The dates shown in this calendar are subject to change at any time by official action of Cornell University.

In this calendar, the university has scheduled classes, laboratories, and examinations on religious holidays. It is the intent of the university that students who miss those activities because of religious observances be given adequate opportunity to make up the missed work.

The Law School and College of Veterinary Medicine calendars differ in a number of ways from the university calendar. Please consult the catalogs of those colleges for details.

The courses and curricula described in this catalog, and the teaching personnel listed herein, are subject to change at any time by official action of Cornell University.

The rules and regulations stated in this catalog are for information only and in no way constitute a contract between the student and Cornell University. The university reserves the right to change any regulation or requirement at any time.

This catalog was produced by Media and Technology Services at Cornell University.
Cornell University Officers

Hunter R. Rawlings III, president
Don M. Randel, provost
Antonio M. Gotto Jr., provost for medical affairs
Frederick A. Rogers, senior vice president and chief financial officer
Carolyn N. Ainslie, vice president for budgeting and planning
Harold D. Craft Jr., vice president for facilities and campus services
Henrik N. Dullea, vice president for university relations
James J. Mingle, university counsel and secretary of the corporation
Polley Ann McClure, vice president for information technologies
Susan H. Murphy, vice president for student and academic services
Mary George Opperman, vice president for human resources
Inge T. Reichenbach, vice president for alumni affairs and development
Yoke San Reynolds, vice president for financial affairs and university controller
J. Robert Cooke, dean of the university faculty
Walter I. Cohen, vice provost
Cutberto Garza, vice provost
Robert C. Richardson, vice provost
Mary J. Sansalone, vice provost

It is the policy of Cornell University actively to support equality of educational and employment opportunity. No person shall be denied admission to any educational program or activity or be denied employment on the basis of any legally prohibited discrimination involving, but not limited to, such factors as race, color, creed, religion, national or ethnic origin, sex, sexual orientation, age, or handicap. The university is committed to the maintenance of affirmative action programs that will assure the continuation of such equality of opportunity. Sexual harassment is an act of discrimination and, as such, will not be tolerated. Inquiries concerning the application of Title IX may be referred to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853-2801 (telephone: 607 255-3976).

Cornell University is committed to assisting those persons with disabilities who have special needs. A brochure describing services for persons with disabilities may be obtained by calling or writing to the Office of Equal Opportunity, Cornell University, 234 Day Hall, Ithaca, New York 14853–2801. (Telephone: 607 255–3976, Telecommunications Device for the Deaf (TDD): 607 255–7665). Other questions or requests for special assistance may also be directed to that office.

INTRODUCTION

Courses of study (http://cuinfo.cornell.edu/Academic/Courses/), a catalogue of Cornell University's many academic programs and resources, contains information about colleges and departments, interdisciplinary programs, undergraduate and graduate course offerings and procedures. Additionally, a student handbook, distributed to all incoming students, describes life at Cornell. The Policy Notebook (http://www.unwco.cornell.edu/policy/library.html), also distributed to each new student, summarizes pertinent university policies, including the campus Code of Conduct and the Code of Academic Integrity. Students should consult with their college's advising office for specific information on their college's academic policies and procedures, degree programs and requirements.

All these publications are also available for viewing on CUINFO the university's electronic information system, and in print at the various university libraries, the Office of the Dean of Students, the Office of the Dean of the University Faculty, the Office of University Counsel, the Office of the Judicial Administrator, and the college offices.

Not included in this publication is information concerning the Medical College and the Graduate School of Medical Sciences, located in New York City.

The following are offices and sources of information about admission to Cornell University.

Medical College and Graduate School of Medical Sciences. Office of Admissions, 1300 York Avenue, New York, NY 10021, 212–746–1067.

http://www.cornell.edu. Students are also advised to consult individual college and department offices for up-to-date course information.

EXPLANATION OF COURSE NUMBERING SYSTEMS

The course levels have been assigned as follows:

100-level course— introductory course, no prerequisites, open to all qualified students
200-level course—lower-division course, open to freshmen and sophomores, may have prerequisites
300-level course—upper-division course, open to juniors and seniors, prerequisites
400-level course—upper-division course, open to seniors and graduate students, 200- and 300-level course prerequisites or equivalent
500-level course—professional level (e.g., management, law, veterinary medicine)
600-level course—graduate-level course, open to upper-division students
700-level course—graduate-level course
800-level course—master's level, thesis, research
900-level course—doctoral level, thesis, research

The list of courses that follows is arranged in two broad groups.

Group 1: Divisions that offer both undergraduate- and graduate-level courses

Agriculture and Life Sciences
Architecture, Art, and Planning
Arts and Sciences

Engineering
Hotel Administration
Human Ecology
Industrial and Labor Relations
Nutritional Sciences
Officer Education

Group 2: Graduate professional divisions

Law
Management
Veterinary Medicine

There are no courses offered by the Graduate School as a unit; graduate-level courses are contained in the various departments that offer the instruction.

Within each division, courses are generally arranged in alphabetical order by department and in numerical order within the departments. All courses, 0–999 are briefly described for those divisions (group 1) offering instruction to both undergraduate and graduate students. Courses in the graduate professional divisions (group 2) are designated by number and title only.

ACCREDITATION

Cornell University is accredited by the Middle States Association of Colleges and Schools. A copy of the most recent reaffirmation of Cornell's accreditation can be found at http://www.ipr.cornell.edu/Alccreditation/Status. Requests for review of additional documentation supporting Cornell's accreditation should be addressed to the Michael Matier, Director, Institutional Research and Planning, Cornell University, 440 Day Hall, Ithaca, NY 14853–2801, msws5@cornell.edu.

Advanced Placement

CREDIT FOR ADVANCED PLACEMENT

Definition and Purpose of Advanced Placement Credit

Advanced placement credit is college credit that students earn before they matriculate as freshmen. Students may use credit they receive for advanced placement to satisfy degree requirements only as specified by the individual college at Cornell. Although such credit counts toward the bachelor's degree, its primary purpose is to exempt students from introductory courses and to place them in advanced courses. Its value is that it allows students to include more advanced courses in their undergraduate curricula.

Sources of Advanced Placement Credit

Advanced placement credit may be earned from one of the following:

a. Achieving the requisite score from the Advanced Placement Examinations (AP exams) from the College Entrance Examination Board (CEEB) in Princeton, NJ. The requisite scores, which vary by subject, are determined by the relevant departments at Cornell and are listed on page 7. Some departments at Cornell offer departmental exams (usually during orientation), for placement and advanced placement credit.

b. Passing a regular course taught at an accredited college to college students and approved by the relevant department at Cornell. Some departments have delegated the review of courses to college staff according to guidelines they have formulated. Some departments review each request individually. Some departments accept credit from virtually all accredited colleges; some do not.

Credit for international credentials is evaluated individually (see below).

Please note: Cornell University does not accept credit for courses sponsored by colleges but taught in high schools to high school students, even if the college provides a
transcript of such work. Students who have taken such courses may, however, qualify by taking an appropriate exam as described in paragraph a above.

The final decision for awarding advanced placement credit at Cornell rests with each individual college. The appropriate department or college office in the university sets the standards of achievement that must be met for advanced placement in its subject, and recommends AP credit for those who meet the standards. For policies governing advanced placement in a specific college, see the academic information section for that college. Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

**Advanced placement examinations.** Entering freshmen should have their scores from CEEB Advanced Placement Examinations sent to their college or school office (see below, "Forwarding of scores and transcripts").

**Departmental advanced standing examinations.** In certain subjects, students may also qualify for advanced placement or credit, or both, on the basis of departmental examinations given on campus during orientation week. A schedule of these examinations will appear in the orientation booklet that will be mailed to entering students in late summer. The departments that award advanced placement and credit on the basis of departmental examinations are shown on page 7.

**Transfer of credit.** Entering freshmen who have completed college courses for which they want to receive credit toward their Cornell degree should send transcripts and course descriptions to their college or school office (see the list at the end of this section). The award of credit or placement for such courses is determined by the appropriate departments according to the following criteria:

- Students need not accept advanced placement credits.
- Credit and placement are determined on the basis of a student's academic performance and the standards of achievement that must be met for advanced placement in each subject.
- Students need not accept advanced placement. They may repeat the course, thereby relinquishing the advanced placement credit.

**International credentials.** Information regarding Cornell's advanced standing policy for international credentials may be obtained by contacting the Associate Director of International Admissions, Cornell University, 410 Thurston Avenue, Ithaca, New York 14850-2488, U.S.A.

**Written inquiries.** Many department, school, and college offices encourage students to contact them with any questions they may have. Addresses given in the following sections may be completed by adding Ithaca, New York 14853.

**Forwarding of scores and transcripts.** Entering freshmen should have their advanced placement test scores sent to their school or college registrar's office.

**College of Agriculture and Life Sciences**

- 140 Roberts Hall

**College of Architecture, Art, and Planning**

- B30 West Stile Hall

**College of Arts and Sciences**

- 61 Goldwin Smith Hall

**College of Engineering**

- 158 Olin Hall

**School of Hotel Administration**

- 1748 Stater Hall

**College of Human Ecology**

- N145 Van Rensselaer Hall

**School of Industrial and Labor Relations**

- 101 Ives Hall

**DETERMINATION OF CREDIT AND PLACEMENT**

The table on page 7 provides information on how credit and placement are determined for most subjects. Supplementary information for subjects requiring additional explanation is provided below.

**Biological Sciences**

The Office of Undergraduate Studies in Biology grants advanced standing credits and exemption from introductory biology courses based on superior performance on the CEEB Advanced Placement Examination in biology.

Any student who earns a score of 5 on this examination may elect to receive eight credits and be permitted exemption from all introductory biology courses.

Students not majoring in biological sciences who score 4 or 5 may receive, respectively, six or eight advanced placement credits. This will satisfy the distribution requirement in biological sciences for students in the College of Human Ecology and a portion of the group B distribution requirement for students in the College of Agriculture and Life Sciences. For students in the College of Arts and Sciences, credits may be applied to the Group I distribution area in accordance with regulations stipulated by the college.

Biological sciences majors who receive a score of 5 may earn eight credits and be exempt from all introductory biology courses or elect to receive four credits and select one of the options allowed for majors with a score of 4. The student receiving a score of 4 must fulfill the introductory biology requirement by taking BIO G 101–102, 101/103, 102/104, or 103–104 or 105 or 106 (Biological Sciences, Lectures and Laboratory). These students should consult information available in the BIO G 101–104 course office (1140 Comstock Hall) and in the Behrman Biology Center (216 Stimson Hall) to determine which semester to complete the introductory biology requirement. For students in doubt, BIO G 101/103 is advised. These students will receive a total of eight introductory biology credits (four advanced placement credits plus four course credits).

**Chemistry**

The Department of Chemistry offers two sequences that satisfy prerequisites for further work in the department: Chemistry 207–208, an eight-credit sequence that includes qualitative analysis, and Chemistry 215–216, a nine-credit sequence that includes qualitative and quantitative analysis.

Freshmen may qualify for advanced placement and advanced standing in chemistry by satisfactory performance on the CEEB Advanced Placement Examination in chemistry or by passing an advanced standing examination offered by the department. A score of 5 on the CEEB examination entitles a student to four credits. A student may earn four or eight credits by suitable performance on the departmental examination. To take the departmental examination students must sign up beforehand in 151 Baker Laboratory.

The specific course in which a student will register after having received a certain advanced placement standing will be decided by consultation between the student, his or her adviser, and the professors teaching the courses. Questions may also be directed to Dr. Stanley Marcus, associate director of undergraduate studies, in 130 Baker Laboratory. Students receiving advanced placement who are interested in a major in chemistry or a related science should consider taking Chemistry 215–216 and should consult the Chemistry 215 instructor or Dr. Stanley Marcus.

**Classics**

For advanced placement and credit in Latin and Greek, students should consult the Department of Classics, 120 Goldwin Smith Hall.

**Latin.** Credit and placement are determined on the basis of a departmental examination. A student who is permitted to register in a 300-level course will be given six advanced placement credits.

**Greek and Modern Greek.** Credit and placement are determined on the basis of a departmental examination. For Ancient Greek, a student who is permitted to register in a 300-level course will be given six advanced placement credits. For Modern Greek, a student who is determined by the examiner to be at an advanced level will be given six advanced placement credits.

**Computer Science**

Students who receive a score of 4 or 5 on the CEEB Advanced Placement Examination in computer science will receive four advanced placement credits and may take Computer Science 211, 212, or 222 (provided, in the case of Computer Science 222, the mathematics prerequisites are met). These credits may be used to satisfy the requirement in computer programming for students in the College of Engineering or part of the distribution requirement in science and quantitative reasoning for students in the College of Arts and Sciences.

Freshmen may also earn four credits by suitable performance on a departmental examination to be given during orientation week. Students who receive a score of 3 on the CEEB Advanced Placement Examination may choose, at their own risk and in consultation with their advisers, to go directly into a 200-level course without receiving credit for Computer Science 100. These students are strongly urged to take the departmental placement test. To take the departmental examination, students must sign up beforehand in the Undergraduate Office, 303 Upson Hall.

**English**

The English department will grant 3 credits to students who score 5 on the CEEB Advanced Placement Examination in English. The credits are granted automatically: no application to the department is required.

†Cornell Advanced Standing Examination. Contact Callean Hile, 203 Morrill Hall.
Students who receive scores of 700 or better on the CEEB SAT II examination in English composition, 700 or better on the CEEB SAT II examination in literature, or 4 or 5 on the CEEB Advanced Placement Examination are eligible to enroll, space permitting, in the following English freshman writing seminars: 270, 271, 272.

**Mathematics and Statistics**

The Cornell calculus sequences discussed below are described under “Basic Sequences” in the Department of Mathematics section of this catalog. The regular freshman calculus courses at Cornell do not differ substantially from calculus courses given in many high schools, and it is best to avoid repeating material that has already been covered at an appropriate level. Secondary school students who have had the equivalent of at least one semester of analytic geometry and calculus should, if possible, take one of the CEEB’s two Advanced Placement Examinations (calculus AB or calculus BC) during their senior year. Students who have been awarded Advanced Placement credit may not also receive academic credit at Cornell for similar courses. In particular, students who have been awarded AP credit for 1 semester of calculus (4 academic credits) may not also receive academic credit for any 1st-semester calculus course (Math 106, 111, 121, 191, 193). Students who have been awarded AP credit for 2 semesters of calculus (8 academic credits) may not also receive academic credit for any 1st-semester calculus course (Math 106, 111, 121, 191, 193) or any 2nd-semester calculus course (Math 112, 122, 192). Finally, students who have been awarded AP credit for statistics (3 academic credits) may not also receive academic credit for the introductory statistics courses Biometry 200, 293, but students entering Mathematics 293 (Calculus BC) during their senior year. Students who receive scores of 700 or better on the CEEB SAT II examination in English as a second language.

**Modern Languages**

Students who have studied a language for two or more years and want to continue study in that language at Cornell must present the results of a placement test. See “Placement Tests and Advanced Placement credit” under “Foreign Language Requirements” in the Arts and Sciences section of this catalog. Students with a grade of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192). Students with a score of 4 or 5 on the language Advanced Placement Examination of the CEEB, earn three credits, and are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

1. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

2. Students who achieve a minimum score of 65 on the Cornell language placement test given during orientation week are eligible to take Cornell’s Advanced Standing Examination (CASE). Outstanding performance on this examination can result in a maximum of six credits.

3. For formal language work at an accredited college, credit is considered by the department on submission of a transcript and may be entered on the student’s Cornell record.

4. Native speakers of languages other than English may, on examination by the appropriate department, be granted a maximum of six credits if they can demonstrate proficiency equivalent to course work on the 200 level or above at Cornell. Additional credit will be considered only for those who pursue advanced work in their native language. Students may not receive both advanced placement credit for competence in their native language and Cornell credit for English as a second language.

**Physics**

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C). Certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, Professor J. T. Rogers, 101 Clark Hall, or the department chair.

Physics B. Students scoring a 4 or 5 on the CEEB Advanced Placement Examination in physics (physics B or physics C) during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 5 in physics B during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics. Students scoring a score of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 5 in physics B during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Electricity and Magnetism. Students scoring a score of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 5 in physics B during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

**Advanced Placement and Credit for International Credentials**

Following are the policies currently in effect for G.C.E. “A” Level Examinations and International Baccalaureate Higher Level Examinations. Accepted students holding any other secondary school credentials are urged to sit for the Advanced Placement Examinations of the College Entrance Examination Board or for the departmental examinations offered during orientation week. Students requiring further information concerning advanced standing credit for international credentials may contact the Associate Director, Undergraduate International Admissions.

**General Certificate of Education (GCE) Advanced ("A") Level Examination**

Advanced placement and credit are awarded on the basis of the CEEB Advanced Placement Examination in physics (physics B or physics C). Certain international examinations, or the departmental examination (which may be taken during orientation week or at other times as arranged). For information about the departmental examination, students should consult the director of undergraduate studies, Professor J. T. Rogers, 101 Clark Hall, or the department chair.

Physics B. Students scoring a 4 or 5 on the CEEB Advanced Placement Examination in physics (physics B or physics C) during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 5 in physics B during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Mechanics. Students scoring a score of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 5 in physics B during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

Physics C—Electricity and Magnetism. Students scoring a score of 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 5 in physics B during their senior year. Students scoring a 4 or 5 on the BC examination may take the appropriate third-semester course (Mathematics 112, 122, or 192) instead of eight credits in Physics 101 and 102. Those earning a score of 3 will receive four credits in Physics 101.

**Music**

Advanced placement and credit are awarded only in music theory and only on the basis of a comprehensive examination administered by the Department of Music, normally during orientation week. If special arrangements are made, the examination may be administered at other times during the academic year. All students interested in taking this examination should consult Professor E. Murray, (telephone: 607/255-4097).
overseas examinations are recognized by Cornell as equivalent in standard to GCE "A" Levels:

- Matriculation examination of the University of Hong Kong (Advanced Level)
- Advanced Level examination of the University of Hong Kong
- Joint examination for the Higher School Certificate and Advanced Level General Certificate of Education in Malaysia and Singapore (principal passes only)

Following is a list of subjects and the marks for which credit will be awarded:

Mathematics 6 or 7 8 credits (prospective math, science, and engineering majors must consult with math department to determine prerequisite for placement in third-semester math courses)

Music subject to departmental review

Philosophy 7 3 credits

Physical Science 6 or 7 8 credits (4 credits, Chemistry 103, 4 credits, Physics 101)

Physics 6 or 7 4 credits (Physics 101, 112, or 207)

For more information about advanced placement or other academic questions, please contact the Associate Director, International Admissions, Undergraduate Admissions Office, 410 Thurston Avenue, Ithaca, NY 14850-2488.

University Registration

University registration is the official recognition of a student's relationship with the university and is the basis for the student's access to services and education. Completion of registration is essential to enable the university to plan for and provide services and education, guided by the highest standards for efficiency and safety. Unauthorized, unregistered persons who use university services and attend classes have the potential to use university resources inappropriately and to displace properly registered students. In addition, the university assumes certain legal responsibilities for persons who participate as students in the university environment. For example, policy states that New York State health requirements must be satisfied. Because these requirements are intended to safeguard the public health of students, the university has a responsibility to enforce the state regulations through registration procedures.

The policy on university registration is intended to describe clearly the meaning of and the procedures for registration so that students can complete the process efficiently and be assured of official recognition as registered students. With the clear communication of the steps for registration, it is hoped that compliance will occur with a minimum of difficulty.

To become a registered student at Cornell University, a person must:

- complete course enrollment according to individual college requirements;
- settle all financial accounts, including current semester tuition;
- satisfy New York State health requirements;
- have no holds from the college, the office of the Judicial Administrator, Gannett Clinic, or the Bursar.

Individuals must become registered students by the end of the third week of the semester.

Cornell University does not allow persons who are not registered with the university to exercise student privileges to leave the university premises. The university does not permit retroactive registration and does not record courses or grades for unregistered persons.

COURSE ENROLLMENT

Pre-course enrollment for each semester at Cornell takes place partway through the preceding semester. Dates are announced in advance and are posted in school and college offices. Students are expected to meet with their advisers during this period to affirm that the courses they plan to take will ensure satisfactory progress toward a degree.

New students and transfer students may be sent course enrollment instructions by their college offices before they arrive on campus. Procedures vary from college to college.

COURSE ADD/DROP/CHANGE

Students may adjust their schedules during add/drop/change periods. A form is completed by the student and signed by both the student's adviser and an appropriate representative of the department offering the course (an instructor, department staff member, or college registrar, depending on the college). The completed and signed form must be returned to the student's college office to be processed. Professional schools, Continuing Education and Summer Sessions, and the Department of Physical Education and Athletics have different course enrollment and add-drop policies. See the chart below for their course add/drop/change fees.

</tr>
</tbody>
</table>

*Consult the college office for special considerations and requirements.

Consult the Summer Session catalog and the Division of Extramural Study brochure for fees.
AUDITING COURSES

Summer school and extramural students may officially register as visitors (auditors) in courses and have this entered on their permanent records if their attendance is reported as satisfactory. Graduate students may register for courses as auditors but will not have the courses listed on their transcripts. Undergraduates may not register to audit courses.

LEAVES AND WITHDRAWALS

A leave of absence must be requested from the college in which the student is enrolled. A leave of absence is granted for a specified time, after which the student is expected to return to resume course work. Students should inform their college of intent to return.

A student may withdraw from the university at the student's discretion. In addition, a college may withdraw a student who fails to return at the end of a period of authorized leave.

Medical leaves are granted and processed through University Health Services.

Internal Transfer Division

Students may not always be satisfied with the original Cornell school or college into which they've been admitted. They may decide to transfer from one college to another, within the university. This process is called internal transfer, and application procedures and deadlines vary by college. It may be possible to be admitted directly into a new program. Students who are uncertain if they immediately qualify for direct transfer, however, should apply to the Internal Transfer Division (ITD).

To apply, candidates must interview with the division's director and submit an essay to the ITD office outlining their reasons for wanting to transfer. Internal Transfer Division applicants must also fulfill the application requirements (e.g., interviews, essays) of their target college as if they were applying for direct transfer. In many cases, colleges formally sponsor students in ITD and essentially guarantee admission if students successfully complete the requirements (taking particular courses, earning a specified grade point average while enrolled in ITD) that are outlined in their letter of sponsorship. Although sponsorship does not guarantee admission to the Internal Transfer Division, it is the most important factor determining acceptance into ITD. Students can apply simultaneously for direct transfer and to ITD, so that if direct transfer is denied they might be offered the option of being sponsored in the Internal Transfer Division.

For more information about transfer requirements, students should contact the admissions office of the college they hope to enter and the office of the Internal Transfer Division, 220 Day Hall (255-4580).

The amount, time, and manner of payment of tuition, fees, or other charges may be charged at any time without notice.

Residency status is determined at the time of admission by the college. Change in residency status is determined by the bursar.

Fees and Expenses

Undergraduate applicants to Cornell pay a nonrefundable $65 application fee when submitting an application for admission. The graduate application fee is $65. Application to the Johnson Graduate School of Management costs $90 (domestic), $120 (international).

Tuition Refund Policy

Amounts personally paid for tuition may be refunded if the student requests a leave of absence or withdrawal from the office of the dean of his or her college of enrollment. The date of this request will determine the tuition liability for the semester. Previously matriculated students who terminate their registration with the university during a fall or spring semester in this manner will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second week, 20 percent; third week, 30 percent; fourth week, 40 percent; fifth week, 60 percent; sixth week, 80 percent; seventh week to the end of the semester, 100 percent.

First-time matriculants will be charged tuition from the university registration day through the date of their request as follows: first six days of the semester (including university registration day), no charge; seventh day of the semester, 10 percent; second and third weeks, 20 percent; fourth week, 30 percent; fifth and sixth weeks, 40 percent; seventh week, 50 percent; eighth and ninth weeks, 60 percent; tenth week to the end of the semester, 100 percent.

Repayment policy. Students receiving financial aid from the university who withdraw during a term will have their aid reevaluated, possibly necessitating repayment of a portion of aid received. Repayment to aid accounts depends on the type of aid received, government regulations, and the period of time in attendance. A partial semester will generally count as one of the eight semesters of financial aid eligibility normally allowed a student.

BILLING AND PAYMENT

Billing

Tuition and room and board charges will be billed in July and December and must be paid prior to registration. The due date for these semester bills will normally be five to ten working days prior to registration day. All
other charges, credits, and payments will appear on monthly statements mailed before the twenty-fifth of every month.

It is possible that some charges will not be listed on the first bill and will appear on a subsequent monthly bill. A student must be prepared to pay any charges appearing on a subsequent bill even though the student receives a financial aid stipend before the charges are billed.

All bills are due by the date stated on the bill; all payments must be received by that date to avoid finance charges. Payments are not processed by postmark.

Please inform the Office of the Bursar of any change in billing address. Address changes made at other offices will not change the billing address. The address initially used on billing statements will be the home address as listed on each student's application for admission.

**Payments**

An individual who has outstanding indebtedness to the university will not be allowed to register* or reregister in the university, receive a transcript of record, have academic credits certified, be granted a leave of absence, or have a degree conferred. University policy precludes the use of any current financial aid aid for payment of past-due charges.

The Office of the Bursar acts as a clearinghouse for student charges and credits that are placed directly on a student's bill by several departments and offices of the university. Since the Office of the Bursar does not have detailed records concerning many items that appear on a bill, students should contact the office involved if they have questions.

For further information, students should contact the Office of the Bursar, Cornell University, 260 Day Hall, Ithaca, New York 14853-2801 (telephone: 607/255-6442). E-Mail UCO-Bursar@cornell.edu

*For specific exceptions, see “Bursar and CornellCard Procedures,” published by the Office of the Bursar, 260 Day Hall, or visit our website at http://www.bursar/home.html.

**STUDENT HEALTH INSURANCE**

Because of the high cost of medical care, it is Cornell University policy that every full-time registered student (including students registered in absentia and non-degree students) must have health insurance coverage. You have two options:

1. enroll in the Student Health Insurance Plan (SHIP); or
2. waive the SHIP and purchase comparable health insurance.

The Student Health Insurance Plan is developed especially for Cornell students and provides extensive coverage at a reasonable cost for most on- or off-campus medical care. Complete and current details of the SHIP, its cost, and an enrollment/waiver form will be mailed to each student with the July bursar bill.

To ensure that all students are covered by an active health insurance plan, each year you will be enrolled automatically in the SHIP unless you submit a waiver form that affirms you have other insurance (from the day you become a registered student) and agree to maintain that coverage while a student at Cornell. If you have adequate health insurance coverage and plan to waive the Student Health Insurance Plan, you must submit the waiver form each year by the deadline to avoid a charge.

Fall entrants: you will receive an enrollment/waiver form for the SHIP with your July bursar bill that you must return by 8/27/99.

Spring entrants: you will receive the form after you arrive at Cornell; deadline is 2/26/00.

Late registrants: the form is due no later than 30 days after the initial bill for the insurance charge.

The Student Health Insurance Plan provides coverage twenty-four hours a day, 365 days a year, anywhere in the world. Students graduating mid-year may be eligible to purchase a 5-month plan. Students enrolled in the SHIP may enroll their eligible dependents for an additional cost (fall deadline: September 30). Graduate and Professional students who prefer to pay monthly must enroll in the installment payment plan no later than September 30. Because of policy restrictions, the plan is nonrefundable (except for dependents who no longer meet eligibility requirements and students who withdraw from Cornell within the first 30 days of the academic year).

For more information, contact the:

**Student Insurance Office**

Gannett Health Center
10 Central Avenue
Ithaca, NY 14853-3101, USA

**Class Meeting Times, Meeting Times, and Examinations**

**CLASS ATTENDANCE AND ABSENCES**

Students are expected to be present throughout each term at all meetings of courses for which they are registered. The right to excuse a student from class rests at all times with the faculty member in charge of that class.

**Absences because of religious beliefs.** In accordance with Section 224-a of the New York State Education Law, each student who is absent from school because of his or her religious beliefs must be given an equivalent opportunity to register for classes or make up an examination, study, or work requirements that he or she may have missed because of such absence on any particular day or days. No fees of any kind shall be charged by the university for making available to such student such equivalent opportunity.

**Laboratories and similar exercises**

1 HR 55 MIN 08:00 AM 09:55 AM 10:10 AM 12:05 PM 12:20 PM 02:15 PM 02:30 PM 03:20 PM 04:25 PM 07:30 PM 09:55 AM 11:00 AM 10:10 AM 01:10 PM 01:25 PM 04:25 PM 07:30 PM 10:30 PM
No classes or laboratory exercises are to be held between the hours of 4:25 p.m. and 7:30 p.m. Monday through Thursday, after 4:25 p.m. on Friday, after 12:20 p.m. on Saturday, and all day Sunday.

Evening preliminary examinations that will be given outside of normal class hours may be scheduled on Tuesday and Thursday evenings only, beginning at 7:30 p.m. All room assignments are scheduled by the Office of the University Registrar. The dates and times of these examinations are listed in the course rosters for each term.

Evening academic activities commencing at 7:30 p.m. on Mondays and Wednesdays, other than regularly scheduled courses and prelims previously approved by the office of the university faculty, are not permitted. Violation of these rules interferes with other university activities (athletic, musical, theatrical, employment, etc.).

Any exception to the above regulations, other than those for evening preliminary examinations, will require permission of the dean or director of the college or school offering the course. Exceptions to the regulations on evening preliminary examinations require approval of the dean of the university faculty. All such exceptions must include provision of special arrangements for the students for whom conflicts are generated by such an exception.

FINAL EXAMINATIONS

Final examinations for undergraduate courses are scheduled by the Office of the University Registrar. Examinations may be one, two, or two and one-half hour in length at the discretion of the department concerned. The schedule of final examinations is available in the Course and Time Roster and the Course and Room Roster, both of which are published through the Office of the University Registrar each semester. Examinations not listed in the registrar's examination schedule will be arranged by the professor in charge and must fall within the announced examination period, except by permission of the dean of the faculty in accordance with existing faculty legislation.

General Rules Governing Final Examinations

Legislation of the university faculty governing study periods and examinations is as follows:

1. No final examinations can be given at a time other than the time appearing on the official examination schedule promulgated by the university registrar's office without prior written permission of the dean of the faculty.

2. No permission will be given, for any reason, to schedule final examinations during the last week of classes or the designated study period preceding final examinations.

3. Permission will be given by the dean of the faculty to reschedule examinations during the examination period itself if requested in writing by the faculty member, but only on condition that a comparable examination also be given for those students who wish to take it at the time the examination was originally scheduled. The faculty member requesting such a change shall be responsible for making appropriate arrangements for rooms or other facilities in which to give the examination. This should be done through the university registrar's office.

4. No tests are allowed during the last week of scheduled classes unless such tests are part of the regular week-by-week course program and are followed by an examination (or the equivalent) in the final examination period.

5. Papers may be required of students during the study period if announced sufficiently far in advance that the student did not have to spend a significant segment of the study period completing them.

6. Faculty can require students to submit papers during the week preceding the study period.

7. Take-home examinations should be given to classes well before the end of the regular term and should not be required to be submitted during study period but rather well into the examination period.

The university policies governing study period and final examinations are:

a) Each course should require that a final examination or some equivalent exercise (for example, a term paper, project report, final critique, oral presentation or conference) be conducted or due during the period set aside for final examinations.

b) Although not specifically prohibited, it is university policy to discourage more than two examinations for a student in one twenty-four-hour time period and especially on any one day. It is urged that members of the faculty consider student requests for a make-up examination, particularly if their course is the largest of the three involved and thus has the strongest likelihood of offering a make-up for other valid reasons, i.e., illness, death in the family, etc.

c) Students have a right to examine their corrected exams, papers, etc., to be able to question their grading. (Note that students have no absolute right to the return thereof.) Exams, papers, etc., as well as grading records, should be retained for a reasonable time after the end of the semester, preferably till the end of the following term, to afford students such right of review.

EVENING PRELIMINARY EXAMINATIONS

The most convenient times and places for "prelims" are the normal class times and classrooms. In cases where the only alternative is to hold evening preliminary examinations, they may be scheduled only on Tuesday and Thursday evenings and only after 7:30 p.m.

An alternative time to take the examination must be provided for those students who have academic, athletic, or employment conflicts at the time scheduled.

Note that instructors holding evening examinations are strongly urged to indicate this in the course descriptions listed in Courses of Study and must notify students of the dates of such examinations as early as possible in the semester, preferably when the course outline is distributed. For more information on the policy governing evening examinations, contact the office of the dean of the faculty, 315 Day Hall.

Grading Guidelines

The official university grading system is composed of letter grades with pluses and minuses. Passing grades range from A+ to D-. F is failing. INC denotes a grade of incomplete, and R is the grade given at the end of the first semester of a year-long course. The grades of INC and R do not have quality-point equivalents attached. These are the quality-point equivalents:

- A+ = 4.3
- A = 4.0
- A- = 3.7
- B+ = 3.3
- B = 3.0
- B- = 2.7
- C+ = 2.3
- C = 2.0
- C- = 1.7
- D+ = 1.3
- D = 1.0
- D- = 0.7
- F = 0.0

This is how a term average is computed:

<table>
<thead>
<tr>
<th>Course</th>
<th>Grade</th>
<th>Points</th>
<th>Quality Product</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chemistry 103 B+</td>
<td>3.3</td>
<td>3</td>
<td>9.9</td>
</tr>
<tr>
<td>English 151 C-</td>
<td>1.7</td>
<td>3</td>
<td>5.1</td>
</tr>
<tr>
<td>DEA 145 B</td>
<td>3.0</td>
<td>4</td>
<td>12.0</td>
</tr>
<tr>
<td>CEH 100 B</td>
<td>3.0</td>
<td>3</td>
<td>9.0</td>
</tr>
<tr>
<td>DEA 111 C</td>
<td>2.0</td>
<td>3</td>
<td>6.0</td>
</tr>
</tbody>
</table>

Total 16 42.0

To arrive at the term average, add the products (credits x quality points) and divide by the number of credits taken. Here, 42 divided by 16 equals 2.63.

The cumulative average (an average of grades from two or more terms) equals the sum of the products of all the grades at Cornell divided by the total number of credits taken.

S-U GRADES

On September 6, 1972, the Faculty Council of Representatives passed the following legislation:

"Resolved, that:

A. the S-U system have symbol equivalents which are uniform within the university: "S" means C- or above; "U" means D+, D-, or failure.

B. S-U options be chosen by the student during the first three weeks of the term.

C. the Announcements and/or supplementary course registration materials describing each course include a description of the course grading options, particularly if the course is graded with an exclusive S-U. Any change in grading options must be announced by the instructor within the first two weeks of the term.

D. course requirements (required reading, term paper, etc.) be the same for students electing S-U grades as for those electing letter grades."

The rules for the S-U option are further defined by each of the academic units. They are as follows:
Agriculture and Life Sciences. (a) Must have 100 credit hours with A, B, C, D grades. (b) The S-U option is available only in those courses so designated in the course catalog after approval by the Educational Policy Committee. (c) Freshmen may not exercise the S-U option.

Architecture, Art, and Planning. (a) All courses specifically required for a degree are counted specifically required unless otherwise excluded. Various departments may designate specific required courses where S-U will be permitted. (b) In a course designated as S or U, the entire class is so graded. The instructor must announce this decision within the first two weeks of class. (c) Where the option for S or U exists, both student and instructor must agree on the option. This agreement must be made by the end of the third week of classes on the appropriate form in the college office. Once agreed upon, this grade option will be used for the final grade.

Arts and Sciences. (a) Courses that count toward satisfaction of major requirements should not be taken for an S or U grade unless the department grants permission. (b) Permission of instructor. (c) A minimum of 80 of the 120 hrs. required for the A.B. degree must be in courses for which the student has received letter grades.

Engineering. (a) May take one Humanities and Social Sciences, Approved, or Free Elective per term after completing first semester. (b) This option may be elected during Pre-Course Enrollment or with the written permission of the instructor and adviser on an add/drop form in the first 3 weeks of classes. (c) Decision is irrevocable after first 3 weeks of term.

Graduate School. (a) Seminars and Thesis Research courses are usually graded S/U, and should be registered accordingly or a grade error results at semester's end. Other courses may be registered as S-U only if offered as S-U option.

Hotel. (a) Maximum of four free-elective credit hours per term. (b) Exceptions are by petition only.

Human Ecology. (a) Not part of student’s major. (b) May be used in the 19 hours required outside the major in Human Ecology courses. (c) Not part of hours required in humanities, natural sciences, and social sciences. (d) A department may approve S-U grading in specific courses if approved by Educational Policies Committee. (e) Freshmen enrolled in English 137 and 138, which are only offered for S-U credit, are permitted to apply these courses to the freshman seminar requirements. (f) Total of 12 credits in S-U courses (not counting PE) may be counted towards degree requirements during a student’s college career only in those courses, if any.

Industrial and Labor Relations. (a) This option may be elected, if available in I&LR electives, or in out-of-college electives but not including directed studies. (b) Degree requirements include a minimum of 105 lettergrade (A+ to D-) credits. (c) Student must also be in good academic standing. (d) A “U” is considered the equivalent of an “F” in determining a student’s academic status. (e) Limited to two courses per term, not to exceed four hours in any one course.

Internal Transfer. (a) S-U grades permitted only when it is the only option or (b) when specifically approved by an admissions officer in the school or college to which the student plans to transfer.

Veterinary Medicine. (a) There are four courses in the veterinary core curriculum that are offered on an S-U basis only. All other required core courses must be taken for a letter grade. (b) Elective courses for veterinary students may be offered on a S-U basis at the option of the professor.

INCOMPLETE

The grade of incomplete is appropriate only when two basic conditions are met:
1) the student has a substantial equity at a passing level in the course with respect to work completed, and
2) the student has been prevented by circumstances beyond the student's control, such as illness or family emergency, from completing all of the course requirements on time.

A grade of incomplete may not be given merely because a student fails to complete all course requirements on time. It is not an option that may be elected at the student's own discretion.

While it is the student's responsibility to initiate a request for a grade of incomplete, requests for reasoning one must be acceptable to the instructor, who establishes specific make-up requirements. The instructor has the option of setting a shorter time limit than that allowed by the student's college for completing the course work. Several colleges require that a statement signed by the instructor be on file indicating the dates on which the student has made up the grade of incomplete and the restriction, if any.

It is the responsibility of the student to see that all grades of incomplete are made up within the deadline and that the grade has been properly recorded with the student's college registrar.

CHANGES IN GRADES

Changes in a grade may be made only if the instructor made an error in assigning the original grade.

OFFICIAL TRANSCRIPTS

An official transcript is one that bears the official signature of the university registrar, sent in a sealed envelope directly from the Office of the University Registrar to another institution or agency as directed by the student. Transcripts can be obtained through the Office of the University Registrar, B7 Day Hall. There is a $20 fee per transcript.

University Requirements for Graduation

The university has only two requirements for graduation that must be fulfilled: the swim test and physical education courses.

A student's college determines degree requirements such as residency, number of credits, distribution of credits, and grade averages. See the individual requirements listed by each college or school or contact the college registrar's office.

PHYSICAL EDUCATION

Classes

All undergraduate students must complete two terms of work in physical education unless exempted from this requirement for medical or other special reasons or by virtue of advanced standing on admission. For transfer students the requirement is reduced by the number of terms satisfactorily completed, not necessarily including physical education, in a college of recognized standing before entering Cornell.

Credit in physical education may be earned by participating in courses offered by the Department of Athletics and Physical Education, participating on an intercollegiate athletic team as a competitor or manager, or performing in the marching band.

Physical education is a requirement of the first two terms at Cornell. Students must register for it in each term, except those in which postponements are granted, until the requirement is satisfied.

Temporary postponements may be granted on the basis of physical disability, schedule conflicts, or excessive work load (employment exceeding twenty hours a week). The Gannett Health Center can provide certifications based on health, and the financial aid office can provide certifications of employment. Students should contact the director or assistant director of Physical Education to establish postponements or waiver of the requirement. Questionable or unusual cases may be resolved by petition to the Faculty Advisory Committee on Athletics and Physical Education.

Swim Test

The University Faculty Committee on Physical Education has established a basic swimming and water safety competency requirement for all entering freshman undergraduate students. Normally, the test is given for women in the Helen Newman pool and for men in the Teagle pool as part of their orientation. The test consists of a feet-first entry into the deep end of the pool and a continuous 75-yard swim using front, back, and optional strokes. Any student who cannot pass the swim test is required to include the course Basic Swimming and Water Safety in his or her program of physical education before electives can be chosen. Students will receive a grade of incomplete in Physical Education until they have passed the swim test or fulfilled the requirement by satisfactory attendance in two terms of Basic Swimming and Water Safety. Students unable to meet the swim requirement because of medical, psychological, or religious reasons must petition the University Faculty Committee on Physical Education for a waiver of the requirement. When a waiver is granted by the Faculty Committee on Physical Education, an alternate requirement is imposed. The alternate requirement substitutes a course in either Advanced First Aid (Emergency Response) or Wellness and Fitness for the original swimming requirement.
STUDENT RESPONSIBILITIES

Students are responsible for meeting all requirements for the courses in which they are enrolled, as defined by the faculty members teaching the courses. It is also the student’s responsibility to be aware of the specific major, degree, distribution, college, and graduation requirements for completing his or her chosen program of studies. Students should know how far they have progressed in meeting those requirements at every stage of their academic career.

Student Records Policy

Under the Family Educational Rights and Privacy Act of 1974 (FERPA), Cornell University is required to advise students of their rights concerning their education records. Education records include records directly related to a student and maintained by an educational institution or party acting on its behalf. The law gives students the right to:

a) inspect and review their education records;
b) challenge contents of education records;
c) a hearing if the challenge is unsatisfactory;
d) include an explanatory statement in the education records if the outcome of the hearing is unsatisfactory;
e) prevent disclosure of personally identifiable information;
f) secure a copy of the institutional policy which includes the location of all education records;

*Directory information is a category of personally identifiable information that includes name, home address, local address, local telephone listing, dates of attendance at Cornell, major field of study and college attended, previous educational agency or institution attended, participation in officially recognized activities (in athletics, the weight and height of members of athletic teams), degrees earned and awards. Directory information may be released unless the student indicates otherwise at the time of registration. Students who wish no release of their directory information must inform the office of the university registrar in writing within 10 days of the date of official university registration. Students may rescind their no release request at any time in writing to the office of the university registrar.

Academic Integrity

Absolute integrity is expected of every Cornell student in all academic undertakings. Any fraudulent act by a student to advance his or her academic status merits a severe penalty and such cases are governed by the Code of Academic Integrity. A pamphlet entitled the Code of Academic Integrity and Acknowledging the Work of Others is distributed to all transfer students and is also available free of charge from the office of the dean of faculty. The policy is published in the Policy Notebook.

PROTECTION OF HUMAN SUBJECTS IN RESEARCH

The University Committee on Human Subjects is the official review board of all university projects that use humans as research subjects. Projects affected by this restriction include, but are not limited to, surveys, questionnaires, studies of existing data, documents, records in which there are no identifiers, as well as mental and physical tests of human subjects.

Requests for student information must be submitted in writing to the Assistant Vice President for Academic Programs and Campus Affairs, 311 Day Hall. All proposals involving human subjects in any category must be submitted to the committee for review.

Inquiries, communications, and requests for guidelines should be directed to the committee’s Executive Secretary, 120 Day Hall (255-2945). The guidelines are also available at the World Wide Web address www.osp.cornell.edu

USE OF ANIMALS FOR COURSES

Vertebrate animals serve as an invaluable aid in instruction. It is recognized, however, that some students have ethical objections to the use of vertebrate animals in this manner. Courses that use vertebrate animals are identified as such in the course descriptions. Students who have concerns about the use of animals in these courses should consult the course instructor for more information about the precise ways in which the animals are used.

A set of University guidelines on the use of vertebrate animals in teaching for faculty and students is printed below and is available from departments in which the courses are offered.

Guidelines for Faculty and Students

With Respect to the Use of Animals in Instruction

Background: On December 8, 1987, the Cornell University Institutional Animal Care and Use Committee approved a series of guidelines recommended to them by the University Animal Welfare Committee. These guidelines were prepared by a subcommittee of faculty members, after they had the opportunity to evaluate the use of animals in undergraduate teaching (and student concerns for the same) from a representative sample of instructors.

Guidelines

1. For demonstrating certain principles and procedures the use of animals in teaching is recognized as an invaluable, often essential, pedagogical device.

2. For courses in which vertebrate animals are to be used in dissection, surgery or in other experimental procedures, the course description that appears in the Announcement "Courses of Study" should alert students to this fact.

3. A detailed description of the intended use of vertebrate animals should be available to students upon request to the instructor in each course.

4. Faculty members are encouraged to explain their reasons and need for using vertebrate animals and should indicate to students the availability of the procedures described in item 8 below.

5. Students are encouraged to discuss their concerns about the instructional use of vertebrate animals with the instructor in the course.

6. When consistent with pedagogical objectives, faculty members are encouraged to consider adopting alternative methods and procedures that do not involve the use of live animals.

7. When students object on ethical or other valid grounds, to participating in an exercise using vertebrate animals, instructors are encouraged to provide alternative means when consistent with pedagogical objectives, for learning the same material.

8. A student who is reluctant to voice his or her concerns about animal use in a particular course or who thinks these concerns have not received proper attention may seek assistance from the Director of the Cornell Center for Research Animal Resources (253-3520).
Interdisciplinary Centers, Programs, and Studies

ANDREW D. WHITE
PROFESSORS-AT-LARGE
726 University Avenue (255-0832)
The program has its origins in Cornell's early history. Andrew D. White, the first president of Cornell University, inaugurated the position of nonresident professor, to be held by eminent scholars, scientists, and intellectuals who periodically visit the university for the stated purpose of "contributing to the intellectual and cultural life of the university." Toward this end, Professors-at-Large engage in a variety of activities including public lectures, participation in ongoing courses, and collaborative research, as well as holding office hours for undergraduate and graduate students. Professors-at-Large serve for a six-year term and are full members of the faculty when in residence.

Term Ending in 2000
Berry, Michael, physicist

Term Ending in 2001
Pingree, David, historian of science

Term Ending in 2002
Chartier, Roger, cultural historian
Ernst, Richard R., physical chemist
Goodall, Jane, primatologist
Tobias, Phillip V., paleoanthropologist

Term Ending in 2003
Morrison, Toni, novelist
Rabinovich, Itamar, historian of the Middle East, diplomat

Term Ending in 2004
Bal, Mieke, cultural analyst
Cleeve, John, writer and actor
MacDonald, David, mammalogist and behavioral ecologist
Slijadzic, Haris, political leader, historian of the Middle East

Term Ending in 2005
Jemison, Mae, astronaut
McDonough, William, architect
O'Brien, Stephen J., genetecist
Schechner, Richard, director of performance studies

CENTER FOR APPLIED MATHEMATICS
657 Frank H. T. Rhodes Hall (255-4335)
The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research over a wide range of the mathematical sciences. Each student develops a solid foundation in analysis, algebra, and methods of applied mathematics. The remainder of the graduate student's program is designed by the student and his or her Special Committee. For detailed information on opportunities for graduate study in applied mathematics, students should contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in an application-oriented program in mathematics may select an appropriate program in the Department of Mathematics, the Department of Computer Science, or some department of the College of Engineering.

Graduate students in the center take courses related to their program of study that are offered by various departments. Below are listed selected courses in applied mathematics in the main areas of research interest of the center's members. Detailed descriptions of these courses can be found in the listings of the individual departments.

Selected Applied Mathematics Courses

Basic Graduate Courses in Mathematics and Applied Mathematics
Math 413-414 Introduction to Analysis
Math 433-434 Introduction to Algebra
Math 436 Applications of Abstract Algebra
Math 611-612 Real and Complex Analysis
Math 615-616 Mathematical Methods in Physics
Math 622 Applied Functional Analysis
Math 633-632 Algebra
Math 651 Introductory Algebraic Topology
T&AM 612-613 Methods of Applied Mathematics
T&AM 614-615 Topics in Applied Mathematics

Analysis (and Differential Equations)
Math 427 Introduction to Ordinary Differential Equations
MATH 428 Introduction to Partial Differential Equations
Math 617 Dynamical Systems
Math 618 Smooth Ergodic Theory
Math 619-620 Partial Differential Equations
Math 652 Differentiable Manifolds
Math 711-712 Seminar in Analysis
Math 713 Functional Analysis
Math 715 Linear Algebra
Math 722 Riemann Surfaces
Math 728 Seminar in Partial Differential Equations

Logic and Theory of Computing
CS 618 Principles of Distributed Computing
CS 671 Introduction to Automated Reasoning
CS 677 Reasoning about Knowledge
CS 682 Theory of Computing
CS 715 Seminar in Programming and Computational Logic
Math 486 Applied Logic I
Math 681 Logic
Math 781-782 Seminar in Logic
Math 785 Model Theory
Math 784 Recursion Theory
Math 787 Set Theory
Math 788 Topics in Applied Logic

Numerical Mathematics and Operations Research
Math 422 Software for Scientific Computing
Math 621 Matrix Computations
Math 622 Numerical Optimization and Nonlinear Algebraic Equations
Math 624 Numerical Methods for Differential Equations
Math 664 Machine Vision
Math 681 Analysis of Algorithms
Math 721-722 Advanced Topics in Numerical Analysis

Math 729 Seminar in Numerical Analysis

EE 423 Computer Methods in Digital Signal Processing
Math 425 Numerical Solution of Differential Equations
Math 728 Seminar in Partial Differential Equations

Discrete Mathematics and Geometry
Math 441-442 Introduction to Combinatorics
Math 455 Applicable Geometry
ORSIE 633 Graph Theory and Network Flows
ORSIE 634 Combinatorial Optimization
ORSIE 636 Integer Programming
ORSIE 639 Polyhedral Convexity

Information Communication and Control Theory

CORNELL CENTER FOR THE ENVIRONMENT
Rice Hall (255-7355)
The Cornell Center for the Environment (CfE) coordinates interdisciplinary research, teaching, and outreach programs on environmental issues. CfE's overarching goal is to continuously advance an intellectual community for the environment at Cornell, with the objective of promoting a sustainable future. To meet this goal CfE:

- initiates environmental courses and curricula at both the graduate and undergraduate levels;
- facilitates interdisciplinary environmental research;
- coordinates outreach programs that assist federal, state and local government, international agencies, private organizations, businesses, and individuals in analyzing and solving environmental problems;
- organizes environmental events, lectures, festivals and seminars; and
- serves as a clearinghouse for environmental information.

The CfE web page (http://www.cfe.cornell.edu) is the principal source of environmental information for the Cornell students, faculty, and staff. Check it frequently for the latest updates on funding, seminars, courses, lectures, events, research opportunities, and new educational programs.

EDUCATION
Undergraduates and graduates can study the environment through programs in Cornell departments, centers, and institutes. Cornell has a strong tradition in environmental studies, with over 200 faculty across campus from the natural, biological, and social sciences.

Undergraduate Education
For undergraduate students, a listing of environmental course offerings is posted on the CfE web page (http://www.cfe.cornell.edu). Undergraduates with an interest in the environment most often major in one of the following areas:

- Agricultural and Biological Engineering
- Agricultural, Resource, and Managerial Engineering
- Architecture
- Biological Sciences
- City and Regional Planning
- Civil and Environmental Engineering
- Design and Environmental Analysis
- Geological Sciences
- Natural Resources
- Plant Sciences
- Science and Technology Studies
- Soil, Crop, and Atmospheric Sciences.

In addition to departmental programs, Cornell offers two interdisciplinary environmental majors. The Department of Science and Technology Studies offers the Biology and Society major that is available to students in the Colleges of Arts and Sciences and Human Ecology. Similarly, students in the College of Agriculture and Life Sciences can develop an approved sequence of courses from the Biology and Society curriculum. The Science of Earth Systems major is available to students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Engineering. The CfE web page (http://www.cfe.cornell.edu) maintains a listing of these and other possible majors for students interested in the environment.

Graduate Study
Graduate level environmental concentrations are found in many Cornell "fields of study," from Agricultural and Biological Engineering to Zoology. Similarly, there are opportunities for minor concentrations in an environmental field. CfE assists in the administration of the Master of Professional Studies—Environmental Management Concentration, the Environmental Toxicology Graduate Field, and the Conservation and Sustainable Development minor.

Master of Professional Studies—Environmental Management Concentration (MPS-EM Concentration). Resolving complex environmental problems requires more than technological solutions and technical expertise. Environmental professionals also need broad-based administrative, analytical, and managerial skills to make cost effective decisions, perform impact analyses, effectively engage stakeholders, and work within a fluctuating legal, political, and regulatory arena. The MPS-EM Concentration is organized with these demands in mind. The program prepares graduates to work as multidisciplinary team members in the environmental management professions. The concentration is offered through five fields of study:

- Agricultural and Biological Engineering
- Agricultural Economics
- Development Sociology
- Natural Resources
- Soil, Crop, and Atmospheric Sciences.

Students take common core courses including: Science and Technology of Environmental Management (ABEN 425); Managing Local Environmental Systems: Social Perspectives and Research Bases (Social Sociology 560); Legal Aspects of Environmental Management (CRP 551 or NTRES 408); and Environmental and Resource Economics (ARME 651). An interdisciplinary problem-solving project and 12-15 additional credit hours round out the program. For more information, contact CfE's education coordinator (607/255-7355 or cufc@cornell.edu).

Environmental Toxicology. CfE is the administrative home of the Environmental Toxicology Graduate Field. The field offers a multidisciplinary science program leading to an M.S. or Ph.D. degree. The three major areas of concentration in the program are cellular and molecular toxicology, food and nutritional toxicology; and ecotoxicology and environmental chemistry. The graduate program prepares students for professional opportunities in academia, industry, private research institutes, and governmental agencies.

Conservation and Sustainable Development Minor (CSD). The minor was formed in response to the challenges facing society to provide for the health, safety, and welfare of people while maintaining the ecological integrity of natural ecosystems and the long-term sustainability of food, forage, and fiber production systems. Solutions to today's conservation and sustainable development problems will continue to elude a single disciplinary approach. These challenges must be met by a new kind of specialist that has holistic perspectives and is capable of working on interdisciplinary research, and development teams. Hence, the Conservation and Sustainable Development Minor is oriented to graduate students desiring interdisciplinary approaches to real world problems.

Requirements for the minor include: (1) taking for credit the CSD core course, Critical Issues in Conservation and Sustainable Development (NTRES 440); (2) taking for credit at least two electives in subject areas outside the student's primary academic focus; and (3) an interdisciplinary problem-solving research or development project. Elective courses are chosen in consultation with the student's graduate
committee that includes one representative from the CSD minor.

RESEARCH AND OUTREACH
CfE is home for several environmental programs offering students opportunities for study, project work, research, and outreach. These programs are focused on a variety of issues from watershed management to sustainable economic development to environmental risks. CfE programs include:

- Water Resources Institute (WRI)
- Institute for Comparative and Environmental Toxicology (ICET)
- Waste Management Institute (WMI)
- Institute for Resource Information Systems (CORNELL IRIS)
- Program for Environment and Community (PEC)
- Program on Breast Cancer and Environmental Risk Factors in New York State (BCERF)
- Work and Environment Initiative (WEI)
- Environmental Inquiry (EI)
- Environmental Risk Analysis Program (ERAP)
- CfE Watersheds Program.

Several other programs affiliated with the Center include:

- Superfund Basic Research and Education Program (SBREP)
- Ocean Resources and Ecosystems Program (OREP)
- Cornell Institute for Research in Chemical Ecology (CIRCE)
- Program in Biogeochemistry and Environmental Change (PBEC)
- Environmental Outreach Council.

For more information on CfE's programs and institutes review the Center's web page (http://cfe.cornell.edu/), or contact the Center by phone (607/255-7555) or e-mail (cufe@cornell.edu).

BEYOND THE CLASSROOM
Students interested in the environment will find many organizations, resources, and activities beyond the classroom setting. CfE sponsors guest lectures and co-hosts conferences with groups from across the campus. In addition, CfE organizes the annual Cornell Environmental Film Festival and the Jill and Ken Iscol Distinguished Environmental Lectures.

THE MARIO EINAUDI CENTER FOR INTERNATIONAL STUDIES

170 Uris Hall (255-6370)

The Mario Einaudi Center for International Studies was established in 1961 to encourage, coordinate, and support comparative and interdisciplinary research on international subjects and was named for its founder in 1991. It is one of the largest and most diverse centers in the United States. Currently, it oversees four Title VI National Resource Centers (East Asia, Latin American Studies, South Asia and Southeast Asia) as well as sixteen topical programs and the university study-abroad program. More than 500 faculty members voluntarily collaborate in the center's programs and well over 300 graduate students are involved directly in its international programs. Undergraduate concentrations in International Relations and Modern European Societies serve 285 students.

Cornell is committed to the application and expansion of its resources to study the global community in all its complexity. These resources include a faculty of preeminent scholars and teachers, excellent research facilities, the ability to teach forty-five languages, and a library system with more than 2,500,000 volumes on topics related to international and comparative studies.

As the world changes, Cornell's international programs change to study those developments. In addition to area studies, these programs focus on topics as varied and vital as international marketing, agriculture, nutrition, population, law, planning, politics, rural development economics, and world peace. These areas and topics change as interest, demand, and potential warrant. As one program gains enough momentum and recognition to attract its own resources, the center applies its resources to another pilot activity that brings faculty and students together across customary professional and departmental boundaries.

In addition, the Einaudi Center has responsibility for the design and expansion of foreign study options for Cornellians through the Cornell Abroad Program and encourages international research and travel by graduate students through its annual Travel Grant Program. The center is also responsible for the International Students and Scholars Office.

Although the center has both an endowment and an appropriation from the university to support interdisciplinary international studies, Cornell monies are only a fraction of the total funds involved in international studies at Cornell. Programs seek funding from foundations, the federal government, alumni, and international agencies, a process that the center assists with as necessary. When particular programs are in a low budget cycle, the center continues to support ones that show promise so that faculty have time to seek new outside funding.

In addition to current programs, publications, and courses, contact:

Current programs coordinated by the Einaudi Center include the following:

Master of Professional Studies in International Development:
Norman Uphoff, field representative
B31 Warden Hall

A program intended for midcareer practitioners is sponsored by the center and leads to a Master of Professional Studies in International Development. Interested individuals should apply through the Graduate School.
COGNITIVE STUDIES

235 Uris Hall (255-6431) (cogst@cornell.edu)

Cognitive Studies focuses on the nature and representation of knowledge. It approaches the study of perception, action, language, and thinking from several perspectives—theory, experiment, and computation—with the aim of gaining a better understanding of human cognition and the nature of intelligent systems. The connection between human and artificial intelligence is an important theme, as is the nature of mental representations and their acquisition and use. Cognitive Studies draws primarily from the disciplines of computer science, linguistics, neuroscience, philosophy, and psychology. The field of cognitive studies is primarily represented by faculty in the following departments: Psychology, Economics, Linguistics, and Philosophy, as well as Modern Languages and Mathematics (College of Arts & Sciences), Computer Science (College of Arts & Sciences and College of Engineering), Human Development and Design and Analysis (College of Human Ecology), Neurobiology & Behavior (Division of Biological Sciences), Education (College of Agriculture and Life Sciences), and the Johnson Graduate School of Management.

Undergraduate Programs

An undergraduate concentration in cognitive studies in the College of Arts and Sciences provides a framework for the design of structured, individualized programs of study in this growing interdisciplinary field. Such programs of study are intended to serve as complements to intensive course work in a single discipline as represented in an individual department. For further information on the undergraduate program, see "Cognitive Studies Concentration" in the College of Arts and Sciences section. Contact Mary Wright (255-6431 or cogst@cornell.edu).

Graduate Programs

Cornell offers a graduate field minor in cognitive studies. Cornell’s unique program of graduate training, which seeks to tailor an optimal program of study and research for each individual, fosters interdisciplinary committees. It is the norm for students interested in cognitive studies to combine faculty members from such fields as Philosophy, Computer Science, Linguistics, or Psychology on common committees. For further information on the graduate Field of Cognitive Studies, contact Carol Rosen, director of graduate studies, 311 Morrill Hall, (255-0722; cdr@cornell.edu), or Mary Wright, Administrative Assistant, 235 Uris Hall, Office of Cognitive Studies (255-6431, cogst@cornell.edu).

Courses

Courses from across the university that are relevant to the Cognitive Studies program are listed in this catalog under Arts and Sciences in the section "Special Programs and Interdisciplinary Studies.

CORNELL ABDROAD

474 Uris Hall 607/255-6224, fax 607/255-8700, e-mail: CUAbroad@cornell.edu
WWW home page: http://www.cuinaudi.cornell.edu/cuabroad

Study abroad is an integral part of a Cornell education. We live in an increasingly global society in which knowledge, resources, and authority transcend national and regional boundaries. To help students develop the knowledge, skills, and attitudes necessary for global citizenship in the twenty-first century, Cornell Abroad offers a wide range of international study opportunities that reflect the fundamental educational goals and objectives of the university. Study abroad is a continuous experience with study on campus, enabling students to make regular progress toward the degree, at a cost that is generally no greater than for study on campus.

Qualified students study abroad through programs administered by Cornell and other American institutions, and by enrolling directly in foreign universities. Among the many study abroad programs available, students select programs with thoughtful planning and apply with the approval of their colleges and faculty advisers. In all cases, students must apply through Cornell Abroad, whose staff services the planning and application process.

LOCATIONS ABROAD

Cornell students majoring in a broad array of fields in all seven undergraduate colleges regularly study in approximately 40 countries. The following list includes programs chosen frequently by students with college approval; those locations preceded by an asterisk (*) are programs run directly by Cornell.

AFRICA

Botswana, Cameroon, Kenya, Madagascar, Tanzania, Uganda: School for International Training; Ghana: University of Ghana (through the Council of International Educational Exchange, CIEE); Kenya: Wildlife Management (School for Field Studies); Kenya Semester Program (St. Lawrence University);

ASIA

China: Chinese University of Hong Kong; Inter-University Program for Chinese Language Studies at Tsinghua, Peking, and Nanjing Universities (CIEE); International Chinese Language Program at National Taiwan University; India: School for International Training;

Europe

Denmark: *Denmark’s International Study Program (DIS); France: *EDUCO (Cornell and Duke in Paris) at Université de Paris VII, Paris I, Institut d’Études Politiques de Paris ("Sciences Po"); Critical Studies Program at the University of Paris (CIEE); Paris Internship (Boston University);

Germany: various university-based study abroad programs including the Berlin Consortium for German Studies at the Free University of Berlin, Wayne State University in Munich and Freiburg;

Greece: College Year in Athens;

Ireland: University of Limerick; Trinity College and University College, Dublin;

Italy: Cornell College of Art, Architecture and Planning Program in Rome; Bologna Cooperative Studies Program; Intercollegiate Center for Classical Studies in Rome; programs in Florence and other cities;

Netherlands: Leiden University; University of Maastricht, Center for European Studies;

Russia: St. Petersburg University (CIEE); Moscow International University and other universities (American Council of Teachers of Russian); Spain: *Cornell-Michigan-Penn program at the University of Seville;

Sweden: *Swedish Child Care and Family Policy Internship at the University of Göteborg; Agricultural College of Sweden, Upsalla; The Swedish Program at the University of Stockholm;
hours of undergraduate credit on the Ithaca campus, students who transfer to Cornell as juniors are usually unable to count student abroad credit toward their Cornell degree.

When Students Study Abroad and for How Long
Students may study abroad their sophomore, junior, or senior year. Junior year is the traditional choice, but second semester sophomore year or first semester senior year is increasingly popular. To ensure preparation, it is important to begin planning for study abroad in the freshman year. Although semester-long programs are usually available, academic year programs are highly recommended, especially for students enrolling in non-English speaking universities.

Application Process
Applications for all study abroad programs—Cornell programs, as well as those administered externally—are available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, ask questions of the staff, and meet with the associate director to gather information. The Cornell Abroad website is a good place to browse through program offerings and to explore links to universities worldwide. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both students and faculty advisers. Application deadlines are usually available at Cornell Abroad, 474 Uris Hall, where students are encouraged to consult the library of study abroad materials, ask questions of the staff, and meet with the associate director to gather information. The Cornell Abroad website is a good place to browse through program offerings and to explore links to universities worldwide. Students meet with the study abroad advisers in their colleges to choose programs that fit the needs of their degree programs. Each applicant completes a written statement of academic purpose outlining goals for study abroad and the program of study that will be followed. Applications are signed by both students and faculty advisers. Application deadlines are usually available at Cornell Abroad, 474 Uris Hall.

Financial Aid
Students studying abroad on Cornell programs in Copenhagen, Gotemburg, Nepal, Paris, Seville, and the United Kingdom in 1999-2000 pay the tuitions and other costs charged by their programs, and a Cornell international program tuition of $3,400 with Cornell Abroad. Cornell students who participate in such non-university enrollment programs in a non-English-speaking country with English-language course work are required to take at least one language course as part of their program of study and are strongly encouraged to take more. Students are advised to consult with their college study abroad advisers about relevant language preparation, and students in the College of Arts and Sciences should note that they are required to have studied the host country language, if taught at Cornell, prior to study abroad.

Housing Arrangements
Study abroad programs generally provide housing in the homes of local residents, in university halls of residence, or in rental apartments. Cornell Abroad will advise students of the arrangements that are available and most appropriate to their individual needs.
with 60 or more credit hours are not likely to receive aid for study abroad assuming they would otherwise need more than eight semesters to earn the undergraduate degree.

Security Abroad and Related Issues
The decision to study in a particular region of the world must be made by each student and his or her family in light of their own interpretations of current events. The director, associate director, and staff stay in regular contact with representatives abroad and receive information regarding rapidly changing political situations through the U.S. Department of Citizens Emergency Services and other agencies. As long as the State Department does not restrict travel by U.S. citizens, Cornell Abroad does not recommend limitations on student plans for study abroad. Cornell Abroad will do everything possible to notify students immediately that they should defer plans when official travel restrictions are issued. Nothing is as important as student security and well-being.

Responsibility for a decision to withdraw from a program or return home early rests with the individual and his or her family. There can be no guarantee of credit for students who withdraw from programs sponsored by colleges and universities other than Cornell, they are advised to inquire about those institutions' policies regarding the completion of academic work and the potential financial implications of a premature departure. In the event of a disrupted semester, refunds of tuition and fees, and the appropriate number of credits to be awarded will be reviewed by Cornell and affiliated institutions on a case-by-case basis. Most institutions sponsoring study abroad programs strive to facilitate student completion of academic programs even under unusual circumstances and have tuition refund policies based on prorated formulas.

Sources of Information and Advice Concerning Study Abroad
Cornell Abroad (474 Uris Hall): Richard Gaulton Ph.D., director; Beatrice B. Szekely Ph.D., associate director; Elizabeth R. Okihiro, student services coordinator; Kathy Lynch, financial services coordinator. The Cornell Abroad library contains an extensive collection of university catalogs and study abroad program brochures, files of course syllabi and evaluations, books, videotapes, and some information on travel, summer study, and work abroad. Comprehensive information is provided on the Cornell Abroad website which incorporates linkages to universities, programs and resources worldwide. In the early weeks of each semester, faculty, students, and staff discuss programs in a series of information meetings announced in the Cornell Daily Sun and on the Cornell Abroad World Wide Web home page (http://www.cieaui.cornell.edu/cuaibroad).

College Study Abroad Advisers

- **Agriculture and Life Sciences**: Bonnie Shelley, 140 Roberts Hall; Architecture, Art, and Planning: Donna Kuhar, 129 Sibley; Arts and Sciences: Dr. Kathy Lynch, 167 Olin Hall; Hotel Administration: Cheryl Farrell, 174G Statler Hall; Human Ecology: Paul Fisher, 172 Martha Van Rensselaer;
- **Industrial and Labor Relations**: Laura Lewis, 101 Ives Hall.

**CORNELL-IN-WASHINGTON PROGRAM**
471 Hollister Hall (255-0900)

Cornell-in-Washington is a program that offers students from all colleges within the university an opportunity to earn full academic credit for a semester of study in Washington, D.C. The aim of the program is to give students a chance to take advantage of the rich resources of the national capital. Washington, as the center of much of the nation's political energy, is an ideal place to study American public policy and the institutions and processes through which it is formulated and implemented. At the same time, Washington's rich collection of libraries, museums, theaters, and art galleries, offers an opportunity to explore American history and art, and the full range of the American humanistic tradition.

The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and 2) studies in the American experience.

Students take courses from Cornell faculty, conduct individual research projects, and work as externs in the Washington community.

The program is housed at the Cornell Center, 2148 O Street, NW, Washington, D.C. 20037. The academic and administrative space is located on the first floor and twenty-seven residential units for approximately sixty students and faculty are on the upper floors. The Cornell-in-Washington program is open to qualified juniors and seniors from all colleges, schools, and divisions of the university. Students enroll in one core course, which involves a major research project often carried out in conjunction with an externship. Students also select one or two other seminars from such fields as government, history, economics, history of art, and social policy. All seminars are taught by Cornell faculty and carry appropriate credits toward fulfillment of major, distribution, and other academic requirements. In addition, students work as externs with congressional committee offices, executive-branch agencies, interest groups, arts and research institutions, and other organizations involved in public policy and American culture.

**Tuition**
Students are registered as full-time students, earn Cornell credit, pay full tuition, and remain eligible for financial aid.

**Housing**
Apartments are rented at the Cornell Center during the academic year. All are fully furnished (except for dishes, cookware, towels and bedding) and reasonably priced by both Washington and Cornell standards. Two students are assigned to each efficiency and three to each one-bedroom apartment. Because of the limited number of spaces and the need for accurate planning, a non-refundable deposit of $150 is required to reserve a space. Students are discouraged from bringing automobiles. The public transportation system, consisting of both bus and subway service, is extensive and convenient to the Center and street parking is not available.

**Applications**
Application forms are available from the Cornell-in-Washington office at 471 Hollister Hall. Applications should be submitted the semester prior to participation.

**Information**
The Cornell-in-Washington website is located at http://www.info.cornell.edu/ciw/ciw.html. Regular information meetings are held on campus in early October and March. These meetings are advertised in the Cornell Daily Sun and on campus bulletin boards. Additional information concerning externships, courses, housing and other features of the program may be obtained at either the Cornell-in-Washington office at 471 Hollister Hall (607) 255-0900, or in Washington at the Cornell Center, 2148 O Street, NW, Washington, DC 20037, (202) 466-2184.

**CORNELL INSTITUTE FOR PUBLIC AFFAIRS**
473 Hollister Hall (255-8018)

The Cornell Institute for Public Affairs (CIPA) is a university-wide two-year graduate professional program leading to a Master of Public Administration degree. Its mission is to develop professionals who can be effective, ethical, and creative leaders in government and in the private sector's interface with government.

CIPA emphasizes the interactions between public and private interests for the benefit of all sectors of society. We use Cornell's cutting-edge strengths as a major research university to undertstand rapidly changing public interests, technological opportunities, ecological constraints, individual aspirations, and political possibilities. Examples of Cornell's extraordinary breadth of policy-related specialties include science and technology, health, education, and social services administration, agricultural policy, nutrition; international relations; economic development; environmental studies; infrastructure management; peace studies; human resources and labor relations, city and regional planning; and ethics in public life. These areas of expertise provide a diverse base for the CIPA Fellows (our students) to pursue the study of public affairs. Thus, CIPA Fellows take courses and work with faculty from all of Cornell's colleges as well as the Cornell Law School, with whom a joint M.P.A./J.D. degree is offered, and the Johnson Graduate School of Management, where a dual MPA/MBA degree is available.

The CIPA program is designed to offer both a sound foundation in the principles, tools, and techniques for a career and leadership in public affairs and the flexibility to accommodate and encourage the special policy-related interests of its students.

The curriculum is structured into three parts: four required core courses (two of three methodology courses) taken by all CIPA Fellows; area requirements focused on developing the wide variety of skills necessary for the public policy professional; and sectoral specialties, focused on the particular interest of the Fellow and leading to a thesis.
The Core Courses
These courses have been developed specially for CIPA Fellows to provide a common, hands-on experience in employing the latest analytical techniques to guide the formulation of management tools essential for the contemporary career in public affairs. It includes hands-on practice with formal management techniques, including investment analysis and linear and dynamic programming.

CIPA I: Quantitative Techniques for Policy Analysis and Program Management (CRP 720) This course is designed to give students the basic management tools essential for the development on their programs of study, more than one hundred faculty members from nearly all colleges at Cornell participate in the graduate field of public affairs and policy, and they are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

CIPA II: Public Political Economy (ECON 659 or CEE 528) Techniques of economic analysis are used to understand the need for various public programs, to estimate the value of new programs and policies, to forge desirable institutional structures for service delivery, and to anticipate and evaluate outcomes.

CIPA III: Administration, Politics, and Public Affairs (GOVT 621) This course is focused on the processes and institutional context of public affairs and analyzes the political and administrative structure and dynamics of policy development and implementation.

CIPA IV: Social Policy (SOC 526) This course incorporates the study of analytic methods, especially the use of statistics and simulation models, to study the structure of public programs and to assess their consequences.

CIPA V: Models and Quantitative Methods (CEE 729) Demonstrates the use and limits of models and quantitative techniques in forming and administering policy.

The Area Requirements
In addition to the four core courses, Fellows must also complete satisfactorily a series of foundation subject or area requirements that are essential to the training of public policy professionals. These areas are: methodolo­gies, politics and policy, economics, math and statistics, finance, regulation, ethics, and public law.

The Sectoral Specialty
At least three courses taken by individual Fellows will be in their sectoral specialty or "concentration." These are widely divergent and depend on the unique interests and background of the individual student.

The CIPA Thesis
Each Fellow must complete a thesis that applies the conceptual tools, theories, and analytical techniques to a problem in the Fellow's area of sectoral expertise. As the culmination of their M.P.A. course of study, this thesis must be both critical and creative, reflecting the Fellow's ability to identify, analyze, and generate supportable solutions to important public policy questions.

Additional Requirements
All M.P.A. candidates must spend four semesters in residence to complete the degree.

The Faculty
In addition to our five core faculty members (Richard E. Schuler, director, economics and civil and environmental engineering; Steven Caldwell, sociology; Arch Donohue, government; and David Lewis, city and regional planning, and Peter Stein, physics) who offer the five core courses and advise the Fellows in the development on their programs of study, more than one hundred faculty members from nearly all colleges at Cornell participate in the graduate field of public affairs and policy, and they are available to supervise the theses of individual Fellows whose policy interests coincide with faculty expertise.

Special Programs
The combined four-year MPA/JD and MPA/ MBA degree programs are available. For selected Cornell undergraduates who are accepted by the end of their junior year, a combined five-year bachelors/MBA program can be arranged.

Application. Applicants are required to submit GRE general test scores. CIPA has a policy of rolling admissions. Students requesting aid, however, must submit applications by March 1 for consideration. For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: cipa@cornell.edu; web site: www.cipa.cornell.edu).

Financial Support. As a professional program, the financial aid resources of CIPA are extremely limited. Students of unusual merit and documented need will be considered for support, but CIPA is unable to provide any one student full support. Therefore, applicants are encouraged to explore and exploit all available sources of external funding.

For an application or more information, contact Cornell Institute for Public Affairs, 472 Hollister Hall (phone: 607-255-8018; fax: 607-255-5240; e-mail: cipa@cornell.edu).

CORNELL PLANTATIONS
One Plantations Road (255-3020)
Internet Home Page: http://www.plantations.cornell.edu
e-mail: plantations@cornell.edu

A place of exceptional diversity and learning opportunities, Cornell Plantations comprises the university's botanical garden, arboretum, and natural areas. Its 5,000+ acres include the woodlands and gardens and around campus, as well as specialized gardens and a 150-acre arboretum that features a field flower meadow and shrubs and hardwoods in central New York State. Cornell Plantations provides unique outdoor laboratory and plant collections for Cornell's academic programs and research in disciplines such as ecology and systematic floriculture, ornamental horticulture, and bioengineering. While many of Cornell Plantations' resources are on or near campus, several thousand acres in and around Tompkins County preserve quality examples of native vegetation and rare plants and animals. The lands include bogs, fens, glens, swamps, wet and dry forests, vernal ponds, and meadows. Arrangements to use these areas are available to the most research and research can be made by calling Cornell Plantations.

Cornell Plantations also offers relaxation, rejuvenation, and inspiration. The vast open spaces provide room to breathe, while the intimate gardens provide respite from the busy campus. Visitors always discover surprises and learn something new in the gardens, which feature herbs, flowers, vegetables, international rose gardens, peonies, poisonous plants, ground covers, rhododendrons, and wildflowers.

Students are encouraged to volunteer as photographers, authors, tour guides, and gardeners. Maps, information, publications, and class brochures (for noncredit classes and workshops) are available in the Garden Gift Shop in the Lewis Headquarters Building at the botanical garden. Non-credit courses in horticulture, landscape design, botanical arts and natural history are offered throughout the year. A one-credit seminar series (HORT 480) is offered each fall; a three-credit Public Garden Management course (HORT 494) is offered each fall.

PROGRAM ON ETHICS AND PUBLIC LIFE
119 Stimson Hall (255-8515)
The critical issues of public life are inescapably ethical issues. In the economy, we face questions of equity and justice and questions about the relation between prosperity, the environment, and the quality of individual lives. In constitutional law, we confront dilemmas about civil rights, freedom of speech, privacy, and abortion. In politics and government, we wrestle with questions about campaigning, character, and compromise. And in international affairs, we encounter the complexities of war and peace, human rights, multilateral aid, and climate change.

The university-wide Program on Ethics and Public Life (EPL) is Cornell's initiative in the systematic study of the ethical dimension of specific public issues. EPL grew out of a conviction that these questions need something more than abstract philosophical discussion. In addition to the general study of values and principles that goes on in theoretical ethics, universities need to foster ways of thinking about the complex, uncertain, and urgent problems of the real world, ways of thinking that are realistic without sacrificing their ethical character.

EPL does not intend to create either an undergraduate major or a graduate field in Ethics and Public Life. On the contrary, we seek to enhance and facilitate the discussion of ethical issues by students whose central concentration is in Law and Society (see separate listing under "Special Programs and Interdisciplinary Studies").

EPL Core Courses
PHIL 194/GOVT 294 Global Thinking @
PHIL 246 Ethics and the World Environment
PHIL 247 Ethics and Public Life
PHIL 342 Law, Society, and Morality
PHIL 343 Political Obligation and Civil Disobedience
GOVT 469/Phil 369 Limiting War: The Morality of Modern State Violence
GOVT 412 Voting and Political Participation

PROGRAM IN REAL ESTATE

114 West Sibley Hall (255-7110)

The two-year Master of Professional Studies (MPS) degree in Real Estate is an interdisciplinary degree program that combines courses from nearly every college at Cornell University. The degree is designed for aspiring real estate professionals who are in the initial or early stages of their careers. Two entities provide the degree program: the Program in Real Estate and the Graduate School and Real Estate Field.

Core courses in financial management, economics, real estate finance and investment, market analysis, project development, regulation, and environmental issues will be required during the first year of study. During the second year, students take additional core courses and elective courses in their areas of concentration. Many concentration options are possible and may be structured from the hundreds of related courses taught at Cornell University (e.g., an international real estate concentration).

Admissions
Admissions procedures for the MPS (Real Estate) program are supervised by the Graduate School and Real Estate Field. Applicants to the program must have completed a bachelor's degree with a good academic record. They must achieve Graduate Management Admission Test (GMAT) or Graduate Record Examination (GRE) scores that are at the level required in other Cornell graduate professional degree programs; and at least two letters of recommendation from undergraduate college faculty members (and if appropriate, from employers) familiar with the student's academic and professional work must be submitted. There is no work experience requirement for admission (although work experience is preferred). Foreign students, for whom English is a second language, will need to achieve acceptable TOEFL scores.

For more information, contact C. Bradley Olson, director of the Program in Real Estate (607-255-7110) or Professor Richard Booth, director of graduate studies (607-255-4025) or E-mail real_estate@cornell.edu.

SCIENCE OF EARTH SYSTEMS: AN INTER-COLLEGE PROGRAM

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these individual systems in isolation. The interconnectedness of these systems is a fundamental attribute of the Earth system; understanding their various interactions is crucial for understanding our environment.

A Science of Earth Systems (SES) major is available for students in the Colleges of Agriculture and Life Sciences, and Arts and Sciences. The SES program of study emphasizes the rigorous and objective study of the Earth system as one of the outstanding intellectual challenges in modern science and as the necessary foundation for the future management of our home planet. Within this program, Cornell's strengths across a broad range of earth and environmental sciences have been coalesced to provide students with the tools to engage in what will be the primary challenge of the twenty-first century.

Students can enter the major in the College of Agriculture and Life Sciences and in the College of Arts and Sciences. In the College of Engineering, the SES program is one of two options in the Geological Sciences major. It is also an option in Agricultural and Biological Engineering.

The SES Curriculum
The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, biology during the freshman and sophomore years. In addition, students take a two-credit SES Colloquium, which is designed to inform students about the field and to provide a sense of community for SES students and faculty from the several colleges. In the junior and senior years, students take a set of common SES core courses and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic math and science sequences.

The SES program provides strong preparation for graduate school in any one of the Earth systems sciences and related engineering fields. The major can also serve as excellent preparation for an advanced degree in environmental law or policy, a teaching degree, or for employment in one of many environmentally oriented careers with the B.S. degree.

The requirements for the major are summarized as follows:

1. MATH 191, 192 (or MATH 111, 112);
2. Two calculus-based physics courses: (e.g., PHYS 207-208);
3. Two introductory chemistry courses: (e.g., CHEM 207-208);
4. Two biology courses: (e.g., BIO G 101/103-102/104 or BIO G 109-110);
5. Three additional courses in higher mathematics and/or basic sciences. One of these courses must be either GEOG 201 or BIOES 261;
6. An introductory course in the Science of Earth Systems;
7. Three core courses in the Science of Earth Systems (SES 301, 302, and 321);
8. Four intermediate to advanced-level courses approved by the SES Curriculum Committee. These courses should build on the core sequence and include upper-level courses with prerequisites in the basic sciences and mathematics. The selection of these courses can be used to prepare for careers or graduate study in specific environmental science disciplines such as geology, hydrological sciences, biogeochemistry, ecology, oceanography, and atmospheric sciences. Effective combinations of these disciplines are also possible.

The SES Core Courses
Note: Class meeting times are accurate at the time of publication. If changes are necessary, new information will be provided as soon as possible.

SES 301 Climate Dynamics (enroll in ASTRO 331 or SCAS 331)

Fall. 4 credits. Prerequisite: Math 112 or 192 or equivalent. Lecs: M W F 1:25; rec: W 2:50. K. Cook.
The purpose of this course is to develop a physical understanding of the climate system. Processes that determine climate and contribute to its change are discussed, including comparisons with the climates of other planets. Applications to problems of climate change and variability include the astronomical theory of ice ages, greenhouse warming, the ozone hole, African drought, and Amazonian deforestation.

**SEST 302 Evolution of the Earth System**

*Spring. 4 credits. Prerequisites: Math 112 or 192 and Chem 207 or equivalent, or instructor's approval. Lec, M W F 11:15; recitation TBA. B. Isacks, W. Allmon, K. Cook.*

The co-evolution of life and the earth system over three time scales: origin of the earth and life and earth's early history; plate tectonics, continental drift and climate changes during the past billion years; and mountain building, ice ages, and our own emergence during the past ten million years. Introduction to methods of interpreting the paleontological, geochemical, and tectonic information preserved in the rock record. (http://www.geo.cornell.edu/geology/classes/ ses302.html)

**SEST 321 Biogeochemistry (enroll in GEOL 321 or NTRES 321)**

*Fall. 4 credits. Prerequisites: college-level biology and chemistry. Lec T R 12:20–1:15. L. Derry and J. Yavitt.*

The cycling of elements at the earth's surface through biologically governed processes and fluxes. Topics include weathering and acid-base chemistry, nutrient limitation and recycling in biogeochemical and terrestrial systems, anthropogenic pollution, isotopic tracers, and mathematical modeling of element fluxes.

**Advising**

Students will be matched with an SES adviser according to the student's interests and the college in which the student is enrolled. The adviser will assist the student in selecting the four upper-level courses required by the SES Program. Several example curricula have been designed as guides for students in each of the colleges, to demonstrate how the college and SES Program requirements are met.

**Entering the SES Program**

Transfers into the program during the freshmen and sophomore years will be relatively straightforward for students who have begun a calculus sequence and have taken courses in the basic sciences. Other interested students, either junior- or senior-level science and math students or those from other fields, should contact an SES adviser to explore the possibility of entering the SES program.

For a list of advisors and more information on the SES program and classes, see the Web page (http://www.geo.cornell.edu/ses/SES_home.html) and contact:

- College of Agriculture and Life Sciences: K. H. Cook (Soil, Crop, and Atmospheric Sciences), R. L. M. Howard (Ecology and Systematics), J. Parlange (Agricultural and Biological Engineering);
- College of Arts and Sciences: L. Hedin (Ecology and Systematics), P. Giersch (Astronomy), B. L. Isacks or R. Kay (Geological Sciences), College of Engineering: W. Brutsaert (Civil and Environmental Engineering), B. L. Isacks or R. Kay (Geological Sciences), M. Kelley (Electrical Engineering), J. Parlange (Agricultural and Biological Engineering).

**DEPARTMENT OF STATISTICAL SCIENCE**

301 Malott Hall (255–8066)

The university-wide Department of Statistical Science at Cornell coordinates activities in statistics and probability at the undergraduate, graduate, and research levels. Students interested in graduate study in statistics and probability can apply to the Graduate Field of Statistics or to one of the other graduate fields of study that offer related course work. Students in the Field of Statistics plan their graduate program with the assistance of their Special Committee. For detailed information on opportunities for graduate study, students should contact the Director of Graduate Studies, 301 Malott Hall.

The department also offers an undergraduate program through the Biometrics Unit in the College of Agriculture and Life Sciences and an Engineering Statistics minor in the College of Engineering. Undergraduate major and certificate programs are currently under development for other colleges. For information, contact the Undergraduate Coordinator, Professor Steven Schwager (424 Warren Hall, 255–1644). Statistics courses offered by the department listed below will fill distribution requirements in many of the colleges.

A free consulting service is offered through the Biometrics Unit in the College of Agriculture and Life Sciences. Statistical computing consulting is available through a separate organization, the Office of Statistical Consulting, B21 Savage Hall, 255–1926.

The department is organized into four units: Biometrics, Engineering Statistics, Mathematical Statistics and Probability, and Social Statistics. The areas covered include agricultural statistics, bio-statistics, economic and social statistics; epidemiology; manufacturing statistics, quality control and reliability, probability theory; sampling theory; statistical computing; statistical design; statistical theory; and stochastic processes and their applications.

**Course designations**

The following course identifiers are used to designate the courses offered by the separate units: Biometrics Unit (CALS), STBTRY; Engineering Statistics Unit (ENGR), STENGR; Mathematical Statistics Unit (ARTS), STMATH; Social Statistics Unit (SIL), STSOC. To enroll in one of the courses see the listing for the appropriate college.

**Biometrics Unit**

**STBTRY 100 Statistics and the World We Live In**

*Fall. 3 credits. Major approaches and topics of biostatistics are presented at an introductory level. Three broad topics are covered: data organizing, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

**STBTRY 261 Statistical Methods I**

*Fall. 4 credits. Prerequisite: STBTRY 100 (formerly 200) or prior experience in data collection and interpretation. Limited to undergraduates. The methods and repertory used to analyze data arising from a wide variety of applications. Topics include: descriptive statistics, point and interval estimation, hypotheses testing, inference for a single population, comparisons between two populations, one and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through Minitab. Emphasis is on basic principles and criteria for selection of statistical techniques. The lectures may co-meet with STBTRY 601. Sections, homeworks, and exams are administrated separately.

**STBTRY 302 Statistical Methods II**

*Fall or spring. 4 credits. Letter only. Prerequisite: STBTRY 261 or STBTRY 601. Limited to undergraduates. A continuation of STBTRY 261. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria, principles of experimental design, analysis of variance for a number of designs; comparing two or more regression lines; analysis of covariance. Emphasis is on the appropriate application and interpretation of statistical techniques. For practical applications, computing is done using the SAS statistical package. The lectures co-meet with STBTRY 602. Sections, homeworks, and exams are administrated separately.

**STBTRY 400 Biometry Seminar**

*Fall or spring. 1 credit. Letter only. Prerequisite: STBTRY 409 or STBTRY 602 or by permission of the instructor. Students will attend weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with STBTRY 600 only with permission of instructor. Students can only take course twice.
STBTRY 408 Theory of Probability (enroll in BTRY 408)
Fall. 4 credits. Prerequisite: STMATH 112, 122 or 192, or permission of instructor.
An introduction to probability theory, foundations, combinatorics, random variables and their probability distributions, expectations, generating functions and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

STBTRY 409 Theory of Statistics (enroll in BTRY 409)
Spring. 4 credits. Prerequisite: STBTRY 408 or equivalent.
The concepts developed in STBTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression.

STBTRY 494 Undergraduate Special Topics in Biometry and Statistics (enroll in BTRY 494)
Fall or spring. 1-3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

STBTRY 495 Statistical Consulting (enroll in BTRY 495)
Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: STBTRY 302 and 409 or permission of instructor. Participation in the Biometrics Unit consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

STBTRY 497 Undergraduate Individual Study in Biometry and Statistics (enroll in BTRY 497)
Fall or spring. 1-3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

STBTRY 498 Undergraduate Supervised Teaching (enroll in BTRY 498)
Fall or spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

STBTRY 499 Undergraduate Research (enroll in BTRY 499)
Fall or spring. 1-3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

STBTRY 600 Statistics Seminar (enroll in BTRY 600)
Fall or spring. 1 credit. S-U grades only. Prerequisite or corequisite: STBTRY 409 or permission of instructor.

STBTRY 601 Statistical Methods I (enroll in BTRY 601)
Fall or summer. 4 credits. Limited to graduate students; others by permission of instructor. Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

STBTRY 602 Statistical Methods II (enroll in BTRY 602)
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: STBTRY 601 or equivalent. A continuation of STBTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques; least squares estimation; multiple regression, model selection techniques; detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparison of two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

STBTRY 603 Statistical Methods III (enroll in BTRY 603)
Fall. 3 credits. Prerequisite: STBTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered spring 2000. Categorical data analysis, including logistic regression; loglinear models, stratified tables, matched pairs analysis, polytomous response and ordinal data. Applications in biomedical and social sciences.

STBTRY 604 Statistical Methods IV: Applied Design (enroll in BTRY 604)
Spring. 3 credits. Prerequisites: STBTRY 601 and 602 or permission of instructor. Offered alternate years. Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

STBTRY 639 Epidemiology Seminar (enroll in BTRY 639)
Spring. 1 credit, variable. S-U grades only. Permission of instructor. This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

STBTRY 662 Mathematical Ecology (enroll in BTRY 662)
Fall. 3 credits. S-U grades optional. Prerequisites: a year of calculus and a course in statistics. Mathematical and statistical analysis of populations and communities: theory and the instructor. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

STBTRY 672 Topics in Environmental Statistics (BTRY 672)
Fall and spring. 2 credits. S-U grades optional. Prerequisite: STBTRY 601 or permission of the instructor. This course is a discussion group focusing on statistical problems arising in the environmental sciences. These issues are explored in a number of different ways, such as student presentations of research papers, directed readings, and outside speakers.

STBTRY 682 Statistical Methods for Molecular Biology (enroll in BTRY 682)
Fall. 2 credits. S-U grades optional. Prerequisite: permission of instructor. Statistical and mathematical topics of current interest in molecular biology: genetic mapping, physical mapping, DNA sequence analysis, phylogenetic inference, population modeling. Topics may vary. The course may be repeated for credit.

STBTRY 694 Graduate Special Topics in Biometry and Statistics (enroll in BTRY 694)
Fall or spring. 1-3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

STBTRY 697 Individual Graduate Study in Biometry and Statistics (enroll in BTRY 697)
Fall, spring, or summer. 1-3 credits. S-U grades optional. Consists of individual tutorial study selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

[STBTRY 717 Linear and Generalized Linear Models (enroll in BTRY 717)]
Spring. 3 credits. S-U grades optional. Prerequisites: STBTRY 409, BTRY 417 and 602 or equivalents. Offered alternate years. Not offered spring 2000. Statistical modelling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, 3 credits. S-U grades optional. A course of lectures selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.

[STBTRY 717 Linear and Generalized Linear Models (enroll in BTRY 717)]
Spring. 3 credits. S-U grades optional. Prerequisites: STBTRY 409, BTRY 417 and equivalents. Offered alternate years. Not offered spring 2000. Statistical modelling and inference using linear models and generalized linear models. Estimation by least squares, maximum likelihood, 3 credits. S-U grades optional. A course of lectures selected by the faculty. Since topics usually change from year to year, this course may be repeated for credit.
STBTRY 795 Statistical Consulting (enroll in BTRY 795)
Fall or spring. 2 credits. S-U grades only. Limited to graduate students. Participation in the Department of Biometrics consulting service; faculty supervised statistical consulting with biologists from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the service during previous weeks. Since consultations usually change from semester to semester, the course may be repeated for credit.

STBTRY 798 Graduate Supervised Teaching (enroll in BTRY 798)
Fall and spring. 2–4 credits. S-U only. Permission of instructor and chair of special committee plus at least 2 advanced courses in statistics and biometry.

Engineering Statistics Unit

STENGR 270 Basic Engineering Probability and Statistics (enroll in ENGRD 270 or OR&IE 270)
Fall, spring, or summer. 3 credits. Pre- or co-requisite: MATH 293.
This course should give students a working knowledge of basic probability and statistics and their application to engineering. Computer analysis of data and simulation are emphasized. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

STENGR 310 Introduction to Probability and Random Signals (enroll in ELE E 310)
Spring. 4 credits. Prerequisite: STENGR 270. This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement. It can then also meet a field breadth requirement if 3 additional credits of field approved or out-of-field elective are taken.
Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions, nonlinear transformations of data; expectation, correlation, and the central limit theorem.

STENGR 360 Engineering Probability and Statistics II (enroll in OR&IE 360)
Fall. 4 credits. Prerequisite: STENGR 270 or ENGRD 270.
This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

STENGR 361 Introductory Engineering Stochastic Processes I (enroll in OR&IE 361)
Spring. 4 credits. Prerequisite: STENGR 360 or equivalent.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

STENGR 411 Random Signals in Communications and Signal Processing (enroll in ELE E 411)
Fall. 3 credits. Prerequisite: STENGR 301 and 310 or equivalent.
Introduction to models for random signals in discrete and continuous time, Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

STENGR 467 Telecommunication Systems I (enroll in ELE E 467)
Fall. 4 credits. Prerequisites: ELE E 301 and STENGR 310. Suggest co-requisite: STENGR 411.
An introduction to analog and digital modulation techniques. Topics include: analog signal representation and filtering; analog amplitude modulation (AM) and frequency modulation (PM); digital transmission via carrier modulation; amplitude-shift keying (ASK), phase-shift keying (PSK), quadrature amplitude modulation white Gaussian noise; effect of noise on analog modulation techniques; error probabilities for digital transmission through additive white Gaussian noise (AWGN) channels.

STENGR 473 Empirical research Methods in Financial Engineering (enroll in ELE E 473)
Fall. 3 credits. Prerequisite: STENGR 270, 360, and 361 or their equivalents.
This course represents an advanced study of empirical research methods in financial economics. The empirical techniques used most often in the analysis of financial markets and how they are applied to actual market data.

STENGR 476 Applied Linear Statistical Models (enroll in ORIE 476)
Spring. First half of term. 2 credits. Prerequisite: STENGR or ENGRD 270.
Multiple linear regression, diagnostics, model selection, inference, and one and two factor analysis of variance. Theory and applications both treated. Use of MINITAB.

STENGR 512 Fundamental Information Theory (enroll in ELE E 582)
Fall. 4 credits. Prerequisite: STENGR 310 or equivalent.
Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable length codes, channel capacity and rate, distortion functions. Coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

STENGR 517 Artificial Neural Networks (enroll in ELE E 577)
Fall. 4 credits. Prerequisites: STENGR 310, STENGR 411 recommended.
Artificial neural networks are brainlike in being formed out of many highly interconnected nonlinear memoryless elements. Probability theory will provide our primary analytical approach to design and analysis of neural networks. The course will cover mathematical and computer-based design capabilities of feed-forward nets (multilayer perceptrons) that can serve as pattern classifiers.

STENGR 523 Introductory Engineering Stochastic Process I (enroll in OR&IE 523)
Spring. 4 credits. Prerequisite: STENGR 360 or equivalent.
Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

STENGR 560 Engineering Probability and Statistics II (enroll in OR&IE 560)
Fall. 4 credits. Prerequisite: STENGR or ENGRD 270 or equivalent.
This second course in engineering probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

STENGR 561 Queuing Theory and Its Applications (enroll in OR&IE 561)
Spring. 3 credits. Prerequisite: STENGR 361 or permission of instructor. Not offered 1999–2000.

STENGR 577 Quality Control (enroll in OR&IE 577)
Fall. 3 credits. Prerequisite: STENGR or ENGRD 270.

STENGR 581 Simulation Modeling
Fall. 2 credits. Prerequisites: programming experience and STENGR 360 (Engineering Probability and Statistics I) or permission of the instructor. STENGR may be taken concurrently.
Models and digital computer programs to simulate the behavior of complex stochastic systems in time. Modeling time and random-
ness, simulation languages, generation of stochastic inputs (scalers and processes).

STENGR 582 Simulation Analysis
Fall. 2 credits. Prerequisites: programming experience and STENGR 360 (Engineering Probability and Statistics II) or permission of the instructor. STENGR may be taken concurrently. Probabilistic and statistical methods for design of computer simulation experiments and analysis of their inputs. Initialization issues, analysis of simulation outputs, variance reduction methods, optimization through simulation.

STENGR 650 Applied Stochastic Processes (enroll in OR&E 650)
Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

STENGR 651 Probability (enroll in OR&E 651)
Spring. 4 credits. Prerequisite: real analysis at the level of STMATH 413 and a previous one-semester course in calculus-based probability. Sample spaces, events, sigma fields, probability measures, set inclusion, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

STENGR 650 Applied Stochastic Processes (enroll in OR&E 650) Fall. 4 credits. Prerequisite: real analysis at the level of STMATH 413 and a previous one-semester course in calculus-based probability.

STENGR 651 Probability (enroll in OR&E 651) Spring. 4 credits. Prerequisite: real analysis at the level of STMATH 413 and a previous one-semester course in calculus-based probability.

STENGR 670 Statistical Principles (enroll in OR&E 670)
Fall. 4 credits. Co-requisite: STENGR 650 or equivalent.
Review of distribution theory of special interest in statistics; normal, chi-square, binomial Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased point estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle; confidence interval construction; introduction to linear models.

STENGR 671 Intermediate Applied Statistics (enroll in OR&E 671)
Spring. 3 credits. Prerequisite: STENGR 670 or equivalent. Statistical inference based on the general linear model; least-squares estimators and their optimality properties; likelihood ratio tests and corresponding confidence regions; simultaneous inference. Applications in regression analysis and ANOVA models. Variance components and mixed models. Use of the computer as a tool for statistics is stressed.

STENGR 676 Selected Topics in Applied Probability (enroll in OR&E 678)
Fall. Credit to be arranged. Topics are chosen from current literature and research areas of the staff.

STENGR 679 Selected Topics in Applied Probability (enroll in OR&E 679)
Spring. Credit to be arranged. Topics are chosen from current literature and research areas of the staff.

Mathematical Statistics and Probability Unit

STMATH 171 Statistical Theory and Application in the Real World (enroll in MATH 171)
Fall or spring. 4 credits. Prerequisite: high school mathematics. This introductory statistics course will discuss techniques for analyzing data occurring in the real world and the mathematical and philosophical justification for these techniques. Topics include population and sample distribution, the central limit theorem, and statistical theories of point estimation, confidence intervals, and testing hypotheses, the linear model, and the least squares estimator. The course concludes with a discussion of tests and estimates for regression and analysis of variance (if time permits). The computer will be used to demonstrate some aspects of the theory, such as sampling distributions and the Central Limit Theorem.

In the lab portion of the course, students will learn and use computer-based methods for implementing the statistical methodology presented in the lectures. (No previous familiarity with the computer is presumed.)

STMATH 411 Introduction to Analysis (enroll in MATH 411)
Fall. 4 credits. Prerequisite: Mathematics 222 or 293-294. Students who plan to attend graduate school in mathematics should take Mathematics 413-414. May be taken concurrently. Probabilistic and statistical methods for design and analysis of experiments. Topics include: Euclidean spaces, the real number system, continuous and differentiable functions, uniform convergence, probability measures, and the Riemann integral. Students who wish to continue study of theoretical analysis upon completion of Mathematics 411, students may take Mathematics 418.

STMATH 471 Basic Probability (enroll in MATH 471)
Fall. 4 credits. Prerequisite: Mathematics 221.
May be used as a terminal course in basic probability. Emphasis primarily for those who will continue with Mathematics 472. Topics include combinations, important probability laws, expectations, moments, moments-generating functions, limit theorems. Emphasis is on diverse applications and on development of use of computer in statistical applications. See also the description of Mathematics 571.

STMATH 472 Statistics (enroll in MATH 472)
Spring. 4 credits. Prerequisite: Mathematics 471 and knowledge of linear algebra such as taught in Mathematics 221. Some knowledge of multivariate calculus helpful but not necessary.
Classical and recently developed statistical procedures are discussed in a framework that emphasizes the basic principles of statistical inference and the rationale underlying the choice of these procedures in various settings. These settings include problems of estimation, hypothesis testing, large sample theory.

[STMATH 474 Basic Stochastic Processes (enroll in MATH 474) Spring. 4 credits. Prerequisite: Mathematics 471 or equivalent and knowledge of linear algebra such as taught in Mathematics 221. Not offered 1999-2000. This is a second-semester undergraduate course on probability. It covers topics from renewal theory, martingales, discrete and continuous time Markov chains, Brownian motion and related diffusion processes, and applications to queuing theory and finance. Theoretical as well as applied aspects of the subject will be emphasized.]

STMATH 621 Measure Theory and Lebesque Integration (enroll in MATH 621)
Fall. 4 credits. Measure theory, integration, and Lp spaces.

STMATH 671-672 Probability Theory (enroll in MATH 671-672)

STMATH 674 Introduction to Mathematical Statistics (enroll in MATH 674)
Spring. 4 credits. Prerequisite: Mathematics 671 or permission of instructor. Topics include an introduction to the theory of point estimation, consistency, efficiency, sufficiency, and the maximum likelihood. Convergence and basic concepts of decision theory are introduced. Concepts of sequential methods may be discussed.

STMATH 771-772 Seminar in Probability and Statistics (enroll in MATH 771-772)
771 fall, and 772 spring. 4 credits each.

STMATH 777-778 Stochastic Processes (enroll in MATH 777-778)
777 fall, and 778 spring. 4 credits each.

Social Statistics Unit

STSOC 210 Statistical Reasoning I (enroll in ILRST 210)
Fall, spring or summer 1999, 2000. 3 credits. Attendance at weekly discussion section is required. An introduction to the basic concepts of statistics and data analysis. Descriptive methods, normal theory models and inference procedures for univariate and bivariate data. Basic statistical designs, an introduction to probability and applications of the Binomial and Normal distributions. Estimation, confidence intervals and tests of significance for a single population mean and proportion, the difference in two population means and
proportions, simple linear regression, correlation and two-way contingency tables. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSOC 211 Statistical Reasoning II (enroll in ILRST 211)
Fall, spring or summer 1999, 2000. 3 credits. Prerequisite: STSOC 210 or suitable introductory statistics course. A second course in statistics. Applications of statistical data analysis techniques, particularly to the social sciences. Topics include: descriptive statistics; simple linear regression; multiple linear regression; logistic regression; and analysis of variance. Computer packages are used throughout the course.

STSOC 310 Statistical Sampling (enroll in ILRST 310)
Spring. 3 credits. Prerequisite: two terms of statistics.

Theoretical and application of statistical sampling, especially in regard to sampling design, cost, estimation of population quantities, and error estimation. Assessment of nonsampling errors. Discussion of applications to social and biological sciences and to business problems. Course includes an applied project.

STSOC 311 Practical Matrix Algebra (enroll in ILRST 311)
Fall. 3 credits. Matrix algebra is a necessary tool for statistics courses such as regression and multivariate analysis and for other "research methods" courses in various other disciplines. One goal of this course is to provide students in various fields of knowledge with a basic understanding of matrix algebra in a language they can easily understand. Topics include special types of matrices; matrix calculations; linear dependence and independence; vector geometry; matrix reduction (trace, determinant, norms); matrix inversion; linear transformation; eigenvalues; matrix decompositions; ellipsoids and distances; some applications of matrices.

STSOC 312 Applied Regression Methods (enroll in ILRST 312)
Fall. 3 credits. Prerequisite: STSOC 112, 211 or equivalent courses. Matrix algebra necessary to analyze regression models is reviewed. Multiple linear regression, analysis of variance, nonlinear regression, and linear logistic regression models are covered. For these models, least squares and maximum likelihood estimation, hypothesis testing, model selection, and diagnostic procedures are considered. Illustrative examples are taken from the social sciences. Computer packages are used.

STSOC 314 Graphical Methods for Data Analysis (enroll in ILRST 314)
Fall. 3 credits. Prerequisite: STSOC 211 or equivalent. Not offered 1999-2000.

Classical and more recent techniques for graphical methods for analysis and display. Characteristics of effective and honest graphs with comparison of alternative methods for understanding data. Includes study of current computer programs and methods expected to be practical in the future: graphing of univariate data, bivariate plots, multivariate data, graphical methods of data analysis; the specification, modification, and control of graphs; study of interaction between choice of display and underlying patterns.

STSOC 315 Statistical Analysis of Legal Data (enroll in ILRST 315)
Fall. 3 credits. Prerequisite: STSOC 211. The course presents a survey of some of the tools from the social and statistical sciences that have been applied to the proof of facts in the courtroom and to the study of questions if legal importance. We will review various probability models, design issues, and statistical methodologies. The approach taken is based on the determination of the probability of the evidence under two competing hypotheses. Decision regarding the probability of the evidence and the role of uncertainty in legal settings, prosecutor's and defender's fallacies; controlled, observational, and epidemiological studies; sampling and surveys; the likelihood ratio approach for evaluation under conflicting hypotheses; values and Bayesian assessment; analysis various types of transfer evidence, including blood grouping and DNA profiling.

STSOC 410 Techniques of Multivariate Analysis (enroll in ILRST 410)
Spring. 3 credits. Prerequisite: STSOC 312 or equivalent. Techniques of multivariate statistical analysis discussed and illustrated by examples from various fields. We emphasize application, but theory will not be ignored. Deviation from assumptions and the rationale for choices among techniques is discussed. Students are expected to learn how to thoroughly analyze real-life data sets using computer-packaged programs. Participants should have some knowledge of matrix notation. Topics include: multivariate normal distribution; sample geometry and multivariate distances; inference about a mean vector; comparison of several multivariate means, variances, and covariances; detection of multivariate outliers; principal component analysis; factor analysis; canonical correlation analysis; discriminant analysis, and multivariate multiple regression.

STSOC 411 Statistical Analysis of Qualitative Data (enroll in ILRST 411)
5 credits. Prerequisite: two statistics courses or permission of instructor. Not offered 1999-2000.

An advanced graduate and beginning graduate course. Includes treatment of association between qualitative variables; contingency tables; log-linear models; binary ordinal, and multinomial regression models; limit dependent variables.

STSOC 499 Directed Studies (graduate) (enroll in ILRST 499)
For description, see the section, Collective Bargaining, Labor Law, and Labor History.

STSOC 510 Statistical Methods for the Social Sciences I (enroll in ILRST 510)
Fall, spring and summer. 3 credits. A first course in statistics for graduate students in the social sciences. Descriptive statistics, probability and sampling distributions, estimation, hypothesis testing, simple linear regression and correlation. Students are instructed on the use of a statistics computer package at the beginning of the term and use it for weekly assignments.

STSOC 511 Statistical Methods for the Social Sciences II (enroll in ILRST 511)
Fall, spring and summer. 3 credits. Prerequisite: STSOC 510 or equivalent introductory statistics course. A second course in statistics that emphasizes applications to the social sciences. Topics include; simple linear regression; multiple linear regression (theory, model building, and model diagnostics); and the analysis of variance. Computer packages are used extensively.

STSOC 610 Seminar in Modern Data Analysis (enroll in ILRST 610)
Fall. 3 credits. Prerequisite: two statistics courses or permission of instructor. An advanced survey of modern data analysis methods. Topics include exploratory data analysis, data reexpression, philosophy of data analysis, robust methods, statistical graphics, regression methods, and diagnostics. Extensive outside reading, research paper, and historical work. Participants should have some knowledge of multiple regression, including the use of matrices, and some experience using a computer.

STSOC 611 Statistical Consulting (enroll in ILRST 611)
5 credits. Prerequisite: linear algebra, knowledge of a programming language, and statistics at least through multiple regression. Not offered 1999-2000.

A survey of new aspects of statistical computing. Topics include: basic numerical methods, numerical linear algebra, statistical models, numerical integration and approximation, smoothing and density estimation. Additional special topics may include: Monte Carlo methods, statistical graphics, computing-intensive methods, parallel computing, computer environments. Designed for graduate students in the statistical sciences and related fields interested in new advances. Students may be asked to write programs in a programming language of their choice.

STSOC 612 Statistical Classification Methods (enroll in ILRST 612)
Fall. 3 credits. Prerequisite: STSOC 312 or equivalent, or permission of instructor. An introduction to a variety of statistical techniques that assign objects to categories on the basis of observed characteristics of the objects. Course topics include (but are not limited to): discriminant analysis and its extensions and variations; nearest neighbor methods, classification and regression trees (CART); neural networks for classification; and estimation of error of classification rules.

STSOC 613 Bayesian and Conditional Inference (enroll in ILRST 613)
3 credits. Prerequisite: graduate level courses equivalent to STENG 670, 651 or permission of instructor. Not offered 1999-2000.
This course covers the following topics: loss functions and utility theory, prior information and subjective probability, coherency, basic Bayesian inference, empirical Bayesian inference, robust Bayesian inference, Bayesian computation, conditional properties of statistical procedures, and Barndorff-Nielsen's exact likelihood theory.

**STSOC 614 Structural Equations with Latent Variables (enroll in ILRST 614)**
3 credits. Prerequisites: STSOC 210, 211, 510, 511 or equivalent. Not offered 1999-2000.

Provides a comprehensive introduction to the general structural equation system, commonly known as the "LISREL model." One purpose of the course is to demonstrate the generality of this model. Rather than treating path analysis, recursive and nonrecursive models, classical econometrics, and confirmatory factor analysis as distinct and unique, we will treat them as special cases of a common model. Another goal of the course is to emphasize the application of these techniques.

**STSOC 615 Expert Systems and Probabilistic Network Models (enroll in ILRST 615)**
3 credits. S-U only. Prerequisite: STENG 560 or an equivalent course in probability and statistic offered in 1999-2000. This is an interdisciplinary course for students in applied mathematics, computer science, statistics, and other related fields of applications such as medical, engineering, and social sciences. Topics include: components of expert systems, rule-based expert systems, probability-based expert systems, uncertainty measures, dependency models, Bayesian and Markov networks, propagation of uncertainties, learning from data, and examples of applications. Students will use computer software to gain experience.

**STSOC 630 Econometrics II (enroll in ECON 620)**
Spring. 4 credits. Prerequisite: Econometrics 619.

This course is a continuation of Economics 619 (Econometrics I) covering (1) statistics; estimation theory, least squares methods, method of maximum likelihood, generalized method of moments, theory of hypothesis testing, asymptotic test theory, and nonnested hypothesis testing and (2) econometrics, the general linear model, generalist least squares, specification tests, instrumental variables, dynamic regression models, linear simultaneous equation models, nonlinear models, and applications.

**STSOC 639 Econometrics I (enroll in ECON 616)**
Fall. 4 credits. Prerequisites: Economics 319-320 or permission of instructor.

This course gives the probabilistic and statistical background for meaningful application of econometric techniques. Topics to be covered are (1) probability theory; probability spaces, random variables, distributions, moments, transformations, conditional distributions, distributions theory and the multivariate normal distribution, convergence concepts, laws of large numbers, central limit theorems, Monte Carlo simulation; (2) statistics; sample statistics, sufficiency, exponential families of distributions. Further topics in statistics will be considered in Econometrics 620.

**STSOC 711 Robust Regression Diagnostics (enroll in ILRST 711)**
3 credits. S-U or letter grade. Prerequisite: STSOC 312 or equivalent, or permission of instructor. Not offered 1999-2000.

Regression, and model checks are simplifications of reality; we rarely expect the model to be exactly true. In many applications of regression, however, small changes in a model, a model assumption, or a data point, can have very large effects on the results. Regression analysis is reviewed in this course as a cyclical process, which takes inputs and produces outputs in an iterative or cyclical way; a way in which the outputs can be used to diagnose, validate, and possibly alter the inputs. As such, this course is an attempt to narrow the gap between the theory and practice of regression analysis. In this course we discuss classical methods as well as a recently-developed general framework for assessing the sensitivity of the outputs to small changes in the input. Students are expected to be able to perform through analyses of real-life data using computer packages. Topics to be discussed include: role of variables in a regression equation, regression outliers and influential observations, robust regression, alternatives to least squares (e.g., LMS, LAV, IRLS), error-in-variables models, and generalized linear models.

**STSOC 712 Theory of Sampling (enroll in ILRST 712)**
Spring. 3 credits. Prerequisite: calculus and at least one semester of mathematical statistics.

Sampling theory from the viewpoint of mathematical statistics. The first part of the course focuses on models and "design" approach, the second part on the more recent "model-based" approach. Attention is paid to recent process in the field.

**STSOC 713 Counting Processes with Statistical Applications (enroll in ILRST 713)**
3 credits. Prerequisite: a course at the technical level of STMATH 572, 574 or permission of instructor. Not offered in 1999-2000.

The statistical analysis of life history data is playing an increasing role in the social, natural, and physical sciences. We will formulate and solve various practical problems in the statistical analysis of life history data using the modern theory of stochastic processes. We will examine the martingale dynamics for point processes relevant to life history data. Both parametric and nonparametric inference for multiplicative intensity models will be considered. The large sample properties of the proposed procedures will be discussed in detail. Extensions of functional central limit theorems for martingales.

**STSOC 714 Topics in Modern Statistical Distribution Theory (enroll in ILRST 714)**
3 credits. Prerequisite: courses equivalent to STENG 651 or STMATH 571, and STBYR 406 or STENG 670. Not offered in 1999-2000.

Recent research has revealed vast territories of distribution theory that are unfamiliar to most statisticians. Provides an introduction to three topics underlying this "modern" theory: infinite divisibility, decomposability, and stability; characterization of distributions; extensions of univariate distributions to multivariate distributions.

**STSOC 715 Likelihood Inference (enroll in ILRST 715)**
3 credits. Prerequisite: graduate courses equivalent to STENG 670. Not offered 1999-2000.

In most statistical models, exact distribution theory for testing hypotheses or constructing confidence intervals is either unavailable or computationally cumbersome. Inferences are routinely performed by using large-sample approximations to the distributions of test statistics. This course provides a survey of some recent higher-order asymptotic approximations for likelihood-based methods of inference.

**STSOC 716 Statistical Consulting (enroll in ILRST 716)**
2 credits. Prerequisites: limited to graduate students, S-U grades only. Not offered in 1999-2000.

A course in practical consulting on "real-world" statistical problems. Under the supervision of the instructor(s), students will learn problems presented by clients (usually faculty and graduate students from other fields) and will collaborate in proposing a statistical model, analyzing data, and interpreting results. Statistical computing will be used as needed.

**STSOC 717 The Analysis of Discrete Data (enroll in ILRST 717)**
Spring. 3 credits. Prerequisites: graduate courses equivalent to STENG 670 or permission of instructor.

This course concerns statistical models and methods for analyzing categorical data. The key models to be covered are log-linear models for contingency tables and logistic regression models for binary-reponse and multinomial data. Asymptotic distribution theory necessary for inference in these models will be emphasized. Other topics include conditional inference and connections with generalized linear models. Computer packages will be used for analyses in practical examples.

**STSOC 730 Advanced Topics in Econometrics II (enroll in ECON 720)**
Spring. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

Advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation, Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, panel data, and duration models.

**STSOC 731 Time Series Econometrics (enroll in ECON 721)**
Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.

This course covers traditional and current time series techniques that are widely used in econometrics. Topics include the theory of stationary stochastic processes including univariate ARMA(p,q) models, spectral density analysis, and vector autoregressive models; parametric and semi-parametric estimation, current developments in distributional theory; estimation and testing in models with integrated regressors including, unit root tests, cointegration, and permanent vs. transitory components.

**STSOC 732 Advanced Topics in Econometrics I (enroll in ECON 719)**
Fall. 4 credits. Prerequisites: Economics 519-520 or permission of instructor.
Advanced topics in econometrics, such as asymptotic estimation and test theory, robust estimation. Bayesian inference, advanced topics in time-series analysis, errors in variable and latent variable models, qualitative and limited dependent variables, aggregation, panel data, and duration models.

**STSOC 799 Directed Studies (Graduate)** (enroll in ILRST 799)

**PROGRAM IN COMPARATIVE AND ENVIRONMENTAL TOXICOLOGY**

213 Rice Hall (255–8008)

The Cornell Program in Comparative and Environmental Toxicology is a broadly based inter-college program facilitated by the Institute for Comparative and Environmental Toxicology (ICET). ICET serves as a focal point for all research, teaching, and cooperative extension activities in the broad interdisciplinary area of environmental toxicology at Cornell and encourages the development of collaborative programs between faculty members in many university departments.

**Graduate Studies**

The graduate Field of Environmental Toxicology provides training leading to the M.S. or Ph.D. degrees. There is both breadth and depth in many facets of environmental toxicology and related disciplines. The program offers a combination of research and didactic training that is designed to prepare students for solving the problems of modern toxicology. Concentrations include cellular and molecular toxicology; nutritional and food toxicology; ecotoxicology and environmental chemistry; and a minor concentration of risk assessment, management, and public policy. Research by faculty associated with the program focuses on the interactions of drugs, pesticides, and other potentially hazardous environmental agents with a wide variety of living organisms (including humans) as well as the ecosystems with which these organisms are associated.

