the legal system in the policy process; roles of citizen organizations, lobbyists, bureaucrats, legislators. Case studies, interviews with Washington officials, participation in a model conference. One exam. A fourth credit available requires a more extensive written assignment and an oral presentation.
An introduction to the environmental policy process and its conceptual framework. Recognition of phenomena identified as natural resources or environmental problems and issues; steps leading to legislation or regulations to solve problems; implementation and evaluation stages; role of the legal system, roles of citizens, lobbyists, government actors. Case studies, presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

NTRES 404 Wildlife Populations Ecology
Spring. 3 credits. Letter grade only. Prerequisite: NTRES 204 or permission of instructor. M W F 11:15. (second 1/3 of the semester). A. N. Moen. The main concepts underlying population dynamics of free-ranging species are discussed in an ecological context as a basis for further study in the NTRES 405 sections associated with this course. The emphasis is on analytical population models rather than descriptive population parameters.

NTRES 405 Wildlife Population Applications
Fall and spring. Credit to be arranged. Letter grade only. 3 hours (TBA) per credit hour. Prerequisites: NTRES 404 or concurrent registration and permission of instructor fall term. Population estimating techniques, simulation models, and reconstruction models provide in-depth experience in these population application sections. Students may reregister for the sections in order to continue model development. Sections will include (1) Wildlife Population Estimating Techniques; (2) Wildlife Population Simulation Models; and (3) Wildlife Population Reconstruction Models.

NTRES 406 Ecology Risk Assessment (also Toxicology 406)
Spring. 3 credits. Prerequisites: BIOES 201 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. Offered alternate odd years. Next offered spring 1999. M W F 11:15-12:05. J. W. Gillett. This course develops an understanding of and competence in the different types of ecological (non human health) risk assessments. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances. The proposed USEPA approach under development will serve as the working model.

NTRES 407 Religion, Ethics, and the Environment
Spring. 4 credits. For juniors, seniors, and graduate students, others by permission only. M W 10:10-11:00; or a hr disc to be arranged. R. A. Baren. How religion, philosophy, and ethics influence our treatment of nature. Terms like religion, nature, fact, value, knowledge, and public interest are examined in detail. Particular themes include: character and moral development, similarities and differences between moral and scientific claims, truth telling, public reason, and property. Also, animals right, responsibilities to future generations, the limitations of rationalism in ethics, and discussion of whether women approach moral issues differently from men.

NTRES 408 Resource Management and Environmental Law
Fall. 3 credits. For juniors, seniors, and graduate students. S-U grades optional. M W F 9:05-9:55. Staff. A senior-level course that introduces the use of legal concepts, doctrines, and remedies in natural resource and environmental management. For a variety of living resources and their habitats, it explores the common law and regulatory processes available for resolving conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic considerations, and constitutional limitations affect management techniques and objectives.

NTRES 410 Wildlife Management Concepts and Applications
Spring. 3 credits. Prerequisites: broad background in biology, NTRES 304 (Wildlife Species Ecology) or NTRES 404 (Wildlife Populations Ecology). This course is open to seniors and graduate students. M W F 9:05. A. Moen. In-depth analyses of the ecological basis for decision making in wildlife management, computer simulations of management problems and effects of options, management information systems, and preparation of computer-based landscape files. Local field trips are taken.

NTRES 411 Seminar in Environmental Ethics
Fall. 3 credits. For seniors, juniors and graduate students. S-U grades optional. M 1:25-3:50. A. Moen. Moral concerns relative to the natural environment and agriculture. In successive years, the seminar will focus on such topics as: (1) animal rights vs. ecosystem concerns; (2) public interest and environmental ethics in a democratic and pluralistic society; and, (3) land use ethics.

NTRES 415 Principles and Practices of Agroforestry (also Hort 415)
Spring. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. M W F 9:05-9:55. R. Schneider. In-depth analysis of the ecological and biological principles relevant to the management of fresh and marine water resources, with emphasis on the effects of water management on community ecology. Lectures and discussions will integrate scientific literature with current management issues. Topics include: linkages between hydrologic variability and community groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality conditions on organisms.

NTRES 416 Environmental Impact Analysis
Spring. 2 credits. Prerequisite: one undergraduate course in biology. M. W. Gillett. The course explores environmental impact assessment (EIA) from the perspective of the water resource manager. Field trips to selected case studies of water resources and their use of computer-based sources of information, and practical skills involved in water resource management (identification, propagation, planting, prunning, measurement).

NTRES 417 Wetland Resources
Spring. 2 credits. Prerequisite: one year of college biology. M W F 9:05-9:55. J. W. Gillett. Examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including fresh- and salt water-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.
Agriculture and Life Sciences 1998-1999

AGRICULTURE AND LIFE SCIENCE 998-1999

agencies; examines diverse conceptual frameworks for landscape impact analysis; and exposes students to modern tools for evaluating landscapes.

[NTRES 438 Fishery Management]
Spring. 3 credits. Offered alternate years. Next offered spring 2000. Lect, T R 10:10; disc, T or R 11:15. C. C. Krueger. Introduction to management as an adaptive process that focuses on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include selection of objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of these topics are discussed.

[NTRES 442 Techniques in Fishery] (also ENTR 456, BIOES 456)
Fall. 3 credits. Requisite: a reasonable biology background. Limited to first 30 seniors, plus graduate students. Lect, T 10:10-12:05, disc, R 10:10 or 11:15. T. A. Gavin. Emphasis is on methods for collecting and analyzing data from fish populations and their habitats. Topics include passive and active fish-capture methods, tagging and marking, and physical and chemical habitat measurements. Assumptions and limitations inherent in data sets, research planning, and scientific report writing are also discussed. Several field trips provide hands-on experience in data collection on streams and lakes.

[NTRES 450 Conservation Biology]
Fall. 3 credits. Requisite: permission of instructor. Limit of 15 upperclass and graduate fishery science students. Credit of field trips, no more than $30. Offered alternate odd years. Next offered fall 2000. T R 1:25-2:25, 2 or more weekend field trips and 1 mid-week field trip. C. C. Krueger.

Enrollment is for periods of 1-4 weeks. Topics are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form and a faculty advisor.

[NTRES 456 Stream Ecology (also ENTR 456, BIOES 456)] Spring. 4 credits. Limited to 45 students. Prerequisites: none; BIOES 261 recommended. Offered alternate years. Lect, T R 9:05-10:00; Lab T W or R 1:25-4:25. K. Bain and B. Peckarsky.

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish communities, stream cycling, trophic dynamics, colonization and succession, community dynamics, conservation, and the impacts of disturbances. Lab. A field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessments.

[NTRES 471 Management of Terrestrial Habitats]
Spring or summer. 2 credits. Prerequisite: permission of instructor. Topics include student based objectives, regulations, habitat management, population control, stocking, and management of trout, reservoirs, the Great Lakes, and Pacific halibut. Ecological, social, political, and economic aspects of these topics are discussed.

[NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions]
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. Topics include the process of achieving goals in the private and public sectors, including public and private land management organizations. An introduction to use of the Global Positioning System (GPS) is included.

[NTRES 494 Special Topics in Natural Resources]
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[NTRES 495 Individual Study in Fish and Wildlife Biology and Management]
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. T. A. Gavin, C. Kofron, C. Krueger, R. Malecki, E. Mills, A. Menon, M. Olson, M. Richmond, L. Rudstam, S. Sullivan. Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

[NTRES 496 Individual Study in Ecology and Management of Landscapes]
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, P. Smallidge, J. Yovetich. Topics in ecology and management of landscapes are arranged depending on the interest of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hal).

[NTRES 498 Teaching in Natural Resources]
Fall and spring. 1-4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insights into the organization, preparation, and execution of course plans through application and discussions with instructor.

[NTRES 500 Professional Projects—M.P.S.]
Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.

[NTRES 601 Seminar on Selected Topics in Fishery Biology and Aquatic Science]
Fall or spring. 1 credit. S-U grades only. T 3:35-4:25; disc. sec, T 4:30-5:00. Selected readings and discussions of research and/or current problems in fishery and aquatic sciences.

[NTRES 604 Seminar on Selected Topics in Resource Policy and Management]
Fall. 2 credits. S-U grades only. M 3:00-4:30. Primarily for graduate students in fishery science and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy environmental and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

[NTRES 607 Ecotoxicology (Toxicology 607)]
Spring. 3 credits. Prerequisite: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. Offered alternate even years. Next offered spring 2000. M W F 11:15-12:05. J. W. Gillett.

Lectures, readings, and special guest discussions focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals in ecosystems, comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

[NTRES 610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610)]
Fall. 3 credits. Prerequisites: biochemistry and animal physiology. Lecture and laboratory. M W F 11:15-12:05. J. W. Gillett.

Introduction to the basic concepts of toxicology, exposure and biological responses to toxicants, methods of assessing toxicity, factors affecting outcomes, specific sources of toxicants (including air pollution, agriculture, industrial and commercial processes, natural occurring toxicants, and social poisons), risk assessment and regulation of toxic materials.

[NTRES 612 Wildlife Science Seminar]
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Check with department for availability. Discussion of individual research or current problems in wildlife science.

[NTRES 615 Case Studies and Special Topics in Agroforestry]
Fall. 2 credits. Prerequisites: NTRES/HORT 415 or permission of instructor. S-U only. Hours to be arranged. L. E. Buck, J. L. Lassoie.
Interdisciplinary groups of students examine case study examples of agroforestry practices in developed and developing countries. Specific topical areas are examined in depth, leading to development of a team-written report and a class presentation. Extensive library research and participation in small group discussions are required.

**NTRES 616 Forest Science and Management Seminar**
Fall and spring. 1 credit. Permission of instructor. S-U grades only. Check with department for availability. Selected readings and discussions of research and/or current problems in forest science and management.

**NTRES 618 Critical Issues in Conservation and Sustainable Development**
Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30-4:25. J. Schelhas.
Establishes a conceptual foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and rural development. Students work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

**NTRES 619 Field Practicum in Conservation and Sustainable Development**
Spring. 3 credits. Prerequisites: NTRES 619; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes two-week field study trip to a Latin American country in January, J. Schelhas.
An interdisciplinary study of a conservation and development problem in Latin America. The course will use an interdisciplinary research methodology that includes group problem identification, individual or rapid appraisal projects, and synthesis of group work to identify key conservation and development issues and research priorities for a selected site.

**NTRES 694 Special Topics in Natural Resources**
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**NTRES 698 Current Topics: Environmental Toxicology (Toxicology 698)**
Fall, spring. 1-3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

**NTRES 699 Graduate Individual Study in Natural Resources**
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. NTRES graduate faculty.
Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

**NTRES 800 Master's Thesis Research**
Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.

**NTRES 900 Graduate-Level Thesis Research**
Fall and spring. Credit to be arranged. Limited to graduate students in a Ph.D. program only before the 'A' exam has been passed. S-U grades only.

**NTRES 901 Doctoral-Level Thesis Research**
Fall and spring. Credit to be arranged. For students admitted to candidacy after the 'A' exam has been passed. S-U grades only.

**PLANT BREEDING**

Biometry courses are listed under Department of Statistics Science in "Interdisciplinary Centers, Programs, and Studies" in the front section of this catalog.

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**PL BR 201 Plants, Genes, and Global Food Production**
Spring. 2 credits. Prerequisite: one year of introductory biology or permission of instructor. Lecs. T R 11:15. S. R. McCouch
This course provides an introduction to Plant Breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B—Biological Sciences.

**PL BR 401 Plant Cell and Tissue Culture**
Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor. Lecs. T R 10:10. E. D. Earle.
Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of those techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed.

**PL BR 402 Plant Tissue Culture Laboratory**
Fall. 1 credit. Enrollment limited. Prerequisites: PL BR 401 (may be taken concurrently) or permission of instructor. W 1:25-4:25 (alternate weeks) plus 1 hr to be arranged. E. D. Earle.
Laboratory exercises complementing Plant Breeding 401.

**PL BR 403 Genetic Improvement of Crop Plants**
Fall. 3 credits. Prerequisites: genetics (BIOGD 281 or other standard genetics course), and a course in crops, horticulture or floriculture. M W F 9:05-9:55. M. E. Smith.
Genetic enhancement of crop value to humans began with domestication and continues with farmers’ variety development and scientifically trained plant breeders’ applications of Mendelian, quantitative, and molecular genetics. This course examines crop genetic improvement methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

**PL BR 446 Plant Cytogenetics Laboratory**
Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Will be offered as a two-week module at a time to be arranged in February 1999. Check with department for further information. K. N. Watanabe.
This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applications to research on plant genetics and plant breeding. Plant materials involve a wide range of crop species. In 1999 the module will cover basic techniques for examination of plant chromosomes. In 2000 it will deal methods by discussing the history and current practice of plant breeding, tools available to breeders, choices and modifications of those tools to meet specific objectives, and challenges plant breeders face in developing varieties for the future.

**PL BR 494 Special Topics in Plant Breeding**
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses
offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 496 Internship in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. Minimum of 60 on-the-job hours per credit granted. Prerequisites: permission of advisor and enrollment during the pre-enrollment period of the semester before the internship. Student must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by the faculty member who will supervise their study and assign their credits and grade. S-U grades only.

PL BR 497 Individual Study in Plant Breeding
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

PL BR 498 Undergraduate Teaching
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor and prior teaching experience in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate teaching assistant in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U optional. Prerequisites: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Undergraduate research projects in plant breeding.

PL BR 604 Methods of Plant Breeding Laboratory
Fall. 2 credits. Prerequisite: PL BR 403, 403 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Mutschler and R. E. Anderson.

PL BR 605 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching.

PL BR 650 Comparative Genomics
Fall. 1 credit. Enrollment limited. S-U or letter grades optional. Prerequisites: PL BR 607 or equivalent. Permission of instructor required. Times to be arranged—three times/week for one month. M. Mutschler and M. Sorrells. This course will emphasize how to access and integrate different types and sources of data using computer databases and a variety of querying mechanisms. Students will learn to integrate information derived from analysis of phenotypes, biochemical and metabolic pathways, DNA sequences and genetic and physical maps using plant genome databases, and a variety of software packages.

PL BR 650 Advanced Plant Breeding Methods
Spring. 3 credits. Prerequisites: PL BR 403 (403), or equivalent, Genetics 281, or equivalent. M. Mutschler. This is a capstone course that integrates information from a variety of disciplines to provide a current comprehensive examination of modern plant breeding. Plant breeding methods used for a variety of crops are considered, including selection strategies, self- and cross-pollinated crops, and a variety of software packages.

PL BR 651 Advanced Plant Breeding
Spring. 3 credits. Prerequisites: PL BR 603 (403), PL BR 607 or equivalent experience. M. Mutschler.

PL BR 652 Seminar
Fall or spring. 1 credit. S-U grades only. T 12:20. Staff and graduate students.

PL BR 653 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional.

PL BR 654 Perspectives in Plant Breeding Strategies
Spring. 3 credits. S-U grades optional. Prerequisite: PL BR 403 or 603. M. E. Mutschler. Emphasis is on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed.

PL BR 655 Quantitative Genetics in Plant Breeding
Spring. 3 credits. S-U grades only. Prerequisites: PL BR 403, BTRY 601 or equivalent. M. E. Sorrells.
PL BR 718 Breeding for Pest Resistance
Spring. 3 credits. Prerequisites: BIOGD 281 and PL BR 693. An introductory course in Plant Pathology and/or Entomology also highly recommended. LeC, TR 10:10-11:30. M. A. Mutschler. A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, monogenic and polygenic control of resistance, approaches to breeding for resistance stability of genetic resistance mechanisms, and the use of biochemical/physiological/molecular tools in breeding for pest resistance.

PL BR 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students working on a master's thesis.

PL BR 900 Graduate-Level Dissertation Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

PL BR 901 Doctoral-Level Dissertation Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only after the "A" exam has been passed.

PLANT PATHOLOGY

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL PA 101 Freshman Writing Seminar: Pests, Pesticides, People, and Pest Control
Spring. 3 credits. Limited to 17 students. Offered spring 1999. LeC, M W F 8:00. P. A. Arneson. This seminar examines the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachel Carson's classic Silent Spring, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

PL PA 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Literature
Fall. 3 credits. Limited to 17 students. LeC, TR 8:40. Not offered 1998. J. A. Laurence. This seminar provides an opportunity to learn more about the biological, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at levels of single sentences to term papers.

PL PA 201 Magical Mushrooms, Mischievous Fungi
Spring. 2 credits. S-U optional. LeC, TR 11:15. G. W. Hudler. A presentation of the fungi and their roles in nature and in shaping past and present civilizations. The historical and practical significance of fungi as decayers of organic matter, as pathogens of plants and animals, as food, and as sources of mind-altering chemicals are emphasized.

PL PA 241 Plant Diseases and Disease Management
Spring. 4 credits. Prerequisite: one year of biology. LeC, M W F 11:15; lab, T or W 1:25. W. E. Fry. An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

PL PA 309 Introductory Mycology

PL PA 319 Field Mycology
Fall. 1 credit. Prerequisite: permission of instructor. Offered fall 1998. R. P. Korf. Study of mushrooms and other fungi on 7 field excursions followed by 7 evening labs devoted to lectures and identification and study of collections under the microscope. Emphasis on ecology, biology, and means of identification. Grades are determined on basis of laboratory final.

PL PA 401 Basic Plant Pathology
Fall. 4 credits. Prerequisite: one year of biology and BIO S 241 or equivalent. Recommended: general microbiology, plant physiology. LeC, TR 11:10; lab, T or W 1:25. W. A. Sinclair. Principles and practice of plant pathology. Lectures and labs are coordinated to consider types of plant pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack, and plant defense, vector relationships, epidemiology, disease forecasting, loss assessment, and disease control. This course prepares students for graduate-level work in plant pathology.

PL PA 407 Nature of Sensing and Response (Also BIO G 407)
Spring. 3 credits. Prerequisites: BIO BM 350 or 353 or 355 and previous or concurrent registration in 352. Recommended: BIO GD 281. LeC, TR 10:10-11:25. T. P. Delaney. The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development, and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed by mutation and disease.

PL PA 411 Plant Disease Diagnosis
Fall. 3 credits. For senior undergraduates specializing in plant pathology or pest management and for graduate students with a major or minor in plant pathology or plant protection. Limited to 20 students. Prerequisites: PL PA 241 or equivalent and permission of instructor. LeC, T 10:10; lab, TR 1:25-4:25. G. W. Hudler. A method for diagnosis of plant disease is presented with emphasis on contemporary laboratory techniques and effective use of the literature.

PL PA 443 Pathology of Trees and Shrubs
Fall. 3 credits. Prerequisites. PL PA 241 or equivalents. LeC, M W F 11:15; labs, F 1:25-4:25. G. W. Hudler. For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the nature, diagnosis, assessment, and treatment of diseases of trees and shrubs. Forest, shade, and ornamental plants are considered.

PL PA 444 Integrated Pest Management
Fall. 4 credits. Prerequisites: BIO ES 261, ENTRON 212 or 241, or PL PA 241 or their equivalents or permission of instructor. P. A. Arneson and J. Losey. Lectures integrate the principles of pest control, ecology, and economics in the management across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

PL PA 494 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 497 Independent Study
Fall or spring. 1-5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PL PA 498 Teaching Experience
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 499 Undergraduate Research
Fall or spring. 3–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.

An opportunity for research experience under the direction of a faculty member.

PL PA 642-661 Special Topics Series
Unless otherwise indicated, the following description applies to courses 642–661.

Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 644 Ecology of Soil-Borne Pathogens
Spring. TBA. M. G. Milgroom.

PL PA 645 Plant Virology

PL PA 647 Bacterial Plant Diseases
Fall and spring. M 9:05. S. V. Beer. Emphasizes current research in plant pathogenesis undertaken in laboratories at Cornell.

PL PA 648 Molecular Plant Pathology

[PL PA 649 Mycology Conferences

PL PA 650 Diseases of Vegetable Crops
Fall. TBA. Hours to be arranged. J. W. Lorber and T. A. Zitter.

PL PA 652 Field Crop Pathology
Spring. W 8:00. G. C. Bergstrom.

PL PA 655 Diseases of Florist Crops

PL PA 655 Plant Diseases in Tropical Agriculture

PL PA 661 Diagnostic Lab Experience
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. Hours to be arranged. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Coursework or experience in diagnostic techniques is strongly advised. Priority will be given to graduate students in plant pathology and plant protection.

PL PA 662 Molecular Plant-Pathogen Interactions

An examination of the molecular properties that control the development of host-parasitic interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

PL PA 663 Plant Biotechnology (BIOL 653.2 and PL BR 653.2)

PL PA 668 Plant Pathology Seminar
Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12:20–1:10.

PL PA 672 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches “trial” courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 671 Concepts of Plant Pathology: Organismal Aspects
Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 401 or equivalent and permission of instructor. Lecs, T R 9:05; lab/disc, R 2–4:25. A. R. Colmer.

Concepts in host-pathogen relationships with emphasis on roles of molecules and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems are considered. Historical perspectives and recent research are reviewed and analyzed. Students prepare and review mock grant proposals.

PL PA 670 Concepts of Plant Pathology: Population Aspects
Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or permission of instructor. Some background in statistics is recommended. Lab/discussion section. Lec, T R 10:10; disc, T 2–4:25. M. G. Milgroom.

Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogens and plant populations, and population genetics of pathogens. The discussion section is used for examining current plant pathogen literature and other exercises complementary to lecture material.

PL PA 706 Phytophthora
Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. S-U grades only. Requires 3 hrs/wk per credit hour. Hours to be arranged. S. G. Lazarowitz.

This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

[PL PA 707 Phytophthora]
Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory, introductory plant pathology. Offered alternate years. S. V. Beer.

A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease methods for manipulation of the pathogens, and recent developments in phytophthora. The current state of knowledge of important phytopathogenic genera including their genetics and mechanisms of pathogenesis is reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

PL PA 709 Phytomycology
Spring. 2 credits. For graduate students with a major or minor in plant pathology or mycology; others by permission. Prerequisites: PL PA 401 and 309 or equivalents, or permission of instructor. Lec, F 1:25–2:30; lab, 2:30–4:30. J. W. Lorber.

Provides basic information on the biology of plant pathogenic fungi with emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

PL PA 715 Phytomycology Laboratory
Spring 1999–2000. 3 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. S. G. Lazarowitz.

[PL PA 735 Advanced Plant Pathology
Spring 1999–2000. 3 credits. Prerequisite: permission of instructor. 3 lecs, hours to be arranged. S. G. Lazarowitz.

Topics in plant virology. An emphasis placed on student discussion of current literature. Topics included are viral infection process, viral and viroid replication, viral recombination, viral movement, viral genes and their products, cross protection, detection of viruses, molecular approaches to resistance and the use of viruses as vectors for introducing genetic material into plants.

PL PA 736 Genetics and Development of Filamentous Fungi
Fall. 2 credits. Prerequisite: BIOGD 281 or equivalent. Hours to be arranged. Offered 1998–99. B. G. Turgeon, O. C. Yoder.
Classical and molecular approaches to the study of fungal genetics are discussed. Recently developed molecular technology is highlighted, with emphasis on transformation systems, gene disruption and replacement, genetic variation, and the potential of transforming DNA, native transposons and plasmids, karyotyping by chromosome separation, and secretion of heterologous proteins. Application of contemporary methodology to genetic dissection of developmental processes, such as plant pathogenesis (including host and tissue specificity), the mitotic and meiotic cell cycles, and conidium formation is described. Experimental evidence supporting various hypotheses to explain fungal pathogenicity is evaluated. Examples are chosen from investigations of plant pathogenic fungi such as Coclithobolus heterostrophus and Magnaporthe grisea and from well known genetic models such as Aspergillus nidulans and Neurospora crassa.

[PL PA 739 Advanced Mycology]
Fall. 4 credits. Prerequisites: PL PA 309 or equivalent, a course in genetics, and permission of instructor. Offered odd-year fall semesters. Not offered 1998-99.
L. P. Koontz.
A detailed study of the taxonomy, nomenclature, and biology of four major groups of fungi (rusts, smuts, peronosporales, and fungi imperfecti.)

[PL PA 788 Research in Molecular Plant Pathology]
Fall and spring. 2, 4, or 6 credits. Prerequisites: permission of instructor before beginning research. S. V. Beer.
Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentration in Molecular Plant Pathology and sufficient theoretical background and practical laboratory experience. Students submit plans and reports on each research experience.

[PL PA 797 Special Topics]
Fall or spring. 1–5 credits. S. U. grades optional.
An opportunity for independent study of a special topic.

[PL PA 798 Graduate Teaching Experience]
Fall or spring. 1–5 credits. S. U. grades.
Hours to be arranged. Staff.
Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

[PL PA 800 Master's-Level Thesis Research]
Fall or spring. S. U. grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.
For students working on a master's degree.

[PL PA 900 Graduate-Level Thesis Research]
Fall or spring. S. U. grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.
For students in a Ph.D. program who have not passed the "A" exam.

[PL PA 901 Doctoral-Level Thesis Research]
Fall or spring. S. U. grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.
For doctoral candidates who have passed the "A" exam.

RURAL SOCIOLGY

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

R SOC 100 American Indian Studies: An Introduction (also American Indian Studies 100)
Fall. 3 credits. S. U. grades optional. Enrollment limited to 550. 2:55-4:10 p.m. R. W. Venables.
This course provides a foundation for the study of American Indians. Emphasis will be placed on social, cultural, historical, educational, and human development. Guest lecturers from Cornell's staff and the Indian communities and media presentations.

R SOC 101 Introduction to Sociology (also Sociology 101)
Fall, spring, or summer. 3 credits. Enrollment limited to 300 in the fall, 400 in the spring. Lecs. T R 10:10-11:00; sec. various times, T. A. Hirschel and P. R. Eberts.
This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course will provide "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

R SOC 103 Introduction to Sociology: Microsociology (also Sociology 103)
An introduction to macrosociology, focusing on social processes within small groups, including the family. Emphasis is on leadership, conformity, social influence, cooperation and competition, distributive justice, and micro analyses of interaction.

R SOC 105 Economic Sociology (also Sociology 105)
Fall. 3 credits. S. U. optional. C. Leuenberger.
Modern social thought arose out of attempts to explain the relationship between economic development and the social transformations that gave rise to the contemporary world. Classical theorists from Karl Marx and Max Weber to Karl Polanyi focus their writings on emergent capitalist economies and societies. Contemporary social theorists likewise have sought to understand the interaction between capitalism and the social forces reacting against and emerging from modern economic development. From exchange and rational choice theories to network analysis and institutional theory, a central theme in contemporary social thought has been the relationship between the economy and society, economic action and social structure, rationality and fundamental social processes. This course provides an introduction to sociological thought and research seeking to understand and explain the relationship between economy and society in the modern era.

R SOC 175 Issues in Contemporary American Indian Societies (also American Indian Studies 175)
Spring. 3 credits. S. U. grades optional. Lec. T R 7:30-9:30 p.m. sec. various times. J. E. Barreiro.
Early American Indian history and the poscontinental period will be reviewed with an emphasis given to contemporary issues. Topics such as land claims, treaties, education, mineral and water rights, social problems, militant organizations, and civil rights will be covered, with guest lecturers and media presentations.

R SOC 200 Social Problems (also Sociology 200)
This course investigates a variety of current social problems from a sociological perspective. The course begins with an overview of sociological theories that may account for social problems and identifies common as well as competing explanations. The theoretical framework is then applied to analyses of a variety of social problems, and these may vary semester to semester. Examples of social problems are homelessness, teen pregnancy, deindustrialization, and homicide, among others. Emphasis in the course will be given to how social problems are measured, and students will be given an opportunity to test theories with data analysis.

R SOC 201 Population Dynamics (also Sociology 201)
Spring. 3 credits. S. U. grades optional. Enrollment limited to 35. ALS students must register for this course as R SOC 201 T R 2:55-4:10 or 8:40-9:55 (depending on instructor). J. M. Stycos or L. B. Williams.
This course provides an introduction to population studies. The primary focus is on the relationships between demographic processes (fertility, mortality, and migration) and social and economic issues. Discussion will cover special topics related to population growth and distribution, including marriage and family formation, labor force participation, urban growth and urbanization resource allocation, and the environment.

R SOC 202 Religion and Family in the U.S. (also Sociology 202)
This course will examine how two fundamental social institutions—religion and the
family—are interlined in American society. As recently as the 1950s, religious institutions were organized around the needs of one dominant family form, the male-breadwinner family with a stay-at-home mother. But since the 1970s, that family form is no longer statistically dominant or culturally normative. How have religious institutions adapted to new family forms? How do religious beliefs influence behavior within families, for example, the raising of children? How do religious institutions foster ideals of family life, or influence family life more generally? What are "good" families? How do people's family experiences and family values influence their participation in organized religion? What models of family life are religious groups organized around? We will begin to answer these questions by drawing on readings that explore the religious family link in a variety of religious, ethnic, and social class contexts within the contemporary United States.

**R SOC 205 International Development (also Sociology 206)**
Spring. 3 credits. Enrollment limited to 74. M W F 10:10-11:00. P. D. McMichael. New questions concerning development models in the post-Cold War era are examined from a comparative and global perspective on North-South relations. While the focus is the "Third World," the issues confronting it are often global, even when they concern the most basic issue of food security. Using films and various theoretical perspectives, we examine Southern societies (economies, ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grassroots activism.

**R SOC 206 Gender and Society (also Women's Studies 206)**
Spring. 3 credits. Enrollment limited to 100. Lecs, M W 11:15-12:05, sec, various times. B. Weinert. Course will familiarize students with gender hierarchies, both social and behavioral similarities/differences between females and males, and degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Objectives will be met through lectures, readings, films, participant observation and personal experiences.

**R SOC 208 Technology and Society**
Fall. 3 credits. Offered odd years. (also Science and Technology 208). C. C. Geisler. The relationship between technology and society is among the most pressing concerns of our time. Ultimately, what makes a technology "useful" or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Here, we try to compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

**R SOC 209 Social Inequality (also Sociology 209)**
Spring. 3 credits. S-U optional. M. Brinton. This course examines the nature and processes of social inequality in industrial societies. The principal focus is on the contemporary United States, with some comparisons to other industrial societies with different educational and class structures. Readings include theoretical and empirical materials on urban inequality and stratification along race, class, and gender lines. The course includes ethnographies of schools and workplaces as well as more quantitative research.

**R SOC 213 Social Indicators, Data Management, and Analysis**
Fall. 3 credits. Offered alternate years (opposite of R SOC 214). Not offered fall 1998 and fall 2000; next offered fall 1999. T R 11:40-12:55. P. R. Eberts. A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and key-informant and other low-cost techniques, will be examined using personal computers.

**R SOC 214 Research Methods for the Social Sciences**
Fall. Offered even years (opposite of R SOC 213). 3 credits. Enrollment limited to 25. B. Williams. A survey of approaches to conducting research in social science will be presented. These include observation techniques, unstructured, semi-structured, and structured interviews, experiments, and focus groups. A basic understanding of elementary statistics, although not required, is preferred.

**R SOC 215 Organizations: An Introduction (also Sociology 215)**
Fall. 3 credits. S-U optional. Lec T R 10:10-11:25. S. Han. This is an introductory course in the study of organizations. We will start by taking a look at various examples of organizing, including a street gang in a Boston neighborhood, General Moltke's Prussian Army, a government agency, and an industrial corporation. These brief glimpses serve as exercises in looking behind and beyond diverse rhetoric for common patterns in organizational phenomena. We will consider these both from inside and outside perspectives. The focus of the course is upon research scholarship, not the training of managers. Nonetheless, the analytical skills you will acquire are applicable to work in firms, government agencies, and nonprofit organizations.

**R SOC 220 Sociology of Health of Latinos and Native Americans (also Latino Studies Program 220)**
Fall. 3 credits. S-U grades optional. Enrollment is limited to 40. (25 R SOC students, 15 LSP students). T R 10:10-11:25. P. M. McGoldrick. Discusses the health status of minorities in the United States. Specifically, it will explore intragroup diversity such as migration, economic status and the influence of culture and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

**R SOC 301 Theories of Society**
Spring. 3 credits. Prerequisites: rural sociology or sociology course. S-U grades optional. Enrollment is limited to 30. M W F 11:15-12:05. P. K. Gellert. An introduction to the "classical" sociological theorists for juniors, seniors, and beginning graduate students. Emphasis on (1) the central concepts of the sociological tradition, (2) major classical theorists (Durkheim, Weber), and contemporary counterparts. The relevance of these theories of society to current events and social problems will be stressed.

**R SOC 302 Evaluating Statistical Evidence (also Sociology 301)**
Fall. 3 credits. S-U optional. Lect, M W F 10:10-11:00. L. L. Braverman. A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with numerous applications.

**R SOC 318 Ethnohistory of the Northern Iroquois (also American Indian Studies 318)**
Spring or summer. 3 credits. Enrollment limited to 100. M W F 1:25-2:15. M. J. Pfeffer. The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships between substantive and philosophical/theoretical issues.

**R SOC 324 Environment and Society (also Science and Technology Studies 324 and Sociology 324)**
Spring or summer. 3 credits. Enrollment limited to 100. M W F 1:25-2:15. M. J. Pfeffer. The main objective of the course is to develop a critical understanding of the dominant trends in modern U.S. environmental thought like preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships between substantive and philosophical/theoretical issues.

**R SOC 331 Demographic Analysis in Business and Government (also Agricultural, Resource, and Managerial Economics 416)**
Fall. 3 credits. S-U with permission of instructor. Prerequisite: R SOC 213 or a statistics course. Enrollment limited to 50 students (10 R SOC students, 40 ARME students). Lect, M W F 1:25-2:15. Sec, M 1:25; 2:30. W. Brown. An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving methods of learning, students come to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates from a variety of academic disciplines and career orientations. Students
will work on problems drawn from consumer marketing, education, housing and real estate development, human resources, health services.

[R SOC 336 Rural Areas in Metropolitan Society
This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity; increased societal interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group projects in rural communities.]

[R SOC 340 Food and Agriculture in Modern Society
Our changing food and agriculture system will be examined from a sociological perspective. What are its major trends as we approach the twenty-first century? What are its social, human health, and environmental issues? What are its potential development strategies and what do these imply for rural communities, urban areas, and the environment?

[R SOC 367 American Indian Tribal Governments (also American Indian Studies 367)
Fall. 3 credits. S-U option. Enrollment limited to 26. Lecs, W 2:00-4:25. B. Baker.
This course focuses on the structure of contemporary tribal governments and the ways in which these governments approach the issues confronting their constituents. The effects of European contact on traditional political organizations are detailed, as are the present day relationships of tribal governments to federal and state governments.

[R SOC 370 Comparative Issues in Social Stratification (also Sociology 371)
Fall. 3 credits. Prerequisite: an introductory social science course. T R 1:25-2:40 or T R 8:40-9:55 (depending on professor). T. A. Lyson or S. Feldman.
This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of race, gender, and sexuality in assessing the patterns, meaning and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

[R SOC 380 Independent Honors Research in Social Science
Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program.

Students should select a faculty adviser and begin preparation for an honors project during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative, M. Pfeffer.

[R SOC 408 Human Fertility in Developing Nations (also Biology and Society 404)
A review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.]

[R SOC 410 Population and Environment
A voluminous new literature is emerging, attempting to trace the connections between population growth and environmental change. The seminars will be devoted to a critical examination of this literature, stressing population change both as cause and consequence of environmental factors. In addition, the social and economic forces that mediate the population-environment relation will be examined.]

[R SOC 416 Population Policy (also Biology and Society 414)
Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Offered alternate years. Enrollment limited to 15. Not offered spring 1999 and 2000; next offered spring 2000. T R 10:10-11:25. Staff.
The ways in which societies try to affect demographic trends. Special focus is on government policies and programs to reduce fertility.]

[R SOC 425 Gender Relations, Gender Ideologies, and Social Change
Drawing on feminist and sociological theory and methods, and employing a comparative and global analytic framework, this course examines how gender ideologies, work-family linkages and the transformation of work and the labor process are based upon as well as to help transform gender relations. The course gives attention to the particularity of place and time as these help to situate gender relations in the different social, regional, and global configurations that contextualize and configure everyday life.]

[R SOC 430 Migration and Population Redistribution
Fall. 3 credits. Prerequisite: undergraduates, one demography course or permission of instructor. Offered every year. T R 8:40-9:55. D. L. Brown.
This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic inter-relationships are emphasized as are implications of changes in local and regional population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relations are investigated. Techniques and measurement issues associated with the analysis of migration and population distribution are discussed.

[R SOC 431 Social Demography of Minorities
Ethnic conflict and accommodation is examined in diverse settings (societies and historical periods). Demographic indicators (such as residential segregation, marital patterns, mortality and fertility differentials, and occupational mobility) of underlying social conditions serve as the principal vehicle for evaluating the status of ethnic relations.

[R SOC 436 Successful Aging: Issues and Social Policy in the 1990s
6-week summer session. 3 credits. M-F 10:00-11:15. P. Taizet.
This course aims to correct the misconceptions about aging and to free ourselves of the stereotypic viewpoint that older persons are members of a single, homogeneous category. Successful aging in the 1990s and beyond is the central focus of the course. The response of the public and private sectors to the rapidly growing older population is examined in view of the imbalance between the strengths and capacities of older persons and the lack of role opportunities in society to utilize and reward their talents and abilities. Films and fieldtrips.

[R SOC 437 Aging and Aging Social Policy in the 1990s
Fall. 3 credits. Prerequisite: R SOC 101 or its equivalent. Enrollment limited to 30. Not offered fall 1998. T R 11:40-12:55. Staff.
An analysis of the "graying" of America and the responses of the public and private sectors to this demographic revolution. Examines the interplay between basic and applied knowledge in social gerontology. Explores the formal and informal networks of services, in both rural and urban environments, that help maintain independent living arrangements by the elderly.

[R SOC 438 Social Demography (also Sociology 437)
This course surveys the methods, theories, and problems of population studies. Attention is directed to the social, economic, and cultural determinants and consequences of population growth, distribution, and change. The core areas of demography, fertility, mortality, and migration are studied. Comparisons are made between developed and developing areas and between Africa, Asia, and Latin America.

[R SOC 440 The Social Impact of Resource Development
Social impact assessment (SIA) is a method of anticipating unwanted side-effects of projects, policies, and new technologies before they happen and a decision tool for mitigation. The seminar explores SIA applications in different parts of the world and pays particular attention to impacts on native and indigenous peoples. Students learn practical SIA skills and related theoretical/conceptual debates.]
This course provides an opportunity for students to read and discuss a wide range of American Indian philosophies.

**R SOC 490 Society and Survival**
Course surveys existing theories, methodological techniques, and research results relating to how social, economic and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policy-related applications in different societies is assessed. Attention is given to the problems associated with inferring causality in morbidity and mortality data.

**R SOC 492 Contemporary Issues Seminars:**
Pacific Rim dynamics challenge U.S. supremacy, Western conceptions of modernization, and "Third World" unity. We relate these trends to regional political, economic, and cultural forces, including the Japanese model, the "Newly Industrializing Countries" (e.g., South Korea, Taiwan), the "third tier" countries (e.g., Indonesia, the Philippines), and emerging "Chinese markets."

**R SOC 494 Special Topics in Rural Sociology**
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**R SOC 495 Population, Environment, and Development in Sub-Saharan Africa**
In the past three decades, countries in Sub-Saharan Africa have experienced rapid population growth, weak economic growth, and growing environmental problems. This course explores how these problems are interrelated and looks at possible solutions. After reviewing trends in population, environment and development within the region, the course focuses on specific problems, including: urbanization, health and survival, population pressure and sustainable agriculture, refugees, and gender/family/community structures.

**R SOC 497 Independent Study in Rural Sociology**
Fall or spring. 3 credits variable (may be repeated for credit). Students must register with an Independent Study form (available at 140 Roberts Hall). S-U grades optional. Informal study may include a reading course, research experience, or public service experience.

**R SOC 560 Managing Local Environmental Systems:**
Spring. 3 credits. Prerequisite: introductory social science or permission of instructor. Enrollment limited to 20. W 1:25-3:25. J. D. Francis.
Course surveys existing theories, methodological approaches, and results relating to how social, economic and cultural structures and processes affect survival chances in diverse societies. A comparative framework is presented, and the utility of existing knowledge for policy-related applications in different societies is assessed. Attention is given to the problems associated with inferring causality in morbidity and mortality data.

**R SOC 601 Theoretical and Methodological Approaches to Community and Rural Development**
Fall. 3 credits. Letter grade only. Prerequisite: graduate student. Lec. R 7:00-10:00 p.m. P. R. Eberts.
A survey of three general approaches for conducting analysis and practice in community and rural development. These approaches include examinations of: 1) community structural changes and policymaking; 2) participatory processes for generating community development; and 3) planning and planning strategies as mechanisms for creating community development opportunities.

**R SOC 602 Community Development Seminar**
Spring. 1 credit. Prerequisite: R SOC 601. M 6:30-9:30 p.m. (Meets triweekly) P. R. Eberts.
A participatory seminar for feedback, collective learning, and guidance as MPS students apply community and rural development theory and methods in thesis project work with local and regional communities.

**R SOC 603 Classical Sociological Theory**
Students will review the major streams of classical sociological thought, focusing on the work of Weber, Durkheim, and Marx. Course materials include original texts and secondary literature. The course will cover several topics, including: resource distribution and social stratification, the role of states, markets, firms, social movements, and government in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and historical methodological approaches. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

**R SOC 604 Theories of Social Change**
This course surveys major twentieth-century social theories, focusing on linkages from classical theory and on theories relevant to understanding the processes of social change. Major topics covered will include mid-century functionalism, conflict theories, neo-Marxism, neo-Weberianism, substantive economic sociology, and world-systems theory. Other topics, such as the "new sociology of culture," critical theory, structuration theory, neofunctionalism, the new methodological individualism, and the macro-micro link, will be covered briefly.

**R SOC 606 Contemporary Sociological Theories of Development**
Fall. 3 credits. Offered every year. T R 12:20-2:15. J. D. Francis.
This course examines how these problems are applied in life expectancy, health and education in addition to material well-being, and it remains a problem everywhere, in both the rich and poor countries, and within them, for regions and communities. Sociological explanations of development have recently crystallized around three competing positions: political economy, rational choice institutionalism, and sociological structuralism. The course will focus on these theories, their antecedents and close cousins, and their research and policy implications.

**R SOC 618 Research Design I**
Fall. 4 credits. Prerequisite: a statistics course. Offered every year. T R 12:20-2:15. J. D. Francis.
First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

**R SOC 619 Research Design II**
Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. Offered alternate years. T R 12:20-2:15. J. D. Francis.
The second part of the two-semester sequence in introductory graduate methods, with emphasis on an intermediate-level treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

**R SOC 625 State, Economy, and Society**
Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and government in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and historical methodological approaches. Substantive theories concern political-economic restructuring in world regions, and the interaction between national and global processes.
and their retheorization in contemporary classical theories of rural social organization. Divergences among imperialist and postcolonial perspectives are examined within local and global contexts of more sustainable agricultural development. This seminar focuses on the comparative study of cases from different world regions. It includes the analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

[R SOC 718 Multidimensional Measurement and Classification] Fall. 3 credits. Prerequisite: previous course work in scaling and statistics. Offered alternate years. Not offered fall 1998 and 2000; next offered fall 1999. T R 12:20-2:15. J. D. Francis. An advanced course in measurement and scaling, building from work by Thurstone, Guttman and Coombs to multidimensional scaling, building from work by Thurstone, Guttman and Coombs to multidimensional scaling. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.

[R SOC 719 Logistic and Log Linear Models] Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. Offered alternate years. Not offered spring 1999 and 2001; next offered spring 2000. T R 12:20-2:15. J. D. Francis. The first part of the course reviews multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.

countries. Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspectives. Several migration systems are examined, including those of North America and the European Community. Policies shaping immigration are also reviewed.

[R SOC 694 Special Topics in Rural Sociology] Fall or spring. 4 credits maximum. S-U grades optional. This department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

[R SOC 715 Comparative Research Methods] Spring. 3 credits. Offered odd years. M 12:20-2:50. T. A. Lyson. This seminar focuses on the comparative research approach will cover a range of data types and problems.

[R SOC 661 Sustainable Agriculture and Development] Spring. 3 credits. S-U grades optional. Offered alternate years. Prerequisites: graduate standing or instructor's permission. Not offered spring 1999 and 2000; next offered spring 2001. M 10:10-12:35. T. A. Lyson. This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, community agriculture development, and the political and policy contexts of more sustainable agricultural systems.

(R SOC 655 Advanced Techniques of Demographic Analysis) Spring. 3 credits. Prerequisites: CEG 606, graduate standing or permission of instructor. Offered alternate years. Enrollment limited to 25. Not offered spring 1998 or 1999. M 7:30-10:30 p.m. D. T. Gurak. An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multi-level models, and other multivariate procedures are among the topics to be covered.

(R SOC 641 Politics and Economics of Rural and Regional Development) Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Offered every year. Not offered fall 1998 and 1999; next offered fall 2000. M 12:20-2:50. T. A. Lyson. A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.

(R SOC 643 Land Reform Old and New) Spring. 3 credits. Offered alternate years. S-U grades optional. R 1:25-4:25. C. C. Geisler. Land reform continues to be a major cornerstone of development planning. Between 1980 and 2000 the number of landless and near-landless in the Third World will approach one billion. Though land reform is a principal source of hope for the landless, its meanings are many and its models are controversial. The seminar acquaints students with land reform in antiquity as well as in contemporary settings (among others, Japan, the Philippines, Israel, India, Brazil, Mexico, Russia, and the United States). Perennial issues of equity, efficiency, and sustainability will be discussed in each of these case study areas.

(R SOC 645 Rural Economy and Society) Fall. 3 credits. Offered alternate years. Not offered 1998-99. W 1:25-4:25. S. Feldman. The structure and dynamics of rural communities are examined in a comparative historical framework focusing on continuities and divergences among imperialist and postcolonial settings. Major topics include classical theories of rural social organization and their retheorization in contemporary peasant studies and agrarian economic changes, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.

(R SOC 640 Community and Changing Property Institutions) Fall. 3 credits. Offered alternate years. R 1:25-4:25. C. C. Geisler. The seminar acquaints students with the controversies over property rights, from antiquity to the present, and features a number of property debates (the biological basis of ownership; private versus public ownership; property and value; the so-called "tragedy of the commons"; the "new" property). Readings explore land use regulation and property rights, common property issues, opposing land ethics, and new property forms in the future.

(R SOC 630 Field Research Methods and Strategies) Fall. 3 credits. Enrollment limited to 20. Offered odd years; not offered 1998 and 2000; next offered 1999. T R 8:40-9:55. L. H. Williams. The seminar covers a variety of methods: structured surveys, focus groups, in-depth interviews, participant observation, archival record analysis, among others. Frameworks by which research questions can be matched with appropriate field methodologies, choice of sample and data collection — will be discussed. Assessment of strengths and weaknesses of various strategies of field research. Discussion of practical matters such as fieldworker recruitment and training, and data processing issues and ethics of field work.

(R SOC 620 Sociology of Development and Underdevelopment) Fall. 3 credits. Limited to upperclass or graduate students. S-U grades optional. Offered every second year. Not offered fall 1998 and 1999; next offered fall 2000. M 12:20-2:50. T. A. Lyson. A survey of social, political, and economic factors in local and regional development. Theories of community and regional development and underdevelopment are explored. Neoclassical, Marxist, and civil society theories are examined within local and global contexts.

(R SOC 619 Logistic and Log Linear Models) Fall. 3 credits. Offered alternate years. Not offered spring 1999 and 2000; next offered spring 2001. M 10:10-12:35. T. A. Lyson. This course examines the relationship between local agriculture and development as these are embedded in a globalizing economy. Topics include an examination of the social scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and community sustainability, agricultural diversification strategies, community agriculture development, and the political and policy contexts of more sustainable agricultural systems.
R SOC 721 Foundations of Environmental Sociology
Fall. 3 credits. Open to graduate students only. S-U optional. Offered every year. Enrollment limited to 20. M. J. Pfeffer. Foundations of Environmental Sociology provides graduate students with a broad survey of the literature in this disciplinary specialty area. Students will review the history of thought in environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

[ R SOC 725 The Sociology of "Third World" States
Fall. 3 credits. Offered alternate years. Not offered fall 1998 and 2000; next offered fall 1999. W. L. 12:45-2:25. S. Feldman. This course examines how processes of political and economic restructuring have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization and trade liberalization and its neoliberalist ideology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism and fundamentalism as these reconfigure national and regional alliances and practices and shape interpretations of current processes of resistance, change, and terms of intervention and exchange.]

R SOC 730 Sociology of Global Change
Spring. 3 credits. S-U grades optional. Offered alternate years. Enrollment limited to 20. W. 1:25-4:25. P. D. McMichael. Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multi-layered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global process in local events and subjectivities and vice versa, and examining the ways in which national structures and cultures interact with global structures and cultures.

R SOC 741 Community Development and Local Control
Spring. 3 credits. Offered alternate years. Not offered 1998-99. W. 1:25-4:25. C. C. Geer. Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."

R SOC 791 Teaching Experience
Fall or spring. 1-3 credits. Limited to graduate students. S-U grades only. Participation in the ongoing teaching program of the department.

R SOC 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted specifically to a Master’s program.

R SOC 872 Development Sociology
Limited to master’s and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional.

R SOC 900 Graduate-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the “A” exam has been passed.

Related Courses in Other Departments
(Others may be added)
- Population Dynamics (SOC 205)
- Social Analysis of Ecological Change (S&TS 660 and BASCOC 460)
- Gender Relations, Gender Ideologies, and Social Change (WMNS 524)

Summer Session Courses
Introduction to Sociology (6-week session)
Environment and Society (3-week session)
Successful Aging: Today and Tomorrow (6-week session)

SOIL, CROP, AND ATMOSPHERIC SCIENCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

Courses by Subject
- Environmental Information and Analysis: 398, 420, 461, 620, 660, 675

General Courses
SCAS 190 Sustainable Agriculture
Fall. Credits variable. 2 or 3. Limited to 60 students. S-U grades optional.LEC. Fall 10:10, labs, M 2:00-2:45, T 10:10-12:35. G. W. Fick. This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes management concepts that conserve or renew those resources for continued benefit to society. The information is of general value for non-majors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the World Wide Web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

SCAS 494 Special Topics in Soil, Crop
and Atmospheric Sciences
(undergraduate level)
Fall or spring. 4 credits maximum. S-U grades optional.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 497 Individual Study in Soil, Crop,
and Atmospheric Sciences
Fall or spring. 1-6 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

SCAS 498 Teaching Experience in Soil
Science, Crop Science, and
Atmospheric Science
Fall or spring. 1-5 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Teaching experience in soil science, crop science, or atmospheric science is obtained by assisting in the instruction of a departmental course.

SCAS 499 Undergraduate Research
Fall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, atmospheric science, or soil science.
SCAS 695 Planning and Reporting Research
Spring. 2 credits. Prerequisite: graduate student status or permission of the instructor. Limited to 10 students. Lec to be announced. G. W. Fick.
This course is designed to prepare students in the SCAS Department and closely related fields for planning their research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either the proposals, grants, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

Atmospheric Science

SCAS 101/102 Science of Earth Systems Colloquium (also ABEN 120/121, GEOL 123/124)
Fall and spring. 2 credits. Lec, T 1:25–2:35. K. J. Riba. Weekly seminars, field trips, and hands-on experiences introducing the student to the scientific study of our planet and human interactions with the environment.

SCAS 131 Basic Principles of Meteorology
Fall. 3 credits. Lecs, T R 11:15–lab, T W or R 1:25–4:25 and M W 7:00–9:30 p.m. M. W. Wysocki.
A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and orographic circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

SCAS 250 Meteorological Observations and Instruments
Methods and principles of meteorological measurements and observations, including surface, free-air, and remote systems. Instrument siting, mounting, and protection. Instrument response characteristics, calibration, and standardization. Recorder and data logging systems. Laboratory exercises in observation and data analysis. Intended to serve as preparation for Observers Examination. Lab fee, $50.

SCAS 331 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lecs, M W F 1:25–2:15; lab, M W F 12:20–1:10. K. H. Cook.
Processes that determine climate and contribute to its change are discussed, including comparisons with climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

SCAS 332 Evolution of the Earth System (also SES 302, GEOL 302)
Spring. 3 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs, to be announced; disc, to be announced. B. Isacks and others.
Co-evolution of life and the earth system: Earth’s early history; plate tectonics, continental drift and climate changes during the past billion years; mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting information preserved in the rock record.

SCAS 334 Microclimatology
This course treats relationships of radiant energy, temperature, wind, and moisture in the local environment. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined, with emphasis on the energy balance.

SCAS 341 Atmospheric Thermodynamics and Hydrometeorology
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 9:05–9:55. W. Knapp.
Introduction to the thermodynamics and hydrometeorology of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics considered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrodynamics and stability.

SCAS 342 Atmospheric Dynamics
Spring. 3 credits. Prerequisites: one year of physics and one course in thermodynamics. M W F 10:10. W. Knapp.
Introduction to atmospheric dynamics and to the methods of description and quantitative analysis used in meteorology. Topics considered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

SCAS 352 Synoptic Meteorology I
Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course will strengthen previously introduced meteorological concepts that will be applied to forecasting mid-latitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

SCAS 353 Application of FORTRAN in Meteorology
Fall. 3 credits. Prerequisites: SCAS 131 plus one computer programming course. Lecs, T R 12:20–1:10; lab, F 12:25–3:20. M. W. Wysocki.
An introduction to numerical techniques using FORTRAN to solve meteorological problems. No previous experience with FORTRAN is expected.

SCAS 425 Statistical Methods in Meteorology
Fall. 3 credits. Prerequisite: an introductory course in statistics (e.g., BTRY 215 or ARMT 310) and calculus. T R 10:10–11:25. D. S. Wilks.
Statistical methods in climatology, operational weather forecasting, and selected meteorological research applications. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the MOS system. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.

SCAS 444 Tropical Meteorology
Structure and dynamics of the tropical atmosphere on a wide range of time and space scales ranging from meso-scale convective systems to planetary waves. Topics include hurricanes, monsoonal circulation, and El Niño.

SCAS 446 Modeling the Earth System
Fall. 3 credits. Prerequisites: programming knowledge and instructor's approval. Offered alternate years. Offered spring 1999. T R 12:20–1:35. K. H. Cook.
Project-oriented exploration of aspects of the Earth System through modeling. Intended primarily for science majors with computing experience, preferably in FORTRAN. Lectures focus on facilitating student projects, discussing basic concepts governing the Earth system dynamics, and evaluating complex models. Students develop a model on a topic of their choice.

[SCAS 447 Physical Meteorology
Fall. 3 credits. Prerequisites: a year each of calculus and physics. Offered alternate years. Offered fall 1999. M W F 10:10–11:15. W. Knapp.
This course focuses on surveying phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of remote sensing of the atmosphere.]

SCAS 451 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: SCAS 341 and SCAS 342. Lecs, T R 9:05; lab, M 1:25–3:20. S. J. Colucci.
Structure and dynamics of large-scale mid-latitude weather systems such as cyclones, anticyclones and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to the study of selected large-scale mid-latitude weather events.

[SCAS 456 Mesoscale Meteorology
Spring. 3 credits. Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. Offered alternate years. Next offered spring 2000. T R 11:40–12:55. S. J. Colucci.
Structure and dynamics of mid-latitude mesoscale weather systems such as fronts, squall lines, convective complexes, precipitation bands, downslope winds, mountain breezes, sea breeze circulations, and lake effect snowstorms.]

SCAS 457 Atmospheric Air Pollution
Fall. 3 credits. Prerequisites: chemical engineering and one course in thermodynamics and one semester of chemical engineering. Offered alternate years. M W F 11:15–12:05. M. W. Wysocki.
Course will examine sources, effects, transport, measurement, and controls of air pollution.
pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

SCAS 635 Advanced Statistical Meteorology
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. Lect, T R 10:10-11:25. R 11:35-12:05. D. S. Wilks. Lectures and topics concurrent with SCAS 435, plus an extra 30-minute session per week in which selected topics from SCAS 435 are treated in more depth, and additional topics are covered which may vary from year to year according to student interest. Term project required.

SCAS 646 Modeling the Earth System
Spring. 3 credits. Prerequisite: instructor's approval. Offered alternate years. Offered spring 1999. T R 12:20-1:35. K. H. Cook. Lectures concurrent with SCAS 466 (see description). Graduate students have different problem sets and more sophisticated projects.

SCAS 652 Advanced Atmospheric Dynamics (also Astronomy 652)
Spring. 3 credits. Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. Offered alternate years. Offered spring 1999. T R 11:40-12:55. K. H. Cook and P. J. Gierasch. Quasigeostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

SCAS 692 Special Topics in Atmospheric Sciences
Fall or spring. 1-6 credits. S-T grades optional. Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 850 Master's-Level Thesis Research in Atmospheric Sciences
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

SCAS 950 Graduate-Level Dissertation Research in Atmospheric Sciences
Fall or spring. Credit by arrangement. S-T grades optional. Hours by arrangement. Limited to students in a Ph.D. program only before the "A" exam has been passed.

SCAS 951 Doctoral-Level Dissertation Research in Atmospheric Sciences
Fall or spring. Credit by arrangement. S-T grades optional. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

Crop Science

SCAS 311 Grain Crops
Fall. 4 credits. Prerequisite: SCAS 260 or BIOL 241. Lects. M W F 10:10; lab. M T 1:25-4:25. 1 or 2 field trips during lab periods (until 5 p.m. or on weekends). R. L. Obendorf.
Environmental Information and Analysis

SCAS 398 Environmental Microbiology
Spring. 3 credits. Prerequisite: BIOES 261 or BIOL 260 or SCAS 260 or permission of instructor. Lecs, M W F 10:10.
W. C. Ghirose.
The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as seasonal cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

SCAS 420 Geographic Information Systems
Fall. 4 credits. Prerequisite: SCAS 461 or instructor's approval. Lecs, T R 9:05-9:55; lab, M T W R 1:25-4:25. S. D. DeGloria.
Principles and applications of geographic information systems for the characterization and assessment of environmental process. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

SCAS 461 Resource Inventory Methods (also Civil and Environmental Engineering 411)
Spring. 3 credits. Prerequisite: permission of instructor. S. D. DeGloria.
A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, interpret, and monitor environmental resources.

SCAS 620 Spatial Modeling and Analysis
Spring. 3 credits. Prerequisites: SCAS 420, SCAS 461, or permission of instructor. Lecs, T R 9:05-9:55; lab, T W 1:25-4:25. S. D. DeGloria.
Theories and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

SCAS 660 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)
Fall. 3 credits. Prerequisite: permission of instructor. Offered fall 1998. Lecs, M W 12:20-1:10; lab, T 2:30-4:25. W. D. Philpot.
An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

SCAS 675 Modeling the Soil-Plant-Atmosphere System
Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development, potential crop production and crop production limited by moisture and nutrient availability, plant-plant competition, and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.

Soil Science

SCAS 260 Introduction to Soil Science
Spring. 4 credits. Prerequisites: CHEM 105, 207, or 215. S-U grades optional. Lecs, M W F 9:05; lab, M T W R or 1:25. Staff.
A comprehensive introduction to the field of soil science, with emphasis on scientific principles and their application to solving soil management problems. The laboratory exercises stress quantitative measurement of soil properties.

SCAS 321 Soil and Water Management
Spring. 3 credits. Prerequisites: SCAS 190 or 260. S-U grades optional. Lecs, T R 10:10-11:25; lab, R 2:30-4:50. H. M. van Es.
Course intended to introduce students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

SCAS 362 Soil Morphology
Fall. 1 credit. Undergraduates only. Recommended for sophomores and juniors. R 1:25-4:25; all day field trip required. R. B. Bryant.
The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.

SCAS 363 Soil Genesis, Classification, and Survey
Fall. weeks 1-7. 2 credits. Prerequisite: SCAS 260. Lecs, M W F 10:10; lab, W 1:25-4:25. One all day field trip is required. R. B. Bryant.
Factors and processes of soil formation. Principles of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Course ends at mid-semester and is part of a sequence of three Intermediate Soil Science courses.

SCAS 365 Environmental Chemistry: Soil, Air, and Water
An overview of the chemical processes that control the concentrations and bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

SCAS 371 Hydrology and the Environment (also ABEN 371 and GEOL 204)
Introduction to hydrology as a description of the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river modeling floods and droughts. Case studies, short field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.

SCAS 372 Soil Fertility Management
Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor. M W F 9:05. Staff.
An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral nutrients for crops and the role of fertilizers and organic nutrient sources in crop production. Credits limited to students specifically in a master's program.

SCAS 471 Properties and Appraisal of Soils of the Tropics
The course examines the conditions in which soils form, and considers ecological, geological and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and the preservation of the environment examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced
technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems.

[SCAS 473 Ecology of Agricultural Systems (also BIOES 473)]
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Offered alternate years. Not offered fall 1999. Lect and disc, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips.
A. G. Power and E. C. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, pollen-plant interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

SCAS 483 Environmental Biophysics
Fall. 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor. Lects, MWF 11:15-12:15. S. J. Riha.

Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

SCAS 663 Pedology
Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Textbook recommended, not required. Offered odd spring semesters. R. B. Bryant.

SCAS 666 Advanced Soil Microbiology
Fall. 1 credit. Prerequisite: SCAS 365 or permission of instructor. S-U grades only for graduate students. T 12:20. M. Alexander.

Discussions of current topics in special areas of soil microbiology. Particular attention is given to biodegradation, bioremediation and fate of chemicals.

SCAS 667 Advanced Soil Physics
Spring. 3 credits. Prerequisites: one year of college physics and SCAS 483 or permission of instructor. S-U grades optional. Offered alternate years. Offered spring 1999. Hours to be arranged.
P. C. Baveye.

A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoints. Mechanical and thermodynamical analysis of the equilibrium status of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

SCAS 669 Organic Matter—Soils, Sediments, and Waters
Spring. 2 or 5 (with discussion) credits. Prerequisites: SCAS 260 and CHEM 357-358 or equivalent. T R 9:05, disc, W 1:25-2:15. J. M. Duxbury.

A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestrial and aquatic environments. Interaction with anthropogenic activities and effects of anthropogenic activities on natural organics are considered.

SCAS 671 Soil Chemistry
Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years. Offered fall 1999. Lects, MWF 10:10. M. B. McBride.

A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter will be emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, will be described.

SCAS 693 Special Topics in Soil Science
Fall or spring. 1–6 credits. S-U grades optional.

Study of topics in soil science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 880 Master's-Level Thesis Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

SCAS 980 Graduate-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students in a Ph.D. program only before the "A" exam has been passed.

SCAS 981 Doctoral-Level Dissertation Research in Soil Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students admitted to candidacy after the "A" exam has been passed.

VEGETABLE CROPS
See Horticultural Sciences.

FACULTY ROSTER
Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology (Geneva)
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)
Agneelli, Arthur M., Ph. D., North Carolina State U. Assoc. Prof., Entomology (Geneva)
Ahner, Beth A., Ph.D., Massachusetts Institute of Technology. Asst. Prof., Agricultural and Biological Engineering
Aldrige, James R., Ph.D., U. of Wisconsin. Prof., Plant Pathology
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Aldwinckle, Herbert S., Ph.D., U. of London (England). Prof., Plant Pathology (Geneva)
Alle, David J., Ph.D., Cornell U. Prof., Agricultural, Resource, and Managerial Economics
Altmann, Naomi S., Ph.D., Stanford U. Assoc. Prof., Biomathematics
Anderson, Robert L., Ph.D., U. of Minnesota. Prof., Horticultural Sciences (Geneva)
Anshenley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Arnston, Phil A., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Pathology
Austic, Richard E., Ph.D., U. of California at Davis. Prof., Animal Science
Baer, Richard A., Ph.D., Harvard U. Prof., Natural Resources
Bain, Mark B., Ph.D., U. of Massachusetts. Assoc. Prof., Natural Resources
Barbado, David M., Ph.D., Cornell U. Prof., Food Science
Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Bassuk, Nina L. Ph.D., U. of London (England). Prof., Floriculture and Ornamental Horticulature
Batt, Carl A., Ph.D., Rutgers U. Assoc. Prof. Prof., Food Science
Baugher, Sherene, Ph.D., SUNY Stonybrook. Asst. Prof., Landscape Architecture
Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science
Baveye, Philippe C., Ph.D., U. of California at Riverside. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
Beer, Steven V., Ph.D., U. of California at Davis. Assoc. Prof., Plant Pathology

Reginald D. Ryder, director of minority educational affairs
Donna L. Kuhar, registrar
Elizabeth A. Cutter, director of student services and admissions
Margaret Webster, curator of visual resources facility
search in progress, director of career services

FACULTY ADVISERS
Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

Students in the fine arts department are assigned faculty advisers for the first year. Students may then choose advisers in their major area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:
Mark Cuvelier, interim chair, Department of Architecture
Porus Olpadwala, chair, Department of City and Regional Planning
Roberto Bertoia, chair, Department of Art

The college offers programs leading to the bachelor's degree—the five-year program in architecture leads to the Bachelor of Architecture, four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their special area of interest through contact with the students and faculty in other disciplines.

Early in its development the college set a limit on the number of students it would enroll and devised a selective method of admission.

There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college's courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university.

The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Olive Tjaden Hall, Rand Hall, and the Foundry. Facilities for architecture, and city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library are located in Sibley Hall.

The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the basement of Sibley Dome. The college has three darkrooms that are available for general use by students in the college and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

NOTE: renovations of the college buildings will temporarily relocate some of the aforementioned facilities. More information on the current location of college facilities can be obtained by contacting the individual departments.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to enroll for the study of architecture at Cornell, and later a practicing architect in Ithaca. This building is used to house visiting teachers and guests of the college and for occasional receptions and social events.

Libraries
The Fine Arts Library, in Sibley Hall, serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning and landscape architecture. The library, with more than 168,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,600 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, in Sibley Hall contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection now includes approximately 400,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries
The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall.

Rome Program
The College of Architecture, Art, and Planning's Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the famous Palazzo Lazzaroni in the center of the historical city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome's famous outdoor market at the Campo dei Fiori.
The program in Rome offers components for students majoring in liberal arts, architecture, fine arts, and planning. Full course loads are available to all students in a curriculum that stresses the convergence of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings.

**COLLEGE ACADEMIC POLICIES**

**Ownership of Student Work**
All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

**Exhibitions of Student Work**
Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Hall gallery and the John Hartell Gallery. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

**Scholastic Standards**
Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have an average for the term of not less than C (1.7). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) **Warning** means that the student’s performance is not up to expectations. Unless an improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) **Final Warning** indicates that the student’s record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) **Required leave of absence: Academic Deficiency.** The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

A cumulative average of at least C- (1.7) is required for graduation.

**ARCHITECTURE**

**Professional Degree Program**
The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student’s ability to deal creatively with architectural problems on analytical, conceptual, and developmental levels. The sequence of courses in design, consisting of studio work augmented by courses dealing with theory and method, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, visual studies, environmental science, structures, and building technology provide a base for the work in design.

In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through detailed further studies in these areas. Within the professional program a basis for understanding architecture in its contemporary and historical cultural contexts is established.

The structure of the program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year’s work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master’s degree in one additional year.

**Rome Program**
The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

**Overlap Program**
For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute Arch 601–602 or 603–604 for Arch 501–502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field secretary for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master’s degree a maximum of 30 credits, including Arch 601–602 or 603–604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

Free

Of the electives, 15 credits are to be taken outside the College of Architecture, Art, and Planning, and 15 credits may be taken either in or outside the college. Total credits: 176

Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.

Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the ten-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

Alternative Programs

Bachelor of Fine Arts

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

Bachelor of Science in History of Architecture

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic back-

Curriculum. A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: Arch 380 through Arch 399
2) 12 credits in 600-level architectural history seminars: Arch 681 through Arch 699; or 8 credits in a 600-level seminar plus Arch 499, offered for honors candidates only
3) One 300-, 400-, or 600-level course in architectural theory
4) 24 credits in electives selected in consultation with the student's adviser
5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

Honors program. Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B+ or better in all courses, have no grade lower than A– in all history of architecture courses taken at the 300 level, and have completed an honors thesis (Arch 499) deemed to be of distinguished quality by the history of architecture faculty.

Dual Degree Options

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study. Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete at least 25 credits beyond the bachelor’s degree, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 135 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor’s degree; with this special sequential degree arrangement that time is shortened to one year.

Summer Term in Architecture

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels, the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

At the graduate level participation in the summer program cannot be undertaken without the consent of the student’s Special Committee.

Furniture design, architectural structures, and computer visualization may be offered as elective courses, contingent upon student interest and faculty availability.

The department offers a Career Discovery Program in Architecture for high school students and undergraduates interested in exploring the possibility of a career in architecture.

Architectural Design

Courses in brackets are not offered this year. A fee of $65 is charged each semester to every student registered in Architecture (undergraduate and graduate levels). Limited to department students. Prerequisite: Architecture 101 and Architecture 152. Fall and spring. 6 credits each term.

An introduction to design as a conceptual discipline directed at the analysis, interpretation, synthesis, and transformation of the physical environment. Exercises are aimed at developing an understanding of the issues, elements, and processes of environmental design.

ARCH 102 Design II

Spring. 6 credits. Limited to department students. Prerequisite: Architecture 101 and Architecture 151. A continuation of Architecture 101. Human, social, technical, and aesthetic factors related to space and form. Design problems range from those of the immediate environment of the individual to that of small social groups.

ARCH 201–202 Design III and IV

Fall and spring. 6 credits each term. Coregistration in Architecture 231–232 and completion of Architecture 151–152 required. Limited to department students. Prerequisite for Architecture 201 is Architecture 102 and Architecture 152.
Elective Design Courses
ARCH 103-104 Elective Design Studio
103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for Architecture 103: permission of instructor required. Prerequisite for Architecture 104: Architecture 103 and permission of instructor.

ARCH 303 Special Problems in Architectural Design
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 200, 300, 400, 500 Elective Design
Fall or spring. 6 credits. Open by permission to transfer students who have not been assigned to a sequence course. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. Prerequisite for Architecture 500 is Architecture 402.

ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum 3). Prerequisite: permission of instructor. Independent study.

Related Courses and Seminars
ARCH 110 Introduction to Architecture: Design Studio
Summer. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A course designed to introduce students to ideas, principles, and methods of solving architectural problems in a studio setting. Through a graduated sequence of exercises culminating in a major term project, students explore the architectural concepts of space, form, function, and technology. Instruction is via highly personalized critiques of individual student work by assigned department faculty as well as by periodic reviews of group by invited faculty and guest critics. The course grade is based on the overall performance in the studio with special emphasis on the quality of a major studio project.

ARCH 317 Contemporary Italian Culture
Fall or spring. Variable credit (maximum, 3). For students in the Rome program only.

This course provides a broad view of the culture and social structure of Italy, drawing from Italian literature, history, and current events.

ARCH 411 Professional Practice
Fall or spring. 3 credits.

An examination of organizational and management theories and practices for delivering professional design services. Included is a historic overview of the profession and a review of the architect's responsibilities from the postcontract phase through construction. Application of computer technology in preparing specifications.

ARCH 412 Professional Seminar
Fall or spring. 3 credits. Visits to public and private agencies and architectural firms. Discussions relative to the various aspects of each firm's practice and the identification of agency roles.

ARCH 510 Thesis Introduction
Foreign summer programs and Rome program only. 3 credits. Must be taken in conjunction with Architecture 500. Prerequisite for Architecture 500 is Architecture 402. Architecture 500 will be considered equivalent to Architecture 501 when taken concurrently with Architecture 510 during a foreign summer program or in Rome.

Lectures, seminars, and independent research leading to complete development of the student's thesis program. General instruction in the definition, programming, and development of a thesis.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for but not limited to graduate students in the Architectural Design and Urban Design Program.

Issues in architectural and urban design. Required for first-year graduate students in design.

ARCH 611-612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year.

The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and functional aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year.

Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 618-619 Seminar in Urban and Regional Design
618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students.

A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

Architectural Theory
ARCH 130 An Introduction to Architecture: Lectures
Summer. 3 credits. S-U option. Open to non-architectural majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.

A survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. The format of the course comprises lectures, demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.

Intended to familiarize non-architecture students with the art and science of architecture. Fundamentals of plant, section, and elevation, the primary elements that comprise an architectural form; basic organizational principles; the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus.

ARCH 132 An Introduction to Architecture
Spring. 3 credits. Open to out-of-department students only. Architecture 131 is not a prerequisite for Architecture 132.

Non-architecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Cross-historical and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

ARCH 231 Architectural Analysis I
Fall. 2 credits. Architecture students must register concurrently in Architecture 201. An introduction to analysis of the object of study in the interest of broadening one's understanding of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II
Spring. 2 credits. Architecture students must register for this course concurrently with Architecture 202.

Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture
Fall or spring. 3 credits. Limited to third-year and above.

Field and figure (interrelation of parts as dominated by the general character of the whole) is the theme for studying numerous issues relevant to the design of elevations and facades.

The first part of the seminar is lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding to the issues addressed.
ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: Architecture 231-232 or permission of instructor. Not offered every year.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year.

Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier’s architecture and urban theories, architectural sequence, facades, the free plan, “DOM-INO” theory.

ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. An examination of Japanese architecture—buildings and gardens—and their contexts—landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered every year.

Gardening and architecture: urban parks, villas, and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of Architecture 231-232. A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 634 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture
Fall or spring. 3 credits. Limited to third-year level students and above. For description, see ARCH 334.

ARCH 635 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum, 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 639 Principles of Design Process
Fall or spring. 3 credits. Limited to third-year architecture students and above. Students in other colleges must have permission of instructor. Not offered every year. Analysis of the major theories and techniques of design developed during the past fifteen years, with special emphasis on application to the solution of whole problems in architectural design.

Architecture, Culture, and Society

ARCH 442 Architecture as a Cultural System
Spring. 3 credits. Architecture 445, 446, 447, or 448 can substitute with permission of instructor.

What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is a significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideational and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geometries of non-Western traditions, and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year. This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year. This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: Architecture 342 or permission of instructor. Not offered every year. This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as a source of architectural knowledge, its power to reveal the eye, and the structural power of vision as revealed in myth and beliefs about “evil eye.”

Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

ARCH 449 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum, 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

Visual Studies
Darkroom fees charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.
ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: Architecture 151.
Freehand drawing as a means of conceiving and expressing spatial form: line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also Art 161)
Fall or spring. 3 credits each term. For description see Art 161.

ARCH 351 Photography II (also Art 261)
Spring. 4 credits. Prerequisites: Architecture 251 or Art 161, or permission of instructor. For description see Art 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit. Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topics to be announced before preregistration.

ARCH 463 Structural Systems
Fall or spring. 3 credits. Prerequisite: Architecture 264. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 465 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 262 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 475 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Environmental Controls
ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits. The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits. Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design. Light, color, and form. Natural lighting possibilities and constraints. Good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits. Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems and plumbing.

ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 261, 361, and 362 or permission of instructor. Not offered every year. Topic to be announced by preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Computer Applications
ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures, 1 recitation. D. Greenberg. Not offered every year. Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology will be presented. Technical fundamentals of computer graphics capabilities will be emphasized. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education itself. The course will be
heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization (also COM S 417)
For description, see COM S 417.

ARCH 375 Practicum in Computer Graphics (also COM S 418)
For description, see COM S 418.

ARCH 376 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, synthetic imaging, and animation. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Prerequisites: limited to third-year students and above. Not offered every year.
Exploration of the formalization of the design process for compatibility with the computer, and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: Architecture 374 or 379 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 477-478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum, 4). Limited to third-year students and above. Prerequisites: Architecture 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector and color raster displays.

Graduate Courses
ARCH 761-762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only. Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum, 12). Limited to architectural science graduate students. Independent study.

ARCHITECTURAL HISTORY
The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Incoming students take Architecture 181-182 in the first year, and three additional courses from the 380-399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements.

Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

Sequence Courses
ARCH 181 History of Architecture I
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain.
The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

ARCH 182 History of Architecture II
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of Architecture 181.
The history of the built environment as social and cultural expression from more recent times to the present. Themes, theories, and ideas are addressed in greater detail for architecture and urban design leading to the present.

Directed Electives
ARCH 380 History of Theory
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
This course, in which classroom discussion and debate play a central role, explores the history of important theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 381 Greek and Roman Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

ARCH 382 Architecture of the Middle Ages (also ART H 332 and RELST 332)
Fall. 4 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
For description, see ART H 332.

ARCH 383 The City
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
This course looks at the development of urban form and urban consciousness from the bronze age to the industrial revolution. It studies conceptions of the city, competing urban paradigms, images of cities both real and fictive, as well as the religious and cultural practices associated with city design.

ARCH 384 The Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.

This course focuses on the leading architects and theorists of the Renaissance from within the context of the political and cultural developments in Italy from 1300 to the mid-sixteenth century. The course also investigates specific architectural problems faced by designers as well as questions of architectural patronage, practices, and theories.

ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
An examination of the nineteenth-century efforts to create appropriate stylistic forms and expressions for emerging building technologies and typologies. The preservation of individual artistic expression against the backdrop of industrialization, urbanization, and professionalization will be emphasized. The course begins with Rationalist theory and its architectural expression and concludes with considerations of Art Nouveau, Modernism, and Jugendstil.

ARCH 388 Modernism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Precursors and proponents of the modern movement from the late nineteenth century into the 1940s are considered in this course. The cultural intentions of the modern are examined in architectural and urban design for individuals, groups, and institutions, from Mies van der Rohe, Le Corbusier, and Frank Lloyd Wright to de Stijl, the Bauhaus, and design education. Attention is paid to the politics of design in the service of the state during the 1930s.

ARCH 389 Architecture, Revolution and Tradition
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
From early eighteenth to early nineteenth century, European society underwent profound change. Political absolutism—the doctrine of unlimited government control—was challenged. Enlightenment attitudes—commitments to human reason, science and education—gained ascendancy. This course considers architectural and urban design in these times of tumult. It begins with efforts to foment architectural revolution within inherited traditions and ends with attempts to establish design traditions within revolutionary settings.

ARCH 390 American Architecture and Building I
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

ARCH 391 American Architecture and Building II
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

ARCH 392 Modern Architecture On Film
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in both commercial and avant-garde films from the medium's birth until the present day. The focus will vary each semester with particular emphases to include the modern house and housing, the modern city, technology and visions of the future, and finally the image of the architect. Representations of these themes in other forms such as painting, photography, theatre, literature, and advertising will also be examined. Selected readings in modern architecture and film, screenings in class, class discussions, presentations, and papers.

ARCH 393 The Cumulative City
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Well established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were recast, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.

ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 395 Contemporary Issues in the Built Environment
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
A consideration of how certain social, cultural, political, ethical, and economic issues are manifest in the architectural and built environments of the United States. Overarching issues will be examined through case studies such as the question of monuments and monumentality in a contemporary, multicultural society through the Vietnam Memorial in Washington, D.C., Holocaust museums and memorials, and the preservation of the Audubon Ballroom as a memorial to Malcolm X. Historical concerns and examples will be brought to bear on these contemporary manifestations of preservation, monumentality, gender, class, professional responsibility, and ethics and design as a collaborative art. A course for architects, planners, and preservationists but also clients and users of buildings and landscape.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Topic to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Topic to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Topic to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: Architecture 181-182 or permission of instructor. Not offered every year.
Topic to be announced.

Courses in Preservation
ARCH 583 Measured Drawing (also CRP 567)
For description, see CRP 567.

ARCH 584 Problems in Contemporary Preservation Practice (also CRP 563)
For description, see CRP 563.

ARCH 585 Perspectives on Preservation (also CRP 562)
For description, see CRP 562.

ARCH 586 Documentation for Preservation (also CRP 560)
For description, see CRP 560.

ARCH 587 Building Materials Conservation (also CRP 564)
For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analysis (also CRP 561)
For description, see CRP 561.
The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience in the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media.

Studio courses occupy approximately one-half of the student's time during the four years at Cornell; the remainder is devoted to a diversified program of academic subjects with a generous provision for electives.

All members of the faculty in the Department of Art are active, practicing artists, whose work represents a broad range of expression. A candidate for the B.F.A. degree may also earn a Bachelor of Arts degree from the College of Arts and Sciences or the College of Human Ecology, or a Bachelor of Science degree from the College of Engineering in a 5-year dual degree program. This decision should be made early in the candidate's career (no later than the third semester) so that he or she can apply to be registered in both colleges simultaneously. Each student will be assigned an adviser in both colleges, of their dual degree program, to provide needed guidance. A candidate for two degrees must satisfy all requirements for both degrees. At least 67 of the total credits must come from courses offered in the Department of Art and an additional 6 credits of History of World Art.

In addition, all Department of Art requirements for freshman writing seminars, art history, and distribution must be met. It is expected that a dual degree candidate will complete the pre-thesis and thesis requirements for the B.F.A. degree during the fifth year.

Concentration

Students must plan their programs to complete 27 credits in one of the studio areas of painting, sculpture, or photography or printmaking. Declaration of the area of concentration must be made during the second semester of the sophomore year. B.F.A. students complete a senior thesis in one area of concentration and are required to participate in the Senior Exhibition in the semester the thesis is taken.