**Courses**

Courses in environmental toxicology are copersoned by the university's academic departments and are open to all graduate students and to undergraduates who have permission of the instructor. The titles and numbers of these courses are listed below. Details of course content are provided in the catalog under the listings of the copersoning department. Further information concerning the program and the development of new courses may be obtained through the director of graduate studies, 213 Rice Hall, telephone: 255–8008, e-mail: envtox@cornell.edu; www.cfe.cornell.edu/icet/

**VISUAL STUDIES**

Studio G, 726 University Ave. (255–6770) or St201A Center for Theatre Arts (254–2782)

Visual Studies as a distinct area of intellectual activity comprehends the analysis of visual forms, especially symbolic visual forms, from a range of historical, scientific, sociological, and aesthetic points of view. Images can be analyzed within a variety of contexts and by means of a variety of methods, and their study is therefore ideally conceived of in transdisciplinary terms. And since the creation of images has an important bearing on their analysis, visual studies concerns itself with practice as well as theory.

Students interested in pursuing visual studies as an area of study should propose an 'Independent Major in Visual Studies' following the same procedures as for any independent major in the school of Arts and Sciences. In addition to the courses listed below, which represent only a sampling of formal curricular offerings pertinent to visual studies, interested students should note the extensive offerings in Art, Architecture, Communications, Computer Science, History of Art, Design and Environmental Analysis, Theatre, Film & Dance, and the annual listings of courses in the Society for the Humanities.

Note also that the creation of a new Program in Visual Studies is currently under consideration by the College of Arts and Sciences. For additional information, contact Marilyn Rivchin (Theatre, Film & Dance).

**Courses**

Some of these courses may not be taught in 1999–2000. For information about availability consult the appropriate departmental listings.

Interactive Multimedia (Communications 439)
Business and Preprofessional Study

UNDERGRADUATE BUSINESS STUDY

Undergraduate preparation for business is found in many schools and colleges at Cornell. Students most frequently take courses in one area, as well as in related fields, to construct a program to suit their interests and career objectives. Each of the following areas provides a different focus for application and use of business study and training, and students should consider carefully the implications of each program when making a choice. Graduate study is available in the Johnson Graduate School of Management as well as in graduate fields following each of the undergraduate options.

The areas most often pursued include applied economics and business management (College of Agriculture and Life Sciences), economics (College of Arts and Sciences), engineering, hotel administration, policy analysis and management, and systems, and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Engineering. This area provides much of the management personnel of modern industry. Engineers frequently climb the ladders of technological management that lead to more general management responsibilities, more than half of the management-level personnel of major corporations such as General Electric, Xerox, IBM, and Du Pont have engineering degrees. In addition to becoming managers by being effective technical supervisors, many students enter engineering explicitly anticipating graduate business education, judging that an engineering background is particularly appropriate for management in a technology-oriented society.

Hotel administration. The undergraduate program in hotel administration prepares individuals to be mid- to upper-level managers and entrepreneurs for the hospitality industry (lodging, food service, and travel) and allied fields. Instruction is provided in the areas of administration and general management, human-resources management, accounting and financial management, food and beverage management, law, properties management, communication, science and technology, economics, and marketing.

Policy analysis and management. Study in the department develops an understanding of the market economy from both buyers' and sellers' perspectives. The focus is on the economic behavior and welfare of consumers in the private, public, and mixed sectors of the economy. An understanding of economics, sociology, and government policy provides the basis for an analysis of consumers' rights and responsibilities.

Industrial and labor relations focuses on the interactions among human beings, organizations, and institutions. It encompasses not only the relationships between employer and employee but the political, economic, social, and psychological factors that affect those relationships. It includes the study of the hiring, training, and motivating of employees and the comprehension of economic theories and models. It is viewed more often as preprofessional than as training for immediate practice in business or economics.

Sociology. The program provides disciplined understanding of society and social issues. The insights and analytical skills students acquire are applicable to corporate, government, and nonprofit settings, and the department's focus on social organization and institutions will prepare you well for graduate or professional programs in business schools. (Also see the description of the Sociology and Economy Concentration in the Department of Sociology section of Arts and Sciences.)

Related Areas

Courses in areas directly related to these business programs are found in many of the undergraduate programs with graduate study in that school. Students in the double-registrant program generally receive a bachelor's degree after four years of study and a Master of Business Administration (M.B.A.) degree after the fifth year of study, rather than the usual sixth year. Students in all Cornell undergraduate colleges and schools are eligible to explore this option. There is also a program with the College of Engineering that allows qualified students to earn a B.S., M.B.A., and Master of Engineering degree in six years. Admission to these combined degree programs is limited to particularly promising applicants. Careful planning is required for successful integration of the work in the two schools.

</tbody>
</table>
The presence of the Cornell Law School on campus provides the opportunity for a limited number of highly qualified undergraduates registered in the College of Arts and Sciences at the university to be admitted to the Law School. At the time of entry they must have completed 105 of the 120 credits required for the Bachelor of Arts degree, including 92 credits of course work in the College of Arts and Sciences.

It may be possible for exceptionally well-qualified students in other Cornell undergraduate colleges to arrange to enter the Law School after three years. The College of Human Ecology offers a program in which students spend their fourth year at the Law School. In addition, members of the Cornell Law School faculty sometimes offer undergraduate courses such as Nature, Functions, and Limits of Law, which are open to all undergraduates.

PREMEDICAL STUDY

Medical and dental schools, while not requiring or recommending any particular major course of study, do require that a particular selection of undergraduate courses be completed. These courses usually include general chemistry and organic chemistry, biology, physics, and a year of English composition (or a freshman writing seminar). In addition, many medical schools require or recommend mathematics and at least one advanced biological science course, such as biochemistry, genetics, embryology, histology, or physiology.

There is no major program that is the best for those considering medical or dental school, and students are therefore encouraged to pursue their own intellectual interests. Students are more likely to succeed at, and benefit from, subjects that interest and stimulate them, and there is no evidence that medical colleges give special consideration to any particular undergraduate training beyond completion of the required courses. In the past, successful Cornell applicants to medical and dental schools have come from the Colleges of Arts and Sciences, Agriculture and Life Sciences, Human Ecology, and Engineering. The appropriate choice depends to a great extent on the student's other interests.

Exceptionally qualified students in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology may apply for acceptance to the Medical College through a double registration procedure arranged between Cornell University and Cornell University Medical College in New York City. This procedure allows registered students to save one year in pursuit of the bachelor's and M.D. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

PREVETERINARY STUDY

There is no specific preveterinary program at Cornell, and students interested in veterinary medicine as a career should select a major area for study that fits their interests while at the same time meeting the entrance requirements for veterinary college as listed below. Most preveterinary students at Cornell are enrolled in the College of Agriculture and Life Sciences, which offers several applied science majors, including animal science, that can lead to related careers if the student does not go to veterinary college. Some enter other divisions of the university, especially the College of Arts and Sciences, because of secondary interests or the desire for a broad liberal arts curricula.

The college-level prerequisite courses for admission to the College of Veterinary Medicine at Cornell are English composition, biology or zoology, physics, inorganic chemistry, organic chemistry, biochemistry, and microbiology. All science courses must include a laboratory. These requirements, necessary for admission to the College of Veterinary Medicine at Cornell, may vary at other veterinary colleges.

For information on additional preparation, including work experience and necessary examinations, students should consult the brochure, Admissions Information, obtained by writing to the Office of DVM Admissions, College of Veterinary Medicine, Cornell University, S1-006 Schuman Hall, Ithaca, New York 14853-6401. Information on the Guaranteed Admissions Program is available from the same address.

Qualified students in the College of Agriculture and Life Sciences may apply for acceptance in a double registration program arranged between Cornell University and the College of Veterinary Medicine at Cornell. This program allows registered students to save one year in pursuit of the bachelor's and D.V.M. degrees. Further information about this program is available from the Health Careers Program office at the Career Center, Cornell University, 103 Barnes Hall, Ithaca, New York 14853-1601.

2 "Arbitrary and Capricious" describes actions which have not sound basis in law, fact, or reason are grounded solely in bad faith or personal desires. A determination is arbitrary and capricious only if it is one no reasonable mind could reach.

3 See the definition at section II.B.4.c.
ADMINISTRATION

Daryl B. Land, dean
Brian F. Chabot, associate dean
Kevin Mahaney, assistant dean for public affairs
H. Dean Sutphin, assistant dean and director of academic programs
Donald R. Viands, associate director of academic programs
W. Ronnie Coffman, associate dean and director of research
Anthony M. Shelton, associate director of research
Daniel J. Decker, associate director of research
Rosemary Loria, associate director of research
D. Merrill Ewert, associate dean and director of cooperative extension
R. David Smith, associate director of cooperative extension
Margaret E. Smith Einarson, associate director of cooperative extension
Norman T. Uphoff, director of international agriculture
James E. Haldeman, associate director of international agriculture

Office of Academic Programs Staff
Counseling and advising: Lisa Ryan, Bonnie Shelley
Registrar: Mary Milks, Patricia Austic
Admissions: Randy Stewart, Laurie Gillespie, Jason Locke, Anne LaFave
Career development: William Alberta, Amy Benedict-Martín, Sheri Mahaney
Minority programs: Catherine Thompson

Department Chairs
Agricultural and biological engineering: M. F. Walter, Riley-Robb Hall
Agricultural, resource, and managerial economics: A. M. Novakovic, Warren Hall
Animal science: A. W. Bell, Morrison Hall
Biometrics Unit: N. S. Altman, Warren Hall
Communication: R. E. Osman, Kennedy Hall
Education: D. H. Monk, Kennedy Hall
Entomology: D. A. Rutz, Comstock Hall
Floriculture and ornamental Horticulture: T. C. Weiler, Plant Science Building
Food science: D. Miller, Stocking Hall
Landscape Architecture: H. W. Gottfried, Kennedy Hall
Natural resources: J. P. Lassoie, Fernow Hall
Plant breeding: E. D. Earle, Emerson Hall
Plant pathology: S. A. Slack, Plant Science Building
Rural sociology: D. L. Brown, Warren Hall
Soil, crop and atmospheric sciences: J. M. Duxbury, Emerson Hall
Statistical sciences: C. E. McCulloch, Warren Hall

College Focus
The College of Agriculture and Life Sciences provides educational programs that prepare men and women with technical, management, and leadership skills.

The college focuses on a broad-based education for its students, and on a problem-solving and basic research program. The program is geared to the discovery and dissemination of knowledge for the purpose of advancing the food system, agriculture, nutrition, biological sciences, environmental quality, and community and rural development throughout New York State, the nation, and the world.

There are six primary areas of focus, developed in response to the needs of society, and representing agriculture and life sciences in their broadest and most dynamic meaning:

- Agriculture (production and marketing)
- Biological Sciences
- Community, Human and Rural Resources
- Environment
- Food and Nutrition
- International

Facilities
The College of Agriculture and Life Sciences is located on the upper campus, up the hill from the central area of Cornell University, on land that was once part of the Ezra Cornell family farm.

Buildings around the area commonly known as the Ag Quad house classrooms, offices, and laboratories. Flanking them are the greenhouses, gardens, and research facilities. Nearby orchards, barns, field plots, forests, and streams extend as far as the Animal Science Teaching Research Center at Harvard and the Agricultural Experiment Station at Geneva.

Roberts Hall serves as headquarters for the administrative units, including offices of the deans and directors of academic programs, research, and cooperative extension. Included in the Office of Academic Programs are the director and associate director, the Admissions Office, the Career Development Office, the Counseling and Advising Office, the Office of Minority Programs, and the Registrar.

Mann Library, with its extensive collections of materials in the agricultural and biological sciences, is at the east end of the Ag Quad. The student lounge and service center, known as the Alfalfa Room, and many of the college classrooms are in Warren Hall. Public computer facilities are available in Warren Hall, in Riley-Robb Hall, and in Mann Library.

DEGREE PROGRAMS
The College of Agriculture and Life Sciences offers programs leading to the degrees of Bachelor of Science, Master of Science, and Doctor of Philosophy. Professional degrees include the Master of Professional Studies and the Master of Arts in Teaching. Some registered professional licensing and certification programs are also available.

Each curriculum in the college creditable toward a degree is registered with the New York State Education Board and is linked with the national Higher Education General Information Survey (HEGIS) codes for federal and state reporting.

Graduate Degrees
Graduate study is organized by fields that generally coincide with the academic departments but may draw faculty from several disciplines in the various colleges of the university. The following graduate fields have primary affiliation in Agriculture and Life Sciences. Current directors of graduate studies are also listed.

Agriculture (M.P.S. Agr.): H. D. Sutphin, Roberts Hall
Agricultural and Biological Engineering: J. A. Bartsch, Riley-Robb Hall
Agricultural Economics: R. N. Boievert, Warren Hall
Animal Breeding: E. J. Poliaik, Morrison Hall
Animal Science: R. L. Quaas, Morrison Hall
*Biochemistry, Molecular and Cell Biology: W. J. Brown, Biotechnology Building
Biometry: S. J. Schwager, Warren Hall
Communication: M. A. Shapiro, Kennedy Hall
Development Sociology: P. McMichael, Warren Hall
*Ecology and Evolutionary Biology: D. W. Winkler, Corson Hall
Education [also M.A.T.]: D. E. Hedlund, Kennedy Hall
Entomology: M. P. Hoffmann, Insectary
Environmental Toxicology: A. Yen, Rice Hall
Floriculture and Ornamental Horticulture: N. L. Bassuk, Plant Science Building
Food Science and Technology: S. S. Rizvi, Stocking Hall
*Genetics and Development: T. D. Fox, Biotechnology Building
International Agriculture and Rural Development (M.P.S. Agr.): R. W. Blake, Morrison Hall
International Development: N. T. Uphoff, Caldwell Hall
Bachelor of Science Degree

Departments in the College of Agriculture and Life Sciences sponsor study for the B.S. degree in nineteen major fields. To qualify for the degree, students must fulfill requirements established by the faculty of the college and administered through the Office of Academic Programs. The following units offer major fields of study for undergraduates. A faculty advising coordinator is listed for each unit. Students should consult with the faculty coordinator regarding requirements and opportunities for concentrations within the major field.

Agricultural and Biological Engineering: R. E. Pitt, 318 Riley-Robb Hall
Agricultural, Resource, and Managerial Economics: D. A. Grossman, 204 Warren Hall
Animal Sciences: E. J. Pollak, B-47 Morrison Hall
Atmospheric Sciences: D. S. Wilks, 1113 Bradfield Hall
Biological Sciences, Division of: J. J. Doyle, 200 Stimson Hall, B. E. Comella, 216 Stimson
Biometry and Statistics: S. J. Schwager, 424 Warren Hall
Communication: B. O. Earle, 332 Kennedy Hall
Education: G. J. Posner, 416 Kennedy Hall
Entomology: Q. D. Wheeler, 3136 Comstock Hall
Floriculture and Ornamental Horticulture: K. W. Mudge, 20 Plant Science Building
Food Science: J. M. Brown, 101 Stocking Hall
Landscape Architecture: P. J. Trowbridge, 442 Kennedy Hall
Natural Resources: T. J. Fahey, 12 Fernow Hall
Nutrition, Food, and Agriculture: C. A. Bisogni, 334 MVR Hall

Plant Science Units (Plant Biology, Genetics and Breeding, Pathology/Protection, Pomology, Vegetable Crops): D. R. Viands, 140 Roberts Hall
Rural Sociology: L. Williams, 220 Warren Hall
Science of Earth Systems: K. Cook, 1110 Bradfield Hall
Crop and Soil Sciences: G. W. Fick, 505 Bradfield Hall
Special Programs in Agriculture and Life Sciences: L. A. Ryan, 140 Roberts Hall

Summary of Basic College Requirements for Graduation

1. Credit Hours
   a. Minimum: 120
   
   Exception: Credit for tutorial courses (Math 105, EDUC 005, and 00 level) increase the number of credits required for graduation by the number of credits in the course. The credits do count toward the minimum 12 credits for full-time status.
   
   b. Minimum at Cornell: 60; Maximum transferred in (C- or higher): 60
   
   c. Minimum from College of Agriculture and Life Sciences: 55 (includes credit used in the distribution and appropriate transfer credit).
   d. Maximum from endowed colleges (Arts and Sciences; Architecture, Art, and Planning; Engineering; and Hotel School) without additional charge: 55 (includes credit used in the distribution AND failed courses)
   
   e. Minimum with letter grade: 100; Maximum with S/U grade: 20 (pro-rated for transfer students) with maximum of one course per semester
   
   f. Maximum independent study, teaching experience, internships: 15 (pro-rated for transfer students)
   
   g. Credit for physical education does not count toward the 120 credit or the minimum 12 credits for full-time status (see #6).

2. Residence
   a. Students are entitled to enroll eight full-time semesters (prorated for transfer students). A full-time semester requires a minimum of 12 credits per semester, not counting physical education. Remedial courses (see #1A) are counted.
   b. A minimum of seven semesters is required, with a GPA of 2.0 or greater.
   c. Internal transfer students must be enrolled in CALS for at least two semesters, not including residency in Internal Transfer Division.
   d. The final semester before graduation must be in residence at Cornell as a full-time student in good academic standing (see #3 B).

Exception: Students with 8 or fewer credits remaining for graduation and with circumstances that prevent full-time study, may petition for approval to complete remaining credits at another institution or part-time in CALS.

E. Students participating in the employee degree program may petition for part-time enrollment.

3. Grade-point Average (GPA)
   a. Cumulative GPA: 1.70 or above must be maintained. Includes only grades earned at Cornell after matriculating into the college.
   b. Final semester: 1.70 or above based on a minimum of 12 credits, or 2.00 or above if graduating in 7 semesters.

4. Distribution

The purpose of the distribution requirement is to provide a broad educational background and to ensure a minimum level of competency in particular skills. Through study of the physical sciences, students develop quantitative and analytic skills based on an understanding of the physical laws governing the universe and through study of the biological sciences, they gain an appreciation of the variability of living organisms. The social sciences and humanities give students perspective on the structure and values of the society in which we live, and prepare them to make decisions on ethical issues that will impact their work and role in society.

Credits received for independent study, field, teaching, work experience, and internships cannot be used to fulfill the distribution requirement. Courses judged to be remedial in the discipline, such as Education 005, will not be counted.

Group A: Physical Sciences
9 credits of 100- or 200-level courses, in at least two disciplines, including at least one course in chemistry or physics.

Crystallography
Physics
*Mathematics (excluding Education 005, Mathematics 101 and 109)

Education 115

Soil, Crop and Atmospheric Sciences 131

Astronomy

Geology

Statistics and Biometry (including ARME 210, IRLST 210)

The college mathematics requirement is described below.

Group B: Biological Sciences
9 credits, to include 6 of introductory biological science (introductory courses include BIO G 101-104, 105, 106, 109, 110.)

Biological Sciences (excluding 160, 200)

Unpermission of the director of Undergraduate Biology is obtained, 209, 367)

Animal Sciences 100, 221, 300, 301

Entomology 212

Nutritional Sciences 262

Plant Breeding 201, 225

Plant Pathology 309, 401

Group C: Social Sciences and Humanities
12 credits (6 in each of the following two categories):

Social Sciences: 100- through 400-level courses in the following departments (excluding Freshman Seminars):
Anthropology
Archaeology

ARME 100, 416
CEH 110/CEH 111 (cannot receive credit for these courses and Econ 101/Econ 102)
Communication 116, 120, 410, 418, 420, 422
Economics (excluding all ARME courses)
Education 271, 311, 317, 370, 378
Government
HDFS 150 (cannot receive credit for this course and SOC 243)
LA/CRP 261, 360, 363
Psychology
Sociology (includes Rural Sociology except RS 100, 175, 318, 442)

Humanities. 100- through 400-level courses in Freshman Seminars and language courses:
African Studies (literature and history)
Asian American Studies
Asian and Near Eastern Studies (literature and history)
Classics (literature and history)
Comparative Literature
English (literature only)
French, German, Italian, Russian, and Spanish (literature only)
History
History of Art/History of Architecture
LA 282
Music and Theatre Arts (theory, literature, and history only)
Natural Resources 407, 411
Philosophy
Religious Studies
Sociology 100, 175, 318, 442
WOMEN'S/SXS 327

Group D: Written and Oral Expression. 9 credits, of which at least 6 must be in written expression, selected from the following:

Freshman Seminars
Communication 117, 201, 350, 352, 260 (was 360), 263 (was 263), 365

Students scoring 4 or 5 on the English advanced placement exam may be awarded 3 credits and are exempt from one freshman seminar course.

5. Math Requirement
Faculty legislation requires minimum competency in mathematics to complete a degree in the College of Agriculture and Life Sciences. As a measure of competency in mathematics, all entering undergraduates, including those with advanced placement or transfer credit in calculus, must take the college math proficiency exam (administered during orientation). The exam score determines the college math graduation requirement, and provides placement information.

The exam has two components. Cutoff scores divide students into three groups, each with specific graduation requirements.

Mathematics requirements and placement suggestions:

Group I Students in this group are considered proficient in math for college graduation requirements. If further math is needed for the major, placement score suggests calculus skill level (e.g., Math 111, 191, 193).

Group II Students in this group MUST complete a math course at Cornell. *

Placement score suggests pre-calculus skill level (e.g., EDUC 115, Math 101, Biometry 101).

Group III Students in this group must take EDUC 005, basic review math in their first semester. Students must ALSO complete an additional math course at Cornell. *

Transfer and AP math credit (up to 6) will be recorded in Group A of the college distribution requirements. Additional transfer credit in math will be recorded as general electives. Students scoring in Group II or Group III of the college math proficiency exam must take a math course at Cornell*, regardless of transfer or AP math credit.

'Math courses at Cornell that may be used to fulfill math requirement:

All courses in the Mathematics department (except 101 and 109)
EDUC 115
Biometry 101

6. Physical Education
a. Pass a required swim test, administered during orientation.

b. Two courses with a satisfactory grade (courses do not count toward 120 credits for graduation or the minimum 12 credits for full-time study).

c. Students are expected to complete the physical education requirement in their first two semesters at Cornell.

d. Transfer students are credited with one course of physical education for each semester previously enrolled full-time (12 or more credits) at another college.

Faculty Advising
a. Each student is assigned to a faculty adviser soon after being admitted to the college. The faculty adviser will help the student plan a program of study of courses appropriate to the degree programs offered by the college.

b. Course enrollment each semester should be planned in consultation with the faculty adviser. Students pre-enroll for courses by computer through CoursEnroll, under courses, classes and exams on the Bear Access menu. Pre-enrollment by computer is not valid until the student's individual code is entered. This code, or adviser key, is provided to the student by the faculty adviser after approval of the choice of courses.

c. All academic plans, such as acceleration and graduate study, should be made in consultation with the student's faculty adviser. Support of the adviser is essential if a student petitions for an exception to any of the requirements of the college.

Progress toward the Degree
a. The progress of each student toward meeting the degree requirements is recorded each term in the college registrar's office on a Summary of Record form.

b. Students who have been in residence for eight semesters and who have met the graduation requirements will be graduated. Students are entitled to attend for the full eight semesters even if they have completed the graduation requirements in fewer semesters, but must notify the College Registrar of their intent to return for the eighth semester. A student who wishes to continue study after graduation must apply for admission as a special student through the college admissions office, 177 Roberts Hall.

c. Application to graduate. Students who are planning to graduate must complete an "Application to Graduate" by February 15th (for May graduate) or September 15th (for January graduate). The adviser signs the application after verifying that the requirements for the major have been completed. The college registrar signs after verifying that the college requirements have been met.

Credit Earned While in High School
Transfer credit will not be accepted for the Syracuse Project Advance Program and similar programs. If a student is enrolled in a college/university course during his/her high school years, transfer credit will be given only if certain criteria are met:

1. Course must be a standard course taught by a post-secondary institution.
2. High school must be a satellite location, one of several options available to all students taking the course.
3. Course syllabus, text, examinations, and evaluation process must be the same for all students at all sites.
4. Students must be enrolled for college credit and pay college tuition.
5. Instructor must be a faculty member (includes adjunct) at the offering college.

If one of these is not met no transfer credit will be given. Written verification may be necessary.

STUDENTS
Undergraduate enrollment is approximately 3,100, with about 56 percent in the upper division. Each year about 850 students are graduated, while 650 freshmen and 250 new transfer students are enrolled. Members of the faculty of the college serve as chairs of the special committees of roughly 1100 graduate students.

Admission
The College Admissions Committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula.

Most students come from New York State, but about 30 percent come from other parts of the United States or abroad. Slightly more than half of the undergraduates are women. Approximately 22 percent are identified as members of minority ethnic groups.

Transfer Students
Approximately 18 to 20 percent of the ALS undergraduate students are transfers who have taken part of their collegiate work at community colleges, agricultural and technical colleges, or other four-year institutions. Many of them hold an associate degree.

*Students 35
A student wishing a break from studies in a semester should submit a written petition for severe scheduling problems or no Petitions. Students must petition by the Committee on Academic Achievement College. Other exceptions must be reviewed while being a full-time student at Cornell Two exceptions to enrollment elsewhere Roberts Hall. Teachers in CALS must register for at least twelve (12) credits of course work each semester. It is expected that students will be enrolled in course work at another institution while they are enrolled at CALS. Two exceptions to enrollment elsewhere while being a full-time student at Cornell would be the joint enrollment agreements between Cornell and Ithaca College and Wells College. Other exceptions must be reviewed by the Committee on Academic Achievement and Petitions. Students must petition before enrolling for a course elsewhere. The committee may approve such petitions only when there are compelling circumstances such as severe scheduling problems or no equivalent course available at Cornell. The Counseling and Advising Office assists students in navigating the college's undergraduate program. Each student is assigned a faculty advisor in their major field of study for assistance and guidance in developing a program of study, and to enhance the student's academic experience. The Counseling and Advising Office coordinates the faculty advising program, serves as the college's central undergraduate advising office, and offers personal counseling. Academic advising is available for students who are interested in international study, need to file petitions to waive college academic regulations, have disability concerns, are experiencing academic difficulties, or have requests for tutoring. The staff coordinates new student orientation, commencement activities, and the activities of two student organizations, Ho-Nun-De-Kah, the college's honor society, and SOnet, the CALS Student Organization Network. Students seek counseling and advising on a variety of issues including academic course problems and college procedures, graduation requirements, personal and family problems, stress management, and time management. Two counselors provide short-term counseling with an expertise in college guidelines. Counseling is framed as appropriate to each student's academic circumstances. The staff is available on a walk-in basis, as well as by appointment. The Office of Minority Programs serves to recruit, admit, monitor and influence policy on behalf of all minority students within the College of Agriculture and Life Sciences. This population is defined as encompassing all African American, Latin American, Asian American, and Native American students. In the past academic year, this population represented approximately 20 percent of the college's undergraduate population. In addition, we are charged with developing and programming for the Educational Opportunity Program and Prehealth Collegiate Science and Technology Entry Program, and some involvement with the Academic Human Diversity and Resources. The Educational Opportunity Program (EOP) and the Collegiate Science Technology Entry Program (CSTEP) are state-supported programs intended to assist New York State students who meet economic and academic criteria set by the college, State Programs Office, and New York State Board of Regents. For further information, please contact Catherine Thompson in 140 Roberts Hall. Within the university, the Office of Minority Programs is charged with acting as the college liaison with the central Office of Minority Education Affairs, the Learning Skills Center, and the State Programs Office. Other university connections include the Undergraduate Admissions Office and the Office of Financial Aid regarding the concerns of the minority student population. The duties of the Office of Minority Programs are primarily carried out by the director with an assistant, part-time support staff, serving as the Prehealth Program adviser and liaison, and providing ongoing support at all levels for the Office of Counseling and Advising. The Office of Career Development offers a variety of helpful services in a friendly environment to all students and alumni of the college. Career development includes self-awareness and assessment, career exploration, decision making, and job search. Services are designed to assist students and alumni with those activities and to help them develop the career planning and job search skills they will find useful as their career paths progress and change. The Career Library contains an extensive collection of current and useful material, including career information books, extensive
3) Faculty members assume responsibility to
make clear to students and teaching assistants specific regulations that apply to scholarly work in a discipline.

4) Faculty members fulfill their responsibility to
- maintain in all class, laboratory, and examination activities an atmosphere conducive to academic integrity and honor
- make clear the conditions under which examinations are to be given
- make clear the consequences of violating any aspects of the code
- provide opportunities for students to discuss the content of courses with each other and help each other to master that content and distinguish those activities from course assignments that are meant to test what
students can do independently
- state explicitly the procedures for use of materials taken from published sources and the methods appropriate to a discipline by which students must cite the source of such materials
- approve in advance, in consultation with other faculty members, which work submitted by a student and used by a faculty member to determine a grade in a course may be submitted by that student in a different course
- monitor the work and maintain such records as will support the crucial underpinning of all guidelines: the students’ submitted work must be their own and no one else’s

Cornell’s Code of Academic Integrity spells out how individuals who have allegedly violated Cornell standards for academic integrity are to be confronted and, if found to be in violation of those standards, sanctioned. The code provides informal resolution of most perceived violations through a primary hearing between the faculty member, the student involved, and an independent witness. If necessary, a hearing before a hearing board follows. The Academic Integrity Hearing Board for the College of Agriculture and Life Sciences consists of three elected faculty members, three elected student members, a chair appointed by the dean, and the director of counseling and advising, who serves as a non-voting record keeper. Professor D. Grossman is the current chair. Individuals who observe or are aware of an alleged violation of the code should report the incident to the faculty member in charge of a course or to the college’s academic integrity office. General information and details on procedures for suspected violations or hearings are available from the Counseling and Advising Office.

A petition for exemption from a college academic requirement or regulation may be filed by any student who has grounds for exemption. Forms are available in the Counseling and Advising office, 140 Roberts Hall. Counselors are available to assist with the process. A petition is usually prepared with the assistance of a student’s faculty adviser, whose signature is required. The adviser’s recommendation is helpful to the committee. The committee determines whether there is evidence of mitigating and unforeseen circumstances beyond the control of the student that would warrant an exemption or other action.

Registration Procedures

All students must register with the university and “check-in” with this college at the beginning of each semester. Check-in materials are available in 140 Roberts Hall as announced each term by the University Registrar.

Course Enrollment Procedures

To enroll in courses, students will receive information from the university registrar, plan a schedule in consultation with their adviser, and pre-enroll by computer, through CoursEnroll in “Just the Facts” on the Bear Access menu. Pre-enrollment is not valid until the student enters the adviser key code into the computer. Adviser keys are provided by faculty advisers after a discussion of selections and requirements takes place. The key code changes each semester to ensure ongoing contact between student and faculty adviser.

To enroll in courses that involve independent study, teaching, or research, a student must...
file an independent study form, available in the college Registrar's Office, 140 Roberts Hall. Students who will be studying off campus should notify the Registrar's Office to ensure that proper registration will occur.

Students may enroll again for a course in which they received a grade of F in a previous semester. Both grades will be recorded and calculated as part of the GPA. If a student retakes a course in which a passing grade was earned, the second time will be for no credit.

Students must not enroll again for a course in which they received an incomplete or NGR. Instead, work for that course should be completed without further enrollment. The instructor files a manual grade form to the college registrar when a grade has been assigned. An incomplete not made up by the end of two successive semesters of residence reverts to a failure. In the case of a graduating senior, incompletes revert to failures at the time of graduation.

Students enrolled in a two-semester course will receive an R at the end of the first semester and should enroll again for the same course the second semester. The letter grade will be recorded for the second semester when all work for the course is completed. A note on the transcript will explain the R grade.

A student is held responsible for and receives a grade for those courses in which he or she enrolls unless the student officially changes such enrollment. All changes in courses or credit, grading options, or sections must be made by the student at the Registrar's Office, 140 Roberts Hall, on its official university course drop and add form.

Add/Drop/Changes are made by filing properly signed forms in the Registrar’s Office, 140 Roberts Hall. Approval and signature of the faculty adviser and course instructor are required to change course enrollment.

Students may add courses during the first three weeks of the term and change grading options or credit hours where applicable and may drop courses until the end of the seventh week.

Students wishing to withdraw from a course after the end of the seventh week must petition to the college Committee on Academic Achievement and Petitions. Petition forms are available in Counseling and Advising, 140 Roberts Hall. Requests for course changes are approved only when the members of the committee are convinced that unusual circumstances are clearly beyond the control of the student. The committee assumes that students should have been able to make decisions about course content, total work load, and scheduling prior to the end of the seventh week of the semester.

If a petition to drop a course is approved after the end of the seventh week of classes, the course remains on the student’s record and a W (for “withdrawal”) is recorded on the transcript.

### Grade Reports

Grade reports for the fall semester are available on Just the Facts in January; grade reports for the spring semester are mailed by the Office of the University Registrar to students at their home addresses unless alternative addresses are reported to the college or university registrar by mid-May.

### Academic Deficiency Policies

At the end of each semester, the Committee on Academic Achievement and Petitions reviews the records of those students who in any respect are failing to meet the academic requirements of the college or who persistently fail to attend classes. For students not making satisfactory progress, the committee takes appropriate action, including, but not limited to, issuing warnings, placing them on probation, granting them leaves of absence, advising them to withdraw, suspension, or expulsion.

Specifically, the committee considers as possible cause for action failure to attend and participate in courses on a regular basis or, at the end of any semester, failure to attain one or more of the following:

- semester GPA of at least 1.7
- cumulative GPA of at least 1.7
- satisfactory completion of 12 or more credits per semester
- reasonable progress toward completion of distribution requirements
- appropriate completion of college and university requirements

In general terms, regular participation in course work with academic loads at a level sufficient to assure graduation within eight semesters and grades averaging C- (1.7) or higher are prima facie evidence of satisfactory progress.

### HONORS RESEARCH PROGRAM

The Bachelor of Science degree with distinction in research will be conferred upon those students who, in addition to having completed the requirements for the degree of Bachelor of Science, have satisfactorily completed the honors program in their area of major interest and have been recommended for the degree by the honors committee of that area.

An undergraduate wishing to enroll in the honors program must have completed at least 55 credits, at least 15 of which are at Cornell. Also, the student must have attained a cumulative grade-point average of at least 3.0 at the time of entry.

Interested students must make written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. An application form is available from the college registrar, 140 Roberts Hall, or from the area committee chair. (Biological sciences students should get applications at 200 Stimson Hall.)

Written approval of the faculty member who will direct the research and of the honors committee in the area is required. After the college registrar verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Academic credit may also be earned by enrolling in an appropriate independent study course. When applying for admission to the program, the student may, if appropriate, submit a budget and a modest request for funds to cover some of the costs the student incurs in doing the research.

The honors committee for each area recommends to the college registrar those students who qualify for honors. Only those who maintain a GPA of at least 3.0 will be graduated with honors.

Unless otherwise indicated in the following program area descriptions, the research report in the form of a thesis or journal article should be submitted to the honors committee no later than four weeks before the end of classes of the semester in which the student expects to graduate. Students in the College of Agriculture and Life Sciences wishing to participate in the honors program must be accepted in one of the program areas approved by the faculty. Students are not eligible for honors by participating in a program offered by another college or administrative unit.

### Animal Sciences

Faculty committee: W. B. Currie, chair; Y. R. Boisclair, S. M. Quirk, P. A. Johnson

The objective of the animal sciences honors program is to provide outstanding undergraduates with the opportunity to pursue supervised independent research and to develop an understanding of the scientific process. It is expected that the research will require significant effort and creative input by the student in its design and execution and in the reporting of the results.

Those students with majors in animal sciences who are interested in doing an honors project should consult with their faculty advisers early in their junior year. All students are expected to meet the college requirements in qualifying for the program and to complete the following:

- Identify a potential honors project sponsor (i.e., a faculty member working in the animal sciences) and secure that faculty member's commitment to sponsor the student in the honors project. That should be accomplished early in the second semester of the junior year.
- Preregister during the spring semester for AS 496, Animal Sciences Honors Seminar, which is offered in the fall semester.
- Register for AS 499, Undergraduate Research.
- Participate in AS 402, Seminar in Animal Sciences, during the spring semester and report on and discuss the project and results.
- Submit a written thesis to the honors committee by the scheduled deadline. Specific information regarding deadlines, format, and organization for the thesis will be provided.
- Meet with the honors committee for a short oral defense of the thesis following a review of the thesis by the student's sponsor and the honors committee.

Details pertaining to the specific requirements of the program can be obtained from the office of the committee chair, 434 Morrison Hall.

### Biological Sciences

Students interested in the honors program in the biological sciences should consult with their faculty advisers and with potential faculty research sponsors early in their junior year. See "Independent Research and Honors
An honors program in the area of entomology may be pursued by any qualified student in the College of Agriculture and Life Sciences (see the requirements at the beginning of this section). The student need not be specializing in entomology. Insects, because of their variety, small size, and easy availability, are convenient subjects for study in a wide array of problems dealing with living systems. Short life cycles, unique physiologies and developmental patterns, and species with easily managed colony requirements and a wide range of behavioral traits provide the raw material for honors study. Cornell's diverse faculty interests and extensive collections and library in entomology are also major assets if a student selects entomology as the area for honors study.

The honors committee requires that an undergraduate who is interested in embarking upon an honors project proceed with the following steps:

1. Discuss the matter with his or her academic adviser, preferably in the junior year, so that a research project can be carefully planned. The possibility of conducting some research during the junior year and/or summer should be discussed.
2. Discuss the project with an appropriate faculty member in the Department of Entomology who can serve as a supervisor to oversee the honors research. (The faculty adviser will be of assistance in determining which faculty entomologist might be the best supervisor, the decision being based primarily on available faculty members' areas of expertise.)
3. Prepare a brief, tentative plan for the project for discussion and approval of the honors project supervisor. The plan should include a statement of objects or hypotheses, proposed methods for testing hypotheses, needs for laboratory space or shared equipment, and a budget outlining financial support needed for travel and supplies.
4. Present a completed application to the chair of the entomology honors committee no later than two weeks before the last day of classes in the semester in which the student anticipates graduation. The thesis will be reviewed by the faculty honors project supervisor and one other referee from the department honors committee. The committee will return the thesis to the student one week before the last day of classes. If reviewers indicate that changes must be made, the revised thesis should be submitted to the chair no later than the last day of classes.

The honors program in natural resources provides an opportunity for undergraduates to pursue supervised independent research in the areas of (1) ecology and management of landscapes; (2) fish and wildlife biology and management; and (3) resource policy, management, human dimensions, and environmental education. The subject matter and nature of the research experience may be quite varied, but requires the guidance and supervision of a faculty member with substantial interest and expertise in the subject area chosen.

In addition to meeting requirements of the college, the student is expected to do the following:

1. Register for the honors program in the junior year or earlier.
2. Select a faculty adviser who will help identify and formulate a research problem.
3. Carry out an independent research effort that is original and separate from the work of others who may be investigating similar subjects.
4. Describe and summarize the work in the format of a conventional master's thesis or scientific paper ready for journal submission. About half of the theses have been published.
5. Work closely with at least two faculty or staff members who will agree to serve as readers for the thesis. Provide readers with a copy of the guidelines for evaluation of honors theses, available from the department's honors program committee.
6. Take the lead role for meeting each of the above expectations.

Nutritional Sciences

Faculty committee: M. N. Kazarinoff

The honors program offers students a research experience structured to give them the opportunity to choose a research project, search the literature relevant to it, plan and execute the research, and write it up in the form of a thesis. As in other types of research available to undergraduates, each student is guided by a faculty mentor. The honors project is designed to be spread over both semesters of the junior and senior years.

Students who consider this option should be aware that it involves a number of deadlines and considerable time commitment. Before signing on for this option, students are encouraged to consult with their academic advisors to make sure that honors will not interfere with other academic objectives, such as preparation for admission to medical school or making the dean's list. Although honors research credits for spring semester junior year and both semesters senior year are designated LET, individual mentors may choose the R grade for work in progress until the project has been fully completed. An outline of this process for both years is given below. Letters of invitation are sent to upcoming juniors during the summer.

Junior Year

Fall Semester Students register for NS 498 (1 credit, S-U). Students are oriented to the program, and provided material that summarizes the range of research activities in DNS. Students begin making arrangements with faculty members. When these arrangements have been completed, students will begin a literature search that focuses on their research problems.

Spring Semester Students register for NS 498 (1 credit, section 1). Additional faculty presentations of research opportunities are made, as well as orientation to supportive services available through DNS. Placements with faculty mentors should be completed by spring break. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research,
2. to develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

Senior Year

Fall Semester Students will register under the number NS 499 (2-4 credits, LET, by arrangement with their mentors). They may begin their research early in the fall semester, in consultation with the research mentor. Each student may also register under the number NS 499 for a convenient number of credits, to be determined in consultation with the chosen adviser. Work carried out will have two objectives:

1. to become familiar with literature and/or research methods appropriate to the problem for the honors research,
2. to develop a research proposal.

The semester outcome will be written reports/discussions of the method(s) or literature searches and a short research proposal, evaluated by the research adviser.

Spring Semester Students will again register under the course number NS 499 (4-9 credits LET, by arrangement with their research mentors). Much of the allotted time will be spent on data analysis and on writing the honors thesis.

Several important deadlines should be noted.

1. Last week in March: The names of thesis readers* are to be in the hands of the honors committee.
2. Third to fourth week of April: A final draft of the thesis is handed to the readers.
3. First to second week of May: Scheduled seminars for oral presentations of each student's research.
4. Last day of classes: Final form of the thesis is handed to the honors chairman.

To help students meet these deadlines, students register for NS 498 (1 credit, section 2) class sessions will be held before spring break for guidance in thesis writing and/or informal reporting of preliminary data. After spring break the group will meet once or
twice (depending on number of students) to practice oral presentations of completed research.

*Grade is determined by each student’s mentor.

**Two readers knowledgeable in the area of the student’s research topic to be chosen by the honors committee and faculty advisers.

Physical Sciences

Faculty committee: S. S. H. Risvi, chair; S. Colucci, C. E. McCulloch, J.-Y. Parlange

The honors program in physical sciences provides outstanding students with an opportunity to do independent research under the supervision of a faculty member in the departments of Agricultural and Biological Engineering, or Food Science or Soil, Crop and Atmospheric Sciences or Biometrics.

In addition to meeting the requirements of the college, the student is expected to:

- Identify a thesis advisor and thesis topic before the end of junior year.
- Working with the thesis advisor, prepare a budget and application form (due by the third week of senior year).
- Enroll in the program for a minimum of two semesters.
- Enroll in the appropriate departmental Undergraduate Research course for a total of at least 6 credits.
- Submit an outline of the thesis to the chair of the committee by the end of January (for a May graduation).
- Submit a draft of the thesis to the thesis advisor with sufficient lead-time for a revision to be prepared.
- Submit three copies of the thesis and names of recommended reviewers to the chair of the honors committee by the second week before the end of classes in the semester in which graduation is expected.

There is no required format but the thesis is usually written in the form of a research journal article or a master’s thesis.

Further details of the program can be obtained from the chair of the physical sciences honors committee.

Plant Sciences

Faculty committee: R. L. Obendorf, chair; L. L. Creasy, A. M. Petrovic, F. S. Rossi, W. A. Sinclair

Students perform independent scientific research under the guidance of faculty members in fields of horticultural, agronomic, and soil sciences; plant biology; plant genetics and breeding; and plant pathology. For admission to the program, students must meet college requirements and submit to the Plant Sciences Honors Committee a project proposal (2-3 pages) which includes a title; a brief background to the problem (justification and literature review); a clear statement of objective(s) and hypotheses to be tested; methodology and experimental plan, necessary space, equipment and supplies, and a project budget. The proposal must be accompanied by a letter from the faculty supervisor stating that he or she has approved the project plan and that its completion within the remainder of the student’s undergraduate tenure is feasible.

Successful completion of the honors program requires acceptance by the honors committee of two copies of a research report. The report should be written in the format of a research publication in the appropriate scientific field. The acceptable report must have been reviewed and corrected according to recommendations of the research supervisor before the report is submitted to the honors committee. The report must be received by the honors committee at least two weeks before the last day of classes of the semester in which the degree is sought and must be accompanied by the research supervisor evaluating the research and, if appropriate, recommending graduation with honors.

The honors committee will review the report within one week and may accept it or return it to the student with specific recommendations for revisions. A suitably revised version must be submitted to the committee before the second day of the examination period. When the committee accepts an honors report, the chair will recommend to the Associate Director of Academic Programs and the College Registrar that the student be graduated with honors. One copy of the accepted report will be returned to the student with review comments from the committee.

Social Sciences

Faculty committee: R. D. Colle, chair; K. A. Strike, M. J. Pfeiffer, W. H. Lesser

Students are accepted into the social sciences honors program of the College of Agriculture and Life Sciences after meeting all the criteria described above, after evaluation of the student’s written application, and on approval of a detailed thesis proposal. The application and proposal are due no later than the third week of the first semester of the senior year. Each student is encouraged to begin working on this proposal with a prospective faculty thesis advisor during the junior year. The purpose of the proposal is twofold. First, it formalizes a plan of study and establishes a set of expectations between the student and his or her faculty advisor. Second, the Honors Committee reviews the proposal to determine whether it is consistent with honors thesis requirements, and to make suggestions for improvement.

The proposal should be 5–10 typed, double-spaced pages and include the following sections:

- **Research Topic**: State the problem to be studied or the topic of interest. Review the relevant literature and the background of the problem or topic, include a more extensive bibliography.

- **Research Questions/Empirical Hypotheses**: Specify the questions to be answered or hypotheses to be empirically tested via collection of data and some mode of analysis accepted in the social sciences.

- **Research Methods**: Discuss the models to be constructed, data collection procedures (including survey instruments or experiments, if appropriate), and methods of analysis.

- **Expected Significance**: State what new knowledge or information is likely to be forthcoming and why it is important.

Faculty advisers must be members of the graduate faculty. Exceptions to this rule will be granted for persons with special expertise who are deemed capable of thesis supervision; exceptions will be granted pending petition to the social science honors committee. Students may register for honors credit directed by the faculty adviser in conjunction with an honors project.

Honors degrees are awarded upon approval of the honors thesis by the social science honors committee. The research should deal with a substantive issue within one of the fields in the social sciences. Both the results of the research and the methodology (or the argument by which the results were achieved) must be reported. Reviews of the literature, practical conclusions or applications, or broad characterizations of an area of inquiry may constitute part of the research report but are not themselves sufficient to count as research.

Honors theses should be written according to the form of any standard journal in the appropriate fields. Three copies of the thesis must be submitted to the chair of the social science committee no later than three weeks before the last day of classes of the semester for which the degree is sought. A supporting letter from the faculty member supervising the work also must be submitted. Approval of the thesis requires a majority vote of the honors committee.

INTERCOLLEGE PROGRAMS

The College of Veterinary Medicine may accept students who are then permitted to double-register in their seventh and/or eighth semester and complete requirements for the Bachelor of Science degree in the College of Agriculture and Life Sciences. Students should consult with the college registrar, 140 Roberts Hall, to ensure that degree requirements have been fulfilled.

Students who have been offered admission to the S. C. Johnson Graduate School of Management may take management courses in their senior year if approved by their college faculty adviser as part of their undergraduate program. These courses count toward the endowed college credits (maximum 55 without additional tuition charge). Students may consult with the college registrar, 140 Roberts Hall, to verify degree requirements and endowed credits earned.

Students in the Field Program in Agricultural and Biological Engineering are usually enrolled in the College of Agriculture and Life Sciences during the freshman and sophomore years and then transferred to and completed their senior year in this college and the College of Engineering in the junior and senior years. Students pay the engineering college tuition during the senior year. The curriculum is accredited by the Accreditation Board for Engineering and Technology. The B.S. degree is awarded in cooperation with the College of Engineering.

The Program in Landscape Architecture offers a first professional degree curriculum in landscape architecture at both undergraduate and graduate levels, as well as a graduate second professional degree. The program is co-sponsored by the Department of Landscape Architecture in the College of Agriculture and Life Sciences and by the College of Architecture, Art, and Planning.
OFF-CAMPUS STUDY PROGRAMS

Study off campus is of two types: (1) credit may be earned at another institution and transferred to Cornell, or (2) credit may be earned in Cornell courses that require off-campus activity. Students who plan to enroll in courses at another institution in the United States must petition for a leave of absence. Courses should be selected in consultation with the faculty adviser.

Albany Programs

Study off campus in Albany, the New York State capital, provides a unique opportunity to combine career interests with academic and legislative concerns. Students receive an intensive orientation to state government and attend a lecture-seminar program composed of three two-credit components and offered by professors-in-residence. An internship experience, supervised by an internship committee, provides up to six additional academic credits. Independent study and research courses offered by the various departments in ALS and/or courses offered by academic institutions in the Albany area may also be elected.

Three opportunities are available. The Assembly Intern Program provides a placement with a member of staff of the New York State Assembly. The Senate Assistants Program has placements with New York State senators and selected staff. The Albany Semester Program provides experience with a state agency such as the Departments of Environmental Conservation, Education, or Labor.

Applications are collected and processed by the ALS Career Development Office, 177 Roberts Hall, in the term prior to assignments. Those accepted should plan a program of study in consultation with their faculty adviser. At least twelve credits must be carried to meet the residence requirement. Seniors should note that their last term average must be 1.7 or above.

All interns will audit the orientation sessions and meet participation requirements in at least two of the lecture-seminar sections. The paper required in each section constitutes an interdisciplinary, inter-college unit affiliated with the Center for the Environment. The mission of Cornell IRIS is to advance the development and use of spatial and spectral information science and technology to benefit the environment. The Institute is comprised of three program areas in environmental resource inventory, remote sensing, and geographic information systems. A description of these programs and general information is available from the Institute director through the Cornell IRIS office in 302 Rice Hall.

The Cornell Institute for Resource Information Systems (Cornell IRIS) is an interdisciplinary, inter-college unit affiliated with the Center for the Environment. The mission of Cornell IRIS is to advance the development and use of spectral and spatial information science and technology to benefit the environment. The Institute is comprised of three program areas in environmental resource inventory, remote sensing, and geographic information systems. A description of these programs and general information is available from the Institute director through the Cornell IRIS office in 302 Rice Hall.
evaluated by a Cornell faculty member in an appropriate discipline. Normally a faculty member will not sponsor more than one of the independent study courses for any one student. To receive academic credit for the internship, students enroll in ALS 400, for an S-U grade only.

Information and applications are available in the Career Development Office, 177 Roberts Hall.

**Cornell-in-Washington**

The Cornell-in-Washington Program offers students from all colleges within the university an opportunity to earn full academic credit for a semester in Washington, D.C. Students take courses from Cornell faculty, conduct individual research projects, and work as externs. The Cornell-in-Washington Program offers two study options: 1) studies in public policy; and, 2) studies in the American experience. Students take part in a public policy or humanities seminar which requires them to serve as externs in federal agencies, congressional offices, or nongovernmental organizations and to carry out individual research projects for the supervision of Cornell faculty. The required externships and all course enrollments are arranged through, and approved by, the Cornell-in-Washington Program. Students in the College of Agriculture and Life Sciences must register for ALS 500 and cannot receive credit for the externship experience alone. For further information, see p. 20, inquire at 471 Hollister Hall, 255-4090, or visit the Cornell-in-Washington website at http://www.info.cornell.edu/ciw/ciw.html.

**SEA Semester**

The Sea Education Association is a nonprofit educational institution offering ocean-focused academic programs and the opportunity to live, work, and study at sea. Science, the humanities, and practical seamanship are integrated in small, personal classes. The 17-credit program is twelve weeks in length. Six weeks are spent in Woods Hole, the following six weeks are spent on either one of SEA's two sailing vessels: the R/V Westward, or the R/V Corinth Cramer. For more information, students should contact the Shoals Marine Programs office, G14 Stimson Hall, 255-4090, or visit the Cornell-in-Washington website at http://www.info.cornell.edu/ciw/ciw.html.

**Shoals Marine Laboratory**

The Shoals Marine Laboratory, run cooperatively by Cornell University and the University of New Hampshire, is a seasonal field station located on the 95-acre Appledore Island off the coast of Portsmouth, New Hampshire, in the Gulf of Maine. SML offers undergraduate, beginning graduate students, and other interested adults a unique opportunity to study marine science in a setting noted for its biota, geology, and history. Please refer to "Courses in Marine Science," under the section on the Office of Undergraduate Biology, for a list of courses offered.

For more information, contact the Shoals Marine Laboratory office, G14 Stimson Hall, 607-255-3717.

**Internships**

Several departments in the college offer supervised intern credit. Arrangements should be made with the offering department for assignment of a faculty member who will be responsible for placement, for planning the program of work, and for evaluating student performance.

For internships not governed by an established internship course, the student must enroll in a 497 course for the number of credits to be assigned. If the work is done during the summer, the student must enroll in the Cornell summer session for the agreed-upon credits.

In cases where the work is not done at Cornell, the awarding of credits depends upon a prior contractual arrangement between a Cornell professor and the student. Specific terms for receiving credit and a grade should be recorded, using the Independent Study, Research, Teaching, or Internship form, available in the Registrar's Office. 140 Roberts Hall.

A maximum of 15 (pro-rated for transfer students) of the 120 credits required for the degree may be taken in internships, independent study courses, and undergraduate teaching or research. No more than 6 of the 15 credits allowed for independent study may be awarded for internships consisting of off-campus work experiences that do not have the continued presence of a Cornell faculty member. The 6-credit allotment includes transfer credit and credit for internships in other colleges at Cornell. The 6-credit limit does not apply to secondary, postsecondary, and cooperative extension teaching internships in the Department of Education.

The College of Agriculture and Life Sciences does not offer a field study option. In general, a rather narrow view is taken toward awarding academic credit for work experience, "life" experience, or apprenticeships. Credit will only be assigned or accepted in cases where a professor is directly involved in determining both the content and the evaluation of a student's work. The awarding of credit will not be allowed in cases where a student brings to the college or to a professor a description of a past experience and requests credit. All students enrolling for an internship must file an Independent Study, Research, Teaching or Internship form with the Office of the College Registrar.

**International Exchange Programs in The College of Agriculture and Life Sciences**

Any student whose grade point average is 2.75 or above and has completed one year of continuous study in CALS may apply to one of the seven international student exchange programs—the Instituto Tecnologico y de Estudios Superiores de Monterrey (ITESM) in Monterrey, Mexico, the Agricultural College of Sweden at Uppsala, Nanyang Technological University in Singapore, the National University of Singapore (NUS), the University of Sydney in Australia, the University of Lausanne in Switzerland, or the University of Agricultural Sciences in Gödöllő, Hungary.

(Please note that the Nanyang program is for Communication majors only, the NUS program for Plant Sciences majors only, and the Lausanne program for Food Science majors only. CALS students may take courses relevant to their major and graduation requirements by earning a maximum of 15 credits per semester. There can be no duplication of credit, and grades received must be C- or better.

These undergraduate exchange opportunities are for **CALS students only**. Students who are interested in international study but not in one of the CALS programs must apply through Cornell Abroad in 474 Uris Hall. Please refer to the Cornell Abroad section of Courses of Study. For more information on programs and application process, see the CALS Study Abroad Adviser in 140 Roberts Hall or visit our web site http://oap.cals.cornell.edu/CAS/International.html.

**MAJOR FIELDS OF STUDY**

The college curriculum consists of 17 major program areas that reflect the departmental academic effort in the college. Faculty curriculum committees in each area identify a sequence of courses appropriate to all students studying in that field. Courses of study are designed to provide systematic development of basic skills and concepts. Opportunity for concentration in an area of particular interest is usually available.

Programs are planned with considerable flexibility, allowing students to prepare for careers, graduate work, professional opportunities, and the responsibilities of educated citizens. Course requirements in each major area are different, but all students must meet minimum distribution requirements of the college.

**Agricultural and Biological Engineering**

The Department of Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, and energy; and developing engineering systems that monitor, replace, or intervene in the mechanisms of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a joint Bachelor of Science degree from the Colleges of Engineering and Agriculture and Life Sciences, and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in agricultural and biological engineering are offered: environmental systems engineering, biological engineering, and agricultural engineering. Students take courses in mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design. Students select upper-level courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of
animal physiology, environmental systems analysis, and waste treatment and disposal. Students select one concentration in the College of Engineering that reflect their concentration, such as environmental engineering or biomedical engineering. Students planning for medical school also take organic chemistry. Throughout the curriculum, emphasis is placed on communication and teamwork skills. Specific course requirements and other information for the Agricultural and Biological Engineering joint program are in the College of Engineering section of this publication.

The department also offers two technology programs: environmental systems technology and agricultural systems technology. The technology programs emphasize applied and technical aspects of agricultural, biological, and environmental sciences. These programs incorporate courses in basic biological and physical sciences and mathematics as well as engineering and technology, agriculture, business, social sciences, and liberal studies. The student develops his or her own program of advanced and elective courses in consultation with a faculty adviser, and may have an informal minor in an area such as communication, business, education, or international agriculture.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, science, medicine, law, and other fields. In recent years graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international development.

The living world is all around us and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who appreciate the challenges facing society. The Department of Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges.

Specific course distribution requirements for the academic programs in environmental systems technology and agricultural systems technology include (for the engineering program, see the College of Engineering section):

A. Basic Subjects

- Calculus: 8 credits
- Chemistry: 6 credits
- Physics: 8 credits
- Introductory biological sciences: 6 credits
- Computer applications: 4 credits
- Statistics or probability: 3 credits
- Written and oral expression: 9 credits

B. Advanced and Applied Subjects

1. Five courses in the environmental, agricultural, or biological sciences: 15 credits
2. Five engineering or technology courses at the 300 level or above; at least 9 credits in agricultural and biological engineering: 15 credits

C. Electives

Additional courses to complete college requirements

D. Total (minimum): 120 credits

For further details on the Agricultural and Biological Engineering and Technology Programs, see the department’s Undergraduate Programs brochure, available at 207 Riley-Robb Hall; contact the advising coordinator, Professor Ron Pitt, at 255-2492; or visit the department’s web site at http://www.cals.cornell.edu/dept/aben

Animal Sciences

The animal sciences program area offers a coordinated group of courses dealing with the principles of animal breeding, nutrition, physiology, management, and growth biology. Emphasis in subject matter is directed toward domestic animal species, dairy and beef cattle, horses, poultry, pigs, and sheep, while laboratory, companion, and exotic animal species are also included in research and teaching programs. The Animal Science Department has extensive facilities for animal production and well-equipped laboratories and classrooms, including a teaching barn, in which students can gain practical experience in the care and management of large animals at a campus location.

The program focuses on the application of science to the efficient production of animals for food, fiber, and pleasure and easily accommodates a variety of interests and goals. Beyond a core of basic courses (suggested minimum, 15 credits) students select production and advanced courses to fulfill an individually tailored program worked out in consultation with their advisers. In this way it is possible to concentrate by species as well as by subject matter (nutrition, physiology, growth biology, breeding, management). For each subject area, supporting courses in other departments are readily available and strongly encouraged. Many science-oriented students elect a program emphasizing supportive preparation in the physical and biological sciences appropriate to graduate, veterinary, or professional study following graduation.

Dairy management is a popular program among students who may be preparing to manage a dairy farm or enter a related career. Other students may select a program oriented toward economics and business in preparation for a career in the poultry, dairy, meat-animal, horse, feed, or meats industry. These are examples of the flexibility within these programs that can be developed to meet a student’s career interest related to animals.

It is recommended that students obtain appropriate fieldwork or animal experience during summers. Several special training opportunities exist for highly motivated students. Upperclass students whose academic record warrants it may, by arrangement with individual faculty members, engage in research (either for credit or for Honors) or assist with teaching (for credit). The Dairy Management Fellows Program offers an equally challenging but different type of experience for a highly select group of students.

Applied Economics and Business Management

The undergraduate program in applied economics and business management is based in the Department of Agricultural, Resource, and Managerial Economics. Courses in agricultural, resource, and management economics are supplemented with others in related areas such as computer science, economics, sociology, history, government, industrial and labor relations, hotel administration, consumer economics, animal sciences, plant sciences, natural resources, mathematics, and statistics.

Six areas of specialization are offered:

Agricultural management is designed for students who have a special interest in the economics and management of businesses that provide services for the agricultural sector of the economy.

Agricultural and applied economics provides a general program in the economics of the agricultural sector and of resource use. It is an appropriate major for those students who (1) are interested in applied economics; (2) want to survey offerings in agricultural, resource, and managerial economics, such as management, marketing, economic development, policy, and environmental and resource economics; and (3) want to prepare for graduate work in agricultural economics. It is an appropriate option for those interested in the application of the principles of economics to problems in both the public and private sectors.

Business management and marketing applies the principles of economics and the tools of management to prepare students for careers in business. Special emphasis is given to developing decision-making skills and to the study of the structure and practices of business institutions. This prepares students for careers in market analysis, sales, banking, merchandising, production management, and general business management.

Environmental and resource economics provides training for students interested in applying economic concepts to problems of the environment and resource use. This specialization is a good option for those wishing to take positions as analysts with agencies that have environmental responsibility or face environmental regulations.

Farm business management and finance is intended for students with farm experience who are interested in farming, farm management, or farm finance careers, in such positions as agricultural lenders, extensions specialists, or consultants.

Food-industry management is designed for students interested in careers in the processing or sales positions with the processing, manufacturing, or distribution segments of the food industry. All of these areas of specialization can provide a strong foundation for graduate work. In planning a course schedule, students must work closely with their faculty adviser. Each area of specialization has its own set of required and recommended courses, yet all the areas have enough flexibility to satisfy the interests and abilities of individual students.
Biological Sciences

Biology is a popular subject at many universities for a variety of reasons: it is a science that is in an exciting phase of development; it prepares students for careers in challenging and appealing fields such as human and veterinary medicine, environmental sciences, and biotechnology; and it deals with the inherently interesting questions that arise when we try to understand ourselves and the living world around us. Many of the decisions we face today deal with the opportunities and problems that biology has put before us.

The major in biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Student services associated with the major, such as the Behrman Biology Center and the Office of Undergraduate Biology, are available to students from either college.

The biology major is designed to enable students to acquire the foundations in physical and life sciences necessary to understand modern biology and to pursue advanced studies in a specific area of biology. Programs of study include animal physiology, biochemistry, cell biology, ecology and evolutionary biology, general biology, genetics and development, microbiology, neurobiology and behavior, systems biology and biotechnology, and plant biology. A special program of study is available for qualified students with an interest in nutrition. Students interested in the marine sciences may consult the Cornell Marine Program Office, G14 Stimson Hall, 255-3717, for academic advice and career counseling.

For more details about the biology curriculum see the section in this catalog on Biological Sciences.

Biometry and Statistics

Biometry is the application of mathematical and statistical techniques to the life sciences. Statistics is concerned with quantitative aspects of scientific investigation: design, measurement, summarization of data, and drawing conclusions based on probability statements. Students with ability in mathematics and an interest in its applications will find this a rewarding and challenging major.

The work of a statistitian or biometrician can encompass research, teaching, consulting, and computing in almost any mix and in a wide variety of applications. Opportunities for employment are abundant in universities, government, and businesses ranging from large corporations to small consulting firms; salaries are usually excellent.

While satisfying course requirements for a major in biometry and statistics, students can also take a wide variety of courses in other disciplines. In fact, students are encouraged to take courses in applied disciplines such as agriculture, biology, economics, and the social sciences that involve numerical data and their interpretation.

Students majoring in this area are required to take a computer science course (e.g., Computer Science 100), mathematics courses (at least three semesters of calculus), and Biometry and Statistics 100, 101, 102, 261–302, 408–409, 417, and Operations Research and Industrial Engineering 270. Experience gained through summer employment or work as an undergraduate teaching assistant is highly recommended. Students should contact Steven J. Schwager for information.

Communication

The single most important thing for you to learn in college is how to assess and manage constantly changing information. No longer are skills and knowledge enough. The amount of information the public receives and is expected to understand is increasing exponentially. Communication is taking a more central role in science, technology, business, and public policy. Increasingly, government, industry, and special interest groups rely on communication specialists to aid in managing information—collecting, sorting, interpreting or reinterpreting, summarizing, and making information understandable and accessible to the general public; to interest groups, and to decision-makers in organizations. Effective information management requires a thorough understanding of the communication process.

When you graduate from our department, you will be better at the basic communication skills of speaking, writing, and listening. Equaly important, as a communication major you will also understand:

• communication processes, such as how communication influences attitudes, opinions, and behaviors
• how communication systems work in our society and in others
• how to apply your understanding of communication to solving problems in science, government, industry, health, and education.

The communication major is a program with a strong core (eight courses) of contemporary communication knowledge, theory, and practice. Required freshman courses are:

Fall semester:

Comm 120 Contemporary Mass Communication
Comm 121 Investigating Communication

Spring semester:

Comm 116 Communication in Social Relationships
Comm 117 Writing about Communication

This set of courses will provide you with a basic understanding of communication and the communication process. These courses also provide a unique opportunity to link practical applications (such as writing and critical analysis) with up-to-date research and knowledge about communication.

During the sophomore year, you will take:

Fall semester:

Comm 201 Oral Communication
Comm 230 Visual Communication

Spring semester:

Comm 253 Information Gathering and Presentation
Comm 282 Communication Industry Research

After completing the eight courses in the core curriculum, all majors take an additional six courses (18 credits) in communication. You can choose to concentrate your advanced study in one of four focus areas:

• Communication in the Life Sciences. (Studies of the impact of communication on environmental, health, science and agricultural issues, as well as public perceptions of risk.)
• Communication Planning and Evaluation. (Development of communication plans to solve problems for individuals or for organizations and evaluating the success of these plans.)
• Communication as a Social Science. (Study of communication research and methods with emphasis on communication as a social science discipline.)
• Communication Systems and Technology. (Principles of how we use communication technologies and how we are influenced by these technologies.)

Detailed information on the distribution of courses is available from the department.

In designing the communication major, the faculty of the department has kept in mind the need for students to understand contemporary research-based knowledge about communication as well as their need to be competent communicators in the workplace and within society at large. Both are critical to successful careers and enlightened citizenship in the twenty-first century.

Education

The focus of the Department of Education is on the improvement of teaching and learning within school and other settings, as well as on the role of education in society. Students study concepts and develop competencies necessary to analyze educational situations critically and to plan, implement, and evaluate educational programs. Study at the undergraduate level is structured around a core curriculum:

• An introductory course in current educational issues (Education 101) (3 credits)
• Course work in the social, philosophical, psychological, and social foundations of education (e.g., Education 271, 311, 317, 370, 378, 472, 477) (12 credits)
• Supervised field experience (e.g., Education 240 for non-majors and Education 420 for majors) (1–4 credits)
• A capstone course to integrate the students' undergraduate experience (Education 495) (2 credits)

Three specializations and three certification programs are available within the department.

Agricultural, extension, and adult education. Agricultural, extension, and adult education is a program that combines preparation in both the agricultural and social sciences. The program prepares students for teaching careers in agriculture, science, and technology in public schools, the Cooperative Extension service, and extension and adult programs of agricultural businesses, government agencies, and a variety of private and not-for-profit organizations. Students take a college program that includes a balance of courses in education as well as courses in a technical area of agriculture/biotechnology, community/economic development, natural resources, human ecology, or communication. Education courses prepare students to succeed as educators in a broad range of careers.

Courses are selected to develop professional
leadership and teaching competence. Students may elect to focus their study on one or more of these areas: agricultural education, extension, and rural and adult education. As an alternative, students may elect to major in one of the college's technical departments and develop a complementary program of study in one or more of the three areas of agricultural, extension, and adult education. Further information is available from the agricultural, extension, and adult education coordinator, Kennedy Hall (Tel: 607-255-7381).

**Educational psychology.** Studies in educational psychology have traditionally focused on teaching and learning in schools. Yet schools are only one location in which learning and teaching take place. An undergraduate emphasis in educational psychology at Cornell applies principles of teaching and learning to educational enterprises, broadly defined.

While graduate study is required for many careers in psychology, an advanced emphasis in educational psychology provides excellent preparation for graduate work or for many post-baccalaureate positions. Educational psychologists develop and/or supervise training programs in business, industry, the military, and government; design and evaluate curriculum and instructional materials for publishers; develop tests for educational and professional associations; evaluate social programs; work in human resource management; and conduct applied research for educational research organizations.

Students interested in concentrating their studies in educational psychology complete a total of 20–25 hours in educational psychology and related courses. Working with a faculty adviser, a student may design a program in one of a variety of applied areas: Instructional Systems Design and Development; Human Relations; Individual and Social Development; or the Educational Psychology of Human Development.

Students interested in careers in educational psychology should apply for admission to the Department of Education. For more information regarding a concentration in educational psychology, contact: Coordinator, Educational Psychology Program, Education Department, Kennedy Hall (Tel: 607-255-9258).

**General education.** The concentration in general education is appropriate for students seeking a solid foundation in the disciplines underlying the education professions. Students take courses in areas such as the art of teaching, philosophy of education, social foundations of education, curriculum and instruction, and related areas. Graduates of the concentration in general education may continue their studies in various areas of education or pursue careers in educational and human resource areas in business and industry, the human services, or government agencies. There are growing opportunities for employment of education graduates in the human resource management areas of agribusiness firms. Further information about the concentration is available from the undergraduate coordinator (Tel: 607-255-9255).

**Teacher Certification.** Students at Cornell may pursue secondary teaching credentials in the biological sciences, earth science, and general science. The New York State Board of Regents has approved significant changes in NYS teacher certification requirements, and all registered teacher education programs in New York will be applying for re-registration with the State. Currently, Cornell operates a registered program with the State, and the faculty is preparing its re-registration application.

**Agriculture.** Students completing the registered program as undergraduates in agriculture are eligible to teach agricultural subjects, introduction to occupations, occupational science or math, and introductory technology for grades 7 and 8. Passing scores on the National Teacher Examination (NTE) or New York State Teacher Certification Exam (NYSTCE) and one year of agricultural work experience are required for provisional certification, which is valid for five years. The master's degree required for permanent certification is offered through graduate study at Cornell. Students who complete the required course work may also be dual-certified to teach selected science subjects and work as a work experience coordinator through a rough draft of the State Education Department. For more information, contact the coordinator for teacher certification (Tel: 607-255-9255).

**Science and Mathematics.** Students completing the registered program in science and mathematics may pursue secondary teaching credentials in biology, chemistry, earth science, general science, mathematics, and physics. Students can begin the program as Cornell juniors or seniors by completing their undergraduate major in their subject matter and five courses in education. Students from all Cornell colleges may apply. In a year of graduate study, students take additional math and/or science courses and student teach. Students may begin their certification studies as graduate students and complete a Master of Arts in Teaching (M.A.T.) degree in three semesters. Students who choose to earn certification and do a research project can complete a Master of Science degree (M.S.) in a minimum of four semesters. Both the M.A.T. or the M.S. can be used to satisfy state requirements for permanent certification. Students who complete either graduate program option after passing the New York State Teacher Certification Exam (NYSTCE), are eligible for New York State Certification. For more information, contact the coordinator for teacher education 607-255-9255.

**Administrator Certification.** In the process of earning a Ph.D. in education, graduate students may also earn New York State certification as a school district administrator. This certificate is normally required of all candidates for a director-level position as a school administrator (e.g., superintendent, curriculum director, etc.). The certificate also makes its holder eligible for building-level positions as principal and vice principal. New York State Teacher Certification Exam (NYSTCE) are eligible for New York State Certification. For more information, contact the coordinator for teacher education 607-255-9255.

**Entomology.** The entomology curriculum provides students with a basic background in biological and environmental sciences, with a special emphasis on the study of insects. Majors may pursue graduate studies in entomology or related sciences upon completion of the B.S. degree. Alternatively, students may immediately begin careers in various aspects of basic or applied insect biology including integrated pest management, insect pathology, environmental assessment, medical or veterinary entomology, insect toxicology, apiculture, insect systematics, or insect ecology. Because of the diversity of career options, the major includes a common core of requirements allowing flexibility in electives selected by students in consultation with their advisers.

**Specific requirements.**

- **Basic Sciences:**
  - One year of college mathematics, including a course in calculus, may substitute statistics and biometry.
  - One semester of physics
  - Chemistry 206-208 or 207-208
  - Chemistry 257 (organic)

- **General Biology:**
  - Introductory Biology
  - Biological Sciences 281 (Genetics)
  - Biological Sciences 387 (Evolutionary Biology)

- **A choice of one:**
  - Biological Sciences 261 (Principles of Ecology) or Biological Sciences 350 or 351 (Principles of Biochemistry)

- **Entomology:**
  - Entomology 212 (Insect Biology)
  - A choice of two:
    - Entomology 322 (Insect Morphology)
    - Entomology 351 (Insect Systematics)
    - Entomology 483 (Insect Physiology)

- Students must also enroll in at least two additional entomology courses offered at the 300–400 level on more specialized topics.

**Food Science.**

- **The mission of the Food Science Program is to educate students for careers in food science and technology. Graduates are prepared for entry level positions in industry, government, and research organizations or for advanced study in food science and related disciplines. Food scientists qualify for satisfying careers which focus on ensuring availability of a safe, nutritious, affordable, and high quality food supply for people throughout New York State, the nation, and the world.**

- **Students choose one of five specialization options:**
  1. Basic Food Science
  2. Food Engineering
  3. Food Processing
  4. Food Industry Operations and Management
  5. Food Biotechnology

- **The first three options meet minimum curriculum standards set by**
the Institute of Food Technologists, the premier professional society for food scientists. Students choose an option based on individual interests and career goals.

The first two years of the program are focused on establishing a solid background in the physical and biological sciences, math, and communication. Required courses include chemistry (intro and organic), biology, microbiology, calculus, physics, freshman seminar, food science, and nutrition. The second two years emphasize the application of basic science and technology to the processing, storage, distribution, marketing, and final preparation of foods. Required courses include Food Engineering Principles, Unit Operations in Food Manufacturing, Food Safety Assurance, Food Chemistry, Sensory Evaluation of Foods, Food Microbiology, and Statistics. Students choose electives to satisfy college distribution requirements and individual interests.

Students are strongly encouraged to participate in research supervised by a faculty member and/or to work as an intern in a food company during summer breaks. Most faculty in the department have active research programs and welcome participation by undergraduate students. Students may receive academic credit or wages for faculty-directed undergraduate research. Many food companies recruit on campus for their summer internship programs. These internships are excellent opportunities for students to gain experience and establish contacts for future employment.

A state-of-the-art food processing and development laboratory, a full-scale dairy plant, and extensive laboratory facilities are available for training, research, and employment.

**Landscape Architecture**

Landscape Architecture focuses on the art of landscape design as an expression of cultural values combined with the natural processes of the ambient environment. The program's unique place within the university promotes interaction among the areas of horticulture, environmental science, architecture, and city and regional planning.

The course of study prepares students intellectually, technically, artistically, and ethically for the practice of landscape architecture. The curriculum focuses on graphic communication, basic and advanced design methods, landscape history and theory, plant materials, construction and engineering technology, and professional practice. Design studios deal with the integration of cultural and natural systems requirements as applied to specific sites at varying scales. Projects range from garden design, parks, housing, historic preservation, environmental rehabilitation and urban design.

Landscape Architecture offers two professional degree alternatives: a four-year bachelor of science degree administered through the College of Agriculture and Life Sciences, a three-year Master of Landscape Architecture degree administered through the Graduate School for those who have a four-year undergraduate degree in another field. Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects. The major in each degree is composed of several parts: core courses related to professional education in landscape architecture, a concentration in a subject related to the core courses, and free electives.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program administered through the Graduate School. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site/landscape and art, or urban design.

In addition, an undergraduate concentration in the American Cultural Landscape is available for nonmajors.

**Dual Degree Options**

Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

**Study Abroad**

The faculty encourages study abroad and has two formally structured programs. The Denmark International Study (DIS) program is available primarily to senior undergraduates and third-year graduates in the fall semester and is administered through Cornell Abroad. The Rome Program is made available to undergraduates and graduate students through the College of Architecture, Art, and Planning.

**Bachelor of Science Landscape Architecture Degree Sequence:** (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)

**First Year**

**Fall Term**

*LA 141, Grounding in Landscape Architecture* 4
*Biological sciences elective* 3
*Physical sciences elective* 3
*Social sciences or humanities elective* 3
*Written or oral expression elective* 3

**Spring Term**

*LA 142, Grounding in Landscape Architecture* 4
*Biological sciences elective* 3
*Social sciences or humanities elective* 3
*Written or oral expression elective* 3

**Second Year**

**Fall Term**

*LA 491, Design and Plant Establishment in the Urban Environment* 3
*LA 201, Medium of the Landscape* 5
*Biological Sciences elective* 3

*Social Sciences or Humanities elective* 3
*HORT 335, Woody Plant Materials for Landscape Use* 3

**Spring Term**

*LA 202, Medium of the Landscape* 5
*LA 315, Site Engineering I (1st 7 weeks)* 2
*Historical studies* 3
*Written or oral expression elective* 3
*Physical sciences elective* 3

**Third Year**

**Fall Term**

*LA 301, Integrating Theory and Practice* 5
*LA 316, Site Engineering II (2nd 7 weeks)* 2
*LA 317, Site Construction I (1st 7 weeks)* 2
*Historical studies* 3
*Free electives* 3

**Spring Term**

*LA 302, Integrating Theory and Practice* 5
**Concentration* 6
*Free elective* 3
*LA 318, Site Construction II (2nd 7 weeks)* 2

**Fourth Year**

**Fall Term**

**Concentration** 6
*Social sciences or humanities elective* 3
*Free elective* 3

(Optional landscape architecture study abroad semester in Denmark or Rome)

**Spring Term**

*LA 402, Urban Design in Virtual Space* 5
**Concentration** 3
*LA 412, Professional Practice* 1
*Free elective* 3

*Summary of credit requirements*

*Specialization requirements* 54
*Distribution electives* 39
*Free electives* 12
**Concentration** 15

**Master of Landscape Architecture (M.L.A.)**

**License Qualifying Degree**

Requirements of the three-year M.L.A. curriculum include 90 credits, 6 resident units of satisfactory completion of the core curriculum courses, and a thesis or a capstone studio. (Please note that each semester the studio classes require a supply and field trip fee and all landscape architecture majors are required to pay an annual technology fee.)
First Year

Fall Term

*LA 505, Graphic Communication I 3

Free electives 3

*LA 501, Composition and Theory 5

*HORT 335, Woody Plant Materials for Landscape Use 3

*LA 491, Design and Plant Establishment in the Urban Environment 3 17

Spring Term

*LA 502, Composition and Theory 5

*Historical Studies 3

**Concentration 3

*LA 615, Site Engineering I (1st 7 weeks) 2

*LA 590, Theory Seminar 3 16

Second Year

Fall Term

*LA 601, Integrating Theory and Practice 5

*LA 616, Site Engineering II (2nd 7 weeks) 2

*LA 617, Site Construction I (1st 7 weeks) 2

*Historical Studies 3

**Concentration 3 15

Spring Term

*LA 602, Integrating Theory and Practice 5

*LA 618, Site Construction II (2nd 7 weeks) 2

*Historical Studies 3

**Concentration 6 16

Third Year

Fall Term

Free electives 3

*LA 701, Urban Design and Planning 5

Free elective 3

**Concentration 3 3

Spring Term

*LA 800, Master's Thesis in Landscape Architecture 5

or *LA 702, Advanced Design Studio 5

*LA 412, Professional Practice 1

Free elective(s) 6 12 or 16

Summary of credit requirements

Specialization requirements 60 or 64

**Concentration 15

Free electives 15 or 11 90

Master of Landscape Architecture Advanced Degree Program. The two-year Master of Landscape Architecture (M.L.A./A.D.) program serves to broaden and enrich undergraduate education in design by providing an expanded educational experience to those who are technically skilled. Applicants are therefore expected to hold a Bachelor's Degree in Landscape Architecture or Architecture from an accredited program.

The objective of the two-year (M.L.A./A.D.) program is to develop specializations for individuals who may wish to teach, practice, or conduct applied research in landscape architecture. Students are permitted some flexibility in establishing programs that take full advantage of the teaching and research resources of the university.

Students admitted to the two-year M.L.A./A.D. program are required to complete 60 credits of course work as approved by the members of their graduate committee. For landscape architects, this must include at least two advanced studios, a graduate seminar, a concentration, and a thesis. For architects the curriculum requires three advanced studios, two courses in plants and planting design, two courses in the history of landscape history, two courses in engineering, a seminar in design theory, a course in professional practice, a concentration, and electives.

Undergraduate Concentration for Non-Majors

Students outside the professional program may choose the undergraduate concentration in the American Cultural Landscape to complement their major. The courses center on the landscape as an object, something to be studied for its own sake, and as a subject, as a means to understand society and its relationship to natural systems and diverse cultures. The cultural landscape includes its visible elements as well as perceptions and cultural ideas and values. The concentration consists of four courses, two required and two electives. Students may petition to substitute one course in the electives list. Direct inquiries to professors H. Gottfried or S. Baugher.

Required.

Visual Studies (choose one):

Arch 11 Introduction to Architectural Design (4 cr)
Art 121 Introduction to Painting (3 cr)
Art 141 Introduction to Sculpture (3 cr)
Art 151 Introduction to Drawing (3 cr)
Art 158 Conceptual Drawing (3 cr)
Art 159 Life and Still-Life (3 cr)
Art 161 Photography (1 cr)
DEA 101 Design I: Fundamentals (3 cr)
DEA 114 Drawing (3 cr)
LA 141 Grounding in Landscape Architecture (3 cr)

The Landscape

+LA 282 The American Landscape (3 cr)

Electives (choose two):

Arch 390 American Architecture and Building I (5 cr)
Arch 391 American Architecture and Building II (3 cr)
LA 261 Urban Archaeology (3 cr)
LA 262 Laboratory in Landscape Archaeology

+LA 360 Pre-Industrial Cities and Towns of North America (3 cr) offered alternate years [1999-2000]
LA 365 American Indians, Planners, and Public Policy (3 cr)
LANAR 525 History of American Landscape Architecture (3 cr)
LA 569 Archeology in Preservation Planning and Design (3 cr) offered alternative years

+Distribution Elective

Natural Resources

The undergraduate curriculum provides students with an integrated, broadly-based approach to understanding the relationships of organisms to their environment, and the ways in which humans affect these relationships. Natural resources are construed in the broad sense to include both the more traditional topics of renewable natural resources (e.g., wildlife, fisheries, forests) and the Earth's ecosystems of which these and other natural resources are a part. Students are encouraged to understand the scientific, ethical, and societal basis for protection and management of natural resources and environments through the application of ecological principles and knowledge of societal needs.

Required Core Curriculum

Students who desire to graduate with a specialization in Natural Resources are expected to complete, as a minimum, the courses specified in the following two-part Core Curriculum. First is a broad group of courses taken primarily outside the department, which, as their presentation suggests (Groups A-D), also fulfill this college's course distribution requirements described on page 30.

Group A—Physical Sciences

Mathematics—2 courses 6-8
Chemistry—2 courses 7-8

Group B—Biological Sciences

Introductory biology (BIOG 101-104 or 105-106)—8 cr. hours 8
General ecology—1 course 4

Group C—Social Sciences

3 credits in addition to 3 credits in economics 6

Humanities

6 credits in addition to a course in "normative" ethics (NTRES 407, 411, B&SOC 206, or PHIL 241, 246, or 247) 9

Group D—Written and Oral Expression

Freshman Writing Seminars—2 courses 6
Oral communications—1 course 3

Courses outside the Distribution Groups

Statistics—1 course 3
Computer applications or programming—1 course 3

The Core Curriculum's second portion is composed entirely of courses offered by the Department of Natural Resources; a minimum of 19 hours in department courses is required.
Nutrition, Food, and Agriculture

Nutritional sciences draws upon chemistry, biology, and the social sciences to understand complex relationships among human health and well-being, food and lifestyle patterns, food and agricultural systems, and social and institutional environments.

The program in nutrition, food, and agriculture provides students with strong training in human nutrition in the context of an understanding and appreciation of the agricultural and life sciences. The program responds to the growing and important interrelationships of human nutrition and the agricultural and life sciences. Growing public interest in health and nutrition has placed new demands upon food processors, producers, and retailers. The problems of hunger and malnutrition in the United States and abroad require that nutritionists work together with specialists in areas such as agricultural economics, food production, and rural sociology. Advances in biotechnology provide researchers with new ways to understand human nutritional requirements and the regulation of human metabolism.

Nutrition, food, and agriculture majors complete a core set of requirements and choose elective courses in the areas of their particular interests. The core curriculum includes introductory chemistry and biology, organic chemistry, biochemistry, physiology, and mathematics. Students complete five courses in nutritional sciences: NS 115 Nutrition and Health: Concepts and Controversies, NS 245 Social Science Perspectives on Food and Nutrition, NS 345 Nutritional and Physicochemical Aspects of Foods, NS 331 Physiological and Biochemical Bases of Nutrition, and NS 352 Methods in Nutritional Sciences. In addition, students select a minimum of 15 credit hours from electives in nutritional sciences as well as elective courses in the broad areas of food production and processing, food and agricultural policy, the life sciences, environment and natural resources, communication, and education.

Valois have faculty advisers in the Division of Nutritional Sciences with whom they meet regularly. Advisers help students plan course schedules and help find opportunities for special study or experiences outside the classroom.

Many students engage in laboratory or field research with a faculty member for academic credit. The honors program is designed for academically talented students who are interested in research. Honors students conduct independent research projects under the guidance of a faculty member and prepare an honors thesis. Many students participate in field experiences for credit during the academic year or summer. Placements in laboratories, industries, or community agencies are possible.

The major in nutrition, food, and agriculture can lead to many different career paths. By supplementing the core requirements with courses in different areas, students can prepare for jobs in industry, government, or community agencies in the United States or abroad. The major is excellent preparation for graduate study in a variety of fields.

The Division of Nutritional Sciences is affiliated with both the College of Agriculture and Life Sciences and the College of Human Ecology. Most of the Division faculty members work in Savage-Kinzeland Hall and Martha Van Rensselaer Hall. In addition to housing offices, classrooms, and seminar rooms, these buildings contain research facilities, specialized laboratories, a human metabolic research unit, and computer facilities. The nutritional sciences Learning Resource Center in Martha Van Rensselaer Hall is used by students for study and small group discussion. The center contains class materials, computers, audiovisual aids and supplementary books and periodicals for independent study and special projects.

For additional information about the nutrition, food, and agriculture program, contact the Division of Nutritional Sciences Academic Affairs Office, 335 MVR, 607–255–2628.

Plant Sciences

Plant sciences students can specialize in plant biology, plant genetics and breeding, plant pathology, plant protection, or horticultural sciences, including floriculture and ornamental horticulture. Fruit science, or vegetable science. Students with well-defined interests upon arrival at Cornell can specialize in one of these programs in their freshman year. Others may prefer to start in the general plant sciences curriculum and specialize after exploring the program offerings.

Plant sciences is a multidisciplinary program, sponsored by the Department of Plant Breeding in Emerson Hall, and the Department of Floriculture and Ornamental Horticulture, Fruit and Vegetable Science, Plant Pathology, and the Section of Plant Biology, all located in the Plant Science Building.

General plant science is intended for students whose interest in studying plants has not yet centered on any one of the specializations within the area. Students may continue with this option throughout their undergraduate years, particularly if they are likely to be interested in and qualified for advanced studies beyond the bachelor’s degree.

Students who plan to seek employment upon graduation may prefer to specialize. There are, however, excellent opportunities for general plant science graduates at the bachelor's degree level in the service and supply industries, as Cooperative Extension educators, as teachers, and as research technicians.

More than one hundred courses are offered in plant science. Other courses relating to plant science are offered in other departments. In addition, an interest in plant science may be combined with another specialization, such as agricultural and biological engineering, education, statistics, international agriculture, food science, or agricultural, resource, and business management.

Undergraduates are encouraged to obtain practical experience, which may involve internship and/or research under the direction of a faculty member or work in a commercial industry, research institute, botanical garden or arboretum, nursery, greenhouse, or farm operation. Departments will assist students in finding positions that will provide useful experience.

Floriculture and ornamental horticulture applies principles of plant science, business management, and many other disciplines to the production and marketing of greenhouse, nursery, and turfgrass crops, as well as to the selection and management of plants in both indoor and outdoor landscapes. Programs prepare students for careers at the professional and managerial levels in horticultural business, landscape management, botanical gardens and arboretum, research, teaching, communications, and extension and public education.

The core curriculum consists of the following courses:

- BIO G 109 and 110, Biological Principles or an equivalent course
- CEM 206 or 207 and 208 or an equivalent course
- HORT 100, Introduction to Floriculture and Ornamental Horticulture
- HORT 102, General Horticulture
- HORT 230, Woody Plant Materials
- HORT 243, (BIO PL 243), Taxonomy of Cultivated Plants
- HORT 300 Herbaceous Plant Materials
- HORT 400, Principles of Plant Propagation
- BIOPL 241, Plant Biology (Introductory Botany)
- BIOPL 242, Plant Physiology (lecture)
- BIOPL 244, Plant Physiology (laboratory)
- SCAS 260, Introduction to Soil Science
- ENTOM 241, Applied Entomology
Although mastery of these subject areas is considered essential for students planning to enter a production or landscape horticulture career, justifiable exceptions to the core curriculum may be granted by the student's adviser. With permission of the adviser, a transfer student may receive core curriculum credit for similar courses. Institutions of other institutions provided that transfer credit is granted by the College of Agriculture and Life Sciences. In addition, all transfer students must complete a minimum of 12 credits in floriculture and ornamental horticulture at Cornell. No more than two of the following landscape architecture courses may be included in this 12-credit requirement: LA 141, 142, 282, 315, 316, 317, 318, 410, 480. No other landscape architecture or greenhouse drawing courses may be applied to the requirement because they do not contain horticultural subject matter.

Students may select an area of emphasis in either production or landscape horticulture, or they may study generally across the specialization. Concentration in production prepares students for careers in greenhouse and nurseries management, whereas the required courses in plant science, agroforestry, arboriculture, and related areas. Some students choose to pursue the required coursework and electives in both areas. Similarly, programs in horticulture and turfgrass science may be arranged or small-group study, optional internships, and job opportunities for graduates can be found with a regulatory agency.

Students are also encouraged to take courses related to plant physiology, plant pathology, plant breeding, and ornamental horticulture courses at Cornell. Some students choose to pursue a general program in production and landscape horticulture including courses in both areas. Similarly, programs in horticulture and turfgrass science may be arranged across two specialization areas. Students wishing to prepare for graduate study may develop a program in basic sciences and their application in horticultural science. Lists of recommended areas of specialization are available from student advisers and from the undergraduate program coordinator.

Working with a faculty adviser, each student will tailor a program to achieve individual educational objectives in production horticulture, landscape horticulture, horticultural business management, or general horticultural science. A core of management courses also recommended for students planning horticultural business careers. Students are encouraged to take courses in these areas: agricultural and biological engineering, soil science, computer science, ecology, entomology, geology, plant breeding, plant pathology, plant physiology, oral and written expression, plant taxonomy, and weed science. Use of electives to pursue study in the humanities and in other areas of special interest to the student is encouraged.

Numerous opportunities to become familiar with the horticulture industries and positions provided through field trips, guest lectures, undergraduate seminars, independent or small-group study, optional internships, and work-experience programs. Questions concerning the undergraduate curriculum, advising, and related matters should be addressed to Associate Professor Kenneth W. Mudge, Undergraduate Program Coordinator, Department of Plant and Environmental Sciences, 20 Plant Science Building, Ithaca, New York 14853-5908. (the science of fruit growing)

The following subjects are considered essential to the student's interest in the management of plant protection. In addition, a number of other subjects are recommended, depending upon the student's interests: agricultural economics, agricultural and biological engineering, soil, crop, and atmospheric sciences; biochemistry; communication; ecology; entomology; general education; general science; genetics; meteorology; mycology; pesticides in the environment; and plant anatomy. Employment involving practical experience in plant protection may be on a farm, at an experimental station, with an agricultural company, or with a regulatory agency.

Pomology (the science of fruit growing) provides students with knowledge of the scientific technology and the influence of environmental factors on the production, handling, and storage of deciduous fruit crops. New York is a national leader in fruit production. Courses are selected by students in consultation with a faculty adviser. Flexibility in programs makes it possible to establish a course of study to fit the desired goals of individual students. The diverse pomology curriculum, complemented by courses in basic sciences and arts and electives in a student's area of interest, prepares pomology majors for a career in fruit production, as well as business related to the fruit industry, storage and merchandising, or professional pomology. Job opportunities for graduates can be found in fruit production, marketing, sales and service, research, teaching, and extension.

Vegetable crops is offered for students with an interest in either the production or the use of vegetable production. The high value of vegetables and their importance in the human diet assures a continued demand for trained personnel in all aspects of vegetable technology. A flexible curriculum is provided to prepare undergraduates for careers in a diversity of fields, including: horticultural and introductory plant pathology. Additional plant pathology courses and other relevant courses from other fields are selected according to the prior training of the student. Options include: entomology; plant breeding; pomology; vegetable crops; floriculture and ornamental horticulture; and soil, crop, and atmospheric sciences.

Plant protection is offered for students who are interested in the management of plant pests. It includes an introduction to pests, plant protection, this specialization can also provide an adequate background for graduate work in entomology, plant pathology, or weed science.

a concentration in basic sciences supplemented by electives in applied areas that seem appropriate. Options include molecular biology, plant physiology, plant biology, genetics, cytology, organic chemistry, biochemistry, anatomy, taxonomy, ecology and evolution; courses in genetics, genetics, and cytogenetics; and statistics; organic chemistry and biochemistry; plant anatomy, ecology, taxonomy, and physiology; crop production, plant pathology; entomology and molecular biology and biotechnology.

Students are encouraged to gain hands-on experience in plant genetics and breeding by conducting independent research under direction of a faculty adviser and/or by working for a faculty member on his/her research. Field, greenhouse, and laboratory facilities are available.

Plant pathology is the study of the causes of plant diseases, the mechanisms of the interactions of disease-causing agents and plants, and the methods of preventing or controlling plant diseases. For most students, a concentration in plant pathology as an undergraduate is preparation for graduate study in plant pathology or another field of interest. For students who wish to pursue a career in research, teaching, or extension with a faculty adviser. Flexibility in planning horticultural business careers.

Working with a faculty adviser, each student plans a curriculum with a concentration in plant pathology or another field of study in plant pathology or another field of interest. For students who wish to pursue a career in research, teaching, or extension with a faculty adviser. Flexibility in planning horticultural business careers.
The vegetable industry is an economically important component of agriculture in New York and in the United States. Recently, there has been increased interest in growing vegetables in tropical countries. Exciting challenges are facing the industry. Greater awareness of environmental and health issues is driving farming practices to depend less upon agricultural chemicals. New technologies are being developed and implemented to help growers manage disease while remaining profitable. Among these technologies are: integrated pest management, genetic engineering, breeding for insect and disease resistance, low-input and organic cropping systems, and others that improve production efficiency and conserve agricultural resources.

The Department of Fruit and Vegetable Science has on-campus greenhouses and laboratories as well as two research farms in the Ithaca area that support our teaching program. Students are encouraged to gain hands-on experience growing vegetables and to pursue their individual interests through course work and by taking advantage of the many resources available in the College of Agriculture and Life Sciences.

Rural Sociology

Technological, economic, demographic, and environmental changes are social processes, and each has major impacts on individuals, social groups, societies, and the international order. At Cornell, students study these and other facets of social change in both domestic and international settings. Among the topic areas in which faculty members in the Department of Rural Sociology specialize are international agricultural and rural development, community and regional development and changes in the United States, environmental sociology, aging and the life course, sociology of agriculture, rural industrialization and labor markets, technology and social change, population and development, political economy, women in development, race and ethnic relations, and research methodology. Most courses provide background in both domestic and international aspects of the subject matter. Normally, students will develop a specialization with either a domestic or international emphasis by choosing appropriate elective courses. All students are required to take five core courses, an introductory course (R SOC 101), methods (R SOC 213), theory (R SOC 301), social stratification (R SOC 370), and a course in statistics. Four elective Rural Sociology courses are also required of all majors.

The focus area in development sociology provides an understanding of the processes and policies that influence social and economic development in rural settings in North America and low-income countries in the developing world. Courses provide background in the sociology of development in both the advanced and developing countries. Students normally select a set of elective courses in which either domestic or international development is emphasized. These courses provide background in several aspects of development, including: an understanding of the processes of socioeconomic development in low-income or Third World countries and training in the formulation of strategies to enhance the socioeconomic well-being of citizens of those countries, and analysis of the social structures and processes for development in nonmetropolitan settings in the United States, and policy sciences.

Courses in the population, environment, and society focus area provide an understanding of the major components of population change—fertility, mortality, and migration; the interaction of population and environment; and the relationships between social structure and the biophysical environment; the relationships between population change and natural resource utilization in development, and impacts of public policy interventions on population size, growth and composition or on natural resource availability and environmental quality. Students normally select the elective courses for the focus area in order to stress either population studies or sociological aspects of natural resources and the environment.

Students are encouraged to complement courses in the department with course work in demographic methods, household analysis, ecology and evolution, environmental studies, natural resources, and policy sciences.

Courses in the social data and policy analysis focus area provide (1) knowledge of research methodology, statistics, and computer applications, (2) an understanding of social, economic, political, and historical concepts essential for conducting meaningful analyses of practical problems and issues faced by organizations, communities, regions, and states, and (3) knowledge and practice in policy analysis. Students ordinarily select electives in order to specialize in either policy analysis or in a particular area of public policy (international development policy, domestic rural development policy, environmental policy, or population policy, etc.).

Students are encouraged to complement courses in the department with course work in data collection and research design, evaluation research, computing, and advanced statistics.

Soil, Crop, and Atmospheric Sciences

The Department of Soil, Crop, and Atmospheric Sciences provides instruction in five specializations: atmospheric sciences, crop science, agronomy, crop science, science of earth systems, and soil science. Employment opportunities are increased with practical experience, and the faculty of the department and the Career Development office of the college are glad to help students search for relevant summer jobs and internship opportunities. Professional certification can also be obtained in some of these specializations.

Atmospheric science is the study of the atmosphere and the processes that shape our weather. The core curriculum in meteorology is designed to provide students with an understanding of the fundamental physical and dynamic properties and processes of the atmosphere.
atmosphere. All students are required to complete a minimum of five semesters of calculus, two semesters of physics, a semester each of chemistry, computer science, and statistics; and a sequence of eight courses covering observational, general, theoretical, and synoptic meteorology. Additional courses are available for students interested in specialized areas of meteorology. The curriculum satisfies the basic requirements for employment as a professional meteorologist and provides a sound background for graduate study or work in the numerous specialized areas of meteorological science. Students are encouraged to choose additional course work in related or complementary areas of interest, such as agriculture, biology, computer science, mathematics, statistics, physics, chemistry, or engineering.

Agronomy combines the study of crop production and soil management. It provides students with a broad array of career opportunities after completion of the B.S. degree, including agricultural business, extension service work, and farming. Graduate school is also possible after a well-planned undergraduate program. Students should take at least 12 credits of crops and 12 credits of soils and design the remainder of their curriculum to meet specific interests and goals. Some students pursue a major in agronomy with a concentration in international agriculture.

Crop science is the application of basic biological and ecological science to the improvement and management of the world's main field crops used for human food and livestock feed. Courses required include 18 credits of crops, 12 credits of plant biology, and 6 credits of soils. Students who anticipate a career in agricultural production or service after completion of the B.S. degree should take additional courses in economics, communication, plant pathology, entomology, and nutrition. Students planning graduate or professional study beyond the bachelor's degree should take advanced course work in organic chemistry and biochemistry, calculus, physics, and statistics.

Science of Earth Systems integrates atmospheric and soil science as well as other earth studies to develop a scientific basis for managing the basic resources of the planet. This is an interdisciplinary program described in detail elsewhere (see index).

Soil science is a basic discipline important in ecology, engineering, agriculture, and conservation. The curriculum in soil science combines physical and biological training to address critical issues in environmental and agricultural management related to soils. Students take 18 credits in soil science, including 4 credits in the introductory course. In addition, chemistry, mathematics, physics, and microbiology are required, as well as 6 credits of crop science to satisfy the major.

Special Programs in Agriculture and Life Sciences

General Studies. The opportunity to develop an independent major in General Studies is available for students interested in pursuing a general education in Agriculture and Life Sciences. In consultation with a faculty adviser, students may plan a sequence of courses suited to their individual interests, abilities, and objectives in an area not encompassed by the existing programs. In addition to the distribution and other college requirements, this major may include a concentration of courses in one of several academic units of the college or university. Students completing this major are often planning a career in agriculturally related food and service occupations. This growing occupation requires the broad perspective, the scientific and technical skills, the attitudes and the analytical ability that a general education fosters.

General Studies includes production agriculture as well as technical work in the agricultural and life sciences. Many biotechnology concerns deal with aspects of agriculture, especially plants, crops, and ecosystems in the natural environment. A strong grounding in biological sciences as well as knowledge of the agricultural sciences is essential in this rapidly growing field. Students should plan basic course work in the major areas of study in the college—animal sciences, plant sciences, environment and technology, agronomic sciences, biological sciences and social sciences. Advanced courses may be selected in these and other areas of individual interest or career aspiration. A course of study for a special program must be planned with and approved by a college faculty adviser. Information and names of faculty advisers prepared to advise in special programs are available in the Counseling and Advising Office, 140 Roberts Hall.

International Agriculture provides students with an understanding of the special problems of applying basic knowledge to the processes of agricultural development in low-income countries. The student typically specializes in a particular subject and works with an adviser to plan a program oriented toward international agriculture. The courses in International Agriculture are designed to acquaint students with the socioeconomic factors in agricultural development, with the physical and biological nature of tropical crops and animals, and the various world food production systems that exist. Study of a foreign language is required. In addition to the college distribution requirements, students in International Agriculture must take a minimum of 30 credits toward the major. A minimum of 7 credits in International Agriculture and 8 credits in a modern foreign language are required. The other courses recommended are drawn from a wide range of disciplines. The objective is to familiarize students with the many facets of agricultural development in low-income countries. Students are encouraged to take additional specialized courses in one of the other program areas of the college.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways:

Dean's List. Each semester, students are recognized for academic excellence by inclusion in the Dean's List. Eligibility for the Dean's List in the College of Agriculture and Life Sciences is determined by the following criteria:

1) a minimum course load for the semester of 12 letter-graded credits;
2) achievement of a semester GPA of at least 3.50; and
3) achievement of an 'S' grade, or a 'C-' or better grade in each course (including physical education), with no Incompletes. Dean's List will be granted retroactively if students meet all the requirements after successful course completion to make up INC grades.

Bachelor of Science with Honors. Students receiving a cumulative GPA of 4.0 or greater (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "summa cum laude." Students receiving a cumulative GPA of greater than or equal to 3.75 and less than 4.0 (based on the last four full-time semesters of Cornell credits in residence, with a minimum of 48 letter graded credits) will graduate "magna cum laude."

Bachelor of Science with Distinction in Research. Students will graduate with a bachelor of science degree with distinction in research when, in addition to having completed all the graduation requirements, they have satisfactorily completed the honors research program in their area of interest and have been recommended for the degree by the honors committee of that area. Special requirements are given in the section on the Honors Research Program.

Ho-Nun-De-Kah, founded in 1929, is the undergraduate honor society of the College of Agriculture and Life Sciences. Members are recruited from the top 20 percent of the senior class and top 10 percent of the junior class. In keeping with the ideals of encouraging scholarship, leadership, and citizenship, members provide free tutoring and a variety of service activities to both the college and the community.

Gamma Sigma Delta is an honor society of faculty and students in the Colleges of Agriculture and Life Sciences, Human Ecology, and Veterinary Medicine. The common bond is promotion of excellence in work related to the quality of our environment and life as it relates to agriculture and the related sciences. The Cornell chapter recognizes the academic achievements of students, faculty, and alumni of those colleges with nominations for membership and with special awards. To be eligible, seniors must be in the upper 15 percent of their major. Five juniors with the highest grade point average in the college are also nominated. Gamma Sigma Delta also promotes academic excellence through sponsorship of special programs in the three colleges.

Phi Kappa Phi is an honor society that recognizes outstanding scholarship in all academic disciplines. Members are nominated from among juniors, seniors, graduate students, and faculty who must be in the top 10 percent of their class, and juniors in the top 5 percent of their class to be eligible.
DESCRIPTION OF COURSES

Undergraduate and graduate courses in the college are offered through the sixteen academic departments and units and also through the Biological Sciences undergraduate program and the Division of Nutritional Sciences.

Descriptions of undergraduate and graduate courses are arranged by department, in alphabetical order.

Graduate study is organized under graduate fields, which generally coincide with the departments. Graduate degree requirements are described in the Announcement of the Graduate School. Courses for graduate students are described in the section on the academic department that offers them.

INTERDEPARTMENTAL/INTERCOLLEGE COURSES

American Indian Studies

American Indian Studies is the instructional component of the American Indian Program. It is a multidisciplinary program offering course work that enhances students' understanding of the unique heritage of North American Indians and their relationship to other peoples in the United States and Canada. Students are challenged by such topics as the sovereign rights of Indian Nations and the contemporary relevance of Indian attitudes toward the environment. The program's instructional core consists of courses focusing on American Indian life from pre-contact times to the present, and from the perspectives of Native people as much as possible. Core courses are supplemented by a variety of offerings in several different departments.

The American Indian Program offers a concentration in American Indian Studies to undergraduate students in conjunction with their major defined elsewhere in the university. The concentration will be earned upon completion of five courses: American Indian Studies 100 (enroll for Rural Sociology 100) and American Indian Studies 175 (enroll for Rural Sociology 175), plus three other courses selected from the American Indian Studies course listing, for a total of at least 15 credits. Students choosing a concentration in American Indian Studies should obtain application materials from the AIP office in 300 Caldwell. AIP also offers a graduate minor.

Students interested in choosing the minor should contact Daniel Usner, History Department, 255-6753.

J. Mt. Pleasant, Director; D. J. Barr, S. Baugher, A. Lees, W 7:30-9:30 p.m.; sec, various times.

AIS 100 Indian America to 1890 (enroll for Rural Sociology 100)
Fall. 3 credits. S-U optional. Enrollment limited to 550. W 7:30-10 p.m.
R. W. Venables.

Science of Earth Systems

During the past several decades, with the increasing concern about air and water pollution, nuclear waste disposal, the ozone hole, and global climate change, the scientific community has gained considerable insight into how the biosphere, hydrosphere, atmosphere, and lithosphere systems interact. It has become evident that we cannot understand and solve environmental problems by studying these systems individually. The interconnectedness of these systems is a fundamental attribute of the Earth System, and understanding their various interactions is crucial to understanding our environment.

A new major in the Science of Earth Systems (SES) is now available for students in the College of Agriculture and Life Sciences. As described in the "Interdisciplinary Centers, Programs, and Studies" section at the front of this catalog, SES is an intercollege major which is also accessible to students in the Colleges of Engineering and Arts and Sciences.

The SES curriculum emphasizes strong preparation in mathematics, physics, chemistry, and biology, and an introduction to the breadth of the major during the freshman and sophomore years. In the junior and senior years, students take a set of common SES core courses (SES 301, 302, 321, 402) and an additional set of advanced disciplinary or interdisciplinary courses that build on the basic sequences.

The SES program provides strong preparation for graduate school in any one of the Earth Systems Sciences and related engineering fields, in addition to preparing students for a wide variety of careers in environmental work with the B.S. degree. The SES major also provides a sound background for students who are interested in entering fields such as environmental law and policy with a strong scientific understanding of the environment.

For complete information about the SES major, see the Web site at http://www.geo.cornell.edu/SES/SES_home.html

For more information, contact a SES adviser to explore the possibility of entering the SES major in the College of Agriculture and Life Sciences: K. H. Cook (SCAS), T. E. Dawson (Ecology and Systematics), L. O. Hedin (Biological Sciences), J. -Y. Parange (ABEN), S. J. Riha (SCAS), J. Yavitt (NTRES).
Science of Earth Systems Courses

SES 301 Climate Dynamics (enroll for ASTRO 331 or SCAS 331)
SES 302 Evolution of the Earth System (enroll for GEOL 302 or SCAS 332)
SES 321 Biogeochemistry (enroll for GEOL 321 or NTRES 321)
SES 402 Mechanics of the Earth and Environmental Sciences (enroll for ABEN 385)

Department of Statistical Science

The university-wide Department of Statistical Science coordinates undergraduate and graduate study in statistics and probability. A list of suitable courses can be found in the "Interdisciplinary Centers, Studies, and Programs" section at the front of this catalog (see p. 22).

NONDEPARTMENTAL COURSES

ALS 101 Transition and Success in Cornell
Fall. 1 credit. Prerequisites: must be an entering student in CALS. Letter grade only. B. O. Earle (assisted by W. N. Alberta).

Discussion-oriented course to enable all new CALS students to enjoy their experience at and transition to Cornell. Lecture, discussion, guest speakers, and assignments that explore Cornell's history, services, and organizations will be used. Emphasis on role of Agriculture and Life Sciences in future of all related careers.

ALS 134 Emergency Medical Technician
Fall and spring. 3 credits. S-U grades optional. Prerequisite: none—but basic and advanced first aid recommended. M. W. 2:00-5:30; lab, W 2:00-5:30. G. J. Conneman and A. E. Gantert.

E.M.T. is an intensive 140-hour course taught throughout the fall and spring semesters. Course includes training in C.F.R. for the professional rescuer, oxygen administration, airway management, fracture management, bleeding control, patient assessment, spinal immobilization, medical antishock shovers, and debrillation. Students will qualify for the New York State E.M.T. Certification Exam upon successful completion of the course. Classes will be conducted in the Class of ’44 classroom-fieldhouse.

ALS 400 Internship
Fall, spring, or summer. 6 credits maximum. Not open to students who have earned internship credits elsewhere or in previous terms. S-U grades only. Students may register only for internships in the New York State Assembly Intern Program, the New York State Senate Session Assistant's Program, and the Albany Semester Program. A learning contract is negotiated between the student and the faculty supervisor(s), stating conditions of the work assignment, supervision, and reporting. Participation is required in any structured learning activities associated with the internship.

ALS 500 Politics and Policy: Theory, Research, and Practice (also HSS 404 and GOVT 500)
Students in the College of Agriculture and Life Sciences must register for ALS 500. S. Jackson and staff.

This course, taught in Washington, D.C., forms the core of the public policy option of the Cornell-in-Washington Program. The central course objective is to provide students with the instruction and guidance necessary to analyze and evaluate their own chosen issue in public policy. Toward that end, the course has three components: (1) weekly lectures providing background on the structures and processes of national politics and policy as well as training in research methodology, (2) student externships; and (3) individual research projects. All three components interrelate to provide students with a strategy and framework for integrating classroom-based learning, field experience, and individual research. Applications are made through the Cornell-in-Washington office, 471 Hollister Hall.

ALS 661 Environmental Policy (also Biology and Society 461 and BIOES 661)
Fall and spring. 3 credits each term. (Students must register for 6 credits each term since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem R 2:30-4:50 p.m. D. Pimentel.

This course utilizes an interdisciplinary approach to focus on complex environmental and policy issues. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research teams spend two semesters preparing a scientific report for publication in Science or BioScience.

AGRICULTURAL AND BIOLOGICAL ENGINEERING

ABEN 102 Introduction to Metal Fabrication Techniques
Fall. 4 credits. Required course for freshman majors in Agricultural and Biological Engineering. A required course for freshman majors in agricultural and biological engineering. No previous programming experience is assumed.

ABEN 104 Introduction to Programming in Java and Fortran
Spring. 4 credits. Prerequisites: none—but basic and advanced first aid recommended. Each lab section limited to 22 students.

An introductory course in computer programming with an emphasis on handling data and algorithm development. Problem sets are on topics of general interest. The first third of the course utilizes Fortran 90 to introduce students to procedural programming concepts and style. For the remainder of the course, students will be introduced to object-oriented programming using Java. Students are expected to spend 5 to 8 hours outside their scheduled laboratory period to complete program sets. No prior knowledge of computers or computer language is necessary.

ABEN 110 Introduction to Metal Fabrication Techniques
Spring. 3 credits. Each lab limited to 18 students. Lec, T R 9:05; labs M T or R 1:25-4:25, M or T 7-10. T. J. Cook.

Focus on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. To include both hand and machine tools, fasteners, strengths of materials, classification and identification of metals, cutting, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

ABEN 132 Introduction to Wood Construction
Fall. 4 credits. Each lab limited to 15 students. Lec, T R 9:05; labs M T or R 1:25-4:25, M or T 7-10. T. J. Cook.

Focus on selection of proper materials and techniques to accomplish a variety of metal fabrication and maintenance projects. To include both hand and machine tools, fasteners, strengths of materials, classification and identification of metals, cutting, brazing, forging, pipe fitting, sheet metal work, controlling distortion, oxy-acetylene cutting, and arc welding.

ABEN 151 Introduction to Computing

An introduction to computer programming and concepts of problem analysis, algorithm development, and data structure in an engineering context. The structured programming language, JAVA, is used, implemented on interactive personal computers, and applied to problems of interest to engineering students.

ABEN 200 Life after Graduation

A required course for freshman majors in Agricultural and Biological Engineering. A forum to discuss the career opportunities for engineering students and the activities and
curricula that will lead to these opportunities. A series of seminars are given by practicing engineers, Cornell faculty members, alumni, staff from Cornell career offices, and students. Students develop personalized written career plans, do a web search for jobs and internships, and select future courses to meet their career goals.

**ABEN 250 Engineering Applications in Biological Systems (also Engineering Distribution)**

Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. Lec, M W F 12:20. B. A. Ahner.

Case studies of engineering problems in agricultural, biological and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

**ABEN 300 Career Development**

Spring. 1 credit. S-U option. Prerequisites: ABEN 200 or permission of instructors. Lec, T 2:30-3:20. Staff. Career development for juniors who are thinking about jobs, graduate or professional school, or anything else. Students will work on planning their options after graduation. Development of resumes and cover letters, contacts with potential employers or graduate schools, job and school searches on the Web, professional engineering registration, entrepreneurial opportunities, career offices at Cornell, and practice interviews. Students are active participants. In addition to ABEN 300 sessions, attendance at four sessions of ABEN 200, selected by each student, is required.

**ABEN 301 Renewable Energy Systems**

Spring. 3 credits. Prerequisite: college physics. Lec, T R 8:40-9:55. L. D. Albright.

Introduction to energy systems with emphasis on quantifying costs and designing renewable energy systems to convert environmental inputs into usable energy. Course will cover solar energy, small-scale hydro-power, wind, bio-conversion processes, house energy balances, and the public policy implications of alternatives. Use of spreadsheet sheets will be extensive.

**ABEN 305 Principles of Navigation (also Nav S 301)**

Fall. 4 credits. Four classes each week (lecture-recitation-project work). Lecs, M W F 8:00-8:50; lab, R 8:00 or 9:05. J-Y. Parlange, and W. Brutsaert.

An introduction to the fundamentals of marine navigation emphasizing piloting and celestial navigation procedures. The course covers coordinate systems, chart projections, navigational aids, instruments, compass observations, celestial navigation, use of the nautical almanac, tides and currents. Electronic navigation systems are also briefly discussed. This course does not satisfy ABEN technical electives.

**ABEN 310 Advanced Metal Fabrication Techniques**

Spring. 1 credit (2-credit option available). Prerequisite: ABEN 110 or permission of instructor. Lab, F 1:25-4:30. T. J. Cook.

Principles and practices extending beyond the scope of ABEN 110. To include out-of-position, high carbon steel and cast iron welding. Soldering and brazing of aluminum, hard surfacing, both tungsten (TIG) and metallic (MIG) inert gas welding, plasma arc and oxy-acetylene processes. Planning, development, and fabrication of a metal construction project for the 2 credit option.

**ABEN 350 Biological and Environmental Transport Processes**

Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible). Lecs, M W F 11:15-12:05, disc, W 2:30-3:20. K. G. Gebremedhin.

Understanding the principles of heat and mass transfer in the context of biological and environmental systems. Emphasis is on physical understanding of transport processes and simple reaction rates with application examples from plant and animal biology, the environment (soil/water/air), and industrial processing of food and biomaterials.

**ABEN 365 Properties of Biological Materials**

Mechanics and structural properties of biological materials. Mechanical damage of animal, plant, and food products. Laboratory exercises in quasi-static and dynamic testing of materials and interpretation of test results. Experimental techniques for determining engineering properties of these materials.

**ABEN 367 Introduction to Biological Engineering**

Spring. 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. Not open to freshmen. S-U grades optional. Lecs, T R 10:10; lab R or F 1:25-4:25. J. B. Hunter.

Explores the use of engineering principles to solve biological problems in the context of laboratory experiments. Topics may include artificial organs, neuromuscular electrical signals, mass transfer in fermentation, enzyme kinetics, mechanics of plant or animal tissue, and DNA transfer. Many topics relate to ongoing research at Cornell. Appropriate for engineering and life science students. Field trips, demonstrations, and readings in current scientific literature.

**ABEN 371 Hydrology and the Environment (also Soil, Crop, and Atmospheric Sciences 371 and Geology 204)**

Spring. 3 credits. Prerequisite: one course in calculus. 2 lecs, 1 lab. Lecs, T R 9:05; lab, F 2:30-4:25. T. S. Steenhuis, P. C. Baveyes, L. Cathles.

Introduction to hydrology: the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, ground water, surface runoff, river meandering, floods, and droughts. Case studies, short field trips, computer programs, and laboratories foster an understanding of concepts and principles of hydrologic processes. This course satisfies the capstone design experience requirement.

**ABEN 385 Mechanics in the Earth and Environmental Sciences**

The study of the earth and the environment requires an understanding of transport and other physical processes within and at the surface of the earth. This course encourages the students to develop a broad working knowledge of mechanics and its application to the earth and environmental sciences, providing the background necessary to study the professional literature.

**ABEN 411 Biomass Processing: Modeling and Analysis**

Spring. 3 credits. Prerequisites: ABEN 250, ABEN 350 (or any course in heat and mass transport), BIOBOM 331, 332, or BIOMI 290. Lec, M W F 9:05. L. P. Walker.

This course is designed to introduce students to how basic concepts from physical chemistry, enzyme and microbial kinetics, and transport phenomena are used to model biomass conversion and degradation processes. Examples of different agricultural and environmental processes are used to explore model development, solutions, and validation. There is a strong emphasis on the use of differential equations to model process dynamics.