Concentration Requirements (27 credits total; 26 in printmaking)

The required courses for each concentration are as follows:

Painting: ART 121, 221, 321, 322, 421, 422 (Thesis)
Sculpture: ART 141, 241, 341, 342, 441, 442 (Thesis)
Printmaking: ART 131/132/133 (2 of 3); 231, 232, 233 (1 of 3); 331, 431, 432 (Thesis)
Photography: ART 161, 261, 263, 461, 462 and one of the following: ART 264, 265, 361

Dual Concentration

If a student is interested in studying in more than one area, he or she may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration and 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

First Area of Concentration Total Credits
Painting: ART 121, 221, 321, 421, 422 23
Sculpture: ART 141, 241, 341, 441, 442 23
Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3) 431, 432 22
Photography: ART 161, 261, 263, 264, 265 (1 of 3), 461, 462 23

Second Area of Concentration Total Credits
Drawing: ART 151, 152, 251, 252, repeat 251 15
Painting: ART 121, 221, 321, 322 15
Sculpture: ART 141, 241, 341, 342 15
Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3) 331 14
Photography: ART 161, 261, 263/264 265 (2 of 3) 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media program enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

ART 121 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ART 129 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Independent study for undergraduate students.

ART 199 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Independent study for graduate students.

ART 599 M.A. Essay in the History of Architecture and Urbanism
Fall or spring. Independent preparation of the M.A. essay, often developed from topics investigated in Art 680.

ART 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Independent study for the doctoral degree.

Undergraduate Program

The curriculum in art is a program of study within the College of Architecture, Art, and Planning.

The undergraduate curriculum in art is an excellent background for a career in applied art although no specific technical courses are offered in such areas as interior design, fashion, or commercial art.

The required courses for the dual concentration are:

First Area of Concentration Total Credits
Painting: ART 121, 221, 321, 421, 422 23
Sculpture: ART 141, 241, 341, 441, 442 23
Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3) 431, 432 22
Photography: ART 161, 261, 263, 264, 265 (1 of 3), 461, 462 23

Second Area of Concentration Total Credits
Drawing: ART 151, 152, 251, 252, repeat 251 15
Painting: ART 121, 221, 321, 322 15
Sculpture: ART 141, 241, 341, 342 15
Printmaking: ART 131/132/133 (2 of 3) 231/232/233 (1 of 3) 331 14
Photography: ART 161, 261, 263/264 265 (2 of 3) 15

Note: The total number of out-of-college elective credits required will be adjusted to allow for the additional credits required of the dual concentration.

Combined Media Concentration

The combined media program enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.
The required courses for the concentration in **Combined Media** (33 credits) are:

- 100 and 200 level studios
- **ART 1__, 2__**
- 200 and 300 level studios
- **ART 2__, 3__, 5__**
- **Pre-Thesis and Thesis**
- **ART 481, 482**
- Out-of-college studio electives (minimum of 2)
- **OCE Studio, OCE Studio**

**Total**: 33 credits

**Note**: The total number of in/out-of-college elective credits required will be adjusted to allow for the additional credits required of the combined media concentration.

### Out-of-College Requirements

A minimum of 49 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include:

- Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All BFA students are required to take 12 credits in the History of Art. One course must be taken in each of the following areas:

  - Non-Western: **280, 380, 381, 383, 384, 385, 386, 389, 396**
  - Elective: Any art history elective at the 300 level or above or any architectural history elective.

The university requirement of two terms in physical education must be met.

A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university. Students may study in absentia for more than two terms. Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

### Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the art department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors who meet the requirements of the Rome Program. Students who wish to spend two consecutive semesters in Rome are encouraged to do so.

In both cases students must petition for special consideration. This petition must include the proposed course schedule for both semesters and must show signatures of approval by the adviser in the student's area of concentration, the department chair, and by the Rome Program adviser.

**Total**: 16 credits

*Fulfills 300-level Theory and Criticism requirement.*

### For those students matriculating in fall of 1998:

Students are required to take **ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture, ART 112, History of World Art; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 113, History of World Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be selected sometime during the junior or senior year.**

**Courses that will fulfill Theory and Criticism requirement:**

- **Art 310, 312**
- Art History 367, 370, 470, 494, 570, 594, 599, 596
- German Studies 660

- **In/OCE’s** | 16 |

**Spring Term**

- Thesis | 6 |
- **In/OCE’s** | 9 |

**Total**: 15 credits

### The M.F.A. Program

The Master of Fine Arts program requires four terms of full-time study, equal to a minimum of sixty credits. Transfer credit for graduate work done elsewhere or in the summer session is not acceptable. The curriculum leading to the master's degree is flexible to
accommodate the needs of the individual student and to enable the student to partake of the greater Cornell community. The ratio of graduate faculty to students is greater than one-to-one, allowing exceptional opportunity for individual mentoring. Graduate students are required to take at least twelve credits of academic work outside the Department of Art during their four terms in residence. Candidates for the Master of Fine Arts degree must have completed eighteen credits in the history of art in the course of their graduate and/or undergraduate study. Every M.F.A. candidate must prepare a written thesis, offer a thesis exhibition of studio work completed during residency, and give an oral defense of the written and visual thesis. Gallery space is provided for a one-week solo thesis exhibition during the final spring semester.

Course Information

Most courses in the Department of Art are open to students in any college of the university who have fulfilled the prerequisites or have permission of the instructor. Fees are charged for all studio courses. See the specific course description for course fees. To take advantage of the special opportunities afforded by summer study, the department has developed several summer-only courses.

Guidelines for Independent Study

A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. An independent study cannot be used to fulfill any of the four drawing requirements. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies do NOT count toward studio requirements. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism

ART 111 Introductory Art Seminar
Fall. 1 credit. S-U only. Limited to B.F.A. students. Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed.

ART 112 History of World Art
Fall. 3 credits. This two-semester course will survey world art from the Paleolithic era to the present. While primary emphasis will be placed upon the art and architecture of the western tradition, lectures on the visual arts outside that tradition will also be presented. The course will emphasize major monuments, important trends and developments, and critical approaches to the art of the past and present. The history of artistic styles will be studied in relation to cultural factors shaping the work of art such as patronage, politics, religion, and economics. The original settings and functions of works of art and buildings will be emphasized as will the possibilities and limitations of materials and techniques.

ART 113 History of World Art
Spring. 3 credits. Continuation of Art 112.

ART 214 Art and the Multicultural Experience
Fall. 3 credits. This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 310 Pictorial Analysis
Fall or spring. 3 credits. A lecture course using historical illustrative material which is presented in a comparative, nonchronological order for the purpose of examining how each painting uses principles that are common throughout art history. The foundations of these principles are studied separately as the elements of abstract order. These elements are to be demonstrated by original compositions that proceed sequentially from relatively simple arrangements to those of maturity.

ART 312 Modern Art in Italy
Fall or spring. 3 credits. Rome Program only.

ART 317 History of Art in Rome: Early Christian to the Baroque Age
Fall. 4 credits. Rome Program only. General survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 319 History of Art in Rome: Renaissance in Rome and Florence
Spring. 4 credits. Rome Program only. A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

ART 419 Independent Study/Supervised Readings in Art
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to be pursued under the supervision of a faculty member.

ART 611 Professional Skills for the Visual Artist
Fall. 3 credits. Limited to MFA students. This seminar will help fine arts graduate students build professional skills that will assist them in their careers as practicing artists and in their work at art-related employment. Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 Recent Practice in the Visual Arts
Spring. 3 credits. Limited to MFA students. This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial will be discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 On-Line Publication for the Visual Artist
Fall. 3 credits. Limited to MFA students. This course is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student will interview a contemporary visual artist. These interviews will be illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student will learn to create a home page on the World Wide Web.

ART 614 Contemporary Theory in the Visual Arts
Spring. 3 credits. Limited to MFA students. This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to critical inquiry and analysis of contemporary visual practice. Topics will vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

Studio Courses in Painting

Fees for painting courses:
121, 221, 321, 322, 421, 422, 429: $40

ART 121 Introductory Painting
Fall, spring, or summer. 3 credits. An introduction to the problems of artistic expression through the study of pictorial composition; proportion, space, shapes, and color as applied to abstract and representational design.
ART 123 Landscape Painting
Summer. 3 credits. Class meets outdoors at selected sites in the Ithaca area. A different motif is explored each week. Pen, pencil, and water- or oil-based colors (optional) are the materials employed. Analysis and discussion of the landscape work of Corot, Cézanne, van Gogh, Seurat, and others are included.

ART 221 Painting II
Fall or spring. 4 credits. Prerequisite: Art 121 or permission of instructor. A continuation of Art 121.

ART 321 Painting III
Fall or spring. 4 credits. Prerequisite: Art 321 or permission of instructor. Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 322 Painting IV
Fall or spring. 4 credits. Prerequisite: Art 321 or permission of instructor. Continued study of the principles of painting and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 421 Pre-Thesis in Painting
Fall or spring. 6 credits. Prerequisite: Art 323. Further study of the art of painting through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 422 Thesis in Painting
Fall or spring. 6 credits. Prerequisite: Art 421. Advanced painting project to demonstrate creative ability and technical proficiency.

ART 429 Independent Studio in Painting
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in painting allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 721-722, 821-822 Graduate Studio Courses in Printmaking
721 Fall, 722 Spring, first-year M.F.A. students. 9 credits. 821 Fall, 822 Spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation, discussion sessions of work in progress are held.

</table>

Fees for printmaking courses:
- Art 131, 132, 133: $55
- Intaglio: 2, 431.1, 432.1: $85
- Lithography: 233, 431.2, 432.2: $85
- Screenprinting: 232, 431.3, 432.3, 439.3: $45

Fees for sculpture courses:
- Art 141: $50
- Art 241, 341, 342, 343, 441, 442: $75

ART 411 Introductory Sculpture
Fall, spring, or summer. 3 credits. A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plasteline, building directly in plaster, casting in plaster, and constructing in wood and metal.

ART 421 Sculpture II
Fall or spring. 4 credits. Prerequisites: Art 141, or an Arch design studio, or permission of instructor. Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

ART 431 Sculpture III
Fall or spring. 4 credits. Prerequisite: Art 241 or permission of instructor. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 432 Sculpture IV
Fall or spring. 4 credits. Prerequisite: Art 341 or permission of instructor. Continuation and expansion of Art 341.

ART 433 Sculpture V
Fall or spring. 4 credits. Prerequisite: Art 342 or permission of instructor. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.
ART 442 Thesis in Sculpture
Fall or spring. 6 credits. Prerequisite: Art 441.
Advanced sculpture project to demonstrate creative ability and technical proficiency.

ART 449 Independent Studio in Sculpture
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in sculpture allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742, 841-842 Graduate Sculpture
741 fall, 742 spring, first-year M.F.A. students. 9 credits. 841 fall, 842 spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

Studio Courses in Photography
Darkroom fees for photography courses:
Fee for B & W courses: $80.00
Fee for color courses: $160.00
Fee for an additional B & W course taken the same term: $25.00
Fee for an additional color course taken the same term: $105.00

ART 161 Photography I (also Architecture 251)
Fall, spring, or summer. 3 credits.
A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photography imagery.

ART 168 Black-and-White Photography
Summer. 3 credits. Three-week session only.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169 Color Photography
Summer. 3 credits. Three-week session only.
Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261 Photography II (also Architecture 351)
Fall, spring, or summer. 4 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor.
A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography
Fall, spring, or summer. 4 credits. Prerequisites: Art 161 or Architecture 251, or permission of instructor.
A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photography.

ART 264 Photo Processes
Fall, spring, or summer. 4 credits.
Prerequisite: Art 161 or Art 251, or permission of instructor.
A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photographic processes.

ART 265 Studio Photography
Fall or spring. 4 credits. Prerequisite: Art 161 or Art 251, or permission of instructor.
A course in the use of medium- and large-format cameras that explores technique, lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

ART 361 Photography III
Fall, spring or summer. 4 credits. Prerequisite: Art 161, 261 or permission of instructor.
Continued study of creative use of photography, with emphasis on specialized individual projects.

ART 461 Pre-Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 261, 263.
A studio course intended for photography majors and other qualified students.

ART 462 Thesis in Photography
Fall or spring. 6 credits. Prerequisite: Art 461.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

ART 469 Independent Studio in Photography
Fall, spring or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 761-762, 861-862 Graduate Photography
761 fall, 762 spring, first-year M.F.A. students. 9 credits. 861 fall, 862 spring, second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

Studio Courses in Drawing
Fees for drawing courses:
151, 152, 251, 252, 459: $25

ART 151 Drawing I
Fall, spring, or summer. 3 credits.
A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink and wash, etc.

ART 152 Drawing II
Spring. 3 credits. Prerequisite: Art 151.
A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of Art 151 concentrating on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

ART 158 Conceptual Drawing
Summer. 3 credits.
Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. An interest in to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

ART 159 Life and Still-Life Drawing
Summer. 3 credits.
The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

ART 251 Drawing III
Fall. 3 credits. Prerequisites: Art 152.
An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

ART 252 Drawing IV
Spring. 3 credits. Prerequisites: Art 251.
Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

ART 459 Independent Studio in Drawing
Fall, spring, or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor.
Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

Special Studio Courses
Course fees:
171, 271, 272, 479: $105
391, 392: $50
481, 482, 489: $70

ART 171 Electronic Imaging in Art
Fall or spring. 3 credits.
An introductory studio course using the computer as a tool for making art. Students will explore various approaches to 2-D image creation using software programs for still image generation and processing.
ART 271 Electronic 3-D Modeling and Animation
Fall or spring. 4 credits. Prerequisite: Art 171.
A studio course in creating 3-D still and animated visualizations using computers and 3-D software for story boarding, object modeling, animation, and rendering.

ART 272 Digital Video and Sound
Fall or spring. 4 credits. Prerequisite: Art 171.
A studio course that introduces students to digital video involving capture stills, animation, video, and sound with an introduction to interactive presentation and CD-ROM production.

ART 372 Special Topics in Art Studio
Fall, spring, or summer. Variable credit. An exploration of a particular theme or project.

ART 379 Independent Studio in Rome for Non-Majors
Fall and spring. 4 credits variable.
Prerequisite: student must be a junior in good standing, and have the written permission of the instructor. Rome Program only.
Independent studio in Rome allows non-art majors the opportunity to pursue special interests in Fine Arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

ART 391 Media Arts Studio I
Fall. 3 credits. Prerequisite: one of the following courses: Art 171, Theatr 277, 377, Music 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50.
A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video, dance. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting arts spaces on campus, including virtual and performative events.

ART 392 Media Arts Studio II
Spring. 3 credits. Prerequisite: one of the following courses: Art 171, Theatr 277, 377, Music 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50.
A continuation of Art 391. A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video, dance. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting arts spaces on campus, including virtual and performative events.

ART 400 Rome Studio
Fall or spring. 4 credits. Prerequisite: permission of instructor. Fee: $25. Rome Program only.
The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. Art 400 fulfills four credits of the concentration requirement.

ART 479 Independent Studio in Electronic Imaging
Fall, spring or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 481 Pre-Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 482 Thesis in Combined Media
Fall or spring. 6 credits. Prerequisite: 481 and written permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

ART 489 Independent Studio in Combined Media
Fall, spring, or summer. 4 credits variable.
Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

CIty and Regional Planning
The department offers several programs of study at both the undergraduate and graduate levels.

The Undergraduate Program in Urban and Regional Studies
The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

Basic Degree Requirements
Requirements for Graduation: URS requirements include (1) 4 credits of foreign language residence; (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) performance electives, (9) a minimum of 34 courses. The university requires students to complete two semesters of physical education.

1. General Education
a. Freshman writing seminars: 2 courses
b. Foreign language: 3 courses or qualification in one foreign language
c. Distribution Requirements: 9 courses
Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirement in Groups 1-4.

Group 1: Physical and biological sciences (2-3 courses required)

Group 2: Quantitative and formal reasoning (1-2 courses required)

Group 3: Social sciences and history (2-3 courses required)

Group 4: Humanities and the arts (2-3 courses required)

Advanced Placement Credit
Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of 5-U courses applied to distribution requirements are not acceptable.

2. Required Courses for the Major in Urban and Regional Studies: 5 courses

CRP 100: The American City
CRP 101: The Global City: People, Production, and Planning in the Third World
CRP 320: Introduction to Statistical Reasoning for Urban and Regional Analysis (statistics course)
Microeconomics course (at least 3 credits, from approved list)
Architecture course (at least 3 credits, from approved list)
Approved List of Microeconomics and Architecture Courses

Micro Economics:
CE&H 110: Introductory Microeconomics
CE&H 210: Intermediate Microeconomics
ECON 101: Introduction to Microeconomics
ECON 301: Microeconomics
ECON 313: Intermediate Microeconomics

Architecture:
ARCH 181: History of Architecture I
ARCH 132: An Introduction to Architecture
ARCH 131: An Introduction to Architecture

Area Requirements for the Major in Architecture:

ARCH 182: History of Architecture II

3. Area Requirements for the Major in Urban and Regional Studies: 11 courses

A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis

a. Design
CRP 415: Gender Issues in Planning and Architecture
CRP 461: Principles of Spatial Design and Aesthetics
CRP 462: Urban Land Use Concepts

b. Economics
CRP 400: Introduction to Urban and Regional Theory
CRP 401: Seminar in Urban Political Economy
CRP 404: Urban Economics
CRP 417: Industrial Restructuring: Implications for State and Local Policy

NOTE: This requirement may not be satisfied with the same course taken to complete the micro-economics course requirement under B.

c. Environment
CRP 380: Environmental Politics
CRP 451: Environmental Law

d. History
CRP 261: Urban Archaeology
CRP 360: Pre-Industrial Cities and Towns of North America
CRP 361: Seminar in American Urban History

CRP 461: Methods of Archival Research
CRP 462: The American Planning Tradition

e. Politics/Policy
CRP 314: Planning, Power, and Decision Making
CRP 315: The Progressive City
CRP 363: American Indians, Planners, and Public Policy
CRP 413: Planning and Political Economy I
CRP 448: Social Policy and Social Welfare

f. Quantitative Analysis
CRP 321: Introduction to Quantitative Methods for the Analysis of Public Policy

B. Students must take any additional 5 CRP courses (of at least 3 credits each, letter grade only)

4. Free Electives: 6-9 courses

5. Physical Education (2 terms of PE)

Required courses for graduation: 34
Required credits: 120

Honors Program
Each year a few well-qualified junior-year students may join the honors program. Each honors student will develop and write an honors thesis under the guidance of his or her faculty advisor.

Off-Campus Opportunities

Cornell-in-Washington Program. Students in good standing may earn degree credits in the Cornell-in-Washington program through coursework and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. We encourage qualified undergraduates to study abroad because exposure to foreign cultures can be an eye-opening part of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. We work continually to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Mideast, and France should be forthcoming. We encourage URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and Fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options

Linked degree options. Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures

Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department seeks students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and depth of interest in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students

In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

Forms for transfer application and financial aid are available from the Cornell University Office of Admissions, 410 Thurston Avenue, Ithaca, New York 14850–4898. Official transcripts of all high school and college work must be submitted along with SAT or ACT scores and letters of recommendation. Prospective transfers should have taken at least 6 credits in English. In addition, students should have taken basic college-level courses distributed across the natural and social
The major courses of work in the arts, sciences, humanities, and mathematics. Applicants whose previous work closely parallels the "General Education" requirements of the Urban and Regional Studies curriculum will have relative ease in transfer. Nevertheless, students with other academic backgrounds, such as engineering, architecture, fine arts, management, and agriculture, are eligible to apply.

Although an interview is not required, applicants are urged to visit the campus. Applicants who want further information regarding the Urban and Regional Studies Program, may contact Professor John Forester, Program Director, Urban and Regional Studies, Cornell University, 106 West Sibley Hall, Ithaca, New York 14853-6701 (telephone: 607-255-4613).

The Graduate Program in City and Regional Planning

The major concentrations of course work in city and regional planning are in the following areas:

- Built environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making and administration.
- History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.
- Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.
- Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, countering plant closings and more general regional decline and stimulating more equitable programs of socioeconomic change and development.
- International planning offers a broad range of courses in international economic development, development planning, and political economy.
- Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems.

Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), in a two-year program; the Master of Arts (M.A.) in historic preservation planning, in a two-year program; and, in special cases, the Master of Professional Studies (International Development) (M.P.S.I.D.), for the twelve-month international planning program.

Off-Campus Opportunities

Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information

Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.

Undergraduate Program in Urban and Regional Studies

CRP 100 The American City
Fall. 3 credits. S-U grades optional for out-of-department students only.
An introductory course on the evolution of urban problems and opportunities facing the majority of this country's population as we approach the last decade of the twentieth century. Readings, discussions, and brief papers exploring topics ranging from suburban development to central city poverty, from environmental threats to downtown revitalization, and from municipal finance to the new position of women in the urban economy.

CRP 101 The Global City: People, Production, and Planning in the Third World
Spring. 3 credits. S-U grades optional for out-of-department students only.
A critical look at the physical and social development of giant cities in the Third World. Their origins, roles, contributions, and shortcomings. Their place in world political economy is evaluated. Policy prescriptions for their principal problems are discussed.

CRP 261 Urban Archaeology
For description, see LA 261.

CRP 314 Planning, Power, and Decision Making
Fall. 3 credits.
This seminar examines various bases of political and professional power. We ask, What do professionals who want to serve the public need to know about power and decision-making processes in the institutional settings in which they operate? How and why can professionals make a difference when facing problems characterized by great complexity and severe inequalities among affected groups?

CRP 320 Introduction to Statistical Reasoning for Urban and Regional Analysis
Fall. 4 credits.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. Emphasis will be on statistical and related computational methods for the formulation, analysis, and testing of hypotheses and models of social, economic, and physical phenomena of cities and regions.

This course will cover applicable methods in probability, descriptive statistics, estimation, hypothesis testing, and regression.

CRP 321 Introduction to Quantitative Methods for the Analysis of Public Policy
Spring. 3 credits.
An introduction to the role and use of quantitative methods in the study of urban and regional issues. This course will focus on various types of models commonly used to analyze urban and regional policy, including regression models, cost-benefit analysis, and simulation, among others. Strengths and weaknesses of those methods will also be considered.

CRP 360 Pre-Industrial Cities and Towns of North America (also LA 360)
Fall. 3 credits. S-U grades optional. For description, see LA 360.

CRP 361 Seminar in American Urban History (also CRP 662)
Fall or spring. 3 credits. Prerequisite: permission of instructor.
Seminar in the historical evolution of the American city. Emphasis on factors in urban growth, the process of urbanization, the urban reform movement, and intellectual and social responses to the city.

CRP 363 American Indians, Planners, and Public Policy (also CRP 547, LA 363, and LA 547)
Spring. 3 credits.
For description, see LA 363.

CRP 370 The Regional Question: The Case of Italy
Fall. 3 credits.
For majors in urban and regional studies only. Rome Program only. The "southern problem" in Italy has long interested regional planners, economists, sociologists, and political scientists. This course will make use of field trips to the Mezzogiorno and Emilio-Romagna to explore practical aspects of regional inequality. Special attention will be paid to theories that purport to explain why the south remains underdeveloped and why the "Third Italy" is thought to be one of the world's most successful regions—in economics, politics, and social life. We will examine how Italy's integration into the European Union affects and is affected by its regional issues.

CRP 371 Cuba: The Search for Development Alternatives
Fall. 3 credits. Open to sophomores, juniors, seniors.
Cuba is a symbol; it is also a society. This course looks beyond the symbol to Cuban society, environment, and political economy within a Caribbean context. Cuba's relations with other nations and their impacts on Cuban development will be emphasized. The 1959 Revolution was a defining moment in Cuban history and a central element in Cuban culture. Students will learn about the experiences that shaped the revolution, altered its course in the 1970s and 1980s, and led to profound experimentation and a renewed search for authenticity in the 1990s.

CRP 380 Environmental Politics
Spring. 4 credits.
Examines the politics of public decisions affecting the environment. Focuses on the roles played by different political actors, the powers of various interest groups, methods for influencing environmental decisions, and the political and social impacts of those decisions.
CRP 400 Introduction to Urban and Regional Theory
Fall. 4 credits. Open to juniors and seniors.
Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as geography, economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

CRP 401 Seminar in Urban Political Economy
Spring. 4 credits. Prerequisites: introductory economics or sociology; for URS students, CRP 400 also.
The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and discuss discussions on outstanding texts, write book reviews, and prepare brief reports.

CRP 404 Urban Economics (also CRP 604)
Spring. 4 credits. Prerequisite: microeconomics.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.

CRP 408 Introduction to Urban Geographic Information Systems (GIS) (also CRP 608)
Spring. 4 credits. Letter grade.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and understand spatial information. This course will focus on GIS in the social sciences. Many of the exercises and examples will be based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues to be covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 416 European City: The Public Sphere and Public Space
Fall. 2-4 credits variable. Open to all juniors and seniors, S-U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only.
An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socio-economic underpinnings of the city. How are cities organized, how do citizens relate to the state, the city to the nation, the nation to the global market? How and where do different groups of people live? How do they get to and from work and play, inside the city and between cities? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)
Fall. 4 credits.
A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States localities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific application to New York and other Northeast locations.

CRP 442 The Sociology of Science
For description, See S&TS 442.

CRP 446 Social Policy and Social Welfare (also CRP 548)
Spring. 4 credits.
This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course will introduce principles that guide the development of social policy including fairness and justice. Various conceptions of society will be examined with reference to their influence on the extent and nature of social welfare provision, comparing the U.S. and other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and workplace) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provisions and how they are administered.

CRP 448 Environmental Law (also CRP 551)
Spring. 4 credits.
An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions that have been handed down under federal environmental statutes and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.

CRP 451 Environmental Planning (also CRP 651)
Fall. 4 credits.
This seminar will examine the roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, NGOs, and social movements—organizations in shaping environmental debates and designing conservation and remediation programs in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

CRP 457 Community Service Fieldwork
Fall or spring. 4 credits variable. Permission is granted by instructor.
Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

CRP 461 Methods of Archival Research
Fall. 3 credits.
Examination of methods of using archival materials, including documents in the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

CRP 477 Issues in African Development (also CRP 677)
Fall and spring. 1 credit. S-U only.
This course examines a broad range of critical concerns in contemporary Africa including food production, human resource development, migration, urbanization, environmental resource management, economic growth, and policy guidance. The weekly presentations are made by invited specialists. Students are required to write a term paper.

CRP 481 Principles of Spatial Design and Aesthetics (also CRP 581 and Landscape Architecture 480)
Fall. 3 credits. Course enrollment is restricted to planning and landscape architecture students unless special permission is granted by instructor. A lecture course that introduces the spatial and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 490 Student-Faculty Research
Fall or spring. 1-4 credits.
Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only.
Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

CRP 492 Honors Thesis Research
Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty.
Each selected student works with his or her thesis adviser.

CRP 493 Honors Thesis Writing
Fall or spring. 4 credits. Prerequisite: completion of CRP 492.
Each selected student works with his or her thesis adviser.

CRP 495 Special Topic
Fall, spring, summer. 1-4 credits. Hours to be arranged.
**CRP 495.40 The History of Urban Form in America (also CRP 669.40)**
Fall. 3 credits.
The history of city planning in America from colonial times to the early 20th century including brief reviews of European influences on urban form. Lecture, discussions, short papers.

**CRP 497 Supervised Readings**
Fall or spring. Variable 4 credits. Limited to upperclass students. Prerequisite: permission of instructor.

**Graduate Courses and Seminars**
Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass undergraduate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

**CRP 512 Public and Spatial Economics for Planners**
Fall. 3 credits. Letter grade. No prior knowledge of economics.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning, and the perspective of the public and nonprofit sectors is the perspective of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course will also cover the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

**CRP 513 Planning Practice and Urban Structure Seminar**
Fall. 4 credits.
This introductory graduate seminar has several objectives. It exposes students to the theory and history of (1) planning, administration, and related public intervention in urban affairs; (2) the growth and development of cities; and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

**CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)**
Fall. 4 credits. For description, see CRP 417.

**CRP 520 Statistical and Mathematical Concepts for Planning**
Fall. 3 or 4 credits.
An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

**CRP 521 Mathematical Foundation for Planning Analysis**
Fall. 1 credit. S-U only. Meets for two hours, once each week, for approximately half the semester.
Review of mathematical foundations for planning analysis. Topics include probability statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for high-level courses in planning analysis. Departmental permission required.

**CRP 532 Real Estate Development Process**
Fall. 3 credits. Not offered 1998-99.
Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

**CRP 533 Real Estate Marketing and Management**
Spring. 3 credits.
The course focuses on the tenant or user as the basic source of the value of real estate. Students explore the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

**CRP 541 The Politics of Technical Decisions I (also Government 628 and Science and Technology Studies 415)**
Spring. 4 credits.
For description, see SRTS 415.

**CRP 545 Introduction to Public Policy Analysis and Management**
For description, see CRP 321.

**CRP 546 Introduction to Community and Environmental Dispute Resolution**
Fall. 3 credits.
This course will explore the theories and techniques of dispute resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

**CRP 547 American Indians, Planners, and Public Policy (also CRP 363, LA 363, and LA 547)**
Spring. 3 credits.
For description, see LA 363.

**CRP 548 Social Policy and Social Welfare (also CRP 448)**
Spring. 4 credits.
For description, see CRP 448.

**CRP 549 Ethics and Practical Judgment in Planning**
Spring. 4 credits variable.
An introduction to problems of practical judgment and ethics as they arise in planning and public service. Professional practice. Issues such as consent, interest, deliberation, and legitimacy are central concerns.

**CRP 551 Environmental Law (also CRP 451)**
Fall. 4 credits.
For description, see CRP 451.

**CRP 552 Urban Land-Use Planning I**
Spring. 3 credits.
Surveys, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

**CRP 553 Urban Land-Use Planning II**
Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.
Seminar covering the essentials of growth management, zoning, and subdivision: the main tools for implementing a land-use plan. Agricultura work on open space preservation, infrastructure timing controls, redevelopment, planned unit development, and much more.

**CRP 555 Urban Systems Studio (also Landscape Architecture 701)**
Fall. 5 credits. Prerequisite: permission of instructor.
Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans. Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

**CRP 557 City Planning Design Studio**
Spring. 4 credits. Prerequisite: previous design courses or permission of instructor.
A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial, social, and environmental issues in urban communities. Studio projects, field trips, and reading.

**CRP 558 City and Regional Planning Workshop**
Fall and spring. 4 credits. S-U only.
Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues, with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

**CRP 560 Documentation for Preservation (also Architecture 586)**
Fall or spring. 3 credits.
Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

**CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also Architecture 580)**
Fall or spring. 4 credits.
Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York; and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 567 Measured Drawing (also Architecture 583)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of the instructor. This course combines the study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of drafting, sketching and measuring a building and the preparation of a finished drawing for publication.

CRP 568 Building Materials Conservation (also Architecture 587)
Spring. 4 credits. Open to juniors, seniors, and graduate students. A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 568 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 569 Archaeology on Preservation Planning and Landscape (also LA 569)
Fall. 3 credits. Offered alternate years. Not open to seniors. For description, see LA 569.

CRP 581 Principles of Spatial Design and Aesthetics (also Landscape Architecture 480)
For description, see CRP 481.

CRP 604 Urban Economics
Spring. 4 credits. For description, see CRP 404.

CRP 605 Urban Public Finance
Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics. An overview of neoclassical public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving fiscal and economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources utilized by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

CRP 608 Introduction to Urban Geographic Information Systems (GIS) (also CRP 408)
Spring. 4 credits. Letter grade. For description, see CRP 408.

CRP 614 Gender and International Development (also Women's Studies 514)
Spring. 4 credits. Not offered 1998-99. This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine theoretical and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 616 Development and Change in the World Economy
Spring. 4 credits. Letter grade only. This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current needs of being built, such as trade liberalization, labor market flexibilization, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

CRP 620 Planning Analysis
Fall. 4 credits. A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from places in the USA, but tools are applicable throughout the world: descriptive and inferential statistics; mapping; and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 631 Local Economic Policy—Field Workshop
Fall. 4 credits. A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. The research work is synthesized into a comprehensive report at the end of the semester.

CRP 635 Workshop: State Economic Development Strategies
Spring. 4 credits. S-U grades optional. The purpose of this course/workshop is twofold: 1) to provide students with research tools useful in developing state-level economic development strategies; and 2) to provide a critical understanding of the primary economic development strategy used by U.S. state policymakers: firm-specific subsidies. The course will consist of lectures and discussion meetings. The required readings will include exercises in qualitative information gathering on economic development topics; use of the census in combination with geographic information systems for analysis and presentation; and shift-share analysis.

CRP 639.05 Special Topic: Regional Development, the Market, with Emphasis on the Third World—Historical and Theoretical Perspective
Fall. 4 credits variable. Historical and conceptual background, and relevant case material, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization and production for urban-rural and regional interactions will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

CRP 639.06 Special Topic: Regional Development, the Market, with Emphasis on the Third World—Current Policy Perspective
Spring. 4 credits variable. The course focuses on what the market can or cannot accomplish in terms of guiding economic industrial, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies.

CRP 642 Critical Theory and the Micro-politics of Practice
Spring. 4 credits variable. Not offered 1998-99. Trying to "solve problems," planners and policy analysts set agendas, shape participation, negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of prosaic, political speech and action in diverse practical settings.

CRP 653 Legal Aspects of Land-Use Planning
Spring. 3 credits. Not offered 1998-99. Offered alternate years. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, growth-control issues.

CRP 655 Real Estate Project Workshop
Spring. 3 credits. Permission of instructor required. Students will be asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships will be required. A range of types of problems that may be encountered in the real estate field will be addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, etc. Projects will focus on real world case studies and will require professional level reports suitable for oral and written presentations.
CRP 657 Real Estate Law
Fall. 3 credits. Letter grade.
Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Discussion of current legal issues affecting real estate industry.

CRP 661 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1-4 credits. Prerequisite: CRP 561.
Preparation of elements of historic preservation plans, designs, legislation, and special regulations. Discussion of current legal issues affecting real estate industry. Neighborhood revitalization, human development, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Discussion of current legal issues affecting real estate industry.

CRP 662 Seminar in American Urban History (also CRP 361)
Spring. 3 credits. Prerequisite: permission of instructor.
For description, see CRP 361.

CRP 663 Historic Preservation Law
Spring. 3 credits. Offered alternate years. Law of historic district and landmark designation, tools for preservation (such as police power, taxation, eminent domain), and recent developments in state and federal historic preservation.

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation
Spring. 3 credits.
The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665 Preservation Planning and Urban Change
Fall. 3 credits.
An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 666 Pre-Industrial Cities and Towns of North America (also LA 668)
Spring. 3 credits. S-U grades optional.
For description, see LA 668.

CRP 668.40 The History of Urban Form in America (also CRP 495.40)
Fall. 3 credits.
For description, see CRP 495.40.

CRP 670 Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing.
Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only.
The international planning lecture series sponsors lectures by scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 675 Seminar in Project Planning in Developing Countries
Fall. 4 credits.
An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U grades only.
For description, see CRP 477.

CRP 683 Environmental Aspects of International Planning (also CRP 453)
Fall. 3 credits.
For description, see CRP 453.

CRP 703 Contemporary Theories of Regional Development
Fall or spring. 4 credits.
An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

CRP 711 Planning and Organization Theory
Fall or spring. 4 credits.
Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussion characterize the course.

CRP 720 Quantitative Techniques for Policy Analysis and Program Management
Spring. 4 credits.
Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 730 Methods of Regional Science and Planning I
Spring. 3 credits.
An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the models, model development, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. CRP 730 emphasizes statistical and econometric models.

CRP 731 Methods of Regional Science and Planning II
Fall. 4 credits.
See CRP 730. CRP 731 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.

CRP 732 Methods of Regional Science and Planning III
Fall or spring. 3 credits. Prerequisites: CRP 730 and CRP 731 or permission of the instructor.
An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CGE models will be discussed. The GAMS software package will be used in related computer exercises.

CRP 733 Seminar in Regional Models
Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature. Not offered 1998-99.
A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

CRP 780 Professional Planning Colloquium I
Fall. 1 credit.
Visiting lecturers treat problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirement for the course are attendance and a brief evaluation at the semester's end.

CRP 791 Master's Thesis in Regional Science
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty.

CRP 792 Master's Thesis, Project, or Research Paper
Fall or spring. 10 credits variable. S-U grades optional.

CRP 794 Planning Internships
Fall, spring, or summer. 1-12 credits.
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner's role in formulating and implementing plans and policies. Salaried internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795 Master's Thesis in Preservation Planning
Fall or spring. 1-6 credits.
CRP 796 Colloquium Journal Publication Workshop
Fall or spring. 2 credits. S-U grades only. Individual and group projects culminating in the production of a professional journal.

CRP 797 Supervised Readings
Fall or spring. 4 variable credits. Limited to graduate students. Prerequisites: permission of instructor.

CRP 798 Colloquium in Regional Science, Planning, and Policy Analysis
Fall or spring. 1 credit. Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

CRP 800 Advanced Seminar in Urban and Regional Theory I
Fall. 3 credits. The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of interregional and intraregional distribution of population and economic activity are reviewed.

CRP 801 Advanced Seminar in Urban and Regional Theory II
Spring. 3 credits. A continuation of City and Regional Planning 800, concentrating on recent developments.

CRP 810 Advanced Planning Theory
Fall. 3 credits. A survey of the works of scholars who have contributed to current thinking about planning theory. Models of man and theoretical concepts concerning the nature of planning today are examined.

CRP 830 Seminar in Regional Science, Planning, and Policy Analysis
Fall or spring. Variable 4 credits. S-U grades only. This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890 Planning Research Seminar I
Fall or spring. 2 credits. Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current research and development by advanced doctoral students, faculty members, and visitors.

CRP 892 Doctoral Dissertation
Fall or spring. 1-2 credits.

Special Topic Courses
Fall or spring. Variable credit. Typical topics are:

CRP 609 Urban and Regional Theory
CRP 619 Planning Theory and Politics
CRP 629 Quantitative Methods and Analysis

CRP 639 Regional Development Planning
CRP 649 Social-Policy Planning
CRP 659 Urban Development Planning
CRP 669 History and Preservation
CRP 679 Planning and Developing Regions
CRP 689 Environmental Planning
CRP 699 Regional Science
CRP 719 Planning Theory and Politics

**LANDSCAPE ARCHITECTURE**

Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

**The Program**

Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School; for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in Landscape Architecture, a concentration in a subject related to the core courses, and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, and 6 resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentration in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

**Dual Degree Options**

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

**Course Information**

*LA 141 Grounding in Landscape Architecture*
Fall. 3 credits.

*LA 142 Grounding in Landscape Architecture*
Spring. 4 credits.
**LA 498 Undergraduate Teaching**  
Fall or spring. 1-2 credits.

**LA 501 Composition and Theory**  
Fall. 5 credits.

**LA 502 Composition and Theory**  
Spring. 5 credits.

**LA 505 Graphic Communication I**  
Fall. 3 credits.

**LA 506 Graphic Communication II**  

**LANAR 524 History of European Landscape Architecture**  
Spring. 3 credits. L. Mirin. A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which environments such as gardens, streets, squares, parks, and new towns reflect in their built form a range of response to demands of culture, economics, technology, security, the law, and ecology.

**LANAR 525 History of American Landscape Architecture**  
Fall. 3 credits. L. Mirin. Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

**LA 545 The Parks and Fora of Imperial Rome**  
Spring. 3 credits.

**LA 569 Archaeology in Preservation Planning and Landscape (also CRP 569)**  

**LA 590 Theory Seminar**  
Fall. 3 credits.

**LA 601 Integrating Theory and Practice I**  
Fall. 5 credits. Limited to graduate students.

**LA 602 Integrating Theory and Practice II**  
Spring. 5 credits. Limited to graduate students.

**LA 615 Site Engineering I**  
Spring. 2 credits. Weeks 1-7.

**LA 616 Site Engineering II**  
Fall. 2 credits. Weeks 8-15.

**LA 617 Site Construction I**  
Fall. 2 credits. Weeks 1-7.

**LA 618 Site Construction II**  
Spring. 2 credits. Weeks 8-15.

**LA 619 Advanced Site Grading**  
Spring. 2 credits. Weeks 8-15.

**LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)**  
Fall. 3 credits. Offered alternate years 1999-00.

**LA 680 Graduate Seminar in Landscape Architecture**  
Fall or spring. 1-3 credits.

**LA 694 Special Topics in Landscape Architecture**  
Fall or spring. 1-3 credits.

**LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)**  
Fall. 5 credits.

**LA 702 Advanced Design Studio**  
Spring. 5 credits.

**LA 800 Master's Thesis in Landscape Architecture**  
Fall or spring. 9 credits. Offered through the College of Agriculture and Life Sciences.

**FACULTY ROSTER**

Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning.

Baugher, Sherene, Ph.D., SUNY at Stony Brook, Technology, Security, the Law, and Ecology.

Booth, Richard J., Ph.D., George Washington U. Assoc. Prof., City and Regional Planning.

Booth, Richard J., Ph.D., George Washington U. Assoc. Prof., City and Regional Planning.

Buon, Lily H. M. Phil., Cambridge U., Asst. Prof., Architecture.

Christopherson, Susan M., Ph.D., U. of California at Berkeley. Asst. Prof., City and Regional Planning.

Clavel, Pierre, Ph.D., Cornell U. Prof., City and Regional Planning.

Dally, Norma A., Ohio State U. Prof., Emeritus. Art.

Drennan, Matthew P., Ph.D., New York University. Prof., City and Regional Planning.

Evans, Ann-Margaret, Ph.D., U. of Massachusetts-Amherst. Prof., City and Regional Planning.

Forester, John, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.

Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning.

Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture.

Isard, Walter, Ph.D., Harvard U. Prof., City and Regional Planning.

Lewis, David B., Ph.D., Cornell U. Assoc. Prof., City and Regional Planning.

Lobo, Jose, Ph.D., Cornell U. Prof., City and Regional Planning.

Luce, Jean N., M.F.A., Ohio U. Prof., Art.

Lynch, Barbara, Ph.D., Cornell U. Visiting Assoc. Prof., City and Regional Planning.

MacDougall, Bonnie C., Ph.D., Cornell U. Assoc. Prof., Architecture.

Minkel, C. M., Cornell U. Prof., Emeritus.

Woodruff, Mary N., Ph.D., Columbia U. Assoc. Prof., Architecture.

The Division of Biological Sciences provides a unified curriculum for undergraduate majors enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell.

Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

The Division of Biological Sciences is composed of seven sections: Biochemistry, Molecular and Cell Biology, Ecology and Systematics; Genetics and Development; Microbiology; Neurobiology and Behavior; Physiology; Plant Biology; and, in addition, the L. H. Bailey Hortorium and the Shoals Marine Laboratory.

Student services are provided by the division’s Office for Academic Affairs and the Behrman Biology Center, both located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office for Academic Affairs also follows the progress of biology majors and works closely with faculty advisers. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Westward or brigantine Corwith Cramer.

FACULTY

Other Teaching Personnel

DISTRIBUTION REQUIREMENTS

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109–110, 105–106, or 101 and 103 plus 102, and 107–108 or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) may be applied to the Group 1 distribution area in accordance with regulations stipulated by the Arts College.

In the College of Human Ecology, the natural sciences distribution requirement is for at least 6 credits selected from Biological Sciences 105–110, 101 and 103 plus 104 and 105, 105–106 or 107–108 or from specified courses in chemistry or physics. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) also satisfies the distribution requirement in the natural sciences.

Note: Biological Sciences 101–102, 103–104 should be taken as a unit by students of any college except those with advanced placement credit.

Switching from one introductory biology sequence to another at midyear may not be possible because of variation in presentation of topics. Students must receive permission of the instructor to switch sequences. Taking sequences in reverse or inconsecutive order is strongly discouraged.
USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in courses offered through the Division of Biological Sciences should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty in 1988, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching.

2. The Division of Biological Sciences conforms to the rules of the care for the care of such animals as outlined in Guiding Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals, and the New York State Public Law Health Act. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annually by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address their concerns to the director of the Cornell Center for Research Animal Resources, Dr. Fred Quimby, at 253-3516. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor's discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course.*

THE MAJOR

The Division of Biological Sciences offers a major in biological sciences to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the division's Office for Academic Affairs, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the associate director for academic affairs, in 120 Simon Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a program of study area and to assure satisfactory progress toward completion of the major. Acceptance into the major requires completion of the course sequences in introductory biology, chemistry, and mathematics (see requirements 1-3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Cornell cumulative grade-point average is required for final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on a provisional basis. Final acceptance into the major is required for admission to a biological sciences major. It is the student's responsibility to assure that final acceptance has been granted.

Whenever possible, students should choose the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Students are not encouraged to continue with the major in biological sciences unless performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.

The requirements for the biological sciences major are listed below. These courses, with the exception of the language requirement, should be taken for a letter grade, unless the course is offered for S/U grades only.

1) Introductory biology for majors (one year): Biological Sciences 101 and 102, or 105-106. Biological Sciences 107-108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board (AP). Students with a score of 4 must fulfill the introductory biology requirement by taking Biological Sciences 101-102, 101 and 103, 102 and 104, or 103-104. These students should consult information available in the course office (1140 Comstock Hall) and in the Biology Center (216 Stimson Hall) to determine which semester to take to complete their introductory biology requirement. For students in doubt, completion of Biological Sciences 101 and 103 is advised. These students receive a total of 8 introductory biology credits (4 AP credits plus 4 course credits).

2) General chemistry (one year): Chemistry 207-208, or 206-208, or 215-216.*

3) College mathematics (one year): one semester of calculus (Mathematics 106, 111, 191 or their equivalent) plus one semester selected from the following:

a. a second semester of calculus (Mathematics 112, 192, or their equivalents).

b. a course in finite mathematics (Biometry 101, 417, Mathematics 105, 231).

c. a course in statistics (Biometry 215, Mathematics 171, Agriculture and Resource Management 210, Psychology 350, Industrial and Labor Relations 210 and 211).

Students interested in quantitative aspects of biology (e.g., computational, physical, population biology) are advised to satisfy the mathematics requirement with two semesters of calculus.

4) Organic chemistry: Chemistry 257 and 251, or 357-358 and 251, or 357-358 and 301, or 359-360 and 251, or 359-360 and 301.

5) Physics: Physics 207-208,* 112-213,* or 101-102. Those who take Physics 112-213 are advised to complete Physics 214 as well.

6) Genetics: Biological Sciences 281.

7) Biochemistry: Biological Sciences 330, or 351 and 352, or 333.

8) Evolutionary Biology: Biological Sciences 278.

9) A program of study selected from the outline below.

10) Foreign language: students registered in the College of Agriculture and Life Sciences must satisfy the foreign language requirement of the Division of Biological Sciences by (a) presenting evidence of successful completion of three or more years of study of a foreign language in high school or (b) attaining a score of 560 or more on the reading portion of the College Entrance Examination Board achievement test or (c) achieving "qualification" status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college credits in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty adviser when choosing appropriate courses in statistics.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements,
The possible programs of study are listed below. Students should consult their faculty advisers.

1) **Animal Physiology**: BIOAP 311, Introductory Animal Physiology, Lectures; BIOAP 313, Histology: The Biology of the Tissues; BIOAP 316, Cellular Physiology, and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for study using live animals. It is intended especially for students contemplating careers in biomedical practice or research.

2) **Biochemistry**: Chemistry 300, Quantitative Chemistry; six credits of organic chemistry (Chemistry 357-358 or 359-360); a minimum of four credits of organic chemistry laboratory (Chemistry 301-302 or 251-252-302 or 301 or 251-252); four credits of biochemistry laboratory courses (BIOBM 420); and Physical Chemistry (Chemistry 389-390 or 287-288 or 287-390 or 389-288). Note that Chemistry 288 is designed for biologists. Five hours of Biochemistry are recommended (331 and 332 or 330 and 334) and students interested in graduate work in biochemistry should take Physics 207-208 and a third semester of calculus for preparation for Chem 389-390. Be sure to complete CHEM 207-208 or 215-216 during the freshman year.

3) **Molecular and Cell Biology**: Chemistry 357-358 or 359-360; BIOBM 452, Survey of Cell Biology; 4 credits of BIOBM 450 (formerly BIOBM 630), Laboratories in Biochemistry, Molecular and Cell Biology, and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following list (underlined courses are recommended as providing breadth in molecular and cell biology): BIOAP 459, Molecular Mechanisms of Hormone Action; BIOBM 443, Applications of Molecular Biology; BIOBM 439, Laboratory Research in Biochemistry, Molecular and Cell Biology; BIOBM 437, Oncogenes and Cancer Viruses; BIOBM 651, Protein Structure and Function; BIOBM 652, Membranes and Bioenergetics; BIOBM 653, Biosynthesis of Macromolecules; BIOBM 655, Mechanisms of Metabolic Regulation and Mammalian Gene Expression; BIOBM 656, Cell Biology; BIOBM 659, The Nucleus; BIOBM 655, Immunology, BIO G 400, Sensing and Response in Biological Systems; BIOG 385, Developmental Biology; BIOGD 483, Molecular Aspects of Developmental Biology; BIOGD 427, Exploration of Marine Biology; BIOGD 389, Advanced Eukaryotic Genetics; BIOI 402, Fertilization and the Early Embryo, BIOPL 343, Molecular Phylogeny and Systematics; BIOI 403, Molecular Phylogeny and Systematics II; BIOI 404, Plant Cell Biology, BIOI 420, Laboratory in Plant Molecular Biology.

4) **Ecology and Evolutionary Biology**: BIOES 261, Ecology and the Environment, and 10 credits from the following course list, including at least one course from each group:

   a) BIOPL 241, Introductory Botany; BIOES 274, The Vertebrates: Structure, Function, and Evolution; BIOES 373, Biology of the Marine Invertebrates; BIOES 466 and 468, Physiological Ecology; BIOES 471, Mammalogy; BIOES 472, Herpetology; BIOES 475, Ornithology; BIOES 476, Evolution, and ENTO 212, Insect Ecology.

   Note: One 400-level, 4-credit course (including 4 credits from BIOMS 564) offered at Shaws Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through course work at a biological field station or work experience.

   Note: The Ecology and Evolutionary Biology program of study requires specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

5) **General Biology**: The Program of Study in General Biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences in addition to courses counted toward requirements 1-8 above. These 13 credits must include:

   1) one course each from those courses required for at least three of the nine other programs of study (see pages 132-134);

   2) a course with a laboratory, and

   3) a minimum of two upper-level (300 and above) courses of two or more credits each.

100-level courses are not acceptable for meeting any of these requirements.

BIOL 341 may not count as the lab course; BIO G 498 may not be used to fulfill the requirements of this program of study. BIO G 490 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the adviser, but it cannot count as a course representing a program of study.

6) **Genetics and Development**: A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 387, Developmental Aspects of Evolution; BIOGD 389, Embryology; BIOGD 480, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOI 485, Bacterial Genetics, BIOI 493, Developmental Neurobiology; BIOI 543, Molecular Biology and Genetic Engineering of Plants.

Students may also choose from the following courses to complete the 13-credit requirement: BIOGD 682, Fertilization and Early Development; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 697, Developmental Genetics; BIOG 633, Biosynthesis of Macromolecules; BIOI 639, The Nucleus; BIOI 663, Theoretical Population Genetics; BIOI 694, Genetics of Diverse Bacteria; BIOI 641, Laboratory in Plant Molecular Biology; BIOI 644, Plant Growth and Development; BIOI 652, Plant Molecular Biology II; BIOI 653, Plant Molecular Biology II, PL BR 606, Advanced Plant Genetics.

Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIO G 499, Undergraduate Research in Biology, with approval of the faculty advisor.

7) **Microbiology**: BIOI 290, General Microbiology, Lectures; BIOI 291, General Microbiology, Laboratory; BIOI 300, Seminar in Microbiology, and at least three courses chosen from the following list of required Microbiology Laboratory courses: BIOI 415, Bacterial Diversity; BIOI 416, Bacterial Physiology; and BIOG 485, Bacterial Genetics.

8) **Neurobiology and Behavior**: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BION 221 and 222) with discussion section (4 credits per term), and 7 additional credits, among which must be a course in neurobiology and behavior offerings. BION 420, BION G 499, and BIONG 720 may not be used as this neurobiology and behavior
course. However, these readings and independent research courses may form part of the additional credits (beyond those provided by the advanced neurobiology and behavior courses) required to complete the Program of Study in Neurobiology and Behavior. BIO G 498 may not be used to fulfill the requirements of this program of study.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BION 221 or 222 for only 3 credits must complete additional course work in neurobiology and behavior. These students should consult the chair of the Section of Neurobiology and Behavior (W363 Seeley G. Mudd Hall) to determine what course(s) to use to make up the deficiency.

9) Plant Biology: Students choose one area of study from the following two options:

Option (a) Botany: Students are required to take Introductory Botany (BIOPL 241). Students should then choose, with the aid of their faculty adviser, a minimum of three of the following courses, for a total of at least 10 additional credits, to round out their botanical training. BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 246, Ethnobotany; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 345 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIOPL 345, Plant Anatomy; BIOPL 444, Plant Cell Biology; BIOPL 445, Photosynthesis; BIOPL 447, Molecular Systematics; BIOPL 448, Plant Evolution and the Fossil Record; BIOES 465 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIOES 466 and 466, Plant Physiology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIOPL 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty adviser, a minimum of 10 additional credits from the following list: BIOPL 241, Introductory Botany; BIOPL 242 and 244, Plant Physiology, Lectures and Laboratory; BIOPL 342 and 344, Plant Physiology, Lectures and Laboratory; BIOPL 346, Algal Physiology; BIOPL 444, Plant Cell Biology; BIOPL 648, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

10) Systematics and Biotic Diversity: A minimum of 15 credits from the following two groups, including at least 7 credits from group A, and 3 from group B, and at least two laboratory courses (marked with *), BIOG 499 (Undergraduate Research in Biology), with approval of the advisor, can be used in fulfillment of up to four credits in Group A, and can count as one laboratory course if it has a laboratory component of 2 or more credits.

(a) *BIOES 274, The Vertebrates: Structure, Function, and Evolution; *BIOES 371, Human Paleontology; *BIOES 373, The Invertebrates: Form, Function, and Evolution; *BIOES 472, Herpetology; *BIOES 475, Ornithology; *BIOES 476, Biology of Fishes; BIOM 290, General Microbiology, Lectures; *BIOM 291, General Microbiology, Laboratory; BIOIM 415, Bacterial Diversity, Lectures; *BIOPL 241, Introductory Botany; *BIOPL 243, Taxonomy of Cultivated Plants; BIOPL 247, Ethnobotany; BIOPL 248, Taxonomy of Vascular Plants; BIOPL 343, The Healing Forest; BIOPL 645, Families of Tropical Flowering Plants—Lecture; *BIOPL 646, Families of Tropical Flowering Plants—Lab; *ENTOM 212, Insect Biology; ENTOM 215, Spider Biology: Life on a Silken Thread; *ENTOM 322, Insect Morphology; *ENTOM 413, Introductory Insect Systematics; *ENTOM 471, Freshwater Invertebrate Biology; *ENTOM 651, Systematics of the Coleoptera: PL PA 309, Introductory Mycology; *PL PA 519, Field Mycology.

(b) BIOES 464, Macroevolution; BIOES 479, Paleobiology; *BIOPL 440, Phylogenetic Systematics; BIOPL 447, Molecular Systematics; *BIOPL 448, Plant Evolution and the Fossil Record; *BIOPL 453, Historical Biogeography; BIOPL 442, Current Topics in Ethnobotany.

11) Independent Option: A special program for students interested in nutrition is available under this option. Students interested in biophysics should contact the Office for Academic Affairs (200 Stimson Hall) for further information. In addition, students who want to undertake a course of study not covered by the nine existing programs of study or the special program may petition the Division of Biological Sciences Curriculum Committee. Information on independent options and curriculum Committee petition forms are available in the Office for Academic Affairs, 200 Stimson Hall.

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an aspect of study within a program of study. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests, and goals and the availability of space and equipment suitable for the proposed project. Students accepted for independent research enroll for credit in Biological Sciences (BIO G 499) as a supervisor. Faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to take full responsibility for the quality of the work. Students may not earn credit for research conducted outside of Cornell. Information on faculty research activities and undergraduate research opportunities is available in the Biological Sciences Center and in 200 Stimson Hall.

Research credits may not be used in completion of the following program of study areas: animal physiology, biochemistry; cell biology; ecology and evolutionary biology, microbiology; plant biology. Up to 3 credits of research may be used to complete the program. Studies in general chemistry and genetics and development, and 4 credits of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office for Academic Affairs, 200 Stimson Hall, and must be submitted to the Honors Program Committee by the deadline announced early in the senior year. Application forms for the honors program are separate from the enrollment forms for Biological Sciences (BIO G 499, Undergraduate Research in Biology). To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in all biology, chemistry, mathematics, and physics courses. Grades earned in courses in other departments that are used to meet major requirements are included in this computation. In addition, candidates must have a Cornell faculty member to supervise their research. Any faculty member in the Division of Biological Sciences may act as a supervisor. Students may also work with Cornell faculty supervisors outside the division. Students who seek to graduate with an honors degree must arrange for a faculty member of the division to serve as co-supervisor. The division co-supervisor must agree to meet with the student on a regular basis, to report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in Biological Sciences (BIO G 499, Undergraduate Research in Biology) under the direction of the faculty member acting as honors supervisor, although it is not necessary to do so. Students choosing to earn credit for honors research must enroll in Biological Sciences (BIO G 499, Undergraduate Research in Biology) separate from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of an acceptable honors thesis, completion of the major requirements, and maintenance of the 3.00 overall cumulative grade-point average through graduation. Recommendation to the faculty that a candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended. Students interested in the honors program should consult their faculty advisers early.

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOM; Ecology and Systematics, BIES; Genetics and Development, BIOGD; Microbiology, BIOM; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOS.
The Division of Biological Sciences teaches three introductory biology course sequences during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110, and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, 105-106, and 107-108 are intended for biological sciences majors and other students needing 8 credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meets the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for non-majors, and meets the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

**BIO G 101-102 Biological Sciences, Lectures**

101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Designed both for students who intend to specialize in biological sciences and for those who want a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory and discussions of plant and animal systems are integrated.

**BIO G 103-104 Biological Sciences, Laboratory**

103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T R 1:30-4:30, M or W 7:30-10:30 p.m., or T R or S 8-11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff. BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support an understanding of the important concepts, principles, and theories of modern biology. A second objective of the laboratory course is to help students gain expertise in the methods used by biologists to construct new knowledge. Students are exposed to basic concepts, research methods, including laboratory and data transformation techniques, and instrumentation in the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, biotechnology, immunology, invertebrate diversity, population plant growth and development, and ecology. During the first semester, dissection of a doubly-pithed frog is included. Pithing is done by the instructor. Dissection of several invertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 105-106 Introductory Biology**

105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. No admittance after first week of classes. Estimated cost for dissection kit, $111. S-U grades optional, with permission of instructor. Lec, T 9:05 (1st lec of fall term, R 8/27 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff. Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects of study in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved and live vertebrate dissections). Students who plan to concentrate in anatomy and physiology should consider taking this course. Because of the strong emphasis on organismal biology, there are dissections. Students who object to dissections may want to take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who take the course must respect deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

**BIO G 107-108 General Biology**

Summer (8-week session). 107, weeks 1-4; 108, weeks 5-8. 4 credits each. Prerequisite: one year of college or permission of instructor. BIO G 101-103, 105, or 107 is a prerequisite for 108. Fee, $25 for weeks 1-4; $15 for weeks 5-8. Lecs, M T R 9-12, labs, M T R 1:30-4:30, F 9-12. Staff. Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organ system level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population biology, and ecology. A general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a lab study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school.

**BIO G 109-110 Biological Principles**

109, fall; 110, spring. 3 credits each term. Limited to 600 students. A passing grade in 109 or 101-103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110...
together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless it is followed by 110 or an exemption is obtained from the instructor. May not be taken for credit after BIO 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may not be used as an introductory course for the major in biological sciences. Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology only. Lecs, M W F 9:05 or 10:10, lab, M T W R or F 2-4:25 or T 10:10-12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelms: fall, Sept. 24 and Nov. 10; spring, Feb. 25 and Apr. 8. R. Turgeon, M. Taylor, C. Eberhard, and staff.

Students who do not plan to major in biology may take this broad introductory course in modern biology. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of invertebrate, vertebrate, and plant material (observation required).

BIO G 152 Special Topics in Biology
Spring. 1 credit. Limited to 30 students. Prerequisites: superior performance in BIO G 109 or equivalent and concurrent enrollment in BIO G 102, 106, or 110, or written permission of instructor. S-U grades only. This course may not be used in fulfillment of college distribution requirements. Lecs, T 3-35; occasional field trips to be arranged. Guest lecturers discuss topics in their field of research interest. R. Turgeon, C. Eberhard, and staff, and guest lecturers. This course is designed to complement introductory biology by providing an opportunity for preparation of selected topics of interest. Class involvement and discussion are encouraged.

BIO G 170 Evolution of the Earth and Life (also Geological Sciences 102)
Spring. 3 credits. Lecs. T R 9:05 or 11:15; lab, T W R 8:00-4:25; field trips during lab. J. L. Cisne.

BIO G 200 Special Studies in Biology
Fall, spring, or summer. 1-3 credits. Prerequisites: transfer- or special-student status and written permission of instructor and of the associate director of the Division of Biological Sciences. Students must register using a special form available in Stimson 200. S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission of the associate director of the division.

BIO G 202 The Diversity of Life
Fall. 3 credits. S-U grades optional. Lecs, M W F 2:30. J. I. Davis, J. J. Doyle, E. Rodriguez. The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective, with attention to the principles employed in the discovery of species and in the analysis of relationships among them. Intersections between species and other taxa are examined during the latter portion of the semester.

BIO G 207 Evolution (also Science and Technology Studies 287)
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOS 278. Does not meet the evolution- ary biology requirement for the biological sciences major. S-U grades optional. Fall. Lecs, T R 10:10; disc, 1 hour each week to be arranged. Staff. Summer (3-week session). Lecs/disc, M F 9:30-10:45 and 1:00-2:15. A. S. Kondrashov. Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. Aims of the course include understanding the major issues in the history and current status of evolutionary biology, and exploration of the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIO G 209 Introduction to Natural Science Illustration
Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs, T R 6:30-9:30 p.m. R. S. King. An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and carbon dust. Potentials and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also Veterinary Microbiology 315)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:30-9:55. J. A. Marsh. A seminar in immunology, with emphasis on the biological functions of the immune response.
BIO G 407 Nature of Sensing and Response (also PLPA 407) (formerly Bio G 307)
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Lec: T R 10:10–11:25. T. P. Delaney.

An examination of the responses of organisms and cells to their surroundings illustrates how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. This course explores a variety of responses to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussions examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the way these systems are perturbed in certain diseases.

BIO G 410 Teaching Contemporary Biology
Fall. 3 credits. Prerequisite: one year introductory biology, permission of instructor. L. Southard and staff.

The goal of this course is to give students an opportunity to learn a topic in biology of current interest to the public, then teach that topic to high school students. The first part of the course will consist of lectures, discussions, and laboratory experiences designed to allow students to become familiar with the topic from many approaches. Student teams will work with science education faculty and high school teachers to prepare meaningful presentations on the topic for high school students. The last part of the course will include practice and formal presentations to high school classes.

BIO G 431 Frontiers in Biophysics
Fall. 1/2 credit. S-U grades only. Lec to be arranged. D. Shalloway and staff.

An overview of current research in biophysics at Cornell by faculty from different departments across the university. Designed for undergraduates who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

BIO G 450 Light and Video Microscopy for Biologists
Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lecs: T R 1:25–2:30; lab, R 2:30–4:30. R. O. Wayne.

Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

BIO G 467 Seminar in the History of Biology (also Biology and Society 447, and Science and Technology Studies 447)
Summer (6-week session). 4 credits. Limited to 18 students. S-U grades optional. W. Prunty and staff.

Specific topic changes each year.

BIO G 469 Food, Agriculture, and Society (also Biology and Society 469 and Science and Technology Studies 469)
Spring. 3 credits. Limited to 20 students. Prerequisite: an introductory ecology course or permission of instructor. S-U grades optional. Lecs, T R 1:25–2:40. A. G. Power.

A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

BIO G 498 Teaching Experience
Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students may not count this course toward graduation. They may, however, upon petition to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility, but not eligibility for graduating with distinction. S-U grades optional, with permission of instructor. Hours to be arranged. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently requiring such experience include BIO G 105–106; BIOAP 311, 315, 319; BIOBM 330, 331; BIOES 274, 475; and BIOMI 291, 292.

BIO G 499 Undergraduate Research in Biology
Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 6 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office for Academic Affairs in 200 Stimson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. (Special forms for this purpose are available in the college offices and in 200 Stimson Hall.) Any faculty member in the Division of Biological Sciences may act as a supervisor. Cornell faculty supervisors outside the division are acceptable only if a faculty member of the division agrees to serve as co-supervisor, taking full responsibility for the quality of the work. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours to be arranged. Staff.

Practice in planning, conducting, and reporting independent laboratory and library research projects. Research credits may not be used in completion of the following programs of study: animal physiology; biochemistry; cell biology; ecology and evolutionary biology; and plant biology. Up to 3 credits of research may be used to complete the Program of Studies in general biology and genetics and development, and 4 credits of research in neurobiology and behavior.

BIO G 606 Freeze-Fracture Technique
Spring, weeks 9–14. 1 credit. Primarily for graduate students. Limited to 8 students. Prerequisites: BIO G 403 or equivalent. S-U grades only. Lec, M 10:10; disc to be arranged; labs, M W 1:25–4:25. Fee may be charged. M. V. Parthasarathy.

Principles of freeze-fracturing and freeze-substitution technique, freezing artifacts, and interpretation of images.

BIO G 705 Advanced Immunology Lectures (also Veterinary Microbiology 705)

Coverage at an advanced level of molecular and cellular immunology.

BIO G 706 Immunology of Infectious Diseases and Tumors (also Veterinary Microbiology 719)
Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Next offered spring 2001. Lec, R 10:10–12:05. Coordinator: R. G. Bell.

Coverage at an advanced level of the immunology of diseases caused by selected viruses, protozoa, and helminths, and tumor immunology.

Medicine and Civilization (Biology and Society 332)
Pathogenic Bacteriology and Mycology (Biological Sciences [BIOIM] 404 and Veterinary Microbiology 316)
Viruses and Disease (Biological Sciences [BIOIM] 406 and Veterinary Microbiology 408)

ANIMAL PHYSIOLOGY (BIOAP)
BIOAP 212 Human Physiology for Non-Biology Majors
Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements of any Program of Study in the biological sciences major. Lecs, M W F 1:25; disc, M W F 2:15. Evening prelims: March 4, 1999. P. W. Concannon and staff.

Introduction to the physiology of all major organ systems and the relation of that
Animal behavior and welfare are stressed. Livestock production and their implications for the behavior of production species (avian and mammalian) influences the success of any broad range of living systems from the cellular regulation, and integration common to a mental, and physical capabilities) is discussed. The structural and functional differences between the sexes are examined. Emphasis is given to studies of humans. Current major course in animal physiology emphasizes principles of operation, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves, cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, and rabbits, which are used after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

BIOAP 214 Biological Basis of Sex Differences (also Biology and Society 214 and Women's Studies 214)
Fall. 3 credits. Limited to non-biology majors and freshman, sophomore, and junior biology majors; senior biology majors may register with permission of instructor. Prerequisite: one year of introductory biology. S-U grades optional. Offered alternate years. Lecs, T R 8:30-9:55. J. E. Fortune.

The structural and functional differences between the sexes are examined. Emphasis is given to studies of humans. Current topics include work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by staff of research physiologists and cooperating physicians.

BIOAP 216 Cellular Physiology
Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 332 and 333 or 333. Lecs, M W F 9:05; lab, M or T 1:25-5:00. Evening prelims: Mar. 2, Apr. 8, and May 4. A. Quarone and staff. Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function in vitro and in vivo. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

BIOAP 219 Animal Physiology Experimentation
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lecs, R 12:20, lab, M or W or Th 1:00 (includes disc section). R. A. Corradino.

A series of student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves, cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, and rabbits, which are used after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

BIOAP 316 Cellular Physiology
Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 333. Lecs, M W F 9:05; lab, M or T 1:25-5:00. Evening prelims: Mar. 2, Apr. 8, and May 4. A. Quarone and staff. Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and to immunological techniques used to study cell structure and function in vitro and in vivo. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

BIOAP 319 Animal Physiology Experimentation
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lecs, R 12:20, lab, M or W or Th 1:00 (includes disc section). R. A. Corradino.

A series of student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves, cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, and rabbits, which are used after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

BIOAP 319 Animal Physiology Experimentation
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and related fields without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor. Lecs, R 12:20, lab, M or W or Th 1:00 (includes disc section). R. A. Corradino.

A series of student-conducted in vitro and in vivo experiments designed to illustrate basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.
BIOAP 712 Thermoregulation and Exercise
Fall. 1 credit. Offered alternate years. D. Robertshaw.
An examination of the competing demands on the body of exercise and heat exposure with particular emphasis on the cardiopulmonary system and integration of thermoregulatory reflexes.

BIOAP 713 The Physiological Control Systems That Control Digestive Behavior: Food and Water Intake
Fall. 1 credit. T. R. Houpt.
A variety of species will be considered with emphasis on common mammalian species: rat, dog, goat, pig, horse, and human. A mixed lecture/seminar format will be used.

BIOAP 714 Cardiac Electrophysiology
Fall. 1 credit. Offered alternate years. R. Gilmour.
Survey of cardiac potentials, passive membrane properties, ion channels and cardiac arrhythmias. Emphasis on non-linear dynamical aspects of cardiac electrophysiology and cardiac arrhythmias.

BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent required. Offered alternate years. K. A. Houpt.
The emphasis will be on physiological assessment of stress.

BIOAP 719 Graduate Research in Animal Physiology (also Veterinary Physiology 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours to be arranged. Staff.
Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 757 Current Concepts In Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Offered alternate years. Not offered 1998-99.
A team-taught survey course in reproductive physiology-endocrinology. Lectures by a number of reproductive biologists on various aspects of male reproductive function (endocrine regulation, testis function, spermatogenesis, and sperm physiology/function); female reproductive function (endocrinology, ovarian development and functions, oocyte physiology/function); fertilization and early embryo development; pregnancy; parturition; puberty; and reproductive technology. Student participation in the form of discussions and/or presentations.

BIOAP 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged.
Coordinator: J. Ray.
This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOAP 812 Advanced Physiological Methods II
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged.
Coordinator: J. Ray.
This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 132 Orientation Lectures in Biochemistry
Spring, weeks 1-3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lec, S 10:10-11:00, for first three S of semester. Section chair and staff.
Discussions by six professors about their research and promising areas for research in the future.

BIOBM 233 Introduction to Biomolecular Structure
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207-208 or equivalents. Lecs, T R 2:30-3:20. S. E. Ellick.
This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry.

BIOBM 320 Physics of Life (also Applied and Engineering Physics 320)
Spring. 3 credits. Prerequisites: freshman and sophomore chemistry, physics, math. S-U grades only. Not offered 1998-99.
Lecs, T R 10:10-11:25; lab/field trips/discussions to be arranged. L. Jelinski.
A foundations course for students interested in biophysics and bioengineering.

BIOBM 330-332 Principles of Biochemistry
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture (333) during the summer. Individualized instruction is offered to a maximum of approximately 250 students each semester. Lectures given fall semester (331) and spring semester (332).

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357-358 (CHEM 358 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 341 is encouraged. Not taken for credit after BIOBM 330 or 331, 332, or 333. S-U grades optional for graduate students only. Twelve weeks in June and July. Evening prelims: fall, Oct. and Nov. 5; spring, Mar. 2 and Apr. 8. J. E. Blankenship, N. Campobasso, P. C. Hinkle, and staff.
Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures; autotutorial format; discussion sessions on three research papers on protein structure and function.

BIOBM 332 Principles of Biochemistry: Molecular Biology
Spring. 3 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit
A comprehensive course in molecular biology that covers the structure and properties of DNA, DNA replication and recombination, synthesis and processing of RNA and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

**BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology**
Summer (8-week session). 4 credits. Prerequisites: one year general chemistry and CHEM 257, or 358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S-U grades with permission of instructor. Lecs, M W F 10:00-12:00. H. T. Nivison.

The content of this course is similar to that of BIOBM 330; however, it is presented in lecture format rather than as individualized instruction. The topics include the structure and function of proteins, enzyme catalysis, metabolism, and the replication and expression of genes.

**BIOBM 334 Computer Graphics and Molecular Biology**
Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. If space permits, students who have completed BIOBM 331 and have either taken or are concurrently taking BIOBM 332 will be permitted to register during the first week of classes. Disc to be arranged. J. E. Blankenship, N. Campobasso, P. C. Hinkle, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Student presentations on current topics in molecular biology.

**BIOBM 430 Laboratories in Biochemistry, Molecular, and Cell Biology**
Fall or spring. 2 or 4 credits (students are expected to register for two sections for a total of 4 credits; limited space available for students taking only one section). Enrollment limited. Prerequisites: BIOBM 330, or 331 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, or 333, and permission of instructor. Strongly recommended: BIOGD 281. Form to apply for admission to this course is found on the web (http://www.bio.cornell.edu/biochem/biobm430/signup.html).

**Registration in the course is official only if the form is completed before a student preregisters.** Class assignments are affected by the date the enrollment form is returned. Preference given to undergraduate majors in the Biochemistry or Molecular and Cell Biology Programs of Study. Undergraduate students with a minor in the field of Biochemistry, Molecular and Cell Biology. Labs, M W 12:20-4:25 (disc, F 1:30-2:30) or T 9:05-4:25 (disc, R 1:30-2:30) or R 9:05-4:25 (disc, T 11:20-2:20). Each section is seven weeks during the semester, which sections are offered in each semester depends on scheduling constraints and student preferences.

**Section 01 Experimental Molecular Biology**
2 credits. H. T. Nivison, staff. Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

**Section 02 Experimental Proteins and Enzymology**
2 credits. H. T. Nivison, V. M. Vogt, and staff. Experiments include purification of enzymes by ion exchange chromatography and affinity chromatography, cell culture, purification of an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

**Section 03 Experimental Cell Biology**
Spring only. 2 credits. T. Hufaker. Experiments include culture of animal cells, immunofluorescence microscopy, purification and analysis of yeast cell division cycle mutants.

**BIOBM 432 Survey of Cell Biology**
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent enrollment in 332, or equivalent. S-U grades optional. Lect, M W 8:40-9:50. W. J. Brown and staff. A survey of a wide array of topics focusing on the general properties of eukaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOGD 483, BIOBM 632, 636, and 639.

**BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry (formerly BIOBM 430)**
Spring. 3 credits. Enrollment limited to 36 students with preference given to seniors and students concentrating in biochemistry or molecular and cell biology. Prerequisites: BIOBM 330 or 333 or 332 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, or 333, and permission of instructor. Strongly recommended: BIOGD 281. Form to apply for admission to this course is found on the web (http://www.bio.cornell.edu/biochem/biobm430/signup.html).

**Registration in the course is official only if the form is completed before a student preregisters.** Class assignments are affected by the date the enrollment form is returned. Preference given to undergraduate majors in the Biochemistry or Molecular and Cell Biology Programs of Study. Undergraduate students with a minor in the field of Biochemistry, Molecular and Cell Biology. Labs, M W 12:20-4:25 (disc, F 1:30-2:30) or T 9:05-4:25 (disc, R 1:30-2:30) or R 9:05-4:25 (disc, T 11:20-2:20). Each section is seven weeks during the semester, which sections are offered in each semester depends on scheduling constraints and student preferences.

**Section 01 Experimental Molecular Biology**
2 credits. H. T. Nivison, staff. Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

**Section 02 Experimental Proteins and Enzymology**
2 credits. H. T. Nivison, V. M. Vogt, and staff. Experiments include purification of enzymes by ion exchange chromatography and affinity chromatography, cell culture, purification of an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

**Section 03 Experimental Cell Biology**
Spring only. 2 credits. T. Hufaker. Experiments include culture of animal cells, immunofluorescence microscopy, purification and analysis of yeast cell division cycle mutants.

**BIOBM 432 Survey of Cell Biology**
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent enrollment in 332, or equivalent. S-U grades optional. Lect, M W 8:40-9:50. W. J. Brown and staff. A survey of a wide array of topics focusing on the general properties of eukaryotic cells. The topics include methods used for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-cell communication, gene expression, and oncogenesis. Some of the material is covered in greater depth in BIOBM 437, BIOGD 483, BIOBM 632, 636, and 639.

**BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry (formerly BIOBM 430)**
Spring. 3 credits. Enrollment limited to 36 students with preference given to seniors and students concentrating in biochemistry or molecular and cell biology. Prerequisites: BIOBM 330 or 333 or 332 and organic chemistry. Recommended: physical chemistry: S-U grades optional. Lect, M W 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

**BIOBM 439 Laboratory Research in Biochemistry, Molecular and Cell Biology**
Fall. 4 credits. Limited to 12 students. Prerequisite: BIOBM 430 (formerly 630). Not offered 1998-99. Labs and disc, 12 hours each week to be arranged. B. M. Tyler.

Independent research in an extension of a research laboratory. The student, after reading papers from a specific laboratory and in conjunction with the instructor and laboratory head, formulate a project appropriate to the research in progress. Projects involve state-of-the-art techniques such as construction of expression vectors, purification of recombinant proteins, analysis of protein-nucleic acid interactions, site-directed and random mutagenesis, PCR, two-hybrid screening for interacting proteins, etc. Group meetings are held weekly with members of the research lab.

**BIOBM 631 Protein Structure and Function**
Fall. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332 and organic chemistry. Recommended: physical chemistry: S-U grades optional. Lect, M W 9:05. L. Nicholson.

Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein folding, stability, dynamics and evolution, folded conformations and structure prediction, ligand binding energetics, and the structural basis of catalysis.

**BIOBM 632 Membranes and Bioenergetics**
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Not offered 1998-99. Lecs, T R 11:15. P. C. Hinkle.

Structure and dynamics of biological membranes, physical methods, model membranes, ionophores, ion-transport ATPases, mitochondrial and chloroplast electron transfer chains, and examples of transport from plants, animals, and bacteria. Emphasis given to structure of membrane proteins.
BIOBM 635 Biosynthesis of Macromolecules
Synthesis of DNA, RNA, and proteins, and regulation of gene expression.

BIOBM 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also Nutritional Sciences 635)
Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and CHEM 358 or 360, or permission of instructor. Offered alternate years. Lecs, T R 9:05. M. N. Kazinoff, N. Noy, P. Stover. Molecular mechanisms by which sensory, hormonal, and nutritional inputs cause changes in enzyme activity in order to regulate metabolic transformations. Emphasis is on gene expression, protein modification, and allosteric effects using examples from mammalian systems. Consideration of identification and characterization of regulatory steps in metabolism from both theoretical and practical aspects.

BIOBM 636 Cell Biology
Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, or 432, or their equivalents. Lecs, T 9:05-11:00. A. P. Bretscher.
Lectures covering current topics in cell biology, including a discussion of secretion, endocytosis, membrane-bound organelles, membrane recycling, the cytoskeleton, cell motility, and related topics. Together with BIOBM 475. 652 and 653, this course provides broad coverage of the cell biology subject area.

BIOBM 637 Integration and Coordination of Energy Metabolism (also Nutritional Sciences 636)
Fall. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 or equivalent. Not offered 1998-99. Lecs. Even years to be arranged. W. J. Arion. The elements and dynamics of energy metabolism in humans and higher animals are developed systematically through biochemical characterization of the metabolic components and structure of major tissues and organs. Emphasis is placed on correlations with physiologic functions. Mechanisms that control energy metabolism within individual tissues and coordinate these processes in vivo are analyzed in the contexts of selected physiologic and pathologic stresses.

BIOBM 639 The Nucleus
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Recommended: BIOGD 281. Lec, T R 12:20. J. T. Lisk.
Lectures on topics of eucaryotic gene organization, regulation of gene expression, RNA processing, chromatin structure, the structure and movement of chromosomes, and the architecture of the nucleus. This course covers the structure and function of the nucleus at the molecular and cell biological levels, and together with BIOBM 457, 652 and 656, provides broad coverage of the cell biology subject area.

BIOBM 646 Plant Biochemistry (also BIOPH 648)
Spring. 3 credits. Prerequisites: BIOPH 350 or 353 or 331 and 332, organic chemistry, and a course in plant physiology. Offered alternate years. Not offered 1998-99. Lecs, M W F 9:05. T. G. Owens and staff.
For course description, see BIOPH 648.

BIOBM 649 Protein-Nucleic Acid Interactions (also BIOMI 692)
Spring. 3 credits. Prerequisites: BIOPH 350 or 353 or 331 and 633. Lecs, T R 10:10-11:25. J. D. Helinski.
For course description, see BIOMI 692.

BIOBM 730 Protein NMR Spectroscopy (also Veterinary Pharmacology 730)
Spring. 2 credits. Prerequisites: CHEM 389 or 390 or CHEM 287 and 288 or permission of instructor. S-U grades optional. Lec to be arranged. L. K. Nicholson, R. E. Oswald.
The student acquires the tools necessary for in-depth understanding of multidimensional, multinuclear NMR experiments. Schemes for magnetization, selective excitation, water suppression, decoupling, and others are presented. The application of these techniques to proteins for resonance assignment, structure determination, and dynamics characterization is studied.

BIOBM 732-737 Current Topics in Biophysics
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOPH 350 or 333 or 331 and 332 or equivalent. S-U grades only. Lecs and lab. Special topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

BIOBM 738 Macromolecular Crystallography (also Chemistry 788)
Spring. 3 credits. S-U grades only. Lecs, T R 10:10. D. J. Thiel, S. E. Ealick, J. C. Clardy. Lectures briefly cover the fundamentals of crystallography and focus on methods for determining the 3-dimensional structures of macromolecules. These include crystallization, data collection, multiple isomorphous replacement, molecular replacement, model building, refinement, and structure interpretation.

BIOBM 750 Cancer Cell Biology (also Veterinary Pathology 750)
Spring. 3 credits. Lecs. Prerequisite: permission of instructor. Offered alternate years. Lecs, M W F 10:10. D. J. Thiel, S. E. Ealick, J. C. Clardy. Each student presents one seminar per year on his or her thesis research and then meets with instructors and thesis committee members for evaluation.

BIOBM 751 Ethical Issues and Professional Responsibilities (also Toxicology 751 and Science and Technology Studies 751)
Spring. 2 credits. Limited to graduate students beyond first year. S-U grades only. Sem, W 2:30-4:15. Additional sections may be offered. Organizational meeting will be held on Wednesday, Jan. 27, 2:30 P.M., in 180 Biotechnology Building. J. M. Fessenden MacDonald.
Ethical issues in research and the professional responsibilities of scientists are discussed in a case-study format. Topics to be discussed include regulations; data selection, manipulation, and representation; fraud, misconduct, and whistle-blowing; conflicts of interest and commitment; authorship, ownership, and intellectual properties; peer review and confidentiality; scientific response to external pressure; legal liabilities; and professional codes of ethics.

BIOBM 830 Biochemistry Seminar
Fall or spring. No credit. Sem, F 4:00. Staff. Lectures on current research in biochemistry, presented by distinguished visitors and staff members. Lectures are open to everyone, but registration is limited to graduate students in Biochemistry, Molecular and Cell Biology.

BIOBM 831 Advanced Biochemical Methods I
Fall. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades optional. Labs and discs, 12 hours each week to be arranged. Organizational meeting first R of semester, 10:10. V. M. Vogt and staff. This course emphasizes experimental design and the concepts implicit in current approaches to research in biochemistry and cell biology. Students are required to read papers and participate actively in discussions in order to design their own protocols before performing experiments using the techniques most common in the recent literature of these fields.

BIOBM 832 Advanced Biochemical Methods II
Spring. 6 credits. Limited to graduate students majoring in biochemistry. S-U grades only. Lab to be arranged. Staff. Research in the laboratories of two or three different professors during the year. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.

BIOBM 833 Research Seminar in Biochemistry
Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, second-, third-, and fourth-year graduate students majoring in biochemistry. S-U grades only. Sem, M 12:20-1:30. T. C. Hufsker, W. J. Brown, J. T. Isi. Arrangements are made jointly between the Director of Graduate Studies and the research adviser.
ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOES)

BIOES 154 The Sea: An Introduction to Oceanography (also Geological Sciences 104)
Spring. 3 or 4 credits (4-credit option includes one 2-hour laboratory each week). S-U grades optional. Lecs, T R 11:40-12:55; labs, M or W 2:00-4:25, or M 7:30-9:55 p.m. C. H. Greene, W. M. White.
A survey of the physics, chemistry, geography, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

BIOES 261 Ecology and the Environment
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. Evening prelims: Sept. 29 and Nov. 3. T. E. Dawson, R. B. Root.
An introduction to the science of ecology, the study of interactions between organisms and their environments. Major topics include demography, succession, biodiversity, biogeography, and ecosystems, and the evolution of adaptations. The influences of enemies, competitors, and mutualists on populations and communities are discussed. The effects of climate and human activities on ecological processes are also considered. Ecological principles are used to explain the issues associated with several environmental problems.

BIOES 263 Field Ecology
Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 261. Lecs, R 1:25; lab, F 12:20-5:00; 1 weekend field trip to the Hudson Valley. R. B. Root.
Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, sampling plankton, and use of scientific collections.

BIOES 264 Birds in Biology, Lectures
Fall. 2 credits. May not be taken for credit after BIOES 475. Intended for students with no background in biology. S-U grades optional. Lecs, W F 9:05. A. A. Dhandon. Using birds as a starting point, this course aims at bringing exciting new insights in bird biology to non-majors. Bird research has often generated new insights in the biological sciences. Studies from anomalies on birds, a number of topics from a variety of biological disciplines can be addressed. These include problems from behavioral ecology (mating systems, sperm competition, extra-pair paternity, territorial behavior, song), from population ecology (population dynamics, micro-evolution, competition), from evolutionary biology (trade-offs in life history theory, optimal clutch size) and from conservation biology (biodiversity, habitat fragmentation, inbreeding).

BIOES 266 Birds in Biology, Laboratory
Fall. 1 credit. Limited to 40 students. Intended for students with no background in biology. Prerequisite: concurrent enrollment in BIOES 264. S-U grades optional. Lab, F 1:25-4:25; some all-day field trips to be arranged on Saturday. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. A. A. Dhandon. Laboratories supplement the lecture course and provide hands-on experience. Laboratories include field trips, some field-research experience, and work in the Cornell bird collections.

BIOES 267 Introduction to Conservation Biology
Fall. 3 credits. May not be taken for credit after NRTES 450. Intended for both science and non-science majors. Completion of BIOES 267 is not required for NRTES 450. S-U grades optional. Lecs, M W F 9:05; disc, F 9:05. A. S. Flecker, J. W. Fitzpatrick.
An exploration of biological concepts related to conserving the Earth's biodiversity, introducing ecological and evolutionary principles in understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.

BIOES 274 The Vertebrates: Structure, Function, and Evolution
An introductory course in vertebrate organismal biology which explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures will cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOES 275 Human Biology and Evolution (also Anthropology 275 and Nutritional Sciences 275)
Fall. 3 credits. S-U grades optional, with permission of either instructor. Offered alternate years. Lecs, W F 10:10; lab, M 10:10. K. A. R. Kennedy, J. D. Haas.
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covering the complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses. Topics such as creationism, the Piltdown fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOES 276 Evolutionary Biology
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week; limited to 20 students. Lecs, W F 10:10; lab, M 10:10; students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 500 students. Prerequisite: one year introductory biology or permission of instructor. S-U grades optional. Lecs, T R 9:05; disc, 1 hour each week to be arranged. Evening prelims: fall, Sept. 24 and Nov. 12, spring, Feb. 25 and Apr. 6. Fall, A. S. Kondrashov; spring, M. Shulman. The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

BIOES 277 Human Paleontology (also Anthropology 371)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Offered alternate years. Not offered 1998-99. Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. K. A. R. Kennedy.
A broad survey of the fossil evidence for human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, dating methods, archaeological associations, and current theories of human origins and physical diversity.

BIOES 371 Biology of the Marine Invertebrates
An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Shools field trip is an excellent opportunity to study representatives of most of the major phyla in their natural habitat. Laboratory demonstrations on campus involve live marine and freshwater invertebrates.

**BIOES 452 Herbivores and Plants:**
*Chemical Ecology and Coevolution (also Entomology 452)*
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Offered alternate years. Lecs. M W F 11:15. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. P. P. Feeny. Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; hypothesis for ecologic patterns of resistance and attack; and implications for human food and agriculture.

**BIOES 455 Insect Ecology (also Entomology 455)**
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTO 101 or knowledge of another taxon. S-U grades optional. Offered alternate years. Not offered 1998-99. Lecs, M W F 11:15. R. B. Root. Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

**BIOES 456 Stream Ecology (also Entomology 456 and Natural Resources 466)**
Spring. 4 credits. Recommended: BIOES 261. S-U grades optional. Offered alternate years. Lecs, T R 9:05-10:05, labs, T W or R 1:25-2:25. Field project with lab papers. B. L. Peckarsky, M. B. Bain. Lecture: addresses the patterns and processes occurring in stream ecosystems, including channel formation; water chemistry; watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics, colonization and succession; community dynamics; conservation; and the impacts of disturbances. Lab: a field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessment.

**BIOES 457 Limnology: Ecology of Lakes, Lectures**
Fall. 3 credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Offered alternate years. BIOES 261, Fall 1998-99. Lecs. M W F 11:15. N. G. Hairston, Jr. The study of continental waters, with emphasis on lakes and ponds. Factors regulating nutrient cycling processes, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

**BIOES 459 Limnology: Ecology of Lakes, Laboratory**
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Offered alternate years. Not offered 1998-99. Lab, T W or R 1:25-4:25; 1 weekend field trip. Fee, $10. N. G. Hairston, Jr. and staff. Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip.

**BIOES 461 Population and Evolutionary Ecology**
Spring. 4 credits. Prerequisites: BIOES 261 or 278 plus two semesters of calculus, or permission of instructor. S-U grades optional. Offered alternate years. Lecs. M W F 1:25-2:25. D. W. Winkler, A. S. Kondrashov. Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; evolution; and sex, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

**BIOES 462 Marine Ecological Processes (also Geologic Sciences 462)**
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Offered alternate years. Lecs and disc. M W F 10:10. C. D. Havell, C. H. Greene. Lectures and discussion focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of organismal, population, community, ecosystems, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

**BIOES 463 Plant Ecology and Population Biology, Lectures**
Fall. 3 credits. Prerequisite: BIOES 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOES 465. Offered alternate years. Lecs. M W F 11:15. P. L. Marks. This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

**BIOES 464 Macroevolution**
Spring. 4 credits. Limited to 25 students. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1998-99. Lecs, T R 10:10-11:25; disc, 1 hour each week to be arranged. A. R. McCune. An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origins and fate of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involve data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

**BIOES 465 Plant Ecology and Population Biology, Laboratory**
Fall. 1 credit. Prerequisite: concurrent enrollment in BIOES 463. Offered alternate years. Lab, F 1:25-5:00. P. L. Marks. Field and laboratory exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

**BIOES 466 Physiological Plant Ecology, Lectures**
Spring. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1998-99. Lecs. M W 8:40-9:55; optional disc to be arranged. T. E. Dawson. A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition; allocation; photosynthesis; carbon and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history and evolution; the evolution of physiological performance; and physiology at the population and community and ecosystem levels. Readings draw from the primary literature and textbooks.

**BIOES 467 Physiological Plant Ecology, Laboratory**
Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Offered alternate years. Not offered 1998-99. Lab, W 1:25-4:25, plus additional lab hours to be arranged. T. E. Dawson. A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratories apply physiological techniques to specific ecological problems and cover aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/week in additional lab time for this course.

**BIOES 471 Mammalogy**
required. Carpooling to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee: $15. Staff.

Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systematics, ecology, and natural history of mammals of the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.]

BIOES 472 Herpetology
Spring. 4 credits. Limited to 35 students. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Lecs. T R 12:20-3:45. labs. T R 1:25-4:25; occasional field trips and special projects. Fee: $30. Weekly guest lectures. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

BIOES 473 Ecology of Agricultural Systems (also Soil, Crop, and Atmospheric Sciences 473)
Fall. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or permission of instructor. Offered alternate years. Lecs and dises, T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:00 because of field trips. A. G. Power, F. C. M. Benjamin.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intraguild competition, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

BIOES 474 Laboratory and Field Methods in Human Biology (also Anthropology 474)
Spring. 5 credits. Limited to 16 students with permission of instructor obtained by preregistering in E231 Corson. Prerequisite: one year of introductory biology or ANTH 101 or permission of instructor. Offered alternate years. Lecs and labs, T R 10:10-12:05; additional hours to be arranged. Independent research project required. K. A. R. Kennedy.

Practical exercises and demonstrations of modern approaches to the methodology of biological anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal subjects, paleoecology, prehistoric nutrition, and relevant field techniques for the archaeologist and forensic anthropologist.

BIOES 475 Ornithology
Fall. 4 credits. Limited to 30 students, with permission of instructor obtained by preregistering in E241 Corson. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Offered alternate years. Lecs. T R 12:20-4:25; occasional field trips and special projects. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee: $15. J. D. Winkler. Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

BIOES 476 Biology of Fishes
Fall. 4 credits. Limited to 24 students. Recommended: BIOES 274 or equivalent experience in systematics. S-U grades optional, with permission of instructor. Offered alternate years. Lecs. M W F 10:10; lab. M 1:25-4:25. A small lab fee may be required. A. R. McCune.

An introduction to the classification, morphology, and behavior of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

BIOES 478 Ecosystem Biology
Spring. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grades optional. Offered alternate years. Note: offered 1998-99. Interested seniors or juniors should contact L. O. Hedin for advice on alternate offerings. Lecs and dises, T R 10:10-12:05. L. O. Hedin, R. W. Howarth.

Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of anthropogenic effects on ecosystems: acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental changes from an ecosystem perspective.

BIOES 479 Paleobiology (also Geological Sciences 479)
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 274, GEOl 375, BIOES 373, or permission of instructor. S-U grades optional. Offered alternate years. Lecs. M W F 12:20. W. Allmon.

A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

BIOES 660 Field Studies in Ecology and Systematics
Fall or spring. Variable credit. Prerequisites: BIOES 274. S-U grades optional, with permission of instructor. S-U grades optional, with permission of instructor. Lecs and field trips to be arranged. Estimated costs: to be announced. Staff.

This course provides students with opportunities to learn field techniques and new biotas by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on campus are devoted to orientation and reports on completed projects.

[Section 01: Life Histories of Marine and Freshwater Invertebrates]
Fall. 2 credits. Prerequisite: Undergraduates must have previous experience or course work with marine or freshwater invertebrates. Offered alternate years. Note: offered 1998-99. Two extended weekend field trips in early September and October. Fee: $100 (to help cover transportation and housing at Shoals Marine Lab).

C. D. Harvell, N. G. Hairston, Jr.

Field trips to the Shoals Marine Lab and Shackelton Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.

[Section 02: Graduate Field Course in Ecology]
Spring. 3 credits. Restricted to graduate students. Offered alternate years. Not offered 1998-99. A fee will be required to help cover food and lodging for trip to Florida. P. L. Marks, R. B. Root.

The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.

BIOES 661 Environmental Policy
(also ALS 661 and Biology and Society 461)
Fall and spring. 3 credits each term. Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. (Seniors and grad students only). S-U grades optional.

This course uses an interdisciplinary approach to focus on complex environmental problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

BIOES 663 Theoretical Population Genetics
Fall. 3 credits. Prerequisites: knowledge of basic population genetics (e.g., BIOGD 481), and some mathematics (e.g., MATH 111). Primarily for graduate students; permission of instructor required for undergraduates. S-U grades optional. Offered alternate years. Lec. 2 hours each week to be arranged (labs are supervised), 5 hours each week to be arranged.

A. S. Kondrashov.

Theoretical population genetics (TPG) is one of the areas of current evolutionary biology. The course explains why TPG is successful in its domain and what its limitations are. Students analyze the effects of seven elementary factors of population dynamics (mutation, selection, drift, migration, segregation, recombination, and non-random segregation).
BIOLOGICAL SCIENCES - 1998-1999

150

mat ing). Consideration of biologically relevant situations when several factors act simultaneously (migration-drift, mutation-selection-drift, segregation-recombination-selection, etc.) leads to studying the changes of not only the population state, but of the "rules of the game" themselves (evolution of reproductive isolation, life history, recombination, mutability, etc.). Students study in detail several topics of general biological interest (maintenance of quantitative variability, evolution of aging, and sexual selection). Active use of computers in analyzing the models, but no formal training in programming required.

**[BIOES 668 Principles of Biogeochemistry]**

A seminar course on advanced topics in freshwater ecology.

**[BIOES 669 Plant Ecology Seminar]**

Spring. 1 credit. May be repeated for credit. Suggested for students majoring or minoring in plant ecology. S-U grades optional. Sem to be arranged. Not offered 1998-99. Staff.

Includes review of current literature, student research, and selected topics of interest to participants.

**[BIOES 670 Graduate Seminar In Vertebrate Biology]**

Fall or spring. 1 credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. T. E. Dawson and staff.

Discussion of topics on water balance, energetics, and temperature regulation emphasize parallels and contrasts in the relations of animals and plants to their biophysical environments. Readings are taken from the primary literature and are biophysical, ecological, and evolutionary in scope. Each student leads a discussion and prepares a written review of a topic, drawing on the primary literature of his or her own research interests.

**[BIOES 673 Human Evolution: Concepts, History and Theory (also Anthropology 673)]**

Fall. 3 credits. Prerequisite: one year of introductory biology, ANTHR 101, or permission of instructor. Offered alternate years. Lec, M 2:30; sem and disc, W 7:30–9:30 p.m. K. A. R. Kennedy.

The historical background of present-day concepts of human evolutionary variations and adaptations in space and time is surveyed. The formation of biological anthropology as an area of scientific inquiry within the social and biological sciences is reviewed. Students select their own topics within a broad range of readings in the history of Western concepts of human origins, diversity, and place in nature.

**[BIOES 760 Special Topics in Evolution and Ecology]**

Fall or spring. 1–3 credits. May be repeated for credit. Enrollment limited. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. Independent or group intensive study of special topics of current interest. Content varies and is arranged between student and staff member.

**[BIOES 763 Workshop in Biogeochemistry]**

Fall or spring. 1 credit. Limited to 15 students. Prerequisite: BIOES 668. S-U grades only. Workshop and disc, TBA. Staff.

Provides a workshop-forum in which graduate students interact with invited world-leaders in biogeochemistry. Workshop topics will change each semester. A one-week workshop will be preceded by seven, one-hour preparatory discussions of readings.

**[BIOES 767 Current Topics in Ecology and Evolutionary Biology]**

Fall. 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lecs and disc, T R 10:10–12:05; 1 weekend field trip. Staff. Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

**Related Courses in Other Departments**

- Advanced Soil Microbiology (Soil, Crop, and Atmospheric Sciences 666)
- Animal Social Behavior (Biological Sciences [BION] 427)
- Early People: The Archaeological and Fossil Record (Anthropology 203 and Archaeology 203)
- Evolution of the Earth and Life (Biological Sciences [BIO G] 170 and Geological Sciences 102)
- Marine Sciences Courses (Biological Sciences [BIOSM] 363–370, 477)

**KINGDOMS AND DEVELOPMENT (BIOGD)**

**BIOGD 184 Understanding Genetics**

Spring. 3 credits. May not be taken for credit after BIOGD 281 or 282.

This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences. This course may not be used to fulfill the requirements for any Program of Study in the biological sciences major. S-U grades optional. Offered alternate years. Lecs, M W F 2:30. T. D. Fox.

An introduction to genetics for students majoring in fields other than biology. Genetics is a rapidly developing science that is providing insight into all aspects of biology and practical tools which increasingly affect our lives. The course shows how major conclusions about inheritance have been derived from the experimental evidence, drawing on examples from the biology of humans, other animals, plants, fungi, and bacteria. It also illustrates current and future applications of genetic discoveries. For example, the basic principles of inheritance, in conjunction with methods for the isolation and detection of specific gene fragments, is used to understand the detection of genetic diseases and the identification of individuals (DNA fingerprinting). Other topics to be covered include the origin of mutations, use of genetic methods to alter the properties of organisms and the influence of inheritance on behavior.

**BIOGD 281 Genetics**

Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Lecs, T R 10:10–12:05; lab, T W or F 2:30–4:25; additional hours to be arranged. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Problem-solving sessions strongly recommended, T or W 8:30–9:45 (additional session to be arranged if necessary). P. J. Banks, T. D. Fox, M. L. Goldberg, R. J. MacIntyre.

A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and Mathematical Ecology (Biometry and Statistics 662)
Related Courses in Entomology (Entomology 212, 331, 332, 370, 453, 471, 631, 634, 672)
Related Courses in Natural Resources (Natural Resources 301, 302, 418, 450, 498)
Taxonomy of Vascular Plants (Biological Sciences [BIOP] 248)
Teaching Experience (Biological Sciences [BIO G] 498)
Undergraduate Research in Biology (Biological Sciences [BIO G] 499)
Undergraduate Seminar in Biology (Biological Sciences [BIO G] 400)
extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed.

In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

**BIOGD 282 Human Genetics**
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent; permission of instructor required for students who have taken BIOGD 281. S-U grades optional. Lecs, M W 10:10; disc, R 10:10 or 11:15. R. A. Calvo. A course designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and legal implications of modern genetics that are discussed in section meetings.

**BIOGD 385 Developmental Biology**
Fall. 3 credits. Prerequisite: BIOGD 281. Lecs, M W F 11:15. A. W. Blackler. An introduction to the morphogenetic cellular and genetic aspects of the developmental biology of animals.

**BIOGD 387 Developmental Aspects of Evolution**
Fall. 2 credits. Prerequisite: BIOGD 281. S-U grades optional. Not offered 1998-99. Lecs, T R 10-12; labs, T or R 2-4:25. A. W. Blackler. A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

**BIOGD 489 Seminar in Developmental Biology**
Spring. 1 credit. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOGD 281. S-U grades only. Not offered 1998-99. See to be arranged. Staff.

**BIOGD 481 Population Genetics**
Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Not offered 1998-99. Lecs, M W F 10-12; disc, M 2:30 or T 1-2:15. C. F. Aquadro. Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and inbreeding, genetic drift, migration and population structure, mutation, multilocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

**BIOGD 486 Human Genetics and Society**
Fall 3 credits. Prerequisite: limited to 24 senior biological sciences majors, with preference given to students studying genetics and development. Prerequisites: BIOGD 281 and BIOBM 330 or 331 and 332, and written permission of instructor. S-U grades optional. Disc, T 3:30-4:25 and R 2:30-3:30. R. A. Calvo. Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are new reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, preconception, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and therapy for genetic diseases. Students lead most discussions. There is a major writing component in the course.

**BIOGD 483 Molecular Aspects of Development**
Spring. 3 credits. Prerequisites: BIOGD 281; BIOBM 332 (preferred) or 330 or 333; and BIOGD 385. Offered alternate years. Lecs, T 2:30-4:00. M. F. Wolfner. An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular events such as cell-cell communication. Numerous developmental systems are discussed and analyzed in microorganisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice and humans. Course readings include original research articles. Discussion emphasizes specific experiments and approaches, results and their interpretation.

**BIOGD 484 Molecular Evolution**
Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Offered alternate years. Not offered 1998-99. Lecs, T R 1:15-3:15. R. J. MacIntyre. An analysis of evolutionary changes in proteins and nucleic acids. Theories on the evolution of the genetic code and the construction of phylogenetic trees from biochemical data are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes.

**BIOGD 485 Bacterial Genetics (also BIOI 485)**
Fall. 2 credits. Graduate students. see BIOI 485. Prerequisites: BIOGD 281. Recommended: BIOI 290 and BIOBM 330 or 331 and 332. Lecs, W 7:30-9:25 p.m. Staff. For course description, see BIOI 485.

**BIOGD 486 Advanced Eukaryotic Genetics**
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOBM 330 or 335 or 331 and 332. S-U grades optional. Lecs, T 12:20-2:15 and R 12:20-2:10; disc R 1:25-2:15 or F 1:15-2:15. E. F. Alani.

The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as cellcycle control, meiotic recombination, and then the basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, chromosome organization, and protein trafficking.

**BIOGD 682 Fortification and the Early Embryo**
Spring. 2 credits. Prerequisites: BIOGD 281, BIOBM 332 (preferred), 330 or 333; and BIOGD 385. Offered alternate years. Not offered 1998-99. Next offered spring 2000. Lec, R 2:30-4:25. M. P. Wolfner. This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-gastrulation embryos from several animal species. Topics include fertilization, pre-nuclear fusion, triggering mitosis, cleavage divisions, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture, and midblastula transition.

**BIOGD 684 Advanced Topics in Population Genetics**
Spring. 2 credits. Limited to 20 students. Prerequisites: BIOGD 481 or equivalent and written permission of instructor. S-U grades optional. Offered alternate years. Lec, T 2:30-4:25. C. F. Aquadro. An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

**BIOGD 685 Advanced Bacterial Genetics (BIOMI 485)**
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 230 or equivalent. Not offered 1998-99. Lec, W 7:30-9:25; disc, R 10:10-11:00. Staff. For course description, see BIOMI 685.

**BIOGD 687 Developmental Genetics**
Fall. 2 credits. Limited to 20 students. Prerequisites: BIOGD 281 and 385 or their equivalents. S-U grades optional. Offered alternate years. Lec to be arranged. K. J. Kemphues.

Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mouse and fish. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sexual determination, and intercellular communication. Students read
current literature and are encouraged to discuss each topic in class.

**BIOGD 780 Current Topics in Genetics**
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students, with preference given to majors in the Field of Genetics; written permission of instructor required for undergraduates. Limited to 20 students. No auditors. S-U grades optional, with permission of instructor. Semester to be arranged. Staff.

A seminar course with critical presentation and discussion by students of original research papers in a particular area of current interest. Content of the course and staff direction vary each year and are announced a semester in advance.

**BIOGD 781 Problems in Genetics and Development**
Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc to be arranged. Staff.

An introduction to the research literature in selected areas through weekly problem sets and discussions.

**BIOGD 782-783 Current Genetics/Development Topics**
Spring. 1/2 or 1 credit for each topic. May be repeated for credit. S-U grades only. Lectures and seminars on specialized topics to be announced. Staff.

**BIOGD 786 Research Seminar in Genetics and Development**
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Semester, W 12:20-1:30. Staff.

Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

**BIOGD 787 Seminar in Genetics and Development**
Fall and spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Semester, M 4-5:00. Staff.

A seminar course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaebacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

**BIOGD 789 Seminar in Genetics and Development**
Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Semester, W 12:20-1:30. Staff.

A course in microbiology that illustrates basic and advanced principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology, 2) physiology, 3) genetics, and 4) structure and function. Students are encouraged to take this course during their third year of study.

**BIOMI 192 Microorganisms on the Planet Earth**

A course in microbiology designed to introduce students, who have a limited background in science, to the microorganisms that populate our planet earth. Among the microorganisms studied are the bacteria, the archaebacteria, some of the single-celled plants and animals, and the viruses. Topics covered are the basic nature of microorganisms, their evolution on earth, their composition and growth, their role in the ecology of this planet, their role in human history and disease, and their use in bioengineering. This course is not a prerequisite for advanced courses in microbiology.

**BIOMI 290 General Microbiology Lectures**
Fall, spring, or summer (6-week session). 2 or 3 credits (2 credits if taken after BIOMI 192). Prerequisites: one year of introductory biology for majors and one year of college chemistry, or equivalent. Recommended: completion of registration in BIOMI 291. Lectures, M W F 11:15. Staff.

A comprehensive overview of the biology of microorganisms, with emphasis on bacteria. Topics include microbial cell structure and function, physiology, metabolism, and genetics, diversity, and ecology. Applied aspects of microbiology are also covered such as biotechnology, the role of microorganisms in environmental processes, and immunology and medical microbiology.

**BIOMI 291 General Microbiology Laboratory**
Fall or spring. 2 credits. Summer (6-week session), 2 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Lectures, F 10:10 or 12:20; labs, M W 12:20-2:15 or 2:30-4:25, T R 10:10-12:05, 12:20-2:15, or 2:30-4:25. C. M. Reihkugler.

A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

**BIOMI 292 General Microbiology Discussion**
Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Disc to be arranged. C. M. Reihkugler.

A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

**BIOMI 300 Seminar in Microbiology**
Spring. 1 credit. Required of all biology students in the microbiology program of study. Strongly recommended for students considering the microbiology program of study. S-U grades only. Semester, W 12:20. Staff.

A series of lectures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on the Cornell campus.

**BIOMI 391 Advanced Microbiology Laboratory**

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology, 2) physiology, 3) genetics, and 4) structure and function. Students are encouraged to take this course during their third year of study.

**BIOMI 392 Environmental Microbiology**
Spring. 3 credits. Prerequisites: BIOMI 290 or SCAS 260 or permission of instructor. Lectures, M W F 10:10. W. C. Ghiorse.

The biology, behavior, diversity, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elementary cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

**BIOMI 404 Pathogenic Bacteriology and Mycology**
Spring. 2 or 3 credits (3 credits with permission of instructor). Prerequisites: BIOMI 290 or SCAS 260 or permission of instructor. Lectures, M W F 1:25. E. E. Farber, E. P. Tullson.

This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality, interactions of host, pathogen and environment, including immunity to bacteria and fungi; and principles of antimicrobial chemotherapeutics and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular level.

**BIOMI 406 Clinical Microbiology**
Fall and spring. 15 credits each semester. Prerequisite: permission of instructor. Hours to be arranged. R. P. Mortlock.

A seminar and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis is on developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of...
with emphasis on virus-host interactions, August of the student's senior year.

BIOMI 408 Viruses and Disease I (also Veterinary Microbiology 417)
Spring. 3 credits. Prerequisites: BIOMI 290, 291, BIOG 305; and permission of instructor.
Lecs, M W 7:30 p.m. J. Casey.
The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

BIOMI 409 Viruses and Disease II (also VETMI 408)
Fall. 2 credits. Prerequisites: BIOMI 290 & 291. Recommended, BIOMI 408, BIOMI 330-332, BIOMI 432. Offered alternate years.
Lecs, W 7-9:00 p.m. G. Whittaker.
This course will be complementary to BIOMI 408, Viruses and Disease I, and will emphasize RNA viruses. The course will be complete in its own right. As such, completion of BIOMI 408 is not a requirement, but is encouraged. The structure and classification of viruses entry, genome replication and virus assembly. Particular emphasis will be placed on virus-host cell interactions. Vaccinations, chemotherapy and evaluation of viruses will also be discussed.

BIOMI 415 Bacterial Diversity
Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Lecs, M W F 11:15. S. H. Zinder.
A consideration of the physiology, ecology, genetics, and practical potential of important groups of bacteria. Topics include molecular methods for determining bacterial phylogeny and taxonomy, the evolution of diverse mechanisms of energy conservation, fixation of carbon and nitrogen, and adaptation to extreme environments.

BIOMI 416 Bacterial Physiology
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333, or their equivalents.
Lecs, M W F 11:15. J. P. Shapleigh.
The concern is with the physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

BIOMI 417 Medical Parasitology (also Veterinary Microbiology, Immunology and Parasitology 431)
Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Offered alternate years.
A systematic study of anthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

BIOMI 485 Bacterial Genetics
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIOMI 281. Recommended: BIOMI 290 and BIOMI 330 or 331 and 332 or 333. Lecs, W 7:30-9:25 p.m. S. Zahler.
Concepts and principles of formal genetic analysis as applied to prokaryotes and their viruses. Topics include mutagenesis and isolation of mutants, genetic exchange; recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation; and genetics of bacterial pathogenesis.

BIOMI 652 (Section 03) Molecular Plant-Microbe Interactions (BIOPH 652, Sec 03)
Spring. 1 credit. Prerequisites: BIOMI 281, BIOMI 330 or 331 or 333, and BIOPH 653 (section 01) or their equivalents. S-U grades optional. Lecs, M W F 10:10 (12 lecs) first third of semester. S. C. Winans.
For course description, see BIOPH 652, Sec 03.

BIOMI 685 Advanced Bacterial Genetics
Fall. 2 credits. Limited to graduate students; see BIOMI 485. Prerequisites: BIOMI 281 or equivalent, BIOMI 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Not offered 1998-99.
Lec, W 7:30-9:25 p.m.; disc to be arranged.
Staff.
Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Lectures and some written assignments are shared with BIOMI 485; advanced topics from the primary literature are critically evaluated in the discussion.

BIOMI 692 Protein-Nucleic Acid Interactions
Spring. 3 credits. Prerequisites: BIOMI 330 or 331 and 633. Lecs, T R 10:10-11:25. J. D. Helmkan.
The physical and chemical bases of protein-nucleic acid interactions are explored including both theory and specific examples. Proteins considered include bacterial non-specific and sequence specific DNA and RNA binding proteins, nucleic acid polymerases, recombines, topoisomerases, DNA repair enzymes, and nucleases.

BIOMI 694 Genetics of Diverse Bacteria
Spring. 3 credits. Prerequisite: BIOMI 485 or equivalent.
Lecs, M W 2:30-3:45.
Staff.
Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.

BIOMI 791 Advanced Topics in Bacterial Genetics
Fall or spring. 1 credit. May be repeated for credit.
Prerequisite: graduate standing in microbiology. S-U grades only.
Disc, T 4-5:00. S. C. Winans.
Discussion and critical evaluation of selections from the contemporary literature in bacterial genetics and molecular biology.

BIOMI 795-796 Current Topics in Microbiology
Fall. 795; spring. 796. 1/2 or 1 credit for each topic. May be repeated for credit.
Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only.
Lecs to be arranged. Staff.
Lectures and seminars on special topics in microbiology.

BIOMI 797 Graduate Seminar in Microbiology
Fall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students are expected to lead discussions on recent primary literature in microbiology. S-U grades only. Sem to be arranged. Staff.

BIOMI 799 Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. Sem to be arranged. Staff.
A seminar relating to the research activities of those enrolled. Students who have completed the BIOMI 797 series requirement are required to present a seminar concerning their research interests and activities at least once each year.

Introduction to Scanning Electron Microscopy (Biological Sciences [BIO G] 401)
NEUROBIOLOGY AND BEHAVIOR (BIONB)

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits (4 credits with one discussion per week; 5 credits with two discussions per week and participation in the Writing in the Majors program). 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each 4-credit discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 15 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisite: one year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lecs, M W F 12:20, disc to be arranged. T. D. Seeley and staff.

A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3-4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: one year of introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lecs, M W F 12:20; disc to be arranged. R. Booker and staff.

A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neurotransmission, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIONB 223 Hormones and Behavior (also Psychology 232)
Spring. 3 credits; two lectures plus a section in which students will read and discuss original papers in the field, give an oral presentation, and write a term paper. Limited to juniors and seniors.

Prerequisites: PSYCH 223, BIONB 221 or 222 or one year of introductory biology plus a course in psychology. S-U grades optional. Lec M W F 11:15. E. Adkins-Regan.

A major focus of the course will be comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also included will be hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

BIONB 324 Biopsychology Laboratory (also Psychology 324)
Fall. 4 credits. Limited to 20 upperclass students. Prerequisite: laboratory experience in biology or psychology. BIONB 221 and 222 or PSYCH 123 and 222; and permission of instructor. Labs, T R 1:25-4:25. Staff.

Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

BIONB 325 Neurodeases—Molecular Aspects
Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOBM 330, or 331; co-registration in one of the two is required. S-U grades optional. Lecs, T R 9-9:50; disc, T 1:30 or 2:30. T. R. Podleski.

The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodeases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer’s, Huntington’s, color blindness, affective disorders, disorders affecting ion channels, and muscular dystrophies. In addition to the molecular studies, when appropriate, time is devoted to discussions of other aspects of the diseases. Emphasis is placed on how these studies provide a useful approach to studying the nervous system by exposing the functions of genes that would be difficult to identify in other ways.

BIONB 326 The Visual System
Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Offered alternate years. Lecs, M W F 10-10; disc, 1 hour each week to be arranged. Not offered 1998-99. H. C. Howland.

The visual systems of vertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology, structure and function of higher visual centers, and ocular development.

BIONB 328 Biopsychology of Learning and Memory (also Psychology 332)
Spring. 3 credits. Prerequisites: one year of biological and biopsychology or BIONB 222. Lecs, M W F 11:15. T. DeVoogd.

This course surveys the approaches that have been or are currently being used in order to understand the processes involved in learning and memory. Topics include invertebrate, “simple system” approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

BIONB 392 Drugs and the Brain

An introduction to neuropharmacology. After a brief introduction to pharmacology, there is discussion of the major neurotransmitter families. Topics include the biological actions of the major psychoactive drugs on the brain, including cocaine, amphetamines, alcohol, psychedelics, marijuana, antidepressants and antipsychotics.

BIONB 396 Introduction to Sensory Systems (also Psychology 396 and 696)
Spring. 3 or 4 credits (4 credits with term paper). Registration for the 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or biopsychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Offered alternate years. Lecs, M W F 10:10. B. P. Halpem.

This course is taught using the Socratic method, in which the instructor asks questions of the students. There are two preliminary exams and a final exam. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory systems and auditory, visual, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. Two or more textbooks, and a course packet of reproduced articles are used. At the level of An Introduction to the Physiology of Hearing, 2nd edition, by J. O. Pickles; Physiological acoustics, neural coding, and psychoacoustics, by W. L. Gulick, G. A. Gescheider, and R. D. Frisina; The Retina: An Approachable Part of the Brain, by J. E. Dowling, Handbook of Physiology—The Nervous System. III. Sensory Processes, edited by J. M. Brookhart and V. B. Mountcastle.

BIONB 420 Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. To be arranged. Staff.

Courses on selected topics in neurobiology and behavior; can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division’s catalog supplement issued at the beginning of the semester.
A literature-based examination of post-somatic, chemosensory, visual and structural, and physiological characteristics of maturation changes in the perceptual, auditory systems. Emphasis is on human data, having already done, and thought about, the assigned readings. Use of e-mail and the internet are integral parts of the course.

BIONB 421 Effects of Aging on Sensory Perception (also Psychology 431 and 631)
Fall. 3 or 4 credits (4 credits with term paper). Limited to 25 students. Prerequisites: one course in biology or psychology, plus a second course in perception, neurobiology, cognition, or biopsychology. No auditors. S-U grades optional. Lecs. T R 10:10-11:25; B. P. Halpem.
A literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of somesthetic, chemosensory, visual and auditory systems. Emphasis is on human data, with non-human information included when especially relevant. The course examines the current developments in human sensory prosthetic devices, and in regeneration of receptor structures. Brief written statements (by electronic mail) of questions and problems related to each set of assigned readings are required at least one day in advance of each class meeting. This course is taught using the Socratic Method, in which the instructor asks questions of the students. Students are expected to come to each class having already done, and thought about, the assigned readings. Use of e-mail and the internet are integral parts of the course.

BIONB 422 Modeling Behavioral Evolution
Spring. 4 credits. Limited to 25 students. Prerequisites: BIONB 221, one year of calculus, one course in probability or statistics, and permission of instructor (Office: West Mudd Hall, phone: 254-452). This course is open to advanced undergraduates and graduate students. S-U grades optional. Offered alternate years. Lecs. T 2:30-4:00, computer lab, one class period per week to be arranged. H. K. Reeve.
This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population genetics (including quantitative genetics), static optimization, dynamic programming, and game-theoretic methods are emphasized. These approaches are illustrated by applications to problems in animal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution cooperation and conflict within animal social groups. Students learn to assess critically recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

BIONB 424 Neuroethology (also Psychology 424)
Spring. 3 credits. Prerequisites: BIONB 221 and BIOPH 261 or 278, and permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1998-99. Lecs. T 2:30-4:25; P. W. Sherman.
An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, spacing systems, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.

BIONB 425 Molecular Neurophysiology
Spring. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Offered alternate years. Lecs. T R 8:40-9:55; D. M. McCobb. Course focuses on the roles of the primary proteins generating cellular electrical signals, ion channels, in nerve cells and other excitable cells (e.g., muscle, heart, glands). Cutting-edge electrophysiological and molecular genetic approaches will be reviewed. Diversity of excitable properties deriving from channel structure will be considered in the contexts of behavior and behavioral plasticity and neural development and channel evolution. Course format includes written and oral presentations reviewing scientific literature in selected areas and proposing new experiments.

BIONB 426 Animal Communication
Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 221. Offered alternate years. Not offered 1998-99. Lecs. T R 2:30-4:25; disc. one hour each week to be arranged. Staff.
A detailed examination of the study of communication by non-human animals. The course begins with an exploration of different conceptual frameworks used in the study of communication, then turns to specific studies of the mechanisms, ontogeny, functional design, and evolutionary history of signaling systems used by animals. The class considers how communication provides humans with a window on the minds of other animals. Readings are drawn from the primary literature.

BIONB 427 Animal Social Behavior
Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOPH 261 or 278, and permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Not offered 1998-99. Lecs. and disc. T R 2:30-4:25; P. W. Sherman.
An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptation, spacing systems, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, mate choice, conflict and cooperation in animal societies, and the evolution of deceit, honesty, and altruism.

BIONB 428 Topics in Behavior
Fall or spring. 2-4 credits. (Credits based on number of hours and/or field exercises as outlined in the division's catalog course supplement and subject to approval through the associate director's office.) Minimum credit. Primarily for undergraduates. S-U grades optional. Not offered 1998-99.
Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, bio rhythms, and communication. Topics, instructors, and times in biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: a 500-level course in biopsychology or equivalent. Offered alternate years. Lecs. T R 9:05. Not offered 1998-99. B. P. Halpem.
The structural and functional characteristics of olfaction and taste are explored by reading and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes as well as at the molecular level. Function is examined primarily in its neuroanatomical and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of Smell and Taste in Health and Disease, edited by T. V. Getchell, R. L. Doty, L. M. Bartoshuk, and J. B. Snow, The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.

BIONB 430 Experimental Molecular Neurobiology
Spring. 4 credits. Limited to 12 students. Prerequisites: BIOM 300 and concurrent or previous enrollment in BIONB 321; also recommend BIOD 261. Offered alternate years. Lecs. and disc. one or two weeks on day other than lab day; Lab T or R all day, or M and W afternoons, to be coordinated with other BIONB 430 sections. D. L. Deitcher.
Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments will emphasize how molecular techniques can be applied to studying neurobiological problems.

BIONB 491 Principles of Neurophysiology
Spring. 4 credits. Limited to 20 students. Prerequisite: BIONB 222 or written permission of instructor. S-U grades optional for graduate students. Lecs. M W 10:10, Lab. M or T 12:20-4:25; additional hours to be arranged. B. R. Johnson.
A laboratory-oriented course designed to teach the theory and techniques of modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and active potentials and synaptic transmission. A variety of preparations are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.
BIONB 492 Sensory Function (also Psychology 492)
Spring. 4 credits. Limited to 25 students. Prerequisite: a 300-level course in psychology or BIONB 222 or BIOP 311, or permission of instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Offered alternate years. Lecs. M W F 10:10–disc. to be arranged. B. P. Halpem, H. C. Howland.
This course covers classical topics in sensory function such as vision, hearing, touch, and balance, as well as more modern topics like sensory coding, location of stimuli in space, the development of sensory systems, and nonclassical topics such as electrophysiology and internal chemoreceptors. Both human and nonhuman systems are discussed. In all cases the chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system.
This course will be taught using the Socratic method, in which the instructors ask questions of the students, and their answers will be discussed. Students will be expected to come to each class having read, thought about, and prepared to discuss the assigned readings and other assigned information resources. Students will submit brief analyses of, and comments and questions on, all assignments by e-mail to the course’s electronic mailing list a day before each class meeting. The mailing list will distribute submissions to all members of the class and to the instructors. In addition to these brief triweekly written exercises, a term paper in the form of a review article will be required.

BIONB 493 Developmental Neurobiology
Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Offered alternate years. Lecs. T R 11:40–12:55. R. Booker.
Lecture covering the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, How do nerve cells differentiate both morphologically and functionally, and what role do cues such as hormones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

BIONB 494 Comparative Vertebrate Neuroanatomy
Organization and evolution of neuroanatomical pathways as substrates for species-typical vertebrate behaviors. The course is divided into three major sections: development, general principles of brain organization, and co-evolution of vertebrate brain and behavior.

BIONB 495 Molecular and Genetic Approaches to Neurosciences
Focus of the course is on how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, and learning and memory.

BIONB 496 Bioacoustic Signals in Animals
Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course teaches students about animal acoustical communication by introducing them to the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratories are designed around the lecture material and provide "real-world" exercises designed to not only introduce to the fundamental principles described in class. Class research projects on a selected topic in bioacoustics are required. (The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/A data acquisition boards.)

BIONB 497 Neurochemistry and Molecular Neurobiology
Fall. 3 credits. Limited to 30 students. Prerequisites: BIONB 222 and either BIOM 330 or 331 and 332, or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1998–99. Lecs. T R 9:05; disc. T 2:25. R. M. Harris-Warrick.
This course focuses primarily on the biochemical/molecular biology of neurons. Emphasis is on the molecular properties of these cells that account for their unique function. The presynaptic regulation of release and postsynaptic mechanism of action of the major classes of neurotransmitters are discussed, as well as selected neuromodulators and hormones. Readings are selected primarily from research journals.

BIONB 623 Chemical Communication (also Chemistry 622)
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent course work in biochemistry, and CHEM 358 or equivalent. Offered alternate years. Lecs. M W 10:00. T. Eisner, J. Meinwald, W. L. Roelofs, and guest lecturers.
The production, transmission, and reception of chemical signals in communicative interactions between animals and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecological, behavioral, and evolutionary principles.

BIONB 626 Sex Differences in Brain and Behavior (also Psychology 524)
Spring. 2 credits. Limited to 12 students. Prerequisite: BIONB 322 or permission of instructor. Discs and seminars to be arranged. T. J. DeVogod.
A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Staff and students.
Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior
Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222 not required. S-U grades only. Lecs and disc, T 10:10–12:05. S. T. Emmel
Lectures, readings, and discussion to introduce first-year graduate students to the research activities in the faculty in the Graduate Field of Neurobiology and Behavior. Class meets weekly for two hours. Students will also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF DIG grant). This proposal will be prepared in consultation with one or more relevant faculty members.

BIONB 723 Advanced Topics in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem to be arranged. Not offered 1998–99. Staff.
A seminar on a specific topic in animal behavior. The instructor presents lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

BIONB 724 Field Methods in Animal Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem and fieldwork to be arranged. Not offered 1998–99. Staff.
A seminar which experience course designed for first-year graduate students in animal behavior. Weekly seminars discussing field
methodology, data collection, and hypothesis testing are followed by an intensive period (ten days to two weeks) in the field. Specific topics and field sites vary from semester to semester. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester."

[BIONB 790 Advanced Topics in Cellular and Molecular Neurobiology]
Fall or spring. Variable credit. May be repeated for credit. Limited to graduate students and advanced undergraduates studying neurobiology and behavior. Prerequisite: BIONB 222. S-U grades optional. Lec and sem to be arranged. Not offered 1998-99. Staff.

A lecture-seminar course on selected topics in cellular and molecular neurobiology. Students read original papers in the scientific literature and lead discussions of these articles. Suggestions on topics may be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 792 Advanced Laboratory in Cellular and Molecular Neurobiology]
Fall or spring. 2 credits. May be repeated for credit. Primarily for graduate students. Prerequisites: BIOLM 330 or 331 or equivalent, BIONB 491 or equivalent, and written permission of instructor. S-U grades optional. Lab to be arranged. Not offered 1998-99. Staff.

A two-week intensive laboratory course designed to provide experience with a specific technique currently used in cellular and molecular neurobiology. The technique under study and instructor in charge vary from semester to semester and are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 793 Advanced Topics in Integrative Neurobiology]
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Lec and discs to be arranged. Not offered 1998-99. Staff.

A course designed to provide in-depth knowledge of current research in anatomical and physiological bases of vertebrate and invertebrate behavior. Readings are primarily from specialty books and selected journal articles. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

[BIONB 794 Advanced Laboratory Techniques in Integrative Neurobiology]
Fall or spring. Variable credit. May be repeated for credit. Prerequisite: permission of instructor based upon a personal interview. Lab to be arranged. Not offered 1998-99. Staff.

A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

PLANT BIOLOGY (BIOPL)

BIOPL 240 Green World/Blue Planet (formerly Plants and Global Issues)

The course focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place limits on fossil fuel consumption as a means of limiting global warming and global climate change? Must human endeavors be restricted in certain areas to maintain diversity? The format of this course is interactive, with lectures and discussions about how we as a society deal with controversial issues.

BIOPL 241 Introductory Botany
Fall. 3 credits. Lec, T R 9:05; lab, M T W or R 1:25-4:25, or M T W 7:30-10:30 p.m. K. J. Niklas.

Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOPL 242 Plant Physiology, Lectures
Spring. 3 credits. Lec, M W F 10:10. S-U grades optional. Primarily for undergraduates and highly recommended for other science majors. May not be taken for credit after BIOPL 342 except by written permission of instructor.

How plants function and grow. Examples deal with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis; light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress; tissue culture; and genetic engineering of plants.

BIOPL 243 Taxonomy of Cultivated Plants (also Horticulture 243)
Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Offered alternate years. Lec, M W 10:10; labs, W 2-4:25. M. A. Luckow.

A study of forms and functions of plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOPL 244 Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 344. Disc and lab, M T W or R 12:20-4:25. Staff.

Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radiotopes.

BIOPL 245 Plant Biology
Summer (6-week session). 3 credits. Limited to 24 students. Lec, M-F 11:30-12:45, labs, M W 2-5:00. Staff.

Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Most of the laboratory work is conducted outdoors in an area that surpasses most biological stations. Those who lack college-level biology are expected to work more closely with the instructor on supplemental instructional materials.

BIOPL 247 Ethnobiology (formerly BIOPL 246, Plants and Civilization)

A consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and ownership of nature, and methodology are among the topics covered.
BIOL 248 Taxonomy of Vascular Plants
An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the evolution of plant diversity, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOL 242 Plant Physiology, Lectures
Spring. 3 credits. Prerequisites: one year of introductory biology and either concurrent enrollment in BIOL 344 or written permission of instructor. May not be taken for credit after BIOL 242 unless written permission is obtained from instructor. Lecs, T R 10:10-11:25. T. G. Owens.
An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and survival of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOL 343 Molecular Biology and Genetic Engineering of Plants
Fall. 2 credits. Prerequisite: one year general biology or permission of instructor. S-U grades optional. Lecs, T R 11:15. M. E. Nasrallah.
An introduction to current studies involving recombinant DNA technology and its application to the improvement of plants. The course emphasizes genetic transformation methodology, gene expression systems, and strategies for increasing productivity. The course is designed for students who wish to become familiar with the theory and practice of plant biotechnology.

BIOL 344 Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOL 342. May not be taken for credit after BIOL 244. Similar to BIOL 244 but at a more advanced level. Lab, W 1:25-4:25; disc, W 12:20. Staff.
Experiments exemplify concepts covered in BIOL 342 and offer experience in a variety of biological and biochemical techniques, including the processes of photosynthesis and respiration, with emphasis on experimental design.

BIOL 345 Plant Anatomy
A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. The laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOL 346 Algal Physiology
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and BIOL 242 or 343 or permission of instructor. S-U grades optional. Offered alternate years. Lecs, T R 8:30-9:55. Not offered 1998-99. T. G. Owens.
This course takes an interdisciplinary approach to the study of algae with an emphasis on the physiology, biochemistry, and ecology of this diverse group of organisms. The algal classes are briefly described with consideration of traditional and emerging criteria for classification of the algae. The majority of the course focuses on interactions of algae with the physical/chemical environment, uptake of inorganic compounds, algal photosynthesis, metabolic strategies, and population dynamics of planktonic algae and benthic macrophytes. There is no laboratory section with this course.

BIOL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants
Fall. 2 credits. Limited to 24 students. Prerequisite: BIOL 247 or BIOL 241, 243, or 248 or permission of instructor. Concurrent enrollment is BIOL 343 is encouraged. S-U grades optional. Lab, W 12:25-4:25. M. E. Nasrallah.
A companion to BIOL 343 with laboratory activities that focus on the practice of plant biotechnology. Students will transfer genes to plants by a variety of methods, and will analyze their expression in the host genome by use of reporter gene assays, and by the preparation and analysis of nucleic acids.

BIOL 348 The Healing Forest
Spring. 2 credits. Prerequisites: BIOL 247 or BIOL 241, 243, or 248 or permission of instructor. Lecs/disc, R 2:30-4:25. D. M. Bates, E. Rodriguez.
An ethnobotanical consideration of the role of plants in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biochemical, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

BIOL 440 Phylogenetic Systematics
Fall. 4 credits. Limited to 24 students. Prerequisite: graduate standing or permission of instructor. Offered alternate years. Lecs, T R 10:10; labs, T R 2:00-4:25. K. C. Nixon.
Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular data sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOL 441 Systematics and Evolution of Crops
An integrated study of the systematics and evolution of agronomic and horticultural species. Processes of domestication, the evolutionary history of selected cultigens, the nature of weeds and land races, classification and nomenclature as applied to cultivated plants, and underexplored plant resources are among the topics considered.

BIOL 442 Current Topics in Ethnobiology
Fall. 2 or 4 credits (4 credits with an independent research component and term paper). Prerequisites: BIOL 247, 348, or permission of instructor. Offered alternate years. Lecs/disc, T 2:30-4:25. E. Rodriguez, D. M. Bates.
Explorations of the interrelationships of plants and animals with humans from a wide range of perspectives. Topics considered are contemporary issues, theory, and methodology of ethnobotany and ethnobiology, and the role of plants and animals in human lives, in subsistence and exchange, and in thought.

BIOL 443 Topics and Research Methods in Systematics
Fall or spring. 1-2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. A series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the division's syllabus catalog issued at the beginning of the semester.

BIOL 444 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisites: one year of introductory biology or permission of instructor. Lecs, M W F 9:05; lab, M or W 12:25-4:25. R. O. Wayne.
Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of protoplasm, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 445 Photosynthesis
Fall. 3 credits. Prerequisites: one year of college chemistry and mathematics. Recommended: one year of college physics and plant physiology. Offered alternate years. Lecs, M W F 10:10. T. G. Owens.
An introduction to the processes of photosynthesis in plants, algae and bacteria. An interdisciplinary approach is emphasized incorporating biochemical, biophysical, physiological and molecular perspectives. The course will cover the range of processes involved in photosynthesis, beginning with light harvesting and primary photochemistry through electron transport and inorganic carbon fixation. Emphasis will be placed on the regulation of photosynthesis from the cellular to the whole-plant level.

BIOL 447 Molecular Systematics
Fall. 3 credits. Prerequisites: BIOES 278 or BIOG 281 or BIOGD 332, or written permission of instructor. Offered alternate years. Lecs, T R 8:30-9:55. J. J. Doyle.
The theory and practice of using molecular evidence, particularly DNA sequence data, for addressing diverse systematic and evolutionary questions. Emphasis is on phyloge
reconstruction, particularly in eukaryotic systems. The organization and evolution of nuclear and organelle genomes is described from the standpoint of their suitability for systematic and evolutionary studies.

[BIOPL 448 Plant Evolution and the Fossil Record]
Spring. 3 credits. Prerequisite: BIOPL 241 or equivalent, or permission of instructor. Offered alternate years. Lecs, T R 9:05; lab, R 12:20–2:15. Not offered 1998–99. K. J. Niklas, W. L. Crepet. An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

[BIOPL 453 Principles and Practice of Historical Biogeography (also Entomology 453)]
Fall. 3 credits. Prerequisite: a course in systematics or permission of instructor. S-U grades optional. Offered alternate years. Not offered 1998–99. Lecs, T R 10:10; lab/disc, R 2:30–4:25. J. K. Liebherr, M. A. Luckow. This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic theory in the context of classical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.

[BIOPL 466 Physiological Plant Ecology, Lectures (also BIOES 466)]
Spring. 3 credits. Limited to 35 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Offered alternate years. Lecs, T R 10:10–11:25, optional disc to be arranged. T. E. Dawson. For course description, see BIOES 466.

[BIOPL 468 Physiological Plant Ecology, Laboratory (also BIOES 468)]
Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Offered alternate years. Lab, T 1:25–4:25, plus additional lab hours to be arranged; 1 weekend field trip required. Fee, $15. T. E. Dawson. For course description, see BIOES 468.

[BIOPL 641 Laboratory in Plant Molecular Biology]
Spring. 4 credits. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 or equivalent, and permission of instructor. Students (including graduate students) strongly advised to preregister by Nov. 29, in the Section of Plant Biology main office (Room 228, Plant Science Building). S-U grades optional. Lab, T 9:05–4:30. J. B. Nasrallah, M. R. Hanson. Selected experiments on gene expression, gene transfer, and assay of reporter genes in plants. The course emphasizes the application of molecular biology methodology to plant systems. Additional lab time is required to complete assignments.

[BIOPL 642 Plant Mineral Nutrition (also Soil, Crop, and Atmospheric Sciences 642)]
Spring. 3 credits. Prerequisite: BIOPL 342 or equivalent. Offered alternate years. Lecs, M W F 10:10. L. V. Kochian, R. M. Welch. A detailed study of the processes by which plants acquire and use mineral nutrients from the soil. Topics include the uptake, translocation, and compartmentalization of mineral elements; root-soil interactions; the metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and the ranges of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements are emphasized to illustrate these topics.

[BIOPL 643 Plant Physiology, Advanced Laboratory Techniques]
Spring. 4 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. S-U grades only. Offered alternate years. Lab, T or W 8–5:00; disc, M 4:30–5:30. Not offered 1998–99. Staff. An introduction to some modern methods in experimental plant biology. A partial list of techniques used includes fluorescence measurements, infrared CO₂ analysis, gel electrophoresis and Western blots, cellular electrode measurements, microtiter plate technology for enzyme assays, sensitive growth measurement, HPLC and GC-MS, and computer interfacing with laboratory equipment.

[BIOPL 644 Plant Growth and Development]
Spring. 3 credits. Prerequisites: BIOPL 345 and either 242 or 342 or their equivalents, or written permission of instructor. Offered alternate years. Not offered 1998–99. Lecs, M W F 9:05. P. J. Davies, D. J. Paolillo. Explores the changes that occur during plant growth and development and their control: morphological and anatomical changes in apices, tissue differentiation, organ formation, embryo development, plant growth, hormone action and interaction, the influence of light in development, flowering, fruiting, dormancy, abscission, and senescence.

[BIOPL 645 Families of Tropical Flowering Plants]
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered every three years. Not offered 1998–99. Fee, $15. K. C. Nixon. The families of flowering plants encountered solely or chiefly in tropical regions are considered in lectures, discussions, and demonstrations, with the aim of providing basic points of recognition for, and an understanding of, diversity and relationships in these families for the student venturing into the tropics.

[BIOPL 646 Families of Tropical Flowering Plants: Field Laboratory]
Intersession. 3 credits. Limited to 20 students, with preference given to graduate students from member institutions of the Organization for Tropical Studies. Prerequisite: BIOPL 243 or 248 or equivalent. Recommended: BIOPL 645. S-U grades only. For more details and application, contact the L. H. Bailey Hortorium, 467 Mann Library. Offered every three years. Not offered 1998–99. K. C. Nixon. An intensive orientation to families of tropical flowering plants represented in forests of the American tropics. Emphasis on field identification combined with lectures on analysis of available materials in a "whole-biology" context.

[BIOPL 647 Seminar in Systematic Botany]
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: written permission of course coordinator. Required for undergraduates. S-U grades optional. Sen, T 11:15–1:10. Bailey Hortorium staff. Lectures and discussions led by staff, visitors, and students on topics of current importance to systematic botany.

[BIOPL 648 Plant Biochemistry]
Spring. 3 credits. Prerequisites: organic chemistry, biochemistry, and a course in plant physiology. Offered alternate years. Not offered 1998–99. Lecs, T R 10:10–11:30. T. G. Owens and staff. Selected areas of plant biochemistry are reviewed in the context of the plant life cycle and responses to the environment. Topics include metabolism of lipids, carbohydrates, organic acids, phenolic compounds, and proteins; nitrogen and sulfur assimilation; respiration; photosynthesis; development and replication of chloroplasts; and cell-wall composition and properties. Attention is paid to operation of control mechanisms.

[BIOPL 649 Transport of Solutes and Water in Plants]
Fall. 3 credits. Prerequisite: BIOPL 342 or equivalent. Offered alternate years. Not offered 1998–99. Lecs, T R 10:10–11:30. R. M. Spanswick. Transport of ions, water, and organic materials in plants; mechanisms of ion transport and relationships between ion transport and metabolism; ion uptake and transport in higher plants; phloem transport; and water relations of single cells and whole plants.

[BIOPL 651 Quantitative Whole-Plant Physiology]
Fall. 3 credits. Prerequisites: introductory physics, calculus, and plant physiology. S-U grades only. Offered alternate years. Lecs, T R 10:10–11:30. R. M. Spanswick. An exploration of the extent to which physiological processes and their interactions can be formulated in a quantitative manner and integrated to describe various aspects of plant behavior, including growth and yield. Consideration is given to characterization of the plant environment, energy balance, gas exchange, water relations, photosynthesis, respiration, translocation, nutrient supply, and the timing of developmental events.

[BIOPL 652 Plant Molecular Biology II]
Spring. 1–4 credits (1 credit per section). Prerequisites: BIOGD 281 and BIOBM 330 or 332, or their equivalents, recommended: BIOBM 331. S-U grades optional. A series of four-week modules on specialized topics. Coordinator: S. H. Howell.

Section 01 Molecular Plant-Pathogen Interactions (also Plant Pathology 662)
1 credit. Lecs, M W F 10:10. Jan. 27-Feb. 22. O. C. Yoder, A. R. Collmer, T. P. Delaney. An examination of the molecular properties that control the development of host-parasite
interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

**Section 02 Molecular Plant-Microbe Interactions (BIOIM 652)**
S. C. Wimans.
Course focuses on the interactions of Agrobacteria and Rhizobia with plants. Topics on Agrobacterium/plant interactions include plant-microbe recognition mechanisms, T-DNA transfer process, oncogenesis and use of Agrobacterium to produce transgenic plants. Contemporary theories describing the genetic and molecular mechanisms of microbial pathogenesis and plant resistance are discussed.

**Section 03 Molecular Aspects of Plant Development II**
S. H. Howell.
The molecular genetics of plant development. The module focuses on vegetative development and includes topics such as the development of the shoot, root, and vasculature and the operation of the vegetative shoot apical meristem. The module is a companion to BIOPL 653, Sec. 04 (Plant Development I), which covers molecular aspects of reproductive development.

**Section 04 Plant Gene Evolution and Phylogeny**
J. P. Doyle.
Practical applications of molecular systematics/evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed, as well as rates of sequence evolution, paralogy and othology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns. The principles of distance and parsimony methods are described, and computer methods for reconstructing gene phylogenies are discussed.

**BIOPL 653 Plant Molecular Biology I**
Fall. 1-5 credits (1 credit per section).
Prerequisites: BIOGD 281 and BIOBM 330 or 352, or their equivalents. Recommended: BIOBM 331. S-U grades optional. Coordinator: S. H. Howell.
A series of four-week modules on specialized topics.

**Section 01 Concepts and Techniques in Plant Molecular Biology**
1 credit. Lecs., M W F 10:10 (12 lecs) Sept. 2-Sept. 28.
T. Delaney, D. B. Stern.
A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation. Methods applicable to plant molecular biology are described including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, plant transformation, mutation production, and use of sequence databases.

**Section 02 Plant Biotechnology (also Plant Breeding 655.2 and Plant Pathology 663)**
This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction, control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

**Section 03 Plant Genome Organization and Function (also Plant Breeding 653.3)**
This course covers the origins and measurement of nuclear DNA variation in plants as well as the development and exploitation of molecular markers for breedings and the isolation of genes underlying interesting phenotypes.

**Section 04 Molecular Aspects of Plant Development I**
This module focuses on the molecular genetics of plant reproduction. Current approaches to the elucidation of the molecular signals and pathways that lead to the establishment of the differentiated state of floral organs are discussed. Topics include the establishment of pattern during floral morphogenesis, cell death and sex determination, gamete development, cell-cell signaling during pollination, and fertilization. The module is a companion to BIOPL 652, Sec. 04 (Molecular Aspects of Plant Development II), which covers molecular aspects of vegetative development.

**Section 05 Molecular Biology of Plant Organelles**
An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization and expression of organelle genomes, RNA editing, organelle transformation, expression of nuclear genes for organelle proteins. Specific topics include cytoplasmic male sterility and gene regulation during plastid development.

**BIOPL 654 Botanical Nomenclature**
Fall. 1 credit. Prerequisite: written permission of instructor. S-U grades only. Offered alternate years. Not offered 1998-99. Lec and disc to be arranged.

**BIOPL 656 Topics in Plant Evolution**
Spring. 1 credit. Prerequisite: BIOPL 448 or equivalent background in evolution, or written permission of instructor. Not offered 1998-99. Lab and disc to be arranged. R. J. Miklas.
A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

**BIOPL 740 Plant Biology Seminar**
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:15. Staff.
An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

**BIOPL 742 Current Topics in Plant Molecular Biology**
Fall or spring. 1 credit. Enrolment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only. Sem, 1 hour each week to be arranged. Staff.
A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

**BIOPL 743 Current Research in Plant Cell and Molecular Biology**
Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program required for undergraduates. Lec. to be arranged. Staff.
An introduction to current research at the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

**BIOPL 745 Current Topics in Systematics**
Fall. 1 credit. Limited to graduate students except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorum staff.
A seminar with presentations and discussion by students of original research papers in systematic biology.

**BIOPL 746 Research Seminar In Systematic Botany**
Spring. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorum staff.
A student-led seminar presentation based on his or her thesis research or a related topic.

**BIOPL 749 Graduate Research in Botany**
Fall or spring. 1 credit. May be repeated for credit. S-U grades optional. Hours to be arranged. Staff.
Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.
BIOL 840 Current Topics in Plant Physiology
Fall or spring. 2 credits. May be repeated for credit. S/U grades only. Sem to be arranged. Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

COURSES IN MARINE SCIENCE

Cornell offers an extensive listing of undergraduate courses in marine science. Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Division of Biological Sciences, the undergraduate specialization in Ocean Sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Sholes Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Stimson Hall.

Undergraduate Specialization in Marine Biology and Oceanography

Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the area of marine biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOES 154, The Sea: An Introduction to Oceanography,
2) BIOSM 364, Field Marine Science or a 400-level BIOSM field course at the Sholes Marine Laboratory,
3) BIOES 462, Marine Ecology.

Undergraduate Specialization in Ocean Sciences

Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in Interdisciplinary Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOES 373 Marine Invertebrate Zoology
2) BIOS 457 Limnology
3) BIOES 462 Marine Ecology
4) BIOES 478 Ecosystem Biology
5) BIOSM 309 Coastal Ecology and Bioclimates
6) BIOSM 364 Field Marine Science
7) BIOSM 365 Underwater Research
8) BIOSM 366 SEA: Introduction to Oceanography
9) BIOSM 369 SEA: Oceanography I
10) BIOSM 370 SEA: Oceanography II
11) BIOSM 371 SEA: Oceanography III
12) BIOSM 402 Marine Pollution
13) BIOSM 413 Adaptations of Marine Organisms
14) BIOSM 418 Tropical Marine Science
15) BIOSM 449 Marine Botany
16) BIOSM 477 Marine Vertebrates
17) GEOL 375 Sedimentology and Stratigraphy
18) GEOL 455 Geochemistry
19) GEOL 475 Special Topics in Oceanography
20) GEOL 479 Paleobiology
21) NTRES 306 Coastal and Oceanic Law and Policy
22) NTRES 417 Wetland Resources

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal course work combined with ample opportunities for practical field experience.

SHOALS MARINE LABORATORY (BIOSM)

G14 Stimson Hall, 255-3717

The objective of the Sholes Marine Laboratory (SML) is to provide undergraduates, beginning graduate students, and other interested adults—a unique opportunity to explore marine sciences in an island setting noted for its biota, geology, and history. SML has established a national reputation for excellence and has become North America's largest marine field station focusing on undergraduate education. The summer population of Appledore Island is limited to about one hundred people at any one time. Participants and faculty members can literally and figuratively immerse themselves in their explorations, free from distractions common to most academic institutions. Because SML is a residential facility, a sense of community develops that makes courses and seminars at SML outstanding educational and intellectual experiences. Participants learn from and exchange ideas with a wide range of specialists whose primary interests are marine but whose perspectives often differ, providing fertile ground for lively discussions.

Credit courses at Sholes Marine Laboratory are full-time, intensive learning experiences. Courses may be taken sequentially, but not concurrently. A typical day combines lecture sessions, laboratory and field work, field trips to nearby islands and the mainland, and collecting and research excursions aboard the Laboratory's 47-foot research vessel, John M. Kingsbury. Field experience is an integral component of all courses, using Appledore's extensive intertidal zone, wading bird rookeries, and seabird colonies. Faculty, drawn from Cornell University, the University of New Hampshire, and other leading academic institutions, are selected not only on their academic excellence, but also on their teaching ability in the field. In addition, numerous guest lecturers include engineers, coastal planners, and specialists from private industry, government, and the academic community.

The Ithaca campus functions of the Sholes Marine Laboratory are centered in the Cornell Marine Programs Office, G14 Stimson Hall. The office serves as an advising center for students interested in the marine sciences, maintains a browsing library with updated information on graduate study and career opportunities as well as on marine programs at other institutions, and administers the SEA Semester, a 17-credit program offered in cooperation with the Sea Education Association (SEA). SML and SEA offer a joint SEA/ Island semester for 18 credits, which combines both programs (BIOSM 364, 366, 367, 368, 372).

The following marine sciences courses are currently administered by the Cornell Marine Programs Office.

BIOSM 160 The Oceanography of the Gulf of Maine
Summer. 4 credits. S-U grades optional. Limited to 24 students. A special 2-week course offered aboard the SSV Corwith Cramer and at Cornell's Sholes Marine Laboratory (SML) on an island off Portsmouth, NH. For more details and an application, contact the SML office, G14 Stimson Hall or the Sea Education Association office at P.O. Box 6, Woods Hole, MA, 02545. Estimated cost (includes tuition, room and board aboard ship and on the island, and ferry transportation) $3,140. Daily labs, labs, and fieldwork for 2 weeks. SML faculty.

An exciting opportunity to explore the offshore and near-coastal environments of the Gulf of Maine for pre-college and first-year non-science majors. Students spend ten days aboard the Sea Education Association's SSV Corwith Cramer and sail from Woods Hole, MA, to the Isles of Shoals via Georges Bank and the Gulf of Maine. Besides operating the ship, students study the many characteristics of this unique ocean environment. Following the sea component, students spend seven days at the Sholes Marine Laboratory to collect data characteristic of the Isles of Shoals coastal environment.
BIOSM 161 Introduction to Field Marine Science
Summer. 4 credits. S-U grades optional. A special 2-week course offered in cooperation with Ryder University at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. Apply directly to Ryder University, College of Continuing Studies. Contact Dr. Richard Alexander for application and information at Alexander edu; (603) 895-5422. Estimated cost (includes tuition, room and board), $1,750. Offered alternate years.

This course allows students who are not biology majors to experience the breadth of the marine sciences under field conditions at an island laboratory. Aspects of biology, geology, earth science, chemistry, and physics are included. Specific topics include beach, salt marsh, intertidal, tidal pool, and benthic offshore environments; identification of marine plants and animals; chemical and physical oceanography; marine geology; and ecology of kelp beds and urchin barrens.

BIOSM 204 Biological Illustration
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and supplies), $900. Daily sessions for 1 week. SML faculty.

General discussion of scientific publishing, illustration labeling, color techniques, and printing processes. The course provides the scientist with the opportunity to develop skills in preparing scientific articles through a variety of study questions. Emphasis is on the development of several scientific illustrations with the goal of obtaining an overview of scientific and wildlife illustrations. The student may choose a single technique to explore in depth. Course limited to 10; individual attention can be emphasized.

BIOSM 303 Ecology of Marine Fishes
Summer. 4 credits. Prerequisite: one year of college-level biology. SCUPA certification recommended, not required. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,900. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including temperature, solar radiation, temperature, atmospheric moisture, precip. wind, and currents. On-site exploration of the dynamics of marine environments focusing on the role of abiotic and biotic factors in the life of coastal and marine fish and animals including humans.

BIOSM 329 Ecology of Animal Behavior
Summer. 4 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, psychol., or behavior. S-U grades optional. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,800. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major processes of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area.

BIOSM 304 Marine Biology for Teachers
Summer. 3 or 4 credits (4+credit option; additional 4 days for individual research). Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course designed for teachers at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,800.

Designed to give all teachers of living marine organisms a thorough understanding of how to use the SML's lab facilities to achieve effective teaching. Laboratory exercises cover several principal techniques of field marine biology and explore the rich marine microbial environment surrounding the Isles of Shoals.

BIOSM 308 Marine Microbial Ecology
Summer. 4 credits. Prerequisite: one year of college-level biology. S-U grades optional. A special two-week course offered at Shool's Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,800. Daily lecs, labs, and fieldwork for 2 weeks. SML staff.

This course examines the fundamental role of marine microbial communities in the function of the biosphere. Lectures survey bacterial, protozoan, and micrometazoan assemblages from Arctic to deep sea vent communities. Laboratory exercises cover several principal techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

BIOSM 309 Coastal Ecology and Bioclimates
Summer. 4 credits. Prerequisite: one year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,800. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors including temperature, solar radiation, atmospheric moisture, precip. wind, and currents. On-site exploration of the dynamics of marine environments focusing on the role of abiotic and biotic factors in the life of coastal and marine fish and animals including humans.

BIOSM 364 Field Marine Science
Summer. 6 credits. Prerequisite: one year of college biology. S-U grades optional. A special 4-week course offered twice each summer at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $2,980. Daily lecs, labs, and fieldwork for 4 weeks. Core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty.

Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living marine organisms. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS 1 places additional emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical) and marine Geology. FMS 2 places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

BIOSM 365 Underwater Research
Summer. 4 credits. Prerequisite: one year of college-level biology, recognized scuba certification, and introductory college physics. S-U grades optional. A special 2-week course offered at Cornell’s Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,900. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

A course designed for the student who desires an initial overview of the marine sciences, this course emphasizes living marine organisms. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS 1 places additional emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical) and marine Geology. FMS 2 places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

BIOSM 366–370 SEA Semester
In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) in Woods Hole, MA, receiving instruction in oceanography, meteorology, marine biology, general oceanography (biological, physical, and chemical) and marine Geology. The second half of SEA Semester (a six-week sea component) is spent at sea aboard the R/V Westward or the R/V Corwith Cramer. Enrollment is open to men and women judged capable of benefiting from SEA Semester; no specific prior training or study is required. Cornell students enrolled in the SEA Semester must take the entire sequence.
Theories and problems raised in class are tested in the practice of oceanography at sea. Students are instructed in the use of basic oceanographic equipment; in the methodologies involved in the collection, reduction of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

**BIOSM 370** SEA Practical Oceanography II
4 credits. Prerequisites: BIOSM 368 and 369.

Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and master of the vessel for the safe and orderly conduct of research activities and the attendant operations of sailing an oceanographic research vessel. Each student undertakes an individual research project designed during the shore component.

**BIOSM 372** SEA Practical Oceanography III
Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368.

Themes and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

**BIOSM 374** Field Ornithology (An Introduction)
Summer. 2 credits. Prerequisite: one year of college-level biology. S-U grades optional. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900.

An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study many concepts frequently taught in the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

**BIOSM 402** Marine Pollution
Summer. 4 credits. Prerequisites: one year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,800.

An introduction to marine pollutants; their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

**BIOSM 409** Ciliophorology
Summer. 2 credits. Prerequisite: permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900.

A special course that examines ciliophoran biology in depth through lectures and laboratory exercises. Topics include a survey of the ciliophorans, their diversity and distribution, and their role in the marine environment. Students undertake a research project on one or more species of ciliates, with emphasis on selected algal grazers, animal grazers, and covering staining techniques, as well as other topics as determined by the course instructor.

**BIOSM 413** Experimental Marine Ecology
Summer. 6 credits. Prerequisite: BIOSM 364 or permission of instructor. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $2,700.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients; nitrate and nitrite fixation; and tolerance of tide-pool biota; and biological responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical and chemical environment of intertidal and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in vivo functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

**BIOSM 418** Tropical Marine Science and Research in Biology
Summer. 12 credits. Limited to 12 students. Prerequisites: one year college-level biology, BIOS 261 or BioSM 364 or equivalent. BioSM 365 or equivalent experience; recognized SCUBA certification; medical exam; and permission of instructor. Lec/lab, 2 weeks; 6 weeks monitoring study and individual research projects, including data analysis on computers. A special 8-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall, 255-3717. Estimated cost (includes room, board, tuition, and airfare) $5,200. For competent divers only. D. F. Shapiro.
In addition to lectures and laboratories covering the basic principles of coral reef ecology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects. This course applies skills learned in the lecture and laboratory research course at Shoals Marine Laboratory.

BIOSM 449 Marine Botany: Ecology and Systematics of Marine Plants
Summer. 4 credits. Prerequisite: BIOSM 364 or one year of introductory biology. S-U grades optional. A special 2-week course offered at the Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,800. Daily labs, fieldwork for 2 weeks. SML faculty.

An overview of the major marine algal groups, including aspects of anatomy, morphology, development, physiology, and use. Laboratories and fieldwork emphasize relationships between distribution and major environmental parameters and involve student projects.

GEOL 475 Bioacoustical Oceanography
Summer. 5 credits. Prerequisites: one year of calculus and physics, one course in oceanography, animal behavior, ecology, and/or marine biology; participation in a previous bioacoustical oceanography course or permission of instructor. For more information and an application, please contact Dr. Charles Greene directly. Send inquiries by e-mail to chg@cornell.edu. Total cost $2,000 (substantial financial aid is available).

Intended to provide undergraduates and graduate students with advanced training in the use of acoustic tools and techniques employed to address fundamental questions pertaining to the distribution and behavior of cetacean, fish and zooplankton populations in the marine environment. The course will address issues of sound propagation and scattering in the ocean as well as active and passive acoustical signal processing.

BIOSM 477 Marine Vertebrates
Summer. 6 credits. Prerequisites: a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $2,700. Daily labs, labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeleton and function, population biology, and the contemporary Gulf of Maine fishery. Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

BIOSM 495 Research Methods in Marine Biology
Summer. 1 credit. Prerequisite: concurrent enrollment in BIOSM 499, or permission of instructor. Primarily for undergraduates. A special 8-week course offered at the Shoals Marine Laboratory (SML). For more details and an application, consult the SML office, G14 Stimson Hall. Weekly seminars for 8 weeks. J. G. Morin and M. J. Shulman.

Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

BIOSM 499 Research in Biology
Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML office, G14 Stimson Hall. Section A: Independent Biological Research. Estimated cost (includes room and board), $900. Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be set with application materials. Section B: Independent Underwater Research. Summer. 2 credits. Prerequisites: recognized SCUBA certification, a medical examination, and one full year of college level biology. Total cost $1,000. An extension of Underwater Research BIOSM 495 for students with special underwater research interests.

[ARKEO Archaeology Underwater (Archaeology 319)]
Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research, also open to non-divers. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,000. Not offered 1998-99. Daily labs, labs, and fieldwork for 1 week. SML faculty.

An introduction and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for actual on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

[NTERES Coastal and Oceanic Law and Policy (Natural Resources 306)]
Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900. Not offered 1998-99. Daily labs and disc for 1 week. SML faculty.

Interested for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

[NTRES Wetland Resources (Natural Resources 417)]
Summer. 2 credits. Prerequisite: one year of college-level biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $900. Daily labs, labs, and fieldwork. SML faculty.

An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

Mark K. Spiro, associate dean for administration
Deborah Cox, assistant dean for student services
Marsha Pickens, assistant dean for alumni affairs and development

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences.
Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research.
Cornell programs and centers of special interest in engineering include the following:
Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.
Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.
Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.
Center for Theory and Simulation in Science and Engineering. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.
Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.
Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university's high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.
Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.
Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.
Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.
Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.
Materials Science Center. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated scientific measurement and characterization equipment.
National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Arrecibo, Puerto Rico.
National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.
National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.
Power Systems Engineering Research Center. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.
Program in Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.
Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.
SRC Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.
Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.
The programs listed on this page are sponsored by College of Engineering units and several are industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy.
General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.
Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY
Bachelor of Science (B.S.) degrees are offered in the following areas:
Agricultural and Biological Engineering
Chemical Engineering
Civil Engineering
College Program
Computer Science
Electrical Engineering
Engineering Physics
Geological Sciences
Materials Science and Engineering
Mechanical Engineering
Operations Research and Engineering
Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.
Students interested in bioengineering may arrange a suitable curriculum through a bioengineering option within one of the field
programs or through the College Program. Students interested in supplementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors currently being developed in the college.

Information about both the bioengineering option and engineering minors is available in the Engineering Advising office, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering, the major offered by the Department of Agricultural and Biological Engineering, or the Science of Earth System (SES) option offered by the Department of Geological Sciences. Double majors combining environmental science and engineering are feasible.

*Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in agricultural and biological engineering students normally enroll in the College of Agriculture and Life Sciences for the first and second years, and jointly in that college and the College of Engineering for the third and fourth years. However, students enrolled in the College of Engineering for the first two years may affiliate with the field of agricultural and biological engineering and become jointly enrolled in the Colleges of Agriculture and Life Sciences and Engineering for the third and fourth years.

Requirements for Graduation
To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 1998-99 edition of the Engineering Undergraduate Handbook.)

One writing-intensive technical course or a course in technical or scientific writing must also be taken, this course may simultaneously satisfy some other requirement.

†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirements, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 133 credits are required for graduation; the specific number of required credits will vary depending on which field program is chosen. (See field curricula for specific field requirements.) Two terms of physical education must be taken in the freshman year and students must demonstrate proficiency in swimming to satisfy a university requirement.