**ABEN 425 Science and Technology of Environmental Management**

Fall. 3 credits. Prerequisite: graduate or senior. Letter only. Lec, T R 2:55-4:10. W.J. Jewell.

Quantitative description of decline in environmental quality caused by human activities, and exploration of science and technology solutions to pollution and their limits. Tools used by engineers and scientists to understand the environment will be used to focus on water quality problems (two-thirds), air quality (one-sixth) and land quality (one-sixth).

**ABEN 435 Principles of Aquaculture**

Spring. 3 credits. Prerequisite: junior standing and above. Lec, T R 1:25-2:15; lab, R 2:30-4:25. M. B. Timmons.

An in-depth treatment of the principles of aquaculture: fish biology, waste treatment, engineering design, fish health, nutrition, processing, etc. This course is intended to build upon the undergraduate's previous course background and interests. Supervised "hands-on" laboratory experiences.

**ABEN 449 Computational Tools for Engineers**

Spring. 3 credits. S-U or letter grade optional. Prerequisite: completion of the undergraduate engineering math sequence or permission of instructor. Labs, M W F 2:30. J. R. Cooke.

This laboratory course provides a hands-on exposure to contemporary engineering software with applications from applied mathematics and the engineering sciences. The symbolic computational software, Mathematica, provides the focus for the course. Topics from Math 191-294 and more advanced topics relevant to the upper-level undergraduate curriculum and research are treated.
ABEN 450 Biologinstrumentation
Fall. 4 credits. Prerequisites: MATH 294, ABEN 151, PHYS 213, or permission of instructor. Lec, M W 8:40-9:50; lab, M or W 2:30-4:25. D. Aneshansley.
Biological and biomedical applications are emphasized in this laboratory-based course. The electronic instrument from sensor to computer is considered. Static and dynamic characteristics of components and systems are determined theoretically and empirically. Computer analog and digital signal condition circuits are designed, constructed and tested. Course satisfies the capstone design requirement.

ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or CS 100) and heat and mass transfer (ABEN 350 or equivalent). Lec, M W 11:15; computation disc/lab: F 11:15. A. K. Datta.
Introduction to simulation-based design as an alternative to prototype-based design. Analysis and optimization of complex real-life processes using an industry-standard physics-based computational software on a supercomputer or high-end personal computer. Biomedical processes and industrial food processing applications of heat and mass transfer are covered. Computational topics introduce the finite-element method, pre- and post-processing, and pitfalls of using computational software. Students choose their own term project, which is the major part of the course (no final exam). The course satisfies the College of Engineering upper-level computing application requirement. It also satisfies the capstone design experience requirement for ABEN students.

[ABEN 456 Physiological Engineering]
Engineering analysis and design in the physiology of animals and humans. Use of engineering principles to study how animals work in nature and to intervene in physiological functions. The two major engineering themes are: signal processing as related to neural conduction, sound processing, vision, and image processing; and systematics as applied to cardiovascular and respiratory systems, bioenergetics, and bird flight. Laboratories involve experiments, computing applications, field trips, and live animal demonstrations.

[ABEN 457 Biomechanics of Plants]
Fall. 3 credits. Prerequisite: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U or letter grade. Lec, TR 11:30-12:05, disc, W 3:35-4:25. J. R. Cooke and K. J. Niklas.
An engineering approach is taken to plant form and function following the text, Plant Biomechanics. Topics include: mechanical behavior of materials, effect of geometry on mechanical behavior, plant-water relations, plant cell walls, mechanical behavior of tissues, mechanical attributes of organs, the plant body, fluid mechanics and biomechanics and plant evolution.

ABEN 471 Geohydrology (also Civil and Environmental Engineering 431 and Geology 445)
Fall. 3 credits. Prerequisites: Mathematics 294 and Engr 202. 2 lecs, 1 disc, lecture, field trips. A. L. Britsaert, L. M. Cathles, J.-Y. Parlange, T. S. Steenhuis.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, groundwater hydraulics, soil water, and solute transport.

ABEN 473 Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology. Lec, T R 9:05; disc, R 1:25-4:30. M. F. Walter.
Engineering principles are applied to the design of soil and water management technologies aimed at solving natural resource problems in the context of watersheds. Emphasis will be placed on rural and countryside engineering and small-scale design for water conveyance, soil erosion control, flood damage control, earthen dams, ponds, moisture observation, drainage, and water supply. This course satisfies the capstone design experience requirement.

ABEN 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology. Lec, M W F 12:20. T. S. Steenhuis and L. D. Gedrich.
This course will focus on design of drainage and irrigation systems for agriculture and non-agricultural purposes. The course will also briefly cover design for rural water supply and sanitation systems. Emphasis is placed on problem solving with actual situations used for review. A computer-aided approach for design project is required of each student. This course satisfies the capstone design experience requirement.

ABEN 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus. Lec, M W F 10:10-11:00. L. P. Walker.
Systems analysis and its use in environmental quality management. Emphasis is on modeling of environmental problems, translation of efficient computational algorithms, and use of computer simulation and optimization procedures (search techniques, linear programming, and dynamic programming) to evaluate management alternatives. Applications include water quality management, air pollution control, solid waste management, and industrial ecology.

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: 1 semester of physics and chemistry. Lec, M W F 1:25. D. A. Haith.
Planning and design of processes and facilities for management of municipal solid wastes. Source characterization and reduction; collection and transport systems; waste-to-energy combustion; sanitary landfills; composting; recycling and materials recovery facilities; hazardous waste management. Emphasis on quantitative analyses.

[ABEN 477 Treatment and Disposal of Agricultural Wastes]
Fall. 3 credits. Prerequisites: one environmental science course and at least junior-level standing, or permission of instructor. T R 2:30-3:45. Not offered 1999-2000. W. J. Jewell.
Overview of pollution problems in agriculture, legal restrictions, and technologies used to control pollution. Biological, physical, and chemical processes are applied to solve problems associated with animal wastes, food production, and food and fiber processing.

ABEN 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent. Lec, T R 2:30-3:45. W. J. Jewell.
Natural waste treatment systems are sustainable, driven by solar power, and generate useful and valuable by-products. Constructed wetlands, wastewater treatment plants, wastewater treatment systems for agricultural and industrial waste water, and bioremediation of toxic and biofilters for air purification are examples of pollution control systems that are used. Pollution control systems in soils and plants are defined and used to design innovative treatment systems for agriculture, municipalities, and industry. This course satisfies the capstone design experience requirement.

[ABEN 481 Design of Wood Structures]
Spring. 3 credits. Prerequisite: ENG 202. Lec, M W F 12:20 (Hollister Hall).
K. G. Gebremedhin. Two evening prelims.
Computer-aided and manual computation procedures of engineering wood structures. Topics include stress analysis, member design, allowable stress design, design of beams, columns, and connections, design of girders and joists, design of exterior walls, design of roofs and floors, and design of beams and girders. This course satisfies the capstone design experience requirement.

[ABEN 482 Biomedical Engineering]
Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent. Lec, TR 11:15; lab, W 1:25-4:25. N. R. Scott.
Analysis and design of the thermal and mechanical environments of plants, animals, and humans. Thermal and mechanical environments include the distribution of temperatures and stresses in buildings, the design of buildings to act as buffers between biological systems and weather. Heat flow, air flow, psychrometrics, energy balances, thermal biology, animal and plant models, thermal modeling, mechanical and natural ventilation, solar energy, and weather phenomena. This course satisfies the capstone design experience requirement.

ABEN 491 Highway Engineering (also Civil and Environmental Engineering 462)
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently). Lec, T R 10:10; lab, T 1:25-4:25. L. H. Irwin.
An introduction to highway engineering with an emphasis on design. Students will work in teams to apply the current standards and design criteria used in professional practice to several highway design projects. Topics of discussion include route location and design, traffic engineering, economic analysis, human factors and public safety, hydrology and drainage design, highway materials, pavement design, and maintenance. This course satisfies the capstone design experience requirement.
ABEN 494 Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee; and the same course will not be offered more than twice under this number.

ABEN 496 Senior Design in Agricultural and Biological Engineering
Fall and spring. 1–3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Note: completing an independent study form is required to register. Hours to be arranged. Staff.
Involves capstone design experience, including a team project, incorporating analysis, design, evaluation, synthesis, and a written report of the end-product. This course may be taken in conjunction with an approved ABEN course (for an approved ABEN course, see ABEN Undergraduate Program publication).

ABEN 497 Individual Study in Agricultural and Biological Engineering
Fall and spring. 1–4 credits. S-U option. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-thirds of their class. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
Special work in any area of agricultural and biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained.

ABEN 498 Undergraduate Teaching
Fall and spring. 1–4 credits. Prerequisite: written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
The student assists in teaching an agricultural and biological engineering course appropriate to his/her previous training. The student meets with a discussion or laboratory section, prepares course materials, grades assignments, and regularly discusses objectives and techniques with the faculty member in charge of the course.

ABEN 499 Undergraduate Research
Fall and spring. 1–3 credits. Prerequisites: normally reserved for seniors in upper two-fifths of their class. Adequate training for work proposed. Written permission of instructor. Students must register with an independent study form (available in 140 Roberts Hall). Hours to be arranged. Staff.
Research in any area of agricultural or biological engineering on problems under investigation by the department or of special interest to the student, provided that adequate facilities can be obtained. The student must review pertinent literature, prepare a project outline, carry out an approved plan, and submit a formal final report.

ABEN 501–502 M.P.S. Project
Fall and spring. 1–6 credits. Required of each M.P.S. candidate in the field. Hours to be arranged. ABEN graduate faculty. A comprehensive project emphasizing the application of agricultural technology to the solution of a real problem.

ABEN 551–552 Agricultural and Biological Engineering Design Project
Fall and spring. 3–6 credits. Prerequisite: admission to the M.Eng. (Agri.) degree program. Hours to be arranged. ABEN graduate faculty. Comprehensive design projects dealing with existing engineering problems in the field. Emphasis is on the formulation of alternative design proposals that include consideration of economics, nontechnical factors, engineering analysis, and complete design for the best design solution. Projects are supervised by faculty members on an individual basis. However, there is a formal orientation during the first four weeks of the semester. A formal report and public presentation of the results of the design project are required for completion of the course(s). A minimum of 3 to a maximum of 12 credits of 551–552 is required for the Master of Engineering degree. Students should register for 551 their first semester and complete any additional design project credits with 552. If more than 6 design project credits are desired in one semester, both 551 and 552 may be taken.

ABEN 651 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOM 200 or BIOM 300 or BIOM 331 or permission. B. Ahner.
This course examines ways in which metabolic pollutants in the environment including bacterial degradation of organics and phyto remediation of heavy metals. Through lectures and current literature, we will evaluate the benefits as well as the current obstacles. We will examine the current efforts to genetically engineer organisms for bioremediation and the potential risks of releasing them into the environment.

ABEN 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of the instructor.
D. J. Aneeshanley.
Application of instrumentation concepts and systems to the measurement of environmental, biological, and agricultural phenomena. Construction and characterization of electronic sensors and transducers will be emphasized. Image processing techniques will be introduced. A final project is required.

ABEN 655 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: Mathematics 293 or equivalent. Lecs. R 2:30–4:30. J.-Y. Parlangue.
Thermodynamics and its applications to problems in engineering and agriculture. Topics include basic concepts (equilibrium, entropy, processes, systems, potentials, stability, phase transitions) and applications (soil and water processes, dilute solutions, electromagnetism, surface phenomena, heat and mass transport, structure of organizations).

ABEN 677 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisite: permission of instructor. Lecs. T & R 2:30–3:45. W. J. Jewell.
Emphasis is on the causes of agricultural waste problems and the application of fundamentals of treatment and control methods to minimize related pollution. Fundamentals of biogenous, chemical, and biological pollution control methods are used in design problems with animal wastes, food production, and food and fiber processing. A semester-long design project is required. This course satisfies the capstone design experience requirement.

ABEN 678 Nonpoint Source Models
Development and programming of simulation models for management of water pollution from runoff and percolation. Emphasis is on prediction of water and chemical inputs to surface waters and groundwater. Applications include watershed hydrology and sediment yield, urban and rural runoff, lake eutrophication, wastewater disposal sites, and pesticides, nutrients and salts in drainage.

ABEN 685 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: TAM 310 or permission of instructor. Lecs. M W F 11:15. J. R. Cooke.
Engineering problem-solving strategies and techniques are explored. Students solve several representative engineering problems that inherently involve biological properties. Emphasis is on formulation and solution of mathematical models and the interpretation of results. The student's knowledge of fundamental principles is used extensively.
ABEN 692 Pavement Engineering (also Civil and Environmental Engineering 643)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisites: one introductory course in soil mechanics or highway engineering. Lec., 1:10-2:15. L. H. Irwin.
Application of geotechnical engineering principles to the selection of materials and the design of highway and airfield pavements, computer-based methods for pavement design, structural evaluation of pavements, and pavement systems management. Topics of discussion will include bituminous mixture design; base courses; soil stabilization methods; seal-coat design; design of flexible and rigid pavements; pavement design for frost conditions; and pavement evaluation using nondestructive test methods. Laboratory will provide a case study of pavement systems management.

ABEN 694 Graduate Special Topics in Agricultural and Biological Engineering
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged.
ABEN graduate faculty.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ABEN 697 Graduate Individual Study in Agricultural and Biological Engineering
Fall or spring. 1-6 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. ABEN graduate faculty.
Topics are arranged by the staff at the beginning of the term.

ABEN 700 General Seminar
Fall. 1 credit. S-U grades only. Staff.
Presentation and discussion of research and special developments in agricultural and biological engineering and related fields.

ABEN 750 Orientation to Graduate Study
Fall. 1 credit. Limited to new graduate students. S-U grades only. Lect, first 7 weeks, M 3:35-4:25, remainder to be arranged. J. A. Bartsch.
An introduction to ABEN research policy, programs, methodology, resources, and degree candidates' responsibilities and opportunities.

ABEN 754 How to Manage a Watershed
(also Government 644)
Examines watershed development and its relation to agriculture, irrigation and other activities within its boundaries. Emphasis on social, technical and economic processes within watersheds, including political and administrative aspects. Provides an opportunity to examine systematically the interaction of various aspects of watershed management and design in developing countries.

ABEN 771 Soil and Water Engineering Seminar
Fall and spring. 1-3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional. Hours to be arranged. T. S. Steenhuis, J.-Y. Parlangue and M. F. Walker.
Study and discussion of research or design procedures related to selected topics in irrigation, drainage, erosion control, hydrology, and water quality.

ABEN 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only. Hours to be arranged. J. R. Cooke.
The interactions of engineering and biology, especially the environmental aspects of plant, animal, and human physiology, are examined in order to improve communication between engineers and biologists.

ABEN 800 Master's-level Thesis Research
Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty.

ABEN 900 Graduate-level Thesis Research
Fall and spring. 1-15 credits. Prerequisite: permission of adviser. S-U grades. ABEN graduate faculty. Variable credit for Ph.D. research before the "A" exam is passed.

ABEN 901 Doctoral-level Thesis Research
Fall and spring. 1-15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of adviser. S-U grades. ABEN graduate faculty.

AGRICULTURAL, RESOURCE, AND MANAGERIAL ECONOMICS

L. S. Willett

Courses by Subject
Farm management, finance, and production economics: 302, 402, 403, 404, 405, 406, 605, 606, 708

Statistics, quantitative methods, and price analysis: 210, 410, 411, 412, 415, 416, 417, 710, 711, 712, 713, 714, 717

Business management, law, and accounting: 220, 221, 320, 321, 323, 324, 325, 326, 327,
328, 422, 424, 425, 426

Public policy: 430, 431, 433, 630, 633, 634,
730, 731, 735

Marketing and food distribution: 240, 342, 346, 347, 443, 446, 447, 448, 449, 640,
641, 740

Environmental and resource economics: 250, 450, 451, 651, 652, 750, 751

Economics of development: 464, 665, 666,
667, 762, 763

General, contemporary issues, research, and other: 100, 380, 494, 497, 498, 499, 694, 698,
699, 700, 800, 900, 901

Note: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

ARME 100 Economics for Business in a Global Economy
Fall. 3 credits. Priority given to CALS majors. Prerequisite: past or concurrent enrollment in Economics 101, or the equivalent, required. Lec., T 1:10-2:30, 2:30-3:20, or 3:35-4:25; R 1:10-2:00, 2:00-2:50. 12 credits. J. R. Cooke.
Understanding global markets and the world economy is critical for business success. This course focuses on understanding economic theory useful for formulating business strategy, such as highly competitive markets, market power, government regulation, environmental policy, international trade, and macroeconomic policy. Students participate in eight laboratory market experiments.

ARME 210 Introductory Statistics
Fall. 4 credits. Prerequisite: EDUC 115 or equivalent level of algebra. Lect, M W F 1:15-2:15; secs, T 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); W 10:10-12:05, 2:30-4:25 (3 secs) or W 7:30-9:25 p.m.; or R 12:20-2:25 (2 secs) or 2:30-4:25 (2 secs). 2 evening prelims. C. van Es.
An introduction to statistical methods. Topics to be covered include the descriptive analysis of data, probability concepts and distributions, estimation and hypothesis testing, regression, and correlation analysis. Applications from business, economics, and the biological sciences are used to illustrate the methods covered in the course.

ARME 220 Introduction to Business Management
This course provides an overview of management and business. Human resources, marketing, finance, and strategy concerns are addressed with consideration paid to current issues such as globalization, ethics, quality, and strategic alliances. Case studies and guest executives are an important part of the course.
ARME 221 Financial Accounting
Spring. 3 credits. Not open to freshmen. Priority given to CALS majors. Lecs, M F 11:15-12:05 or 12:20-1:10; sec, T 10:10-12:05 (2 secs), 12:20-2:15, or 2:30-4:25; W 10:10-12:05, 12:20-2:15 (2 secs), 2:30-4:25 (2 secs), or 7:30-9:25 p.m. (2 secs); or R 10:10-12:05, or 2:30-4:25. 2 evening prelms and a comprehensive final, weekly homework assignments, and 1 written case study and one project using an electronic spreadsheet. J. S. Hopkins. A comprehensive introduction to financial accounting concepts and techniques, intended to provide a basic understanding of the accounting cycle, elements of financial statements, underlying theory of GAAP, and statements interpretation. Elements examined include inventory, depreciation, internal control of assets, time value of money, notes, stocks, bonds, and the statement of cash flows. Limited use of a financial data base publicly held companies, introduction to financial information on the World Wide Web.

ARME 240 Marketing
Fall. 3 credits. Priority given to CALS majors. Lecs, M W F 10:10-11; secs, M 2:30-3:20; T 12:20-1:10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25; W 12:20-1:10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25; or R 12:20-1:10 (2 secs), 1:25-2:15 (2 secs), 2:30-3:20, or 3:35-4:25. 5 discussion sections are held during the semester. M. G. Meloy. This course provides a broad introduction to the fundamentals of marketing. We will explore the components of an organization’s strategic marketing program, including how to price, promote, and distribute goods, services, ideas, people, and places. We will examine specifically the central role played by changing consumer preferences, our primary emphasis will be placed on consumer goods industries. The principles and concepts from this course apply equally well to the marketing of goods and services in all sectors of the economy. Case studies, lectures, and current marketing applications from various companies will be presented and analyzed.

ARME 250 Environmental Economics
Spring. 3 credits. Lecs, T R 2:55-4:10. D. Chapman. Concepts and methods used in the public and private analysis of environmental resources. Subjects include valuation, benefit-cost analysis, and ecological economics. Major current economic problems such as economic incentives in environmental policy, endangered species protection, forestry, energy use, world petroleum resources, and global warming. The growing world trade in resource-intensive manufactured products and the impact on income, employment, and pollution. Comparative resource use and environmental information in industrialized and developing countries.

ARME 302 Farm Business Management
Fall. 4 credits. Not open to freshmen. This course is a prerequisite for ARME 402 and 405. Lecs, M W F 9:05-9:55; sec, W or R 1:25-4:25. On days farms are visited, the section period is 1:25-6:00. W. A. Knochauf. An intensive study of planning, directing, organizing, and controlling a farm business, with emphasis on the tools of managerial analysis and decision making. Topics include financial statements, business analysis, budgeting, and acquisition, organization, and management of capital, labor, land, buildings and machinery.

ARME 320 Business Law I
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Lecs, M W F 9:05-9:55. 1 evening prelim. D. A. Grossman. Consideration is given chiefly to legal problems of particular interest to persons who expect to engage in business. Emphasis is on the law pertaining to contracts, sales, agency, property, and the landlord-tenant relationship.

ARME 321 Business Law II
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisite: a course in business law or permission of instructor. Lecs, T R 8:40-9:55. D. A. Grossman. The first portion of this course examines legal issues in the formation and operation of business enterprises, particularly partnerships, corporations, and limited liability companies. The second portion of the course will review selected topics in business law, such as employment discrimination, secured transactions, product liability, unfair competition, and international business law.

ARME 323 Managerial Accounting
Fall. 3 credits. Priority given to CALS majors. Prerequisite: ARME 221 or equivalent. Lecs, M W 12:20-1:10; secs, R 10:10-12:05, 12:20-2:15 (2 secs), or 2:30-4:25 (2 secs); or F 10:10-12:05 or 12:20-2:15 (2 secs). 2 evening prelms, a third exam, weekly homework, one written case study, and one project using an electronic spreadsheet. S. Hopkins. An introduction to cost accounting that emphasizes the application of accounting concepts to managerial control and decision making. Major topics include product costing, standard costing, cost behavior, cost allocation, budgeting, inventory control, variance analysis, measuring divisional performance, and accounting systems in the manufacturing environment. Use of electronic spreadsheets is required.

ARME 324 Financial Management
Spring. 4 credits. Priority given to CALS majors. Prerequisite: ARME 220 or equivalent. Lecs, M W F 9:05-9:55; secs, W 2:30-4:25 or R 10:10-12:05, 12:20-2:15, or 2:30-4:25, or F 10:10-12:05 or 12:20-2:15. 2 evening prelms. Staff. Focuses on three major questions facing management: how to evaluate capital investment decisions, how to raise the capital to finance the firm, and how to generate sufficient cash flows to meet the firm’s cash obligations. Major topics include methods to analyze investment decisions, impact of taxes, techniques for handling risk and uncertainty, effects of inflation, sources and costs of debt and equity, capital structure, leverage, and working capital management.

ARME 325 Personal Enterprise and Small Business Management
Spring. 4 credits. Limited to juniors and seniors. Prerequisites: ARME 220 and 221 or permission of instructor. Absolutely no add or drop after second class meeting. Term project account to approximately $100 per team. Lecs, T R 12:20-1:10; sec, W 2:30-4:25. Two additional hours to be arranged. D. Streeter. Course is focused on the activities involved in planning a start-up business, including the exploration of strategic dimensions, performance of marketing research, and planning of financial aspects related to the new company. Lectures and hands-on clinics include visits by real world entrepreneurs who discuss the start-up process and the challenges of managing growth in a small business. Term project is the development of a business plan, completed in teams no fewer than three.

ARME 326 Human Resource Management in Small Businesses
Fall. 3 credits. Prerequisite: ARME 220 or ARME 302 or equivalent. S-U grades optional. Lecs, T R 10:10-11:25 or 11:40-12:55. R. A. Milligan. An introduction to the management of human resources in small businesses. The focus is on developing and utilizing all of the capabilities of all small business personnel including owners, family members, and employees. Topics include recruitment, selection, compensation, training, empowerment, team building, leadership, performance management, and conflict resolution. Student involvement and active learning experiences are emphasized.

ARME 327 Accounting for Entrepreneurs
Spring. 3 credits. This course is intended for non-ARME majors. Students may not receive credit for this course in addition to credit for ARME 221 and/or ARME 323. Lecs, T R 10:10-11:25, sec W 2:30-3:20 or R 1:25-2:15. M. J. Hunsicker. This course provides an introduction to the principles of accounting used by entrepreneurs who plan, direct, and make decisions about critical business activities in their companies. This course will provide future entrepreneurs with the requisite technical skills to accumulate, record, and communicate financial information about their businesses to internal and external parties of the firm. We will explore the principles of financial accounting (accounting and bookkeeping, ownership, inventory, fixed assets, liabilities, time value of money, investments, owners’ equity) and managerial accounting (budgeting, product costing, inventory management, break-even analysis) as they apply to small businesses. Use of accounting software and the Internet will be required. This course is intended for students who have no prior accounting courses and who are preparing for an entrepreneurial career path.

ARME 328 Innovation and Dynamic Management (also Hotel Administration 418)
Spring. 3 credits. Limited to juniors and seniors. Lecs, T R 10:10-11:25. C. Enz. For description, see H ADM 418.

ARME 340 Futures and Options Trading
Spring. 3 credits. Limited to juniors and seniors. Priority given to CALS juniors and seniors, then out of college seniors. Prerequisites: ECON 101, EDUC 115 and ARME 210 or equivalent. S-U grades optional. Lecs, T R 10:10-11:25. W. H. Lesuer. The focus of the course is on the use of futures and options as risk management tools. Commodities, exchange rate, and interest rate derivatives are covered from the perspective of the hedger, but those interested in arbitrage and speculation will get some insights as well. Students will participate in a simulated trading exercise in which they will use price and
market information and input from industry experts to manage a hedge position.

**ARME 342 Marketing Management**

Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: ARME 240 and ECON 101–102. Lecs, M W F 10:10–11; secs, R 12:20–2:15 (2 secs) or 2:30–4:25 (2 secs); F 10:10–12:05 (2 secs), or 12:20–2:15 (2 secs). In weeks that secs are held, there will be no F lecture. R. R. Christy. Deals with the central link between marketing at the societal level and everyday consumption by the general public. As such, this course emphasizes the management aspects of marketing by considering consumer behavior, strategies in product and brand selection, pricing, promotion, sales forecasting, and channel selection. Identification and generation of economic data necessary for marketing decisions are considered. Public policy and ethical dimensions of marketing are examined.

**ARME 346 Dairy Markets and Policy**

Spring, weeks 1–7. 1 credit. Limited to juniors and seniors. Prerequisites: ECON 101 or equivalent. S-U grades optional. Lecs, R 2:30–3:25. M. S. Stephenson. An introduction to dairy markets and policy. Major topics include: milk pricing, marketing channels, dairy trends and demographics, world trade for dairy products, and policy issues. Class participation is expected as topics and new ideas are explored.

**ARME 347 Strategic Marketing for Horticultural Firms**

Spring. 1 credit. Prerequisite: ARME 240. Lec, M 12:20–1:10. G. B. White. This course will emphasize applications in strategic marketing. Lectures focus on practical aspects of the planning, implementation, and control phases of the strategic marketing process. Students will develop a long-range marketing plan for a fruit, vegetable, greenhouse, nursery, or related horticultural firm.

**ARME 380 Independent Honors Research in Social Science**

Fall or spring. 6 credits. Limited to students who have met the requirements for the honors program. See "Honors Program" in CALS section of this catalog. Provides qualified students an opportunity to conduct original research under supervision. Information available in ARME undergrad program office in Warren Hall.

**ARME 402 Seminar in Farm Business Planning and Managerial Problem Solving**

Fall. 3 credits. 4 half-day field trips. One all-day field trip. On days field trips are taken, class ends at 6:00. Prerequisite: ARME 302 or equivalent. Lecs, T R 12:20–1:10; sec, R 1:25–4:25. G. J. Conneman. A case-oriented seminar workshop designed for juniors and seniors who plan to return to the family business or home farm or to take positions in banking, credit, or agricultural business, as well as those who wish to establish enterprises of their own. The objective of the course is to pull together interdisciplinary knowledge and apply it in a problem-solving/critical-thinking management context. Topics include managerial analysis and strategic marketing, human resource management, and business and family arrangements.

**ARME 403 Farm Management Study Trip**

Spring. 1 credit. Prerequisite: ARME 302. Open by application only. Secs, arranged. W. A. Knoblauch. A special program to study production and management systems in diverse agricultural regions of the U.S. Includes a trip (usually taken during spring break) to the region being studied. A different region is visited each year. The course meets in advance of the study trip and upon return from trip. A paper, selected by the student, which further explores an aspect of the trip, is a requirement for completing the course.

**ARME 404 Advanced Agricultural Finance Seminar**

Spring. 2 credits. Limited to 16 seniors with extensive course work in farm management and farm finance. Open by application prior to March 1 of the year before the course is offered. W. 2:30–4:25. E. L. LaDue. A special program in agricultural finance, conducted with financial support from the Farm Credit System. Includes two days at Northeast Farm Credit offices, one week in Farm Credit Association offices, a one-day program on FSA financing during fall term, a two- to four-day trip to financial institutions in New York City, and an actual farm consulting and credit analysis experience in the spring term.

**ARME 405 Farm Finance**

Spring. 4 credits. Prerequisite: ARME 302 or equivalent. Lecs, M W F 9:05–9:55; sec, T 2:30–4:25. E. L. LaDue. The principles and practices used in financing farm businesses, from the perspectives of the farmer and the farm lender. Topics include sources of capital, financing entry into agriculture, financial analysis of a business, capital management, financial statements, credit instruments, loan analysis, financial risk, and leasing.

**ARME 406 Farm and Rural Real Estate Appraisal**

Spring, weeks 7–15. 2 credits. Limited to 40 juniors. Prerequisites: ARME 302 or equivalent and permission of instructor. Lec, R 11:15–12:05; sec, R 1:25–4:25. Five half-day field trips, 1 all-day field trip. On days field trips are taken, class ends at 6:00. G. J. Conneman. The basic concepts and principles involved in appraisal. Factors governing the price of farms and rural real estate and methods of valuation are studied. Practice in appraising farms and other rural properties.

**ARME 410 Business Statistics**

Spring. 3 credits. Prerequisite: ARME 210 or equivalent. Lecs, M W F 11:15–12:05. Two evening prelims. C. van Es. This course focuses on four major topics used to analyze data from marketing research, business, and economics. Topics studied: survey sampling procedures, contingency table analysis, time series and forecasting, and experimental design and ANOVA. A brief introduction to non-parametric methods is also included. The course will involve a research project designed to give experience in collecting and interpreting data.

**ARME 411 Introduction to Econometrics**

Spring. 3 credits. Prerequisite: ARME 210 and either ECON 313 or PAM 200, or equivalents. Lecs, T R 10:10–11:25. C. B. Barrett. The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression are discussed and simultaneous equation models, simulation, and forecasting techniques are introduced.

**ARME 412 Introduction to Mathematical Programming**

Spring. 3 credits. Primarily for juniors, seniors, and M.S. degree candidates. Prerequisite: ARME 210 or equivalent. Lecs, T R 9:05–9:55; sec, R 12:20–2:15. H. F. Green. This is a course in applied linear programming. The emphasis will be on formulation, specification, and interpretation of solutions to mathematical models of economic problems. Standard LP problems, sensitivity analysis, blending, resource allocation, capital budgeting, product mix, transportation and financial planning, inventory management, etc., will be studied. Integer and nonlinear programming will be introduced if time permits.

**ARME 415 Price Analysis (also Economics 415)**

Fall. 3 credits. Prerequisites: ARME 210 or equivalent. ECON 313 or PAM 200 or equivalents. Lecs, M W F 9:05–9:55. H. M. Kaiser. The focus of this course is on the analysis of supply and demand characteristics of commodities with particular attention to agricultural products. Special attention is paid to empirical analysis. Institutional aspects of pricing, temporal and spatial price relationships, price forecasting, and the economic consequences of pricing decisions are included.

**ARME 416 Demographic Analysis in Business and Government (also Rural Sociology 331)**

**ARME 417 Decision Models for Small and Large Businesses**

Spring. 3 credits. Limited to juniors and seniors. Preference given to ARME majors. Prerequisites: ARME 210 or equivalent. Lecs, M W 2:30–3:20, lab; W 7:30–9:25 or R 12:20–2:15 or R 2:30–4:25. C. L. van Es. The course is focused on economic and statistical models of decision analysis and their application in large and small business settings. The course will demonstrate how use of models can improve the decision-making process by helping the decision-maker understand the structure of the decision, incorporate subjective probabilities as a way to portray risk, measure outcomes in a way that is consistent with attitudes toward risk, and understand the value of information. The importance of sensitivity analysis will be emphasized, as well as the need to combine both quantitative and qualitative considerations in decision-making. Cases will be drawn from small business scenarios, the public policy arena, and
corporate settings. Implementing decision models with computers will be the focus of lab sessions.

**ARME 422 Estate Planning**

Fall. 1 credit. Limited to juniors, seniors, and graduate students. S-U grades only. 

Fourteen sessions on the various aspects of estate-planning techniques. The law and use of trusts, the law of wills, federal and New York State estate and gift taxes, and substitutes for probate procedures are covered.

**ARME 424 Strategic Management**

B. L. Anderson.

This is a capstone course designed to integrate what students have learned in other ARME courses with an emphasis on strategic decisions. Issues will be approached from the standpoint of the board of directors, chief executive officer, or business unit manager. What should be considered and how strategic decisions should be made are the focus of the course. While the primary focus is on public corporations, not-for-profits, cooperatives, and small businesses, strategies will also be included. The course is built around several high-level guest executives and a series of case studies. Improving oral and written communication skills in a business context is emphasized.

**ARME 425 Small Business Management Workshop**

Fall. 4 credits. Limited to seniors. 

Prerequisite: ARME 325 or NBA 300 and permission of instructor. Term project work will amount to approximately $100 per team. 

Lecs, M W 2:30-4:25.

D. Streeter.

Students serve as counselors to small businesses in the central New York area and confront problems facing small personal enterprises. Encourages the application of business principles in businesses and the witnessing of the results of firm-level decision making. Student teams meet with the business owners and course staff at arranged times during the semester.

**ARME 426 Cooperative Management and Strategies**

Spring. 3 credits. Recommended: ARME 220 or equivalent. Estimated cost of field trip, $60. 

Lecs, M W F 12:20-1:10. 

2-day field trip required. B. L. Anderson.

Investigates the unique aspects of cooperative, membership, and not-for-profit organizations. Issues are approached from the point of view of management, the board of directors, and members. Topics include characteristics of various types of business organizations, cooperative principles, legislation, taxation, as well as the unique nature of corporate strategies, management, financing, and marketing in cooperative, membership, and not-for-profit organizations. Primary focus is on operating cooperatives in agriculture, although alternative types of cooperative organizations are discussed, such as: credit unions, insurance cooperatives, employee stock ownership plans, housing cooperatives, flexible manufacturing networks, consumer cooperatives, and membership organizations.

**ARME 430 International Trade Policy**

(Also ECON 263) 

Spring. 3 credits. Prerequisites: ECON 101-102 or equivalents and intermediate microeconomics. 

Lecs, T R 1:25-2:40. Optional section to be arranged. 

N. H. Chau.

This course examines the economic principles underlying international trade and monetary policy, and the policies, practices, and institutions that influence trade and foreign exchange markets. Emphasis is current topics in international trade policy, to trade in primary commodities, and to both developed and developing countries are also emphasized.

**ARME 431 Food and Agricultural Policies**

Spring. 3 credits. Prerequisite: intermediate microeconomics. 

Lecs, T R 1:10-12:55, sec, R 2:30-3:20 or 3:35-4:25. 

H. de Gorter.

The course deals broadly with food and agricultural policies, including price support and storage or reserve policies, agricultural protection, soil conservation programs, the structure of agriculture, domestic food subsidy programs, environmental issues, and food safety. The importance of international trade and agricultural policies in other countries is emphasized.

**ARME 433 Devolution and Public Sector Restructuring (Also City and Regional Planning 412)**

Fall. 3 credits. S-U grades optional. 

For description, see CRP 412.

**ARME 443 Food-Industry Management**

Fall. 4 credits. Limited to juniors and seniors. 

Prerequisite: ARME 448 or 342 or permission of instructor. 

G. A. German.

A case-study approach is used to examine the application of management principles and concepts to marketing and distribution problems of the food industry. Cases covering new product introductions, merchandising strategies, and investment decisions are included. Guest speakers from the food industry present case-study solutions at the Tuesday afternoon section.

**ARME 446 Food Marketing Colloquium**

Fall. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructor. S-U grades only. 

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will participate in research topics on various aspects of the food industry.

**ARME 447 Food Marketing Colloquium**

Spring. 1 credit. Limited to juniors and seniors with extensive course work in food industry management and marketing. Permission of the instructor. S-U grades only. 

ARME 446 and 447 have been developed as a two-semester special seminar that provides the weekly focus for the Food Marketing Fellows Program. The seminar will cover advanced topics in food marketing, many of which will have an important international dimension and will be presented by industry members. A number of field trips will be taken. Students will participate in research topics on various aspects of the food industry.

**ARME 448 Food Merchandising**

Spring. 3 credits. Limited to juniors and seniors. Prerequisite: ARME 240. 

Merchandising principles and practices as they apply to food industry situations. The various elements of merchandising such as buying, pricing, advertising, promotion, display, store layout, profit planning and control, and merchandising strategy are examined in this course. The consequences of food industry trends and initiatives for other industry members, public policymakers, and consumers are considered.

**ARME 449 Global Marketing Strategy**

Spring. 3 credits. Prerequisite: previous marketing course. Limited to seniors and graduate students. M W 2:55-4:10. 

J. M. Hagen.

This course examines opportunities and challenges in the rapidly changing global marketplace. Topics include the decision to serve a foreign market, alternative strategies for entry into foreign markets (such as exporting or establishing a local subsidiary), and issues in implementing those strategies. The course includes case analysis and discussion.

**ARME 450 Resource Economics (Also Economics 450)**

Fall. 3 credits. Prerequisites: MATH 111, ECON 313, and a familiarity with EXCEL. 

Dynamic models of renewable, nonrenewable, and environmental resources will be constructed to examine market allocation and optimal resource management.

**ARME 451 Environmental Economics and Policy (Also Economics 408)**

Spring. 3 credits. Prerequisites: ECON 313, or intermediate microeconomics course, and calculus. Limited to undergraduate students. S-U grades optional. 

This course explores the economic foundations for public decision making about environmental commodities and natural resources, using tools from intermediate microeconomics. Emphasis will be placed on the two leading economic paradigms of allocating public goods: the conventional economic approach, with specific emphasis on market failure, externalities, benefit-cost analysis, and the use of non-market valuation techniques, and a property rights/institutional perspective. Ecological economic concepts will also be examined.

**ARME 464 Economics of Agricultural Development (Also Economics 464)**

Spring. 3 credits. Prerequisites: ECON 101-102, or permission of instructor. 

This course is designed to provide an understanding of the economics of the agricultural sector in low-income countries. In addition, more general issues of economic development beyond the agricultural sector will be covered in order to provide the necessary context for an understanding of rural problems. Among the areas covered are the nature of development and technical change, welfare and income distribution, land
Agricultural, Resource, and Managerial Economics

reform, food and nutrition policy, food security and food aid, competition with more developed countries and international markets, the effect of U.S. policy on agricultural development, and the role of international institutions. Examples from a wide variety of developing countries will be used to illustrate the basis for economic analysis.

ARME 494 Undergraduate Special Topics in Agricultural, Resource, and Managerial Economics
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department.

ARME 497 Individual Study in Agricultural, Resource, and Managerial Economics
Fall or spring. Variable credit. S-U grades optional. Students must register with an Independent Study form (available in 154 Warren Hall). Staff. To be used for special projects designed by faculty members.

ARME 498 Supervised Teaching Experience
Fall or spring. 1-3 credits. Total of 4 credits maximum during undergraduate program. Students must register with an Independent Study form (available in 154 Warren Hall). Staff. Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty. Students are expected to teach at least one hour per week for each credit awarded. Students cannot receive both pay and credit for the same hours of preparation and teaching.

ARME 499 Undergraduate Research
Fall, spring, or summer. 1-4 credits. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 154 Warren Hall). S-U grades optional. Staff. Permits outstanding undergraduates to carry out independent study of suitable problems under appropriate supervision. Students cannot receive both pay and credit for the same hours of work.

ARME 605 Agricultural Finance and Capital Management
Fall. 3 credits. Prerequisite: ARME 405 or equivalent. $35 charge for reading materials, no text. T R 8:40-9:55. Offered alternate years. Not offered fall 1999 and fall 2001; next offered fall 2000. E. L. LaDue. Advanced topics in capital management and financing of agriculture. Special emphasis on current issues. Example topics: farm-sector funds flows, financial risk and decision analysis, agricultural finance policy, financial intermediation and intermediaries, farm growth, income, and capital evaluation, and selected topics on financing agriculture in developing countries.

ARME 608 Production Economics (also Economics 408)
Fall. 3 credits. Recommended: ECON 313 and MATH 111 or equivalents. Lecs, M W F 10:10-11:10. L. W. Tauer. The theory of production economics with emphasis on applications to agriculture and natural resources. Topics include the derivation, estimation, and use of production, cost, profit, demand, and supply functions. Production response over time and under risk is introduced.

ARME 630 Policy Analysis: Welfare Theory, Agriculture, and Trade (also Economics 430)
Spring. 4 credits. Prerequisites: ARME 608 or ECON 603, ECON 313, or equivalent. Intermediate micro theory incorporating calculus. Lecs, T R 1:25-2:40. H. de Gorter. The first half of the course surveys the theory of welfare economics as a foundation for public policy analysis. Major issues addressed include the measurement of welfare, measurement of welfare change including the compensation principle, consumer and producer surplus, willingness-to-pay measures, externalities, and the general theory of second-best outcomes. The second half of the course focuses on public policy analysis as applied to domestic agricultural policy and international trade. The domestic policy component examines major U.S. farm commodity programs and related food and macroeconomic policies and analyzes their effects on producers, consumers, and other groups. The international trade component examines the structure of world agricultural trade, analytical concepts of trade policy analysis, and the principal trade policies employed by countries in international markets.

ARME 633 Devolution and Public Sector Restructuring (also City and Regional Planning 612)
Fall. 3 credits. S-U grades optional. Lec, T 10:10-12:35. M. E. Warner. For description, see CRP 612.

ARME 634 Local Government Restructuring in New York State (also City and Regional Planning 616)
Spring. 4 credits. Prerequisite: ARME 633. S-U grades optional. Lec, F 9:05-12:05. M. E. Warner. For description, see CRP 618.

ARME 640 Analysis of Agricultural Markets (also Economics 440)
Fall, weeks 1-7 (ends Oct. 15). 2 credits. Prerequisites: ARME 411 or 415 or equivalents. Lecs, M W F 8:40-9:55. W. G. Tomek. This course is about agricultural product markets. Focus is placed on their distinguishing characteristics, criteria for evaluating performance and models of price behavior including market margins.

ARME 641 Commodity Futures Markets (also Economics 441)
Fall, weeks 8-14 (starts Oct. 18). 2 credits. Prerequisites: ARME 411 or ARME 415 or equivalents. Recommended: ARME 640. Lecs, M W F 8:40-9:55. W. G. Tomek. This course is primarily about markets for agricultural futures contracts. Emphasis is placed on models of price behavior on futures markets including relationships among cash and futures prices. These principles provide a foundation for a discussion of hedging, speculation, and public-policy issues.

ARME 651 Environmental and Resource Economics
Spring. 4 credits. Limited to graduate students. Lecs, T R 10:10-11:25. W. D. Schulze. A review of welfare economics, environmental externalities, and common property resources, and a survey of current environmental and natural resource policy. Techniques for measuring benefits and costs—including property value and wage hedonic approaches, travel cost models and contingent valuation—are covered. Survey/data collection methods are described in detail. Explore innovative market mechanisms for resolving public goods, common property, and externality problems. Students will be required to complete a paper describing their own formal economic analysis of a natural resource or environmental problem. Open to graduate students outside of economics. ARME 651 is a core course for the Environmental Management concentration/option.

ARME 652 Land Economics Problems (co-listed with Urban and Environmental Engineering 529)
Fall or spring. 1 or more credits. Limited to graduate students. Prerequisite: permission of instructor. S-U grades optional. W 7:30-9:25. E. J. Lee. Special work on any subject in the field of land and resource economics.

ARME 655 Food and Nutrition Policy (also Nutritional Sciences 685)
Spring. 3 credits. Prerequisites: introductory microeconomics and intermediate statistics (i.e. through multiple regression), or permission of instructor. S-U grades optional. Lecs, M W 2:55-4:10. D. Sahm. For description, see NS 685.

ARME 666 Economics of Development (also Economics 466)
Spring. 3 credits. Prerequisites: ECON 313 and 314 or permission of instructor. S-U grades optional. Lecs, T R 11:40-12:55. S. C. Kydd. The course is designed as an introduction to the economics of development at the graduate level. The course will be split into two major sections, the first dealing with the microeconomics of households in developing countries and the second covering macroeconomic strategy and performance. A principal goal will be to illuminate the particular features of low-income countries which are important to economic analysis and policy. Special attention will be given to issues facing countries with important agricultural and resource sectors.

ARME 667 Topics in Economic Development (also Economics 770)
Fall. 3 credits. Prerequisite: basic first-year courses in ECON or equivalent or instructor's permission. S-U grades optional. Lecs, T R 1:25-2:40. Not offered fall 1999. R. Kanbur. This course is targeted to second-year graduate students. Topics covered will vary from year to year but may include: poverty, inequality, intra-household allocation, structural adjustment, debt. Examination will be by term paper.)
equation models, and models with nonspherical error terms and specification errors. Students seeking an introduction to econometrics should take ARME 411.

**ARME 711 Econometrics II**
Fall; 4 credits. Prerequisite: ARME 710 or equivalent. BTRY 417 recommended. Lecs, M W 10:10-12:05. T. D. Mount. Coverage beyond that of ARME 710 of linear regression models, including alternative methods of incorporating non-sample information and testing restrictions. Diagnostic techniques for collinearity and influential observations, pooling data, stochastic coefficients, limited dependent variables and latent variables.

**ARME 712 Quantitative Methods**
Fall; 4 credits. Prerequisite: some formal training in matrix algebra. A course at the level of BTRY 417 is highly recommended. Lecs, M W F 8:40-9:55. R. N. Boisvert. A comprehensive treatment of linear programming and its extensions, including postoptimality analysis. Topics in nonlinear programming, including separable, spatial equilibrium and risk programming models. Input-output models and their role in social accounting matrices and computable general equilibrium models will be discussed. Applications are made to agricultural, resource, and regional economic problems.

**ARME 723 Multivariant Methods II**
Spring; 3 credits. Prerequisite: ECON 609. S-U only. Lecs, M W F 9:05-9:55. J. M. Conrad. This course is concerned with the analysis and optimization of dynamic systems. Course objectives are to (1) present the basic theory of dynamical systems and dynamic optimization, (2) introduce associated methods of optimization and numerical analysis, (3) review some applications of dynamic analysis from various subfields in economics, and thereby (4) equip students with basic theory and methods to perform applied research on dynamic allocation problems.

**ARME 732 Advanced Production Economics**
Fall; 3 credits. Prerequisite: ARME 608, 710, or equivalents; ECON 609 is highly recommended. Offered alternate years. Offered fall 1999 and 2001. Not offered fall 2000. Hours to be arranged. R. N. Boisvert. Theoretical and mathematical developments in production economics, with emphasis on estimating production relationships, scale economies, technical change, factor substitution. Developments in flexible functional forms, duality and dynamic adjustment models are emphasized. Discussions of other topics (risk, supply response, and household production functions) based on student interest.

**ARME 710 Econometrics I**
Spring; 4 credits. Prerequisites: matrix algebra and statistics at the level of BTRY 417 and 601 (BTRY 409 or ECON 619 preferred). Undergraduates must have permission of instructor. Lecs, M W F 8:40-9:55. W. G. Tomek. This intermediate-level course covers selected statistical models and associated estimators used in econometric, dynamic and other stochastic regressor models, seemingly unrelated regression and simultaneous

**ARME 731 Seminar on the Political Economy of Agriculture and Trade**

**ARME 735 Public Finance: Resource Allocation and Fiscal Policy (also Economics 735)**
Fall; 4 credits. Not offered fall 1999. Time to be arranged. R. Kanbur. For description, see ECON 735.

**ARME 740 Agricultural Markets and Public Policy**
Spring, weeks 1-7; 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Offered each fall. Lecs, M W F 9:05-9:55. J. M. Conrad. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets; testing auction institutions; market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities, and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

**ARME 717 Research Methods in Agricultural Economics**
Spring; 2 credits. Limited to graduate students. M 2:30-4:25. R. N. Boisvert. Discussion of the research process and scientific method as applied to agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the semester each student develops a research proposal that may be associated with his or her thesis.

**ARME 730 Seminar on International Trade Policy: Agriculture, Resources and Development**
Spring; 3 credits. Limited to graduate students. Prerequisites: ARME 630 or equivalent. Offered alternate years. Offered spring 2000 and 2002. Not offered spring 2001. Hours to be arranged. D. R. Lee. This course examines selected topics in the professional literature on international trade policy, focusing on agricultural trade and related topics, including the liberalization of trade and environmental linkages, technological change and trade policy, and agricultural trade and development.

**ARME 731 Seminar on the Political Economy of Agriculture and Trade**

**ARME 735 Public Finance: Resource Allocation and Fiscal Policy (also Economics 735)**
Fall; 4 credits. Not offered fall 1999. Time to be arranged. R. Kanbur. For description, see ECON 735.

**ARME 740 Agricultural Markets and Public Policy**
Spring, weeks 1-7; 2 credits. Limited to graduate students. Prerequisite: familiarity with multiple regression techniques at the ARME 411 level or higher. Offered each fall. Lecs, M W F 9:05-9:55. J. M. Conrad. Students will participate as subjects in a series of illustrative computerized experiments ranging from double auctions to public goods provision. Topics covered include experimental methods; decisions and games; markets; testing auction institutions; market power (monopoly, oligopoly); bargaining, compensation and performance; public goods; externalities, and voting; information and uncertainty; and economic anomalies. Students must design and write a paper describing their own experiment.

**ARME 717 Research Methods in Agricultural Economics**
Spring; 2 credits. Limited to graduate students. M 2:30-4:25. R. N. Boisvert. Discussion of the research process and scientific method as applied to agricultural economics. Topics include problem identification, hypotheses, sources of data, sampling concepts and designs, methods of collecting data, questionnaire design and testing, field organization, and analysis of data. During the
This course focuses on models of individual, household, firm/farm, and market behavior in low- and middle-income developing economies. Topics covered include agricultural land, labor and financial institutions, technology adoption, food security and nutrition, risk management, intra-household analysis, reciprocity networks, and product factor markets analysis. Empirical investigation is emphasized.

[ARME 763 Macro Policy in Developing Countries]
Spring. 3 credits. Prerequisites: ECON 609, 610, 613 (may be taken concurrently), or permission of instructor. Offered alternate years. Not offered spring 2000; next offered spring 2001. Lec, T 2-4:25. S. C. Kyle.

This course examines macroeconomic policies in developing countries and their interaction with economic growth, development, and stability. Theoretical models useful for analysis of macro policies will be covered as well as an examination of empirical studies. Emphasis will be on research topics of current interest to students and professionals in the field, particularly those relating to the interaction of macro policy with micro and sectoral analysis.

[ARME 800 Master's-Level Thesis Research]
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted specifically to a master's program.

[ARME 900 Graduate-Level Thesis Research]
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

[ARME 901 Doctoral-Level Thesis Research]
Fall or spring. 1–9 credits. Prerequisite: permission of graduate committee chair. S-U grades only. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

ANIMAL SCIENCE

AN SC 100 Domestic Animal Biology I
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05; sec, T W or R 2–4:25. W. B. Currie, M. L. Thonney, and staff.

An introduction to the science of raising animals in the context of commercial animal production. Lectures and labs address the biology of economically important species (morphology, anatomy, and physiology) and application of the biology to the management of animals within major livestock industries. Topics covered include fundamentals of anatomy, regulatory mechanisms, vital systems, digestion, and metabolism. Students care for small numbers of cattle, sheep, pigs, and chickens in different phases of their life cycle to maximize hands-on contact. Living animals will be used noninvasively, and fresh organs and tissues from dead animals will be used in laboratories.

AN SC 105 Contemporary Perspectives of Animal Science
Spring. 1 credit. Limited to freshmen, sophomores, and first-year transfers. T 1:25 or W 12:20. R. C. Gorewit and D. J. Cherney.

A forum to discuss the students' career planning and the contemporary and future role of animals in relation to human needs.

AN SC 120 Animal Domestication and Behavior
Fall. 3 credits. T R 8:40–9:55. E. A. Oltenacu.

This Freshman Writing Seminar will explore the relationship between humans and their domestic animals. Students will study the role of animal behavior in the domestication process, both historically and in modern attempts to domesticate new species, and in finding solutions to current issues related to animal welfare.

AN SC 150 Domestic Animal Biology II
Spring. 4 credits. S-U grades optional. Lecs, M W F 9:05; lab/disc T W or R 2–4:25. W. R. Butler and staff.

Second of a two-semester sequence (100/150) applying the basic biology of growth, defense mechanisms, reproduction, and fatation to aspects of the production and care of domestic animals. Fresh tissues and organs from domestic animals along with preserved specimens will be used in laboratories, exercises, and demonstrations.

AN SC 212 Animal Nutrition
Fall. 4 credits. Prerequisite: CHEM 208 or equivalent. Recommended: AN SC 100 and 150. Lecs, M W F 10:10; lab, M T W R or F 1:25–4:25. A. W. Bell and D. J. Cherney.

An introduction to animal nutrition, including digestive physiology and metabolism of livestock and other species; nutrient requirements and requirements for different aspects of animal production and performance; principles of feed evaluation and ration formulation. Laboratory classes include gastrointestinal tract dissections and a nutritional experiment performed on a laboratory or farm animal species.

[AN SC 213 Nutrition of the Dog]

Nutrition of the dog. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

[AN SC 214 Nutrition of Exotic Animals]

Principles of nutrition for exotic animals. Nutrient requirements, sources of nutrients, feeding management systems, and ration formulation will be discussed. Signs of nutrient deficiencies and excesses will be described.

[AN SC 215 Exotic Avian Husbandry and Propagation]
Spring. 2 credits. Limited to 100 students. Prerequisites: AN SC 100, 150 or Bio G 103, 104 or equivalent. Lec, M 2:30–4:30. J. Parks and D. Muscarella.

Natural history, care, management, health and breeding of exotic avian species with emphasis on psittacines (parrots and related species) and raptors (birds of prey). Lectures, demonstrations, and local field trips.

[AN SC 216 Nutrition of the Cat]

Nutrition of the cat. Digestive physiology, nutrient requirements, feeding practices, and interactions of nutrition and disease.

AN SC 221 Introductory Animal Genetics

An examination of basic genetic principles and their application to the improvement of domestic animals, with emphasis on the effects of selection on animal populations.

AN SC 250 Dairy Cattle Principles

Introduction to the background and scientific principles relating to dairy cattle production. Laboratories are designed to provide an understanding of production techniques. This course is a prerequisite for AN SC 251, 351 and AN SC 355.

AN SC 251 Dairy Cattle Selection

Application of scientific principles of genetic programs in herds with different breeding programs. Emphasis on economical traits to be used to improve genetic progress and herd profitability.

AN SC 265 Horses
Fall. 3 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. S-U grades optional. Lecs, T R 9:05, lab, R 1:25–4:25. C. Collyer.

Selection, management, feeding, breeding, and training of light horses.

AN SC 280 Molecular Biology in Agriculture and Medicine
Fall. 2 credits. Prerequisite: one year of introductory biology. Lec, T R 10:10. S. M. Quirk.

The applications of molecular biology to animal research, animal agriculture, industry and medicine are discussed. An introduction of basic recombinant DNA techniques is followed by topics such as transgenic animal production, mammalian cloning, genome projects, gene therapy and genetic screening. Ethical issues raised by use of these techniques will be discussed.

AN SC 290 Meat Science (also Food Science 290)
Fall. 2 or 3 credits. Lecs, T R 11:15; lab, M or R 12:20–2:20. Lecs, C. Collyer. 2 credits; lecture plus lab, 3 credits; lab cannot be taken without lecture. Staff.
AN SC 300 Animal Reproduction and Development
Spring. 3 credits. Prerequisite: AN SC 100-150 or equivalent and one year of introductory biology. Lecs, M W F 10:10.
J. E. Parks.
Comparative anatomy and physiology of mammalian and avian reproduction, with emphasis on domestic and laboratory animals. Fertilization through embryonic development, pregnancy, and growth to sexual maturity; emphasis on physiological mechanisms and application to fertility regulation. Separate laboratory offered to demonstrate fundamental aspects of reproduction and reproductive technology.

AN SC 301 Animal Reproduction and Development Lab
Spring. 1 credit. Prerequisite: AN SC 100-150 or equivalent. Concurrent enrollment in or completion of AN SC 300 required to register. Labs, M W F or M 1:25-4:25. Each lab limited to 30 students.
J. E. Parks.
Demonstration of fundamental principles and applied aspects of mammalian and avian reproduction. A limited number of live animals will be used in some demonstrations. Dissection and examination of tissues from vertebrate animals will be included in selected laboratories.

AN SC 305 Farm Animal Behavior (also BIOAP 312)
Spring. 2 credits. Prerequisites: introductory course in animal behavior, at least one animal production course or equivalent experience is recommended. S-U grades optional. Lec, TR 11:15. E. A. Oltenacu and K. A. Houpt.
The behavior of production species (ovine and mammalian production systems) is discussed with an emphasis on the successful management of any animal production program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

AN SC 314 Practice in Critical Thinking in the Biological Sciences
Fall. 1 credit. M 12:20. A. van Tienhoven.
The course will consist of four or five presentations by the instructor of the "scientific method." Each week the students will critically review a published paper in the biological sciences as if it were a manuscript and submit their typed review. Each week, a different student will be designated to collate these reviews and write an evaluation to the "editor-in-chief." This evaluation will be reported verbally and in writing. Students thus will learn to think, write, and speak critically. Emphasis is placed on students participating in class and being exposed to the "scientific method." Each student will complete a project.

AN SC 321 Applied Animal Genetics Seminar
Fall. 2 credits. Prerequisite: AN SC 221 or equivalent. S-U grades only. Lec, M 12:20, disc M 1:25. P. A. Oltenacu and E. J. Pollak.
Topics of interest related to the genetic definition and control of qualitative and quantitative traits in various species of animals are presented. Genetic conservation programs and current animal improvement strategies as well as challenges presented by new developments in reproductive biology and molecular genetics are addressed in a lecture-discussion-type format.

AN SC 322 Applied Animal Genetics-Laboratory
Fall. 1 credit. Prerequisite: concurrent registration in AN SC 321 or instructor's permission. S-U grades only. M 2:30-4:25. P. A. Oltenacu and E. J. Pollak.
Many genetic concepts addressed in AN SC 321 are explored in depth using a computer-assisted instruction environment. Mendelian inheritance of qualitative traits, detection of carriers of recessive genes, artificial selection, inbreeding and heterosis, design and evaluation of genetic improvement and conservation programs, and role of population size are among the topics considered.

AN SC 323 Equine Genetics Seminar
Fall. 1 credit. Prerequisite: AN SC 221 or equivalent. S-U grades only. Disc, TR 1:25-2:15. P. A. Oltenacu and staff.
Topics of equine genetics will be presented and discussed. Independent library research, a short written paper, and an oral presentation will be important parts of this course. Lecture topics may include the genetic aspects of color, abnormalities, metabolic diseases, unsoundness, and performance.

AN SC 330 Poultry Biology, Nutrition, and Management
Spring. 2 credits. Prerequisites: AN SC 100 and 150 or permission of instructor. Offered alternate years. Next offered spring 2000, 2002; not offered spring 2001.
Lec, TR 10:10-11:15; lab, T 2:00-4:25. F. A. Boisclair and staff.
Topics of poultry nutrition, breeding and embryology are discussed in relation to their practical applications. The student becomes familiar with the concept of least-cost feed formulation for poultry. The course also is designed to provide an understanding of current technology involved in commercial poultry production.

AN SC 341 Biology of Lactation
Spring. 2 credits. Prerequisite: AN SC 100-150 or Animal Physiology. Offered alternate years. Next offered spring 2000, 2002; not offered spring 2001.
Lec, TR 9:00-9:55. Y. R. Boisclair and staff.
A comprehensive survey of the biology of the mammary gland. Lectures cover: 1) basic aspects such as anatomy and development of the mammary gland, biochemical and hormone regulation of milk synthesis and regulation of gene expression in the mammary cells; 2) practical aspects such as the impact of lactation on nutrition, reproduction, and diseases. Lactation in the dairy cow provides the primary emphasis next to the course, but examples from other mammals including humans will be used.

AN SC 341 Dairy Herd Management
Application of scientific principles to practical herd management with emphasis on the roles of reproduction, milking, housing, records, and production economics. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 355 Dairy Nutrition and Health
Spring. 3 credits. Prerequisite: AN SC 250 and permission of instructor. Letter only. Lecs, T R 9:05, lab, W 1:25-4:25.
D. M. Galton, E. Chase and T. L. Batchelder.
Application of scientific principles to practical herd management with components of nutrition and herd health. Laboratories emphasize practical applications, analyses of alternatives, decision making, field trips, and discussion.

AN SC 360 Beef Cattle
M. L. Thonney.
Emphasis is on the management of reproduction, nutrition, and selection in beef cattle enterprises. A cattle growth model is studied. Laboratories acquaint students with management skills through computerized simulations and working directly with cattle. Students spend several days during the semester feeding and caring for cows and their newborn calves.

AN SC 365 Equine Nutrition
Fall. 3 credits. Prerequisites: AN SC 100, 212, and 265 or equivalent. S-U grades optional. Lec, M W F 9:05-9:55.
H. F. Hintz.
The principles of nutrition for horses will be presented. Digestive physiology, sources of nutrients, feeding programs for various classes of horses and interactions of nutrition and diseases will be discussed.

AN SC 370 Swine Nutrition and Management
Fall. 3 credits. Recommended: AN SC 212. Lec, TR 11:15; lab, T 2:45. Offered alternate years. Next offered fall 2000.
X. G. Lei and K. Roney.
This course focuses on swine nutrition, feeding, and management. Lectures are integrated basic nutrition and swine system including pig biology, digestive and metabolic development, nutritional biochemistry and physiology, impact of swine nutrition on environment, use of pig model in medicine, and current swine nutrition and biotechnology. Laboratory practice, animal projects, and problem troubleshooting are offered.

AN SC 380 Sheep
M. L. Thonney.
Emphasis is on the breeding, feeding, handling, and selection of sheep from a production-system approach. Lectures and laboratories are designed to provide students a practical knowledge of sheep production as
well as the scientific background for improved management practices. Students work directly with sheep during laboratories and spend several days during the semester feeding and caring for ewes and their newborn lambs.

AN SC 392 Animal Growth Biology Fall. 2 credits. Not open to freshmen; sophomores by permission of instructor only. Prerequisites: one year of college biology and one course in animal or human physiology. AN SC 212 and 221 or equivalent. Lec, R 1:25–5:20; sec, F 1:25–2:15. Staff.

A detailed discussion of the morphological and physiological aspects of growth of domestic and laboratory animals. Overview of the cell cycle and early embryo growth regulation, differentiation and cellular aspects of tissue development and growth, maternal influences on fetal growth and allometric patterns of postnatal growth are discussed. Endocrine, genetic and nutritional influences on protein and lipid metabolism, nutrient requirements and composition of growth will be emphasized.

An analysis of constraints on livestock production in developing countries of the tropics, economic objectives and risk, and production methods. Emphasis is on strategic use of animal and plant resources, animal performance with inputs restricted, decision making, and alternative systems of production. Principles, real examples, independent study projects, and classroom interactions will aid problem-solving efforts to improve food security.

AN SC 401 Applied Cattle Nutrition Fall. 4 credits. Prerequisites: AN SC 100 and 212 (or equivalent); AN SC 355 is encouraged. Lecs, M W F 10:10; lab, M 1:25–4:25. M. E. Van Amburgh.

An applied approach to predicting nutrient requirements and feed utilization to meet requirements with wide variations in cattle type, feed composition, and environmental conditions. Dairy cattle are emphasized. Nutrient management to minimize cost of production and environmental effects is discussed. Computer models (Cornell Net Carbohydrate and protein system) are used in the laboratory to apply the information presented in lectures, including evaluation of feeding programs on case study farms. Course is designed for juniors, seniors, and entering graduate students.

AN SC 412 Livestock and the Environment Spring. 2 or 4 credits. No prerequisite for 2 credits (weeks 1–7). Students who have taken AN SC 411 (formerly 312) can sign up for 4 credits (full semester) for completing an independent project on whole-farm environmental planning. Lec, T R 11:15–12:05. D. G. Fox.

This course will explore controversial issues surrounding livestock and the environment, including competition with humans for food resources, animal and human health, and impact of livestock farms on environmental/community problems, including odor, pathogens, and excess nutrient effects on water quality. Those taking 2 additional credits will use computer software tools to evaluate aspects of whole-farm nutrient and environmental management on case study farms, with data collection and analysis continuing throughout the semester.

AN SC 414 Ethics and Animal Science Fall. 2 credits. Enrollment limited to 20 students, juniors and seniors only. Lecs, M 12:20, disc, W 12:20–1:10. One Saturday morning, required farm tour 9 a.m.–1 p.m., Saturday, September 4, 1999. D. J. Cherney.

Exploration of the place of animals in the biological world, origins of ethics and morality, specism, the use of animals for research and agricultural purposes, transgenic animals. A report on the farm tour or a book review, participation in discussion and a project of the student will be used to evaluate the performance of each student.

AN SC 420 Quantitative Animal Genetics Spring. 2 credits. Prerequisite: AN SC 221 or equivalent. Limited to 30 students. Lecs, M 12:20; sec, M 2:4–25. E. J. Pollak.

A consideration of problems involved in improving livestock, application of the theory of quantitative genetics, with emphasis on genetic evaluation and analysis of data for genetic parameters. Computer labs use interactive matrix algebra program for problem solving.

AN SC 425 Gamete Physiology and Fertilization Fall. 2 credits. Limited to 50 students. Prerequisite: AN SC 300 or equivalent. Offered alternate years. Next offered fall 1999, 2001; not offered fall 2000. Lecs, R 2:30–4:25. J. E. Parks.

Study of the formation, growth, differentiation, and maturation of mammalian sperm and oocytes; gamete transport and interaction with male and female reproductive tracts; and cytological, physiological, and molecular changes required for fertilization. Lecture, discussion, and aspects of gamete physiology and in vitro technologies such as cryopreservation, oocyte maturation and fertilization.

AN SC 427 Fundamentals of Endocrinology Fall. 3 credits. Prerequisite: animal or human physiology or permission of instructor. Lecs, M W F 9:05. P. A. Johnson.

Physiology and regulation of endocrine secretions. Neuroendocrine, reproductive, growth, and metabolic aspects of endocrinology are emphasized. Examples are selected from many animals, including humans.

AN SC 456 Dairy Management Fellowship Spring. 2 credits. Limited to seniors. Prerequisites: AN SC 351 and 355, and permission of instructor. S-U grades only. Hours to be arranged. D. M. Galton and T. Batchelder.

The program is designed for undergraduates who have a sincere interest in dairy farm management. Objectives are to gain further understanding of the integration and application of dairy farm management principles and programs with respect to progressive dairying and related industries.

AN SC 494 Special Topics in Animal Science Fall or spring. 4 credits maximum. Prerequisite: undergraduate standing. S-U grades only. Offerings vary by semester and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

AN SC 496 Introduction to Research Fall. 1 credit. S-U grades only. Required of students undertaking Honors in Animal Science. Open to Honors students in other programs and those planning to pursue research, by permission of the instructor. Disc, M 12:20–1:10. W. B. Currie.

An exposure to the world of scientific research; identifying problems; devising hypotheses, realistic research plans; scientific writings and other forms of communication, including the publishing of science; finding and managing reference materials; cost of research, funding and beneficiaries; obligations imposed on investigators by society and regulatory agencies; responsibilities and freedom in science; ethical issues that impact on scientists—interactions between sponsors, investigators, professors, trainees and others. Students make oral presentations and prepare brief items of technical writing.
AN SC 497 Individual Study in Animal Science
Fall or spring. 1-3 credits; may be repeated for credit. Intended for students in animal sciences. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Staff. May include individual tutorial study or a lecture topic selected by a professor. Since topics may change, the course may be repeated for credit.

AN SC 498 Undergraduate Teaching
Fall or spring. 1, 2 or 3 credits; limited to two experiences during undergraduate career. Limited to students with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to consolidate the student's knowledge. A participating student assists in teaching a course assigned with the student's education and experience. The student is expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and to discuss teaching objectives, techniques, and subject matter with the professor in charge.

AN SC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

AN SC 601 Amino Acids (also NS 601)
A course emphasizing the dynamic aspects of protein structure and function, amino acid transport and amino acid and nitrogen metabolism, and their relationships to the nutritional requirements for amino acids.

AN SC 603 Mineral Nutrition: Metabolic, Health, and Environmental Aspects (also NS 603)
This course focuses on the metabolic roles and environmental impacts of mineral nutrition in animal, human, and food systems. Team-taught lectures include general biochemical and physiological aspects of mineral nutrition and specific mechanisms of gene expression, regulation, and mammalian health disorders associated with individual elements.

AN SC 604 Vitamins (also NS 604)
Fall. 2 credits. Lec. T R 10:10. G. F. Combs, Jr.
Tested by discussion lectures on nutritional aspects of the vitamins, including recent developments in nutritional and biochemical interrelationships with other nutrients and metabolites.

AN SC 606 Ruminant Nutrition: Microbial Ecology and Forage Chemistry
This course provides an overview of ruminant nutrition with an emphasis on microbial ecology, forage chemistry and rumen function.

AN SC 610 Seminar
Fall and spring. 1 credit. S-U grades only.

AN SC 619 Field of Nutrition Seminar
Fall and spring. No credit. No grades given.
Lectures on current research in nutrition.

AN SC 620 Seminar in Animal Breeding
Fall and spring. 1 credit. Limited to graduate students with a major or minor in animal breeding. S-U grades only. Hours to be arranged.

AN SC 621 Seminar: Endo/Reprod Biology
Fall and spring. 1 credit. Prerequisites: permission of instructor. Registration limited to graduate students. S-U grades only. Lec. W 4:00. W. R. Butler and staff.
Current research in reproductive physiology is presented by staff members, graduate students, and visitors.

AN SC 625 Nutritional Toxicology (also TOX 625)
Exploration of toxicological principles and a selective survey of natural food and feed toxins. At the end of this course, students will understand relationships between nutrition and toxicology; be prepared to conduct research concerning the effects of naturally occurring toxins, and be able to use multimedia to present their understanding of a class of toxicants. Occasionally, the class will take walking field trips. In addition, students will read printed and electronic communications and create STELLA simulation models and a system of Web pages related to a specific family of toxicans.

AN SC 630 Bioenergetics/Nutritional Physiology
An integrated systems approach to understanding the nutritional physiology and energy metabolism of ruminant productivity. Emphasis on extracellular metabolism of tissue and organ metabolism of specific nutrients in relation to pregnancy, lactation, and growth. Critical discussion of techniques and approaches to the study of animal bioenergetics.

AN SC 640 Individual Study in Animal Science
Fall or spring. 1 or more credits. S-U grades optional. Hours to be arranged. Staff. Study of topics in animal science more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

AN SC 650 Molecular Techniques for Animal Biologists
Spring. 4 credits. Prerequisites: BIOBM 330 or BIOBM 332 or BIOBM 333 or equivalents and permission of instructors. Offered alternate years. Next offered spring 2000. R. L. Quaas.
A laboratory course designed for students with little or no experience with techniques in molecular biology. Emphasis will be on modern techniques used in conducting research in animal-related sciences such as nutrition, physiology, pharmacology and immunology (e.g., subcloning, mutagenesis of DNA, RT-PCR, DNA sequencing and analysis, analysis of gene expression, protein expression). Lectures will introduce laboratory exercises and supplement laboratory topics. Students will perform an independent project requiring time outside scheduled laboratories and will give a scientific presentation.

AN SC 694 Special Topics in Animal Science
Fall or spring. 4 credits maximum. Prerequisite: graduate standing. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester and will be advertised by the department. Courses offered under this number will be approved by the department curriculum committee and the same course will not be offered more than twice under this number.

AN SC 720 Advanced Quantitative Genetics
This course covers statistical methods used in a variety of problems in the quantitative genetics of animal populations. The initial focus is the estimation of breeding values for purposes of ranking animals for selection. The core of the course is the mixed linear model, linear estimators and predictors are treated extensively. The importance of appropriate modeling is emphasized. Generalizations to nonlinear models, via Bayesian principles, are made, i.e., inferences from posterior distributions.

AN SC 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students admitted specifically to a Master's program.

AN SC 900 Graduate-Level Thesis Research
Fall or spring. Credit to be arranged. maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty. For students in a Ph D. program only before the 'A' exam has been passed.
AN SC 901 Doctoral-Level Thesis

Research
Fall or spring. Credit to be arranged, maximum 12 credits/semester. Prerequisite: permission of adviser. S-U grades only. Graduate faculty.

For students admitted to candidacy after the 'A' exam has been passed.

BIOMETRY AND STATISTICS

N. S. Altman, chair, G. Casella, C. Castillo-Chavez, M. Contreras, C. F. McCulloch, S. J. Schwager

The Department of Biometrics in Statistical Science offers the following courses in Biometry and Statistics for an hour a week. Credit is not given for study in Biometry and Statistics.

BTRY 90 Introduction to Biomathematics

Spring. 1 credit. S-U grades only. Prerequisite: one year of college-level algebra. An introductory course on the use of mathematics, computing, probability, and statistics in the biological sciences. Through-out the course, biological examples are used to develop quantitative ideas. Topics, which may change from semester to semester, will be selected from those covered in Biometry 101. Each semester, a selection of topics from a list that includes basic statistics and probability, curve fitting, elementary matrix algebra, differentiation, integration, and difference and differential equations, will be taught. The course will meet twice a week for 30 minutes. Each class will be followed by a computer laboratory for an hour and fifteen minutes, where the students will use Mathematica, a symbolic mathematics and graphs package to illustrate and expand the concepts covered in class.

BTRY 100 Statistics and the World We Live in (also STBTRY 100)

Fall. 3 credits. Major concepts and approaches of statistics are presented at an introductory level. Three broad areas are covered: collecting data, organizing data, and drawing conclusions from data. Topics include sampling, statistical experimentation and design, measurement, tables, graphs, measures of center and spread, probability, the normal curve, confidence intervals, and statistical tests.

BTRY 101 Introduction to Biometry I

Spring. 4 credits. S-U grades optional. Prerequisite: pre-calculus. An introductory survey course in the use of mathematics, computing, and probability and statistics in the biological sciences. Case studies are used to develop the ideas of statistics, curve fitting, elementary matrix algebra, basic probability, and differentiation. Selected topics in differential and difference equations and integration will also be covered. A symbolic mathematics and graphics package (e.g., Maple or Mathematica) will be taught and used throughout the course.

BTRY 102 Introduction to Biometry II

Fall. 4 credits. S-U grades optional. Prerequisite: BTRY 101 or 2 semesters of calculus.

The course is the continuation of Biometry 101. It provides a more in-depth view of the use of mathematics, computing, and probability and statistics in the biological sciences. Topics covered include discrete and continuous models of biological processes, multivariable calculus, optimization methods, matrix algebra, and Markov models.

BTRY 261 Statistical Methods I (also STBTRY 261)

Fall. 4 credits. Letter only. Prerequisite: BTRY 100 (formerly 200) or prior experience in data collection and interpretation. Limited to undergraduates.

Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one and two-way analysis of variance, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques. The lectures may co-meet with BTRY 601. Sections, homeworks and exams are administered separately.

BTRY 302 Statistical Methods II (also STBTRY 302)

Spring. 4 credits. Letter only. Prerequisite: BTRY 261 or BTRY 601. Limited to undergraduates.

A continuation of BTRY 261. Emphasis is on the use of multiple regression analysis, analysis of variance and related techniques to analyze data in a variety of situations. Topics include least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria, principles of experimental design, analysis of variance for a number of designs including multeway factorial, nested and split plot designs; comparing two or more regression lines; analysis of covariance. Emphasis is on the appropriate design of studies prior to data collection and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done using the SAS statistical package. The lectures co-meet with BTRY 602. Sections, homeworks and exams are administered separately.

BTRY 400 Biometry Seminar (also STBTRY 400)

Fall and spring. 1 credit. S-U grades only. Prerequisite: BTRY 302 or BTRY 409 or by permission of the instructor.

Students will attend weekly seminar, the Biometrics Unit Discussion Series. Can be taken concurrently with BTRY 600 only with permission of instructor. Students can only take course twice.

BTRY 408 Theory of Probability (also STBTRY 408)

Fall. 4 credits. Prerequisite: MATH 112, 122, or 192, or permission of instructor. An introduction to probability theory: foundations, combinatorics, random variables and their probability distributions, expectations, generating functions, and limit theory. Biological and statistical applications are the focus. Can serve as either a one-semester introduction to probability or a foundation for a course in the theory of statistics.

BTRY 409 Theory of Statistics (also STBTRY 409)

Spring. 4 credits. Prerequisite: BTRY 408 or equivalent.

The concepts developed in BTRY 408 are applied to provide an introduction to the classical theory of parametric statistical inference. Topics include sampling distributions, parameter estimation, hypothesis testing, and linear regression.

BTRY 417 Matrix Algebra

Spring. 3 credits. Prerequisite: precalculus mathematics.

Definitions, basic operations and arithmetic, determinants, and the inverse matrix. Rank, linear dependence, canonical forms, linear equations, generalized inverses and eigenvectors and vectors. Emphasis is on understanding basic ideas and on developing skills for applying matrix algebra.

BTRY 451 Mathematical Modeling of Populations

Fall. 3 credits. S-U grades optional. Prerequisites: MATH 112, BTRY 408, or equivalent. Offered alternate years. Not offered 1999–2000, offered fall 2000.

This course will emphasize stochastic and deterministic models relevant to population genetics and population biology. Computer simulations and use of mathematical packages will be an integral part of the course.

BTRY 494 Undergraduate Special Topics in Biometry and Statistics (also STBTRY 494)

Fall or spring. 1-3 credits. S-U grades optional. A course of lectures selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

BTRY 495 Statistical Consulting (also STBTRY 495)

Spring. 2 credits. S-U grades only. Limited to undergraduates. Prerequisites or co-requisites: BTRY 302 and 409 and permission of instructor.

Participation in the Department of Biometrics consulting service: faculty-supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered during previous weeks.

BTRY 497 Undergraduate Individual Study in Biometry and Statistics (also STBTRY 497)

Fall and spring. 1-3 credits. S-U grades only. Students must register with an Independent Study form (available in 140 Roberts Hall).
Consists of individual tutorial study selected by the faculty. Because topics usually change from year to year, this course may be repeated for credit.

**BTRY 498 Undergraduate Supervised Teaching (also STBTRY 498)**
Fall and spring. 2 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 499 Undergraduate Research (also STBTRY 499)**
Fall or spring. 1–3 credits. S-U grades optional. Limited to statistics and biometry undergraduates. Prerequisite: permission of faculty member directing research. Students must register with an Independent Study form (available in 140 Roberts Hall).

**BTRY 600 Statistics Seminar (also STBTRY 600)**
Fall and spring. 1 credit. S-U grades only. Prerequisite or corequisite: BTRY 409 or permission of instructor.

**BTRY 601 Statistical Methods I (also STBTRY 601)**
Fall and summer. 4 credits. Limited to graduate students; others by permission of the instructor. Statistical methods are developed and used to analyze data arising from a wide variety of applications. Topics include descriptive statistics, point and interval estimation, hypothesis testing, inference for a single population, comparisons between two populations, one- and two-way analysis of variance, comparisons among population means, analysis of categorical data, and correlation and regression analysis. Interactive computing is introduced through MINITAB statistical software. Emphasis is on basic principles and criteria for selection of statistical techniques.

**BTRY 602 Statistical Methods II (also STBTRY 602)**
Spring. 4 credits. Limited to graduate students; others by permission of instructor. Prerequisite: BTRY 601 or equivalent.
A continuation of BTRY 601. Emphasis is on the use of multiple regression analysis, analysis of variance, and related techniques to analyze data in a variety of situations. Topics include an introduction to data collection techniques, least squares estimation, multiple regression, model selection techniques, detection of influential points, goodness-of-fit criteria; principles of experimental design; analysis of variance for a number of designs, including multi-way factorial, nested, and split plot designs; comparing two or more regression lines; and analysis of covariance. Emphasis is on appropriate design of studies prior to data collection, and the appropriate application and interpretation of statistical techniques. For practical applications, computing is done with the MINITAB and SAS statistical packages.

**BTRY 603 Statistical Methods III (also STBTRY 603)**
Spring. 3 credits. Prerequisite: BTRY 601 and 602 or permission of instructor. Offered alternate years. Next offered spring 2001.
Category I data analysis, including logistic regression, loglinear models, stratified tables, matched pairs analysis, polynomial response and ordinal data. Applications in biomedical and social sciences.

**BTRY 604 Statistical Methods IV: Applied Design (also STBTRY 604)**
Spring. 3 credits. Prerequisites: BTRY 601 and 602 or permission of instructor. Offered alternate years. Not offered spring 2001.
Applications of experimental design including such advanced designs as split plots, incomplete blocks, fractional factorials. Use of the computer for both design and analysis will be stressed, with emphasis on solutions of real data problems.

**BTRY 639 Epidemiology Seminar (also STBTRY 639)**
Spring. 1 credit. S-U grades only. Permission of instructor. This course will develop skills in the preparation and interpretation of epidemiological data by discussing current research topics and issues.

**BTRY 662 Mathematical Ecology (also STBTRY 662)**
Fall. 3 credits. S-U grades optional. Prerequisite: a year of calculus and a course in statistics.
Mathematical and statistical analysis of populations and communities: theory and methods. Spatial and temporal pattern analysis, deterministic and stochastic models of population dynamics. Model formulation, parameter estimation, and simulation and analytical techniques.

**BTRY 672 Topics in Environmental Statistics (also STBTRY 672)**
Fall and spring. 2 credits. S-U grades only. Prerequisite: BTRY 601 or permission of instructor.
This course is a discussion group focusing on statistical topics and issues. Participation in the Department of Biometrics consulting service: faculty supervised statistical consulting with researchers from other disciplines. Discussion sessions for joint consideration of selected consultations encountered by the previous weeks. From consultations usually change from semester to semester, the course may be repeated for credit.

**BTRY 705 Statistical Consulting (also STBTRY 705)**
Fall and spring. 2–4 credits. S-U grades only. Limited to graduate students. Permission of instructor and chair of special committee plus at least two advanced courses in statistics and biometry. Students assist in teaching a course appropriate to their previous training. Students will meet with a discussion or laboratory section and regularly discuss objectives with the course instructor.

**BTRY 795 Master's Level Thesis Research**
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.
Research at the M.S. level.

**BTRY 900 Graduate Level Dissertation Research**
Fall or spring. Credit to be arranged. S-U grades only. Limited to candidates for graduate degrees. Prerequisite: permission of the graduate field member concerned.
Research at the Ph.D. level.

**BTRY 901 Doctoral Level Dissertation Research**
Fall or spring. Credit to be arranged. S-U grades only.
An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 116 Communication in Social Relationships
An overview of current knowledge about communication, with particular emphasis on interpersonal communication. Introduction to a wide range of contemporary theories and research about effective communication in contexts such as friendships, small groups, organizations, and health care settings.

COMM 120 Contemporary Mass Communication
Fall or summer. 3 credits. Lee, M W F 12:20-1:10. J. Shanahan.
The processes and effects of communication systems. Topics include the evolution of communication media, current knowledge about mediated communication, and the role of communication in contemporary social issues. Discussion sections relate the course topics to students' personal experience. Assignments include case studies, experiential learning exercises, and short papers.

COMM 201 Oral Communication
Fall, spring, or summer. 3 credits. Each section limited to 20 students (fall and spring) or 15 students (summer). Preference given to sophomores, juniors, and seniors. Fluency in spoken English is assumed. Students missing the first two class meetings without university excuse are dropped so others may register. No student will be added or dropped after the second week of classes. K. Berghren, T. Russo, R. Thompson, and staff.
The course examines the role of the voice in voice and in written expression, the importance of listening, and the critical importance of listening in voice. The course explores the variety of voices as a means of expression and as a means of communication. The course focuses on the development of oral communication skills, including hearing, speaking, and listening.

COMM 203 Argumentation and Debate
Fall or summer. 3 credits. T R 10:10-11:25. P. Stepp.
The student will learn the principles of argumentation and the rules of debate. Classroom debates on the CEDA national topic will provide experience in critical thinking, rapid organization of thoughts, employment of research, and writing and speaking in a logical, persuasive manner.

COMM 204 Effective Listening
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman students per section. No students accepted or allowed to drop after the second week of classes. Lec, M 2:55-4:10; sec, W 12:25-2:40, 2:55-4:10; R 1:25-2:40, 2:55-4:10. R. Thompson.
Lectures and sections are used to present an analysis of the process of listening, to identify barriers to effective listening, and to develop students' listening skills. Topics include audiology, cultural contexts, intercultural communication, linguistics, therapeutic listening, and critical analysis of information. Students are involved in skill-building exercises and in writing self-analytical papers, as well as attending seminars.

COMM 230 Visual Communication
An introduction to visual communication theory. Course examines how visuals influence our attention, perspectives, and understanding. Examples of visuals drawn from advertising, TV news, documentaries, entertainment movies, print and interactive media are used to develop a theoretical framework for becoming more visually aware and for thinking more critically about how visuals influence us.

COMM 240 Communication Systems and Technologies
Spring. 3 credits. Lec T 11:40-12:55. A. P. Chan.
An exploration of the nature of communication systems and technologies. Topics include a brief history of communication and information technologies, descriptions of the uses, and impacts of technologies within the social system, and an introduction to electronic message design and construction.

COMM 250 Newswriting for Newspapers
Fall. 3 credits. Limited to 25 students. Keyboarding ability essential. Students must complete two writing assignments each week, one done in class, one done out of class.

COMM 251 Information Gathering and Presentation
Spring. 3 credits. Prerequisite: COMM 117.

COMM 260 Science Writing for Public Information
Fall, spring, or summer. 3 credits. Limited to 25 nonfreshman or graduate students per section. Prerequisite: one college-level writing course. Lec: Fall 01, M W F 9:05-9:55; 02, M W F 10:10-11:00; Spring: Lec 01, M W F 9:05-9:55 or 02, M W F 1:25-2:15. L. Cowdery.

COMM 272 Principles of Public Relations
Fall, spring, or summer. 3 credits. Limited to 25 junior, senior, or graduate students per section. Prerequisite: any college-level writing course. Lec 01, M W F 10:10-11:00; Lec 02, M W F 11:15-12:05. L. Van Buskirk and staff.
Students write as members of different organizations, and as representatives of business, government, community, and other interests. Emphasis is on adapting tone to the audience and to the message. Writing assignments include reports, memoranda, proposals, and letters. Assignments are based on cases developed from current websites.

COMM 273 Communication Institutions
A survey of the history, organization, and social importance of communication institutions. Institutions to be analyzed include advertising/PR, media industries, propaganda and political communication, news/journalism, and new technologies. Cases and examples will be drawn from areas relevant to CALS programs, including environment, agricultural policy and land use, and the communication 110 or 120 are suggested but not required.
COMM 282 Communication Industry Research
Spring. 3 credits. Prerequisite: COMM 116, 120, 121. Lec. M W 12:20-1:10; labs, F 9:05-11:00; F 12:20-2:15, or R 9:05-11:00.
D. Scott. Public opinion polls, readership/viewership studies, audience segmentation techniques, and media and message effect evaluation are all widely used in communication industries. This course covers the use of basic research design, measurement, sampling, and simple descriptive statistics in conducting these studies.

COMM 284 Sex, Gender, and Communication
Fall. 3 credits. Not open to freshmen. T R 2:55-4:10. L. Van Buskirk. The course explores the personal, career, social, and economic implications of gender categories. Topics considered include theories of gender construction, social structures, personal relationships, and gender concerns in the workplace.

COMM 285 Communication in Life Sciences (also Science and Technology Studies 285)
Spring. 3 credits. M W F 10:10-11:05. B. Lewenstein. Environmental problems...public health issues...scientific research. In each of these areas, communication plays a fundamental role. From the mass media to individual conversations, from technical journals to textbooks, from lab notes to the World Wide Web, communication helps define social issues and research findings. This course examines the institutional and intellectual contexts, processes, and practical constraints on communication in the life sciences.

COMM 301 Business and Professional Speaking
Fall, spring, or summer. 3 credits. Prerequisite: COMM 201. Limited to second term sophomores, juniors and seniors during fall and spring. Lec. M W 11:15-12:05; sec. T 2:30-4:25; W 1:25-3:20; R 10:10-12:05. B. Earle. The study and practice of written and oral communication skills used in formal and informal organizations, including interviews, informative and persuasive speeches, reports, and discussions. Students exercise and enhance the organizational, analytical, and presentational skills needed in particular settings suited to their own business and professional careers.

COMM 303 Speech and Debate Practicum
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of a year trial basis. Hours to be arranged. P. Stepp. Students will learn preparation for practice in CFDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided into four groups according to level of experience; therefore it may be repeated to a maximum of 8 credits.

COMM 305 Communication Technologies and Management of Information
Fall. 3 credits. Prerequisite: COMM 240. T R 10:10-11:25. A. F. Chan. Appropriate use of communication and information technologies can facilitate the coordination, control, and management of information. This course surveys existing theories and practice of information management, integrating insights across communication, economics, management science, and sociology.

COMM 350 Writing for Magazines
Fall, spring, or summer. 3 credits. Limited to 25 juniors, seniors, or graduate students, or others with permission of instructor. No drops after third week. Extensive out-of-class writing assignments. Fall: M 1:25-4:25. W. Ward; spring: lec., T R 8:40-9:55, lab. R 1:25-2:35. Staff. A course in nonfiction freelance writing for magazines. Intensive fact writing to help students communicate more effectively through the medium of the printed word in magazines. Art and techniques of good writing are studied; magazines in many fields of interest are reviewed. All articles are analyzed and returned to the student to rewrite and submit to a magazine.

COMM 352 Science Writing for the Mass Media
Fall. 3 credits. Not open to freshmen. Limited to 24 students. Prerequisite: one college-level writing course. Lecs. M W 9:05; lab. W 12:20-2:15. B. Lewenstein. How to write about science, technology, and medicine for the mass media. Discussion topics include accuracy, comprehensiveness, risk communication, and the history and structural science of science. Writing assignments focus on writing news and feature stories for newspapers and magazines, with excursions into newsletters, radio, TV, and other media.

COMM 353 Science Writing Practicum
Spring. 1 credit. Prerequisite: COMM 201, COMM/S&TS 352, ENG. 350 or permission of instructor. Hours TBA. Offered even-numbered years.

COMM 354 Science Writing Practicum
Fall and spring. 2 credits. Limited to 10-15 Program in Speech and Debate members only; permission of instructor and completion of a year trial basis. Hours to be arranged. P. Stepp. Students will learn preparation for practice in CFDA (Cross Examination Debate Association) debate, Lincoln Douglas debate, or individual speaking events. The class will be divided into four groups according to level of experience; therefore it may be repeated to a maximum of 8 credits.

COMM 358 Issues in Teaching Communication
Fall or spring. 1-6 credits. Limited to undergraduates who have met the requirements for the honors program. R. D. Colle.

COMM 382 Communication Research Design
Spring. 3 credits. Lec. T R 8:30-10:30, W 2:30-4:15. Prerequisite: COMM 282 or equivalent; one course in statistics (may be concurrent). Not offered 1999-2000. C. Scherer.

COMM 389 Issues in Teaching Communication
Fall. 1 credit. Prerequisite: must be past or current undergraduate teaching assistant for COMM 201, 204, or 301. Alternate M 7:30-9:10 p.m. K. Berggren. This seminar brings together novice educators to discuss ideas, experiences, and practices. Integration of theory into actual education efforts is challenging for professional educators. Novice teachers are not aware of their common experiences, much less of a theoretical component to education. In discussions of actual teaching experiences, literature reviews, research reports, textbook chapters, curriculum, and evaluation tools, we will examine new ideas and practices. The primary goal of the seminar is to enrich and deepen the novice teaching experience.

COMM 405 Community Service Practicum
Fall and spring. 2 credits. May be repeated for credit. Limited to 10-15 Program in Speech and Debate members; permission of instructor required. Hours to be arranged. P. Stepp. Students share their communication talents in structured experiences in which they design and implement a speech or debate project in local schools or the community.
COMM 410 Organizational Behavior and Communication
Fall. 3 credits. Prerequisites: COMM 116 or equivalent. Lec, M W 11:15–12:05; Sec 01, W 2:30–4:25; Sec 02, F 10:10–12:05; Sec 03, F 10:10–12:05; Sec 04, 12:20–2:15; Sec 05, 12:20–2:15. D. KRikorian.
Study of management and leadership in formal organizations with emphasis on the psychology of communication between superiors and employees; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab.

COMM 411 Leadership from a Communication Perspective
Spring. 3 credits. Limited to 30 students. Lec, T R 1:25–2:15. P. Stepp.
Leadership is a product of human communication. Leadership competence can be increased by increasing communication competence. Leadership theories, particularly transformational leadership, will be studied, and gender/minority responsive leadership will be stressed. Practical application will include leadership exercises and observation of leaders.

COMM 412 Communication Leadership Lab
Spring. 1 credit. Concurrent enrollment in COMM 411 required. Hours TBA. P. Stepp.
This course will provide laboratory experience in leadership and the methods used to analyze leadership in an organization. Students will take turns serving as a group leader of six to eight students in applying leadership theories to study leadership styles, leader-follower relations, organizational culture, and leadership competencies in an organization.

COMM 418 Communication and Persuasion
Spring. 3 credits. Prerequisite: COMM 110 and an introductory psychology or social psychology. M W 2:55–4:10 (one evening mid-semester prelim). M. Campo.
The course focuses on theories of communication’s influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 618; graduate students should enroll in COMM 618.

COMM 420 Public Opinion and Social Processes
Fall. 3 credits. Lec, T R 10:10–11:25. D. Scheufele.
The course provides an overview of the theoretical and applied literature related to the concept, “public opinion.” Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues.

COMM 421 Communication and the Environment
Students will investigate how values, attitudes, social structure, and communication affect public perceptions of environmental risk and public opinion about the environment. A primary focus will be mass media’s impact in public perceptions of the environment, how the media portray the environment, and discussion of the implications of public consumption of environmental content.

COMM 422 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or COMM 120. M W F 12:20–1:10 (one evening mid-semester prelim). M. Shapiro.
A survey of knowledge about the psychological influence of television and other audio-visual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 622; graduate students should enroll in COMM 622.

COMM 424 Communication in the Developing Nations
Fall. 3 credits. Limited to juniors and seniors. T R 2:55–4:10. R. Colle.
The role of communication in development programs, particularly in the Third World. Emphasis is on communication interventions in agriculture, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 624; graduate students should enroll in COMM 624.

COMM 426 Impact of Communication Technologies
Examine emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of previous communication innovations from cave painting to television. Lectures concurrent with COMM 626; graduate students should enroll in COMM 626.

COMM 428 Communication Law
Spring. 3 credits. Offered even-numbered years. Limited to junior, senior, and graduate students; others by permission of the instructor. Lec, M W F 11:15–12:05. D. Grossman.
A practical survey of the law governing mass media, primarily for those working in the field. Coverage includes restraints on news gathering and publication, privacy, defamation, copyright, broadcast and cable regulation, access, electronic media and other issues of current interest.

COMM 429 Legal Issues in Business and Electronic Communication
The increase in commercial use of the Internet and new types of interactive electronic media in business create unique contexts for applying traditional principles of law. This course will examine the rights and responsibilities of parties involved in electronic commerce, including information security (guaranteeing confidentiality and effective record-keeping), electronic contracts and EDI, rights in information (copyrights, trade secrets, trademarks and patents), regulation of information content (pornography and advertising) and regulation of on-line conduct (criminal liability and civil exposure).

COMM 439 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lec, T 11:40–12:55; lab 01, T 1:25–2:15; lab 02, R 1:25–2:15. G. Gay.
An overview of interactive multimedia technologies (videodisc, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representations, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 639; grad students should enroll in COMM 639.

COMM 440 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Permission of instructor. Letter grade only. Lec, T 12:20–2:15; lab 01, T 11:15–12:05; lab 02, R 11:15–12:05. G. Gay.
Course will focus on the design of computer interfaces and software from the user’s point of view. The goal is to teach user interface designs that “serve human needs” while building feelings of control, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and multimedia and social issues. Lectures concurrent with COMM 640; graduate students should enroll in COMM 640.

COMM 446 Public Communication of Science and Technology
Fall. 3 credits. Limited to 15 students. Prerequisite: COMM 352 or 360, or Engineering 350, or permission of instructor. Offered even-numbered years. M W 2:55–4:10. B. Lewenstein.
Explore the structure, meanings, and implications of “public communication of science and technology” (PCST). Examine the contexts in which PCST occurs, look at motivations and constraints of those involved in producing information about science for nonprofessional audiences, analyze the functions of PCST. Tie existing ideas about PCST to general communication research, and learn how to develop new knowledge about PCST. Course format is primarily seminar/discussion.
COMM 476 Communication Fellows
Program
Spring. 2 credits. M 2:55-4:10. Prerequisites: permission of instructor, limited to communication seniors selected based on goals and academic preparation. B. O. Earle.
A series of lectures, seminars and guest speakers exploring the planning, evaluation and policy-making process. Includes a three-day trip to a metropolitan area to visit corporate leaders, administrative agencies and policy makers. Fee charged.

COMM 486 Risk Communication
An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 680; graduate students should enroll in COMM 686.

COMM 490 Senior Thesis in Communication
Fall, spring. 3 credits; may be repeated for a maximum of 6 credits. Prerequisite: COMM 382. Staff.
Seniors conduct research based on a thesis proposal written in COMM 382. Supervision provided by a member of the Communication faculty assisted by a Ph.D. candidate. Thesis will be reviewed by faculty readers before approval.

COMM 494 Special Topics in Communication
Fall, spring, or summer. 1-3 credits each. S-U grades optional. Prerequisite: permission of instructor. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 496 Internship
Fall, spring, summer, and inter session. 1-3 credits. Prerequisites: limited to communication juniors or seniors, 3.0 average in communication courses, and approval of academic advisor. S-U grades only.
Structured, on-the-job learning experience under supervision of communication professionals in a cooperating organization. Maximum of 6 credits total may be earned; no more than 3 per internship but flexibility allows 6 for 1 credit each, 3 for 2 credits each, or 2 for 3 credits each. Internships must be approved in advance by the student's academic advisor and must be supervised by a communication professional in fields of public relations, advertising, publishing, or broadcasting. Minimum of 60 on-the-job hours per credit required.

COMM 497 Individual Study in Communication
Fall or spring. 1-6 credits; may be repeated to 6 credits with a different supervising faculty member. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Individual study under faculty supervision. Work should concentrate on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic. Attempts to implement this knowledge in a practical application are desirable.

COMM 498 Communication Teaching Experience
Fall or spring. 1-3 credits; may be repeated to 6 credits with different courses. Limited to juniors and seniors. Intended for undergraduates desiring classroom teaching experience. Prerequisite: 3.0 cumulative average (2.7 if teaching assistant for a skill development course) and permission of the faculty member who will supervise the work and assign the grade. Students must register with an Independent Study form (available in 140 Roberts Hall). Periodic meetings with the instructor cover realization of course objectives; evaluation of teaching methods, and student feedback. In addition to aiding with the actual instruction, each student prepares a paper on some aspect of the course.

COMM 499 Independent Research
Fall or spring. 1-3 credits; may be repeated to 6 credits. Limited to seniors and graduate students. Prerequisite: 3.0 cumulative average. Students must register with an Independent Study form (available in 140 Roberts Hall). Permits outstanding students to conduct laboratory or field research in communication under appropriate faculty supervision. The research should be scientific, systematic, controlled, empirical. Research goals should include description, prediction, explanation, or policy orientation and should generate new knowledge.

COMM 510 Organizational Behavior and Communication
Fall. 3 credits. Lec., M W 11:15-12:05; sec., TBA. D. Krikorian.
Study of management and leadership in formal organizations with emphasis on the psychology of communication between supervisor and employee; examination of formal and informal communication networks, and interpersonal communication in an organizational context. Case studies analyzed in lab. Lectures concurrent with COMM 410; graduate students should enroll in COMM 510.

COMM 610 Seminar in Organizational Communication
Spring. 3 credits. Prerequisites: COMM 410/510 or one course in organizational behavior or permission of instructor. Not offered 1999-2000. Lec., M W 11:15-12:05; lab, F 10:10-12:05. D. Krikorian.
Examination of contemporary research on the social psychology of interpersonal communication in organizations including supervisor-employee relations, leadership style, work motivation, organizational socialization, and formal and informal communication networks.

COMM 618 Communication and Persuasion
Spring. 3 credits. Prerequisite: introductory research methods course and introductory psychology or social psychology course. M W 2:55-4:10. M. Campo.
The course focuses on theories of communication influence on persuasion and attitude change. Students will become familiar with a variety of social-psychological theories of attitude change and persuasion. Those theories also will be applied to a variety of communication situations including mass communication, advertising, public relations/public information, and interpersonal communication. Lectures concurrent with COMM 418; graduate students should enroll in COMM 618.

COMM 620 Public Opinion and Social Processes
Fall. 3 credits. T R 10:10-11:25. D. Scheufele.
The course provides an overview of the theoretical and applied literature related to the concept "public opinion." Students investigate how public opinion is perceived and acted upon by society. Relationships between public opinion, communication and social psychological variables are examined. Public opinion is studied using current theoretical and practical applications. Analysis and interpretation of public opinion polls and trends in public opinion on specific issues.

COMM 622 Psychology of Television
Fall. 3 credits. Prerequisites: introductory psychology or social psychology and introductory research-methods course. M W 12:20-1:10. M. Shapiro.
A survey of knowledge of the psychological influence of television and other audio-visual communication technologies. Topics may include: the history of concerns about television and movies, who watches television and why, how people understand and mentally process television, how television influences thinking and emotions, the effects of various forms (including entertainment, news, and advertising), the future forms of mass media including multimedia and virtual reality. Lectures concurrent with COMM 422; graduate students should enroll in COMM 622.

COMM 624 Communication in the Developing Nations
Fall. 3 credits. Open to juniors, seniors, and graduate students. T R 2:55-4:10. R. D. Cole.
The role of communication in development programs, particularly in Third World nations. Emphasis is on communication interventions in agriculture, health, nutrition, family planning and community development, and especially on methods for designing communication strategies for reaching low-income, rural people. Among the approaches considered are extension, social marketing, and development support communication. Lectures concurrent with COMM 424; graduate students should enroll in COMM 624.

COMM 626 Impact of Communication Technologies
Examines emerging technologies of communication, such as computer-based information systems and satellites and their potential for influencing communication processes and social systems. Also examines the impacts of
previous communication innovations from cave painting to television. Lectures concurrent with COMM 426; graduate students enroll in COMM 626.

COMM 639 Interactive Multimedia: Design and Research Issues
Fall. 3 credits. Prerequisite: permission of instructor. Lec, T 11:40–12:15; lab 01, T 12:20–1:15; lab 02, R 11:15–12:05. G. Gay.

An overview of multimedia technologies (video disk, CD-ROM, digital video technologies, computer graphics, and text). Course will focus on theories and research applicable to interactive multimedia such as visualization, learner control, mental models, knowledge representation, and information processing. Course will also emphasize interactive multimedia design, application, and evaluation. Lectures concurrent with COMM 439; grad students should enroll in COMM 639.

COMM 640 Computer Mediated Communication: Theory and Practice
Spring. 3 credits. Prerequisite: permission of instructor. Lec, T 12:20–1:15; lab 01, T 11:15–12:05; lab 02, R 11:15–12:05. G. Gay.

Course will focus on the design of computer interfaces and software from the user's point of view. The goal is to teach user interface designs that serve human needs while building feelings of competence, confidence, and satisfaction. Topics include formal models of people and interactions, collaborative design issues, psychological and philosophical design considerations, and marketing and social issues. Lectures concurrent with COMM 440; graduate students should enroll in COMM 640.

COMM 641 Human-Computer Interaction

An examination of how people relate to, think about, and interact with new communication technologies in schools, homes, and the workplace. Using assigned readings from multiple disciplines, class exercises, field studies, and case studies, students will study and critique aspects of human-computer interaction, social psychology, and other issues that shape the process and effectiveness of designing, implementing, and using computer systems.

COMM 676 Communication Planning for Social and Behavioral Change

Overview theories that guide and influence social change efforts. Research techniques and communication tools used in communication planning and campaign techniques and communication tools used in communication planning and campaign design are reviewed. Class discussion focuses on social change efforts in nutrition and health, rural development, marketing, and the environment. Course seeks to integrate theory, data-based generalizations, and planning processes into an integrated communication plan.

COMM 680 Studies in Communication
Fall. 3 credits. Limited to graduate students. Permission of instructor. M W 8:40–9:55. J. Shanahan.

A review of classical and contemporary readings in communication, including key concepts and areas of investigation. An exploration of the scope of the field, the interrelationships of its various branches, and an examination of the role of theory in the research process.

COMM 681 Advanced Communication Theory
Spring. 4 credits. Prerequisite: COMM 680 or graduate standing and permission of instructor. T R 2:30–4:25. M. A. Shapiro.

Development of, and contemporary issues in, communication theory. Discussion will include the interaction between communication and society, social groups, and mental processing.

COMM 682 Methods of Communication Research
Spring. 3 credits. Lec, M W 12:20–1:10; sec, F 12:20–1:15. D. Scheufele.

An analysis of the methods used in communication research. Emphasis on understanding the rationale for survey, textual, experimental, and ethnographic research methods. Development of class research project from research question to writing. Computer use of Statistical Package for the Social Sciences (SPSS) to assist in data analysis. Familiarity with basic statistical concepts helpful.

COMM 683 Quantitative Research Methods in Communication
Spring. 3 credits. Prerequisite: COMM 682 or equivalent. Lec, M–Th 11:00–12:00. G. Gay.

Experience in quantitative research techniques. The course provides an introduction to inter- and multi-disciplinary research through examination of the procedures, techniques and assumptions associated with particular techniques of design and measurement, data collection, data preparation, data analysis, and hypothesis testing. Readings include a variety of fields and disciplines in the social and natural sciences.

COMM 685 Training and Development: Theory and Practice (also International Agriculture 685 and EDUC 685)

Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Design for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

COMM 686 Risk Communication

An examination of theory and research related to the communication of scientific information about environmental, agricultural, food, health, and nutritional risks. Course will concentrate on social theories related to risk perception and behavior. Case studies involving pesticide residues, waste management, water quality, environmental hazards, and personal health behaviors will be examined. Emphasis will be placed on understanding, applying, and developing theories of risk communication. Lectures concurrent with COMM 466; graduate students should enroll in COMM 686.

COMM 691 Seminar: Topics in Communication
Fall and spring. No credit. S-U grades only. Hours to be arranged. G. Gay and R. Colle.

Some weeks scholars from a wide variety of fields will present varied topics in theory or research as it relates to communication. Other weeks graduate students will present thesis (project) proposals to faculty and peers.

COMM 694 Special Topics in Communication
Fall, spring, or summer. 1–3 credits. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Graduate students only. Study of topics in communication not otherwise provided by a department course and determined by the interest of the faculty and students.

COMM 700 MPS Project Research
Fall or spring. 1–6 credits. May be repeated for a maximum of 6 credits. S-U grades only. Prerequisite: permission of committee chair. Project research for Master of Professional Studies (Communication) students.

COMM 781 Seminar in Psychology of Communication
Spring. 3 credits. Letter grade. Offered odd-numbered years. Prerequisite: COMM 680 and 681 or equivalent graduate level theory in psychology or social psychology. Hours to be arranged. M. Shapiro.

Discussion and analysis of selected current issues in the psychology of communication. Students will discuss and synthesize current research and theory in the mental processing of communication.

COMM 794 Seminar in Communication Issues
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor. Small group study of topical issue(s) in communication not otherwise examined in a graduate field course.

COMM 797 Graduate Independent Study
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: permission of instructor. Individual study concentrating on locating, assimilating, synthesizing, and reporting existing knowledge on a selected topic.

COMM 798 Communication Teaching Laboratory
Fall and spring. 1–3 credits each semester. Letter grade only. May be repeated once. Limited to graduate students. Prerequisite: permission of the faculty member who will supervise the work and assign the grade. Students must use the faculty member's section number to register. Graduate faculty.

Designed primarily for graduate students who want experience in teaching communication courses. Students work with an instructor in developing course objectives and philosophy, planning, and teaching.

COMM 799 Graduate Research
Fall, spring, or summer. 1–3 credits. Letter grade only. Prerequisite: appropriate communication graduate course work or permission of instructor.
EDUC 120 Education for Empowerment  
Spring. 3 credits. W 1:25–4:25.  
R. F. Staelin  
Common themes running through the modules include human learning, teaching strategies, political/social/economic factors affecting education. The course provides an opportunity to sample different areas of study and to gain knowledge and awareness of one's own educational processes.  

EDUC 210 Psychology of Learning and Memory  
Fall. 3 credits. Prerequisite: introductory psychology. Not offered 1999–2000.  
J. A. Dunn  
This course deals with contemporary theories of learning, issues in the study of learning, and application of the principles of learning to the management of teaching and learning. Practical applications of research findings will be emphasized. One or more experimental projects and the use of microcomputers will be required.  

EDUC 212 Psychological Foundations of Education  
Spring and fall. 3 credits. S-U option available. Prerequisite: introductory psychology. W 2:45–4:25 plus times to be arranged.  
A lecture/discussion survey of the psychological foundations of educational practice. Topics include the selective contributions of developmental, social, and experimental psychology, including instructional technology, to American education.  

EDUC 220 Community Learning and Service Partnership  
Fall. 4 credits. S-U grades optional. T R 2:55–4:10. Staff  
Students learn to be self-directed learners, to integrate theory, and to be critical observers of their own experiential learning, issues of diversity and empowerment, interpersonal communication, and critical analysis. Concepts and skills are learned through participation in a campus-based adult education program, the Community Learning and Service Partnership (CLASP). Students practice adult education facilitation techniques in lab.  

EDUC 240 The Art of Teaching  
G. J. Posner and staff  
This course is designed for all students interested in finding out more about teaching. Students engage in field experiences to find out what teaching involves. Possible field experiences range from large group to tutorial situations, from preschool to adult education, from traditional school subject matters to recreational and vocational areas, and from school-based to nonformal situations. Class work builds on those experiences and provides skills and concepts to make the field experiences more profitable.  

EDUC 271 Sociology of Education  
Fall. 3 credits. S-U grades optional. T R 10:10–11:25. J. W. Sipple  
An introduction to the sociological study of schooling and education. Topics include the effects of social factors on educational achievement, the norms and values learned as part of the process of schooling, the relations between students and teachers, and the school's relations to the economic and political systems. All levels of education, from elementary school to the university, are considered.  

EDUC 311 Educational Psychology  
Fall. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W F 11:15–12:05. D. E. Schrader  
This course applies psychological concepts to educational settings such as schools with a focus on understanding the interactions between people, context and knowledge in schools and other learning environments. It examines education as a social, moral, and interpersonal enterprise that respects differences between individuals. This course is designed to foster effective teaching and learning across the life span, but with a focus on secondary education.  

EDUC 317 Psychology of Adolescence  
Spring. 3 credits. Prerequisite: introductory psychology. S-U grades optional. M W 11:15–12:05; Friday morning section to be arranged. D. E. Schrader  
This course surveys the nature of adolescent cognitive, social, moral, and self-development. Theories of adolescence are examined in the context of real-life experiences of adolescents using case analysis as a methodological tool. Educational implications will be discussed for both formal and informal settings.  

EDUC 331 Careers in Agriculture, Extension, and Adult Education  
Fall. 1–3 credits. Letter grade only. M W 2:00–4:25. J. D. Deshler, D. E. Foster, and G. J. Applebee  
This course will offer modules in three areas of teaching. Adult Education, Cooperative Extension, and Agricultural Education. Each module will offer one hour of credit, and students may take one or more of the modules. The course will provide a historical perspective and an introduction to the organization and scope of programs for each module. Students will examine career opportunities and characteristics of the professions addressed by each module. Course activities include field observations and experiences during arranged times.  

EDUC 332 Instructional Methods in AgriScience Education  
Spring. 1–3 credits. Prerequisite: enrolled in a Cornell teacher education program or permission of instructor. R 2:00–4:25. C. A. Conroy, R. E. Steele  
Selection, practice, and evaluation of methods in Agriscience Education will be stressed. The course offers a modular approach to focus on teaching strategies and methodology unique to teaching in schools. Content will include program planning (Module I), experiential learning (Module II), and youth leadership (Module III). All students must enroll for one credit in Module I; students may be exempt from Modules II and III with permission of instructor. Participants will be required to participate in field experiences arranged times.  

EDUC 335 Youth Organizations  
Spring. 3 credits. T R 10:10–11:25; lab to be arranged. Not offered spring 1999–2000. Staff  
Visual, creative, and competent leaders are essential for youth organizations. Class participants learn how to facilitate both youth and adult volunteer leadership development. They examine factors affecting membership,
purposes, design, operation, and administration of youth organizations. The course provides students with in-depth learning-by-doing experience of how youth organizations function. Field experience with a recognized youth organization is required.

**EDUC 370 Issues in Educational Policy**
Spring. 3 credits. T R 10:10-11:25.
K. A. Shotski
An examination of selected policy issues in current education. Included are such topics as equality of educational opportunity, student, parent, and teacher rights, and educational politics. Issues are treated from legal, sociological, and economic perspectives. Meets group C requirements for College of Agriculture and Life Sciences.

**EDUC 378 Political Economy of Education**
Fall. 3 credits. S-U grades optional. T R 1:25-2:40. Staff.
A policy oriented examination of educational systems with an emphasis on political and economic perspectives. Attention will be paid to both external and internal aspects of educational politics. Specific topics will include the changing contributions of education to earnings, school-community relations, power within educational organizations, the impact of technology in the workplace and in classrooms, and the sources and impact of educational costs. A variety of education settings will be examined including higher education and non-formal education.

**EDUC 380 Independent Honors Research in Social Science**
Fall or spring. 1–6 credits. Limited to students who have met requirements for the honors program. S-U grades optional. A maximum of 6 credits may be earned in the honors program. Staff.

**EDUC 401 Our Physical Environment**
Fall. 3 credits. Prerequisite: permission of instructor. Charge for laboratory supplies, approximately $7. T 1:25-4:25.
N. Rockcastle
A practical, relatively nonmathematical study of some basic relationships and physical interactions in the environment, with emphasis on physics and earth science. Attention is paid to analysis for understanding and predicting significant problems. An individual research project is included. Useful for teachers, environmental educators, and those for whom physical science seems difficult or uninviting.

**EDUC 402 Knowing and Learning in Science, Mathematics, and Agriculture**
Fall. 4 credits. Prerequisite: enrollment in a Cornell teacher education program or permission of instructor. M W 2:30–4:25.
D. J. Trumbull and S. C. Piliero.
Students examine both current notions in the history and philosophy of science that explain how knowledge within a discipline develops and current theory and research that examines the individual's acquisition of knowledge. This material serves as a basis for students' individual research projects investigating neophytes' knowledge of science and mathematics concepts. All students enrolled must complete fieldwork. Fieldwork will center on a mini-project that takes a week in an appropriate educational setting.

**EDUC 403 Observing and Teaching Science, Mathematics, and Agriscience**
Spring. 4 credits. Prerequisites: enrollment in a Cornell teacher education program or permission of the instructor. C. A. Conroy and S. C. Piliero.
Designed for prospective secondary teachers, this course provides a multiple-perspectives orientation to the culture of schools and the world of teaching science and mathematics. Students spend 6–8 hours each week observing in area schools. Students also plan and teach innovative lessons in the scheduled teaching laboratory. Readings and discussions focus on planning, delivery and evaluation of instruction classroom management, and other issues such as equity, tracking, and classroom language.

**EDUC 412 Psychology of Human Interaction**
Fall. 3 credits. Enrollment limited. Prerequisite: permission of instructor. T R 10:10–12:05. D. E. Hedlund.
Designed to develop skills for, and understanding of, effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

**EDUC 413 Psychology of Human Development**
The processes of counseling are examined from various theoretical perspectives. Typical counseling issues are examined, and implications are drawn for counseling strategies, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

**EDUC 414 Counseling Psychology**
Spring. 4 credits. Prerequisites: introductory psychology, social or personality psychology. T R 10:10–12:05.
D. E. Hedlund.
The processes of counseling are examined from various theoretical perspectives. Typical counseling issues are examined, and implications are drawn for counseling strategies, including psychological assessment, establishing therapeutic goals, intervention strategies, and evaluation of outcomes.

**EDUC 420 Field Experience**
Fall or spring. 1–4 credits. S-U grades optional. A maximum of 12 credits may be earned in the honors program. Staff.
A project-focused introduction to course design, from needs assessment, through materials development, to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project will vary from year to year. Students are expected to make extensive use of computer software writing, design, management, and communication. The summer section of 447 will be offered in the fall and we anticipate that, rather than working on a single class project, students will undertake curriculum development projects of their own design.

**EDUC 427 Philosophy of Education**
Fall. 3 credits. T 2:30–4:25. K. A. Strike.
A study of central issues in the philosophy of education. Questions of ethics, political philosophy, and the nature or function of knowledge are examined and linked to current educational issues.

**EDUC 477 Law and Educational Policy**
Fall. 3 credits. M 2:30–4:25. K. A. Strike.
A study of recent federal court decisions concerning education. Emphasis on examining legal issues against a background of related educational issues and in terms of the consequences of legal decisions for the development and operation of educational institutions.

**EDUC 483 Comparative Studies in Adult Education**
Spring. 3 credits. S-U grades optional. T R 3:35–5:00. J. D. Deshler.
Focusses on the variety of adult-education programs in countries around the world. Literature on comparative adult education, international conferences on adult education, UNESCO adult-education publications, and international community development are analyzed in relationship to each student's exploration of adult education in two countries. Description of adult education in other countries is shared by international students.

**EDUC 494 Special Topics in Education**
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

**EDUC 495 Senior Seminar**
Spring. 2 credits. Education majors or permission of instructors. S-U only. To be arranged. Undergraduate coordinator for the department.
This seminar focuses in depth on two or three significant educational issues, which may vary from year-to-year depending on the interests and background of students and faculty. The seminar attempts to help students relate the knowledge gained in their particular concentrations to a set of broad issues in education. While education faculty will be involved in selecting the issues and providing guidance for the seminar, students will be expected to provide the initiative and leadership in the classroom.

**EDUC 447 Curriculum Design Laboratory: A Technology-Intensive Course**
Spring or summer. 3 credits.
W. S. Carlsen
A project-focused introduction to course design, from needs assessment, through materials development, to the evaluation of student outcomes. The course involves the creation and implementation of an actual curriculum, and the nature of the project will vary from year to year. Students are expected to make extensive use of computer software writing, design, management, and communication. The summer section of 447 will be offered in the fall and we anticipate that, rather than working on a single class project, students will undertake curriculum development projects of their own design.
EDUC 497 Individual Study in Education
Fall or spring. 1–3 credits. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged. 
Staff.

A student may, with approval of a faculty adviser, study a problem or topic not covered in a regular course or may undertake tutorial study of an independent nature in an area of educational interest.

EDUC 498 Undergraduate Teaching
Fall or spring. 1 or 2 credits. 4 credits maximum during undergraduate career. Limited to students with grade-point averages of at least 2.7. S-U grades optional. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged.
Staff.

The course focuses on skills enabling anyone who works with people.

EDUC 499 Undergraduate Research
Fall or spring. 6 credits maximum during undergraduate career. Not open to students who have earned 6 or more undergraduate research credits elsewhere in the college. Limited to juniors and seniors with grade-point averages of at least 2.7. Students must register with an Independent Study form (available in 140 Roberts Hall). Hours to be arranged.
Staff.

The course affords opportunities for students to carry out independent research under appropriate supervision. Each student is expected to review pertinent literature, prepare a project outline, conduct the research, and prepare a report.

EDUC 501 Communication Workshop
Summer and intersession. 2 credits. S-U grades optional. M. D. Gloc

The course is designed to develop communication skills enabling individuals to cope with such concerns as motivation, dealing with difficult people, productive criticism, improving comprehension, adjusting to different learning styles, and communicating with the public. Practice is coordinated with theory and research findings.

The ongoing dynamics of the course necessitate intense participation over a period of time, not provided by regularly scheduled fifty-minute class periods. Additional auto-tutorial lab time is scheduled. Appropriate for anyone who works with people.

EDUC 507 Science and Environment for Teachers
Summer. 3 credits. S-U option. 

This three-week in-service program for secondary and middle school science teachers focuses on biological, chemical, and hydrological methods of water monitoring and watershed dynamics. Participants also use remote sensing, work with computers, investigate topics in science, technology and society, learn pedagogical techniques that are consistent with science reform initiatives; and discuss and develop new types of assessment.

EDUC 513 Interpersonal Interaction
Summer. 1–2 credits. D. E. Hedlund.

Designed to develop skills for an understanding of effective interpersonal communication and interaction. Appropriate for students in the helping professions, education, and areas involving management of human resources.

A workshop design is required for the second credit. Participants must bring a tape recorder to class.

EDUC 523 Food and Fiber Across the Curriculum
Summer. 0–3 credits. D. E. Foster and staff.

An intensive five-day course designed to help New York State elementary teachers and administrators implement the New York Agriculture in the Classroom Program and understand the complexity of New York's leading industry.

Participants learn how instructional materials and experiences with our food-fiber system can be used to teach students language arts, mathematics, science, and social studies.

One credit is earned by class attendance and participation. Two credits require one additional project. Three credits require two additional projects.

EDUC 548 Effective College Teaching
Spring. 1–3 credits. S-U grade option.
T 5:00–7:00. D. Way.

This course is designed to help participants become more effective college teachers.

It will examine the basic principle of learning, identify different learning styles, and explore a variety of teaching techniques, methods, and technologies. Participants will also learn how to design a course and improve their effectiveness as teachers.

EDUC 601 Secondary Agriculture, Science and Mathematics Teaching Practicum
Fall or spring. 6 credits. Prerequisite: permission of instructor. Letter grades only. For graduate students enrolled in the Teacher Education in Science and Mathematics Program. M T W R F 8:00–5:00. W. S. Carlsen, C. A. Conroy, S. C. Pillerio, G. J. Posner, A. Solomon, M. S. Slack, and D. J. Trumbull.

Supervised student teaching in science or mathematics at the secondary level. Program includes teaching in a local school for ten weeks.

EDUC 602 Teaching Agriculture, Science/Mathematics: Methods, Materials, Practice
Fall or spring. 9 credits. Prerequisite: concurrent enrollment in EDUC 601 or permission of instructor. M T W R F 9:00–3:00. S. C. Pillerio, M. S. Slack, and D. J. Trumbull.

The course begins with full day sessions of intensive consideration of theoretical frameworks relevant to all aspects of student teaching. Assignments and a weekly seminar during the summer to students to use their theories to develop and evaluate teaching materials and practices. Students will complete an extensive portfolio documenting their work.

EDUC 606 Seminar in Science and Mathematics Education

Explores topics in science and mathematics education. The focus of the seminar changes each year.

EDUC 609 Methods for Interpretive Research
Spring. 3 credits. Prerequisite: course in research methods or measurement and permission of instructor. M W 2:30–4:00. Offered alternate years. D. J. Trumbull.

This course examines some of the methods of educational interpretive research. An interpretive research perspective attends to the complex interactions between researcher, researched and contexts and accepts the centrality of interpretation in the conduct of human affairs. This perspective imposes some unique demands on researchers wishing to justify the quality of their projects. In the class, students will practice methods for gathering and interpreting data by conducting a small project using methods as they relate to the aims and assumptions of interpretive research.

EDUC 611 Educational Psychology

A basic survey course for graduate students.

Emphasis on psychological factors involved in human learning and the educational process.

Set in a broad-based conceptual model of any behavioral setting for learning. A life span developmental approach is used, appropriate for those seeking an introduction to educational psychology or a refresher course in contemporary educational psychology.

EDUC 614 Epistemological Development and Reflective Thought

Insight into how individuals make sense of knowledge is essential to teaching and learning. This course examines theories of intellectual development and their implications for educating students of various age groups, particularly college students. The role of reflection on thinking (metacognition) and its impact on development of thought is explored.

EDUC 615 Self and Interpersonal Development and Education

Interpersonal interactions affect teaching and learning. This course takes a life-span perspective as it explores constructive-developmental theories of self and others, and how such theories explain students' understanding of their own and others' actions in educational contexts.

EDUC 620 Internship in Education
Fall or spring. 1–6 credits. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for supervising the work.
Staff.

An opportunity for practical experience in educational professions development.

EDUC 621 Work-Experience Coordinator Certification Course I
Summer. 3 credits. S-U grades optional.

The first of a two-course sequence designed to develop the competencies needed for certification as a coordinator of diversified cooperative work experience programs. The course focuses on the history and philosophy, types, operation, and evaluation of work-experience programs including articulation
with JPTA and VESID. Field interviews are required. A prerequisite for Course II, EDUC 622.

**EDUC 622 Work-Experience Coordinator Certification Course II**

Summer. 3 credits. Prerequisite: EDUC 621 Work-Experience Certification Course I. Staff.

The second course for certification as a diversified cooperative work experience coordinator combines course work and directed field experience leading to the planning, development, and approval of a work-experience program in a local educational agency. Development of a philosophy and policy statement, budget, curriculum for related instruction, annual work plan by function, promotional materials, and all program forms for Board of Education approval required.

**EDUC 630 Special Problems in Agricultural, Extension, and Adult Education**

Fall or spring; may also be offered in summer. 1-3 credits. S-U grades optional. Hours to be announced. R. E. Steele. The course provides an opportunity for graduate-level study of individually selected problems and issues in agricultural, extension, and adult education.

**EDUC 632 Teaching Agricultural, Extension, and Adult Education**

Summer. 3 credits. Prerequisite: an introductory course in teaching methods or permission of instructor. Hours to be announced. C. A. Conroy. The focus of the course is on the selection, use, and evaluation of methods and materials for teaching. Methods for group and informal instruction are covered. Opportunity is provided for students to develop teaching competence based on their individual needs and interests. Development of self-evaluation skills is included. A class project on the development of instructional materials is required.

**EDUC 633 Program Planning in Agricultural, Extension, and Adult Education**

Spring. 3 credits. Field trip. Lec, T R 10:10-11:25; lab, to be announced. Staff. Current social and economic conditions affecting agricultural, extension, and adult education are examined. Principles, objectives, strategies, and sources of information are applied to program planning. Participants have an opportunity to observe ongoing programs in agricultural, extension, and adult education, and to pursue individual interests in program development and improvement.

**EDUC 635 Experiential Learning**

Fall. 2 credits. Prerequisite: open to undergraduates with permission of instructor. S-U grades optional. T 12:20-2:15. R. Steele. Participants will explore various dimensions of scholar and practitioner thinking about the understanding and practice of experiential learning. Theoretical perspectives on experiential education, reflective practice, and a critical learning systems perspective will be explored through readings and applied assignments. The instructor will introduce methods of facilitation designed to encourage inquiry and dialogue for improvement of both nonformal and formal educational activities. The course process is intended to engage participants in reflective dialogue—nurturing emergence of learning community elements.

**EDUC 644 Curriculum Theory and Analysis**

Spring. 3 credits. M 1:25-4:25. G. J. Posner. An examination of the basic elements involved in making curriculum decisions and an analysis of current approaches to curriculum. The course focuses on the assumptions underlying any curriculum. The major task of each student is to choose and conduct an in-depth analysis of a curriculum. This course is the basic graduate course in curriculum.

**EDUC 651 Developing a Research Proposal**

Spring. 2 credits. Letter or S-U option. T R 3:35-4:25. Offered alternate years. Not offered 1999-2000. C. A. Conroy and D. J. Trumbull. Study of procedures for developing and writing a research proposal. Emphasis will be given to identifying a significant topic, recognizing weaknesses in illustrative proposals, and clear and concise writing. Students will be provided with some assistance in constructing a brief proposal of their own.

**EDUC 661 Administration of Educational Organizations**

Fall. 3 credits. R 3:35-6:00. J. W. Sipple. Perspectives on the administration of educational organizations. Consideration of social science, legal and ethical theories, and their application to both public schools and higher education. Intended for students who are considering careers as educational administrators, as well as for those who want to further their understanding of educational organizations.

**EDUC 664 Educational Finance**

Fall. 3 credits. S-U grades optional. W 3:35-6:00. Staff. An analysis of the distribution and utilization of public and private resources for educational purposes. The discussion will revolve around the issues of equity, efficiency, and freedom of choice. Alternative methods of financing schools will be evaluated, and the perplexing legal and moral issues raised by such questions as "Who pays?" and "Who benefits?" will be discussed. Specific attention will be given to budgeting, accountability, and productivity. An opportunity for individuals to focus on their own areas of interest, such as occupational education, the two-year college, or secondary or higher education.

**EDUC 665 Administrative Decision Making**

Spring. 3 credits. S-U grades optional. W 3:35-6:00. Staff. An introduction to decision making theory and its relevance to the field of educational administration. Specific applications will be made to the study and improvement of productivity within educational systems. A wide variety of educational settings will be considered, including higher education and nonformal education.

**EDUC 670 Foundations of Extension Adult Education**

Fall. 3 credits. Limited to 20 students. S-U grades optional. T 9:05-12:05. J. D. Deshler. An analysis of alternative purposes, nature, and scope of extension, adult, and continuing education programs in the United States and abroad, with emphasis on the relationship of programs to historical, cultural, political, and social settings. Definitions, conceptual controversies, philosophical issues, and current research directions will be examined through a seminar approach.

**EDUC 682 Community Education and Development**

Fall. 3 credits. Limited to 25 students. Letter grade only. M 1:25-4:25. Staff. An examination of the concept of community; changes in community life; the analysis of community; alternative strategies for community development; patterns of response to community by universities, colleges, schools, cooperative extension, and government service agencies; and such functional dimensions of community education programming as participatory decision making, volunteers, leadership development, council formation and function, interagency coordination, and change-agents roles.

**EDUC 685 Training and Development: Theory and Practice (also Communication 685, International Agriculture 685)**

Spring. 4 credits. S-U grades optional. Charge for materials, $45. F 9:05-12:05; lab to be arranged. R. D. Colie and J. D. Deshler. Analysis, design, conduct, administration, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy and nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

**EDUC 694 Special Topics in Education**

Fall, spring, or summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Hours to be arranged. Staff. Topics to be announced.

**EDUC 711 Contemporary Issues in Educational Psychology**

Fall and spring. Variable. 3 credits. S-U grades optional. Staff. Fall: hours to be announced. J. Dunn. Spring and fall. T 2:00-4:30. This is a graduate-level seminar dealing with key issues in contemporary psychology having implications for educational practice and research. Topics will vary from semester to semester. Students may take the course more than once.

**EDUC 714 Moral Development and Education**

Spring. 3 credits. S-U grades optional. M 12:20-2:15. Not offered 1999-2000. D. E. Schrader. This seminar focuses on current topics in moral development research as related to the educational process. Topics include the question of the development of moral reasoning, gender differences in the relationship between moral judgment and moral action, questions related to moral education in secondary schools and university settings, and professional ethics in educational settings. This course takes a life-span perspective; however, special emphasis will be placed on development from adolescence through adulthood.
EDUC 718 Adult Learning and Development
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 2:00-4:25. J. E. Ripple and J. D. Deshler. Deals with adult development and learning behavior from points of view of educational psychology, and adult education. Inferences are drawn from theory and research to the practice of adult continuing education. Appropriate for graduate students in educational psychology, extension and continuing education, and community service education, and for others interested in adult learning and development.

EDUC 730 Seminar in Agricultural, Extension, and Adult Education
Spring. 2 credits. S-U grades optional. R 8:30-9:35. Staff. Emphasis on current problems and research in agricultural, extension, and adult education. Includes discussion and analysis of student and staff research.

[EDUC 745 Seminar in Curriculum Theory and Research
Fall. 3 credits. Prerequisite: EDUC 644, or permission of instructor. Not offered 1999-2000. T 2:30-5:00. G. J. Posner. Theoretical issues in curriculum and appropriate areas for curriculum research are discussed. Two current topics of interest are the hidden curriculum and school reform. Both topics serve to uncover the relation between ideology and research.]

EDUC 760 Practicum Seminar in Educational Administration
Fall, spring and summer. 2 credits. S-U only. Hours to be arranged. J. W. Sipple and K. A. Strike.
The practicum seminar is taken in conjunction with the administrative internship and serves to tie together previous coursework, current policy issues, and the concurrent internship. It involves two elements. First, current interns will meet regularly during the semester to bring their knowledge base (developed in the program) to bear on their current duties and problems and will collaboratively solve with faculty and other interns. Second, interns will participate in special topic seminars as needed in order to supplement coursework in critical areas. Examples of special topics are AIDS, sexual harrassment in the workplace, child abuse, and substance abuse recognition.

EDUC 782 Seminar in Philosophy of Education
Spring. 3 credits. Prerequisite: permission of instructor. S-U grades optional. W 9:00-11:00. K. A. Strike.
Topics to be announced.

EDUC 783 Comparative Extension Education Systems
Summer. 3 credits. S-U option. R. E. Steele.
Extension education in the developing nations is studied, using as an analytical frame of reference, a hypothetical model comprising such components as community organization, community-based learning, indigenous facilitators and leaders, extension generalists and specialists, training and research-extension linkages. Case materials on alternative extension models and intercountry experiences provide an empirical base.

EDUC 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

EDUC 900 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged. Limited to students working on theses or other research and development projects. S-U grades optional. Each student, before course enrollment, must obtain the approval of a faculty member who will assume responsibility for guiding the work. Hours to be arranged. Staff.

ENTOM 212 Insect Biology
Fall. 4 credits. Prerequisites: BIO G 101-102 (may be taken concurrently) or equivalent. Lecs, W T 10:10-11:00; labs T, W or R 1:25-4:25. Lab fee $35. C. Gilbert.
Introduces the students to empirical aspects of entomology, focusing on basic principles of systematics, morphology, physiology, behavior, and ecology of insects. The laboratory in early fall includes field trips to collect and study insects in the natural environment. A collection emphasizing ecological, behavioral and taxonomic categories is required.

ENTOM 215 Spider Biology: Life on a Silken Thread
Fall. 2 credits. Prerequisite: introductory biology or permission of instructor. S-U grades optional. Lecs, M W 1:25-2:15. L. S. Rayor.
Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

ENTOM 241 Applied Entomology
Fall. 3 credits. Prerequisites: BIO G 101-102 or equivalent. Lecs, T R 10:10; lab/disc; T or W 12:20-3:15. W. M. Tingey.
Introduction to major pest species and tactics for their management. Discussions of insect pest management requirements on farms, gardens, forests, and urban environments, along with descriptions of control methods, materials, and equipment.

ENTOM 250 Introductory Beekeeping
Fall. 2 credits. Lecs, T R 11:15. R. A. Morse.
Introduces the fundamentals of practical beekeeping, including the life history, physiology, and behavior of honey bees. The classical experiments on the dance language and the role of pheromones are reviewed. Some lectures are devoted to pollination of agricultural crops and the production of honey and beeswax.

ENTOM 264 Practical Beekeeping
Fall. 1 credit. Limited to 20 students. Prerequisite: ENTOM 260 (may be taken concurrently). Lab fee $5. R. A. Morse. This course consists of fourteen laboratory sessions to acquaint students with practical methods of colony management. Laboratories involve actual work with honey bee colonies and equipment. Some of the topics covered are management of bees for apple pollination, honey harvesting and processing, and disease identification and control.

ENTOM 277 Natural Enemies Managing Pests: An Introduction to Biological Control
An introduction to the dynamic field of biological control. What is it and when should it be used? This course covers a diversity of types of biological control, including the use of parasitoids, predators, pathogens, and competitors as well as plant breeding to control pests from microbes to weeds to invertebrates to vertebrates. This presentation is intended for students curious about controlling pests without using synthetic chemicals.

[ENTOM 322 Comparative Insect Morphology]

This course provides a detailed introduction to the external and internal anatomy of insects. Lectures introduce basic concepts in insect morphology, such as the organization of the insect body plan and organ systems, functional morphology, homology, phylogeny, modularity, and development. The laboratory portion of the course introduces students to the basic methods of insect microdissection, specimen preparation, and scientific illustration. A high-quality, publishable illustration is produced based on student artwork.

[ENTOM 325 Insect Behavior]
Spring. 3 credits. Prerequisites: introductory biology or introductory entomology or permission of instructor. Lecs, M W F 12:20. Offered alternate years. Not offered spring 2000; next offered spring 2001. L. S. Rayor.

Insects are the most diverse organisms on earth, with equally diverse behavior. This course will explore the behavior of insects, ranging from the individual sensory and physiological mechanisms that are the basis of insect behavior, to the behavioral dynamics of foraging, courtship, parental care, and social behavior. Topics include insect learning, perception, finding strategies, predation, pollination, and examination of current issues in insect behavior.

[ENTOM 331 Introductory Insect Systematics]
Fall. 4 credits. Prerequisite: ENTOM 212. Lecs, T R 12:20; labs, T R 1:25–4:25. Offered alternate years. Q. D. Wheeler.

An introduction to the classification, evolutionary history, and distribution of the insects. Laboratory practice in the identification of orders, families, and representative genera of insects; methods of collection, preservation, and study. Lectures on theory and practice of insect systematics and major features of insect evolution. Insect collections are required.

[ENTOM 352 Medical and Veterinary Entomology]

The ecology of arthropods of medical and veterinary importance in temperate and tropical regions of the world with emphasis on the role they play in causation or transmission of disease. The laboratory involves 2 field trips, techniques of collection and identification, dissections, methods of transmitted disease identification of a blood pathogen and the source of a blood meal.

[ENTOM 370 Pesticides, the Environment, and Human Health (also Toxicology 370)]
Fall. 2 credits. Prerequisites: BIOG 101–102 or equivalent. Lecs, T R 9:05. Offered alternate years. Not offered fall 1999; next offered fall 2000. J. G. Scott.

A survey of the different types of pesticides, their uses, properties, and effects on the environment. Discussion of the risks, benefits, regulation, politics, and current controversies associated with pesticide use.

[ENTOM 441 Seminar in Insect Pest Management]
Spring. 1 credit. Limited to 15 students. Prerequisite: ENTOM 241 or 444 or permission of instructor. S–U grades only. Hours to be arranged. Offered alternate years. M. P. Hoffmann and A. M. Shelton.

Discussion and analysis of current topics in insect pest management.

[ENTOM 444 Integrated Pest Management (also Plant Pathology 444)]
Fall. 4 credits. Prerequisites: BIOES 261, ENTOM 212 or 241, and PL PA 241 or their equivalents or permission of instructor. Lecs, M W F 9:05; labs M or T 1:25–4:25. P. Arneson and S. P. Fuentes.

Lectures integrate the principles of pest control, ecology, and economics in the management of pests across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

[ENTOM 452 Herbivores and Plants: Chemical Ecology and Coevolution (also BIOES 452)]
Spring. 3 credits. Prerequisites: one year of introductory biology; BIOES 261; CHEM 257 or 357/358 and 251 or 301; or permission of instructor. Lecs, M W F 11:15. Offered alternate years. Not offered spring 2000; next offered spring 2001. P. P. Feeny.

Significance of plant chemistry in mediating interactions between plants and herbivorous animals; mechanisms and strategies of plant finding and exploitation by animals; especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack; implications for human food and agriculture.

[ENTOM 453 Principles and Practice of Historical Biogeography (also BIOPL 453)]
Fall. 3 credits. Prerequisite: a course in systematics or permission of instructors. S–U grades optional. Lecs, T R 10:10; lab T 1:25–4:30. Offered alternate years. J. K. Liebherr and M. Luckow.

A survey of techniques in historical biogeography, and the development of modern biogeographic theory in the context of classical, ecological and phylogenetic analytical methods. Geological and paleontological aspects of biogeography will be presented, and large-scale biogeographic patterns discussed. Laboratories will focus on computer applications and discussion of controversial issues.

[ENTOM 455 Insect Ecology (also BIOES 455)]
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent and ENTOM 212 or equivalent knowledge of another taxon. S–U grades optional. Lecs, M W F 11:15. Offered alternate years. R. B. Root.

Topics include the nature and consequences of biotic diversity, biogeographic and evolutionary, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

[ENTOM 456 Stream Ecology (also BIOES 456 and NTRES 456)]

Lecture addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences, plant, invertebrate, and fish community structure, nutrient cycling, trophic dynamics, colonization and succession, community dynamics and the impacts of disturbances. Lab: a field project includes descriptive and experimental techniques and hypothesis testing related to environmental assessment.

[ENTOM 463 Invertebrate Pathology]

Lecture presents principles of pathology as applied to invertebrates. Topics explored include non-infectious and infectious diseases caused by viruses, bacteria, fungi, protozoa, and nematodes, epizootiology of insect diseases and use of pathogens for control. Laboratory involves a diversity of pathogens and hosts using techniques such as microrjection, electron microscopy, immunodiffusion, density gradient centrifugation, soil extraction, and computer simulation.

[ENTOM 470 Ecological Genetics]
Spring. 3 credits. Prerequisites: BIOES 278 or permission of instructor. S–U grades optional. Lecs, T R 10:10; disc., 1 hr./wk to be arranged. Offered alternate years. C. M. Caillaud.

A study of the genetic basis and evolution of ecologically important traits. Blending theory with an experimental approach to study evolution in nature, the course includes methods for measuring genetic variation and natural selection; biometrical and molecular analysis of genetic architecture; constraints and limits on evolution in natural populations; genetic aspects of coevolution, phenotypic plasticity, and conservation of endangered species. Examples are taken from studies of animals and plants.

[ENTOM 471 Freshwater Invertebrate Biology and Biomonitoring]

The lecture explores the morphology, physiology, phylogeny, life histories, behavior,
feeding ecology, and evolution of macroscopic freshwater invertebrates with an emphasis on contrasting the attributes of aquatic and terrestrial insects. The laboratory involves field collections and laboratory identification of invertebrates and stresses the use of keys. Students will prepare a collection of freshwater invertebrates or conduct a project using freshwater invertebrates to biomonitor stream habitat quality.

ENTOM 477 Biological Control
Fall. 3 credits. Prerequisites: ENTOM 212 or permission of instructor. Lecs, M W F 9:05; lab T 12:25-1:15. Offered alternate years. M. J. Tauber. Approach and procedures in biological control focus on living parasitoids and predators. Demonstrations focus on living parasitoids and predators. Discussions focus on case histories.

ENTOM 483 Insect Physiology
Fall. 5 credits. Prerequisite: ENTOM 212 or permission of instructor. Lecs, M W F 11:15; lab W 1:25-4:25 and a disc, to be announced. Offered alternate years. Not offered fall 1999; next offered fall 2000. Offered summer 2000; lab, to be announced. Q. D. Wheeler. An introduction to the often unique ways in which insects have met their basic needs. Each organ system is examined with emphasis on basic principles and specific examples. The students will also be introduced to some common methods used in physiological research and to the critical reading of scientific literature.

ENTOM 490 Toxicology of Insecticides (also Toxicology 490)

ENTOM 494 Special Topics in Entomology
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

ENTOM 497 Individual Study in Entomology
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.

ENTOM 498 Undergraduate Teaching
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Undergraduate teaching assistance in an entomology course by agreement with the instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff. Participating students assist in teaching a course allied with their education and experience. Students are expected to meet regularly with a discussion or laboratory section, to gain teaching experience, and regularly to discuss teaching objectives, techniques, and subject matter with the professor in charge.

ENTOM 631 Systematics of the Coleoptera
Summer. 3 credits. Limited to 18 students. 3 week summer session. Prerequisites: an introductory course in insect taxonomy and permission. Labs, M T W F 9-4; Saturday field trips. Offered alternate years. Q. D. Wheeler. A comprehensive review of the comparative morphology, phylogenetic relationships, classification, natural history, and distribution of the Coleoptera, including adult and immature stages. Laboratory practice in identification and methods for collection and study of beetles. A collection is required.

ENTOM 632 Advanced Coleopterology
Summer. 1-3 credits. Prerequisite: permission of instructor. S-U grades optional. Offered alternate years. Not offered summer 2000. Offered summer 2000. Lab, to be arranged. Q. D. Wheeler. An advanced course on the phylogeny and classification of selected subclades of Coleoptera. Laboratory exercises in identification of beetles, generally to the level of genus or beyond. Taught by authority on taxon of interest, frequently including a visiting scholar. Can be repeated for credit.

ENTOM 634 Special Topics in Systematic Entomology
Fall or spring; taught on demand. 2-4 credits. Prerequisite: permission of instructor. Lectures on the classification, evolution, and biometrics of selected taxa, with accompanying laboratory studies on identification and comparative morphology. Collections sometimes required.

ENTOM 635 Insect Molecular Systematics
Winter session, 2000. 2 credits. Prerequisites: permission of instructor. Offered alternate years. Lectures/labs M-F 9:00 am.-1:00 pm. Limited to 6 students. B. N. Danforth. Analysis of DNA sequence variation can provide a powerful tool for resolving problems in insect systematics, from species level taxonomic decisions to higher level (ordinal) relationships. This course will introduce students to the basic methods of insect molecular systematics, including DNA extraction, gel electrophoresis, PCR, DNA purification, and DNA sequencing (manual and automated). Results will be analyzed using available computer programs. Students are encouraged to collect preliminary data for thesis or post-doctoral research.

ENTOM 644 Advanced IPM: Theory and Implementation
Spring. 1-4 credits. S-U grades optional. Lecs, M W F 10:10. Coordinator: J. E. Losey. This advanced course in integrated pest management (IPM) will be comprised of a rotating series of four-week intensive modules on specialized topics. Topics will range from basic ecology and genetics of pests and their natural enemies to specific strategies for pest management implementation. The course is designed to provide advanced IPM instruction for graduate and upper-level undergraduate students with intermediate backgrounds in IPM. In special cases, students with little or no background in IPM seeking intensive instruction on a specialized topic may enroll with permission of the instructor. Each module is a unique unit and students may take any or all modules each time the course is offered. Prerequisites and grading procedures will be determined by the instructor(s) of each module. Potential modules include: Insecticide resistance and resistance management—J. Scott; Crop protection decision-making—J. Nyrop; Entomology (Geneva); Economics of pest management—J. Peck; ARME; Greenhouse and Floriculture IPM—J. Sanderson; Entomology (Ithaca); IPM in fruit systems—A. Agnello, G. English-Loeb; Entomology (Geneva); Genetics in managed ecosystems—C.M. Caillaud; Entomology (Ithaca); Turf-grass insect IPM—M. Villani; Entomology (Geneva); Insect vectors of plant pathogens—Staff; IPM of soil-dwelling arthropods—M. Villani; Entomology (Geneva); Integrated weed and insect pest management—C. Mohler; Ecology & Systematics, IPM implementation and extension—M. Hoffmann, J. Sanderson; Entomology (Ithaca); Plant resistance—Staff; Entomology, Plant Breeding, Integrated Pest Management in Tropical Agriculture—P. Amsden; Plant Pathology (also PL PA 655); IPM of natural systems—B. Blossey; Natural Resources; Sustainable strategies for pest management—Staff.

ENTOM 662 Insect Behavior Seminar
Spring. 2 credits. Prerequisites: permission of instructor and ENTOM 212 and BIOLS 252 or equivalents. S-U grades optional. Offered alternate years. Hours to be arranged. M. J. Tauber.

ENTOM 672 Seminar in Aquatic Ecology
Spring. 1 credit. Prerequisites: permission of instructor or either ENTOM 456, 471 or BIOLS 261, 462. S-U grades optional. Hours to be arranged. Offered alternate years. B. L. Peckarsky. Discussion and analysis of current topics in the ecology of streams, lakes and marine ecosystems, including student-generated synthesis of key papers in the literature.

ENTOM 685 Seminar in Insect Physiology
Spring. 1 credit. S-U grade optional. Prerequisites: permission of instructor. Not for thesis research. Staff.

ENTOM 707 Individual Study for Graduate Students
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. Not for thesis research. Staff.

ENTOM 709 Teaching Entomology
Credit to be arranged. Staff. Teaching entomology or for extension training.

ENTOM 800 Master's-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.

ENTOM 900 Doctoral-Level Thesis Research
Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Staff.
Jugatae Seminar
Fall and spring.
A seminar conducted by Jugatae, the entomology club of Cornell University, to discuss topics of interest to its members and guests. All interested undergraduate and graduate students are encouraged to attend.

FLORICULTURE AND ORNAMENTAL HORTICULTURE
Botany and Horticulture courses are listed under Horticultural Sciences.

Freehand Drawing and Scientific Illustration
Freehand Drawing and Scientific Illustration courses are offered through the Department of Floriculture and Ornamental Horticulture and are described in the section "Freehand Drawing and Scientific Illustration."

FOOD SCIENCE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

FOOD 101 Science and Technology of Foods
Fall. 1 credit. S-U grades only. M 1:25-2:15. J. H. Hotchkiss and staff.
This course explores the application of science and technology to foods. Lectures will elucidate the role of engineering, biotechnology, chemistry, biochemistry, nutrition, toxicology, and microbiology in supplying the world with safe and nutritious food. An overview of food science as a discipline and career choice will be given.

FOOD 102 Exploring Food Processing
A series of seminars on current technological and regulatory developments in food science. Field trips to four commercial food manufacturing/processing plants and one food research organization will be used to illustrate the application of current technologies. A course project, using the Food Science Alumni Network, will be required.

FOOD 150 Food Choices and Issues
This course provides Cornell students with the knowledge needed to make healthy food choices. A systematic approach to food production, processing, distribution, and consumption will be presented. Each student will analyze the nutritional quality of his or her personal diet using a computer diet analysis program. Topics include relationships between diet and health, food processing, food safety, and discussions of contemporary issues relating to food quality, safety, and nutrition.

FOOD 200 Introductory Food Science
Fall. 3 credits. Prerequisite: college level courses in chemistry and biology. M W F 11:15-12:05. J. H. Hotchkiss.
A comprehensive introduction to the principles and practice of food science and technology. Topics include: chemistry of foods, nutritional significance; food fortification, preservation, and processing; microbiology and fermentations; and composition and processing of food commodities and contemporary issues including food safety, regulation, and world food needs. Interrelationships between the chemical, physical, nutritional, and quality properties of foods as affected by formulation, processing, and packaging are stressed.

FOOD 210 Food Analysis
Spring. 3 credits. Prerequisite: CHEM 208 or equivalent. Lecs, T, R 12:20-1:10; lec, T 12:20-1:15. R. H. Liu.
Introduces basic analytical techniques for food analysis and other biological analysis. Emphasizes fundamental principles of analytical chemistry, basic laboratory techniques, and modern instrumental methods. Gravimetric, volumetric, and spectrophotometric methods, gas chromatography (GC), high-performance liquid chromatography (HPLC), infrared spectra (IR), and atomic absorption spectrometry are discussed.

FOOD 250 Kosher and Halal Food Regulations
Spring. 2 credits. Sophomore standing and above. M 7:30-9:25 p.m.
J. M. Regenstein.
A comprehensive introduction to kosher and halal foods in the American food industry with some coverage of home practices. The kosher food laws, their origin, and their application in modern food processing will be examined. Halal laws will also be examined and the interactions between the two communities explored. Current food-related issues in both communities will be reviewed, including recent court decisions. Some aspects of ethnic foods will also be considered.

FOOD 290 Meat Science (also Animal Science 290)
Fall. 2 or 3 credits. Lecs, T 11:15-12:05 M W F; lab, M 12:20-3:20. R. H. Liu.
An introduction to meat science through a study of the structure, composition, and function of muscle and its conversion to meat. Properties of fresh and processed meat, microbiology, preservation, nutritive value, inspection, and sanitation are also studied. Laboratory exercises include anatomy, meat animal slaughter, meat cutting, wholesale and retail cut identification, processing, inspection, grading, quality control, and meat merchandising. An all-day field trip to commercial meat packing plants is taken.

FOOD 311 Milk and Frozen Desserts
Fall. 2 credits. Prerequisite: FOOD 322 or permission. R 12:20-2:25.
Deals with the principles and practices of processing fluid milk products and frozen desserts. The chemistological, and technological aspects of processing these dairy products are considered. Emphasis will be upon product quality and recognition of factors affecting consumer acceptance.

FOOD 321 Food Engineering Principles
Fall. 3 credits. Prerequisites: FOOD 200 and introductory physics. M W F 9:05-9:55. S. S. Rizvi.
Introduces the engineering principles underlying food processes and equipment. Topics covered include thermodynamics, mass and energy balances, fluid mechanics, and heat and mass transport.

FOOD 322 Food Engineering Laboratory
Limited to 10 students in each lab session. Provides hands-on experience with food engineering processes and measurements. Topics covered include mass and energy balances, rheology, fluid mechanics, heat transfer, refrigeration and psychrometry.

FOOD 351 Milk Quality
Fall. 1 credit. Prerequisite: AN SCI 250 or equivalent or permission of instructor. F 12:20. D. K. Bandler and D. P. Brown.
Focuses on the important aspects of farm sanitation and milk handling as they affect milk flavor and quality. The course is an overview of quality control tests, basic microbiology, cleaning and sanitizing, and special problems in modern processing and marketing fresh and shelfable dairy products.

FOOD 394 Applied and Food Microbiology (also BIOMI 394)
Fall. 2-3 credits. Prerequisites: BIOMI 290-291. M W F 12:20-1:10. C. A. Batt.
Microorganisms play a central role in a variety of food, agricultural and environmental processes. This course will present a comprehensive survey of the roles that microorganisms play in industrial/biotechnological processes as well as their importance in the safety and production of foods. Issues related to the biochemistry, genetics and physiology of microorganisms important in these processes will be reviewed. A 2 credit core section on food microbiology is complemented by a 1 credit section on environmental microbiology applications.

FOOD 395 Food Microbiology Laboratory
Fall. 2 credits. Prerequisite: BIOMI 291 or equivalent. M W F 10:00-11:00. J. M. Brown.
Work includes study of the physiological characteristics of representative food microorganisms, practice in using general and special methods for microbological testing and control of food products, and practice in the application of a systematic approach to controlling the safety of foods.

FOOD 396 Food Safety Assurance
This course provides information on procedures to control biological, chemical, and physical hazards and assure the safety of foods. Topics include discussions on the Hazard Analysis Critical Control Point (HACCP) concept, good manufacturing practices, prerequisite programs, and the application of current technologies in reducing the risk of foodborne illnesses. Case studies and exercises will be used to demonstrate and apply the key principles that are discussed.

FOOD SCIENCE 81
FOOD 406 Cheese and Other Fermented Dairy Foods
Principles and practices of fermentation and processing techniques applied to cheeses, cultured dairy foods, beer, and related products. Labs will feature unit processes and tastings.

FOOD 409 Food Chemistry
Spring. 3 credits. Prerequisite: BIOBM 330 or 331. M W F 9:05-9:55. J. W. Brady.
The chemistry of foods and food ingredients. Chemical and physical properties of water, proteins, lipids, carbohydrates, and other food components/additives are discussed in the context of their interactions and functional roles in foods. The effects of chemical changes during processing and storage on quality and nutritional aspects of several food commodity groups (milk, meat, fruits and vegetables, cereals and legumes) are described.

FOOD 410 Sensory Evaluation of Food
Fall. 2–3 credits (one lab credit).
Topics include the sensory evaluation methods used to test the flavor, appearance and texture of foods by quantitative description and simple difference testing, consumer testing for product acceptability, sensory tests in quality control, strategic product research and product development. The psychological principles in sensory testing and statistical methods for sensory data analysis are presented. The laboratory provides first hand experience in organizing and conducting sensory tests and an introduction to online data collection and analysis. Undergraduate Food Science majors are required to take both the lecture and the laboratory.

FOOD 411 Principles of Food Packaging
The chemical and physical properties and manufacture of the basic materials used to construct packaging are discussed. The influence of packaging on shelf life is presented. Emphasis is on newer packaging technologies and materials. Economics, design, and regulation of food packaging are briefly presented.

FOOD 419 Food Chemistry Laboratory
A laboratory course emphasizing fundamental chemical principles and laboratory techniques necessary for an understanding of the chemistry of foods. Relationships between chemical composition and functional, nutritional, and organoleptic properties of foods are stressed. Many of the laboratory techniques involved are common to those used in biochemistry laboratories (e.g., electrophoresis, chromatography, enzyme assays) but are applied to specific foods or beverages.

FOOD 423 Unit Operations in Food Manufacturing
Fall. 4 credits. Intended for seniors and food science majors. Lec, T R 11:15-12:05; recitation, T 12:20; lab, 1:25-4:25 T or to be arranged. S. J. Mulvaney and S. K. Sharma.
An integrated approach to understanding food manufacturing operations. Topics include major unit operations used for thermalization, freezing and dehydration of foods. Emphasis is placed on the interplay between engineering design of processes and the physical and chemical transformations that occur as food is produced from various commodities. The impact of process conditions on product safety, overall quality, and storage stability are also considered.

FOOD 430 Understanding Wine
Spring. 3 credits. Prerequisites: introductory biology and chemistry or permission of instructor. Students must be 21 years old by the first day of class (Jan. 25, 2000) to enroll. S-U grades optional. T R 2:30-4:25. T. Henrick-King, T. E. Acree, and H. T. Lawless.
An introduction to wine appreciation through the study of fermentation biology, wine composition, and sensory perception. Samples of wines will be used to illustrate the sensory properties, microbiological processes, and chemical components that determine wine quality. Students will learn to recognize the major features of wine that determine sensory quality and know the processes that produced them. Topics will include the psychology and chemistry of bouquet, taste, and aroma; the microbiology of fermentation and spoilage; and the sensory properties of wines from different grape varieties, viticultural practices, and wine making techniques.

FOOD 447 International Postharvest Food Systems
Fall or spring. 3 credits. Prerequisite: freshman chemistry. S-U grades optional. T R 10:10-11:00. M. C. Bourne and staff.
An interdisciplinary course designed for all undergraduate and graduate students in CALS. Describes postharvest food losses and methods to reduce these losses. Topics include storage and care of unprocessed and minimally processed foods such as cereal grains, fruits, vegetables, tubers, and fish; biology and control of fungi, insects, and vertebrates in foods; chemical causes of quality loss; effects of climate; and economic and social factors affecting food preservation and storage. Emphasis is given to the problems in developing countries. The third credit requires a written case study of a country or commodity.

FOOD 450 Fundamentals of Food Law
Introduction to the complex array of federal and state statutes and regulations that control food processing, packaging, labeling, and distribution of food, including aspects of safety and nutritive value. Emphasis will be on the Food and Drug Administration and U.S. Department of Agriculture regulations, but the course will also refer to other regulatory agencies. Emphasis will be placed on how a food or agricultural professional interacts with this legal system during legislative action, regulatory rule making, and with respect to compliance.

FOOD 456 Advanced Concepts in Sensory Evaluation
Readings and discussions of primary source materials in sensory evaluation, including recent advances in sensory methods, historical perspectives, psychophysics, perceptual biases, and multivariate statistical approaches to sensory data. A major independent research project is conducted on a current issue in sensory evaluation.

FOOD 459 Special Topics in Food Science
Fall or spring. 4 credits maximum. S-U grades optional.
The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

FOOD 471 Individual Study in Food Science
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional.
May include individual research, a special topic selected by a professor or a group of students, or selected lectures of a course already offered. As topics may be changed, the course may be repeated for credit.
FOOD 498 Undergraduate Teaching Experience
Fall or spring. 3 credits maximum. Prerequisite: permission of instructor. Students must register with an Independent Study Form (available in 140 Roberts Hall). S-U grades only. Students assist in teaching a course appropriate to their previous training and experience. Students will meet with a discussion or laboratory section and will regularly discuss objectives with the course instructor.

FOOD 499 Undergraduate Research in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Students must register with an Independent Study Form (available in 140 Roberts Hall). This course may be repeated for credit. Students conduct original research directed by a food science faculty member.

FOOD 600 Seminar In Food Science
Fall and spring. 1 credit. S-U grades only. Required of all food science graduate students. T 4:30-5:30. A weekly seminar series on contemporary topics and issues in the Field of Food Science and Technology. Representatives from academia, industry, and government provide presentations on a wide variety of topics. Graduate students in the Field of Food Science and Technology may use the forum to present their required thesis research seminar. Required of all graduate students in the Field of Food Science and Technology. Strongly recommended for graduate students minoring in Food Science and Technology.

FOOD 604 Chemistry of Dairy Products
Fall. 2 credits. Limited to 16 students. Prerequisites: organic chemistry, biochemistry, knowledge of dairy-product manufacturing procedures, and permission of instructor. F 1:25-3:30. Offered alternate years. Not offered fall 1999. D. M. Barbano. A detailed study of milk constituents and their properties. Properties of various milk constituents are related to observed physical and chemical changes that occur in dairy products during and after processing. This course will emphasize current research in dairy chemistry.

FOOD 605 Physical Chemistry of Food Components
Fall. 3 credits. Prerequisite: an undergraduate course in physical chemistry. M W 10:10. Offered alternate years. Not offered fall 1999. J. W. Brady. This course will cover the physical properties of food molecules. Emphasis will be placed on the molecular basis of structural characteristics, colloidal properties, molecular interactions, foams, gels, and water binding of foods.

FOOD 607 Advanced Food Microbiology
Spring. 2 credits. Prerequisites: food microbiology, genetics (preferred). M W 11:15. Offered alternate years. Next offered spring 2000; not offered spring 2001. C. A. Batt. There have been great advances in applying the modern tools of molecular biology to the detection of microorganisms and their metabolites. The primary emphasis of this course will be to review the recent developments in the theory and application of nucleic acid and antibody-based detection systems, especially as they concern food safety. In addition, other approaches, including measurement of impedance, ATP, and endotoxins, will be discussed.

FOOD 608 Chemometric Methods in Food Science
Fall. 2 credits. Prerequisite: basic statistics and chemistry or permission of instructor. S-U grades optional. W 1:25-3:20. Offered alternate years. Next offered in 2000. K. J. Siebert. Food science applications using multivariate statistical methods (chemometrics) include extracting information from large data sets, modeling molecular and product properties, optimizing analytical methods and processing operations, discerning relationships between product composition and sensory properties, identifying cultivars or species, and detecting adulteration. The techniques covered are also applicable to many other problems in biology and chemistry.

FOOD 616 Flavors—Analysis and Applications

FOOD 620 Food Carbohydrates (also Nutritional Sciences 620)
Spring. 2 credits. Limited to qualified seniors and graduate students. Prerequisite: BIOM 330 or equivalent. T R 10:10. Offered alternate years. Next offered spring 2001; not offered spring 2000. A. Lewis and J. W. Brady. A consideration of the chemistry of carbohydrates, including sugars, starches, pectins, hemicelluloses, gums, and other complex carbohydrates. Emphasis is on the intrinsic chemistry and functionality in food systems and the changes occurring during food processing and storage.

FOOD 621 Food Lipids
Fall. 2 credits. Letter grade. Prerequisites: FOOD 409 and a Biochemistry course. An advanced course in food lipids. Describes the physical, chemical and biochemical properties of lipids, interactions and changes in food processing and storage, food chemistry, technology and applications, and modern analytical methodology of lipids.

FOOD 665 Engineering Properties of Foods
Spring. 2 credits. Prerequisite: course in transport processes or unit operations as applied to foods; or permission of instructor. T R 12:20-1:10. Offered alternate years. Next offered spring 2000; not offered spring 2001. S. S. H. Rizvi, S. J. Mulvany, and S. K. Sharma. Theories and methods of measurement and prediction of rheological, thermal, and mass transport properties of foods and biomaterial systems. Emphasis is on physical-mathematical basis of measurement as well as the prediction processes. Examples of appropriate use of these properties in engineering design and analysis of food processes will also be provided.

FOOD 694 Special Topics in Food Science
Fall or spring. 4 credits maximum. S-U grades optional. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

FOOD 698 Graduate Teaching Experience
Fall and spring. 1 to 3 credits. S-U grades only. Staff. Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of field faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring. There will be assigned readings and discussion sessions on educational theory and practice throughout the term.

FOOD 800 Masters-Level Thesis Research
Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to master's candidates; permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 900 Graduate-Level Thesis Research
Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

FOOD 901 Doctoral-Level Thesis Research
Fall or spring. Credit to be arranged. Maximum credit, 12. Prerequisite: limited to doctoral students who have passed the "A" exam; permission of Special Committee Chair. S-U grades only. Graduate faculty.

Related Courses in Other Departments
Introduction to Computing (ABEN 151)
Introduction to Business Management (ARME 220)
Marketing (ARME 240)
Food Industry Management (ARME 443)
Biological and Environmental Transport Processes (ABEN 350)
Computer-Aided Engineering: Applications to Biomaterials and Food Processing (ABEN 453)
Practical Aspects of Postharvest Handling of Horticultural Crops (HORT 365)
FREEHAND DRAWING AND SCIENTIFIC ILLUSTRATION

Freehand Drawing is a program within the Department of Floriculture and Ornamental Horticulture. Other courses offered by the department are listed under Horticultural Sciences.

[FR DR 109 Nature Drawing
Fall. 3 credits. Limited to 25 students. S-U grades optional. Permission of instructor required. M W F 10:10-12:05. Not offered fall 1999. R. J. Lambert. A beginning course with emphasis on the drawing of natural forms: plants, animals, and landscapes. Of particular interest to students in floriculture and ornamental horticulture, landscape architecture, biological sciences, nature education, or similar fields. Outside field notebook assignments.]

[FR DR 211 Freehand Drawing and Illustration
Fall. 2 credits. Prerequisite: FR DR 109 or equivalent. S-U grades optional. 6 studio hours scheduled in 2 or 3 hour units between 9:05 and 12:05 M T W R. Not offered 1999. R. J. Lambert. Progression to the organization of complete illustrations. Subject matter largely from sketchbooks, still life, and imagination. Composition, perspective, and ways of rendering in different media are considered.]

FR DR 214 Watercolor
Spring. 2 credits. S-U grades optional. 4 studio hours scheduled in 2 hour units between 9:05 and 12:05 and 2 hours outside sketching. M T W R. R. J. Lambert. A survey of watercolor techniques. Subject matter largely from sketchbooks, still life, and imagination.]

FR DR 316 Advanced Drawing
Fall. 2 credits. Prerequisite: FR DR 109, 211 or permission of instructor. S-U grades optional. 4 hours to be arranged. M R 9:05-12:05, 2 hours outside sketching. R. J. Lambert. For students who want to attain proficiency in a particular type of illustration or technique.

[FR DR 417 Scientific Illustration
Fall. 2 credits. Prerequisite: FR DR 211 or 316 or equivalent. S-U grades optional for graduate students only. Not offered 1999-2000. R. J. Lambert. A survey of methods of illustration. Training in techniques of accurate representation in media suitable for reproductive processes, including pen and ink, scratchboard, wash, and mixed media.]

FRUIT AND VEGETABLE SCIENCE: HORTICULTURAL SCIENCE

See Horticultural Sciences.

HORTICULTURAL SCIENCES

Horticultural science courses at Cornell are taught by the faculty of the Department of Floriculture and Ornamental Horticulture and the Department of Fruit and Vegetable Science (Pomology and Vegetable Crops).

Floriculture and Ornamental Horticulture

FRUIT and Vegetable Science

Courses by Subject:

General horticulture: 100, 101, 102
Public garden management: 485
Crop production:
Agroforestry: 415
Fruit: 200, 442, 444, 445, 450
Greenhouse and controlled environments: 400, 410
Nursery: 400, 420
Turfgrass: 350, 475
Vegetable: 225, 456, 460
Extension education: 476, 629
Horticultural physiology: 400, 450, 455, 456, 460, 462, 615, 620
Independent study, research, and teaching: 470, 495, 496, 497, 498, 499, 500, 605, 700, 800, 900
Internships: 496
Landscape horticulture: 301, 455, 440, 485, 491
Plant materials: 230, 243, 300, 301, 335, 430
Plant propagation: 400
Postharvest physiology: 325, 625, 630
Seminars: 602, 630
Special topics: 470, 494, 629, 630, 635, 694
Turfgrass management: 330, 475
Vegetable types and varieties: 220, 465

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HORT 100 History of Horticulture
Fall. 2 credits. Lec, T 2:00-4:30. C. F. Gortzig. A survey of the history and development of horticulture as a science, art and profession. Discussion covers pre-history to the present with emphasis on the 1700's to present. A field trip to historic sites for which there may be a charge of $30-$50.

HORT 101 Introduction to Floriculture and Ornamental Horticulture
Fall. 2 credits. Lec, W 10:10; lab W 12:25-4:25. T. C. Weiler and staff. Introduction to the technology and career opportunities in floriculture and ornamental horticulture. Exploration of private and/or public sector activities: production (greenhouse, nursery, and sox), sales (retail and wholesale), landscape management (landscape management, recreational turfgrass management, urban horticulture) related professional and commercial fields. The role of science and technology in the continuing development of horticultural practices. Field trips to horticultural farms and demonstration sites.

HORT 102 General Horticulture
Spring. 4 credits. Each lab limited to 25 students. Lecs, M W F 10:10; lab M T or W 2:45-4:25. L. D. Topoleski.

This course acquaints the student with applied and basic horticulture. Open to all students who want a general knowledge of the subject or who want to specialize in horticulture but have a limited background in practical experience or training in plant science. Includes flower, fruit, and vegetable growing and gardening techniques.

HORT 200 Introductory Pomology
Fall. 3 credits. S-U grades optional. Lec, T R 10:10, lab, T 1:25-4:25. I. A. Merwin. A general introduction to pomology—the science and art of fruit growing. Lectures and discussion emphasize the natural history, ecology, botany, physiology, integrated pest management, and diverse production systems for fruits grown in temperate climate areas. Lab sessions and field-trips involve fruit anatomy and morphology, clonal selection and propagation, planting and pruning techniques, fruit harvesting and storage, environmental and sustainability issues, WWW-based information on fruit growing, and hands-on practice in local orchards and vineyards.

HORT 220 Vegetable Types and Identification
Fall. 2 credits. T 2:45-4:25. L. Topoleski. This course acquaints students with the vegetable species grown in the Northeast and the pests and disorders encountered in their production. Subjects covered include identification of economically destructive weeds, diseases and insects of vegetables, identification of vegetable and weed seeds, seedling and nutrient deficiencies, vegetable judging, grading, and grade defects.

HORT 225 Vegetable Production
Fall. 4 credits. Lecs, M W F 11:15; lab, W 2:45-4:25, 1 S fieldtrip and 3 fieldtrips (September). W 11:15-6:00. L. A. Ellerbrook. Intended for those interested in the production, processing, and marketing of vegetables. Topics included are techniques, problems, and trends in the culture, harvesting and storage of the major vegetable crops. Field trips to conventional organic farms and hands-on experience in growing vegetables in the laboratory are included.

HORT 230 Woody Plant Materials
Spring. 4 credits. Lecs, T 11:15-2:55, lab, W 1:25-4:25 required and either W or F 2:45-4:25. Staff. A study of the trees, shrubs, ground covers, and vines used in landscape plantings. Emphasis is on winter identification and values for use as landscape material.

HORT 243 Taxonomy of Cultivated Plants (also BIOPL 243)
Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lec, M W 10:10-11:00; lab, W 12:25-4:25. Offered even years. Not offered fall 1999, next offered fall 2000. M. A. Luckow. A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.
HORT 300 Herbaceous Plant Materials
Fall. 3 credits. Fee for lecture-laboratory manual: $35. Lecs, T R 10:10; lab, T 2–4:25. W. B. Mills.
Identification, use, characteristics, and garden cultural requirements of annual and herbaceous perennial plants, especially those used in northern climates. Practical gardening experiences at selected campus locations. Field trips to nearby specialty nurseries. Garden planting design is not a component of the course.

HORT 301 Plants for Interiors
Spring. 3 credits. Prerequisite: HORT 300 or permission of instructor. Fee for lecture-laboratory manual: $35. Lecs, M W 11:15; lab, R 2–4:25. Offered even years. T. C. Weiler and staff.
Study of plants for interiors: identification, design characteristics, and cultural requirements; the interior landscape industry (organization, bidding, installation, maintenance); use of plants as elements of planting design (trees, shrubs, groundcovers, and accent plants (including potted flowering plants and cut flowers). Required 3-day field trip, estimated cost, $130.

HORT 325 Practical Aspects of Postharvest Handling of Horticultural Crops
A study of changes that occur in horticultural crops between harvest and consumer. Practices that affect the rate of change and the final effect on quality of the commodity are discussed. Maturity/quality indices, preharvest treatments, and harvesting/handling practices and storage/transportation requirements of selected horticulture crops are covered.

HORT 330 Turfgrass Management
Fall. 3 credits. Prerequisite: SCAS 260 Lecs, M W 11:15; lab, F 11:15–1:10. Offered even years. Not offered fall 1999, next offered fall 2000. A. M. Petrić
Study of the scientific principles involved in the management of golf courses, athletic fields, parks and industrial grounds, and commercial sod production. Considerations given to principles of establishment, mowing, irrigation, growth and development, species selection, nutrition in the management of turfgrass sites, and integrated pest management.

HORT 335 Woody Plant Materials for Landscape Use
A study of the trees, shrubs, vines, and ground covers used in landscape plantings in the northeastern United States. Emphasis is on leaf identification and on characteristics that determine the usefulness of each as landscape subjects.

HORT 400 Principles of Plant Propagation
Fall. 3 credits. Prerequisites: BIOPL 242 and 244 or another course in plant physiology. Lecs, T R 9:05; lab, R 1:25–4:25. W. B. Tuggle.
Sexual (seed) propagation and asexual (vegetative) propagation including cuttage, graftage, tissue culture, layering and specialized vegetative reproductive structures. Physiological, environmental, and anatomical principles are stressed in lecture and hands-on skills in laboratories. Examples include both temperate as well as tropical horticultural, agronomic, and forestry crops.

HORT 401 The How, When and Why of Grafting—A Distance Learning Approach
Spring. 2 credits. Lec: autotutorial (web, cd); Lab: greenhouse/autotutorial; Discussion: email. K. W. Mudge.
A four-week autotutorial approach to the principles and practicalities of grafting and budding as applied to plant propagation. Emphasis will be on the role of grafting in modern horticultural practice and on student development of hands on grafting skills. Instruction will involve microcomputer presentation of lecture materials (world wide web, cd-rom) asynchronous discussion (email), and hands on greenhouse laboratory exercises.

HORT 410 Production and Marketing of Crops Grown in Controlled Environments
Spring. 4 credits. Letter grade only. Offered odd years; 2001. Lecs, T R 10:10; lab 2–4:25. T. C. Weiler and staff.
Basics of establishing and managing agricultural production in environmentally optimized facilities; technology basics, systems, principles, practices, structures, systems and equipment, materials handling, heating and cooling, lighting, fertilizing and irrigation, environmental stewardship, integrated pest management, business management, world centers of production, cut cut, potting, budding, vegetable, and fruit crops in controlled environments, emphasizing predictive harvesting through environmental, physical, and chemical management of growth and development. Each student will grow one or more crops. Required 3-day field trip, estimated cost, $130.

HORT 415 Principles and Practices of Agroforestry (also NTRES 415)
Spring. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. Lecs, M W 10:10; lab, W 1:25–4:25. K. W. Mudge, J. P. Lassoe.
An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of woody and non-woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, and use of computer-based sources of information, and practical skills involved in woody plant management (identification, propagation, pruning, measurement).

HORT 420 Principles of Nursery-Crop Production
Principles of commercial production of nursery crops, with emphasis on postharvest handling and storage. Term project required. Field trips are made to commercial nurseries.

HORT 430 Special Topics in Ornamental Plants
Fall or spring. Credit and hours to be arranged. Primarily for upperclass floriculture and ornamental horticulture majors. Prerequisites: HORT 230, 300, 301, 335, or the equivalent, and permission of instructor. R. T. G. Mower.
Topical subjects in plant materials. Independent and group study of important groups of woody and herbaceous plant materials not considered in other courses. The topic is given in the supplementary announcement.

HORT 435 Landscape Management
Fall. 4 credits. Prerequisites: HORT 230 or 335. Lecs, M W 9:05; lab, M 2–4:25. Offered even years. Not offered fall 1999, next offered 2000. G. L. Good.
A study of the practices involved in the maintenance of woody ornamental plants in the landscape. The major emphasis will be on post-planting techniques, including water and fertilization management, weed management, pruning, and general tree care. Labs have a hands-on focus.

HORT 440 Restoration Ecology
An inquiry based treatment of the principles and methods of ecology, conservation biology, hydrology, soil science and related disciplines applied to the restoration of degraded terrestrial ecosystems. Weekly labs, four weekend field trips, and a semester-long project provide many opportunities for experiential learning. Substantial commitment outside of the classroom is expected.

HORT 442 Berry Crops: Culture and Management
A study of the evolution, breeding history, and physiology of strawberries, raspberries, blackberries, blueberries, and other small fruit crops, and of cultural practices that influence productivity, fruit quality, and pest damage. Marketing and economics will be considered, and alternative production practices for both commercial and home gardeners will be discussed. Frequent field trips enhance classroom activities.

HORT 444 Applied Viticulture
Grape production and post-production practices with emphasis on the Great Lakes and Finger Lakes regions. We will examine grape varieties, site selection, and vine management as affected by geography, meteorology and vine anatomy/physiology. Protection of vines and grapes from injury by cultural, chemical, and natural means will also be explored. Laboratory exercises and field trips offer hands-on experience in vineyard practices, marketing and processing.

HORT 445 Orchard Management
The science and technology of deciduous tree-fruit production. Topics include basic tree and fruit physiology, orchard renovation and design systems, nutrition, irrigation and
freeze protection practices, tree pruning and training, post-harvest fruit storage, marketing and economic spreadsheet models, monitoring and decision systems for integrated pest management, and efficient utilization of orchard equipment. Emphasis is on the agroecology of perennial crop systems, with labs providing hands-on experience in orchard management. Previous coursework in pomology and interplant sciences is suggested, but not a prerequisite.

**HORT 450 Soil Management and Nutrition of Perennial Crops**

Fundamentals of mineral nutrition and soil management for perennial horticultural crops.

**HORT 455 Fertility Management and Nutrition of Vegetable Crops**
Fall. 3 credits. Prerequisite: any college-level chemistry course. Lecs, M W 10; lab/disc, M 2-4:25. Not offered 1999-2000.

The course deals with both major, secondary and minor elements including fertilization programs, interpretation of tissue and soil analyses, nutrient interactions, induced deficiencies, toxicities as well as the effects of organic matter, crop residues, and specific crop sequences. The course emphasizes hands-on field and greenhouse experiments and small group discussions.

**HORT 460 Plant-Plant Interactions**
Spring. 3 credits. Prerequisite: any crop production on plant ecology course or permission of instructor. Lecs, M W 10; lab/disc, M 2-4:25. Not offered spring 2001. D. W. Wolfe.

Mechanisms by which plants interfere or positively interact within the context of environmental conditions such as light, temperature, and fertility. Competitive and chemical interactions are considered between weeds and crops, among crops in monoculture, and between individuals in monoculture.

Most examples will be taken from temperate and tropical monoculture and intercropping systems, but implications for natural ecosystems will also be considered.

**HORT 462 Vegetable Crop Physiology**

Study of the physiological processes that determine the timing, quantity, and quality of vegetable crop yields. Processes of flower induction, fruit set, fruit growth, and the relations between vegetative and reproductive growth are covered. The course emphasizes practical hands-on greenhouse experiments and small group discussions.

**HORT 465 Vegetable Varieties and Their Evaluation**
Fall, weeks 1-7. 2 credits. Prerequisites: HORT 225 or permission of instructor. S-U grades only. Lecs, W F 8; lab, F 1:25-4:25. Offered alternate years. Not offered fall 2000. D. W. Wolfe and A. Rangarajan.

Principles of vegetable variety evaluation and selection of techniques in relation to program objectives. Morphology, yield, and quality of selected crops will be studied in the field. The seed industry will be briefly discussed.

**HORT 470 Special Topics in Pomology**
Spring. 3 credits. Open to undergraduates by permission. Hours to be arranged. Staff.

Selected topics are considered with respect to the current literature, experimental techniques, or applied technologies. Topics change from year to year to another and reflect the expertise and research interests of the professors who participate. Topics selected for each term will be announced several months before the term begins.

**HORT 475 Golf Course Management**
Fall. 2 credits. Prerequisite: HORT 330 or equivalent. Lecs, F 1:25-4:25. Offered odd years. A. M. Petrovic.

Advanced study in the management of golf course operations including selection of root zone materials, fertilization practices, integrated pest management practices, irrigation systems, environmental based decision making, personnel management and financial operations. Analysis of a central New York golf courses will provide the basis for discussion.

**HORT 476 Practical Problem-Solving in Horticulture**
Fall. 2 credits. Lecs, M 12:20-1:10; lab w 2-4:25. C. P. Mazza.

Foundation for extension or similar career oriented students. Application of horticultural science principles to practical situations. Techniques of synthesizing information from various scientific disciplines. Classes led by staff in several departments. Topics are interdisciplinary, drawing from expertise in horticultural science (landscape and food), entomology, plant pathology, natural resources, and Cornell Plantations.

**HORT 480 Plantations Seminar Series**
Fall. 1 credit. S-U grade only. W 7:30 p.m. D. A. Rakow.
A 10-week series of seminars given by prominent speakers on a variety of horticultural, natural sciences, and human cultural themes.

**HORT 485 Public Garden Management**
Spring. 3 credits. Prerequisites: HORT 300 or HORT 301; HORT 290 or HORT 335. Lecs, T R 10:10-11:00, lab, T R 11:15-12:05. Two-and-one-half-day field trip to visit other botanical gardens and arboreta. Offered odd years. 2001. Not offered spring 2000. D. A. Rakow.

The course will explore the history of public gardens, types of contemporary public gardens, and the operation of botanical gardens and arboreta. Included will be separate units on: collections curation, design of collections, management of landscapes and natural areas, educational programming, interpretive programs, research, financial management, and staffing.

**HORT 491 Design and Plant Establishment in the Urban Environment**
Fall. 3 credits. Prerequisites: HORT 230 or 335 or permission of instructor. Lecs, T R 12:20; lab, T 1:25-4:25. N. L. Bassuk and P. J. Trowbridge.

This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the environmental constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers, and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design, followed by specifications and graphic details, will be produced to implement these practices. Field work includes chemical and physical analysis of soils, vegetation, and site assessment.

**HORT 494 Special Topics in Horticulture**
Fall or spring. 4 credits maximum. S-U grades optional.

In Sections 01 and 02, the departments teach "trial" courses under this number. Offerings may vary by semester, and will be advertised by the departments. Courses offered under the number will be approved by the department curriculum committees, and the same course will not be offered more than twice under this number.

**Section 01. Fruit and Vegetable Science**

**Section 02. Horticultural Practicum**
Fall. 3 credits. Lab, R 1:25-4:25. D. A. Rakow and staff.

In Section 02, students will gain practice in developing specific plant material. M 10:15-12:05: the direction of experienced plantations' staff. Applied theory and practice for a variety of horticultural topics: integrated pest management, water, bog, and marl gardening, bed preparation and planting perennials, tree planting, pruning techniques, small engine maintenance, stone patio and path construction, and dry stone wall construction.

**HORT 495 Undergraduate Seminar**
Fall or spring. 1 credit. Fruit and Vegetable Science. Undergraduate participation in weekly departmental seminar series. Graduate students should enroll in HORT 602. May be taken four times for one credit per semester. S-U grades only. R 4. C. B. Watkins and A. Rangarajan.

Current topics in Fruit and Vegetable Science (see HORT 602).

**HORT 496 Internship in Horticultural Sciences**
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of student's adviser in advance of participation in internship programs. Students must register with an Independent Study form (available in 140 Roberts Hall) signed by the faculty member who will supervise their study and assign their grade. Hours to be arranged. Staff.

**HORT 497 Independent Study in Horticultural Sciences**
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor(s). Students must register with an Independent Study form available in 140 Roberts Hall. Independent study in horticultural sciences under the direction of one or more faculty members. Hours to be arranged. Staff.

**HORT 498 Undergraduate Teaching Experience**
Fall or spring. Credit variable. S-U grades optional. Prerequisites: previous enrollment in course to be taught or equivalent, and written permission of the instructor. Students must register with an
Independent Study form (available in 140 Roberts Hall). Hours to be arranged. Staff.

Designed to give qualified undergraduate students teaching experience through actual involvement in planning and teaching horticultural sciences courses under the supervision of departmental faculty members. This experience may include leading discussion sections; preparing, assisting in, or teaching laboratories; and tutoring.

HORT 499 Undergraduate Research
Fall or spring. Credit variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall.) Hours to be arranged.

Undergraduate research projects in horticultural sciences.

HORT 500 Master of Professional Studies (Agriculture) Project
Fall or spring. 1-6 credits. (6 credits maximum toward MPS (Agriculture) degree). S-U grades optional. Staff.

A comprehensive project emphasizing the application of principles and practices to professional horticultural teaching, extension, and research programs and situations. Required of Master of Professional Studies (Agriculture) candidates in the respective graduate fields of horticulture.

HORT 600 Seminar in Floriculture and Ornamental Horticulture
Fall or spring. 1 credit. Prerequisite: permission of instructor. Lec, M 12:20.

Staff.

Graduate students join distinguished visitors and Cornell staff members for weekly professional seminars on current teaching, research, and extension in floriculture and ornamental horticulture. Students will present a seminar based on their work. Often students use the presentations as part of their thesis defense and in preparation for job interviews.

HORT 602 Seminar in Fruit and Vegetable Science
Fall or spring. 1 credit. S-U grades only. R 4:00. A. Ratnaswamy, and C. B. Watkins.

Weekly seminars consist of graduate student research project reports, faculty research topics, as well as guest speakers from other universities and/or industry. Required of graduate students majoring or minoring in pomology or vegetable crops. Undergraduate students register under HORT 495 Sec 1.

HORT 615 Quantitative Methods in Horticultural Research

Advantages and limitations of conventional experimental designs and analyses of greenhouse and field (including-on-farm) experiments. Use and interpretation of plant growth analysis techniques. Discussions will include critical analysis of published data and research in progress.

HORT 620 Woody Plant Physiology

An examination of physiological processes in woody plants emphasizing whole plant integration and how these processes affect plant growth under both natural and cropping systems. Topics include evolution of the woody plant form, structure and function of the root and shoot, growth periodicity, dormancy, growth analysis, carbon balance and allocation, root symbioses, and physiological responses to biotic and abiotic stress. Faculty from Geneva and Fruit and Vegetable Science collaborate in teaching.

HORT 625 Advanced Postharvest Physiology of Horticultural Crops
Spring. 3 credits. BIOPOL 242 and/or HORT 325. Lecs, T R 10:10; disc, to be arranged. Not offered spring 2000.

Physiological and biochemical aspects of growth and maturation, ripening, and senescence of harvested horticultural plant parts. Topics include morphological and compositional changes during ripening and storage life, some physiological disorders, aspects of hormone action and interactions, and a consideration of control.

HORT 629 Special Topics in Plant Science Extension (also Plant Breeding 629)

Designed for graduate students and advanced undergraduates to provide a broader knowledge of cooperative extension, philosophy and methods. Developed for students interested in extension and research in public and commercial organizations. Topics relate to extension in other countries as well as in the United States.

HORT 630 Current Topics in Postharvest Horticulture
Spring. 1 credit. Prerequisite: permission of instructor. Hours to be arranged. Staff.

Graduate students and staff report and discuss current topics in postharvest biology and technology of horticultural crops.

HORT 635 Tools for Thought
Fall. 1 credit. Open to graduate students only. S-U grade only. 1 hour per week, to be arranged. T. H. Whitlow.

A discussion of readings from Kuhn, Popper, Waddington and others emphasizing application of the philosophy of science to the real world practices of scientists.

HORT 636 Current Topics in Horticulture
Fall or spring. 1 credit. S-U grades only. 1 hour per week, to be arranged. Staff.

A seminar series on current topics chosen by participating students and faculty, on a rotating basis. Format consists of weekly discussion groups, with each participant presenting at least one oral report based on independent reading and/or experimentation related to the chosen topic. Interested students should contact the designated instructor(s) for each term.

HORT 694 Special Topics in Horticulture
Fall or spring. 4 credits maximum. S-U grades optional. Hours to be arranged.

Sec 01. Floriculture. Sec 02. Fruit and Vegetable Science. Staff.

The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number must be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

HORT 700 Graduate Teaching Experience
Fall or spring. Credit variable. Open only to graduate students. Undergraduates should enroll in HORT 498. S-U grades optional. Prerequisite: permission of instructor. Hours to be arranged. Staff.

Designed to give graduate students teaching experience through involvement in planning and teaching courses under the supervision of departmental faculty members. The experience may include leading discussion sections; preparing, assisting in, or teaching lectures and laboratories; and tutoring.

HORT 800 Thesis Research, Master of Science
Fall or spring. Credit to be arranged. S-U grades only.

HORT 900 Thesis Research, Doctor of Philosophy
Fall or spring. Credit to be arranged. S-U grades only.

INTERNATIONAL AGRICULTURE

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

INTAG 300 Perspectives in International Agriculture and Rural Development
Fall. 2 credits. Prerequisite: International Agriculture 300. F 1:25–3:20.

R. A. Arneson and staff.

The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and non-government agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture in the tropics, using case studies of agricultural development in Latin America, especially Ecuador. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in International Agriculture in the Developing Nations II (International Agriculture 402), which includes a trip to Ecuador during the intersession.

INTAG 402 Agriculture in the Developing Nations I
Fall. 2 credits. Prerequisite: International Agriculture 300. F 1:25–3:20.

P. A. Arneson and staff.

The goal of this course is to acquaint students with the major issues and problems in international agriculture and rural development and to show how problems in development are being addressed by international, government, and non-government agencies. The lectures/discussions attempt to establish the global context for sustainable agricultural development and focus on agriculture in the tropics, using case studies of agricultural development in Latin America, especially Ecuador. This course may be taken as a stand-alone survey course in international agriculture, but it is also the preparatory course for participation in International Agriculture in the Developing Nations II (International Agriculture 602), which includes a trip to Ecuador during the intersession.
subsidize farmers in developing countries. The course will examine traditional systems from several disciplinary points of view.

INTAG 599 International Agriculture and Rural Development Project Paper
Fall and spring. 1-6 credits. Limited to M.P.S. candidates in the fields of International Agriculture and Rural Development (IARD) and International Development (ID). S-U grades only. Staff.

INTAG 602 Agriculture in the Developing Nations II
Spring. 3 credits. Prerequisites: INTAG 300 or equivalent, INTAG 402, and permission of instructors. Cost of field-study trip includes air fare and approximately $450 for lodging, meals, and personal expenditure per student. T R 2:30-4:25 until midterm only. R. W. Blake and staff. Oriented to provide students an opportunity to observe agricultural development in a tropical environment and promote interdisciplinary exchange among students and staff. The two-week field-study trip during January to Latin American countries is followed by discussions and assignments dealing with problems in agriculture and livestock production in the context of social and economic conditions.

INTAG 603 Administration of Agricultural and Rural Development (also Government 692)
Spring. 4 credits. M 2:30-5:30. N. T. Uphoff and T. W. Tucker. An intercollege course designed to provide graduate students with a multidisciplinary perspective on the administration of agricultural and rural development activities in developing countries. The course is oriented to students in agricultural or social sciences who may have administrative responsibilities during their professional careers.

INTAG 650 Special Topics in International Agricultural and Rural Development
Fall or spring. 1 credit. Staff. A seminar for new themes of agricultural and rural development. Offered occasionally. Specific content varies.

INTAG 685 Training and Development: Theory and Practice (also Communication 685, Education 685 and Industrial and Labor Relations 658)
Spring or summer. 4 credits. S-U grades optional. Charge for materials $45.LEC. F 9:05-12:05, lab 1 hour per week, to be arranged. At Communication Graduate Center. R. Colle and D. Deshler. Analysis, description, and evaluation of training programs for the development of human resources in small-farm agriculture, rural health and nutrition, literacy as nonformal education, and general community development. Designed for scientists, administrators, educator-trainers, and social organizers in rural and agricultural development programs in the U.S. and abroad.

INTAG 694 Graduate Special Topics in INTAG
Fall or spring. 1-4 credits. S-U or letter option. Staff. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

INTAG 694.1 Tropical Fallow Management
Fall and spring. 1-2 credits. Prerequisite: permission of instructor required. Letter or S-U grades. E. Fernandes and L. Fisher. This discussion course is linked to the CIFFAD initiative on Fallow Management in the Tropics, which is supported by several CIFOR programs. The course, which is coordinated by the Management of Organic Inputs in Soils of the Tropics (MOIST) group, will build upon the outputs from discussions in previous semesters and continue to refine the analytical framework and guidelines for the characterization, evaluation and synthesis of managed tropical fallow systems. Material for the course will be drawn from papers and discussions presented by participants in the 1997 Workshop on the Intensification of Shifting Cultivation in Southeast Asia and case studies developed by Cornell students in 1998 field studies in Asia, Africa and Latin America.

INTAG 694.2 Farmer Centered Research and Extension
Fall. 3 credits. Letter or S-U grades. TR 2:30-4:25. R. W. Blake and T. Tucker. This course provides an introduction to participatory traditions in farming systems research, extension, evaluation of rural development, technology generation, gender analysis, participatory rural appraisal and documentation of local and indigenous knowledge of community-based development. Case studies of farmer-centered research and extension will provide a focus for discussion. Appropriate roles of researchers and extensionists as facilitators of farmer-centered research and extension will be examined. A major contribution of farmer-centered research and extension is its potential to legitimize people's knowledge by enhancing their capacity to critically analyze and research their own problems, and to empower them to take direct action to solve them.

INTAG 703 Seminar for Special Projects in Agricultural and Rural Development
Fall and spring. 1 credit. Required for graduate students enrolled in the M.P.S. (Agr.) degree program and majoring in international agricultural and rural development; others with permission of the director of graduate field studies in INTAG. S-U grades only. M 12:20-2:15. R. W. Blake and staff. The seminar provides students with the opportunity to develop and present their special projects. It also serves as a forum for discussion of current issues in low-income agricultural and rural development, with particular attention to interdisciplinary complexities.

Related Courses in Other Departments

LA 141 Grounding in Landscape Architecture
Fall. 4 credits. Limited to 15 students. Letter grade only. Cost of drafting supplies, about $250. Introduction to the representation and design of landscapes and to working in a studio setting. Freehand drawing, measured drawing, and model making are used to understand design principles of the changing landscape.

LA 142 Grounding in Landscape Architecture
Spring. 4 credits. Limited to approximately 20 students; freshman landscape architecture majors or permission of instructor. Cost of basic drafting equipment, fees and supplies, about $250. Fundamentals of landscape design applied to small-scale site-planning projects. Work in the studio introduces course participants to the design process, design principles, construction materials, planting design, and graphics.
LA 201 Medium of the Landscape
Fall. 5 credits. Limited to landscape architecture majors. Cost of basic drafting equipment, supplies and fees, about $200; expenses for field trip, about $250.
This studio course emphasizes the design process and principles involved in organizing and giving form to outdoor space through the use of structures, vehicular and pedestrian circulation systems, earthform, water and vegetation.

LA 202 Medium of the Landscape
Spring. 5 credits. Prerequisite: LA 201 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
This course will focus upon the role of materials in design, design theory, and design vocabulary associated with landscape architectural projects.

LA 261 Urban Archaeology (also CRP 261)
Fall. 3 credits. Not offered fall 1999. Urban archaeologists study American Indian, colonial, and nineteenth-century sites which now lie within the boundaries of modern cities. This course explores how urban centers evolve; what lies beneath today's cities; and how various cultures have altered the urban landscape. Students will participate in a local archaeological excavation.

LA 262 Laboratory in Landscape Archaeology (also ARKKE 262)
Spring. 3 credits. Prerequisites: LA 261 or CRP 261 or permission of instructor. Not offered spring 2000. Various American Indian civilizations and European cultures have all altered the landscape to meet the needs of their cultures. Students will learn how to interpret the American Indian and Euro-American landscapes of specific archaeological sites by identifying and dating artifacts, studying soil samples, and creating site maps.

LA 282 The American Landscape
Fall. 3 credits. Next offered 2000. An interdisciplinary study of the environmental and cultural history of the American landscape. Topics include the relation of landscape to community, landscape use and ecological change, regional and national landscapes, and perceptions of landscape expressed in paintings, photographs and literature.

LA 292 Creating a Second Nature
Spring. 3 credits. Prerequisites: none, but ARKKE 100, ANTHR 100 or CLASSICS/HISTORY OF ART 220 recommended. Offered alternate years. Not offered 1999–2000.

LA 301 Integrating Theory and Practice I
Fall. 5 credits. Prerequisite: LA 202 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
Course participants will be engaged in the art and science of site-scaled design. This includes relating construction and planting details to concepts and program.

LA 302 Community Design Studio: Integrating Theory and Practice II
Spring. 5 credits. Prerequisite: LA 301 with a grade of C or better. Cost of supplies and fees, about $250; expenses for field trip, about $250.
The studio will engage course participants in service-oriented design projects. Theories of place-making, community and participatory design and planning, and sustainability will be explored through practice-based learning. Students will be expected to work independently and collaboratively on team projects in the community. One class period per week will be designated for community field work.

LA 315 Site Engineering I
Spring. 2 credits. Prerequisite: permission of instructor.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creatively develop grading plans for project-scale site design.

LA 316 Site Engineering II
Fall. 2nd seven weeks of semester. 2 credits. Prerequisite: LA 315 or permission of instructor.
Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 317 Site Construction I
Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor.
The detail design and use of materials and landform materials, used by landscape architects in design implementation. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will fabricate detail material samples and prototypes.

LA 318 Site Construction II
Spring (2nd seven weeks of semester). 2 credits. Prerequisite: LA 317 or permission of instructor.
Exploration of construction materials, including specifications, cost estimates, and methods used by landscape architects in project implementation. This is the foundation course. The course includes lectures, studio problems, and development of drawings leading to construction documentation for a comprehensive project. Students will produce a self-criticism report to measured drawings specific to the comprehensive project. Course participants will fabricate material prototypes in wood and metal.

LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360 and CRP 666 and LA 666)
Fall. 3 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture has altered the landscape in their own unique way as they created their own built environments.

LA 363/547 American Indians, Planners, and Public Policy (also CRP 363/547)
Spring. 3 credits.
Decisions made by public agencies and private enterprise too often lead to the flooding, polluting, strip-mining, or other destruction of American Indian reservations, archaeological sites, and burial grounds. The central focus of the course is how to address urban and regional problems without imperiling the cultural survival of minorities.

LA 402 Urban Design in Virtual Space
Spring. 5 credits. Cost of supplies and fees, about $250; basic expenses for field trip, about $250.
A sequence of projects introducing students to advanced skills in large-scale urban design, including 3-D computer modeling and digital design media as tools for shaping the form of the city.

LA 410 Computer Applications in Landscape Architecture
Fall or spring. 3 credits. Offered to landscape architecture students only. Limited to 15 students.
This course is designed to develop a working knowledge of various computer software applications with emphasis on AutoCAD. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

LA 412 Professional Practice
Spring. 1 credit.
This course is designed to develop a working knowledge of various computer software applications with emphasis on AutoCAD. The course will explore other applications relative to land-use planning and the profession of Landscape Architecture.

LA 480 Principles of Spatial Design and Aesthetics (also City and Regional Planning 481 and 581)
Fall. 3 credits. Not offered 1999–2000. A lecture course that introduces the conceptual and visual design vocabularies of cities. Aesthetic principles and theories of design are investigated for different types of urban spaces drawn from a variety of international examples, historic and modern. Included in the course are design methods and applications in the contemporary urban context of Europe and North America.

LA 483 Design Criticism
Fall. 3 credits.
Writing design criticism. Emphasis on analytical descriptions and interpretations or works and the role of criticism in design discourse.

LA 486 Community Design Workshop
This class will offer hands-on learning of the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization). This course will enable students to both study and experience design and implementation skills at all levels of the design process. Students will learn and practice skills related to community design primarily through work on the participating design and planning phase of the project.
LA 497 Experiential Community Design
This class will offer the opportunity to learn, hands-on, the design process through the designing and building of service-oriented community projects (parks, public spaces, school gardens, downtown revitalization).
LA 490 Rome Wasn’t Built in a Day
Spring. 3 credits.
In this electronic course, students will learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM "Layers of Rome" as a digital text, the course will engage participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The material focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation and the design of cities. Lectures, research, readings and exercises will be developed using the Layers of Rome CD, web searches, digital networking and various interactive learning technologies geared toward urban analysis and visual design media.
LA 491 Design and Plant Establishment in the Urban Environment [also HORT 491]
Fall. 3 credits. Prerequisites: HORT 230 or permission of instructor. Cost of supplies, about $50; expenses for field trips, about $50.
This course will focus on the establishment of woody and herbaceous plants in urban and garden settings. By understanding the special constraints placed on plants, we will be able to critically assess and modify potential planting sites, select appropriate trees, shrubs, and ground covers and learn about the principles and practices of plant establishment both in the ground and in contained environments. Design, followed by specifications and graphic details, will be produced to implement these practices. Field work includes chemical and physical analysis of soils, vegetation, and site assessment. A comprehensive project allows students to put into practice many technical and design aspects of the course.
LA 494 Special Topics in Landscape Architecture
Fall or spring. 1–3 credits. May be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.
LA 497 Individual Study in Landscape Architecture
Fall or spring. 1–5 credits. May be repeated for credit. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Work on special topics by individuals or small groups.
LA 498 Undergraduate Teaching
Fall or spring. 1–2 credits. Prerequisites: previous enrollment in course to be taught and permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Designed to give qualified undergraduates experience through actual involvement in planning and teaching courses under the supervision of department faculty.
LA 501 Composition and Theory
Fall. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250. Field trip about $250. Basic principles of natural and cultural processes within contemporary design applied to the practice of landscape architecture. Projects focus on the relationship between measurement, process, experience and form at multiple scales of intervention.
LA 502 Composition and Theory
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250.
The studio will focus on the spatial design of project-scale site development. Students will develop their expertise in applying the design theory, vocabulary, and graphic expression introduced in LA 501.
LA 505 Landscape Representation I
Fall. 3 credits. Prerequisites: concurrent enrollment in LA 501 or permission of instructor.
This class introduces students to both conventional and unconventional modes of landscape architectural design representation. Drafting, orthographic drawing, axonometric project, lettering, analysis and concept drawing will be taught alongside more expressive modes of direct site study and representation.
LA 506 Graphic Communication II
Spring. 3 credits. Prerequisites: LA 505 and concurrent enrollment in LA 502 or permission of instructor. Not offered 1999–2000.
Course will focus on modes of landscape representation from ideation to presentation. Projects will in many cases correspond with LA 502 design projects. Representation studies will include for example: freehand, analysis and orthographic drawing; concept modelling; composite drawings; visual books.
LANAR 524 History of European Landscape Architecture*
Spring. 3 credits.
Offered through the College of Architecture, Art, and Planning.
LANAR 525 History of American Landscape Architecture
Fall. 3 credits.
Offered through the College of Architecture, Art, and Planning.
LANAR 545 The Parks and Fora of Imperial Rome
Spring. 3 credits. Prerequisites: advanced standing in a design field, classics or history of art, or by permission of the instructor. Offered alternate years. Not offered spring 2000.
This advanced seminar is seeking students in classics, art history, landscape architecture, and architecture to bring their knowledge of Latin, Greek, Italian, archaeology, drawing, design or computer modeling to a collaborative study of the ancient fora and public parks depicted on the Severan Marble plan of Rome.
LANAR 569 Archaeology in Preservation Planning and Site Design [also ARCP 569]
Spring. 3 credits. Offered alternate years. Next offered spring 2000.
In response to federal, state, and local legislation, archaeology now plays an important role in design, planning, and land-use decisions. Students develop the research skills needed to complete environmental review projects and historic landscape plans.
LA 590 Theory Seminar
Spring. 3 credits.
Seminar in contemporary landscape design theory. For graduate students and seniors.
LANAR 598 Graduate Teaching
Fall or spring. 1–3 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form. Staff.
Designed to give qualified students experience through involvement in planning and teaching courses under the supervision of faculty members. The experience may include leading discussion sections, preparing, assisting in desk critiques, and presenting lectures. There will be assigned readings and discussion sessions on education theory and practice throughout the term. (Credit hours are determined by: 2 hours per week = 1 credit hour)
LANAR 601 Integrating Theory and Practice I
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250.
The studio will focus on site-scaled projects that engage cultural and natural systems. Theories of place-making, sustainable design and landscape representation will be critically explored through design projects that derive from and affirm a sense of site and place. The integration of site knowledge and site construction aims to support a deeper level of correspondence between design and site.
LANAR 602 Integrating Theory and Practice II
Spring. 5 credits. Limited to graduate students. Cost of drafting supplies and fees, about $250; expenses for field trip, about $250.
The studio will build upon your prior course work with an expectation that course participants can creatively manipulate the program and conditions of a site with increased emphasis placed on how things are constructed and contemporary technology. This course will focus on the expression of design solutions that grow from and affirm an explicit sense of site and place. Social, cultural, physical and historic factors and their relationship to site design and planning will be critically explored through theory and practice in this studio.
LANAR 615 Site Engineering I
Spring. 2 credits. Prerequisite: permission of instructor.
Lectures and studio projects focusing on the professional skills and knowledge required to competently and creativity develop grading plans for project-scale site design.
Lectures and studio projects dealing with design, site surveys, site layout, and horizontal and vertical road alignment. The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will fabricate detail material prototypes and have the option of developing computer-generated drawings.

LA 618 Site Engineering II
Fall. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 615 or permission of instructor. Lectures and studio projects dealing with earthwork estimating, storm water management, site surveys, site layout, and horizontal and vertical road alignment.

LA 617 Site Construction I
Fall (1st seven weeks of semester). 2 credits. Prerequisite: permission of instructor. The detail design and use of landscape materials, used by landscape architects in project implementation is the focus of this course. The course format includes lectures, field trips, studio problems, and development of technical drawings leading to construction documentation for a wide variety of projects. Students will fabricate detail material prototypes and have the option of developing computer-generated drawings.

LA 618 Site Construction II
Spring. (2nd seven weeks of semester). 2 credits. Prerequisite: LA 617 or permission of instructor. Exploration of materials, including specifications, cost estimates, and methods used by landscape architects in project implementation is the focus for this course. The course includes lectures, short studio problems, and the development of drawings leading to construction documentation for a comprehensive project. Students will develop a process of self-criticism related to measured drawings specific to the comprehensive project. Course participants will fabricate material prototypes in wood and metal.

[LA 619 Advanced Site Grading
Spring (2nd seven weeks of semester). 2 credits. Limited to 10 students. Prerequisite: LA 315 or LA 615. Not offered 1999-2000. Grading skills and knowledge applied as a design component of site planning projects.]

LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)
Fall. 3 credits. Offered alternate years. Various American Indian civilizations as well as diverse European cultures have all exerted their influences on the organization of town and city living. Each culture altered the landscape in their own unique way as they created their own built environments.

LA 680 Graduate Seminar in Landscape Architecture
Fall or spring. 1-3 credits. May be repeated for credit. Limited to graduate students. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Seminar topics and group study not considered in other courses.

LA 694 Special Topics in Landscape Architecture
Fall or spring. 1-3 credits; may be repeated for credit. S-U grades optional. Topical subjects in landscape architectural design, theory, history, or technology. Group study of topics not considered in other courses.

LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)
Fall. 5 credits. Limited to graduate students. Cost of supplies and fees, about $250; expenses for field trip, about $250. Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions and spatial typologies involving the street, square, block, garden, and park systems. 3-D computer modeling and digital design media are introduced as tools for urban design. This is a specially arranged collaborative studio with the Department of City and Regional Planning.

LA 702 Advanced Design Studio
Spring. 5 credits. This advanced studio provides the opportunity to explore issues of contemporary landscape architecture and integrate related fields. Topics examined include the influences of culture, history, and criticism, as well as reinterpretations of engineering and representation.

LA 800 Master's Thesis in Landscape Architecture
Fall or spring. 9 credits. Independent research, under faculty guidance leading to the development of a comprehensive and defensible design or study related to the field of landscape architecture. Work is expected to be completed in final semester of residency.

NATURAL RESOURCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

NTRES 100 Principles of Conservation
Fall. 3 credits. Limited to first-year students specializing in natural resources. Letter grade only. M W F 9:05; 1 hr disc to be arranged. R. J. McNeil. The nature of natural resources, how they are managed, and their interactions with individuals and societies are considered. Case histories are used to illustrate both principles and practices. Emphasis will be on management of renewable resources based on ecological and cultural perspectives.

NTRES 201 Environmental Conservation
Spring. 3 credits. M W F 12:20; 1 hr disc sec to be arranged. Staff. As the end of the 20th century approaches, our lives are increasingly touched by questions about environmental degradation at local, regional, and global scales. Business as usual is being challenged. This course will stimulate you to go beyond the often simplistic portraits of the environmental dilemma offered by the mass media so that you will have a firmer basis for responsible citizenship and action on environmental issues.

NTRES 210 Introductory Field Biology
Fall. 4 credits. Limited to 90 students. Open to sophomores and juniors with an adviser in Natural Resources or by permission of instructor. Prerequisites: BIO G 101 and 102 or equivalent. 2 overnight weekend field trips required. Cost of field trips, approximately $12. Lec, W 9:05; labs, M W 1:25-4:25 or T R 1:25-4:25. T. Gavin and C. Smith. Introduction to methods of inventorying, identifying, and studying plants and animals. Students are required to learn the taxonomy, natural history, and how to identify approximately 170 species of vertebrates and 80 species of woody plants. Selected aspects of current ecological thinking are stressed. The interaction of students with biological events in the field and accurate recording of those events are emphasized.

NTRES 253 Applied Ecology and Ecosystem Management
Spring. 3 credits. Prerequisites: introductory courses in biology and ecology. Lec M W 10:10-11:00; T R 9:30-10:25. The application of ecological principles to renewable resource and environmental problems. The perspective is the interactions of species within the ecosystem, which is the basic unit of study. Topics include fisheries, forests, the conservation and management of wild species, invaders and pests, and pollution. The discussion section emphasizes quantitative analysis and the use of microcomputers.

NTRES 270 Conservation of Birds
Spring or summer. 2 credits. Not offered every year. Check with department for availability. C. R. Smith. A course for majors and nonmajors, focusing on science-based bird conservation and management at the organism, population, community and landscape levels. Current resource management issues relevant to birds will be explored in the contexts of agricultural practices, habitat management, tropical deforestation, the design and management of natural preserves, endangered species management, global climate change and the economic importance of bird study as an outdoor recreational activity.

NTRES 271 Conservation of Birds Laboratory
Spring or summer. 1 credit. Concurrent enrollment in NTRES 270 required. Not offered every year. Check with department for availability. C. R. Smith. A field-oriented course designed to teach skills of bird observation and identification based on the integration of field marks, songs and calls, and habitat cues. Topics covered include the choice and effective use of field guides, binoculars, and other tools for bird identification; procedures for taking and organizing field notes; the relationships of birds to their habitats and to other birds; and methods and procedures for censusing and surveying songbird populations.

NTRES 301 Forest Ecology
Fall. 3 credits. Prerequisite: introductory biology. M W F 11:15. T. J. Fahey. A comprehensive analysis of the distribution, structure, and dynamics of forest ecosystems. Topics include paleoecology of forests, ecology of forest trees, disturbance, succession and community analysis, primary productivity, and nutrient cycling.

NATURAL RESOURCES

91
NTRES 302 Forest Ecology Laboratory
Field trips designed to familiarize students with the nature of regional forests and to provide experience with approaches to quantifying forest composition and its relation to environmental factors. Optional weekend field trips to Adirondacks and White Mountains, New Hampshire. Group research projects in local forests.

NTRES 303 Woodlot Management and Maple Syrup Production
Spring. 3 credits. Letter grades only. Lec, T R 10:10-11:00; lab R 12:20-4:25. T. J. Fahey.
A practical, field-oriented course emphasizing principles and practices of multiple purpose management of small nonindustrial private forest land in the northeastern United States, including the production of maple syrup.

NTRES 304/305 Wildlife Ecology Concepts/Applications
These courses are currently under revision. Please contact the Department for information on availability.

NTRES 306 Coastal and Oceanic Law and Policy
Summer. 2 credits. July 19-26. A special 1-week course offered at Cornell’s Sholes Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, contact the SML office, G14 Stimson Hall. Estimated cost includes tuition, room and board, and ferry transportation, $1,000.
Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and efficacy of various legal techniques. A case study that requires extensive use of the laboratory’s library and personnel is assigned. The week concludes with a mock hearing.

NTRES 308 Natural Resources Management
Fall. 3 credits. Prerequisite: junior standing. M W F 10:10. B. A. Knuth.
Focus is on fish, wildlife, forest, and water resources. Concepts emphasized include the comprehensive planning process and human dimensions of resource management. Students integrate biological, social, and institutional dimensions of management through case studies. Grades are based on individual and group performance.

NTRES 399 Resource Management in American Indian Nations
Summer. 1 credit. Prerequisite: none; recommended: one course each in Natural Resources and American Indian Program. Consult Cornell University Summer Session Catalog for scheduling information. S. M. Penningroth.
This course examines resource management in territories belonging to American Indian nations. Topics include history, sovereignty, religious significance, social and ecological components, and intellectual property. Case examples of traditional Indian management techniques as well as contemporary resource management issues are presented.

NTRES 331 Introduction to Biogeochemistry (also GEO 321, SES 321)
Fall. 4 credits. Prerequisites: college-level chemistry, plus a course in biology and/or geology. Lec, T R 12:20-1:10; lab, to be announced. J. B. Yavitt and L. A. Derry. Control and function of the Earth’s global biogeochemical cycles. The course begins with a review of the basic inorganic and organic chemistry of biologically significant elements, and then considers the biogeochemical cycling of carbon, nutrients, and metals that take place in soil, sediments, rivers and the oceans. Topics include weathering, acid-base chemistry, biological redox processes, nutrient cycling, trace gas fluxes, biogeochemical cycles, the use of isotopic tracers, and mathematical models. Interactions between global biogeochemical cycles and other components of the Earth system are discussed.

NTRES 340 Quantitative Population Analysis
Fall. 3 credits. Letter grade only. Prerequisites: Math 111, Math 171, BTRY 215 or permission of instructor. M W F 9:05-9:55. P. J. Sullivan.
The dynamics and demographics of aquatic and terrestrial populations are examined using statistical techniques and computer modeling. The course will emphasize (1) estimation of population abundance using statistical surveys, mark-recapture methods, cohort analysis, and other sampling techniques; and (2) characterization of population dynamics through mathematical and statistical models representing the fundamental processes of birth, death, growth and movement. Topics will include applications to aquatic and terrestrial organisms of resource and conservation interest.

NTRES 350 Ecological Dimensions of Global Change
Fall. 3 credits. Prerequisites: college-level courses in biology and chemistry. M W 12:20-1:10, disc sec; or M or W 1:25-2:15. J. B. Yavitt.
Human accelerated environmental changes threaten the integrity of nature. This course explains the ecological principles that comprise this threat. Topics include increasing air temperature, atmospheric carbon dioxide and other gases, and pollution. Discussions explore the likely future behavior of nature given different global change scenarios.

NTRES 400 International Environmental Issues
Fall. 4 credits. Prerequisite: junior standing or above. T R 10:10-12:05. J. B. Yavitt.
Current international environmental issues are analyzed from an interdisciplinary perspective, with an emphasis on understanding the complex relationships between humans and the environment that underlie environmental problems and solutions. Topics covered include conceptualization of environmental issues, population, property rights, human behavior, environmental values, environmental education, international policies, international organizations, globalization, conservation and development projects, participation and community-based conservation, and social conflict and unrest. Environmental issues covered include endangered species, biodiversity, tropical forests, global climate change, protected areas, indigenous people, and ocean fisheries. Emphasis on systematic analysis of environmental issues; written and oral presentations.

NTRES 402 Natural Resources Policy, Planning, and Politics
Spring. 3 credits. Prerequisites: junior standing; special application process, and course fee (approx. $150). Lec, January two-week intercession; two 2 hr orientation sessions in fall semester and four 2 hr sessions in February and March. Completed applications due by October 14. Applications are available in 122D Fellows Hall or by contacting map10@cornell.edu. An introduction to the environmental policy process and its conceptual framework.
Recognition of phenomena identified as natural resources or environmental problems and issues; steps leading to legislation or regulations to solve problems; implementation and evaluation stages; role of the legal system; roles of citizens, lobbyists, government actors. Case studies; presentations by and discussions with about twenty prominent Washington policy makers appearing as guest lecturers. Required interviews, term paper, oral reports. Several meetings in Ithaca before and after intensive January session in Washington.

NTRES 404/405 Wildlife Populations Ecology/Applications
These courses are currently under revision. Please contact the Department for information on availability.

[NTRES 406 Ecology Risk Assessment (also Toxicology 406)
Spring. 3 credits. Prerequisites: BIOES 261 or equivalent; permission of instructor if not an advanced student in natural sciences of engineering. M W F 11:15-12:05. Offered alternate odd years. Next offered spring 2001. J. W. Gillett.
The course strives to develop understanding of and competence in the different types of ecological (non human health) risk assessments. Focus is on cases for chemical, physical, and biological stressors in a variety of circumstances. The proposed USEPA approach under development will serve as the working model.]

NTRES 407 Religion, Ethics, and the Environment
Spring. 4 credits. For juniors, seniors, and graduate students; others by permission only. S-U grades optional. T R 10:10-11:00; a hr disc to be arranged. R. A. Baer.
How religion, philosophy, and ethics influence our treatment of nature. Terms like religion, nature, fact, value, knowledge, and public interest are examined in detail. Particular themes include character and moral development, similarities and differences between moral and scientific claims, truth telling, public reason, and property. Also, animals rights vs. ecosystem concerns, responsibility to future generations, the limitations of rationalism in ethics, and discussion of whether certain approach moral issues differently from men.

[NTRES 408 Resource Management and Environmental Law
A senior-level course that introduces the use of legal concepts, doctrines, and remedies in
natural resource and environmental management. For a variety of exploiting resources and their habitats, it explores the common law and regulatory processes available for resolving conflicts between exploitation and protection and stresses a practical understanding of how public and private values, economic considerations, and constitutional limitations affect management techniques and objectives.

NTRES 410 Wildlife Management Concepts and Applications
Spring. 3 credits. Prerequisites: senior standing or permission of instructor. NTRES 210 required and a broad background in biology or ecology is strongly recommended. Lecs, T R 11:15–12:05; lab, W 1:25–4:25.

An in-depth analysis of ecological and human dimensions for decision making in integrated wildlife management. This includes population and system modeling for evaluation of management decisions, adaptive management, and design of wildlife management plans. Afternoon labs and field trips are required to investigate areas of interest in wildlife management.

NTRES 411 Seminar in Environmental Ethics
Fall. 3 credits. For seniors, juniors and graduate students. S-U grades optional. W 1:25–3:50.

Moral concerns related to the natural environment and agriculture. In successive years, the seminar will focus on such topics as (1) animal rights vs. ecosystem concerns, (2) natural resource management and the concept of the public interest, (3) applying environmental ethics in a democratic and pluralistic society, and (4) land use ethics.

NTRES 415 Principles and Practices of Agroforestry (also Hort 415)
Spring. 3 credits. Prerequisites: senior or graduate standing or permission of instructor. S-U option. Lec, M W 10:10–11:00; lab, W 1:25–4:25. K. Mudge and B. Lascaro.

An introduction to modern and traditional agroforestry systems involving the spatial or temporal integration of multipurpose woody plants (trees and/or shrubs) with annual or perennial crops and/or with livestock. Interactions between woody and non-woody components of agroforestry systems will be considered from the standpoint of above and below ground resource capture. The sustainability of agroforestry systems will be critically examined from both a biophysical and socioeconomic perspective. Laboratory sessions will include field trips, case studies, use of computer-based sources of information, and practical skills involved in woody plant management, propagation, planting, pruning, measurement.

NTRES 417 Wetland Resources
Summer. 2 credits. Prerequisite: one year of college biology. July 12–19. A special 1-week course offered at Cornell's Shools Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application contact the SML office, G14 Uniton Hall. Estimated cost (includes tuition, room and board, and ferry transportation), $1,000.

An examination of coastal and adjacent freshwater wetlands from historical, disturbance, and preservation perspectives, including fresh and salt water-marsh ecology, and management. Field trips selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

NTRES 418 Wetland Ecology and Management-Lecture
Fall. 3 credits. Students may not receive credit for NTRES 418 and NTRES 417. Wetland Resources and Management Laboratory summer course. T R 1:25–2:40. B. L. Bedford.

Examination of the structure, function, and dynamics of wetland ecosystems with an emphasis on principles required to understand how human activities affect wetlands. Current regulations, protection programs, and management strategies are considered.

NTRES 419 Wetland Ecology and Management-Laboratory
Fall. 1 credit. Optional. Concurrent enrollment in NTRES 418 is required. W or F 12:20–4:25. One weekend fieldtrip required.

An integrated set of laboratory field exercises designed to expose students to: (a) the diversity of wetland ecosystems; (b) the flora, fauna, soils and hydrology of wetlands within the region, (c) methods of sampling wetlands vegetation, soils, and water; and (d) methods of wetland identification and delineation. Some exercises will require written reports.

NTRES 420 Ecological Management of Water Resources
Spring. 3 credits. Prerequisites: introductory ecology and introductory chemistry or permission of instructor. M W F 9:05–9:55. R. Schneider.

In-depth analysis of those ecological and biological principles relevant to the management of fresh and marine water resources, with an emphasis on the effects of water management on community ecology. Lectures and discussion will integrate scientific literature with current management issues.

Topics include water hydrologic variability and communities; groundwater-surface connections, flow paths for dispersal, patchily distributed water resources, and water quality controls on organisms.

NTRES 428 Landscape Impact Analysis
Spring. 3 credits. Prerequisites: one introductory course in ecology or equivalent and NTRES 425; one advanced course in ecology or equivalent. T R 1:25–2:40. B. Bedford.

The course explores environmental impact assessment (EIA) from the perspective of the watershed, landscape, or region rather than the individual development project. It provides an overview of the EIA process and landscape analysis as they are implemented within various governmental and development agencies, and introduces conceptual frameworks for landscape impact analysis; and exposes students to modern tools for evaluating landscapes.

NTRES 438 Fishery Management
Spring. 3 credits. Lec, T R 10:10; disc, T or R 11:15. Offered alternate years. Next offered spring 2000. C. C. Krueger.

Introduction to the diverse concepts and techniques that focus on achievement of goals. Coverage includes sport and commercial fisheries and species restoration. Topics include setting goals and objectives, regulations, habitat and population control, stocking, and management of trout, reservoirs, and the Great Lakes and Pacific halibut. Ecological, social, political, and economic aspects of those topics are discussed.

[NTRES 442 Techniques in Fishery Science]
analytical methods to assess the dynamics and status of fisheries' resources and then demonstrates how the information may be transformed into useful information for decision makers.

NTRES 471 Management of Terrestrial Habitats
Spring or summer. 2 credits. Prerequisites: NTRES 210. Students must register with an Independent Study form. See description above. Check with department for availability. C. R. Smith.

A landscape ecological approach will be used to introduce students to habitat concepts and to methods of inventorying, measuring, monitoring, describing, classifying, and restoring terrestrial habitats at a variety of temporal and spatial scales. Field trips will be taken to areas managed by both public and private land management organizations. An introduction to use of the Global Positioning System (GPS) is included.

NTRES 493 Individual Study in Resource Policy, Management, and Human Dimensions
Fall, spring, or winter. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. R. A. Baer, Brown, L. E. Buck, D. J. Decker, J. Gillett, B. Knuth, R. McNeil, J. Scheibas. Topics in environmental and natural resource policy, management, and human dimensions are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 494 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 495 Individual Study in Fish and Wildlife Biology and Management
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. M. Bain, P. Curtis, T. Gavrin, C. Kraf, C. Krueger, R. Malecki, E. Mills, A. Moen, M. Olson, M. Richmond, L. Rudstam, C. Smith, P. Sullivan. Topics in fish and wildlife biology and management are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 496 Individual Study in Ecology and Management of Landscapes
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. B. Bedford, T. Fahey, M. Krasny, J. Lassoie, R. Schneider, P. Smallidge, J. Yavitt. Topics in ecology and management of landscapes are arranged depending on the interests of students and availability of staff. Students must register with an Independent Study form (available in 140 Roberts Hall).

NTRES 498 Teaching in Natural Resources
Fall and spring. 1–4 credits. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Course designed to give students an opportunity to obtain teaching experience by assisting in labs, field trips for designated sections, discussions, and grading. Students will gain insight into the organization, preparation, and execution of course plans through application and discussions with instructor.

NTRES 500 Professional Projects—M.P.S.
Fall and spring. Credit to be arranged. Limited to graduate students working on professional master's projects. S-U grades only.

NTRES 601 Seminar on Selected Topics—Fish and Wildlife Biology and Aquatic Science
Fall or spring. 1 credit. S-U grades only. T 3:35-4:25, duc sec, T 4:30-5:00. Selected readings and discussions of research and/or current problems in fishery and aquatic sciences.

NTRES 604 Seminar on Selected Topics in Resource Policy and Management
Fall. 2 credits. S-U grades only. M 3:00-4:30. Primarily for graduate students with a major or minor in resource policy and management and upper level undergraduates with a strong interest in resource policy analysis. Topics include the policy process, actors and stakeholders, ethical dimensions, and evaluation. Emphasis is placed on discussion, faculty-student interaction, communication skills, and current resource policy issues.

NTRES 607 Ecotoxicology (also Toxicology 607)
Spring. 3 credits. Prerequisites: graduate or senior status and two 300-level courses in chemistry, biological science, or toxicology. M W F 11:15-12:05. Offered alternate even years. Next offered spring 2000. J. W. Gillett. Lectures, readings, and special guest focus on the principles of effects of toxic chemicals on natural ecosystems, their components, and processes. Major topics include fate and transport of chemicals (chemodynamics), comparative biochemical toxicology, ecosystem process analysis, simulation through mathematical and physical (microcosm) models, and relationships to regulation and environmental management.

NTRES 610 Introduction to Chemical and Environmental Toxicology (also Toxicology 610)
Fall. 3 credits. Prerequisites: biochemistry and animal physiology. Letter grade only. M W F 11:15-12:05. J. W. Gillett. Introduction to the basic concepts of toxicology, exposure and biological responses to toxicants, methods of assessing toxicity; factors affecting outcomes, specific sources of toxicants (including air pollution, agriculture, industrial and commercial processes, natural occurring toxicants, and social poisons), risk assessment and regulation of toxic materials.

NTRES 612 Wildlife Science Seminar
Fall and spring. 1 credit. Prerequisite: permission of instructor. S-U grades only. Check with department for availability.

Discussion of individual research or current problems in wildlife science.

NTRES 615 Case Studies and Special Topics in Agroforestry
Fall. 2 credits. Prerequisites: NTRES/HORT 415 or permission of instructor. S-U grades only. Hours to be arranged. L. E. Buck, J. P. Lassoe.

Interdisciplinary groups of students examine case studies of agroforestry practices developed and developing countries. Specific topical areas are examined in depth, leading to development of a team-written report and a class presentation. Extensive library research and participation in small group discussions are required.

NTRES 616 Forest Science and Management Seminar
Fall and spring. 1 credit. Permission of instructor. S-U grades only. Check with department for availability. Selected readings and discussions of research and/or current problems in forest science and management.

NTRES 618 Critical Issues in Conservation and Sustainable Development
Fall. 3 credits. Preference to graduate students with minor in conservation and sustainable development; seniors by permission. Limited to 30 students. T R 2:30-4:25. J. Scheibas.

Establishes a conceptual foundation for analyzing and addressing conservation and development issues from an interdisciplinary perspective. Engages students in the inherent conflicts between natural resource conservation and rural development. Students work in interdisciplinary groups to analyze issues and cases from both developing and developed countries.

NTRES 619 Field Practicum in Conservation and Sustainable Development
Spring. 3 credits. Prerequisites: NTRES 618; preference given to graduate students with minor in conservation and sustainable development; permission of instructor. Limited to 12 students. Includes two-week field study trip to a Latin American country in January. J. Schelhas.

An interdisciplinary study of a conservation and development problem in Latin America. The course will use an interdisciplinary research methodology that includes group problem identification, individual or rapid appraisal projects, and synthesis of group work to identify key conservation and development issues and research priorities for a selected site.

NTRES 660 Quantitative Ecology of Fisheries Resources
Spring. 3 credits. S-U grades optional. Prerequisites: NTRES 304 recommended or permission of instructor. M W F 10:10-11:00. Offered alternate even years. P. J. Sullivan.

This course is taught in conjunction with NTRES 460 (see description above). Students taking the course for graduate credit will be asked, in addition to the 400-level projects and homework, to construct and document a model of population or community dynamics that reflects and extends the concepts covered in the course.
NTRES 694 Special Topics in Natural Resources
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings may vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

NTRES 698 Current Topics: Environmental Toxicology (Toxicology 699)
Fall, spring. 1-3 credits. Prerequisites: graduate or senior standing in scientific discipline and permission of instructor. A student-faculty colloquium on subjects of current interest, usually focusing on multidisciplinary aspects of topical problems (e.g., Superfund, oil spills).

NTRES 699 Graduate Individual Study in Natural Resources
Fall or spring. Credit to be arranged. S-U grades optional. Prerequisite: permission of instructor. NTRES graduate faculty. Study of topics in natural resources more advanced than, or different from, other courses. Subject matter depends on interests of students and availability of staff.

NTRES 800 Master's Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students working on master's thesis research. S-U grades only.

NTRES 900 Graduate-Level Thesis Research
Fall and spring. Credit to be arranged. Limited to graduate students in a Ph.D. program only before the 'A' exam has been passed. S-U grades only.

NTRES 901 Doctoral-Level Thesis Research
Fall and spring. Credit to be arranged. For students admitted to candidacy after the 'A' exam has been passed. S-U grades only.

Related Courses in Other Departments
Courses in many other departments are relevant to students majoring in Natural Resources. The following list includes some of the most closely related courses but is not exhaustive.

- Environment and Society (R SOC 208, 324, 340, 410, 440, 495)
- Environmental Law, Ethics, and Philosophy (S&T S 206; CRP 451; PHIL 241, 246, 247, 381)
- Human Systems and Communication (COMM 260, 285, 352, 421)
- Physical Sciences (ABEN 435, 475; SCAS 260, 321, 365, 371, 483; GEOL 103, 104; CEE 432)
- Public Policy and Politics (GOVT 427, 428; BIO & SOC 461; CEE 529)
- Resource Economics (ARME 100, 250, 450, 451; ECON 309)
- Spatial Data Interpretation (SCAS 420, 461, 620, 660)

PLANT BREEDING

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

PL BR 201 Plants, Genes, and Global Food Production
Spring. 2 credits. Prerequisite: one year of introductory biology or permission of instructor. Lecs, T R 11-15.
S. R. McCouch
This course provides an introduction to Plant Breeding. It offers a sense of the historical and social importance of the field, tracing its evolution from the pre-scientific days of crop domestication to modern applications of biotechnology. It offers specific examples of how breeding objectives are realized and raises questions about the environmental, social and economic consequences of intensive food production systems. This course may be used for partial fulfillment of the CALS distribution requirement GROUP B—Biological Sciences.

PL BR 401 Plant Cell and Tissue Culture
Fall. 3 credits. Prerequisites: a course in plant biology, cell biology, or genetics, or permission of instructor. Lecs, T R 10:10.
F. D. Earle
Lectures and demonstrations dealing with the techniques of plant tissue, cell, protoplast, embryo, and anther culture and the applications of these techniques to biological and agricultural studies. Methods for plant improvement via manipulations of cultured cells will be discussed.

PL BR 402 Plant Tissue Culture Laboratory
Fall. 1 credit. Enrollment limited. Prerequisites: permission of instructor. Will be offered as a two-week module at a time to be arranged in Spring 2000. Check with department for further information. K. N. Watanabe
This course aims to provide fundamental knowledge and techniques in plant cytogenetics. Emphasis is on applied techniques and molecular cytogenetics. It will cover basic techniques for examination of plant chromosomes.

PL BR 404 Genetic Diversity
Spring. 2 credits. S-U option. Prerequisites: a course in genetics, plant breeding or permission of instructor. T R 9-9:55.
S. Kresovich
This course explores the structure of genetic variation through time and space and how it ultimately may be maintained and utilized. Case studies representing organisms of biological interest and agricultural importance are employed to highlight biological and genetic theories, and approaches essential to conservation genetics and the improvement of crop and animal species. In complement, underlying ethical, legal, and social issues affecting conservation and use of genetic diversity also are addressed.

PL BR 446 Plant Cytogenetics Laboratory
Spring. 1 credit. S-U only. Prerequisites: a course in genetics or permission of instructor. Fall or spring. Credit to be arranged. Will be offered as a two-week module at a time to be arranged in Spring 2000. Check with department for further information. K. N. Watanabe

PL BR 497 Individual Study in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 498 Internship in Plant Breeding
Fall or spring. Credits variable, may be repeated up to a maximum of 60 on-the-job hours per credit granted. Prerequisites: permission of adviser and enrollment during the pre-enrollment period of the semester before the internship. Students must be a plant breeding junior or senior with a minimum 3.0 average in plant breeding courses. Students must attach to their course enrollment materials a "CALS Independent Study, Research, Teaching, or Internship" form signed by their faculty member who will supervise their study and assign their credits and grade. S-U grades only. Staff. On-the-job learning experience under the supervision of professionals in a cooperating organization. A learning contract is written between the faculty supervisor and student, stating the conditions of the work assignment, supervision, and reporting.

PL BR 497 Individual Study in Plant Breeding
Fall or spring. Credits variable, may be repeated up to a maximum of 6. S-U optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
PL BR 498 Undergraduate Teaching
Fall or spring. Credits variable, may be repeated to a maximum of 6. S-U grades optional. Prerequisite: permission of instructor, and previous enrollment in course to be taught or equivalent. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Undergraduate teaching assistance in a plant breeding course. Teaching experience may include leading a discussion section, preparing and teaching laboratories, and tutoring.

PL BR 499 Undergraduate Research
Fall or spring. Credits variable. S-U grades optional. Prerequisite: permission of instructor. Students must register with an Independent Study form (available in 140 Roberts Hall). Staff.
Undergraduate research projects in plant breeding.

PL BR 604 Methods of Plant Breeding Laboratory
Fall. 2 credits. Prerequisite: PL BR 403, 603 or equivalent (may be taken concurrently). T R 1:25-4:15. M. E. Sorrells and R. E. Anderson.
Field trips to plant breeding programs involve discussion of breeding methods used, overall goals, selection and screening techniques, and variety and germ plasm release. Additional labs include use of computers in plant breeding research and selection techniques for disease resistance. For a term project each student designs a comprehensive breeding program on a chosen crop.

PL BR 606 Advanced Plant Genetics
This course provides an advanced survey of genetics in higher plants. Topics include genetic analysis of developmental and metabolic processes, cytot genetics, mating behavior and barriers, and aspects of population and quantitative genetics.

PL BR 607 Electronic Information Resources and Bioinformatics
Fall. 1 credit. Enrollment limited. S-U or letter grades only. Prerequisite: basic biology, basic genetics, familiarity with PC working environment. Permission of instructor required. Times to be arranged—three times/wkce for one month. E. Paul and S. McCouch.
This course will focus on how to access information in public data bases such as GenBank, GRIN, and SWISSPROT, and on tasks such as BLAST searching, sequence alignment, primer design, and phylogeny analysis. The biological background of issues will be presented in lectures, and extensive on-line exercises will provide students with experience in accessing and analyzing diverse information in the computer environment.

PL BR 608 Comparative Genomics
Fall. 1 credit. Enrollment limited. S-U or Letter grades optional. Prerequisites: PL BR 607 or equivalent experience. Permission of instructor required. Times to be arranged—three times/wkce for one month. E. Paul, S. McCouch and M. Sorrells.
This course will emphasize how to access and integrate different types and sources of data using computer databases and a variety of querying mechanisms. Students will learn to integrate information derived from analysis of phenotypes, biochemical and metabolic pathways, DNA sequences and genetic and physiological maps using plant genome databases, and a variety of software packages.