Mathematics
The normal program in mathematics includes MATH 191 (or 195), 192, 293, and 294. Every student must attain a grade of at least C- in MATH 191 (or 195), 192, 293, and 294, or other coursework that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

Physics
The normal program in physics includes PHYS 111, 213, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 213, or C- in MATH 293 before taking PHYS 214). Students in the field programs of ABEN, CHEM, CEE, COM S, GEOI, or ORIE must substitute CHEM 208 for PHYS 214.

Chemistry
CHEM 211 or 207 is required for all students. CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213 and 214) first may postpone CHEM 211 until the sophomore year.

In general, students intending to affiliate with the following departments and schools should take CHEM 211: Applied and Engineering Physics, Civil Engineering (not students in the environmental engineering option), Computer Science, Electrical Engineering, Materials Science and Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of their freshman year, to be followed by CHEM 211 in the spring term. All students considering the environmental option in Civil Engineering, the science of earth systems option in Geology Sciences, or a health-related career such as medicine should take the CHEM 207-208 sequence.

Freshman Writing Seminars
Each semester of their freshman year, students choose a freshman writing seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses offer the student practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing
The ability to communicate is essential to successful professional practice. In addition to taking two Freshman Writing Seminars, engineering students must have a course that includes a significant amount of technical or scientific writing. Technical writing requirement by enrolling in an Engineering Communications course (ENGR 334, 335 [formerly 435], or 350), selected courses in the Communications department (COMM 260, 262, or 252), or an approved writing-intensive engineering course (ENGR/SEEP 264, CHEM 432, M&AE 427, M&AE 435, or M&AE 443-444). The Engineering Advising office, 167 Olin Hall, maintains an up-to-date list of approved courses. Courses that fulfill the technical writing requirement may be used to satisfy another graduation requirement.

Some students might fulfill the technical-writing requirement through the writing they do in their co-op jobs; this arrangement must be approved in advance. For details, contact the Engineering Communications Program, 465 Hollister Hall.

Computing
In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, ENGRD/COM S 211 or 212, ENGRD/COM S 222, ENGRD/CEE 241, ENGRD/SEEP 264, ENGRD 423, M&AE 389, M&AE 489, M&AE 575, M&AE 579, and M&AE 670. The recommended choice for students intending to enter the field program in Engineering Physics is ENGRD 264; in Chemical Engineering, ENGRD 211, 222 or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 211 or 212; in Electrical Engineering, ENGRD 211; in Mechanical Engineering, M&AE 389, M&AE 489, M&AE 575, or M&AE 670; and in Operations Research and Engineering, ENGRD 211.

Engineering Distribution
Three engineering distribution courses (9 credits) are required. One course must be an Introduction to Engineering Course (designated by ENGR) and is to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem solving context. See the Introduction to Engineering Course listing for current course offerings.

The other two distribution courses must be selected from two different categories listed
Mechanical Engineering: ENGRD 202

Materials Science and Engineering:

Electrical Engineering: ENGRD 231

Agricultural and Biological Engineering:

Students in the field program in Engineering Physics may substitute A&F 333 for ENGRD 203.

Probability and statistics

ENGRD 270, Basic Engineering Probability and Statistics

Students in the field program in Electrical Engineering may substitute ELE E 310 for ENGRD 270.

Electrical sciences

ENGRD 219, Mass and Energy

Thermodynamics and energy balances

ENGRD 219, Mass and Energy

Thermodynamics

ENGRD 221, Thermodynamics

Earth and life sciences

ENGRD 201, Introduction to the Physics and Chemistry of the Earth

ENGRD 250, Engineering Applications in Biological Systems

Biology and chemistry

BIO 101 and 103, Biological Sciences, Lecture and Laboratory

BIO 105, Introductory Biology

BIO 107, General Biology (summer only)

CHEM 309, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Agricultural and Biological Engineering: ENGRD 202

Chemical Engineering: ENGRD 219

Civil and Environmental Engineering: ENGRD 202

Computer Science: ENGRD 210 or ENGRD 212

Electrical Engineering: ENGRD 231

(co-enrollment in ELE E 232 strongly recommended)

Materials Science and Engineering: ENGRD 261

Mechanical Engineering: ENGRD 202

Operations Research and Engineering

ENGRD 270

Liberal Studies Distribution

The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories:

(a) humanities or history,

(b) social sciences,

(c) foreign languages, and

(d) expressive arts.

No freshman seminar may be used to meet the liberal studies requirement.

At least two courses must be chosen from category (a).

No more than 3 credits toward this requirement may be taken in category (d).

At least two courses in either category (a) or (b) must be from the same field of study. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising Office.

a) Humanities or History

American Studies 101, 201, 202

Architecture 131, 132, 181, 182

Art 317, 318

African Studies 202, 204, 205, 211, 280, 285, 304, 310, 361, 370, 381, 404, 422, 425, 431, 432, 435, 455, 475, 483

Anthropology 290, 451, 452, 453, 455

Archeology (courses in Old World Archeology and 493)

Asian Studies (courses in Asian art, literature, religion or cultural history)

Biology and Society 206

Classics (all courses except 285, 356, 360, 361 and language courses)

Collective Bargaining, Labor Law and Labor History 101, 101, 384, 385, 386, 482, 488

Communication 420, 465

Comparative Literature (all courses)

Economics 315, 323, 324, 325, 326

Engineering: ENGRG 250, 298, 360

English (all courses except ENGL 285 and these as a prerequisite)

Food Science and Technology 101-102, unless they have had no calculus.

French Literature (all courses)

German Literature (all courses)

History (all courses)

History of Art (all courses)

Industrial and Labor Relations Interdepartmental Course 451

International and Comparative Labor Relations 430

Italian Literature (all courses)

Jewish Studies 274, 351, 352

Lavor Economics 448

Music (only introductory, music theory, and music history courses)

Natural Resources 407

Near Eastern Studies (courses listed under history, civilization, or literature)

Philosophy (all courses except courses in logic and PHIL 383)

Religious Studies 101

Russian Literature (all courses)

Science and Technology Studies 201, 233, 355, 453, 444, 525

Spanish Literature (all courses)

Theater Arts (only courses in Theater Studies, film analysis and history)

b) Social Sciences

Agricultural Economics (ARME) 100, 250, 430, 431, 432, 450, 464

Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)

Archeology (all courses except those in Methodology and Technology)

Architecture 342

Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)

Biology and Society 201, 301, 406, 407

City and Regional Planning 100, 101, 314, 361, 382, 404, 442

Communication 116, 120, 314, 410, 416, 420

Consumer Economics and Housing (110, 111, 247, and any course having one or more of these as a prerequisite)

Design and Environmental Analysis 150, 250

Economics (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301–302 and not 101–102, unless they have had no calculus.)

Education 210, 212, 271, 311, 317, 322, 360, 413, 477

Government (all courses)

Human Development and Family Studies (all courses)

Human Service Studies (all courses)

International and Comparative Labor Relations (all courses)

Labor Economics (all courses except 345 and 448)

Linguistics (all courses)

Natural Resources 201, 215

Organizational Behavior (all courses)

Rural Sociology (all courses)

Sociology (all courses)

Textiles and Apparel 245

c) Foreign Language
This category includes all foreign language courses, if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to 6 advanced placement credits equal to two courses according to these rules.

d) Expressive Arts
Africana Studies 303, 425, 430
Art (studio courses) Biological Sciences 208, 209
Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)
Design and Environmental Analysis 101, 102, 114
Engineering (all Engineering Communications courses, which are designated ENGRC)
English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)
Floriculture (courses in Freehand Drawing and Scientific Illustration)
Industrial and Labor Relations 452
Music (courses in musical performance, musical organizations and ensembles; three 1-credit courses equals one course)
Theater Arts (all courses except those listed in category (a) above)

Electives
- Approved electives—six (6) credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:
1. One Introduction to Engineering course (ENGR1)
2. Engineering distribution courses.
3. Courses stressing written or oral communication.
4. Upper-level engineering courses.
5. Advanced courses in mathematics.
6. Rigorous courses in the biological and physical sciences.
7. Courses in business, economics, or language (when they serve the student’s educational and academic objectives).
8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
- Field approved electives—nine (9) credits (approved by engineering field program faculty and faculty advisers). Students should refer to the Field Program curriculum for descriptions of courses that meet this category.
- To ensure breadth of engineering studies, field programs will also include nine (9) hours of courses outside the field.

Social Issues of Technology
It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed within the “Science and Technology Studies” undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising Office
From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women’s Programs in Engineering office provide additional specialized services.

Freshman Year Requirements
By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:
- MATH 191 (or 193) and MATH 192
- Two of the following: CHEM 211, 207, 208, PHYS 112, 213, 214*
- COM S 100
- Two (2) Freshman Writing Seminars
- One (1) Introduction to Engineering course (ENGR1 designation)
- Two (2) Physical Education courses
  (*Students with an interest in pre-med (or other health-related career), Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Geological Sciences should enroll in the COM S 210 sequence during their freshman year.)

Affiliation with a Field Program
Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field counselor’s office in the field of their choice and completing the Application for Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 cumulative grade point average and (2) have satisfied the field’s course and grade requirements as specified below:

Field Program Courses and Minimum Grade Requirements
- Agricultural & Biological Engineering
  Field Program: No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent
  Applied & Engineering Physics: A grade of B- or better in all required mathematics and physics courses
- Chemical Engineering
  No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses
- Civil & Environmental Engineering
  A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required).
- Computer Science
  A grade of B- in COM S 280, ENGRD 211 or 212 and all mathematics courses
- Electrical Engineering
  A grade of C or better in all 200-level mathematics and physics courses; no course may be repeated more than once
- Geological Sciences
  Good academic standing in the College of Engineering
- Materials Sciences & Engineering
  A grade of C in ENGRD 261
- Mechanical & Aerospace Engineering
  A grade of C- in mathematics and science courses and ENGRD 202
- Operations Research & Engineering
  A grade of C- in MATH 191 (or 193) and 192, and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation)

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.

SPECIAL PROGRAMS

Dual Degree Option
A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineer­ ing, the College of Arts and Sciences, or the College of Architecture, Art and Planning may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those interested should contact the appropriate coordinators of dual degree programs at the following locations: 172 Goldwin Smith Hall (for Arts and Engineering)
The major may be in any subject area offered by schools or departments of the college; the minor may be in a second engineering subject area or in a logically connected nonengineering area. The combinations must clearly form an engineering education in scope and content and should include engineering design and synthesis as well as engineering sciences. In addition to 48 credits in the major and minor subjects, including at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives.

Further information about the College Program may be obtained from the Associate Dean for Undergraduate Programs, 222 Carpenter Hall.

Important Note: Because no single standard-ized curriculum exists, the College Program is not accredited. College Program students who intend to seek legal licensing as a Professional Engineer should be aware that the on-campus program will require additional education, work, and/or experience to qualify for eligibility to take the Fundamentals of Engineering examination.

Engineering Minors

Recently established by the College Curriculum Governing Board (CCGB), the Engineering Minor is a supplement to the regular bachelor’s degree programs in the college, including the College Program, and recognizes formal study of a particular technical subject area in engineering normally outside the student’s major. As such, it may be necessary for some students choosing to complete the requirements for an Engineering Minor to spend more than the traditional eight semesters to complete their studies at Cornell. In many cases, however, courses fulfilling minor requirements may also satisfy other degree requirements (e.g., distribution courses, approved electives, or field-approved electives). Students undertaking a minor are normally advised to complete the requirements during the time of their continuous undergraduate enrollment at Cornell.

To complete an Engineering Minor, an undergraduate engineering student must

- Be enrolled in a major field program that approves the participation of its affiliates in the desired Engineering Minor.
- Complete all the requirements for a major field program in engineering.
- Satisfactorily complete six courses (18 credit minimum) as stipulated in a college-approved Engineering Minor petition filed by the school or department other than that which offers the student’s major.

Students may apply for the certification of their Engineering Minor at any time after the necessary coursework has been completed in accordance with published standards. Students who receive certification in an approved Engineering Minor will be recognized by means of an official notation on their Cornell transcript.

Because the program is new and participation among engineering field programs is optional, students should be aware that minors are still in the development stage. Current information on approved Engineering Minors and certification forms can be obtained either from the offering undergraduate field office or from the Engineering Advising office, 167 Olin Hall.

Bioengineering Option

Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science-based courses and bioengineering courses. At least one course must be from the science-based course list and at least two (totalling at least 6 credits) from the bioengineering course list. Each student interested in the bioengineering option can request (through the Engineering Undergraduate Programs and Student Services office) a faculty consultant who will assist the student in course selection for this option. The bioengineering faculty consultant is in addition to the student’s regular academic adviser.

A list of approved courses is available in the Engineering Advising office, 167 Olin Hall or in the Engineering Undergraduate Programs and Student Services office, 222 Carpenter Hall.

International Programs

All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program in the introductory section of Courses of Study. An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today’s engineers. In keeping with the university goals of internationalizing the curriculum, the Engineering Curriculum encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in the Engineering Advising office, 167 Olin Hall.

Information on co-op programs abroad is available from the Engineering Professional Programs office in 148 Olin Hall.

Engineering Communications Program

The Engineering Communications Program (ECP) provides instruction in the written, oral, and visual presentation of information. Engineering Communications ENGRG 350 and Communications for Engineering Managers ENGRG 335 (formerly 435) are three-credit seminars that give students a thorough introduction to these areas. These courses use material from engineering and business workplaces, and many assignments are based on actual events and situations. Students learn to direct their writing and presentations to different audiences that have varying roles and levels of expertise. They also deal with organizational and ethical issues in the communications they encounter and produce. Classes have lively discussion, and the limited size of sections ensures close attention to individual students’ work. Occasionally, the program’s instructors or independent studies in topics of special interest. ECP courses fulfill the college’s technical writing requirement (see Requirements for Graduation).

In addition to offering communications seminars, the program works with the engineering fields to integrate communications instruction and practice into technical courses. The goal of these writing-intensive efforts is to strengthen students’ understanding of course material and increase their ability to communicate it. The ECP also gives presentations to student groups on communications topics and teamwork, and has been involved in innovative educational projects such as Undergraduate Engineer in Residence (ENGRG 470), a collaborative learning initiative in physics and mathematics. The program awards several annual prizes for writing, oral presentation, and teamwork. For further information, contact the director, 465 Hollister Hall.

Engineering Cooperative Program

A special program for undergraduates in most fields of engineering is the Engineering Cooperative Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire
better understanding of engineering as a profession.

Sophomores in the upper half of their class are eligible to apply for the co-op program. Students in Computer Science and Agricultural and Biological Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their first co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

Further information may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

MASTER OF ENGINEERING DEGREE PROGRAMS

One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are discussed in this announcement in connection with the corresponding upperclass engineering field programs because the curricula are integrated. Cornell baccalaureate engineering graduates frequently continue their studies in the M.Eng. program, although the program is also open to qualified graduates of other schools. The M.Eng. degrees and the academic fields under which they are described are listed below.

M.Eng. (Aerospace): Mechanical and Aerospace Engineering
M.Eng. (Agricultural and Biological): Agricultural and Biological Engineering
M.Eng. (Chemical): Chemical Engineering
M.Eng. (Civil & Environmental): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geology): Geological Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
M.Eng. (Nuclear): Nuclear Science and Engineering
M.Eng. (OR&E): Operations Research and Industrial Engineering

Candidates for a professional master's degree who wish to specialize in areas related to manufacturing may avail themselves of two special programs. The manufacturing systems engineering option may be centered in any of the fields listed above. This option is attested to by a Dean's Certificate in addition to a diploma at the time of graduation. An industrial internship program provides opportunities to combine on-campus education with off-campus industrial experience. An M.Eng. option of potential interest to engineers from all fields is the program in Engineering Management, offered by the School of Civil and Environmental Engineering. This option is described in the section related to the M.Eng. (Civil & Environmental) degree.

Cornell engineering graduates in the upper half of their class will generally be admitted to M.Eng. programs; however, requirements for admission vary by field. Superior Cornell applicants who will be, at the time of matriculation, eight or fewer credits short of a baccalaureate degree may petition for early admission. Other applicants must have a baccalaureate degree or its equivalent from a college or university of recognized standing, in an area of engineering or science that is judged appropriate for the proposed field of study. They must also present evidence of undergraduate preparation equivalent to that provided by a Cornell undergraduate engineering education, a transcript, two letters of recommendation, and a statement of academic purpose. A candidate who is admitted with an undergraduate background that is judged inadequate must make up any deficiencies in addition to fulfilling the regular course requirements for the degree. Applicants from foreign universities must submit the results of the Graduate Record Examination aptitude tests and must have an adequate command of the English language. Financial aid providing partial support is available for very highly qualified candidates, primarily those who are residents of the U.S.

Cooperative Programs with the Johnson Graduate School of Management

Two programs culminate in both Master of Engineering and Master of Business Administration degrees. One, which Cornell students enter during their undergraduate career, makes it possible to earn the B.S., M.Eng., and M.B.A. in six years—one year less than such a program would normally require. The second program, which is available to students who already hold baccalaureate degrees from Cornell or other institutions, requires five semesters and leads to both the M.Eng. and M.B.A.

Undergraduate students at Cornell interested in the six-year program should seek advice and information from the department with whose field they intend to affiliate during their upperclass years. Information about admission to either program and about scholarship aid may be obtained from the Engineering Professional Programs office, 148 Olin Hall.

ACADEMIC PROCEDURES AND POLICIES

Advanced Placement Credit

The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1. advanced placement examinations given and scored by the College Entrance Examination Board (CEEB), or
2. General Certificate of Education (GCE) Advanced ("A") Level Examinations; or
3. International Baccalaureate (IB) Higher Level Examinations; or
4. Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways:

1. They may enroll in a more advanced course in the same subject right away.
2. They may substitute an elective course from a different area.
3. They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams

The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 or 193, 192, 293, and 294 are required.

First-term math (MATH 191 or 193). AP credit may be earned by:

• a score of 3 or 4 on the CEEB BC exam, or
• a score of 4 or 5 on the CEEB AB exam, or
• a passing score on the Cornell departmental exam for first-term math.

First-year math (through MATH 192). AP credit may be earned by:

• a score of 5 on the CEEB BC exam, or
• a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required.

PHYS 112. AP credit may be earned by:

• a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
• a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
• a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 293.

PHYS 213. Students receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more
information contact Professor Joseph Rogers, the departmental representative. His telephone number is 607/255–8158.

Chemistry: CHEM 207 or CHEM 211 is required. CHEM 207 or CHEM 211. AP credits may be earned by:
- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: Students who are successful in obtaining AP credit for CHEM 207 and who are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty advisor.

Computing: COM S 100 is required. AP credit may be earned by:
- a score of 4 or 5 on the CEEB A or AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office for Academic Affairs, Division of Biological Sciences, 200 Stimson Hall, to discuss proper placement.

Freshman Writing Seminar: Two Freshman Writing Seminars (for a total of six credits) are required.
- AP credit for one Freshman Writing Seminar may be earned by a score of 5 on the CEEB AP English exam.

A score of 4 on the AP English exam will earn a student three credits in English. These three credits cannot be applied toward the Freshman Writing Seminar requirement, but can be applied toward the expressive arts category in the Liberal Studies Distribution requirement.

Liberal Studies Distribution: Six courses beyond two Freshman Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under “General Information.”

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.

2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to the Engineering Advising office, 167 Olin Hall. Those who wish to take departmental examinations do so during Orientation Week; permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Committee on Academic Standards, Petitions, and Credit (AS PAC).

A more detailed description of the college’s policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from the Engineering Advising office, 167 Olin Hall.

Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

- To apply for transfer credit, students must complete and submit a Transfer Credit Form (one form for each request), accompanied by a course description. (Transfer Credit Forms are available from the Engineering Advising or Registrar’s offices and should be submitted prior to enrollment.) An official transcript from the offering institution (bearing the institutional seal and registrar’s signature) must be sent to the Engineering Registrar’s office before official transfer credit will be awarded.

- To apply for transfer credit to satisfy requirements in mathematics, science, engineering courses, or Freshman Writing Seminars, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required to apply for transfer credit which satisfies liberal studies distribution requirements.

The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (AS PAC) in the Engineering Advising office.
Cornell does not award credit for courses in which a student has earned a grade of less than C; schools and departments may stipulate a higher minimum grade.

College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency by taking the appropriate AP or Cornell departmental placement examination, as described in the Advanced Credit section.

After matriculation, no more than 18 credits of transfer or Cornell extramural credit may be used to satisfy bachelor’s degree requirements. Summer session courses taken at Cornell are not considered transfer credits.

Transfer students may transfer up to 36 credits for each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements. No more than 72 transfer credits may be used to meet graduation requirements.

A more detailed description of the college’s regulations governing transfer credit may be found in the pamphlet, Advanced Placement and Transfer Credit for First-Year Engineering Students, as well as the Engineering Undergraduate Handbook, both available from the Engineering Advising office, 167 Olin Hall.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing change somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stern warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. at least 12 credits passed, including at least two courses from mathematics, science, and/or engineering;
2. a C- or better in the mathematics course;
3. a semester average of 2.0 or higher;
4. no F, U, or INC grades.

Academic Progress

The total number of credits required for graduation range from 123 to 133, depending upon the field program. Therefore, an average semester credit load ranges from approximately 15 to 16 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 193), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat a course once, in the following semester.

Failure to achieve at least a C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced mathematics courses often have mathematics prerequisites, and having to repeat the prerequisite course may delay your progress in the physics and mathematics curricula.

Dean’s List

Dean’s List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor, which are determined by the dean of the college, are a term average of 3.25 (without rounding) or higher without failing, unsatisfactory, missing, or incomplete grades (even in physical education) and 12 credits or more of letter grades. Students may earn Dean’s List status retroactively if they meet these criteria after making up incomplete courses.

Graduating with Distinction and Honors Program

Graduating with Distinction

Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may be designated “cum laude, magna cum laude, or summa cum laude.” Cum laude requires a GPA of 3.50 (either overall or for the last four full-time semesters in Engineering); magna cum laude requires a GPA of 3.75 (either overall or for the last four full-time semesters in Engineering); and summa cum laude requires a GPA of 4.0 (based on all credits taken at Cornell). Note: All GPA calculations are minimums and are not rounded.

Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of 3.50. (i.e., the student must also be eligible for one of the three cum laude distinctions.) If the student’s major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of “With Honors.” For more specific information, see the field program outline in this catalog.

S-U Grades

Several courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

1. The course in question must be offered with an S-U option.
2. The student must have previously completed at least one full semester of study at Cornell.
3. The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
4. Students may only elect to enroll S-U in one (1) course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered “S-U only” may be taken in the same semester as the “elect S-U” course.)

The choice of grading option for any course is initially made during the pre-enrollment period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled in the current semester under a different grade option.

Residence Requirements

Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are on a voluntary or required leave of absence are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) may be used to satisfy the requirements for the bachelor’s degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on programs sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of the Engineering Advising office, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell

It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising office.

Students who wish to transfer into the College of Engineering can apply at the Engineering
Advising office—application forms are available in 167 Olin Hall. Students who wish to withdraw must enter the college as second-semester sophomores or later must be accepted by a field program as part of the admission process. Students who would enter as a second-semester freshman or first-semester sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who opt to transfer into engineering should take courses in mathematics, chemistry, physics, and biology, as well as the field of engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in the Engineering Advising office, 167 Olin Hall.

Leave of Absence

A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a specified period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through the Engineering Advising office; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course.) Students who owe money to the university are ineligible for an absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition. No more than 18 credits earned while on leave can be used to meet degree requirements.

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks before the day the student plans to return to campus.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are granted for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the medical leave requirements before returning to campus.

Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required Leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester. Leaves are granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course.) Students who owe money to the university are ineligible for an absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition. No more than 18 credits earned while on leave can be used to meet degree requirements.

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks before the day the student plans to return to campus.

Required Withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

Engineering Career Services

Individual advising and group seminars are available for students who desire assistance in career and job-search matters. More than 300 national employers visit the campus annually to recruit technical graduates. Additional job opportunities are posted electronically, and a state-of-the-art resume referral service is available. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Further information on all services is available from the Engineering Career Services office, 201 Carpenter Hall (2-5006); http://www.engineering.cornell.edu/ccs

Agricultural and Biological Engineering

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world’s natural resources, including water, soil, air, energy and biodiversity; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET). Three concentrations in Agricultural and Biological Engineering are offered: Environmental Systems Engineering, Biological Engineering, and Agricultural Engineering. All of these students take courses in mathematics, computer science, chemistry, biology, and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students seek advice from the department in areas that include: bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that reflect their concentration, such as environmental engineering or biomedical engineering. Students planning for medical school also take organic chemistry.
Throughout the curriculum, emphasis is placed on communications and teamwork skills. Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international agriculture.

The living world is all around us, and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who appreciate the challenges facing society. Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges. The department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.

For further details see the department’s undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field’s advising coordinator, Professor Ron Pitt, at 255-2492.

The field program requirements are outlined below.

**Basic Subjects**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>MATH 191 (or 193), 192, 293, 294, Calculus for Engineers and Engineering Mathematics</td>

<tr>
<td>ABEN 200, Undergraduate Seminar</td>
<td>1</td>
</tr>
<tr>
<td>Engineering distribution (two courses, including ENGRD 202, Mechanics of Solids)</td>
<td>6</td>
</tr>
<tr>
<td>Liberal studies (two freshman seminars and at least two courses in humanities or history)</td>
<td>24</td>
</tr>
</tbody>
</table>

**Advanced and Applied Subjects**

- **Engineering sciences in any field** (must include fluid mechanics and thermodynamics), plus ABEN 250 and 350 (Engineering Applications in Biological Systems, Bio. & Env. Transport Processes), and a minimum of four agricultural and biological engineering courses (at least 12 credits) chosen from courses numbered 450 to 495 | 35 |
- Environmental, biological or agricultural sciences (at least 3 credits of biological sciences beyond the introductory level) | 9 |

Approved electives (at least 3 credits in the College of Agriculture and Life Sciences) | 6 |

Total (minimum) | 123

### Agricultural and Biological Engineering Honors Program

**Eligibility**

This program is only available to seniors registered in the College of Engineering.

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA ≥ 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

**Content**

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of an ABEN faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.

- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Each applicant to the ABEN honors program must have an ABEN faculty advisor who will supervise the honors program. A written approval of the faculty member who will direct the research is required. After the College verifies the student's grade-point average, the student will be officially enrolled in the honors program.

**Master of Engineering (Agricultural and Biological) Degree Program**

The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculum is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include biological engineering, energy, environmental engineering, environmental management, food engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project. Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas. More information is available from the ABEN Student Services office, 207 Riley-Robb Hall (255-2173), or by e-mail at abengradfield@cornell.edu.

### APPLIED AND ENGINEERING PHYSICS

**Bachelor of Science Curriculum**

The undergraduate engineering physics curriculum is designed for students who want to pursue careers of research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in these areas. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realm of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design,
energy conversion, environmental engineering, geotechnological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state-device development, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, nanosciences, nuclear physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The Engineering Physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and an opportunity for innovative design is provided. Examples are ENGR 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman level Introduction to Engineering course); ENGRD/A&EP 264, Computer-Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 333, Electronic Circuits (a sophomore/junior course); PHYS 410, Advanced Experimental Physics; and A&EP 438, Computational Engineering Physics (a senior computer laboratory). Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with them developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy their computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year.

Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so they may wish to explore accelerating their mathematics requirements so they may wish to explore accelerating their mathematics requirements so well for the applied physics major, but entering students with sufficient background are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their junior year, and for best maintaining such options as a semester or year abroad, or early graduation.

Some courses (though the list is not all-inclusive) that will satisfy this requirement are PHYS 444, Nuclear and High-Energy Particle Physics; PHYS 454, Introductory Solid State Physics; A&EP 438, Computation Engineering Physics; A&EP 440, Quantum and Nonlinear Optics; A&EP 699, Nuclear Physics for Applications; ELE F 450, Lasers and Optical Electronics; and ELE F 531, Quantum Electronics I.

If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Areas of concentration.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of dual majors or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their adviser to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these electives are advised to consult with their EP adviser, a professor active in their area of interest, or with the associate director of the school, Professor Frank W. Wise.

Electives need not be all formal course work: Qualified students are encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active.

The variety of course offerings and many electives provide a sizable flexibility in scheduling. If scheduling conflicts arise, the student may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before entering the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or higher in every technically required course, and to attain each semester a grade-point average for that semester of at least 2.5.

**Engineering Physics Honors Program**

**Eligibility**

The Bachelor of Science degree with honors will be conferred upon those students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

**Content**

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or senior thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during
the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor’s written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper with, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. This report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee.

Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is required for successful completion of the honors requirement.

**Master of Engineering (Engineering Physics) Degree Program**

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanoscience, and nanotechnology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nanostructure science and technology. Core courses in this specialty include the microcharacterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, nanostructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (not less than 6 nor more than 12 credits)

2) an integrated program of graduate-level courses, as discussed below (17 to 23 credits)

3) a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It is planned to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng. (Engineering Physics) degree program should contact Professor Harold Craighead.

**CHEMICAL ENGINEERING**

**Bachelor of Science Curriculum**

The undergraduate Field Program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program take CHEM 208 during the freshman year. The program for the last three years, for students who have taken an Introduction to Chemical Engineering course during the first year is as follows:

**Semester 3**

*The electives in semester seven and eight comprise 6 credits of field approved electives,
CIVIL AND ENVIRONMENTAL ENGINEERING

Bachelor of Science Curriculum

The School of Civil and Environmental Engineering offers an accredited undergraduate program in civil engineering and permits students to pursue one of two options leading to the B.S. degree: civil engineering or environmental engineering. Within civil engineering, while it is not necessary to do so, students may concentrate in structural engineering, geotechnical engineering, hydraulics and hydrology, water resources systems, or transportation. The environmental engineering curriculum emphasizes study of environmental engineering, environmental and water resources systems, and hydraulics and hydrology. Sample curricula are available in the school office, 220 Hollister Hall.

Requirements for Admission to the Field:

Students planning to enter the field program in Civil and Environmental Engineering are required to complete the following courses before or during the first semester of the sophomore year with a grade of C- or better: for the Civil option, ENGRD 202, Mechanics of Solids, for the Environmental option, either ENGRD 202, Mechanics of Solids or CHEM 208, General Chemistry. In addition, the field requires a cumulative grade point average of at least 2.0 both overall and in engineering and sciences courses.

Recommended Engineering Distribution Courses:

Students entering the environmental option are required to take ENGRD 202 (Mechanics of Solids), as an engineering distribution course. The second engineering distribution may be selected according to their interests. Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;
ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;
ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;
ENGRD 211, Computers and Programming, for students interested in transportation.

Field Program:

Environmental Engineering Option

These option requirements apply to all students in the Classes of 2000 and later. For the field program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

<table>
<thead>
<tr>
<th>Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 241, Engineering Computation*</td>
<td>3</td>
</tr>
<tr>
<td>CEE 304, Uncertainty Analysis in Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 323, Engineering Economics</td>
<td>3</td>
</tr>
<tr>
<td>CEE 331, Fluid Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>CEE 341, Introduction to Geotechnical Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 351, Environmental Quality Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CEE 451, Microbiology for Environmental Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CEE 453, Laboratory Research in Environmental Engineering</td>
<td>3</td>
</tr>
<tr>
<td>ABEN 475, Environmental System Analysis</td>
<td>3</td>
</tr>
</tbody>
</table>

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved Communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective.

Civil Engineering Option

For the field program in Civil Engineering, students may elect to substitute CHEM 208 for PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum.

<table>
<thead>
<tr>
<th>Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENGRD 203, Dynamics</td>
<td>3</td>
</tr>
<tr>
<td>ENGRD 241, Engineering Computation*</td>
<td>3</td>
</tr>
<tr>
<td>CEE 304, Uncertainty Analysis in Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 323, Engineering Economics and Management</td>
<td>3</td>
</tr>
<tr>
<td>CEE 331, Fluid Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>CEE 341, Introduction to Geotechnical Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 351, Environmental Quality Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CEE 361, Introduction to Transportation Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CEE 371, Structural Behavior</td>
<td>4</td>
</tr>
</tbody>
</table>

Additional requirements include a set of two field-approved electives and three design electives from an approved list of courses which is available in the school office. In addition, students must complete one technical communications course from among the courses designated ENGRD or approved Communications courses. If the technical communications course is taken as an expressive art, then students must take an additional approved elective from a department or school other than Civil and Environmental Engineering.

*ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement.

ENGRD 270 may be accepted (on petition) as a substitute for CEE 304 in the field program.
but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.

**Civil and Environmental Engineering Honors Program**

**Eligibility**

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the *cum laude* distinctions at the time of graduation.

**Content**

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior Honors Thesis (1-6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGRG 470: Undergraduate Engineering Teaching or CEE 401: Undergraduate Teaching in CEE (1-3 credits per semester).

3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

**Timing**

All interested students must apply no later than the beginning of the first semester of their junior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

**Procedures**

Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the Associate Director for all but unusual proposals.

**Master of Engineering (Civil) Degree Program**

The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field. Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval. For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1. Three courses, one in professional engineering practice (CEE 503) and a two-course design project (CEE 501 and 502).

2. Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydrology, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.

3. Technical electives.

4. Study in a related area or areas.

Courses taken as technical electives or in the related subject area(s) may consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1. Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).

2. One course in finance, accounting, or engineering economics, as appropriate given a student's background.

3. One course in individual and/or organizational behavior from a recommended list.

4. Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the sixth term of study.

**COMPUTER SCIENCE**

**Bachelor of Science Curriculum**

The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college may major in computer science.

For details, visit our web site at http://www.cs.cornell.edu/ugrad

**The Major**

Computer Science majors take courses in algorithms, data structures, logic, programming languages, scientific computing, systems, and theory. Electives in artificial intelligence, computer graphics, computer vision, databases, multimedia, and networks are also possible. Requirements include:

- four semesters of calculus (MATH 111-122 or 112-221-222 or 191-192-293-294)
- two semesters of introductory computer programming (COM S 100 and ENGRD 211 or 212)
- a seven-course computer science core (ENGRD 222, COM S 280, 314, 381, 410, 414, and 482)
- two 400+ computer science electives, totaling at least 6 credits
- a computer science project course (COM S 413, 415, 418, 435, or 473)
- a 3+ credit mathematical elective course (ORIE 270, MATH 300+, TRAM 300+, etc.)
- two 500+ courses (field approved electives) that are technical in nature and total at least six credits
- a three-course specialization in a discipline other than computer science. These courses must be numbered 300-level or greater and be 3+ credit hours each.

The program is broad and rigorous, but it is structured in a way that supports in-depth study of outside areas. Intelligent course selection can set the stage for graduate study and employment in any technical area and any professional area such as business, law, or medicine. With the advisor, the computer science major is expected to put together a coherent program of study that supports career objectives and is true to the aims of liberal education.
Computer Science Honors Program

Eligibility
The Bachelor of Science degree with honors will be granted to students who, in addition to having completed all requirements for a bachelor degree, have:

• maintained a cumulative GPA ≥ 3.50
• qualified for cum laude honors in the College of Engineering
• completed 8 credit hours of COM S course work at or above the 500-level
• completed 6 credit hours of COM S 490 research with a COM S faculty member, (spread over at least two semesters) obtaining grades of A- or better.

See the COM S undergraduate web site for more information on eligibility: http://www.cs.cornell.edu/ugrad

Content
Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math or field approved electives, or the minor.

Timing
Honors determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: <ugrad@cs.cornell.edu>. The subject line for this message should read ‘HONORS TRACK’. Related questions may also be addressed to the ugrad.e-mail alias, or candidates can call or stop by 303 Upson Hall, 255-0982.

Preparation
Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students are encouraged to discuss potential contacts with their advisors and/or browse the department’s web page at <http://www.cs.cornell.edu> for specific leads on research opportunities.

The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in COM S will be subject to the same honors criteria.

Master of Engineering (Computer Science) Degree Program
The one-year program leading to the degree of M.Eng. (Computer Science) admits more than 70 students a year. The “fifth year,” as it is sometimes referred to, provides students with the opportunity to more fully establish professional credentials in advanced computing technologies. In recent years, the demand for the “fifth year” has expanded enormously. A strong undergraduate background in computer science or a related field is required. Each admission is made available for Cornell seniors who apply in the fall semester. The emphasis of the curriculum can be on programming languages, systems, theory of algorithms, theory of computation, numerical analysis, artificial intelligence, computer graphics/visualization, multimedia, network systems, or information processing, which includes databases and information organization and retrieval. The required design project could be, for example, the design of a compiler for a large subset of a general-purpose programming language or the solution of a significant engineering problem using computer science techniques.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science) and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to study several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

Electrical Engineering

Bachelor of Science Curriculum
The undergraduate field program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

Electrical Engineering Field Program
Students planning to enter the field program in Electrical Engineering must take ENGRD 231 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 231/ELE E 232 for students without advanced standing in mathematics.

Electrical engineering students with an interest in computer engineering are encouraged to take ENGRD 231 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ELE E 210 and ENGRD 231) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

<table>

ELE E 310 can be taken in place of ENGRD 270 or T&AM 310 to satisfy the college application of probability and statistics requirement.

(Must include two 400-level electrical engineering laboratory courses and at least two additional courses at the 400-level or above. The remaining electives may not include project courses, such as ELE E 391, 392, 491 or 492, and must be at the 300-level or above in Electrical Engineering.

At least one of the required electrical engineering laboratory courses must be selected from a list including ELE E 416, 425, 430, 453, 457, 475, 476, 488, 490, 530, 534 and 539. The other may be selected from the above list or from among ELE E 423, 426, 433, 439, 451, 452, 471, 472, 524, 526, 536, 554, 558 and 593. (This list is dynamic and changes frequently. Always refer to the latest information in the ELE E Web Handbook.)

(Must include one course at the 300-level or above (see Electrical Engineering Web Handbook for details).

All students graduating with a B.S. degree must fulfill the engineering design requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available on the department web handbook pages at http://www.ee.cornell.edu/. Undergraduate specialization is achieved through the various electrical engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates.

Maximum technical course scheduling flexibility in the field program is possible for those students who do not complete their 6 credits of approved electives prior to entry into the field program. Accordingly, intended electrical engineering students are advised to consider course selection carefully during their first three terms in engineering.

An electrical engineering honors program also exists for those students who so desire and meet the program entrance requirements. The
honors program requires an additional senior ELE E course, a required senior year research or design project, or a senior year honors thesis, and completion of the honors seminar. Details are available via the electrical engineering homepage located on the World Wide Web at http://www.ee.comell.edu/.

All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C- may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the first semester in the Field Program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical Engineering Web Handbook to remain active participants.

**Electrical Engineering Honors Program**

**Eligibility, Entry, and Continuation**

A student may apply to enter the ELE E Honors Program as early as the beginning of the fifth semester and as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

**Honors Seminar**

Any student in the honors program is required to take (or to have taken) an Honors Seminar during his or her junior year. The Honors Seminar is a 2-credit, 2-hour course that consists of a weekly series of introductory research lectures by Electrical Engineering faculty members. Each Honors Seminar enrolling over 10 students will require a number of short papers on topics covered in the lecture series. Many Electrical Engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program will receive letter grades for the Honors Seminar. Other students may attend the Honors Seminar for academic credit, but will be graded on an S/U basis for one credit hour.

**Honors Project**

Any student in the honors program is required to accumulate at least three credit hours from a senior year honors project consisting either of research, teaching, or directed reading. All Honors projects should emphasize the development of communication skills. A 3-credit teaching-oriented honors project would consist of a one-credit seminar on teaching coupled with two credit hours worth of classroom teaching, and can be a unique component of class assignments. A 3-credit research-oriented honors project requires explicitly a written submission summarizing and concluding the project.

**Additional Coursework**

Any student in the honors program is required to take at least three credit hours of advanced (senior level) ELE E coursework that has at least a 300-level prerequisite. These credit hours are in addition to the credit hours required as part of the ELE E field program.

The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree; thus an honors degree requires a minimum of 137 credit hours.

**Master of Engineering (Electrical) Degree Program**

The M.Eng (Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on engineering design and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, excluding a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Students with advanced standing frequently take one or more graduate-level courses prior to graduation, which may begin the fifth-year Master of Electrical Engineering program in their last semester of undergraduate work as long as 8 or fewer credits remain toward B.S. degree requirements and a 3.0 GPA has been maintained. Admission must be approved in advance of the last semester of undergraduate work.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

**Geoscience Option**

The Geoscience Option stresses a balanced overview of geological sciences with considerable specialization achieved by careful selection of field-approved electives. Students are required to take GEOL 201 (ENGRD 201) as an Engineering Distribution course. For students interested in geology, one of the GEOL 491-492 (Undergraduate Research, 2 credits each) with a significant component of field work; (b) GEOL 491 or 492 based on field observations obtained in GEOL 212 (Caribbean Field Trip, 2 credits) or
Science of Earth Systems (SES) Option

The SES Option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. The aim is to prepare students for graduate study and careers across the broad spectrum of earth sciences required for successful understanding and management of our planet.

The option provides a rigorous base of environmental science that strongly complements Cornell's programs in environmental science that strongly complements Cornell's programs in environmental science that strongly complements Cornell's programs in environmental science that strongly complements Cornell's programs in environmental science that strongly complements Cornell's programs in environmental science. The program requires 30 credits of postgraduate study, including GEOL 101 High Energy Synchrotron Source (CHESS). Undergraduate research, a fourth-year field-approved elective, and an integrated approach to the study of the earth system. Undergraduate research, a fourth-year field-approved elective, and an integrated approach to the study of the earth system. Undergraduate research, a fourth-year field-approved elective, and an integrated approach to the study of the earth system. Undergraduate research, a fourth-year field-approved elective, and an integrated approach to the study of the earth system.

Areas of specialization include at present:
- Climate Dynamics, the study of the physical and chemical processes producing Earth's climate system;
- Ocean Sciences, the study of the biological, chemical and physical processes at work in the ocean;
- Hydrological Sciences, the study of the interactions of rock, water, snow and ice on Earth's land surfaces;
- Biogeochemistry, study of element cycling near Earth's surface and how organisms both mediate and benefit from these fluxes;
- Environmental Geophysics, remote sensing of Earth's surface and subsurface applied to the study of the environment, global change, and natural hazards.

As alternatives to these specializations, students may select courses in Civil and Environmental Engineering (Environmental Option) or the Agricultural and Biological Engineering major offered by the Department of Agricultural and Biological Engineering.

Students are required to take a second semester of chemistry, two semesters of biology, and ENGRD 201 (Physics and Chemical Engineering) one of the Engineering Distribution courses. In addition, students take one semester of the two-credit SES Colloquium, which is designed to inform students about the field and to provide a sense of community for SES students and faculty from the several colleges who participate in the SES program. The option requires a set of four core courses, normally taken in the junior or senior years, which provide breadth and integration. An additional set of four intermediate to advanced courses are selected to provide depth and a degree of specialization. These courses permit the student to specialize in atmospheric, hydrologic or ocean sciences, biogeochemistry, environmental geophysics, an approved combination of these areas, or a combination with courses in economics, government, or education in preparation for further study leading to careers in environmental law or management or K-12 education.

The field requirements for the SES Option are summarized as follows. CHEM 208 is required, and may be taken instead of PHYS 214. ENGRD 201 (GEOL 201) is a required engineering distribution course. The Field Program includes BIO G 101/103-102/104 (or BIO G 109-110), the four SES core courses listed below, four additional courses selected with the advisor's approval to provide specialization in one or a combination of the areas covered by SES, and four other field-approved electives. Two of the specialization courses will count as field-required courses, and two as field-approved electives. At least three of the field-approved electives must be non-GEOL courses. The four SES core courses include the following:

- SES 301 Climate Dynamics (enroll in ASTRO 351 or SCAS 331) Fall, 4 credits;
- SES 302 Evolution of the Earth System (enroll in GEOL 302 or SCAS 332) Spring, 4 credits;
- SES 321 Biogeochemistry (enroll in GEOL 321 or NTRES 321) Fall, 4 credits;
- SES 402 Mechanics in the Earth and Environmental Sciences (enroll in ABEN 385) Spring, 4 credits.

An honors theses involving research (GEOL 491–492, 2 credits each) of breadth, depth, and quality.

Timing

A student interested in completing an honors thesis must, by the beginning of their seventh semester, have a written proposal of his/her honors project accepted by his/her adviser and the director of undergraduate studies.

Procedures

Each application to the Geological Sciences honors program must have a faculty adviser to supervise the honors program. Written approval by the faculty member who will direct the research is required. After the college verifies the student's grade-point average, the student will be officially enrolled in the honors program.
3. Complete MS&E 261 with a minimum grade of C prior to affiliation.

The department’s core curriculum consists of all the required MS&E courses including the MS&E distribution course, the processing elective, and the four courses comprising the student’s area of specialization.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible.

### Material Science and Engineering Honors Program

#### Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Materials Science and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

#### Content

The requirements for an honors degree in Materials Science and Engineering are:

1. Students must take at least nine credits above the minimum required for graduation in Materials Science and Engineering. So the minimum number of credits for an honors degree is at least 135. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400- and graduate-level, with selected courses at the 300-level, which must be approved by the upperclass advisers.

2. A senior honors thesis (eight credits) with a grade of at least an A.

**Note:** Undergraduates typically enter the honors program at the beginning of their Senior year (seventh semester), so that they must have a cumulative GPA equal to or greater than 3.50 at that point.

#### Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their senior year. A student must be in the program for at least two semesters before graduation.

### Procedures

Each application to the Materials Science and Engineering honors program must have a faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the student’s grade-point average is verified, the student will be officially enrolled in the honors program.

#### Master of Engineering (Materials) Degree Program

Students who have completed a four-year undergraduate program in engineering or the physical sciences can be considered for admission into the M.Eng. (Materials) program. This program consists of 30 credits, including course work and a master’s design project. The project, which requires individual effort and initiative, is carried out under the supervision of a faculty member. Twelve credits are devoted to the project, which is normally experimental in nature, although computational or theoretical projects are also possible.

Courses for the additional 18 credits are selected from the graduate-level classes in materials science and engineering and from other related engineering fields approved by the faculty. Typically half of the courses are from MS&E. One 3-credit technical elective must include advanced mathematics (modeling, computer application, or computer modeling), beyond the MS&E undergraduate requirements.

### Mechanical and Aerospace Engineering

#### Bachelor of Science Curriculum in Mechanical Engineering

The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

#### Bachelor of Science Curriculum in Mechanical Engineering

The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

**Mechanical systems, design, and materials processing** is concerned with the design, analysis, and synthesis of mechanical systems. The area includes research in mechanical design and analysis, vehicle engineering, mechanism and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

**Engineering of fluids, energy, and heat transfer systems** is concerned with the efficient conversion of energy in electric power.
The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term, sophomore students who plan to enter the Mechanical Engineering Program take ENGRD 202 (also T&AM 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School supports students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's advisor.

The requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.
2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five elective courses (24 credits).

The eleven required courses are:
- M&AE 212, Mechanical Properties and Processing of Engineering Materials
- M&AE 221, Thermodynamics
- M&AE 225, Mechanical Design and Synthesis
- T&AM 203, Dynamics
- ELE E 210, Introduction to Circuits for Electrical and Computer Engineers
- M&AE 325, Introductory Fluid Mechanics
- M&AE 324, Heat Transfer
- M&AE 325, Mechanical Design and Analysis
- M&AE 326, System Dynamics
- M&AE 427, Fluids/Heat Transfer Laboratory
- M&AE 428, Engineering Design

**Electives**

Students should use the flexibility provided by the field approved electives, approved electives, and humanities/social sciences electives to develop a program to meet their specific goals.

**Field Approved Electives**

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements:

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student. Typically these are two courses chosen from an appropriate subset of the school's upper-class offering.

However, students may petition for approval of two related courses to form a custom concentration.

The standard concentrations are:
- Fluids/Aerospace Engineering, M&AE 305, 306, 423, 449, 506
- Thermo-Fluids M&AE 423, 449, 506
- Materials Processing M&AE 412, 514
- Mechanical Systems M&AE 389, 465, 467, 469, 478, 489

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 412, 464, 467, 486, and 489.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and OR&EIE 270.

One of the field approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizations are not accepted. Advisers may approve such courses as approved electives.

**Approved Electives**

To maximize flexibility (i.e., the option for study abroad, COOP, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
- courses in cognitive sciences

Recommendation on humanities/social sciences electives

Students are encouraged to build a program that includes studies in
- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of:

a. a technical drawing course in high school or in a community college,

b. ENGRG 102, Drawing and Engineering Design,

c. another technical drawing course at Cornell, or

d. a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 389 or 489.

The writing requirement of the Common Curriculum is satisfied by M&AE 427, Introduction to Circuits for Electrical and Computer Engineers (ELF E 210) may be replaced or supplemented by Electronic Circuits (PHYS 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

**Applicability:** The curriculum requirements described above apply to the Class of '98 and beyond. More detailed materials describing the Mechanical Engineering Program can be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

**Preparation in Aerospace Engineering**

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by majoring in mechanical engineering and taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507. Students may prepare for the graduate program in aerospace engineering by majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.
The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, rarefied and non-equilibrium flows, combustion, dynamics and control, CFD, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of class, any subsequent changes must also be approved by the committee. An individual student’s curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in aerospace engineering. In general, all courses must be beyond the level required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

**Master of Engineering (Mechanical) Degree Program**

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, energy and fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, CFD, CAE, CAD, CAM, etc.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

**Nuclear Science and Engineering**

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, H. H. Fleischmann, D. A. Hammer, V. O. Kostroun, and S. C. McGuire.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the Manufacturing, Energy, or Electronic Packaging Option programs leading to special dean’s certificates in those areas.

### Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs such as those in engineering physics, materials science and engineering, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

### Master of Engineering (Nuclear) Degree Program

The two-year curriculum leading to the M.Eng.(Nuclear) degree is intended primarily for individuals who wish a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

**Fall term**

- **NS&E 509**, Nuclear Physics for Applications
- **A&EP 612**, Nuclear Reactor Theory
- **A&EP 633**, Nuclear Engineering

**Technical elective**

- **Spring term**

- **A&EP 651**, Nuclear Measurements Laboratory
- **NS&E 545**, Energy Seminar

**Technical elective**

- **Engineering design project**
- **Mathematics or physics elective**

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- **M&AE 651**, Advanced Heat Transfer
- **ELE F 581**, Introduction to Plasma Physics
- **ELE F 582**, Basic Plasma Physics
- **ELE F 471**, Feedback Control Systems
- **ELE F 472**, Digital Control Systems
- **A&EP 661**, Microcharacterization
- **NS&E 484**, Introduction to Controlled Fusion: Principles and Technology
- **NS&E 621**, Radiation Effects In Microelectronics
- **M&AE 459**, Physics of Modern Materials Analysis
OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

Bachelor of Science Curriculum in Operations Research and Industrial Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisors concerning an accelerated program of study.

A student who intends to enter the field program in Operations Research and Industrial Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

<table>
<thead>
<tr>
<th>Term</th>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>ENGRD 211, Computers &amp; Programming or ENGRD 212, Structure and Interpretation of Computer Programs</td>

†The behavioral science requirement can be satisfied by any one of several courses, including the Johnson Graduate School of Management (JGSM) course, NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and ILROB 170, 171, and 320. The adviser must approve the selection in all cases.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

| Minimum credits | OR&IE 580, Design and Analysis of Simulated Systems | 4 |
|                | Three upperclass OR&IE electives as described below | 9 |
|                | Two field-approved electives (at least 3 credits must be outside OR&IE) | 6 |
|                | Two courses in humanities and social sciences | 6 |
|                | Two approved electives | 6 |
|                | Available OR&IE electives are as follows: Manufacturing and distribution systems: OR&IE 416, 417, 451, 480, 524, 525, and 562 and JGSM MBA 641 Optimization methods: OR&IE 431, 432, 435 and 436 Applied probability and statistics: OR&IE 462, 476 (2 credits), 561, 563, 575 (2 credits), 576 (2 credits) and 577 Scholastic requirements for the field are a passing grade in every course, a grade of C- or better in ENGRD 211 and 270, OR&IE 310, 320, 321, 350, 360, 361 an overall average of at least 2.0 for each term the student is enrolled in the school, an average of 2.0 or better for OR&IE field courses, and satisfactory progress toward the completion of the degree requirements. The student's performance is reviewed at the conclusion of each term. | |

Operations Research and Industrial Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Operations Research and Industrial Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA ≥3.50 and must be eligible for one of the cum laude distinctions at the time of graduation.

Content

An OR&IE honors program shall consist of at least nine credits beyond the minimum required for graduation in OR&IE, so that no part of the honors program can also be used to satisfy graduation requirements. The nine credits shall be from one or more of the following with at least four hours in the first category:

1. Advanced courses in OR&IE at the 500-level or above.
2. A significant research experience or honors project under the direct supervision of an OR&IE faculty member using OR&IE 490: OR&IE Operations Research. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&IE using OR&IE 490: Teaching in OR&IE, or ENGR 470: Undergraduate Engineering Teaching.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the OR&IE honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the students faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student's program must also be approved by the associated director of undergraduate studies.

Master of Engineering (OR&IE) Degree Program

This one-year professional degree program stresses applications of operations research and industrial engineering and requires completion of a project. The course work centers on additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of man-machine systems, information systems and control systems, and in the financial world.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is integrated with the undergraduate Field Program in Operations Research and Industrial Engineering. We also welcome applications from Cornell undergraduates in many other majors, or from qualified non-Cornellians. To ensure completion of the program in one calendar year, the entering student should have completed courses in statistics and in computer programming (Pascal or C). Students interested in the Manufacturing Option should obtain further information from the Center for Manufacturing Enterprise, 103 Frank H. T. Rhodes Hall, 607-255-9128. Students interested in the Financial Engineering Option should contact the Financial Engineering Option Office in 201 Frank H. T. Rhodes Hall, 607-255-9128. Information concerning industrial internships can be obtained from the Master of Engineering Program Office, 148 Olin Hall.

1. For matriculants with preparation comparable to that provided by the undergraduate Field Program in Operations Research and Industrial Engineering:

<table>
<thead>
<tr>
<th>Fall term</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR&amp;IE 516, Case Studies</td>
<td>1</td>
</tr>
<tr>
<td>OR&amp;IE 893, Applied OR&amp;IE Colloquium</td>

</thead>
<tbody>
<tr>
<td>OR&amp;IE 894, Applied OR&amp;IE Colloquium</td>
<td>1</td>
</tr>
<tr>
<td>M.Eng. Project</td>
<td>minimum of 4</td>
</tr>
</tbody>
</table>
Technical electives 9

At least 12 credit hours of the electives specified above must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering. Other restrictions apply. A minimum of 30 credits must be taken to complete the program.

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&IE 520, 523, and 560 will take other technical electives in their place):

Fall term Credits

OR&IE 560, Engineering Probability and Statistics II 4
OR&IE 520, Optimization I 4
OR&IE 522, Topics in Linear Optimization 1
OR&IE 516, Case Studies 1
OR&IE 580, Design and Analysis of Simulated Systems 4
OR&IE 893, Applied OR&IE Colloquium 1
M. Eng. Project 1

Spring term

OR&IE 523, Introduction to Stochastic Processes I 4
OR&IE 894, Applied OR&IE Colloquium 1
M. Eng. Project minimum of 4

Technical electives 6

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the Master of Engineering Handbook, which is available in Room 201, Frank H. T. Rhodes Hall.

The project requirement can be filled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that actually exist in manufacturing firms, financial firms, hospitals and other service industries.

Cooperative Program with the Johnson Graduate School of Management

Undergraduates majoring in operations research and industrial engineering may be interested in a cooperative program at Cornell that leads to both Master of Engineering and Master of Business Administration (M.B.A.) degrees. With appropriate curriculum planning such a combined B.S./M.Eng./M.B.A. program can be completed in six years. An advantage for OR&IE majors is that they study, as part of their undergraduate curriculum, several subjects that are required for the M.B.A. degree. (This is because modern management is concerned with the operation of production and service systems, and much of the analytical methodology required to deal with operating decisions is the same as that used by systems engineers in designing these systems.) An early start on meeting the business-degree requirements permits students accepted into the cooperative program to earn both the M.Eng.(OR&IE) and M.B.A. degrees in two years rather than the three years such a program would normally take.

The details of planning courses for this program should be discussed with the admissions office of the Johnson Graduate School of Management.

In accordance with this program the candidate would qualify for the B.S. degree at the end of four years, the M.Eng.(OR&IE) degree at the end of five years, and the M.B.A. degree at the end of six years.

Further details and application forms may be obtained at the office of the School of Operations Research and Industrial Engineering, Frank H. T. Rhodes Hall, and at the admissions office of the Johnson Graduate School of Management.

In addition, there are two other programs that combine an M.Eng. (OR&IE) degree and an MBA degree from Cornell. The Twelve-Month MBA Program allows students to obtain both degrees in two academic years plus the intervening summer. The combined M.Eng.-MBA Program allows students to obtain both degrees in a total of five semesters.

STATISTICAL SCIENCE DEPARTMENT

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the Interdisciplinary Centers, Programs, and Studies section at the front of this catalog.

THEORETICAL AND APPLIED MECHANICS

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Master of Engineering (Engineering Mechanics) Degree Program

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechan-ics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T&AM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

ENGINEERING COURSES

Courses offered in the College of Engineering are listed under the various departments and schools.

Courses are identified with a standard abbreviation followed by a three-digit number.

Engineering Communications ENGRC
Engineering Distribution ENGRD
Engineering General Interest ENGRG
Introduction to Engineering ENGRI
Agricultural and Biological Engineering ABEN
Applied and Engineering Physics A&EP
Chemical Engineering CHEME
Civil and Environmental Engineering CEE
Computer Science COM S
Electrical Engineering ELE E
Geological Sciences GEOL
Materials Science and Engineering MS&E
Mechanical and Aerospace Engineering M&E
Nuclear Science and Engineering NS&E
Operations Research and Industrial Engineering OR&IE
Theoretical and Applied Mechanics T&AM
ENGINEERING COMMON COURSES

Engineering Communications Courses

Courses in this category, offered by the Engineering Communications Program, develop writing and oral presentation skills relevant to engineers.

ENGRC 301 Writing in Engineering
TBA. 1 credit. Prerequisite: permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. This course can only be taken in conjunction with a "writing-intensive" engineering class.

Some "writing-intensive" engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content through enhancing communications skills. May be taken more than once, with different engineering courses.

ENGRC 333 Topics in Engineering Communications
TBA. 3 credits.

Topics vary as the need and interest arise. Sample topics include introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology and the law, and the role of the college technical writing requirement.

ENGRC 350 Engineering Communications
Fall, spring, summer TBA. 3 credits.

Prerequisite: two Freshman Writing Seminars. Limited to 20 students per section.

Engineering graduates spend much of their time conveying technical information to a variety of audiences. They write a range of documents, give oral presentations, and use visuals to enhance their writing and talks. This important tasks can seem daunting and burdensome; ENGRC 350 aims to make them manageable and interesting. This course helps students develop effective processes for drafting, editing, and revising, provides strategies for communicating specialized information in different contexts, uses material from the engineering workplace, and addresses organizational and ethical issues. Students learn to communicate effectively through various assignments and a longer term project (for example, a research paper, feasibility study, or users' manual). The course material generates lively class discussion, and the class size ensures ongoing attention to each student's work. Fulfills the college technical writing requirement.

ENGRC 335 Communications For Engineering Managers (formerly ENGRC 435)
Fall, spring, summer TBA. 3 credits.

Prerequisite: two Freshman Writing Seminars. Limited to 20 students per section.

Do you anticipate communicating with colleagues, superiors, and subordinates in your working future? Will you ever run an event? Are you going to present information or ideas to an audience made up of both technical and managerial staff? Do you expect to use e-mail for both intercompany and external communication? If you need ideas about the most effective ways to approach these situations, this workshop-type class is a great place to start. Are you interested in roundtable discussions on current topics and events? Would you like to practice your written and oral communication skills in a fun, interactive, relaxed environment? Do you want to learn how to contribute effectively on a team? Rushwrites and case studies lead to active discussions on a variety of technical topics. Visual and informal presentations give experience in organizing ideas and presenting them to a variety of audiences. A group project emphasizes working effectively in teams. Fulfills the college technical writing requirement. Note: Because space is limited, seniors are given priority.

Engineering Distribution Courses

Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or co-requisites.

ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also GEOL 201)
Spring. 3 credits. Prerequisites: MATH 191 and PHYS 112. L. M. Cathles.

Formation of the solar system - accretion and evolution of the earth. The rock cycle: radioactive isotopes and the geological time scale; plate tectonics, rock and minerals, earth dynamics; The hydrologic cycle: runoff, floods and sedimentation, groundwater flow, contaminant transport. Weathering cycle: chemical cycles, CO2 (weathering), rock cycle, controls on global temperature (CO2 or ocean currents), oil and mineral resources.

ENGRD 202 Mechanics of Solids (also T&AM 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.

Principles of statics, force systems, and equilibrium of frameworks; mechanics of deformable solids, stress, strain, statically indeterminate problems; mechanical properties of engineering materials; axial force, shear force, bending moment, plane stress; Mohr's circle; bending and torsion of bars; buckling and plastic behavior.

ENGRD 203 Dynamics (also T&AM 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.

Newtonian dynamics of a particle; systems of particles, a rigid body; kinematics, motion relative to a moving frame. Impulse, momentum, angular momentum, energy. Rigid-body kinematics, angular velocity, moment of momentum, the inertia tensor. Euler equations, the gyroscope.
Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

ENGR 231 Introduction to Digital Systems
Fall, spring. 3 credits. Prerequisite: COM S 100.
An introduction to basic principles, design techniques, and methodology for communication, computer, and information systems, which process digital data streams. Includes Boolean algebra, integrated circuit components, switching circuits, and systems which provide computation, data, voice, and video service.

ENGR 241 Engineering Computation (also CEE 241)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Co-requisite: MATH 294. W. Philpot, staff.
This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheets. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations are broached. Applications are drawn from different areas of engineering.

ENGR 250 Engineering Applications in Biological Systems (also ABEN 250)
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. B. A. Ahner.
Case studies of engineering problems in agricultural, biological, and environmental systems, including biomediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the applications of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ENGR 261 Introduction to Mechanical Properties of Materials (also MS&E 261)
Fall, spring. 3 credits. S. P. Baker.
This course examines the relationship of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, strength, fracture resistance, creep resistance, or fatigue resistance. Low-tolerant design methods using fracture mechanics.

ENGR 264 Computer-Instrumentation Design (also A&E EP 264)
Fall, spring. 3 credits. Prerequisites: COM S 100. 1 lab. Fall: T. Cool; spring: J. Brock.
This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using an IBM-AT style computer or Windows. The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, non-linear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written communication skills in the context of science and engineering. A number of rhetorical principles will be presented that can produce clarity in communication without oversimplifying scientific issues. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

ENGR 270 Basic Engineering Probability and Statistics (also OR&IE 245)
Fall, spring, summer. 3 credits. Pre-requisite: MATH 293.
This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

Courses of General Interest
Courses in this category are of general interest and cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 102 Drawing and Engineering Design (also ELE E 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty students each half-term. Recommended for students without mechanical drawing experience. S-U grades optional.
Introduction to sketching, drawing, and graphic techniques useful in design, analysis, and presentation of ideas. Computer-aided design is integral to the course-work and final design project.

ENGRG 150 Engineering Seminar
Fall. 1 credit. First-year students only. S-U grades only.
Engineering freshmen meet regularly with their faculty advisors to discuss a range of engineering topics. Discussions may include the engineering curriculum and student programs, what different types of engineers do, the character of engineering careers, active research areas in the college and in engineering in general, and other skills useful for engineering students. Groups may visit campus academic, engineering, and research facilities.

ENGRG 298 Inventing an Information Society (also ELE E 298 and S&TS 292)
Spring. 3 credits. Approved for humanities distribution.
Explores the history of information technology from the 1830s to the present by considering the technical and social history of telecommunications, the electric-power industry, radio, television, computers and the internet.
Emphasis is placed on the changing relationship between science and technology, the economic aspects of innovation, gender and technology and other social relations of this technology.

ENGRG 323 Engineering Economics and Management (also CEE 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors.
D. P. Loucks.
Introduction to engineering and business economics and to project management. Intended to give students a working knowledge of management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 360 Ethical Issues in Engineering (also ELE E 360 and S&TS 360)
Spring. 3 credits. A humanities elective for engineering students. Open to sophomores.
A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Codes of ethics and ethical theory will be used to sort out conflicts the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class.

ENGRG 461 Entrepreneurship For Engineers (also M&A AE 461)
Spring. 3 credits. Enrollment open to seniors; others with permission of instructor. Enrollment may be limited. See M&A 461 for course description.

ENGRG 470 Undergraduate Engineering Teaching
Fall. 3 credits.
Engineering juniors and seniors can now earn graduation credit while helping freshmen learn mathematics, physics, or engineering design. This course introduces apprentice teachers to collaborative learning, pedagogical theory, interpersonal/intercultural issues, and practical tools for educational innovation. This course is an approved elective and can be applied toward the Honors Degree in Electrical Engineering. A 3.0 GPA is strongly recommended.
ENGRG 501 Bioengineering Seminar
Fall, spring. 1 credit. Primarily for juniors, seniors, and graduate students. M. L. Shuler.

A broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions.

ENGRG 605 Fundamentals of Biomedical Engineering I (also CHEM 605)
Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science, PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.

A series of four-week modules on specialized topics.

605.1 Cellular Dynamics and Cancer

605.2 Physiological Systems

Emphasis on development of physiologically-based pharmacokinetic models for drug delivery and on models of cardiovascular system, particularly blood flow.

605.3 Biomaterials

The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/alloys, and ceramics and that are currently used in human body. After student's completion of this module, they should have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, and the current R&D activities in biomaterials, challenges that biomaterials are facing and future direction of R&D in biomaterials.

605.4 Biomedical Engineering Project

Students will work in teams on a design problem of their choice related to development of a biomedical device or procedure. Each team will present an oral report and a written report.

ENGRG 606 Fundamentals of Biomedical Engineering II (also CHEM 606)
Spring. 1–4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler.

A series of 1 and 2-credit modules on specialized topics.

606.1 Artificial Organs and Tissue Engineering

An introduction to the use of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section will discuss the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regenerative guides), and hybrid cell/polymer implantable systems (e.g., engineered tissues).

606.2 Biomedical Instrumentation and Diagnosis

Perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographies, and micro-electromechanical devices to biological systems will be explored.

606.3 Biomechanics of Musculoskeletal Systems

Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb will be explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads will be discussed, and physical testing will be demonstrated. A computer model of the stifle (knee) joint will be created by combining knowledge of the anatomy and the mechanical environment.

Introduction to Engineering Courses

Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with courses in a department.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&EP 110)
Fall, spring. 3 credits.

The principles of laser action, types of laser systems, elements of laser design, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Materials by Design (also M&A E 111)
Fall. 3 credits. F. P. Giannelis.

Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves disassembling and analyzing various consumer products such as disposable camera or portable cassette player. Emphasis is placed on materials identification and their selection to perform an engineering function.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)
Fall, spring. 3 credits. Not open to freshmen. T. M. Duncan, C. Cohen.

Design and analysis of processes involving chemical change. Strategies for design, such as creative thinking, conceptual block-busting, and (re)definition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess product quality, economics, safety, and environmental issues.

ENGR 113 Introduction to Environmental Systems (also CEE 113)
Fall. 3 credits. Not open to students not in upper-division engineering students. M. Weber-Shirk.

Introduction to analysis, management, and modeling of environmental systems. Discussion of physical, chemical, and biological processes affecting environmental quality. Use of computers to simulate environmental phenomena. Examples include management of water resources, ecosystems concepts, solid waste management, and water quality in surface and ground waters.

ENGR 114 An Introduction to Electrical Engineering Design
Spring. 3 credits.

An introduction to electrical engineering and electronic circuit design. Students work in small groups on a series of electronic circuit projects leading to the team design of a working fiber optic transmitter-receiver system. The laboratories and lectures introduce the concepts and principles of electronic circuits and focus upon circuits useful in the design project. Laboratory fee required.

ENGR 115 Engineering Application of Operations Research (also OR&IE 115)
Fall. 3 credits. Enrollment not open to OR&IE upper-class majors.

An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

ENGR 116 Modern Structures (also CEE 116)
Fall. 3 credits. Staff.

An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as bridges, skyscrapers, long-span structures, and shell structures. The philosophy of engineering design and the impact of structural failures and earthquakes are discussed. A semester project involves the design and construction of a small balsa-wood bridge.
ENGRI 117 Introduction to Mechanical Engineering (also M&E 117)
Fall or spring, to be determined. 3 credits.
An introduction to topics of current interest in mechanical engineering. Specific topics vary from offering to offering. Students are urged to check in Upson 112 for details.

ENGRI 118 Design Integration: A Portable CD Player (also MS&E 118 and T&M 118)
Spring. 3 credits.
This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGRI 120 Introduction to Biotechnology (also CHEM E 120)
Fall. 3 credits. W. M. Saltzman.
Introduction to the fundamental science and engineering that spawned the biotechnology revolution: the biology of cells cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnical processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.

ENGRI 121 Fission, Fusion, and Radiation (also A&EP 121 and NS&E 121)
Spring. 3 credits. K. B. Cady.
Lecture-laboratory course on (1) the physical nature and biological effects of nuclear radiation, (2) benefits and hazards of nuclear energy, (3) light-water reactors, breeder reactors, and fusion reactors; and (4) uses of nuclear radiation in research. Laboratory demonstrations involve Cornell's research reactor; detection of nuclear radiation; activation analysis using gamma-ray spectroscopy; neutron radiography; and pulsed power generators for fusion research.

ENGRI 122 Earthquake! (also GEOL 122)
Fall. 3 credits. L. D. Brown.
The science of natural hazards and strategic resources is explored. Techniques for locating and characterizing earthquakes, and assessing the damage they cause; methods of using sound waves to image the earth's interior to search for strategic materials; the historical importance of such resources. Seismic experiments on campus to probe for groundwater, the new critical environmental resource.

ENGRI 124 Designing Materials for the Computer (also MS&E 124)
Spring. 3 credits. 3 lectures. C. K. Ober.
Introduces the materials, processes and properties of the semiconductors, polymers, ceramics, and metals used in the microelectronics industry to form integrated circuits, electronic devices and displays. This course examines lithographic processing, metallization, diffusion, ion implantation, oxidation and other processes used in fabricating electronic devices and their packages. The technology of displays will be discussed including liquid crystal displays and light emitting devices.

ENGRI 125 Global Environment (also GEOL 125)
Fall. 3 credits. W. M. White, L. A. Derry.
Wise environmental management requires an understanding of natural chemical interactions. Examine key cycles and processes in the atmosphere, biosphere, hydrosphere, and the solid Earth; the impact of man's activity on them, including the greenhouse effect, ozone hole, acid rain, and water pollution. Laboratory sessions include environmental chemical analysis and computer simulation.

ENGRI 126 Introduction to Telecommunications
Fall. 3 credits. 2 lectures.
This course introduces the technologies that underlie wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Modems and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course will include both lectures and laboratory demonstrations. The students will have the opportunity to design communication systems, and to determine their performance through simulations.

ENGRI 185 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, ARTH 200, ENGL 285, GEOL 200, MS&E 285, NS&E 285 and PHYS 200)
Spring. 3 credits. 3 lectures. R. Kay.
An interdepartmental course on the use of techniques of science and engineering in cultural research. Applications of physical and physiological principles to the study of archaeological artifacts and works of art. Historical and technical aspects of artistic creation. Analyses by modern methods to deduce geographical origins, and for exploration, dating and authentication of cultural objects. Does not meet liberal studies distribution requirement for Engineering.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

For complete course descriptions, see the Agricultural and Biological Engineering listing in the College of Agriculture and Life Sciences section or visit the department web site <http://www.cals.cornell.edu/dept/aben/>.

ABEN 104 Introduction to Programming in Java and Fortran
Spring. 4 credits. Each lab limited to 22 students. S-U grades optional. Fee: $15.

ABEN 120/121 Science of Earth Systems Colloquium (also GEOL 123/124, SCAS 101/102 and SES 101/102)
120, fall; 121, spring. 2 credits. ABEN 120 is not a prerequisite for ABEN 121. S-U grades only.

ABEN 151 Introduction to Computing
Fall. 4 credits. Prerequisite: MATH 191 or equivalent (co-registration permissible). Each lab and recitation section limited to 22 students.

ABEN 200 Life after Graduation
Spring. 1 credit. S-U grades optional.

ABEN 250 Engineering Applications in Biological Systems (also ENGRD 250)
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. For description, see ENGRD 250.

ABEN 300 Career Development
Spring. 1 credit. Prerequisites: ABEN 200 or permission of instructor. S-U grades optional.

ABEN 301 Energy Systems
Spring. 3 credits. Prerequisite: college physics.

ABEN 331 Environmental Control for Agricultural Production Systems
Fall. 3 credits.

ABEN 350 Biological and Environmental Transport Processes
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible).

ABEN 365 Properties of Biological Materials
Spring. 3 credits. Prerequisites: one semester of math and physics. S-U grades optional.

ABEN 367 Introduction to Biological Engineering
Spring. 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. S-U grades optional. Not open to freshmen.

ABEN 371 Hydrology and the Environment (also SCAS 371 and GEOL 204)
Spring. 3 credits. Prerequisite: one course in calculus.

ABEN 385 Mechanics in the Earth and Environmental Sciences
Spring. 4 credits. S-U grades optional.

ABEN 411 Biomass Processing: Modelling and Analysis
Spring. 3 credits. S-U grades optional.

ABEN 449 Computational Tools for Engineers
Spring. 3 credits. Prerequisite: completion of the undergraduate engineering math sequence or permission of instructor. S-U grades optional.

ABEN 450 Instrument Design: Signal Processing and Data Acquisition
Fall. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming and use of spreadsheets.
ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes  
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or COM S 100) and heat and mass transfer (ABEN 350 or equivalent).

ABEN 454 Physiological Engineering  
Fall. 3 credits. Corequisite: fluid mechanics.

ABEN 456 Biomechanics of Plants  
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U grades optional.

ABEN 471 Geohydrology (also CEE 431 and GEOL 445)  
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. For description, see CEE 431.

ABEN 473 Watershed Engineering  
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.

ABEN 474 Drainage and Irrigation Design  
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology.

ABEN 475 Environmental Systems Analysis  
Fall. 3 credits. Prerequisites: computer programming and one year of calculus.

ABEN 476 Solid Waste Engineering  
Spring. 3 credits. Prerequisites: one semester of physics and chemistry.

[ABEN 477 Treatment and Disposal of Agricultural Wastes]  
Fall. 3 credits. Prerequisites: one environmental science course and at least junior-level standing or permission of instructor. Not offered 1998-99.

ABEN 478 Ecological Engineering  
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

ABEN 481 Design of Wood Structures  
Spring. 3 credits. Prerequisite: ENGRD 202.

ABEN 482 Bioenvironmental Engineering  
Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent.

ABEN 491 Highway Engineering (also CEE 462)  
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently).

ABEN 494 Special Topics in Agricultural and Biological Engineering  
Fall, spring. 1-4 credits. S-U grades optional.

ABEN 496 Senior Design in Agricultural and Geological Engineering  
Fall, spring. 1-3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 497 Individual Study in Agricultural and Biological Engineering  
Fall, spring. 1-4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 498 Undergraduate Teaching  
Fall, spring. 1-4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 499 Undergraduate Research  
Fall, spring. 1-3 credits. Prerequisites: written permission of instructor; adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 551/552 Agricultural and Biological Engineering Design Project  
Fall, spring. 1-6 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

ABEN 655 Thermodynamics and Its Applications  
Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

ABEN 671 Analysis of the Flow of Water and Chemicals in Soils  
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics.

ABEN 672 Drainage  
Spring. 4 credits. Prerequisites: ABEN 471 and two calculus courses. S-U grades optional. Offered alternate years.

[ABEN 677 Treatment and Disposal of Agricultural Wastes]  
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1998-99.

ABEN 678 Nonpoint Source Models  
Spring. 3 credits. Prerequisites: computer programming and calculus.

ABEN 685 Biological Engineering Analysis  
Spring. 4 credits. Prerequisite: TRAM 310 or permission of instructor.

ABEN 692 Pavement Engineering (also CEE 643)  
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering  
Fall, spring. 1-4 credits. S-U grades optional.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering  
Fall, spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional.

ABEN 700 General Seminar  
Fall. 1 credit. S-U grades only.

ABEN 750 Orientation for Research  
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

ABEN 754 Sociotechnical Aspects of Watershed Development (also ARME 754 and GOVT 644)  
Spring. 2-3 credits. S-U grades optional.

ABEN 771 Soil and Water Engineering Seminar  
Fall, spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

ABEN 781 Structures and Related Topics Seminar  
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

ABEN 785 Biological Engineering Seminar  
Spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only.

ABEN 800 Master's-level Thesis Research  
Fall, spring. 1-15 credits. Prerequisite: permission of advisor. S-U grades only. Variable credit for Ph.D. research before the "A" exam is passed.

ABEN 901 Doctoral-level Thesis Research  
Fall, spring. 1-15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of advisor. S-U grades only.

**APPLIED AND ENGINEERING PHYSICS**

A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGR 1110)  
Fall. spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGR 110.

A&EP 121 Fission, Fusion, and Radiation (also ENGR 121 and NS&E 121)  
Spring. 3 credits. K. B. Cady. This is a course in the Introduction to Engineering series. For description, see ENGR 121.

A&EP 217 Electricity and Magnetism (also PHYS 217)  
Fall, spring. 4 credits. Prerequisites: approval of student's advisor and permission of the instructor; coregistration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 102 or equivalent and coregistration in MATH 293 or equivalent. Staff. Intended for students who have done well in PHYS 112 or 116 (or the equivalent) and in mathematics who desire a more analytic treatment than that of PHYS 213. At the level of Electricity and Magnetism, by Purcell. Recommended for prospective engineering physics majors. A placement quiz may be
given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 213 without difficulty.

A&EP 264 Computer-Instrumentation Design (also ENGRD 264)
Fall, spring. 3 credits. Prerequisites: COM S 100. Fall: T. Cool; spring: J. Brock.
For description, see ENGRD 264.

Introduction to biophysics for engineers and students interested in bioengineering.

A&EP 321 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in the physical sciences. Review of vector analysis; complex variable theory; Cauchy-Riemann conditions, complex Taylor and Laurent Series, Cauchy integral formula and residue techniques, conformal mapping; Fourier Series; Fourier and Laplace transforms; ordinary differential equations; separation of variables. Texts: Mathematical Methods for Physics, by Arfken; Mathematical Physics, by Butkov.

A&EP 322 Mathematical Physics II
Spring. 4 credits. Prerequisite: A&EP 321. Second of the two-course sequence in mathematical physics intended for upper-level undergraduates in the physical sciences.
Partial differential equations, Bessel functions, spherical harmonics, separation of variables, wave and diffusion equations, Laplace, Helmholtz and Poisson's Equations, transform techniques, Green's functions, integral equations, Fredholm equations, kernels; complex variables, theory, branch points and cuts, Riemann sheets, method of steepest descent; tensors, contravariant and covariant representations; group theory, matrix representations, class and character. Texts: Mathematical Methods for Physics, by Arfken; Mathematical Physics, by Butkov.

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Enrollment limited.
Prerequisites: PHYS 214 or equivalent.
F. Bodenschutz.
A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology and engineering. The students will also be introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits.
Prerequisites: PHYS 112 or 116 and coregistration in A&EP 321 or equivalent or permission of instructor.
Newton's mechanics, constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thorton.)

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor.
Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace's equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent or permission of instructor.
Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis on physical concepts and developing ability to design/analyze microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 355 or PHYS 318; coregistration in A&EP 356 or equivalent and in PHYS 326.
A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 363)
Fall, spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less crowded. 1lec, 2 labs. Fall: F. Kirkland; spring: J. Alexander.
Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparison filters and polarizers). Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering (also ELE E 403, M&AE 458 and NS&E 403)
Fall. 3 credits. Prerequisite: PHYS 214 and MATH 296.
For description, see NS&E 403.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory three-semester physics sequence plus one year of junior-level mathematics. Quantum statistical basis for equilibrium thermodynamics, macrocanonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer, and Statistical Physics, by Rosser.

A&EP 434 Continuum Physics
Spring. 4 credits. Prerequisites: A&EP 333 and 356 or equivalent.
At the level of Lai, Rubin and Knapp, Continuum Mechanics, and Tritton, Introduction to Fluid Mechanics.

A&EP 439 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in 321 permitted.
Numerical computations: finite differences, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot by solved analytically. Fluid-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics
An introduction to the fundamentals of the interaction of laser light with matter. Topics include the propagation of laser beams in bulk media and in guided-wave structures, the origins of optical nonlinearities, harmonic generation, self-focusing, optical bistability, propagation of ultrashort pulses, solitons, optical phase conjugation, optical resonance and two-level atoms, atom cooling and trapping, multiphoton processes, spontaneous and stimulated scattering, ultra-intense laser-matter interactions.

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 4 credits. Prerequisites: A&EP 361 or equivalent, co-enrollment in AEP 423 or equivalent.
An introduction to the physics of crystalline solids. Crystal structures; electronic states; lattice vibrations; metals, insulators and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, superconductivity are covered as time allows. The majority of the course will address the foundations of the subject, but time is devoted
to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel, or Solid State Physics by Ashcroft and Mermin.