PL BR 610 Advanced Plant Breeding Methods
Spring. 3 credits. Prerequisites: PL BR 403, 603, or equivalent BIOGD 281, or equivalent. M W F 12:20-1:10. M. Mutschler.
This is a capstone course that integrates information from a variety of disciplines to provide a current comprehensive examination of modern plant breeding. Plant breeding methods used for a variety of crops are considered, including selection techniques, strategies for self- and cross-pollinated crops, population improvement, and utilization of wild germplasm for crop improvement in private or public programs. The effect of crop and breeding objectives on the success of breeding strategies will be considered. Integration of biochemical and molecular techniques into an applied breeding program will be addressed.

PL BR 622 Seminar
Fall or spring. 1 credit. S-U grades only. T 12:20. Staff and graduate students.

PL BR 650 Special Problems in Research and Teaching
Fall or spring. 1 or more credits. Prerequisite: permission of instructor supervising the research or teaching. Staff.

PL BR 653.2 Plant Biotechnology (also Plant Pathology 663 and BIO PL 653.3)
Fall. 1 credit. S-U grades optional. Prerequisite: BIO PL 653.1 or permission of instructor. Lect., M W F 1:25-2:15 (12 lecs) Sept. 29-Oct. 27. E. D. Earle and M. Zaitlin.
This course deals with production and use of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

PL BR 653.3 Plant Genome Organization (also BIO PL 653.3)
Fall. 1 credit. Prerequisites: BIO PL 653.1. M W F 10:10-11:00. Offered alternate years. Next offered Fall 2000. S. D. Tanksley.
The structure and variation of plant nuclear genomes, including changes in genome size, centromere/telomere structure, DNA packaging, transposable elements, genomic and physical mapping, positional gene cloning, genomic sequencing and comparative genomics.

PL BR 653.6 Molecular Breeding and Genetic Diversity (also BIO PL 653.6)
Fall. 1 credit. S-U grade or letter option. Lect., M W F 10:10-11:00 (12 lecs) Sept. 29-Oct. 27. Offered alternate years. S. Kresovich and S. Tanksley.
Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments to identify quantitative trait loci (QTLs), as well as how to apply molecular markers to plant and animal breeding programs. Strategies for the use of DNA polymorphisms in the management of genetic resources will also be taught.

PL BR 694 Special Topics in Plant Breeding
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department curriculum committee, and the same course will not be offered more than twice under this number.

PL BR 707 Perspectives in Plant Breeding Strategies
Emphasis on discussion and evaluation of selected benchmark papers and current literature. Selection techniques and breeding objectives, methods, and strategies for both self- and cross-pollinated crops are reviewed and discussed. Extensive outside reading is required.

PL BR 717 Quantitative Genetics in Plant Breeding
Spring. 3 credits. S-U grades only. Prerequisites: PL BR 403, 603, and BTRY 601 or equivalent. M W F 12:30-3:20. Offered even years. D. R. Viands and M. E. Sorrells.
Discussion about quantitative genetics and quantitative trait loci (QTLs) for more efficient plant breeding. Specific topics include components of variance (estimated from various mating designs): theory and computer analysis for QTL, population structure, multiple locus regressions, and interval analysis; heritability; theoretical gain from selection; and genotypic and phenotypic correlation coefficients. During our semester, plants in the greenhouse will be evaluated to provide data for computing quantitative genetic parameters.

PL BR 718 Breeding for Pest Resistance
A multidisciplinary examination of the challenge of incorporating disease and insect resistance into crop plants. Topics covered include national and international germplasm collections, identification of sources of resistance, resistance mechanisms in plants, crop and plant breeding, and the use of biochemical/physiological/molecular tools in breeding for pest resistance.

PL BR 800 Master's-Level Thesis Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty.
For students working on a master's thesis.
PL BR 900 Graduate-Level Dissertation
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students in a Ph.D. program only before the "A" exam has been passed.

PL BR 901 Doctoral-Level Dissertation Research
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted to candidacy after the "A" exam has been passed.

PLANT PATHOLOGY

PL BR 101 Freshman Writing Seminar: Pests, Pesticides, People, and Politics
Spring. 3 credits. Limited to 17 students. Lecs, M W F 8:00. Offered spring 2000. P. A. Ameson.
This seminar examines the use of pesticides, their impact on human health and the environment, and their regulation. Beginning with Rachael Carson's classic Silent Spring, we will examine many facets of the pesticide controversy through readings in current popular literature, technical journals, government documents, industry propaganda, and publications of various so-called "public interest groups." We will emphasize the need for critical thinking as we explore the power of the written word to persuade.

PL BR 102 Freshman Writing Seminar: Environmental Issues and the Changing Global Climate
Fall. 3 credits. Limited to 17 students. Lecs, T R 8:40. Not offered fall 1999. This course provides an opportunity to learn more about the biological, social, and political impact of environmental issues on scales ranging from local to global. Readings, discussions, and some hands-on experience will provide subjects for a seminar designed to teach writing at levels of single sentences to term papers.

PL PA 241 Plant Diseases and Disease Management
Spring. 4 credits. Prerequisite: one year of biology. Lecs, M W F 11:15; lab, T or W 1:25. W. E. Fry.
An introduction to plant diseases, their diagnosis, and their management. Topics covered include fungi, bacteria, viruses, nematodes, and other plant pathogens; disease cycles, plant disease epidemiology, disease forecasting, and the principles and practices of plant disease management. This course is intended for students who want a practical knowledge of plant diseases and their control. It is not an adequate prerequisite for plant pathology courses numbered 600 and above.

PL PA 309 Introductory Mycology
Fall. 3 credits. Prerequisite: a year of biology or equivalent. Concurrent registration in PL PA 319 is recommended. Lecs, T R 9:05-9:55; labs, R 1:25-4:25. J. R. Aist.
An introduction to fungi, emphasizing biology, comparative morphology, and taxonomy.

PL PA 319 Field Mycology
Fall. 1 credit. Prerequisite: permission of instructor. Offered fall 1999. K. T. Hodge.
Study of mushrooms and other fungi on 7 field excursions followed by 7 evening labs devoted to lectures and identification and study of collections under the microscope. Emphasis on ecology, biology, and means of identification. Grades are determined on basis of laboratory final.

PL PA 401 Basic Plant Pathology
Fall. 4 credits. Prerequisite: permission of instructor. Offered fall 1999. K. T. Hodge.
Study of pathogens and their population dynamics, disease cycles, diagnostic criteria and procedures, mechanisms of pathogen attack and plant defense, vector relationships, epidemiological disease control. Laboratories consist of exercises to reinforce key concepts presented in lecture. Prerequisites: PL PA 241 or PL PA 401, PL BI 241 or equivalent. Grades are determined on basis of laboratory final.

PL PA 472 Microbial Control of Plant Diseases
Spring. 3 credits. Limited to 20 students. Prerequisites: PL PA 241 or PL PA 401, BIOMI 290, or equivalents. Lecs, M W 9:05; disc F 9:05-9:55. E. B. Nelson.
This course is intended to provide students with a broad exposure to the field of biological disease control. The basic biological concepts and principles underlying microbial interactions with plants, as well as plant pathogens, and the role of these interactions in the suppression of fungal and bacterial diseases will be discussed. Emphasis will be placed equally on biological control processes in rhizosphere and phylloplane habitats. Topics will address aspects of root and leaf microbial ecology, plant pathogen ecology and behavior, ecological and molecular mechanisms of biological disease control, and manipulation and enhancement of biological control processes. Applied aspects such as delivery approaches, commercialization and registration of biological control organisms, and implementation of biological disease control practices in agriculture will also be covered. One student-driven discussion session per week will provide opportunities to explore timely topics related to biological control that may fall beyond the central focus of the course.

PL PA 443 Pathology of Trees and Shrubs
For students preparing for careers in horticulture, urban forestry, and pest management. Deals with the natural history, diagnosis, assessment, and treatment of diseases of trees and shrubs. Forest, shade, and ornamental plants are considered.

PL PA 444 Integrated Pest Management
Fall. 4 credits. Prerequisites: BIO ES 261, ENTOM 212 or 241, or PL PA 241 or their equivalents or permission of instructor. P. A. Ameson and J. Losey.
Lectures integrate the principles of pest control, ecology, and economics in the management across multiple systems. Laboratories consist of exercises to reinforce concepts presented in lecture and demonstrate pest monitoring techniques and the application of computer technology to management problems.

PL PA 472 Microbial Control of Plant Diseases
Spring. 3 credits. Limited to 20 students. Prerequisites: PL PA 241 or PL PA 401, BIOMI 290, or equivalents. Lecs, M W 9:05; disc F 9:05-9:55. E. B. Nelson.
This course is intended to provide students with a broad exposure to the field of biological disease control. The basic biological concepts and principles underlying microbial interactions with plants, as well as plant pathogens, and the role of these interactions in the suppression of fungal and bacterial diseases will be discussed. Emphasis will be placed equally on biological control processes in rhizosphere and phylloplane habitats. Topics will address aspects of root and leaf microbial ecology, plant pathogen ecology and behavior, ecological and molecular mechanisms of biological disease control, and manipulation and enhancement of biological control processes. Applied aspects such as delivery approaches, commercialization and registration of biological control organisms, and implementation of biological disease control practices in agriculture will also be covered. One student-driven discussion session per week will provide opportunities to explore timely topics related to biological control that may fall beyond the central focus of the course.
PL PA 494 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 497 Independent Study
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. An opportunity for independent study of a special topic in mycology or plant pathology under the direction of a faculty member.

PL PA 498 Teaching Experience
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. Undergraduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor.

PL PA 499 Undergraduate Research
Fall or spring. 3–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). S-U grades optional. An opportunity for research experience under the direction of a faculty member.

PL PA 642-661 Special Topics Series
Unless otherwise indicated, the following description applies to courses 642-661.
Fall or spring. 1 credit. Prerequisite: permission of instructor. S-U grades optional. Weekly discussions of current topics in special areas of plant pathology and mycology. Students are required to do extensive reading of current literature and to present oral and written reports.

PL PA 642 Plant Disease Epidemiology
Fall. TBA. M. G. Milgroom.

PL PA 644 Ecology of Soil-Borne Pathogens

PL PA 645 Plant Virology

PL PA 647 Bacterial Plant Diseases
Fall and spring. M 9:05. S. V. Beer. Emphasizes current research in plant pathology undertaken in laboratories at Cornell.

PL PA 648 Molecular Plant Pathology

PL PA 649 Mycology Conferences

PL PA 650 Diseases of Vegetable Crops
Fall. TBA. Hours to be arranged. J. W. Lorbeer and T. A. Zitter.

PL PA 652 Field Crop Pathology
Spring. W 8:00. G. C. Bergstrom.

PL PA 654 Diseases of Florist Crops

PL PA 655 Plant Diseases in Tropical Agriculture (also ENTOM 644)

PL PA 661 Diagnostic Lab Experience
Summer and fall. 1 or 2 credits. S-U grades only. Requires 3 hrs/wk per credit hour. Open only to majors. T. A. Zitter. For graduate students and advanced undergraduates with a special interest in diagnosing plant diseases. Students work in the Diagnostic Laboratory (Plant Pathology Department) under supervision of the diagnostician. Coursework or experience in diagnostic techniques is strongly advised. Priority will be given to graduate students in plant pathology and plant protection.

PL PA 662 Molecular Plant-Pathogen Interactions
Spring. 1 credit. Prerequisites: BIOGD 251, BIOM 330 or 351, and BIOM 653.1. Lecs. M W F 10:10 (12 lecture) Jan. 26–Feb. 21. T. P. Delaney, A. R. Collmer. An examination of the molecular properties that control the development of host-parasitic interactions in both microorganisms (bacteria and fungi) and higher plants. Contemporary theories describing the genetic mechanisms of pathogenesis and resistance are discussed.

PL PA 663 Plant Molecular Biology 1
Fall. 1–5 credit. Prerequisites: BIO GS 281, BIO BM 330 or 351. Section 01 Concepts and Techniques in Plant Molecular Biology (BIO PL 653.1) 1 credit. Lecs. M W F 10:10 (12 lecture) Sept. 1–Sept. 27. T. Delaney, G. B. Martin. A review and update on molecular biology concepts relevant to plant sciences including DNA synthesis, RNA transcription and processing, and protein structure and translation.

Methods applicable to plant molecular biology are described, including isolation of nucleic acids, gel electrophoresis, recombinant DNA techniques, plant transformation, mutant production, and use of sequence databases.

Section 02 Plant Biotechnology (BIO PL 653.2 and PL BR 653.2)
1 credit. Lecs. M W F 1:25 (12 lecture) Sept. 29-Oct. 27. M. Zaitlin, E. E. Earle. This course deals with production and uses of transgenic plants for agricultural and industrial purposes. Topics include procedures for gene introduction and control of gene expression, as well as strategies for obtaining transgenic plants that are resistant to insects, diseases, and herbicides, produce useful products, or have improved nutritional and food processing characteristics. Regulatory and social issues relating to plant biotechnology are discussed.

PL PA 681 Plant Pathology Seminar
Fall and spring. 1 credit. Required of all plant pathology majors. S-U grades only. W 12:20–1:10.

PL PA 694 Special Topics in Plant Pathology
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and are advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

PL PA 701 Concepts of Plant Pathology: Organismal Aspects
Spring. 3 credits. For graduate students with majors or minors in plant pathology; others by permission. Prerequisites: PL PA 401 or equivalent and permission of instructor. Lecs. T R 9:05; lab/disc, R 2–4:25. A. R. Collmer. Concepts in host-pathogen relationships with emphasis on roles of nucleic acids and cells in determining the outcome of an interaction. Genetic, molecular biological, physiological, and cell biological approaches to experimental analysis of exemplary host-pathogen systems are considered. Historical perspectives and recent research are reviewed and analyzed. Students prepare and review mock grant proposals.

PL PA 702 Concepts of Plant Pathology: Population Aspects
Fall. 3 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisites: PL PA 401 or permission of instructor. Some background in statistics is recommended. Lab=discussion section. Lec. T R 10–10; disc. T 2–4:25. G. M. Gilgroom. Theory and concepts in plant disease epidemiology and population biology of plant pathogens. Topics include: population dynamics of pathogens in time and space, interactions of pathogen and plant populations, and population genetics of pathogens. The discussion section is used for examining current plant pathology literature and other exercises complementary to lecture material.

PL PA 705 Phytophycology
Spring. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent. Not offered spring 2000. S. G. Lazarowicz. This course considers plant viruses and the diseases they cause. Consideration is given to virus structure and composition, classification, replication, effects on hosts, modes of transmission, and the relationships of these aspects to principles of diagnosis and control.

PL PA 706 Phytonematology
Fall. 2 credits. For graduate students with a major or minor in plant pathology; others by permission. Prerequisite: PL PA 401 or equivalent or permission of instructor. J. Enard. The course deals with plant-parasitic and plant-associated nematodes, their biology, morphology and systematics; ecology and role in ecosystem health; physiology and molecular aspects of nematode-plant interactions; population dynamics; interactions with other plant pathogens; and management options. Bioengineering, breeding for resistance, genetic mechanisms of host resistance, biological control, and technical methods of handling nematodes will also be covered. Emphasis will be placed on the nematode as an animal system.

PL PA 707 Phytophycology
Fall. 2 credits. Prerequisites: general microbiology, lectures and laboratory; introductory plant pathology. Offered alternate years. Not offered fall 1999. S. V. Beer.

A consideration of the prokaryotes that cause disease in plants and examples of the diseases they cause. The course emphasizes properties of bacterial pathogens that affect disease, methods for manipulation of the pathogens,
and recent developments in phytobacteriology. The current state of knowledge of important phytopathogenic genera including their genetics and mechan- 
isms of pathogenesis is reviewed. Laboratory practice in isolation, inoculation, identification, genetics, and physiology is included.

PL PA 709 Phytomycology
Spring. 2 credits. For graduate students with a major or minor in plant pathology or mycology, others by permission. Prerequisites: PL PA 401 and 300 or equivalents, or permission of instructor. Lec, F 1:25–2:30; lab, 2:30–4:30. J. W. Lorbeer.

Provides basic information on the biology of plant pathogenic fungi with emphasis on the structure, ecology, genetics, life cycles, and disease cycles of representative genera and species.

[PL PA 715 Phytovirology Laboratory
Spring. 2 credits. Limited to 12 students. Prerequisite: permission of instructor. S-U grades only. Not offered spring 2000. S. G. Lazarowitz.]

[PL PA 735 Advanced Plant Virology
Spring. 3 credits. Prerequisite: permission of instructor. 3 lecs, hours to be arranged. Not offered spring 2000. S. G. Lazarowitz.

Topics in plant virology, with an emphasis placed on student discussion of current literature. Topics include virion replication process, viral and viroid replication, viral recombination, viral movement, viral genes and their products, cross protection, detection of viruses, molecular approaches to resistance and the use of viruses as vectors for introduc- 

Guided research experiences in laboratories addressing questions concerning the interaction of pathogens (bacteria, fungi, viruses) and plants at the molecular level. Intended for beginning graduate students with a concentra-

PL PA 797 Special Topics
Fall or spring. 1–5 credits. S-U grades optional. An opportunity for independent study of a special topic.

PL PA 798 Graduate Teaching Experience
Fall or spring. 1–5 credits. S-U grades. Hours to be arranged. Staff.

Graduate teaching assistance in a mycology or plant pathology course by mutual agreement with the instructor. This experience may include, but is not limited to, preparing, assisting in, and teaching laboratories, preparing and delivering lectures, leading discussion sessions, and tutoring.

PL PA 800 Master's-Level Thesis Research
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.

For students working on a master's degree.

PL PA 900 Graduate-Level Thesis Research
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.

For students in a Ph.D. program who have not passed the "A" exam.

PL PA 901 Doctoral-Level Thesis Research
Fall or spring. S-U grades optional. Credit to be arranged. Prerequisite: permission of adviser. Graduate faculty.

For doctoral candidates who have passed the "A" exam.

POMOLOGY (FRUIT SCIENCE)
See Horticultural Sciences.

RURAL SOCIOLOGY

Note: class meeting times are accurate at the time of publication. If changes for necessary, the department will provide new information as soon as possible.

R SOC 100 Indian America to 1890 (also American Indian Studies 100)
Fall. 3 credits. S-U optional. Enrollment limited to 550. 2:30–9:30 p.m.; sec various times. Staff.

American Indian cultural and political history from 1800 to the present will be the primary focus of this course, with a review of important earlier events in U.S./Native American cultural studies. Emphasis will be on Native American perspectives, with guest lectures and media presentations.

R SOC 101 Introduction to Sociology (also Sociology 101)
Fall, spring or summer. 3 credits. Enrollment limited to 350 in the fall, 400 in the spring. Lect, T R 10:10–11:00; sec, various times. Staff.

This course provides an introduction to theory and research in sociology. It demonstrates how the insights, theories, and methods of sociological analysis can be brought to bear on major issues of social life. A primary goal is to convey a sense of the manner in which sociologists formulate theories and how the collection and analysis of data are used to evaluate those theories. The course will provide "hands-on" experience in analyzing sociological issues. Students undertake guided research exercises that involve using computers to analyze actual data. No prior background is presumed; necessary skills are covered in class and section meetings.

R SOC 105 Economic Sociology (also Sociology 105)
Fall. 3 credits. S-U optional. 2:15–3:30. S. V. Beer.

Modern social thought arose out of attempts to explain the relationship between economic development and the social transformations that gave rise to the contemporary world. Classical theorists from Karl Marx and Max Weber to Karl Polanyi focus their writings on emergent capitalist economies and societies. Contemporary social theorists likewise have sought to understand the interaction between capitalism and the social forces reacting against and emerging from economic development. From exchange and rational choice theories to network analysis and institutional theory, a central theme in contemporary social thought has been the relationship between the economy, society, economic action and social structure, rationality and fundamental social processes. This course provides an introduction to social thought and research seeking to understand and explain the relationship between economy and society in the post-industrial era.

R SOC 175 Issues in Contemporary American Indian Societies (also American Indian Studies 175)
Spring. 3 credits. S-U grades optional. Lecs, W 7:30–9:30 p.m.; sec, various times. Staff.

American Indian cultural and political history from 1800 to the present will be the primary focus of this course, with a review of important earlier events in U.S./Native American national relations. Emphasis will be on Native American perspectives, with guest lectures and media presentations.
ecologies, class/gender relations) and the impact of global forces on Southern resources. Such forces include global food systems, new forms of export production, development agencies, multilateral institutions, local bureaucracies, transnational corporations, the debt crisis, and new technologies. We will also examine the new social movements, such as environmentalism, feminism, and grassroots activism.

R SOC 206 Gender and Society (also Women's Studies 206)
Spring. 3 credits. Enrollment limited to 100.
Course will familiarize students with origin of gender hierarchies, social and behavioral similarities/differences between females and males, and degree that biological, psychoanalytic, psychological and sociological perspectives help to understand the differences. United States and cross-cultural comparisons of the consequences of gender inequality will be a major focus of the course. Objectives will be met through lectures, readings, films, participant observation and personal experiences.

R SOC 208 Technology and Society
Fall. 3 credits. Offered odd years. M.W.F 10:10–11:00. C. C. Geisler.
The relationship between technology and society is among the most pervasive concerns of our time. Ultimately, what makes a technology useful or "appropriate" is a sociological question. Lectures and readings review classical debates regarding technology and society. Herein, students compare high technologies and appropriate technologies, identify problems associated with technology transfer to other societies, and create a list of important criteria by which technologies are judged appropriate or inappropriate using numerous case studies.

R SOC 209 Social Inequality (also Sociology 208)
This course examines the nature and processes of social inequality in industrial societies. The central focus is on the contemporary United States, with some comparisons to other industrial societies with different educational and class structures. Readings include theoretical and empirical materials on urban inequality and stratification along race, class, and gender lines. The course includes ethnographies of schools and workplaces as well as more quantitative research.

R SOC 213 Social Indicators, Data Management, and Analysis
Fall. 3 credits. Offered alternate years (opposite of R SOC 214). T.R 11:40–12:55. P. R. Eberts.
A survey of definitions of social indicators and general principles of social indicators research will be illustrated from data on both developed and less-developed countries. Data management and analysis of measures of poverty, level of living, inequality, quality of life, etc., based on census data, household surveys, and key informant and other low-cost techniques, will be examined using personal computers.

R SOC 214 Research Methods for the Social Sciences
Fall. Offered even years (opposite of R SOC 213). 3 credits. Enrollment limited to 30. T.R 11:40–12:55. P. R. Eberts.
A survey of approaches to conducting research in the social sciences will be presented. These include observation techniques, unstructured, semi-structured, and structured interviews, experiments, and focus groups. Some statistical techniques for data analysis will be discussed. A background in elementary statistics, although not required, is preferred.

R SOC 215 Organizations: An Introduction (also Sociology 215)
This is an introductory course in the study of organizations. We will start by taking a look at various examples, including a street gang in a Boston neighborhood, General Moltke's Prussian Army, a government agency, and an industrial corporation. These brief glimpses serve as exercises in looking behind the rhetoric for common patterns in organizational phenomena. We will consider these both from inside and outside perspectives. The focus of the course is upon research scholarship, not the training of managers. Nonetheless, the analytical skills you will acquire are applicable to work in firms, government agencies, and nonprofit organizations.

R SOC 220 Sociology of Health and Ethnics Minorities (also Latinas Studies Program 220)
 Discusses the health status of minorities in the United States. This course explores intragroup diversity such as migration, economic status and the influence of culture, and the environment on health status and access to health care. Although special attention is given to Latino populations, discussion encompasses other minorities who face similar problems.

R SOC 301 Theories of Society
Spring. 3 credits. Prerequisites: rural sociology or sociology course. S-U grades optional. Enrollment is limited to 30. M.W.F 11:15–12:05. P. K. Gellert.
An introduction to the "classical" sociological theorists for juniors, seniors, and beginning graduate students. Emphasis on (1) the central concepts of the sociological tradition, (2) major classical theorists (Marx, Durkheim, Weber) and contemporary counterparts. The relevance of these theories of society to current events and social problems will be stressed.

R SOC 302 Evaluating Statistical Evidence (also Sociology 301)
Fall. 3 credits. S-U optional. Lec M.W 10:10–11:00. R. L. Breiger.
A first course in statistical evidence in the social sciences, with emphasis on statistical inference and multiple regression models. Theory is supplemented with applications.
The development of Iroquois (Hodenosaunee) history and culture is traced to the present day.

Preservationism, conservationism, deep ecology, ecofeminism, social ecology, NIMBYism, risk assessment, and environmental equity. Another objective is to familiarize students with some major contemporary substantive environmental problems and policies. These topics include air and water quality, public lands management, biodiversity, deforestation, climate change, and ozone depletion. A sociological framework is applied to evaluate interrelationships of substantive and philosophical/theoretical issues.

An overview of the way demographic analysis is used in business and government. Through the use of case study and problem solving, students learn to understand how demographic concepts, methods, and data are used by demographers to solve problems in business and government. The course is designed for upper-level undergraduates of a variety of academic disciplines and career orientations. Students will work on problems drawn from consumer marketing, education, housing, and real estate development, human resources, and health services.

Rural Areas in Metropolitan Society

This course analyzes the changing structure and role of small towns and rural areas in developed nations. The focus is on adaptation of rural communities and populations to major trends including increased societal differentiation and complexity; increased economic interdependence, and rapid social, economic, technological, and ecological change. Alternative policies to ameliorate rural problems and/or enhance rural contributions to national development are considered. Students participate in group research projects in rural communities.

Food and Agriculture in Modern Society

Spring. 3 credits. Prerequisite: one course in social science (CALS Group C). S-U optional. Enrollment limited to 30. T R 8:40-9:55. G. W. Gillespie. Our changing food and agriculture system will be examined from a sociological perspective. What are its major trends as we enter the twenty-first century? What are its effects on human health, and environmental issues? What are its potential development strategies and what do these imply for rural communities, urban areas, and the environment?

Sociology of American Indians (also American Indian Studies 361)

Spring. 3 credits. Prerequisite: R SOC 101/SOC 101 or approval of the instructor. Enrollment limited to 20. T R 10:10-11:25. Offered odd years. Not offered spring 2000. B. Baker. This course is designed to emphasize the role of theory and research in our understanding of American Indians. Towards that end, the relationship between the nation-state and indigenous populations will be emphasized. Students will be exposed to the following theoretical perspectives: world systems and dependency, internal colonialism, social disintegration, the social construction of reality, political mobilization, and ethnicity/colonization. The course also considers the role of gender, race, ethnicity, and experiences of inequality. Throughout the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

American Indian Tribal Governments (also American Indian Studies 367)

Fall. 3 credits. S-U option. Enrollment limited to 20. Lecs, W 2:00-4:25. B. Baker. This course focuses on the structure of contemporary tribal governments and the ways in which these governments approach the issues confronting their constituents. The effects of European contact on traditional political organizations are detailed, as are the present day relationships of tribal governments to federal and state governments.

Comparative Issues in Social Stratification (also Sociology 371)

Fall. 3 credits. S-U option. Enrollment limited to 20. Lecs, W 2:00-4:25. T. A. Lyson. This course reviews both classical and contemporary issues in the comparative social stratification literature. Particular attention is given to the changing configurations of different labor markets, debates on the meaning of new economic constituencies, and the role of gender, ethnicity, and sexuality in assessing the patterns, meaning and experiences of inequality. Through the course we will give special attention to the importance of understanding how questions of measurement are constructed and employed in understanding social inequality.

Independent Honors Research in Social Science

Fall and spring. 1-6 credits. Limited to students who have met the requirements for the honors program. A maximum of 6 credits may be earned in the honors program. Students should select a faculty adviser and begin proposal development during the junior year. Students must submit written proposals by the third week of the semester of their senior year to the departmental honors committee representative.

Human Fertility in Developing Nations (also Biology and Society 404)

Spring. 3 credits. Prerequisite: R SOC 408 or permission of instructor. Enrollment limited to 15. T R 2:55-4:10. Offered alternate years. Not offered 1999-2000. Staff. This review of the major literature dealing with the social causation of variation in human fertility. Emphasis will be on international comparisons and on the methodology of field research.

Population Policy (also Biology and Society 414)

Spring. 3 credits. Prerequisite: R SOC 201 or permission of instructor. Enrollment limited to 15. T R 10:10-11:25. Offered alternate years. Not offered 1999-2000. Staff.

Gender Relations, Gender Ideologies, and Social Change

Spring. 3 credits. Prerequisite: R SOC 425. Offered alternate years. Not offered 1999-2000. S. Feldman. Drawing on feminist and sociological theories of power, methods, and employing a comparative and global analytic framework, this course examines how gender ideologies, work-family linkages and the transformation of men and the labor process are based on and help transform gender relations. The course gives attention to the particularities of place and time as these help to situate gender relations in the different state, regional, and global configurations that contextualize and configure everyday life.

Migration and Population Redistribution

Fall. 3 credits. Prerequisite: undergraduate, one demographic course or permission of instructor. T R 8:40-9:55. Offered even years. Not offered fall 1999 and 2001; next offered 2000. D. L. Brown. This course analyzes the determinants and consequences of internal migration in urban and rural areas of developed and developing nations. Economic and demographic interrelationships are emphasized as are implications of changes in local and regional population size and composition for labor supply, the demand for goods and services, and infrastructure. Public policy implications of the inter-relations are investigated. Techniques and measurement issues associated with the analysis of migration and population distribution are discussed.
The core areas of demography, fertility, mortality, and migration are studied. Com­
der to the social, economic, and political
impact of aging on the elderly. Films and
texts about aging topics are used to
Falls credits. Spring. 3 credits. S-U
optional. Prerequisite: R SOC 101 or
Enrollment limited to 30. Staff.

An analysis of the “graying” of America and the
responses of the public and private sectors to
this demographic revolution. Examines the
interplay between basic and applied knowl-
dge in social gerontology. Explores the
formal and informal networks of services, in
both rural and urban environments, that help
maintain independent living arrangements for
the elderly.

Social Demography (also Sociology 413)

Fall. 3 credits. Enrollment limited to 30. M W

This course surveys the methods, theories, and
problems of population studies. Attention is
directed to the social, economic, and
cultural determinants and consequences of
population growth, distribution, and change.
The core areas of demography, fertility, mortality,
and migration are studied. Com-
parisons are made between developed and
developing areas and between Africa, Asia,
and Latin America.

The Social Impact of Resource Development

Spring. 3 credits. S-U grades optional.
Offered alternate years. Not offered 1999–
2000. C. C. Geisler. Social impact assessment (SLA) is a method of
anticipating unwanted side-effects of projects,
policies, and new technologies before they
happen and a decision tool for mitigation. The
seminar explores SLA applications in
different parts of the world and pays particular
attention to impacts on native and indigenous
peoples. Students learn practical SLA skills and
related theoretical/conceptual debates.

American Indian Philosophies: Selected Topics (also
American Indian Studies 442)

Spring. 3 credits. S-U grades optional.
Prerequisite: permission of instructor.
Enrollment limited to 15. W 7:30-10:30.
R. W. Venables.

This course provides an opportunity for
students to read and discuss a wide range of
American Indian philosophies.

Sociology and Survival

Fall. 3 credits. Prerequisite: introductory
sociology course or permission of
instructor. Enrollment limited to 30. T R
D. T. Gurak.

Course surveys existing theories, methodologi-
cal techniques, and research results relating to
how social, economic and cultural structures
and processes affect survival chances in
diverse societies. A comparative framework is
presented, and the utility of existing knowl-
edge for policy-related applications in
different societies is assessed. Attention is
given to the problems associated with imputing
causality in morbidity and mortality data.

Special Topics in Rural Sociology

Fall or spring. 4 credits maximum. S-U
grades optional.
The department teaches “trial” courses under
this number. Offerings vary by semester, and
will be advertised by the department. Courses
taken under this number will be approved by
the department curriculum committee, and
the same course will not be offered more than
twice under this number.

Population, Environment, and Development in Sub-Saharan Africa

Fall. 3 credits. Offered alternative years.
D. T. Gurak.

In the past three decades, countries in sub-
Saharan Africa have experienced rapid
population growth, weak economic growth,
and growing environmental problems. This
course examines problems that are
interrelated and looks at possible solutions.
After reviewing trends in population,
environment and development within the
region, the course focuses on specific
problems, including urbanization, health and
survival, population pressure and sustainable
agriculture, refugees, and gender/family/
community structures.

Independent Study in Rural Sociology

Fall or spring. 3 credits variable (may be
repeated for credit). Students must register
with an Independent Study form (available
at 140 Roberts Hall). S-U grades optional.
Informal study may include a reading course,
research experience, or public service
experience.

Managing Local Environmental Systems: Social Perspectives and Research Bases

Fall. 3 credits. S-U optional. Enrollment
limited to 15. W 1:25–4:25. J. D. Francis.
Course is for students with diverse back-
grounds: undergrads, grads, people in
professional careers, others with interest in
environmental issue identification, resolution,
and management. Course discussions include
ecological, social, economic and local
government perspectives. Via lab exercises
throughout the semester, student will have
opportunities to apply the concepts and
principles of these perspectives to analysis of
specific local environmental management
problems. Readings, lectures, and a course
project are mandatory.

MPS Project

Fall and spring. 1-6 credits. S-U
optional.
Prerequisite: graduate student. Lec, R
7:00–10:00 p.m. P. R. Eberts.
A survey of three general approaches for
conducting analysis and practice in
community and rural development. These
approaches include examinations of: 1) community
structural changes and policymaking; 2) participatory processes for generating
community development; and 3) planning strategies as mechanisms for
creating community development opportunities.

Community Development Seminar

Spring. 1 credit. Prerequisite: R SOC 601.
M 6:30–9:30 p.m. (Meets triweekly.)
P. R. Eberts.
A participatory seminar for feedback,
collective learning, and guidance as MPS
students apply community and rural
development theory and methods in thesis project
work with local and regional communities.

Classical Sociological Theory

Fall. 4 credits. S-U grades optional.
Prerequisites: open to graduate students
Students will review the main streams of
classical sociological thought, focusing on
the work of Weber, Durkheim, and Marx. Course
materials include original texts and secondary
literature, used to examine the concepts,
methods and explanation in classical
sociological thought. Important objectives of
the course will be to identify the philosophical
and conceptual core of the discipline and to
critically evaluate the relevance of the classical
theories to contemporary social change and
development.

Theories of Social Change

Spring. 3 credits. S-U grades optional.
P. D. McMichael.
This course surveys major twentieth-century
social theories, focusing on lineages from
classical theory and on theories recent to
understanding the processes of social change.
Major topics covered will include mid-century
functionalism, conflict theories, neo-Marxism,
neo-Weberianism, substantive economic
sociology, and world-systems theory. Other
topics, such as the “new sociology of culture,”
R SOC 606 Sociological Theories of Development
Spring. 3 credits. T 2:30-5:30.
P. K. Gellert.
This course is a critical examination of a historical range of theories and research in the sociology of development from the post-war period through the present. Major topics include modernization theory, dependency theory, world-system theory, the developmental state, global commodity chains, and globalization. Throughout the course, the concept of development itself is questioned and critiqued both theoretically and in terms of practical challenges from environmental, indigenous and other social movements.

R SOC 607 Sociology of Natural Resources and Development
Fall. 3 credits. S-U optional. Offered odd years. R 1:25-4:25.
T. A. Lyson.
Building on theories of the sociology of development, this seminar will examine the role of natural resource extraction, processing, and exports to global markets in the developmental trajectories of nations in Asia, Africa and Latin America. Engages students in both theoretical debates and practical implications of resource access, control, and conflict amongst various social actors ('stakeholders'). Detailed historical cases will be examined, primarily from Southeast Asia (Indonesia, Malaysia, Philippines).

R SOC 612 Population and Development in Asia [also WMNS 612]
L. B. Williams.
This graduate seminar considers population and development issues in Asia. Case studies pertaining to Southeast Asia will be highlighted. We will discuss the linkages between population and development and consider both from a historical perspective. Recent social, economic, and demographic change in the region will be considered in depth. Evolving gender roles in the family, labor force, and broader social context will also be examined.

R SOC 618 Research Design I
Fall. 4 credits. Prerequisite: a statistics course. T R 12:20-2:15.
J. D. Francis.
First of a two-semester sequence (may be taken individually) in introductory graduate methods. Discusses problems of measurement, the design of instruments, and problems of reliability and validity. Common forms of measuring instruments are discussed. Concludes with an introduction to factor analysis. Students apply principles to development of several common types of scales. Computers will be used extensively.

R SOC 619 Research Design II
Spring. 4 credits. Prerequisite: an introductory methods course and a statistics course. T R 12:20-2:15.
J. D. Francis.
The second part of the two-semester sequence in introductory graduate methods, with emphasis on the case-study treatment of the following topics: regression, analysis of variance, analysis of covariance. Special attention is given to use of categorical variables in regression. Students develop and examine several analytical models using actual data to familiarize themselves with data handling and processing. Extensive use of computers.

R SOC 621 Foundations of Environmental Sociology
Fall. 3 credits. Open to graduate students only. S-U optional. Enrollment limited to 20. W 10:10-12:35. Offered even years. Not offered fall 1999 and 2001; next offered fall 2003.
M. J. Pfeffer.
Foundations of Environmental Sociology provides graduate students with a broad survey of the literature in this disciplinary specialty area. Students will review the history of thought in environmental sociology as well as key literature in the various substantive foci of this specialty. The principle objective of this course is to provide graduate students specializing in environmental sociology with a firm grasp of the content, controversies, and trends in the area. Sessions are conducted in a seminar style, and discussions are focused on close review of assigned readings.

R SOC 625 State, Economy, and Society
Spring. 3 credits. Enrollment limited to 25. W 1:25-4:25. Offered even years.
P. D. McMichael.
Reviews major issues concerning the relations between political and economic institutions and the role of states, markets, firms, social movements, and cultural institutions in the process of social change. Theoretical perspectives are drawn from classical and modern social theory, including the application of comparative and historical methodologies. Substantive themes concern political-economic restructuring in world regions, and the interaction between national and global processes.

R SOC 630 Field Research Methods and Strategies
Fall. 3 credits. Enrollment limited to 20. T R 8:40-9:55. Offered odd years.
L. B. Williams.
This course will cover a variety of methods: focus group, in-depth interviews, participant observation, archival record analysis, structured surveys, among others. Frameworks by which research questions can be matched with appropriate field methodologies, choice of sample, data collection, approaches, etc. will be discussed and we will assess the strengths and weaknesses of various strategies of field research. We will also discuss practical matters such as fieldworker recruitment and training, data processing issues, and we will highlight the ethics of field work.

R SOC 640 Community and Changing Property Institutions
Fall. 3 credits. R 1:25-4:25. Offered even years. Not offered fall 1999.
C. C. Geisler.
The seminar acquaints students with the structure and dynamics of rural communities and the retheorization in contemporary peasant studies and agrarian political economy literatures, theorizations of locality, rurality and spatial complexity within the world economy, and critical issues framing the relationship between political and labor market restructuring and petty commodity and household production systems.

R SOC 645 Advanced Techniques of Demographic Analysis
Spring. 3 credits. Prerequisites: CEH 606; graduate standing or permission of instructor. Enrollment limited to 25. M 7:30-10:30 p.m. Offered alternate years. Not offered 1999-2000.
D. T. Gurak.
An examination of analytical techniques that assumes a basic knowledge of demographic data and research methodology. Life tables, demographic estimates with incomplete data, survey techniques to supplement inadequate vital registration systems, data management, multilevel models, and other multivariate procedures are among the topics to be covered.

R SOC 661 Sustainable Agriculture and Development
Spring. 3 credits. S-U grades optional. Prerequisites: graduate standing or instructor's permission. Offered alternate years. M 10:10-12:35.
T. A. Lyson.
This course examines the relationship between local agriculture and development as these are embedded in a globalization economy. Topics include an examination of the social, scientific theoretical underpinnings of conventional agriculture, the social origins of sustainable agriculture, environmental and...
community sustainability, agricultural diversification strategies, community agriculture development, and the political and policy contexts of more sustainable agricultural systems.

R SOC 671 Epistemological Challenges to Social Science Paradigms: A Feminist Inquiry (also Women's Studies 671)
Fall. 3 credits. W 1:25–4:25. Offered alternate years. S. Feldman. This course will review and analyze contemporary themes in feminist epistemological critiques of sociological methods and knowledge systems. It identifies mainstream explanations within the social sciences, introduces early feminist challenges to androcentric paradigms, and explores philosophical assumptions of postmodem and poststructural analyses. Substantive foci assess various approaches to field, archival, and survey research, and the theoretical presuppositions of approaches from rationalism to postpositivism. We also address the linkages between theory and questions of political practice, individualism, and autonomy.

[R SOC 675 Global Patterns of International Migration]
Fall. 3 credits. Enrollment limited to 20. M 7:30–10:30 p.m. Offered alternate years. Not offered 1999–2000. Staff. International migration to the United States and other countries has increased in recent decades. What accounts for that trend in an era when large-scale international migration is supposed to have ended and what are the implications of immigration for receiving countries? Theories and research on these issues are examined in the course from a comparative and interdisciplinary perspective. Several migration systems are examined, including those of North America and the European Community. Policies shaping immigration are also reviewed.

[R SOC 694 Special Topics in Rural Sociology]
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches "trial" courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number will be approved by the department's curriculum committee, and the same course will not be offered more than twice under this number.

[R SOC 715 Comparative Research Methods]
Spring. 3 credits. M 12:20–2:50. Offered odd years. Not offered spring 2000 and 2002; next offered spring 2001. T. A. Lyson. This seminar focuses on the comparative method in the social sciences. The logic of comparative inquiry forms the substantive base of the course. Topics include cross-national and cross-regional research design and an analysis of the comparative case study approach. Illustrations of the comparative research approach will cover a range of data types and problems.

[R SOC 716 Multidimensional Measurement and Classification]
Fall. 4 credits. Prerequisite: previous course work in scaling and statistics. T R 12:20–2:15. Offered odd years. Next offered 2001–2002. J. D. Francis. An advanced course in measurement and scaling, building from work by Thurstone, Gutman and Coombs to multidimensional measurements. Topics include philosophy of factor analysis, factor-analysis models, factoring design, factoring techniques, and comparison with factor-analysis models. Cluster analysis and multidimensional scaling are the other major techniques discussed. As matrix algebra is an integral part of these procedures, class time is devoted to this topic. Computers are used to analyze fit to models.

[R SOC 719 Logistic and Log Linear Models]
Spring. 4 credits. Prerequisites: two courses in statistics and one in methods. T R 12:20–2:15. Offered every even years. Next offered 2001–2002. J. D. Francis. The first part of the course reviews multiple regression theory and procedures, after which extensions of these models to categorical data are discussed. Consideration is given to violations of assumptions and their effects. Then more advanced regression concepts and estimation techniques are discussed. The main focus of the course is on logit and log linear models. Computerized labs are an integral part of the course.

[R SOC 725 The Sociology of "Third World" States]
Fall. 3 credits. W 1:25–4:25. Offered alternate years. Not offered 1999–2000. S. Feldman. This course examines how processes of political and economic restructuring have reshaped state capacities and processes of state formation. Particular attention is paid to questions of class formation, corporatist alliances, transnational interests, and alternative development strategies with the emergence of austerity, privatization and trade liberalization. The topic of postcolonial sociology. Critical to this discussion are the contours of authoritarianism, nationalism, communalism and fundamentalism as these reconfigure national and regional alliances and practices and shape interpretations of current processes of resistance, charity, and terms of intervention and exchange.

[R SOC 730 Sociology of Global Change]
Spring. 3 credits. S-U grades optional. Enrollment limited to 20. W 1:25–4:25. Offered odd years. Not offered spring 2000 and 2002; next offered spring 2001. P. D. McGlade. Analyses of social change and development are increasingly sensitive to global context. They include the sociology of the world economy as a multi-layered entity anchored in an evolving international division of labor and the system of nation states, and the sociology of transnational political, economic, and cultural processes (e.g., food regimes, commodity chains, diasporas and transnational identities, the new regionalism, and transnational social movements). The seminar examines the substantive and methodological questions generated by research on these global processes, including questions of relevant units of analysis, situating global processes in local contexts and subjectivities and反之，examine the ways in which national structures and cultures interact with global structures and cultures.

[R SOC 741 Community Development and Local Control]
Spring. 3 credits. W 1:25–4:25. Offered alternate years. Not offered 1999–2000. C. C. Geisler. Theories of community growth and decline and the current debate over the place of local control in community development in general are considered. Salient themes include the role of neopopulism in community development, changing institutions of property as community development occurs, and changing definitions of "community."

[R SOC 791 Teaching Experience]
Fall or spring. 1–3 credits. Limited to graduate students. S-U grades optional. Graduate faculty. Participation in the ongoing teaching program of the department.

[R SOC 800 Master's-Level Thesis Research]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted specifically to a Master's program.

[R SOC 872 Development Sociology]
Limited to master's and doctoral degree candidates with permission of the graduate field member concerned. S-U grades optional. Graduate faculty.

[R SOC 900 Graduate-Level Thesis Research]
Fall or spring. Credit to be arranged. Prerequisite: permission of instructor. S-U grades optional. Graduate faculty. For students admitted specifically to a Master's program. For students admitted after the "A" exam has been passed.

Related Courses in Other Departments
(Others may be added)
Population Dynamics (SOC 205)
Gender Relations, Gender Ideologies, and Social Change (WMNS 524)
Summer Session Courses
Introduction to Sociology (6-week session)
Environment and Society (3-week session).
Sociology of Health and Human Behavior (3-week session)

SOIL, CROP, AND ATMOSPHERIC SCIENCES

Note: class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.
Courses by Subject

Crop Science: 311, 314, 315, 317, 608, 610, 612, 613, 614, 642, 691, 820, 920, 921
Environmental Information and Analysis: 398, 411, 420, 620, 660, 675

General Courses

SCAS 190 Sustainable Agriculture
Fall. Credits variable, 2 or 3. Limited to 60 students. S-U grades optional. Lec, R 10:10; labs, M 2:00–4:25, T 10:10–12:35. G. W. Fick. This course is designed to be an enjoyable introduction to basic food production resources (soils, crops, and climates), and it emphasizes scientific principals of management that conserve or renew those resources for continuing benefit to society. The information is of general value for non-majors and students new to the field. Laboratories include several field trips and stress hands-on experience with soils, crops, and descriptive climatology. Written assignments are prepared for the World Wide Web. An extra credit can be earned by participation in team preparation and delivery of a lesson in sustainable agriculture.

SCAS 494 Special Topics in Soil, Crop and Atmospheric Sciences (undergraduate level)
Fall or spring. 4 credits maximum. S-U grades optional. The department teaches “trial” courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 497 Individual Study in Soil, Crop, and Atmospheric Sciences
Fall or spring. 1–6 credits. S-U grades optional. The department teaches “trial” courses under this number. Offerings vary by semester, and will be advertised by the department. Courses offered under the number are approved by the department curriculum committee, and the same course is not offered more than twice under this number.

SCAS 498 Teaching Experience in Soil Science, Crop Science, and Atmospheric Science
Fall or spring. 1–5 credits. Students must register with an Independent Study form (available in 140 Roberts Hall). The topics in soil science or crop science or atmospheric science are arranged at the beginning of the term for individual study or for group discussions.

SCAS 499 Undergraduate Research
Fall or spring. Credit to be arranged. Students must register with an Independent Study form (available in 140 Roberts Hall). Independent research on current problems selected from any phase of crop science, atmospheric science, or soil science.

SCAS 695 Planning and Reporting Research
Spring. 2 credits. Prerequisite: graduate student standing or permission of the instructor. Limited to 10 students. Lec to be announced. G. W. Fick. This course is designed to prepare students in the SCAS Department and closely related fields for planning their research and reporting research results. Emphasis is given to literature reviews, scientific writing and reviewing (either thesis proposals, grant proposals, or manuscripts for publication), and slide and poster presentations. Students are expected to work closely with their major professor as well as the instructor of the course.

Atmospheric Science

SCAS 131 Basic Principles of Meteorology
Fall. 3 credits. Lecs, T R 11:15; lab, T W or R 12:45–1:25 and M W 7:00–9:30 p.m. M. W. Wysocki. A simplified treatment of the structure of the atmosphere: heat balance of the earth; general and secondary circulations; air masses, fronts, and cyclones; and hurricanes, thunderstorms, tornadoes, and atmospheric condensation. In the laboratory, emphasis is on techniques of analysis of weather systems.

SCAS 250 Meteorological Observations and Instruments

SCAS 331 Climate Dynamics (also ASTRO 331)
Fall. 4 credits. Prerequisites: MATH 112 or 192 or equivalent. Lecs, M W F 1:25–2:15; disc, W 2:30. K. H. Cook, P. J. Gierasch. Processes that determine climate and contribute to its change are discussed, including atmospheric radiation, ocean circulation and atmospheric dynamics. Contemporary climate change issues are investigated and discussed in the context of natural variability of the system.

SCAS 332 Evolution of the Earth System (also SES 302, GEOL 302)
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent. Lecs, to be announced; disc, to be announced. T. R. 1:25–11:25. D. S. Wilks. Co-evolution of life and the earth system: Earth’s early history; plate tectonics, continents, and atmospheric circulation; the roles of climate and life in shaping the earth; evidence from sedimentary rocks and the fossil record. Introduction to methods of interpreting information preserved in the rock record.

SCAS 334 Microclimatology
Spring. 3 credits. Recommended a course in physics. T R 10:10–11:25. D. S. Wilks. This course treats relationships of radiant energy, temperature, wind, and moisture in the local environment. The interplay between physical processes of the atmosphere, plant canopies, and soil is examined, with emphasis on the energy balance.

SCAS 341 Atmospheric Thermodynamics and Hydrodynamics
Fall. 3 credits. Prerequisites: one year of calculus and one semester of physics. M W F 9:05–9:55. M. W. Wysocki. Introduction to the thermodynamics and hydrodynamics of the atmosphere and to the methods of description and quantitative analysis used in meteorology. Topics covered include thermodynamic processes of dry air, water vapor and moist air, and concepts of hydrostatics and stability.

SCAS 342 Atmospheric Dynamics
Spring. 3 credits. Prerequisites: one year each of calculus and physics. M W F 10:10. W. Knapp. Introduction to the methods of description and quantitative analysis used in meteorology. Topics covered include equations of atmospheric motion, motion in the free atmosphere, vertical variations of wind and pressure fields, mathematical representation and characteristics of fronts, mechanisms of pressure change, concepts of circulation and vorticity, and effects of friction on atmospheric motion.

SCAS 352 Synoptic Meteorology I
Fall. 3 credits. Prerequisites: SCAS 341 and concurrent enrollment in SCAS 342. Lecs, T R 9:05; lab, M 1:25–3:25. M. W. Wysocki. Weather map analysis and forecasting techniques are studied by applying the principles of fluid and heat flow. This course will strengthen previously introduced meteorological concepts that will be applied to forecasting mid-latitude synoptic scale weather systems, such as cyclones, anticyclones, jet streams, fronts, and waves.

SCAS 352 Application of FORTRAN in Meteorology
Fall. 3 credits. Prerequisites: SCAS 131 plus one computer programming course. Lec, T R 12:20–1:10; lab, T 1:25–3:20. M. W. Wysocki. An introduction to numerical techniques using FORTRAN to solve meteorological problems. No previous experience with FORTRAN is expected.

SCAS 435 Statistical Methods in Meteorology
Fall. 3 credits. Prerequisite: an introductory course in statistics (e.g., BTRY 215 or ARME 310) and calculus. T R 10:10–11:25. D. S. Wilks. Statistical methods used in climatology, operational weather forecasting, and selected meteorological researches. Some statistical characteristics of meteorological data, including probability distributions, intercorrelations, and persistence. Operational forecasts derived from multiple regression models, including the FORCH model. Forecast verification techniques and scoring rules. Time series analysis, EOFs, and other research topics as time permits.
SCAS 444 Tropical Meteorology
Structure and dynamics of the tropical atmosphere on a wide range of time and space scales ranging from meso-scale convective systems to planetary waves. Topics include hurricanes, monsoonal underlying physical principles. Topics include space scales ranging from meso-scale to the study of Structure and dynamics of the tropical atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

SCAS 447 Physical Meteorology
Fall. 3 credits. Prerequisites: a year each of calculus and physics. M W F 10:10. Offered alternate years. Offered fall 1999. W. W. Knapp.
Primarily a survey of natural phenomena of the atmosphere, with emphasis on their underlying physical principles. Topics include composition and structure of the atmosphere, atmospheric optics, acoustics and electricity, solar and terrestrial radiation, and principles of radar probing of the atmosphere.

SCAS 451 Synoptic Meteorology II
Fall. 3 credits. Prerequisites: SCAS 341 and SCAS 342. Lecs, T R 9:05; lab, M 12:25—12:50. S. J. Colucci.
Structure and dynamics of large-scale mid-latitude weather systems, such as cyclones, anticyclones and waves, with consideration of processes that contribute to temperature changes and precipitation. Laboratory sessions involve real-time weather forecasting and the computer application of a numerical model of the atmosphere to the study of selected large-scale mid-latitude weather events.

SCAS 456 Mesoscale Meteorology
Spring. 3 credits. Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. T R 11:40—12:55. Offered alternate years. Next offered spring 2000. S. J. Colucci.
Structure and dynamics of mid-latitude mesoscale weather systems such as fronts, jets, squall lines, convective complexes, precipitation bands, downslope windstorms, mountain breezes, sea breeze circulations, and lake effect snowstorms.

SCAS 457 Atmospheric Air Pollution
Fall. 3 credits. Prerequisites: SCAS 341 or one course in thermodynamics and one semester of chemistry or permission of instructor. M W F 11:15—12:05. Offered alternate years. Next offered fall 2000. M. W. Wysocki.
Course will examine sources, effects, transport, measurement, and controls of air pollution. The basic principles in each area will be discussed with an emphasis on their local, regional, and global impacts.

SCAS 635 Advanced Statistical Meteorology
Fall. 3 credits. Prerequisites: coursework in or elementary knowledge of statistics, calculus, matrix algebra, and computer programming. Lec, T R 10:10—11:25. R 11:35—12:05. D. S. Wilks.
Lectures and topics concurrent with SCAS 435, plus additional. Hours by arrangement. This course is offered in the fall and spring semesters. Topics will be selected from SCAS 435 as the need arises. Additional topics will include the role of random errors, the normal distribution, least squares methods, statistical models for analysis of data, and computer simulation.

SCAS 652 Advanced Atmospheric Dynamics (also Astronomy 652)
Spring. 3 credits. Prerequisites: SCAS 341 and SCAS 342 or permission of instructor. T R 11:40—12:55. Offered alternate years. Offered spring 2001. S. J. Colucci.
Quasi-geostrophic theory, atmospheric waves, hydrodynamic instability, the general circulation of the atmosphere, and topics selected from among numerical weather prediction and tropical, mesoscale, and middle atmosphere processes according to student interest.

SCAS 692 Special Topics in Atmospheric Sciences
Fall or spring. 1-6 credits. S-U grades only. Study of topics in atmospheric science that are more specialized or different from other courses. Special topics to be covered will depend on staff and student interests.

SCAS 850 Master's-Level Thesis Research in Atmospheric Sciences
Fall or spring. Credit by arrangement. S-U grades only. Hour by arrangement.
Limited to students specifically in a master's program.

SCAS 950 Graduate-Level Dissertation Research in Atmospheric Sciences
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement.
Limited to students admitted to candidacy after the "A" exam has been passed.

SCAS 951 Doctoral-Level Dissertation Research in Atmospheric Sciences
Fall or spring. Credit by arrangement. S-U grades optional. Hours by arrangement.
Graduate faculty.
Limited to students admitted to candidacy after the "A" exam has been passed.

Crop Science

SCAS 311 Grain Crops
Fall. 4 credits. Prerequisite: SCAS 260 or BIOL 241. Lecs, M W F 10:10; lab, M T 1:25—4:25. 1 or 2 field trips during lab periods (until 5 p.m. on weekends). R. L. Obendorf.
Principles of field-crop growth, development and maturation, species recognition, soil and climatic adaptations, liming and mineral nutrition, weed control, cropping sequences, management systems, and crop improvement are considered. Grain, protein, oil, fiber, and sugar crops are emphasized in the context of food systems for improved health. Laboratory utilizes living plants, extensive crop garden, and computer simulation.

SCAS 312 Forage Crops
Spring. 4 credits. Prerequisites: introductory course in crop and/or soil science. Recommended: course in animal nutrition. Lecs, M W F 11:15; lab, M or T 1:25—4:25. G. W. Fick.
The production and management of crops used for livestock feed are considered in terms of establishment, growth, maintenance, harvesting, and preservation. Forage grasses, forage legumes, and corn are emphasized, and consideration is given to their value as livestock feed in terms of energy, protein, and other nutritional components.

SCAS 314 Tropical Cropping Systems: Biodiversity, Social & Environmental Impacts
Fall. 3 credits. Prerequisite: introductory course in crop science or soil science or biology or permission of instructor. Lecs, T R 8:40—9:55. E. C. Fernandes.
Characterization and discussion of traditional shifting cultivation, low and rice-based systems, smallholder mixed farming including root crops and livestock, plantation fruit and oil crop systems, and agroforestry. An introduction to species diversity and domestication, factors such as climate, land quality, soil management, land tenure, labor, and markets are considered. The impact of tropical cropping systems on the environment is evaluated.

SCAS 315 Weed Science
Fall. 3 credits. Prerequisite: introductory course in biology or botany. Lecs, T R 9:05; lab, T W 2:45—2:55. Staff.
Principles of weed science are examined. Emphasis is on (a) weed ecology, (b) chemistry of herbicides in relation to effects on the environment and plant growth, and (c) control of weeds in crop systems. The laboratory covers weed identification and ecology, herbicide selectivity, symptomology, and behavior in soil.

SCAS 317 Seed Science and Technology
Fall. 3 credits. Prerequisite: BIOL 241 or equivalent. Lecs, T R 11:15; lab, R 1:25—4:25. 2 all-day field trips will be scheduled during the semester. Offered alternate years. Offered fall 1999. Not offered fall 2000. A. G. Taylor, Geneva Experiment Station. (Ithaca contact, R. L. Obendorf.)
The principles and practices involved in the production, harvesting, processing, storage, testing, quality management, certification, and use of high-quality seed from improved cultivars. Information is applicable to various kinds of agricultural seeds. Hands-on laboratory experience.

SCAS 608 Water Status in Plants and Soils
Fall. 1 credit. Prerequisite: permission of instructor. S-U grades only. Lec, 1 hour to be arranged; lab, first class meeting R 1:25—4:25. Offered alternate years. Not offered fall 1999. Offered fall 2000. T. L. Setter.
Techniques for field appraisal of the status of water in plants and soil, including methods used in physiological studies, such as the psychrometer, pressure chamber, gas exchange analyzer, and abscisic acid analysis with ELISA.

SCAS 610 Physiology of Environmental Stresses
A study of the responses of plants to environmental stresses, with emphasis on thermal stresses including chilling, freezing, and high temperature injury. Emphasis is on the physiological and biochemical basis of injury and plant resistance mechanisms at the whole-plant, cellular, and molecular levels.

SCAS 612 Seed Physiology and Biotechnology
Spring. 3 credits. Prerequisite: plant physiology. T R 8:30—9:55. R. L. Obendorf.
This course in seed biology describes the molecular, biochemical, physiological, environmental, and genetic regulation of seed development, maturation, and germination events including the deposition and mobilization of seed reserves with illustrations from the world's major food and feed seeds. Illustrations extend the principles to practical situations, industrial uses, and food systems improved for improved health.

SCAS 613 Physiology and Ecology of Seed Yield
Spring. 3 credits. Prerequisite: plant physiology. M W F 12:20. T. L. Setter. A study of environmental constraints on crop-plant productivity from a physiological perspective. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and mineral nutrient environments. Topics include photosynthesis and nitrogen assimilation, translocation and partitioning; canopy-scale influences on solar radiation use efficiency; regulation of growth processes in leaf, root and floral sinks in response to environment; seed set; water transport and stomatal regulation; photosynthesis and nitrogen assimilation, plant productivity from a physiological perspective. Acclimation responses and genetic adaptation are examined for temperature, light, water, compacted soil, and drought responses. Emphasis on growth processes of vegetative plant organs.

SCAS 614 Research Methods in Weed Physiology
Spring. 2 credits. Prerequisite: SCAS 315 or equivalent. Offered alternate years. Next offered spring 2000. Staff. Examination of a variety of modern techniques used to study herbicide absorption, translocation, metabolism, mode of action, and mechanism of resistance. Experiments will also be designed to study herbicide behavior and detection in soils. Laboratories will be accompanied by short lectures pertinent to experimental topics.

SCAS 615 Plant Mineral Nutrition (ALSO BIO PL 642)
Spring. 3 credits. Prerequisite: BIO PL 341 or equivalent. Lecs, M W F 10:10–11. Offered alternate years. Not offered spring 1999. Next offered spring 2001. L. V. Kochian, R. M. Welch. A detailed study of the processes by which plants acquire and utilize mineral nutrients from the soil. Topics will include the uptake, translocation, and compartmentation of mineral elements; root-soil interactions; metabolism of mineral elements; the involvement of mineral nutrients in various physiological processes; and nutrition of plants adapted to extreme environmental stresses (e.g., acid soils). Specific mineral elements will be emphasized to illustrate the above topics.

SCAS 616 Special Topics in Crop Science
Spring. 1–6 credits. S-U grades optional. Hours to be arranged. Staff. Study of topics in crop science that are more specialized or different from other courses. Special topics to be offered will depend on staff and student interests.

SCAS 620 Master's-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty. Limited to students specifically in a master's program.

SCAS 920 Graduate-Level Thesis Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

SCAS 921 Doctoral-Level Dissertation Research in Crop Science
Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

SCAS 398 Environmental Microbiology
Spring. 3 credits. Prerequisite: BIOEES 261 or BIOMI 290 or SCAS 250 or permission of instructor. Lecs, M W F 10:10. W. C. Ghiorse. The biology, behavior, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutants, chemical, wastewater treatment, and environmental biotechnology.

SCAS 411 Resource Inventory Methods (also Civil and Environmental Engineering 411)
Spring. 3 credits. Prerequisite: permission of instructor. S. D. DeGloria. A survey of resource inventory methods applied to field-based studies of environmental systems. Laboratory emphasis is on using maps, spatial databases, global positioning systems, and aerospace imagery to discriminate, measure, inventory, and monitor environmental resources.

SCAS 420 Geographic Information Systems
Fall. 4 credits. Prerequisite: SCAS 411 or instructor's approval. Lecs, T R 9:05–9:55; lab, M T W E 1:25–4:25. S. D. DeGloria. Principles and applications of geographic information systems for the characterization and assessment of environmental processes. Methods for accessing, updating, analyzing, and mapping spatial data and information are emphasized. Needs assessment, coordinate systems, database design and maintenance, data transformations, and map accuracy assessment are considered.

SCAS 421 Soil and Water Management
Fall. 4 credits. Prerequisites: SCAS 260, SCAS 461, or permission of instructor. Lecs, T R 9:05–9:55; lab, T W 1:25–4:25. S. D. DeGloria. Theory and practice in the development, integration, and visualization of spatial data for resource inventory, environmental process modeling, land classification and evaluation. Application and evaluation of advanced spatial analytical methods applied to environmental systems and databases of interest to the student are emphasized.

SCAS 660 Remote Sensing Fundamentals (also Civil and Environmental Engineering 610)
Fall. 3 credits. Prerequisite: permission of instructor. Lecs, M W 12:20–1:10; lab, T 2:30–4:25. Not offered 1999-2000. W. D. Philipps. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation, and project design.

SCAS 675 Modeling the Soil-Plant-Atmosphere System
Spring. 3 credits. Prerequisite: SCAS 483 or equivalent. Not offered spring 2001. Lecs, T 8:40–9:55. S. J. Riha. Introduction to the structure and use of soil-plant-atmosphere models. Topics covered will include modeling plant physiology, morphology, and development; potential crop production and crop production limited by moisture and nutrient availability; plant-plant competition; and land surface processes as well as model data requirements, validation and scale. Use of soil-plant-atmosphere models for teaching, research, extension, and policy formation will be discussed.

Soil Science

SCAS 260 Soil Science
Fall. 4 credits. S-U grades optional. Lecs, M W F 9:05, lab, M T W 10:00. Staff. Designed for students interested in a comprehensive introduction to soil science from both an environmental and plant management perspective, this course is divided into three units. A unit on soil information introduces students to soil characterization, testing, mapping, classification, GIS and land evaluation. A soil management unit addresses fertility, pest management, water, and microclimate, as well as erosion, conservation, pollution and soil health. The unit on the role of soils in ecosystems considers topics such as biodiversity, soils as sinks and sources of greenhouse gases, and the impact of soils on land use. Labs will include field-oriented with an emphasis on learning practical skills needed to evaluate and manage soils. Subsequent labs will focus on accessing, interpreting and applying soil information.

SCAS 321 Soil and Water Management
Fall. 4 credits. Prerequisites: SCAS 260. S-U grades optional. Lecs, T R 10:10–11:25; lab, R 2:30–4:30. H. M. van Es. Course introduces students to the principles of soil and water interaction and to the effects of human intervention on these processes. Aspects of soil and water management, including hydrology, soil erosion and conservation, water management, contaminant movement, tillage, soil compaction and water quality are examined. Case studies and policy approaches from both the United States and abroad are discussed.

SCAS 362 Soil Morphology
Fall. 1 credit. Recommended for sophomores and juniors. R 1:25–4:25; all day field trip required. R. B. Bryant. The principles for field identification of soil properties, profiles, and landscapes are presented. A series of soil pits are examined, described, classified, and interpreted in the field.
LIFE SCIENCE 99 9-2

An overview of the chemical processes that Science courses.

relations. Course ends at mid-semester and is exercises and field trips provide practical survey, and interpretation. Laboratory principles of field identification, classification, and their functions in sustaining soils, and their diversity among them. The major groups of soils of the world.

SCAS 363 Soil Genesis, Classification, and Survey

Fall, weeks 1-7; 2 credits. Prerequisite: SCAS 260. Lecs, M W F 10:10; lab, W 1:25-4:25. One all day field trip is required. R. B. Bryant.

Factors and processes of soil formation. Principled of field identification, classification, survey, and interpretation. Laboratory exercises and field trips provide practical training in soil morphology and landscape relations. Course ends at mid-semester and is part of a sequence of three Intermediate Soil Science courses.

SCAS 365 Environmental Chemistry: Soil, Air, and Water

Spring. 3 credits. Prerequisites: CHEM 207-208. Lecs, M W F 10:10-11:00. M. B. McBride.

An overview of the chemical processes that control the bioavailability of nutrients and pollutants in soil, air, and water. Particular attention is given to soil's function as a filter for contaminants. The history of environmental contamination and its impact on agricultural soils and ecosystems is described.

SCAS 371 Hydrology and the Environment (also ABEN 371 and GEOG 204)

Spring. 3 credits. Students enrolled in the statutory colleges must enroll in ABEN 371 or SCAS 371. Prerequisite: 1 course in calculus. Lecs, T R 9:05; lab, F 1:25-3:20. T. S. Steenhuis, L. M. Cathles, P. C. Baveye.

Introduction to hydrology as a description of the hydrologic cycle and the role of water and chemicals in the natural environment. Includes precipitation, infiltration, evapotranspiration, groundwater, surface runoff, river meandering floods, and droughts. Case studies, short field trips, computer programs, and laboratories are used to foster an understanding of concepts and principles of hydrologic processes.

SCAS 372 Soil Fertility Management

Fall. 3 credits. Prerequisite: SCAS 260 or permission of instructor. M W F 9:05. Staff.

An integrated discussion of soil crop yield relationships, with emphasis on the soil as a source of mineral elements for crops and the role of fertilizers and organic nutrient sources in crop production.

SCAS 471 Properties and Appraisal of Soils of the Tropics

Spring. 3 credits. Prerequisite: SCAS 260 or equivalent. S-U grades optional. A. VanWambeke.

The course examines the conditions in which soils form, and considers ecological, geological and vegetational factors that produce the diversity that exists among them. The major kinds of soils are recognized, their management properties described, and methods to alleviate the constraints to crop production and the preservation of the environment examined. Topics include the identification of soils, and their functions in sustaining traditional farming systems and advanced technological packages. The course pursues these themes reviewing the most recent sources of information generated in tropical countries and published in Latin-American, French, and English journals. The last part of the course gives special attention to salt-affected soils, paddy rice cultivation and the characteristics of acid-sulfate soils. Lectures include slides of soils, landscapes, and cropping systems.

SCAS 473 Ecology of Agricultural Systems (also BIOE 473)

Fall. 3 credits. Permission of instructor. BIOE 261 or permission of instructor. S-U grades optional. Disc and T R 2:30-3:45. During the first 6 weeks of class, the Thursday meetings may run to 5:30 because of field trips. Offered alternate years. Not offered fall 1999. A. G. Power and E. C. Fernandes.

Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

SCAS 483 Environmental Biophysics

Spring. 3 credits. Prerequisite: SCAS 260 or equivalent or permission of instructor. Lecs, M W F 11:10. T. S. Steenhuis.

Introduction to basic principles of energy and mass transfer and storage in soil-plant systems. Energy budgets, soil heat flow, water movement in saturated and unsaturated soils, evapotranspiration, water, gas, and nutrient dynamics in the soil-plant-atmosphere continuum will be covered. Applications to agronomic and environmental problems and instrument design and use are considered through discussion and problems sets.

SCAS 663 Pedology

Spring. 3 credits. Prerequisite: SCAS 361 or permission of instructor. Disc, W 1:25-3:25. A. VanWambeke.

A detailed study of measurement processes and of the hydrostatics of aqueous solutions in soils and porous media, with emphasis on fundamental principles. Examination of the molecular aspects of water-solid interactions, including shrink-swell phenomena and the properties of absorbed water. Analysis of equilibrium water adsorption from thermodynamical and mechanistic (molecular) standpoint. Mechanical and thermodynamical analysis of the equilibrium state of aqueous solutions in deformable soils. Formal lectures are complemented by tutorial sessions.

SCAS 664 Organic Matter—Soils, Sediments, and Waters

Spring. 2 or 3 (with discussion) credits. Prerequisites: SCAS 260 and CHEM 357-358 or equivalent. T R 9:05; disc, W 1:25-2:15. J. M. Duxbury.

A discussion of current concepts on the chemical nature, dynamics, and properties of natural organics and organo-mineral associations in terrestial and aquatic environments. Interaction with anthropogenic organics and effects of anthropogenic activities on natural organics are considered.

SCAS 671 Soil Chemistry

Fall. 3 credits. Prerequisite: one year of physical chemistry or permission of instructor. Offered alternate years. Offered fall 1999. M. B. McBride.

A detailed examination of the structure and surface chemistry of colloidal particles common to soils. Ion exchange, mineral-solution equilibria, and adsorption reactions of silicate clays, oxides, and organic matter will be emphasized. The behavior of environmental contaminants in soils, particularly metals and toxic organics, will be described.

SCAS 693 Special Topics in Soil Science

Fall or spring. 1-6 credits. S-U grades optional.

Study of topics in soil science that are more specialized or different from other courses. Special topics to be chosen will depend on staff and student interests.

SCAS 880 Master's-Level Thesis Research in Soil Science

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students specifically in a master's program.

SCAS 980 Graduate-Level Dissertation Research in Soil Science

Fall or spring. Credit by arrangement. S-U grades only. Hours by arrangement. Graduate faculty.

Limited to students admitted to candidacy after the "A" exam has been passed.

VEGETABLE CROPS

See Horticultural Sciences.

FACULTY ROSTER

Abawi, George S., Ph.D., Cornell U. Prof., Plant Pathology (Geneva)
Acree, Terry E., Ph.D., Cornell U. Prof., Food Science, and Technology (Geneva)
Adleman, Marvin L., M. A., Harvard U. Prof., Landscape Architecture
Agello, Arthur M., Ph.D., North Carolina State U. Assoc. Prof., Entomology (Geneva)
Ahrn, Beth A., Ph.D., Massachusetts Institute of Technology. Asst. Prof., Agricultural and Biological Engineering
Aist, James R., Ph.D., U. of Wisconsin. Prof., Plant Pathology
Albright, Louis D., Ph.D., Cornell U. Prof., Agricultural and Biological Engineering
Aldwinkle, Herbert S., Ph.D., U. of London (England). Prof., Plant Pathology (Geneva)
Alliee, David J., Ph.D., Cornell U. Prof., Agricultural, Resource, and Managerial Economics
Altman, Naomi S., Ph.D., Stanford U. Assoc. Prof., Biometrics Unit
Andersson, Tor L. Ph.D., U. of Minnesota. Prof., Horticultural Sciences (Geneva)
Aneshansley, Daniel J., Ph.D., Cornell U. Assoc. Prof., Agricultural and Biological Engineering
Arneson, Phil A., Ph.D., U. of Wisconsin. Assoc. Prof., Plant Pathology
Austic, Richard E., Ph.D., U. of California at Berkeley. Prof., Animal Science
Baer, Richard A., Ph.D., Harvard U. Prof., Natural Resources
Bain, Mark B., Ph.D., U. of Massachusetts. Assoc. Prof., Natural Resources
Barbano, David M., Ph.D., Cornell U. Prof., Food Science
Barrett, Christopher B., Ph.D., U. of Wisconsin. Assoc. Prof., Agricultural, Resource, and Managerial Economics
Barrsch, James A., Ph.D., Purdue U. Assoc. Prof., Agricultural and Biogeographical Engineering
Bassuk, Nina L. Ph.D., U. of London (England). Prof., Floriculture and Ornamental Horticulture
Batt, Carl A., Ph.D., Rutgers U. Prof., Food Science
Baugh, Sherene, Ph.D., SUNY Stonybrook. Asst. Prof., Landscape Architecture
Bauman, Dale E., Ph.D., U. of Illinois. Prof., Animal Science
Baveye, Philippe C., Ph.D., U. of California at Riverside. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
Beer, Steven V., Ph.D., U. of California at Davis. Assoc. Prof., Plant Pathology
Bell, Alan W., Ph.D., U. of Glasgow (Scotland). Prof., Animal Science
Bellfnder, Robin R., Ph.D., Virginia Polytechnic Inst. and State U. Prof., Fruit and Vegetable Science
Bergstrom, Gary C., Ph.D., U. of Kentucky. Prof., Plant Pathology
Bjorkman, Thomas N., Ph.D., Cornell U. Assoc. Prof., Horticultural Sciences (Geneva)
Blake, Robert W., Ph.D., North Carolina State U. Prof., Animal Science
Blossey, Bernd, Ph.D., Christian-Albrechts U., Germany. Asst. Prof., Natural Resources
Boisclair, Yves R., Ph.D., Cornell U. Asst. Prof., Animal Science
Boisvert, Richard N., Ph.D., U. of Minnesota. Prof., Agricultural, Resource, and Managerial Economics
Boor, Kathryn J., Ph.D., U. of California at Davis. Asst. Prof., Food Science
Brady, John W., Ph.D., SUNY Stonybrook. Assoc. Prof., Food Science
Broadway, Roxanne M., Ph.D., U. of California at Davis. Prof., Entomology (Geneva)
Brown, Dan L., Ph.D., Cornell U. Assoc. Prof., Animal Science
Brown, David L., Ph.D., U. of Wisconsin. Professor, Rural Sociology
Brown, Susan K., Ph.D., U. of California at Davis. Assoc. Prof., Horticultural Sciences (Geneva)
Bryant, Ray B., Ph.D., Purdue U. Prof., Soil, Crop, and Atmospheric Sciences
Burr, Thomas J., Ph.D., U. of California at Berkeley. Prof., Plant Pathology (Geneva)
Buiter, Walter R., Ph.D., Purdue U. Prof., Animal Science
Calderone, Clas W., Ph.D., Ohio State U. Asst. Prof., Entomology
Carlson, William S., Ph.D., Stanford U. Assoc. Prof., Education
Casella, George, Ph.D., Purdue U. Prof., Biometrics Unit
Castillo-Chavez, Carlos, Ph.D., U. of Wisconsin. Prof., Biometrics Unit
Chan, Alice P., Ph.D., Michigan State U. Asst. Prof., Communication
Chapman, Lewis D., Ph.D., U. of California at Berkeley. Prof., Agricultural, Resource, and Managerial Economics
Chase, Larry E., Ph.D., Pennsylvania State U. Assoc. Prof., Animal Science
Cherney, Jerome H., Ph.D., U. of Minnesota. Prof., Soil, Crop, and Atmospheric Sciences
Christy, Ralph D., Ph.D., Michigan State U. Prof., Agricultural, Resource, and Managerial Economics
Colfman, W. Ronnie, Ph.D., Cornell U. Prof., Plant Pathology
Colucci, Steven, Ph.D., SUNY. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
Connan, George J., Ph.D., Pennsylvania State U. Prof., Agricultural, Resource, and Managerial Economics
Conroy, Carol A., Ph.D., Pennsylvania State U. Asst. Prof., Education
Contreras, Martha, Ph.D., U. of California at Riverside. Asst. Prof., Plant Pathology

Zobel, Richard W. Ph.D., U. of California at Davis. Assoc. Prof., Soil, Crop, and Atmospheric Sciences
ADMINISTRATION
Porus Olpadwala, interim dean
John Zissovici, associate dean
Carol Chock, interim director of alumni affairs and development
Cynthia K. Prescott, director of administration and finance
Reginald D. Ryder, director of minority educational affairs
Donna L. Kuhar, registrar
Elizabeth A. Cutter, director of student services and admissions
Margaret Webster, curator of visual resources facility
Susan Lewis, director of career services

FACULTY ADVISERS
Architecture students are assigned faculty advisers for their first year. Upperclass students have one assigned adviser but are encouraged to seek assistance and advice from the most appropriate faculty member or college officer.

Students in the fine arts department are assigned faculty advisers for the first year. Students may then choose advisers in their major area of concentration.

Undergraduate students in the Program of Urban and Regional Studies are assigned faculty advisers.

All students in the college are invited to share their concerns and seek advice from the volunteer student advisers at anytime.

Specific inquiries regarding rules, procedures, or deadlines should be addressed to:
Mark Cruvellier, chair, Department of Architecture
John Forester, chair, Department of City and Regional Planning
Roberto Bertoia, chair, Department of Art

</tbody>
</table>

The college offers programs leading to the bachelor’s degree—the five-year program in architecture leads to the Bachelor of Architecture; four-year programs in art and architecture lead to the Bachelor of Fine Arts. In addition, four-year programs with a concentration in either urban and regional studies or history of architecture lead to the Bachelor of Science.

Graduate-level programs are offered in art, architectural design and urban design, architectural sciences, history of architecture and urbanism, historic preservation planning, city and regional planning, regional science, and landscape architecture.

Students in each of these programs work in physical proximity to one another and thus gain a broader understanding of their own special area of interest through contact with the students and faculty in other disciplines.

Early in its development, the college set a limit on the number of students it would enroll and devised a selective method of admission. There are now more than 650 students and a full-time teaching staff of over fifty-five, supplemented by visiting professors and critics, part-time lecturers, and assistants.

Teachers and students mix freely, and much instruction and criticism is on an individual basis.

The college’s courses are integral parts of the professional curricula. Fundamental subjects are taught by faculty members whose experience provides them with professional points of view. The concentration of professional courses within the college is balanced by the breadth of view gained from courses and informal learning in the rest of the university. The college believes that this breadth is an essential element of professional education. This conviction is evident in the form of the curriculum, the methods of teaching, and the extracurricular life of teachers and students.

FACILITIES

The college occupies Sibley Hall, Rand Hall, and the Foundry. Facilities for architecture, city and regional planning, as well as college administrative offices, the Visual Resources Facility, and the Fine Arts Library are located in Sibley Hall.

The Department of Art is housed in Olive Tjaden Hall. Sculpture facilities are in the Foundry and shop facilities in Rand. The Green Dragon Cafe, a student eatery and lounge, is located in the basement of Sibley Dome. The college has three darkrooms that are available for general use by students in the college and serve as laboratories for the photography courses. A darkroom fee must be paid by each user. Information about darkroom rules and regulations, hours, and equipment is available at the darkroom circulation desk.

Through the generosity of the late Lillian P. Heller, the college also owns the Miller-Heller House, home of William H. Miller, the first student to major in architecture. The college also owns the Miller-Heller House, home of William H. Miller, the first student to major in architecture. The college also owns the Miller-Heller House, home of William H. Miller, the first student to major in architecture. The college also owns the Miller-Heller House, home of William H. Miller, the first student to major in architecture.

Rome Program

The College of Architecture, Art, and Planning’s Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th century Palazzo Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome’s famous outdoor market at the Campo dei Fiori.

The program in Rome offers components for students majoring in architecture, fine arts, planning, and liberal arts. Full course loads are available to all students in a curriculum that stresses the correlation of artistic, cultural, and architectural ideas vital to an understanding of the city. Students are responsible for planning course schedules that

Libraries

The Fine Arts Library, in Sibley Hall, serves the College of Architecture, Art, and Planning through its collections on architecture, fine arts, city and regional planning, and landscape architecture. The library, with more than 175,000 books, is capable of supporting undergraduate, graduate, and research programs. Some 1,800 serials are currently received and maintained.

The Visual Resources Facility, made possible through gifts from George and Adelaide Knight, is located in Sibley Hall and contains the F. M. Wells Memorial Slide Collection, which consists of a large and growing collection of slides of architecture, architectural history, and art. The collection includes approximately 425,000 slides.

The facilities of the libraries of other schools and departments on campus and the John M. Olin Library, designed primarily as a research library for graduate students, are also available.

Museums and Galleries

The Herbert F. Johnson Museum of Art was formally opened in May 1973. Although many of its exhibitions and activities relate directly to academic programs of the university, the museum has no administrative affiliation with any department. In this way, its programs freely cross academic boundaries, stimulating interchange among disciplines. With a strong and varied collection and a continuous series of high-quality exhibitions, it fulfills its mission as a center for the visual arts at Cornell. Art galleries are also maintained in Willard Straight Hall, where loan exhibitions of paintings and graphic work by contemporary artists are held. Throughout the year, works of students, faculty, and staff in the College of Architecture, Art, and Planning and of guest artists may be viewed in the John Hartell Gallery in Sibley Dome and in the Olive Tjaden Gallery in Olive Tjaden Hall.

The College of Architecture, Art, and Planning’s Rome Program was founded in the fall of 1986 to provide instruction in Italy for students seeking excellence in art, architecture, and other disciplines. The program offers an educational experience that draws upon the rich past of Rome, its resources in museums, its art and architecture, and its wide variety of cultural offerings. The school is located in the restored 17th century Palazzo Lazzaroni in the center of the eternal city next to such well-known Roman sights as Piazza Navona, the Pantheon, and Rome’s famous outdoor market at the Campo dei Fiori.
ensure their particular requirements can be met, since course offerings in Rome are limited. For additional information, see individual department listings or contact the Rome Program Office, 149 Sibley Hall.

COLLEGE ACADEMIC POLICIES

Ownership of Student Work

All drawings, models, paintings, graphic art, and sculpture done in the studios and drafting rooms as a part of the instructional program are the property of the college until they have been graded and released by the instructor. Certain works may be selected by the college for retention for academic purposes.

Exhibitions of Student Work

Exhibitions of student work are held each semester as part of the yearly schedule of the Olive Tjaden Hall Gallery and the John Hartell Gallery in Sibley Dome. These galleries display work from a specific course or exhibit examples of recent work by individual faculty, students, and visitors.

Scholastic Standards

Term by term, a candidate for an undergraduate degree in the college is required to pass all courses in which the student is registered and have an average for the term of not less than C (2.0). The record of each student who falls below the standard will be reviewed by the Student Records Committee for appropriate action, as described below:

1) Warning means that the student's performance is not up to expectations. Unless improvement is shown in the subsequent term, the student may be placed on final warning or required to take a leave of absence from the college.

2) Final Warning indicates that the student's record is unsatisfactory. Unless considerable improvement is shown in the subsequent term, the student shall be required to take a leave of absence from the college.

3) Required leave of absence: academic deficiency. The student is dismissed from the college and may not continue studies in the college. A student who has been placed on a required leave of absence may apply for readmission after an absence of at least two semesters. Application for readmission is made by letter, addressed to the Student Records Committee. The student must submit evidence that his or her time has been well used, and, if employed, must submit a letter from an immediate superior. If a student chooses to register for courses, either extramurally at Cornell or at another institution, he or she should be advised that credit for these courses will not apply toward the degree but will appear on the student's transcript. The grades received for any courses taken while on a required leave of absence will not be counted into the grade point average. Readmission to the college is at the discretion of the Student Records Committee. Application for full-term readmission must be made by November 15, and application for part-time readmission must be made by April 15. Refer to the Architecture, Art & Planning Handbook (Whitebook) for further information regarding required leave of absence.

4) Required withdrawal: may not reregister in the College of Architecture, Art, and Planning. The student is dismissed from the college and is permanently prohibited from continuing studies in it. This dismissal does not preclude the possibility of applying for admission to another division of the university.

The above actions are not necessarily sequential. A student who has received a warning may be placed on a required leave of absence for academic deficiency at the end of the next term if performance during that time is deemed to be grossly deficient. A cumulative average of at least C (1.7) is required for graduation.

ARCHITECTURE

Professional Degree Program

The first professional degree in architecture is the Bachelor of Architecture. This degree counts toward the professional registration requirements established by the various states, National Architectural Accrediting Board, and the National Council of Architectural Registration Boards. The professional program is normally five years in length and is designed particularly for people who, before they apply, have established their interest and motivation to enter the field. It therefore incorporates both a general and professional educational base.

The program is oriented toward developing the student's ability to design architecturally sound solutions to architectural problems on analytical, conceptual, and developmental levels. The sequence of courses in design, consisting of studio work augmented by lectures and seminars, are the core of the program. Sequences of studies in the history of architecture and cities, culture and society, architectural theory, visual studies, environmental controls, structures, construction and computer graphics and applications provide a base for the work in design.

In the first three years the student has the opportunity to establish a foundation in the humanities and sciences through electives. During the fourth and fifth years this base may expand through further detailed studies in these areas. Within the professional program a focus for understanding architecture in its contemporary and historical cultural contexts is established.

The program incorporates considerable flexibility for the individual student to pursue his or her particular interest in the fourth and fifth years. By carefully planning options and electives in the fifth year, it is possible for a qualified student to apply the last year's work for the Bachelor of Architecture degree to one of the graduate programs offered in the department. Some students are then able to complete the requirements for the master's degree in one additional year.

Note on Professional Accreditation

Most states require that an individual intending to become an architect hold an accredited degree. There are two types of degrees that are accredited by the National Architectural Accrediting Board: (1) the Bachelor of Architecture, which requires a minimum of five years of study, and (2) The Master of Architecture, which requires a minimum of three years of study following an unrelated bachelor's degree or two years following a related pre-professional bachelor's degree. These professional degrees are structured to educate those who aspire to registration and licensure to practice as architects. The four-year, pre-professional degree is useful to those wishing a foundation in the field of architecture, as preparation for either continued education in a professional degree program or for employment options in fields related to architecture.

Rome Program

The program offers the opportunity for students from Cornell and other universities to spend one or two terms of study in Rome. This option is open to fourth- and fifth-year Cornell architecture students; outstanding third-year students are admitted by petition and a review of their design record. Courses offered by this department include design, thesis, thesis introduction, history, theory, architectural science, and visual studies. In addition, courses are offered by other departments in Italian language, Italian culture, and history of art. The program provides a unique urban and architectural experience drawing from the rich past of the city for sources of instruction and inspiration.

Overlap Program

For qualified students the department offers an option that combines the fifth year of the undergraduate program with the first year of the Master of Architecture program. In the fall of the fourth undergraduate year interested students petition the department to substitute ARCH 601–602 or 603–604 for ARCH 501–502. At the same time, they complete graduate school applications and submit them with fee and portfolio to the graduate field assistant for architecture. Students accepted into the program may not normally begin until the fall of their fifth year and, once enrolled, may not transfer back into the 501–502 sequence.

Following admission into the Overlap Program, students may petition to apply toward the requirements of the master's degree a maximum of 30 credits, including ARCH 601–602 or 603–604 and other advanced courses taken in excess of distribution requirements for the Bachelor of Architecture degree.

### Architecture Concentrations for Majors

It is often advantageous for undergraduates to concentrate in specific sub-disciplines of architecture, especially if they anticipate application to specialized graduate programs. Therefore, the following concentrations in architecture are offered within the department for B.Arch. and B.F.A. in Architecture candidates only:

- Architecture, Culture, and Society
- Architectural Science and Technology
- Architecture, Art, and Planning, and Visual Studies in Architecture

### Transfer Students

Although the program leading to the Bachelor of Architecture is specifically directed to those who are strongly motivated to begin professional study when entering college, it is sufficiently flexible to allow transfers for students who have not made this decision until after they have been in another program for one or two years. Individuals who have already completed a nonprofessional undergraduate degree must also apply to transfer to the Bachelor of Architecture degree program, since the graduate program in architecture requires the Bachelor of Architecture degree or its equivalent for entrance.
Transfer students are responsible for completing that portion of the curriculum that has not been covered by equivalent work. Applicants who have had no previous work in architectural design must complete the ten-term design sequence. Since this sequence may be accelerated by attending summer terms, seven or eight regular terms and two or three summer terms are typically required.

For those who would benefit from an opportunity to explore the field of architecture before deciding on a commitment to professional education, the department offers an introductory summer program that includes an introductory studio in architectural design, lectures, and other experiences designed to acquaint the participants with opportunities, issues, and methods in the field of architecture.

Admission is offered to a limited number of transfer applicants who have completed a portion of their architecture studies in other schools. Each applicant's case is considered individually. Transfer students must complete a minimum of 70 credits and four terms in residence, taking 35 of the 70 credits (including four terms of design) in the Department of Architecture. Placement in the design sequence is based on a review of a representative portfolio of previous work.

**Alternative Programs**

**Bachelor of Fine Arts**

After completing the first four years of requirements, the student may choose to receive the degree of Bachelor of Fine Arts (B.F.A.) in architecture, which is not a professional degree.

**Bachelor of Science in History of Architecture**

The history of architecture major leads to a Bachelor of Science degree, conferred by the College of Architecture, Art, and Planning. The major is intended for transfer students from other programs at Cornell and from colleges and universities outside Cornell. Students in the Department of Architecture and the College of Arts and Sciences may take the major as part of a dual-degree program. The course of study in this major, available to students from a variety of academic backgrounds, offers the opportunity for a vigorous exploration of architecture and its history.

**Admission requirements**

Two years of undergraduate study, ARCH 181 and 182 or the equivalent. Students transferring from a B.Arch. program must be in good standing in their design sequence.

**Procedure**

Students from Cornell may transfer to the program at the beginning of the fall term of their third or fourth year of study. They submit a short application as prospective internal transfer students. Before applying, all prospective internal transfer students meet with a history of architecture faculty member to discuss scheduling for the program.

Students who wish to transfer to the program from outside Cornell must apply to the Department of Architecture by March 15. Applications may be considered after this date but are given lower priority. Applications for both internal and external transfer students are available from Elizabeth Cutter, Admissions Office, College of Architecture, Art, and Planning, Cornell University, Sibley Hall, Ithaca, New York 14853-6701.

**Curriculum.** A student entering the program is assigned an adviser from the history of architecture faculty in the Department of Architecture. Adviser and student together prepare an appropriate two-year course of study according to the following guidelines:

1) 24 credits of 300-level courses in architectural history: ARCH 380 through ARCH 399

2) 12 credits in 600-level architectural history seminars: ARCH 681 through ARCH 699; plus 8 credits in a 600-level seminar plus ARCH 499, offered for honors candidates only

3) One 300-, 400-, or 600-level course in architectural theory

4) 24 credits in electives selected in consultation with the student's adviser

5) Language requirement, to be met in the manner specified for students enrolled in the College of Arts and Sciences

**Honor program.** Students will graduate with honors if, during their two years of study in the program, they have a cumulative average of B or better in all courses, have no grade lower than a B in all history of architecture courses taken at the 300 level, and have completed an honors thesis (ARCH 499) deemed to be of distinguished quality by the history of architecture faculty.

**Dual Degree Options**

Students can earn both the B.S. and B.Arch. degrees either simultaneously or sequentially. Students who have transferred into the B.Arch. program at Cornell may find this to be a special opportunity for an enlarged and enriched program of study.

Students currently enrolled in the College of Arts and Sciences at Cornell can earn a B.A. in an arts college major and a B.S. in the history of architecture in five years. In this option, students complete a minimum of 150 credits, which includes the B.S. prerequisites and curriculum requirements and 100 credits of the usual distribution and major requirements in the College of Arts and Sciences. Further information about this option is available at the Admissions Office, 125 East Sibley Hall, and at the Academic Advising Center of the College of Arts and Sciences, 55 Goldwin Smith Hall.

Students may also elect to continue toward a Master of Arts degree in the history of architecture. The M.A. ordinarily requires a minimum of two years of graduate work beyond the bachelor's degree, with this special sequential degree arrangement that time is shortened to one year.

**Summer Term in Architecture**

The summer term offers students the opportunity of a concentrated period of design work. Design is offered at both undergraduate and graduate levels; the term is six to eight weeks in duration.

Undergraduate design sequence courses, excluding 101 and 502, are offered in Ithaca. Normally there is also a design program abroad for third-, fourth-, and fifth-year students.

Students from schools of architecture other than Cornell are welcome to apply to enroll in any summer program.

At the graduate level participation in the summer program cannot be undertaken without the consent of the student's Special Committee.

Other department courses may be offered as elective courses, contingent upon student interest, faculty availability and departmental approval.

The department offers a Career Explorations in Architecture Program for high school students and college students considering a professional education in architecture.

**Concentration in Architecture For Non-Majors**

This special concentration has been formulated specifically for those students not enrolled in the Department of Architecture and who are interested in complementing their current academic program with an introduction to various facets of architectural studies. Some students may wish to use the Concentration in Architecture for Non-Majors as a means of investigating possible graduate studies in architecture. Some may wish to develop architectural specialties within other disciplines. Students are admitted to this program through application to the Department of Architecture.

The curriculum for students accepted to the Concentration in Architecture Program totals 15 credit hours. Grades received must be C or better in all courses.

9 credits of required courses, including one semester each of:

ARCH 130, 131, or 132: Introduction to Architecture 3 credits

ARCH 151: Drawing I 2 credits

ARCH 111: Concentration in Architecture: Design Studio 4 credits

(ARCH 110: Introduction to Architecture: Design Studio, offered in the summer only, may substitute for ARCH 111.)

And 6 credits of elective department courses, chosen, for example from among the following:

ARCH 130, 131, 132: Introduction to Architecture 3 credits

ARCH 152: Drawing II 2 credits

ARCH 181, 182: History of Architecture I, II 3 credits each

ARCH 342: Architecture as a Cultural System 3 credits

ARCH 231, 232: Architectural Analysis I, II 2 credits each

ARCH 263, 264, 363: Structures 3 credits each

ARCH 261, 361, 362: Environmental Controls 3 credits each

ARCH 262: Building Technology 3 credits

ARCH 476: Computer Applications 3 credits

**Architectural Design**

Courses in brackets are not offered this year.

A fee of $65 is charged each semester to every student registered in Architecture (undergraduate, graduate and in the Rome Program). These fees are subject to change.
Graduate Courses
ARCH 701-702 Problems in Architectural Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is architectural design.

ARCH 703-704 Problems in Urban Design
Fall and spring. 9 credits each term. Basic first-year design course for graduate students whose major concentration is urban design.

ARCH 801 Thesis or Research in Architectural Design
Fall or spring. 9 credits. Prerequisite: ARCH 701 and ARCH 702. Second-year design course for graduate students whose major concentration is architectural design.

ARCH 802 Thesis or Research in Urban Design
Fall or spring. 9 credits. Prerequisite: ARCH 703 and ARCH 704. Second-year design course for graduate students whose major concentration is urban design.

Elective Design Courses
ARCH 103-104 Elective Design Studio
103, fall; 104, spring. 6 credits each term. Limited to students from outside the department. Prerequisite for ARCH 102. The prerequisite for ARCH 104 is ARCH 102.

ARCH 200, 300, 400 Elective Design Studio
Fall or spring. 6 credits. This course is for students who are not architecture majors at Cornell. Prerequisite: permission of department office. Each student is assigned to a class of appropriate level. For descriptions, see ARCH 201-202, ARCH 301-302 and ARCH 401-402.

ARCH 309 Elective Design Studio
Fall, spring or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 202. ARCH 309 is a design studio that, upon completion, will be credited as an elective design studio. With the successful completion of ARCH 302, ARCH 309 may be used as a substitute for ARCH 401.

ARCH 500 Design IX Alternate Studio
Fall, spring or summer. 6 credits. Foreign summer and Rome Programs only. Prerequisite: C or better in ARCH 402. ARCH 500 will be considered equivalent to ARCH 501 when taken concurrently with ARCH 510. In order to take ARCH 502, one must have a grade of C or better in ARCH 500 and a passing grade in ARCH 510. For description, see ARCH 401-402.

Related Courses and Seminars
ARCH 110 Introduction to Architecture: Design Studio
Summer. 3 credits. S-U option. Open to non-architecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year.
ARCH 605 Special Problems in Design
Fall and spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. Independent study. This course does not count for design sequence credit.

ARCH 610 Graduate Design Seminar
Fall. 3 credits. Intended for but not limited to graduate students in the Architectural Design and Urban Design Program. Issues in architectural and urban design.

ARCH 611-612 Urban Housing Developments
611, fall; 612, spring. 3 credits each term. Limited to fourth- and fifth-year students in architecture and graduate students. Prerequisite: permission of instructor. Not offered every year.

ARCH 613 Transportation
Fall. 3 credits. Prerequisite: permission of instructor. Not offered every year. The impact of various transportation forms on the environment is considered from the perspectives of architects, engineers, planners, and human ecologists. Readings and discussions of past, current, and future transportation modes focus on aesthetic and physical aspects.

ARCH 614 Low-Cost Housing
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Aspects of low-cost housing involving engineering technology, architecture, physical planning, economics, and sociology.

ARCH 616-619 Seminar in Urban and Regional Design
616, fall; 617, spring; 618, fall; 619, spring. 3 credits each term. Limited to fifth-year and graduate students. Not offered every year. A broad range of issues and problems of urban and regional development and the context in which the designer functions are surveyed. Selected case studies are presented by the participants and visitors.

Architectural Theory
ARCH 130 An Introduction to Architecture: Lectures
Summer. 3 credits. S-U option. Open to non-architecture majors in college, high school students in 11th and 12th grades, and any individuals with a minimum of a high school diploma interested in exploring the field of architecture. Not offered every year. A survey course that covers the many facets of architecture: history, design principles, preservation, landscape architecture, building technology, and cultural factors. The format of the course comprises lecture demonstrations, films, and field trips. Course evaluation is based on quizzes and a final examination.

ARCH 131 An Introduction to Architecture
Fall. 3 credits. Open to out-of-department students only. ARCH 131 is a prerequisite for ARCH 132. Intended to familiarize non-architecture students with the art and science of architecture. Fundamentals of plan, section, and elevation, the primary elements that comprise an architectural form, basic organizational principles, the ways in which we perceive architectural space; and the various concepts of function in relation to form will be included among the topics to be covered, using examples from numerous times and cultures as well as from the contemporary Cornell campus.

ARCH 132 An Introduction to Architecture
Spring. 3 credits. Open to out-of-department students only. ARCH 131 is a prerequisite for ARCH 132. Non-architecture students are initiated into various types of architectural drawings and exposed to a variety of methods whereby architectural forms communicate both simple and complex meanings. Architecture in its relation to fields such as landscape architecture, urban design, structural design, interior design, set design, architectural history, preservation, and computer graphics will be included in the presentations, which will also deal with the various relationships established between an architect and a society. Cross-historical and cross-cultural examples will be used in developing in the student a degree of fluency in the languages of architectural discourse.

ARCH 231 Architectural Analysis I
Fall. 2 credits. Architecture students must register concurrently in ARCH 201. An introduction to the object of study in the interest of broadening one's understandings of the ways in which architecture can connote and denote meanings.

ARCH 232 Architectural Analysis II
Spring. 2 credits. Architecture students must register for this course concurrently with ARCH 202. Advanced analytical studies focusing on complex architectural spaces, objects, images, and representations.

ARCH 334 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 634)
Fall or spring. 3 credits. Limited to third-year level students and above. Field and figure relationships (interrelation of parts dominated by the general character of the whole) are the general themes for studying numerous issues relevant to the design of elevations and facades.

The first part of the seminar is lecture/seminar format. Students are required to research and present a paper for discussion. In the latter part of the semester, students do exercises to demonstrate their understanding of the issues addressed.

ARCH 335 Theory of Architecture
Fall or spring. 3 credits. Prerequisite: ARCH 231–232 or permission of instructor. Not offered every year.

ARCH 336 Theory of Architecture
Fall or spring. 3 credits. Limited to third-year students and above. Not offered every year. Theories of modern architecture: De Stijl, cubist and purist painting, industrialized architecture, Le Corbusier's architecture and urban theories, architectural sequence, facades, the free plan, "DOMINO" theory.

ARCH 337 Special Investigations in the Theory of Architecture I
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 338 Special Topics in the Theory of Architecture I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.

ARCH 339 Elements, Principles, and Theories in Japanese Architecture
Spring. 3 credits. Not offered every year. An examination of Japanese architecture—buildings and gardens—and their contexts—landscapes, settlements, and cities. The course is addressed to those interested in Japanese architecture as a manifestation of Japanese culture and as a subject for analysis. Emphasis is on underlying concepts, ordering principles, formal typologies, space and its representation, perceptual phenomena, and symbolic content. Readings focus on theoretical treatments of these aspects by Japanese and western writers.

ARCH 431 Theory of Architecture
Fall. 3 credits. Prerequisite: third-year status. Not offered every year. Gardening and architecture: urban parks; villas and country houses; and Italian, French, and English landscape gardens. Site planning.

ARCH 432 Theory of Architecture
Spring. 3 credits. Prerequisite: third-year status. Not offered every year. The development of urban form, urban intervention, contextualism, ideal cities, historic new towns, streets, piazzas, fortifications, public buildings and social housing types, site planning, and transportation.

ARCH 435 Architecture and Representation
Fall. 3 credits. Limited to degree candidates in architecture. Prerequisite: successful completion of ARCH 231–232. Not offered every year. A study of architecture as it functions as a representational art, referring to its past while inferring its present.

ARCH 434 Column, Wall, Elevation, Facade: A Study of the Vertical Surface in Architecture (also ARCH 334)
Fall or spring. 3 credits. Limited to thirdyear level students and above. For description, see ARCH 334.

ARCH 638 Critical Theory in Architecture
Spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. An inquiry into the fundamental principles of architectural criticism in theory and practice, with emphasis on the structures of criticism in the twentieth century.

ARCH 637 Special Investigations in the Theory of Architecture II
Fall or spring. Variable credit (maximum, 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 638 Special Topics in the Theory of Architecture II
Fall or spring. 3 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced before preregistration.
ARCHITECTURE, ART, AND PLANNING — 1999-2000

Architecture, Culture, and Society

ARCH 342 Architecture as a Cultural System
Spring. 3 credits. ARCH 445, 446, 447, or 448 can substitute with permission of instructor. What have been the major issues in the theory and practice of architectural design through time and across cultures, and how is aesthetic judgment related to more general systems of ordering within a particular society or group? This course draws on concepts, methods, and findings from the broad field of cultural anthropology to address these questions. Case studies and examples are drawn from a wide range of architectural traditions around the world for which there is significant ethnographic literature, with special emphasis on sub-Saharan Africa, India, and the United States. Topics include the ideological and formal relationships between folk and monumental traditions in complex societies, the structure of the ideal social order and its refraction in the material world, cosmological models and architectural form, geometries of non-Western traditions, and the relationship between indigenization and culture change.

ARCH 349 Undergraduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 441-442 Special Topics in Architecture, Culture, and Society
Fall and spring. 3 credits each term. Prerequisite: permission of instructor. Topic to be announced before preregistration.

ARCH 445 Architecture and the Mythic Imagination
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. This course focuses on traditional societies in which beliefs about architectural order are borne out of the mythic and religious imagination. Certain themes that are common to a range of cultures are explored in detail. They include the model of the human body as a source of architectural knowledge, the sacred center, the cosmic mountain, and architectural rituals as enactments of myths. Such themes are traced across cultures, through time and into contemporary theory.

ARCH 446 Topics in Architecture, Culture, and Society
Fall or spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor.

ARCH 447 Architectural Design and the Utopian Tradition
Fall. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. This course explores the relationship between visionary architecture of the late 19th and 20th centuries and the wider utopian literature of the time. It first explores themes in utopian fiction as well as in anti-utopian tracts and then turns to the attempts of architects, planners, and artists to concretize visions of the ideal world. The course will devote special attention to the ways in which ideals grounded in the utopian tradition have emerged in the social criticism of housing and neighborhood design in the urban setting in recent times.

ARCH 448 The Indian Example and the Visual Tradition in Culture
Spring. 3 credits. Prerequisite: ARCH 342 or permission of instructor. Not offered every year. This course provides a concise chronological summary of the major building traditions of Hindu India and explores the relationship between form and more general beliefs about the power of vision to reveal and transform. Topics include the sculptural program of the Hindu temple as a vehicle for the preservation and transmission of mythic texts, the oculus as an element and the eye as a motif, darshan, the spiritually transforming vision, and the destructive power of vision as revealed in myths and beliefs about "evil eye."

ARCH 647-648 Architecture in Its Cultural Context I and II
647, fall; 648, spring 4 credits each term. Prerequisite: permission of instructor. Not offered every year. Fall term, theory; spring term, problem solving and method. An examination of the relationship between architecture and other aspects of culture. Emphasis on the motivations for particular architectural forms and especially on theories of architecture. Examples from the United States and Asia.

ARCH 649 Graduate Investigations in Architecture, Culture, and Society
Fall or spring. Variable credit (maximum 4). Prerequisite: permission of instructor and approved independent study form. Independent study.

Visual Studies
Darkroom fees charged for all photography courses.

ARCH 151 Drawing I
Fall. 2 credits. Freehand drawing with emphasis on line and perspective representation of form and space.

ARCH 152 Drawing II
Spring. 2 credits. Prerequisite: ARCH 151. Freehand drawing as a means of conceiving and expressing spatial form; line weight, shades and shadows, and figure drawing.

ARCH 251 Introductory Photo I (also ART 161)
Fall or spring. 3 credits each term. For description see ART 161.

ARCH 351 Photography II (also ART 261)
Spring. 4 credits. Prerequisites: ARCH 251 or ART 161, or permission of instructor. For description see ART 261.

ARCH 450 Architectural Publications
Fall and spring. Variable credit (maximum 3). May be repeated for credit. Colloquy and practicum on issues related to the production of an architectural journal, as well as other theoretical and practical production related to the exchange of architectural ideas. Exercises will cover both theoretical as well as hands-on aspects of architectural publication.

ARCH 457 Special Project in Photography
Fall or spring. Variable credit (maximum 3). Prerequisites: written proposal outlining the special project and permission of instructor. Not offered every year. Independent study.

ARCH 458 Special Investigations in Visual Studies
Fall or spring. Variable credit (maximum 3). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 459 Special Topics in Visual Studies I
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topics to be announced before preregistration.

ARCH 658 Special Investigations in Visual Studies II
Fall or spring. Variable credit (maximum 4). Prerequisites: permission of instructor and approved independent study form. Independent study.

ARCH 659 Special Topics in Visual Studies III
Fall or spring. 3 credits. Prerequisite: permission of instructor. Topic to be announced before preregistration.

Architectural Science and Technology

Structures

ARCH 263 Structural Concepts
Fall. 4 credits. Prerequisite: Mathematics 111 or approved equivalent. Fundamental concepts of structural behavior. Statics and strength of materials. Introduction to and analysis of simple structural systems.

ARCH 264 Structural Elements
Spring. 3 credits. Prerequisite: ARCH 263. Concepts and procedures for the design of individual structural components (columns, beams, etc.) in steel, concrete, and timber construction.

ARCH 363 Structural Systems
Fall or spring. 3 credits. Prerequisite: ARCH 264. Concepts and procedures for the design of overall structural framing systems in steel, concrete, and timber construction.

ARCH 364 Vertigo Structures (also ARCH 664)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. A course in which students examine and experiment with the design of tall vertical structures, principally in terms of overall structural form and behavior, but also in the context of aesthetic, perceptual, historic, economic, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 365 Bridge Design (also ARCH 665)
Fall or spring. 3 credits. Prerequisite: ARCH 363 or equivalent. Limited enrollment. Not offered every year. There can be no denying the major visual impact of bridges on the built environment. And yet, during the past century, architects...
have virtually abandoned the role that they have historically had in the design of these structures. Engineers, on the other hand, have claimed bridge design as their responsibility and have hailed it as evidence of Structural Art. Are the basic principles of bridge design such that this situation makes sense for our society? Or is a rethinking of the manner in which bridges are designed called for? Students in this course examine and experiment with the design of bridge structural forms, not only in terms of what is technically feasible but also, with equal emphasis, in the context of aesthetic, historical, and social considerations. Weekly meetings include lectures, discussion seminars, and studio-type design reviews.

ARCH 463 Special Topics in Structures
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 263, 264, and 365 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 473 Special Investigations in Structures
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

ARCH 664 Vertigo Structures
Fall or spring. 3 credits. Prerequisite: ARCH 365 or equivalent. Limited enrollment. Not offered every year.
For description, see ARCH 364.

ARCH 665 Bridge Design
Fall of spring. 3 credits. Prerequisite: ARCH 365 or equivalent. Limited enrollment. Not offered every year.
For description, see ARCH 365.

Construction
ARCH 262 Building Technology, Materials, and Methods
Spring. 3 credits.
Properties of materials—their use and application to the design of buildings and building systems. Discussion of various methods of building construction and assembly.

ARCH 465 Special Topics in Construction
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 262 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 475 Special Investigations in Construction
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Environmental Controls
ARCH 261 Environmental Controls—Site Planning
Fall. 3 credits.
The basic principles involved in design in the outdoor environment. A brief historical perspective. A development of inventory including grading and drainage. Foundations, surfacing, and construction.

ARCH 361 Environmental Controls—Lighting and Acoustics
Fall. 3 credits.
Basic properties and principles of sound and light. Sound phenomena, noise control, absorption, acoustical design, light, color, and form. Natural lighting possibilities and constraints as well as good and bad examples of artificial lighting.

ARCH 362 Environmental Controls—Mechanical and Passive Solar Systems
Spring. 3 credits.
Basic thermal analysis of buildings, human comfort criteria, energy conservation, passive solar design, HVAC distribution systems, overview of mechanical conveying systems and plumbing.

ARCH 464 Special Topics in Environmental Controls
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 261, 361, and 362 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 474 Special Investigations in Environmental Controls
Fall or spring. Variable credit (maximum 3). Prerequisite: permission of instructor and approved independent study form. Independent study.

Computer Applications

ARCH 372 Imaging and the Electronic Age
Spring. 3 credits. For undergraduate, non-computer-scientists. 2 lectures, 1 recitation. D. Greenberg. Not offered every year.
Historical technological advances which created major paradigm shifts for communications as well as advances in computer technology will be presented. Technical fundamentals of computer graphics capabilities will be emphasized. The latter half of the course will cover the effect of these scientific advances on many discipline-specific areas including architecture, art and animation, photography and the film industry, medicine, engineering design, the corporate structure, and education itself. The course will be heavily supplemented with pictorial content consisting of slides, movies, and live interactive demonstrations.

ARCH 374 Computer Graphics and Visualization (also COM S 417)
For description, see COM S 417.

ARCH 375 Practicum in Computer Graphics (also COM S 418)
For description, see COM S 418.

ARCH 376 Microcomputer Applications in Design
Fall. 3 credits. Prerequisites: previous knowledge of PC-based CAD or permission of instructor.
This course covers advanced principles, concepts, and applications of microcomputer-aided design, computer graphics, and animation. It combines seminar-style presentation with hands-on laboratory sessions. The course uses IBM PC platforms exclusively.

ARCH 379 Design by Computer
Spring. 3 credits. Prerequisites: limited to third-year students and above. Not offered every year.
Exploration of the formalization of the design process for compatibility with the computer, and the role of computers in design. Lecture with CAD lab.

ARCH 476 Special Topics in Computer Applications
Fall or spring. 3 credits. Limited to 30 students. Prerequisites: ARCH 374 or 379 or permission of instructor. Not offered every year.
Topic to be announced by preregistration.

ARCH 477-478 Special Projects in Computer Graphics
477, fall; 478, spring. Variable credit (maximum 4). Limited to third-year students and above. Prerequisites: ARCH 374 plus concurrent registration in Computer Science 314 or equivalent, and permission of instructor.
Advanced work in computer graphics input and display techniques, including storage tube, dynamic vector and color raster displays.

ARCH 479 Micro-Computer Applications in Design (also ARCH 679)
Fall. 3 credits. Prerequisites: an introductory course in computer graphics or computer science, or permission of instructor; upper level undergraduate or graduate status.
The course explores the role of synthetic imaging and computer graphics in architectural design. The first half of the course is devoted to examining the new possibilities that information technologies offer for multimedia visualization of architecture, from abstract conceptual drawings, to sketching, photorealistic rendering, and multimedia representation, including motion and sound. The second part of the course explores the uses of information technologies to model and simulate the creative design process. These explorations include: developing a library of design ideas as building blocks for design; creating multimodal, multidimensional, immersive, virtual environments; interactive transformation and synthesis of design concepts; and "reverse architecturing" of canonical works. The emphasis of this course is on concepts as well as methods and techniques of computer graphics and their application to simulating the creative design process in architecture.

Graduate Courses
ARCH 679 Micro-Computer Applications in Design
For description, see ARCH 479

ARCH 761-762 Architectural Science Laboratory
761, fall; 762, spring. 6 credits each term. Open to architectural science graduate students only. Projects, exercises, and research in the architectural sciences.

ARCH 763-764 Thesis or Research in Architectural Science
763, fall; 764, spring. Variable credit (maximum, 12). Limited to architectural science graduate students. Independent study.
### Architectural History

The history of the built domain is an integral part of all aspects of the architecture curriculum, from design and theory to science and technology. Students take ARCH 181–182 in the first year, and three additional courses from the 380–399 series, preferably in the third and fourth years. Seminars are intended for advanced undergraduate and graduate students and do not satisfy undergraduate history requirements. Courses with the same number may only be taken once to satisfy history of architecture or in-college requirements.

**Sequence Courses**

**ARCH 181 History of Architecture I**  
Fall. 3 credits. Required of all first-year students in architecture; open to all students in other colleges with an interest in the history of the built domain. The history of the built environment as social and cultural expression from the earliest to more recent times. Themes, theories, and ideas in architecture and urban design are explored, beginning with the earliest written records.

**ARCH 182 History of Architecture II**  
Spring. 3 credits. Required of all first-year students in architecture. Open to all students in other colleges with an interest in the history of the built domain; may be taken independently of ARCH 181. The history of the built environment as social and cultural expression from more recent times to the present. Architecture and urban design themes, theories, and ideas are addressed in greater detail leading to the present time.

**Directed Electives**

**ARCH 180 History of Theory**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. This course, in which classroom discussion and debate play a central role, explores the history of critical theoretical issues involving art and architecture. The readings, which span from the Greeks to today, focus on more than just questions of aesthetics and include theories of ethics, origins, imagination, nature, society, and pedagogy.

**ARCH 381 Greek and Roman Architecture and Urbanism**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. The history of architecture and urban design in ancient Mediterranean civilizations, with emphasis on Greece and Rome. The course considers change and transformation of building types and their elements within the general context of social demands.

**ARCH 382 Architecture of the Middle Ages (also ART H 332 and RELST 332)**  
Fall. 4 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. For description, see ART H 332.

**ARCH 383 The City**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year.

**ARCH 384 The Italian Renaissance: Architecture, Politics, and Urbanism**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. This course focuses on the leading architects and theorists of the Renaissance from within the context of the political and cultural developments in Italy from 1300 to the mid-sixteenth century. The course also investigates specific architectural problems faced by designers as well as questions of architectural patronage, practices, and theories.

**ARCH 385 Magnificent Utility—Architecture and the Arts of Persuasion**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Architects put revolutionary attitudes about form, space, light, and the arts into practice during the course of the seventeenth century. Focusing on the urban centers of Rome and Paris and the cultural landscapes of Spain, England, and Central Europe, this course explores how architecture, urban design, and the arts were employed to promote state and church.

**ARCH 387 The Nineteenth Century—Style, Technology, and Individuality in the West**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. This course explores transformation historiographically in the cumulative city, focusing on the political and cultural expression from the earliest to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

**ARCH 390 American Architecture and Building I**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. A review of architecture, building, and responses to the landscape from the prehistoric period to the Civil War. Architecture and building as social and collaborative arts will be emphasized and thus the contributions of artisans, clients, and users as well as professional architects and builders will be examined. The architectural expressions of Native Americans, African Americans, women, and others will be treated in addition to those of European colonists and settlers.

**ARCH 391 American Architecture and Building II**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. A continuation of Architecture 390 but may be taken independently. An account of American architecture, building, and responses to the environment from the post-Civil War period to the present day. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

**ARCH 392 Modern Architecture on Film**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. An exploration of certain themes deemed critical to modern architecture and urbanism through their representation in film. Particular attention will be paid to the processes of industrialization, professionalization, and urbanization as well as to the manifestations of gender, class, race, and ethnicity in the built and architectural environments.

**ARCH 393 The Cumulative City**  
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Well established cities were transformed by radical and unimagined change in the nineteenth and twentieth centuries. Politics and economies were transformed, populations exploded, and new technologies reshaped transportation, communication, and building. This course explores transformation historically in the cumulative city, focusing on specific cities in America and Europe, Africa, and Asia. The cultural context of each city is examined to understand how it changed and how meanings became associated with evolving urban forms.
ARCH 394 Toward the Millennium
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Theory and practice in architecture and urbanism are investigated from the 1950s to the present. From the Americanized International Style to the recent internationalism of design attitudes, the immediate past is explored historically to probe the matrix of meanings associated with contemporary form, urbanism, and technology.

ARCH 396 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 397 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 398 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Topic to be announced.

ARCH 399 Special Topics in the History of Architecture and Urbanism
Fall or spring. 3 credits. Prerequisites: ARCH 181–182 or permission of instructor. Not offered every year. Topic to be announced.

Courses in Preservation
ARCH 583 Measured Drawing (also CRP 567)
For description, see CRP 567.

ARCH 584 Problems in Contemporary Preservation Practice (also CRP 563)
For description, see CRP 563.

ARCH 585 Perspectives on Preservation for the Twenty-First Century: Planning, Practice, and Policy (also CRP 562)
For description, see CRP 562.

ARCH 586 Documentation for Preservation (also CRP 560)
For description, see CRP 560.

ARCH 587 Building Materials Conservation (also CRP 564)
For description, see CRP 564.

ARCH 588 Historic Preservation Planning Workshop: Surveys and Analyses (also CRP 561)
For description, see CRP 561.

Graduate Seminars in the History of Architecture and Urbanism
ARCH 680 Seminar in Historiography
Fall. 4 credits. Prerequisite: permission of instructor. Historiographic and methodological issues are examined in relation to the history of architecture and urbanism. Taught by different faculty members in successive years, the seminar is required of all first- and second-year graduate students in the History of Architecture and Urbanism Program.

ARCH 682 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 683 Seminar in the History of Theory
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 684 Seminar in the Italian Renaissance: Architecture, Politics, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 685 Seminar in Seventeenth- and Eighteenth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 686 Seminar in Twentieth-Century Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 687 Seminar in the History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 689 Seminar in the History of Cities
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 690 Seminar in American Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 692 Seminar in Nineteenth-Century Architecture, Building, and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 693 Seminar in Urban History
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 694 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 695 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 696 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 697 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 698 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 699 Seminar in Special Topics in the History of Architecture and Urbanism
Fall or spring. 4 credits. Prerequisite: permission of instructor. Not offered every year. Topic to be announced.

ARCH 299 Undergraduate Independent Study in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 3). Prerequisite: permission of instructor. May not be taken by students in design to satisfy undergraduate history requirements. Independent study for undergraduate students.

ARCH 499 Undergraduate Thesis in the History of Architecture and Urbanism
Fall or spring. 4 credits. For B.S. honors candidates in history only.

ARCH 799 Graduate Independent Study in the History of Architecture and Urbanism
Fall or spring. 4 credits. Independent preparation of the M.A. essay, often developed from topics investigated in ARCH 680.

ARCH 999 Ph.D. Dissertation in the History of Architecture and Urbanism
Fall or spring. Variable credit (maximum, 12). Independent study for the doctoral degree.

ART

Undergraduate Program
The curriculum in art is a program of study within the College of Architecture, Art, and Planning. The undergraduate curriculum in art is an excellent background for a career in applied art, although no specific technical courses are offered in such areas as interior design, fashion, or commercial art. The undergraduate curriculum in art, leading to the degree of Bachelor of Fine Arts, provides an opportunity for the student to combine a general liberal education with the studio concentration required for a professional degree. During the first four semesters all students follow a common course of study designed to provide a broad introduction to the arts and a basis for the intensive studio experience of the last two years. Beginning with the third year, students concentrate in painting, sculpture, photography, printmaking, or combined media. Studio courses occupy approximately one-half of the student's time during the four years at
The required courses for each concentration are as follows:

- **Painting**
  - ART 121, 221, 321, 322, 421, 422 (Thesis)
- **Sculpture**
  - ART 141, 241, 341, 342, 441, 442 (Thesis)
- **Printmaking**
- **Photography**
  - ART 161, 261, 263, 264, 265, 461, 462 and one of the following: ART 264, 265, 361

### Dual Concentration

If a student is interested in studying in more than one area, he or she may choose to do a dual concentration. The dual concentration requires a first area, in which the thesis is conducted, and a non-thesis second area. Pre-thesis and thesis must be taken in the first area of concentration. Students take 23 credits in the first area of concentration and 15 credits in the second area of concentration. Drawing is only available as a second area of concentration.

The required courses for the dual concentration are:

<table>
<thead>
<tr>
<th>First Area of Concentration</th>
<th>Second Area of Concentration</th>
<th>Total Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Painting, ART 121, 221, 321, 421, 422</td>
<td></td>
<td>23</td>
</tr>
<tr>
<td>Sculpture, ART 141, 241, 341, 342, 441, 442</td>
<td></td>
<td>23</td>
</tr>
<tr>
<td>Photography, ART 161, 261, 263, 264, 265 (1 of 3), 461, 462</td>
<td></td>
<td>23</td>
</tr>
</tbody>
</table>

### Combined Media Concentration

The combined media program enables students to fulfill concentration requirements by combining several studio disciplines, including out-of-department studio courses such as those offered in the departments of music, theatre, and dance, etc.

The required courses for the concentration in Combined Media (35 credits) are:

- 100 and 200 level studios
  - ART 1... 2...
- 200 and 300 level studios
  - ART 2... 3..., 5... (2 of 4)
- Pre-Thesis and Thesis
  - ART 481, 482
- Out-of-college studio electives (minimum of 2)
- OCE Studio, OCE Studio

**Total** 33 credits

---

**Note:** The total number of in/out-of-college electives credits required will be adjusted to allow for the additional credits required of the combined media concentration.

### Rome Program

Students in good standing who have completed the requirements of the first two years of the curriculum are eligible for participation in the Rome Program. Students are admitted to the program by application and review of their record. Applications are submitted to the Rome Program coordinator. Students applying to the Rome Program must meet with their faculty adviser, the art department Rome Program adviser, and the department chair to obtain signatures of approval for admission to the program. Students in the department wishing to attend the Rome Program must register for a full semester of credits. The department recommends that students attend the program during the first or second semester of their junior year. Under special circumstances, seniors may also attend the Rome Program. Students wishing to spend two consecutive semesters in Rome are encouraged to do so. In both cases students must petition for special consideration. This petition must include the proposed course schedule for both semesters and must show signatures of approval by the adviser in the student’s area of concentration, the department chair, and by the Rome Program adviser.

### Rome Curriculum

- ART 400 Rome Studio
- ART 312 Modern Art in Italy
- ART 317 History of Art in Rome: Early Christian to the Baroque Age
- ART 318 History of Art in Rome: Renaissance in Rome and Florence
- ITAL 111/112 Italian Language
- ARCH 317 Contemporary Italian Film

**Total** 16 credits

Students may not take more than 16 credits a semester in the Rome Program. Only four studio credits may be taken in any one semester. Students may study in Rome for one or two academic semesters.

*Fulfills 300-level Theory and Criticism requirement.

### Out-of-College Requirements

A minimum of 49 electives credits must be taken outside of the college. In the first year, students must take two freshman writing seminars. Students are required to take courses from among three groups, which include: Physical and Biological Sciences (minimum of two courses, of at least 3 credits each); Social Sciences (minimum of three courses, of at least 3 credits each); and, Humanities and Expressive Arts (minimum of three courses, of at least 3 credits each). All BFA students are required to take 12 credits in the History of Art. One course must be taken in each of the following areas:

The university requirement of two terms in physical education must be met. A candidate for the B.F.A. degree at Cornell is required to spend the last two terms of candidacy in residence at the university, subject to the conditions of the Cornell faculty legislation of November 14, 1962. No student may study in absentia for more than two terms.

Students who transfer into the undergraduate degree program in art must complete a minimum of four terms in residence at Cornell and a minimum of 60 credits at the university, of which 30 credits must be taken in the Department of Art, including four terms of studio work.

For those students matriculating in fall of 1999:
Students are required to take ART 111, Introductory Art Seminar; ART 121, Introductory Painting; or ART 141, Introductory Sculpture; ART 112, History of World Art; and a Freshman Writing Seminar during the fall semester of the freshman year. ART 115, History of World Art, ART 171, Electronic Imaging in Art, and an additional Freshman Writing Seminar must be taken during the spring semester of the freshman year. A 300-level course in Theory and Criticism must be taken sometime during the junior or senior year.

Courses that will fulfill Theory and Criticism requirement:
ART 312
ARCH 447
ART H 370, 464, 494, 594
ENGL 395
GERST 660
AS&RC 304, 503
ANTHR 453, 320, 322

First Year

Fall Term (Required Curriculum) Credits
111 Introductory Art Seminar 1
112 History of World Art* 3
121 Introductory Painting 3
or
141 Introductory Sculpture 3
151 Drawing I 3
Freshman Writing Seminar 3
In/Out College Electives 3

Spring Term (Required Curriculum)
113 History of World Art* 3
121 Introductory Painting 3
or
141 Introductory Sculpture 3
152 Drawing II 3
171 Electronic Imaging in Art 3
Freshman Writing Seminar 3

Second Year

Fall Term (Required Curriculum)
One of the following: 3
131 Introductory Etching
132 Introductory Graphics
133 Introductory Lithography
161 Introductory Photography 3
251 Drawing III 3
Out-College Elective (OCE)/Art History 4
OCE 3

Spring Term
200 Level Studio 4
200 Level Studio 4
252 Drawing IV 3
OCE/Art History 4
OCE 3

Third Year

Fall Term
200 Level Studio 4
Art Studio concentration 4
300-level course in Theory and Criticism 3
OCE 3
In/OCE 3

Spring Term (Rome) Credits
Art Studio concentration 4
OCE/Art History 4
In/OCE’s 4

Fourth Year

Fall Term
Pre-Thesis 6
In/OCE’s 10

Spring Term
Thesis 6
In/OCE’s 9

Guidelines for Independent Study
A student who wants to undertake Independent Study must be a junior in good standing. Fine Arts students must have completed two years of the curriculum, including all first- and second-year studios and four semesters of drawing. An independent study cannot be used to fulfill any of the four drawing requirements. All students must have taken a minimum of one Cornell Art Department course in the area of the proposed independent study. It is recommended that the student take the independent study with a professor with whom they have previously studied. Out-of-department students may be exempt from the studio sequence requirement at the discretion of the supervising professor. Independent studies do NOT count toward studio requirements. Credit hours are variable up to a maximum of four.

Courses in Theory and Criticism

ART 111 Introductory Art Seminar
Fall. 1 credit. S-U only. Limited to B.F.A. students. Students meet each week with a different member of the faculty. The varying artistic interests of the faculty are presented and discussed.

ART 112 History of World Art
Fall. 3 credits. Not offered every year. This two-semester course will survey world art from the Paleolithic era to the present. While primary emphasis will be placed upon the art and architecture of the western tradition, lectures on the visual arts outside that tradition will also be presented. The course will emphasize major monuments, important trends and developments, and critical approaches to the art of the past and present.
The history of artistic styles will be studied in relation to cultural factors shaping the work of art such as patronage, politics, religion, and economics. The original settings and functions of works of art and buildings will be emphasized as will the possibilities and limitations of materials and techniques.

ART 113 History of World Art
Spring. 3 credits. Not offered every year. Continuation of ART 112.

ART 214 Art and the Multicultural Experience
Fall. 3 credits. This course will investigate selected topics related to art and the multicultural experience. Students will study the basic vocabulary and tools used in the expression of art. They will question the nature of the visual arts as a discipline and survey art created by underrepresented American minority cultural groups.

ART 312 Modern Art in Italy
Fall or spring. 3 credits. Rome Program only.
This course is designed to introduce students to contemporary developments in Italian art and to major issues concerning the art world. Significant movements of the twentieth century, including Futurism, Metaphysical painting, and Magic Realism will be discussed. Post-war painting and sculpture will be emphasized. Visits with artists in studios, galleries and museums will introduce students to the exchange between artists, dealers, and critics. Fulfills 300-level Theory and Criticism requirement for Fine Arts majors.

ART 317 History of Art in Rome: Early Christian to the Baroque Age
Fall. 4 credits. Rome Program only. A general survey of the early Christian period to the fantastic vision of Piranesi in the eighteenth century. Special emphasis will be placed on the developments of the Renaissance and Baroque periods. Weekly lecture and field trips.

ART 318 History of Art in Rome: Renaissance in Rome and Florence
Spring. 4 credits. Rome Program only. A direct knowledge of art in its historical context is the aim of this course. Open both to students interested in history and to those concentrating on the visual impact of art. Included are lectures and field trips.

ART 419 Independent Study/Supervised Readings in Art
Fall, spring or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent reading and research allows a student the opportunity to investigate special interests that are not treated in regularly scheduled courses. The student develops a plan of study to pursue under the supervision of a faculty member.

ART 611 Professional Skills for the Visual Artist
Fall. 3 credits. Limited to MFA students. This seminar will help fine arts graduate students build professional skills that will aid them in their careers as practicing artists and in their work at art-related employment. Students will complete a resource notebook that should be useful to them in the years after they graduate. Topics will include: funding resources, exhibition opportunities, employment options, documentation of work, health, safety, and legal issues.

ART 612 Recent Practice in the Visual Arts
Spring. 3 credits. Limited to MFA students. This seminar is designed to provide graduate students with an overview of recent visual artwork. Students will study work from a wide range of artists who have received significant recognition within the visual arts community. Reviews of major exhibitions such as Documenta, La Biennale di Venezia, and the Whitney Biennial will be discussed. Students will be encouraged to travel to nearby cities to look at contemporary work.

ART 613 On-Line Publication for the Visual Artist
Fall. 3 credits. Limited to MFA students. This course is designed to introduce graduate students to the basic principles of electronic imaging. As a major project, each student will interview a contemporary visual artist. These interviews will be illustrated with digital images of each artist's work and combined in an on-line magazine. Additionally each student will learn to create a home page on the World Wide Web.

ART 614 Contemporary Theory in the Visual Arts
Spring. 3 credits. Limited to MFA students. This seminar explores selected writings on the current issues represented within the visual arts. It is designed to introduce graduate students to several approaches to contemporary visual practice. Topics will vary but may include related criticism in areas such as visual culture, semiotics, identity politics, and institutional frames.

Studio Courses in Painting

Fees for painting courses: 121, 221, 321, 322, 421, 422, 429: $40

ART 121 Introductory Painting
Fall, spring. 3 credits. The study of the language of painting through color, form, materials and techniques. Aspects of traditional and modern pictorial composition are studied including proportion, space, and color theory through the representation of a variety of subjects.

ART 221 Painting II
Fall or spring. 4 credits. Prerequisite: ART 121 or permission of instructor. A continuation of the study of aspects of pictorial composition initiated in ART 121, focussing on problems relating to the depiction of the figure, space, and light. Topics are explored within the context of historical and contemporary artistic expression.

ART 321 Painting III
Fall or spring. 4 credits. Prerequisite: ART 221 or permission of instructor. An intensive study of painting materials and techniques to express pictorial ideas. A variety of traditional painting techniques are explored including egg tempera, fresco, gouache, encaustic and oil. In addition, paints and associated techniques developed in the 20th century are used as well as developing technologies applicable to the painting process.

ART 322 Painting IV
Fall or spring. 4 credits. Prerequisite: ART 321 or permission of instructor. An advanced course centered on issues of artistic expression. A variety of painting media are used to address conceptual issues through representation as well as abstraction.

ART 421 Pre-Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 322. Advanced study of painting through assigned and independent projects utilizing a variety of materials leading to the formulation of a thesis project.

ART 422 Thesis in Painting
Fall or spring. 6 credits. Prerequisite: ART 421. A focused independent project demonstrating creative ability and technical proficiency. The project will be exhibited in an appropriate space at the end of the term.

ART 429 Independent Studio in Painting
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in painting allows students the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 721–722, 821–822 Graduate Painting
721, fall; 722, spring; first-year M.F.A. students. 9 credits. 821, fall; 822, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation.

Studio Courses in Printmaking

Fees for printmaking courses:
Art: 131, 132, 133: $55
Intaglio: 231, 431.1, 432.1, 439.1: $65
Lithography: 233, 432.2, 439.2: $85
Screenprinting: 232, 431.3, 432.3, 439.3: $45

ART 131 Introductory Intaglio
Fall and spring. 3 credits. A basic introduction to etching techniques, with emphasis on engraving, lift ground, relief printing, monotypes, and experimental techniques.

ART 132 Introductory Graphics
Fall and spring. 3 credits. An introduction to the two-dimensional thought process and the language of vision. Students will explore design projects and the use of graphic materials, including collage, pochier, and screen printing.

ART 133 Introductory Lithography
Fall and spring. 3 credits. The theory and practice of lithographic printing, using limestone block and aluminum plate. Basic lithographic techniques of crayon, wash, and transfer drawing are studied.
ART 231 Intaglio II  
Spring. 4 credits. Prerequisite: ART 131. A studio course in advanced etching techniques. Refinement of processes and ideas through the use of aquatint, spit bite, lift ground, soft ground, and dry point in black and white with an introduction to multiple plate color printmaking.

ART 232 Advanced Screen Printing  
Fall. 4 credits. Prerequisite: ART 132. An exploration of the screen printing process as it applies to the Fine Arts. Students will develop skills in multicolor printing using transparent inks and additives. Stencils will be made by the handcut and the photo process.

ART 233 Lithography II  
Spring. 4 credits. Prerequisite: ART 133. The theory and practice of lithographic printing using lithographic stones and aluminum plates. Traditional techniques in crayon, tusche wash, and color printing as well as photolithography using kodalith and computer-generated transparencies.

ART 331 Printmaking III  
Fall or spring. 4 credits. Prerequisite: ART 231, 232, or 233 or permission of instructor. Study of the art of graphics through both assigned and independent projects. Work may concentrate in any one of the graphic media or in a combination of media.

ART 332 Printmaking IV  
Fall. 4 credits. Prerequisite: ART 331 or permission of instructor. Continuation and expansion of ART 331.

ART 431 Pre-Thesis in Printmaking  
Fall or spring. 6 credits. Prerequisites: ART 331. Further study of the art of graphics through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 432 Thesis in Printmaking  
Fall or spring. 6 credits. Prerequisite: ART 431. Advanced printmaking project to demonstrate creative ability and technical proficiency.

ART 439 Independent Studio in Printmaking  
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in printmaking allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 731-732, 831-832 Graduate Printmaking  
731, fall; 732, spring; first-year M.F.A. students. 9 credits. 831, fall; 832, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation; discussion sessions of work in progress are held.

**Studio Courses in Sculpture**

**Fees for sculpture courses:**

</tr>
</tbody>
</table>

ART 141 Introductory Sculpture  
Fall, spring, or summer. 3 credits. A series of studio problems introduce the student to the basic considerations of artistic expression through three-dimensional design, i.e., modeling in Plasteline, building directly in plaster, casting in plaster, and constructing in wood and metal.

ART 241 Sculpture II  
Fall or spring. 4 credits. Prerequisites: ART 141, or an architecture design studio, or permission of instructor. Various materials, including clay, plaster, wood, stone, and metal, are used for exercises involving figurative modeling, abstract carving, and other aspects of three-dimensional form and design. Beginning in the second year, students are encouraged to explore the bronze casting process. The sculpture program, which is housed in its own building, contains a fully equipped bronze casting foundry.

ART 341 Sculpture III  
Fall or spring. 4 credits. Prerequisite: ART 241 or permission of instructor. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 342 Sculpture IV  
Fall or spring. 4 credits. Prerequisite: ART 341 or permission of instructor. Continuation and expansion of ART 341.

ART 343 Sculpture V  
Fall or spring. 4 credits. Prerequisite: ART 342 or permission of instructor. Continued study of the principles of sculpture and the selection and expressive use of materials and media. Group discussions and individual criticism.

ART 441 Pre-Thesis in Sculpture  
Fall or spring. 6 credits. Prerequisite: ART 343. Further study of the art of sculpture through both assigned and independent projects executed in various media. Instruction through group discussions and individual criticism.

ART 442 Thesis in Sculpture  
Fall or spring. 6 credits. Prerequisite: ART 441. Advanced sculpture project to demonstrate creative ability and technical proficiency.

ART 449 Independent Studio in Sculpture  
Fall, spring, or summer. 4 credits variable. Prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in sculpture allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

ART 741-742, 841-842 Graduate Sculpture  
741, fall; 742, spring; first-year M.F.A. students. 9 credits. 841, fall; 842, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they are to work. All members of the faculty are available for individual consultation. Weekly discussion sessions of works in progress are held.

**Studio Courses in Photography**

Darkroom fees for photography courses:

- Fee for B & W courses: $105.00
- Fee for color courses: $185.00
- Fee for an additional B & W course taken the same term: $50.00
- Fee for an additional color course taken the same term: $130.00

ART 161 Photography I (also ARCH 251)  
Fall, spring, or summer. 3 credits. A basic lecture-studio course in black and white photography for beginners. Emphasis is on basic camera skills, darkroom techniques, and understanding of photographic imagery.

ART 168 Black-and-White Photography  
Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of black-and-white photographic imagery.

ART 169 Color Photography  
Summer. 3 credits. Three-week session only. Intended for students at all levels, from introductory to advanced. Emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 261 Photography II (also ARCH 351)  
Fall, spring, or summer. 4 credits. Prerequisites: ART 161 or ARCH 251, or permission of instructor. A continuation of Photography I concentrating on black and white photographic processes, history and theory of creative practice, and individual projects.

ART 263 Color Photography  
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. A studio course in color photography with emphasis on camera skills, darkroom techniques, and the content of color photographic imagery.

ART 264 Photo Processes  
Fall, spring, or summer. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. A studio course in alternative and nonsilver photographic processes. Emphasis is on camera skill, basic techniques and processes, image content, and creative use of photo processes.

ART 265 Studio Photography  
Fall or spring. 4 credits. Prerequisite: ART 161 or ARCH 251, or permission of instructor. A course in the use of medium- and large-format cameras that explores technique,
lighting, and the use of larger-format cameras for personal expression both in the studio and outdoors.

**ART 361 Photography III**
Fall, spring or summer. 4 credits. prerequisite: ART 161, 261 or permission of instructor. Continued study of creative use of photography, with emphasis on specialized individual projects.

**ART 461 Pre-Thesis in Photography**
Fall or spring. 6 credits. prerequisite: ART 261, 263.
A studio course intended for photography majors and other qualified students.

**ART 462 Thesis in Photography**
Fall or spring. 6 credits. prerequisite: ART 461.
A studio course intended for photography majors and other qualified students. Advanced photography project to demonstrate creative ability and technical proficiency.

**ART 469 Independent Studio in Photography**
Fall, spring or summer. 4 credits variable. prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in photography allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 761-762, 861-862 Graduate Photography**
761, fall; 762, spring; first-year M.F.A. students. 9 credits. 861, fall; 862, spring; second-year M.F.A. students. 9 credits. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. Members of the faculty are available for consultation. Discussion sessions of work in progress are held.

### Studio Courses in Drawing

Fees for drawing courses: $25

**ART 151 Drawing I**
Fall, spring, or summer. 3 credits. A course that is general in nature and introduces students to principles and techniques of representation. Emphasis will be on creating the illusion of space and form through line, the rendering of light and shade, and studies in perspective. In addition, the student will have the opportunity to explore various media such as charcoal, chalk, pencil, pen, ink, wash, etc.

**ART 152 Drawing II**
Spring. 3 credits. prerequisite: ART 151. A general course in drawing that will emphasize figure study and life drawing. This course will build on the foundation of ART 151 and concentrate on the analytical study of the figure. Students will explore a variety of materials, traditional and contemporary.

**ART 158 Conceptual Drawing**
Summer. 3 credits. Emphasis on drawing from the imagination. The generation of ideas and their development in sketches is stressed. The intent is not to produce finished art but rather to experience a series of problems that require image and design concepts different from those of the artist working directly from nature.

**ART 159 Life and Still-Life Drawing**
Summer. 3 credits. The human figure and still life are studied both as isolated phenomena and in relation to their environment. Focuses on helping the student observe and discover.

**ART 251 Drawing III**
Fall. 3 credits. prerequisites: ART 152. An intermediate drawing course in which students will study composition, the articulation of form, and the illusion of space in a variety of materials. Expressive content, conceptualization, and the exploration of materials will be stressed.

**ART 252 Drawing IV**
Spring. 3 credits. prerequisites: ART 251. Advanced drawing with an emphasis on life drawing and figure composition. Individual expression will be encouraged along with creative investigation of materials and processes.

**ART 459 Independent Studio in Drawing**
Fall, spring, or summer. 4 credits variable. prerequisite: student must be a junior in good standing and have the written permission of the instructor. Independent studio in drawing allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 171 Electronic Imaging in Art**
Fall or spring. 3 credits. An introductory studio course using the computer as a tool for making art. Students will explore various approaches to 2- and 3-D image creation using software programs for imaging generation and processing. Intro to the World Wide Web.

**ART 271 Electronic 3-D Modeling and Animation**
Fall or spring. 4 credits. prerequisite: ART 171. A studio course in creating 2- and 3-D still and animated visualizations using computers and 3-D software for object modeling, animation, and rendering. Concentration on the World Wide Web.

**ART 272 Digital Video and Sound**
Fall or spring. 4 credits. prerequisite: ART 171. A studio course that introduces students to digital video including capture stills, animation, video, and sound with an introduction to interactive presentation and CD ROM production. Concentration on the World Wide Web.

**ART 372 Special Topics in Art Studio**
Fall, spring, or summer. Variable credit. An exploration of a particular theme or project.

**ART 379 Independent Studio in Rome**
Fall and spring. 4 credits variable. prerequisite: must be a junior in good standing, and have the written permission of the instructor. Rome Program only.
Indepedent studio in Rome allows non-art majors the opportunity to pursue special interests in Fine Arts not treated in regularly scheduled courses. The student plans a course of study or projects that meet the approval of the faculty member selected to guide their progress and evaluate the results.

**ART 391 Media Arts Studio I**
Fall. 3 credits. prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50.
A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video, dance. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting art spaces on campus, including virtual and performative events.

**ART 392 Media Arts Studio II**
Spring. 3 credits. prerequisite: one of the following courses: ART 171, THETR 277, 377, MUSC 120, or equivalent. Also student must be a junior and have permission of instructor. Lab fee $50.
A collaborative interdisciplinary studio course in a variety of digital and electronic media, including art, architecture, music, film and video. Group projects and discussions will also investigate the artistic and interactive potential of a high-speed intranet connecting art spaces on campus, including virtual and performative events.

**ART 400 Rome Studio**
Fall or spring. 4 credits. prerequisite: permission of instructor. Fee: $25. Rome Program only.
The content for the Rome studio will be determined by the instructor. Emphasis will be divided between work accomplished in the studio and work executed outdoors in the environs of Rome. Media will consist primarily of painting, drawing, sculpture, and photography, or those assigned by the instructor. ART 400 fulfills four credits of the concentration requirement.

**ART 479 Independent Studio in Electronic Imaging**
Fall, spring or summer. 4 credits variable. prerequisite: must be a junior in good standing and have the written permission of the instructor. Independent studio in art studio in electronic imaging allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

**ART 481 Pre-Thesis in Combined Media**
Fall or spring. 6 credits. prerequisite: permission of instructor on a combined media thesis form must be received in the art department, prior to enrollment in this course.
Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work.
The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

**ART 482 Thesis in Combined Media**

Fall or spring. 6 credits. Prerequisite: ART 481 and written permission of instructor on a combined media thesis form must be received in the art department prior to enrollment in this course. Students are responsible, under faculty direction, for planning their own projects and selecting the media in which they will work. The projects should reflect experiences gained by exploring and combining various media including those taken in studio courses outside the department. Students select a faculty member from the area of concentration most appropriate to their area of combined media.

**ART 489 Independent Studio in Combined Media**

Fall, spring, or summer. 4 credits variable. Prerequisite: must be a junior in good standing and have the written permission of the instructor. Independent studio in combined media allows the student the opportunity to pursue special interests not treated in regularly scheduled courses. The student plans study and projects under the supervision of a faculty member selected to guide their progress and evaluate their results.

---

**CITY AND REGIONAL PLANNING**

The department offers several programs of study at both the undergraduate and graduate levels.

**The Undergraduate Program in Urban and Regional Studies**

The Program in Urban and Regional Studies (URS) is a four-year academic program aimed at assessing the problems of human communities and regions. Students who graduate from the program receive a Bachelor of Science degree. The program provides both an excellent liberal arts education and a strong concentration of studies respecting urban and regional issues. The urban and regional studies courses in the program provide students with a broad understanding of relevant issues, the ability to assess those issues, and technical analysis skills. The URS Program is truly interdisciplinary. Students learn to evaluate urban and regional problems by using a wide range of analytic tools and disciplinary perspectives.

**Basic Degree Requirements**

Requirements for Graduation: URS requirements include (1) eight semesters of resi-

dence, (2) 120 credits, (3) two freshman seminars, (4) qualification in one foreign language, (5) four groups of distribution requirements, (6) required courses for major, (7) area requirements for major, (8) free electives, (9) a minimum of 34 courses. The university requires students to complete two semesters of physical education.

1. General education
   a. Freshman writing seminars: 2 courses
   b. Foreign language: 3 courses or qualification in one foreign language
   c. Distribution Requirements: 9 courses
      Students must take a total of nine courses for the distribution requirement: four courses (of three or more credits each) from Groups 1 and 2, at least two of which are from Group 1, and at least one of which is from Group 2; five courses from Groups 3 and 4, with at least two in each group and two in the same department. No single course may satisfy more than one distribution requirement. URS students must follow the College of Arts and Sciences guidelines specifying courses that meet the requirements for groups 1–4.
      Group 1: Physical and biological sciences (2–3 courses required)
      Group 2: Quantitative and formal reasoning (1–2 courses required)
      Group 3: Social sciences and history (2–3 courses required)
      Group 4: Humanities and the arts (2–3 courses required)
   Advanced Placement Credit
      Students may apply up to two courses of approved advanced placement credit in calculus, computer science, and science toward satisfaction of the distribution requirement in Groups 1 and 2 above, if they complete at least one science course during their undergraduate career. They may apply no advanced placement credit toward the distribution requirement in Groups 3 and 4. Grades of S-U courses cannot be applied to the distribution requirements.

2. Required Courses for the Major In Urban and Regional Studies: 5 courses
   CRP 100: The American City
   CRP 101: The Global City: People, Production, and Planning in the Third World
   CRP 223: Introduction to Statistical Reasoning for Urban and Regional Analysis (statistics course)
   Microeconomics course (at least 3 credits, from approved list)
   Architecture course (at least 3 credits, from approved list)
   Approved List of Microeconomics and Architecture Courses
   Micro Economics
   CE&H 110: Introductory Microeconomics
   CE&H 210: Intermediate Microeconomics
   ECON 101: Introduction to Microeconomics
   ECON 301: Microeconomics
   ECON 313: Intermediate Microeconomics
   Architecture

3. Area Requirements for the Major In Urban and Regional Studies: 11 courses
   A. Students must take one listed CRP course in each of the following 6 areas: Design, Economics, Environment, History, Politics/Policy, Quantitative Analysis
      a. Design
         CRP 381: Principles of Spatial Design and Aesthetics
         CRP 415: Gender Issues in Planning and Architecture
         CRP 482: Urban Land Use Concepts
      b. Economics
         CRP 400: Introduction to Urban and Regional Theory
         CRP 401: Seminar in Urban Political Economy
         CRP 404: Urban Economics
         CRP 417: Industrial Restructuring: Implications for State and Local Policy
      NOTE: This requirement may not be satisfied with the same course taken to complete the micro-economics course requirement under B.
      c. Environment
         CRP 380: Environmental Politics
         CRP 451: Environmental Law
      d. History
         CRP 261: Urban Archaeology
         CRP 360: Pre-Industrial Cities and Towns of North America
         CRP 361: Seminar in American Urban History
         CRP 461: Methods of Archival Research
         CRP 462: The American Planning Tradition
      e. Politics/Policy
         CRP 314: Planning, Power, and Decision Making
         CRP 318: Politics of Community Development
         CRP 563: American Indians, Planners, and Public Policy
         CRP 413: Planning and Political Economy I
         CRP 448: Social Policy and Social Welfare
      f. Quantitative Analysis
         CRP 321: Introduction to Quantitative Methods for the Analysis of Public Policy
   B. Students must take any additional 5 CRP courses (of at least 3 credits each, letter grade only)
4. Free Electives: 6-9 courses
5. Physical Education (2 terms of PE)
   Required courses for graduation: 34
   Required credits: 120

Honors Program
Each year a few well-qualified junior-year students may join the honors program. Each honors student will develop and write an honors thesis under the guidance of his or her faculty adviser.

Off-Campus Opportunities
Cornell-in-Washington Program. Students in good standing may earn degree credits in the Cornell-in-Washington program through course work and an urban-oriented externship in Washington, D.C. Students may work as externs with congressional offices, executive-branch agencies, interest groups, research institutions, and other organizations involved in the political process and public policy. Students also select one or two other seminars from such fields as government, history, economics, human development, architectural history, natural resources, and social policy. Cornell faculty members teach these seminars, which provide credit toward fulfillment of major, distribution, and other academic requirements.

Cornell Abroad. We encourage qualified undergraduates to study abroad because exposure to foreign cultures can be an eye-opening aspect of a university education. In an increasingly interdependent world, the experience of living and learning in a foreign country is invaluable. We work continually to develop study abroad opportunities. Current programs are available in Great Britain, Spain, and Germany. Opportunities in Asia, the Middle East, and France should be forthcoming. We encourage URS students to explore these opportunities.

Cornell-in-Rome Program. The College of Architecture, Art, and Planning has a teaching facility in Rome located in the sixteenth-century Palazzo Massimo. Students in good standing can earn degree credits through courses taken with Cornell faculty assigned to Rome and with accredited instructors. Courses are available in areas of urban development, regional development, and architecture and art.

Research and fieldwork. Students are welcome to work with department faculty members on research or other opportunities that are appropriate to their particular interests. Fieldwork and community-service options also exist for students in the Urban and Regional Studies Program.

Additional Degree Options
Linked degree options. Urban and regional studies students may earn both a Bachelor of Science degree and a Master of Regional Planning (M.R.P.) degree in a fifth year of study. Ordinarily, the professional M.R.P. degree requires two years of work beyond that for the bachelor's degree. Under this option, a minimum of 30 credits and a master's thesis or thesis project are required for the M.R.P. degree. Interested students apply to the Graduate School, usually in the senior year.

Dual degree option. A student accepted in the Cornell College of Arts and Sciences may earn both a B.A. in a College of Arts and Sciences major and a B.S. in urban and regional studies in a total of five years. Special requirements have been established for this dual degree program. Cornell students interested in pursuing the dual degree program should contact either the director of the Urban and Regional Studies Program or the appropriate dean of the College of Arts and Sciences for further information.

Admissions Requirements and Procedures
Among the most important criteria for admission to the Urban and Regional Studies Program are intellectual potential and commitment—a combination of ability, achievement, motivation, diligence, and use of educational and social opportunities. Nonacademic qualifications are important as well. The department encourages students with outstanding personal qualities, initiative, and leadership ability. Above all, the department seeks students with a high level of enthusiasm and commitment in the study of urban and regional issues. Applicants must complete a university admission application.

Transfer Students
In most cases, transfer applicants should no longer be affiliated with a high school and should have completed no fewer than 12 credits of college or university work at the time of application. High school students who have completed graduation requirements at midyear and are taking college courses for the rest of the academic year should apply as freshmen. Prospective candidates who believe that their circumstances are exceptional should consult with the Director of Admissions in the Cornell division of interest to them before filing an application.

The Graduate Program in City and Regional Planning
The major concentrations of course work in city and regional planning are in the following areas:

- Built environment and urban development planning is concerned with physical facilities; the social, economic, and environmental forces that affect their design; and the process of development, plan making, and administration.
- History and historic preservation planning is a special program of study preparing students for work in history, analysis, and preservation of buildings, urban environments, and neighborhoods, including downtown business areas.
- Regional planning and regional science are concerned with socioeconomic issues and functional planning at the regional level, the forces that generate economic growth and social development, and the ways in which resources can best be used.
- Local and regional economic development is concerned with understanding and influencing how economic change may be harnessed to the benefit of communities, counteracting plant closings and more general regional decline and stimulating more equitable programs of socioeconomic change and development.
- International planning offers a broad range of courses in international economic development, development planning, and political economy.

Quantitative methods and policy analysis courses are offered to prepare planners and researchers for a variety of situations and problems. Complementing these concentrations, planning theory and political economy courses examine the organizational and planning processes and the political and economic conditions in which planning and international development operate.

Several graduate degrees are offered: the Ph.D.; the Master of Regional Planning (M.R.P.), in a two-year program; the Master of Arts (M.A.) in historic preservation planning, in a two-year program; and, in special cases, the Master of Professional Studies (International Development) (M.P.S./I.D.J), for the twelve-month international planning program.

Off-Campus Opportunities
Rome Program. Graduate students have the opportunity to spend one or two semesters in Rome, studying at Cornell's center at the Palazzo Massimo. Instruction is given by Cornell professors-in-residence and by other faculty. The program is structured to include work assignments in one of the international development organizations headquartered in Rome.

Course Information
Most courses in the Department of City and Regional Planning are open to students in any college of the university who have fulfilled the prerequisites and have the permission of the instructor.

The department attempts to offer courses according to the information that follows. However, students should check with the department at the beginning of each semester for late changes.
The course are design methods and applications in the contemporary urban context of Europe and North America.

CRP 395 Special Topics
Fall, spring, summer. 4 credits. Hours to be arranged.

CRP 395.40 The History of Urban Form in America (also CRP 689.40)
Fall. 3 credits.
The history of city planning in America from colonial times to the early 20th century including brief reviews of European influences on urban form. Lecture, discussions, short papers.

CRP 400 Introduction to Urban and Regional Theory
Fall. 4 credits. Open to juniors and seniors.
Introductory review of theories dealing with the spatial distribution of population and economic activity, drawn from various social science disciplines such as economics, and sociology. Review of recent research dealing with such topics as population distribution, migration, location of industry and economic activity, and the spatial organization of urban and regional social systems.

CRP 401 Seminar in Urban Political Economy
Spring. 4 credits. Prerequisites: introductory economics or sociology; for URS students, CRP 400 also.
The world economy, the global city, and social change. Population, technology, and work in industrial and developing countries. Race, ethnicity, and nationality. Profits, subsistence, and poverty. Students may read and direct discussions on outstanding texts, write book reviews, and prepare brief reports.

CRP 404 Urban Economics (also CRP 504)
Spring. 4 credits. Prerequisites: intermediate microeconomics.
Urban phenomena are analyzed from an economic point of view. Areas examined include economic aspects of urbanization processes and policies, determinants of urban growth and decline, urban land and housing markets, urban transportation, and urban public services. Some time will be spent in discussing problems of cities in developing countries.

CRP 408 Introduction to Urban Geographic Information Systems (GIS) (also CRP 508)
Spring. 4 credits. Letter grade.
Geographic Information Systems (GIS) have revolutionized the way we manage, analyze, and present spatial information. This course will focus on GIS in the social sciences. Many of the exercises and examples will be based on planning issues, but the concepts can be applied to many other disciplines such as government, economics, natural resources, and sociology. Some of the issues to be covered include: fundamentals of spatial analysis; overview of GIS technology and applications; designing a GIS project; gathering and analyzing data; and creating thematic maps.

CRP 412 Devolution and Public Sector Restructuring (also CRP 612)
Fall. 3 credits. S-U grades optional.
This course will address devolution and decentralization of government services in a
national and international context and then focus on the local public sector response in the United States. Privatization, intermunicipal cooperation, and internal restructuring will be reviewed including changing roles for the private sector, non-profit sector and unions. Implications for policy, program design, public advocacy and citizen involvement will be addressed. Special topics may include welfare reform. Students will be expected to write a major research paper in addition to short papers throughout the term.

**CRP 416 European City: The Public Sphere and Public Space**

Fall. 2-4 credits variable. Open to all juniors and seniors; S-U option available to non-majors. Enrollment may be limited by the instructor. Rome Program only.

An examination of the social, economic, and political life of the European city, particularly Italian cities, especially Rome. Study of the socio-economic underpinnings of the city. How are cities organized? How do citizens relate to the state, to the city, to the nation, to the global market? How and where do different groups of people live? How do they travel, inside the city and from city to city? How are new parts of the city developed and old ones preserved, transformed, or destroyed? What public services do people expect, and how are they delivered? What is the role of private business? How do Italians/Europeans confront problems of the urban environment, poor neighborhood services, and impoverished immigrants? In all these cases, how do Italian (or European) conditions and policies differ from those in the United States (or elsewhere)?

**CRP 417 Industrial Restructuring: Implications for State and Local Policy (also CRP 517)**

Fall. 4 credits.

A basic introduction to new issues arising from the way in which national and international economic shifts are affecting diverse United States cities. The course will focus on intra-industry restructuring, the location of economic activities, and state and local economic policy. Cases will be drawn from a variety of industries and national situations, with specific attention to New York and other Northeastern locations.

**CRP 418 Local Government Restructuring in New York (also CRP 618)**

Spring. 4 credits. Optional Grade. Prerequisite: CRP 412/612.

Students will undertake research requested by New York State clients—statewide associations of local government, state agencies and the public sector union, to analyze and identify alternative approaches to restructuring local government service delivery. The course will begin with an overview of qualitative research methods: case studies, interviews techniques, and surveys. The class will work as team with specific statewide client organizations to complete a project. Formal presentation and web page design will be part of the final product.

**CRP 442 The Sociology of Science**

For description, see S&TS 442.

**CRP 448 Social Policy and Social Welfare (also CRP 548)**

Spring. 4 credits.

This course addresses conceptual issues underlying social policy and the provision of social welfare and analyzes how different positions are reflected in a set of current social welfare controversies. The first part of the course will introduce principles that guide the development of social policy—fairness and justice. Various conceptions of society will be examined with reference to their influence on the nature and extent of social welfare provision, comparing the U.S. with other industrialized countries. The second part of the course will examine the relationship between economic change and social policy in the United States. A series of current social policy controversies (such as AIDS, homelessness, abortion, and welfare) will illustrate how values and assumptions about state, economy, and society affect the forms of social welfare provisions and how they are administered.

**CRP 451 Environmental Law (also CRP 551)**

Fall. 4 credits.

An introduction to how the legal system handles environmental problems. Study of federal statutes such as the National Environmental Policy Act, the Clean Air Act, and the Clean Water Act, and of important judicial decisions. This course will be hands-on and will involve a review of federal environmental statutes and regulations. Discussion of environmental law topics from a policy management perspective. This course is designed for undergraduate and graduate students interested in urban issues, planning, natural resources, government, environmental engineering, law, business, architecture, landscape architecture, etc. Course assignments for graduate students will differ in some aspects from those for undergraduates.

**CRP 453 Environmental Aspects of International Planning (also CRP 663)**

Fall. 3 credits.

This seminar will examine the roles of diverse environmental actors—international organizations, national bureaucracies, scientific communities, and non-governmental organizations in shaping environmental debates and designing conservation and remediation programs in the Third World. Open to advanced undergraduate and graduate students in planning, environmental studies, and related social and natural sciences.

**CRP 457 Community Service Fieldwork**

Fall or spring. 4 credits variable. Permission is granted by instructor.

Undergraduate students work under the direction of a faculty member in the CRP department on a project that assists a public or nonprofit organization. Projects will involve urban and regional issues as defined by a "client" and agreed upon by the faculty member.

**CRP 461 Methods of Archival Research**

Spring. 3 credits.

Examination of methods of using archival materials, including how to use the Cornell archives and regional history collection, for research in the history of architecture, historic preservation, and history of urban development.

**CRP 474 Third World Urbanization (also CRP 674)**

Spring. 4 credits. S-U grades optional. Colonialism and economic globalization have profoundly affected urban Third World societies and landscapes—often by relegating everyday urban life to the margins and shrouding it in illegitimacy. This course explores social, political and spatial dimensions of these processes. We look at rural-urban dynamics and their implications for the structure of urban space and for concepts of state and citizenship, we assess the position of Third World Cities in the global economy and implications for employment. Special attention is given to women workers, and urban environment. The second half of the course focuses on responses to these massive changes: violence and repression, social movements, and transmigration.

**CRP 477 Issues in African Development (also CRP 677)**

Fall and spring. 1-4 credits. Limited to undergraduate students in the Urban and Regional Studies Program. S-U grades only.

Research, reading, and/or writing project in which a student and faculty member choose a topic related to urban and regional studies.

**CRP 491 Rome Wasn't Built in a Day**

Spring. 3 credits. Letter grade.

In this electronic course, students will learn about how the form and spatial structure of the city of Rome has evolved through time. Using the interactive CD-ROM "Rome's of Rome" as a digital text, the course will engage participants in the investigations of urban design in Rome both as a case study and as a vehicle for exploring concepts applicable to many contemporary cities worldwide. The majority of the course focuses on the intersection between historical studies of urban space, architectural geography, urban landscape formation and the design of cities. Lectures, research, readings and exercises will be developed using the Layers of Rome CD, web searches, digital networking and various interactive learning technologies geared toward urban analysis and visual design media.

**CRP 492 Honors Thesis Research**

Fall or spring. 4 credits. Limited to Urban and Regional Studies Program majors who have been selected as honor students by the department faculty.

Each selected student works with his or her thesis adviser.

**CRP 493 Honors Thesis Writing**

Fall or spring. 4 credits. Prerequisite: completion of CRP 492.

Each selected student works with his or her thesis adviser.

**CRP 497 Supervised Readings**

Fall or spring. Variable 4 credits. Limited to upperclass undergraduate. Prerequisite: permission of instructor.

**Graduate Courses and Seminars**

Courses numbered from 500 to 599 and 600 to 699 are generally considered introductory or first-year courses; those numbered from 700 to 799 and 800 to 899 are generally considered more advanced. Upperclass gradu-
ate courses are numbered from 300 to 499. (Undergraduate students with the necessary prerequisites and permission of the instructor may enroll in courses numbered 500 and above.)

CRP 504 Urban Economics (also CRP 404)
Spring. 4 credits.
For description, see CRP 404.

CRP 508 Introduction to Urban Geographic Information Systems (GIS) (also CRP 409)
Spring. 4 credits. Letter grade.
For description, see CRP 408.

CRP 512 Public and Spatial Economics for Planners
Fall. 3 credits. Letter grade. No prior knowledge of economics.
Covers basic microeconomic theory and some topics in macroeconomics. What distinguishes it from foundation courses in economics is that the context of every topic is both spatial and public. The concept of space is central to city and regional planning. The perspective of the public and nonprofit sectors is the same as that of city and regional planning. Both space and the public-nonprofit sectors are peripheral to (or absent from) the usual graduate foundations courses in economics. The course will also cover the economic theory necessary to understand the many applications of economics presented in subsequent courses in city and regional planning.

CRP 513 Planning Practice and Urban Structure Seminar
Fall. 4 credits.
This introductory graduate seminar has several objectives. It: (1) exposes students to the theory and history of (1) planning, administration, and related public intervention in urban affairs, (2) the growth and development of cities, and (3) the built environment. Topics are analyzed from the perspective of political economy. Students improve their understanding of the planning process and of the urban application of the social sciences, get practice in writing short papers, and explore one research topic in depth.

CRP 517 Industrial Restructuring: Implications for State and Local Policy (also CRP 417)
Fall. 4 credits. For description, see CRP 417.

CRP 518 Politics of Community Development (also CRP 318)
Spring. 3 credits. Letter grade.
For description, see CRP 318.

CRP 519 Urban Theory and Spatial Development
Spring. 3 credits. Letter grade.
This course complements theories of urbanization and spatial development with an introduction to issues of governance within urban regions in the U.S. and Western Europe. The course will discuss economic and political institutions and actors as they shape the spatial form of cities. The work of authors such as Patsy Healey, Margit Mayer, David Harvey, Mike Davis, and Susan Fainstein will be discussed.

CRP 520 Statistical and Mathematical Concepts for Planning
Fall. 3 or 4 credits.
An introduction to statistical and mathematical concepts and methods of importance in planning and policy analysis. Topics will include matrix algebra, probability, sampling, estimation, and regression as well as the use of a microcomputer statistical package.

CRP 521 Mathematical Foundation for Planning Analysis
Fall. 1 credit. S-U grades only. Meets for two hours, once each week, for approximately half the semester.
Review of mathematical foundations for planning analysis. Topics include probability, statistics, mathematical functions, and matrix algebra. Intended for students with prior course work as a refresher course in preparation for higher-level courses in planning analysis. Departmental permission required.

CRP 525 Introductory Methods of Planning Analysis
Fall. 4 credits. Letter grade.
A course on quantitative and qualitative analysis of neighborhoods, cities, and regions. Focus is on data from places in the USA, but tools are applicable throughout the world, descriptive and inferential statistics; mapping, and observation. Required lab exposes students to essential microcomputer applications and builds skills in writing and analysis.

CRP 529 Mathematics for Planners
Fall. 4 credits. 5-S grades optional.
The course covers basic mathematical concepts and techniques—with an emphasis on calculus—needed by the student who wishes to take intermediate-level courses in economics, urban and regional analysis, quantitative methods for the social sciences and policy analysis. Topics include: matrix algebra, set theory, functions, differentiation, and integration.

CRP 532 Real Estate Development Process
Fall. 3 credits.
Examination of various forms of development as well as the role of major participants in the processes. Review issues in residential, retail, industrial, office, and low-income housing projects. Some guest speakers and case studies.

CRP 533 Real Estate Marketing and Management
Spring. 3 credits.
The course focuses on the tenant or user as the basic source of the value of real estate. Students study the characteristics and needs of tenants, and how the ownership and management of buildings respond to these needs. Office buildings are considered in detail while key elements common to the operation and marketing of all types of property are reviewed. Topics include examination of tenant types, factors creating preferred locations, building services and operations, negotiation of lease agreements, marketing campaigns, and governmental regulations. Guest speakers and case studies.

CRP 537 Real Estate Seminar Series
Fall and spring. 1/2 credit per term. S-U grades only. Restricted to MPS/RE students.
A one-credit course designed to bring students weekly into direct contact with real estate professionals mainly through the use of videoconferences originating from locations around the world.

CRP 541 The Politics of Technical Decisions I (also GOVT 628 and S&TS 415)
Spring. 4 credits.
For description, see S&TS 415.

CRP 545 Introduction to Public Policy Analysis and Management (also CRP 321)
For description, see CRP 321.

CRP 546 Introduction to Community and Environmental Dispute Resolution
Fall. 3 credits.
This course will explore the theories and techniques of dispute resolution as they apply to community, environmental, and related public policy disputes. Analysis will complement skill-building. Issues of power, participation, and strategy are central to our examinations of negotiation and mediation practice.

CRP 547 American Indians, Planners, and Public Policy (also CRP 363, LA 363, and LA 547)
Spring. 3 credits.
For description, see LA 363.

CRP 548 Social Policy and Social Welfare (also CRP 448)
Spring. 4 credits.
For description, see CRP 448.

CRP 549 Ethics and Practical Judgment in Planning
Spring. 3 credits.
An introduction to problems of practical judgment and ethics as they arise in planning and public-serving professional practice. Issues such as consent, interests, deliberation, and legitimacy are central concerns.

CRP 551 Environmental Law (also CRP 451)
Fall. 4 credits.
For description, see CRP 451.

CRP 552 Urban Land-Use Planning I
Fall. 3 credits.
Survey, analyses, and plan-making techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 553 Urban Land-Use Planning II
Spring. 3 credits. Prerequisite: CRP 552 or permission of instructor.
Survey, plans, and planning techniques for guiding physical development of urban areas; location requirements, space needs, and interrelations of land uses. Emphasis on residential, commercial, and industrial activities and community facilities; housing and neighborhood conditions. Lectures, seminars, and field exercises.

CRP 555 Urban Systems Studio (also LA 701)
Fall. 5 credits. Prerequisite: permission of instructor.
Application of urban design and town planning techniques to specific contemporary problems of city environments. Issues of urbanism are investigated and applied to physical design interventions involving the street, square, block, garden, and park systems. Topics covered in the studio include urban land-use development, spatial systems and aesthetics, and public and private implementation of urban-design plans.
Computer modeling and digital design media will be introduced as tools for urban design. This is a specially arranged collaborative studio with the Landscape Architecture Program.

CRP 557 City Planning Design Studio
Spring. 4 credits. Prerequisite: previous design courses or permission of instructor. A series of individual and team small area design projects at district, neighborhood, and project scale. The course objective is to develop an understanding of the spatial issues, knowledge, and skills needed to design for the functional, aesthetic, social, and cost needs of urban communities. Studio projects, field trips, and reading.

CRP 558 City and Regional Planning Workshop
Fall and spring. 4 credits. S-U grades only. Students work on urban issues, such as housing, traffic and parking, economic development, zoning, and related planning issues with public or non-profit organizations in New York State. Projects are undertaken on a community-service basis for "clients" who specifically request planning assistance. Students work individually or in teams.

CRP 560 Documentation for Preservation (also ARCH 586)
Fall or spring. 3 credits. Methods of identifying, recording, collecting, processing, and analyzing information dealing with historic and architecturally significant structures, sites, and objects.

CRP 561 Historic Preservation Planning Workshop: Surveys and Analyses (also ARCH 588)
Fall or spring. 4 credits. Techniques for the preparation of surveys of historic structures and districts; identification of American architectural styles, focusing on upstate New York, and explorations of local historical resources, funding sources, and organizational structures. Lectures and training sessions. Emphasis on fieldwork with individuals and community organizations.

CRP 562 Perspectives on Preservation (also ARCH 585)
Fall. 3 credits. An introductory course for preservationists. A survey of the historical development of preservation activity in Europe and America leading to a contemporary comparative overview. Field trips to notable sites and districts.

CRP 563 Problems in Contemporary Preservation Practice (also ARCH 584)
Spring. Variable credit. A review and critique of ongoing preservation projects and an investigation of areas of expertise currently being developed. Presented by staff and guest lecturers.

CRP 564 Building Materials Conservation (also ARCH 587)
Spring. 3 credits. Open to juniors, seniors, and graduate students. A survey of the development of building materials in the United States, chiefly during the nineteenth and early twentieth centuries, and a review of the measures that might be taken to conserve them.

CRP 565 Fieldwork or Workshop in History and Preservation
Fall or spring. Variable credit. Work on applied problems in history and preservation planning in a field or laboratory setting or both.

CRP 567 Measured Drawing (also ARCH 583)
Fall. 3 credits. For undergraduate architecture students and graduate students in history and preservation. Prerequisite: permission of instructor. Combines study of architectural drawing as historical documents with exercises in preparing measured drawings of small buildings. Presents the basic techniques of studying, sketching, and measuring a building and the preparation of a finished drawing for publication.

CRP 569 Archaeology on Preservation Planning and Site Design (also LA 569)
Spring. 3 credits. Offered alternate years. For description, see LA 569.

CRP 571 Principles of Spatial Design and Aesthetics (also CRP 381 and LA 480)
Not offered 1999-2000. For description, see CRP 381.

CRP 605 Urban Public Finance
Fall. 4 credits. Letter grade. Prerequisite: prior exposure to microeconomics. An overview of public economics theory, particularly those aspects of the theory that are central to urban public finance. In part two, the unusual three-tiered fiscal system of the United States is described along with the evolving economic role of large municipal governments. Part three of the course presents the public finance theory of taxation. Major taxes and other revenue sources utilized by large municipalities are described and analyzed. Part four is the heart of the matter, namely the measurement and analysis of the fiscal condition of cities.

CRP 607 GIS Applications Workshop
Spring. 3 credits. Letter grade. Prerequisites: a basic GIS course and knowledge of ArcView or ArcInfo. Students with exceptional programming and web design skills can take the class with the prior permission of instructor. This course is a more advanced GIS class that focuses upon GIS applications and projects for one or more clients. Clients may be out-of-state and travel for meetings and/or site visits for data collection may be required. Contact the instructor directly to learn about project options for the current semester.

CRP 612 Devolution and Public Sector Restructuring (also CRP 412)
Fall. 3 credits. S-U grades optional. For description, see CRP 412.

CRP 614 Gender and International Development (also WOMNS 614)
Fall. 3 credits. This course has four main objectives. First, to provide an analysis of the location of women in processes of development and to understand the centrality of gender in each case. Second, to examine the methodological and conceptual frameworks for the analysis, including an understanding of gender divisions and their interaction with other forms of inequality such as class, race, and ethnicity. Third, to reflect upon the linkages between the global economy and the gendered macro and micro processes of development. Fourth, to provide a basis for research, practical action, and policy formulation and for evaluating directions and strategies for social change.

CRP 616 Development and Change in the World Economy
Spring. 3 credits. Letter grade only. This course concentrates on the current dynamics of national and international development, the globalization of national economies, and the forces and trends that are shaping this process. Beginning with an analysis of economic restructuring taking place since the late 1960s, the emphasis is on the factors affecting the new international division of labor and production, the labor market, consumption, trade and finance, and the distribution of resources. This includes the analysis of processes through which the current neoliberal model is being built, such as trade liberalization, labor market flexibility, the erosion of nation states as economic units, and the formation of trade blocks and global institutions.

CRP 618 Local Government Restructuring in New York (also CRP 418)
Spring. 4 credits. S-U grades optional. Prerequisite: CRP 412/612. For description, see CRP 418.

CRP 621 Quantitative Techniques for Policy Analysis and Program Management
Fall. 4 credits. Selected analytical techniques used in the planning and evaluation of public policy and public investments are examined. Topics include simulation modeling, benefit-cost and cost-effectiveness analysis (including capital budgeting), and optimization strategies.

CRP 631 Local Economic Policy—Field Workshop
Fall. 4 credits. A group policy analysis exercise in an upstate New York city. Students do a combination of data analysis; interviews with labor, business, and public leaders; and problem papers addressed to current issues presented by a client group. Individual work is synthesized into a comprehensive report at the end of the semester.

CRP 632 Methods of Regional Science and Planning I
Spring. 4 credits variable. An introduction to some of the major methods and models used in regional science and planning. This course is half of a two-semester sequence (see CRP 731). Either course may be taken first. Both courses will cover topics related to the structure and assumptions of the modern regional model, and their applications in regional science and planning. Where appropriate, computer implementation will be considered. CRP 730 emphasizes statistical and econometric models.

CRP 633 Methods of Regional Science and Planning II
Fall. 4 credits. See CRP 632. CRP 633 will provide an introduction to deterministic methods and models such as input/output models, social accounting models, and optimization models.
The purpose of this course/workshop is twofold: (1) to provide students with research economic development strategies; and (2) to discuss meetings. The workshop sessions will include exercises in qualitative information gathering on economic development topics, use of the census in combination with geographic information systems for analysis and presentation, and shift-share analysis.

CRP 639.05 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World: Historical and Theoretical Perspective
Fall. 4 credits variable. Historical and conceptual background, and relevant case studies, for dealing with urban and regional development using production analysis with a focus on the Third World. Consequences of the organization of production for urban-rural and regional interaction will be emphasized. This historically oriented theoretical framework will be compared to location, central place, and interregional feedback theories.

CRP 639.06 Special Topic: Regional Development, Planning, and the Market, with Emphasis on the Third World: Current Policy Perspective
Spring. 4 credits variable. The course focuses on what the market can or cannot accomplish in terms of guiding economic industrial, and regional development. Points of view represented range from completely unrestricted market operations to proactive industrial development policies in market contexts. Lessons are drawn for Third World regional development policy drawn from the experience.

CRP 642 Critical Theory and the Micro-politics of Practice
Spring. 4 credits variable. Trying to "solve problems," planners and policy analysts set agendas, shape participation, and negotiate relations of power. This seminar explores theories illuminating the communicative micro-politics of their daily practice. We explore issues of power and discourse, practical judgment and deliberation, productive and reproductive aspects of prosaic, political speech and action in diverse practical settings.

CRP 653 Legal Aspects of Land-Use Planning
Spring. 3 credits. Offered alternate years. Survey of leading cases and legal concepts in land-use planning, with particular attention to zoning, subdivision control, condemnation, and growth-control issues.

CRP 655 Real Estate Project Workshop
Spring. 3 credits. Permission of instructor required. Students will be asked to undertake the preparation of reports analyzing various aspects of real estate activity. Individual and team working relationships will be required. A range of types of problems that may be encountered in the real estate field will be addressed, including project feasibility, marketing, planning and design, legal constraints and concerns, etc. Projects will focus on real world case studies and will require professional level reports suitable for oral and written presentations.

CRP 657 Real Estate Law
Fall. 3 credits. Letter grade. Examination of major legal concepts pertaining to acquisition, use, management, and transfer of real estate. Particular focus on important legal considerations pertaining to property rights, contracts, and public controls on the use of land. Consideration of important case law, statutory law, and rules and regulations. Discussion of current legal issues affecting real estate industry.

CRP 661 Historic Preservation Planning Workshop: Plans and Programs
Fall or spring. 1-4 credits. Prerequisite: CRP 561. Preparation of elements of historic preservation plans, designs, legislation, and special studies. Individual or group projects are selected by students. Fieldwork is emphasized.

CRP 662 Seminar in American Urban History (also CRP 361)
Spring. 3 credits. Prerequisite: permission of instructor. For description, see CRP 361.

CRP 663 Historic Preservation Law
Spring. 3 credits. Offered alternate years. Law of historic district and landmark designation, tools for preservation, and recent developments in state and federal historic preservation.

CRP 664 Economics and Financing of Neighborhood Conservation and Preservation
Spring. 3 credits. The economic and financial aspects of historic preservation and neighborhood conservation. Topics include public finance, selected issues in urban economics, real estate economics, and private financing of real estate projects.

CRP 665 Preservation Planning and Urban Change
Fall. 3 credits. An examination of fundamental planning concepts and issues as they relate to historic preservation. Neighborhood revitalization, federal housing programs, the role of public and private institutions, displacement, and other social issues are among the primary topics.

CRP 666 Pre-Industrial Cities and Towns of North American (also LA 666)
Fall. 3 credits. S-U grades optional. For description, see LA 666.

CRP 668.40 The History of Urban Form in America (also CRP 395.40)
Fall. 3 credits. For description, see CRP 395.40.

CRP 670 Regional Planning and Development in Developing Nations
Fall or spring. 4 credits. Prerequisite: second-year graduate standing. Extensive case studies of development planning are analyzed. Focus is on the political economy of the process of regional development through urbanization and in particular on the concepts of equity and efficiency, external economies, export linkages, and internal self-sufficiency and integration. Resource development, national integration, human development, and migration problems are discussed.

CRP 671 Seminar in International Planning
Spring. 1 credit. S-U grades only. The international planning lecture series sponsors lectures by visiting scholars or professionals in the field of international development and planning. The only formal requirement for the course is a brief evaluation of the series at the end of the semester.

CRP 672 International Institutions
Fall. 3 credits. Letter grade. Studying major international organizations of the post-WWII period like the UN, ILO, GATT-WTO, World Bank and IMF, Breton Woods. We examine how they functioned during and after the globalization international economy. We explore weaknesses in global governance and in the international financial system, and we assess current debates and proposals for reform.

CRP 674 Third World Urbanization (also CRP 474)
Spring. 3 credits. For description, see CRP 474.

CRP 675 Seminar in Project Planning in Developing Countries
Fall. 4 credits. An examination of the problems and issues involved in preparing project proposals for presentation to funding agencies. Topics include technical design, financial feasibility, social impact analysis, and policy relevance, as well as techniques for effective presentation of proposals. The course is organized as seminar-workshop providing both an analysis of the critical elements of effective proposals and an opportunity to use those elements in the preparation of proposals. A multidisciplinary perspective is emphasized.

CRP 677 Issues in African Development (also CRP 477)
Fall or spring. 1 credit. S-U grades only. For description, see CRP 477.

CRP 683 Environmental Aspects of International Planning (also CRP 453)
Fall. 3 credits. For description, see CRP 453.

CRP 703 Contemporary Theories of Regional Development
Fall or spring. 4 credits. An advanced seminar, mainly for doctoral candidates, to review recent contributions to the literature. After a fast-paced review of basic material in political economy, students will read and present summaries of works by major contemporary theorists. A final paper is required.

CRP 711 Planning and Organization Theory
Fall or spring. 4 credits. Advanced seminar on theoretical models of planning, organization, and urban structure. The first part of the course, which may be taken separately for one credit, provides an overview of administrative issues affecting planning. Next, attention is given to theories of organizational structure, growth, and change. Final sessions are devoted to the influence of urban and regional structures as context. Critical reading, short papers, and seminar discussions characterize the course.
CRP 732  Methods of Regional Science and Planning III  
Fall or spring. 3 credits. Prerequisites: CRP 632 and CRP 633 or permission of the instructor. 
An introduction to the design and implementation of Social Accounting Matrix and Computable General Equilibrium models and their uses, primarily in a regional context, for planning and policy analysis. The use of econometric methods and CGE models will be discussed. The GAMS software package will be used in related computer exercises.

CRP 733  Seminar in Regional Models  
Fall or spring. 3 credits. S-U grades optional. Prerequisites: sufficient methodological background to read the current literature. 
A review of the classical and important current literature on socioeconomic and/or environmental models of subnational regions. Each student will be expected to identify his or her own area of interest and critically review and report to the class on important papers in that area.

CRP 790  Professional Planning Colloquium I  
Fall. 1 credit. 
Visiting lecturers address problems and opportunities in the practice of planning. Topical focus to be announced. The only formal requirements for the course are attendance and a brief evaluation at the semester’s end.

CRP 791  Master’s Thesis in Regional Science  
Fall or spring. 12 credits variable. S-U grades optional. Hours to be arranged. Regional Science faculty.

CRP 792  Master’s Thesis, Project, or Research Paper  
Fall or spring. 10 credits variable. S-U grades optional.

CRP 794  Planning Internships  
Fall, spring, or summer. 1-12 credits variable. 
Combines a professional planning internship in a metropolitan area with academic study to provide experience and understanding of the planner’s role in formulating and implementing plans and policies. Selected internships in federal or state agencies, legislative offices, and comparable settings include development of research, analysis, and other technical skills. Weekly seminars draw on student field experiences, assigned readings, and guest speakers to examine current issues of federal, urban, and regional policy from the perspective of planning practice.

CRP 795  Master’s Thesis in Preservation Planning  
Fall or spring. 1-6 credits variable.

CRP 796  Professional Writing and Publishing (Colloquium)  
Fall or spring. 2 credits. S-U grades only. Individual and group projects culminating in the production of a professional journal.

CRP 797  Supervised Readings  
Fall or spring. 4 credits variable. Limited to graduate students. Prerequisites: permission of instructor.

CRP 798  Colloquium in Regional Science, Planning, and Policy Analysis  
Fall or spring. 1 credit. 
Presentation and discussion of current research by faculty, visitors, and graduate students working on their dissertations. Typically, the colloquium will meet once a week during the semester.

CRP 800  Advanced Seminar in Urban and Regional Theory I  
Fall. 3 credits. 
The theory of urban spatial organization. Economic, technological, and social factors leading to urbanization and various kinds of spatial organizations are explored. Major theoretical contributions to the understanding of intraregional and intraurban distribution of population and economic activity are reviewed.

CRP 801  Advanced Seminar in Urban and Regional Theory II  
Spring. 3 credits. 
A continuation of City and Regional Planning 800, concentrating on recent developments.

CRP 810  Advanced Planning Theory  
Fall. 3 credits. 
A survey of the works of scholars who have contributed to current thinking about planning theory. Alternative assumptions concerning models of man and theoretical concepts concerning the nature of planning today are considered.

CRP 830  Seminar in Regional Science, Planning, and Policy Analysis  
Fall or spring. 4 credits variable. S-U grades only. 
This seminar will provide an opportunity to review some of the literature and current research in regional science, planning, and policy analysis. Specific topics covered will vary each year. Empirical and analytical research will be emphasized. Students will be expected to prepare and present a research paper during the semester on some aspect of the topics under review.

CRP 890  Planning Research Seminar I  
Fall or spring. 2 credits. 
Intended for doctoral candidates in city and regional planning; other students welcome. Presentation and discussion of current problem areas and research by advanced doctoral students, faculty members, and visitors.

CRP 892  Doctoral Dissertation  
Fall or spring. 1-2 credits variable. 
Special Topic Courses  
Fall or spring. Variable credit. Typical topics are:

CRP 609  Urban and Regional Theory  
CRP 619  Planning Theory and Politics  
CRP 620  Quantitative Methods and Analysis  
CRP 639  Regional Development Planning  
CRP 649  Social-Policy Planning  
CRP 659  Urban Development Planning  
CRP 669  History and Preservation  
CRP 679  Planning and Developing Regions  
CRP 689  Environmental Planning  
CRP 699  Regional Science  
CRP 719  Planning Theory and Politics

LANDSCAPE ARCHITECTURE  
Landscape Architecture at Cornell is jointly sponsored by the College of Agriculture and Life Sciences and the College of Architecture, Art, and Planning.

The Program  

Landscape Architecture offers a three-year Master of Landscape Architecture License Qualifying Degree, administered through the Graduate School, for those who have a four-year undergraduate degree in another field. The major is composed of several parts: core courses related to professional education in Landscape Architecture, a concentration in a subject related to the core courses, and free electives. Requirements of the three-year M.L.A. curriculum include 90 credits, and 6 resident units, satisfactory completion of the core curriculum courses, and a thesis or a capstone studio.

The department also offers a two-year Master of Landscape Architecture Advanced Degree Program, administered through the Graduate School, for those with accredited degrees in Landscape Architecture or Architecture. The two-year program entails core courses in the discipline and the development of concentrations in subject matter areas such as landscape history and theory, landscape ecology and urban horticulture, the cultural landscape, site landscape and art, or urban design.

Both of these degrees are accredited by the Landscape Architecture Accreditation Board (LAAB) of the American Society of Landscape Architects.

Dual Degree Options  
Graduate students can earn a Master of Landscape Architecture and a Master of Science (Horticulture) or a Master of City and Regional Planning simultaneously. Students need to be accepted into both fields of study to engage in a dual degree program and must fulfill requirements of both fields of study. Thesis requirements are generally integrated for dual degrees.

Course Information  
*LA 141  Grounding in Landscape Architecture  
Fall. 4 credits.

*LA 142  Grounding in Landscape Architecture  
Spring. 4 credits.

*LA 201  Medium of the Landscape  
Fall. 5 credits.

*LA 202  Medium of the Landscape  
Spring. 5 credits.

*[LA 261  Urban Archaeology (also CRP 261)  
Fall. 3 credits. Not offered 1999-2000.]

*[LA 262  Laboratory in Landscape Archaeology (also ARKEO 262)  
Spring. 3 credits. Not offered 1999-2000.]

*LA 282  The American Landscape  
Fall. 3 credits.
*LA 292 Creating a Second Nature  
Spring. 3 credits.

*LA 301 Integrating Theory and Practice I  
Fall. 5 credits.

*LA 302 Community Design Studio: Integrating Theory and Practice  
Spring. 5 credits.

*LA 315 Site Engineering I  
Spring. 2 credits.

*LA 316 Site Engineering II  
Fall. 2 credits.

*LA 317 Site Construction I  
Fall. 2 credits. Weeks 1–7.

*LA 318 Site Construction II  
Spring. 2 credits. Weeks 8–15.

*LA 360 Pre-Industrial Cities and Towns of North America (also CRP 360, CRP 666 and LA 666)  
Fall. 3 credits. Offered alternate years 1999–00.

*LA 363 American Indians, Planners, and Public Policy (also CRP 363/547 and LA 547)  
Spring. 3 credits.

*LA 402 Urban Design in Virtual Space  
Spring. 5 credits.

*LA 410 Computer Applications in Landscape Architecture  
Fall or spring. 3 credits.

*LA 412 Professional Practice  
Spring. 1 credit.

*LA 480 Principles of Spatial Design and Aesthetics (also CRP 481/581)  
Fall. 3 credits. Not offered 1999–2000.

*LA 482 Landscape Preservation: Theory & Practice  
Spring. 3 credits.

*LA 483 Design Criticism  
Fall. 3 credits.

*LA 486 Community Design Workshop  
Spring. 3 credits.

*LA 487 Experiential Community Design  
Fall. 3 credits.

*LA 490 Rome Wasn’t Built in a Day  
Spring. 3 credits.

*LA 491 Design and Plant Establishment in the Urban Environment (also HORT 491)  
Fall. 3 credits.

*LA 494 Special Topics in Landscape Architecture  
Fall or spring. 1–3 credits.

LANAR 497 Individual Study in Landscape Architecture  
Spring. 1–5 credits; may be repeated for credit. S-U grades optional. L. J. Mirin. Work on special topics by individuals or small groups.

*LA 498 Undergraduate Teaching  
Fall or spring. 1–2 credits.

*LA 501 Composition and Theory  
Fall. 5 credits.

*LA 502 Composition and Theory  
Spring. 5 credits.

*LA 505 Graphic Communication I  
Fall. 3 credits.

*LA 506 Graphic Communication II  

LANAR 524 History of European Landscape Architecture  
Fall. 3 credits. L. Mirin. A survey from classical times to the present, emphasizing design principles and techniques that have established the landscape architecture tradition in Europe. Particular reference is made to the manner in which gardens, streets, plazas, parks, and new towns reflect in their built form, a range of responses to demands of culture, economics, technology, security, the law, and ecology.

LANAR 525 History of American Landscape Architecture  
Spring. 3 credits. L. Mirin. Landscape architecture in the United States from Jefferson to the present is examined as a unique expression of the American experience. Influences exerted by the physical landscape, the frontier and utopian spirit, and the cultural assumptions of democracy and capitalism are traced as they affect the forms of urban parks, private and corporate estates, public housing, transportation planning, national parks, and other open-space designs.

*LA 545 The Parks and Fora of Imperial Rome  
Spring. 3 credits.

*LA 569 Archaeology in Preservation Planning and Site Design (also CRP 569)  

*LA 590 Theory Seminar  
Spring. 3 credits.

*LA 598 Graduate Teaching  
Fall or spring. 1–2 credits.

*LA 601 Integrating Theory and Practice I  
Fall. 5 credits. Limited to graduate students.

*LA 602 Integrating Theory and Practice II  
Spring. 5 credits. Limited to graduate students.

*LA 615 Site Engineering I  
Spring. 2 credits.

*LA 616 Site Engineering II  
Fall. 2 credits. Weeks 8–15.

*LA 617 Site Construction I  
Fall. 2 credits. Weeks 1–7.

*LA 618 Site Construction II  
Spring. 2 credits. Weeks 8–15.

*LA 619 Advanced Site Grading  

*LA 666 Pre-Industrial Cities and Towns of North America (also CRP 666)  
Fall. 3 credits. Offered alternate years.

*LA 680 Graduate Seminar in Landscape Architecture  
Fall or spring. 1–3 credits.

*LA 694 Special Topics in Landscape Architecture  
Fall or spring. 1–3 credits.

*LA 701 Urban Design and Planning: Designing Cities in the Electronic Age (also CRP 555)  
Fall. 5 credits.

*LA 702 Advanced Design Studio  
Spring. 5 credits.

*LA 800 Master’s Thesis in Landscape Architecture  
Fall or spring. 9 credits.

*Offered through the College of Agriculture and Life Sciences.

FACULTY ROSTER

Azis, Iwan, Ph.D., Cornell U. Visiting Prof., City and Regional Planning.

Baugher, Sherene, Ph.D., SUNY at Stony Brook, Visiting Prof., City and Regional Planning.

Beneria, Lourdes, Ph.D., Columbia U. Prof., City and Regional Planning.

Booth, Richard S., J.D., George Washington U. Assoc. Prof., City and Regional Planning.

Briggs, Laura, M. Arch, Columbia U. Asst. Prof., Architecture.

Chi, Lily H., M. Phil., Cambridge U., Asst. Prof., Architecture.

Christopher, Susan M., Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.

Glavel, Pierre, Ph.D., Cornell U. Prof., City and Regional Planning.

Crump, Ralph W., B.Arch., Cornell U. Prof. Emeritus, Architecture.

Daly, Norman, M.A., Ohio State U. Prof. Emeritus, Architecture.

Drennan, Matthew P., Ph.D., New York University. Prof., City and Regional Planning.

Esnard, Ann-Margaret, Ph.D., U. of Massachusetts-Amherst. Prof., City and Regional Planning.

Forester, John, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning.

Goldsmith, William W., Ph.D., Cornell U. Prof., City and Regional Planning.

Greenberg, Donald P., Ph.D., Cornell U. Prof., Architecture.

Hancock, Thomas, Ph.D., U. of North Carolina. Asst. Prof., City and Regional Planning.

Hodgden, Lee F., M.Arch, Massachusetts Inst. of Technology. Prof. Emeritus, Architecture
Hubbell, Kent L., M.F.A.S., Yale. Prof., Architecture
Isard, Walter, Ph.D., Harvard U. Prof., City and Regional Planning
Kia, Alexander, M.R.P., Cornell U. Prof. Emeritus, Architecture
Kord, Victor, M.F.A., Yale U. Prof., Art
Lewis, David B., Ph.D., Cornell U. Assoc. Prof., City and Regional Planning
Lobo, Jose, Ph.D., Cornell U. Prof., City and Regional Planning
Locy, Jean N., M.F.A., Ohio U. Prof., Art
Lynch, Barbara, Ph.D., Cornell U. Visiting Assoc. Prof., City and Regional Planning
Lyons, Marcia, M.F.A., School of Visual Arts. Visiting Asst. Prof., Art
MacDougall, Bonnie G., Ph.D, Cornell U. Assoc. Prof., Architecture
McGrain, Todd V., MFA, U. of Wisconsin. Asst. Prof., Art
Meyers, Elisabeth H., M.F.A., U. of Texas. Assoc. Prof., Art
Mikus, Eleanor, M.A., U. of Denver. Prof. Emeritus, Art
Miller, John C., M.Arch., Cornell U. Prof., Architecture
Ochshorn, Jonathan, M. Urban Design, City College of New York, Assoc. Prof., Architecture
Olpadwala, Porus, Ph.D., Cornell U. Assoc. Prof., City and Regional Planning
Otto, Christian F., Ph.D., Columbia U. Prof., Architecture
Ovaska, Arthur, M.Arch., Cornell U. Assoc. Prof., Architecture
Parsons, Kermit C., M.R.P., Cornell U. Prof., City and Regional Planning
Pearman, Charles W., B.Arch., U. of Michigan. Prof., Architecture
Pendall, Rolf, Ph.D., U. of California at Berkeley. Prof., City and Regional Planning
Perlis, Barry A., M.F.A., Ohio U., Assoc. Prof., Art
Poleskie, Stephen F., B.S., Wilkes Coll. Prof., Art
Reps, John W., M.R.P., Cornell U. Prof. Emeritus, City and Regional Planning
Richardson, Henry W., M.R.P., Cornell U. Prof., Architecture
Saltzman, Sid, Ph.D., Cornell U. Prof., City and Regional Planning
Saul, Francis W., M.S., Harvard U. Assoc. Prof. Emeritus, Architecture
Schack, Mario L., M.Arch., Harvard U. Arthur L. and Isabel B. Wiesenberger Prof., Architecture
Shaw, John P., M.Arch., Massachusetts Inst. of Technology. Prof. Emeritus, Architecture
Simon, Andrea, B.Arch., Cornell U. Assoc. Prof., Architecture
Singh, Arnold, Prof. Emeritus, Art
Squier, Jack L., M.F.A., Cornell U. Prof., Art
Stein, Stuart W., M.C.P., Massachusetts Inst. of Technology. Prof. Emeritus, City and Regional Planning
Taft, W. Stanley, M.F.A., California College of Arts and Crafts. Assoc. Prof., Art
DIVISION OF BIOLOGICAL SCIENCES

The biology major provides a unified curriculum for undergraduates enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. Courses in biological sciences are integral to many disciplines and are basic requirements in many schools and colleges at Cornell. Graduate study in the biological sciences is administered by more than a dozen specialized fields within the Graduate School, as described in the Announcement of the Graduate School.

ORGANIZATION

Many different departments participate in the biology major.

Student services are provided by the Office of Undergraduate Biology, which includes the Behman Biology Center. Both are located in Stimson Hall, where academic advice, information on biological sciences course offerings, other important information, and counseling are available for undergraduates. The Office of Undergraduate Biology also follows the progress of biology majors and works closely with faculty advisors. Additional services and resources of the Biology Center include academic program planning, tutoring, lecture tapes, examination files, and information on undergraduate research opportunities. The center has comfortable areas for studying and relaxing.

The Shoals Marine Laboratory, a cooperative venture with the University of New Hampshire, is located on Appledore Island in the Gulf of Maine. Its base office in Stimson Hall provides advising and career counseling for students interested in the marine sciences and administers the SEA Semester program for Cornell students pursuing studies at Woods Hole or aboard the schooner Westward or brigantine Cornith Cramer.

DISTRIBUTION REQUIREMENT

In the College of Agriculture and Life Sciences, the biological sciences distribution requirement (Group B) is for a minimum of 9 credits, including at least 6 credits of introductory biology satisfied by Biological Sciences 109-110, 105-106, or 101 and 103 plus 102 and 104, or 107-108 or any combination of the first term of one sequence and the second term of another. Advanced placement in biology with a score of 4 or 5 (6 or 8 credits, respectively) satisfies the distribution requirement except BIOG 200 (unless permission is obtained), BIOG 209, or BIOSM 367. The following courses are especially suitable for the distribution requirement because they have no prerequisites: BIO G 101-104, 105-106, 107-108, 109-110, 170, 202, 207; BIOBM 135, 246, 275, BIOGD 184; BIOM 192, BIOAP 212, BIOL 240, 241. Note: Methods courses in the natural sciences can be used toward the distribution requirement because of variation in presentation and possible fulfillment of the biological sciences distribution requirement except BIOG 200 (unless permission is obtained), BIOG 209, or BIOSM 367.

USE OF ANIMALS IN THE BIOLOGICAL SCIENCES CURRICULUM: CORNELL UNIVERSITY

Students wishing to enroll in biology ("BIO") courses should know and understand the following criteria relative to the use of animals in the teaching program, as passed by the faculty of the Division of Biological Sciences in 1986, and reaffirmed in 1997:

1. "Live animals will be used for teaching in certain courses in the biological sciences. Some animals will require humane euthanasia after they have been used for teaching."
2. Courses bearing the "BIO" description conform to the rules for the care of such animals as outlined in Guiding
Principles in the Care and Use of Animals (as approved by the Council of the American Physiological Society), the Guide for the Care and Use of Laboratory Animals. (DHHEW publication 86–23, revised 1996; see p. 14, Courses of Study), the Animal Welfare Act, and the New York State Public Health Law. Within these regulations, and in keeping with the principle of Academic Freedom of the Faculty, the use of animals to aid in teaching any biological sciences discipline is at the discretion of the professor in charge.

3. Each course, as well as research projects, in which animals are used receives a formal review annual by the Cornell University Institutional Animal Care and Use Committee (IACUC).

4. Any concerns regarding the use of live animals in teaching should be addressed first to the faculty member responsible for that course. He or she is required to be in compliance with all applicable regulations and guidelines. Alternatively, students may choose to address the concern to the director of the Cornell Center for Research Animal Resources, Dr. Fred Quimby, at 253–3520. The director may initiate discussion with the faculty member responsible for a particular course without involving the student if he or she would prefer to remain anonymous.

5. Enrollees in those courses in the biological sciences in which animal use is a component may, at the professor’s discretion, be asked to sign copies of this statement (USE OF ANIMALS...) at the first meeting of the course.

ADVANCED PLACEMENT

For information on credit for advanced placement in Biological Sciences, please see the section on Advanced Placement in the front of this publication.

THE MAJOR

The major of biological sciences is available to students enrolled in either the College of Agriculture and Life Sciences or the College of Arts and Sciences. The undergraduate program is coordinated for students in both colleges through the Office of Undergraduate Biology, where students submit their applications to the major and obtain biology faculty advisers.

During the second semester of the sophomore year, all students who intend to major in biological sciences must apply for acceptance into the major with the Office of Undergraduate Biology, in 200 Stimson Hall. Students in the College of Agriculture and Life Sciences who were admitted directly to the major complete the application process to declare a program of study and to assure satisfactory progress toward completion of the major. Acceptance into the major requires completion of the course sequences in introductory biology, chemistry, and mathematics (see requirements 1–3 below), plus one semester of organic chemistry lectures. In addition, a 2.75 Cornell cumulative grade-point average is required for final acceptance into the major except for those students admitted directly to the major as freshmen (College of Agriculture and Life Sciences students only) or as transfers. Students in the process of completing these prerequisites for admission to the major may be accepted on an experimental basis. Final acceptance into the major is required for graduation with a biological sciences major. It is the student’s responsibility to assure that final acceptance has been granted.

Whenever possible, students should include the introductory biology, chemistry, and mathematics sequences in their freshman schedule and complete the organic chemistry lecture course in their sophomore year. Students are not encouraged to continue with the major in biological sciences unless performance in these four subjects gives evidence of capacity to perform satisfactorily at a more advanced level.

The requirements for the biological sciences major are listed below. These courses, with the exception of the language requirement, should be taken for a letter grade, unless the course is offered for S-U grades only.

1) Introductory biology for majors (one year): BIO G 101 and 103 plus 102 and 104, or BIO G 107–108, offered during the eight-week Cornell Summer Session for 8 credits, also satisfies the introductory biology requirement for majors. Students may choose to accept advanced placement if they have received a score of 5 on the Advanced Placement Examination of the College Entrance Examination Board achievement test or (c) achieving “qualification” status in a language as defined by the College of Arts and Sciences or (d) successfully completing at least 6 college level courses in a foreign language. Students registered in the College of Arts and Sciences must satisfy the language requirement as stated by that college.

*Since modern biology has an important physical and quantitative orientation, students are advised to undertake basic science courses that emphasize this approach. Asterisks in the above list indicate the courses that provide this orientation, but all courses listed are acceptable.

Although not required for the biological sciences major, a course in statistics is recommended for students planning graduate study or a research career. Students should consult their faculty advisers when choosing appropriate courses in statistics.

Note: Core courses cannot count towards the Program of Study Requirements.

Programs of Study and Requirements

As noted in the list of requirements above, students accepted into the biological sciences major must choose a program of study. The program of study requirements are designed to help students achieve depth in one area of biology while ensuring that the selected advanced courses form a coherent and meaningful unit. Because of the flexibility allowed in satisfying these requirements, students should consult their faculty advisers.

The possible programs of study are listed below.

1) Animal Physiology: BIOAP 311, Introductory Animal Physiology, Lectures; BIOAP 313, Histology: The Biology of the Tissues; BIOAP 316, Cellular Physiology; and BIOAP 319, Animal Physiology Experimentation. The Program of Study in Animal Physiology emphasizes whole-animal, tissue, and cell physiology, and provides considerable opportunity for studies using live animals. It is intended especially for students contemplating careers in biomedical
practice or research. Advanced courses, though not required, include BIOAP 419, Advanced Animal Physiology Experimentation, which permits senior students to conduct supervised research projects of their own, and BIOAP 458, Mammalian Physiology, which provides in-depth coverage of selected topics in mammalian and human physiology.

2) Biochemistry. Chemistry 350, Qualitative Chemistry, six credits of organic chemistry (Chemistry 357–358 or 359–360); a minimum of four credits of organic chemistry laboratory (Chemistry 301–302 or 251–252–302 or 301 or 251–252); four credits of biochemistry laboratory courses (BIOBM 430); and Physical Chemistry (Chemistry 389–390 or 287–288 or 287–390 or 389–288). Note that Chemistry 288 is designed for biochemistry. Advanced laboratory courses (BIOBM 430); and chemistry (Chemistry 357–358 or 359–360). Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

3) Molecular and Cell Biology. Chemistry 357–358 or 359–360; BIOBM 432, Survey of Cell Biology; 4 credits of BIOBM 430, Laboratories in Biochemistry, Molecular and Cell Biology, and at least 7 additional credits of courses that have a cell biological or molecular biological orientation. The 7 additional hours should include at least two courses from the following list (underlined courses are recommended as providing breadth in molecular and cell biology): BIOAP 619, Lipids; BIOAP 638, Molecular Mechanisms of Hormone Action; BIOBM 444, Applications of Molecular Biology; BIOBM 447, Eukaryotic Cell Differentiation; BIOBM 631, Protein Structure and Function; BIOBM 632, Membranes and Transport; BIOBM 655, Biochemistry of Mammalian Tissues; BIOBM 639, Mechanisms of Metabolic Regulation and Mammalian Gene Expression; BIOBM 640, Cell Biology; BIOBM 639, The Cell; BIOBM 405, Immunology; BIOBM 407, Nature of Sensing and Response: Signal Transduction in Biological Systems; BIOGD 485, Developmental Biology; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOGD 682, Fertilization and the Early Embryo; BIOPL 454, Molecular and Genetic Engineering of Plants; BIOPL 347, Laboratory in Molecular Biology and Genetic Engineering of Plants; BIOPL 444, Plant Cell Biology; BIOPL 641, Laboratory in Plant Molecular Biology; BIOPL 652, Plant Molecular Biology II; BIOPL 290, General Microbiology, Lectures; BIOI 408, Viruses and Disease; BIOI 485, Bacterial Genetics; BIOI 692, Protein-Nucleic Acid Interactions; BIOMN 222, Neurobiology and Behavior I: Introduction to Neurobiology; BIOMN 325, Neurodegenerative-Molecular Aspects; BIOMN 425, Natural History of Ion Channels; BIOMN 495, Molecular and Genetic Approaches to Neurosciences. Five hours of biochemistry are recommended (BIOBM 351 and 352 or 330 and 334). Be sure to complete CHEM 207–208 or 215–216 during the freshman year.

4) Ecology and Evolutionary Biology. BIOES 261, Ecology and the Environment, and 10 credits from the following course lists, including at least one course from each group:
   (a) BIOPL 241, Introductory Botany; BIOES 274, The Vertebrates: Structure, Function, and Evolution; BIOES 373, Biology of the Marine Invertebrates; BIOES 466 and 468, Physiological Plant Ecology, Lectures and Laboratory; BIOES 471, Mammalogy; BIOES 472, Herpetology; BIOES 475, Ornithology; BIOES 476, Biology of Fishes; ENTOM 212, Insect Biology.

Note: One 400-level, 4-credit course (including 4 credits from BIOM 364) offered at Shoa’s Marine Laboratory may be applied toward the 10 credits. Students are encouraged to gain experience in some aspect of field biology through a research project at a biological field station or work experience.

Note: The Ecology and Evolutionary Biology program of study offers an undergraduate specialization in Marine Biology and Oceanography. A description of this specialization can be found in the section entitled COURSES IN MARINE SCIENCE.

Note: The Organization for Tropical Studies (OTS) offers an Undergraduate Semester Abroad Program, featuring two courses in biology (Fundamentals of Tropical Biology and Field Research in Tropical Biology) and one course each in Environmental Policy and Latin American Culture. cornell biology majors, with a concentration in Ecology and Evolutionary Biology, who complete the OTS Program as part of Cornell Abroad, can substitute the credit earned from the biology courses for two 3-credit courses at the 300 level from list (b). The OTS Program is administered through Duke University. Applications are available at Cornell Abroad, 474 Uris Hall.

5) General Biology. The Program of Study in General Biology requires a minimum of 13 credit hours from courses offered by the Division of Biological Sciences in addition to courses counted toward requirements 1–10 above. These 13 credits must include:

1) One course from each of the three different programs of study from among the nine other programs of study.

2) a course with a laboratory, and

3) a minimum of two upper-level (300 and above) courses of two or more credits each.

100-level courses are not acceptable for meeting any of these requirements. BIOI 341 may not count as the lab course; BIO G 498 may not be used to fulfill the requirements of the program of study. BIO G 499 (minimum of 2 credits, but no more than 3 credits) may count as one of the upper-level courses, and may count as the laboratory course with approval of the advisor, but it cannot count as a course representing a program of study.

Note: It is possible to use a single course to fulfill more than one requirement. For example, BIOES 472, Herpetology, could count in all three areas: as a course in the Ecology & Evolutionary Biology program of study, as an upper level course, and as a course with a lab.

6) Genetics and Development. A minimum of 13 credits, usually chosen from the following courses: BIOGD 385, Developmental Biology; BIOGD 387, Developmental Aspects of Evolution; BIOGD 389, Embryology; BIOGD 480, Seminar in Developmental Biology; BIOGD 481, Population Genetics; BIOGD 482, Human Genetics and Society; BIOGD 483, Molecular Aspects of Development; BIOGD 484, Molecular Evolution; BIOGD 486, Advanced Eukaryotic Genetics; BIOMI 485, Bacterial Genetics, BIOMN 493, Developmental Neurobiology, BIOMN 343, Molecular Biology and Genetic Engineering of Plants.

Students may also choose from the following courses to complete the 13-credit requirement: BIOGD 682, Fertilization and Early Development; BIOGD 684, Advanced Topics in Population Genetics; BIOGD 687, Developmental Genetics; BIOBM 633, Biosynthesis of Macromolecules; BIOBM 639, The Nucleus; BIOES 663, Theoretical Population Genetics; BIOMI 694, Genetics of Development; BIONB 641, Laboratory in Plant Molecular Biology; BIOPL 644, Plant Growth and Development; BIOPL 652, Plant Molecular Biology II; BIOPL 653, Plant Molecular Biology I; PL BR 606, Advanced Plant Genetics.

Up to 3 credits for this program of study may be chosen from other biological sciences courses, including BIO G 499, Undergraduate Research in Biology, with approval of the faculty advisor.

7) Microbiology. BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 300, Seminar in Microbiology;
and at least three courses chosen from the following: BIOM 391, Advanced Microbiology Laboratory; BIOM 415, Bacterial Diversity; BIOM 416, Bacterial Genetics.

8) Neurobiology and Behavior: The two-semester introductory course sequence, Neurobiology and Behavior I and II (BIONB 221 and 222) with discussion sections (4-credit offerings term), and 7 additional credits. These additional credits must include a course from the neurobiology and behavior offerings (this course can NOT be BIONB 420, 720 or BIONB 499. However, BIONB 420, 720 and BIO G 499 MAY BE used to supplement this neurobiology and behavior course to fulfill the 7 additional credits. Please consult with your advisor for courses that may be approved for the 7 additional credits that are not listed in the Biological Sciences course offerings. BIO G 498 may not be used to fulfill the requirements of this program of study.

Note: Students who declare the Program of Study in Neurobiology and Behavior after taking BIONB 221 or 222 and BIONB 420 add only 3 credits for group A, and from group B, and at least two laboratory courses (marked with *). BIONB 499, Undergraduate Research in Biology, with approval of the advisor, can be used in fulfillment of up to four credits in Group A, and can count as one laboratory course if it has a laboratory component of 2 or more credits.

(a) BIONB 274, The Vertebrates: Structure, Function, and Evolution; BIONB 371, Human Paleontology; BIONB 373, The Invertebrates: Form, Function, and Evolution; BIONB 471, Mammalogy; BIONB 472, Herpetology; BIONB 475, Ornithology; BIONB 476, Biology of Fishes; BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 415, Bacterial Diversity, Lectures; BIONB 241, Introductory Botany; BIONB 243, Taxonomy of Cultivated Plants; BIONB 247, Ethnobotany; BIONB 248, Taxonomy of Vascular Plants; BIONB 343, The Healing Forest; BIONB 645, Families of Tropical Flowering Plants—Lecture; BIONB 466, Families of Tropical Flowering Plants—Lab; ENTOM 212, Insect Biology; ENTOM 215, Spider Biology: Life on a Silken Thread; ENTOM 422, Insect Morphology; ENTOM 431, Introductory Insect Systematics; ENTOM 471, Freshwater Invertebrate Biology; ENTOM 631, Systematics of the Coleoptera; PL PA 309, Introductory Mycology; PL PA 519, Field Mycology.

(b) BIONB 464, Macroevolution; BIONB 479, Paleobiology; BIONB 440, Phylogenetic Systematics; BIONB 447, Molecular Systematics; BIONB 448, Plant Evolution and the Fossil Record; BIONB 453 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIONB 456 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIONB 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory; BIONB 345, Plant Anatomy; BIONB 444, Plant Cell Biology; BIONB 445, Photosynthesis; BIONB 447, Molecular Systematics; BIONB 448, Plant Evolution and the Fossil Record; BIONB 453 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIONB 456 and 468, Physiological Plant Ecology, Lectures and Laboratory.

Option (b) Plant Biotechnology: Students are required to take BIONB 343 and 347, Molecular Biology and Genetic Engineering of Plants, Lectures and Laboratory. Students choose, in consultation with their faculty advisor, a minimum of 7 additional credits from the following list: BIONB 241, Introductory Botany; BIONB 242 and 244, Plant Physiology, Lectures and Laboratory; BIONB 342 and 344, Plant Physiology, Lectures and Laboratory; BIONB 442, Introductory Cell Biology; BIONB 468, Plant Biochemistry; PL BR 401, Plant Cell and Tissue Culture; or PL BR 402, Plant Tissue Culture Laboratory.

10) Systematics and Biotic Diversity: A minimum of 13 credits from the following two groups, including at least 7 credits from group A, and 3 from group B, and at least two laboratory courses (marked with *).

(a) BIONB 274, The Vertebrates: Structure, Function, and Evolution; BIONB 371, Human Paleontology; BIONB 373, The Invertebrates: Form, Function, and Evolution; BIONB 471, Mammalogy; BIONB 472, Herpetology; BIONB 475, Ornithology; BIONB 476, Biology of Fishes; BIOMI 290, General Microbiology, Lectures; BIOMI 291, General Microbiology, Laboratory; BIOMI 415, Bacterial Diversity, Lectures; BIONB 241, Introductory Botany; BIONB 243, Taxonomy of Cultivated Plants; BIONB 247, Ethnobotany; BIONB 248, Taxonomy of Vascular Plants; BIONB 343, The Healing Forest; BIONB 645, Families of Tropical Flowering Plants—Lecture; BIONB 466, Families of Tropical Flowering Plants—Lab; ENTOM 212, Insect Biology; ENTOM 215, Spider Biology: Life on a Silken Thread; ENTOM 422, Insect Morphology; ENTOM 431, Introductory Insect Systematics; ENTOM 471, Freshwater Invertebrate Biology; ENTOM 631, Systematics of the Coleoptera; PL PA 309, Introductory Mycology; PL PA 519, Field Mycology.

(b) BIONB 464, Macroevolution; BIONB 479, Paleobiology; BIONB 440, Phylogenetic Systematics; BIONB 447, Molecular Systematics; BIONB 448, Plant Evolution and the Fossil Record; BIONB 453 and 465, Plant Ecology and Population Biology, Lectures and Laboratory; or BIONB 456 and 468, Physiological Plant Ecology, Lectures and Laboratory.

11) Independent Option: A special program for students interested in nutrition is available under this option. Students interested in courses in biophysics should contact the Office of Undergraduate Biology (200 Stimson Hall) for further information. In addition, students who want to undertake a course of study not covered in the nine-credit offerings programs of study or the special program may petition the Biological Sciences Curriculum Committee. Information on independent options and Curriculum Committee petition forms are available in the Office of Undergraduate Biology, 200 Stimson Hall.

Independent Research and Honors Program

Individual research projects under the direction of a faculty member are encouraged as an aspect of the study. Applicants for research projects are accepted by the individual faculty members, who take into account students' previous academic accomplishments, interests and goals, and the availability of space and equipment suitable for the proposed project. Students accepted for independent research projects enroll for credit in Biological Sciences BIO G 499, Undergraduate Research in Biology, with the written permission of the faculty supervisor. Students register for this course in 200 Stimson Hall. Any faculty member of Biological Sciences may act as a supervisor. Faculty supervisors outside Biological Sciences are acceptable only if a faculty member of Biological Sciences agrees to take full responsibility for the quality of the work. Students may not enroll for credit for research conducted outside of Cornell. Information on faculty research activities and undergraduate research opportunities is available in the Behrman Biology Center, 216 Stimson Hall.

Research credits may not be used in completion of the following program of study areas: animal physiology, botany, cell biology, ecology and evolutionary biology, microbiology, plant biology. Up to 3 credits of research may be used to complete the program of studies in general biology, genetics and development, systematics and biotic diversity, as well as 4 credits of research in neurobiology and behavior.

The honors program in biological sciences is designed to offer advanced training in laboratory or field research through the performance of an original research project under the direct guidance of a member of the Cornell faculty. Applications for the honors program are available in the Office of Undergraduate Biology, 200 Stimson Hall, and must be submitted early in the senior year to the Honors Program Committee by the announced deadline. Application forms for the honors program are separate from the enrollment forms for BIO G 499, Undergraduate Research in Biology. To qualify for the program, students must have been accepted into the biological sciences major, have completed at least 30 credits at Cornell, and have an overall Cornell cumulative grade-point average of at least 3.00. In addition, students must have at least a 3.00 Cornell cumulative grade-point average in biology, chemistry, mathematics, and physics courses.

(Grades earned in courses in other departments that are used to fulfill major requirements are included in this computation.) In addition, candidates must have a Cornell faculty member in Biological Sciences to supervise their research. Students who select supervisors outside of Biological Sciences must arrange for a cosigner within Biological Sciences. The candidate must agree to meet with the student on a regular basis and report to the Honors Program Committee on the progress of the work approximately two months before the thesis is due, and to serve as a reviewer of the thesis. An honors candidate usually enrolls for credit in BIO G 499, Undergraduate Research in Biology under the direction of the faculty member acting as honors supervisor, although it is not necessary. Students choosing to earn credit for honors research must register in BIO G 499, Undergraduate Research in Biology, separately from the honors program. Requirements of the honors program include participation in honors research seminars during two semesters, submission of a satisfactory honors thesis, completion of all major requirements, and maintenance of the 3.00 Cornell cumulative grade-point average through graduation. Recommendation to the faculty that a
candidate graduate with honors and at what level of honors is the responsibility of the Honors Program Committee. The student's final grade point average is a factor in determining the level of honors recommended. Students interested in the honors program should consult their faculty advisers early during their junior year. Students are strongly encouraged to begin their research projects in their junior year, although they are not formally admitted to the honors program until the beginning of their senior year. Students who are considering study abroad during their junior year should consult with a member of the Honors Committee during their sophomore year to plan a reasonable schedule for honors research. The Honors Program requires that student participants attend honors seminars in which they give oral presentations during the first and second semesters of their senior year. Therefore, students who are considering studying away from campus during their senior year should consult with a member of the Honors Committee no later than the beginning of the first semester of their junior year. Details pertaining to thesis due dates, seminars, and other requirements may be obtained from the Office of Undergraduate Biology, 200 Stimson Hall. Information on faculty research activities is available in the Behrman Biology Center, 216 Stimson Hall. Deviation from any of the requirements of the Honors Program requires a petition in the form of a letter to the Honors Program Committee, c/o Registrar, Office of Undergraduate Biology, 200 Stimson Hall.

CURRICULUM COMMITTEE

Many decisions pertaining to the curriculum, to division-wide requirements, and to the programs of study are made by the Biological Sciences Curriculum Committee. The committee consists of faculty and elected student members and welcomes advice and suggestions from all interested persons.

ADVISING

Students in need of academic advice are encouraged to consult with their advisors, to the Behrman Biology Center (216 Stimson Hall) or the Office of Undergraduate Biology, 200 Stimson Hall.

Students interested in marine biology should visit the Cornell Marine Programs Office, G14 Stimson Hall.

Students interested in the multidisciplinary program of Biology and Society should see "Special Programs and Interdisciplinary Studies," in the College of Arts and Sciences section of this catalog.

INDEX OF COURSES

The following course identifiers are used to denote biological sciences courses in specific areas: General Courses, BIO G; Animal Physiology, BIOAP; Biochemistry, Molecular and Cell Biology, BIOM; Ecology and Systematics, BIOES; Genetics and Development, BIOGD; Microbiology, BIOM; Neurobiology and Behavior, BIONB; Plant Biology, BIOPL; Shoals Marine Laboratory, BIOSM.

Note: Biological sciences ("BIO") courses count as agriculture and life sciences credits for students in the College of Agriculture and Life Sciences and as arts and sciences credits for students in the College of Arts and Sciences.

GENERAL COURSES (BIO G)

Biological Sciences teaches three introductory biology course sequences during the academic year: BIO G 101-104, BIO G 105-106, and BIO G 109-110; and one during the eight-week summer session: BIO G 107-108. BIO G 101-104, BIO G 105-106, and 107-108 are intended for biology majors and other students needing 8 credits from an introductory sequence for majors (for example, students in a premedical curriculum). Any of these sequences meet the prerequisite for upper-level courses listing "one year of introductory biology for majors" as a prerequisite. BIO G 109-110 is a course sequence intended for non-majors, and meet the prerequisite for many, but not all, upper-level courses listing "one year of introductory biology" as a prerequisite. Students can earn a maximum of 8 credits in introductory biology (including advanced placement credits).

**BIO G 101-102 Biological Sciences, Lectures**

101, fall; 102, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 103 (fall) or 104 (spring). Passing grade (D or better) in 101 is prerequisite to 102 unless permission is obtained from instructor. May not be taken for credit after BIO G 105-106 or 109-110. S-U grades optional, with permission of instructor. Lecs, M W F 9:05 or 10:10. 2 lecs each week; to accommodate these, students must reserve all 3 days. Evening prelims: fall, Sept. 23 and Nov. 9; spring, Feb. 24 and Apr. 6. Designed both for students who intend to specialize in biological sciences and for those who want to obtain a thorough knowledge of biology as part of their general education. The fall semester covers the chemical and cellular basis of life, energy transformations, physiology, neurobiology, and behavior. The spring semester covers genetics, development, evolution, and ecology. Each topic is considered in the light of modern evolutionary theory and discussions of plant and animal systematics are integrated. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 103-104 Biological Sciences, Laboratory**

103, fall; 104, spring. 2 credits each term. Prerequisite: concurrent enrollment in BIO G 101 (fall) or 102 (spring). 103 is prerequisite to 104 unless permission is obtained from instructor. No admittance after second week of classes. S-U grades optional, with permission of instructor. Lab, M T W R 1:25-4:25, M or W 7:30-10:30 p.m., or T R or S 8-11. One 3-hour lab each week and a weekly lec for discs, special lecs, etc. J. C. Glase, P. R. Ecklund, and staff.

BIO G 103-104 is designed to provide laboratory experience with major biological phenomena in order to support and understand the major areas of biology. First-semester topics include biochemistry, physiology, plant biology, and behavior. In the second semester, laboratory experience is provided in the areas of genetics, microbiology, immunology, invesigating diversity, population plant growth and development, and ecology. During the first semester, dissection of a doubly-pitted frog is included. Pithing is done by the instructor. Dissection of several invertebrates occurs during the second semester. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

**BIO G 105-106 Introductory Biology**

105, fall; 106, spring. 4 credits each term (or 2 credits, with permission of instructor). Enrollment limited to 200 students. Prerequisite: 105 is prerequisite to 106, unless written permission is obtained from instructor. May not be taken for credit after BIO G 101-104 or 109-110. No admittance after first week of classes. Estimated cost for dissection kit, $11. S-U grades optional, with permission of instructor. Lec, T 9:05 (1st lec of fall term, R 8/26 9:05); additional study and lab hours to be arranged. C. H. McFadden and staff.

Designed primarily for biology majors, preprofessionals, and other students who desire a challenging, broad introduction to fundamental concepts of biology. Cell biology, physiology, anatomy (accompanied by preserved vertebrate dissection), and biochemistry are strongly emphasized in the fall semester. Subjects in the spring semester are genetics, development, ecology, evolution, behavior, and the diversity of organisms (accompanied by preserved and live invertebrate dissection). Students who plan to concentrate in anatomy and physiology should consider taking this course because of the strong emphasis on organismal biology. Because some testing involves the use of pre-dissected specimens, students who object to dissections should take BIO G 101-104. The course uses an autotutorial format and offers considerable flexibility in scheduling. Completion of the course requires mastery of a group of core units. Testing on these units is primarily by oral examination. Students who elect to take the course must be able to meet deadlines. Four formal laboratory sessions are offered each semester; additional laboratory work is included in the core units. Evaluation is based on written reports on experimental work, practical exams, and a comprehensive final exam.

**BIO G 107-108 General Biology**

Summer (8-week session; 107, weeks 1-4; 108, weeks 5-8). 4 credits each. Prerequisite: one year of college or permission of instructor; BIO G 101-103, 105, or 107 is a prerequisite for 108. Fee, $25 for weeks 1-4; $15 for weeks 5-8. Lecs, M-R 9-12; labs, M T R 1:30-4:30, F 9-12. Staff. Designed for students who plan further study in biology and for students who want a broad course in biology as part of their general education. BIO G 107 covers biological metabolism, first at the molecular level and then progressively to the organism level. The laboratory work involves an introduction to some major techniques, vertebrate dissection, and a survey of plant organization. BIO G 108 seeks to integrate the topics of genetics, developmental biology, population
biology, and ecology in a general consideration of biological evolution. The laboratory work is a continuation of the material covered in BIO G 107 and involves more techniques, a survey of animal organization, and the design and performance of a field study. BIO G 107-108 fulfills the introductory biology requirement for majors and forms a suitable introductory biology course sequence for students intending to go to medical school. For those students who object to animal dissection, alternative materials are available for study. However, testing will involve identification of important structures in real organisms.

BIO G 109-110 Biological Principles
109, fall; 110, spring. 3 credits each term. Limited to 500 students. A passing grade in 109 or 101-103 or 105 is prerequisite to 110 unless written permission is obtained from the instructor and the student has at least 3 credits of college biology. Since 109-110 together constitute an integrated survey, 109 cannot be used to satisfy the College of Arts and Sciences or College of Agriculture and Life Sciences distribution requirement unless prerequisite to 110 is followed by 110 or an exemption is obtained from the instructor. May not be taken for credit after BIO G 101-104 or 105-106. This course sequence may be used to fulfill the distribution requirement in the Colleges of Agriculture and Life Sciences, Arts and Sciences, and Human Ecology but may not be used as an introductory course for the major in biological sciences. Note that this course satisfies the prerequisite for many, but not all second- and third-level courses in biology. Letter grade only. Lecs, M W F 9:05 or 10:10; lab, M T W R or F 2-4:25 or T 10:10-12:35. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Each student must attend lab on alternate weeks. Evening prelims: fall, Sept. 23 and Nov. 9; spring, Feb. 24 and Apr. 4. A. Blackler, R. Turgeon, H. Greene, and staff. Students who do not plan to major in biology may take this broad introductory course in modern biology. The content is designed to appeal to anyone who seeks a comprehensive knowledge of biology as part of a general education. Laboratory sections enable small groups of students to meet with the course staff and are used for problem-solving experiments, demonstrations, and discussions. No live dissections are involved; there are dissections of vertebrate, invertebrate and plant material. For those students who object to dissection, alternative materials are available for study and there is no grade penalty for omission of animals. Testing, for students choosing to be tested, will involve identification of important structures in real organisms.

BIO G 117 Evolution of the Earth and Life (also GEOG 102)
Spring. 3 credits. S-U grades optional. Lecs, T R 10-11:15; lab, T 7 or R 2:00-4:25; field trips during lab. J. L. Cisne.

BIO G 200 Special Studies in Biology
Fall, spring, or summer. 1–3 credits. Prerequisites: transfer- or special-student status and permission from the Office of Undergraduate Biology. Students must register in 200 Stimson Hall. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. A registration device for students who want to take only a portion of a regular biological sciences course—for example, only the lectures or only the laboratory in a course that includes both. Only students who have already had training equivalent to the portion of the regular course that is to be omitted may register in this manner. This course may not be substituted for 100-level courses and may not be used in fulfillment of college distribution requirements except by permission from the Office of Undergraduate Biology.

BIO G 202 The Diversity of Life
Fall. 3 credits. S-U grades optional. Lecs, M W F 2:30. Not offered 1999–2000. J. I. Davis, J. J. Doyle, E. Rodriguez. The main focus of this course is on the diversity of living and extinct species. This diversity is examined from an evolutionary perspective, with attention to the principle employed in the discovery of species and in the analysis of relationships among them. Interactions between humans and other species are examined during the latter portion of the semester.

BIO G 207 Evolution (also HIST 287 and S&TS 287)
Fall or summer. 3 credits. Intended for students with no background in college biology. May not be taken for credit after BIOES 278. Does not meet the evolution-biology requirement for the biological sciences major. S-U grades optional. Fall: Lecs, T R 10:10; disc, 1 hour each week to be arranged. W. B. Provine. Summer (3-week session) (also S&TS 287). Lecs/disc, M F 9:30-10:45 and 1:00-2:15. A. S. Kondrashov.
Evolution is the central concept in biology. This course examines evolution in historical and cultural contexts. This course aims to understand the major issues in the history and current status of evolutionary biology, and explore the implications of evolution for culture. Issues range from controversies over mechanisms of evolution in natural populations to the conflict between creationists and evolutionists.

BIO G 209 Introduction to Natural Science Illustration
Summer (6-week session). 2 credits. Limited to 12 students. Prerequisite: free-hand drawing or permission of instructor. S-U grades optional. Lecs and labs. T R 6:30-9:30 p.m. B. S. King. An introduction to the art of natural science illustration for publication, and to the techniques of various media including pencil, pen and ink, watercolor, colored pencil, scratchboard, and computer. Fundamentals and limitations of line and half-tone reproduction, copyright, and portfolio presentation are discussed.

BIO G 305 Basic Immunology Lectures (also VETMI 315)
Fall. 3 credits. Strongly recommended: basic courses in microbiology, biochemistry, and genetics. S-U grades optional, with permission of instructor. Lecs, T R 8:30-9:55. J. A. Marsh.
A survey of immunology, with emphasis on the biological functions of the immune response.

BIO G 320 Principles of Toxicology (also VETMI 320)
Spring. 3 credits. Prerequisites: 1 year each of introductory biology and chemistry, with lab, 1 semester of organic chemistry lecture or waiver by instructor. Lect T R 1:25–2:40. S. Penningroth, R. Dietert, and S. Bloom.
An introduction to the interdisciplinary science of toxicology is presented, including selected material from biology, chemistry, toxicology, and pharmacology. Basic principles are illustrated by examining several "toxicological contexts," for example, DDT toxicity to wildlife reproduction. Risk management is introduced as it applies in the discipline in which regulatory agencies integrate science-based quantitative risk assessment with economic and social considerations to implement politically acceptable cleanup at hazardous chemical waste sites. Students will be expected to present toxicological analyses of hypothetical "risk scenarios," recommending acceptable risk management strategies in response to environmental contamination. Occasional research talks by toxicology faculty introduce students to basic research in this interdisciplinary branch of Biological Science.

This is an introductory level course in toxicology. The format is lecture, supplemented by case examples. It is appropriate for non-majors seeking basic literacy in environmental and human toxicology. It also serves as a "gateway course" for students interested in 400- and 600-level toxicology courses.

BIO G 400 Undergraduate Seminar in Biology
Fall or spring. Variable credit (1–3 credits assigned for individual seminar offerings). May be repeated for credit. S-U grades optional. Sem to be arranged. Staff. From time to time specialized seminars on topics of interest to undergraduates are offered by visiting faculty or faculty from the Sections of Ecology and Systematics, Genetics and Development, or Plant Biology. Topics and instructors are listed in the division's catalog supplement issued at the beginning of the semester. For seniors interested in Biochemistry, Physiology, or Neurobiology, please see descriptions under appropriate section.

Section 02 Development and Evolution (also BIOGD 480, BIOES 760-02, and BIOGD 780)
Fall*. 2 credits. Prerequisites: BIOGD 281 and BIOES 278. S-U grade only. Lecs and Discs T 12:20–2:25 p.m. Students will also be required to attend five seminars on M 4:00–5:30 p.m. M. Wolfner, A. M. McCune. Five leading international experts will describe recent advances in data and theory at the intersection of developmental biology and evolutionary biology. Topic coverage will center around pattern formation and the origin of metazoan body plans. During the Tuesday class meeting prior to each expert's visit,
students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend the speaker's seminar on Monday at 4:00 p.m. and then meet with the speaker during class on the following day for continued discussion of the topic.

*Fall 1999 is the only time that this special course will be offered, at least in this seminar–coupled format. Graduate students should register for BIO 700 or BIOGD 780; undergraduates should register for BIO G 400 or BIOGD 480.

**BIO G 401 Introduction to Scanning Electron Microscopy**
Fall or spring, weeks 1–8. 1 credit. Limited to 8 students (fall), 12 students (spring). S-U grades optional. Lec, M 10:10; lab, T R F 9:45–12:15 or T W or R 1:25–4:25. Fee may be charged. M. V. Parthasarathy.

An introductory course that includes the principle and use of the scanning electron microscope. Students use biological material to explore and understand some of the fine biological architecture. In addition to preparing the specimens, the students use the scanning electron microscope to study and obtain micrographs of features that interest them.

**BIO G 403 Transmission Electron Microscopy for Biologists**
Fall. 1, 3, or 4 credits (4 credits if student takes both sections). Limited to 12 students. Prerequisites: BIOAP 313, BIOPL 345 or 445, S-U grades optional. Lec, T 11:15, labs, M W or T R 1:25–4:25. Two sections: Sec 01, 1 credit, weeks 1–4; sec 02, 3 credits, weeks 5–12. Students may register for one or both sections. Fee may be charged. M. V. Parthasarathy.

Section 01, restricted to 14, covers the principles and use of the transmission electron microscope (TEM), with emphasis on proper operation of the instrument and interpretation of images obtained. Negatively stained materials are used to understand TEM techniques. Section 02, 3 credits, weeks 5–12, covers the principles and techniques of preparing biological material for transmission electron microscopy. Using animal, plant, and microbe materials this section studies chemical fixatives, cryofixations, ultrathin sectioning, immunogold localization, quantitative microscopy, and metal shadowing techniques. Students have two additional weeks to complete laboratory assignments at the end of each section.

**BIO G 405 Biology of the Neotropics**
Fall. 2 credits. Prerequisite: introductory biology (majors, non-majors, or equivalent), or permission of instructor. S-U grades optional. Sem, W 7:30–9:30 p.m. P. H. Wrege, A. S. Flecker.

This seminar is an introductory survey of the biology of the New World tropics, with primary focus on moist lowland forests. The objectives are to learn the basic characteristics and phenomena important to understanding neotropical biology, to gain firsthand knowledge of the resources in tropical biology available at Cornell, and to learn how to organize and execute a meaningful seminar presentation.

**BIO G 408 Presentation Skills Biologists**
Spring. 1 credit. Prerequisites: previous research experience. Preference given to students accepted into the Honors Program. L. Southard and G. Hess. This course will cover oral and written communication skills used in presenting research to other scientists. Topics covered will include oral presentations, preparation of scientific papers, presentation tips for research seminars, and preparation of visual aids using PowerPoint. All students will present a 10-minute seminar on their research and will evaluate other presentations.