A&EP 470 Biophysical Methods (also BIONB 470) Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through sophomore level, some knowledge of cellular biology helpful but not required. Letter grades only. An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics covered will include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format will include assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students interested in biophysics, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AE 459 and NS&E 484) Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Emphasis on understanding the physics and materials science involved in the laboratory apparatus, performance of laboratory measurements, computer simulation or software development, theoretical design and analysis. Details to be arranged with respective faculty member.

A&EP 550 Applied Solid State Physics Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent). Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course will concentrate on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices and mesoscopic quantum mechanical effects. The course will stress the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 606 Introduction to Plasma Physics (also ELE E 501) Fall. 4 credits. Prerequisites: ELE E 303 and ELE E 304 or equivalent. For description, see ELE E 581.

A&EP 607 Basic Plasma Physics (also APPLIED PHYSICS 507) Spring. 4 credits. Prerequisites: ELE E 581 and A&EP 606. For description, see ELE E 582.

A&EP 633 Nuclear Reactor Engineering Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. The fundamentals of nuclear reactor engineering, reactor siting and safety, fluid flow and heat transfer, control, environmental effects, and radiation protection.

A&EP 661 Microcharacterization Spring. 3 credits. Prerequisites: introductory three-semester physics sequence or an introductory course in modern physics. At the senior/first-year graduate level. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process of which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

A&EP 682 Micro/Nano-fabrication and Processing Fall. 3 credits. An introduction to the fundamentals of micro and nano-fabrication and patterning thin-film materials and surfaces, with emphasis on electronic materials, with emphasis on electronic and optical materials, micromechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that defines and limits the various processes. At the level of Brodie and Muray.

A&EP 751/752 M ENG Project 751, fall; 752, spring. 6-12 credits to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the University faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.
CHEM 332 Analysis of Separation Processes
Spring. 4 credits. Prerequisites: CHEM 313 and 323. TBA. Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria: binary, ternary, and multicomponent distillation; liquid-liquid extraction; gas absorption, absorption, membrane separations.

CHEM 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEM 313 and 322. D. L. Koch. A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 391 Physical Chemistry I (also CHEM 391)
For description, see CHEM 391.

CHEM 432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 324, 332, and 390. Ackley and staff. Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 462 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEM 432. Ackley and staff. A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 472 Process Control
Fall. 3 credits. Prerequisites: CHEMF 324 and 390. J. R. Engstrom. Analysis of the dynamics of chemical processes and design of feedback and feedforward control systems. Laplace transform techniques; stability analysis; frequency-response analysis. An introduction to multivariable control.

CHEM 480 Chemical Processing of Electronic Materials
Spring. 3 credits. A. B. Antion and J. R. Engstrom. Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermodynamics of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

CHEM 481 Biomedical Engineering
Spring. 3 credits. Prerequisite: CHEM 324 or equivalent or permission of instructor. W. M. Saltzman. Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pace makers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEM 490 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEM 491 Undergraduate Teaching in Chemical Engineering
Fall, spring. 1 credit. T. M. Duncan and M. Ackley. Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEM 492 Research Principles and Practices
Spring. 1 credit. T. M. Duncan. Introduces research procedures, including documenting and reporting research (writing and speaking), experimental design, data analysis, visualization, design, and control of continuous large-scale chemical processes. Pharmaceutical processing covers fermentation, purification, and sterilization. Food processing emphasizes food preservation principles and technology.

CHEM 520 Chemical, Pharmaceutical, and Food Processing
Spring. Variable to 3 credits. Prerequisite: seniors or M.Eng. students with one term of college chemistry. T. M. Duncan, M. L. Shuler, and S. Mulyanov. This course consists of three parts, each one credit. Chemical processing is open to non-chemical engineers only and covers process fundamentals, design, and control of continuous large-scale chemical processes. Pharmaceutical processing covers fermentation, purification, and sterilization. Food processing emphasizes food preservation principles and technology.

CHEM 526 Managing Chemical Process Design
Fall. 1 or 2 credits. Prerequisite: CHEM 462. K. E. Ackley. Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

CHEM 564 Design of Chemical Reactors
Spring. 3 credits. Prerequisite: CHEM 590 or equivalent. P. Harriott. Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEM 565 Design Project
Fall, spring. 3 or 6 credits. Required for students in the M.Eng. (Chemical) program. Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEM 590 Special Projects in Chemical Engineering
Fall, spring. Variable credit. Limited to graduate students. Non-thesis research or studies on special problems in chemical engineering.

CHEM 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)
Fall. 1-4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481 or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering. For description, see ENGRG 605.

CHEM 606 Fundamentals in Biomedical Engineering II (also ENGRG 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481 or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.

CHEM 640 Polymers Materials
Fall. 3 credits. F. Rodriguez. Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHEM 643 Introduction to Bioprocess Engineering
Fall. 3 credits. Prerequisite: CHEM 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler. A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEM 656 Separations Using Membranes or Porous Solids

CHEM 661 Air Pollution Control

CHEM 675 Synthetic Polymer Chemistry (also M S&E 671 and CHEM 671)
Fall. 4 credits. Prerequisites: CHEM 359-360 or equivalent or permission of instructor. For description, see CHEM 671.

CHEM 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEM 313 or equivalent. P. Clancy. Postulatory approach to thermodynamics. Legendre transformations. Equilibrium and stability of general thermodynamic systems. Applications of thermodynamic methods to advanced problems in chemical engineering. Introduction to statistical mechanical ensembles, phase transitions, Monte Carlo methods, and theory of liquids.

CHEM 713 Chemical Kinetics and Dynamics
Spring. 3 credits. Prerequisite: CHEM 390 or equivalent. J. R. Engstrom. Microscopic and macroscopic viewpoints. Connections between phenomenological chemical kinetics and molecular reaction.

CHEM 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEM 323 and 324 or equivalent. D. L. Koch. Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.

CHEM 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHEM 511 or equivalent. P. H. Steen. Conservation laws with multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as evaporation, condensation, evaporation through films and membranes, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEM 741 Selected Topics in Biochemical Engineering
Fall. 1 credit (may be repeated for credit). Prerequisite: CHEM 545 or permission of instructor. M. L. Shuler and W. M. Saltzman. Discussion of current topics and research in biochemical engineering for graduate students.

CHEM 745 Physical Polymer Science I

CHEM 751 Mathematical Methods of Chemical Engineering Analysis

CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Simulation
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years. P. H. Steen. Elements of stability and bifurcation theory. Branch-following techniques. Stability of discrete and continuous systems. Application to elasticity, reaction-diffusion, and hydrodynamic systems using software for continuation problems.

[CHEM 777 Computational Modeling and Simulation of Materials Processing and Materials Design
Spring. 3 credits. Not offered spring 1999. P. Clancy. Computational tools ranging from the atomic—quantum mechanical modeling, Monte Carlo and molecular dynamics—to the macroscopic—continuum modeling tools for process simulation in the semiconductor industry.]

CHEM 790 Seminar
Fall, spring. 1 credit each term. General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

CHEM 792 Advanced Seminar in Thermodynamics
Fall, spring. 1 credit. A forum for talks by graduate students and faculty members on topics of current interest in thermodynamics and statistical mechanics.

CHEM 890 Thesis Research
Fall, spring. Variable credit. Thesis research for the M.S. degree in chemical engineering.

CHEM 990 Thesis Research
Fall. Variable credit. Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING

General

CEE 113 Introduction to Environmental Systems (also ENGRD 241)
Fall. 3 credits. Not open (without instructor's permission) to upper-division engineering students. M. Weiher-Shirk. This is a course in the Introduction to Engineering series. For description, see ENGRD 113.

CEE 116 Modern Structures (also ENGRD 116)
Fall. 3 credits. Staff. This is a course in the Introduction to Engineering series. For description, see ENGRD 116.

CEE 241 Engineering Computation (also ENGRD 241)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisite: MATH 294. W. Philipot, staff. For description, see ENGRD 241.

CEE 304 Uncertainty Analysis in Engineering
Fall. 4 credits. Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Bates. An introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. The course covers data presentation, probability theory, and commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, and models of vehicle arrivals.

CEE 309 Special Topics in Civil and Environmental Engineering
Fall, spring. 1-4 credits. Staff. Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 400 Senior Honors Thesis
Fall, spring. 1-6 credits. Staff. Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

CEE 401 Undergraduate Engineering Teaching in CEE
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

CEE 501 Civil and Environmental Engineering Design Project I
Fall. 3 credits. Required for students in the M.Eng. (Civil) program. Staff. Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

CEE 502 Civil and Environmental Engineering Design Project II
Spring (work required during January intersession). 3 credits. Required for students in the M.Eng. (Civil) program. Staff. A continuation of CEE 501.

CEE 503 Professional Practice in Engineering
Spring. 3 credits. Required for and limited to students in the M.Eng. (Civil) program. C. H. Trautmann. Financial, legal, regulatory, ethical, and business aspects of engineering practice are examined in detail. Students are expected to develop their understanding of the interrelations among the physical, social, economic, and ethical constraints on engineering design.

CEE 601 Water Resources and Environmental Engineering Seminar
Fall. 1 credit. Presentation of topics of current interest.

Remote Sensing

CEE 411 Remote Sensing: Resource Inventory Methods (also SCAS 461)
Spring. 3 credits. Prerequisite: permission of instructor. S. C. DeGloria. For description, see SCAS 461.

CEE 610 Remote Sensing Fundamentals (also SCAS 660)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Philpot. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors; sensor and ground-data acquisition; data analysis and interpretation; and project design.
CEE 615 Digital Image Processing  
Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MAT 109) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor. W. D. Philpot.

An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.

CEE 617 Project—Remote Sensing  
On demand. 1–6 credits. W. D. Philpot. Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 618 Special Topics—Remote Sensing  
On demand. 1–6 credits. W. D. Philpot. Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CEE 710 Research—Remote Sensing  
On demand. 1–6 credits. W. D. Philpot. For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 810 Thesis—Remote Sensing  
Fall. 3 credits. Prerequisite: CEE 323 or equivalent. D. P. Loucks. Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 620 Water-Resources Systems I  
Fall. 3 credits. Prerequisite: CEE 323 or equivalent. D. P. Loucks. Course examines statistical, time series, and stochastic optimization methods used to address water-resources problems. Statistical issues include maximum likelihood, and moments estimators; censored datasets and historical information; probability plotting; Bayesian inference; index flood methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and reservoir-operation optimization models.

CEE 621 Water-Resources Systems II: Stochastic Hydrology  
Spring. 3 credits. Prerequisites: CEE 304 and 620 or permission of instructor. Not offered 1998-1999. J. R. Stedinger. Course examines mathematical, statistical, and decision-theory approaches to water-resources planning and management. Focus is on stochastic optimization and simulation methods and applications to address water-resources problems. Statistical issues include maximum likelihood, and moments estimators; censored datasets and historical information; probability plotting; Bayesian inference; index flood methods; ARMA models; multivariate stochastic streamflow models; stochastic simulation; and reservoir-operation optimization models.

CEE 623 Environmental Quality Systems Engineering  
Spring. 3 credits. Prerequisites: MATH 294 and optimization (ABEN 475, or OR&IE 520/520). C. A. Shoemaker. Applications of optimization, simulation methods, and uncertainty analysis to the prevention and remediation of pollution. Case studies include regional waste and wastewater treatment, restoration of dissolved oxygen levels in rivers, and reclamation of contaminated groundwater. Applications use linear programming, integer, dynamic, nonlinear programming, and sensitivity analysis.

CEE 628 Water and Environmental Resources Systems Analysis Seminar  
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker. Graduate students and faculty members give informal lectures on various topics related to ongoing research in water or water-resources systems planning and analysis.

CEE 722 Environmental and Water Resources Systems Analysis Research  
On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be sustained throughout the investigation to be undertaken. Staff. Investigations of particular environmental or water-resources systems problems.

CEE 820 Thesis—Environmental and Water Resources Systems  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Fluid Mechanics and Hydrology  
See also CEE 241 and CEE 655.

CEE 331 Fluid Mechanics  
Fall, usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: ENGRD 202 (may be taken concurrently). P. L-F. Liu. Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

CEE 332 Hydraulic Engineering  
Spring. 4 credits. Prerequisite: CEE 331. Staff. Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

CEE 431 Geohydrology (also GEOL 445 and ABEN 471)  
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles. Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, ground water hydrodynamics, soil water, and solute transport.

CEE 432 Hydrology  

CEE 435 Coastal Engineering  
Fall. 4 credits. Prerequisite: CEE 331. Not offered 1998-99. P. L-F. Liu. Introduction to wave water phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave theories to engineering design problems such as forces on coastal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.

CEE 630 Advanced Fluid Mechanics  
Fall. 3 credits. Prerequisite: CEE 331. Not offered 1998-99; may be offered 1999-2000. Staff. Introduction to tensor analysis; conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers. Similitude and modeling. Laminar diffusion of momentum, mass and heat.
[CEE 631] Flow and Contaminant Transport Modeling in Groundwater

[CEE 632] Hydrology

[CEE 633] Flow in Porous Media and Groundwater
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 1998-99. W. H. Brutsaert. Fluid mechanics and equations of single-phase and multiphase flow, methods of solution. Applications involve aquifer hydrodraulics, pumping wells, drainage flows, infiltration, groundwater recharge; land subsidence; seawater intrusion; miscible displacement; transient seepage in unsaturated materials.

[CEE 634] Boundary Layer Meteorology
Fall. 3 credits. Prerequisite: CEE 331 or permission of instructor. Not offered 1998-99. W. H. Brutsaert. Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation, land use, fluids sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

[CEE 635] Small and Finite Amplitude Wave Waves
Spring. 3 credits. Prerequisite: CEE 435 or equivalent. P. L.-F. Liu. Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.

[CEE 636] Environmental Fluid Mechanics

[CEE 638] Hydraulics Seminar
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L.-F. Liu. Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

[CEE 639] Special Topics in Hydraulics
On demand. 1-6 credits. Staff. Special topics in fluid mechanics, hydraulic engineering, or hydrology.

[CEE 732] Computational Hydraulics

[CEE 733] Research in Hydraulics
On demand. 1-6 credits. Staff. The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge in the form of a research report.

Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Geotechnical Engineering

[CEE 341] Introduction to Geotechnical Engineering

[CEE 640] Foundation Engineering

[CEE 641] Retaining Structures and Slopes
Spring. 3 credits. Prerequisite: CEE 341. T. D. O'Rourke. Earth pressure theories. Design of rigid, flexible, and reinforced structures and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of course material under field conditions of engineering practice.

[CEE 643] Pavement Engineering (also ABEN 692)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering. L. H. Irwin. For description, see ABEN 692.

[CEE 644] Environmental Applications of Geotechnical Engineering
Fall. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke. Principles of geotechnical migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation technologies, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

[CEE 648] Seminar in Geotechnical Engineering
Fall, spring. 1 credit. Staff. Presentation and discussion of topics in current research and practice in geotechnical engineering.

[CEE 649] Special Topics in Geotechnical Engineering
On demand. 1-6 credits. Staff. Supervised study of special topics not covered in the formal courses.

[CEE 740] Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart. Detailed study of the physiochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic properties of natural soils. Field-testing methods for determining properties based on laboratory testing.

[CEE 741] Rock Engineering
Spring. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. Staff. Geological and engineering classifications of intact rock, discontinuities, and rock masses. Laboratory and field evaluation of properties. Stress states and stress analysis. Design of foundations on, and openings in, rock masses. Analysis of the stability of rock slopes.

[CEE 744] Advanced Foundation Engineering
Spring. 2 credits. Prerequisite: CEE 640. Not offered 1998-99. F. H. Kulhawy. A continuation of CEE 640, with detailed emphasis on special topics in soil-struture interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

[CEE 745] Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. H. F. Stewart. Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankment and retaining structures under dynamic loading conditions.
CxEE 746 Embankment Dam Engineering
Spring. 2 credits. Prerequisites: CxEE 641 and 741, or permission of instructor. F. H. Kuhlwy.
Principles of analysis and design for earth and rockfill dams. Materials, construction methods, internal and external stability, seepage and drainage, performance monitoring, abutment and foundation evaluation. Introduction to tailings dams.

CxEE 749 Research in Geotechnical Engineering
On demand. 6-0 credits. Staff. For the student who wants to pursue a particular geotechnical topic in considerable depth.

CxEE 840 Thesis—Geotechnical Engineering
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Environmental Engineering

CxEE 351 Environmental Quality Engineering
Spring. 3 credits. L. W. Lion. Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

CxEE 352 Water Supply Engineering
Fall. 3 credits. Prerequisites: CxEE 351 and previous/concurrent enrollment in CxEE 451 or BIOMI 290. R. I. Dick. Analysis of contemporary threats to human health from water supply systems. Criteria and standards for potable-water quality. Water-quality control theory. Design of water supply facilities.

CxEE 451 Microbiology for Environmental Engineering
Fall. 3 credits. Prerequisite: two semesters of college chemistry. J. M. Gossett. An introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Topics include nomenclature and chemical processing of organic compounds; characteristics of bacteria, fungi, algae, protozoa and viruses relevant to water and wastewater; pathogens, disease, and immunity; environmental influences on microorganisms; biochemical and metabolic processes; microbial genetics; and microbial ecology. This is an introductory course; consequently, it is inappropriate for those who have taken BIOMI 290 or equivalent.

CxEE 453 Laboratory Research in Environmental Engineering
Spring. 3 credits. Prerequisites: CxEE 351 or permission of instructor. M. L. Weber-Shirk. Laboratory investigations of reactor flow characteristics, acid rain/lake chemistry, contaminated soil-site assessment, risk assessment, and remediation; pollutant dispersion/transport in rivers; drinking water filtration for pathogen removal; oxygen sag in rivers; and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized.

CxEE 653 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion. Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibrium, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CxEE 654 Aquatic Chemistry
Spring. 3 credits. Prerequisite: CxEE 653 or CHEM 287–288. J. J. Bisogni. Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid–base reactions, buffer systems, mineral precipitation, coordination and redox reactions. Eh–pH diagrams adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CxEE 653.

CxEE 655 Pollutant Transport and Transformation in the Environment
Fall. 3 credits. Prerequisite: CxEE 351. F. A. Cowen. Application of fluid mechanics to problems of pollutant transport and mixing in the water environment. An introduction to advective, diffusive, and dispersive processes. Mass transfer at the boundaries: air-water transfer and sediment-water transfer. Introduction to chemical and biochemical transformation processes. Applications to transport and mixing processes in rivers, lakes, estuaries and oceans.

CxEE 658 Sludge Treatment, Utilization, and Disposal
Spring. 3 credits. Prerequisite: CxEE 352 or permission of instructor. R. I. Dick. Analysis of the quantity and quality of residues produced from municipal and industrial waste-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate disposal. Considerations in selecting and integrating of sludge-management processes.

CxEE 659 Environmental Quality Engineering Seminar
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff. Presentation and discussion of current research and design projects in environmental engineering.

CxEE 750 Research in Environmental Engineering
On demand. 1–6 credits. Staff. For students who want to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

CxEE 755 Physical/Chemical Processes
Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CxEE 653 or permission of instructor. J. M. Gossett. Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Analysis and design of treatment processes and systems.

CxEE 756 Biological Processes
Spring. 3 credits. Prerequisites: CxEE 651 and 755, or permission of instructor. J. M. Gossett. Theoretical and engineering aspects of biological phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in receiving waters. Bioeconomic analysis and design of biological treatment processes.

CxEE 757 Environmental Engineering Processes Laboratory I
Fall. 2 credits. Prerequisite: concurrent enrollment in CxEE 653 and CxEE 755. J. J. Bisogni. Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange; gas transfer; sedimentation; characterization of reactor mixing regimes; coagulation.

CxEE 758 Environmental Engineering Processes Laboratory II
Spring. 2 credits. Prerequisite: CxEE 651 and concurrent enrollment in CxEE 756. J. M. Gossett. Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy; biochemical and chemical oxygen demand; biological treatability studies; enumeration of bacteria.

CxEE 759 Special Topics in Environmental Engineering
On demand. 1–6 credits. Staff. Supervised study in special topics not covered in formal courses.

CxEE 850 Thesis—Environmental Engineering
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
Transportation

CEE 361 Introduction to Transportation Engineering
Fall (1998-99 only; usually offered spring). usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg. Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supply-demand interactions; system planning, design, and management; traffic flow and control of intersection and network analysis. Institutional and energy issues; environmental impacts.

CEE 462 Highway Engineering (also ABEN 491)
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently). L. H. Irwin. For description, see ABEN 491.

CEE 463 Transportation and Information Technology
Fall. 3 credits. M. A. Turnquist. Improvements in the utilization of existing facilities has become an important objective in transportation planning. This course examines the role of computer and telecommunications technologies to achieve these improvements. Specific attention is focused on the development of analyses to evaluate the benefits of inclusion of these technologies in transportation systems.

[CEE 664 Transportation Systems Design)
Spring. 3 credits. Prerequisite: CEE 361. Not offered 1998-99.

Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria. Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

CEE 762 Transportation Research
On demand. 1-6 credits. Staff. In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

CEE 764 Special Topics in Transportation
On demand. 1-6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

CEE 860 Thesis—Transportation Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student and one or more faculty members.

Structural Engineering

See also CEE 116, CEE 241, CEE 304, and CEE 595.

CEE 371 Structural Behavior

CEE 372 Structural Analysis

CEE 473 Design of Concrete Structures
Fall. 4 credits. Prerequisite: CEE 372. Design of reinforced concrete and prestressed concrete structures. Design project.

CEE 671 Random Vibration
Fall. 3 credits. Prerequisites: M&AE 326, CEE 779, and OR&IE 260; or equivalent and permission of the instructor. Offered alternate years. M. D. Grigoriu. Review of random-process theory, simulation, and first-passage time. Linear random vibration: second-moment response descriptors and applications from fatigue; seismic analysis; and response to wind, wave, and other non-Gaussian load processes. Nonlinear random vibration: equivalent linearization, perturbation techniques, Fokker-Planck and Kolmogorov equations, Ito calculus, and applications from chaotic vibration, fatigue, seismic analysis, and parametrically excited systems.

CEE 672 Fundamentals of Structural Mechanics
Fall. 3 credits. M. D. Grigoriu. Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, introduction to finite-element method.

CEE 673 Advanced Structural Analysis
Fall. 3 credits. Prerequisites: CEE 372 and computer programming. J. F. Abel. Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

CEE 675 Concrete Materials and Construction
Winter. 3 credits. Prerequisite: CEE 376 or equivalent. Offered alternate years. K. C. Hover. Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 677 Stochastic Mechanics

CEE 680 Structural Engineering Seminar
Fall, spring. 1 credit. Limited to qualified seniors and graduate students. M. Grigoriu. Presentation of topics of current interest in the field of structures.

CEE 770 Engineering Fracture Mechanics

CEE 772 Finite Element Analysis (also M&AE 680 and T&AM 666)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. P. Dawson. For description, see M&AE 680.

CEE 774 Advanced Concrete Structures I
Fall. 3 credits. Prerequisite: undergrad course in concrete structures. R. N. White. Role of material properties in structural performance; design code philosophies; behavior and design of reinforced and prestressed concrete flexural sections; deflection prediction and control for RC and PC structures including load balancing for PC
structures, continuity effects; serviceability issues; behavior and design of RC and PC slab systems; plastic truss (strut-and-tie) approach for torsion and shear; building framing systems.

CEE 775 Advanced Concrete Structures II
Spring. 3 credits. Prerequisite: CEE 774 or equivalent. S. L. Billington. Behavior of structural concrete and modeling techniques (including strut and tie modeling) focusing on building and bridge design. Topics include walls, slender columns, bi-axial bending, beam-column joints, deep beams, precast design and construction, prestress losses, ductility enhancement for severe loadings and plasticity in concrete.

CEE 776 Advanced Design of Metal Structures
Fall. 3 credits. Prerequisite: CEE 374 or equivalent. T. Pekoz. Preliminary design of structural systems. Design of members and connections. Behavior and computer-aided design of building frames. Design of composite members.

CEE 777 Advanced Behavior of Metal Structures

CEE 778 Inelastic Analysis and Design of Structures
Spring. 3 credits. Prerequisite: CEE 673 and CEE 776 or 774 or equivalent). Co-requisite: CEE 779 or equivalent. Not offered 1998-99. Inelastic methods for static and dynamic structural analysis with applications to earthquake engineering (performance based seismic design), structural stability, and inelastic limit states design. Advanced topics related to steel and composite steel-concrete structures including connection design/ detailing, non-uniform torsion and fracture resistant design.

CEE 779 Structural Dynamics and Earthquake Engineering
Spring. 3 credits. M. D. Grigoriu. Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

CEE 783 Civil and Environmental Engineering Materials Project
On demand. 1-3 credits. K. C. Hoffer. Individual projects or reading and study assignments involving engineering materials.

CEE 785 Research in Structural Engineering
On demand. 1-6 credits. Staff. Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

CEE 786 Special Topics in Structural Engineering
On demand. 1-6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

CEE 880 Thesis—Structural Engineering
Fall, spring. 1-12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Engineering Management
See also CEE 323 and CEE 463.

CEE 590 Project Management
Fall. 3 credits. Prerequisite: permission of instructor. M. A. Turnquist and F. J. Wayno. An introduction to the work and skills of management, especially for the management of projects. Planning, organizing, communicating, scheduling, controlling, and correcting will be covered in conjunction of lectures, readings, outside assignments, and in-class role-playing exercises.

CEE 591 Engineering Management Project
Fall. 3 credits. Prerequisite: permission of instructor. Staff. An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor. Staff. A continuation of CEE 591.

CEE 593 Engineering Management Methods I: Data, Information, and Modeling
Fall. 3 credits. Prerequisites: OR&IE 320 and OR&IE 270 or CEE 304 or equivalent. F. L. Bennett. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project scheduling, quality control, forecasting, and resource allocation.

CEE 594 Engineering Management Methods II: Managing Uncertain Systems
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. M. A. Turnquist. Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration and queuing. Simulation of uncertain systems. Projects and case studies to illustrate application of the methods.

CEE 595 Construction Planning and Operations
Fall. 3 credits. F. L. Bennett. A course on the fundamentals of construction planning—organization of the workforce, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 596 Current Topics in Construction Management
Spring. 3 credits. Prerequisite: CEE 595 or equivalent. F. L. Bennett. This course will focus on topics of current interest in the professional management of construction projects and organizations. It will draw from literature, practicing construction managers, software producers, and research. The course seeks to identify and evaluate trends and prepare students for management positions in engineering design and construction.

CEE 597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent. Not offered 1998-99. J. R. Steedger. Course develops a working knowledge of risk terminology and reliability engineering, analytic tools used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the U.S., environmental risks, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 692 Special Topics in Engineering Management
On demand. 1-6 credits. Staff. The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge of the course.

COM S 099 Fundamental Programming Concepts
Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree. This course is designed for students who intend to take COM S 100 but are not adequately prepared for that course. Basic programming concepts and problem analysis are studied. The programming language used is Java. Students with previous programming experience should not take this course.

COM S 100 Introduction to Computer Programming
Fall, spring, summer. 4 credits. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is Java. COM S 100 also includes a brief introduction to Matlab. The course does not presume previous programming experience. Programming assignments are tested and run on interactive, stand-alone microcomputers. During the fall semester, two versions of COM S 100 are available as described below.
COM S 100a Introduction to Computer Programming
Standard version of COM S 100. No college-level mathematics is assumed. Register for COM S 100.

COM S 100b Introduction to Computer Programming
Prerequisite: MATH 111, 191 or equivalent. Offered fall only. Alternative version of COM S 100, emphasizing examples and applications involving continuous mathematics, including trigonometry and calculus. Register for COM S 100. COM S 100b is not always available at all COM S 100 lecture hours.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102)
Fall. 3 credits. This course surveys the study of how the mind/brain works. We will examine how intelligent information processing can arise from biological and artificial systems. The course draws primarily from five disciplines that make major contributions to cognitive science: philosophy, psychology, neuroscience, linguistics, and computer science. The first part of the course will introduce the roles played by these disciplines in cognitive science. The second part of the course will focus on how each of these disciplines contributes to the study of five topics in cognitive science: language, categorization, memory, vision, and action.

COM S 113 Introduction to C
Fall, spring. 1 credit. Weeks 5-8. Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only. A brief introduction to the C programming language and standard libraries. Unix accounts will be made available for students wishing to use that system for projects, but familiarity with Unix is not required. (Projects may be done using any modern implementation of C.) COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall, spring. 1 credit. Weeks 1-4. Prerequisite: COM S 100 or equivalent programming experience. S-U grades only. An introduction to Unix, including shell commands, emacs, the file system, and software tools like grep, find, make, awk, and perl. Knowledge of some programming language like Java, C, C++, Pascal, or Fortran is expected, but projects will not assume expertise in any particular language.

COM S 130 Creating Web Documents
Fall. 5 credits. Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students with little or no computer background to tools and techniques for creating interactive multimedia. Topics covered will include HTML authoring, scripting languages, interaction techniques, data mining, and incorporating sound, video, and images in documents.

COM S 201 Cognitive Science in Context Laboratory: Explorations of Cognitive Science in Ecological Settings (also COGST 201 and PSYCH 201)
Fall. 4 credits. Limited to 24 students. Prerequisite: Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101) or written permission of the instructor. Discussion and demos, MW 10:10; lab, M or W 1:25–4:25, plus additional hours to be arranged. B. Halpern and staff. For description, see COGST 201.

COM S 202 Transition to Java
Fall, spring; weeks 1-4. 1 credit. Prerequisites: COM S 100; COM S 212 recommended. A brisk introduction to the Java programming language. Students are expected to be familiar with recursion and abstract data types as taught in COM S 212.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits. Credit will not be granted for both ENGRD/COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, modules (classes), program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and analysis of algorithms. Java is the principal programming language.

COM S 212 Structure and Interpretation of Computer Programs (also ENGRD 212)
Fall, spring, 4 credits. Credit will not be granted for both ENGRD/COM S 211 and 212. Prerequisite: COM S 100 or equivalent programming experience. A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs.

ENGRD/COM S 212 covers a wide range of topics in computer science and programming using advanced functional and object-oriented programming languages. ENGRD/COM S 211 focuses on strengthening programming skills in a more conventional programming language (Java), while still introducing important topics in computing. Either course is a suitable prerequisite for further study in the field. Appropriate transfers between ENGRD/COM S 211 and 212 (in either direction) are encouraged during the first few weeks of the semester.

COM S 213 C++ Programming
Fall, spring. 2 credits. Prerequisite: COM S 211 or 212 or equivalent programming experience. Students who plan to take COM S 113 and 213 must take 113 first. S-U grades only.

An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 212. 213 includes most of the material taught in 113.

COM S 222 Introduction to Scientific Computation (also ENGRD 222)
Spring, summer. 3 credits. Prerequisites: COM S 100 and (MATH 222 or MATH 294). An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equation solving, least-squares fitting, and ordinary differential equations. The Matlab computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Prerequisite: COM S 211 or 212 or permission of instructor. Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets, graphs, and algebraic structures.

COM S 314 Introduction to Digital Systems and Computer Organization
Fall, spring. 4 credits. Prerequisite: ENGRD/COM S 211. Computer organization. Topics include representation of information, machine and assembly languages, processor organization, input/output devices, memory hierarchies, combinational and sequential circuits, data path and control unit design, and RISC pipelining. The course features several major projects, including a full RISC processor design.

COM S 381 Introduction to Theory of Computing
Fall, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction. An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

COM S 400 The Science of Programming
Spring. 4 credits. Prerequisite: COM S 280 or equivalent. Not offered every year; next offering TBA. The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with functional and sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.
COM S 410 Data Structures
Fall, spring, summer. 4 credits. Prerequisite: COM S 280 or permission of instructor.
Lists, trees, graphs, arrays, and other forms of data structure and their implementation. Relationship between language and data structure, emphasizing abstract data types. Dynamic storage allocation and memory management. Detailed study of searching and sorting methods. Analysis to determine the more efficient algorithm in a given situation.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisite: COM S 410 or permission of instructor. Not offered every year; semester to be announced. The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.

COM S 412 Introduction to Compilers and Translators
Spring. 3 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 413. Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

COM S 413 Practicum in Compilers and Translators
Spring. 2 credits. Prerequisites: COM S 314, 381, 410. Corequisite: COM S 413. A compiler implementation project related to COM S 412.

COM S 414 Systems Programming and Operating Systems
Fall, summer. 3 credits. Prerequisite: COM S 314 or permission of instructor. An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415 Practicum in Operating Systems
Fall. 2 credits. Prerequisite: COM S 410. Corequisite: COM S 414. The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring. 3 credits. Prerequisite: COM S 211 or 212. An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

COM S 418 Practicum in Computer Graphics (also ARCH 375)

COM S 421 Numerical Analysis
Fall. 3 credits. Prerequisites: (ENGRD/COM S 211 or 212) and COM S 410. Recommended: COM S 213 and strong programming skills in C or C++ or Java. Introduction to modern relational database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course primarily covers the internals of database systems, and includes many large programming assignments.

COM S 423 Introduction to Database Systems
Fall. 3 credits. Prerequisites: (ENGRD/COM S 211 or 212) and COM S 410. Recommended: COM S 213 and strong programming skills in C or C++ or Java. Introduction to modern relational database systems. Concepts covered include storage structures, access methods, query languages, query processing and optimization, transaction processing, and database design theory. The course primarily covers the internals of database systems, and includes many large programming assignments.

COM S 424 Distributed Systems and Algorithms
Fall. 4 credits. Prerequisite: COM S 424. Students will implement a simple relational database system with coding assignments ranging from disk management to high-level query processing. This provides a thorough understanding of database system internals.

COM S 444 Distributed Systems and Algorithms
Fall. 4 credits. Corequisite: COM S 432. Topics in Prolog, LISP, ML, or Nuprl. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 447 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: (COM S 211 or COM S 212) and COM S 280 or equivalent. A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Prerequisite: (COM S 211 or COM S 212) and COM S 280 or equivalent. Corequisite: COM S 472. Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Not offered every year; semester to be announced. A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring. 4 credits. Prerequisites: COM S 410 and either 381 or 481, or permission of instructor. Techniques used in the design and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 486 Applied Logic (also MATH 406)
Fall or spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableaux, natural deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic. Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490 Independent Reading and Research
Fall, spring. 1-4 credits. Independent reading and research for undergraduates.

COM S 501 Software Engineering: Technology and Technique
Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language. An introduction to the problems of building large, reliable software systems and the methods, languages, and tools used in modern software development. Topics include software life-cycle models, software analysis and design, verification and validation, reliability, engineering ethics and professionalism. Programming topics include modularity, data abstraction, object-oriented programming, and effective use of C++. General techniques will be complemented with programming experience using industrial-strength languages and tools.

COM S 514 Intermediate Computer Systems
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. This course focuses on practical issues in designing and implementing distributed systems.
software. Topics vary depending upon instructor. Recent offerings have covered object-oriented software development methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in COM S 490, COM S 515 or COM S 790.

COM S 515 Practicum in Systems
Fall or spring. 1-2 credits. Co-requisite: COM S 514. The practical aspects of modern software systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year at the discretion of the instructor. Some students take COM S 490 or COM S 790 instead of COM S 515.

COM S 516 High-performance Computer Architecture
Spring. 4 credits. Prerequisite: COM S 514 required; COM S 412 or 414 highly recommended. Not offered every year; next offering TBA. Introduces techniques used in high-performance computer architecture. Covers pipelining of instruction execution to superscalar, superpipelined, and speculative architectures; memory system design, including caches, operating system support in the form of naming and protection schemes; introduction to parallel architectures.]

COM S 519 Engineering Computer Networks
Fall. 4 credits. Prerequisites: COM S 214, 314, and 410, or permission of instructor. Introduction to telephone, IP, and ATM networks. Techniques for system design and protocol layers. Detailed introduction to networking protocols in the areas of multiple access, switching, scheduling, routing, naming and addressing, error control, flow control, and traffic management. Overview of importing protocol into Internet and telephone networks. Protocol implementation techniques. The course is project-oriented and requires familiarity with C programming.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (C or FORTRAN), MATLAB, some knowledge of numerical methods, especially numerical linear algebra. NBA 550 is a suitable alternative. Not offered 1998-99.

This course provides a hands-on introduction to computational methods and tools used in finance. We study commercial software packages used in finance, their underlying methods, and the financial context. The commercial software packages may include the MATLAB Financial Toolbox, the Kamakura software, and the risk management software from Algorithmics. The underlying numerical techniques include nonlinear least-squares procedures (regression), basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadratic programming (and linear complementarity problems), specialized tree (and lattice) evaluation methods.

COM S 601 System Concepts
Fall. 3 credits. Prerequisites: open to students enrolled in the COM S Ph.D. program. This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Graduate standing or permission of instructor. A study of programming paradigms: functional, imperative, concurrent and logic programming. Models of programming languages, including the lambda calculus. Typing systems, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612 Compiler Design for High-Performance Architectures
Spring. 4 credits. Prerequisites: COM S 531 and 412. Credit for course may not be taken if student has credit for course 512. Compiler design for pipelined and parallel architectures. Program analysis: data and control dependencies, dataflow analysis, efficient solution of dataflow equations, dependence tests, solution of Diophantine equations. Architecture and code generation for instruction-level parallel (ILP) processors: pipelined, VLIW and superscalar architectures, code reorganization and software pipelining. Architecture and code generation for multi-processors: shared- and distributed-memory architectures, latency tolerance and avoidance, loop transformations to enhance parallelism and locality of reference.

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year; semester to be announced.

Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages, deadlock, verification.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in, polymorphism, modules, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 618 Principles of Distributed Computing—Message-Passing
Fall 4 credits. Prerequisite: mathematical maturity and some basic knowledge of distributed systems. Offered in odd-numbered years.

This course focuses on research in message-passing distributed computing. It covers the fundamental problems and presents some of the latest results and open questions in message-passing systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

COM S 619 Principles of Distributed Computing—Shared Memory
Fall. 4 credits. Prerequisites: mathematical maturity and some basic knowledge of distributed systems. Offered in even-numbered years.

This course focuses on research in shared-memory distributed computing. It covers fundamental problems and paradigms of shared-memory systems. Topics include linearizability and other models of consistency, non-blocking and wait-free computation, universal constructions of wait-free objects, the atomic snapshot problem, the k-set consensus problem, bounded concurrent timestamps, etc.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisite: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The Matlab system is used extensively.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years. Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton methods, variable metric, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Previous exposure to numerical analysis, mathematical analysis including Fourier and Laplace transforms, and differential equations. Offered in even-numbered years. Finite difference and spectral methods for the solution of differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, the treatment of boundary conditions, and multigrid methods. This course combines theory and programming (in Matlab), emphasizing fundamental principles more than applications.

COM S 626 Computational Molecular Biology
Spring. 4 credits. Prerequisites: familiarity with linear programming, numerical solutions of ordinary differential equations & non-linear optimization methods. Problems and algorithms in computational molecular biology. Topological and geometric invariants (alignment, scoring functions, complexity of searches and alignment, secondary structure prediction, families and function), the protein folding problem (lattice models, lattice searches, the HP model, chemical potentials, statistical potentials, funnels, complexity and model verification, global optimization, homology, threading), and the dynamics of complex biosystems (the Molecular Dynamics method, long range forces, statistics of flexible systems, reduced models).
COM S 631 Multimedia Systems
Spring. 4 credits. Prerequisites: COM S 414 or permission of instructor.
Hardware and software issues involved in computer manipulation of audio, video, and images. Topics include media capture, representation, compression, editing, processing, storage, and transmission. Special emphasis on the processing of digital video, including algorithms for special effects and automatic extraction of content, and applications of parallel architectures to video processing.

COM S 632 Advanced Database Systems
Spring. 4 credits. Prerequisite: COM S 452-453 or permission of instructor. A variety of advanced issues ranging from transaction management to query processing to data mining. Extensive paper reading and discussion. Development of a term project with research content.

COM S 664 Machine Vision
Spring. 4 credits. Prerequisites: undergraduate-level understanding of algorithms and Math 221 or equivalent. An introduction to computer vision. The following topics will be covered: edge detection, image segmentation, stereopsis, motion and optical flow, shape reconstruction, shape representations and extracting shapes from images, model-based recognition. Students will be required to implement several of the algorithms covered in the course and evaluate them on both synthetic and real images.

COM S 671 Introduction to Automated Reasoning
Fall. 4 credits. Prerequisite: standing and COM S 611 or permission of instructor. Topics in modern logic needed to understand and use automated reasoning systems such as HOL, Nuprl, and PVS. Special emphasis on type theory and logic and on tactic-oriented theorem proving.

COM S 672 Advanced Artificial Intelligence
Spring. 4 credits. Prerequisites: COM S 472 or permission of instructor. Artificial intelligence (AI) provides many computational challenges. This course covers a variety of areas in AI, including knowledge representation, automated reasoning, learning, game-playing, and planning, with an emphasis on computational issues. Specific topics include stochastic reasoning and search procedures, properties of problem encodings, issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 674 Natural Language Understanding
Spring. 4 credits. Prerequisites: COM S 622 or permission of instructor. Not offered every year. This course presents an introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course will cover syntactic analysis, semantic interpretation, and discourse processing, via symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive, deductive approaches to interpretation, machine translation, and machine learning of natural language.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered in even-numbered years.
Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, and modeling resource-bounded reasoning, and connections to game theory.

COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered in odd-numbered years.
Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and probability, probability and adversaries, conditional logics of normality, Bayesian networks, qualitative approaches to uncertainty, going from statistical information to degrees of belief. Connections to game theory.

COM S 681 Analysis of Algorithms
Fall. 4 credits. Prerequisite: COM S 381 or 481, or permission of instructor. Methodology for developing efficient algorithms, primarily for graph theoretic problems. Understanding of the inherent complexity of natural problems via polynomial-time algorithms, randomized algorithms, NP-completeness, randomized reducibilities. Additional topics such as parallel algorithms and efficient data structures.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisite: (COM S 381 or 481) and (COM S 492 or COM S 481), or permission of instructor. Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

COM S 686 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, COM S 682, and (MATH 481 or MATH/COM S 480). Topics in logics of programs and program verification. Possible topics include: Floyd/Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

COM S 709 Computer Science Colloquium
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science.

A weekly meeting for the discussion and study of important topics in the field.

COM S 713 Seminar in Systems and Methodology
Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 600, 611, 613, 615, 671, a logic course, or permission of instructor. Not offered every year; semester to be announced. Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalism.

COM S 715 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisite: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

COM S 717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisite: COM S 612 or permission of instructor. Not offered every year; semester to be announced. Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 719 Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisite: COM S 611 or permission of instructor. S-U grades only.

COM S 722 Topics in Numerical Analysis
Fall, spring. 4 credits. Prerequisite: COM S 621 or 622 or permission of instructor. Not offered every year; semester to be announced. Topics are chosen at instructor's discretion.

COM S 729 Seminar in Numerical Analysis/ACRI
Fall, spring. 1-4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.

COM S 754 Systems Research Seminar
Fall, spring. 1 credit.

COM S 772 Seminar in Artificial Intelligence
Fall, spring. 4 credits. Prerequisites: permission of instructor.

COM S 773/774 Proseminar in Cognitive Studies I & II (also COGST, PHIL, LING, and PSY 773/774)
Fall, 773; spring, 774. 4 credits. For description, see COGST 773/774.

COM S 775 Seminar in Natural Language Understanding
Fall, spring. 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 789 Seminar in Theory of Algorithms and Computing
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.
ELE E 210 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 210)
Fall, spring. 3 credits. Co-requisites: MATH 293 and PHYS 213.
A first course in electrical circuits, establishing the fundamental properties of circuits with application to high-speed computers and modern electronics. Topics include node and mesh analysis applied to CMOS circuit design, transistor operation and its impact on computer speed, sinusoids, resonance, complex impedance, and operational amplifiers.

ELE E 215 Practicum in Circuit Design
Fall, spring. 1 credit. Pre or co-requisite: ENGRD 210.
Laboratory course to develop skills with modern instrumentation, and to explore the design and operation of electrical circuits used in computers, amplifiers, and signal processing.

ELE E 223 Practicum in Digital Systems
Fall and spring. 1 credit. Pre or co-requisite: ENGRD 231.
Laboratory projects in the design and implementation of combinational and sequential digital systems for computations, communications, and information distribution.

ELE E 250 Technology in Society (also ENGRG 250, MIST 250 and S&T 250)
Fall. 3 credits. A humanities elective for engineering students.
For description, see ENGRG 250.

ELE E 291-292 Sophomore Electrical Engineering Project
291, fall; 292, spring. 1-8 credits. Limited to sophomores in Engineering.
Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration.

ELE E 298 Invent an Information Society (also ENGRG 298 and S&T 292)
Spring. 3 credits. Approved for humanities distribution.
For description, see ENGRG 298.

ELE E 301 Electrical Signals and Systems I
Fall 4 credits. Prerequisites: a grade of at least C+ in ENGRD 210 and C in MATH 293 and 294.
Continuous- and discrete-time signals and systems; Fourier series and transforms; bilateral Laplace and Z transforms; convolution; FFTs and DFTs; applications to modulation, filtering, and sampling.

ELE E 302 Signals and Systems II: Discrete-Time Systems and Signal Processing
Spring. 4 credits. Prerequisite: ELE E 301. Review of discrete-time convolution and bilateral Z-transforms with discrete-time linear time-invariant systems applications. Unilateral Z-transforms and difference equations. Discrete-time Fourier transforms. Sampling and reconstruction of continuous-time signals. DFTs and FFTs and attendant computational issues. Introduction to digital filter design techniques with special emphasis on linear-phase FIR filters; FIR filter design using windowing, frequency sampling, and least squares; and IIR filter design using impulse invariance and bilinear transformation.

ELE E 303 Electromagnetic Fields and Waves
Fall. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214 and MATH 294. 1 design credit.
Maxwell's equations in differential form, wave equation, plane electromagnetic waves; phase and group velocities; Poinsot's theorem, complex dielectric constant; wave reflection and transmission; guided waves on transmission lines; transient pulse propagation; elementary dipole antenna; analysis of wireless communication links.

ELE E 306 Fundamentals of Quantum and Solid-State Electronics
Spring. 4 credits. Prerequisites: PHYS 214 and MATH 294.
Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronics devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Fermi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ELE E 308 Fundamentals of Computer Engineering
Spring. 4 credits. Prerequisite: ENGRD 231, ELE E 232 and ENGRG/COM S 5 211.
This course provides a fundamental understanding of computer systems, including their integration into embedded systems. Topics covered include assembly language programming, machine code generated by compilers, high-level language: data structures, computer organization. CISC and RISC computer architectures, floating point arithmetic, I/O, and memory hierarchy.

ELE E 310 Introduction to Probability and Random Signals
Spring. 4 credits. Prerequisite: MATH 294. This course may be used in place of ENGRG 270 to satisfy the engineering distribution requirement.
Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions, nonlinear transformations of data: expectation, correlation; and the central limit theorem.

ELE E 311 Electrical Engineering Honors Seminar
Spring. 2 credits variable. Students registered for this course are required to attend all of the colloquia lectures. Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers. Those non-honors students who take the seminar pass/fail are only required to write one summary paper. Each paper may review any the topic presented during the term.

ELE E 315 Electronic Circuit Design
Fall. 4 credits. Prerequisites ELE E 210 and ELE E 215.
Design of electronic circuits for computers, signal processing, communications, microelectronics, optoelectronics, measurements and control.

ELE E 360 Ethical Issues in Engineering (also ENGRG 360 and S&T 360)
Spring. 3 credits. A humanities elective for engineering students. Open to sophomores.
For description, see ENGRG 360.

ELE E 391-392 Junior Electrical Engineering Project
391, fall, 392, spring. 1-8 credits. Limited to juniors in Engineering.
Individual study, analysis, and, usually, experimental tests in connection with the special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration.

ELE E 403 Introduction to Nuclear Science and Engineering (also A&EP 403, MAE 456 and NS&E 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.
For description, see NS&E 403.

ELE E 407 Quantum and Solid State Electronics
Fall. 4 credits. Prerequisite: some previous knowledge of quantum mechanics.
Angular momentum; effective potential; spin states; atom-radiation interaction; oscillator strengths, LCAO; lattice waves; thermal properties of xts; thermal energy; metals; electron and phonon contributions to specific heat; metallic conductivity; thermal conduction in metals; electron gas models; effective mass; E(k) surface and m' from cyclotron resonance; K-p expansion; plasma dispersion relation; EM waves in a medium; plasmons; polaritons (TO phonons + EM wave); LST relation; surface and interface plasmons; optical properties of xts; excitons (Mott-Wannier and Frenkel); polarizability; Landau theory of ferroelectric transition; piezoelectricity. Elements of superconductivity. Josephson Junction and the SQUID device. Schottky and Frenkel defects; Schottky barrier; heterostructures and solid-state lasing; resonant tunnel diode; optical detectors. Conduction in amorphous media.
ELE E 411 Random Signals in Communications and Signal Processing
Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 303 or equivalent.
Introduction to models for random signals in discrete and continuous time: Markov chains, Poisson process, queueing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ELE E 416 Global Position System Theory and Design
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of the instructor.
A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

ELE E 423 Computer Methods in Digital Signal Processing
Fall. 4 credits. Prerequisite: ELE E 302. Satisfies undergraduate computer applications requirement.

ELE E 425 Digital Signal Processing
Fall. 4 credits. Prerequisites: ELE E 301, ELE E 302 and ELE E 310. An advanced course in digital signal processing. Correlation, practical DSP, quantization, A/D and D/A conversion, delta-sigma quantization. Quantization effects in digital filters and structural implications. Multirate DSP including sampling rate conversion and filter bank theory. Wiener filtering, spectral estimation, and signal detection. Emphasis on two-dimensional sampling and Fourier techniques.

ELE E 426 Applications of Signal Processing
Spring. 3 or 4 credits. Prerequisite: ELE E 425.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is oriented to a variety of applications.

ELE E 430 Lasers and Optical Electronics
Fall. 4 credits with lab. may be taken for 3 credits without lab. Prerequisite: ELE E 303 or equivalent.
An introduction to the operation of lasers and devices based nonlinear and nonlinear optics. Material covered includes diffraction-limited optics, Gaussian and beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design.

Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

ELE E 432 MicroElectro Mechanical Systems (MEMS)
Spring. 3 credits. Prerequisite: ELE E 315 or permission of instructor.
Introductory course to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS including materials, microstructures, devices and simple microelectromechanical systems, scaling electronic and mechanical systems to the micrometer/mm-scale, material properties, and the integration of micromechanical structures and actuators with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ELE E 433 Microwave Integrated Circuits
Fall. 4 credits. may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.
An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six- to two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

ELE E 439 VLSI Digital System Design
Fall, spring. 4 credits. Prerequisites: ENGRD 231, ELE E 232 and ELE E 315. (See ELE E 539)
Custom CMOS VLSI design as seen by a system designer. Emphasis on structured design methodologies for digital VLSI systems. Topics include MOS transistors, design rules for MOS integrated circuits, implementation of common digital components, clocking disciplines for VLSI, tools for computer-aided design, system design for performance, and novel architectures for VLSI systems.

ELE E 445 Computer Networks and Telecommunications
Fall. 4 credits. Prerequisites: ELE E 308 (or COM S 314) and a course in probability.
Design, analysis, and implementation of local area networks, wide area networks, and telecommunications systems: circuit switching, packet switching, broadband switching, protocols, asynchronous transfer mode systems.

ELE E 451 Electric Power Systems
Fall. 3 credits.
The objective is to acquaint the student with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and methods will be explored. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics and protection, and power system stability.

ELE E 453 Integrated Circuit Design
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 is recommended as a corequisite.

ELE E 457 Silicon Semiconductor Electronics
Fall. 4 credits with lab. Prerequisites: ELE E 315 and ELE E 306 or equivalent. Semiconductor devices, energy diagrams, transport and recombination. Pn-junction diode, Schottky diode, ohmic contact, and metal-oxide-semiconductor (MOS) structure. Bipolar junction transistor (BJT), field effect transistor (MOSFET), and thin film transistor (TFT). Integrated transistors in DRAM's, SRAM's, and AMLCD displays. Laboratory measurements of wafer-level and packaged test structures, devices, and cells.

ELE E 462 Artificial Intelligence and Expert Systems in Telecommunication Networks
Spring. 3 credits. Prerequisite: ELE E 310 or some familiarity with random variables. May not be offered 1998-99.
In the last two or three years a surprising number of connections between AI and telecommunications have been identified. Significant discoveries in the area of wireless systems (e.g., a variety of network control algorithms) have been found to be straightforward restatements of old results from the field of Artificial Intelligence. (We may hope that the reverse is the case, as well.) It also is becoming clear that, to provide an acceptable level of performance, the next generation of wireless multimedia systems will need some degree of predictive "cognitive" capacity. This senior/introductory graduate course focuses on the expert system side of AI. It has been designed to provide a foundation in the development and analysis of expert systems with an emphasis on telecommunications engineering applications. The students will develop a background in the theory of expert systems, and then be give an opportunity to apply their knowledge in an area of their choice. Areas of discussion will include: Rule-based expert systems, probabilistic systems, Bayesian networks, and the propagation of evidence.

ELE E 467 Telecommunication Systems I
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 310. Suggested co-requisite: ELE E 411.
An introduction to analog and digital modulation and demodulation techniques. Topics include: analog signal representation and filtering; analog amplitude modulation (AM) and frequency modulation (FM); digital pulse amplitude modulation (PAM); digital transmission via carrier modulation (PM); frequency and phase shift keying (FSK, PSK, quadrature amplitude modulation (QAM); fundamentals of random processes, white Gaussian noise; effect of noise on analog and digital modulation techniques; error probabilities for digital transmission through additive white Gaussian noise (AWGN) channels.

ELE E 468 Telecommunication Systems II
Spring. 4 credits. Prerequisite: ELE E 467 or permission of instructor. Suggested prerequisite: ELE E 411.
Fundamentals of digital communications. Topics include: digital source coding, Huffman coding, sampling, quantization, analog source coding, optimum receivers for
digital transmission through additive white Gaussian noise (AWGN) channels, matched filters, channel capacity and error control coding; digital transmission through bandlimited AWGN channels, inter-symbol interference compensation techniques, phase-locked loops (PLL); trellis-coded modulation (TCM); spread-spectrum communication systems.

**ELE E 471 Feedback Control Systems (also M&AE 478)**

Fall. 4 credits. Prerequisite: ELE E 301 or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root-locus and frequency response methods. Computer-aided design laboratory examines modeling and control of a computer-simulated dynamic process.

**ELE E 472 Digital Control Systems**

Spring. 4 credits. Prerequisite: ELE E 471 or permission of instructor. Not offered 1998–99. Analysis and design of feedback control systems using digital devices to implement compensation. Z-transforms and linear algebra are the major mathematical tools. Topics include: state realizations, digitizations of analog systems, least-squares system identification, state feedback control, observers, combined observer-controller, and algebraic-controller design. Assignments will consist of reports on computer-aided controller design and digitally simulated evaluation.

**ELE E 475 Advanced Microprocessor Architectures**

Fall. 4 credits. Prerequisites: ELE E 308 and assembly language programming at the level of ELE E 477. Topics in modern microprocessor architecture, with design and implementation using programmable logic. Traditional processor structure, including registers, ALU, instruction decoder, bus interfaces, and interrupt handler. Advanced architectures, including Direct Memory Access, memory management, floating point units, caches, pipelines, and reconfigurable architecture. Additional topics may include multiple processors, on-chip peripherals, reliable systems. Laboratory groups will design and build a small digital computer using Field Programmable Gate Arrays (FPGAs).

**ELE E 476 Digital Systems Design Using Microcontrollers**

Spring. 4 credits. Prerequisite: ELE E 308 or COM S 314 (ELE E 474 strongly recommended). Design of real-time digital systems using microcontroller-based embedded controllers. Students working in pairs will design, debug, and construct several small systems that illustrate and employ the techniques of digital system design acquired in previous courses. The project focuses on the laboratory work, the lectures being used primarily for the introduction of examples, description of specific modules to be designed, and instruction in the hardware and high-level design tools to be employed.

**ELE E 482 Plasma Processing of Electronic Materials (also MS&E 482)**

Spring. 3 credits. Prerequisite: ELE E 303 or its equivalent. Fundamental principles that govern partially ionized, chemically reactive plasma discharges and their applications to processing electronic materials. Topics include simple models of low pressure, partially ionized plasmas, collision phenomena, diffusive processes, plasma chemistry and surface processes. Examples and their applications to electronic materials processing will be discussed in detail.

**ELE E 484 Introduction to Controlled Fusion: Principles and Technology (also A&AE 484, M&AE 459 and MS&E 484)**

Fall. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. Offered on demand. For description, see MS&E 484.

**ELE E 485 Atmospheric and Ionospheric Physics (also ASTRO 485)**

Fall. 3 credits. Prerequisites: PHYS 214 or 216, introductory chemistry, introductory differential equations. The structure and dynamics of the middle atmosphere and the ionosphere are surveyed. Topics include energy balance and thermal structure, global circulation patterns, ionization, production and loss of charged particles, coupling of the neutral atmosphere with electric fields, charged particle transpots, and observation techniques.

**ELE E 486 Electromagnetic Waves and Communication**

Spring. 4 credits. Prerequisite: ELE E 303. This course is recommended for students who wish to obtain a greater understanding of E & M aspects of the fundamentals of guided waves, high frequency electronics and wireless communication. Topics to be covered will include: Vector and scalar potentials, transmission lines, waveguides, fiber optics, antenna arrays, propagation in different environments including interference and diffraction.

**ELE E 487 Introduction to Antennas and Radar**

Fall. 3 credits. Prerequisites: ELE E 301 and ELE E 304 (or a grade of B or better in ELE E 303). Fundamentals of antenna theory, including gain and effective area, near and far fields, phased arrays, aperture antennas and aperture synthesis. Fundamentals of radar, including detection, tracking, Doppler shifts, sampling, range and frequency aliasing. Synthetic aperture radars and remote sensing from aircraft and satellites; over-the-horizon (OTH) radars and ionospheric propagation effects; radar astronomy techniques.

**ELE E 488 RF Circuits and Systems**

Spring. 3 credits. Prerequisites: ELE E 315 or equivalent. 2 design credits. Lab credit. Basic RF circuits and applications. Receivers, transmitters, modulators, filters, detectors, transmission lines, oscillators, frequency synthesizers, low-noise amplifiers. Applications include communication systems, radio and television broadcasting, radar, radio and radar astronomy. Computer-aided circuit analysis. Five laboratory sessions.

**ELE E 490 Practicum in Systems Engineering**

Fall only. 3 credits. Group II Electrical Engineering Lab + 1 credit of Engineering Design. Prerequisite: ELE E 308 and ELE E 315. Not offered 1998–99. Concepts involved with bringing a product to reality. You will use your creative abilities, together with your knowledge of analog and digital circuit design, microprocessor systems, and semiconductor devices, to create a simple engineered product: a micro-controller based, PWM switching light dimmer. Included will be system design concepts presented by staff from Lutron Electronics, Inc., product cycle, product specification, including UL safety issues and new product testing, RFI and product testing. Microcontroller based design, switching electronics, switching supplies and pulse width modulation. A final team product prototype is required as are several major presentations during the semester.

**ELE E 491-492 Senior Electrical Engineering Project**

491. fall; 492. spring. 1-8 credits. Limited to seniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration for this course.

**ELE E 494 Distribution Automation and Control for Electric Power Networks**

Spring. 4 credits. Distribution automation is a system that enables an electric utility to monitor, control, and operate distribution systems in a real-time mode from remote locations. This course will cover modeling of distribution networks, three-phase unbalanced power flow analysis and short circuit calculations, state estimation, operation and control strategies, communication systems, and control systems for distribution automations.

**ELE E 495 Introduction to Point and Space Groups (also MS&E 495)**

**ELE E 495-499 Special Topics in Electrical Engineering**

1–4 credits. Seminar, reading course, or other special arrangement agreed upon by the student and faculty members concerned.

**ELE E 515-516 Applied Signal Processing Systems Design**

515. fall; 516. spring. Variable credits. Project-level design of systems in the area of signal processing and general instrumentation, including digital signal processing hardware, audio, speech, and analog interfacing. Students pursue individual projects and
coordinate ideas and resources with other students with related interest.

**ELE E 521 Theory of Linear Systems**
Fall. 4 credits. Prerequisite: ELE E 502 or permission of instructor. Recommended: a good background in linear algebra and linear differential equations. State-space and multi-input-multi-output linear systems in discrete and continuous time. The state transition matrix, the matrix exponential, and the Cayley-Hamilton theorem. Controllability, observability, stability, realization theory. At the level of *Linear Systems*, by T. Kailath.

**ELE E 522 Nonlinear Systems: Analysis, Stability, Control, and Applications**
Spring. 4 credits. Prerequisites: ELE E 521 or a solid background in linear algebra and real analysis strongly recommended but not required. A fairly rigorous introduction to nonlinear systems, including nonlinear differential equations, flows, phase-plane analysis, fundamentals of Lyapunov theory, LaSalle's theorem, regions of attraction, slowly varying systems, advanced stability theory, Lyapunov regions and applications, describing function analysis, averaging and singular perturbations. bifurcation analysis and control and application to physical systems.

**ELE E 525 Adaptive Filtering in Communication Systems**
Fall. 4 credits. Prerequisite: ELE E 468. Not offered 1998-99. Fundamentals of an adaptive filter theory intended for digital communication systems applications. Traditional problem, e.g., channel equalization for intersymbol interference removal, is used to motivate adaptive filter design and to raise issues of current interest. Assignments will consist of reports on adaptive digital filter and simulation evaluation.

**ELE E 526 Advanced Signal Processing**

**ELE E 530 Fiber and Integrated Optics**
Spring. 4 credits with lab. Prerequisite: ELE E 303 or equivalent. Physical principles of optical waveguides, optical sources and detectors, noise, modulators, and sensors. Wave equation solutions to the mode structure in waveguides, mode coupling, dispersion and bandwidth limitations, optical sources based on semiconductor devices, detectors and noise, modulation techniques, nonlinear effects in optical waveguides, and optical sensors.

**ELE E 531 Quantum Electronics I**
Fall. 4 credits. Prerequisites: ELE E 306 and 407, or PHYS 443. A detailed treatment of the physical principles underlying lasers, related fields, and applications. Topics include the interaction of radiation and matter, including emission, absorption, scattering, and basic spectroscopic properties of key laser media; theory of the laser, including methods of achieving population inversions, dispersive effects, and laser oscillation spectrum.

**ELE E 533 Semiconductor Lasers**
Spring. 3 credits. Prerequisites: ELE E 430, ELE E 457, or permission of instructor. Study of principles and characteristics of semiconductor lasers. Topics cover laser dynamics, noise, quantum confined structures, single-frequency lasers, and slave lasers, surface-emitting lasers, reliability, and emerging research subjects. A term project and paper will be required.

**ELE E 534 Microwave Solid State Devices**
Spring. 4 credits. Prerequisites: ELE E 433 and ELE E 435. May be taken for 3 credits without lab. Prerequisites: ELE E 433 and ELE E 435. 3 lectures, 1 lab. Basic theory of operation of solid-state microwave and millimeter wave devices: field effect transistor (FET), high electron mobility transistor (HEMT), Schottky, IMPATT, Gunn, PIN, and tunnel devices. Emphasis on how to integrate these devices into practical circuits. Oscillators, amplifiers, and mixers will be fabricated and measured in the laboratory.

**ELE E 535 Semiconductor Physics**
Fall. 4 credits. Prerequisites: ELE E 457 and 407, or permission of instructor. Physics of materials and structures useful in semiconductor electronic and photonic devices, including crystal structure, energy bands, effective mass, phonons, classical field transport, high-field and ballistic charge carrier transport, electron scattering by phonons, optical absorption, reflection, optical emissions, deep levels as charge carrier traps, surface and interface effects. On the level of *Compound Semiconductor Device Physics* by S. Tiwari.

**ELE E 536 Micro/Nanofabrication Technology**
Spring. 4 credits. 3 credits without lab with permission. Prerequisites: ELE E 453, or ELE E 457 or ELE E 439 or equivalent, or permission of instructor. Fabrication of ultra-large scale integrated circuits (ULSI), microelectromechanics (MEMS), active matrix liquid crystal displays (AMLCD), and optoelectronic integrated circuits (OEIC). Measurement and thin film deposition, etching, metallization, and precision assembly. Process integration for CMOS, BiCMOS, ECL, MEMS, AMLCD's, and OEIC's. Hands-on microfabrication laboratory with full MOS/MEMS process.

**ELE E 537 Electronic System Packaging**
Fall. 4 credits. 3 credits without project with permission of instructor. Prerequisites: ENGRD 251 and ELE E 315 or ELE E 453 or ELE E 457 or ELE E 439 or equivalent, or permission of instructor. Physical integration of circuits, chips, packages, modules, boards, and cabinets into electronic systems. Computer, communication, and wireless systems. Portable, desktop, and cabinet level computers. Handset, base station, and switch level communication systems. Physical architecture, electrical and optical signal distribution, power and ground distribution, signal integrity, electromagnetic interference (EMI), and electromagnetic compatibility (EMC). Introduction to high-performance digital systems. Energy management and cooling, assembly and manufacturing; measurement and test of computer and wireless system case studies.

**ELE E 539 Practicum in VLSI Design**
Fall and spring (year-long course). 2 credits each semester. Prerequisites: ELE E 475 or consent of instructor. Corequisite: ELE E 459. A year-long implementation project related to ELE E 459. Students will design a chip and have it fabricated in the fall semester and test it for functionality and performance in the spring semester. Students are required to take the course both fall and spring.

**ELE E 541 Advanced Computer Architectures**
Fall. 3 credits. Prerequisite: ELE E 308 (or COM S 280 and 314). Not offered 1998-99. Design and evaluation of processor architectures are examined in the light of actual implementations. Topics include parallel and pipelined architectures, interleaved memories, cache and virtual memories, I/O processors, vector and array processors, protection mechanisms, and RISC architectures.

**ELE E 542 Parallel Processing**
Spring. 3 credits. Prerequisite: ELE E 541. Parallel computer systems that are designed to provide a high computation rate for large specific problems are studied. Topics include computer architecture, interconnection networks, performance characterization, basic algorithms, and parallel programming techniques. Recent multiprocessors and massively parallel processors are also discussed.

**ELE E 546 Broad Band Information Networks**
Spring. 3 credits. Prerequisite: ELE E 445 or consent of the instructor. 3 lecture. Evolution of network architectures for integrated voice, data, and video services; advances in switching with an emphasis on asynchronous transfer mode (ATM); performance modeling; traffic and network management.

**ELE E 547 Computer Vision**
Fall. 4 credits. Prerequisites: ELE E 302 or (COM S 280 and 314) or consent of instructor. Computer acquisition and analysis of image data with emphasis on techniques for robot vision. This course will concentrate on descriptions of objects at three levels of abstraction: segmented images (images organized into subimages that are likely to correspond to interesting objects), geometric structures (quantitative models of images and world structures), and relational structures (complex symbolic descriptions of images and world structures). The programming of several computer-vision algorithms will be required.

**ELE E 548 Digital Image Processing**
Spring. 3 credits. Prerequisites: ELE E 411, ELE E 425, familiarity with linear algebra. Introduction to image processing through seven major topics: perception, modeling, transform representation, analysis, compression, and restoration. Special attention is allocated to compression. Equal emphasis will be placed on gaining a mathematical and an intuitive understanding of algorithms through actual image manipulation and viewing.
ELE E 549 Visual Motion Seminar
Spring. 1 credit. May not be offered 1998-99.
This seminar will provide an overview of motion as used in both coding and analysis of digital video, through examination of motion estimation and motion segmentation techniques. Topics include an introduction to digital video techniques for computing motion, both block-based and pixel-based motion estimation, MPEG motion coding, Haussdorf-based motion estimation, motion-based tracking, and various techniques for motion segmentation. An emphasis will be placed on recent research results.

ELE E 554 Advanced Analog VLSI Circuit Design
Spring. 4 credits. Prerequisite: ELE E 453 or permission of instructor.
Overview of devices available to analog integrated circuit designers in modern CMOS processes: capacitors, MOSFETs, floating-gate MOSFETs, and BiTs. Basic building blocks for analog VLSI circuits: differential pairs, current mirrors, operational transconductance amplifiers, multi-tanh circuits, and translinear circuits. Linear and nonlinear mixed-signal integrated circuits. Integrated continuous-time and discrete-time signal processing circuits. Digital-to-analog and analog-to-digital conversion techniques. Students will work in small teams to design a small-scale analog functional module.

ELE E 555 Advanced Power Systems Analysis I
Fall. 3 credits. Prerequisites: ELE E 451, ELE E 471. A course in numerical methods would be helpful. The course is designed for first-year graduate students. Not offered 1998-99.
Topics include electromagnetic transients, synchronous machine modeling, synchronous machine control models, single-machine dynamic models, multimachine simulation using a differential-algebraic model, small-signal analysis of power systems, direct methods for stability analysis including potential energy boundary surface methods, regions of attraction, exit point method and voltage stability using energy functions.

ELE E 556 Advanced Power Systems Analysis II
Spring. 3 credits. Prerequisite: ELE E 451.
Advanced topics in electric power system analysis. These include advanced control and analysis methods for dynamic contingencies such as voltage collapse and loss of synchronism, simulation methods for large-scale nonlinear analysis; methods for system protection with emphasis on digital relaying.

ELE E 558 Compound Semiconductor Electronics
Spring. 4 credits with lab. Prerequisites: ELE E 457 or equivalent.
Electronic properties of advanced semiconductor structures using compound semiconductor transistors. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductors and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ELE E 561 Error-Control Codes
Fall. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-(Ray) Chaudhuri-Hocquenghem (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

ELE E 562 Fundamental Information Theory
Fall. 4 credits. Prerequisite: ELE E 310 or equivalent.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures and variable-length codes. Channel capacity and rate-distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ELE E 563 Communication Networks
Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor.
Classical line-switched communication networks: point-process models for offered traffic; blocking and queuing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets: using various protocols, TDMA. Flow control and capacity assignment algorithms for wideband circuit-switched and ATM networks.

ELE E 564 Decision Making and Estimation
Fall. 4 credits. Prerequisite: coregistration in ELE E 411. Not offered 1998-99.
An introduction to those methods of making rational decisions and inferences and of forming estimates that are central to problems of communication, pattern recognition, and statistical signal processing. Topics include Bayes, minimax, and Neyman-Pearson decision theories; Bayes and maximum likelihood point estimation; Cramer-Rao bound, efficient, and consistent estimation; spectral estimation; and robust models for signal extraction.

ELE E 566 Wireless Networks
Spring. 4 credits. Prerequisites: ELE E 445 and ELE E 411.
An introductory course in mobile and wireless networks. The course is targeted mainly at the graduate level, but is open to undergraduates. The course covers fundamental techniques in the design and operation of the first and the second generation wireless networks: cellular systems, medium access techniques, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, GMR, GSM), wireless data (CDPD, Mobile Internet, Personal Communication Services (PCS), etc.

ELE E 567 Topics in Digital Communications
Spring. Offered as 2 or 4 credits. Prerequisites: ELE E 562.
Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data transmission, and storage systems. Possible topics include: PAM, DPM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding, applications to audio, video, and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

ELE E 568 Mobile Communication Systems
Spring. 4 credits. Prerequisite: ELE E 411 and ELE E 467; corequisite: ELE E 468.
Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include: cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

ELE E 577 Artificial Neural Networks
Fall. 4 credits. Prerequisites: ELE E 310; ELE E 411 recommended.
Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide our primary analytical approach to design and analysis of neural networks. The course will cover mathematical and computer-based design capabilities of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers.

ELE E 581 Introduction to Plasma Physics (also A&EP 606)
Fall. 4 credits. Prerequisites: ELE E 503 and ELE E 304 or equivalent. First-year graduate-level course; open to exceptional seniors with permission of instructor.
Plasma state; motion of charged particles in fields; drift-circit theory; cokout scattering, collisions, ambipolar diffusion; transport theory; two-fluid and hydrodynamic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics, plasma technology, and controlled fusion.

ELE E 582 Basic Plasma Physics (also A&EP 607)
Spring. 4 credits. Prerequisites: ELE E 581 or A&EP 606.
Boltzmann and Vlasov Equations; dielectric tensor; waves in hot-magnetized plasma; Landau and cyclotron damping; microinstabilities; drift waves, low-frequency stability; test particles, Cerenkov emission; fluctuations; collisional effects; applications.

ELE E 583 Electrodynamics
Fall. 4 credits. Prerequisite: ELE E 301 and ELE E 304 or equivalent. 3 lecs. Maxwell's equations and electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation, electromagnetic dispersive dielectric and magnetic media. At the level of Classical Electrodynamics, by Jackson.

ELE E 585 Visual Motion Seminar
Spring. 1 credit. May not be offered 1998-99.
This seminar will provide an overview of motion as used in both coding and analysis of digital video, through examination of motion estimation and motion segmentation techniques. Topics include an introduction to digital video techniques for computing motion, both block-based and pixel-based motion estimation, MPEG motion coding, Haussdorf-based motion estimation, motion-based tracking, and various techniques for motion segmentation. An emphasis will be placed on recent research results.
ELE E 584 Microwave Theory
Spring. 4 credits. Prerequisites: ELE E 301 and 304 or equivalent. 3 lecs, 1 rec. Theory of passive microwave devices. Modal coupled-mode theory. Couplers, circulators. Periodic waveguides, coupled-mode theory.

ELE E 586 Upper Atmosphere Physics II (also ASTRO 576)
Spring. 3 credits. High-latitude ionosphere; electric fields in the polar cap and auroral zone; particle precipitation and the aurora; magnetic and ionospheric storms; plasma instabilities in the ionosphere and magnetosphere; structure and physical processes in the sun, solar corona, and solar wind; interactions between the solar wind and the earth's magnetosphere; trapping, acceleration, and drift of energetic particles in the magnetosphere.

ELE E 587 Energy Seminar (also NS&E 545 and M&AE 545)
Fall. 1 credit. Energy resources, their conversion to electricity or mechanical work, and the environmental consequences of the energy cycle will be discussed by faculty members from several departments in the University, and by outside experts. Examples of topics to be surveyed are energy resources, and economics, electricity generation, nuclear reactors; solar power; energy conservation by users; and air-pollution control.

ELE E 593 Bioelectric Signal Analysis and Processing
Fall. 3 credits with lab. Prerequisites: ELE E 301, ELE E 315, and a knowledge of C programming and MATLAB. ELE E 425 helpful. Measurement and computer-aided analysis of low-level biological signals in the presence of background noise. Electrocardiography, A/D conversion, filtering, signal conditioning, and data compression techniques will be investigated using the human surface ECG as signal source. Pattern classification and microcontroller instrumentation design will be introduced. Final team design projects are required.

ELE E 594 Advanced VLSI Devices
Spring. 4 credits. Prerequisites: ELE E 535 or ELE E 457 or equivalent. ELE E 536 recommended as a corequisite. Not offered 1998-99. Review of device operation principles and review of classical and QM foundations for carriers in semiconductors including hot-carrier, nonstationary and tunneling effects. Analysis and modeling of physical, structural and material effects for state-of-the-art MOSFET design and characterization in the context of deep submicron CMOS VLSI circuits. Methodology for modeling potential for further scaling and functional enrichment Design challenges in device and interconnect scaling for both performance and reliability. Project will require simulation study in both lumped-element (SPICE) and distributive (TCAD) levels.

ELE E 595-599 Advanced Topics in Electrical Engineering
Fall, spring. 1-4 credits. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 691-692 Electrical Engineering Colloquium
691, fall; 692, spring. 1 credit each term. For students enrolled in the graduate field of Electrical Engineering. Lectures by staff, graduate students, and visiting authorities. A weekly meeting for the presentation and discussion of important current topics in the field. Reports required.

ELE E 693-694 Master of Engineering Design
693, fall; 694, spring. 1-10 credits. For students enrolled in the M.Eng. (Electrical) degree program. Uses real engineering situations to present fundamentals of engineering design. Each professor is assigned a section number. To register, see roster for appropriate 0-digit course ID number.

ELE E 695-699 Graduate Topics in Electrical Engineering
1-4 credits. Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned. See M.Eng. office for course registration procedure.

ELE E 791-792 Thesis Research
Fall, spring. 3 credits. Prerequisite: permission of instructor. Weekly field sessions. A weekend field trip.

ELE E 891-892 Colloquium
Spring, summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.

GEOLOGICAL SCIENCES
Courses
For complete course descriptions, see the Geological Sciences listing in the College of Arts and Sciences section.

GEOL 101 Introductory Geological Sciences
Fall, spring, summer. 3 credits.

GEOL 102 Evolution of the Earth and Life (Bio G 170)
Spring, summer. 3 credits.

GEOL 104 The Sea: An Introduction to Oceanography (Bio ES 154)
Spring, summer. 3 or 4 credits (4 credits with lab section).

GEOL 105 Writing on Rocks (Freshman Seminar)
Fall. 3 credits. See Freshman Seminar handbook for description.

GEOL 106 Vertebrate Fossil Preparation
Spring. 1 credit. Prerequisites: one introductory geology course or concurrent enrollment; class size is limited.

GEOL 107 How the Earth Works
Fall. 1 credit.

GEOL 108 Geology and Society
Spring. 1 credit. May be taken concurrently with or after GEOL 101, 102, 104, 111, 201, or 206.

GEOL 109 Dinosaurs
Fall. 1 credit.

GEOL 111 To Know the Earth and Build a Habitable Planet
Fall. 3 credits.

GEOL 122 Earthquake! (also ENGR 122)
Fall. 3 credits. This is a course in the Introduction to Engineering series. For course description, see ENGR 122.

GEOL 123-124 Science of Earth Systems Colloquium (also ABEN 120-121, SCAS 101-102 and SES 101-102)
Fall, spring. 12 credits. 2 credits. S-U grades only. For description, see ABEN 120-121.

GEOL 125 Global Environment (also ENGR 125)
Fall. 3 credits. W. M. White, L. A. Derry. This is a course in the Introduction to Engineering series. For course description, see ENGR 125.

GEOL 200 Art, Archaeology, and Analysis (also ARKE 285, ART 372, ARTH 200, ENGL 285, ENGR 185, M&AE 285, NS&E 285 and PHYS 200)
Spring. 3 credits. 3 lectures. R. Kay. This is a course in the Introduction to Engineering series. For course description, see ENGR 185.

GEOL 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Spring. 3 credits. Prerequisites: MATH 191 and PHYS 112. For course description, see ENGRD 201.

GEOL 203 Natural Hazards and the Science of Complexity
Fall. 3 credits. 1 course in calculus.

GEOL 210 Introduction to Field Methods in Geological Sciences
Fall. 3 credits. Prerequisite: GEOL 101 or 201, or permission of instructor. Weekly field sessions. A weekend field trip.

GEOL 212 Caribbean Field Trip (January)
Fall. 2 credits. Enrollment limited to 15. Prerequisite: permission of instructor. Travel and subsistence expenses to be announced. L. D. Brown.

GEOL 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.

GEOL 214 Western Adirondack Field Course
Spring. 1 credit. Prerequisite: GEOL 210 or equivalent, or permission of instructor.

Junior, Senior, and Graduate Courses
Of the following, the core courses GEOL 326, 355, 356, 375, and 388 may be taken by B.S. candidates who have successfully completed GEOL 201 or the equivalent and by B.A. candidates who have completed GEOL 101 or the equivalent, or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

GEOL 302 Evolution of the Earth System (also SES 332 and SCAS 302)
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. For course description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.
GEOL 321 Introduction to Biogeochemistry (also SES 321, NTRES 321)
Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. For description, see NTRES 321.

GEOL 326 Structural Geology
Spring. 4 credits. Prerequisite: GEOL 101 or 201, or permission of instructor.

GEOL 355 Mineralogy
Fall. 4 credits. Prerequisite: GEOL 101 or 201 and CHEM 207 or permission of instructor.

GEOL 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: GEOL 355.

GEOL 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: GEOL 101, 102, or 201.

GEOL 380 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent.

GEOL 411 Satellite Remote Sensing in Geosciences
Fall. 3 credits.

GEOL 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: GEOL 210 and GEOL 326; Spanish desirable, but not required.

GEOL 423 Petroleum Geology
Fall. 3 credits. Recommended: GEOL 326. Offered alternate years.

GEOL 434 Reflection Seisimology
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent.

GEOL 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor.

GEOL 445 Hydrogeology (also ABEN 471 and CEE 431)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles. For description, see CEE 431.

GEOL 452 X-ray Diffraction Techniques
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years.

GEOL 453 Advanced Petrology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years.

GEOL 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years.

GEOL 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 102, or equivalent. Recommended: GEOL 356. Offered alternate years. Not offered 1998-99.

GEOL 458 Volcanology
Spring. 3 credits. Corequisite: GEOL 356 or equivalent. Offered alternate years.

GEOL 462 Marine Ecological Processes (also BIOES 462)
Spring. 3 credits. Limited to 75 students.

Prerequisite: BIOES 261. Offered alternate years. C. D. Harvell, C. H. Greene. For description, see BIOES 462.

GEOL 475 Special Topics in Oceanography
Spring, summer. 2-5 var. credits. Prerequisites: GEOL 104 or BIO ES 154 and permission of instructor.