**BIO G 410 Teaching Contemporary Biology**
Fall. 3 credits. Prerequisite: one year introductory biology, permission of instructor. L. Southard and S. Merkel. This course provides students with the opportunity to experience teaching high school science. Students will concentrate on a topic of current public interest, then develop teaching plans appropriate for high school students. The first part of the course consists of lectures, discussion, and laboratory experiments, which familiarize the students with the scientific content of the course. Students will then work in teams with high school teachers to develop their presentations. The final part of the course will include practice presentations and teaching at regional high schools.

**BIO G 431 Frontiers in Biophysics**
Fall. 1/2 credit. S-U grades only. Lec to be arranged. G. Feigenson and staff. A day of lectures on Saturday 9/25 giving an overview of current research in biophysics at Cornell by faculty from different departments across the university, first followed by an introduction to the graduate students who are considering a career in biophysics and for graduate students who are interested in biophysics research opportunities at Cornell.

**BIO G 450 Light and Video Microscopy for Biologists**
Spring. 3 credits. Limited to 12 students. Prerequisites: one year of introductory biology and permission of instructor. Lecs, T R 1:25–2:30; lab, R 2:30–4:30. R. O. Wayne.

Theoretical and practical aspects of light microscopy, including brightfield, darkfield, phase-contrast, polarization, Hoffman-modulation contrast, interference, differential-interference contrast, and fluorescence microscopy, as well as video- and computer-based digital image enhancement, are studied. Students learn both qualitative and quantitative techniques to probe noninvasively the structure and function of living plant cells.

**BIO G 467 Seminar in the History of Biology (also HIST 415, B&SOC 447, and SATS 447)**
Summer (5-week session) 4 credits. Limited to 18 students. S-U grades optional. W. B. Provine.

Specific topic changes each year.

**BIO G 469 Food, Agriculture, and Society (also B&SOC 469 and SATS 469)**

A multidisciplinary course dealing with the social and environmental impact of food production in the United States and developing countries. Agroecosystems of various kinds are analyzed from biological, economic, and social perspectives. The impacts of traditional, conventional, and alternative agricultural technologies are critically examined in the context of developed and developing economies. Specific topics include pest management, soil conservation, plant genetic resources, biotechnology, and sustainable development.

**BIO G 498 Teaching Experience**
Fall or spring. 1–4 credits. Enrollment limited. Prerequisites: previous enrollment in the course to be taught or equivalent. Arts students may not count this course toward. They may, however, upon petition to their class dean, carry fewer than 12 other credits and remain in good standing. This would affect Dean's List eligibility, but not eligibility for graduating with distinction. S-U grades optional, with permission of instructor. Hours to be arranged. Staff. Designed to give qualified undergraduate students teaching experience through actual involvement in planning and assisting in biology courses. This experience may include supervised participation in a discussion group, assisting in a biology laboratory, assisting in field biology, or tutoring. Biological sciences courses currently offering such experience include BIO G 105-106, BIOAP 311, 313, 319; BIOM 330, 331; BIODE 274, 475; and BIOMI 291, 292.

**BIO G 499 Undergraduate Research in Biology**
Fall or spring. Variable credit. Students in the College of Arts and Sciences may not register for more than 3 credits per term with one supervisor or 8 credits per term with more than one supervisor. Prerequisite: written permission of staff member who supervises the work and assigns the grade. Students must register in the Office of Undergraduate Option in 200 Stimson Hall. Each student must submit an independent study statement describing the proposed research project during course registration. (Applications are available in the college offices and in 200 Stimson Hall.) Any faculty member in Biological Sciences may act as a supervisor. Cornell faculty supervisors outside Biological Sciences are acceptable only if a faculty member of Biological Sciences agrees to serve as cosigner, taking full responsibility for the quality of the work. Supervisors outside of Cornell are not acceptable. S-U grades optional. Hours to be arranged. Staff. Practice in planning, conducting, and reporting independent laboratory and library research programs. Research credits may not be used for completion of the following programs of study: animal physiology, biochemistry, cell biology; ecology and evolutionary biology; microbiology; plant biology. Up to 3 credits of research may be used to complete the Program of Studies in general biology and genetics and development, and 4 credits of research in neurobiology and behavior.

**BIO G 705 Advanced Immunology Lectures (also VETMI 705)**
Spring. 4 credits. Prerequisite: BIO G 305 or permission of instructor. Offered alternate years. Next offered spring 2002. Lecs, M W F 9:05. Coordinator: R. G. Bell.
Coverage at an advanced level of molecular and cellular immunology.

**BIO G 706 Immunology of Infectious Diseases and Tumors (also VETMI 719)**
Spring. 2 credits. Prerequisite: BIO G 305 or permission of instructor. S-U grades optional, with permission of instructor.
Coverage at an advanced level of the immunology of diseases caused by selected viruses, protozoa, and helminths, and tumor immunology.

**Related Courses in Other Departments**
The Sea: An Introduction to Oceanography (Biological Sciences [BIOES] 154)
Medicine and Civilization (Biology and Society 322)
Pathogenic Bacteriology and Mycology (Biological Sciences [BIOI] 404 and Veterinary Microbiology 318)
Viruses and Disease (Biological Sciences [BIOI] 408 and Veterinary Microbiology 408)

**ANIMAL PHYSIOLOGY (BIOAP)**

**BIOAP 212 Human Physiology for Non-Biology Majors**
Spring. 3 credits. May not be taken for credit after BIOAP 311. Limited to 130 students. This course may be used toward the science distribution requirement of the College of Arts and Sciences and the Group B distribution requirement of the College of Agriculture and Life Sciences.
This course may not be used to fulfill the requirements of any program of study in the biological sciences major. Lecs, M W F 1:25; disc, M W or F 2:15. Evening labs: March 2 and Apr. 13.
P. W. Concannon and staff.
Introduction to the physiology of all major organ systems and the relation of that physiology to human health and disease. Emphasis is on understanding of major body functions and control mechanisms regulating each organ system. Students develop a fundamental understanding of how their bodies work that will be the basis of making informed decisions about their own health and medical needs and those of their families. Taught by staff of research physiologists and cooperating physicians.

**BIOAP 214 Biological Basis of Sex Differences (also B&SOC 214 and WOMNS 214)**
Fall. 3 credits. Limited to non-biology majors and first-, second-, and junior biology majors; senior biology majors may register with permission of instructor. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, T R 8:30-9:55. Offered alternate years. Not offered fall 1999. J. E. Fortune.
The structural and functional differences between the sexes are examined. Emphasis is placed on mechanisms of mammalian reproduction, where possible, special attention is given to studies of humans. Current evidence on the effects of gender on nonreproductive aspects of life (behavior, mental, and physical capabilities) is discussed.
The course is intended to provide students with a basic knowledge of reproductive endocrinology and with a basis for objective evaluation of sex differences in relation to contemporary life.

**BIOAP 311 Introductory Animal Physiology, Lectures (also VETPH 336)**
Fall. 3 credits. Prerequisites: one year of college biology, chemistry, and mathematics. Recommended: previous or concurrent course in physics. S-U grades optional, with permission of instructor.
A general course in animal physiology emphasizing principles of operation, regulation, and integration common to a broad range of living systems from the cellular to the organismal level. Structure/function relationships are stressed along with underlying physico-chemical mechanisms.

**BIOAP 312 Farm Animal Behavior (also ANSC 305)**
Spring. 2 credits. Prerequisites: introductory course in animal behavior. Recommended: at least one animal production course or equivalent experience. S-U grades optional.
The behavior species (avian and mammalian) influences the success of any management program. Students study behaviors relating to communication, learning, social interactions, reproduction, and feeding of domestic animals, and their physiological basis. Management systems for commercial livestock production and their implications for animal behavior and welfare are stressed.

**BIOAP 313 Histology: The Biology of the Tissues**
Fall. 4 credits. Prerequisite: one year of introductory biology. Recommended: BIOBM 330 or 331, or their equivalents, and previous or concurrent enrollment in BIOAP 311. S-U grades optional, with permission of instructor. Lecs, T R 12:25; labs, T R 2:30-5:00. Evening labs: Oct. 1 and Nov. 5. S. Wahl.
Provides students with a basis for understanding the microscopic, fine-structural, and functional organization of vertebrates, as well as methods of analytic morphology at the cell and tissue levels. Interrelations of structure, composition, and function in cells and tissues are emphasized. The course may include work with vertebrate animals.

**BIOAP 316 Cellular Physiology**
Spring. 4 credits. Limited to 72 students, with preference given to students studying in animal physiology. Each lab limited to 36 students. Prerequisite: concurrent or previous enrollment in BIOBM 330 or 331 and 332 or 333. Lecs, M W F 9:05; lab, M or T 12:55-5:00. Evening prelims: Feb. 29, Apr. 6, and May 2. A. Quaroni and staff.
Lectures introduce students to the most current information on the way cells function and regulate themselves and neighboring cells and on what molecules are involved in these regulatory processes. Laboratories provide an introduction to cell and organ culture and histological techniques used to study cell structure and function in vivo and in vitro. Experiments performed in the laboratory are closely related to, and provide practical experience with, subjects covered in the lectures. Vertebrate animals are used in this course. No experimentation is performed on live animals.

**BIOAP 319 Animal Physiology**

**Experiments**
Fall. 4 credits. Designed for upper-level undergraduate and graduate students studying in physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and Medicine without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor.
Lecs, R 12:20; lab, M or W 12:20-5:00 (includes disc section). R. A. Corradino.
A series of student-conducted in vivo and in vitro experiments designed to introduce basic physiological processes in animals, with emphasis on relevance to humans, and to introduce students to physiology research techniques, instrumentation, experimental design, and interpretation of results. Techniques include anesthesia, surgical procedures, vivisection under anesthesia, and real-time computer recording and analysis of data. Experiments with living tissues and live animals examine properties of blood, muscle, and nerves; cardiovascular, respiratory, and renal function and their control; and endocrine regulation of renal, cardiovascular, and reproductive tissue activity. Experimental resources include live animals, frogs, rats, and rabbits, which are euthanized after the laboratory exercises. Written reports of laboratory activities are required. Grading is based on evaluation of these reports, take-home case studies, laboratory performance, and weekly quizzes.

**BIOAP 419 Advanced Animal Physiology Experimentation**
Spring. 3 credits. Prerequisite: BIOAP 319 previous semester or permission of instructor. Limited to 12 students selected on the basis of project proposals. Lab to be arranged. Coordinator and advisor: R. A. Corradino.
Advanced research on selected aspects of laboratories conducted in BIOAP 319, Animal Physiology Experimentation. Close supervision is provided.

**BIOAP 458 Mammalian Physiology**
Spring. 3 credits. Enrollment limited. Graduate student auditors allowed. Prerequisite: BIOAP 311 or equivalent. Students not meeting this prerequisite must obtain written permission of instructor in TH 014 Vet Research Tower before the first class. Lecs, M W F 10:10. Evening labs: Feb. 22, Mar. 28, and Apr. 18. K. W. Beyenbach and staff.
The course offers an in-depth treatment of selected topics in mammalian and human physiology. Emphasis is on concepts and a working knowledge of physiology. Selected topics include: basic functional elements of biological systems, recurrent themes in physiology, design of multicellular animals; mammalian physiology, and other students interested in biomedically related professions. Graduate students in the Field of Physiology and Medicine without equivalent background are strongly encouraged to enroll. Each of 2 afternoon laboratory sections is limited to 40 students. Prerequisite: concurrent or previous enrollment in BIOAP 311 or permission of instructor.
Lecs, R 12:20; lab, M or W 12:20-5:00 (includes disc section). R. A. Corradino.
BIOAP 658 Molecular Mechanisms of Hormone Action
Spring. 2 credits. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. K. A. Houpt.

BIOAP 701-718 Special Topics in Physiology
Fall or spring. 1 or 2 credits for each topic. May be repeated for credit. Enrollment in each topic may be limited. S-U grades optional, with permission of instructor. Lectures, laboratories, discussions, and seminars on specialized topics. Four topics offered fall 1999; topics to be offered announced for spring 2000.

BIOAP 711 Readings in Applied Animal Behavior
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent. Offered alternate years. Lec, 1 hour each week to be arranged. K. A. Houpt.

BIOAP 712 Thermoregulation and Exercise

BIOAP 713 The Physiological Control Systems That Control Intake Behavior: Food and Water Intake
Fall. 1 credit. Not offered fall 1999. T. R. Houpt.

BIOAP 715 Stress Physiology: To Be Discussed as Part of Animal Welfare
Fall. 1 credit. Prerequisite: BIOAP 311 or equivalent required. Offered alternate years. K. A. Houpt.

BIOAP 719 Graduate Research in Animal Physiology (also VETPH 628)
Fall or spring. Variable credit. Prerequisites: written permission of the section chair and of the staff member who supervises the work and assigns the grade. Students must register in Vet Research Tower 825. S-U grades optional. Hours to be arranged. Staff. Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOAP 757 Current Concepts in Reproductive Biology
Fall. 3 credits. Limited to 20 students. Prerequisites: undergraduate degree in biology and a strong interest in reproductive biology. S-U grades optional. Lec/disc, T R 10:10–12:05. Offered alternate years. J. E. Fortune, W. R. Butler, and staff.

BIO 811 Advanced Physiological Methods I
Fall. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: J. Ray. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIO 812 Advanced Physiological Methods II
Spring. 2 credits. Enrollment limited. Prerequisites: graduate student status or permission of course coordinator. S-U grades only. Lab to be arranged. Coordinator: J. Ray. This is a course primarily for graduate students in physiology and related disciplines. Experiments are carried out in the laboratories of physiology faculty members to acquaint graduate students with the latest techniques/methods in physiological research. Three modules are offered each semester by arrangement with the course coordinator.

BIOCHEMISTRY, MOLECULAR AND CELL BIOLOGY (BIOBM)

BIOBM 132 Orientation Lectures in Biochemistry
Spring, weeks 1–3. No credit. Primarily for freshmen, sophomores, and transfer students. S-U grades only (registered students receive an unsatisfactory grade for nonattendance). Lec, S 10:10–11:00, for first three S of semester. Section chair and staff.

Discussions by six professors about their research and promising areas for research in the future.

BIOBM 233 Introduction to Biomolecular Structure
Fall. 2 credits. Limited to 30 students. Prerequisites: CHEM 207–208 or equivalents. Lecs, T R 2:30–5:30. S. E. Elaik. This course is intended for students with a basic understanding of chemistry who are considering a program of study in biochemistry. The interrelationship between the structure and function of biologically important molecules are explored. Emphasis is placed on understanding the way in which the three-dimensional arrangements of atoms determine the biological properties of both small molecules and macromolecules such as proteins and enzymes. The study of molecular structure is aided by interactive computer graphics for visualizing three-dimensional structures of molecules.

BIOBM 330-333 Principles of Biochemistry
Introductory biochemistry is offered in three formats: individualized instruction (330) and lectures (331 and 332) during the academic year and lecture (333) during the summer. Individualized instruction is offered to a maximum of approximately 250 students each semester. Lectures given fall semester (331), spring semester (332), and summer (333).

BIOBM 330 Principles of Biochemistry, Individualized Instruction
Fall or spring. 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357–358 (CHEM 258 may be taken concurrently) or equivalent, or permission of instructor. Concurrent registration in BIOBM 334 is encouraged. May not be taken for credit after BIOBM 331, 332, or 333. S-U grade optional for graduate students only. Hours to be arranged. Evening prelims: fall, Oct. 5 and Nov. 4, spring, Feb. 29 and Apr. 6. E. Blankenship, P. C. Hinkle, and staff.

Fourteen units that cover protein structure and function, enzymes, basic metabolic pathways, DNA, RNA, protein synthesis, and an introduction to gene cloning. No formal lectures; autotutorial format.

BIOBM 331 Principles of Biochemistry: Proteins and Metabolism
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and CHEM 257 or 357–358 (CHEM 257 or 357 should not
The chemical reactions important to biology, key reactions of synthesis and catabolism. They are discussed in an integrated format. Topics include methods for studying proteins, protein folding, enzyme catalysis, bioenergetics, and key reactions of synthesis and catabolism.

BIOBM 332 Principles of Biochemistry: Molecular Biology
Spring. 2 credits. Prerequisites: one year of introductory biology for majors and previous or concurrent registration in organic chemistry, or permission of instructor. May not be taken for credit after BIOBM 330 or 333. S-U grades with permission of instructor. Lees, M W F 10:10-11:00. T. T. Delaney. This comprehensive course in molecular biology covers the structure and properties of DNA, RNA, and proteins, the regulation of gene expression, and the principles and uses of recombinant DNA technologies.

BIOBM 333 Principles of Biochemistry: Proteins, Metabolism, and Molecular Biology
Summer (8-week session). 4 credits. Prerequisites: one year of introductory biology for majors and one year of general chemistry and either CHEM 157, or 357-358, or equivalents, or permission of the instructor. May not be taken for credit after BIOBM 330, 331, or 332. S-U grades with permission of instructor. Lees, M W F 10:00-12:00. S. Ely or H. T. Nivison. The content of this course is similar to that of BIOBM 330; however, it is presented in lecture format rather than as individualized instruction. The topics include the structure and function of enzymes, enzyme catalysis, metabolism, and the replication and expression of genes.

BIOBM 334 Computer Graphics and Molecular Biology
Fall or spring. 1 credit. Prerequisite: concurrent registration in BIOBM 330. If space permits, students who have completed BIOBM 331 and have either taken or are concurrently taking BIOBM 332 will be permitted to register during the first week of classes. Disc to be arranged. J. E. Blankenship, P. C. Hinkle, and staff. Visualization of complex biomolecules using Silicon Graphics computers. Group presentations on current topics in molecular biology.

BIOBM 407 Nature of Sensing and Response: Signal Transduction in Biological Systems (Also PLPA 407)
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and previous or concurrent registration in 332. Recommended: BIOGD 281. S-U grades optional. Le T R 10:10-11:25. T. P. Delaney. The responses of organisms and cells to their surroundings are examined to illustrate how biological systems sense their biotic and abiotic environment and communicate sensing into appropriate responses. A wide variety of response systems will be explored to identify their unique features and to illustrate how similar processes are utilized by widely divergent organisms. Examples are drawn from prokaryote, plant and animal systems for environmental sensing, control of development and responses during disease. Discussion will also examine the role of genetics and biochemistry in understanding signal transduction pathways, as well as the ways these systems are perturbed by mutation and disease.

BIOBM 430 Laboratories in Biochemistry, Molecular, and Cell Biology (also BI BI 430)
Fall, spring, summer. 2 or 4 credits. Students are expected to sign up for two sections for a total of 4 credits; limited space available for students taking only one section. Enrollment limited. Prerequisites: BIOBM 330, or 331 and previous or concurrent enrollment in 332, or 332 and previous or concurrent enrollment in 331, or 332 and permission of instructor. Strongly recommended: BIOGD 281. Form to apply for admission to this course is found on the Web (http://www.bio.cornell.edu/biochem/biobm430/signup.html). Registration in the course is official only if the form is completed by the student, and prerequisite classes are assigned by the date the enrollment form is returned. Preference given to undergraduate majors in the Biochemistry, Molecular and Cell Biology Programs of Study, and to graduate students with a minor in the Field of Biochemistry, Molecular and Cell Biology. Labs, M W 12:20-2:45 (disc, T 9:05-10:25 or R 1:25-2:25). Each section is seven weeks during the semester, which sections are offered in each semester depends on scheduling constraints and student preferences.

Section 01 Experimental Molecular Biology
Fall. 2 credits. S. Ely and H. T. Nivison. Experiments include cloning of DNA fragments, restriction mapping, DNA sequencing, Southern blotting, and PCR. The experiments emphasize quantitative aspects as well as experimental design.

Section 02 Experimental Proteins and Enzymology
2 credits. S. Ely and H. T. Nivison. Experiments include purification of enzymes by salt fractionation, ion exchange chromatography, and affinity chromatography, determination of kinetic parameters for an enzyme, analysis of proteins by rate zonal sedimentation, SDS-polyacrylamide gel electrophoresis, and immunoblotting.

Section 03 Experimental Cell Biology
Spring only. 2 credits. T. Helfaker. Experiments include culture of animal cells, purification and analysis of subcellular components, immunofluorescence, electron microscopy, and in vitro assays.

Section 04 Experimental Molecular Neurobiology

BIOBM 432 Survey of Cell Biology
Spring. 3 credits. Prerequisite: BIOBM 330, 333, or 331, and previous or concurrent registration in 332, or equivalent. S-U grades optional for graduate students only. Lees, M W F 8:40-9:55. W. J. Brown and staff. A survey of a wide array of topics focusing on the general properties of eukaryotic cells. Topics include basic cell processes, the cell cycle, the cytological organization of the eukaryotic cell, and cell specialization. Focus on current topics in molecular biology. The topics include methods for studying cells, the structure and function of the major cellular organelles, and analyses of cellular processes such as mitosis, endocytosis, cell motility, secretion, cell-to-cell communication, gene expression, and gene regulation. Some of the material is covered in greater depth in BIOBM 337: BIOGD 483, BIOBM 632, 635, and 639.

BIOBM 434 Applications of Molecular Biology to Medicine, Agriculture, and Industry
Fall. 3 credits. Enrollment limited to 36 students. Prerequisites: BIOBM 330 or 335 or 333 and 332. Recommended: BIOGD 281. S-U grades optional. Lees, M W F 11:15. J. M. Calvo, S. Ely. By considering some recent applications of biology, you may extend your knowledge of molecular biology and integrate information from biochemistry, cell biology, genetics, immunology, virology, microbiology, and plant biology. Topics include large-scale sequencing of genomes, drug discovery based upon genomics, mapping and cloning human disease genes, DNA vaccines, transgenic animals, engineering plants resistant to insects, and gene therapy. Problem solving and oral presentations are important aspects of this course.

BIOBM 435-436 Undergraduate Biochemistry Seminar
435, fall; 436, spring. 1 credit each term. May be repeated for credit. Limited to upperclass students. Prerequisite: BIOBM 330 or 335 or 331 and 332 or written permission of instructor. S-U grades only. Sem time to be arranged. Organizational meeting first W of each semester at 4 p.m. Fall: G. P. Hess; spring: staff. Selected papers from the literature on a given topic are evaluated critically during six or seven two-hour meetings.

BIOBM 437 Eukaryotic Cell Proliferation (also TOX 437)
Fall. 3 credits. Prerequisite: BIO G 101-102 or BIO G 105-106 and BIOBM 330 or BIOBM 331-352. Recommended: BIOGD 281 and BIOBM 332. S-U grades optional. Lees, T R 12:20-1:35. R. H. Chen. The course covers a wide spectrum of the issues related to cell proliferation in eukaryotes. Topics include regulation of cell division cycle, signal transduction pathways, growth factor receptors, oncogenes, cancer viruses, tumor suppressors, and apoptosis. Additional lectures will discuss aspects of differentiation and development that are related to the cell cycle.

BIOBM 631 Protein Structure and Function
Fall. 3 credits. Prerequisites: BIOBM 330 or 335 or 331 and 332 and organic chemistry. Recommended: physical chemistry. S-U grades optional. Lees, M W F 9:05. L. H. Wise. Presentations on the principles of protein structure and the nature of enzymatic catalysis. Specific topics include protein
BIOBM 632 Membranes and Bioenergetics
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Lecs, T R 9:05. W. J. Arion.
Fall 6 credits. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Labs and Discs 12 hours each week TBA. Organizational meeting first R of semester, 10:10. V. M. Vogt and staff.

BIOBM 633 Biochemistry of Macromolecules

BIOBM 635 Mechanisms of Metabolic Regulation and Mammalian Gene Expression (also NS 635)
Spring. 2 credits. Prerequisites: at least 4 credits of Principles of Biochemistry and CHEM 338 or 360, or permission of instructor. Offered alternate years. Lecs, T R 9:05. M. N. Kazarinoff, N. Noy, P. Stower.

BIOBM 636 Cell Biology
Spring. 2 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332, or 432, or their equivalents. Lec, T R 9:05-11:00. A. P. Bretscher.

BIOBM 637 Integration and Coordination of Energy Metabolism (also NS 636)
Fall. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 or 332 or equivalent. Lecs, M W F 9:05. Evening preims to be arranged. W. J. Arison.

BIOBM 639 The Nucleus
Spring. 2 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Recommended: BIOGD 281. Lec, T R 12:20. J. T. Li.

BIOBM 692 Protein-Nucleic Acid Interactions (also BIOI 692)
Spring. 3 credits. Prerequisites: BIOBM 330 or 333 or 331 and 332. Lecs, T R 10:10-11:25. Offered alternate years. Not offered 1999-2000. J. D. Helmann. For course description, see BIOI 692.

BIOBM 703 Protein NMR Spectroscopy (also VETPR 730)
Spring. 2 credits. Prerequisites: CHEM 389 and 390 or CHEM 287 and 288 or permission of instructor. S-U grades optional. Lec to be arranged. L. K. Nicholson, R. E. Oswald.

BIOBM 730-737 Current Topics in Biochemistry
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

BIOBM 732-737 Current Topics in Biochemistry
Fall or spring. 1/2 or 1 credit for each topic. May be repeated for credit. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. S-U grades only. Lectures and seminars on specialized topics. Topics for fall and spring to be announced in the division's course supplement published at the beginning of each semester.

BIOBM 738 Macromolecular Crystallography (also CHEM 788)

BIOBM 750 Cancer Cell Biology (also VETPA 750)
Spring. 3 credits. Prerequisite: BIOBM 330 or 333 or 331 and 332 or equivalent. Offered alternate years. Lecs to be arranged. J. Guan, R. Levine, B. Pauli, A. Yen.

BIOBM 751 Ethical Issues and Professional Responsibilities (also TOX 751)
Spring. 2 credits. Limited to graduate students beyond first year. S-U grades only. Sem, W 2:30-4:25. Additional sections may be offered. Organizational meeting will be held on Wednesday, Jan. 26, 2:30 P.M. in 180 Biotechnology Building. Staff.

BIOBM 830 Biochemistry Seminar
Fall or spring. No credit. Sem, F 4:00. Staff.

BIOBM 835-836 Methods and Logic in Biochemistry
Fall, spring. 1 credit each term. May be repeated for credit. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Lab TBA. Staff.

BIOBM 838 Professional Responsibilities (also NS 838)
Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Lab TBA. Staff.

BIOBM 839 Research Seminar in Biochemistry
Fall or spring. 1 credit each term. May be repeated for credit. Required of, and limited to, first-year graduate students in the Field of Biochemistry, Molecular and Cell Biology. S-U grades only. Lab TBA. Staff.

Molecular Mechanisms of Hormone Action (Biological Sciences [BIOAP] 658 and Veterinary Medicine 758)
ECOLOGY AND EVOLUTIONARY BIOLOGY (BIOES)

BIOES 154 The Sea: An Introduction to Oceanography (also GEOL 104)
Spring. 3 or 4 credits (4-credit option includes one 2/1/2 hour laboratory each week). S-U grades optional. Lecs, T R 11:40-12:55; labs, M or W 2:00-4:25, or M 7:30-9:55 p.m. C. H. Greene, K. R. Zamudio.
A survey of the physics, chemistry, geology, and biology of the oceans for both science and non-science majors. Topics include: sea-floor spreading and plate tectonics, marine sedimentation, chemistry of seawater, ocean currents and circulation, the oceans and climate, ocean ecology, coastal processes, marine pollution, and marine resources.

BIOES 261 Ecology and the Environment
Fall or summer. 4 credits. Prerequisite: one year of introductory biology. S-U grades optional. Lecs, M W F 11:15; disc, W or R 1:25, 2:30, or 3:35. N. G. Hairston, C. O. Hendin, P. E. Feeny.
An introduction to the science of ecology, the study of interactions between organisms and their environments. Major topics include demography, succession, biodiversity, biogeography, and ecosystems, and the evolution of adaptations. The influences of enemies, competitors, and mutualists on populations and communities are discussed. The effects of climate and human activities on ecological processes are also considered. Ecological principles are used to explain the issues associated with several environmental problems.

BIOES 263 Field Ecology
Fall. 2 credits. Limited to 25 students. Prerequisite: concurrent or previous enrollment in BIOES 261. Lecs, R 1:25; lab, F 12:20-5:00; 1 weekend field trip to the Hudson Valley. P. L. Maris.
Field exercises designed to give students direct experience with field work, with emphasis on developing observational skills, journal keeping, and a landscape perspective. Topics include plant succession, niche relationships of insects, influence of herbivores and competition on plant performance, decomposition of soil litter, foraging behavior, census methods, and use of scientific collections.

BIOES 264 Birds in Biology
Fall. 3 credits. Limited to 25 students. May not be taken for credit after BIOES 475. Intended primarily for biology non-majors. S-U grades optional. Lecs and disc T R 8:40-9:55; two field trips TBA. A. A. Dhondt.
This course explores exciting new insights in biology using detailed examples drawn from bird studies. Subject matter is suitable for non-majors, but of interest to majors as well. Topics will be drawn from a variety of biological disciplines. These include behavioral ecology (mating systems, territorial behavior, song), population ecology (migration, population limitation, micro-evolution, competition), evolutionary biology (trade-offs in life histories, optimal clutch size), and conservation biology (habitat fragmentation, inbreeding, acid rain). Lectures will be interspersed with discussion of selected papers.

BIOES 267 Introduction to Conservation Biology
Fall. 3 credits. May not be taken for credit after NTRES 450. Intended for both science and non-science majors. Completion of BIOES 267 is not required for NTRES 450-454, but is recommended. Lecs, M W 9:05; disc, F 9:05 or R 2:30. A. S. Flecker, J. W. Fitzpatrick.
An exploration of biological concepts related to conserving the Earth's biodiversity, introducing ecological and evolutionary principles important for understanding major conservation problems. Topics include patterns of species and ecosystem diversity, causes of extinction, genetic risks of small populations, design of nature preserves, strategies for protecting endangered species, ecosystem restoration, and the value of biodiversity.

BIOES 274 The Vertebrates: Structure, Function, and Evolution
Spring. 4 credits. Prerequisite: one year of introductory biology. Lecs, M W F 12:20; labs, M or T or W 12:54-4:25. Fee, $25. K. R. Zamudio.
An introductory course in vertebrate organismal biology which explores the structure and function of vertebrates with an emphasis on trends in vertebrate evolution. Lectures will cover topics such as the origin and evolution of various vertebrate groups, sensory systems, thermoregulation, life history, locomotion, feeding, size, and scaling. Laboratories include dissections of preserved vertebrate animals and noninvasive live animal demonstrations.

BIOES 275 Human Biology and Evolution (also ANTHR 275 and NS 275)
An introduction to the biology of Homo sapiens through an examination of human evolution, biological diversity, and modes of adaptation to past and present environments. Evolutionary theory is reviewed in relation to the current evidence from the fossil record and studies of the evolution of human behavior. A survey of human adaptation covers a complex of biological and behavioral responses to environmental stress. Human diversity is examined as the product of long-term evolutionary forces and short-term adaptive responses such as acculturation, the Pilkington fraud, the sociobiology debate, genetic engineering, race and IQ, and racism are presented as examples of current issues in human biology.

BIOES 278 Evolutionary Biology
Fall or spring. 3 or 4 credits. (4-credit option involves writing component and two discussion sections per week, limited to 20 students each semester. Students may not preregister for the 4-credit option; interested students complete an application form on the first day of class.) Limited to 20 students each semester. Prerequisite: one year introductory biology or permission of instructor. S-U grades optional. Lecs, T R 9:05; disc, 1 hour each week to be arranged. Evening prelims: fall, Sept. 23 and Oct. 28; spring, Feb. 24 and Mar. 30. Fall, M. A. Geber, staff; spring, M. Shulman.
The course considers explanations for patterns of diversity and for the apparent "good fit" of organisms to the environment. Topics covered include the genetic and developmental basis of evolutionary change, processes at the population level, the theory of evolution by natural selection, levels of selection, concepts of fitness and adaptation, modes of speciation, long-term trends in evolution, rates of evolution, and extinction. Students taking the 4-credit option read additional materials from the primary literature and write a series of essays in place of the regular prelims.

BIOES 371 Human Paleontology (also ANTHR 371)
Fall. 4 credits. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lecs, M W F 2:30; lab, 1 hour each week to be arranged; occasional field trips. Offered alternate years. K. A. R. Kennedy.
A broad survey of the fossil evidence for the human evolution with special attention to skeletal and dental anatomy, geological contexts, paleoecology, mating systems, and current theories of human origins and physical diversity.

BIOES 373 Biology of the Marine Invertebrates
Fall (but taken in the previous summer at the Sholes Marine Laboratory [SML]). 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors in the Department of Biology required for 1999 because it will be off campus. Offered alternate years. Two week, full-time course (August 6-August 20). Daily and evening lectures, laboratories, and field work. Total cost for room, board, and overhead at SML: $800. C. D. Harvell, J. G. Morin, SML Faculty.
An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. The Sholes Marine Laboratory exposes students to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

BIOES 452 Herbivores and Plants: Chemical Ecology and Coevolution (also ENTOM 452)
Spring. 3 credits. Prerequisites: one year of introductory biology, BIOES 261, CHEM 253 or 357/358 and 251 or 301, or permission of instructor. S-U grades optional. Lecs, M W F 11:15. Field trips, additional lectures, or laboratory demonstrations may be held in place of F lecture. Offered alternate years. Not offered 1999-2000. P. P. Feeny.
Topics include significance of plant chemistry in mediating interactions between plants and herbivorous animals, mechanisms and strategies of plant finding and exploitation by animals, especially insects, and of defense and escape by plants; evolutionary hypotheses for ecological patterns of resistance and attack.
BIOLOGICAL SCIENCES - 1999-2000

and implications for human food and agriculture.

BIOES 455 Insect Ecology (also ENTRM 455)
Fall. 3 credits. Prerequisites: BIOES 261 or equivalent. Labs. 212 or knowledge of another taxon. S-U grades optional. Lecs, M W F 11:15. Offered alternate years. R. B. Root.
Topics include the nature and consequences of biotic diversity, biogeography, coevolution, adaptive syndromes exhibited by various guilds, population regulation, impact of insects on ecosystems, comparative and functional analysis of communities, and differences in the organization of natural and managed systems. Ecological and evolutionary principles are integrated by thorough study of exemplars.

BIOES 456 Stream Ecology (also ENTRM 456 and NTRES 456)
Lecture: addresses the patterns and processes occurring in stream ecosystems, including channel formation, water chemistry, watershed influences; plant, invertebrate, and fish community structure; nutrient cycling; trophic dynamics, colonization and succession; community dynamics; conservation; and the impacts of channel alterations. Labs: a field project includes descriptive and experimental techniques and hypotheses testing related to environmental assessment.

BIOES 457 Limnology: Ecology of Lakes, Lectures
Fall. 3 credits. Prerequisite: BIOES 261 or written permission of instructor. Recommended: introductory chemistry. Lecs, M W F 11:15. Offered alternate years. Not offered 1999-2000. N. G. Hairston, Jr. The study of continental waters, with emphasis on lakes and ponds. Factors regulating nonpoint processes, population and community dynamics of freshwater organisms, and physical and chemical properties of fresh water are considered.

BIOES 459 Limnology: Ecology of Lakes, Laboratory
Fall. 2 credits. Prerequisite: concurrent or previous enrollment in BIOES 457. Lab, T W or R 1:25-4:25, 1 weekend field trip. Fee, $10. Offered alternate years. Not offered 1999-2000. N. G. Hairston, Jr. and staff.
Laboratories and field trips devoted to studies of the biological, chemical, and physical properties of lakes and other freshwater environments. Vertebrate dissection (fish) during one laboratory exercise and during a portion of weekend field trip.

BIOES 461 Population and Evolutionary Ecology
Problems of ecology are viewed from an evolutionary perspective, exploring issues of adaptation and fitness by developing advanced understanding of demography and interspecific interactions. Blending theory and empirical findings, the course explores population dynamics; life-history theory; dispersal; competition; predation; parasite-host coevolution; mutualisms; and sexual, kin, and group selection. Methods of estimation and analysis are learned in laboratory.

BIOES 462 Marine Ecological Processes (also GEOL 462)
Lectures and discussions focus on current research in broad areas of marine ecology with an emphasis on processes unique to marine systems. A synthetic treatment of multiple levels of organization in marine systems including organismal, population, community, ecosystem, and evolutionary biology. Examples are drawn from all types of marine habitats, including polar seas, temperate coastal waters, and tropical coral reefs.

BIOES 463 Plant Ecology and Population Biology, Lectures
Fall. 4 credits. Prerequisite: BIOES 261 or 278 or equivalents, or permission of instructor. Recommended: some taxonomic familiarity with vascular plants and concurrent enrollment in BIOES 465. Lecs, M W F 11:15. Offered alternate years. Not offered 1999-2000. M. A. Geber, P. L. Marks.
This course examines the biological and historical factors affecting the structure of plant communities, and the distribution, abundance, and population dynamics of individual species. The influence of the environment, disturbance history, competition, and herbivory on the organization of plant communities are considered. Plant populations are also studied through an analysis of plant life histories and plant-plant and plant-animal interactions. Throughout the course an attempt is made to blend empirical patterns, experimental results, and theory. Readings are drawn from the primary literature.

BIOES 464 Macroevolution
Spring. 4 credits. Limited to 25 students. Prerequisite: BIOES 278 or permission of instructor. S-U grades optional, with permission of instructor. Lecs, T R 10:10-11:25; disc, 1 hour each week to be arranged. Offered alternate years. A. R. McCune.
An advanced course in evolutionary biology centered on large-scale features of evolution. Areas of emphasis include patterns and processes of speciation, phylogeny reconstruction, the origins and fate of variation, causes of major evolutionary transitions, and patterns of diversification and extinction in the fossil record. Discussion of these problems involves data and approaches from genetics, morphology, systematics, paleobiology, development, and ecology.

BIOES 465 Plant Ecology and Population Biology, Laboratory
Field and laboratory exercises designed to give firsthand experience with the ecology and population biology of plants. Emphasis is on making observations and measurements of plants in the field and greenhouse, and on data analysis.

BIOES 466 Physiological Plant Ecology, Lectures
Spring. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional, with permission of instructor. Lecs, M W 8:40-9:55; optional disc to be arranged. Offered alternate years. Not offered 1999-2000. Staff.
A detailed survey of the physiological approaches used to understand the relationships between plants and their environment. Lectures explore physiological adaptation; limiting factors; resource acquisition and allocation; photosynthesis, carbon, and energy balance; water use and water relations; nutrient relations; linking physiology, development, and morphology; stress physiology; life history ecology; the evolution of physiological performance; and physiology at the population and community and ecosystem levels. Readings draw from the primary literature and textbooks.

BIOES 468 Physiological Plant Ecology, Laboratory
Spring. 2 credits. Limited to 15 students. Prerequisite: previous or concurrent enrollment in BIOES 466. Lab, W 1:25-4:25, plus additional lab hours to be arranged. Offered alternate years. Not offered 1999-2000. Staff.
A detailed survey of the physiological approaches used in understanding the relationships between plants and their environment. Laboratory applies physiological techniques to specific ecological problems and covers aspects of experimental design and computer-aided data analysis. Most laboratories run past the three-hour period, with students spending an average of 3 hours/week in additional lab time for this course.

BIOES 471 Mammalogy
Fall. 4 credits. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Lecs, M W F 12:20; lab, M T W or W 1:25-4:25; 1 weekend field trip required. Carpools to the Vertebrate Collections at Research Park is necessary several times during the semester. Fee, $15. Offered alternate years. Not offered 1999-2000. Staff.
Lectures on the evolution, classification, distribution, and adaptations of mammals. Laboratory and fieldwork on systemsatics, ecology, and natural history of mammals of the world, with primary emphasis on the North American fauna. Systematics laboratories held in the museum at Research Park. Live animals are studied in the field and are sometimes used in the laboratory for nondestructive demonstrations or experiments. The systematics laboratory exercises are based on museum specimens.

BIOES 472 Herpetology
Lectures cover various aspects of the biology of amphibians and reptiles, including evolution, zoogeography, ecology, behavior,
and physiology. Laboratory topics include systematics, morphology, and behavior. Live animals are studied in the field and are used in the laboratory for nondestructive demonstrations and experiments. The systematics laboratory exercises are based on museum specimens and dissection of preserved materials.

[BIOES 473 Ecology of Agricultural Systems (also BIOL 473)]
Fall. 3 credits. Limited to 45 students.
Prerequisite: BIOES 261 or permission of instructor. S-U grades optional. Lec and labs, T R 2:30-3:45. During the first 6 weeks of class, Thursday meetings may run to 5:00 because of field trips. Offered alternate years. Not offered 1999-2000.
Analysis of the ecological processes operating in agricultural systems, with an emphasis on the interactions between organisms. Topics include nutrient dynamics in agroecosystems, plant competition and facilitation, intercropping, the ecology of species invasions, mutualism in agroecosystems, plant-herbivore relations, plant-pathogen interactions, biological pest control, and evolutionary processes in agriculture. Case studies from both the tropics and the temperate zone are used to illustrate important concepts.

[BIOES 475 Ornithology]
Fall or spring. 4 credits. Limited to 16 students with permission of instructor obtained by preregistering in E231 Conson. Prerequisite: one year of introductory biology or ANTHR 101 or permission of instructor. Lec and labs, T R 10:10-12:05; additional hours to be arranged. Independent research project required. Offered alternate years. Not offered 1999-2000.
K. A. R. Kennedy.
Practical exercises and demonstrations of modern approaches to the methodology of biological anthropology. Emphasis on comparative human anatomy, osteology, description of skeletal subjects, paleopathology, skeletal maturation, and relevant field techniques for the archaeologist and forensic anthropologist.

[BIOES 476 Field Studies in Ecology and Evolution (also ANTHR 476)]
Fall. 4 credits. Limited to 30 students, with permission of instructor obtained by preregistering in E231 Conson. Recommended: BIOES 274. S-U grades optional, with permission of instructor. Lec and labs, T R 12:20-4:25; occasional field trips and special projects. Carpooling to the Vertebrate Collections at Research Park is necessary once a week. Fee, $15. Offered alternate years. Not offered 1999-2000.
D. W. Winkler.
Lectures cover various aspects of the biology of birds, including anatomy, physiology, systematics, evolution, behavior, ecology, and biogeography. Laboratory includes dissection of dead material, studies of skeletons and plumages, and specimen identification of avian families of the world and species of New York. Independent projects emphasize research skills.

[BIOES 477 Biology of Fishes]
Fall. 4 credits. Limited to 24 students. Recommended: BIOES 274 or equivalent experience in vertebrate zoology. S-U grades optional, with permission of instructor. Lec, M W F 10:10; lab, M 1:25-
4:25, with additional lab time TTH; two field trips. A small lab fee may be required. Offered alternate years. Not offered 1999-2000. A. R. McCune.
An introduction to the study of fishes: their structure, evolution, distribution, ecology, physiology, behavior, classification, and identification, with emphasis on local species. Two field trips, including one full day weekend trip required. Live animals are studied in the field and are sometimes used in the laboratory. Active demonstrations or experiments. The systematics and dissection laboratories use preserved specimens.

[BIOES 478 Ecosystem Biology]
Fall. 4 credits. Prerequisite: BIOES 261 or equivalent. S-U grades optional. Lec and labs, T R 10:10-12:05. Offered alternate years. L. O. Hedin.
Analysis of ecosystems in terms of energy flow and nutrient cycles, emphasizing an experimental approach and comparative aspects of terrestrial, freshwater, and marine ecosystems. Consideration of the hydrologic effects on ecosystems such as from acid precipitation and offshore oil pollution. Analysis of climate change and regional environmental change from an ecosystem perspective.

[BIOES 479 Paleobiology (also GEOG 479)]
Fall. 4 credits. Prerequisites: one year of introductory biology for majors and either BIOES 274, GEOIL 375, BIOES 373, or permission of instructor. S-U grades optional. Lec, M W F 12:20; lab to be arranged. W. Allmon.
A survey of the major groups of organisms and their evolutionary histories. Intended to fill out the biological backgrounds of geology students and the geological backgrounds of biology students concerning the nature and significance of the fossil record for their respective studies.

[BIOES 660 Field Studies in Ecology and Evolution (also ANTHR 660)]
Fall or spring. Variable credit. Prerequisites: BIOES 261, a taxon-oriented course, and permission of instructor. S-U grades optional, with permission of instructor. Lec and field trips to be arranged.
Estimated costs: to be announced. Staff. This course provides students with opportunities to learn field techniques and new biota by participating in an intensive series of field exercises. Extended field trips may be scheduled during fall break, intersession, or spring break. The regions visited, trip objectives, and other details are announced by the various instructors at an organizational meeting held at the beginning of the semester. Meetings on computer use are devoted to orientation and reports on completed projects.

Section 01: Life Histories of Marine and Freshwater Invertebrates
Fall. 2 credits. Prerequisite: undergraduates must have previous experience or course work with marine or freshwater invertebrates. Two extended weekend field trips in early September and October. Fee: $100 (to help cover transportation and housing at Shools Marine Lab). Offered alternate years. Not offered 1999-2000. C. D. Harvel, N. C. Haiston, Jr. Field trips to the Shools Marine Lab and Shackelton Point Field Station. Students employ experimental approaches to study the evolution of invertebrate life histories.

Section 02: Graduate Field Course in Ecology
Spring. 3 credits. Restricted to graduate students. A fee will be required to help cover food and lodging for trip to Florida. Offered alternate years. P. L. Marks, R. B. Root.
The course is designed to give graduate students experience in defining questions and designing field investigations. The class is based at the Archbold Biological Station in central Florida over spring break and during the following week. The class visits several ecosystems including sand pine scrub, cattle ranches, cypress swamps, everglades, and coral reefs.

[BIOES 661 Environmental Policy (also ALS 661 and B&SOC 461)]
Fall and spring. 3 credits each term. (Students must register for 6 credits each term, since an "R" grade is given at the end of the fall term.) Limited to 12 students. Prerequisite: permission of instructor. Sem, R 2:30-4:30. D. Pimentel. The course uses an interdisciplinary approach to focus on complex environmental problems. Ten to twelve students, representing several disciplines, investigate significant environmental problems. The research team spends two semesters preparing a scientific report for publication in Science or BioScience.

[BIOES 663 Theoretical Population Genetics]
Fall. 3 credits. Prerequisites: knowledge of basic population genetics (e.g., BIOLG 481), and some mathematics (e.g., MATH 111). Primarily for graduate students; permission of instructor required for undergraduates. S-U grades optional. Lec, 2 hours each week to be arranged; lab (computer), 3 hours each week to be arranged. Offered alternate years. Not offered 1999-2000. Kotob, R. This course is designed to (1) illustrate the theoretical underpinnings of population genetics, (2) relate these principles to contemporary issues in the study of human populations, and (3) illustrate the normative implications of population genetics to both human and non-human populations. The course covers the fundamentals of population genetics, focusing on the Hardy-Weinberg equilibrium and the effects of natural selection. The course is designed to be accessible to students with a background in biology, mathematics, or genetics, and is particularly appropriate for students interested in the role of genetics in human population studies.

[BIOES 665 Limnology Seminar]
Spring. 1 credit. May be repeated for credit. Primarily for graduate students, written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Offered alternate years. Not offered 1999-2000.
N. G. Hairston, Jr.
A seminar course on advanced topics in freshwater ecology.

ECOLOGY AND EVOLUTIONARY BIOLOGY 151
also be required to attend five seminars on M 4:00–5:30 p.m. M. Wolfrner, A. McCune. Five leading international experts will describe recent advances in data and theory at the intersection of developmental biology and evolutionary biology. Topic coverage will center around pattern formation and the origin of metazoan body plans. During the Tuesday class meeting prior to each expert’s visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend the speaker’s seminar on Monday at 4:00 p.m. and then meet with the speaker during class on the following day for continued discussion of the topic.

Fall 1999 is the only time that this special course will be offered, at least in this seminar-coupled format. Graduate students should register for BIOGD 780; undergraduates should register for BIOGD 480.

BIOES 763 Workshop in Biochemistry
Fall or spring. 1 credit. Limited to 15 students. Prerequisite: BIOES 668. S-U grades only. Workshop and disc, TBA. Staff.
Provides a workshop-forum in which graduate students interact with invited world-leaders in biochemistry. Workshop topics will change each semester. A one-week workshop will be preceded by seven, one-hour preparatory discussions of readings.

BIOES 767 Current Topics in Ecology and Evolutionary Biology
Fall 4 credits. Prerequisite: permission of instructor required for undergraduates. S-U grades only. Lecs and disc, T R 10:10–12:05; 1 weekend field trip. Staff.
Critical evaluation and discussion of theory and research in ecology and evolutionary biology. Lectures by faculty and student-led discussions of topics in areas of current importance.

BIOGD 281 Genetics
Fall, spring, or summer (8-week session). 5 credits. Not open to freshmen in fall semester. Enrollment may be limited to 200 students. Prerequisite: one year of introductory biology or equivalent. No admittance after first week of classes. Lecs, T R 10:10–12:05; lab, T W or F 2:30–4:25; additional hours to be arranged. Students do not choose lab sections during course enrollment; lab assignments are made during first day of classes. Problem-solving sessions strongly recommended, T or W 8:30–9:45 (additional session to be arranged if necessary). P. J. Brodie, T. D. Fox, M. L. Goldberg, R. J. MacIntyre.
A general study of the fundamental principles of genetics in eukaryotes and prokaryotes. Discussions of gene transmission, gene action and interaction, gene linkage and recombination, gene structure, gene and chromosome mutations, genes in populations, and extrachromosomal inheritance. Aspects of recombinant DNA technology are discussed. In the laboratory, students perform experiments with microorganisms and conduct an independent study of inheritance in Drosophila.

BIOGD 282 Human Genetics
Spring. 2 or 3 credits (2 credits if taken after BIOGD 281). Each discussion limited to 25 students. Prerequisite: one year of introductory biology or equivalent, permission of instructor required for students who have taken BIOGD 281. S-U grades only. Lecs, M W 10:10 (lec, also F 10:10) or 11:15; disc, R 10:10 or F 10:10 or 11:15. R. A. Galvo. A course designed for nonmajors. Lectures provide the technical background needed to understand controversial personal, social, and
GENETICS AND DEVELOPMENT

BIOGD 385 Developmental Biology
Fall. 3 credits. Prerequisite: BIOGD 281.
An introduction to the morphogenetic, cellular, and genetic aspects of the developmental biology of animals.

BIOGD 386 Developmental Aspects of Evolution
Spring. 2 credits. Prerequisite: BIOGD 281. S-U grades optional. Lec., T R to be arranged. Offered alternate years.
A. W. Blackler.
An examination of the developmental mechanisms that underlie evolutionary change and organismal diversity and of the developmental constraints that contribute to evolutionary conservatism.

BIOGD 387 Developmental Aspects of Mental Biology
Fall. 3 credits. Preference given to seniors. Prerequisites: one year of introductory biology and a knowledge of mammalian adult anatomy. Lec., T R 11:10; labs, T or R 2-4:25. A. W. Blackler.
A course in the embryonic development of vertebrate animals, with emphasis on the comparative aspects of morphogenesis and function at the tissue and organ levels. The laboratory has a strong morphogenetic bias, emphasizing the comparative aspects of developmental anatomy and preparation for medical studies.

BIOGD 480 Development and Evolution (also BIOES 760-02/BIOG 400)
BIOGD 780
Fall*. 2 credits. Prerequisites: BIOGD 281 and BIOES 278. S-U grades only. Lec. and disc T 12:20-2:25 p.m. Students will also be required to attend five seminars on M 4:40-5:30 p.m. M. W. Wolfer, A. McCune.
Five leading international experts will describe recent advances in data and theory at the intersection of developmental biology and evolutionary biology. Topic coverage will center around pattern formation and the origin of metazoan body plans. During the Tuesday class meeting prior to each expert's visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The week before the seminar, students will be required to attend the speaker's seminar on Monday at 4:00 p.m. and then meet with the speaker during class on the following day for continued discussion of the topic.

*Fall 1999 is the only time that this special course will be offered, at least in this seminar-based format. Graduate students should register for BIOGD 780; undergraduates should register for BIOGD 480.

BIOGD 481 Population Genetics
Fall. 4 credits. Prerequisite: BIOGD 281, BIOES 278, or equivalents. Lec., M W F 10:10; disc, M 2:30 or T 1:25.
C. F. Aquadro.
Population genetics is the study of the transmission of genetic variation through time and space. The class explores how to quantify this variation, what the distribution of variation tells us about the structure of natural populations, and about the processes that lead to evolution. Topics include the diversity and measurement of genetic variation, mating and reproductive systems, selection and fitness, genetic drift, migration and population structure, mutation, multifocus models, the genetics of speciation, quantitative traits, and the maintenance of molecular variation. Emphasis is placed on DNA sequence variation, and the interplay between theory and the data from experiments and natural populations. Specific case studies include the population genetic issues involved in DNA fingerprinting, the genetic structure and evolution of human populations, and the study of adaptation at the molecular level. Examples are drawn from studies of animals, plants, and microbes.

BIOGD 482 Human Genetics and Society
Fall. 3 credits. Enrollment limited to 24 senior biological sciences majors, with preference given to students studying genetics and development. Prerequisites: BIOGD 281 and BIOBM 330 or 331 and 332 or permission of instructor. S-U grades optional. Disc, T 2:30-4:25 and R 2:30-3:30. R. A. Calvo, P. J. Bruns.
Presentation of some of the science and technology, plus discussion of the ethical, social, and legal implications of recent advances in human genetics. Among the topics considered are assisted reproductive strategies, eugenics, genetic counseling, genetic screening (pre-implantation, prenatal, neonatal, presymptomatic, carrier, and workplace), wrongful life and wrongful birth, genetic effects of abused substances, genetics and behavior, and therapy for genetic diseases. Students lead many discussions. There is a major writing component in the course.

BIOGD 483 Molecular Aspects of Development
Spring. 3 credits. Prerequisites: BIOGD 281, BIOBM 332 or 330 or 333; and BIOGD 385 or permission of instructor. Lec., T R 11:15. Offered alternate years. Not offered 1999-2000.
M. F. Wolfer.
An advanced course in developmental biology, with emphasis on the molecular events underlying developmental processes. Simultaneously, a molecular biology course that focuses on how development modulates and uses transcriptional, post-transcriptional, translational and post-translational regulation of gene expression and cellular events such as signal transduction and cell-cell communication. Numerous developmental systems are discussed and analyzed in model organisms, plants and, especially, animals including fruit flies, nematode worms, and vertebrates such as mice, frogs, and humans. Course readings include original research articles. Discussion emphasizes specific experimental approaches, results and their interpretation.

BIOGD 484 Molecular Evolution
Spring. 3 credits. Prerequisites: BIOGD 281 and organic chemistry. Lec., T R 11:15. Offered alternate years.
R. J. MacIntyre.
An analysis of evolutionary changes in genes and their protein products. Theories on the evolution of the genetic code, the construction of phylogenetic and biochemical trees, and the role of gene duplications in evolution are discussed. The second half of the course concerns the evolution and the organization of genomes from viruses to higher eukaryotes, including the evolution of satellite DNA sequences and transposable elements.

BIOGD 485 Bacterial Genetics (also BIOMI 485)
Fall. 2 credits. Graduate students, see BIOMI 485. Prerequisite: BIOGD 281.
Recommended: BIOMI 290 and BIOMB 330 or 331 and 332 or 333. Lec., W 7:30-9:25 p.m. Staff.
For course description, see BIOMI 485.

BIOGD 486 Advanced Eukaryotic Genetics
Spring. 4 credits. Enrollment may be limited to 50 students. Prerequisites: BIOGD 281, BIOBM 330 or 331 and 332; S-U grades optional. Lecs, T 12:20-1:25 and R 12:20-1:10; disc, R 1:25-2:15 or T 11:15-12:05. E. F. Alagan.
The course develops fundamental skills in eukaryotic genetic analysis through lectures and by reading, analyzing, and presenting research articles. Concepts are presented within the context of a well-studied field, such as chromosome segregation. The basic tools that have been developed to study this field are used to analyze other topics such as vegetative and meiotic cell cycle control, embryonic development, pathogen resistance in plants, and human genetics.

BIOGD 487 Fertilization and the Early Zygote
Spring. 2 credits. Prerequisites: BIOGD 281; BIOMB 332, 330, or 333; and BIOGD 385 or permission of instructor. Lec, R 2:30-4:25. Offered alternate years.
M. F. Wolfer.
This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-fertilization embryos from several animal species. Topics include fertilization (sperm-egg binding, sperm entry into egg), polynuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture.

BIOGD 488 Advanced Topics in Population Genetics
Spring. 2 credits. Limited to 20 students.
Prerequisites: BIOGD 481 or equivalent, and written permission of instructor. S-U grades optional. Lec., T 2:30-4:25. Offered alternate years. Next offered spring 2001.
C. F. Aquadro.
An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

BIOGD 489 Advanced Bacterial Genetics (BIOMI 489)
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec., W 7:30-9:30. R. J. MacIntyre. Offered 1999-2000, 2000-2001. Staff.
For course description, see BIOMI 685.

BIOGD 487 Developmental Genetics
Fall. 2 credits. Limited to 20 students.
Prerequisites: BIOGD 281 and 385 or their equivalents. S-U grades optional. Lec. to be arranged. Offered alternate years. Next offered fall 2000.
K. J. Kemphues.

BIOGD 682 Fertilization and the Early Zygote
Spring. 2 credits. Prerequisites: BIOGD 281; BIOMB 332, 330, or 333; and BIOGD 385 or permission of instructor. Lec, R 2:30-4:25. Offered alternate years.
M. F. Wolfer.
This course treats the earliest events in the formation of a new organism. The methods and findings of genetic, developmental, and molecular analyses are discussed. Readings in the recent literature and discussions focus on pre-fertilization embryos from several animal species. Topics include fertilization (sperm-egg binding, sperm entry into egg), polynuclear fusion, egg activation, initiation and terminating the cleavage, division period, cytoplasmic determinants, changes in nuclear and cytoplasmic architecture.

BIOGD 684 Advanced Topics in Population Genetics
Spring. 2 credits. Limited to 20 students.
Prerequisites: BIOGD 481 or equivalent, and written permission of instructor. S-U grades optional. Lec., T 2:30-4:25. Offered alternate years. Next offered spring 2001.
C. F. Aquadro.
An in-depth exploration of current areas of research in population genetics. Readings primarily from recent books and the current literature. Specific topics are announced the previous fall and in the division's catalog supplement. Format includes lectures, discussion, and presentations by students.

BIOGD 685 Advanced Bacterial Genetics (BIOMI 489)
Fall. 2 credits. Limited to graduate students in Biological Sciences; see BIOMI 485. Prerequisites: BIOGD 281 or equivalent, BIOBM 330 or 331 and 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lec., W 7:30-9:30. Offered 1999-2000, 2000-2001. Staff.
For course description, see BIOMI 685.
Selected topics focus on the use of genetic analysis in understanding mechanisms of development. Topics are drawn primarily from studies in fruitflies, nematodes, mice and fish. Possible topics include pattern formation, cell lineage, neural development, maternal information in development, germ cell development, sex determination, and intercellular communication. Students read current literature and are encouraged to discuss each topic in class.

BIODG 780 Development and Evolution (also BIOES 760-02/BIOG 400/BIOG 480) Fall*. 2 credits. Prerequisites: BIODG 281 and BIOES 278. S/U grades only. Lecs and Discs T 12:20-2:25 p.m. Students will also be required to attend five seminars on M 4:00-5:30 p.m. M. Wolfner, A. McCune. Five leading international experts will describe recent advances in data and theory at the intersection of developmental biology and evolutionary biology. Topic coverage will center around pattern formation and the origin of metazoan body plans. During the Tuesday class meeting prior to each expert's visit, students and course faculty will present and discuss recent papers by the upcoming speaker. The following week, students will be required to attend the speaker's seminar on Monday at 4:00 p.m. and then meet with the speaker during class on the following day for continued discussion of the topic.

Fall 1999 is the only time that this special course will be offered, at least in this seminar-coupled format. Graduate students should register for BIODG 780; undergraduates should register for BIODG 480.

BIODG 781 Problems in Genetics and Development Fall. 2 credits. Limited to first-year graduate students in the Field of Genetics and Development. Disc to be arranged. Staff.

An introduction to the research literature in selected areas through weekly problem sets and discussions.

BIODG 782-783 Current Genetics/Development Topics Spring. 1/2 or 1 credit for each topic. May be repeated for credit. S/U grades only. Lectures and seminars on specialized topics to be announced. Not offered 1999-2000. Staff.

BIODG 786 Research Seminar in Genetics and Development Fall and spring. 1 credit. Limited to and required of second-, third-, and fourth-year graduate students in Genetics and Development. S-U grades only. Sem, W 12:20-1:50. Staff.

Each graduate student presents one seminar per year based on his or her thesis research. The student then meets with the thesis committee members for an evaluation of the presentation.

BIODG 787 Seminar in Genetics and Development Fall and spring. 1 credit. Limited to graduate students in Genetics and Development. S-U grades only. Sem, M 4-5:00. Staff.

Seminars in current research in genetics and developmental biology conducted by distinguished visitors and staff.

BIOMI 291 General Microbiology Laboratory Fall or spring, 2 credits. Summer (6-week session), 2 credits. Prerequisite: concurrent or previous enrollment in BIOMI 290. Lecs, F 12:20 labs, M W 12:20-2:15 or 2:30-4:25, or T R 10:10-12:05, 12:20-2:15, or 2:30-4:25. C. M. Rehkugler.

A study of the basic principles and techniques of laboratory practice in microbiology, and fundamentals necessary for further work in the subject.

BIOMI 292 General Microbiology Discussion Spring. 1 credit. Prerequisite: concurrent or previous enrollment in BIOMI 290. S-U grades only. Disc to be arranged. C. M. Rehkugler.

A series of discussion groups in specialized areas of microbiology to complement BIOMI 290.

BIOMI 300 Seminar in Microbiology Spring. 1 credit. Required of biological science students in the microbiology program of study. Strongly recommended for students considering the microbiology program of study. S-U grades only. Sem, W 12:20. Staff.

A series of lectures and seminars designed to present students with laboratory safety training and acquaint them with research projects in microbiology on the Cornell campus.

BIOMI 391 Advanced Microbiology Laboratory Fall. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333. Preference given to biological sciences students in the microbiology program of study. Lab, M W 1:25-4:25; disc, F 1:25. J. B. Russell, W. C. Ghiorse, J. P. Shapleigh, S. H. Zinder.

A laboratory course that illustrates basic principles of experimental microbiology. The course is organized into four modules which last three weeks each: 1) ecology, 2) physiology, 3) genetics, and 4) structure and function. Students are encouraged to take this course during their third year of study.

BIOMI 398 Environmental Microbiology Spring. 3 credits. Prerequisite: BIOMI 290 or BIOMI 290 or SCAS 260 or permission of instructor. Lecs, M W F 10:10. W. C. Ghiorse.

The biology, behavior, diversity, and function of microorganisms in natural environments are discussed in relation to past and present environmental conditions on Earth. The role of microorganisms in ecologically and environmentally significant processes is also considered through discussion of specific topics such as elemental cycles, nutrient cycling, transformation of pollutant chemicals, wastewater treatment, and environmental biotechnology.

This is a course in medical microbiology, presenting the major groups of bacterial and mycotic pathogens important to human and veterinary medicine. The emphasis of this course is infection and disease pathogenesis. Topics include disease causality; interactions of pathogen and environment, including immunity to bacteria and fungi; and principles of antimicrobial therapy and drug resistance. A companion seminar addresses the current and classic literature related to microbial pathophysiology on the cellular and molecular level.

[BIOMI 406] Clinical Microbiology
Fall and spring. 15 credits each semester. Prerequisite: permission of instructor. Hours to be arranged. Not offered 1999-2000, 2000-2001. R. P. Mortlock. Training and practical experience in clinical microbiology in the hospital laboratory of the Cornell Medical College and New York Hospital in New York City. Emphasis is on developing students' capability in the isolation and rapid identification of organisms from various types of clinical specimens. This course is intended to prepare the student for state and federal licensing in various areas of clinical microbiology. This is a full-time program, taking place from September to August of the student's senior year.

[BIOMI 408] Viruses and Disease I (also VETMI 408)
Spring. 3 credits. Prerequisites: BIOMI 290, 291, BIO G 305, and permission of instructor. Recommended: BIODG 281. Lecs, M W F 7:30-8:25. J. Casey. The course covers basic concepts in virology with emphasis on virus-host interactions, strategies for gene regulation, and mechanisms of pathogenicity. Selected viral infections that result in immune dysfunction and neoplasia are highlighted in the context of approaches to prevent or reduce the severity of diseases.

[BIOMI 409] Viruses and Disease II (also VETMI 409)
Fall. 2 credits. Prerequisites: BIOMI 290 & 291. Recommended: BIOMI 408, BIOMI 350-352, BMBI 452. Lecs, W T R 8:00-9:00. Offered alternate years. J. Casey. This course will be complementary to BIOMI 408, Viruses and Disease I, and will emphasize RNA viruses. The course will be complete in its own right. As such, completion of BIOMI 408 is not a requirement, but is encouraged. The structure and classification of viruses, virus entry, genome replication and assembly will be studied with particular emphasis on virus-host cell interactions. Vaccination, chemotherapy and evolution of viruses will also be discussed.

[BIOMI 416] Bacterial Physiology
Spring. 3 credits. Prerequisites: BIOMI 290, 291, and BIOMI 330 or 331 or 333, or their equivalents. Lecs, M W F 11:15-12:00. J. P. Shapleigh. The concern is with the physiological and metabolic functions of bacteria. Consideration is given to chemical structure, regulation, growth, and energy metabolism. Special attention is given to those aspects of bacterial metabolism not normally studied in biochemistry courses.

[BIOMI 417] Medical Parasitology (also VETMI 417)
Fall. 2 credits. Prerequisites: courses pertaining to zoology and biology. Offered alternate years. Lecs, T R 3:30-4:25. D. Bowman. A systematic study of arthropod, protozoan, and helminth parasites of public health importance with emphasis on epidemiologic, clinical, and zoonotic aspects of these parasites.

[BIOMI 485] Bacterial Genetics
Fall. 2 credits. Graduate students, see BIOMI 685. Prerequisite: BIODG 281. Recommended: BIOMI 290 and BIOMI 330 or 331 and 332 or 333. Lecs, W 7:30-9:25. Staff. Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Topics include mutagenesis and isolation of mutants; genetic exchange, recombination and mapping; complementation, epistasis and suppression; transposons; gene expression and regulation, and genetics of bacterial pathogenesis.

[BIOMI 652] (Section 03) Molecular Plant-Microbe Interactions (BIOPL 652, Sec 03)
Spring. 1 credit. Prerequisites: BIODG 281, BIOMI 330 or 331 or 333, and BIOPL 653 (section 01) or their equivalents. S-U grades only. Lecs, M W F 10:10 (12 lecs) first third of semester. S. C. Winans. For course description, see BIOPL 652, Sec 03.

[BIOMI 663/685] Advanced Bacterial Genetics
Fall. 2 credits. Limited to graduate students; see BIOMI 485. Prerequisites: BIODG 281 or equivalent, BIOMI 330 or 331 or 332 or equivalent, and permission of instructor. Recommended: BIOMI 290 or equivalent. Lecs, W 7:30-9:25 p.m.; disc to be arranged. Not offered 1999-2000, 2000-2001. Staff. Concepts and principles of formal genetic analysis as applied to prokaryotes, with emphasis on enterobacteria and their viruses. Lectures and some written assignments are shared with BIOMI 485; advanced topics from the primary literature are critically evaluated in the discussion.

[BIOMI 694] Genetics of Diverse Bacteria
Spring. 3 credits. Prerequisite: BIOMI 485 or equivalent. Lecs, M W 2:30-3:45. Not offered 1999-2000. Staff. Selected topics in bacterial diversity, with strong emphasis placed on underlying molecular mechanisms. Topics include interactions between bacteria and plants and animals, prokaryotic developmental biology, biodegradation of xenobiotics, and synthesis of antibiotics.

[BIOMI 791] Advanced Topics in Bacterial Genetics
Fall or spring. 1 credit. May be repeated for credit. Prerequisite: graduate standing in microbiology. S-U grades only. Disc, T 4-5:00. S. C. Winans. Discussion and critical evaluation of selections from the contemporary literature in bacterial genetics and molecular biology.

[BIOMI 795-796] Current Topics in Microbiology
Fall, 795; spring, 796. 1/2 or 1 credit for each topic. May be repeated for credit. Designed primarily for graduate students in microbiology. Prerequisite: upper-level courses in microbiology. S-U grades only. Lecs to be arranged. Staff. Lectures and seminars on special topics in microbiology.

[BIOMI 797] Graduate Seminar in Microbiology
Fall and spring. 1 credit each semester. All students in the Graduate Field of Microbiology must enroll for at least their first three semesters in residence. Students are expected to lead discussions on recent primary literature in microbiology. S-U grades only. Sem to be arranged. Staff.

[BIOMI 798] Graduate Research Seminar in Microbiology
Fall and spring. 1 credit each semester. Required of all graduate students in the Graduate Field of Microbiology. S-U grades only. Sem to be arranged. Staff. A seminar relating to the research activities of those enrolled. Students who have completed the BIOMI 797 series requirement are required to present a seminar concerning their research interests and activities at least once each year.

[BIOMI 799] Microbiology Seminar
Fall and spring. Required of all graduate students in the Graduate Field of Microbiology and open to all who are interested. Sem to be arranged. Staff.

NEUROBIOLOGY AND BEHAVIOR (BIONB)

BIONB 221 Neurobiology and Behavior I: Introduction to Behavior
Fall. 3, 4, or 5 credits (4 credits with one discussion per week and participation in the Writing in the Majors program). 4- or 5-credit option required of students in the neurobiology and behavior program of study. Each year. Credit-discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Enrollment in the 5-credit option is limited to 15 students. Students may not preregister for the 5-credit option; interested students complete an application form on the first day of class. Not open to freshmen. Prerequisite: one year of introductory biology for majors. May be taken independently of BIONB 222. S-U grades optional. Lecs, M W F 12:20; disc to be arranged. S. T. Emlen and staff.
A general introduction to the field of behavior. Topics include evolution and behavior, behavioral ecology, sociobiology, chemical ecology, communication, rhythmicity, orientation and navigation, and hormonal mechanisms of behavior.

BIONB 222 Neurobiology and Behavior II: Introduction to Neurobiology
Spring. 3 or 4 credits (4 credits with discussion and written projects). 4-credit option required of students studying neurobiology and behavior. Each discussion section is limited to 20 students, with preference given to students studying neurobiology and behavior. Not open to freshmen. Prerequisite: one year of introductory biology for majors and one year of chemistry. May be taken independently of BIONB 221. S-U grades optional. Lecs, M W F 12:20; disc to be arranged. R. Booker and staff.
A general introduction to the field of cellular and integrative neurobiology. Topics include neural systems, neuroanatomy, developmental neurobiology, electrical properties of nerve cells, synaptic mechanisms, neurochemistry, motor systems, sensory systems, learning, and memory. Some discussion sections include dissections of preserved brains.

BIONB 322 Hormones and Behavior (also PSYCH 322)
Spring. 3 credits; two lectures plus a section in which students will read and discuss original papers in the field, give an oral presentation, and write a term paper. Limited to juniors and seniors. Prerequisite: PSYCH 222 or BIONB 222 or one year of introductory biology plus a course in psychology. S-U grades optional, but not recommended. Lec M W F 11:15. E. Adkins-Regan.
A major focus of the course will be comparative and evolutionary approaches to the study of the relationship between reproductive hormones and sexual behavior in vertebrates, including humans. Also included will be hormonal contributions to parental behavior, aggression, stress, learning and memory, and biological rhythms.

BIONB 324 Biopsychology Laboratory (also PSYCH 324)
Fall. 4 credits. Limited to 20 upperclass students. Prerequisites: laboratory experience in biology or psychology, BIONB 221 and 222 or PSYCH 123 and 222; and permission of instructor. Labs, T R 1:25-4:25. T. DeVoogd.
Experiments designed to provide research experience in animal behavior (including learning) and its neural and hormonal mechanisms. A variety of techniques, species, and behavior patterns are included. Live animals are used in the laboratory.

BIONB 325 Neurodiseases—Molecular Aspects
Fall. 3 credits. Prerequisites: two courses from BIONB 222, BIOGD 281, BIOMB 330, or 331, co-registration in one of the two is acceptable. S-U grades optional. Lecs, T R 9:05; disc, T 1:30 or 2:30. T. R. Podleski.
The intent of this course is to teach students how to use recombinant DNA techniques for the study of neurodiseases. How are genes responsible for diseases identified and how are the functions of these genes studied? Attention is focused on those neural diseases in which significant advances have been made using these techniques, for example, Alzheimer’s, Hunt diseases, schizophrenia, depression, disorders affecting ion channels, and muscular dystrophies. Emphasis is placed on how these studies provide useful approaches to understanding the cellular and molecular processes that underlie these diseases. This course will focus on the molecular mechanisms that underlie neurodegeneration and neuronal death. Topics covered will include the genetics of neurodegeneration, the cellular and molecular mechanisms that underlie neurodegeneration, and the role of genetic factors in the development of neurodegenerative disorders. Prerequisites: one year of biology, one year of chemistry, and one year of computer science.

BIONB 326 The Visual System
Spring. 4 credits. Prerequisite: BIONB 222 or BIOAP 311, or permission of instructor. S-U grades optional. Lecs, M W F 10:10; disc, 1 hour each week to be arranged. Offered alternate years. H. C. Howland.
The visual systems of vertebrates are discussed in breadth and depth. Topics covered include the optics of eyes, retinal neurophysiology and function, and visual processing in the central visual system. Prerequisite: one year of biology and one year of chemistry.

BIONB 328 Biopsychology of Learning and Memory (also PSYCH 332)
Spring. 3 credits. Prerequisites: one year of biology and either a course in biopsychology or BIONB 222. Lecs, M W F 11:15. T. DeVoogd.
This course surveys the approaches that have been or are currently being used in order to understand the biological and psychological processes of learning and memory. Topics include invertebrate, "simple system" approaches, imprinting, avian song learning, hippocampal and cerebellar function, and human pathology. Many of the readings are from primary literature.

BIONB 392 Drugs and the Brain
Spring. 3 credits. Prerequisite: BIONB 222 or equivalent and permission of instructor. S-U grades optional. Lecs, T R 10:10-11:25; disc to be arranged. Offered alternate years. R. Harris-Warrick.
An introduction to neuropharmacology. After a brief introduction to pharmacology, there is discussion of the major neurotransmitter families. Topics include the biological actions of the major psychoactive drugs on the brain, including cocaine, amphetamines, alcohol, psychedelics, marijuana, antidepressants and antipsychotics.

BIONB 396 Introduction to Sensory Systems (also PSYCH 396 and 696)
Spring. 3 or 4 credits (4 credits with term paper or web site). Registration for the 4-credit option requires permission of instructor. Prerequisites: an introductory course in biology or psychology, plus a second course in neurobiology or behavior or perception or cognition or biopsychology. Students are expected to have elementary knowledge of perception, neurophysiology, behavior, and chemistry. No auditors. Lecs, M W F 10:10. Offered alternate years. B. P. Halpern.
This course is taught using the Socratic method, in which the instructor asks questions of the students. Students respond, analyze, and discuss in class difficult original literature dealing with both those characteristics of sensory systems that are common across living organisms and those sensory properties which represent adaptations of animals to particular habitats or environments. Classroom discussion can increase, but not decrease, a student’s final grade. The principles and limitations of major methods used to examine sensory systems are considered. General principles of sensory audition, vision, and somesthetic systems are covered. One aspect of each system (e.g., localization of objects in space by sound, color vision, and thermoreception) is selected for special attention. Two or more textbooks, and a course packet of reproduced articles are used. At the level of An Introduction to the Physiology of Hearing, 2nd edition, by J. O. Pickles, Physiological acoustics, neural coding, and psychoacoustics, by W. L. Gulick, G. A. Gescheider, and R. D. Frisina; The Retina. An approachable part of the brain, by J. E. Dowling; Handbook of Physiology—The Nervous System. III. Sensory Processes, edited by J. M. Brookhail and V. B. Mountcastle.

BIONB 420 Topics in Neurobiology and Behavior
Fall or spring. Variable credit. May be repeated for credit. Primarily for undergraduates. S-U grades optional. To be arranged. Staff.
Courses on selected topics in neurobiology and behavior, can include lecture and seminar courses. Topics, instructors, and time of organizational meetings are listed in the division’s catalog supplement issued at the beginning of the semester.
BIONB 421 Effects of Aging on Sensory and Perceptual Systems (also PSYCH 431) [38x538]
Fall. 3 or 4 credits (4 credits with term paper or web site). Limited to 25 students. Prerequisites: introductory course in biology or psychology, plus a second course in neurobiology, cognition, or biopsychology. No auditors. S-U grades optional. Lecs, T R 10:10–11:25. B. P. Halpern. A literature-based examination of post-maturation changes in the perceptual, structural, and physiological characteristics of somesthetic, chemosensory, visual and auditory systems. Emphasis is on human data, with non-human information included when especially relevant. The course examines the current developments in human sensory prosthetic devices, and in regeneration of receptor structures. Brief written statements (by electronic mail) of questions and answers are assigned reading for each one day in advance of each class meeting. This course is taught using the Socratic Method, in which the instructor asks questions of the students. Students are expected to come to each class having already done, and thought about, the assigned readings. Use of e-mail and the internet are integral parts of the course.

BIONB 422 Modeling Behavioral Evolution Spring. 4 credits. Limited to 25 students. Prerequisites: BIOMN 221, one year of calculus in probability or statistics, and permission of instructor (Office: W309 Mudd Hall; phone: 254-4352). This course is open to advanced undergraduates and graduate students. S-U grades optional. Lecs, T R 2:30–4:00; computer lab, one class period per week to be arranged. Offered alternate years. Not offered 1999–2000. H. R. Reeve. This is an intensive lecture and computer lab course on modeling strategies and techniques in the study of behavioral evolution. Population-genetic (including quantitative-genetic), static optimization, dynamic programming, and game-theoretic methods are emphasized. These are approached by application to problems in optimal foraging, sexual selection, sex ratio evolution, animal communication, and the evolution of cooperation and conflict within animal social groups. Students learn to assess critically recent evolutionary theories of animal behavior, as well as to develop their own testable models for biological systems of interest or to extend pre-existing models in novel directions. The Mathematica software program is used as a modeling tool in the accompanying computer lab (no prior experience with computers required).

BIONB 424 Neuroethology (also PSYCH 424) Spring. 3 credits. Prerequisites: BIONB 221 and 222. S-U grades optional. Lecs, T R 9:05–11:05; R 9:05–9:55. Offered alternate years. Not offered 1999–2000. C. D. Hopkins. In the 1950s through the 1970s, ethologists attempted to understand the mechanisms of animal behavior through the use of comparative methods, evolutionary analysis, careful observations of animals in their native habitats, and clever experimentation. Now, with the explosion of knowledge and techniques in the neurosciences, many of the ethologist’s mechanisms are being explained in terms of neural systems. This course reviews the status of research in neuroethology, including mechanisms of acoustic communication in insects and in vertebrates, echolocation in bats and sound localization in other mammals, electroreception and electrosensation, and visual processing. In addition, the course reviews studies of the neural systems involved in decision making, in initiating action, and in coordinating fixed acts. Assigned readings include original articles from the scientific literature. A term paper or equivalent is required. Recitations scheduled in class.

BIONB 425 Molecular Neurophysiology Spring. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional. Lecs, T R 2:55–4:10. Offered alternate years. Not offered 1999–2000. D. McCubb. Course focuses on the roles of the primary proteins generating cellular electrical signals and ion channels in nerve cells and other excitable cells (e.g., muscle, heart, glands). Cutting-edge electrophysiological and molecular genetic experiments will be reviewed. Diversity of excitable properties deriving from channel structure will be considered in the contexts of behavior and developmental plasticity, neural development, and channel evolution. Course format includes written and oral presentations reviewing scientific literature in selected areas and proposing new experiments.

BIONB 426 Animal Communication Spring. 4 credits. Limited to 50 students. Prerequisite: BIONB 221. Letter grade only. Lecs, T R 2:30–3:25; disc, one hour each week to be arranged. Offered alternate years. Not offered 1999–2000. Staff. A detailed examination of the study of communication by non-human animals. The course begins with an exploration of different conceptual frameworks used in the study of communication, then turns to specific studies of the mechanisms, ontogeny, functional design, and evolution of the signaling systems used by animals. The class considers how communication provides humans with a window on the minds of other animals. Readings are drawn from the primary literature.

BIONB 427 Animal Social Behavior Fall. 4 credits. Limited to 30 students. Prerequisites: BIONB 221 and BIOMS 261 or 278, and advance permission of instructor. S-U grades optional, with permission of instructor. Lecs and discs, T R 2:30–4:25. Offered alternate years. P. W. Sherman. An intensive course for upper-division students interested in behavioral ecology and sociobiology. Lectures, discussions, and student presentations examine topics including adaptations, communication, mating systems, sexual selection, sex ratios, inbreeding and outbreeding, conflict and cooperation in animal societies, eusociality, kin recognition, and Darwinian medicine.

BIONB 428 Topics in Behavior Fall or spring. 2–4 credits. (Credits based on number of lectures and/or field exercises outlined in the division’s catalog course supplement and subject to approval through the associate director’s office.) May be repeated for credit. Primarily for undergraduates. S-U grades optional. Required for seniors.

Courses on selected topics in behavior; can include lecture and seminar courses; may include laboratory. Past topics have included animal orientation, insect behavior, biohythms, and communication. Topics, instructors, and time of organizational meeting are listed in the division’s catalog supplement issued at the beginning of each semester.

BIONB 429 Offalction and Taste: Structure and Function (also PSYCH 429) Spring. 3 or 4 credits (4 credits with term paper or research project, which can, but need not, study nonhuman vertebrates). Preference given to junior and senior psychology and biology majors and graduate students. Graduate students, see PSYCH 629. Prerequisite: a 300-level course in biopsychology or equivalent. Lecs, T R 9:05. Offered alternate years. Not offered 1999–2000. B. P. Halpern. The structural and functional characteristics of olfaction and taste are examined in various species by studying and discussing current literature in these areas. Structure is examined at the light levels of electron microscopes as well as at the molecular level. Function is examined primarily in its neurological and biochemical aspects. The emphasis is on vertebrates, especially air-breathing vertebrates in the case of olfaction, although there is some coverage of invertebrate forms. A textbook and a course packet of reproduced articles are used. At the level of Smell and Taste in Health and Disease, edited by T. V. Getchell, R. L. Dory, L. M. Bartoshuk, and J. B. Snow, The Neurobiology of Taste and Smell, edited by T. E. Finger and W. L. Silver.

BIONB 430 Experimental Molecular Neurobiology Spring. 2 credits. Limited to 12 students. Prerequisites: co-meeting with BIONB 430 lab. Mandatory registration via web page: www.bio.cornell.edu/biochem/bionb/signup.html. Disc, one hour each week on day other than lab day, Lab T or W all day, or M and W afternoons, to be coordinated with other BIONB 430 sections. Letter grade only. Offered alternate years. Not offered 1999–2000. D. L. Deitcher. Experiments include PCR, cloning of DNA fragments, RNA purification, restriction digests, bacterial transformation, and DNA sequencing. Experiments will emphasize how molecular techniques can be applied to studying neurobiological problems.

BIONB 470 Biophysical Methods Spring. 3 credits. Limited to 20 students. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only. Lecs T R 8:40–9:55. M. Lindau. An overview of the diversity of modern biophysical experimental techniques used in the study of biological systems at the cellular and molecular level. Topics covered will include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format will include assigned literature reviews for two or three students on specific biophysics topics and individual student presentations on these
topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.

**BIONB 491 Principles of Neurophysiology**
Spring. 4 credits. Limited to 20 students. Prerequisites: BIONB 222 or written permission of instructor. S-U grades optional for graduate students. Lecs, M W 10:10; lab, M or T 12:20-4:25; additional hours to be arranged. B. R. Johnson. A laboratory-oriented course designed to teach the theoretical and technical fundamentals of cellular physiology, and the design and interpretation of experimental protocols in modern cellular neurophysiology. Lecture time is used to introduce laboratory exercises and discuss results, to supplement laboratory topics, and for discussion of primary research papers. Extracellular and intracellular recording and voltage clamp techniques are used to analyze motor neuron and sensory receptor firing properties, and examine the cellular basis for resting and action potentials and synaptic transmission. A variety of approaches are used as model systems. Computer acquisition and analysis of laboratory results are emphasized.

**BIONB 492 Sensory Function (also PSYCH 492)**
Spring. 4 credits. Limited to 25 students. Prerequisite: a 300-level course in biophysics; or BIONB 222 or BIOAP 311, or permission of instructors. Students are expected to have a knowledge of elementary physics, chemistry, and behavior. S-U grades optional. Lecs, M W 10:10; disc, F 10:10. Offered alternate years. Not offered 1999-2000. B. P. Halpern, H. C. Howland. This course covers classical topics in sensory function such as vision, hearing, touch, and balance; as well as more modern topics like sensory coding, localization of stimulus sources in space, the development of sensory system, and nonclassical topics such as electroreception and internal chemoreceptors. Both human and nonhuman systems are discussed. In addition, chemical, physical, and neurophysiological bases of sensory information are treated, and the processing of this information is followed into the central nervous system. This course will be taught using the Socratic method, in which the instructors ask questions of the students, and their answers will be discussed. Students will be expected to come to each class having read, thought about, and prepared to discuss the assigned readings and other assigned information resources. Students will submit brief analyses of, and comments and questions on, all assignments by e-mail to the course's electronic mailing list a day before each class meeting. The mailing list will distribute submissions to all members of the class and to the instructors. In addition to these brief weekly written exercises, a term paper or web site in the form of a review article will be required.

**BIONB 493 Developmental Neurobiology**
Fall. 3 credits. Prerequisite: BIONB 222 or permission of instructor. S-U grades optional, with permission of instructor. Lecs, T R 10:10-11:30. Offered alternate years. Not offered 1999-2000. R. Booker. Lectures cover the development of the nervous system, taking examples from both vertebrates and invertebrates. Emphasis is on cellular and molecular issues, that is, how do nerve cells differentiate both morphologically and biochemically? The role of cues such as homones and developmental genes in neural development is discussed. Readings are taken from original journal articles.

**BIONB 494 Comparative Vertebrate Neuroanatomy**

**BIONB 495 Molecular and Genetic Approaches to Neuroscience**
Fall. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: BIONB 222 and BIONB 330 or 332. Letter grade only. Lecs, T R 2:55-4:10. Offered alternate years. D. D. Detcheverry. Focus of the course is how different molecular and genetic approaches have led to major advances in neuroscience. Lectures, student presentations, and discussions examine original research articles. Topics include ligand-gated channels, potassium channels, seven membrane spanning receptors, development of the neuromuscular junction, neurotransmitter release, second messengers, and learning and memory.

**BIONB 496 Bioacoustic Signals in Animals and Man**
Spring. 3 credits. Limited to 12 junior, senior, and graduate students. Prerequisites: one year of introductory biology, PHYS 101-102 or 207-208, and permission of instructor. S-U grades optional. Lecs, M W 9:05; lab to be arranged. Offered 1999-2000. C. W. Clark, R. R. Hoy. Humans and most terrestrial animals live in a world of sound. Acoustic signals mediate social interactions and predator-prey behavior. This course teaches students about animal acoustical communication and how they differ from each other, and the different communication systems that are based on sound. The course presents the physical properties of sound, the physiological mechanisms of sound production and hearing, and an analysis of the behavioral context of signaling. In the laboratory students learn how to record, synthesize, and analyze acoustic signals with the aid of tape recorders and the Macintosh computer. Laboratory reports are designed around the lecture material and provide "real-world" exercises designed to stimulate discovery of the fundamental principles described in class. Class research projects on a selected topic in bioacoustics are required. The laboratory is based on software instrumentation running on a Macintosh II platform equipped with A/D-D/A data acquisition boards.

**BIONB 623 Chemical Communication (also CHEM 622)**
Fall. 3 credits. Primarily for research-oriented students. Limited to 30 students. Prerequisites: one year of introductory biology for majors or equivalent, course work in biochemistry, and CHEM 358 or equivalent. Lecs, M W 10:10; disc, F 10:10. Offered alternate years. Not offered 1999-2000. T. J. DeVoogd. The production, transmission, and reception of chemical signals in communicative interactions of animals, plants, and microorganisms. Studies of insects are emphasized. Specific topics are treated with varying emphasis on chemical, biochemical, ecolog­ical, behavioral, and evolutionary principles.

**BIONB 626 Sex Differences in Brain and Behavior (also PSYCH 524)**
Spring. 2 credits. Limited to 12 students. Prerequisite: BIONB 322 or permission of instructor. Discs and seminars to be arranged. T. J. DeVoogd. A survey of the newly discovered animal models for sex differences in the brain. Topics include the role of steroids in brain development, whether hormones can modify the structure of the adult brain, and the consequences of such sex differences in anatomy for behavior.

**BIONB 720 Seminar in Advanced Topics in Neurobiology and Behavior**
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students; written permission of instructor required for undergraduates. S-U grades optional. Sem to be arranged. Staff and students. Designed to provide several study groups each semester on specialized topics. A group may meet for whatever period is judged adequate to enable coverage of the selected topics. Ordinarily, topics are selected and circulated during the preceding semester. Discussion of current literature is encouraged. Suggestions for topics should be submitted by faculty or students to the chair of the Section of Neurobiology and Behavior.

**BIONB 721 Introductory Graduate Survey in Neurobiology and Behavior**
Fall. 2 credits. Required of graduate students majoring in neurobiology and behavior. Concurrent registration in BIONB 221 and 222, or BIONB 623, or BIONB 226, or S-U grades only. Lecs and discs, T 10:10-12:05. H. C. Howland. Lectures, readings, and discussion to introduce first-year graduate students to the research activities of the faculty in the Graduate Field of Neurobiology and Behavior. Class meets weekly for two hours. Students will also prepare a research proposal on a potential topic for their thesis research (in the format of an NSF or NIH grant). This proposal will be prepared in consultation with one or more relevant faculty members.

**BIONB 723 Advanced Topics in Animal Behavior**
Fall or spring. Variable credit. May be repeated for credit. Primarily for graduate students in behavior. Prerequisite: permission of instructor. S-U grades optional. Sem to be arranged. Not offered 1999-2000. T. G. Eisner, J. Meinwald, W. L. Roelfs, and other reviewers. A seminar on a specific topic in animal behavior. The instructor leads the lectures during the first few course meetings; the remainder of the course is devoted to student presentations. Topic and instructor are listed in the division's catalog supplement issued at the beginning of the semester.
A laboratory in the integrative, or neuroethological, approach to studies of animal behavior. Designed to provide practical working knowledge of research methods in anatomical, physiological, and behavioral approaches to studies of vertebrate and invertebrate behavior. Laboratory technique to be covered and instructor are listed in the division's catalog supplement issued at the beginning of the semester.

PLANT BIOLOGY (BIOPL)

BIOPL 240 Green World/Blue Planet
Spring. 3 credits. S-U grades optional. Lecs, T R 1:25–2:40. K. J. Niklas and staff. The course focuses on helping individuals understand how scientific information relates to the issues they face as citizens, in management decision making, and in public policy. To what extent should genetic engineering of crop plants be permitted? Should we place an advantage of several outstanding natural areas on the day of classes.

BIOPL 241 Introductory Botany
Introductory botany for those interested in the plant sciences. Emphasizes structure, reproduction, and classification of angiosperms and the history of life on earth. Laboratory emphasizes development of skills in handling plant materials, including identification. First and second weeks of laboratory are field trips, starting with the first day of classes. Those who register for an evening laboratory are still required to attend the afternoon field trips.

BIOPL 242 Plant Physiology, Lectures
Spring. 3 credits. Lecs, M W F 10:10. S-U grades optional. Primarily for undergraduates in agricultural sciences, but also for any Biological Sciences students wanting to know about plant function. Suitable as a second-level course for nonmajors to satisfy the biology distribution requirement. Prerequisites: one year of introductory biology and/or BIOPL 241. Recommended: one year of introductory chemistry. Concurrent enrollment in BIOPL 244 required of plant science undergraduates and highly recommended for other science majors. May not be taken for credit after BIOPL 342 except by written permission of instructor. Evening prelms Feb. 24 and March 30.

B. J. Davies
How plants function and grow. Examples dealt with crop plants or higher plants where possible, though not exclusively. Topics include cell structure and function; plant metabolism, including photosynthesis, light relations in crops; plant-water relations; water uptake, transport, and transpiration; irrigation of crops; sugar transport; mineral nutrition; growth and development—hormones, responses to light, flowering, fruiting, dormancy, and abscission; stress-tissue culture; and genetic engineering of plants.

BIOPL 243 Taxonomy of Cultivated Plants (also HORT 243)
Fall. 3 credits. Prerequisite: one year of introductory biology or written permission of instructor. May not be taken for credit after BIOPL 248. Lecs, M W F 10:10, labs, W 2–4:25. Offered alternate years. Not offered 1999–2000. M. A. Luckow. A study of ferns and seed plants, their relationships, and their classification into families and genera, emphasizing cultivated plants. Particular emphasis is placed on gaining proficiency in identifying and distinguishing families and in preparing and using analytic keys. Attention is also given to the economic importance of taxa, to the basic taxonomic literature, and to the elements of nomenclature.

BIOPL 244 Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOPL 242. May not be taken for credit after BIOPL 248. Lecs and lab, M T W R 12:20–4:25. Lab, T. Silva. Experiments exemplify concepts covered in BIOPL 242 and offer experience in a variety of biological and biochemical techniques, including use of small amounts of radioisotopes.

BIOPL 245 Plant Biology
Summer (6–week session). 3 credits. Limited to 24 students. Lecs, M-F 11:30–12:45, labs, M W 2–5:00. T. Silva. Introductory botany, including plant identification. Emphasizes structure, reproduction, and classification of flowering plants. Much of the laboratory work is conducted outdoors taking advantage of several outstanding natural areas which are available for study. Those who lack college-level biology are expected to work closely with the instructor on supplementary instructional materials.
A consideration of the principles, methods, and issues of ethnobiology. Emphasis is on the past and present ecological, evolutionary, economic, and cultural interrelationships of humans in traditional and lay societies with their plants and animals, as a means of understanding the place and future of humans in the biosphere. Traditional medicines, underutilized organisms, resource management, and conservation. Methodology is among the topics covered.

BIOL 248 Taxonomy of Vascular Plants
Spring. 4 credits. Prerequisite: one year of introductory biology. May not be taken for credit after BIOL 243. S-U grades optional. Lecs, M W F 9:05; lab, W or R 1:25-4:25. J. J. Davis.

An introduction to the classification of vascular plants, with attention to the goals of taxonomy, the processes of plant evolution, and the means of analyzing evolutionary relationships among plants. The laboratory concentrates on methods of plant identification and presents an overview of vascular plant diversity, with particular attention to the flowering plants.

BIOL 340 Methods in Chemical Prospecting
Spring. 2 credits. Prerequisites: Intro Biology (BIOL 101-104, 105-106, 107-108) required. Concurrent or completion of BIOL 344 or permission in organic chemistry, recommended. Lab to be arranged. Offered alternate years. J. Berry and E. Rodriguez. Student participants will learn theory and methodologies, including biological assays and other techniques, related to investigation of natural products from the biological sciences and apply these methodologies to individual research projects. Each student will present results of their research in a poster session, in addition to preparing a scientific report.

BIOL 342 Plant Physiology, Lectures
Spring. 3 credits. Prerequisites: one year of introductory biology and either concurrent enrollment in BIOL 344 or permission of instructor. May not be taken for credit after BIOL 242 unless written permission of instructor is obtained from instructor. Lecs, T R 10:10-11:25. T. G. Owens.

An integrated and interdisciplinary study of the processes that contribute to the growth, competition, and survival of plants. Topics include, but are not limited to, plant water relations, membrane properties and processes, photosynthesis, plant respiration, mineral and organic nutrition, stress physiology, control of growth and development, and responses to the environment. Emphasis is on the relationship between structure and function from the molecular to the whole-plant level.

BIOL 344 Plant Physiology, Laboratory
Spring. 2 credits. Prerequisite: concurrent enrollment in BIOL 342. May not be taken for credit after BIOL 244. Similar to BIOL 244 but at a more advanced level. Lab, W 1:25-4:25; disc, W 12:20. T. Silva.

Experiments exemplify concepts covered in BIOL 342 and explore a variety of biochemical and biotechnological techniques, including use of small amounts of radioisotopes, with emphasis on experimental design.

BIOL 345 Plant Anatomy
Fall. 4 credits. Limited to 15 students. Prerequisite: one year of introductory biology or a semester of botany. Lecs, M W F 9:05; lab, W or R 1:25-4:25. T. J. Davis.

A descriptive course with equal emphasis on development and mature structure. Lecture, laboratory, and reading are integrated in a study guide. This laboratory offers the opportunity to develop the practical skills required to make anatomical diagnoses and to write anatomical descriptions.

BIOL 347 Laboratory in Molecular Biology and Genetic Engineering of Plants
Fall. 2 credits. Limited to 24 students. Prerequisite: BIOL 345 or permission of instructor. Concurrent enrollment is BIOL 343 is encouraged. S-U grades optional. Lab, W 12:25-4:25. M. E. Nasrallah.

A companion to BIOL 343 with laboratory activities that focus on the practice of plant biotechnology. Students will transfer genes to plants by a variety of methods, and will analyze their expression in the host genome by use of reporter gene assays, and by the preparation and analysis of nucleic acids.

BIOL 348 The Healing Forest
Spring. 2 credits. Prerequisites: BIOL 247 or BIOL 241, 243, or 248 or permission of instructor. Lec/disc, R 2:30-4:25. Offered alternate years. D. M. Bates, E. Rodriguez.

An ethnobotanical consideration of the role of plants in traditional and western medicine. Studies of indigenous and lay societies illustrate the ecological, systematic, biocultural, and cultural aspects of herbal medicines and are placed in the broader context of such interdependent themes as the conservation of biological and cultural diversity, human health, bioprospecting, compensation for indigenous knowledge, and sustainable development.

BIOL 440 Phylogenetic Systematics
Fall. 4 credits. Limited to 24 students. Prerequisite: BIOL 240 or permission of instructor. Lecs, T R 10:10; labs, T R 2:00-4:25. Offered alternate years. Not offered 1999-2000. K. C. Nixon.

Basic and advanced theory and methods of phylogenetic analysis. Students are introduced to cladistic analysis using parsimony and gain experience with computer-aided analysis of taxonomic data, including both morphological and molecular sources. Topics discussed include applications of phylogenetic methods to biogeography and evolutionary studies.

BIOL 442 Current Topics in Ethnobiology
Fall or spring. 1-2 credits (1 credit per section). Prerequisite: written permission of instructor. S-U grades optional. A series of 1-credit modules on specialized topics in systematics. Topics and instructors vary each semester. May not be taught every semester. Topics and instructors are listed in the divisional offering statement, but content may vary each semester.

BIOL 448 Plant Cell Biology
Fall. 4 credits. Limited to 24 students. Prerequisite: one year of introductory biology or permission of instructor. Lecs, M W F 9:05; lab, M or W 12:25-4:25. P. O. Wayne.

Evidence from microscopy, physiology, biochemistry, and molecular biology is used to try to unravel the mystery of the living cell. The dynamics of proteolysis, membranes, and the various organelles are studied. The mechanisms of cell growth and division, the relationship of the cytoskeleton to cell shape and motility, the interaction of the cell with its environment, and the processes that give rise to multicellular differentiated plants are investigated.

BIOL 445 Photosynthesis

An introduction to the processes of photosynthesis in plants, algae and bacteria. An interdisciplinary approach is emphasized incorporating biochemical, biophysical, physiological and molecular perspectives. The course will cover the range of processes involved in photosynthesis beginning with light harvesting and primary photochemistry through electron transport and inorganic carbon fixation. Emphasis will be placed on the regulation of photosynthesis from the cellular to the whole-plant level.
The theory and practice of using molecular evidence, particularly DNA sequence data, for reconstruction, particularly in eukaryotic organisms, is described. An introduction to evolution, surveying major ecologic settings, and evolutionary theory as it relates to plants.

BIOPL 448 Plant Evolution and the Fossil Record
An introduction to evolution, surveying major changes in plants from the origin of life to the present. Emphasis is placed on plant form and function, adaptations to particular ecologic settings, and evolutionary theory as it relates to plants.

BIOPL 453 Principles and Practice of Historical Biogeography (also ENTOM 453)
Fall. 3 credits. Prerequisite: a course in systematic biology or permission of instructor. S-U grades optional. Lecs, T R 10:10; lab/disc, R 12:30-4:25. Offered alternate years. J. K. Liebherr, M. A. Luckow.
This course provides a comprehensive survey of the current methods and techniques used in historical biogeography, and the development of modern biogeographic thought in the context of historical and ecological methods of analysis. Brief summaries of geological and paleontological aspects of biogeography are presented, and large-scale biogeographic patterns discussed. The laboratories focus on hands-on computer applications of modern techniques and discussion of controversial issues in biogeography.

BIOPL 466 Physiological Plant Ecology, Lectures (also BIOES 466)
Spring. 3 credits. Limited to 45 students. Prerequisite: BIOES 261 or introductory plant physiology. S-U grades optional. Lecs, T R 9:05; lab/disc, R 12:20-2:15. Offered alternate years.

BIOPL 468 Physiological Plant Ecology, Laboratory (also BIOES 468)
Spring. 2 credits. Limited to 15 students. Prerequisite: permission for concurrent enrollment in BIOES 466. Lab, W 1:25-4:25, plus additional lab hours to be arranged. Offered alternate years. Not offered 1999-2000. Staff.
For course description, see BIOES 466.

BIOPL 464 Regulatory Factors in Plant Growth and Development
Spring. 1-2 credits (1 credit per section). Prerequisites: BIOPL 242 or BIOPL 342 or equivalent, or permission of instructor. Two modules, which can be taken together or in isolation. These mesh with BIOPL 652-653 and BIOPL 653-654. (Molecular and Plant Development II and I respectively.) S-U grades optional. Offered alternate years.

Section 01 Plant Hormones
1 credit. Lecs M W F 9:05 (14 lecs) January 24-February 23. P. J. Davies, Plant Hormones: their role in plant growth and development, analysis, biosynthesis and mode of action, including signal transduction, examined from a physiological, biochemical and molecular point of view. The course covers auxin, gibberellin, cytokinin, ethylene, abscisic acid, brassinosteroids and other compounds as appropriate.

Sec 02 Phytochrome and Photomorphogenesis
1 credit. Lecs M W F 9:05 (12 lecs) April 3-April 28. P. J. Davies. A study of the regulation of plant growth and development by light as perceived through the pigments phytochrome and cryptochrome. This will include the biochemistry and molecular biology of phytochrome and the way in which phytochrome modulates growth patterns in plants. The course emphasizes the application of molecular biology methodology to plants. Additional lab time is required to complete assignments.

Section 01 Basic Principles of Ion Transport and Electrophysiology
1 credit. Lecs T R 10:10-11:30 (9 lecs) August 26-September 23. The biophysical basis of ion transport across cell membranes, including membrane structure, ion fluxes and their measurement, the thermodynamic criterion for active transport, and the relationship between ion transport and the electrical properties of cell membranes.
Section 02 Ion Transport in Plants

Section 03 Water Transport in Plants

Section 04 Water Relations of Plants

Section 05 Molecular Aspects of Plant Development I
1 credit. S-U grades optional. Lecs, M W F 10:10 (12 lecs) Sep. 29-Oct. 24. J. J. Doyle. Practical applications of molecular systematics and evolution for plant molecular biologists and other non-systematists. The course focuses on two basic issues: methods and principles for inferring relationships among genes and the use of data to hypothesize relationships among plants. Evolutionary patterns and processes of genes and gene families are discussed as well as rates of sequence evolution, paralogy and orthology, the effects of recombination and concerted evolution of gene phylogenies, and the implications of using gene or allele phylogenies to infer organismal evolutionary patterns. The principles of distance and parsimony methods are described, and computer methods for reconstructing gene phylogenies are discussed.

Section 06 Molecular Breeding and Genetic Diversity
1 credit. Lecs M W F 10:10 (12 lecs) Sep. 29-October 27. S. D. Tanksley. Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.

Section 07 Molecular Biology of Plant Organelles
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 29-Nov. 29. M. R. Hanson (odd years), D. B. Stern (even years). An in-depth examination of the molecular biology of plant mitochondria (odd years) and plastids (even years). Topics include the organization and expression of organelle genomes, RNA editing, organelle transformation, expression of nuclear genes for organelle proteins. Special topics include cytoplasmic male sterility and gene regulation during plastid development.

Section 08 Botanical Nomenclature
1 credit. Lecs TR 10:10-11:30 (9 lecs) September 28-October 28. S. C. Winans. Botanical Nomenclature and its application to plant breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.

Section 09 Molecular Biology of Plant Nuclei
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 29-Nov. 29. M. R. Hanson (odd years), D. B. Stern (even years). Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.

Section 10 Molecular Biology of Plant Genomes
1 credit. S-U grades optional. Lecs, M W F 1:25 (12 lecs) Oct. 29-Nov. 29. M. R. Hanson (odd years), D. B. Stern (even years). Application of DNA markers to the evaluation of genetic diversity in natural populations and germplasm collection as well as the identification, manipulation and isolation of genes important to plant and animal productivity using molecular genetic techniques. Students will learn how to design and execute experiments for identification of quantitative trait loci (QTLs) as well as how to apply molecular markers to plant and animal breeding programs. Strategies will also be taught for the use of DNA polymorphisms in the management of genetic resources.
BIOL 656 Topics in Plant Evolution
Spring. 1 credit. Prerequisite: BIOL 448 or equivalent background in evolution, or written permission of instructor. Lab and disc to be arranged. Offered alternate years. K. J. Niklas.
A series of selected topics to provide a background in plant evolution, paleobotanical literature, and evolutionary theory. Among the topics discussed are the origin of a terrestrial flora, the evolution of the seed plants, and the origin and adaptive radiation of the angiosperms.

BIOL 740 Plant Biology Seminar
Fall and spring. No credit (no official registration). Required of graduate students doing work in plant biology. Sem, F 11:30-12:20. Staff. Lectures on current research in plant biology, presented by visitors and staff.

BIOL 741 Problems in Plant Cell and Molecular Biology
Fall. 2 credits. Limited to first- and second-year graduate students in the Plant Cell and Molecular Biology Program. Disc to be arranged. Staff. An introduction to the research literature in plant molecular and cellular biology through weekly problem sets and discussions.

BIOL 742 Current Topics in Plant Molecular Biology
Fall or spring. 1 credit. Enrollment is limited. Primarily for graduate students, with preference given to majors or minors in plant molecular biology; written permission of instructor required for undergraduates. S-U grades only. Sem, 1 hour each week to be arranged. P. J. Davies.
Fall topic: molecular aspects of plant hormone biosynthesis, signal transduction and action. A seminar with critical presentation and discussion by students of original research papers concerning the molecular biology of plants. Staff direction varies each year and is announced a semester in advance.

BIOL 743 Current Research in Plant Cell and Molecular Biology
Fall. 1 credit. Limited to graduate students; written permission from a member of the Plant Cell and Molecular Biology Program required for undergraduates. Lect to be arranged. Staff.
An introduction for graduate students to the research being conducted by Cornell faculty in the Plant Cell and Molecular Biology Program.

BIOL 744 Current Topics in Systematics
Fall. 1 credit. Limited to graduate students, except by permission of instructor. S-U grades optional. Disc, T 12:20. Bailey Hortorium staff.
A seminar with presentations and discussion by students of original research papers in systematic biology.

BIOL 746 Research Seminar in Systematic Botany
Spring. 1 credit. Limited to graduate students, except by permission of instructor. Disc, T 12:20. Bailey Hortorium staff.
A student-led seminar presentation based on his or her thesis research or a related topic.

BIOL 749 Graduate Research in Botany
Fall or spring. Variable credit. May be repeated for credit. S-U grades optional. Hours to be arranged. Staff.
Similar to BIO G 499 but intended for graduate students who are working with faculty members on an individual basis.

BIOL 840 Current Topics in Plant Physiology
Fall or spring. 2 credits. May be repeated for credit. S-U grades only. Sem to be arranged. P. J. Davies.
Fall topic: molecular aspects of plant hormone biosynthesis, signal transduction and action. Seminar reports by graduate students on current literature in experimental plant physiology or related areas.

COURSES IN MARINE SCIENCE
Cornell offers an extensive listing of undergraduate courses in marine science.
Undergraduates interested in pursuing studies in marine science are encouraged to explore the undergraduate specialization in Marine Biology offered through the Division of Biological Sciences. The undergraduate specialization in Ocean Sciences offered through the Science of Earth Systems Program, and the summer program of courses offered by the Shoals Marine Laboratory. Further information on these programs can be found at the Cornell Marine Programs Office, G14 Simson Hall.

Undergraduate Specialization in Marine Biology and Oceanography
Biological Sciences majors in the ecology and evolutionary biology program of study have the option of specializing their program of study in the area of marine biology. This specialization is intended for students with interests in understanding the unique aspects of organismal biology in the marine environment. In addition to fulfilling the major and the ecology and evolutionary biology program of study requirements, students in marine biology are encouraged to enroll in the following courses:

1) BIOS 154, The Sea: An Introduction to Oceanography,
2) BIOSM 364, Field Marine Science or a 400-level BIOSM field course at the Shoals Marine Laboratory,
3) BIOES 462, Marine Ecology.

Undergraduate Specialization in Ocean Sciences
Science of Earth Systems majors have the option of specializing their program of study in the area of ocean sciences. This interdisciplinary specialization is intended for students with interests in understanding the interaction of biological, chemical, geological, and physical processes in ocean systems. In addition to fulfilling the Science of Earth Systems general requirements (see the SES program description in the Science Centers, Programs, and Studies section of catalog), students in ocean sciences are required to take four advanced courses from the following list to fulfill their major requirements:

1) BIOS 373 Marine Invertebrate Zoology
2) BIOS 457 Limnology
3) BIOS 462 Marine Ecology
4) BIOS 478 Ecosystem Biology
5) BIOSM 309 Climates and Ecosystems
6) BIOSM 364 Field Marine Science
7) BIOSM 375 Field Marine Ecology
8) BIOSM 366 SEA: Introduction to Oceanography
9) BIOSM 369 SEA: Oceanography I
10) BIOSM 370 SEA: Oceanography II
11) BIOSM 371 SEA: Oceanography III
12) [BIOSM 402 Marine Pollution]
13) [BIOSM 413 Adaptations of Marine Organisms]
14) BIOSM 418 Tropical Marine Science
15) BIOSM 449 Seaweeds, Plankton and Seagrass
16) BIOSM 477 Marine Vertebrates
17) GEOL 375 Sedimentology and Stratigraphy
18) GEOL 455 Geochemistry
19) GEOL 475 Special Topics in Oceanography
20) GEOL 479 Paleobiology
21) NTRES 306 Coastal and Oceanic Law and Policy
22) NTRES 417 Wetland Resources

Students in both marine science specializations are exposed to an integrated program of study, emphasizing a natural progression of formal coursework combined with ample opportunities for practical field experience.
from Arctic to deep sea vent communities. Laboratory exercises cover several principal techniques of field microbial ecology and explore the rich marine microbial environment surrounding the Isles of Shoals.

**BIOSM 309 Climates and Ecosystems**  
Summer. 4 credits. Prerequisite: one year of college-level biology; background preferred in physics/physical geography. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty. 

A study of the fundamentals of organism-environment interaction developed through defining and measuring abiotic factors (including solar radiation, temperature, atmospheric moisture, precipital wind, and currents). On-site exploration of the dynamics of meteorology and the role of abiotic and biotic factors in the life of coastal and marine plants and animals including humans. 

**BIOSM 329 Ecology of Animal Behavior**  
Summer. 4 credits. Prerequisite: one year of introductory college biology. Recommended: course work in ecology, psychology, or behavior. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. Not offered 1999-2000. SML faculty. 

The ecological significance of behaviors of coastal organisms, with emphasis on field and laboratory research methods. Lectures and readings address the major subareas of behavior (communication, orientation, social behavior, foraging, predator avoidance, and sensory mechanisms). Each student engages in short-term behavioral observation and prepares a research proposal for studying a problem within the course subject area. 

**BIOSM 363 Marine Biology for Teachers**  
Summer. 3 or 4 credits (4-credit option: additional 4 days for individual research). Primarily for teachers, grades 6 through 12, but open to others with teaching experience. Prerequisite: one year of introductory college biology. S-U grades optional. A special 10-day course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 10 days. Offered alternate years. Not offered 1999-2000. SML faculty. 

Designed to give an overview of living marine organisms (algae, invertebrates, fishes, marine mammals, and shorebirds) and of the environment they inhabit. Fieldwork is emphasized. Occasional lectures and films deal with additional topics such as coastal-zone problems and the economics of marine organisms, and educational resources of the marine environment.)
BIOSM 364 Field Marine Science

Summer. 6 credits. Prerequisite: one year of college biology. S-U grades optional. A special 4-week course offered twice each summer at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. 3 core faculty members assisted by up to 15 visiting lecturers, including representatives of governmental agencies. SML faculty. Designed for the student who desires an initial overview of the marine sciences, this course emphasizes living material in natural habitats. Most of the course work is concerned with the biology of intertidal plants and animals, biological oceanography, ichthyology, and fisheries. Attention is also given to introductory physical and chemical oceanography and marine geology. Marine ecology and the effects of human activity on the marine environment are included. Students apply this knowledge by conducting a transect study toward the end of the course. FMS places additional emphasis on ichthyology, fisheries biology, general oceanography (biological, physical, and chemical) and marine geology. FME places an additional emphasis on ecology, especially in the intertidal zone; ecological, evolutionary and physiological adaptations of marine organisms; and field experiments.

BIOSM 365 Underwater Research

Summer. 4 credits. Prerequisites: one year of college-level biology, recognized scuba certification, and a medical examination. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. Team-taught by three faculty members with occasional guest lecturers. Not for recreational divers. Course covers the philosophy of research, hypothesis testing, experimental design, sampling methods, various underwater techniques, diving physics and physiology, and use of dive tables. Emphasis is on subtidal ecological research. Requirements include critical reading of several journal articles and production of a research proposal.

BIOSM 366-370 SEA Semester

In cooperation with the Sea Education Association (SEA), the Shoals Marine Laboratory offers a semester-length sequence of courses designed to provide college undergraduates with a thorough academic, scientific, and practical understanding of the sea. This sequence is repeated approximately once every two months throughout the year. Students spend the first half of SEA Semester (a six-week shore component) on an island off Portsmouth, N.H. During lectures and watch standing, students are introduced to the elements of maritime history, law, and others, including representatives of the faculty of the Sea Education Association and the Shoals Marine Oceanographic Institution and others.

BIOSM 375 Field Marine Ecology

Summer. 6 credits. Prerequisites: one full year of college-level biology. S-U grades optional. A 4-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 4 weeks. SML faculty. Designed for students seeking an introduction to the marine sciences and marine ecology, FME places special emphasis on oceanography at sea. Students are introduced to the methods and techniques of the practicing oceanographer. During lectures and watch standing, students are introduced to the operation of basic oceanographic equipment; the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 366 SEA Introduction to Oceanography I

3 credits. Prerequisite: concurrent enrollment in BIOSM 367 and 368. A survey of the characteristics and processes of the global ocean. Oceanographic concepts are introduced and developed from their bases in biology, physics, chemistry, and geology. Provides a broad background in oceanography with special attention to areas pertinent to the subsequent cruise. Guest lecturers from the Woods Hole research community interpret current trends and activities in this rapidly evolving field. Students develop individual projects to be carried out at sea.

BIOSM 367 SEA Introduction to Maritime Studies

3 credits. Prerequisite: concurrent enrollment in BIOSM 366 and 368. An interdisciplinary consideration of our relationship with the marine environment. Covers the elements of maritime history, law, literature, and art necessary to appreciate our marine heritage and to understand the political and economic problems of contemporary maritime affairs.

BIOSM 368 SEA Introduction to Nautical Science

3 credits. Prerequisites: concurrent enrollment in BIOSM 366 and 367. An introduction to the technologies of operation at sea. The concepts of navigation (piloting, celestial, and electronic), naval architecture, ship construction, marine engineering systems, and the physics of sail are taught from their bases in astronomy, mathematics, and physics. Provides the theoretical foundation for the navigation, seamanship, and engineering that students employ at sea.

Sea Component (six weeks)

Courses 369 and 370 take place aboard the R/V Westward, a 125-foot steel auxiliary-powered staysail schooner built in 1961, or the R/V Corwith Cramer, a 134-foot steel auxiliary-powered brigantine built in 1987 for SEA. Both ships normally put to sea with a ship's company of thirty-four. The professional staff of nine includes the captain, the chief scientist, three science watch officers, three deck watch officers, an engineer, and a steward. In addition to the or more visiting investigators are frequently aboard. Up to twenty-four students round out the complement.

BIOSM 369 SEA Practical Oceanography I

4 credits. Prerequisite: BIOSM 366. Theories and problems raised in the shore component are tested in the practical oceanography at sea. Students are introduced to the tools and techniques of the practicing oceanographer. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment; the methodologies involved in the collection, reduction, and analysis of oceanographic data; and in the attendant operations of a sailing oceanographic research vessel.

BIOSM 370 SEA Practical Oceanography II

4 credits. Prerequisites: BIOSM 368 and 369. Building on the experience of Practical Oceanography I, students assume increasing responsibility for conducting oceanographic research and overseeing operations of the vessel. The individual student is ultimately responsible directly to the chief scientist and the master of the vessel for the safe and orderly conduct of research activities and related operations of the vessel. Each student undertakes an individual research project designed by the shore component.

BIOSM 372 SEA Practical Oceanography III

Summer. 3 credits. Prerequisites: BIOSM 366, 367, and 368. Theories and problems raised in class are tested in the practice of oceanography at sea. During lectures and watch standing, students are instructed in the operation of basic oceanographic equipment, in the methodologies involved in the collection, analysis, and reduction of oceanographic data, and in the attendant operations of sailing an oceanographic research vessel. Group research projects are completed.