GEOL 476 Sedimentary Basins: Tectonics and Mechanics
Spring. 3 credits. Prerequisite: GEOL 375 or permission of instructor.

[GEOL 478 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years. Not offered 1998-99.]

GEOL 479 Paleobiology (also BIO ES 479)
Fall. Prerequisite: one year of introductory biology for majors and either BIO ES 274, 373, GEOL 375, or permission of instructor. Offered alternate years.

GEOL 481 Senior Survey of Earth Systems
Fall. 3 credits. Limited to seniors majoring in geological sciences.

GEOL 491-492 Undergraduate Research
Fall. Spring. 1-4 credits.

GEOL 500 Design Project in Geohydrology
Fall. Spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters.

GEOL 502 Case Histories in Groundwater Analysis
Spring. 4 credits.

GEOL 524 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years.

GEOL 528 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor.

[GEOL 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years. Not offered 1998-99.]

GEOL 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years.

[GEOL 651 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years. Not offered 1998-99.]

[GEOL 656 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisites: GEOL 455 or permission of instructor. Offered alternate years. Not offered 1998-99.]

GEOL 681 Geotectonics
Fall. 3 credits. Prerequisites: permission of instructor.

Prerequisite: BIOES 261. Offered alternate years. C. D. Harvell, C. H. Greene. For description, see BIOES 462.

GEOL 695 Computer Methods in Geological Sciences
Fall, spring. 3 credits.

GEOL 700-799 Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

GEOL 722 Advanced Topics in Structural Geology

GEOL 731 Plate Tectonics and Geology

GEOL 733 Fractals and Chaos—Independent Studies

GEOL 751 Petrology and Geochemistry

GEOL 753 Advanced Topics in Mineral Physics

GEOL 755 Advanced Topics in Petrology and Tectonics

GEOL 757 Current Research in Petrology

GEOL 762 Advanced Topics in Petroleum Exploration
Spring.

GEOL 771 Advanced Topics in Sedimentology and Stratigraphy

GEOL 773 Paleobiology

GEOL 775 Advanced Topics in Oceanography

GEOL 779 Lithospheric Seismology (COCORP Seminar)

GEOL 793 Andes-Himalaya Seminar

GEOL 795 Low-Temperature Geochemistry

GEOL 796 Geochemistry of the Solid Earth

GEOL 797 Fluid-Rock Interactions

GEOL 799 Soil, Water, and Geology Seminar

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111 Materials by Design (also ENGR 111)
Fall. 3 credits. E. P. Giannelis. This is a course in the Introduction to Engineering series. For description, see ENGR 111.
This course is designed to show how materials chemistry has enabled modern technology. Topics will include conducting polymers, organic LEDs, self-assembling materials, bonding in materials, crystal structures and symmetry, defects. Carrier statistics. Properties of semiconductor properties by doping. Carrier statistics. Properties of junctions in semiconductor devices. Principles and design of ferromagnetic materials for transformers, permanent magnets, and magnetic memory devices. Conductivity Fundamentals of superconducting materials for high-field magnets and Josephson junctions. Introduction to dielectric and optical properties.

Emphasis on design of experiments for evaluation of materials' properties and performance as related to processing history and microstructure. Projects available in areas such as plasticity, mechanical and chemical processing, phase transformations, electrical properties, magnetic properties, and electron microscopy.

**MS&E 445 Mechanical Properties of Materials**
- Spring. 3 credits. Prerequisites: MS&E 351 and 336, or permission of instructor. A. L. Ruoff.
- Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers, and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

**MS&E 447/448 Materials Design Concepts I & II**
- Fall, 447; spring, 448. 2 credits each term. C. K. Ober, D. C. Agar.
- Develops design in the field of materials science using Dieter's *Engineering Design*, Ashby's *Materials Selection in Engineering Design*, and other sources. Innovation, patent searching, and ASTMS standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral and written presentations. Proposal for design-study project in the fall semester. Completion of extensive design-study project in the spring semester. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise.

**MS&E 449 Introduction to Ceramics**
- Fall. 3 credits. Prerequisite: MS&E 311 or permission of instructor. R. Dieckmann.
- Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to microstructure), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

**MS&E 452 Properties of Solid Polymers**
- Fall. 3 credits. Prerequisite: MS&E 351 or permission of instructor. R. Dieckmann.

**MS&E 454 Processing of Glass, Ceramic, and Glass-Ceramic Materials**
- Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. This course is team taught with scientists from the research and development laboratory of Corning (Inc.).

**MS&E 455 Introduction to Composite Materials**
- Spring. 4 credits. For description, see T&AM 455.

**MS&E 459 Physics of Modern Materials Analysis**
- Spring. 3 credits. M. O. Thompson.
- The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are relevant to understanding techniques of modern materials analysis. Principles of analysis techniques such as Auger electron spectroscopy, ion scattering, and secondary ion-mass spectroscopy. Design of experiments for near-surface analysis.

**MS&E 463 Principles of Electronic Packaging**
- Spring. 3 credits. E. P. Giannelis.
- Design, materials, and manufacturing needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials to be discussed include metals, ceramics, and polymers.

**MS&E 482 Plasma Processing of Electronic Materials (also ELE E 482)**
- Spring. 3 credits. Prerequisite: ELE E 503 or equivalent.
- For description, see ELE E 482.

**MS&E 489 Undergraduate Teaching Involvement**
- Fall and spring. Variable credit. MS&E faculty.
- This course will give credit to students who help in the laboratory portions of ENGR 111 or 124, ENGRD 261 or MS&E 277. The number of credits earned will be determined by the teaching load and will typically be 1 to 3 credits.

**MS&E 490 Independent Study**
- Fall and spring. Variable credit. Individual faculty.
- This course is meant for students who have already taken MS&E 333 and MS&E 334, Research Involvement, and who want to do an intense research project.

**MS&E 495 Introduction to Point and Space Groups (also ELE E 495)**
- Fall. 2 credits. Homework only. S-U grades only. R. L. Liboff.
- For description, see ELE E 495.

**MS&E 503 Magnetic Materials**
- Fall. 3 credits. Prerequisites: PHYS 213 and 214, or equivalent. Y. Suzuki.
- This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, magnetic anisotropy will be included in the fundamentals. Specific magnetic materials and their applications include: ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

**MS&E 514 Chemical Processing of Ceramics (also MS&E 414)**
- For description, see MS&E 414.

**MS&E 516 Thin-Film Materials Science**
- Fall. 3 credits. Offered alternate years. D. G. Ait.
- This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interdiffusion and reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and aluminides will be presented.

**MS&E 522 Mechanical Properties of Thin Films**
- Spring. 3 credits. S. P. Baker.
- Mechanical properties which are unique to materials in the form of thin films (typical thicknesses 1 micrometer and less) and micrometer scale structures. Mechanics of two-dimensional structures. Stress and mechanical property measurement methods in small dimensions. Microstructural development in thin films. Elastic, plastic, and fracture response of films and constrained volumes.

**MS&E 531 Structure of Materials (also MS&E 331)**
- Fall. 4 credits. S. L. Sass.
- For description, see MS&E 331.

**MS&E 532 Electrical and Magnetic Properties of Materials (also MS&E 332)**
- Spring. 3 credits. Prerequisite: MS&E 331/531 or permission of instructor. Y. Suzuki.
- For description, see MS&E 332.

**MS&E 535 Thermodynamics of Condensed Systems (also MS&E 335)**
- Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.
- For description, see MS&E 335.

**MS&E 536 Kinetics, Diffusion, and Phase Transformations (also MS&E 336)**
- Spring. 3 credits. Prerequisite: MS&E 335/535 or permission of instructor. R. Dieckmann.
- For description, see MS&E 336.
Engineer - 1998-1999

MS&E 541 Microprocessing of Materials (also MS&E 441) Fall. 3 credits. D. G. Ast. For description, see MS&E 441.

MS&E 542 Macroprocessing (also MS&E 442) Spring. 3 credits. Not offered 1998-99. For description, see MS&E 442.

MS&E 552 Properties of Solid Polymers (also MS&E 452) Fall. 3 credits. Prerequisite: ENGRD 261. Corequisite: MS&E 335/335 or permission of instructor. C. K. Ober. For description, see MS&E 452.

MS&E 553-554 Special Project 553, fall; 554, spring. 6 credits each term. Master of Engineering research project.

Graduate Core Courses

MS&E 602 Elasticity, Plastic Flow, and Fractures Spring. 3 credits. S. P. Baker. Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperatures over a wide range of strain rates, fracture in brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

MS&E 603 Analytical Techniques for Materials Science Spring. 4 credits. Lab. M. O. Thompson. Survey of atomic and structural analysis techniques as applied to surface and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopy, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.

MS&E 655 Composite Materials (also M&AE 655 and TAM 655) Spring. 4 credits. For description, see TAM 655.

Related Course in Another Department

Introductory Solid-State Physics (PHYS 454).

Further Graduate Courses

Point defects (thermal disorder, component–activity-dependent disorder, influence of dopants, different kinds of associates, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's laws), point-defect relaxation (migration controlled, phase-boundary-reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solid materials in potential gradients, selected solid-state processes (internal reactions, etc.).

MS&E 614 Transmission Electron Microscopy Spring. 3 credits. Prerequisite: MS&E 331 or equivalent level of knowledge of crystallography and diffraction. S. J. Sass. This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include specimen preparation, adjustment and calibration of the TEM, and image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, including Bloch waves and anomalous absorption, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current texts are Loreto Electron Beam Analysis of Materials, 2nd ed., and Riemer Transmission Electron Microscopy, Physics of Image Formation.

MS&E 617 Solid State Electrochemistry Fall. 3 credits. Prerequisite: MS&E 612 or permission of instructor. Offered alternate years. Not offered 1998-99; next offered fall 2000. R. Dieckmann. Disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Rickert.

MS&E 619 Superhard Materials Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1998-99. A. L. Ruoff. The superhard materials include diamond, cubic boron nitride (possibly the new C$_3$N), and boron–nitride. B.C. The highest of their extreme hardness is examined. The thermodynamics of their stability and the kinetics of their crystal growth will be described. Commercial methods of synthesis of large crystals, powders, thin films and precrystalline aggregates (by sintering at pressure) will be examined. Their chemical, optical and mechanical properties will be studied. Moreover, there is substantial potential for radiation-hard semi-conducting devices and the status of this area will be covered. At the level of Field, *The Properties of Natural and Synthetic Diamonds*, plus recent papers.

MS&E 626 Advanced Inorganic Chemistry II: Solid-State Chemistry (also CHEM 607) Spring. 4 credits. Lab. M. O. Thompson. Survey of atomic and structural analysis techniques as applied to surface and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV and X-ray photoelectron spectroscopy, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.

MS&E 671 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671) Spring. 4 credits. Prerequisites: CHEM 359-360 or equivalent or permission of instructor. For description, see CHEM 671.

MS&E 703 Surfaces and Interfaces in Condensed Matter Spring. 3 credits. Alternate years. Not offered 1998-99. J. M. Blakely. This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics and theory of rate processes will be assumed. The following are the main

M&E 221 Thermodynamics (also ENGRG 221)
Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112.

For description, see ENGRG 221.

M&E 225 Mechanical Design and Synthesis
Spring. 3 credits. Prerequisite: ENGRG 202. Lab fee.
A hands-on laboratory, the use of machine tools, mechanical dissection, and a number of design projects provide direct experience of creative design synthesis.

M&E 323 Introductory Fluid Mechanics
Fall. Usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRG 202 and 203 and coregistration in 221, or permission of instructor.
Hydrostatics, conservation laws using control volume analysis and using differential analysis. Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, compressible flow.

M&E 324 Heat Transfer
Spring, may also be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&E 323 or permission of instructor.

M&E 325 Mechanical Design and Analysis
Fall: usually offered in Engineering Cooperative Program. 4 credits. Prerequisites: ENGRG 202, ENGRG 203, M&E 212 and M&E 225. Lab fee.
Application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems.

M&E 326 System Dynamics
Spring, may be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 204, ENGRG 203. Junior standing required.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems; stability analysis. Computer simulation and experimental studies of vibration and control systems.

M&E 427 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&E 323, 324. Fulfills the technical writing requirement.

M&E 428 Seminar on Engineering Design
Fall. 2 credits. Prerequisite: completion of six semesters in mechanical engineering or equivalent. S-U grades only.
This course is offered to introduce the design 'practise' in action. It consists of seminars by industry and academic practioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by two design 'projects' in the semester, one of which is a competition to design an all-balsa indoor hand-launched glider for maximum duration.

MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

M&E 101 Naval Ship Systems
For description, see NAVS 202.

M&E 102 Drawing and Engineering Design (also ENGRG 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty-two students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional.
For description, see ENGRG 102.

M&E 117 Introduction to Mechanical Engineering (also ENGRI 117)
Fall or spring, to be determined. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGRI 117.

M&E 212 Mechanical Properties and Processing of Engineering Materials (also MS&E 345)
Spring. 4 credits. Prerequisite: ENGRG 202.
Introduction to the broad range of mechanical behavior of materials and their processing. The mechanical properties of metals, ceramics, and composite materials are covered together with their microstructural features and processing. Ideal work methods are

M&A 306 Automotive Engineering
Spring. 3 credits. Limited to juniors and seniors. Fulfills computer applications requirement.
Course emphasizes the application of computers to the solution of mechanical engineering design problems. Topics include: geometric modelling, computer graphics, analytical methods such as simulation, optimization, and curve fitting; and an introduction to the finite element method.

M&A 412 Smash and Crash: Mechanics of Large Deformations
Fall. 4 credits. Prerequisites: M&AE 212, TAM 202. Fulfills field design requirement.
Severe loading is a defining feature of both materials processing and crashworthiness. Materials intentionally are stressed beyond their elastic limits, either in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crashworthiness, it is to absorb the vehicle energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including boundary theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crash cage.

M&A 417 Control of Robot Manipulators
Spring. 3 credits.
Introductory course in the analysis and control of mechanical manipulators. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Various control strategies will be explored and analyzed on a three degree of freedom manipulator and a computer model of the manipulator.
M&AE 455 Introduction to Composite Materials (also MS&E 455 and T&AM 455)
Spring. 4 credits.
For description, see T&AM 455.

M&AE 461 Entrepreneurship for Engineers (also ENGRG 461)
Spring. 3 credits. Enrollment open to seniors; others with permission of instructor. Enrollment may be limited. Course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include: competitive analysis, competitive strategy, business formation: bookkeeping; technology protection; human resource management; negotiation; business valuation; and manufacturing issues.

M&AE 464 Design for Manufacture
Spring. 3 credits. Prerequisites: M&AE 212 and M&AE 225. Fulfills field design requirement. Readings and class discussion will provide a context for the importance of design for manufacture and assembly in product development, manufacturing and marketing. Lecture topics include DFMA design rules and applications; net present value analysis applied to product development; determination of manufacturing capability using statistical process control; and Taguchi design for experiment methodology to evaluate product/process improvements.

M&AE 465 Biomechanical Systems—Analysis and Design
Spring. 3 credits. Prerequisites: ENGRD 202 and 203. Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

M&AE 467 Advanced Mechanical Analysis and Design
Fall. 3 or 4 credits. Evening examinations. Prerequisite: M&AE 325 and M&AE 326 or permission of instructor. Fulfills field design requirement. Further application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems. Diverse examples from aerospace, automotive, and biomechanical fields, with emphasis on current machinery applications. Students have access to general-purpose software tools (such as MATLAB) as well as specialized computational codes (such as ANSYS) for analysis of stress and deformation.

M&AE 469 Stress Analysis for Mechanical and Aerospace Design
Fall. 3 credits. Prerequisites: T&AM 202 and M&AE 325 or permission of instructor. Evening examinations. Not offered 1998-99. Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to analysis and design of mechanical and aerospace systems and components. Review of mechanics fundamentals and their application to classical problems. Introduction to modern computational methods (such as the finite element method) for analysis of stress and deformation.

M&AE 478 Feedback Control Systems
Fall. 4 credits. Prerequisite: ELF E 301 or permission of instructor. For description, see ELF E 471.

M&AE 486 Automotive Engineering Design
Spring. 4 credits. Prerequisite: M&AE 428 and senior standing. Fulfills field design requirement. For description, see M&AE 386.

M&AE 489 Computer-Aided Design Project
Fall. 4 credits. Limited to seniors in mechanical engineering. Fulfills both field design and computer applications requirements. Requires extensive project in addition to course assignments. For description, see M&AE 389.

M&AE 514 Introduction to Precision Engineering
Spring. 3 credits or 4 with laboratory. Prerequisites: ENGRG 102 and M&AE 428, or M&AE 412, or permission of instructor. Variability in mechanical products arises primarily from the processes used to make and assemble parts; it must be accommodated in design and controlled in manufacturing. This course addresses form variability through studies of ideal-form modeling, form tolerancing, form measurement, and manufacturing process modeling (sources of form error). Central principles, practices, and limitations are summarized.

M&AE 570 Intermediate Dynamics
Fall. 3 credits. Prerequisites: graduate standing or permission of instructor. 2 lectures. Introduction to analytical mechanics, virtual work, Lagrangian mechanics. Small vibration and stability theory. Newtonian-Eulerian mechanics of rigid bodies.

M&AE 612 Materials Processing: Theory and Applications

M&AE 613 Computational Methods in Materials Processing

M&AE 615 Experiments in Materials Processing
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. This course will focus on experiments related to the mechanical properties of materials and experiments using various materials processing apparatus and will include a general introduction to sensors and instrumentation for engineering measurements. Testing for mechanical properties/model parameter characterization: inelastic deformation, fatigue, and fracture. Flight testing rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and forming. Numerical simulations. Determination of heat transfer coefficients associated with quenching and forging. Thermodynamic analysis. Fluidity measurements. Specimen design and fabrication. Although the focus is on metals and alloys attention is also given to polymers and ceramic materials.

M&AE 655 Composite Materials (also MS&E 655 and T&AM 655)
Spring. 4 credits.
For description, see T&AM 655.

M&AE 670 Finite Element Analysis for Mechanical and Aerospace Design
Spring. 4 credits. Prerequisite: graduate standing, or permission of instructor. Evening examinations. Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as heat conduction). Primary emphasis on underlying mechanics and numerical methods. Secondary consideration of inherent capabilities and limitations of large-scale, general-purpose structural mechanics programs (such as ANSYS). Introduction to computational aspects through study of small, special-purpose programs and application of available general-purpose programs. Term project.

M&AE 677 Advanced Topics in Systems and Control
Spring. 4 credits. Prerequisite: M&AE 478 (ELF E 471), ELF E 521, graduate standing, or permission of instructor. Modern topics in model-based control pertaining to multi-input, multi-output systems. Emphasis on design techniques which result in closed loop systems that are insensitive to modeling errors. Topics include H-infinity and H-2 optimization, explicit models of uncertainty, gain scheduling, and the analysis of uncertain systems. Computer-aided design laboratory will include aerospace applications such as flight control, control of flexible space structures, and other topics depending on class interest.

M&AE 679 Modelling and Simulation of Dynamic Systems
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1998-99. Selected applications from diverse fields. Representation of continuous dynamic systems by state-variable models. Simulation by numerical integration using general-purpose languages (such as MATLAB) and simulation...
packages. Special topics in linear and nonlinear dynamics. Term project.)

M&AE 680 Finite Element Analysis (also CEE 772 and T&AM 666)
Spring. 3 credits. Prerequisites: T&AM 663 or equivalent. P. Dawson. Conceptual, theoretical, and practical bases for finite element analysis in engineering, with emphasis on structural, mechanical, fluid, and thermal problems. Focuses on the FEM as a method for numerically solving partial differential equations. Topics include: strong and weak problem forms; weighted-residual and variational formulations; formulation of elliptic, parabolic, hyperbolic, and eigenvalue problems; convergence and error estimation; and isoparametric elements. Applications selected from such topics as nonlinear analysis, materials processing, and fracture mechanics.

Energy, Fluids, and Aerospace Engineering

M&AE 305 Introduction to Aeronautics
Fall. 3 credits. Limited to upperclass engineers; others with permission of instructor.
Introduction to the concept of aircraft design. Principles of flight of propulsive and compressible aeronautics, boundary layers, and wing theory. Description and performance of propeller-driven and jet propulsion engines. Design studies focus on transonic passenger airplanes and small supersonic jets.

M&AE 306 Spacecraft Engineering
Fall. 3 credits. Upperclass engineering students. Introduction to spacecraft design from launch, through orbital operation, to reentry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, and reentry. Emphasis on satellites orbiting the Earth. Several guest lectures on current problems and trends in spacecraft operation and development.

M&AE 400 Components and Systems: Engineering in a Social Context (also ST 400)
Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Serves as an approved elective but not as a field elective in mechanical engineering. Offered alternate years. Not offered 1998-99.
This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), supersonic transport, and the automobile and its effect on the environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

M&AE 423 Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisite: M&AE 323.
This course builds on the foundation of M&AE 323. Emphasis will be both on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered will include some exact solutions to the Navier-Stokes equations; boundary layers; wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence and chaos.

M&AE 449 Combustion Engines
Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.
Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Air-standard analyses, chemical equilibrium, ideal-cycle analyses, deviations from ideal processes, combustion knock. Formation and control of undesirable exhaust emissions.

M&AE 456 Introduction to Nuclear Science and Engineering (also AE&EP 403, ELE E 403 and NS&E 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.
For description, see NS&E 403.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also AE&EP 484, ELE E 484 and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213 and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand. For description, see NS&E 484.

M&AE 506 Aerospace Propulsion Systems
Spring. 3 credits. Prerequisite: M&AE 323 or permission of instructor. Offered alternate years. Not offered 1998-99.

M&AE 507 Dynamics of Flight Vehicles
Spring. 3 credits. Prerequisites: M&AE 505 and M&AE 323 or permission of instructor. Offered alternate years.

M&AE 543 Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermochemistry, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, and combustion of solids.

M&AE 601 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint. Aspects of kinetic theory as it applies to the formulation of continuum fluid dynamics. Surface phenomena and boundary conditions at interfaces. Fundamental kinematic descriptions of fluid flow, tensor analysis, derivation of the Navier-Stokes equations and energy equation for compressible fluids. Viscous flows, boundary layers, potential flows, vorticity dynamics.

M&AE 612 Fluid Dynamics at High Reynolds Numbers
Spring. 4 credits. Prerequisite: M&AE 601.
Navier-Stokes and Euler equations, integral formulas for fluid forces and moments on immersed bodies in compressible and incompressible viscous flows. Vorticity dynamics in compressible flows, Kelvin's theorem. Fjortoft's theorem, Helmholtz decomposition of vector fields. Singularities, vortex filaments, vortex sheets, Biot-Savart relations. Irrotational motion: representations in terms of velocity or vector potentials. Topology of flows; general results in potential theory.

M&AE 603 Compressible Gas Dynamics
Fall. 4 credits. Graduate standing or permission of instructor. Not offered 1998-99.
Fundamentals of compressible gas dynamics are described using thermodynamics and fluid properties. Isentropic flow theory. Normal shock waves including Rankine-Hugoniot relations. Duct flows including effects of area, friction, and heat interaction. Oblique shock waves and Prandtl-Meyer expansion fans. Applications include high-speed aerodynamics, combustor design, and jets used for materials processing.

M&AE 608 Physics of Fluids
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Behavior of a gas is considered at the microscopic level. Introduction to kinetic theory: velocity distribution, collisions, Boltzmann equation, quantum mechanics. Postulates of quantum mechanics, internal structure, rigid rotor, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relation to thermodynamics, calculations of thermodynamic properties. Chemical rate processes.

M&AE 636 Elements of Computational Aerodynamics
Spring. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics. Not offered 1998-99. Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&AE 736, but is more applications oriented and uses commercial software for all computational exercises.

M&AE 651 Advanced Heat Transfer
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1998-99.
Advanced treatment of conductive and convective heat transfer. Basic equations

[M&AE 654 Radiation Heat Transfer
2-4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1998-99.

[M&AE 732 Analysis of Turbulent Flows
Spring. 4 credits. Prerequisite: M&AE 601 or permission of instructor. Offered alternate years. Not offered 1998-99.

[M&AE 733 Stability of Fluid Flow
Fall, on demand. 4 credits. S-U grades only. Prerequisite: graduate standing or permission of instructor. Not offered 1998-99.

[M&AE 734 Turbulence and Turbulent Flow
Fall. 4 credits. Prerequisite: M&AE 601, graduate standing, or permission of instructor. Not offered 1998-99.
Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.]

[M&AE 736 Theory of Computational Aerodynamics
Spring. 4 credits. Prerequisites: graduate standing, an advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Not offered 1998-99.
Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.]

[M&AE 737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics; and some FORTRAN. C. or C++ programming experience.

Special Offerings

[M&AE 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to graduate students.
Prerequisite: permission of instructor. Intended for an individual student or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.]

[M&AE 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credits to be arranged.
Prerequisite or corequisite: M&AE 428. Fulfills field design requirement. Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.]

[M&AE 545 Energy Seminar (also ELE E 587 and NS&E 545)
Fall. 1 credit. For description, see ELE E 587.]

[M&AE 594 Manufacturing Seminar (also OR&E 893-894)
Fall, spring. For description, see OR&E 893-894.]

[M&AE 690 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to graduate students.
Special lectures by faculty members on topics of current research.]

[M&AE 791 Mechanical and Aerospace Research Conference
Fall. 1 credit each term. S-U grades only. For graduate students involved in research projects. Presentations on research in progress by faculty and students.]

[M&AE 799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend.
Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.]

[M&AE 890 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director.
Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.]

[Nuclear Science and Engineering
A number of courses in nuclear science and engineering are offered through the School of Applied and Engineering Physics (see A&EP 609, 612, 635, 638, and 651).
NS&E 121 Fission, Fusion, and Radiation (also A&EP 121 and ENGR 121)
Spring. 3 credits. K. R. Kay.
This is a course in the Introduction to Engineering series. For description, see FNGR 121.
NS&E 285 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, ARTTH 200, ENGL 285, ENGR 185, GEOL 200, M&AE 285 and PHYS 200)
Spring. 3 credits. 3 lectures. R. Kay.
This is a course in the Introduction to Engineering series. For description, see ENGR 185.]
OR&IE 435 Introduction to Game Theory
Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. For the latter, focus on linear games. Applications to weighted voting and cost allocation.

OR&IE 436 A Mathematical Examination of Fair Representation
Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor.
In this course we will study the mathematical aspects of the apportionment problem, the most recognizable form of the problem. The basic ideas extend beyond apportionment of legislatures (in both federal and state) to many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to some other realms where indivisible resources are to be allocated among competing constituencies.

OR&IE 451 Economic Analysis of Engineering Systems
Spring, weeks 1-7. 2 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

OR&IE 452 Introductory Engineering Stochastic Processes II
Fall. 4 credits. Prerequisite: OR&IE 361 or equivalent.
Stationary processes, martingales, random walks, and gambler's ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory, Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.

OR&IE 476 Applied Linear Statistical Models
Spring. weeks 1-7. 2 credits. Prerequisite: OR&IE/ENGRI 270.
Multiple linear regression, diagnostics, model selection, inference, one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB stressed.

OR&IE 480 Information Technology for Operations Research & Industrial Engineering
Spring. 4 credits. Prerequisite: COM S/ENGRI 211, OR&IE 310 and OR&IE 350.
This course views information technology as the means by which computer science, operations research and industrial engineering are brought to serve the operational and strategic needs of enterprises. The course takes the perspective of an OR&IE professional who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, and integrates a computer application into the solution. This perspective introduces OR&IE and other students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the internet. The course will use lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete.

OR&IE 490 Teaching in OR&IE
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor.
This course involves working as a TA in an OR&IE course. The course instructor will assign credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

OR&IE 499 OR&IE Project
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor.
Project-type work, under faculty supervision, on a real problem existing in some firm or institution, usually a regional organization. Opportunities in the course may be discussed with the associate director.

OR&IE 515 Design of Manufacturing Systems
Fall. 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School. For description, see OR&IE 416. Lab fee $15.

OR&IE 516 Case Studies
Fall. 1 credit. Limited to M.Eng. students in OR&IE.
Students are presented with unstructured problems that resemble real-world situations. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

OR&IE 520 Operations Research I: Optimization
For description, see OR&IE 320.

OR&IE 521 Optimization II
For description, see OR&IE 321.

OR&IE 522 Operations Research I: Topics in Linear Optimization
Spring. 1 credit. Prerequisite: OR&IE 520.
Students who have already taken OR&IE 321 or 521 should not enroll. Limited to M.Eng. students in OR&IE.
An extension of OR&IE 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

OR&IE 523 Operations Research II: Introduction to Stochastic Processes I
For description, see OR&IE 361.

OR&IE 524 Design of Manufacturing Systems II
Spring; weeks 1-7. 2 credits. Prerequisites: OR&IE 562, OR&IE 416, or by permission of instructor.
This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students will examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control and financial analysis. Meetings between project teams and faculty will be substituted for some lectures or laboratory. Analytical methods appropriate for conducting analysis will be discussed in lectures.

OR&IE 525 Production Planning and Scheduling Theory and Practice
Fall. 4 credits. Corequisite: OR&IE 320. Production planning, including MRP, linear programming, and related concepts. Scheduling and sequencing work in manufacturing systems. Job release strategies and control of work in process inventories. Focus on setup time as a determinant of plans and schedules.

OR&IE 529-530 Selected Topics in Applied Operations Research
Fall, spring. Credit to be arranged. Prerequisite: permission of instructor. Current topics dealing with applications of operations research.

OR&IE 551 Economic Analysis of Engineering Systems
Spring, weeks 1-7. 2 credits. Prerequisites: OR&IE 520 and OR&IE 350. Lectures concurrent with OR&IE 451. For description see OR&IE 451.

OR&IE 560 Engineering Probability and Statistics II
For description, see OR&IE 360.

OR&IE 561 Queuing Theory and Its Applications

OR&IE 562 Inventory Theory
Spring, weeks 1-7. 2 credits. Prerequisite: OR&IE 321, 561, 416 or permission of instructor.
The first portion of this course is devoted to the analysis of several deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

OR&IE 563 Applied Time-Series Analysis
Fall. 3 credits. Prerequisites: OR&IE 361 and OR&IE 270, or permission of instructor. Not offered 1998-99.
The first part of this course treats regression methods to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to nonstationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.
OR&IE 564 Introductory Engineering Stochastic Processes II
Fall. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462. For description, see OR&IE 462.

OR&IE 565 Applied Financial Engineering
Spring. 4 credits. Limited to M.Eng. students. This course has two components: a sequence of lectures and a project. The course will be co-listed with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng. project requirement.

OR&IE 575 Experimental Design
Randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

OR&IE 576 Regression
Spring, weeks 8–14 (alternates with 575). 2 credits. Prerequisite: OR&IE 476. Nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, regression with correlated errors. Computing in MINITAB or SAS.

OR&IE 577 Quality Control

OR&IE 580 Design and Analysis of Simulated Systems
Fall. 4 credits. Prerequisites: programming experience and OR&IE 360/560 or permission of instructor. Note: OR&IE 360/560 may be taken concurrently. Digital computer programs to simulate the operation of complex discrete systems in time. Modeling, program organization, pseudo-random-variable generation, simulation languages, statistical considerations; applications to a variety of problem areas.

OR&IE 599 Project
Fall, spring. 5 credits. For M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

OR&IE 625 Scheduling Theory
Spring. 3 credits. Not offered 1998–99. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling, and shop scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

OR&IE 630 Mathematical Programming I

OR&IE 632 Nonlinear Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Necessary and sufficient conditions for unconstrained and constrained optima. Duality theory. Computational methods for unconstrained (e.g., quasi-Newton) problems, linearly constrained (e.g., active set) problems, and nonlinearly constrained (e.g., successive quadratic programming) problems.

OR&IE 633 Graph Theory and Network Flows

OR&IE 635 Interior-Point Methods for Mathematical Programming
Spring. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor. Not offered 1998–99.

OR&IE 636 Integer Programming
Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 1998–99.
Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods with additional topics drawn from recent research in this area.

OR&IE 639 Polyhedral Convexity

OR&IE 650 Applied Stochastic Processes
Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

OR&IE 651 Probability
Spring. 4 credits. Prerequisite: real analysis at the level of Math 413 and a previous one-semester course in calculus-based probability. Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

OR&IE 662 Advanced Stochastic Processes
Spring. 3 credits. Prerequisite: OR&IE 651 or equivalent. Brownian motion, martingales, Markov processes, and topics selected from: diffusion, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

OR&IE 670 Statistical Principles
Fall. 4 credits. Co-requisite: OR&IE 650 or equivalent. Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

OR&IE 671 Intermediate Applied Statistics
Spring. 3 credits. Prerequisite: OR&IE 670 or equivalent. Not offered 1998–99. Statistical inference based on the general linear model, least-squares estimators and their optimality properties, likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

OR&IE 672 Selected Topics in Environmental Statistics (also BTRY 672)
Spring. 2 credits. Prerequisite: ENGRD 270 or equivalent. For description, see BTRY 672.

OR&IE 680 Simulation

OR&IE 720-729 Selected Topics in Applied Operations Research
Fall, spring. Credit to be arranged. Current research topics dealing with applications of operations research.

OR&IE 738-739 Selected Topics in Mathematical Programming
Fall, spring. Credit to be arranged. Current research topics in mathematical programming.

OR&IE 768-769 Selected Topics in Applied Probability
Fall, spring. Credit to be arranged. Topics are chosen from current literature and research areas of the staff.
THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD Player (also ENGR 118 and MSE 118)
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGR 118.

T&AM 202 Mechanics of Solids (also ENGR 202)
Fall, spring. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.
For description, see ENGR 202.

T&AM 203 Dynamics (also ENGR 203)
Fall, spring. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.
For description, see ENGR 203.

Engineering Mathematics

T&AM 191 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.

T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits.
Prerequisite: MATH/T&AM 191/193.
For description, see MATH 192.

T&AM 193 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 193.

T&AM 293 Engineering Mathematics I (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in COMP 500.
For description, see MATH 293.

T&AM 294 Engineering Mathematics II (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.
For description, see MATH 294.

T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent. Initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Special functions, linear partial differential equations. Introduction to probability and statistics. Use of computers to solve problems.

T&AM 311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310).
Introduction to complex variable theory. Cauchy's integral theorem, Laurent series. Classification of singularities, Method of Residues. Applications include conformal mapping (Laplace equation, Laplace transform, Fourier transform, Fourier series, transfer function, solution and stability of linear systems. Examples are drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 610 can be taken without T&AM 310).
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.

T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
Emphasis is on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.

T&AM 612 Methods of Applied Mathematics III
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.

T&AM 613 Methods of Applied Mathematics IV
Spring. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase, and Laplace methods). Regular and singular perturbation methods. An intensive course, e.g., method of composite expansions. Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductors, Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also M &AE 455 and MSE 455)
Spring. 4 credits.
Introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials; micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays; orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design, manufacturing methods, and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.

T&AM 591 Master of Engineering Design Project I
Fall. 3-6 credits.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II
Spring. 5-15 credits.
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M &AE 655 and MSE 655)
Spring. 4 credits.
Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: shear-lag models of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure; stress distributions around holes and cuts in composite laminates; compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I
Fall. 4 credits.
Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors; deformations, rotations and strains; balance principles; stress; small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; boundary-value problems, e.g. plates, St. Venant's solutions.
Dynamics and Space Mechanics

T&AM 671 Advanced Dynamics  Spring 3 credits. Prerequisite: T&AM 570 or equivalent. Offered alternate years. Review of Lagrangian mechanics. Hamilton's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; Melnikov's method.

T&AM 672 Celestial Mechanics (also ASTRO 579)  Fall 3 credits. Offered alternate years. Description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability; capture problems. Osculating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings.

THEORETICAL AND APPLIED MECHANICS 225

FACULTY ROSTER

Abel, John F., Ph.D., U. of California at Berkeley. Prof., Civil and Environmental Engineering
Ahner, Beth A., Ph.D., Massachusetts Institute of Technology. Asst. Prof., Agricultural and Biological Engineering
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Allmendinger, Richard, Ph.D., Stanford U. Prof., Geological Sciences
Aleshshard, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Anton, A. Brad, Ph.D., California Inst. of Technology. Asst. Prof., Chemical Engineering
Ast, Dieter G., Ph.D., Cornell U. Prof., Materials Science and Engineering

Bartsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biological Engineering
Bassett, William A., Ph.D., Columbia U. Prof., Geological Sciences

T&AM 576 Applied Dynamical Systems (also MATH 717)  For description, see MATH 717.

Special Courses, Projects, and Thesis Research

T&AM 491-492 Project in Engineering Science  491, fall; 492, spring. 1-4 credits, as arranged.
Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800 Topics in Theoretical and Applied Mechanics  Fall, spring. 1-5 credits, as arranged. Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics  Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research in Theoretical and Applied Mechanics  Fall, spring. 1-15 credits, as arranged. S-U grades optional. Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

GRADUATE SCHOOL

Walter Cohen, dean
Christine Runney, associate dean
Eleanor S. Reynolds, associate dean
Hilary Ford, assistant dean

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

GRADUATE SCHOOL

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee who usually has the primary responsibility for directing the student's thesis or dissertation research.

REQUIREMENTS FOR ADMISSION

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a Test of English as a Foreign Language (TOEFL) score of 550 or higher (600 for some fields);
2) studied for two or more years in, or received a degree from, a college or university in a country where both the language of instruction and the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08541, U.S.A.

Applications for fall admission for most fields in the Graduate School should be received by early January. Many fields, however, have different deadlines. Consult the Graduate School's application booklet for the closing date for each field.

Inquiries regarding admission should be addressed to the graduate field office or to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, New York 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the World Wide Web at <http://www.gradschool.cornell.edu/>. An interactive application is available on the Web and application forms may be downloaded and printed from the Web. Both the application and the Catalog may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, New York 14853-2602. (The application is mailed world-wide; the Catalog is mailed to addresses with the U.S.)

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School.

Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION
David A. Dittman, dean
A. Neal Geller, associate dean for academic affairs
Judi Brownell, Richard J. and Monene P. A. Neal Geller, associate dean for academic and enrollment management
Timothy Hinkin, director of undergraduate studies
Donald C. Bishop, associate dean for graduate education
Robert N. D'Entremont, director of external relations
Margaret Haley Ferguson, director of financial services
James E. Hisle, managing director of the Statler Hotel and J. Willard Marriott Executive Education Center
Cheryl S. Farrell, director of admissions and student services
Yariela Kerr-Donovan, director of minority programs and lecturer
Katherine S. Margolis, director of academic information resources and training
Richard S. MacDonald, director of administrative services
Philipus Miller III, director of alumni affairs
Preston Clark, director of instructional support and visiting lecturer
Millie Reed, director of career services
Glenn Withiam, director of publications
Fred Conner, senior editor of the Cornell Hotel and Restaurant Administration Quarterly
Mark Adams, director of communications

Requirements for Graduation
Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;

2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses in the final semester), of 120 required and elective credits, as set forth in the table on the following page;

3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 560 on Cornell Placement Test; 3) pass language 121 and 122 (8 credits) or the equivalent, and attain a minimum grade of at least C- in each (C or above for transfer credit from other institutions); or 4) pass 123 or the equivalent;

4) completion of two units of practice credit prior to the last two terms of residence, as defined on the following page;

5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 72 of the 120 credits needed for graduation, the hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 21-credit group of free electives.

Transfer Credit Policy
Transfer students are required to complete all degree requirements with at least seventy-five (75) credits at Cornell University, of which a minimum of sixty (60) must be in courses offered by the Hotel School, and nine (9) must be in distributive electives taken outside the Hotel School. Thus, a maximum of forty-five (45) hours in transfer credit may be allowed from other accredited colleges or universities, as follows:

DEGREE PROGRAMS
Hotel and Restaurant Administration

UNDERGRADUATE CURRICULUM
The School of Hotel Administration offers education in the numerous disciplines required for modern management in the global hospitality industry. Included in the core curriculum are courses in management, human resources, financial management, food and beverage operations, marketing, tourism, property asset management, communications, and law. Students also are encouraged to pursue a broad range of elective courses, including those in the humanities, social sciences, and natural sciences, as preparation for assuming leadership positions in the business and local community. For more complete information about undergraduate program requirements, see the school's student handbook or course supplement (available in room 174 Statler Hall).

FACILITIES
Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

The School of Hotel Administration's Nestlé Library has the largest single collection of hospitality-related materials in the United States. The collection contains approximately 23,000 books, 1,000 videotapes, numerous ephemera and memorabilia (such as photographs, menus, and rare books), and more than 800 journal, magazine, newsletter, and newspaper subscriptions. Materials on lodging, foodservice, travel and tourism, and general business topics comprise the core of the library's collections. Among the library's special features are numerous computerized information resources, including NEVUS, Dow Jones, ABI/INFORM, and The International Hospitality and Tourism Database, an extensive and unique index to hospitality articles. Information resources and services for the hospitality industry are available for a fee through the library's HOSTLINE service. In addition to offering an excellent collection of materials and a dignified and refined study space, the Hotel School library extends quality service to every student. Please visit us and benefit from our collections and services.

Statler Hotel and J. Willard Marriott Executive Education Center. The Statler Hotel comprises 150 guest rooms, an executive education center, restaurants, a lounge, and the university's faculty and staff club. It demonstrates the very finest in hospitality and hospitality-education practices. The Statler is an independent, self-sustaining teaching hotel that provides quality food, beverage, meeting, and lodging services to the Cornell community and campus visitors, including parents and those who visit Cornell as part of the application process. In addition, the hotel is a practice-management facility for certain classes, internships, and independent-study projects. It offers part-time jobs to approximately 300 students each semester with preference given to students in the hotel school.

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs,
Core 18
Hotel Electives 0
Distributive Electives 9
Free Electives 18

45

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Others generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer.

Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine (9) credits may transfer. The remaining nine (9) must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three (3) credits are taken (at Cornell or transferred from elsewhere) in each area. A maximum of six credits, but no more than four per semester, of distributive electives may be taken on an S/U basis.

Eighteen (18) credits in free electives may transfer.

Concentration

While completing the hotel elective courses, undergraduates in the school may select a concentration.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative g.p.a. of 3.0 in the concentration was attained.

Foreign Languages

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

Independent Study

Students may conduct independent study projects in any academic area of the school under the direction of a faculty member. Credit is arranged on an individual basis. To enroll in an independent study project, students must obtain written permission from the school before the add deadline. See H Adm 499 or 699 for more details.

Practice-Credit Requirement

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last two semesters. Further details are set forth in the Practice Credit Handbook for Undergraduates in the School of Hotel Administration, available in the school's Career Services Office, room 255 Statler Hall.

Management-Intern Program

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in the U.S. and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H Adm 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

Study Abroad

All students planning to study abroad apply through Cornell Abroad, please see the Cornell Abroad program description in the introductory section of Course of Study.

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's study-abroad faculty representative and the director of student services so that all petition and credit-evaluation procedures are followed.

Part-Time Study

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

Grading System

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0, B to 3.0, C to 2.0, D to 1.0, F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals "C" or above and an unsatisfactory grade equals "D+" or lower.

Students whose term averages are at least 3.3 and who take at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

**MANAGEMENT OPERATION COURSES**

**H ADM 100 Principles of Management**

- Fall and spring. 3 credits. Limited to non-hotel school students. Elective. R. Chase, faculty.

**H ADM 102 Distinguished Management Lectures**

- Fall. 1 credit. Elective. D. Dittman.

**H ADM 104 Elements of Business for Non-Business Majors**

- Spring. 1 credit. Limited to non-hotel students. P. Rainsford provides hands-on skills and knowledge about how to start or run a small business for students whose professional careers may require them to operate their own business. The course is designed to give professional careers in management, planning, commanding, coordinating and controlling.

**H ADM 105 Introduction to Lodging**

- Fall and spring. 3 credits. Limited to hotel school and sponsored internal transfer division students. Required. R. Hartman.

**H ADM 301 Club Management**

- Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Limited to 35 hotel school juniors and seniors; spring, open enrollment. Prerequisite for hotel students: H Adm 105, or equivalent. Elective. R. James.

**H ADM 306 Franchising in the Hospitality Industry**

- Fall. 3 credits. Not open to freshmen. Elective. M. Nolen.

**H ADM 401 Strategic Management**

- Fall and spring. 3 credits. Limited to 45 juniors and seniors per lecture. Prerequisites: H Adm 105, 115, 211, and 321, or equivalents. Required. C. Pizzi.

This is a top management "big picture" course. It is not limited to a single functional area such as marketing, human resources, finance, food and beverage, design, or so forth. The problems and issues of strategy require a total enterprise perspective, and the skill of judging how all the relevant factors affect the business organization. Introduces a number of models, methods, and techniques that can be used to identify strategic issues, generate future-oriented action plans to address those issues, and implement change. An important goal is to emphasize the need to review a firm's strengths and weaknesses as the basis for formulating the firm's strategy for exploiting environmental opportunities and coping with environmental threats. Because of the group nature of the course, the absolute
drop deadlines are September 3 in the fall and January 29 in the spring.

H ADM 402 Hospitality Management Seminar
Fall. 1 credit. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H ADM 102. Elective. D. Dittman.

A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the speaker's area of expertise. The class is relatively unstructured, and students are expected to participate in discussions.

H ADM 403 Resort Management
Fall. First seven weeks or second seven weeks. 2 credits. Limited to seniors and graduate students, others by permission of instructor. Mandatory attendance in all class periods. Elective. M. Noden.

First Seven Weeks: A lecture course in the development, operations and management of the resort property. Resorts of various types, seasons, and economic levels are considered. Emphasis is on the financing and environmental considerations of the resort development cycle. Regulatory issues are examined, and relationships with host communities and governmental bodies are explored. Special consideration is given to the promotion of business, the provision of facilities, services and guest entertainment. Contract non-contract relationships with the travel industry are reviewed.

Second Seven Weeks: A lecture course in the development, financing and management of secondary-residential hotel condominiums. Contemporary state statutory requirements, S.F.C. regulations and prospectus rules are reviewed for application in the managerial portfolio. Federal land use controls are examined and explained. Individual financing of units, and management contracts are fully reviewed, and students will be exposed to typical management contract requirements and protocols. Rental pooling, and its effects upon management and owners will be fully explored. Applications of the condominium concept, including such by-products as time sharing, will be examined from a managerial perspective.

H ADM 404 Entrepreneurship and Small Business Management
Fall and spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H ADM 321 or equivalent. Elective. Not offered fall 1998. P. Rainford.

Focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating a new business venture. Case studies and guest speakers will be used. There will be one major term project, which will require student teams to serve as consultants to real businesses that have asked for help from the Small Business Administration. Because of the group project nature of the course, the absolute drop deadline for all students is the last day of the first week of classes.

H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. Not offered spring 1999. T. Hinkin.

Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analysis.

H ADM 407 Seminar in Hotel Operations

Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-to-large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

H ADM 408 Introduction to Casino Operations
Spring. 2 credits. Limited to 45 juniors, seniors, and graduate students. Estimated cost of field trip, $150. Elective. R. Harmann.

Introduction to the multi-billion dollar gaming industry, including a historical overview of gambling, and the implications of legal, social, and economic issues within the industry. Reviews various games played in casinos, current trends, and the most popular casino destinations in the world. Special attention is devoted to the growth of casinos in cruise ships, Indian reservations, and on river boats in the U.S.

H ADM 409 Airline Management
Spring. 3 credits. Prerequisites: H Adm 115 and 211. Elective. M. Noden.

Focuses on domestic and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate structures, international trends, and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

H ADM 603 Managing Across Cultural Boundaries
Fall and spring. 3 credits. Limited to 15 seniors and graduate students. Prerequisites: H Adm 121, 165, 321, 401 or graduate student status. Elective. J. Shay.

Contributes to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness and understanding of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and issues that often confront managers working in foreign countries; and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master's requirement. P. Rainford.

An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 702 Human Behavior in Organizations
Fall. 3 credits. Professional master's requirement. T. Hinkin.

Focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations will provide the basis for understanding the dynamics of effective organizational behavior. Learning will occur primarily through readings, case discussions, and self-reflective teamwork.

H ADM 801 Seminar in Hospitality and Service Inquiry
Fall. 3 credits. Elective. Not offered fall 1998. C. Lundberg.

This seminar introduces graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating findings. The implications and consequences of career choices and tradeoffs among the alternative philosophical, ideological, and pragmatic perspectives and approaches of doing inquiry will be emphasized.

HUMAN RESOURCES MANAGEMENT COURSES

H ADM 115 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. F. Berger, B. Chung, T. Simons.

Focuses on managing people in the workplace. Students develop theoretical lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.

H ADM 210 The Management of Human Resources
Fall and spring. 3 credits. Limited to 100 non-hotel school students per lecture, no freshmen. Elective. F. Merritt, faculty.

Examines the role of human resources management, starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized.

H ADM 211 Human Resources Management
Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, no freshmen or graduate students. Prerequisite: H Adm 105 and 115 (co-registration in 115 allowed). Required. B. Chung, M. Lankau, B. Tracey.

Provides students with an overview of the human resources management (hrm) field and shows them the link between specific hrm activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will understand the relationship between
HOTEL ADMINISTRATION - 1998-1999

compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will a) understand the relationship between human resource activities, as well as the relationship between firm and other functional areas within hospitality organizations; and b) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 313 Training in the Hospitality Industry
Fall. 3 credits. Limited to 24 students. Prerequisite: H Adm 211. Elective. F. Berger.
Training is one of the primary activities for coping with a continuously changing environment. It also is one of the fundamental responsibilities of all hospitality managers. Students will learn the major theoretical and practical issues associated with program design, development, implementation, and evaluation. Students will become part of a project with one or more hospitality organizations.

H ADM 411 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 juniors, seniors, and graduate students, with preference given to hotel school seniors and seniors in other graduate schools. Prerequisites: H Adm 115, 702, or equivalents. Elective. T. Simons.
Negotiation is a critical factor in business success. This course provides hands-on experience in negotiation in the hospitality context. Through role-play exercises, discussion, and writing, students will develop their skills as negotiators. They will improve their comfort level with negotiations and develop their own personal negotiation style. Students will also learn how to adjust their negotiating style to respond appropriately to others’ different personalities and negotiation tactics.

H ADM 412 Managing Organizational Change
Spring. 3 credits. Prerequisite: H Adm 211 or equivalent. Elective. C. Lundberg.
Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 415 Managerial Leadership in the 1990s
Students learn how to participate and be observers in their own lives through studying the field of applied behavioral science. Students will be able to use what they learn about human behavior and apply it to work situations. This allows them to pursue opportunities in organizations in a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers, associates and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell hospitality students. The absolute deadline for adding the course is 12:00 noon on the first day of class. The drop deadline is 12:00 noon on Friday, February 5, 1999.

H ADM 416 Special Studies in the Management of Human Resources: Service Cultures
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H Adm 211 or equivalent. Elective. Not offered spring 1999. Faculty.
Assists students in understanding the role of human resources in creating and maintaining effective service-driven operations. Emphasis will be placed on the diagnosis and design of human resource initiatives to achieve strong service cultures and organizational performance. Topics include the management of emotions, monitoring and measuring the corporate culture for service, and the linkage of human resource practices to service vision, organizational design, and strategic objectives. Students will develop and conduct a culture audit in a business. Class discussion, case analysis, and field experience.

H ADM 418 Innovation and Dynamic Management
Spring. 3 credits. Limited to juniors and seniors. Elective. C. Enz.
Investigates the ways in which businesses and managers can build profitable organizations through a process of rethinking, re-evaluating, and discarding existing practices. Knowing self through reflection, knowing organizations function, and knowing how to change them to enable others and build communities are the focus of this course. Students will examine the process of innovation and the psychology of followers. The class will serve as a model of a learning organization as students develop their skill set as change agents and organizational leaders.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel school seniors and graduate students. Elective. C. Lundberg.
Theoretical and practical applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 711 Human Resources Management
Spring. 5 credits. Professional master’s requirement. B. Tracey.
Focuses on the development of human resources management skills and exploration of the dilemmas and responsibilities of leadership. Uses managerial perspective with emphasis on the effects that managerial activities have on recruitment, selection, and retention systems. Individual decision-making and integration abilities will be assessed. Case studies, exercises, and simulations.

FINANCIAL MANAGEMENT COURSES

H ADM 120 Survey of Financial Management
Spring. 2 credits. Limited to non-hotel school students. Elective. Faculty. A survey of basic principles of financial management, investment, and financial analysis. Designed for the student who desires a basic general knowledge of financial decision making.

H ADM 121 Financial Accounting
Fall and spring. 3 credits. Limited to hotel school students. Elective. D. Ferguson. The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner’s equity.

H ADM 123 Financial Accounting Principles
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. Faculty. An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner’s equity.

H ADM 221 Managerial Accounting
Fall. 3 credits. Prerequisites: H Adm 121 and 174, or equivalents. Required. G. Potter.
Focuses on the use of accounting information for management decision making and control. Topics include product costing, management control systems and performance measurement. There will be one common exam at the end of the semester.

H ADM 222 Finance
Spring. 3 credits. Prerequisite: H Adm 121, 221, or equivalents. Required. S. Carvell.
Provides students with accounting cash flow information for financial planning, capital structure decisions, debt equity ratio analysis, investment evaluation and short-term and long-term financial decision making. Topics include current asset management, short-term financing, capital budgeting, long-term financing, cost of capital, and problems in international finance.

H ADM 321 Hospitality Financial Management
Fall. 3 credits. Prerequisites: H Adm 121, 221 and 222, or permission of instructor. Required. J. Eyster.
Integrates the areas of financial accounting, managerial accounting, and finance and applies the interpretive and analytical skills of each to hospitality-industry situations. Topics include uniform system of accounts, revenue and expense tracking and internal control, accounting systems, ratio and comparative analysis, cost-volume-profit analysis, pricing, operational budgeting, project capital budgeting, decision-making, equity and debt financing structures, and operating agreement forms. Students analyze hospitality operations and projects and present their findings in management report form.
An introductory course covering institutional vehicles to include joint ventures, limited partnerships, construction mortgages, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

FOOD AND BEVERAGE MANAGEMENT 235

H ADM 322 Principles of Investment Management
Fall. Limited to non-hotel school students. Hotel school students or those with a background in economics, quantitative analysis, and computers are advised to enroll. Elective. A. Arbel. An introductory course covering institutional and analytical aspects of aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including students' participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321, or equivalents. Elective. D. Reoos. Focuses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return, feasibility and appraisal; equity-based and debt financing, then in-depth analysis of financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 324 International Financial Management
Fall and spring. 3 credits. Prerequisites: H ADM 121, 221, 222, or equivalents, micro and macroeconomics. Elective. F. Ferguson. Focuses on the international aspects of financial management important to the hospitality industry with the intention of providing an understanding of and confidence in dealing with the economic issues faced by the multinational corporation. Areas covered are the international financial management environment, the management of foreign exchange risk, international asset management, and international sources of funds.

H ADM 326 Corporate Finance
Fall. 3 credits. Limited to 30 juniors and seniors. Prerequisite: H ADM 321. Elective. S. Carvell. In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, cash management, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special attention is placed on issues important to the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

H ADM 421 Internal Control in Hospitality Operations
Fall. 3 credits. Limited to 30 students. Prerequisite: H ADM 321, 722, or equivalent. Faculty. Hotel and restaurant operations are analyzed from the perspective of preventing fraud and embezzlement. The design and distribution of production, accounting, information systems, and supervisory tasks are studied in a manner that will ensure effective internal control and verifiable audit trails. Case studies.

H ADM 422 Taxation and Management Decisions
Fall. 3 credits. Limited to 50 juniors, seniors and graduate students. Elective. A. Scarabba. Introduction to tax advantages and disadvantages of various organizational structures, including corporations, partnerships, and subchapter "S" corporations; financial information reporting to tax authorities and shareholders. Emphasis is on use of depreciation methods to achieve tax reductions; syndication techniques; and the role tax laws play in promoting private investment and development.

H ADM 423 Financial Management Policy
Fall. 3 credits. Limited to 30 students, non-hotel students by permission of instructor. Prerequisite: H ADM 326 or 721. Elective. S. Carvell. Covers numerous policy issues in financial management. Each of these issues will affect the potential profitability and survivability of the firm under conditions of uncertainty. The course will concentrate on nine major policy issues including capital structure, dividend policy, lease vs. buy analysis, and working capital financing.

H ADM 424 Security Analysis and Portfolio Management
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: macro and micro economics, introductory course in statistics and/or quantitative analysis, and knowledge of computers beyond word processing. Elective. A. Arbel. An in-depth analysis of financial instruments, investments and portfolio management, including fixed income, equity securities, advanced valuation models, risk-return analysis, screening techniques, asset allocation, and active portfolio management and trading. Recent developments in investments research are covered, and large financial databases are used for practical applications of the concepts and techniques presented.

H ADM 621 Hospitality Real Estate Finance
Spring. 3 credits. Limited to graduate students. Prerequisite: H ADM 722, or equivalent. J. deRoos. For description, see H ADM 323. This graduate course includes the H ADM 323 lectures plus an hour-long discussion session each week which features guest speakers from industry, faculty from other colleges, and case studies.

H ADM 624 Analysis and Interpretation of Financial Statements
Spring. 3 credits. Limited to 30 seniors and graduate students. Elective. G. Potter. Covers the financial accounting issues that are encountered in reporting the operations of corporate enterprises. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptability. Emphasis is on outsiders' views of the company and their decision making through interpretation of the statements.

H ADM 721 Financial Economics
Fall. 3 credits. Professional master's requirement. L. Cana. Integrates corporate finance with the framework of value minimization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

H ADM 722 Hospitality Financial Management
Spring. 3 credits. Professional master's requirement. G. Potter. Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

FOOD AND BEVERAGE MANAGEMENT COURSES

H ADM 136 Food and Beverage Management
Fall and spring. 4 credits. Limited to hotel school students. Requisite: G. Norkus. An introduction to the principles of food and beverage management, begins with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized.

H ADM 230 Introduction to Culinary Arts
Fall and spring. 2 credits. Limited to non-hotel school students. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory. Absolute drop deadline for Fall is September 8; spring drop deadline is January 30. Elective. Faculty. Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

H ADM 236 Culinary Theory and Practice
Fall and spring. 4 credits. Requisite: H ADM 136. Attendance at first class is mandatory. Required. T. O'Connor, B. Richmond, R. White. Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods through preparing, tasting, and evaluating foods. They will also develop an awareness of potential production problems and how to trouble-shoot them.
H ADM 237 Seminar in Culture and Cuisines
Fall. 3 credits. Limited to 20 students. Prerequisites: H Adm 165 and 236, or permission of instructor. Elective. B. Spies.
Explores various cuisines in terms of history, lifestyle, and fads peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons and draw relationships among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

H ADM 330 Seminar in Chain-Restaurant Operations
Fall. 3 credits. Prerequisite: H Adm 136 and 236, or permission of instructor. Elective. C. Muller.
Chain-affiliated restaurants account for an ever-increasing market share of all food service dollars. The growth of multi-unit chain operations brings unique challenges, opportunities, and strategic orientations for restaurant management. This course will identify these present issues, the historical factors that have led to them, and the pending economic and organizational questions facing the chain restaurant segment. Case study analyses, company research, and a term project.

H ADM 331 Food Service Distribution Management
Spring. 3 credits. Limited to 24 juniors, seniors, and graduate students; others by permission of instructor. Elective. E. Merberg, G. Nordus.
Provides an overview of the food service distribution industry: past, present, and future. Specific disciplines of food service distribution include marketing and sales, operations, routing, credit management practices, and financial management of the distribution center. Focus also on the newly emerging role of the “distributor consultant.” Concept of developing business partnerships between food service operators and food service distributors is stressed.

H ADM 332 Reviewing the Restaurant: The Consumer’s View of the Dining Experience
Spring. 3 credits. Field trip $200. Limited to 20 students. Prerequisites: H Adm 165 and 235, or permission of the instructor. Elective. G. Pezzotti.
Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic is reviewed with an emphasis on depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

H ADM 333 Current Issues in Food Safety and Sanitation
Spring. Variable to 3 credits. Three-credit registration limited to 12 students. Elective. B. Richmond.
A study of current issues in food safety and sanitation, with special emphasis on regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis, legal responsibilities related to food, food handlers, equipment and facilities, food-borne illness and other public-health concerns, and certification and training. Preparation for NFIA/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

H ADM 334 Wine and Food Pairing Principles and Promotion
Fall. 2 credits. Limited to 20 seniors and graduate students. Prerequisites: H ADM 430 or permission of instructor. Elective. G. Pezzotti.
Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional wine and food styles: how foods’ flavors can change a wine’s flavor, and the promotion of wine and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food tastings to industry guests.

H ADM 335 Restaurant Management
Fall and spring. 4 credits. Limited to 30 hotel school students per lab; others by permission of instructor. Prerequisites: H Adm 136 and 236. Approximate cost of utensils and manual, $75. Once enrolled, students may not drop the course without permission of instructor. Required. S. Gould, B. Halloran, B. Lang, J. Ridley, H. Winslow.
A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics related to the general management of restaurants, including issues in defining a service philosophy, improving profit margins, securing adequate supplies, identifying target markets, and planning for organization growth. The laboratory is based on a hands-on managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant.

H ADM 338 Health and Fitness in the Resort Hotel and Spa Industry
Fall. 3 credits. Limited to 20 seniors and graduate students. Two field trips, $75-100. Prerequisite: previous courses in food and beverage management and marketing. Elective. M. Tabacchi.
Emphasizes the management aspects of spas, health clubs, and spa resorts. Topics include feasibility of success and marketing research necessary to establish new spas, design of menus, mental and physical fitness programs, stress management, spa medical treatments, complementary medical treatments and other spa programs. Other topics include personnel required, safety, legal and ethical issues, integration of nutritional menu items and their marketing and merchandising. Guest speakers.

H ADM 339 Airline Food Service Management
Spring. 3 credits. Field trip, $75-100. Prerequisites/Corequisites: H Adm 136, 236, or permission of the instructor. Elective. M. Tabacchi.
Focuses on the challenge of preparing and distributing 20,000–30,000 meals per day to 20–30 different airline carriers and rethermalizing those meals at 30,000 feet in confined space and short periods of time. Examines strategies, planning, and forecasting by airline, airline catering, and sales executives, as well as the effect of the economy and the airline’s competition upon the type of meals served.

H ADM 430 Introduction to Wines Fall and spring. 2 credits. Wine class kit and course fee, $25.00. Limited to hotel school juniors, seniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be 21 years old by the first day of university classes. S-U grades only. Elective. S. Mitkosski, A. Nash.
An introduction to wine, including the cultivation and managing of the world's wine regions and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary in 24 hours of the class before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school.

Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 11 in the fall and February 5, 1999 in the spring.)

H ADM 431 Seminar in Independent Restaurant Operations Management Fall and spring. 3 credits. Five field trips, $275. Limited to 20 students. Prerequisite: written permission of instructor. Elective. G. Pezzotti.
Designed for students who have a strong interest in food and beverage operations and who may be considering a career as an entrepreneur. Students visit and analyze various independently owned restaurant operations. Analysis covers the restaurant’s concept (market), organization, ownership, management, physical structure, and back-of-the-house operations, and fiscal integrity. Readings relevant to current topics in the restaurant industry are required. Classes alternate weekly between field trips and seminar/case presentations.

H ADM 435 Contemporary Healthy Foods Fall. 3 credits. Field trip, $50. Limited to 20 seniors and graduate students, or by permission of instructor. Elective. M. Tabacchi.
Builds a greater awareness and understanding among nutrition and food service profession­als of the origins and manifestations of today’s health-conscious and educated food service patron. Topics include the marriage of nutrition and the cuisine demanded by today’s consumer, fresh produce, lean meats, and the lack of fabricated diet foods. Menu design includes creativity and nutrient density of foods. Major emphasis is on preparation, merchandising and selling of healthy meals in Statler’s outlets.

Designed to explore and analyze food service management in business, industry, and health.
care facilities, e.g., office/industrial complexes, educational institutions, contract companies, and hospital and extended-care facilities. Characteristics of food service organization structures, controls, systems design, equipment, and legal regulations. Readings, small investigative projects, presentations, discussions, and local site visits.

H ADM 434 Desserts Merchandising
Spring. 3 credits. Limited to 25 students. Prerequisite: H ADM 236, 230, or permission of the instructor. Elective. Faculty. A hands-on course providing exposure to a variety of breads, pastries, cakes, and other desserts. Students develop large-scale production skills, become familiar with bakeshop utensils, and advertise and sell their products.

H ADM 435 Selection, Procurement, and Supply Management
Fall and spring. 3 credits. Field trip, $5. Prerequisites: H ADM 136 and 236, or 731. Elective. R. Spies. Expands upon the concepts of purchasing and supply management that were developed in H ADM 136 and 731. Designed to expose the student to two specific areas: the management of the procurement system and the major commodity groups that are germane to the operation of a hotel or foodservice operation. Lectures include discussions on the comparison of the purchasing function in the hospitality industry to other industries, distribution systems, legal and ethical implications of buyer-seller relationships, procurement options, buying strategy development, price protection programs, and other contemporary issues. Students work with the major entire food groups: meats, seafood, and poultry, with emphasis placed on identification, quality and condition, market form, yield tests, and cost analyses.

H ADM 436 Beverage Management
Fall and spring. 2 credits. Limited to 20 hotel school juniors, seniors, and graduate students. Prerequisite: H ADM 430 (Co-registration is allowed). Elective. S. Mutkoski, A. Nash. Designed for students who intend to pursue food and beverage as a career. Deals specifically with the management of beverage operations. Lectures develop skills in and awareness of dram shop liability, staff training and responsible customer service; beverage pricing, food and wine pairings; wine list development; purchasing, storage, and service; wine regions; cost controls and loss prevention; and creative beverage merchandising. Guest lecturers.

H ADM 437 Specialty Food and Beverage Operations: Guest Chefs
Spring. 3 credits. Limited to 20 students. Prerequisite: H ADM 335 or 731. Elective. B. Lang, B. Halloran, H. Winslow. Designed for students with a strong food and beverage orientation, especially students considering careers in the hotel food and beverage environment, or those who anticipate interacting with current culinary trends. Working in groups, students market, organize, plan, produce, serve, and prepare the financial analysis and accounting relative to four guest chef specialty production nights for the Cornell community, utilizing the Statler Hotel facility. Final project.

H ADM 438 Catering Management
Spring. 2 credits. Field trip, $150. Limited to 20 students. Prerequisite: H ADM 236 or permission of instructor. Elective. R. Spies. Examines off-premise catering for business and social functions, as well as sports events and office catering. Topics include the organizational structure of catering operations; legal aspects of catering businesses; menu design for special occasions and its operational implications; marketing from a caterer's perspective; function planning and management; staff recruitment, training, and supervision; and post-event analysis. Site visits and analyses of actual catering operations.

H ADM 439 Wine: A Cultural and Historical Perspective
Fall and spring. 2 credits. Limited to 200 students. Elective. A. Nash. Designed to provide students with a cultural and historical perspective on wine and its place in society. History, people, culture, production of wine in specific wine-producing regions of the world, wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.

H ADM 631 Case Studies in Multi-unit Restaurant Management
Fall. 3 credits. Limited to 20 graduate students, seniors by permission. Elective. C. Mueller. Case studies of multi-unit restaurant organizations will focus on topics such as: new venture planning, rapid growth and organizational change, market identification, service delivery and design, consumer demand, corporate culture, production planning and operations management, strategic planning and implementation, tactics and market responses, international expansion, breakpoints and breakthrough thinking. Each class period will be spent in student-organized discourse and exchange based upon their assigned written case analysis. Grading will be on individual case presentations, class participation and written case assignments.

H ADM 633 Food Service Operations Management
Fall. 3 credits. Limited to 20 seniors and graduate students. Elective. Faculty. Applies fundamental concepts of marketing, financial analysis, food service production and management, and human resource principles that were addressed in previous courses. Combines theory and practice in all levels of a food service operation: basic knowledge, technical skills, and analytical skills. Manages by planning, implementing, critiquing, and analyzing a food service operation. Designs and implements a training program for an opening staff and employees who will be rotating through different positions. Develops budgets, bids projects, and actualize for different food service operations. Employs a feasibility model for a particular food service concept and operation.

H ADM 731 Graduate Food and Beverage Management
Spring. 3 credits. Professional master's requirement. Focuses on the technical, managerial, and human resources skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and current and future issues affecting the food service industry.

MARKETING AND TOURISM

H ADM 243 Marketing Management for the Hospitality Industry
Fall and spring. 3 credits. Limited to 80 hotel school students per lecture, not open to freshmen. Required. M. Lynn, J. Sigauw. Provides an overview of the discipline of marketing as it applies to the hospitality industry. Topics include understanding how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, the external operating environment, and how the special nature of service affects the development of marketing strategies in the hospitality industry.

H ADM 244 Tourism I
Fall. 3 credits. Not open to freshmen. Elective. M. Noden. An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 245 The Basics of Hotel Sales
Fall and spring. 3 credits. Field trip, $50. Limited to 24 students. Prerequisite: H ADM 240/241/243, 741, or equivalent. Elective. Not offered fall 1998. J. Sigauw. Emphasis on skills and knowledge leading to an understanding of the role of a successful property level sales person. Topics include roles of types of sales positions at the hotel level, tools necessary to make it up the ladder, operation of a hotel sales function, and differing buying strategies of market segments.

H ADM 343 Marketing Research
Fall and spring. 3 credits. Limited to 32 students. Prerequisites: H ADM 240-241, 243 or equivalent and an introductory course in statistics/quantitative methods, or permission of instructor. Elective. J. Austin. Introduces students to the basic techniques and practices used to collect, analyze, and disseminate data for decision making in hospitality marketing. The goal is to help future managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

H ADM 346 Marketing Planning for Hotels
Spring. 3 credits. Prerequisite: H ADM 243, 741, or equivalent. Elective. L. Renaghan. Key variables in property level management and their proper application in developing a marketing plan, e.g., marketing intelligence, demand analysis, supply and competitor
H ADM 448 Marketing Communications  
Spring. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective: C. Dev.  
Provides students with a managerial understanding of the effective use of a variety of marketing communications media, including advertising, sales promotion, public relations, etc. Hospitality industry emphasized.

H ADM 449 International Marketing  
Fall and spring. 3 credits. Limited to 25 students. Prerequisites: Micro and macroeconomics. Elective. Not offered fall 1998. Fall 1998. Faculty.  
Develops understanding of international marketing with emphasis on hospitality-industry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

H ADM 461 Marketing Decision Models for Service Firms  
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course or an introductory course in quantitative methods for management. Elective. Not offered fall 1998. 
Introduces students to advanced data analysis and modeling methods used for decision making in hospitality marketing.

H ADM 462 Strategic Marketing  
Fall. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective: C. Dev.  
Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussions, and development of a strategic marketing report.

H ADM 463 Marketing Research  
Fall and spring. 3 credits. Limited to 20 graduate students. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. Not offered fall 1998. J. Austin.  
Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing. The goal is to help future managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

H ADM 464 Food and Beverage Marketing Strategy  
Fall. 3 credits. Limited to graduate students, seniors by permission. Prerequisite: prior three-credit marketing course. Elective. Not offered fall 1998. T. Kelly.  
Focuses on how to apply marketing, sales, and merchandising techniques to the commercial food and beverage industry. Addresses developing a market segmentation based upon understanding the needs and wants of potential target markets, translating needs and wants into viable food service concept positioning strategy, and marketing strategies used to maintain and increase sales and market share. Recitation and analysis involves substantial use of the Consumer Report on Eating Share Trends (CREST) database.

H ADM 465 Services Marketing  
Spring. 3 credits. Limited to graduate students. Prerequisite: previous marketing course, or permission of instructor. Elective: L. Renaghan.  
Helps students preparing for ownership or management positions develop an understanding of services marketing principles applicable across the entire service sector. Marketing strategies of service firms from various service industries will be evaluated. New marketing approaches uniquely applicable to services are considered as well as the reformulation of traditional marketing principles from consumers and industrial goods marketing. Case studies, guest speakers.

H ADM 466 Marketing Planning For Hotels  
Fall. 3 credits. Limited to graduate students. Prerequisite: H Adm 243, 741, or equivalent. Elective. Not offered fall 1998.  
For description, see 346. This course includes the H Adm 346 lectures plus a theoretical paper.

H ADM 467 Consumer Behavior  
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: introductory marketing principles or marketing management course. Elective. Not offered fall 1998. M. Lynn.  
For description, see H ADM 347.

H ADM 741 Marketing Management  
Spring. 3 credits. Professional master's requirement. J. Austin.  
Basic concepts and principles underlying marketing decision making and the skills needed to analyze and understand complex marketing situations in order to plan and implement marketing programs.

PROPERTY ASSET MANAGEMENT COURSES

H ADM 255 Hotel Development and Planning  
Spring. 3 credits. Limited to sophomores, juniors, and seniors. Required. R. Penner.  
An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria, construction management; and the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.

H ADM 350 Real Estate Management  
Fall. 3 credits. Elective. J. deRouss.  
Designed for students interested in the management of residential and commercial real estate. Overview of real estate economics, the relevant law, and different aspects of property management including leases and management contracts and finance, staffing, and building operations. Examples from several types of properties.
H ADM 351 Hospitality Facilities Design
Fall. 4 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective. R. Penner.
A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.

H ADM 352 Hotel Planning and Interior Design
Spring. 3 credits. Field trip, $200, drawing supplies, $75. Limited to 12 students. Prerequisite: H Adm 351. Elective. R. Penner.
A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the renovation of hotel guestrooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation. Drawing ability is essential.

H ADM 353 Food Service Facilities Design
Spring. 3 credits. Limited to 18 students. Prerequisites: H Adm 351 and 335 (coregistration is allowed). A food service experience is recommended. Elective. M. Redlin.
An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas; develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.

H ADM 354 Computer-Aided Design
Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H Adm 351 or equivalent studio experience. Attendance at first class is mandatory. Elective. S. Curtis.
The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, mode settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.

H ADM 355 Hospitality Facilities Operations
Fall. 3 credits. Prerequisite: H Adm 255. Required: M. Redlin.
An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance department. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.

H ADM 356 Hospitality Risk Management
Spring. 3 credits. Limited to 30 hotel school juniors, seniors and graduate students. Elective. D. Stipanuk.
Risk management within the hospitality environment is treated to include such areas of control and risk financing. Issues in fire protection, customer and workplace safety, OSHA requirements, and customer and corporate security are analyzed. Basic elements of insurance and crisis management are discussed.

H ADM 357 Insurance and Risk Management
Fall and spring. 3 credits. Limited to 75 students per lecture. Prerequisite: An introductory accounting or business course. Elective. Faculty.
A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and noninsurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.

H ADM 450 Principles of Real Estate
Fall. 3 credits. Limited to juniors and seniors. Elective. J. Corgel.
Approaches the study of real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.

H ADM 455 Special Topics in Properties Management
Spring. 3 credits. Limited to juniors, seniors and graduate students. Elective. Faculty.
The theme and instructor of the "special topics" course will change each year on the basis of current trends, student interest, and faculty expertise. See the school registrar or properties area coordinator for details about the current topics.

H ADM 456 Hospitality Facilities Management
Fall. 3 credits. Prerequisite: H Adm 355, 751, or permission of the instructor. Elective. D. Stipanuk.
A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the World Wide Web.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Limited to juniors with permission of instructor and graduate students. Elective. D. Stipanuk.
Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, managing other professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.

H ADM 458 Hospitality Real Estate
Spring. 3 credits. Prerequisite: H Adm 323, 450, or permission of instructor. Elective. J. Corgel.
Expands the student's understanding of the real estate market and its impact on hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of real estate as a factor in the production of income of hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of the real estate as an investment, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 459 International Development
Spring. 3 credits. Limited to 25 seniors and graduate students. Elective. J. Clark.
A seminar course covering the strategic development of international hospitality operations. Topics include corporate expansion strategies; the international development process; viewpoints of public and private stakeholders; and such development challenges as technology, infrastructure, environmental concerns, and public policy issues. Senior corporate guest lecturers will present and discuss new projects in such locations as Hawaii, Mexico, western and eastern Europe, Southeast Asia, and Latin America and contrast these opportunities with development in the U.S.

H ADM 651 Principles of Real Estate
Fall. 3 credits. Limited to graduate students. Elective. J. Corgel.
This survey course approaches real estate from four perspectives: investment, market, mortgage finance, and legal. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development. This course includes much of the material in H ADM 450 plus special topic sessions that feature guest speakers from industry, faculty from other colleges, and case studies.

H ADM 658 Advanced Real Estate
Spring. 3 credits. Prerequisite: H Adm 323, 450 or 651. Elective. J. Corgel.
Promotes sound real estate investment and finance decision making through the use of advanced theory and techniques in financial economics. Real estate investment decisions are made through applications of the after-tax discounted cash flow model which incorporates prevailing domestic and international economic conditions in real estate markets, tax rules, and government regulations. Financing decisions are made using the techniques of modern financial analysis. A wide array of financing options is considered including convertible, participating, and accrual real estate investment and otherwise used to increase the wealth of hospitality corporation shareholders; and to understand the importance of real estate as an investment, and the approaches to valuation and contemporary hospitality valuation issues.

H ADM 751 Properties Development and Planning
Spring. 3 credits. Professional master's requirement. Faculty.
Provides an overview of project development, hotel planning, and the construction process, including the role of the development team,
feasibility, functional planning and design, interpretation of architectural drawings, architectural and engineering criteria, construction management, contracts, and scheduling. Student teams will prepare the program document for a new hotel or one undergoing major rehabilitation in conjunction with other professional master's core courses.

**COMMUNICATION COURSES**

**H ADM 165 Managerial Communication I**
Fall and spring. 3 credits. Each lecture limited to 16 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student may petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters, including any ITD semesters. Required: S. Blyson, S. Jones, Y. Kim.

An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear expression. The process of planning, preparing, and executing professional communications. Students write a series of business documents and give several oral presentations.

**H ADM 266 Intermediate French: Le Français de l'Hôtellerie et du Tourisme**
Spring. 3 credits. Limited to 15 students. Prerequisite: French 123 or permission of instructor. Elective: A. Grandjean-Levy.

Offers continuing study of the French language with specific emphasis on the hospitality industry. Material presented considers cultural, geographic, economic, historical, political, and social contexts within which the business functions. The course is conducted in French, emphasizing a conversational approach. Specialized situations and vocabulary are used in building general competence in practical usage. Students with special interest in the hospitality industry will be given priority for admission.

**H ADM 364 Advanced Business Writing**
Fall and spring. 3 credits. Limited to 15 juniors, seniors, or graduate students, or written permission of instructor. Prerequisite: for undergraduates: H ADM 165 (for hotel school students) or completion of student's freshman writing requirement. Elective: R. Steinacker.

Focuses on the written communication that requires special persuasiveness and control of tone. Writing assignments will give students a chance to apply the theories of communication, semantics, and human relations covered in the course. The kinds of communications that will be analyzed, evaluated, and written include persuasive messages to subordinates and superiors in an organization; sales letters and other promotion materials; and negative messages such as refusal, rejection, and responses to complaints. A major topic is the planning and executing of a job-hunting campaign, for which students prepare resumes, letters of application, and follow-up messages adapted to their individual needs.

**H ADM 365 Managerial Communication II**
Fall and spring. 3 credits. Limited to 22 juniors and seniors per lecture. Note: Students required to take this course generally may not delay it. However, students may be allowed to drop before the first class meets if the area has a wait list and the vacancy can be filled. Students must drop between the first and second class if they check first with the course chair, and 2) can find a replacement for their place in the course. Students may not drop after the second class unless they petition and present a case of extenuating circumstances. It is expected these cases would be rare. Prerequisites: Hotel undergraduates must have completed H ADM 165 and H ADM 111. Required: Y. Kim, J. Lumley.

A broad study of communication in a management context. Emphasizes the significant role of communication in developing work relationships that enable managers to achieve their goals. It presents the theories and principles of communication that underlie effective performance. Students increase their individual communication abilities by applying these concepts in a variety of managerial contexts, including interacting one-to-one, working in groups, and formally developing and presenting ideas to larger audiences.

**H ADM 462 Communication and the Multicultural Organization**
Fall. 3 credits. Elective: E. Huetman.

Influence of culture, perception, and gender on communication in multicultural organizations, including international and domestic businesses with diverse work forces. Focus is on human interaction at work. Special emphasis on hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business.

**H ADM 463 Persuasive Communication in Organizations**
Spring. 3 credits. Limited to 18 students. Prerequisites: H ADM 165 and 365 for hotel school undergraduates, or permission of instructor. Elective: Faculty.

Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking: also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

**H ADM 661 Organizational Communication For Managers**
Spring. 3 credits. Elective: B. Stevens.

Focuses on the complex interactions that occur when people communicate in organizations. Structured around the communication tasks managers are confronted with to be effective on the job. Business cases. Emphasis on design of effective communication strategies. Applications and experiential exercises help students perfect their ability to write, make oral presentations, and interact effectively with others in mangerial contexts.

**H ADM 761 Communication Modules**

Elective modules cover topics related to the professional master's program benchmarks: written communication, presentational speaking, and group process/leadership. Additional topics in support of students' individual goals also may be offered. Topics include organizing ideas, revising and editing written documents, etc. Modules are available on a first-come, first-served basis, and are offered throughout the semester during the management development periods.

**OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES**

**H ADM 170 Keyboarding on the Macintosh**
Spring. 2 credits. Limited to 30 students. Elective: B. David.

An introduction to the computer and a beginning course in alphabetic and numeric keyboarding. Students learn word processing skills during the second half of the course.

**H ADM 174 Microcomputing**
Fall and spring. 3 credits. Limited to hotel school freshmen and transfers. Limited to 30 students per lecture. Required: R. Alvarez, P. Clark, R. Moore.

An introduction to microcomputing to develop functional computer fluency. Students develop skills in five generic areas: text, graphics, spreadsheet, presentation, and list processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows.

**H ADM 175 Quantitative Methods**
Fall and spring. 3 credits. Limited to 120 hotel school students. Co- or prerequisite: H ADM 174. Required for hotel students who matriculated prior to fall 1997. Not offered fall 1998. G. Thompson.

An introduction to statistical and operations management methods appropriate to the hospitality industry. Topics include descriptive statistics, probability, correlation and regression, forecasting, decision analysis, quality control charts, and an introduction to yield management. Emphasis is on practical applications of the techniques to hospitality related problems.

**H ADM 274 Microcomputing**
Spring. 3 credits. Limited to 50 non-hotel students per lecture. B. David.

An introduction to microcomputing to develop functional computer fluency. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and file processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows. Software used is Word, Excel, Powerpoint, Filemaker. Students will use the Internet.

**H ADM 371 Hospitality Quantitative Analysis**
Fall and spring. 3 credits. Required: G. Thompson.

Introduces statistical and operations research methods appropriate for the hospitality industry. The overriding goal is to provide students with the skills and understanding
necessary for decision making using quantitative data. Students will use computer spreadsheet software extensively for the "number crunching" analysis.

**H ADM 374 End-User Business Computing Tools**
Spring. 3 credits. Limited to 20 students. Elective. R. Alvarez.
Explores the personal computer as a managerial tool. Concepts of spreadsheet modeling, database, and end-user computing are covered. Students learn to use specific software applications programs to solve original problems. All work is done on IBM computers.

**H ADM 474 Corporate Information Systems Management**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. R. Alvarez.
Explores ten key issues in information technology management through use of case studies of companies with relevant experience with the issues. A basic understanding of information technology, organizational behavior, and general management is advised.

**H ADM 475 Information Technology in the Hospitality Industry**
Spring. 3 credits. Limited to 30 students in each section. Prerequisites: all other required core courses, except for students concentrating in information technology. Required. R. Moore.
A three-tiered course, with each tier lasting five weeks. Tier I covers information technology management issues. Prior to taking Tier II, students will be required to pass a proficiency test of microcomputer skills taught in H ADM 174. Students will update their skills and learn more advanced features, with emphasis on database and model building skills. In Tier III, students select one of a series of modules, such as hotel systems, food service systems, management of information technology systems, or electronic commerce.

**H ADM 674 Service Operations Management**
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: H ADM 175, 371, 771 or equivalent. Elective. Not offered fall 1998. G. Thompson.
The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

**H ADM 675 Yield Management**
Fall and spring. 3 credits. Limited to 30 students. Prerequisites: H ADM 175, 771, or equivalent. Elective. S. Kimes.
Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

**H ADM 771 Graduate Quantitative Methods**
Fall. 3 credits. Professional master's requirement. S. Kimes.
Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management.

**H ADM 772 Information Technology for Hospitality Managers**
Fall. 3 credits. Professional master's requirement. R. Moore.
Familiarizes students with issues surrounding the use of information technology in supporting hospitality operations from a guest services perspective and decision making from the viewpoint of management.

**LAW COURSES**

**H ADM 385 Business Law I**
Spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Elective. Faculty.
Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities.

**H ADM 387 Business and Hospitality Law**
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn.
An integrated, chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

**H ADM 485 Employment Discrimination and the Law of Management**
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. D. Sherwyn.
Provides students with an understanding of anti-discrimination statutes and a framework for establishing the proper policies and procedures for complying with the law, avoiding liability, and maintaining positive employment relations.

**H ADM 487 Real Estate Law**
Fall. 3 credits. Recommended: completion of H ADM 387 preferred. Elective. Faculty.
Familiarizes students with the nature and ownership of real estate. Describes interests in real estate and how title is transferred. Acquaints students with legal aspects of marketing residential and commercial real estate, including shopping center and commercial leases, real estate syndication, and subdividing real estate for development.

**H ADM 681 The Interplay of Law and Ethics in Service Industry Management**
Spring. 3 credits. Limited to 50 hotel graduate students; seniors and other graduate students by permission of instructor. Prerequisite: completion of all required professional master's first-year courses, or permission of instructor. Elective. Not offered spring 1999. Faculty.
Involves students in ethical aspects of traditional law problems confronting service industry managers and executives within the areas of commerce, consumerism, administrative law and practice, anti-competitive marketing activities, and federal securities regulation. The impact of the corporation on traditional notions of personal social responsibility will be stressed.

**H ADM 490 Housing and Feeding the Homeless**
Explores the public and private sector partnerships in addressing the crisis of homelessness. Through lectures, readings, discussions, research, volunteerism, and a field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. The components of successful housing programs and food assistance programs will be analyzed.

Students taking the course for four credit hours will, in small groups, work with agencies providing services to homeless persons. They will analyze the agency's mission, identify a specific management challenge, and formulate an approach and solution to that challenge. This fieldwork will require approximately eight days during the semester.

Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency approximately three hours per week during the semester.

**H ADM 491 Hotel Ezra Cornell**
Fall and spring. Variable credit (maximum, 4). Prerequisite: written permission. Elective. G. Pezzotti, Y. Kerr-Donovan.
Elected board members of Hotel Ezra Cornell receive credit for academic coursework, and the development, organization, and manage-
ment of the April "Hotel-for-a-Weekend." Students who are considering a board position may pre-enroll for the course and should speak with the instructor for additional information about board positions and required courses. Pre-enrollment will take place in April after Hotel Ezra Cornell Weekend, at which time the HA 491 course enrollment will be finalized. Further information is available in the Student Services Office. 1788 Statler Hall.

H ADM 492 Industry Challenges and Trends
Spring. 3 credits. Limited to 15 seniors and graduate students. Elective. Faculty. The seminar approach will be used to discuss readings and case studies selected to illustrate current challenges and future trends such as globalization, consolidation, etc., in the hospitality industry. The view will be futuristic and primarily from that of a multi-unit/corporate perspective. An in-depth analysis of a few specific companies will be included using case studies and guest lecturers as appropriate. Student teams will research new topics and make presentations and final reports.

H ADM 499 Graduate Independent Research
Fall and spring. Credit to be arranged. Elective. Faculty. Student must have in mind a project and obtain agreement from an individual faculty member to oversee and direct the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172 Statler.

H ADM 793 Industry Mentorship Program
Spring. No credits. S-U grades only. Upheld in the industry, and to develop an understanding of value into management practice. Executive in the industry, and to develop an understanding of value into management practice.

A special integrative course for students who write well and desire to explore in depth a topic of mutual interest to them and a faculty adviser of their choice. The approval of a second reader is required for completion of the course. The final requirement of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

H ADM 990 Ph.D. Thesis Research
Fall and spring. Credit to be arranged.
Kimes, Sheryl E., Ph.D., U. of Texas. Assoc. Prof.
Lang, Barbara, B.S., Cornell U. Lecturer
Lankau, Melenie, Ph.D., U. of Miami. Asst. Prof.
Lumley, Jane, M.A., Pennsylvania State U. Senior Lecturer
Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management
Lynn, Wm. Michael, Ph.D., Ohio State U. Assoc. Prof.
Muller, Christopher C., M.P.S., Ph.D., Cornell U. Asst. Prof.
Mukoski, Stephen A., Ph.D., Cornell U. Banfi Vintners Professor of Wine Education and Management
Nash, Abby, B.A., Cornell U. Visiting Lecturer
Nohel, Tom, Ph.D., U. of Minnesota. Assoc. Prof.
Noden, Malcolm A., Senior Lecturer
Norkus, Gregory X., M.S., Cornell U. Senior Lecturer
O’Connor, Therese A., M.S., Elmira College. Senior Lecturer
Penner, Richard H., M.S., Cornell U. Prof.
Pezzotti, Giuseppe G. B., B.S., Cornell U. Lecturer
Rainsford, Peter, Ph.D., Cornell U. Assoc. Prof. and J. Thomas Clark Prof. of Entrepreneurship and Personal Enterprise
Redlin, Michael H., Ph.D., Cornell U. Prof.
Renaghan, Leo M., Ph.D., Pennsylvania State U. Assoc. Prof.
Richmond, Bonnie S., M.S., U. of Missouri. Senior Lecturer
Ridley, Jane S., B.A., SUNY at Binghamton. Teaching Support Specialist
Roberts, Elizabeth, Ph.D., Purdue U. Asst. Prof.
Sherwyn, David, J.D., Cornell U. Asst. Prof.
Simons, Tony L., Ph.D., Northwestern U. Asst. Prof.
Snow, Craig, Ph.D., Purdue U. Senior Lecturer
Spies, Rupert, Studienassessor, Lecturer
Steinacher, Richard, Ph.D., Florida State U. Lecturer
Stevens, Betsy, Ph.D., Wayne State U. Asst. Prof.
Susskind, Alex, Ph.D., Michigan State U. Asst. Prof.
Tabacchi, Mary H., Ph.D., Purdue U. Assoc. Prof.
Thompson, Gary M., Ph.D., Florida State U. Assoc. Prof.
Tracey, J. Bruce, Ph.D., SUNY Albany. Asst. Prof.
White, Robert, A.O.S., Culinary Institute of America. Teaching Support Specialist

**Visiting and Other Teaching Staff**

Blanchard, Kenneth, Ph.D., Cornell U. Visiting Assoc. Prof.
James, Robert, M.B.A., Pace U. Visiting Lecturer
Merberg, Elliot, B.S., New York U. Visiting Lecturer
Sciarabba, Andrew, B.B.A., St. John Fisher College. Visiting Lecturer
Shankar, Gowri, Ph.D., Syracuse U. Visiting Assoc. Prof.
Yesawich, Peter C., Ph.D., Cornell U. Visiting Assoc. Prof.
ADMINISTRATION
Francille M. Firebaugh, dean  
Charles McClintock, associate dean  
D. Merrill Ewert; director of Cornell Cooperative Extension  
Carol L. Anderson, assistant dean; associate director of Cornell Cooperative Extension  
Jennifer Gerner, associate dean  
Brenda Bricker, director, administrations and student services  
Mary Rhodes, director, study abroad, institutional research, college registrar

DIVISION OF STUDENT SERVICES

Brenda Bricker, director, Office of Admissions, Student and Career Services  
Mary Rhodes, director, Office of Study Abroad, Institutional Planning and Research, College Registrar

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate field representative identified among the faculty of each department. Department faculty are listed at the beginning of the course descriptions for each department.

The Students

The College of Human Ecology undergraduate enrollment is 1,369 with 55 percent in the upper division. About 558 students are graduated each year, and last year 288 freshmen and 85 transfer students matriculated. One hundred faculty members serve as advisers for undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective. Approximately 73 percent of the student body comes from New York State, with the remainder from other parts of the United States and abroad. 27 percent were identified as members of minority groups in 1996. Approximately 239 graduate students have members of the college's faculty chairing their special committees. The college awarded 49 master's degrees and 25 doctorates last year.

ACADEMIC PROGRAMS

Majors

Selection of a major begins with selection of career goals. In their freshman and sophomore years, students can explore ways to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The director of career services and the counselors for in career development in the Office of Admissions, Student, and Career Services (170 Martha Van Rensselaer Hall) and resources in the Career Development Center (190 MVR) can help students through their career exploration process.

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. A student may satisfy the requirements of more than one major option. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options:

- Design and Environmental Analysis (DEA): Interior design, facility planning and management, human factors and ergonomics.
- Human Biology, Health and Society (HBHS): A major sponsored by Division of Nutritional Sciences, HBHS combines the biological sciences with courses that explore human health issues from the perspectives of both the biological and behavioral science. More information about this program can be found in a separate section of the catalog that describes the division's programs.
- Human Development (HD): Does not have separate options. Courses focus on cognitive, social, and personality development, phases of development, and family studies and life course. The department administers an honors program for selected students.
- Nutritional Sciences (NS): The division supervises the department major. By careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.) The division administers an honors program for selected students.

**Policy Analysis and Management (PAM):** The department supervises four majors: policy analysis and management, consumer economics and housing, human service studies, and policy analysis. Students majoring in human service studies may also meet the requirements of an accredited bachelor's degree program in social work. The consumer economics and housing, human service studies, and the policy analysis majors will be terminated after spring, 2000.

**Textiles and Apparel (TXA):** Apparel design, apparel-textile management, fiber science.

**Interdepartmental Major in Biology and Society (ID-BS).**

**Individual Curriculum** It is possible to develop an individual program of study if none of the above programs fits particular educational and career objectives.

**Changing Majors**

Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. It is important for a student to discuss a possible change of major with her or his faculty adviser or counselor. If the student decides to make a change, a completed change-of-major form (available from the Office of Admissions, Student, and Career Services, 170 Martha Van Rensselaer Hall) must be presented to the Office of the Registrar (146 MVR). Students eligible for special status are those of younger undergraduates. To facilitate procedures specifically for that group.

**Students of Mature Status**

The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those twenty-four years old or older at first matriculation, the college has adopted certain procedures specifically for that group. Counselors in the Office of Admissions, Student, and Career Services (170 MVR) can provide information of interest to mature students.

Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms. Mature students are encouraged to contact the director of the Continuing Education Information Service, 200 Day Hall, for information on resources available through that office.

**Special Students**

Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor’s degree preparing for graduate study or jobs and careers in human ecology-related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degrees status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admission procedures in the Office of Admission (170 MVR).

**Empire State Students**

Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session. Extramural Study, and Related Programs, B20 Day Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

**DESIGN AND ENVIRONMENTAL ANALYSIS**

The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges. These include frequent social and organizational change, technological advances, new building methods, and finite resources. The program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop their multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments. The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The DEA Resource Center includes books, journals, newsletters, and material samples for student use.

**Options**

The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human-environment relations. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell an "IFMA Recognized Program." This means that it meets the standards for recognition programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true in the interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

**Option I: Interior Design**

The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based on knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine the program with one of the other options.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

**Option II: Facility Planning and Management**

This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, health-care institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, human-environment relations, organizational effectiveness, and business administration. Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

**Option III: Human Factors and Ergonomics**

Human-environment relations focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior, and to use that knowledge to help architects, planners, interior designers and product designers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, lifestyle, social class, and stage in life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other
public agencies as well as in the facility management and product design division of private companies. Human-environment relations are good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising
All DEAs majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, Paul Eshelman, in E304 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs. Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work
All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY
The Human Biology, Health, and Society (HBHS) program permits you to combine your interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral science. HBHS majors select the issues to explore in depth from Human Ecology courses that address health and the broad range of factors that influence human well-being. Examples of issues you can explore include: biology and behavior, metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This new major is offered by faculty in the Division of Nutritional Sciences and more information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT
Human Development majors explore the psychological, social, cultural, and biological development of individuals from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture on development; and the influence that developing humans have on their environment. The Human Development major provides an excellent foundation for many careers, such as medicine (particularly family medicine), pediatrics, and psychiatry, clinical psychology and other mental health professions, law, business (especially human resources), child and family advocacy, and education (from preschool to high school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and history. The diversity of faculty expertise results in a wide-ranging view on human development. The research of the department's faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of language in infants, and the effects of environmental toxins on children's cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and studies of the effectiveness of reading programs for Headstart preschoolers, apprenticeship programs for high school students, and support programs for older adults moving into a retirement community.

Curriculum
Human Development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to all professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up parts of each student's curriculum, and include classes in the social and natural sciences, humanities, writing, and communication. In addition, there are requirements for the major in Human Development. All majors can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities
Beyond formal coursework, students also have the opportunity to take advantage of many other educational opportunities. Most of these opportunities involve ongoing individual work with Cornell faculty or other professionals, and academic credit can be earned through all of them. These opportunities include:

Field Placements. Human Development majors can arrange internships with Urban Semester in New York City, Cornell-in-Washington, and Cornell Abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, retirement homes, and the department's on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional schools expect of their successful applicants. Recent projects have included the study of parent-infant interactions, the transition of high school students to the world of work, and the study of recent trends in the composition of American families.

Independent Research. Under faculty supervision, some advanced students complete an honors thesis in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included marital quality in Asian and interracial couples, development in families that adopt school-age children, and connections between speed of visual processing in infants and later scores on intelligence tests.

Undergraduate Teaching Assistant. Advanced students can serve as undergraduates teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching Certification. A cooperative program with SUNY Cortland allows students interested in elementary education to earn a degree with a Cornell bachelor of science degree and then apply for New York State teaching certification, which is honored in most other states.

NUTRITIONAL SCIENCES
A major of Nutritional Sciences (NS) focuses on the complex interrelationships among food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand such questions as: How are nutrients used by the body? What factors influence human food choice? What nutrients are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for professional membership in the American Dietetic Association, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through
this major. The requirements for this program are outlined in the section of this catalog that describes the division's programs.

POLICY ANALYSIS AND MANAGEMENT (FORMERLY CONSUMER ECONOMICS AND HOUSING AND HUMAN SERVICES STUDIES)

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have concentrated knowledge in one of three areas: family/social welfare, health, and consumer policy. Graduates are well-qualified for a wide variety of public, not-for-profit, and private sector employment emphasizing either program analysis and evaluation or management. The major also attracts numbers of pre-law students, pre-MBA students, and students intending to pursue graduate education in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a BS and a Master of Health Administration.

The PAM major combines theoretical underpinnings from economics, sociology, psychology, and government to critique and analyze our society's values, laws, policies, and programs as well as knowledge to build management skills for use in public, nonprofit, and for-profit settings. Ideas of social justice, equity, and efficiency will be studied concurrently with strategic planning, human resources, supervision, and organizational development. Research methods, statistics, and planning and evaluation concepts will be learned and used to direct and aid in program planning, policy analysis, program evaluation, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply them to a particular concentration—social welfare/family, health, or consumer policy. Social welfare/family policy and management includes a panoply of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption and child neglect and abuse policies and programs through income maintenance and anti-poverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, health maintenance organizations, public health issues, and substance abuse policies. Consumer programs and policies include such regulation and laws governing advertising, food and drug safety, nutrition policies, the regulation of credit, insurance, telecommunications, mortgage, housing issues, and public utility markets and also deal with issues such as the invasion of privacy, internet security, and children's TV. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to college requirements, all PAM majors are expected to take core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Finance. Students will also be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors will have the opportunity to participate in a departmentally approved experiential learning. Please check with the undergraduate advising coordinator, Professor Alan Mathios, for further details.

Consumer Economics and Housing, Human Service Studies, and Policy Analysis

The program in Policy Analysis and Management has been formed from three previous majors: Consumer Economics and Housing (CEH), Human Service Studies (HSS), and the interdepartmental major in Policy Analysis. The Department of Policy Analysis and Management is committed to maintaining these programs for students currently enrolled in them. PAM will offer majors in Consumer Economics and Housing, Policy Analysis, and Human Service Studies to students matriculating in spring 1997 and thereafter and to transfer students who can complete the program by no later than spring 2000. Such students also have the choice of switching to the Policy Analysis and Management major. The department is not obligated to continue teaching courses required for the CEH, HSS, and PA majors or those required for accreditation in Social Work after spring semester 2000. Please see the Human Ecology Student Guide, 1997–98 and PAM director of undergraduate studies Alan Mathios, for further information.

TEXTILES AND APPAREL

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the overall mission of the college, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

Academic Advising

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Peter Schwartz (201 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin early to work with their advisers to develop a professional portfolio of their work. Students are free to change advisers; changes must be recorded with the advising coordinator. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that the program meets graduation requirements for the major and the college.

Ownership and Exhibition of Student Work

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department to exhibit for academic purposes. Students are not responsible for loss or theft of student work.

Course Fees

No grade will be given in a course unless the course fee has been paid by the last week of classes.

Options

Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems; the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous course work, transfer students may need one or two extra semesters to fulfill the requirements of the major.

Option I: Apparel Design

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

Option II: Apparel-Textile Management

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

Option III: Fiber Science

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber
science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

**Career Opportunities**
Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in fiber and polymer science, textile marketing, apparel design, textiles, or business and management.

**INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY**
Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biological and sociological science, and public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, ecology, ethics, and history. In addition, majors are required to take core courses in biology and society, a set of electives, and a special senior seminar.

Course work in the College of Human Ecology must be taken in two of the following three concentrations: human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements, and application procedures, see the Human Ecology Student Guide, available in the Office of Admissions, Student, and Career Services, 170 Martha Van Rensselaer Hall. Academic advising is coordinated by the director of undergraduate studies, S. Kay Obendorf, 288 Martha Van Rensselaer Hall.

**INDIVIDUAL CURRICULUM**
A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator, Patti Papapietro, Office of Admissions, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student's undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in formally developing a program of study. Although the coordinator must sign the course enrollment schedule during course enrollment each term, it is the student's responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her advisers and the program coordinator in advance of the program change.

**SPECIAL OPPORTUNITIES**
Several programs allow students to receive academic credit for work that extends and complements their coursework. Through structured experiences facilitated by faculty members, students learn to test, deepen, and apply what they've learned in the classroom.

Students strengthen their ability to integrate theory and practice and learn to reflect critically on their experience while broadening their understanding of service and professional life and enhancing their understanding of diversity and complex societal issues. In existing courses and through individual and group projects, students develop an intellectual framework for understanding and solving problems in a variety of challenging settings.

Placement opportunities are available in business and management, health, law, medicine, environmental analysis, education, nutrition, government, laboratories, textiles and apparel, design, social service and community settings. Students are encouraged to plan early for these opportunities.

To learn more, students should consult with their faculty adviser, professor, or director of undergraduate studies. They can also visit the Career Development Center in 115 MVR and explore established opportunities listed on the Web site, find informational materials, or meet with a career counselor to develop their own unique placements. New initiatives are encouraged. For further information, contact Kris Delsu-Beach, director of career services, 172 MVR.

**Cornell in New York City**
The Urban Semester Program in Multicultural Dynamics in Urban Affairs

**Cornell in New York City** provides students with many study options that focus on multicultural dynamics in urban affairs. Experimental learning practices inform all courses of study. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses, HE 470, HE 480, and HE 490. Students learn by doing and through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and learn how to be agents of change.

Several majors in the college require internships or encourage field study. Check with the director of undergraduate studies for each major for more information. The Career Development Center in 159 MVR and counselors in the Office of Admissions, Student, and Career Services in 172 MVR can help you find internships and provide more information on department opportunities and enrolling in Cornell in New York City.
Multicultural Practice
Fall and spring semesters: HE 470
Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their experiences in their internships with a focus on multicultural issues, professional practice, and organizational culture.

Multicultural Issues in Urban Affairs
Fall and spring semesters: HE 480
This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Readings will reflect the focus on inner-city children and youth under a variety of multicultural-influenced conditions and contexts. Costs include travel to and from sites by public transportation at about $3.00-6.00 each week.

Communities in Multicultural Practice
Fall and spring semesters: HE 490
This course provides students with an understanding of community building processes and enables them to participate with children, youth, and their families in school settings. Once each week, students participate in inner-city schools for a full day working with children, staff, and children, providing community service. Student learning is focused on how to increase the capacities of children to learn and expand their horizons by motivating them to envision success. Students focus on the assets that inner-city children bring to their learning environment and learn how to mentor them. They generate an inventory of skills, knowledge, values, behaviors, and perspectives that school children may develop to enter the professions. Costs include public transportation costs and costs from the various sites, about $5.00-6.00 each week.

The Winter Intersession in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building
Winter intersession: HE 402
Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx with children of the Banana Kelly community. In carrying out community service, students participate with the director of the Cornell in New York City program. In the 1999 intersession, six students mentored 12 children in an after-school program by documenting the community with photographs and stories. In the 1998 intersession seven students mentored 15 ninth graders from Banana Kelly High School. A photography exhibit was produced and circulated. In 1998, Cornell students and children produced three-dimensional models of their imagined community of years in the future and a book of essays and photographs.

Fieldwork in Diversity and Professional Practice
Summer session: HE 406
Over the course of an eight-week summer session, students participate in a literacy project in Williamsburg, Brooklyn.

Gerontology Concentration

Gerontology Certificate Program
This program develops students' understanding of and competence in dealing with the processes and issues of aging. Study in gerontology provides practical experience and preparation for professional work. Students draw on resources of several departments and colleges. Cornell and Ithaca College to shape a curriculum suited to their professional goals and interests. Contact the Gerontology Coordinator, Life Course Institute, 259 Martha Van Rensselaer Hall.

Double-Registration Programs

Johnson Graduate School of Management
A limited number of highly qualified students from Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after the junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology. Accepted students should be aware that if the management coursework taken in the senior year is in excess of the 21 additional credits allowed in the Cornell endowed divisions, they will be charged for the additional credits on a per-credit basis. Students entering this program must also complete requirements for the degree and major in Human Ecology.

Law School
A small number of highly qualified applicants may be admitted to the Cornell Law School after only three years of undergraduate study. The requirements for admission under these circumstances are more stringent than for acceptance after four years of undergraduate study. Applicants must present outstanding qualifications and strong professional motivation. The junior-year applicant follows the ordinary application procedures for Cornell Law School admission. Interested students should contact the Law School director of admissions to discuss the extraordinary admissions criteria. Because students accepted to this program will spend their senior year in the Cornell Law School, they need to plan ahead to ensure that distribution requirements for the B.S. degree from the College of Human Ecology will be met. Successful applicants need the approval of the college registrar.

Cornell Medical College
A limited number of highly qualified students from three Cornell divisions, including the College of Human Ecology, may be accepted by the Cornell Medical College after the junior year. To be considered for this program, the student must have completed 105 credits toward graduation by the end of the junior year. Students also need to plan ahead to ensure that distribution requirements for the bachelor of science degree will be met. Accepted students receive 15 credits toward the B.S. degree from their first year of study at the College of Medicine. Interested students should contact the Health Careers Program office in 103 Barnes Hall.

Off-Campus Programs

New York State Assembly Internships
A limited number of session internships with the New York State Assembly are available in spring semester. Intern applicants must be sophomores or higher and enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Office of Student Services, N104 Martha Van Rensselaer Hall.

Cornell-in-Washington
For information on Cornell-in-Washington, see the section, Interdisciplinary Centers, Programs, and Studies, in the front of the catalog.

Ithaca College
Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Cornell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Ithaca College.

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, 145 Martha Van Rensselaer Hall.

Wells College
Full-time undergraduate students at Cornell may petition to enroll in courses at Wells College. Students pay regular tuition to Cornell and only special fees to Wells College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Wells College.

Cornell students are eligible to register only in Wells College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Wells College courses is on a space-available basis. Participation in this program is not guaranteed, and Wells College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, 145 Martha Van Rensselaer Hall.
PLANNING A PROGRAM OF STUDY

Academic Advising

Students who choose to major in a particular department are assigned to a faculty adviser by that department’s director of undergraduate studies. The director of undergraduate studies can help match a student’s needs with the special interests of a faculty member. Students may change advisers as their own interests change and should see the director of undergraduate studies to discuss such a change. Faculty advisers and counselors in the Office of Admissions, Student, and Career Services (170 Martha Van Rensselaer Hall) are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must provide the adviser key number during course enrollment each term, it is the student’s responsibility to make sure that her or his program meets graduation requirements for the major and the college. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

Completing Graduation Requirements

A summary of record is kept for each student in the Office of the Registrar, 145 Martha Van Rensselaer Hall. At the beginning of fall term each continuing student receives a copy showing which major and degree requirements have already been met. It is important to check this summary and to bring any questions to the attention of the faculty adviser and the staff members in the Office of Admissions, Student, and Career Services. A student may complete the requirements of more than one major.

Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss which courses may interest students and round out their educations.

Students should consult the index of this Announcement for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue may take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May. Students in human ecology who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section “Advanced Placement of Freshmen.”

REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college.

Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to

1. meet college credit and distribution requirements,
2. complete requirements for a major,
3. achieve a cumulative average of 1.7 (C–) or better,
4. complete two terms of physical education

College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may allow you to choose among certain courses listed there.

Category I General Distribution (37-41)

A. Natural Sciences (6)
B. Social Sciences (6)
C. Humanities (4) Language credit cannot be used in this area (See: IV).
D. Written Communications (6) Must be Freshman Writing Seminars. At least one seminar must be in the humanities.
E. Quantitative and Analytical (3-7)
1. Math competency equivalent to EDUC 115 (precalculus)
   a. AP of 3 or higher on AB test
   b. AP of 2 on BC test
   c. Math assessment test score equivalent to EDUC 115
   d. Pass a math course equivalent to or higher than EDUC 115
2. Statistics, advanced math, logic (3)
F. Additional credits (12)

Category II Requirements in the Major

(number of credits vary by major)

Category III HUMEC Credits Outside the Major

May not include any HE 00 courses. HE 100, HE 101 or any 403 course. A maximum of three credits of special studies (400, 401, and 402), or of any internship credit may be used. A maximum of five credits of either HE 470 or HE 480 or HE 490 can be used.

Category IV Electives

Credits to complete 120 credits overall, exclusive of physical education.

Elective credits can be earned in Human Ecology or elsewhere. Students who earn more than 21 credits in endowed colleges during fall or spring terms will be billed for the excess credits at the endowed rate of tuition. Billable endowed credit includes endowed courses taken in Category II.

Category V Physical Education

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies

College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

Category L.D. Students who score 4 or 5 on the Princeton AP Exam are awarded 3 credits in English. Students who score 5 on the Princeton Exam are exempt from one freshman writing seminar in addition to the 3 English credits awarded.

Category IV. There is no limit to the number of credits that may be taken in the state divisions of Cornell, and therefore students may choose to take additional state credits and graduate with more than 120 credits.

Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of F or U is received will be counted as part of the 21 endowed credits allowed. Students are not required to take elective credit in the endowed units. Elective credits earned in Cornell’s endowed divisions during summer session, in absenta credits, and transfer credits are not counted in the limited 21 endowed credits permitted because they were paid for at endowed tuition rates.

Not more than 21 credits in Categories II and IV may be taken in the endowed divisions of the university except under both of the following conditions:

1) The students must have senior status (must be in the final two semesters prior to graduation);
2) Payment must be made for each credit taken in excess of the 21 allowed, whether or not the courses are passed. For the fee per credit charge, students should call the Office of the Bursar.

Category L.D. Transfer students should have taken at least 6 credits in courses in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshman writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculation.

Category IV. Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C– will not transfer to meet human ecology degree requirements.
PROCEDURES

Course Enrollment and Registration

Students are expected to complete course enrollment during specified times each semester. It is the student's responsibility to learn the dates of course enrollment. They can find this information in the Human Ecology Registrar's Office, 145 Martha Van Rensselaer Hall. Freshmen and transfer students enrolling in the university for the first time in the fall term request their courses during the summer before they arrive on campus. Enrollment materials are mailed to them in May. Because new students starting in January do not have an opportunity to enroll in courses until after they arrive on campus, the college tries to reserve places for them in human ecology courses. The orientation schedule given to all new students lists a specified time to enroll in such courses.

Continuing students enroll for fall semester in March–April, and enroll for spring semester in October–November preceding the beginning of the term. They are notified of course enrollment dates by poster, e-mail, and by notices in the Cornell Daily Sun. Course enrollment materials are available for continuing students via computer access to Just the Facts and in the Human Ecology Registrar's Office, 145 Martha Van Rensselaer Hall. For the first three weeks of the term, students have an opportunity to add courses in other divisions of the university as well as in human ecology.

Enrollment

Before or during course enrollment, students discuss their program plans with a faculty adviser or a college counselor in the Office of Admissions, Student, and Career Services. For their advising sessions, students need the Course and Time Roster issued by the university registrar which also is available via computer on CUNINFO. Students must obtain an adviser key number from their departmental major faculty adviser, or if they have not declared a major, from a college counselor in 172 MVR.

Students complete their enrollment course requests by the deadline announced by the university registrar.

The following policies and procedures apply to course enrollment.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in Cornell University: Courses of Study. For such courses, students must request the instructor's permission during the CourseEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school's registrar in Sage Hall.

Special Studies Courses

Each department in the College of Human Ecology (DEA, HD, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. These courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the courses are offered. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair as well as the student's departmental advising assistant before submitting it to the Human Ecology Registrar's Office. The student also must complete a course registration form in the Human Ecology Registrar's Office. Special studies forms and instructions are available in the departmental offices.

To register in a special studies course taught in a department outside the college, students should follow the procedures established for that department.

Course Loads

The normal course load in the college ranges from 12 to 18 credits. During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater.

Credits beyond 15 may be added during the first three weeks of the semester without special permission.

Students should avoid planning excessive work loads; the time required to keep abrears of courses tends to increase as the semester progresses. Classes cannot be dropped after the seventh week of classes without petitioning and by substantiating extenuating circumstances, so students should try to avoid the need to drop courses.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Admissions, Student, and Career Services, 170 MVR.

Exemption from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the Human Ecology Student Guide. Petition forms are available in the Office of Admissions, Student, and Career Services, 172 Martha Van Rensselaer Hall or in Room 145, the Office of the Registrar.

Overenrolled Courses

Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in Cornell University: Courses of Study. Students' professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Late Course Enrollment

Students who do not complete course enrollment during the course enrollment period usually must wait until the beginning of the semester to enroll. Extensions are rarely granted and usually only for documented illness.

Students who do not meet the deadline for any reason should see the college registrar in 145 MVR as soon as possible. The college registrar can explain available options on course enrollment procedures under such circumstances.

Important: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade option and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under Course Enrollment Changes.

At the beginning of the fall semester, each continuing student receives a copy of his or her summary of record from the Human Ecology Registrar's Office. This summary shows degree requirements that the student has completed. Students are responsible for assuring that their academic program meets degree requirements. They resolve any questions about degree requirements with the appropriate staff person in the Human Ecology Registrar's Office. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Admissions, Student, and Career Services.
Late University Registration
A student clearing his or her financial obligations after the deadline date on the bursar's bill is considered late. Late registrants are assessed a finance charge on the bursar's bill starting from the date the bill is due. All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, the Bursar's Office will charge a late fee.

Students who fail to register by the third week of the term will be withdrawn from the university. Should withdrawn students wish to return, they must reapply through the admissions committee.

Course Enrollment Changes
Deadlines
- During the first three weeks of the term, courses may be added or dropped, or the grade option can be changed.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor.
- From the fourth week of the term, instructors have the right to consider students' requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which they will no longer approve course changes.
- From the eighth week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student's control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- A student who submits a petition after the seventh week of the term requesting permission to drop a course must attach a statement from his or her faculty adviser to that petition indicating whether or not the advisor supports the request.
- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript.

Deadlines for Half-Term Courses
Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add classes after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course. (See Petition Process, General Petition Form for information on the procedure.)

Procedures
It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new classes early makes it easier for the student to keep up with class work. Dropping an unneeded class early makes room in the class for other students who may need it for their academic programs.

Ideally, students evaluate their class work load carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for class enrollment are also required for class enrollment changes. For example, the instructor's permission must be obtained for a course requiring it, and the same forms for special studies courses must be completed. Aside from the procedures listed below for course enrollment changes, all course change forms for nutritional science majors must be signed by the faculty department adviser.

Waiting List: The Human Ecology Registrar's Office maintains waiting lists for students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To be active on a waiting list, students must check in person every 48 hours with the Human Ecology Registrar's Office names of students who do not check in are automatically dropped from the list.

Limited enrollment classes: Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the course list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance.

There is no charge for course changes. To make course changes during the first three weeks, a student takes the following five steps:

1. Completes the five steps listed above for changes made during the first three weeks.
2. Obtains the instructors' signatures on the course change form for human ecology courses.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section below, Petition Process.) Students are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

In absentia Study
Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology.

To be eligible for in absentia study, a student must be in good academic standing at the time of withdrawal from the college. Students not in good standing may study in absentia but will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology Registrar's Office, 145 MVR. The student completes the form, has it signed by his or her faculty adviser, attaches catalog descriptions for the courses that will be taken, then submits the form to the Human Ecology Registrar's Office, 145 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar.

A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. A student's petition for more than 15 credits in absentia may be allowed under the following conditions: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution from which the absentia study is taken send transcripts of grades to the Human Ecology Registrar's Office. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better. Only credits (not
course names and grades) for in absentia transcript. A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology. The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence
A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by requesting an extension in writing from the Office of Admissions, Student, and Career Services. Note that in absentia study and leave of absence status are mutually exclusive.

A student considering a leave of absence is urged to discuss plans with a counselor in the Office of Admissions, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology Registrar's Office, 145 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.

A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warning or severe warning or in good academic standing.

Withdrawal
A withdrawal is a termination of a student status at Cornell University. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Admissions, Student, and Career Services and filing a written notice of withdrawal in the Human Ecology Registrar's Office. A student considering such an action is urged to discuss plans with a counselor in the Office of Admissions, Student, and Career Services, 170 MVR.

In some instances a student may be given a withdrawal by the college registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Petition Process
The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Admissions, Student, and Career Services, 170 MVR.

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar in the Human Ecology Registrar's Office.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition must attach a statement from the student's faculty adviser before CAS will consider the appeal.

Grades of Incomplete
A grade of incomplete is given when a student does not complete the work for a course on time but when, in the instructor's judgment, there was a valid reason. A student with such a reason should discuss the matter with the instructor and request a grade of incomplete.

Beginning fall 1984, a grade of incomplete may remain on a student's official transcript for a maximum of two semesters and one summer after the grade is given, or until the awarding of a degree, whichever is the shorter period of time. The instructor has the option of setting a shorter time limit for completing the course work.

If the work is completed within the designated time period, the grade of incomplete will be changed to a regular grade on the student's official transcript. If the work is not completed within the designated time period, the grade of incomplete automatically will be converted to an F.

When a student wants to receive a grade of incomplete, the student should arrange a conference with the instructor (preferably before classes end and the study period begins) to work out the agreement. A form, called explanation for reporting a final grade of F or incomplete, has been signed by both the instructor and the student, must be submitted by the instructor to the Human Ecology Registrar's Office. This form is submitted with the final grade sheets whenever a grade of incomplete is given.

This form is for the student's protection, particularly in the event that a faculty member with whom a course is being completed leaves campus without leaving a record of the work completed in the course.

If circumstances prevent a student from being present to consult the instructor, the instructor may, if requested by the student, initiate the process by filling out a copy of the form and turning it in to the Human Ecology Registrar's Office with the grade sheet. Before a student will be allowed to register for succeeding semesters, he or she must go to the Human Ecology Registrar's Office to fill out and sign the remainder of the form.

If the work is satisfactorily completed within the required time, the course appears on the student's official transcript with an asterisk and the final grade received for the semester in
which the student was registered for the course.

A student who completes the work in the required time and expects to receive a grade must take the responsibility for checking with the Human Ecology Registrar's Office (about two weeks before grades are returned to students) to make sure that the grade has been received. Any questions should be discussed with the course instructor.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean's List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote graduate study and research and to stimulate scholarship and leadership toward the well-being of individuals and families. As a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and activity on significant problems of living—at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average.

Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.

Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences.

The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

THE URBAN SEMESTER PROGRAM IN NEW YORK CITY

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. During either fall or spring semester students enroll in three classes occurring on the opportunities and barriers that a multicultural society presents and their articulation with professional, community, or public policy settings (15-credit residential program). Students intern three to four days each week and are encouraged to live in the Olin Hall dormitory of the Cornell University Medical College.

The two-week winter intercession course (2 credits) enables students to do community service through a reflective practice curriculum. In the eight-week summer semester (3 credits), students carry out a literacy project with pre-K and kindergarten children. Students who seek to contribute to their own communities are encouraged to participate in any of the program offerings. Most students work with the program staff to locate internships. For further information, contact the Urban Semester Program at (212) 746-2273 or the Student Resource Center, N-159 Martha Van Rensselaer Hall.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

- Health and medicine—New York Hospital/Cornell Medical Center, Chinatown Health Clinic, New York City Department of Public Health, Bellevue Hospital, Queens Medical Center for Women and Children, Community Health Project

- Private and public law—NOW Legal Defense and Education Fund, Neighborhood Defender Service of Harlem, Legal Aid, Puerto Rican Legal Defense and Education Fund, NAACP Legal Defense and Education Fund, Gay and Lesbian Anti-Violence Project, Kane Kessler, P.C.

- Government and community agencies—Women's Action Alliance, The Center for Puerto Rican Legal Defense and Education Fund, Rican Legal Defense and Education Fund, Community Services Center

- Private not-for-profit organizations—Grant Street Settlement House, Neighborhood Housing Services, Abyssinian Baptist Church Development Corporation, University Settlement Society of New York, Urban Development Corporation, Greater Chinatown Community Association, Lesbian and Gay Community Services Center

- Private and public schools—United Federation of Teachers, Central Park East, River East, Manhattan Center for Math and Science, PS 41, City and Country, Churchill School, Little Red School House, St. Ann's School

HE 470 Multicultural Practice

Fall and spring semesters.

Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their experiences in their internships with a focus on multicultural issues, professional practice, and organizational culture.
A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

DEA 111 Making a Difference: By Design
Students in any academic area examine how design affects their daily life and future profession. Course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, and the arts, etc., who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics: nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision-making, and ecological issues.

DEA 115 Design Graphics
Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100; technology fee $10. Permission of instructor only. M W F 8:00-10:00. K. Gibson.
A studio studio course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

[DEA 150 Introduction to Human-Environment Relations]
Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and handicaps; person-environment fit for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; user-responsive design; participatory design programming; and post occupancy evaluation.

DEA 201 Design Studio III
Fall. 4 credits. Limited to 18 students. Prerequisites: DEA 101, 102, and 115 (minimum grades of B-). Recommended: DEA 111. Must take DEA 201 and DEA 251 concurrently. Minimum cost of materials, $150; lab fee, $40; optional field trip, approximately $100. M W F 1:25-4:25. J. Jennings.
Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

DEA 202 Design Studio IV
Spring. 4 credits. Each section limited to 18 students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 111 and 204. Minimum cost of materials, $120; diazo machine fee, $8; field trip fee. M W F 12:20-4:25. K. Gilmore.
Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior design problems of limited complexity. Each problem of 3 to 5 weeks duration is structured to emphasize different aspects of the design process.

DEA 203 Digital Communications
Fall. 2 credits. Priority given to DEA majors. Lab fee $10. M 7:30-9:55. J. Elliott.
Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

DEA 204 Introduction to Building Technology
Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of building and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and methods; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.

[DEA 243 Inside Out: The American Everyday Interior (also Women's Studies 243)]
A study of late nineteenth- and twentieth-century everyday interiors in socio-cultural contexts, with an emphasis on design dissemination, consumer patterns, and gender issues. Topics include women's walls, power in the parlor, photographs as a mirror, the love of the colonial.

DEA 250 The Environment and Social Behavior
Fall. 3 credits. Limited to 16. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:55-4:10. Staff.
A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, M1communication, community, and crime is explored. Topics covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

DEA 251 History and Theory of the Interior
Fall. 3 credits. Limited to 65. Prerequisites: priority given to DEA majors. M W F 9:05-9:55. J. Jennings.
An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to...
the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements and theorists. Reading, discussion, analytical exercises, essays, examinations.

FIELD TRIP:

DEA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged.
Department faculty.
Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

DEA 301 Design Studio V
Fall. 4 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204.
Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 5 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.

DEA 302 Design Studio VI
Spring. 5 credits. Prerequisites: DEA 301 and 303 or permission of instructor.
Intermediate-level interior design studio with an introduction to computer applications. Emphasis is on the use of a microcomputer as a design tool in the process of creating and planning interior spaces. Continued development of design skills and problem solving in relation to the selection of problem types.

DEA 303 Introduction to Furnishings, Materials, and Finishes
Fall. 2 credits. W 7:30-9:25 p.m. R. Gilmore.
Basic understanding of furniture types and systems; interior products and equipment such as work-stations, window, wall, and floor coverings, ceiling and lighting systems, and materials and finishes. Emphasis is placed on criteria for selection of furnishings, materials, and finishes for typical interior design and facility management problems.

DEA 304 Introduction to Professional Practice of Interior Design
Spring. 1 credit. T 2:30-4:25. A. Basinger.
Introduction to organizational and management principles for delivery of interior design and facility management services. Covers basic organizational and basic management functions within interior design and facility management organizations, work flow and scheduling, business practices, legal and ethical responsibilities and concerns, contracts, basic contract documents such as working drawings and specifications, supervision of construction and installation, and cost estimation.

DEA 305 Construction Documents and Detailing
Comprehensive study of drafting, detailing, schedules and specifications. Emphasis on drawing conventions, symbols, dimensioning, detailing of interior elements, terminology, construction methods and materials.

DEA 325 Human Factors: Ergonomics-Anthropometrics
Fall. 3 credits. Recommended: DEA 150. T R 8:40-9:55. A. Hedge.
Implications of human physical and physiological characteristics and limitations on the design of settings, products, and tasks. An introduction to engineering anthropology, biomechanics, control/display design, work physiology, and motor performance. Course includes practical exercises and field project work.

[DEA 349 Graphic Design
Spring. 3 credits. Enrollment limited to 20 students. Recommended: design background. Priority given to DEA majors. Approximate cost of materials, $50. M W 1:25-4:25. Not offered spring 1999. Staff. The fundamentals of lettering, typography, layout, presentation techniques and the functional and visual aspects of environmental graphics. Printing processes and the application of photography and illustration are also covered. A series of projects expounds problems typical of the graphic design field, and in interior and exterior graphics, signing, and directional systems.]

DEA 350 Human Factors: The Ambient Environment
An introduction to human-factors considerations in lighting, acoustics, noise control, indoor air quality and ventilation, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 374 Elements of Business for Non-Business Majors (also Hotel Administration 104)
Spring. 1 credit. Limited to 36. Weekend course. P. Rainsford.
Focus will be to provide hands-on skills and knowledge about how to start or run a small business. Especially appropriate for students interested in professional careers such as architecture, design, writing, art, engineering, law, and other service businesses. Course structure will use a computer-based management simulation game and will require students to work in management teams of six to start and operate a hotel. Introductory-level coursework. No previous experience or computer knowledge required. Students are required to attend all sessions and complete a paper, which will be due a week after conclusion of the course.

DEA 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Department faculty.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period after registration in 145 MVR. College Registrar's Office, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisers and the instructor should register for one of the following subdivisions of independent study.

DEA 400 Directed Readings
For study that predominantly involves library research and independent reading.

DEA 401 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

DEA 402 Supervised Fieldwork
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403 Teaching Apprenticeship
For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the subject to be taught and in the overall academic program.

[DEA 405 Portfolio Preparation
Spring. 3 credits. Enrollment limited to 18. Prerequisites DEA 301 or permission of instructor. S-U option. Minimum cost of materials, $200. Required field trip $20. M W 10:10-1:10. Not offered 1999. Staff. Students apply graphic design principles to develop a professional portfolio of their work. Also covered are resume writing and planning the job search, and the use of appropriate computer software and computer-aided graphic tools.]

DEA 407 Design Studio VII
Advanced interior design studio organized around a series of interior design problems, 3 to 5 weeks in duration. Focus is on development of design skills and on competence in solving a selected set of generic interior design problem types.

DEA 408 Design Studio VIII
Spring. 5 credits. Prerequisites: DEA 301, 302, 304, and 305. Letter grade only. Minimum cost of materials, $150; diazo machine fee, $8 per semester. T R 12:20-4:25. S. Danko.
Design-problem-solving experiences involving completion of advanced interior design problems. Problems are broken into five phases: programming; schematic design and
evaluation, design development, including material and finish selection; design detailing; and in-process documentation and the preparation of a professional-quality design presentation.

DEA 430 Furniture as a Social Art
Spring. 3 credits. Limited to 15. Permission of instructor. Cost of building materials and fees $30. Students must also sign up for 2 hours of DEA shop time each week for model building. M W 10:10–12:05. F. Eshelman. This course examines furniture as a design process that emphasizes support of human behavior. Information about specific social issues including health care, aging, child care, and education is the starting point for assignments. Students analyze products currently available and design new furniture. Also covered are furniture materials, fabrication processes, and manufacturing techniques.

[DEA 443 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior]

DEA 451 Seminar in Facility Planning and Management
Fall. 1 credit. S-U grades only. M 3:35–4:25. F. Becker, W. Sims. Series of seminars led by Cornell faculty and other facility management professionals. Topics include strategic space planning, space standards, office automation, project management, energy conservation, environmental protection and regulatory issues.

DEA 453 Planning and Managing the Workplace
Spring. 3 credits. Prerequisite: DEA 250 or permission of instructor. M 7:30–10:30. F. Becker. Intended for students interested in the planning, design, and management of facilities for complex organizations. The purpose of the course is to explore how characteristics of the workplace, including building, design, furniture and equipment and policies governing their use and allocation, affect individual and organizational effectiveness. Special topics, such as the human implications of new information technologies and work at home, are also covered.

DEA 454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials $100. T R 8:40–9:55. S. Danko. For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

DEA 455 Research Methods in Human-Environment Relations
Fall. 3 credits. Prerequisite: DEA majors only or permission of instructor, and a statistics course. M W F 1:25–2:15. Staff. The course develops the student's understanding and competence in the use of research and analytical tools to study the relationships between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459 Programming Methods in Design
Fall. 3 credits. Prerequisite: DEA 325. T R 10:10–11:25. W. Sims. Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problem and creation of new methods or techniques are emphasized.

DEA 470 Applied Ergonomic Methods
Spring. 3 credits. Prerequisite: DEA 325. T R 2:55–4:10. A. Hedge. This course covers ergonomics methods and techniques and their application to the design of modern work environments. Emphasis is placed on understanding key concepts. Coverage includes conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems. This course is the undergraduate section of DEA 670, which will share the same lectures but will meet for an additional hour. DEA 670 will have additional readings and projects.

DEA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Department faculty. Independent advanced work by graduate students recommended by their special committee chair and approved by the head of the department and instructor.

[DEA 643 Cultural Construction: The Nineteenth- and Twentieth-Century American Interior]
Spring (even-numbered years). 4 credits. Enrollment limited to 15 students. S-U option. F 1:25–2:25. R 10:10–11:30. Not offered spring 2000. J. Jennings. A course intended for graduate students who want a more thorough grounding in the history of vernacular interiors than is provided by DEA 443. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class hour each week, and do additional readings and projects.

DEA 645 Dancing Mind/Thinking Heart: Creative Problem-Solving Theory and Practice
Spring. 3 credits. Limited to 15 graduate and advanced undergraduate students. Prerequisite for undergraduates: permission of instructor. T R 3:40–7:30. S. Danko. Focuses on thinking processes and techniques that support creative problem solving. Theories of creative behavior and critical thinking are examined. Course is highly participatory and experiential. Weekly discussions include hands-on applications of theories on short problems tailored to the backgrounds of the students. Primary goal is to demonstrate perceptual, emotional, intellectual, cultural, and environmental blocks to creative thinking and expand the student's repertoire of creative problem solving strategies for use in day-to-day professional practice. Case studies of creative individuals and organizations from a variety of fields are presented.

DEA 650 Programming Methods in Design
Fall. 4 credits. Recommended prerequisites: DEA 660, 652, and 656. T R 10:10–11:25. W. Sims. A course intended for graduate students who want a more thorough introduction to environmental programming methods than is provided by DEA 459. Each student is required to attend DEA 459 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 459 for more detail.

DEA 651 Human Factors: Ergonomics- Anthropometrics
Fall. 4 credits. Recommended: DEA 150 and a 3-credit statistics course. T R 8:40–9:55. A. Hedge. A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 325. Each student is required to attend DEA 325 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 325 for more detail.

DEA 652 Human Factors: The Ambient Environment
Spring. 4 credits. Recommended: DEA 150. T R 8:40–9:55. A. Hedge. A course intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 350. Each student is required to attend DEA 350 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. For detailed description, see DEA 350.
DEA 670 Applied Ergonomics Methods
Spring. 4 credits. Enrollment limited to 20. Prerequisite: DEA 651. T R 2:55-4:10. A. Hedge. Intended for graduate students who want a more thorough understanding of applied ergonomics methods than is provided by DEA 650. Each student is required to attend DEA 470 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 453 for more detail.

DEA 671 Environmental Analysis II: Indoor Air Quality Methods
Spring (odd-numbered years). 3 credits. Enrollment limited to 20. Prerequisite: DEA 652. T R 10:10-11:25. Not offered spring 1999. A. Hedge. This course provides in-depth coverage of the nature of indoor air pollutants and techniques for analyzing indoor air quality in modern work environments. Emphasis is placed on understanding key concepts in environmental exposure, toxicology, epidemiology and on understanding the procedures for assessing indoor air quality conditions. Coverage also includes detailed consideration of the design of modern ventilation systems.

DEA 679 Master's Thesis and Research
Fall or spring. Credits to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional. Department graduate faculty.

HUMAN DEVELOPMENT COURSES

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HDFS 115 Human Development
Fall or summer. 3 credits. S-U grades optional. M W F 1:25-2:15. J. Garbarino. Provides a broad overview of theories, research methods, and current knowledge of human development from conception into adulthood. Course material primarily covers infancy and childhood with considerably less focus on adolescent and adult development. Topics include biological, intellectual, linguistic, social and emotional development as well as the cultural, social, and interpersonal contexts that affect developmental processes and outcomes in these domains.

HDFS 150 Families and the Life Course (also Sociology 151)
Spring. 3 credits. S-U grades optional. M W F 1:25-2:15. F. Wethington. This course provides an introduction to social scientific research on family roles and functions. Topics include family history, how families change over the life course, and how families are influenced by cultural and economic forces.

HDFS 216 Human Development: Adolescence and Youth
Spring or summer. 3 credits. Prerequisite: HDFS 115. S-U grades optional. T R 2:55-4:10. Staff. Provides a broad overview of theories, issues, and research in the study of human development from early adolescence to early adulthood (youth). Attention is focused on the interplay of biological and cognitive factors, interpersonal relationships, social structure, and cultural values in shaping the individual's development. The role of adolescence in both the individual's life course and the evolution of the culture as a whole is also considered. Faculty, peer group, educational, and work contexts for development are discussed.

HDFS 218 Human Development: Adulthood and Aging
Fall. 3 credits. Prerequisite: HDFS 115. S-U grades optional. M W F 9:05-10:05. S. Cornelius. Provides a general introduction to theories and research in adult development and aging. Psychological, social, and biological changes from youth through adulthood are discussed. Both individual development within generations and differences among generations are emphasized.

HDFS 233 Children and the Law
Fall. 3 credits. Prerequisites: HDFS 115 and an introductory statistics course. F 2:40-5:00. S. Ceci. This course examines psychological data and theories that shed light on the practical issues that arise when children enter the legal arena. It attempts to integrate theories, research, and methodology from various disciplines including psychology including, developmental, cognitive, social, and clinical. This course also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. The topic of children and the law provides an opportunity to meet all these requirements. Rapid changes involving child witnesses in our legal system have forced social scientists to bring their work into the courtroom. At the same time, bringing this fray into the legal system has changed the course of research and thinking about certain aspects of child development and cognition; it has encouraged researchers to tackle new issues and to develop innovative experimental paradigms. Selected topics to be covered include: memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representation, and repression. Several actual cases involving child witnesses will be presented to illustrate the application of scientific data to the courtroom. Because of the heavy use made of case material, graduate students are expected that students will devote more than the usual number of hours to this course to allow for liberal use of video and textual coverage of actual trials.
HDFS 241 History of Childhood in the United States (also History 271)  
Fall. Limited to 30 students. 3 credits.  
T R 8:40-9:55. R. Savin-Williams.  
An examination of childhood and adolescence in various historical contexts: Puritan New England, slave plantations, evangelical revivals, the Western frontier, Victorian families, reform schools, early high schools and colleges, the Industrial Revolution of the 1920s, immigrant communities, the Depression and World War II, the 1950s, and more recent social and cultural changes affecting families. Students will evaluate continuities and changes in the lives of American children as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own childhood and adolescence. This course is designed to give students a humanities perspective on approaches to childhood central to many different disciplines.

HDFS 242 Participation with Groups of Young Children  
Fall or spring. 4 credits. Limited to 20 students (limit depends on availability of placements and supervision). Prerequisites: HDFS 115 and permission of instructor. S-U grades optional. W 10:10-12:05. J. Ross-Bernstein.  
This course is designed to integrate developmental theories with supervised experience in child care centers, with the intention of enhancing the student's abilities to understand and to relate effectively with young children. Participation, observation, reflection, reading, writing, and sharing of viewpoints are some of the means used to these ends. Placements are in local nursery schools, day care centers, Head Start programs, and kindergartens.

HDFS 251 Social Gerontology: Aging and the Life Course  
This course analyzes the social aspects of aging in contemporary American society from a life course perspective. Topics to be covered include: (1) An introduction to the field of gerontology, its history, theories, and research methods, (2) A brief overview of the physiological and psychological changes that accompany aging, (3) An analysis of the contexts (such as family, friends, social support, employment, volunteer work) in which individual aging occurs, including differences by gender, ethnicity, and social class. (4) The influences of society on the aging individual. Guest speakers will provide an introduction to various careers in the field of gerontology.

HDFS 253 Gender and the Life Course  
This course examines the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between social change and individual lives, observing the significance of two key institutions—work and family—in shaping basic life choices and their consequences in the life course. Implications of key life trajectories and transitions for individual lives and for social policy will also be discussed.

HDFS 258 History of Women in the Professions, 1800 to the Present (also Women's Studies 238 and History 240, American Studies 258)  
The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, reading, and discussion are geared to identifying the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

HDFS 260 Personality Development (also Psychology 275)  
Spring. 3 credits. Prerequisite: HDFS 115 or Psychology 128. Offered alternate years. T R 12:20-1:45. C. Hazan.  
An introduction to personality psychology, with an emphasis on personality development and contemporary research. Covers the major theories of personality, influences on personality development (including genetic, biological, experiential, and environmental factors), and methods for assessing personality.

HDFS 261 The Development of Social Behavior  
Issues in the development of social behavior are viewed from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings and peers, the development of prosocial and aggressive behavior, the functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

HDFS 266 Emotional Functions of the Brain  
Fall. 3 credits. Prerequisite: a biology course. Letter grades only. M 10:10-12:35. R. Depue.  
Much of our social behavior, and what we refer to as personality, is related to phylogenetically-old emotional systems, systems that help us to adapt to critical stimuli in the environment. These systems are structured and organized within the brain, but they are also capable of being modified by our everyday experiences. A recent view of the gross anatomy of the primate brain is presented, the focus of the course concerns networks of brain regions that are organized around the integration of processes related to emotion and cognition. First, general features of the brain in relation to emotional evaluation and expression processes are discussed, and then the brain organization related to several specific types of emotional systems are explored. Neurobiological modulation of emotional processes by neurotransmitters of wide distribution in the brain are detailed as well. The latter helps to lay the groundwork for understanding the nature of individual differences in much of our social and emotional behavior.

HDFS 284 Introduction to Sexual Minorities (also Women's Studies 285)  
Fall. 3 credits. Prerequisite: one social science course. S-U grades optional. M 6:30-9:00 p.m. R. Savin-Williams.  
This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgendered, and other sexual minority populations. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Required readings and reaction papers include readings to the readings.

HDFS 300 Special Studies for Undergraduates  
Fall or spring. Credit to be arranged.  
Permission required.

Special arrangement for course work to establish equivalency not transferable from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of-registration period.

HDFS 313 Problematic Behavior in Adolescence  
Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101; HDFS 216 recommended. T R 2:55-4:10. J. Haugaard.  
This course will explore several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors will be presented. Appropriate research will be reviewed; treatment and prevention strategies will be explored. An optional discussion seminar will be available to students who would like an opportunity to discuss readings and lectures in greater depth.

HDFS 334 The Growth of the Mind  
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HDFS 635, a supplemental graduate seminar. Prerequisites: A course in human experimental psychology, statistics, or HDFS 115 or equivalent; or permission of the instructor. S-U grades optional. Offered alternate years. Not offered 1998-99. B. Lust.  
In this course the fundamental issues of cognition are introduced. What is the nature of human intelligence? of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to these representations? What are the relations between language and thought? In the study of those issues, how can epistemology and experimental psychology be related through the experimental method? Basic debates in the study of cognition are introduced and discussed throughout: for example, the roles of innateness and learning, the distinction between competence and
HDFS 344 Infant Behavior and Development
Fall. 3 credits. Prerequisites: HDFS 115, a biology course, and a statistics course. Offered 1998-99. S. Robertson.

Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interconnectedness of these aspects of development will be strongly emphasized as their relationship to the biology of fetal and infant development. Topics with implications for general theories of development will be emphasized (e.g., the functional significance of early behavior, the nature of continuity and change, the role of the environment in development). Conditions which put infants at risk for poor development (e.g., prematurity, birth, exposure to environmental toxins, maternal depression) and topics with significant social, ethical, or political implications (e.g., infant day care, fetal rights) will also be considered. An emphasis on research methodology in the study of early behavior and development will be maintained throughout the course.

HDFS 346 The Role and Meaning of Play
Fall. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HDFS 115. M 7:30-9:25 p.m. J. Ross-Bernstein.

The aim of this course is to examine the play of children ages three through seven. Through seminar discussions, workshops, films, and individualized research, the student will explore the meanings and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

HDFS 347 Human Growth and Development: Biological and Behavioral Interactions (also Biology and Society 347 and Nutritional Sciences 347)
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HDFS 115 or Psychology 101. Offered alternate years. Limited to 150 students. M W F 1:25-2:15. S. Robertson and J. Haas.

This course is concerned with the interrelationships between physiological and psychological growth and development in humans during infancy. Intrinsic and extrinsic causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are examined. The interaction between physiological and behavioral or psychological factors is emphasized throughout the course.

HDFS 348 Advanced Participation with Children
Spring. 4-8 credits. Limited to 20 students. Limit depends on availability of placements and credits. Prerequisites: HDFS 115 and HDFS 242; and permission of instructor. Recommended: HDFS 346; S-U grades optional. T 12:20-2:15. J. Ross-Bernstein.

An advanced, supervised field-based course, designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and an instructor, to keep a journal; and to plan, carry out, and evaluate weekly activities for children in their placement. Conference group and readings focus on contexts of development and on ways to support children's personal and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the class. Participation is in settings that serve typical and/or special needs children from two to ten years of age and provide education, care, or special-purposes interventions for them.

HDFS 353 Risk and Opportunity Factors in Childhood and Adolescence

This course explores the meaning of risk and opportunity in the lives of children and youth. It begins from an understanding of risk accumulation and resilience as they relate to social policy, professional practice, and community development. The concept of 'social toxicity' is organizing central theme of the course. Assignments include writing research-based editorials and participating in a simulated public policy debate.

HDFS 354 Families in Cross-cultural Perspective
Spring. 3 credits. Prerequisites: HDFS 115 or HDFS 150 or Rural Sociology 101 or Anthropology 101 or 102, or equivalents; S-U grades optional. M W F 10:10-11:00. Not offered 1998-99. Staff.

This course will be taught with an emphasis on the life cycle of families and individuals. Focus will be on the rites/rites, both subtle and obvious, that mark an individual's movement through the stages of life. The approach will be both anthropological and historical. Students will see correlations between diverse family forms in the United States and around the world.

HDFS 359 American Families in Historical Perspective (also Women's Studies 357, History 359, American Studies 359)

This course is an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with changing cultural concep-
HDFS 370 Experimental Psychopathology (also Psychology 325)
Spring. 4 credits. Limited to sophomores, juniors, and seniors. Prerequisites: HDFS 115, Psychology 101 or Education 110; a course in statistics (e.g., Psych 550, Soc 301, Educ 352 or 353, Ag Ec 310 or equivalent); and an introductory biology course. Letter grades only. TBA. Staff. A research-based survey of the cognitive, emotional, and biological aspects of psychopathology across the life span. The major mental illnesses will be covered, including schizophrenia, anxiety disorders, affective disorders, and childhood disorders as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development; minimal attention to psychotherapy.

HDFS 397 Experimental Child Psychology
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: either HDFS 115, Psychology 101, and one course in statistics. Intended primarily for students interested in entering graduate programs involving further research training. Limited to 16 students. M. W. 10:10-12:00. L. Lee. A study of experimental methodology in research with children. Includes lectures, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.

HDFS 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: either HDFS 115, 150, and two intermediate level HDFS courses, or four courses in psychology or sociology. S-U grades optional. For advanced independent study by an individual student, or an experimental basis with a group of students in a field of HDFS not otherwise provided through course work in the department or elsewhere at the university. Students prepare a monograph description of the study they want to undertake, on a form available from the department office in NG14. This form must be signed by the instructor directing the study and the student's faculty adviser and submitted to NG14 MVR, the Office of Undergraduate Education. After clearance that all prerequisites are met, the student picks up the form in NG14 to file at course registration or within the change-of-registration period after registration in the College Registrar's Office. 145 MVR along with an add/drop slip. To ensure review before the close of the periods, early submission of the special studies form to the Office of Undergraduate Education is necessary. Students, in consultation with their supervisor, should register for one of the following subdivisions of independent study (guidelines for each are available in NG14 Martha Van Benselaur Hall).

HDFS 400 Directed Readings
Prerequisites: In addition to the general prerequisites, a statistics or methods course and at least one course directly linked to the area of study. Permission required.

For study that predominantly involves library research and independent study.

HDFS 401 Empirical Research
Prerequisites: In addition to the general prerequisite courses, a statistics or methods course and at least one course directly linked to the area of study. Permission required. For study that predominantly involves data collection and analysis, or laboratory or studio projects.

HDFS 402 Supervised Fieldwork
Prerequisites: In addition to the general prerequisite courses, an observation or participation course. Permission required. For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

HDFS 403 Teaching Apprenticeship
Prerequisites: In addition to the general prerequisite courses, must have taken the course or equivalent and received a grade of B+ or higher. Permission required. For study that includes assisting faculty with instruction.

HDFS 417 Female Adolescence in Historical Perspective (also Women's Studies 438 and History 458)
Spring. 3 credits. Prerequisites: HDFS 258 or 359 or a 200- or 300-level history or women's studies course. Permission of instructor required. T. 2:20-4:25. J. Brumberg. A reading, writing, and discussion course that will attempt to answer a basic historical question that has consequence for both contemporary developmental theory and social policy: How has female adolescence in the United States changed in the past 200 years? The focus will be on the ways in which gender, race, and cultural population shape adolescent experience. Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.

HDFS 436 Language Development (also Psychology 436 and Linguistics 436)
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HDFS/LING 633, a supplemental graduate seminar. Prerequisite: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. T 2:25-4:10. B. Last. This course surveys basic issues, methods, and research in the study of first-language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The fundamental issues of relationships between language and thought are discussed, as are the fundamental linguistic issues of Universal Grammar and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

HDFS 438 Thinking and Reasoning
Fall. 3 credits. Prerequisite: HDFS 115 or Psychology 101. Letter grades only. Not offered 1998-99. HDFS 355 Cognitive Development will be taught in place of this course in spring 1999. T. R. 1:25-2:40. B. Kossowski. This course will examine problem solving and transfer, pre-casual thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and non-rational reasoning. Two general issues will run through the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various methods accurately portray the kind of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

HDFS 439 Cognitive Development: Infancy through Adolescence
Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 101. Letter grades only. Not offered 1998-99. HDFS 355 Cognitive Development will be taught in place of this course in spring 1999. T. R. 1:25-2:40. B. Kossowski. This course will be an overview of current and classic issues and research in cognitive development. Central topics of both "hard cognition" (e.g., information processing and neuropsychological functioning) and "soft cognition" (e.g., problem solving, concepts and categories) will be covered. Selected topics will be linked to methodological issues and to important social issues such as cross-cultural cognitive development and putative racial and social class differences.

HDFS 440 Internship in Educational Settings for Children
Fall or spring. 8-12 credits. Prerequisites: HDFS 115, 242, or 243 and 548. Recommended: HDFS 546. Permission of instructor required. S-U grades optional. J. Ross-Bernstein. Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages two to ten and their families. Interns will function as participants in various settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructor. Students are expected to define their own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

HDFS 451 Nontraditional Families and Troubled Families
Fall. 3 credits. Limited to 30 students. Prerequisites: HDFS 115 or 150. Letter grades only. T. R. 8:40-9:55. Not offered 1998-99. J. Haugard. This is an advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. Four types of families are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child).

HDFS 456 Families and Social Policy
Spring. 3 credits. Prerequisites: one course in the area of the family or in sociology. S-U grades optional. Not offered 1998-99. P. Moen. An examination of the intended and unintended family consequences of governmental
polices, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered."

[HDFS 457 Health and Social Behavior (also Sociology 457)]
Next offered 1999-2000. F. Wetherington. This course critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. The lectures focus on social stress, social support, and family structure, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in medical sociology, health psychology, public health, and epidemiology.

HDFS 464 Sexual Minorities and Human Development (also Women's Studies 467)
Spring. 3 credits. Limited to 15 students. Permission of instructor required. T 2:55-4:10. R. Savin-Williams. The first half of the course covers topics of a fairly general nature regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students will determine the content through their selection of particular topics that interest them. The success of the course depends on students feeling personally engaged and committed to the course content. Because of the multidisciplinary nature of the course, it is hoped that students will bring a variety of backgrounds in disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will feel comfortable in the course.

HDFS 467 Psycho-social Issues in Asian American Identity (also Asian American Studies 467)
Spring. 3 credits. Prerequisites: HDFS 115 or Psychology 101 or permission of instructor. S-U grades optional. M 6:30-9:00 p.m. L. Lee. The course will review theories of identity and self and their usefulness in understanding identity formation for various ethnic groups within the Asian American population. It will examine the impact of various societal forces, e.g., racism, stereotypes, etc. as well as life experiences, e.g., immigration, family values, etc. in shaping or contributing to the formation of identity or identities of Asian Americans.

HDFS 471 Child Development and Psychopathology
Spring. 3 credits. Limited to 60 advanced-level students. Prerequisites: a basic course in psychopathology or instructor's permission. Letter grades only. T R 11:40-12:55. J. Haugard. This class will explore the development and prevention of mental, emotional, and behavioral disorders in children such as mental retardation, autism, and attention deficit disorders. Topics will include (1) the classification of mental disorders, (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders, (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and preventive interventions. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.

HDFS 482 Child Development and Social Policy
Fall. 3 credits. Enrollment limited to 25 juniors and seniors or by permission of instructor. Prerequisites: HDFS 115, HDFS 150, and a course in statistics. HDFS 260 or 261 strongly recommended. Letter grades only. Offered alternate years. T R 12:20-1:35. C. Raver. Course work and seminar discussion emphasize the integration of basic research in young children's social and emotional development with intervention and prevention-oriented research. The course also examines theoretical models of the relations between risk and resilience in child development, family functioning, community and culture. Policies in the domains of parenting, early childhood education, family and community services, and child care are analyzed. Broad questions regarding the identification of social problems and the design of solutions are considered within cultural and historical contexts.

HDFS 498 Senior Honors Seminar
Fall. 1 credit. Required for, and limited to, seniors in the HDFS honors program. S-U grades only. TBA. S. Cornelius. This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

HDFS 499 Senior Honors Thesis
Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty.

HDFS 106, 206, 306, 406 Topics in Human Development
2-4 credits. S-U grades optional. These topics vary each time the course is offered and are taught by advanced graduate students in the field of human development. Descriptions are available at the time of course registration. These courses do not fulfill any requirements for the major; they must be taken as electives.

Topics Courses
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor may be required. This series of courses provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practical, or other format.

HDFS 215, 315, 415 Topics in Adolescent and Adult Development
HDFS 235, 335, 435 Topics in Cognitive Development
HDFS 245, 345, 445 Topics in Early Childhood Development and Education
HDFS 255, 355, 455 Topics in Family Studies and the Life Course

The Graduate Program

HDFS graduate courses are only open to undergraduates with instructor's permission.

General Courses

HDFS 610 Processes in Human Development: Theoretical Models and Research Designs
Fall. 3 credits. Open to graduate students and juniors and seniors in HDFS and related fields with instructor's permission. Prerequisite: a minimum of one course in statistics. Letter grades only. W 2:00-4:25. U. Bronfenbrenner. The purpose of the seminar is to acquaint students with selected scientific paradigms being employed at the forefront of developmental science for investigating the conditions and processes that shape human development over the life course. Particular attention will be given to research models that draw on disciplines e.g., evolutionary biology, human genetics, developmental psychology, sociology, anthropology, history, economics. The principal seminar activities consist of faculty and student development of research questions, critical analysis of these questions in the light of diverse theoretical perspectives, and their corresponding research designs. In this process, the human being is treated as an integrated organism.

HDFS 617 Adolescence
Spring. 3 credits. Not offered 1998-99. Staff. Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.

HDFS 631 Cognitive Development
Fall. 3 credits. Offered alternate years. Not offered 1998-99. Staff. Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language thinking and reasoning, learning, creativity, and intelligence.

HDFS 640 Infancy
Fall. 3 credits. Not offered 1998-99. TBA. S. Robertson. Development in infancy will be examined through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues to be considered include the role of experience in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development will also be considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. The course will combine perspectives from developmental psychology and psychobiology.
This course is designed to provide both broad and in-depth training in the areas of social and emotional development during infancy and childhood. It will cover most of the major topic areas and theoretical orientations. Consideration will be given to basic influences on socioemotional development—biological, social, and cultural. Coverage will include normative development as well as the origins and nature of individual differences. We will explore such fundamental issues and questions as: What are emotions? What role do they play in the development and organization of personality? What are the effects of early social relationships on emotional development? When and how does the self-system emerge? Emphasis will be on the processes—both internal and external—that help determine the course and outcome of development.

[HDFS 650] Contemporary Family Theory and Research
Fall. 3 credits. Not offered 1998-99. E. Wethington. Sociological and social psychological theories and research on the family are examined with reference to the relationship between the family and society. Topics change from year to year, but focus on the processes of socialization and social control, the reproduction of gender and social class across generations, changes in family “values” across time, the rise of divorce and single motherhood, family diversity, and the genesis of deviance and psychological disorder.

[HDFS 660] Social Development
Spring. 3 credits. S-U grades optional. Not offered 1998-99. C. Raver. This course is designed to provide both broad and in-depth training in the areas of social and emotional development during infancy and childhood. It will cover most of the major topic areas and theoretical orientations. Consideration will be given to basic influences on socioemotional development—biological, social, and cultural. Coverage will include normative development as well as the origins and nature of individual differences. We will explore such fundamental issues and questions as: What are emotions? What role do they play in the development and organization of personality? What are the effects of early social relationships on emotional development? When and how does the self-system emerge? Emphasis will be on the processes—both internal and external—that help determine the course and outcome of development.

[HDFS 670] Experimental Psychopathology
Spring. 3 credits. Prerequisite: an undergraduate course in abnormal psychology or psychopathology; a course in multivariate statistics; and substantive course work in neuropsychology or related biological science. Not offered 1998-99. TBA. Staff. Overview of current theories and empirical research on functional and organically based psychological disorders. Topic areas to be covered include autism, schizophrenia, anxiety disorders, affective disorders, and personality disorders. Focus is on the developmental and etiology of psychopathology.

Topical Seminars
Seminars offered irregularly, with changing topics and instructors. Content, hours, credit, and instructors to be announced. Seminars offer concentrated study of specific theoretical and research issues.

[HDFS 618] Seminar in Adolescence and Development
Topics include family relations, parent-teen relationships, self-esteem, youth and history, work, and moral development.

[HDFS 633] Seminar on Language Development
Topics include acquisition of meaning in infancy, precursors of language in early infancy, and atypical language development.

[HDFS 635] Seminar in Cognitive Development
Topics include early attention, perception, memory, and communication. Assessment and intervention in relation to these processes will be considered when possible.

[HDFS 645] Seminar on Infancy
Focuses on selected topics in the development of psychology and psychobiology of infancy (including fetal development). Special topics vary and depend in part on student interests.

[HDFS 646] Seminar in Early-Childhood Development and Education
Topics include analysis of models and settings, design of assessment techniques, program evaluation, and early childhood in a cross-cultural context.

[HDFS 655] Seminar in Family Studies and the Life Course
Topics include the sociology of marital status, the single-parent family, work-family linkages, women and work, and families and social change.

[HDFS 665] Seminar in Personality and Social Development
Focuses on selected issues related to personality and social development. The issues selected vary each year according to current importance in the field and student interests.

[HDFS 675] Seminar in Developmental Psychopathology
Topics include learning disabilities, therapeutic interventions in atypical development, child abuse and maltreatment, family factors in the etiology of functional disorders, and cognitive characteristics of atypical groups.

[HDFS 685] Seminar in Human Development and Family Studies
Topics include development of self-concept, sex-role identity, observational methods, and interviews in developmental research.

[HDFS 690] Seminar on Ecology of Human Development
Topics include the institutional setting as a determinant of behavior, the poor family, and the identification and measurement of ecological variables.

Individualized Special Instruction

[HDFS 700-806] Special Studies for Graduate Students
Fall or spring. Credits and hours to be arranged. Credits 1-15 (3 hours work per week per credit). S-U grades at discretion of instructor.

Independent advanced work by graduate students recommended by their Special Committee chair with permission of the instructor.

[HDFS 700] Directed Readings
For study that predominantly involves library research and independent study.

[HDFS 701] Empirical Research
For study that predominantly involves collection and analysis of research data.

[HDFS 702] Practicum
For study that predominantly involves field experience in community settings.

[HDFS 703] Teaching Assistantship
For students assisting faculty with instruction. Does not apply to work for which students receive financial compensation.

[HDFS 704] Research Assistantship
For students assisting faculty with research. Does not apply to work for which students receive financial compensation.

[HDFS 705] Extension Assistantship
For students assisting faculty with extension activities. Does not apply to work for which students receive financial compensation.

[HDFS 706] Supervised Teaching
4 credits. For advanced students who assume major responsibility for teaching a course. Supervision by a faculty member is required.

[HDFS 806] Teaching Practicum
4 credits. For advanced graduate students to independently develop and teach an undergraduate topic course under the supervision of a faculty member.

[HDFS 899] Master's Thesis and Research
Fall or spring. Credit to be arranged. Credits 1-15 (3 hours work per week per credit). S-U grades at discretion of thesis adviser. Prerequisite: permission of thesis adviser.

[HDFS 999] Doctoral Thesis and Research
Fall or spring. Credit to be arranged. Credits 1-15 (3 hours work per week per credit). S-U grades only. Prerequisite: permission of thesis adviser.

POLICY ANALYSIS AND MANAGEMENT

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

[PAM 100] Skills for Learning in the Field (formerly HSS 102)
Fall and spring. 3-4 credits. Priority given to PAM students. Open to all levels, undergraduate and graduate. Limited to 30 students. Not offered 1998-99. Students learn to be self-directed learners and to integrate theory and experience. Topics include experiential learning, participant observation, interpersonal communication, critical analysis, and empowerment. These ideas and skills are learned through participation in GLASP, an adult literacy program.
HUMAN ECOLOGY - 1998-1999

PAM 180 Human Services in Contemporary Society (formerly HSS 101)
Fall. 3 credits. Recommended for freshmen and first-year transfer students.
D. Barr.
A lecture and discussion course designed as an introduction to the community base of services. Current and historical human services are examined. Emphasis is placed on social services, education, health, and criminal justice. Barriers to service delivery are discussed, such as racism, sexism, classism, sexual preference, physical disability, and age. Contemporary issues that impact on service delivery will also be discussed with attention to the relationship between direct service and public policy.

PAM 200 Intermediate Microeconomics (formerly CEH 210)
Fall or spring. 4 credits. Prerequisite: Econ 101 or equivalent. Fall. Preference to sophomores and juniors. Spring preference to juniors and seniors.
R. Brooks.
A section is mandatory. Theory of demand and supply. Barriers to service delivery are discussed, such as racism, sexism, classism, sexual preference, physical disability, and age. Contemporary issues that impact on service delivery will also be discussed with attention to the relationship between direct service and public policy.

PAM 201 Determinants of Behavior (formerly HSS 246)
Fall. 3 credits. Prerequisites: introductory sociology and introductory psychology and HDFS 115. Enrollment limited to 45. Priority given to social work majors.
J. Mueller.
This course provides an interdisciplinary knowledge base for human service professionals. We examine social behavior in the human environment from ecological, ethological, historical, cultural, and social system perspectives. Applications are made to professional practice at the micro level (counseling with individuals and families or other small groups), at the macro level (social planning and policy formulation for vulnerable groups in our society).

PAM 202 Household and Family Demography (formerly CEH 226)
Fall. 3 credits. Prerequisite: RSOC 101 or equivalent. S-U grades optional. Not offered 1998-99.
J. V. Mueller.
This course identifies important trends in U.S. households and family structure, examines the demographic, social, and economic forces behind recent changes in household structure, and evaluates current and future consequences and policy implications of these changes for both households and society. Topics include historical and contemporary trends in the size and composition of families and households, trends in marriage, divorce, remarriage, contraception, childbearing, and living arrangements, and interrelationships between household division of labor. Policy implications of all of the above are also considered.