BIOSM 374 Field Ornithology (An Introduction)

Summer. 4 credits. Prerequisite: one year of college-level biology. S-U grades optional. A special two-week course offered at Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Daily lecs and fieldwork for 2 weeks. SML staff. An introduction to field ornithology focusing on the biology, ecology, and behavior of the avifauna on the Isles of Shoals. The course focuses on field work designed to observe and study many concepts frequently taught in...
the classroom setting including territoriality, breeding biology, and survivorship. Students learn and apply numerous ornithological field methods including various census techniques, territory mapping, banding, behavioral observations, and creating a field notebook.

[BIOSM 402 Marine Pollution]

Summer. 4 credits. Prerequisites: one year of college-level biology and chemistry or permission of instructor. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. Offered alternate years. Not offered 1999-2000. SML faculty.

An introduction to marine pollutants, their sources and control/treatment; the effects of marine pollution upon coastal ecosystems; and federal and state water pollution regulatory programs. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

[BIOSM 409 Ciliophorology]

Summer. 4 credits. Prerequisite: permission of instructor. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and lab for 1 week. Offered alternate years. Not offered 1999-2000. SML faculty.

A special course that examines ciliophoran biology in depth through lectures and laboratory exercises. Topics include a detailed look at the ciliate faunules found in such diverse habitats as salt marshes, sandy sediment interstitial spaces, the Gulf Stream and the Sargasso Sea, marine caves, and benthic hydrothermal vents. Laboratory includes training in field collection of water samples, measurement and modeling of effluent plume dispersion, and measurement of microbial indicators of water quality, dissolved nutrients, BOD, dissolved oxygen, and toxicity.

[BIOSM 413 Experimental Marine Ecology]

Summer. 6 credits. Prerequisite: one year of college level biology; experience in ecology or physiology recommended. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

An introduction to the physiological ecology and functional morphology of marine plants and animals, with emphasis on selected algal and invertebrate examples from the Gulf of Maine. Topics covered include photosynthesis in the marine environment; respiration in intertidal organisms; carbohydrates, proteins, and lipids as nutrients in the sea; acclimation and tolerance to biotic and abiotic factors, and responses to competition and grazing. Field and laboratory exercises explore principles and procedures used to characterize the physical, chemical, and biotic environment of selected and shallow subtidal organisms, including determination of temperature, light, salinity, oxygen and nutrient levels, and in vivo functional analyses of metabolic phenomena. The process of scientific investigation is the predominant theme of the course.

[BIOSM 418 Tropical Marine Science]

Summer. 12 credits. Limited to 12 students. Prerequisites: one year college-level biology and SCUBA certification; medical exam; and permission of instructor. Lec/lab, 2 weeks; 6 weeks monitoring study and individual research projects, including data analysis on computer. A special 8-week course offered in Akumal, Mexico. For more details, contact Shoals Marine Laboratory, G-14 Stimson Hall, 255-3717. For competitor divers only. D. F. Shapiro.

In addition to lectures and laboratory exercises covering the basic principles of coral reef biology, students participate in a coral reef monitoring survey. Following two weeks of course work, students engage in independent research projects. This course applies skills learned in the Undergraduate Research course at Shoals Marine Laboratory.

[BIOSM 449 Seaweeds, Plankton and Seagrass: The Ecology and Systematics of Marine Plants]

Summer. 4 credits. Prerequisite: BIOSM 364 or one year of introductory biology. S-U grades optional. A special 2-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 2 weeks. SML faculty.

An overview of the major algal groups, including species of red, brown, and green algae. Laboratory focuses on examining silver stained specimens, and covers staining techniques, as well as back scattered and secondary SEM and TEM methodologies.

[BIOSM 475 Special Topics in Oceanography]

Summer. 2-5 credits. Prerequisites: GEOl 104 or BIO E 154 and permission of instructor. C. H. Greene and B. M. Monger.

Undergraduate instruction and participation in advanced areas of oceanographic research. Topics will change from term to term. Contact instructor for further information.

[BIOSM 477 Marine Vertebrates]

Summer. 6 credits. Prerequisites: a course in vertebrate biology. S-U grades optional. A special 3-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 3 weeks. SML faculty.

Topics in marine vertebrate biology emphasizing laboratory studies, field collections or observations, and readings from the current literature. Topics covered include systematics of fishes of the Gulf of Maine, elasmobranch physiology, interpretation of life history and parameters from otolith microstructure, teleost skeletal morphology, and functional population biology and the contemporary Gulf of Maine fishery. Mesozoic marine reptiles, the biology of sea turtles in cold water, coloniality in sea birds, avian adaptations to life at sea, evolution and systematics of marine mammals, diving physiology, and ecology and conservation of existing marine mammal populations. Dissection of vertebrate animals is a part of one or more laboratory sessions.

[BIOSM 495 Research Methods in Marine Biology]

Summer. 1 credit. Prerequisite: concurrent enrollment in BIOSM 499 or permission of instructor. Primarily for undergraduates. A special 8 week course offered at the Shoals Marine Laboratory (SML). For more details and an application, consult the SML office, G14 Stimson Hall. Weekly seminars for 8 weeks. Offered alternate years. Not offered 1999-2000. J. G. Morin and M. J. Shulman.

Seminar course on research methodology, experimental design, statistical analyses, and scientific writing. The course is designed to assist students in the research they are conducting while enrolled in BIOSM 499.

[BIOSM 499 Research in Biology]

Summer. Credits variable (2 credits/7 days on site). For more details and an application, consult the SML Office, G14 Stimson Hall.

Section A: Independent Biological Research: Independent study with a member of the Shoals Marine Laboratory core faculty, based on student faculty interest and available facilities. A short proposal of research must be set with application materials.

[ARKEO 319 Archaeology Underwater]

Summer. 2 credits. Prerequisites: recognized scuba certification and a medical examination required for students engaging in underwater research; also open to non-divers. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork for 1 week. Offered alternate years. Not offered 1999-2000. SML faculty.

An introduction to the subject and a review of this contemporary subdiscipline of archaeology. The approach of the course is practical, with a strong potential for on-site experience in search, site recognition, survey, and recording. The course also covers the history and development of the subject, the legal aspects of underwater research, and the worldwide potential of the field. Since any archaeological research project involves a great deal more than digging, the course provides ample opportunities for those who are interested in the subject but are not divers or sufficiently experienced in scuba.

[GEOL 213 Marine and Coastal Geology]

Summer. 2 credits. Prerequisite: an introductory course in geology or permission of instructor. A special 8 week course offered at Cornell's Shoals Marine Laboratory (SML), on an island off Portsmouth, N.H. For more details and an application, consult the SML Office, G14 Stimson Hall. Estimated cost (includes tuition, room and board), $1,100. Daily lecs, labs, and fieldwork for 1 week. SML faculty.

This course examines the complete history of the Isles of Shoals from Paleozoic intrusion, deformation and metamorphism to recent glaciation, sea-level change and wave erosion. Students will learn basic surveying and mapping techniques using the Brunton compass, poplevel/stadia rod, autolevel and...
GPS. Sea kayaks will be used for inter-island travel and explorations of the islands. No previous kayak experience is required. Field efforts will focus on creating a series of thematic maps depicting island characteristics such as topography, bedrock geology and structure, vegetation and land use patterns.

**NTRES 306 Coastal and Oceanic Law and Policy**

Summer. 2 credits. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs and disc for 1 week. SML faculty. Intended for persons interested in careers in management of marine or coastal resources or in the natural sciences. Subjects include law and policy related to ocean dumping, marine sanctuaries, environmental impact statements, water and air pollution, fisheries management, offshore gas and oil production, and territorial jurisdiction. Lectures on the status and history of law are accompanied by discussion of relevant policy and analysis of the efficacy of various legal techniques. A case study that requires extensive use of the laboratory's library and personnel is assigned. The week concludes with a mock hearing.

**NTRES 417 Wetland Resources**

Summer. 2 credits. Prerequisite: one year of college-level biology. A special 1-week course offered at Cornell's Shoals Marine Laboratory (SML) on an island off Portsmouth, N.H. For more details and an application, consult the SML office, G14 Stimson Hall. Daily lecs, labs, and fieldwork. SML faculty. An examination of coastal and adjacent freshwater wetlands from historic, destruction, and preservation perspectives, including fresh- and salt-marsh ecology and management. Field trips to selected examples of the wetlands under discussion and follow-up laboratories emphasize successional features, plant identification and classification, and examination of the dominant insect and vertebrate associations.

**BIOES 373 Biology of the Marine Invertebrates**

Fall (but taken in the previous summer at the Shoals Marine Laboratory (SML). 4 credits. Limited to 30 students. Prerequisite: one year of introductory biology for majors. Permission of faculty required for 1999 because it will be off campus. Two week, full-time course. Daily and evening lectures, laboratories, and field work. Offered alternate years. C. D. Harvell, J. G. Morin, SML faculty. An introduction to the biology and evolution of the major invertebrate phyla, concentrating on marine representatives. In addition to the evolution of form and function, lectures cover aspects of ecology, behavior, physiology, chemical ecology, and natural history of invertebrates. By being taught at the Shoals-Marine Laboratory, students are exposed to a wealth of marine and terrestrial invertebrates in their natural habitats. Regular field excursions allow an excellent opportunity to study freshly collected and in situ representatives of most of the major phyla.

FACILITIES AND SPECIAL PROGRAMS
Most of the academic units of the College of Engineering are on the Joseph N. Pew, Jr. Engineering Quadrangle. Facilities for applied and engineering physics are located in Clark Hall on the College of Arts and Sciences campus, and facilities for agricultural and biological engineering are centered in Riley-Robb Hall on the campus of the New York State College of Agriculture and Life Sciences. Special university and college facilities augment the laboratories operated by the various engineering schools and departments, and special centers and programs contribute to opportunities for study and research. Cornell programs and centers of special interest in engineering include the following:

Center for Applied Mathematics. A cross-disciplinary center that administers a graduate program.

Center for Manufacturing Enterprise. A joint venture of Cornell, industrial organizations, and the federal government to encourage the development and implementation of modern manufacturing systems.

Center for Radiophysics and Space Research. An interdisciplinary unit that facilitates research in astronomy and the space sciences.

Center for Theory and Simulation in Science and Engineering. A supercomputer facility used for advanced research in engineering and the physical and biological sciences.

Cornell Electronic Packaging Alliance. A cooperative venture involving Cornell and several corporations in the areas of computing and microelectronics, organized to undertake precompetitive, interdisciplinary research in electronic packaging.

Cornell High Energy Synchrotron Source (CHESS). A high-energy synchrotron radiation laboratory operated in conjunction with the university’s high-energy storage ring. Current research programs at CHESS are in areas of structural biology, chemistry, materials science, and physics.

Cornell Nanofabrication Facility (part of the National Science Foundation funded National Nanofabrication Users Network). A center that provides equipment and services for research in the science, engineering, and technology of nanometer scale structures for electronic, chemical, physical, and biological applications.

Cornell Waste Management Institute. A research, teaching, and extension program within the Center for Environmental Research that addresses the environmental, technical, and economic issues associated with solid waste; one facility sponsored by the institute is the Cornell Combustion Simulation Laboratory in the Sibley School of Mechanical and Aerospace Engineering.

Institute for the Study of the Continents. An interdisciplinary organization that promotes research on the structure, composition, and evolution of the continents.

Laboratory of Plasma Studies. A center for interdisciplinary research in plasma physics and lasers.

Cornell Center for Materials Research. An interdisciplinary facility with substantial support from the National Science Foundation, providing sophisticated measurement and characterization equipment.

National Astronomy and Ionosphere Center. The world's largest radio-radar telescope facility, operated by Cornell in Arecibo, Puerto Rico.

National Earthquake Engineering Research Center. A facility recently established by the National Science Foundation and a group of universities in New York State to study response and design of structures in earthquake environments.

National Institutes of Health/National Science Foundation Developmental Resource in Biophysical Imaging and Optoelectronics. A resource that develops novel measurement and optical instrumentation for solving biophysical problems.

Power Systems Engineering Research Center. A research and instructional program centered in a laboratory that has a complete real-time model of an electric power system.

Program of Computer Graphics. An interdisciplinary research center that operates one of the most advanced computer-graphics laboratories in the United States.

Program on Science, Technology, and Society. A cross-disciplinary unit that sponsors courses and promotes research on the interaction of science, technology, and society.

SRC Program on Microscience and Technology. A center sponsored by the Semiconductor Research Corporation to promote research essential to the development of VLSI devices and circuits.

Ward Laboratory of Nuclear Engineering. Irradiation, isotope production, and activation analysis facilities for interdisciplinary research.

The programs listed on this page are sponsored by College of Engineering units and several industry affiliated. These are in the areas of injection molding, computer science, materials science, geologic study of the continents, and nanometer scale structures.

DEGREE PROGRAMS
Cornell programs in engineering and applied science lead to the degrees of Bachelor of Science, Master of Engineering (with field designation), Master of Science, and Doctor of Philosophy. General academic information concerning the Bachelor of Science degree is given here under the heading "Undergraduate Study." Curricula for major studies are described under the various academic areas.

Programs leading to the Master of Science and Doctor of Philosophy degrees are administered by the Graduate School. They are described in the Announcement of the Graduate School and the special announcement Graduate Study in Engineering and Applied Science. The professional Master of Engineering programs and cooperative programs with the Johnson Graduate School of Management are described below.

UNDERGRADUATE STUDY
Bachelor of Science (B.S.) degrees are offered in the following areas:

Agricultural and Biological Engineering
Chemical Engineering
Civil Engineering
College Program
Computer Science
Electrical Engineering
Engineering Physics
Geological Sciences
Materials Science and Engineering
Mechanical Engineering
Operations Research and Engineering

Students in the College of Engineering begin their undergraduate studies in the Common Curriculum, which is administered by the faculty members of the College Curriculum Governing Board (CCGB) through the associate dean for undergraduate programs and the Engineering Advising office. Subsequently most students enter field programs, which are described separately for each academic area. Criteria for entrance into the field programs are described in the section titled "Affiliation with a Field Program." Alternatively students may enter the College Program (described below), which permits them to pursue a course of study adapted to individual interests.
Students interested in bioengineering may arrange a suitable curriculum through the bioengineering option within one of the field programs or through the College Program. Students interested in supplementing their field program with formal study in another traditional area of engineering may wish to consider one of the engineering minors offered by the college. Information about both the bioengineering option and engineering minors is available in the Engineering Advising office, 167 Olin Hall. Students interested in environmental engineering and science may pursue the environmental option offered by the School of Civil and Environmental Engineering, the major offered by the Department of Agricultural and Biological Engineering, or the science of earth systems (SES) option offered by the Department of Geological Sciences. Double majors combining environmental science and engineering are feasible.

*Agricultural and biological engineering, chemical engineering, civil engineering, electrical engineering, engineering physics, materials science and engineering, mechanical engineering, and operations research and engineering are accredited by the Engineering Accreditation Commission of the Accreditation Board for Engineering and Technology.

†To major in agricultural and biological engineering students normally enroll in the College of Agriculture and Life Sciences for the first and second years, and jointly in that college and the College of Engineering for the third and fourth years. However, students enrolled in the College of Engineering for the first two years may affiliate with the field of agricultural and biological engineering and become jointly enrolled in the Colleges of Agriculture and Life Sciences and Engineering for the third and fourth years.

Requirements for Graduation

To receive the Bachelor of Science degree, students must meet the requirements of the Common Curriculum, as set forth by the College of Engineering, including the requirements of the field program, as established by the school or department with which they become affiliated. Students must meet the Common Curriculum as explained below. (Further explanation of the revised Common Curriculum and field flow charts are provided in the 1999-2000 edition of The Engineering Undergraduate Handbook.)

Course Category Credits
1) Mathematics 16
2) Physics (depending on field) 8-12
3) Chemistry (depending on field) 4-8
4) First-Year writing seminar* 6
5) Computer programmer† 4
6) Engineering distribution (3 courses) 6
a. One Introduction to Engineering (ENGR) 3
b. Two other engineering distribution courses (ENGRD) 6
7) Liberal studies distribution (6 courses) 18 (min.)
8) Approved electives 6
9) Field program
   a. Field required courses 30 cr. min.
   b. Field approved electives 9
   c. Courses outside the field 9

*One writing-intensive technical course or a course in technical communication writing must also be taken; this course may simultaneously satisfy some other requirement.
†One approved course in computing applications must also be taken; this course may simultaneously satisfy some other requirement, such as an engineering distribution course, an approved elective, or a field program course.

From 123 to 133 credits are required for graduation; the specific number of required credits will vary depending on which field program is chosen (see field curricula for specific field requirements). Two terms of physical education must be taken in the freshman year and students must demonstrate proficiency in swimming to satisfy a university requirement.

Mathematics

The normal program in mathematics includes MATH 191 (or 193), 192, 293, and 294. Every student must achieve a grade of at least C- in MATH 191 (or 193), 192, 293, and 294, or other courses that may be approved as substitutes for these courses. If this requirement is not met the first time a course is taken, the course must be repeated immediately and a satisfactory grade attained before the next course in the sequence may be taken. Failure to achieve at least a C- the second time around will generally result in dismissal from the engineering program.

Courses that are taken a second time in order to meet this requirement do not yield additional credit toward a degree.

Physics

The normal program in physics includes PHYS 112, 113, and 214 or the corresponding honors courses (PHYS 116, 217, and 218). Engineering students are required to have attained a minimum grade of C- in MATH 191 or equivalent before taking PHYS 112. The same minimum grade is required in each subsequent mathematics course before taking the physics course for which it is a prerequisite (e.g., C- in MATH 192 before taking PHYS 213, or C- in MATH 293 before taking PHYS 214). Students in the field programs of ABEN, CHEM, CEE, COM S, GEOI or ORAE may substitute CHEM 208 for PHYS 214.

Chemistry

CHEM 211 or 207 is required for all students. CHEM 211 is a course designed for students who do not intend any further study in chemistry. Typically, CHEM 211 is taken during the freshman year, but students who wish to complete the physics program (PHYS 112, 213 and 214) first may postpone CHEM 211 until the sophomore year.

In general, students intending to affiliate with the following departments and schools should take CHEM 211: Applied and Engineering Physics, Civil Engineering, Environmental Engineering, Mechanical and Aerospace Engineering, and Operations Research and Industrial Engineering. Students considering Chemical Engineering must take CHEM 207 in the fall of their freshman year, to be followed by CHEM 208 in the spring term. All students considering the environmental option in Civil Engineering, the science of earth systems option in Geological Sciences, or a health-related career such as medicine, should take the CHEM 207-208 sequence.

First-Year Writing Seminars

Each semester of their freshman year, students choose a First-Year Writing Seminar from among more than one hundred courses offered by over thirty different departments in the humanities, social sciences, and expressive arts. These courses are designed to give students practice in writing English prose. They also assure beginning students the benefits of a small class.

Technical Writing

The ability to communicate is essential to successful professional practice. In addition to taking two First-Year Writing Seminars, engineering students must have a course that includes a significant amount of technical or scientific writing. They can fulfill this technical-writing requirement by enrolling in an Engineering Communications course (ENGRC 334, 335 [formerly 435], or 350), selected courses in the Communications department (COMM 260, 265, or 352), or an approved writing-intensive engineering course (ENGRD/AEPE 264, CHEME 432, M&AE 427, MS&E 435, or MS&E 443-444). Courses that fulfill the technical writing requirement may be used to satisfy another graduation requirement.

Some students might fulfill the technical-writing requirement through the writing they do in their co-op jobs; this arrangement must be approved in advance. For details, contact the Engineering Communications Program, 405 Hollister Hall.

Computing

In either the first or second term of their freshman year, students normally take COM S 100, Introduction to Computer Programming. Before graduation they must take an additional course with a significant amount of computing applications; this course may also be used to meet another graduation requirement. Courses that satisfy this requirement are ABEN 453, ABEN 475, ENGRD/COM S 211 or 212, ENGRD/COM S 222, ENGRD/CEE 241, ENGRD/AEPE 264, ELE E 423, M&AE 479, M&AE 575, M&AE 578, and M&AE 670. The recommended choice for students intending to enter the field program in Engineering Physics is ENGRD 264, in Chemical Engineering, ENGRD 211, 222 or 241; in Civil Engineering, ENGRD 241; in Computer Science, ENGRD 211 or 212; in Electrical Engineering, ENGRD 211; in Mechanical Engineering, M&AE 479, M&AE 575, M&AE 578, or M&AE 670; and in Operations Research and Engineering, ENGRD 211.

Engineering Distribution

Three engineering distribution courses (9 credits) are required. One course must be an Introduction to Engineering Course (designated by ENGR) to be taken by the student during their freshman year. The Introduction to Engineering course will introduce students to the engineering process and provide a substantive experience in an open-ended problem-solving context. See the Introduction to Engineering Course listing for current
course offerings.

The other two distribution courses must be selected from two different categories listed below. A student may use any one of the possible substitutions described.

1) Scientific computing
   ENGRD 211, Computers and Programming
   ENGRD 212, Structure and Interpretation of Computer Programs
   ENGRD 222, Introduction to Scientific Computing
   ENGRD 241, Engineering Computation

2) Materials science
   ENGRD 261, Introduction to Mechanical Properties of Materials

3) Mechanics
   ENGRD 202, Mechanics of Solids
   ENGRD 203, Dynamics

Students in the field program in Engineering Physics may substitute A&EP 333 for ENGRD 203.

4) Probability and statistics
   ENGRD 270, Basic Engineering Probability and Statistics
   ENGRD 271, Introduction to Circuits for Electrical and Computer Engineers
   ENGRD 272, Introduction to Digital Systems
   ENGRD 274, Computer-Instrumentation Design

5) Electrical sciences
   ENGRD 210, Introduction to Circuits for Electrical and Computer Engineers
   ENGRD 231, Introduction to Digital Systems
   ENGRD 264, Computer-Instrumentation Design

6) Thermodynamics and energy balances
   ENGRD 219, Mass and Energy Balances
   ENGRD 221, Thermodynamics

7) Earth and life sciences
   ENGRD 201, Introduction to the Physics and Chemistry of the Earth
   ENGRD 250, Engineering Applications in Biological Systems

8) Biology and chemistry
   BIO G 101 and 103, Biological Sciences, Lecture and Laboratory
   BIO G 105, Introductory Biology
   BIO G 107, General Biology (summer only)
   CHEM 389, Physical Chemistry I

Some fields require a specific engineering distribution course as a prerequisite for the upperclass course sequence. These requirements are:

Agricultural and Biological Engineering: ENGRD 202
Chemical Engineering: ENGRD 219
Civil Engineering: ENGRD 202
Computer Science: ENGRD 211 or ENGRD 212
Electrical Engineering: ENGRD 231 (co-enrollment in ELE E 232 strongly recommended)
Geological Sciences: ENGRD 201
Materials Science and Engineering: ENGRD 261

Mechanical Engineering: ENGRD 202
Operations Research and Engineering: ENGRD 270

Liberal Studies Distribution

The six required liberal studies courses (totaling at least 18 credits) may be chosen from approved courses in four categories: (a) humanities or history, (b) social sciences, (c) foreign languages, and (d) expressive arts. (No First-Year Writing Seminar may be used to meet the liberal studies requirement.)

- At least two courses must be chosen from category (a).
- No more than 3 credits toward this requirement may be taken in category (d).
- At least two courses in either category (a) or (b) must be from the same field of study. One of these courses must be at or above the 200-level or be an explicit prerequisite of the other.

Following each category is a list of approved courses. Every effort has been made to keep the lists up to date, but errors sometimes occur. Students who wish to use a course that seems to fit the category description but is not listed should contact the Engineering Advising office.

a) Humanities or History

American Studies 101, 201, 202
Architectural 131, 132, 181, 182
Art 317, 318
African Studies 202, 204, 205, 211, 280, 304, 310, 360, 370, 371, 404, 422, 425, 431, 432, 435, 475, 476, 483
Anthropology 290, 451, 452, 453, 455
Archeology (courses in Old World Archeology and 493)
Asian Studies (courses in Asian art, literature, religion or cultural history)
Biology and Society 206
Classes (all courses except 285, 286, 360, 361 and language courses)
Collective Bargaining, Labor Law and Labor History 100, 101, 384, 385, 386, 482, 488
Communication 426
Comparative Literature (all courses)
Economics 315, 323, 324, 325, 326
Engineering, ENGRG 250, 298, 360
English (all courses except ENGL 285 and writing courses, whose numbers end in the 80s; e.g., 288, 289, 382, etc.)
French Literature (all courses)
German Literature (all courses)
History (all courses)
History of Art (all courses)
Industrial and Labor Relations Interdepartmental Course 451
International and Comparative Labor Relations 430
Italian Literature (all courses)
Jewish Studies 274, 351, 352
Labor Economics 448
Music (only introductory, music theory, music history and digital music courses)
Natural Resources 407
Near Eastern Studies (courses listed under history, civilization, or literature)
Philosophy (all courses except courses in logic and PHIL 383)
Religious Studies 101
Russian Literature (all courses)
Science and Technology Studies 201, 205, 206, 233, 292, 355, 433, 444, 525
Spanish Literature (all courses)
Theater Arts (all courses)

b) Social Sciences

Agricultural Economics (ARME) 100, 250, 430, 431, 432, 450, 464
Anthropology (all courses except 101 and courses in Biological and Ecological Anthropology)
Archeology (all courses except those in Methodology and Technology)
Architecture 342
Asian American Studies 110
Asian Studies (courses in Asian anthropology, economics, government, linguistics, or sociology)
Biology and Society 201, 301, 406, 407
City and Regional Planning 100, 101, 314, 361, 382, 404, 442
Communication 116, 120, 240, 410, 420
Design and Environmental Analysis 150, 250
Economics (all courses except 315, 317, 318, 319, 320, 321, 326. Engineering students should generally take ECON 301-302 and not 101-102, unless they have had no calculus.)
Education 210, 212, 271, 311, 317, 322, 360, 413, 477
Government (all courses)

Human Development and Family Studies (all courses)

International and Comparative Labor Relations (all courses)

Labor Economics (all courses except 345 and 448)

Linguistics (all courses)

Natural Resources 201, 215

Organizational Behavior (all courses)

Policy, Analysis and Management (all courses except 305, 323, 326, 371, 424, 425, 606 and 607)

Rural Sociology (all courses)

Sociology (all courses)

Textiles and Apparel 245

c) Foreign Language
This category includes all foreign language courses; if two or more foreign language courses are used to fulfill part of the liberal studies requirement, they must be a sequence of courses in the same language. The rules for placement and advanced placement credit in languages are those of the College of Arts and Sciences. Speakers of languages other than English may obtain up to 6 advanced placement credits equal to two courses according to these rules.

d) Expressive Arts
African Studies 303, 425, 430
Art (studio courses)
Biological Sciences 208, 209
Communications (all courses except 116, 120, 314, 410, 416, 420, 426, 465)
Design and Environmental Analysis 101, 102
Engineering (all Engineering Communications courses, which are designated ENGRCO)
English (expository and creative writing courses, whose numbers end in the 80's, e.g., 288, 289, 382, etc.)
Floriculture (courses in Freehand Drawing and Scientific Illustration)
Industrial and Labor Relations 452
Music (courses in musical performance, musical organizations and ensembles, three 1-credit courses equals one course)
Theater Arts (all courses except those listed in category (a) above)

Electives
• Approved electives—six (6) credits required (approved by the academic adviser)

Because these courses should help develop and broaden the skills of the engineer, advisers will generally accept the following as approved electives:
1. One Introduction to Engineering course (ENGR1).
2. Engineering distribution courses.
3. Courses stressing written or oral communication.
4. Upper-level engineering courses.
5. Advanced courses in mathematics.
6. Rigorous courses in the biological and physical sciences.
7. Courses in business, economics, or language (when they serve the student's educational and academic objectives).
8. Courses that expand the field program or another part of the curriculum (Note: No ROTC courses may be used as approved electives unless they are co-listed by an academic department.)
• Field approved electives—nine (9) credits (approved by engineering field program faculty and field faculty advisers).

Students should refer to the field program curricula for descriptions of courses that meet this category.

To ensure breadth of engineering studies, field programs will also include nine (9) credits of courses outside the field.

Social Issues of Technology
It is important for engineers to realize the social and ethical implications of their work. Consequently, in selecting their humanities, social sciences, and approved electives, students are urged to consider courses listed within the "Science and Technology Studies" undergraduate area of concentration (see Interdisciplinary Centers and Programs section). These courses may provide students with an important perspective on their studies and their future careers.

Engineering Advising Office
From the time that students enter the college as freshmen until they are affiliated with a major field or the College Program before the second term of the sophomore year, they are under the administration of the Engineering Advising office, which implements the academic policies of the College Curriculum Governing Board. The office offers general advising and counseling services and serves as the primary resource center for undergraduate students in the college. The Engineering Minority Programs office and the Women's Programs in Engineering office provide additional specialized services.

Freshman Year Requirements
By the end of the freshman year, engineering students are expected to have completed (or received credit for) the following core requirements:
• MATH 191 (or 193) and MATH 192
• Two of the following: CHEM 211, 207, 208, PHYS 112, 213, 214
• COM S 100
• Two (2) First-Year Writing Seminars
• One (1) Introduction to Engineering course (ENGRI designation)
• Two (2) Physical Education courses

(Students with an interest in pre-med (or other health-related careers). Chemical Engineering, the environmental option in Civil Engineering, or the science of earth systems option in Geological Sciences should enroll in the CHEM 207-208 sequence during their freshman year.)

Affiliation with a Field Program
Students must apply for affiliation with a field program during the first term of their sophomore year, although earlier affiliation may be granted at the discretion of the field. This is done by visiting the undergraduate field consultant's office in the field of their choice and completing the Application for Field Affiliation form. To affiliate with a field program, students must (1) have a 2.0 GPA in all engineering and pre-engineering mathematics, science courses and a 2.2 GPA in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required).

Field Program Courses and Minimum Grade Requirements

Agricultural & Biological Engineering
No more than one grade below C- in mathematics and science courses and ABEN 151 or equivalent.

Chemical Engineering
No more than one grade below C- in chemistry, mathematics, physics, or chemical engineering courses and a 2.2 GPA in mathematics, science, and chemical engineering courses.

Civil Engineering
A 2.0 GPA in all engineering and science courses and a grade of C- or better in ENGRD 202 (for students in the environmental option who do not take ENGRD 202 prior to affiliation, a grade of C- or better in CHEM 208 is required).

Computer Science
A grade of B- or better in COM S 280, ENGRD 211 or 212 and all mathematics courses.

Electrical Engineering
Good academic standing in the College of Engineering; a grade of C or better in MATH 293 and PHYS 213. Repeated technical courses used to satisfy this requirement may require field approval.

Engineering Physics
A grade of B- or better in all required mathematics and physics courses.

Geological Sciences
Good academic standing in the College of Engineering.

Materials Science & Engineering
Good academic standing in the College of Engineering and a grade of C in ENGRD 261.

Mechanical Engineering
A grade of C- or better in mathematics and science courses and ENGRD 202.

Operations Research & Engineering
A grade of C- in MATH 191 (OR 193) and 192, and a 2.0 GPA in all mathematics, science, and engineering courses (both overall and in the term immediately prior to affiliation).

Students must be affiliated or conditionally affiliated by the end of their fourth semester or they will be withdrawn from the College of Engineering, unless allowed to participate in a terminal semester.
SPECIAL PROGRAMS

Dual Degree Option
A special academic option, intended for superior students, is the dual degree program, in which both a Bachelor of Science and either a Bachelor of Arts or Bachelor of Fine Arts degree can be earned in about five years. Students registered in the College of Engineering, the College of Arts and Sciences, or the College of Architecture, Art and Planning may apply and, after acceptance of their application, begin the dual degree program in their second or third year. Those interested should contact the appropriate coordinators of dual degree programs at the following locations: 172 Goldwin Smith Hall (for Arts and Sciences); or 135 East Sibley (for Architecture, Art and Planning), and the Associate Dean for Engineering Undergraduate Programs in 222 Carpenter Hall.

Double Major in Engineering
The Double Major option, which makes it possible to develop expertise in two allied fields of engineering, generally requires at least one semester beyond the usual four years. Students affiliate with one field following normal procedures and then petition to enter a second field before the end of their junior year. All the requirements of both fields must be satisfied. Further information is available from the Engineering Advising office, 167 Olin Hall, and the individual field consultant offices.

College Program
Individually arranged courses of study under the College Program are possible for those well-qualified students whose educational objectives cannot be met by one of the regular field programs. Often the desired curriculum is in an interdisciplinary area. Each program is developed by the student in consultation with faculty advisers and must be approved by the College Program Committee, which is responsible for supervising the student's work. Students apply to enter the College Program by the end of the first term of the sophomore year. A student should seek assistance in developing a program from the College Program Committee and a consultant. If approved, the program is the curricular contract to which the student must adhere. Normally, students applying to the College Program should have a 3.0 cumulative grade point average.

Every curriculum in the College Program, with the exception of certain faculty-sponsored programs, must comprise an engineering major and an educationally related minor. The major may be in any subject area offered approved electives. Courses in humanities and social sciences and at least 32 credits in engineering courses, each program includes the normally required courses in humanities and social sciences and approved electives. Further information about the College Program may be obtained from the Associate Dean for Undergraduate Programs, 222 Carpenter Hall.

Important note: because no single standardized curriculum exists, the College Program is not accredited.

Engineering Minors
The Engineering Minor is a supplement to the regular bachelor's degree programs in the college, including the College Program, and recognizes formal study of a particular technical subject area in engineering normally outside the student's major. Therefore, it may be necessary for some students choosing to complete the requirements for an engineering minor to spend more than the traditional eight semesters to complete their studies at Cornell. In many cases, however, courses fulfilling minor requirements may also satisfy other degree requirements (e.g., distribution courses, approved electives, or field-approved electives). Students undertaking a minor are expected to complete the requirements during the time of their continuous undergraduate enrollment at Cornell.

To complete an engineering minor, an undergraduate engineering student must:
- Be enrolled in a major field program that approves the participation of its affiliates in the desired minor.
- Successfully complete all the requirements for a bachelor of science degree in engineering.
- Satisfactorily complete six courses (18 credit minimum) as stipulated in a college-approved minor offered by an engineering school or department other than that which offers the student's major.

Students may apply for certification of an engineering minor at any time after the necessary coursework has been completed in accordance with published standards. Students who receive certification in an approved engineering minor will be recognized by means of an official notation on their Cornell transcript following graduation.

The College of Engineering currently offers minors in the following areas (offering departments are indicated in parentheses):
- Civil Infrastructure (CEE)
- Electrical Engineering (ELE E)
- Engineering Management (CEE)
- Engineering Statistics (ORIE)
- Environmental Engineering (ABEN/CEE)
- Geological Sciences (GEOI)
- Industrial Systems and Information Technology (ORIE)
- Materials Science and Engineering (MSIE)
- Operations Research and Management Science (ORIE)

Additional information on specific minors can be found in the departmental sections of this publication, the Engineering Undergraduate Handbook, the undergraduate field office of the department offering the minor, and the Engineering Advising office.

Bioengineering Option
Students who elect this option will graduate with a B.S. degree in one of the traditional fields and with an administrative note on their transcript formally recognizing their efforts in bioengineering.

The requirements for completion of the option are four courses (12 credit hours minimum) and one credit hour of Bioengineering Seminar (ENGRG 501). These courses can simultaneously satisfy other degree requirements and are not necessarily four additional courses. These four courses must be selected from two categories: science courses and bioengineering courses. At least one course must be from the science-based course list and at least two (totaling at least 6 credits) from the bioengineering course list. Each student interested in the bioengineering option can request (through the Engineering Undergraduate Programs office) a faculty consultant who will assist the student in course selection for this option. The bioengineering faculty consultant is in addition to the student's regular academic adviser.

A list of approved courses is available in the Engineering Advising office, 167 Olin Hall or in the Engineering Undergraduate Programs office, 222 Carpenter Hall.

International Programs
All students who plan to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Courses of Study.

An international perspective, sensitivity to other cultures, and the ability to read and speak a second language are increasingly important to today's engineers. In keeping with the university goals of internationalizing the curriculum, the College of Engineering encourages students to study or work abroad during their undergraduate years. For further information on these and other opportunities to add an international dimension to your undergraduate education, see the staff in the Engineering Advising office, 167 Olin Hall. Information on co-op programs abroad is available from the Engineering Professional Programs office in 148 Olin Hall.

Engineering Communications Program
The Engineering Communications Program (ECP) provides instruction in the written, oral, and visual presentation of information.

Engineering Communications ENGRG 350 and Communications for Engineering Managers ENGRG 335 (formerly 435) are three-credit seminars that give students a thorough introduction to these areas. These courses use material from engineering and business workplaces, and many assignments are based on actual events and situations. Students learn to direct their writing and presentations to different audiences that have varying roles and levels of expertise. They also deal with organizational and legal issues in the communications they encounter and produce. Classes have lively discussion, and the limited size of sections ensures close attention to individual students' work. Occasionally, the program's instructors offer courses or independent studies in topics of special interest. ECP courses fulfill the college's technical writing requirement (see Requirements for Graduation).
In addition to offering communications seminars, the program works with the engineering fields to integrate communications instruction and practice into technical courses. The goal of these writing-intensive efforts is to strengthen students' understanding of course material and increase their ability to communicate. The ECP also gives presentations to student groups on communications topics and teamwork, and has been involved in innovative educational projects such as Undergraduate Engineering Teaching (ENGTR 470), a collaborative learning initiative in physics and mathematics. The program awards several annual prizes for writing, oral presentation, and teamwork. For further information, contact the director, 465 Hollister Hall.

Engineering Cooperative Program
A special program for undergraduates in most fields of engineering is the Engineering Cooperative Education Program, which provides an opportunity for students to gain practical experience in industry and other engineering-related enterprises before they graduate. By supplementing course work with carefully monitored, paid jobs, co-op students are able to explore their own interests and acquire a better understanding of engineering as a profession.

To be eligible, a student must have been enrolled at Cornell for four semesters prior to working, with a cumulative GPA of 2.7 or higher. (Students in Computer Science and Agricultural and Biological Engineering are eligible, even though they may not be registered in the College of Engineering.) Applicants are interviewed by representatives of cooperating companies and select their work assignments from any offers they receive. Those students who are offered assignments and elect to join the program usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class. Further information may be obtained from the Engineering Professional Programs office, 146 Olin Hall.

MASTERS OF ENGINEERING DEGREE PROGRAMS
One-year Master of Engineering (M.Eng.) programs are offered in thirteen fields. These programs are designed to enable students to develop more challenging and stimulating programs of study. Students usually take their fifth-term courses at Cornell during the summer following their sophomore year and begin their co-op work assignment that fall. They return to Cornell to complete term six with their classmates and then undertake a second work assignment with the same company the following summer. Co-op students return to campus for their senior year and graduate with their class.

M.Eng. (Civil & Environmental): Civil and Environmental Engineering
M.Eng. (Computer Science): Computer Science
M.Eng. (Electrical): Electrical Engineering
M.Eng. (Engineering Physics): Applied and Engineering Physics
M.Eng. (Geology): Geological Sciences
M.Eng. (Materials): Materials Science and Engineering
M.Eng. (Mechanical): Mechanical and Aerospace Engineering
M.Eng. (Nuclear): Nuclear Science and Engineering
M.Eng. (OR&E): Operations Research and Industrial Engineering

Advanced Placement Credit
The College of Engineering awards a significant amount of advanced placement (AP) credit to entering freshmen who demonstrate proficiency in the subject areas of introductory courses. Students can earn AP credit by receiving qualifying scores on any of the following:

1) advanced placement examinations given and scored by the College Entrance Examination Board (CEEB); or
2) General Certificate of Education (GCE) Advanced ('A') Level Examinations; or
3) International Baccalaureate (IB) Higher Level Examinations; or
4) Cornell's departmental placement examinations, given during orientation week prior to the beginning of fall-term classes.

Advanced placement credit is intended to permit students to develop more challenging and stimulating programs of study. Students who receive AP credit for an introductory course may use it in three different ways.

1) They may enroll in a more advanced course in the same subject right away.
2) They may substitute an elective course from a different area.
3) They may enroll in fewer courses, using the AP credit to fulfill basic requirements.

Acceptable Subjects and Scores for CEEB or Cornell Departmental AP Exams
The most common subjects for which AP credit is awarded in the College of Engineering, and the scores needed on qualifying tests, are listed below. AP credit is awarded only for courses that meet engineering curriculum requirements.

Mathematics: MATH 191 (or 193), 192, 293, and 294 are required.

First-term math (MATH 191 or 193). AP credit may be earned by:
• a score of 3 or 4 on the CEEB BC exam, or
• a score of 4 or 5 on the CEEB AB exam, or
• a passing score on the Cornell departmental exam for first-term math.
First-year math (through MATH 192). AP credit may be earned by:
- a score of 5 on the CEEB BC exam, or
- a passing score on the Cornell departmental exam for first-year math.

Physics: PHYS 112 and 213 are required. PHYS 112. AP credit may be earned by:
- a score of 4 or 5 on the mechanics portion of the CEEB C exam, or
- a score of 5 on the CEEB B exam only if the student has at least one semester of AP or transfer credit in first-term mathematics at the time of matriculation, or
- a passing score on the Cornell departmental exam for PHYS 112.

Note: Students who have received credit for PHYS 112 may not enroll in PHYS 213 unless concurrently enrolled in MATH 295.

PHYS 213. Students receiving a 5 on the Electricity and Magnetism portion of the C exam may choose to accept AP credit for PHYS 213 or placement in PHYS 217 with no AP credit for PHYS 213. For advice or more information contact Professor Joseph Rogers (607-255-8158), the departmental representative.

Chemistry: CHEM 207 or CHEM 211 is required. CHEM 207 or CHEM 211. AP credits may be earned by:
- a score of 5 on the CEEB AP exam, or
- a passing score on the Cornell departmental exam for Chemistry.

Note: students who are successful in obtaining AP credit for CHEM 207 and are considering majors in Chemical Engineering or Materials Science and Engineering should consider enrolling in CHEM 215. Those who are offered AP credit for CHEM 207 and then elect to take CHEM 215 will also receive academic credit for CHEM 207. You may want to discuss this option with your faculty advisor.

Computing: COM S 100 is required. AP credit may be earned by:
- a score of 4 or 5 on the CEEB A or AB exam, or
- a passing score on the Cornell departmental exam for COM S 100.

Biology: Biology is not required of engineering students, although it is a popular option as an elective, especially for students who intend to pursue health-related careers. AP credit may be earned as follows:
- eight credits will be offered to students who receive a 5 on the CEEB AP exam;
- six credits will be offered to students who receive a 4 on the CEEB AP.

Those who want to study more biology should contact the Office for Academic Affairs, Division of Biological Sciences, 200 Simson Hall, to discuss proper placement.

First-Year Writing Seminar: Two First-Year Writing Seminars (for a total of six credits) are required. AP credit for one First-Year Writing Seminar may be earned by a score of 5 on the CEEB AP English exam.

A score of 4 on the AP English exam will earn a student three credits in English. These three credits cannot be applied toward the First-Year Writing Seminar requirement, but can be applied toward the expressive arts category in the Liberal Studies Distribution requirement.

Liberal Studies Distribution: Six courses beyond two First-Year Writing Seminars are required. Students may earn AP credit toward the liberal studies distribution by taking College Entrance Examination Board (CEEB) AP tests. AP credit earned in the humanities or social sciences cannot be used to fulfill the "upper level" liberal studies requirements.

Modern Languages: Students may earn AP credit for competence in a foreign language by taking the College Entrance Examination Board (CEEB) AP test or by taking the Cornell Advanced Standing Examination (CASE). Those who score 4 or 5 on the CEEB AP test are entitled to three credits. In order to qualify for the CASE exam, the student must score at least 650 on a College Placement Test (taken either in high school or at Cornell during Orientation Week). A score of 2 on the CASE entitles the student to three credits, and a score of 3 entitles the students to six credits which are equivalent to two courses. Modern language AP credits may be used to satisfy the foreign language category of the liberal studies distribution, or may meet an approved elective requirement, contingent on discussions with the faculty adviser.

Advanced Placement and Credit for International Credentials

Students who have successfully completed either a General Certificate of Education (GCE) Advanced ("A") Level Examination or an International Baccalaureate (IB) Higher Level Examination may be eligible for advanced placement credit in the College of Engineering as follows:

General Certificate of Education Advanced Level Examination (GCE "A")

Hong Kong Advanced Level examinations and the joint examination for the Higher School Certificate and Advanced Level Certificate of Education in Malaysia and Singapore—principal passes only—are considered equivalent in standard to GCE "A" Levels.

Note: Advanced Placement credit based on GCE or IB results may also be awarded for courses that satisfy the liberal studies requirement in the College of Engineering. In such cases, the College of Engineering follows the AP guidelines found earlier in this publication under "General Information."

General Policies for Advanced Placement

The general policies in the College of Engineering governing awards of AP credit are as follows:

1. AP credit will not be offered in any subject area without a documented examination.

2. All AP examinations are normally taken and scored before fall-term classes begin. Students who take CEEB AP tests in high school should have an official report of their scores sent directly to Cornell as soon as possible. Students who have completed either GCE "A" Level or IB Higher Level Examinations must present the original or a certified copy of their examination certificate to the Engineering Advising office, 167 Olin Hall. Those who wish to take departmental examinations should do so during Orientation Week; permission to take these tests after the start of fall-term classes must be requested in a written petition to the College's Committee on Academic Standards, Petitions, and Credit (ASPCAC).

A more detailed description of the college's policies concerning advanced placement credit and its use in developing undergraduate programs may be found in the pamphlet Advanced Placement and Transfer Credit for First-Year Engineering Students, which may be obtained from the Engineering Advising office, 167 Olin Hall.

Transfer Credit

Undergraduate students who have completed courses at recognized and accredited colleges may, under certain conditions, have credits for such courses transferred to Cornell. Such courses must represent academic work in excess of that required for the secondary school diploma and must be documented as such, in writing, by the secondary institution. Courses deemed acceptable for transfer credit must be equivalent in scope and rigor to courses at Cornell.

- To apply for transfer credit, students must complete and submit a Transfer
Credit Form (one form for each request), accompanied by a course description. (Transfer Credit Forms are available from the Engineering Advising or Registrar's offices and should be submitted prior to enrollment.) An official transcript from the offering institution (bearing the institutional seal and registrar's signature) must be sent to the Engineering Registrar's office before official transfer credit will be awarded.

- To apply for transfer credit to satisfy requirements in mathematics, science, engineering courses, or First-Year Writing Seminars, a student must receive approval from the department offering an equivalent course at Cornell. The department certifying the course may require course materials, textbooks used, etc., in addition to the course description before approving the course.

- Departmental approval is not required to apply for transfer credit which satisfies liberal studies distribution requirements. The course will be reviewed for approval by a representative of the Committee on Academic Standards, Petitions, and Credit (ASPAC) in the Engineering Advising office.

- Cornell does not award credit for courses in which a student has earned a grade of less than C; schools and departments may stipulate a higher minimum grade.

- College courses completed under the auspices of cooperative college and high school programs will be considered for advanced placement credit only if students demonstrate academic proficiency through the appropriate AP or Cornell departmental placement examination, as described in the Advanced Credit section.

- Following matriculation, students may apply up to 18 credits of transfer credit toward bachelor's degree requirements.

- Transfer students may transfer up to 36 credits each year spent in full-time study at another institution, provided that the courses are acceptable for meeting graduation requirements.

- No more than 72 total transfer credits (combination of those taken both before and after matriculation) may be used to meet graduation requirements.

- Summer session courses taken at Cornell are not considered transfer credit.

- A more detailed description of the requirements governing transfer credit may be found in the pamphlet, Advanced Placement and Transfer Credit for First-Year Engineering Students, as well as The Engineering Undergraduate Handbook, both available from the Engineering Advising office, 167 Olin Hall.

Academic Standing

Full-time students are expected to remain in good academic standing. The criteria for good standing changes somewhat as a student progresses through the four years of the engineering curriculum. At all times, the student must be making adequate progress toward a degree, but what this actually means varies from field to field.

Requirements for freshman engineering students to be in good standing at the end of the first semester are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stem warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 12 credits passed, including at least two courses from mathematics, science, and/or engineering.
2. A C- or better in the mathematics course.
3. A semester average of 2.0 or higher.
4. No F, U, or INC grades.

Requirements for second-semester freshman and first-semester sophomores to be in good standing are as follows. Failure to meet these standards will result in a review by the Committee on Academic Standards, Petitions, and Credit (ASPAC), and the actions of warning, stem warning, required leave of absence, or withdrawal from the College of Engineering may be taken.

1. At least 14 credits passed in courses that meet engineering degree requirements.
2. A C- or better in the mathematics course, if one was taken.
3. A semester average of 2.0 or higher.
4. No F, U, or INC grades.

Academic Progress

The total number of credits required for graduation range from 123 to 133, depending upon the field program. Therefore, an average semester credit load ranges from approximately 15 to 17 credits.

Because mathematics is pivotal to the study and practice of engineering, students must earn a grade of C- or better in MATH 191 (or 193), 192, 293, and 294. Those who fail to meet this standard are allowed to repeat the course once, in the following semester. Failure to achieve at least a C- the second time will generally result in withdrawal from the College of Engineering. Physics and advanced mathematics courses with extensive mathematics prerequisites, and having to repeat the prerequisite course may delay progress in the physics and mathematics curricula.

Dean's List

Dean's List citations are presented each semester to engineering students with exemplary academic records. The criteria for this honor are determined by the dean of the college. For 1999-2000, the requirement is a semester average of 3.40 or higher (without rounding), no failing, unsatisfactory, missing, or incomplete grades (even in physical education); and at least 12 letter-grade credits (not S-U). Students may earn Dean's List status retroactively if they meet these criteria after making up incomplete grades. Students who earn Dean's List status receive certificates from the Engineering Registrar's office, and the honor is noted on the transcript.

Graduating with Distinction and Honors Program

Graduating with Distinction

Meritorious students graduating with a Bachelor of Science degree from the College of Engineering may also be designated cum laude, magna cum laude, or summa cum laude.

- Cum laude will be awarded to all engineering students with an overall GPA ≥ 3.50. Cum laude will also be awarded to all engineering students who received a semester GPA ≥ 3.50 in each of the last four semesters of attendance at Cornell, in each of these semesters, at least 12 letter graded credits must be taken with no failing, unsatisfactory, missing or incomplete grades. If the student is an engineering co-op student, then the engineering co-op summer term will count as one of the last four. Students who were approved for pro-rated tuition in their final semester will be awarded cum laude if they received a semester GPA ≥ 3.50 in their last semester and meet the conditions above in the prior four semesters. (The change in the cum laude policy will become effective for the class graduating in May 2001.)

- Magna cum laude will be awarded to all engineering students with an overall GPA ≥ 3.75 (based on all credits taken at Cornell).

- Summa cum laude will be awarded to all engineering students with an overall GPA ≥ 4.0 (based on all credits taken at Cornell).

Note: all GPA calculations are minimums and are not rounded.

Field Honors Program

To be eligible for field honors, a student must enter a program with and maintain a cumulative GPA of 3.50. If the student's major field has an approved honors program and both the GPA and program requirements are fulfilled, the faculty of the field may recommend that a student graduate with the additional diploma and transcript notation of "With Honors." For more specific information, see the field program outline in this catalog.

S-U Grades

Many courses offered by the university may be taken either for a letter grade or for an S-U (satisfactory or unsatisfactory) grade designation. Under the S-U option, students earning the letter grade equivalent of C- or better in a course will receive a grade of S; those earning less than C- receive a grade of U. (Any course in which a U grade is received does not count toward graduation requirements.)

Engineering students may choose to receive an S-U grade option under the following conditions:

- The course in question must be offered with an S-U option.
- The student must have previously completed at least one full semester of study at Cornell.
- The proposed S-U course must count as either a liberal studies distribution or an approved elective in the engineering curriculum.
- Students may only elect to enroll S-U in one (1) course each semester in which the choice between letter grade and S-U is an option. (Additional courses offered "S-U only" may be taken in the same semester as the "elected S-U" course.)

The choice of grading option for any course is initially made during the pre-enrollment
period. Grading options may be changed, however, by submitting a properly completed Add/Drop Form to the Engineering Registrar by the end of the third week of classes. After this deadline, the grading option may not be changed, nor will a student be permitted to add a course in which they were previously enrolled (in the current semester) under a different grade option.

Residence Requirements
Candidates for an undergraduate degree in engineering must spend at least four semesters or an equivalent period of instruction as full-time students at Cornell. They must also spend at least three semesters of this time affiliated with an engineering field program or with the College Program.

Students who are on a voluntary leave of absence are permitted to register for courses extramurally only with the approval of their field (or the college, for unaffiliated students). No more than 18 credits earned through extramural study or acquired as transfer credit (or a combination thereof) after matriculation may be used to satisfy the requirements for the bachelor's degree in engineering.

Degree candidates may spend periods of time studying away from the Cornell campus with appropriate authorization. Information on procedures sponsored by other universities and on procedures for direct enrollment in foreign universities is available at the Cornell Abroad office, 474 Uris Hall. Programs should be planned in consultation with the staff of the Engineering Advising office, who can provide information on credit-evaluation policies and assist in the petitioning process.

Transferring within Cornell
It is not uncommon for students to change their academic or career goals after matriculation in one college and decide that their needs would be better met in another college at Cornell. While transfer between colleges is not guaranteed, efforts are made to assist students in this situation.

The office responsible for assisting students with the transfer process is the Internal Transfer Division office. Students who wish to transfer out of the College of Engineering to another college at Cornell should consult initially with the Engineering Advising office.

Students who wish to transfer into the College of Engineering can apply at the Engineering Advising office; application forms are available in 167 Olin Hall. Students who would enter the college as second-semester sophomores or later must be accepted by a field program as part of the admission process. Students who would enter as a sophomore may be accepted into the college without the requirement of field affiliation but must be sponsored by a field program.

Students who hope to transfer to engineering should take courses in mathematics, chemistry, computer science, physics, and engineering that conform to the requirements of the Common Curriculum. Interested students should discuss their eligibility with an adviser in the Engineering Advising office, 167 Olin Hall.

Leave of Absence
A leave of absence may be voluntary, medical, or required. A description of each follows:

Voluntary Leave: Students sometimes find it necessary to suspend their studies. To do this, students must petition for a leave of absence for a period of time and receive written approval.

Affiliated students request leave through their fields. Unaffiliated students request leave through the Engineering Advising office; the first step is an interview to establish conditions for the leave and subsequent return. Those who take a leave before affiliating with a field and while not in good standing may be given a "conditional leave." This requires them to meet specific conditions, established at the time the leave is granted, before they will be reinstated.

Leaves of absence are not generally granted for more than two years. A leave of absence granted during a semester goes into effect on the day it is requested and lasts for a minimum of six months. If a leave is requested after the twelfth week of a semester, the courses in which the student was registered at the time of the request are treated as having been dropped (i.e., a "W" will appear on the transcript for each course). Students who owe money to the university are ineligible for leaves of absence. If courses taken during a leave are to satisfy Cornell degree requirements, they must be approved in advance through a formal transfer petition. (See previous section of Transer Credit for details.)

Students who intend to take a leave of absence should check with the Office of Financial Aid and Student Employment to discuss financial implications; this is especially true for those who have taken out educational loans. Medical insurance eligibility may also be affected.

To return after a leave of absence, the conditions established when the leave was granted must be satisfied, and the college must be notified in writing, at least six weeks prior to the date the student plans to return to campus.

Medical Leave: Medical leaves are granted by the college only upon recommendation by a physician from Gannett Health Center. Such leaves are generally for at least six months and up to five years with the understanding that the student may return at the beginning of any term after the medical condition in question has been corrected. Students must satisfy the Gannett Health Center that the condition has been corrected before they may return. The student's academic standing will also be subject to review both at the time the leave is granted and upon the student's return.

Required Leave: A required leave of absence is imposed in cases where the academic progress of a student is so poor that continuing into the next semester does not appear prudent. An example where a leave of absence would be required might be failure in several courses in a semester. Unless the student is ahead in the curriculum, returning later to repeat the semester makes better academic sense than continuing without the necessary background. In many cases, the leave is dictated by courses that are only offered in the fall or the spring semester.

Leaves are given when the probability of success is increased substantially by deferring the student's return by one semester (or, in unusual circumstances, one year).

Rejoining the College
Students wishing to rejoin the college who have not yet affiliated with a field should request permission to rejoin in a letter to the Engineering Advising office; affiliated students should contact their field office. This must be done at least six weeks before the beginning of the semester in which the student wishes to return. The letter should describe the student's activities since leaving Cornell, detail any academic work completed during this time, and specify the courses the student intends to take upon return.

Withdrawal from the College
A withdrawal from the College of Engineering may be voluntary or required. Following is a description of each.

Voluntary Withdrawal: Students who voluntarily withdraw from the engineering degree program sever all connection with the college. Unaffiliated students who wish to withdraw should do so through the Engineering Advising office. Affiliated students should contact their field office. A withdrawal is requested during the semester, courses in which the student is enrolled must be dropped in accordance with applicable regulations.

Any student who fails to register in the first three weeks of the semester, without benefit of a leave of absence or permission for study in absentia, will be deemed to have withdrawn.

Students who withdraw from the College of Engineering are eligible to apply for admission to one of the other six colleges at Cornell. The intra-university transfer process should be followed.

If students who have withdrawn subsequently wish to return, they must make a formal application for readmission. This is rarely granted. It is subject to a review of the student's academic background and depends on available space in the college and in the student's major field.

Required Withdrawal: Students are required to withdraw from the college only when their overall record indicates that they are either incapable of completing the program or not sufficiently motivated to do so. This action only withdraws them from the College of Engineering and does not, in and of itself, adversely affect their ability to transfer and complete a degree in one of the other colleges in the university.

ENGINEERING CAREER SERVICES
Individual advising and group seminars are available for students who desire assistance in career and job-search matters. More than 300 national employers visit the campus annually to recruit technical graduates. Additional job opportunities are posted electronically, and a state-of-the-art résumé referral service is available. Both undergraduate and graduate students can use these services to pursue permanent or summer employment opportunities. Further information on all services is available from the Engineering Career Services office, 201 Carpenter Hall (255-5006); http://www.career.cornell.edu/ccs.
AGRICULTURAL AND BIOLOGICAL ENGINEERING

Bachelor of Science Curriculum

Agricultural and Biological Engineering is at the focus of three great challenges facing humanity today: ensuring an adequate and safe food supply in an era of expanding world population; protecting and remediating the world's natural resources, including water, soil, air, energy and biodiversity; and developing engineering systems that monitor, replace, or intervene in the biology of living organisms. The undergraduate engineering program in the Department of Agricultural and Biological Engineering has a unique focus on biological systems, including the environment, that is realized through a combination of fundamental engineering sciences, biology, applications courses, and liberal studies. The program leads to a Bachelor of Science degree and is accredited by the Engineering Accreditation Commission (EAC) of the Accreditation Board for Engineering and Technology (ABET).

Three concentrations in Agricultural and Biological Engineering are offered: environmental engineering, biological engineering, and food and fiber engineering. All of these students take courses in mathematics, computing, physics, chemistry, basic and advanced biology, fundamental engineering sciences (mechanics, thermodynamics, fluid mechanics, and transport processes), engineering applications, and design.

Students select application courses in the department in areas that include bioprocessing, soil and water management, bioenvironmental and facilities engineering, bioinstrumentation, engineering aspects of animal physiology, environmental systems analysis, and waste treatment and disposal. Students select other courses in the College of Engineering that reflect their concentration, such as environmental sciences or biomedical engineering. Students planning for medical school also take organic chemistry. Throughout the curriculum, emphasis is placed on communications and teamwork skills.

Many undergraduate students participate in teaching assistantships, research assistantships, design teams, Engineering Coop, and study abroad. Students should have a strong aptitude for the sciences and mathematics and an interest in the complex social issues that surround technology.

Career opportunities cover the spectrum of private industry, public agencies, educational institutions, and graduate programs in engineering, finance, law, and other fields. In recent years, graduates have developed careers in environmental consulting, biotechnology, the pharmaceutical industry, biomedical engineering, management consulting, and international agriculture.

The living world is all around us, and within us. The biological revolution of this century has given rise to a growing demand for engineers who have studied biology and the environment, who have strong math and science skills, who can communicate effectively, and who appreciate the challenges facing society. Agricultural and Biological Engineering is educating the next generation of engineers to meet these challenges. The department is located in Riley-Robb Hall and operates specialized facilities that are among the largest and most complete of their kind in the world.

For further details see the department's undergraduate programs publication, available at 207 Riley-Robb Hall, or contact the field's advising coordinator, Professor Ron Pitt, at 255–2492.

The field program requirements are outlined below:

**Basic Subjects**

Agricultural and Biological Engineering Honors Program

Eligibility

This program is only available to seniors registered in the College of Engineering. The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor's degree, have satisfactorily completed the honors program in the Department of Agricultural and Biological Engineering and have been recommended for the degree by the honors committee of the department. An honor's program student must enter with and maintain a cumulative GPA ≥ 3.50.

Content

An ABEN honors program shall consist of at least nine credits beyond the minimum required for graduation in ABEN. These nine credits shall be drawn from one or more of the following with at least four credit hours in the first category:

- A significant research experience or honors project under the direct supervision of a faculty member using ABEN 499, Undergraduate Research. A written senior honors thesis must be submitted as part of this component.
- A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the department (e.g., ABEN 151 or 250) under ABEN 498, Undergraduate Teaching.
- Advanced or graduate courses. These additional courses must be technical in nature, i.e., in engineering, mathematics, biology, chemistry, and physics at the 400- and graduate level.

Note: no research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each applicant to the ABEN honors program must have an ABEN faculty advisor to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the College verifies the student's grade-point average, the student will be officially enrolled in the honors program.

Minor in Environmental Engineering

(Offered in cooperation with the School of Civil and Environmental Engineering)

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: A&EP, CHEMF, COM S, ELE E, GEOI, M&AIE, MS&E, OR&IE. A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues. The requirements for the environmental engineering minor are outlined below. For further details consult the Agricultural and Biological Engineering Undergraduate Programs office, 207 Riley-Robb Hall, or the Civil and Environmental Engineering
Environmental Engineering

Requirements

To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

Students must select courses from the following group listings, with at least one (1) course from each group.

Group A: Environmental Engineering Processes:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>CEE 351</td>
<td>Environmental Quality Engineering</td>

Master of Engineering (Agricultural and Biological) Degree Program

The program for the M.Eng. (Agricultural and Biological) degree is intended primarily for those students who plan to enter engineering practice. The curriculm is planned as an extension of an undergraduate program in agricultural and biological engineering but can accommodate graduates of other engineering disciplines. The curriculum consists of 30 credits of courses intended to strengthen the students' fundamental knowledge of engineering and develop their design skills. At least three of the required 30 credits are earned for an engineering design project that culminates in a written and oral report.

A candidate for the M.Eng. (Agricultural and Biological) degree may choose to concentrate in one of the subareas of agricultural and biological engineering or take a broad program without specialization. The subareas include biological engineering, energy, environmental engineering, environmental management, food engineering, international agriculture, local roads, machine systems, soil and water engineering, and structures and environment. Elective courses are chosen from among engineering subject areas relevant to the student's interests and design project.

Courses in technical communication, mathematics, biology, and the physical sciences may also be taken as part of a coherent program. Master of Engineering students in agricultural and biological engineering can qualify for the Dean's Certificate in energy, manufacturing, or bioengineering by choosing their design project and a number of electives from the designated topic areas. More information is available from the ABEN Student Services office, 207 Riley Robb Hall (255-2173), or by e-mail at abengradfield@cornell.edu.

APPLIED AND ENGINEERING PHYSICS

Bachelor of Science Curriculum

The undergraduate engineering physics curriculum is designed for students who want to pursue careers in research or development in applied science or advanced technology and engineering. Its distinguishing feature is a focus on the physics and mathematics fundamentals, both experimental and theoretical, that are at the base of modern engineering and research and have a broad applicability in their fields. By choosing areas of concentration, the students may combine this physics base with a good background in a conventional area of engineering or applied science.

The industrial demand for engineering physics graduates with baccalaureates is high, and many students go directly to industrial positions where they work in a variety of areas that either combine, or are in the realms of, various more conventional areas of engineering. Recent examples include bioengineering, computer technology, electronic-circuit and instrumentation design, energy conversion, environmental engineering, geological analysis, laser and optical technology, microwave technology, nuclear technology, software engineering, solid-state devices, technical management, and financial consulting. A number of our graduates go on for advanced study in all areas of basic and applied physics, as well as in a diverse range of areas in advanced science and engineering. Examples include applied physics, astrophysics, atmospheric sciences, biophysics, cell biology, computer science and engineering, electrical engineering, environmental science, fluid mechanics, geotechnology, laser optics, materials science and engineering, mechanical engineering, medical physics, mathematics, medicine, nuclear engineering, oceanography, and physics. The undergraduate program can also serve as an excellent preparation for medical school, business school, or specialization in patent law.

The Engineering Physics program fosters this breadth of opportunity because it both stresses the fundamentals of science and engineering and gives the student direct exposure to the application of these fundamentals. Laboratory experimentation is emphasized, and ample opportunity for innovative design is provided. Examples are ENGR 110, The Laser and Its Applications in Science, Technology, and Medicine (a freshman Introduction to Engineering course); ENGRD/A&EP 264, Computer- Instrumentation Design (a recommended sophomore engineering distribution course); A&EP 330, Modern Experimental Optics (a junior/senior course); A&EP 365, Advanced Experimental Physics; and A&EP 458, Computational Engineering Physics (a senior computer laboratory).

Undergraduates who plan to enter the field program in Engineering Physics are advised to arrange their Common Curriculum with their developing career goals in mind. Students are also encouraged to take PHYS 112 or PHYS 116 during their first semester (if their advanced placement credits permit) and are recommended to satisfy the computing applications or technical writing requirement with the engineering distribution course ENGRD 264. Engineering physics students need to take only two engineering distribution courses, since A&EP 333, which they take in their junior year, counts as a third member of this category. Engineering Physics students are advised to take A&EP 363 in the spring semester of the sophomore year. Students with one semester of advanced placement in math, who have received a grade of A- or better in MATH 192, may wish to explore accelerating their mathematics requirements so
as to enroll in A&EP 321 and 322 in the sophomore year. For advice on this option, consult with the A&EP associate director.

In addition to the requirements of the Engineering Common Curriculum, the upperclass course requirements of the field program are as follows:

**Course** | **Credits**
---|---
A&EP 333, Mechanics of Particles and Solid Bodies | 4
A&EP 355, Intermediate Electromagnetism | 4
A&EP 361, Introductory Quantum Mechanics | 4
A&EP 363, Electronic Circuits | 4
A&EP 423, Statistical Thermodynamics | 4
A&EP 434, Continuum Physics | 4
PHYS 410, Advanced Experimental Physics | 4
A&EP 321, Mathematical Physics I; or MATH 421 (applied mathematics) | 4
A&EP 322, Mathematical Physics II; or MATH 422 (applied mathematics) | 4
Applications of quantum mechanics | 3 or 4

Five field-approved electives (15-19 credits), of which four must be technical. The technical electives are expected to be upper-level courses (300 or above).

Total field credits = 58 credit hours minimum.

The Engineering Common Curriculum allows students to take only 4 courses each semester of their freshman year if they so desire. This course load is fully consistent with the requirements of the EP major, but entering students with strong preparation are encouraged to consider taking an additional course during one or both semesters of the freshman year so that they may have additional flexibility in developing a strong, individualized educational program in their latter years, and for allowing additional options such as a semester or year abroad, or early graduation.

Some courses (though the list is not all-inclusive) that will satisfy this requirement are PHYS 444, Nuclear and High-Energy Particle Physics; PHYS 454, Introductory Solid-State Physics; A&EP 430, Computational Engineering Physics; A&EP 440, Quantum and Nonlinear Optics; A&EP 609, Nuclear Physics for Applications; ELE E 430, Lasers and Optical Electronics; and ELE E 531, Quantum Electronics I.

Two of the four credits of PHYS 410 required for the BS degree in Engineering Physics can be satisfied by successfully completing A&EP/PHYS 330. The remaining two credits of PHYS 410 can then be satisfied by taking PHYS 400 for two credits, provided that the experiments completed in PHYS 400 do not overlap with those in A&EP/PHYS 330. (A list of experiments that are not appropriate will be prepared by A&EP faculty and made available in the A&EP office.) If a student chooses this option, A&EP/PHYS 330 may also count as a technical elective, provided the remaining three technical electives are four credits each.

If a scientific computing course was not selected as an engineering distribution course, one of these technical electives may be needed to satisfy the computing applications requirement. For students going on to graduate school a third course in mathematics is recommended.

**Choosing elective courses.** A distinctive aspect of the Engineering Physics curriculum is the strong opportunity it provides students to develop individualized programs of study to meet their particular educational and career goals. These can include the pursuit of a dual major or the development of a broad expertise in one or more of a number of advanced technical and scientific areas. With at least seven technical and approved electives in the sophomore, junior, and senior years, Engineering Physics majors are encouraged to work closely with their advisors to develop a coherent academic program that is in accordance with those goals. For those students who look toward an industrial position after graduation, these electives should be chosen to widen their background in a specific area of practical engineering. A different set of electives can be selected as preparation for medical, law, or business school. For students who plan on graduate studies, the electives provide an excellent opportunity to explore upper-level and graduate courses, and to prepare themselves particularly well for graduate study in any one of a number of fields. Various programs are described in a special brochure available from the School of Applied and Engineering Physics, Clark Hall. Students interested in these options are advised to consult with their EP advisor, a professor active in their area of interest, or with the associate director of the school, Professor Frank W. Wise.

Electives need not be all formal course work; qualified students may be encouraged to undertake independent study under the direction of a member of the faculty (A&EP 490). This may include research or design projects in areas in which faculty members are active. The variety of course offerings and many electives provide flexibility in scheduling. If scheduling conflicts arise, the school may allow substitution of courses nearly equivalent to the listed required courses.

The Engineering Physics Program requires that a minimum GPA of 2.7 (B-) be attained in all physics and mathematics courses taken by a student before enrolling in the Engineering Physics field unless approval is obtained from the A&EP associate director. To remain in good standing in the field, the engineering physics student is expected to pass every course for which he or she is registered, to earn a grade of C- or better in specifically required courses, and to attain each semester a grade-point average for that semester of at least 2.5.

**Engineering Physics Honors Program Eligibility**

The Bachelor of Science degree with honors will be conferred upon those students who, while completing the requirements for a bachelor degree, have satisfactorily completed the honors program in the Department of Engineering Physics and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50.

**Content**

The student must

1. Complete at least eight credits of field approved electives at the 400-level or higher and receive a minimum grade of an A- in each of the courses taken to fulfill this eight-credit requirement. These eight credits are in addition to the credits obtained by completing the senior thesis or special project requirement as discussed in item 2.

2. Enroll in A&EP 490 or an equivalent course over two semesters for the purpose of completing an independent research project or thesis under the supervision of a Cornell engineering or science faculty member. The minimum enrollment is to be two credits in the first semester and four credits in the second. The level of work required for a successful completion of this project or thesis is to be consistent with the amount of academic credit granted.

**Timing**

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

**Procedures**

Before enrolling in A&EP 490, or the equivalent, the honors candidate must submit a brief proposal outlining the topic and scope of the proposed project or thesis and a faculty supervisor's written concurrence to the associate director for undergraduate studies. This proposal will be reviewed by the A&EP Honors Committee and either approved or returned to the candidate to correct deficiencies in the proposal. The proposed research project or senior thesis is to consist of a research, development, or design project and must go beyond a literature search. The final steps in completing the honors project are a written and oral report. The written report is to be in the form of a technical paper, for example, an abstract, introduction, methods section, results section, conclusions section, references, and figures. The report will be evaluated by the faculty supervisor and the chair of the A&EP Honors Committee. Following the completion of the written report, an oral report is to be presented to an audience consisting of the faculty supervisor, the chair of the Honors Committee and at least one other departmental faculty member, along with the other honors candidates. The final research project course grade will be assigned by the faculty supervisor, following the oral presentation and after consultation with the chair of the Honors Committee. A minimum grade of A- is necessary for successful completion of the honors requirement.

**Master of Engineering (Engineering Physics) Degree Program**

The M.Eng. (Engineering Physics) degree may lead directly to employment in engineering design and development or may be a basis for further graduate work. Students have the opportunity to broaden and deepen their preparation in the general field of applied
physics, or they may choose the more specific option of preparing for professional engineering work in a particular area such as laser and optical technology, nanostructure science and technology, device physics, materials characterization, or software engineering. A wide latitude is allowed in the choice of the required design project.

One example of a specific area of study is solid-state physics and chemistry as applied to nanostructure science and technology. Core courses in this specialty include the microcharacterization of materials (A&EP 661) and the microprocessing and microfabrication of materials (A&EP 662). The design project may focus on such areas as semiconductor materials, device physics, nanostructure technology, or optoelectronics. Another area of study may be applied optics where core courses can be chosen from applied physics, electrical engineering, and physics.

Each individual program is planned by the student in consultation with the program chair. The objective is to provide a combination of a good general background in physics and introductory study in a specific field of applied physics. Candidates may enter with an undergraduate preparation in physics, engineering physics, or engineering. Those who have majored in physics usually seek advanced work with an emphasis on engineering; those who have majored in an engineering discipline generally seek to strengthen their physics base. Candidates coming from industry usually want instruction in both areas. All students granted the degree will have demonstrated competence in an appropriate core of basic physics; if this has not been accomplished at the undergraduate level, subjects such as electricity and magnetism, or classical, quantum, and statistical mechanics should be included in the program.

The general requirement for the degree is a total of 30 credits for graduate-level courses or their equivalent, earned with a grade of C or better and distributed as follows:

1) a design project in applied science or engineering (no less than 6 nor more than 12 credits)
2) an integrated program of graduate-level courses, as discussed below (17 to 23 credits)
3) a required special-topics seminar course (1 credit)

The design project, which is proposed by the student and approved by the program chair, is carried out on an individual basis under the guidance of a member of the university faculty. It may be experimental or theoretical in nature; if it is not experimental, a laboratory physics course is required.

The individual program of study consists of a compatible sequence of courses focused on a specific area of applied physics or engineering. It's purpose is to provide an appropriate combination of physics and physics-related courses (applied mathematics, statistical mechanics, applied quantum mechanics) and engineering electives (such as courses in biophysics, chemical engineering, electrical engineering, materials science, computer science, mechanical engineering, or nuclear engineering). Additional science and engineering electives may be included. Some courses at the senior level are acceptable for credit toward the degree; other undergraduate courses may be required as prerequisites but are not credited toward the degree.

Students interested in the M.Eng. (Engineering Physics) degree program should contact Professor Richard Loveless.

APPLIED MATHEMATICS

The Center for Applied Mathematics administers a broadly based interdepartmental graduate program that provides opportunities for study and research in a wide range of the mathematical sciences. For detailed information on opportunities for graduate study in applied mathematics, contact the director of the Center for Applied Mathematics, 657 Frank H. T. Rhodes Hall.

There is no special undergraduate degree program in applied mathematics. Undergraduate students interested in application-oriented mathematics may select an appropriate program in the Department of Mathematics or one of the departments in the College of Engineering.

A list of selected graduate courses in applied mathematics may be found in the description of the Center for Applied Mathematics, in the section "Interdisciplinary Centers and Programs."

CHEMICAL ENGINEERING

Bachelor of Science Curriculum

The undergraduate field program in Chemical Engineering comprises a coordinated sequence of courses beginning in the sophomore year and extending through the fourth year. Special programs in biochemical engineering and polymeric materials are available. Students who plan to enter the field program during the first year is as follows:

Semester 3  Credits
Math 293, Engineering Mathematics 4
PHYS 213, Electricity and Magnetism 4
CHEM 389, Physical Chemistry I (engineering distribution) 4
ENGRD 219, Mass and Energy Balances (engineering distribution) 3
Humanities or social sciences 3

Semester 4
Math 294, Engineering Mathematics 4
CHEM 290-391, Physical Chemistry (field) 6
ENGRD 211, 222, or 241 3
Humanities or social sciences 3

Semester 5
CHEM 357, Introductory Organic Chemistry 3
CHEM 251, Organic Chemistry Laboratory 2
CHEM 313, Chemical Engineering Thermodynamics 4

CHEM 323, Fluid Mechanics 3
Humanities or social sciences 3

Semester 6
Applied Science elective 3
CHEM 301, Nonresident Lectures 1
CHEM 324, Heat and Mass Transfer 3
CHEM 332, Analysis of Separation Processes 4
CHEM 390, Reaction Kinetics and Reactor Design 3
Humanities or social sciences 3

Semester 7
CHEM 432, Chemical Engineering Laboratory 4
CHEM 472, Process Control Electives* 6
Humanities or social sciences 3

Semester 8
CHEM 462, Chemical Process Design Electives* 3
Humanities or social sciences 3

*The electives in semester seven and eight comprise 6 credits of field approved electives, and 3 credits of CHEM process or systems electives. CHEM process or systems electives include CHEM 480, Chemical Processing of Electronic Materials; CHEM 564, Design of Chemical Reactors; CHEM 640, Polymeric Materials; CHEM 643, Introduction to Bioprocess Engineering; CHEM 656, Separations Using Membranes or Porous Solids; CHEM 661, Air Pollution Control.

†Applied science electives include BIOMI 290, General Microbiology Lectures; BIOBM 330, 331, 332, and 333, Principles of Biochemistry; CEE 654, Aquatic Chemistry; CHEM 480, Chemical Processing of Electronic Materials; CHEM 640, Polymeric Materials; FOOD 409, Food Chemistry; MS&E 331, Structure of Materials; MS&E 332, Electrical and Magnetic Properties of Materials; MS&E 441, Microprocessing of Materials; MS&E 449, Introduction to Ceramics; MS&E 452, Properties of Solid Polymers; any A&EP course numbered 333 or above; any CHEM course numbered 301 or above; any PHYS course numbered 300 or above.

Master of Engineering (Chemical) Degree Program

The professional master's degree, M.Eng. (Chemical), is awarded at the end of one year of graduate study with successful completion of 30 credits of required and elective courses in technical fields including engineering, mathematics, chemistry, physics, and business administration. Courses emphasize design and optimization based on the economic factors that affect design alternatives for processes, equipment, and plants. General admission and degree requirements are described in the college's introductory section.

Specific requirements include
1) two courses in advanced chemical engineering fundamentals chosen from CHEM 711, 713, 731, 732, and 751
Recommended engineering distribution courses for students planning to enter the civil engineering option are:

ENGRD 261, Introduction to Mechanical Properties of Materials, for students interested in structural engineering or civil engineering materials;

ENGRD 201, Introduction to the Physics and Chemistry of the Earth, for students interested in geotechnical engineering;

ENGRD 221, Thermodynamics, for students interested in fluid mechanics and hydraulics/hydrology;

ENGRD 211, Computers and Programming, for students interested in transportation;

ENGRD 241, Engineering Computation,* for all students.

Field Program:

Environmental Engineering Option

These option requirements apply to all students in the Classes of 2000 and later. For the field program in Environmental Engineering, students must take CHEM 208 in place of PHYS 214. The following nine courses are required in addition to those required for the Common Curriculum:

<table>
<thead>
<tr>
<th>Core Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Introductory Biology</td>
<td>4</td>
</tr>
<tr>
<td>ENGRD 241</td>
<td>3</td>
</tr>
<tr>
<td>CEE 304</td>
<td>4</td>
</tr>
<tr>
<td>CEE 323, Engineering Economics and Management</td>
<td>3</td>
</tr>
<tr>
<td>CEE 331, Fluid Mechanics</td>
<td>4</td>
</tr>
<tr>
<td>CEE 341, Introduction to Geotechnical Engineering</td>
<td>4</td>
</tr>
<tr>
<td>CEE 351, Environmental Quality Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CEE 451, Microbiology for Environmental Engineering</td>
<td>3</td>
</tr>
<tr>
<td>CEE 453, Laboratory Research in Environmental Engineering</td>
<td>3</td>
</tr>
<tr>
<td>ABEN 475, Environmental Systems Analysis</td>
<td>3</td>
</tr>
</tbody>
</table>

Additional requirements include one or more of the following.

- ENGRD 241 can be used to satisfy both the computer application requirement and a field program requirement. If a student elects to use this course as a second distribution course, the student must take an additional approved elective to fulfill the core course requirements.
- ENGRD 270 may be accepted (by petition) as a substitute for CEE 304 in the field program, but only if ENGRD 270 is taken before entry into the field, or in some special cases where co-op or study abroad programs necessitate such a substitution.
- Students may substitute CEE 372 Structural Analysis for either CEE 351 or CEE 361 if they also take CEE 473 or CEE 474. However, CEE 372 cannot count as both a core course and a field-approved elective.

Civil and Environmental Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Civil and Environmental Engineering and have been recommended for the degree by the faculty of the school. An honors program student must enter with and maintain a cumulative GPA of 3.50.

Content

A CEE honors program shall consist of at least nine credits beyond the minimum required for graduation in CEE. These nine credits shall be drawn from one or more of the following components:

1. A significant research experience or honors project under the direct supervision of a CEE faculty member using CEE 400: Senior
Honors Thesis (1–6 credits per semester). A significant written report or senior honors thesis must be submitted as part of this component.

2. A significant teaching experience under the direct supervision of a faculty member or as part of a regularly recognized course in the College of Engineering (i.e., ENGRG 470-Undergraduate Engineering Teaching or CEE 401-Undergraduate Teaching in CEE (1–3 credits per/semester).

3. Advanced or graduate courses at the 500-level or above.

The minimum number of credits in any component included in a program should be two. No research, independent study, or teaching for which the student is paid may be counted toward the honors program.

Timing
All interested students must apply no later than the beginning of the first semester of their senior year, but are encouraged to apply as early as the first semester of their junior year. All honors program students must be in the program for at least two semesters prior to graduation.

Procedures
Each applicant to the CEE honors program must have a faculty adviser or faculty mentor to supervise the student's individual program. (This need not be the student's faculty adviser.) The application to the program shall be a letter from the student describing the specific proposed honors program and include the explicit approval of the faculty adviser and the honors adviser. Each program must be approved by the CEE Curriculum Committee, although the committee may delegate approval authority to the associate director for all but unusual proposals.

Engineering Minor Programs
The School of Civil and Environmental Engineering currently offers three engineering minor programs: civil infrastructure, engineering management, and environmental engineering (offered in cooperation with the Department of Agricultural and Biological Engineering). Descriptions and requirements for each program follow:

Minor in Civil Infrastructure
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the civil infrastructure minor: ABEN, A&E, CHEME, COM S, ELE E, GEOL, M&AE, MS&E, OR&E.

The minor in civil infrastructure is intended to introduce engineering undergraduates to the engineering methodologies of mechanics, materials, analysis, design, and construction and to show how these are used in solving problems in the development maintenance and operation of the built environment which is vital for any modern economy.

The requirements for the civil infrastructure minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs office, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Required Course: ENGRD 202 Mechanics of Solids

II. Additional Courses: choose any 5 (groupings are for information only)*

Geotechnical Engineering
CEE 341 Introduction to Geotechnical Engineering
CEE 640 Foundation Engineering
CEE 641 Retaining Structures and Slopes
CEE 644 Environmental Applications of Geotechnical Engineering

Structural Engineering
CEE 371 Structural Behavior
CEE 372 Structural Analysis
CEE 473 Design of Concrete Structures
CEE 474 Design of Steel Structures
CEE 476 Civil Engineering Materials
ABEN 481 Design of Wood Structures
CEE 672 Fundamentals of Structural Mechanics
CEE 673 Advanced Structural Analysis

Other Related Courses
CEE 332 Hydraulic Engineering
CEE 361 Introduction to Transportation Engineering
CEE 595 Construction Planning and Operations

* Other CEE courses approved by petition in advance.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Environmental Engineering
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: ABEN, A&E, CHEME, COM S, ELE E, GEOL, M&AE, MS&E, OR&E.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs office, 221 Hollister Hall, or the Agricultural and Biological Engineering Undergraduate Programs office, 207 Riley-Robins Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Required Courses (3):
CEE 304 Uncertainty Analysis in Engineering
or ENGRD 270 Basic Engineering

Probability and Statistics
or ELE E 310 Introduction to Probability and Random Signals

CEE 323 Engineering Economics and Management
OR&E 350 Financial and Managerial Accounting

II. Additional Courses—choose any 3*
CEE 590 Project Management
CEE 593 Engineering Management Methods I: Data, Information and Modeling
CEE 594 Engineering Management Methods II: Managing Uncertain Systems
CEE 595 Construction Planning and Operations
CEE 597 Risk Analysis and Management
NBA 401 Entrepreneurship for Engineers

*Other courses approved by petition in advance.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Civil Infrastructure
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the civil infrastructure minor: ABEN, A&E, CHEME, COM S, ELE E, GEOL, M&AE, MS&E, OR&E.

This minor focuses on giving engineering students a basic understanding of engineering economics, accounting, statistics, project management methods and analysis tools necessary to manage technical operations and projects effectively. The minor provides an important set of collateral skills for students in any engineering discipline.

The requirements for the engineering management minor are outlined below. For further details, consult the Civil and Environmental Engineering Undergraduate Programs offices, 221 Hollister Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Required Courses (3):
CEE 304 Uncertainty Analysis in Engineering
or ENGRD 270 Basic Engineering

Probability and Statistics
or ELE E 310 Introduction to Probability and Random Signals

CEE 323 Engineering Economics and Management
OR&E 350 Financial and Managerial Accounting

II. Additional Courses—choose any 3*
CEE 590 Project Management
CEE 593 Engineering Management Methods I: Data, Information and Modeling
CEE 594 Engineering Management Methods II: Managing Uncertain Systems
CEE 595 Construction Planning and Operations
CEE 597 Risk Analysis and Management
NBA 401 Entrepreneurship for Engineers

*Other courses approved by petition in advance.

Academic Standards: a letter grade of C or better for each course in the minor.

Minor in Environmental Engineering
(Offered in cooperation with the Department of Agricultural and Biological Engineering)

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the environmental engineering minor: ABEN, A&E, CHEME, COM S, ELE E, GEOL, M&AE, MS&E, OR&E.

A fundamental challenge for the engineering profession is development of a sustainable society and environmentally responsible industry and agriculture reflecting an integration of economic and environmental objectives. We are called upon to be trustees and managers of our nation's resources, the air in our cities, and use and quality of water in our aquifers, streams, estuaries and coastal areas. This minor encourages engineering students to learn about the scientific, engineering, and economic foundations of environmental engineering so that they are better able to address environmental management issues.

The requirements for the environmental engineering minor are outlined below. For further details consult the Civil and Environmental Engineering Undergraduate Programs office, 221 Hollister Hall, or the Agricultural and Biological Engineering Undergraduate Programs office, 207 Riley-Robins Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

II. Students must select courses from the following group listings, with at least one (1) course from each group.

Group A. Environmental Engineering Processes:
CEE 351 Environmental Quality Engineering
CEE 352 Water Supply Engineering
CEE 451 Microbiology for Environmental...
Engineering
ABEN 476  Solid Waste Engineering
ABEN 477  Treatment and Disposal of Agricultural Wastes
ABEN 478  Ecological Engineering
CEE 644  Environmental Applications of Geotechnical Engineering
ABEN 651  Bioremediation
CEE 653  Water Chemistry for Environmental Engineering
CEE 655  Pollutant Transport and Transformation in the Environment
CEE 658  Sludge Treatment, Utilization, and Disposal
CEE 654  Aquatic Chemistry

**Group B. Environmental Systems:**
ENGRI 113*  Introduction to Environmental Systems (May count only if taken before the student's junior year.)
ABEN 475  Environmental Systems Analysis
CEE 529  Water and Environmental Resources Problems and Policies
CEE 597  Risk Analysis and Management
CEE 623  Environmental Quality Systems Engineering
ABEN 678  Nonpoint Source Models

**Group C. Hydraulics, Hydrology and Environmental Fluid Mechanics:**
CEE 331  Fluid Mechanics (GHEME 323 or M&AE 323 may be substituted for CEE 311)
CEE 352  Hydraulic Engineering
ABEN 371  Hydrology and the Environment
CEE 431/ABEN 471  Geohydraulics
CEE 432  Hydrology
CEE 435  Coastal Engineering
ABEN 473  Watershed Engineering
ABEN 474  Drainage and Irrigation Systems
CEE 633  Flow in Porous Media and Groundwater
CEE 655  Transport, Mixing and Transformation in the Environment
ABEN 671  Analysis of the Flow of Water and Chemicals in Soils
ABEN 672  Drainage

**Master of Engineering (Civil) Degree Program**
The M.Eng. (Civil) degree program is a 30-credit (usually ten-course) curriculum designed to prepare students for professional practice. There are two options in this program: one in civil and environmental engineering design and one in engineering management. Both options require a broad-based background in an engineering field.

Applicants holding an ABET-accredited (or equivalent) undergraduate degree in engineering automatically satisfy this requirement. Those without such preparation will require course work beyond the graduate program's 30-credit minimum to fulfill the engineering preparation requirement. Both options also require one course in professional (design-option) or managerial (management-option) practice and a two-course project sequence. The project entails synthesis, analysis, decision making, and application of engineering judgment. Normally it is undertaken in cooperation with an outside practitioner, with some options indicating an intensive, full-time session between semesters. The general degree requirements and admissions information are described above in the section entitled "Master of Engineering Degree Programs." Each student's program of study is designed individually in consultation with an academic adviser and then submitted to the school's Professional Degree Committee for approval.

For the M.Eng. (Civil) program in civil and environmental engineering design options, the requirements are:

1) Three courses, one in professional engineering practice (CEE 590) and a two-course design project (CEE 501 and 502).
2) Specialization in a major concentration area—three to five courses in either environmental engineering, environmental fluid mechanics/hydrology, geotechnical engineering, structural engineering, transportation management, or water resources and environmental systems engineering.
3) Technical electives.
4) Study in a related area or areas.

Courses taken as technical electives or in the related subject area(s) must consist of graduate or advanced courses in fields related to the major concentration area, either inside or outside of the school.

For the M.Eng. (Civil) program in the engineering management option, the requirements are:

1) Five courses: Project Management (CEE 590), Engineering Management Methods (CEE 593 and 594), and the Management Project (CEE 591 and 592).
2) One course in finance, accounting, or engineering economics, as appropriate given a student's background.
3) One course in individual and/or organizational behavior from a recommended list.
4) Three courses from a disciplinary or functional specialization, subject to adviser's approval.

The School of Civil and Environmental Engineering cooperates with the the Johnson Graduate School of Management in two joint programs leading to both Master of Engineering and Master of Business Administration degrees. See the introductory section under College of Engineering.

Applications for the six-year B.S./M.Eng./M.B.A. program must be submitted at the beginning of the sixth term of study.

**COMPUTER SCIENCE**

**Bachelor of Science Curriculum**
The Department of Computer Science is affiliated with both the College of Arts and Sciences and the College of Engineering. Students in either college major in computer science.

For details, visit our web site at http://www.cs.cornell.edu/ugrad

**Computer Science Honors Program**

**Eligibility**
The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have:
- qualified for Latin honors in the College of Engineering (basically, a cumulative GPA ≥ 3.50)
- at least 8 credits of COM S course work at or above the 500-level
- at least 6 credits of COM S 490 (independent research) spread over two semesters, with a grade of A or better each term.

See the COM S undergraduate web site for more information on eligibility: http://www.cs.comell.edu/ugrad

Content
Honors courses may not be used to satisfy the COM S 400+ elective requirement, the COM S project requirement, the math, technical, or field approved electives, or the specialization.

Timing
Honors’ determinations are made during the senior year. Students wanting to be considered for field honors should notify the Undergraduate Office in the Department of Computer Science via electronic mail at the following address: <ugrad@cs.cornell.edu>. The subject line for this message should read “HONORS TRACK”. Related questions may be addressed to the ugrad e-mail alias, or candidates can call or stop by 303 Upson Hall, 255–0982.

Preparation
Arrangements for doing COM S 490 research should be made directly with faculty members in the department. Students can be encouraged to discuss potential contacts with their advisers and/or browse the department’s web page at http://www.cs.comell.edu for specific leads on research opportunities.

The Department of Computer Science reserves the right to make changes to the honors program requirements at any time. Generally speaking, all members of the same graduating class in COM S will be subject to the same honors criteria.

Master of Engineering (Computer Science) Degree Program
The M.Eng. program in computer science is a one-year program that can be started in either the fall or spring semester. This program is designed to develop expertise in system design and implementation in many areas of computer science including computer networks, Internet architecture, fault-tolerant and secure systems, distributed and parallel computing, high performance computer architecture, databases and data mining, multimedia systems, computer vision, computational tools for finance, computational biology (including genomics), software engineering, programming environments and artificial intelligence.

A typical program in computer science includes several upper-division and graduate courses and a faculty-supervised project. The course and project requirements are flexible and allow students to build up a program that closely matches their interests. In particular, slightly under half the courses may be taken outside the computer science department (for example, many students choose to take several business administration courses). Project work, which may be done individually or in a small group, can often be associated with ongoing research in the Department of Computer Science in one of the areas listed above.

Cornell seniors may use the early admission option to effectively co-register for the M.Eng. program while completing the undergraduate degree. This option can be started in either the fall or spring semesters. It applies to students who have eight or fewer credits remaining to complete their undergraduate program.

For more information about the M.Eng. program in computer science and the early admission option for Cornell seniors, please consult our web page at www.cs.cornell.edu/grad/meng.

Cooperative Program with the Johnson Graduate School of Management
Undergraduates majoring in computer science may be interested in a program that can lead, in the course of six years, to B.S., M.Eng. (Computer Science), and M.B.A. degrees. This program, which is sponsored jointly by the College of Engineering and the Johnson Graduate School of Management, enables students to satisfy several subjects required for the M.B.A. degree as part of their undergraduate curriculum. Planning must begin early, however, if all requirements are to be completed on schedule.

For further details and assistance in planning a curriculum, students can consult with their adviser, the undergraduate office in 303 Upson Hall, or the Johnson School directly.

ELECTRICAL ENGINEERING

Bachelor of Science Curriculum
The undergraduate field program in Electrical Engineering provides a foundation that reflects the broad scope of this engineering discipline.

Concentrations include computer engineering and digital systems; control systems; electronic circuit design; information, communication, and decision theory; microwave electronics; plasma physics; power and energy systems; quantum and optical electronics; radio and atmospheric and space physics; and semiconductor devices and applications.

Electrical Engineering Field Program
Students planning to enter the field program in Electrical Engineering must take ENGRD 231 as an engineering distribution course. The fall of the sophomore year is the preferred term for ENGRD 231/ELE E 232 for students with advanced standing in mathematics. Electrical engineering students with an interest in computer engineering are encouraged to take ENGRD 211 as an engineering distribution course prior to entry into the field program. In addition, the field program normally begins in the spring of the sophomore year, as shown below. All of these courses (except ELE E 210 and ENGRD 231) are taught only once each academic year, either spring or fall, as indicated in the course descriptions.

Field Approved Electives (36-credit minimum in the following categories)

Electrical Engineering Electives
(8 courses) 24 minimum
Electives Outside Field
(3 courses) 9 minimum
Total minimum field credits 53

ELE E 310 can be taken in place of ENGRD 270 or T&M 310 to satisfy the college application of probability and statistics requirement.

†These electives must include three 400-level electrical engineering laboratory courses and at least two additional courses at the 400-level or above. The remaining electives may not include independent project courses, such as ELE E 391, 392, 491 or 492, and must be at the 500-level or above in Electrical Engineering.

At least one of the required electrical engineering laboratory courses must be selected from a list including ENGRD 415, 425, 430, 450, 453, 457, 475, 476, 488, 490, 497, 530, and 534. The other may be selected from the above list or from an approved list of courses.

ELE E 402, 426, 433, 438, 450, 452, 471, 472, 481, 524, 525, 526, 536, 539, 547, 554, 558, 577, and 593. (This list is dynamic and changes frequently. Always refer to the latest information in the ELE E Web Handbook.)

‡Must include one course at the 300-level or above (see Electrical Engineering Web Handbook for details).

All students graduating with a B.S. degree must fulfill the engineering design requirement. To meet this requirement, students must demonstrate that they have completed courses that contain at least 16 credits of engineering design. A table listing the engineering design content of all relevant electrical engineering and computer science courses is available through the department web handbook pages at http://www.ee.cornell.edu/.

Undergraduate specialization is achieved through the various electrical engineering elective courses, as well as other courses in related technical fields within engineering, mathematics, the physical sciences, and the analytical biological sciences. The School of Electrical Engineering offers more than thirty courses that are commonly taken as electives by undergraduates.

ELECTRICAL ENGINEERING 187
An electrical engineering honors program also exists for those students who so desire and meet the program entrance requirements. The honors program requires an additional senior ELE E course, a required senior year directed reading course, or a research project, or ENGRG 470, and completion of the honors seminar. Details are available via the electrical engineering homepage located through the World Wide Web at http://www.ee.comell.edu/.

All students majoring in electrical engineering are expected to meet the following academic standards:

1. Students must achieve a grade-point average of at least 2.3 every semester.
2. No course with a grade of less than C– may be used to satisfy degree requirements in the field program or serve as a prerequisite for a subsequent electrical engineering course.
3. Students must complete satisfactorily ELE E 210, ELE E 215, MATH 294, and PHYS 214 by the end of the sophomore year in the field program of Electrical Engineering, and make adequate progress toward the degree in subsequent semesters.
4. Honors program students must meet the GPA and progress requirements specified in the Electrical Engineering Web Handbook to remain active participants.

Electrical Engineering Honors Program

Eligibility, Entry, and Continuation

A student must apply to enter the ELE E Honors Program and may do so as early as the beginning of the fifth semester or as late as the end of the sixth semester. A student must have a cumulative GPA of at least 3.5 to apply for entry. A student in the honors program whose cumulative GPA falls below 3.5 at the end of any semester will be dropped from the honors program by College of Engineering regulations. There is an additional requirement (see Honors Seminar) for entry into the program after the end of the fifth semester.

Honors Seminar

Any student in the honors program is required to take (or to have taken) an honors seminar during his or her junior year. The Honors Seminar is a 2-credit semester-course (offered spring only) consisting of a weekly series of introductory research lectures by electrical engineering faculty members. Each honors seminar enrollee will be required to write a number of short papers on topics covered in the lecture series. Many electrical engineering faculty members will give a lecture or short series of lectures as part of the Honors Seminar. Students in the honors program and students with a cumulative GPA of at least 3.5 who are considering entering the honors program must receive letter grades for the Honors Seminar.

Honors Project

Any student in the honors program is required to accumulate at least three credit hours from a senior year honors project consisting either of design, ENGRG 470, or directed reading. All honors projects should emphasize the development of communication skills. Design- and reading-oriented honors projects require explicitly a written submission summarizing and concluding the project.

Additional Coursework

Any student in the honors program is required to take at least three credit hours of advanced (senior level) ELE E coursework that has at least a 300-level prerequisite. These credit hours are in addition to any credit hours required as part of the ELE E field program. The program described above requires honors program participants to amass at least nine credit hours over and above the 128 credit hours required for a B.S. degree; thus an honors degree requires a minimum of 137 credit hours.

Minor in Electrical Engineering

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the electrical engineering minor: ABEN, A&EP, CEE, CHEME, COM S, GEOL, M&AE, MS&E*, OR&IE. (*MS&E students planning to pursue an MS&E degree in one of the above areas may take an ELE E course, a required senior year directed reading course, or a design project, or ENGRG 470, and completion of the honors seminar. Details are available via the electrical engineering homepage located through the World Wide Web at http://www.ee.comell.edu/.)

The School of Electrical Engineering offers a minor to students who wish to complement their major field by obtaining a background in electrical engineering. The minor offers the opportunity to study analog and digital circuits, signals and systems, electromagnetic fields, and additionally specialize at higher levels in one of several different areas such as circuit design, electronic devices, communications, computer engineering, networks, or space engineering.

The requirements for the electrical engineering minor are outlined below. For further details consult the Electrical Engineering Undergraduate Programs office, 222 Phillips Hall.

Requirements

To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Required Courses:
   - ELE E 210 Introduction to Circuits for Electrical and Computer Engineers
   - ELE E 215 Practicum in Circuit Design (counts as one course)
   - ENGRD 231 Introduction to Digital Systems
   - ELE E 232 Practicum in Digital Systems (counts as one course)
   - ELE E 301 Electrical Signals and Systems I
   - ELE E 303 Electromagnetic Fields and Waves
   - ELE E 315 Electronic Circuit Design

II. Two (2) of the following:
   - ELE E 301 Electrical Signals and Systems I
   - ELE E 303 Electromagnetic Fields and Waves
   - ELE E 315 Electronic Circuit Design

III. One (1) other ELE E course at the 300 level or above (3 credit minimum)

IV. One (1) other ELE E courses at the 400 level or above (3 credit minimum)

Academic Standards: a letter grade of C– or better for each course in the minor and a cumulative GPA of 2.3 or better for all courses in the minor.

Master of Engineering (Electrical) Degree Program

The M.Eng. (Electrical) degree program prepares students either for professional work in electrical engineering and closely related areas or for further graduate study in a doctoral program. The M.Eng. degree differs from the Master of Science degree mainly in its emphasis on engineering design and analysis skills rather than basic research.

The program requires 30 credits of advanced technical course work beyond that expected in a typical undergraduate program, including a minimum of four courses in electrical engineering. An electrical engineering design project is also required and may account for 3 to 8 credits of the M.Eng. program. Occasionally, students take part in very extensive projects and may apply for a waiver of the 8-credit maximum and increase the project component to 10 credits. Students with special career goals, such as engineering management, may apply to use up to 11 credits of approved courses that have significant technical content, but are taught in disciplines other than engineering, mathematics, or the physical sciences.

Students with advanced standing frequently take one or more graduate-level courses prior to graduation and may actually begin accumulating credits toward the Master of Electrical Engineering program in their last semester of undergraduate work. Application of credits taken while an undergraduate at Cornell must be approved in advance of the last semester of undergraduate work.

Although admission to the M.Eng. (Electrical) program is highly competitive, all well-qualified students are urged to apply. Further information is available from the Master of Electrical Engineering Program Office in 222 Phillips Hall.

GEOLOGICAL SCIENCES

Bachelor of Science Curriculum

The Department of Geological Sciences offers two options in its field program, the geoscience option and the science of earth systems (SES) Option. The geoscience option emphasizes the structure, composition, and evolution of our planet, while the SES option is more concerned with processes on and near the earth's surface where the interactions of water, life, rock, and air produce our planetary environment. An engineering minor is available.

The geoscience option reveals the earth's turbulent history from the formation of our solar system to the plate tectonic cycles that dominate the earth's present behavior. That history is highlighted by the co-evolution of life and the Earth system from the origin of life to the modern inter-glacial phase during which our species has so proliferated. Topics of study also include the fundamental processes responsible for earthquakes, volcanic eruptions, and mountain building.
The geoscience option prepares students for advanced study in geology, geophysics, geochemistry, and geobiology, and careers in mineral and petroleum exploration or environmental science. Alternatively, it is a valuable major for a pre-law or pre-med program or in preparation for a career in K–12 education.

The science of earth systems (SES) Option provides an integrated view of Earth processes critical to the understanding of our environment. This scientific understanding is the primary foundation upon which to determine if, and to what degree, human societies can modify or adapt to future change. The SES option is for students interested in careers in atmospheric, hydrological and ocean sciences, environmental chemistry (biogeochemistry), and environmental geophysics. The option enables students in the College of Engineering to take part in the multidisciplinary, interdisciplinary program in the science of earth systems (see description in Interdisciplinary Centers, Programs, and Studies). Collaborations with other departments provide breadth and depth to the program.

Geoscience Option

The geoscience option stresses a balanced overview of geological sciences with considerable flexibility and a degree of specialization achieved by careful selection of field-approved electives. Students are required to take ENGRD/GEOL 201 and an engineering distribution course. For students interested in geobiology or paleontology, BIO G 101/103–102/104 (or BIO G 109–110) are recommended. CHEM 208 may be substituted for PHYS 214.

The geoscience option requires the following courses: the introductory outdoor field course, GEOL 210, and the five core courses, GEOL 326, 355, 356, 375, and 388. Two additional GEOL field-required courses and at least one field-approved elective must be GEOL 300 through 600-level courses. The core courses may be taken in any reasonable sequence, except that GEOL 355, which is offered in the fall, should be taken before GEOL 356, which is offered in the spring. GEOL 326, 355, 356, and 375 should be taken relatively early in the major program.

In addition, a requirement for an advanced outdoor field course may be met by completing one of the following 4 credit options: (a) GEOL 417 (Field Mapping in Argentina, 3 credits) and GEOL 491–492 (based on field observations) for a combined 4 credit minimum; (b) GEOL 437 (Geophysical Field Methods, 3 credits) plus at least 1 credit of GEOL 491 or 492 using geophysical techniques from GEOL 434; (c) GEOL 491–492 (Undergraduate Research, 2 credits each) with a significant component of field work; or (d) an approved outdoor field course taught by another college or university (4-credit minimum).

A selection of field-approved electives may provide specializations in geophysics, geochemistry (including petrology and mineralogy), geology (palaeontology), and geobiology applied to mineral and petroleum industries, environmental problems, hydrology, and civil engineering. Students intending to specialize in economic geology or pursue careers in the mining industries or mineral exploration should consider including economics courses among their liberal studies distribution courses. Students who want a more general background or who want to remain uncommitted with regard to specialty must choose at least two of their field-approved electives from the same field. The field-approved electives outside the field may be chosen from offerings in other science or engineering fields or the liberal arts, but should be at the 300 level or above. Students may request substitution of GEOL 491 and 492, Undergraduate Research, for a fourth-year field-approved elective but not if it is being used to fulfill the outdoor field requirement.

In addition to course work, students learn by involvement in research projects. Facilities include equipment for processing seismic signals and digital images of the earth’s surface, instruments for highly precise isotopic and element analyses, and extensive libraries of earthquake records, satellite images, and exploration seismic records. High-pressure, high-temperature mineral physics research uses the diamond anvil cell and the Cornell High Energy Synchrotron Source (CHESS). Undergraduates have served as field assistants for faculty members and graduate students in Argentina, British Columbia, the Aleutian Islands, Scotland, Switzerland, Tibet, and Barbados. Undergraduates are encouraged to participate in research activities, frequently as paid assistants.

Science of Earth Systems (SES) Option

The SES Option emphasizes a strong preparation in basic mathematics and sciences and an integrated approach to the study of the earth system including the lithosphere, biosphere, hydrosphere, and atmosphere. The aim is to prepare students for graduate study and careers across the broad spectrum of earth sciences required for successful understanding and management of our planet. The option provides a rigorous base of environmental science that strongly complements Cornell’s programs in environmental and agricultural engineering.

Students are required to take a second semester of chemistry, three semesters of biology, and ENGRD 201 (Physics and Chemistry of the Earth) as one of the engineering distribution courses. The option requires a set of core courses, normally taken in the junior or senior years, which provide breadth and integration. An additional set of five intermediate to advanced courses are selected to provide depth and a degree of specialization. These courses permit the student to specialize in atmospheric, hydrologic or ocean sciences, biogeochemistry, environmental geophysics, an approved combination of these areas, or a combination with courses in economics, government, or education in preparation for further study leading to careers in environmental law or management or K-12 education.

The field requirements for the SES Option are summarized as follows. CHEM 208 is required, and may be taken instead of PHYS 214. ENGRD 201 is a required engineering distribution course. The field program includes BIO G 101/103–102/104 (or BIO G 109–110), BIOES 201, the three SES core courses listed below, five additional courses selected with the advisor’s approval to provide specialization in one or a combination of the areas covered by SES, and an additional field-approved elective. Two of the specialization courses will count as field-required courses, and three as field-approved electives. At least three of the field-approved electives must be non-GEOL courses. The three SES core courses include the following:

- SES 301 Climate Dynamics (enroll in ASTRO 353 or SCAS 351) Fall. 4 credits
- SES 302 Evolution of the Earth System (enroll in GEOL 302 or SCAS 352) Spring. 4 credits
- SES 321 Biogeochemistry (enroll in GEOL 321 or NTRES 321) Fall. 4 credits

Areas of specialization include at present

- climate dynamics, the study of the physical and chemical processes producing Earth’s climate system;
- ocean sciences, the study of the biological, chemical and physical processes at work in the ocean;
- hydrological sciences, the study of the interactions of rock, water, snow and ice on Earth’s land surfaces;
- biogeochemistry, study of element cycling near Earth’s surface and how organisms both mediate and benefit from these fluxes;
- environmental geophysics, remote sensing of Earth’s surface and subsurface applied to the study of the environment global change, and natural hazards.

In addition to faculty in or associated with the Department of Geological Sciences, faculty currently associated with the SES program include the following: W. Brutsaert (CEE); R. Bryant (SCAS); P. Gierzach (ASTRO); L. Hedin (BIOES); R. Howarth (BIOES, SCAS); M. Kelley (ELE E3); J.-Y. Parange (ABEN); S. Riha (SCAS); Y. Yavitt (NTRES)

Geological Science Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Geological Sciences and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50.

Content

In addition to the minimum graduation requirements, a student must

1. take at least 9 credits above the minimum required for graduating and approved by the upperclass adviser;
2. have a written proposal of the honors project accepted by his or her faculty adviser and the director of undergraduate studies;
3. complete an honors thesis involving research GEOL 491–492, 2 credits each) of breadth, depth, and quality.

Timing

A student interested in completing an honors thesis must, by the beginning of their seventh semester, have a written proposal of his/her honors project accepted by his/her adviser and the director of undergraduate studies.
Procedures
Each application to the Geological Sciences honors program must have a faculty adviser to supervise the honors program. Written approval by the faculty member who will direct the research is required. After the college verifies the student’s grade-point average, the student will be officially enrolled in the honors program.

Minor in Geological Sciences
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the geological sciences minor: ABEN, A&EP, CEE, CHEM, COM S, ELE E, M&AE, MS&E, OR&E.

Whereas many engineering students will encounter and have to understand the naturally operating systems of the Earth in their professions, the tools and techniques used by earth scientists to understand these solid and fluid systems over the widest scales of space and time are of use to a wide cross-section of engineering students. This minor is designed to give a flexible set of options for students looking to complement training in their major field with a core education in either of the two tracks in Cornell Geological Sciences: SES or geoscience.

The requirements for the geological sciences minor are outlined below. For further details consult the Geological Sciences Undergraduate Programs office, 2122 Snee Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Choose 1 or 2 of these 3 courses:
   - ENGRD 201 Introduction to the Physics and Chemistry of the Earth
   - GEOL 210 Introduction to Field Methods in Geological Sciences
   - GEOL 203 Natural Hazards and the Science of Complexity

II. Choose at least 2 courses from the following list of core courses:
   - GEOL 302 Evolution of the Earth System
   - GEOL 321 Introduction to Biogeochemistry
   - GEOL 326 Structural Geology
   - GEOL 355 Mineralogy
   - GEOL 356 Petrology and Geochemistry
   - GEOL 375 Sedimentology and Stratigraphy
   - GEOL 388 Geophysics and Geotectonics

III. To complete the Minor, these 3-4 courses are to be supplemented with 2-3 additional GEOL courses at the 300 level or higher. These may include, for example, additional courses from the above list of core courses, undergraduate research courses, and outdoor field courses.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 3.0 or better for all courses in the minor.

Master of Engineering (Geological Sciences Degree Program)

The Master of Engineering (Geological Sciences) is a one-year professional degree that provides students with intensive training in, and a fast-track into, careers in the burgeoning areas of environmental geoscience and resource exploration. Emphasis is on developing skills with cutting-edge geophysical and computational techniques for remote sensing, subsurface imaging, and modeling of subterranean fluid flow. Extensive facilities are available for GIS, image processing, and seismic and georadar field surveying.

Currently, program options include geohydrology and environmental geophysics. Under development is a new option in petroleum exploration, designed for those interested in careers in the resurgent oil exploration industry. Past design projects have included field studies in areas as diverse as the Finger Lakes and the Caribbean.

The program requires 30 credits of postgraduate instruction, at least 10 of which must involve engineering design. Students must also complete a design project, worth between 3 and 12 credits, that has a significant geological component and results in substantial conclusions or recommendations.

General information on admission and degree requirements for the M.Eng. degree program can be found in the college's introductory section.

MATERIALS SCIENCE AND ENGINEERING

Bachelor of Science Curriculum

Students majoring in materials science and engineering are required to take MS&E 261, Introduction to Mechanical Properties of Materials before affiliating with the field. They are strongly urged to take it as an engineering distribution course during their sophomore year. Students in materials science and engineering must concentrate in a specialization which may cover an area such as general materials science, solid state, metallic materials, ceramic materials, polymeric materials, electronic materials, or biomaterials.

Specialization is achieved through the selection of technical electives in the junior and senior years. Optional research involvement courses provide undergraduates with the opportunity to work with faculty members and their research groups on current projects.

The requirements for a Bachelor of Science degree in Materials Science and Engineering are:

1. Completion of common curriculum including humanities and social sciences.
2. Completion of 10 required field courses below:
   - MS&E 331, Structure of Materials
   - MS&E 332, Electrical and Magnetic Properties of Materials
   - MS&E 335, Thermodynamics of Condensed Systems
   - MS&E 336, Kinetics, Diffusion, and Phase Transformations
   - MS&E 441, Microprocessing of Materials
   - MS&E 443/455, Senior Materials Laboratory I or Senior Thesis I
   - MS&E 444/455, Senior Materials Laboratory II or Senior Thesis II
   - MS&E 445, Mechanical Properties of Materials
   - MS&E 447 & 448, Materials Design Concepts I & II

3. A 3 credit materials processing elective.
4. Four courses in a technical specialization.
5. Twelve credits of other electives.
6. One of the elective or specialization courses must include substantial advanced chemistry (e.g., MS&E 222, CHEM 208, CHEM 357).

To continue in good standing in the field of Materials Science and Engineering, students must

1. Maintain an overall 2.0 term average.
2. Maintain an average of 2.3, with no grade below C, in the department's core curriculum.
3. Complete MS&E 261 with a minimum grade of C prior to affiliation.

The department's core curriculum consists of all the required MS&E courses including the MS&E distribution course, the processing elective, and the four courses comprising the student's area of specialization.

An attractive and very challenging program combines the materials science and engineering curriculum with that of either electrical engineering or mechanical engineering, leading to a double major. The combination of materials science and engineering with electrical engineering is particularly well suited to students who will eventually be employed in the electronic materials industry. Mechanical engineers knowledgeable in materials science also will be well equipped for technical careers. Curricula leading to the double-major degree must be approved by both of the departments involved and students are urged to plan such curricula as early as possible.

Material Science and Engineering Honors Program

Eligibility
The Bachelor of Science degree with honors will be granted to students who, in addition to completing the requirements for a bachelor degree, have satisfactorily completed the honors program in Materials Science and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50.

Content
The requirements for an honors degree in Materials Science and Engineering are:
1. Students must take at least nine credits above the minimum required for graduation in Materials Science and Engineering, so that the minimum number of credits for an honors degree is 135. These additional courses must be technical in nature, i.e., in engineering, mathematics, chemistry, and physics at the 400 level and graduate-level, with selected courses at the 300-level, which must be approved by the upperclass advisers.

2. A senior honors thesis (eight credits) with a grade of at least an A.

Note: undergraduates typically enter the honors program at the beginning of their senior year (seventh semester), so that they must have a cumulative GPA equal to or greater than 3.50 at that point.

Timing
All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member to work on a senior honors thesis during the second semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures
Each application to the Materials Science and Engineering honors program must have a faculty adviser to supervise the honors program. A written approval of the faculty member who will direct the research is required. After the student's grade-point average is verified, the student will be officially enrolled in the honors program.

Minor in Materials Science and Engineering
Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the materials science and engineering minor: ABEN, A&EP, CEE, CHEM, COM S, ELE E, GEOL, M&AE, OR&IE.

Materials form the core basis of many engineering disciplines including mechanical, civil, chemical, and electrical engineering. This minor provides engineers in related fields with the fundamental understanding of mechanisms that determine the performance, properties, and processing of modern materials.

The requirements for the materials science and engineering minor are outlined below. For further details consult the Materials Science and Engineering Undergraduate Programs office, 328 Bard Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. One of:
   - MS&E 352 Electrical and Magnetic Properties of Materials
   - MS&E 353 Thermodynamics of Condensed Systems
   - MS&E 366 Kinetics, Diffusion and Phase Transformations

II. Two of:
   - MS&E 352 Electrical and Magnetic Properties of Materials
   - MS&E 353 Thermodynamics of Condensed Systems

MECHANICAL AND AEROSPACE ENGINEERING

MECHANICAL AND AEROSPACE ENGINEERING 191

MECHANICAL AND AEROSPACE ENGINEERING

Bachelor of Science Curriculum in Mechanical Engineering
The upperclass field program in Mechanical Engineering is designed to provide a broad background in the fundamentals of this discipline as well as to offer an introduction to the many professional and technical areas with which mechanical engineers are concerned. The program covers both major streams of the field of mechanical engineering.

Mechanical systems, design, and materials processing is concerned with the design, analysis, testing, and manufacture of machinery, vehicles, devices, and systems. Particular areas of concentration are mechanical design and analysis, vehicle engineering, biomechanics, and materials processing and precision engineering. Other topics covered are computer-aided design, vibrations, control systems, and dynamics.

Engineering of fluids, energy, and heat-transfer systems is concerned with the efficient conversion of energy in electric power generation and aerospace and surface transportation, the environmental impact of engineering activity (including pollutants and noise), aeronautics, and with the experimental and theoretical aspects of fluid flow, heat transfer, thermodynamics, and combustion. Specific areas of concentration include aerospace engineering, heat, energy, and power engineering, and thermo-fluid sciences.

The undergraduate program is a coordinated sequence of courses beginning in the sophomore year. During the fall term sophomore students who plan to enter the Mechanical Engineering program take ENGRD 202 (also T&AM 202) as an engineering distribution course. They also are encouraged to take ENGRD 221 (also M&AE 221), which is a field requirement that may simultaneously satisfy Common Curriculum requirements as an engineering distribution course. Occasionally because of study abroad or requirements for second majors or pre-med, students cannot complete all of the required sophomore courses on schedule. In such cases students should delay ENGRD 221 until the first semester of the junior year. The Sibley School supports students with unusual requirements, but any delays or substitutions must be discussed with and receive approval from the student's adviser.

The requirements for the degree of Bachelor of