PAM 204 Applied Public Finance (also CEH 244)
Fall. 3 credits. Prerequisites: PAM 200 or concurrent with PAM 200. S-U grades optional. D. Kenkel.
The public sector now spends nearly $2 out of every $5 generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course will provide an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of public finance, especially the role of government. Case studies and outside speakers will be used to illustrate these ideas.

PAM 205 Research Methods (formerly HSS 292)
Spring. 3 credits. Sections TBA.
W. Trochim.
Students will learn the logic and methods of social science research and develop skill in analyzing issues or problems through the research process. They will state their hypotheses, design hypothesis studies, and conduct statistical analyses. PAM majors should take this course later than their junior year.

PAM 206 Race, Power, and Privilege in the United States (formerly HSS 280)
Fall. 3 credits.
J. Avery and D. Barr.
For description, see AS&RC 280.

PAM 220 Introduction to Nonprofit Management (also HSS 220)
Spring. 3 credits. D. Tobias and S. Walston.
This course includes a basic introduction to management and related concepts of planning, organizing, controlling, leadership, and special topics within five major management contexts including individual/personal, groups/families, firms, not-for-profit organizations, and governments/communities.

PAM 221 Groups and Organizations (formerly HSS 203)
Spring. 3 credits. Enrollment limited to 125 students. Not offered 1998-99.
A basic course in the social psychology of groups and human service organizations. Students will explore these ideas using several specific topics. Students will learn the logic and methods of social science research and develop skill in transforming issues of interest to themselves into researchable questions. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. PAM majors should take this course later than their junior year.

PAM 222 Consumers in the Market I (formerly CEH 233)
Fall. 4 credits. D. Avery.
A study of the structure and functioning of consumer retail markets with emphasis on the role and activities of the major players in these markets—firms, groups, and governments. The nature and consequences of various types of market failures are studied from the perspective of the firm, the consumer, and the role of government. Case studies and outside speakers will be used to impart reality to the course.

PAM 230 Introduction to Policy Analysis (formerly CEH 230)
Fall. 3 credits. R. Avery and S. Walston.
Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public policy arena. Students will be introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course will focus on public policy analysis in the consumer, health, and family/social welfare areas and will also include an introduction to the technical skills required to undertake policy analysis.

PAM 240 Critical Perspectives (also HSS 240)
Spring. 3 credits.
J. Greene and J. Gershen.
This course examines the implications and importance of perspective for an examination of policy. It considers the sources of differing perspectives, including demographic characteristics, historical experience, and intellectual tradition. We also consider how these differing perspectives affect what is considered to be empirical evidence, what assumptions are made, and what outcomes are considered to be important. We will explore these ideas using several specific public policy proposals.

PAM 270 Housing and Society (formerly CEH 247)
Fall. 3 credits.
P. Chi.
A survey of contemporary American housing issues as related to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population, and governmental actions to alleviate housing problems.

PAM 300 Special Studies for Undergraduates (formerly CEH and HSS 300)
Fall or spring. Credit to be arranged.
Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multipage description of the study they want to undertake on a form available from the College Registrar's Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

PAM 301 Economic Organization of the Household (formerly CEH 325)
Fall. 3 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. Not offered 1998-99.
W. K. Bryant.
Economic models are used to help explain a wide variety of family and individual behavior. Topics include the demand for consumer goods and services; consumption and saving; time allocation in the household including labor supply; household production and leisure; human capital investment; fertility; marriage and divorce. Within each topic, uses of the material by public- and private-sector decision makers are discussed.
PAM 303 Ecology and Epidemiology of Health (formerly HSS 330)  
Fall. 3 credits. S-U grades optional. Limited to 50 students. E. Rodríguez.  
Ecological and epidemiological approaches to the problems of achieving human health within the physical, social, and mental environment. The course introduces epidemiological methods to the students and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.

PAM 305 Introduction to Multivariate Analysis (formerly CEH 307)  
Fall. 4 credits. Prerequisites: ARM 210 or ILRST 210 or equivalent. B. Rosen.  
The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and interpret the results of regression analysis. Factor analysis and analysis of variance will be covered as well. Section meets one a week.

PAM 310 Evaluation of Public Policies (formerly CEH 485)  
Fall. 3 credits. Prerequisites: PAM 200, 350 or permission of instructor. B. Rosen.  
This is an advanced course in economic policy analysis that builds on the material covered in PAM 330, Intermediate to Policy Analysis. The course will use a series of policy examples to demonstrate the economic approach. Special topics in cost-benefit analysis and policy evaluation techniques will be developed when necessary for the example under study. Examples of topics that may be addressed include excise taxation, economic evaluations of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.

PAM 322 Consumers in the Market II (formerly CEH 333)  
Spring. 4 credits. R. J. Avery.  
This course focuses on external and internal forces that shape consumer decision making. Material in this course will cover the processes whereby consumers interpret market-provided information and the social forces impacting consumer purchase decisions. Particular emphasis will be placed on communication institutions in the market (advertising, the news, and other mass media) and the control of these institutions through government regulation. A select group of consumer policy issues will be covered, such as consumer evaluation of product safety and quality, food additives, consumer privacy, and socially responsible advertising.

PAM 326 Personal Financial Management (formerly CEH 315)  
Spring. 3 credits. Preference given to humanities economics; limit 200; not open to freshmen. S-U grades optional. R. Heck.  
The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, basic economic and financial principles, returns to human resources, income and wealth analysis, the role of consumer and mortgage credit, financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, retirement and estate planning, and alternative forms of savings and investments.

PAM 330 Intermediate Policy Analysis (formerly CEH 250)  
Spring. 3 credits. Prerequisite: PAM 200. N. Kuty.  
Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as consumer and producer surplus, deadweight loss, rationale for public policy; benefit-cost analysis; impact assessments; experimental, quasi-experimental, and non-experimental designs; and the social ecology of policy analysis.

PAM 331 Introduction to Program Planning and Development (formerly HSS 360)  
Fall and spring. 3 credits. Not offered 1998-99. Staff.  
The course provides an introduction to program planning and development in the delivery of human services. Models of program planning, development, and delivery will be analyzed and practiced. The processes of conceptualizing a program and the context of planning and development (political, organizational, economic, and social) will be examined. Basic tools and techniques available to planners will be identified and selected skills developed. Issues related to ethics, power/authority, confidentiality, and accountability will be included. Professional roles and competencies needed will be highlighted throughout the course. Students will apply the planning and development process to individual projects.

PAM 340 The Economics of Consumer Policy (formerly CEH 330)  
Fall. 3 credits. Prerequisites: Econ 101, and PAM 200 or permission of instructor. S. Tennyson.  
Students are acquainted with the basic approaches to consumer policy and perform economic analyses of specific consumer policy issues. Three specific areas of policy intervention are addressed: externalities and public goods; anti-trust and regulation of "natural" monopolies; and markets characterized by imperfect information. Policy discussions are reinforced through the use of specific real-world examples. Students are required to write three short papers on each area of policy intervention discussed in class.

PAM 341 Economics of Consumer Law and Protection (formerly CEH 365)  
Spring. 3 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. A. Mathios.  
Economic analysis of the roles played by both the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, accident law and antitrust law, as well as the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 342 Financial and Credit Markets and Policy (formerly CEH 434)  
This course will look at the structure of financial markets in the United States. A number of different markets and institutions will be examined including banks, savings and loans, insurance companies, pension funds, government bond markets, credit unions, and finance companies. The principles underlying government regulation of these institutions will be explored, as well as management problems and concerns. The emphasis will be on learning the institutional environment, not on personal finance.

PAM 350 Contemporary Issues in Women's Health (formerly HSS 335)  
Fall. 3-4 credits. Offered alternative years. A. Parrott.  
This course will deal with the history of women in medicine and the cultural and historical treatment of women's health problems. Health care research and the exclusion of women from research trials and guidelines will also be addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations will also be discussed in depth. Students may take the course for a fourth credit, which will require attending a discussion session every other week and observations of seven facilities that provide a variety of women's health care (i.e., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaze class, women's self defense class, etc.) on the alternate week.

PAM 351 Community Mental Health (formerly HSS 380)  
Summer only. 3-4 credits. Not offered 1998-99.  
Students become acquainted with basic concepts in the field of mental health. Beginning with the injustices that served as a catalyst to the community mental health movement, the course evaluates the ethical and practical challenges experienced by mental health professionals in the community. Other topics include social roles of mental illness, epidemiology, the role of culture and social class in mental illness, public attitudes, and civil liberties.

PAM 370 Wealth and Income (formerly CEH 355)  
Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under PAM 600. Prerequisites: Econ 101-102 or equivalent. S-U grades optional. E. Peters.  
The wealth and income positions of American households are defined and described. Various statistics are employed to present conflicting pictures of the distribution of income among the working population. Several models of economic determinants of income are presented and redistributive policies are discussed in the context of the economics of the political and philosophical positions for and against such policies.
HUMAN ECOLOGY - 1998-1999

[**PAM 371 Economics of Family Policy—Adults** (formerly CEH 320) (also Economics 420)]
Fall. Limited to 40 students. Junior or senior standing; non-PAM majors by permission of instructor. Not offered 1998-99. Staff.

This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.

[**PAM 372 Economics of Family Policy—Children** (formerly CEH 321) (also Economics 421)]
Spring. 4 credits. Limited to 40 students. Junior or senior standing; non-PAM majors by permission of instructor. Not offered 1998-99. J. Gerner.

This course examines the economics of family policy issues that particularly affect children. This course focuses on economic behavior that generates the policies and b) the economic incentives and behavior that result from these policies. Topics include child welfare, education, day care provision, child support, and adoption.

[**PAM 373 The Economics of Welfare Policy** (CEH 356)]
Fall. 4 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. D. Burchfield.

Using the tools of economics, this course examines welfare policy. Included are an examination of how populations are affected, what behavior various policies are likely to engender, and how much income redistribution occurs as a result of various welfare policies. Also evaluated are various proposals for welfare reform.

[**PAM 374 Urban Economics and Policy (formerly CEH 348)**]
Spring. 4 credits. Prerequisite: PAM 200 or equivalent. S-U grades optional. N. Kuty.

This course explores the economics of cities and urban problems. The course is a study of the location choices of firms and households, growth of cities, and determination of land rents. The urban policy issues explored in this course include—housing, urban poverty, zoning, and community development.

[**PAM 375 Housing for the Elderly (formerly CEH 444)**]
Fall. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. P. Chi.

This is a service-learning seminar that will allow students to explore, through a wide range of service experiences, the different ways community agencies assist older adults to remain independent in such diversified residential settings as assisted retirement housing, subsidized housing for the low-income elderly, home-sharing projects, ECHO housing, accessory apartments, shared group living projects, and continuing care retirement community. This seminar is designed to provide an introduction to social welfare services. The seminar will focus on how the residential environment influences the ability of older adults to function independently and impacts their need for services. Throughout the seminar, students will be asked to reflect critically on how their service experience complements, challenges, or extends the course curriculum. The seminar will meet every week for 2 hours. Students are also required to have 2 hours of service a week. 4 during the weeks the seminar meets and 6 during the other weeks.

[**PAM 376 Housing, Neighborhood and Community (formerly CEH 445)**]
Spring. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. Not offered 1998-99. P. Chi.

A study of interrelationships between housing conditions, neighborhood transition, and community development. Both theoretical and empirical perspectives on residential patterns, neighborhood change, and community poverty and development. Special attention is also given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.

[**PAM 380 Human Sexuality (formerly HSS 315)**]
Spring. 3 credits. Limited to 500 students. Prerequisite: Introductory introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: One course in biology. A. Parrot.

The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. The course will focus on the evolution of sexual norms, across-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Future trends in sexuality will be addressed. Biological and developmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural system on the development of sexual needs, standards, and values. Research and theory in human sexuality will be explored in an interdisciplinary approach drawing on human and organizational behavior, biology, history, communication arts, education, research theory, law, sociology, and psychology.

[**PAM 381 Health-care Services and the Consumer (formerly HSS 325)**]
Fall. 3 credits. Prerequisite: Introductory introductory course in human services or health or biology. S-U grades optional. Offered alternate years. Not offered fall 1998. A. Parrot.

This course is an introduction to health care services and will present developments in the health field that affect the availability and kinds of health services. Emphasis is placed on interrelationships between types of practitioners, institutions, and agencies, and the part each can play in prevention, diagnosis, and treatment of disease and disability. Focus will include historical and current trends, quality health care, consumer issues, cultural concerns, ethical issues, politics and policies, and the contemporary problems of health care.

[**PAM 383 Social Welfare as a Social Institution (formerly HSS 370)**]
Fall. 3 credits. J. Allen.

A philosophical and historical introduction to social welfare services. The course reviews the historical, social, and political contexts within which social welfare programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and the ways in which policies are translated into social welfare programs. Basic issues in welfare and those generated through present program designs, public concerns, and the interrelationships and support of services in the community.

[**PAM 400-401-402 Special Studies for Undergraduates (formerly CEH and HSS 400-401-402)**]
Fall and spring. Credits to be arranged. S-U grades optional. Staff.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH, HSS, or PAM not otherwise provided through course work in the department or elsewhere at the university.

Students prepare a multipage description of the study they want to undertake, on a form available from the department field office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration with an add/drop slip. The department chair or College Registrar's Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

[**PAM 400 Directed Readings (formerly CEH and HSS 400)**]
For study that predominantly involves library research and independent reading.

[**PAM 401 Empirical Research (formerly CEH and HSS 401)**]
For study that predominantly involves data collection and analysis.

[**PAM 402 Supervised Fieldwork (formerly CEH and HSS 402)**]
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

[**PAM 403 Teaching Apprenticeship (formerly HSS 403)**]
Prerequisite: students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

[**PAM 404 Senior Seminar: Self-Evaluation of Professional Practice (formerly HSS 473)**]
Fall. 3 credits. Prerequisite: limited to students with field experience or ongoing field experience. Faculty.

The process of change at the individual, family, and community level is a major theme of the senior seminar. The second theme, which is integrated throughout the course, concerns ethical principles and values that should inform professional practice. We will also discuss value dilemmas attendant on interventions to promote change at both the micro and macro levels of practice.

[**PAM 424 Families in Business (formerly CEH 433)**]
Spring. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. R. Heck.
Offers students the opportunity to explore family business topics such as business formation, growth and expansion, strategic management, professionalization, succession, location, roles, and family dynamics, conflicts, and relationships relative to the business. An overview of families who own businesses and the profiles of their businesses will be presented along with the examination of the course topics relative to the various stages of business activity including feasibility, start-up, ongoing maintenance, expansion or redirection, and exit or transfer. Case studies from the Harvard Business School series will be utilized to examine the course topics listed above. The course also provides an introduction to research on family businesses by surveying the conceptual issues and methodological approaches related to the study of family businesses.

**PAM 425 Empirical Research on Family Businesses (formerly CEH 436)**

Fall. 3 credits. Prerequisites: introductory statistics or permission of instructor. S-U grades optional. R. Heck.

Allows students to develop research skills by providing opportunities for hands-on survey and fieldwork. Topics and activities include research design, sampling, questionnaire development, and statistical analyses related to family-owned businesses; critical review of current research approaches and extant databases used to research business ownership; and implementation and completion of an actual survey of fieldwork project of selected family business owners, or the use of extant databases for descriptive analyses of family-owned businesses.

**PAM 432 Community Decision Making (formerly HSS 465)**

This course provides an introduction to the local political environment of human service agencies and programs. Special attention is given to how community issues are raised, debated, and resolved. Topics include the roles of service providers, local government officials, social movement organizations, federal and state governments, the courts, and the news media. Previous or concurrent participation in community activities is desirable but not required.

**PAM 435 The U.S. Health Care System**

[also HSS 435]

Spring. 3 credits. L. Dimmeler.

This course provides an introduction to the health care delivery systems in the United States, and covers the inter-relatedness of health services, the financing of health care, and the key stakeholders in health care delivery including regulators, providers, health plans, employers and consumers. The course describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. The course provides an overview of the key elements of the field including ambulatory care services, mental health services, hospitals and clinicians, insurers, the roles of public and private organizations, and the politics of health care in the U.S.

**PAM 450 Economics of Health Behavior and Policy (formerly CEH 432)**

Spring. 3 credits. S-U grades optional. Prerequisites: PAM 200 or equivalent or permission of instructor. D. Kenkel.

This course uses the tools of economics to provide a better understanding of health behavior and policy. One focus is on policies that promote public health, including education programs and cigarette and alcohol taxation. Policies that influence consumer choices about health care and health insurance are also considered. A common theme is that to understand the effects of health policy it is necessary to analyze the incentives faced by consumers and the incentives of their employers, insurers, and health care providers. Analyses of specific health policies help develop this theme.

**PAM 470/HDFS 485 Psycho-Economic Perspectives on Human Intelligence and Achievement: Did the Bell Curve Get It Right? (formerly CEH 479)**

Spring. 3 credits. Prerequisites: Basic Statistics (ARME 210, ARME 411, BTRY 215, ILRST 210, PAM 305, ECON 319, ECON 320); Basic Economics: ECON 101 or permission of either instructor. Open to juniors and seniors; limited to 100. Not offered 1998–99. S. Ceci, E. Peters.

The course brings together the analytical tools and key models of economics and psychology to investigate issues raised by Herrnstein and Murray's book *The Bell Curve*. The objective of the course is to bring research into the classroom by enabling students to understand and use (in the lab) the methods available for defining and assessing intelligence and its relationship to success in life and other social issues.

**PAM 471 The Politics of Power and Empowerment in Community Development**

Spring. 3 credits. Limited to 20 students. D. Barr.

The course will take a theoretical world view of power and the historically colonial relationship between the American ruling class and other people. The three dimensions of power will be used as the framework for analysis. The relationship among social class, race, sex, and power will be under study. In addition, the class will explore the nature of empowerment and new theories of power and empowerment.

**PAM 473 Social Policy (formerly HSS 475)**

Spring. 3 credits. Prerequisites: PAM 393 or Government 111 or Sociology 141. S-U grades optional. J. Allen.

An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

**PAM 474 Housing and Feeding the Homeless (formerly HSS 476)**

For description, see H ADM 490.

**PAM 480 Professional Internship in Human Service Studies (formerly HSS 414)**

Fall or spring. 4–7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: PAM 100. Precourse enrollment required. Staff. Students intern for a minimum of 10 hours a week in a human service organization and attend a weekly seminar or office hours with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experientially and, at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

**PAM 481-482 Social Work Methods and Practice I and II (formerly HSS 471-472)**

Introduction to concepts and methods used in a generalist model of social work practice. Examination of the values and ethics of professional practice. Students learn knowledge and skills appropriate for working with individuals, groups, families, organizations, and communities. Class content is integrated with concurrent supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are expected to arrange and pay for their own transportation.

**PAM 481 Social Work Methods and Practice I (formerly HSS 471)**

Fall. 9 credits. Limited to 25 social work students. Lab fee $63. Prerequisites: introductory psychology, introductory sociology, one course in human development, grades of C+ or better in PAM 201 and 383. Staff.

**PAM 482 Social Work Methods and Practice II (formerly HSS 472)**

Spring. 9 credits. Limited to 25 social work students. Prerequisites: grade of B- or better in PAM 481 and satisfactory performance in fieldwork. R. Bounous, E. DeLara.

**Topics Courses**

Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. Hours to be arranged. Department faculty. This series of courses provides an opportunity for advanced undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

**PAM 483 Human Service Environments— Topic course (formerly HSS 490)**

**PAM 484 Human Service Programs— Topic course (formerly HSS 491)**

**PAM 485 Performance Management and Measurement in Nonprofit Organizations—Topic course (formerly HSS 492)**
HUMAN ECOLOGY - 1998-1999

PAM 486 Child Welfare I (formerly HSS 490)
Fall. 3 credits.
This course is an introduction to the field of child welfare with its many contemporary, traditionally, and sometimes controversial issues. Included is an overview of current child welfare practice and policy as it affects such problem areas as drugs and alcohol, children and homelessness, and children and violence. The course is designed to provide a systems theory orientation.

PAM 487 Child Welfare II (formerly HSS 490)
Spring. 3 credits.
This course is a sequel of Child Welfare I, which exposed students to the numerous problems plaguing children caught up in the child welfare system. Students will have the opportunity to take a closer look at how the system works, how it is not working to improve the lives of children, and what might be done about it. The purpose of the course is to prepare students to be change agents regarding the child welfare system and to not accept the status quo. The course will also focus on issues that are emerging for the future of children contends with the system.

PAM 499 Honors Program (formerly CEH 499 and HSS 499)
Fall or spring. This course is a combination of CEH 499 and HSS 499. For CEH and PA majors, the goal of the honors program is to provide students with the opportunity to undertake basic or applied research leading to the preparation of a thesis representing original work of publishable quality. The program is intended for those students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. CEH or PA majors doing an honors program may take PAM 499 for up to 15 credits. See Professor Alan Mathios for more details. For HSS majors the honors program affords the opportunity of an independent literature or field investigation. The HSS Honors Program is open to HSS majors who have been admitted as juniors to the College of Human Ecology Honors Program. HSS majors may take up to 6 credits of PAM 499 and should spread the credit over two semesters in their senior year.

PAM 520 Policy and Management Issues on Foreign Investment in China (formerly CEH 520)
Spring. 3 credits. P. Chi.
This course will help students understand the general investment environment in China and learn how social, cultural, political and economic factors affect decisions on market entry strategies, marketing mix strategies and other management strategies for FIES in China.

PAM 600 Special Problems for Graduate Students (formerly CEH and HSS 600)
Fall and spring. Credits to be arranged. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.

PAM 601 Research Workshop in Consumer Economics and Housing (formerly CEH 601)
Fall and spring. 1 credit. S-U grades only. Not offered 1998-99.
Research workshop designed to provide a forum for graduate students in consumer economics and housing to present their research.

PAM 603 Teaching Experience (formerly HSS 603)
Fall and spring. 1–3 credits. S-U only. For students assisting faculty with instruction. The aspects of teaching and the degree of involvement vary depending on the course and the experience of the student. Does not apply to work for which students receive financial compensation.

PAM 604 Economics of Consumer Demand (formerly CEH 613) (also Economics 413)
Fall. 3 credits. Prerequisite: PAM 200, Economics 311 or 513, or concurrent enrollment in the three, and two semesters of calculus. S-U grades optional. Not offered 1998-99. W. K. Bryant.
Introduction at the graduate level to theory and empirical research on household demand, consumption, and saving. Emphasis on the use of the theoretical and empirical research. Topics include neo-classical theory of demand, duality, complete demand systems, conditional demand, demand scaling and translating, consumption and savings. Time allows, Becker and Lancaster models of demand will be introduced.

PAM 605 Economics of Household Behavior (formerly CEH 624) (also Economics 427)
Spring. 3 credits. Prerequisite: PAM 604 or Economics 609-610 or consent of instructor. S-U grades optional. E. Peters.
This course examines household decision-making in both single agent and multiple agent (e.g., game theoretic or bargaining) frameworks. The first half of the course focuses on 1) the family structure, 2) its theoretical and methodological dimension, 3) time allocation models of behavior-decisions that are usually modeled in a single-agent framework. The second half of the course looks at 1) marriage markets, 2) family formation and dissolution, 3) bargaining models of resource allocation within the household, and 4) intergenerational transfers across households. These kinds of behaviors are more fruitfully studied using multiple agent models such as contract theory, game theory, and household bargaining. Empirical applications of the theoretical models are presented for both developed and developing countries. Implications for family policies such as child care subsidies, divorce laws, family planning, government subsidies to education, and social security are also discussed. Much of the material covered by this course could typically also be found in economic demography and economics of the family courses.

PAM 606 Demographic Techniques (formerly CEH 606)
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

PAM 607 Advanced Family Demography (formerly CEH 627)
Fall. 3 credits. Prerequisite: PAM 606 or equivalent. S-U grades optional. Offered alternate years. Not offered 1998-99.
This course builds on the basic methods of dynamic population analysis covered in PAM 600. Demographic Techniques, extending them to the study of lives and populations structured not only by age and sex, but also by family status. The same or very similar methods apply to populations structured on other discrete dimensions (e.g., labor force status, region of residence, health status). Life-cycle analysis methods used to study the distribution of total lifetime are extended to the study of the distribution of total lifetime between family states. Methods for studying reproduction are extended to the study of kin and family states resulting from distributions of reproductive performance in the female population. Methods for studying individual lifetimes are also extended to the study of intersecting lifetimes, primarily through nuptiality. These are general models or, more generally, models of interacting populations. Finally, household structure, fusion, and fission are studied. This combines elements of interacting-population and kin-availability modeling, plus static population-comparison methods.

PAM 610 Introduction to Program Evaluation (formerly HSS 689)
Fall. 1 credit. J. Greene.
This course provides a conceptual introduction to the theory and practice of social program evaluation. It is designed particularly but not exclusively for students planning a major or minor in HSS program evaluation and planning. The course emphasizes two major dimensions of evaluation: 1) its practical, real-world political dimension and 2) its theoretical, methodological dimension. At the intersection of these two dimensions lie issues of evaluation's purpose and role, which are also addressed in the course.

PAM 611 Program Evaluation and Planning—Topic course (formerly HSS 611)

PAM 612 Measurement for Program Evaluation and Research (formerly HSS 690)
Fall. 4 credits. Priority given to HSS students. Limit 35. E. Rodriguez.
The course reviews measurement theory and its application to the evaluation of human service programs. Topics include validity, reliability, scaling methods, basic principles of instrument design, and varied methods of data collection with an emphasis on structured questionnaires and interviews. Student work is focused around an applied course project. Attention is also given to ethical and managerial issues that arise in applied measurement settings.

PAM 613 Program Evaluation and Research Design (formerly HSS 691)
Spring. 3 credits. W. Trochim.
This course reviews research design and its application to the evaluation of human service programs. Major topics include experimental, quasi-experimental, and nonequivalent research designs, basic measurement theory, and the theory of validity in research. Attention is given to issues that arise in the application of research designs to the evaluation of programs including problems of randomization, causal inference, replication, and utilization of
results. The central role of the general linear model in the statistical analyses of outcome evaluation is presented through case examples and computer simulation. Students will encounter examples of outcome evaluations from a wide range of disciplines including health, social work, criminal justice, social policy, and education.

PAM 614-615 Program Evaluation in Theory and Practice (formerly HSS 692-693)
614, fall; 615, spring, 4 credits each semester. Prerequisites for PAM 614: 612 and 613 or 617, or consent of instructor. Prerequisite for PAM 615: 614. Students must register for both semesters. Staff. This course is a practicum in which the class designs and conducts an evaluation of a human service program. Students are involved in all phases of the evaluation from design through the production and dissemination of a final report. Emphasis is on research methods in the social sciences. Application of knowledge and principles of evaluation. Students are stressed for example, planning and managing an evaluation, ethics, methods of data collection, data processing, and strategies for analysis and feedback of results.

PAM 616 Strategies for Policy and Program Evaluation (formerly HSS 695)
Fall. 3 credits. Prerequisites: PAM 612 and 613 or 617 or equivalent. Offered alternate years. C. McClintock. This course examines a wide range of approaches to the evaluation of policies and programs in the human services. The approaches are examined with respect to their purposes, key audiences, and methodologies, as well as their philosophical, political, and value frameworks. Analysis of commonalities and differences across evaluation approaches are used to judge the appropriateness of a given strategy for a particular context.

PAM 617 Qualitative Methods for Program Evaluation (formerly HSS 696)
Spring. 3 credits. Prerequisites: PAM 612 and 613 or 617 or equivalent. J. Greene. This course presents a qualitative approach to applied research and the evaluation of human service programs and policies. It provides a critical examination of epistemological assumptions underlying this approach, questions of entry into setting, methods for data collection and data analysis, reporting, confidentiality of participants, and the ethics of qualitative inquiry. The course aims to help students understand how, when, and why a qualitative approach to social inquiry can be used appropriately, effectively, and defensively.

PAM 618 Seminar in Program Evaluation and Evaluative Research (formerly HSS 687)
Fall and spring. 1 credit. W 12.0-110. J. Greene, E. Rodriguez, and W. Trochin. This ongoing seminar is topically organized according to student and faculty projects. Focuses on teaching issues in evaluation practice, including consulting, ethics and standards, preparation of conference and publication materials, and various methodological issues.

PAM 620 Human Service Administration—Topic Course (formerly HSS 610)

PAM 623 Consumer Decision Making (formerly CEH 639)
Spring. 3 credits. Not offered 1998-99. R. J. Avery. Individual and family decision making with respect to their market purchases will be investigated from a multidisciplinary perspective. Topics to be covered in the course include cognitive theories of information processing; theories of group interaction in decision making; and the effect of advertising, imperfect information, and uncertainty on consumer product evaluation and purchase behavior. Special attention will be given to decision making by consumers in various market segments, e.g., low-income consumers, children, and the elderly. Specific attention will be paid to how consumers in these segments process marketer-provided information and their related consumption decisions.

PAM 630 Seminar in Program Planning and Development (formerly HSS 669)
Fall. Variable credit. Staff. Topics include microlevel program planning, third-sector organizations, and intergovernmental influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human service areas are examined.

PAM 631 Ethics, Public Policy, and American Society (formerly HSS 658)
Fall. 3 credits. J. Ziegler. This course will explore current issues of ethics and public policy against a background of theories of ethical behavior. Questions of how public officials and managers of public and non-profit agencies and private enterprises will act will be examined. How do standards of ethical behavior in the professions get established? How are public policy issues with ethical implications resolved? Readings will be drawn from political philosophy, contemporary social science, and imaginative writing. Class participation is essential. Open to seniors and graduate students.

PAM 632 The Intergovernmental System: Analysis of Current Policy Issues (formerly HSS 664)
Fall. 3 credits. Open to seniors who have had a course in American government and to graduate students. J. Ziegler. This course offers advanced policy analysis of current political/social/economic issues in the context of the intergovernmental system. Particular attention is paid to how certain policy and human service issues are played out at the federal, state, and local levels of government, and to the formulation of federal and state budget policy. General public administration considerations. Students work in teams on a policy/administrative research project and report to the class.

PAM 633 Social Policy and Program Planning in Human Services (formerly HSS 660)
Spring. 3 credits. U grades optional. Staff. An examination of the policy process with an emphasis on the ways in which this process determines the allocation and distribution of social services in the fields of health, education, income security, employment, criminal justice, and housing. The relationship of the policy process to the political economy, to intergovernmental relations, and to social change at the national, regional, state, and local levels will be analyzed. To this end, history, theories, cultural values and beliefs, and the structure of society will also be investigated. The role of evaluation in policy planning and implementation will be underscored. Current issues in policy, such as the role of the private and voluntary sectors, intergovernmental politics, barriers and constraints to the development of effective policies, and the respective roles of consumers, clients, and human service professionals in the policy process will also be addressed.

PAM 640 Information and Regulation (formerly CEH 635) (also Economics 481)
Spring. 3 credits. Prerequisite: PAM 604 or PAM 200 and two semesters of calculus. Staff. Using a survey of the problems and policies accompanying informational failures and other market failures with regard to consumer well-being. Governmental regulation of products, of producers, of consumers, and of prices is examined. Antitrust, requirements, advertising restrictions, and regulatory agencies are examined in terms of their ability to serve the public interest or to serve special interests. Economic analysis, rather than institutional structure, is emphasized.

PAM 650 Health Administration—Topic course (formerly HSS 612)
Topical Seminars and Practica

PAM 651 Seminar in Mental Health Services (formerly HSS 613)
Fall. 3 credits. Open to undergraduate seniors with instructor's approval. J. Mueller. Using lectures, case examples, and class discussions, we will look from both administrative and clinical perspectives at the organization and delivery of mental health services to persons who are mentally ill, mentally infirm, or seriously emotionally and/or developmentally disabled. We will examine model programs for long-term community care and services designed to meet the special needs of ethnically/racial minorities, women, and homeless persons who are mentally impaired. State/federal partnerships will be discussed in terms of their impact on fiscal and human resources for both public and for-profit agencies.

PAM 652 Health Care Services: Consumer and Ethical Perspectives (formerly HSS 623)
Fall. 3-4 credits. Limited to 30 students; undergraduates with permission of instructor. 4-credit option, may be used as Biology and Society Senior Seminar option. J. Parrot. The course will focus on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care delivery, health care as a right or privilege, private industry role in health care, services for the medically indigent and elderly, practitioner burnout and training.
ethics of transplantation and funding, reproductive technology, AIDS research and funding, animals in medical research, right to die, and baby and granny Doe cases.

PAM 653 Health Economics and Policy (formerly CEN 632)
Spring. 3 credits. Prerequisites: PAM 604, Econ 609 or permission of instructor. S-U. Prerequisites required: R. M. Kenkel.

This course provides an overview of research in health economics and its relevance for health policy. Models of health capital, household production, and insurance are developed and used to address public health policies and health insurance programs and reforms. Major issues in the economics of the health care sector are discussed, including the markets for physician services, hospital care, and long-term care. Much of the course focuses on the U.S., but it will also review research on other countries, especially developing countries that face a much different set of health policy issues.

PAM 654 Legal Aspects of Health Services Delivery (formerly HSS 627)
Spring. 3 credits. Prerequisites: PAM 657 or permission of instructor. Staff.

This course introduces principles of the law that are specifically applicable to health services delivery. Topics considered include the liability of hospitals and their staff and personnel for injuries to patients; medical records and disclosure of information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

PAM 655 Comparative Health-Care Systems (formerly HSS 630)
Spring. 3 credits. Open to graduate students and a limited number of seniors with permission of instructor. P. J. Ford.

An overview of health services is given within the larger context of the social and economic development policies of several industrialized democracies and developing countries. Sociocultural, economic, and epidemiologic factors are stressed as keys to the formulation of realistic strategies. Resource allocations for health services are assessed against the backdrop of changing rates of economic growth.

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care (formerly HSS 631)
Spring. 3 credits. Prerequisite: PAM 657. R. Battistella.

The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in the delivery of health services organization and financing. Pressures on traditional indemnity insurance and solo fee-for-service medicine are examined in the context of the transition from unmanaged to managed care delivery systems. The course is divided into two parts: Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part 2 focuses on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive markets. Considerable attention is given to the relationship between health care management and with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. The consumer

PAM 657 Health Care Organization (formerly HSS 634)
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of the instructor. R. Battistella.

The course will provide an introduction at the graduate level to the organization of health providers in the United States, the interrelationships of major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different services interrelate along the continuum of care. The course will describe and analyze organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (eg., equity, quality, efficiency). Innovations by the public and private sectors in the delivery and reimbursement of health care will also be presented.

PAM 658 Field Studies in Health Administration and Planning (formerly HSS 635)
Fall or spring. 1-4 credits. TBA. Staff.

Students interested in developing administrative and program-planning research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 659 Epidemiology, Clinical Medicine, and Management Interface Issues (formerly HSS 637)
Spring. 3 credits. E. Rodriguez.

This course explores from an empirical and analytical framework the relationships between epidemiology, clinical medicine, and management. The course will review the epidemiology, policy issues, and treatment of selected diseases accounting for a significant percentage of utilization and cost of health care services. In addition, students will have an opportunity to explore issues of resource allocation and continuous quality improvement. The format for the class is lecture, discussion, and case analysis.

PAM 660 Quality in Health Care Organizations (formerly HSS 638)
Fall. 3 credits. A. Klabenfeld and S. Walston.

The quality of health services—the extent to which the appropriate and most effective care is properly administered in the least costly manner—is a topic of paramount importance to patients. But, it is also a central concern of the providers and those who pay for care. It is also a cornerstone of health care reform. Through readings, lecture, discussion, and group work, this course will acquaint the student with the basic elements of managing quality in health care organizations including: defining quality from many perspectives; measuring performance and detecting poor quality care; traditional and alternative approaches to managing quality including Continuous Quality Improvement; and the politics of quality, both within and outside the organization.

PAM 661 Economics of Health and Medical Care (formerly HSS 640)
Fall. 3 credits. J. Kuder.

The course is designed for graduate students who seek an understanding of the tools, vocabulary, and way of thinking of economics as it is applied to decision making in health services delivery, administration, and policy. The philosophy of the course approach is based upon the often-quoted credo of John M. Keynes: 'The theory of economics does not furnish a body of settled conclusions immediately applicable to policy. It is a method rather than a doctrine, apparatus of the mind, a technique of thinking which helps its possessors to draw correct conclusions.' The basic methods of micro-economics will be emphasized as tools to help individuals and organizations make better decisions about health services delivery, administration, and policy issues.

PAM 662 Health Care Financial Management I (formerly HSS 641)
Fall. 3 credits. D. Burchfield.

The course is designed to give graduate students an intensive introduction to the issues and techniques in the financial management of health service organizations. Lectures, readings, guest speakers, problems, case studies, and research for term paper/projects will all be used to get across the important points and reinforce them with examples and applications. The course emphasizes the internal financial management knowledge and skills necessary for financial success in complex health organizations.

PAM 663 Health Care Financial Management II: Payment Systems (formerly HSS 642)
Spring. 3 credits. Prerequisite: PAM 662. Staff.

The purpose of this course is to develop an understanding of the theories on which health care payment and reimbursement systems are based and the techniques through which they operate.

PAM 664 Information Resources Management in Health and Human Service Organizations (formerly HSS 645)
Spring. 3 credits. Prerequisite: PAM 662. Staff.

The course focuses on the nature of decision making and decision support systems, sources of information, and the strategic management of information resources in organizations.

PAM 665 Managing Health and Human Service Organizations I (formerly HSS 648)
Fall and spring. 3 credits. K. Edwards.

This is the first segment of an 8-credit course sequence addressing the management and leadership of health and human services organizations, with a perspective that ranges from that involved in first-line supervision to that of strategy setting at the CEO level. This course begins with a study of management—communications, motivation, change management, leadership, human resources, organizational design issues, and labor relations. It then turns to the development of technical skills in the areas of problem solving, decision making, productivity measurement, resource allocation, and performance measurement. The course is taught with an applied focus and utilizes a case study approach.
PAM 666 Strategic Management and Organizational Design of Health Care Systems (formerly HSS 649) Spring. 3 credits. Prerequisite: PAM 665. S. Walston.

This is the second segment of an 8-credit sequence in the management and leadership of health and human services organizations. This course concentrates on strategy issues, marketing, organizational culture issues, development of mission, the management of professionals, and studies the importance of roles, structure, and inter- and intra-institutional relationships in these organizations. The course is taught via a case study approach.

PAM 667 Health and Welfare Policy (formerly HSS 665) Fall. 3 credits. R. Battistella.

Health and welfare issues are seen as reflecting alternate solutions to the broader institutional problems of allocation (economics), control (politics), and normative behavior (morality). A basic tenet is that health and welfare policy is deeply rooted in social values and the availability of economic resources. Health policy is interpreted from a multidisciplinary perspective in which change emanates from structural dynamics accompanying socioeconomic development such as the evaluation of the economy from the entrepreneurial to the managerial to the post-industrial stages, together with shifts in social and political ideology—libertarianism, welfare statism, and secular humanism.

PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems (formerly HSS 668) Spring. 3 credits. Prerequisite: PAM 657. R. Battistella.

Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Progressive long-term care is viewed as a continuum encompassing medical dependency and independence. Social and public-private health services are viewed as complementary. Topics covered include fiber properties, fabric structure, and fiber processing, with an emphasis on visual design and its role in fashion and interior design. Special emphasis is given to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented reality and virtual reality are used to enhance the learning experience. A studio course that focuses on the use of technology in the classroom.

PAM 674 Housing Economics (formerly CEN 648) (also Economics 448) Spring. 3 credits. Prerequisite: PAM 200 or Economics 311 or 313. M. 1-25-3-5-5.

A survey of economic theory and empirical research related to housing markets. The course studies the demand and supply sides of the housing market as applications of microeconomic theory. Topics related to housing demand include tenure choice (decision to own or rent), household formation, mobility, and discrete choice models of housing demand. Topics on the supply side include housing starts, maintenance, and rehabilitation. Topics in housing finance such as mortgage choice, and the demand for home mortgage debt will be studied. Housing policy issues such as tax policy, housing for the elderly, fair housing, rent control, and zoning also will be addressed.

Students in this seminar will study human service organizations in the context of their changing economic, political, ecological, and technological environments, and in terms of the leadership behaviors of administrators who are making successful adaptive responses to these changes. The introduction of new organizational forms and strategies for nurturing innovation and for effecting cultural change within the work environment will be discussed from the perspective of leadership roles at various organizational levels. Readings include both new theoretical literature and practical how-to-do-it guides for administrators. The seminar format provides an opportunity for simulations so that students can enact and receive feedback on their own developing leadership skills.

PAM 704-705 Internship in Human Service Studies (formerly HSS 704-705) Fall, spring, or summer. 1-15 credits. S-U grades optional.

Internship placement in human services is determined by availability and students' academic and professional goals. Opportunities are available in public and private human service organizations at the national, state, and local levels in positions consistent with students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

PAM 718 Advanced Seminar in Program Evaluation (formerly HSS 790) Fall, spring. 1-3 credits. S-U grades optional. Prerequisite: permission of the instructor. Staff.

This advanced course is intended for students with at least three courses in evaluation (PAM 612 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, addressing current issues of importance in the field.

PAM 799 MPS Problem Solving Project (formerly HSS 799) Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge for independent advanced work. S-U grades optional.

PAM 899 Master's Thesis and Research (formerly CEN and HSS 889) Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

PAM 999 Doctoral Thesis and Research (formerly CEN and HSS 999) Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

Topical Seminars and Practica—PAM 618 and 630 (formerly HSS 697 and 669) Seminars and practica offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

Topics Courses—PAM 611, 620, and 650 (formerly HSS 611, 610 and 612) Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. Hours to be arranged.

This series of courses provides an opportunity for graduate students to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

TEXTILES AND APPAREL COURSES

A. Lemley, chair, A. Netravali, director of graduate studies; P. Schwartz, director of undergraduate studies; S. Ashdown, C. C. Chu, C. Colman, C. Jirousek, S. Loker, S. K. Obendorf, A. Racine, S. Watkins

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

TXXA 114 Introduction to Computer-Aided Design Fall and summer. 3 credits. Fall, T, W, or R 1:25-4:25. It is important for students on wait lists to attend the first class. Limit 14 per lab section. Fall and spring. Credits to be arranged. Not open to those who have taken or are currently enrolled in TXXA 648.

TXXA 125 Art, Design, and Visual Thinking Fall. 3 credits. S-U grades optional. Lecs M W F 12:20-1:10. C. Jirousek

An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an internet-based electronic textbook, lectures emphasize the various dimensions of expression to be seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an internet-based electronic textbook, lectures emphasize the various dimensions of expression to be seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

TXXA 271 Policy Analysis and Management 271
TXA 145 Introduction to Apparel Design
Spring. 4 credits. Limited to 36 students with 18 students per lab section. Prerequisite: TXA 135. Letter grades only. This course covers the fundamentals of apparel design, including the principles and processes of draping, advanced flat pattern making, and fitting. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 217 Drawing the Clothed Figure
Spring. 3 credits. Enrollment limited to 18 students. Prerequisite: a basic drawing course. This course covers the application of principles of how to draw clothing on the human body. Emphasis will be on development of techniques to express the human body, materials, and clothing designs quickly and clearly in working sketches and to present clothing designs in finished renderings.

TXA 237 Structural Fabric Design
Fall. 3 credits. Prerequisite: TXA 135. Letter grades only. This course covers the technical elements of fabric design with an emphasis on woven and knitted fabrics. Topics include structure of woven and knitted fabrics, openness, manufacturability, equivalence, and color effects.

TXA 264 Draping
Fall. 4 credits. Limited to 20 students. Prerequisite: TXA 135 and TXA 145. Letter grades only. The course requires the students to use the design process to apply information about body structure, user needs (thermal protection and comfort), mobility, and visibility, and the nature of materials to the production of functional, fashionable apparel.

TXA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Staff. Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multicopy description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.

TXA 331 Apparel Production and Management
Fall. 3 credits. Prerequisites: Economics 101 and 102 and an upper-division course in either apparel or textiles. Lab fee. S. Loker. This course covers the techniques of apparel and management industry, particularly the technical and economic aspects of apparel production. Analysis of specific apparel manufacturing and management issues such as efficient manufacturing methods (e.g., Quick Response, CAD, and EDD); the garment industry, labor, environmental impacts, and safety.

TXA 335 Fiber Science
Fall. 3 credits. Prerequisites: College chemistry and physics. Lab fee. M W 1:25–4:25. A. Netravali. This course covers fibers commonly used in various engineering, medical, and apparel applications. Topics include nature of polymer molecules, chemical structure of organic fibers, inorganic fibers, micro-macro structure of fibers, fiber dimensions, environmental effects, mechanical, optical, thermal, and frictional properties of fibers. Fiber uses such as composites in aerospace and other structural components, circuit boards, bulletproof vests, sutures, artificial arteries, geotextiles, sporting goods, etc., will be discussed.

TXA 336 Fundamentals of Color and Dyeing
Fall. 3–4 credits. Prerequisite: college Natural Science Requirements. Fiber science students are required to take the lab. Lab fee. Lecs M W 10:10–11:00; lab M 1:25–4:25. C. C. Chu. Color is an extremely important and useful factor in daily life. This course will emphasize theories and scientific principles of color, providing a framework for the use of colors in design, marketing, or research. How colorants are used to dye fabrics will be addressed. Although fabrics are chiefly used to illustrate color in the class, much of the information and knowledge will be useful to non-textile majors. Guest lecturers from industry will provide the practical aspects of color in business.

TXA 400-401-402-403 Special Independent Studies for Undergraduates
Fall or spring. Credits to be arranged. S-U grades optional. Staff. For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of TXA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multicopy description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration along with an add/drop slip in 145 MVR, College Registrar Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special-studies form to the department chair is necessary. Staff, students, in consultation with their supervisor, should register for one of the following subdivisions of independent study.

TXA 403 Directed Readings
For study that predominantly involves library research and independent reading.

TXA 404 Empirical Research
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

TXA 406 Supervised Fieldwork
S-U only. For study that involves both responsible participation in a community setting and reflection on that experience, through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.
TXA 403 Teaching Apprenticeships
Fall or spring. 2-4 credits. Prerequisites: student must have upperclass standing, have demonstrated a high level of performance in the subject to be taught and in the overall academic program, and have permission of the instructor and the department chair. S-U grades optional. Staff. Apprenticeship includes both a study of teaching methods in the field and assisting the faculty with instruction.

TXA 432 Product Quality Assessment
Fall. 3 credits. Prerequisites: TXA 135 and Statistics. Lab fee, $15. Lecs M W 1:25; lab M or W 2:30-4:25. S. K. Obendorf. This course covers evaluation of fibers, yarns, fabrics, and garments, with emphases on the meaning of standards, testing philosophy, quality control, and statistical analysis. Day-to-day tests used in textile and apparel industry will be discussed. Laboratory sections will introduce students to various test methods, data generation for analysis, and evaluation.

TXA 436 Fiber Chemistry
Spring. 3 credits. S-U grade optional. Senior and first-year graduate students. Lecs M W F 10:10-11:00. Offered alternate years. Not offered 1998-99. C. C. Chu. The chemical and physical structure of several commercially important fibers, such as cotton, wool, silk, polyesters, nylons, acrylics, polyolefins and spandex and their polymerization process are discussed. The general chemical and physical properties of each will be given. Degradation reactions for certain fibers such as polyolefins and acrylics will be discussed.

TXA 439 Biomedical Materials and Devices for Human Body Repair

TXA 444 Apparel/Textile Retailing and Distribution
Spring. 3 credits. S-U grades optional. Juniors and seniors only. Prerequisites: TXA 135, TXA 331, and ARME 240 or equivalent. Lec M W 2:55-4:10. P. Schwartz. This course provides an overview of the business of design, production, distribution, marketing, and merchandising of apparel and related products from a management perspective. The organization and structure of both domestic and international retailers is included along with pricing strategies, merchandise planning, inventory management, and sales promotion. New uses of computer systems and information technologies will be emphasized throughout.

TXA 446 Apparel Design: Intermediate Functional Clothing Design
Spring. 4 credits. Prerequisites: TXA 367 and TXA 246 or permission of instructor. Minimum cost of materials, $125; lab fee, $15. Offered alternate years. M W 10:10-1:10. S. Watkins. Complex problems in functional apparel design will be studied with an emphasis on totally encapsulating clothing. Students will work in groups and individually to set design criteria and develop innovative solutions for current problems in protective apparel.

TXA 465 Apparel Design: Product Development and Presentation
Fall. 4 credits. Prerequisites: minimum of three drawing or art courses, TXA 264, TXA 368, and TXA 375 or permission of instructor. Minimum cost of materials, $250; lab fee, $10. M W 10:10-1:10. Not offered 1998-99. S. Ashdown. Through studio problems in apparel design, students examine the influence of manufacturing technology and cost on apparel products. Garments are developed to various stages from sketches to finished samples. Some portfolio development included.

TXA 475 Computer-Aided Design for Portfolio Presentations in Textiles and Apparel
Spring (first seven weeks of semester). 2 credits. Prerequisite: TXA 217 or TXA 375. Course fee covering CAD lab color printing, $15.00. T R 10:10-12:05. C. Jirousek. This course will explore the use of Adobe Photoshop as a tool for portfolio development in textile and apparel design. Building on studio work produced in other courses, students will learn the basics of Photoshop and create a design line for a formal portfolio that will involve textile design applied to either apparel or home furnishings use.

TXA 499 Honors Thesis Research

TXA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades optional. Staff. Independent advanced work by graduate students recommended by their chair and approved by the department chair and instructor.

TXA 626 The Chemistry of Textile Finishes and Dyeing
Spring. 3 credits. S-U optional. Prerequisites: TXA 360 or equivalent and organic chemistry, or permission of instructor. Not offered alternate years. C. C. Chu. Chemical aspects of textiles with emphasis on finishes and dyeing are discussed. Industrially important textile chemicals used for dyeing and enhancing fiber and fabric properties, such as durable press, anti-soiling, water repellency will be studied. The emphasis is on the correlation of the observed effect with chemical structure, end-use influences, interaction with fabric and fibers, sources and synthetic routes. The environmental impact of these textile chemicals and current federal regulation will be briefly discussed.

TXA 628 Textiles and Apparel Special Topics in Textiles and Apparel
Fall. 1-3 credits. Prerequisite: permission of instructor. Staff.

TXA 637 Research Seminars in Apparel Design
Fall and spring. 1 credit; S-U optional; repeat of course each semester is encouraged for all apparel design graduate students. Open to advanced undergraduates with permission of individual instructor. Apparel Design faculty.

TXA 639 Mechanisms of Fibrous Assemblies
Fall. 3 credits. Prerequisite: solid mechanics or permission of instructor. Offered alternate years. Not offered 1998-99. S. Ashdown. A study of the mechanics of fiber assemblies: idealized yarn and fabric models; statistical bundle theories; deformation of yarns and fabrics in tensile, shear, and compression stress; bending and buckling; and the mechanical behavior of nonwoven textile materials.

TXA 644 Human Factors: Anthropometrics and Apparel Design
Spring (even-numbered years). 3 credits. S-U grades optional. Prerequisites: course in statistics and permission of instructor. Open to advanced undergraduates. Offered alternate years. Not offered 1998-99. S. Ashdown. Seminar course focusing on the human form and its relationship to clothing. Includes discussion of quantification of body sizes and human variation; historical, cultural, and aesthetic concepts of fit; apparel sizing techniques; national and international sizing systems and standards; impact of sizing systems on various populations (elderly, handicapped, etc.).

TXA 657 Aesthetics and Meaning in World Dress
Spring. 3 credits; S-U grades optional. Prerequisites: TXA 125 or course in history of art, costume history, or other history. Offered alternate years. Not offered 1998-99. C. Jirousek. An examination of the aesthetic and social psychological relationship between body and clothing in the context of various cultures. Students will develop a research topic to be presented orally and in a term paper and will participate in the development of an exhibition.

THE SCHOOL

The School of Industrial and Labor Relations at Cornell (ILR) is a small school within a large university. It tries to maintain the small-college atmosphere expected of an institution that has about 700 undergraduates and approximately 120 graduate students, even as ILR students participate fully in the activities of the larger Cornell community.

ILR students begin study in January 1998 in modern, technologically advanced lecture halls and seminar rooms, as well as a library enlarged in size and more useable for study. Almost half of the school's typical freshman class comes from the greater New York City area. Another 30 percent live in other parts of New York State. Students from other states and a few from foreign countries make up the rest of the class. Women constitute about 50 percent of recent entering classes, and minority students comprise about 25 percent of new freshmen and transfer students.

Students enrolled in the School of Industrial and Labor Relations at Cornell may take a substantial number of courses in the other six undergraduate colleges and schools of the university, including the College of Arts and Sciences. Cornell students have access to all of the libraries and other services of the university.

The school operates in four areas: (1) resident instruction, (2) extension and public service, (3) research, and (4) publications. It provides instruction to undergraduates and graduate students who are preparing for careers in industrial and labor relations, as well as to men and women already engaged in industrial relations activities and the general public through its Extension and Public Service Division.

The school's Conference Center, part of the extension division, initiates and hosts conferences covering the full scope of industrial and labor relations. The center provides continuing education and information to practitioners and scholars.

The Research Division develops materials for resident and extension teaching and originates studies in industrial and labor relations. The Publications Division publishes and distributes the research results.

GRADUATE DEGREES

More than 120 students on the Cornell campus are enrolled in graduate study in industrial and labor relations, one of the largest graduate fields in the university. Students may work toward the degrees of Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy. For further information on graduate programs, contact the Graduate Office, School of Industrial and Labor Relations, Cornell University, 216 Ives Hall, Ithaca, NY 14853-3901.

DEPARTMENTS OF INSTRUCTION

Courses in the school are organized into six departments:

Collective Bargaining, Labor Law, and Labor History

In the study of workers, employers, and the government policies affecting them, members of this faculty concentrate on subjects of industrial and labor relations best understood by reliance on the fields of administration, economics, history, and law. Courses explore subjects within the framework of American society, stress fundamental forces of change, and analyze texts and empirical data with methods drawn from the social sciences, the humanities, and the legal professions.

Human Resource Studies

This department offers specialization in human resource studies. Human Resources focuses on employer-employee relationships and deals with such topics as human-resource planning, staffing, computer communications, personnel information systems, training, management development, performance appraisal, compensation administration, organization development, and the social context of human resource management. The study of human resource policy focuses on government efforts to enhance the population's ability to be employed. Although primarily concerned with governmental measures that influence the supply of labor (for example, training, education, health, mobility, and immigration), the subject area also includes policies in private industry that relate to the demands for labor.

International and Comparative Labor Relations

International and Comparative Labor Relations is concerned with industrial and labor relations systems and labor markets in other parts of the world. Countries include those in Western Europe, as well as in Asia, Latin America, and South America.

Labor Economics

Labor Economics deals with labor markets: that is, the institutional arrangements, terms, and conditions under which workers supply their labor and under which firms demand their labor. Faculty members are especially concerned with understanding the workings of labor markets and the effects of various public policies. The topics dealt with in courses and research include the following: analysis of the labor force, employment and unemployment, wages and related terms of employment, income distribution, income security programs, health and safety in industry, retirement, pensions and social security, economic aspects of collective bargaining, and economic demography.

Organizational Behavior

By studying individuals, groups, single organizations, and associations or organizations, persons in the field of organizational behavior understand human behavior within organizations as well as the actions of the organizations themselves. At the individual level of analysis, courses consider motivation, leadership, attitudes, personality, group processes, organizational change, and worker participation. At the organizational level, courses examine occupations, deviance in the work place, conflict, power, organizational design, public policy regarding organizations, and industrial conflict. The department also offers courses in research methods in organizational research and general survey courses in both psychological and sociological research.

Social Statistics

Economic and social statistics includes the principles of statistical reasoning, statistical methods, and the application of statistical tools of analysis.

A full list of required and elective courses is available from the Office of Student Services, 101 Ives Hall.
RESIDENT INSTRUCTION

This division conducts the on-campus programs leading to the degrees of Bachelor of Science, Master of Industrial and Labor Relations, Master of Professional Studies, Master of Science, and Doctor of Philosophy from Cornell.

Office of Student Services

Staff members from the Office of Student Services, 101 Ives Hall, work closely with faculty and committee members to administer degree programs for the school and many of the school's support services. The office's responsibilities include the admitting and orienting of new students, maintaining students' personal and academic records, and counseling students on personal and academic problems. The office also works closely with seniors who are planning graduate study.

Counseling and Advising

New students will be provided advising on orientation, academic procedures, and course registration by counselors in the Office of Student Services.

Each of the school's academic departments names faculty members to serve as advisers for students who wish to consult with them regarding career possibilities in the field, postgraduate programs, or similar matters. Questions or issues related to graduation requirements, course registration, and related academic procedures should be raised with counselors in the Office of Student Services.

Minority Programs

Cornell University administers a variety of special opportunity programs designed to provide financial assistance and other forms of assistance to (1) minority students and (2) low-income students meeting program guidelines. The purpose of these programs is to open access to a Cornell education for capable students who otherwise might not secure the admissions consideration, financial assistance, or supportive services necessary for their success at the university. The associate director for minority education in the Office of Student Services provides academic and personal counseling to all ILR minority students. ILR offers a variety of support services to enhance academic achievement.

STUDY OPTIONS

Several study options are open to ILR undergraduates, making it possible to tailor a program to fit special circumstances. One such option is the five-year ILR master's degree. With early planning, some students may earn the M.S. degree in the fifth year. Using another option, some ILR students arrange for dual registration in the Johnson Graduate School of Management, carrying their bachelor's degree in ILR and a master's degree in the Johnson Graduate School of Management after five years of study.

Some students elect to spend a semester in New York City, Albany, or Washington, D.C., with a chance to observe actual labor problem solving as interns in congressional offices, labor organizations, personnel offices, and state and federal agencies. For more information, see "Special Academic Programs," below.

Study abroad options are also available at a number of foreign universities. Qualified students may spend a semester or a full year studying abroad. A number of ILR courses deal directly with today's problems and involve fieldwork in the Ithaca area and elsewhere in New York State.

The ILR program allows juniors and seniors who want to conduct their own research to receive course credit for individually directed studies if the program is supervised by a faculty member.

Study in Absentia

Registration in absentia enables a student to seek admission in another American institution for a semester or a year and transfer credit toward completion of the Cornell degree. This study option requires the development of a plan of study, a statement of appropriate reasons for study away from the university (e.g., availability of courses not offered at Cornell), good academic standing, approval of the plan by the director of student services, and payment of a special registration fee. Course work taken in absentia is usually not evaluated for transfer credit until the work has been completed and the student has returned to the school.

Students then submit a course syllabus and other evidence of content to the chairman of the department that might have offered the respective course, or to a counselor in the Office of Student Services if the course is more appropriate as a general elective.

Leave of Absence or Withdrawal

If a student desires to withdraw or to take a leave of absence from the university, an interview should be scheduled with a counselor in the Office of Student Services. Counselors will assist students in petitioning for approval of a leave of absence and in contacting the appropriate offices or departments of the university.

REQUIREMENTS FOR GRADUATION

To earn the Cornell Bachelor of Science degree in industrial and labor relations, the student needs to successfully complete 120 credits. This requires eight terms for an average of 30 credits a year although some students accelerate their studies.

FRESHMAN YEAR

Fall Semester

Freshman Writing Seminar 3
Introductory Microeconomics (ECON 101) 3
History of American Labor: Nineteenth Century (ILRCB 100) 3
Social and Psychological Foundations of Organizational Behavior I (ILROB 170) 3
ILR Colloquium (ILR 150) 1
Elective 3

Spring Semester

Freshman Writing Seminar 3
Introductory Macroeconomics 102 3
History of American Labor: Twentieth Century (ILRCB 101) 3
Social and Psychological Foundations of Organizational Behavior II (ILROB 171) 3
Elective 3

Physical Education, Fall and Spring

SOPHOMORE YEAR

Fall Semester

Statistics I (ILRST 210) 3
Development of Economic Institutions (ILRLE 140) 3
Labor and Employment Law (ILRBC 201) 3
Human Resource Management (ILBHR 260) Fall or Spring 3
Elective 3

Spring Semester

Statistics II (ILRST 211) 3
Economics of Wages and Employment (ILRLE 240) 3
Distribution: Cultural Perspectives 3
Distribution: Western Intellectual Tradition 3
Elective 3

JUNIOR AND SENIOR YEARS

Economic Security (ILRLE 340) 3
Collective Bargaining (ILRCB 300) 3
Distribution: International and Comparative ILR 3
Distribution: Upper Division Writing 3
Distribution: Science and Technology 3
Advanced Organizational Behavior (ILROB 420) 3
ILR and General Electives 3
ILR Advanced Electives—27 credit hours in no fewer than 9 courses

General Electives—34 credit hours of which up to 22 hours may be freely elected in the university's endowed divisions

Required Courses

(55 credits)

The curriculum prescribes the courses and subjects listed in the table above: some are illustrative. In the senior year, all courses will be electives.

Elective Courses

(65 credits)

From the courses offered by the school, students must select a minimum of 9 courses and 27 credits of ILR elective courses. No more than 9 of these credits may be satisfied by ILR 499, Directed Studies, or ILR 497-498, Internships. ILR 495, Honors Program, or one semester of Study Abroad.
Undergraduates are required to select one intensive writing course (for a minimum of three credits) from a list of designated courses. The remaining 34 credits may be selected from the courses of any other college at Cornell, but a student who takes more than 34 credits in the endowed colleges (the College of Architecture, Art, and Planning; the College of Arts and Sciences; the Johnson Graduate School of Management; the College of Engineering; and the School of Hotel Administration) must pay for each credit taken in excess of 34, whether or not the courses are passed. For the precise fee per credit, students should call the Office of the Bursar.

The number of credits that may be taken in the endowed colleges at no additional cost to the student may be changed at any time by official action of the school.

**ILR Math Requirement**

If you took AP calculus in high school and scored a 3 or better on the AB exam or a 2 or better on the BC exam, you have fulfilled the ILR math requirement. If you did not take AP calculus, or if you did not achieve the scores noted above, you will be expected to take and pass the ILR Math Assessment before you may register for required courses in Statistics and Labor Economics. The Math Assessment is based on materials covered in New York State Regents Exams for Courses 2 and 3 (Calculus is not covered in those courses.)

The ILR Math Assessment will be scheduled in August, January, and May. Those who do not pass in the first attempt will be expected to register in an appropriate math course and pass the assessment before the beginning of their third semester in the school. Anyone who cannot meet the requirement by the beginning of the third semester may be enrolled for a terminal term and will be expected to leave the school thereafter.

Transfer students will be expected to meet the same standards in math; either present the score required by Cornell University for AP calculus (AB or BC) credit, or pass the ILR Math Assessment before being permitted to register in ILRST 210 or ILRLE 240 with a terminal semester possible after failing the assessment given at the beginning of a third semester as an ILR student.

**SCHEDULING AND ATTENDANCE**

**Schedule Changes**

Occasionally it may be necessary for a student to request changes in his or her course schedule either before a term begins or during the semester. Such requests must be directed to the Office of Student Services to avoid possible loss of academic credit.

**Class Attendance**

It is each student's responsibility to attend all scheduled classes unless excuses have been approved by the faculty. In some courses an instructor may permit a maximum number of class absences without a grade penalty or dismissal from the course. An explanation for absence from class may occasionally be secured from the Office of Student Services in advance of the expected absence. Any approved absence may be warranted by:

1. participation in authorized university activities such as athletic events, dramatic productions, or debates;
2. medical problems supported by a record of clinic or infirmary treatment;
3. serious illness or death in the immediate family;
4. other circumstances beyond the student's control.

A request for explanation of an absence should, when possible, be made to the Office of Student Services before the date of expected absence. A reported and explained absence does not relieve a student from fulfillment of academic requirements during the period of absence. The course instructor has the authority to determine what work must be completed. The office can only confirm the explanation for absence. Students should inform the Office of Student Services of any problems they have meeting course requirements.

**ACADEMIC STANDING AND GRADES**

**Academic Integrity**

In 1987 the faculty of the School of Industrial and Labor Relations approved a revised code of academic integrity. This code, while based on the Cornell University code, varies somewhat. Absolute integrity is expected of all Cornell students in all academic undertakings. They must in no way misrepresent their work, fraudulently or unfairly advance their academic status, or be a party to another student's failure to maintain academic integrity. The code specifically prohibits:

1) knowingly representing the work of others as one's own;
2) using or obtaining unauthorized assistance in any academic work;
3) fabricating data in laboratory or field work;
4) giving fraudulent assistance to others;
5) fabricating data in support of laboratory or field work.

Full details on the applications of those prohibitions to course work, term papers, examinations, and other situations are listed in the code. Copies are available from the Office of Student Services, 101 Ives Hall.

**Dean's List**

A Dean's List is compiled for each of the four undergraduate classes each term on the seventh day following receipt of final grades from the registrar. Eligibility for the Dean's List is determined by applying all of the following criteria:

1) achievement of a term average for freshmen of 3.3 or better; for sophomores of 3.4 or better; and for juniors and seniors of 3.6 or better;
2) a minimum course load of the term of 12 letter-graded credits;
3) completion of all courses registered for at the beginning of the term;
4) satisfaction of all good-standing requirements.

**S-U Grading Policy**

An undergraduate may register to receive a final grade of S (Satisfactory) or U (Unsatisfactory) in courses that offer this option—either in the school or in other divisions of the university—subject to the following conditions:

1) the S-U option may be used in ILR and in out-of-college course electives only, not in directed studies;
2) students are limited to registering in two S-U courses a term;
3) S-U registration is limited to 4 credits for each course;
4) students registering for S-U grades must be in good standing;
5) students must fulfill the graduation requirement of 105 letter-graded credits.

ILR Faculty members assign a grade of U for any grade below C- and a grade of S for any grade of C- or better. A grade of U is considered equal to an F in determining a student's academic standing, although it is not included in the cumulative average. No change of grading (from letter to S-U or from S-U to letter) may be made after the first three weeks of class. There are no exceptions to this restriction, and appeals will not be accepted.

**Involuntary Separation from the School for Academic Reasons**

A student may be denied permission to register at the end of any term when he or she has failed:

1) to establish good standing after a semester on warning;
2) to maintain an average of 1.7 in any term after a previous record of warning;
3) to achieve good standing after being on warning any two previous semesters;
4) two or more failures in one term or has a term average of 1.0 or below.

The Academic Standards and Scholarship Committee may decide to permit a student to remain on warning more than one semester if there has been significant improvement even though the cumulative average is still below 1.7.

**Academic Standing**

Good standing requires that all of the following criteria be met at the end of each term:

1) an average of C- (1.7) for the semester's work, including a minimum of 8 completed and letter-graded credits;
2) no failing grades in any course, including physical education;
3) a cumulative average of C- (1.7) for all completed terms.

If at the end of any term a student fails to maintain good standing or if overall academic performance is so marginal as to endanger the possibility of meeting school and university degree requirements, his or her record is reviewed by the Committee on Academic Standards and Scholarships. The committee may issue a written warning to the student at that time. If a student does not improve after the written warning, he or she may be denied permission to register for the next term.
Grades of Incomplete
A grade of incomplete is assigned when the course has not been completed for reasons that are acceptable to the instructor. It is understood that the work will be completed later and credit given. Instructors may grant a grade of incomplete for a limited number of clearly valid reasons, but only to students with substantial equity in a course. A firm and definite agreement on the conditions under which it may be made up must be made with the instructor. The school's policy allows a maximum of two full terms of residence for removal of a grade of incomplete. If it is not made up within this time, the grade automatically becomes an F.

SPECIAL ACADEMIC PROGRAMS
To meet the special academic objectives of some students, the school's faculty has established several special academic programs. For additional information, students should contact a counselor in the Office of Student Services. Counselors will explore the program with students to help them decide if it suits their interests.

Dual Registration in the Johnson Graduate School of Management
Dual informal registration in the Johnson Graduate School of Management leads to a Bachelor of Science degree in industrial and labor relations and a master's degree in management after five years of study and is open to students who meet the requirements of the Johnson Graduate School of Management.

Early planning by each student, preferably in the sophomore year, is desirable to ensure that the expectations of the Johnson Graduate School of Management and ILR curriculum requirements are fulfilled. Students interested in the very limited and selective program of the Johnson Graduate School of Management should contact the Admissions Office, 319 Malott Hall, and a counselor at the Office of Student Services.

Five-Year Master of Science Degree Program
With early planning it is possible to earn the M.S. degree in a fifth year of study. This program is designed specifically for those who wish to concentrate study in an area of specialization in the school for a Master of Science degree. Students considering this program should consult a counselor in the Office of Student Services after their freshman year.

Internships
The Credit Internship Program has provided students with a vivid understanding of problems in labor and industrial relations through observation and participation in "real-life" labor relations situations. A number of selected students spend a term of the junior year in Albany, New York City, or Washington, D.C., in close contact with practitioners. Their activities include independent research under the direction of ILR faculty members and seminars drawing on fieldwork experience with employers, labor organizations, and government agencies. More information about this program is available from the Office of Student Services.

Honors Program
Undergraduates who are ranked in the top 20 percent of their class at the end of the junior year may propose a two-semester research project, an honors thesis, for review by the Committee on Academic Standards and Scholarships. When approved, the candidate for graduation with honors works for two semesters (for 3 credits in each term) to research, write, and then defend the thesis.

Study Abroad
Cornell students with strong academic records and the necessary preparation in required and elective courses are encouraged to consider study abroad. The university currently has contact with universities in more than 40 countries that permit undergraduates to register for courses while maintaining Cornell registration and financial aid for a semester or a year. Information about those opportunities may be requested from Cornell Abroad, 474 Uris Hall.

COLLECTIVE BARGAINING, LABOR LAW, AND LABOR HISTORY

ILRCB 100 Introduction to U.S. Labor History: Nineteenth Century
Fall. 3 credits. C. Daniel, I. DeVault, N. Salvatore.

ILRCB 101 Introduction to U.S. Labor History: The Twentieth Century
Spring. 3 credits. Prerequisite: ILRCB 100. C. Daniel, I. DeVault, N. Salvatore.

ILRCB 201 Labor and Employment Law
Fall. 3 credits. M. Gold, R. Lieberwitz, K. Stone.

ILRCB 202 Labor and Employment Law
Fall. 3 credits. M. Gold, R. Lieberwitz, K. Stone.

ILRCB 300 Collective Bargaining (200)
Fall and spring. 3 credits. M. Cook, R. Hebdon, H. Katz, S. Kuruvilla, L. Turner.

ILRCB 301 Labor Union Administration
Fall. 3 credits. Staff.

ILRCB 302 Strangers and Citizens: Immigration and Labor in U.S. History
Fall or spring. 3 credits. I. DeVault.

ILRCB 304 Seminar in American Labor and Social History
Fall or spring. 4 credits. Permission of instructor. C. Daniel, I. DeVault, N. Salvatore.

ILRCB 305 Introduction to Labor Arbitration and Alternative Dispute Resolution
Fall. 3 credits. J. Gross.

An introductory seminar whose topic changes depending on semester and instructor.

An introductory survey that focuses in part on collective bargaining in the United States, the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict, the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.

ILRCB 306 Collective Bargaining (200)
Fall and spring. 3 credits. M. Cook, R. Hebdon, H. Katz, S. Kuruvilla, L. Turner.

A comprehensive introduction to industrial relations and collective bargaining in the United States; the negotiation, scope, and day-to-day administration of contracts; the major substantive issues in bargaining, including their implication for public policy; industrial conflict, the major challenges facing unions and employers today; U.S. industrial relations in international and comparative perspective.
ILRCB 384 Women and Unions (also WOMNS 384) Fall or spring. 4 credits. J. Devault. Will explore women’s participation in the United States labor movement in the nineteenth and twentieth centuries. Issues covered will include women workers’ relations with male-dominated union movements, the role of cross-class alliances of women in organizing women workers, interactions with radical parties and organizations, problems faced by women union leaders and activities, and others.

ILRCB 385 The African-American Workers, 1865–1910: The Rural and Urban Experience Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. N. Salvatore. Examines the history of blacks in America from Emancipation through the experience of the first generation born after slavery, with a focus on the work experience. Topics will include the restructuring of work during Reconstruction; the relationship between work and black organizational developments; between black and white workers, and the nature of work in the agricultural south and in cities throughout the nation.

ILRCB 386 The African-American Workers, 1910–the Present: Race, Work and the City Fall. 3 credits. Prerequisites: junior or senior. N. Salvatore. Examines the history of blacks in America from the start of the Great Migration through the 1970s, with a focus on the work experience. Topics will include the effect of migration and urbanization on black workers, the nature of the relationship between black and white workers as influenced by depression and two world wars, and an examination of the effect of the Civil Rights movement on the economic circumstances of black workers.

ILRCB 401 My Brother’s Keeper: Volunteerism and Philanthropy Spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold. The philosophy, practice, economics, and law of volunteering labor and donating money. Topics include altruism versus self-interest; why individuals volunteer labor and raise and donate money; the structure and practices of charitable organizations; the economic effects of voluntary labor and philanthropic gifts; and the law of raising and distributing money.

ILRCB 404 Contract Administration Fall. 3 credits. Prerequisites: ILRCB 201 and 300 or ILRCB 500 and 501. K. Bronfenbrenner. Bridges the gap between ILRCB 300/500, Collective Bargaining, and ILRCB 602, Arbitration. It focuses on various aspects of dispute settlement process prior to final resolution. The content of the course is to expand the knowledge of students rather than to develop personal skills. It includes such topics as (1) the historical development of contractual grievance process, (2) the merits of various alternative processes that have been adopted by unions and management in the United States, (3) the impact of external law on the behavior of the parties in the adjustment process, (4) a comparison of the U.S. system with systems in other industrialized economies, (5) current issues and problems in the systems, (6) nonunion grievance procedures, and (7) ongoing experimental alternatives to the standard systems.

ILRCB 407 Contemporary Trade Union Movement Spring. 3 credits. Prerequisites: under-graduate ILRCB 101, graduate students ILRCB 502. R. Seeber, R. Hurl. An examination of contemporary trade union issues, including union power, political action, collective bargaining approaches, and organizing efforts. The content will cover structural, functional and strategic aspects of contemporary unions. Speakers from the union movement will address the class.

ILRCB 482 Ethics at Work Fall or spring. 3 credits. Prerequisites: junior or senior or permission of instructor. M. Gold. Major theories of ethics are examined, then applied to issues in the employment relationship such as genetic screening of job applicants, random drug testing of employees, affirmative action, discipline for off-duty conduct, worker safety and cost/benefit analysis, comparable worth, strikes by employees providing crucial services, and crossing a picket line.

ILRCB 483 Liberty and Justice for All Fall or spring. 3 credits. Prerequisite: junior or senior or permission of instructor. M. Gold. Major theories of ethics are examined, then applied to contemporary issues such as affirmative action and reverse discrimination, the right to life (from abortion to capital punishment), comparable worth, and constitutional rights such as freedom of speech.

ILRCB 484 Honors Program Fall and spring (yearlong course). 3 credits each term. Admission to the ILR senior honors program may be obtained under the following circumstances: (a) students must be in the upper 20 percent of their class at the end of their junior year; (b) an honors project, entailing research leading to completion of a thesis, must be completed; (c) a good faculty member agrees to act as thesis supervisor; and (d) the project, endorsed by the proposed faculty sponsor, is submitted to the Committee on Academic Standards and Scholarships. Accepted students embark on a two-semester sequence. The first semester consists of determining a research design, familiarization with germane scholarly literature, and preliminary data collection. The second semester involves completion of the data collection and preparation of the honors thesis. At the end of the second semester, the candidate is examined orally on the completed thesis by a committee consisting of the thesis supervisor, a second faculty member designated by the appropriate department chair, and a representative of the Academic Standards and Scholarship Committee.

ILRCB 497–498 Internship Fall and spring. 497, 3 credits; 498, 6 credits. M. Gold. All requests for permission to register for an internship must be approved by the faculty member who will supervise the project and the chairman of the faculty member’s academic department before submission for approval by the director of Off-Campus Credit Programs. Upon approval of the internship, the Office of Student Services will register each student for 497, for 3 credits graded A+ to F for individual research, and for 498, for 6 credits graded S-U; it will provide a professionally appropriate learning experience, which is graded by the faculty supervisor.

ILRCB 499 Directed Studies Fall and spring. 3 credits. For individual research, conducted under the direction of a member of the faculty, in a special area of labor relations not covered by regular course offerings. Registration is normally limited to seniors who have demonstrated ability to undertake independent work. Eligible students should consult a counselor in the Office of Student Services at the time of course registration to arrange for formal submission of their projects for approval by the Academic Standards and Scholarship Committee.

ILRCB 500 Collective Bargaining Fall. 3 credits. Open only to graduate students. Recommended: ILRCB 501 taken previously or concurrently. M. Cook, R. Hebdon, H. Katz, S. Kuruvilla, L. Turner. A comprehensive introduction to the industrial relations system of the United States. The negotiation, scope, and day-to-day administration of contracts; union and employer bargaining structures; implications of industrial relations issues for U.S. competitiveness and public policy; industrial conflict; U.S. industrial relations in international and comparative perspective.

ILRCB 501 Labor and Employment Law Fall. 3 credits. Open only to graduate students. M. Gold, R. Lieberwitz, K. Stone. A survey and analysis of the law governing labor relations and employee rights in the workplace. The first half of the course examines the legal framework within which collective bargaining takes place, including union organizational campaigns, negotiations for and enforcement of collective bargaining agreements, and the use of economic pressure. The second half of the course surveys additional issues of rights in employment, including such topics as employment discrimination, the developing law of "unjust dismissal," and union security. Also serves as an introduction to judicial and administrative systems.

ILRCB 502 History of Industrial Relations in the United States since 1865 Spring. 3 credits. Open only to graduate students. C. Daniel, I. Devault. N. Salvatore. This introductory survey course emphasizes historical developments in the twentieth century. Special topics include labor union struggles over organizational alternatives and such other topics as the history of working-class life styles, radicalism, welfare capitalism, union democracy, and the expanding authority of the federal government.

ILRCB 602 Arbitration Fall and spring. 4 credits. Limited to 21 students. Prerequisites: ILRCB 201, 300; graduate students ILRCB 500 and 501; permission of instructor. J. Gross, R. Lieberwitz. A study of the place and function of arbitration in the field of labor-management relations, including an analysis of principles and practices, the law of arbitration, the
The areas of study are determined each semester by the instructor offering the seminar.

ILRCB 682 Seminar in Labor Relations Law and Legislation
Fall or spring. 3 credits. Limited enrollment. Prerequisite: permission of instructor. R. Lieberwitz.
Legal problems in public employment and other areas of labor relations affecting the public interest.

ILRCB 683 Research Seminar in the History of Industrial Relations
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 100 and 101; graduate students, ILRCB 502. C. Daniel, I. Devault, N. Salvatore.
The areas of study are determined each semester by the instructor offering the seminar.

ILRCB 684 Employment Discrimination and the Law
Fall. 3 credits. Prerequisite: ILRCB 201/501 or equivalent. M. Gold.
An examination of the laws against employment discrimination based on race, color, religion, sex, national origin, and disability.

ILRCB 685 Research Seminar on Trade Unions
Fall or spring. 3 credits. Prerequisite: ILRCB 200 or 500; permission of instructor. S. Kuruvilla.
Designed to provide an analytical survey of research on trade unions in the United States. Major topics include unions in politics, unions as complex organizations, public opinion and attitudes toward unions, determinants of union growth and decline, economic and non-economic effects of unions, internal union government, and commitment and participation in trade union activity. This is a research-oriented course.

ILRCB 686 Collective Bargaining in the Public Sector
Fall or spring. 3 credits. Prerequisites: undergraduates, ILRCB 200 and 201; graduate students, ILRCB 500 and 501. R. Hebden.
An examination of the development, practice, and extent of collective bargaining between federal, state, and local governments and their employees. The variety of legislative approaches to such matters as representation, unfair practice, scope of bargaining, impasse procedures, and the strike against government are considered along with implications of collective bargaining for public policy and its formulation.

ILRCB 689 Constitutional Aspects of Labor Law
Spring. 3 credits. R. Lieberwitz.
In-depth analysis of the Supreme Court decisions that interpret the United States Constitution as it applies in the workplace. This study will focus on the First Amendment, Fifth Amendment, Fourteenth Amendment, and Commerce Clause, with issues including freedom of speech and association, equal protection, due process, and other issues in the area of political and civil rights. The course entails a high level of student participation in class discussion, and assignments include a research paper.
ILRCB 703 Theory and Research in Collective Bargaining

Spring. 3 credits. Open to graduate students who have had ILRCB 500 and ILR 725 or their equivalents. Recommended: a statistics course beyond the level of ILRST 510. Staff.

This is a second-level course in collective bargaining that builds on the institutional research covered in ILRCB 500. The existing literature on the economic forces that affect collective bargaining is appraised for its theoretical and empirical content. Efforts are made to explore the appropriate role for theory and empirical analysis in moving research in collective bargaining toward a more analytical perspective and to identify and appraise the underlying paradigms used to study collective bargaining-related issues.

ILRCB 705 The Economics of Collective Bargaining

Spring. 3 credits. Prerequisites: ILRCB 500; ILRF 515 or their equivalents and an understanding of multiple regression analysis; or permission of instructor. Staff.
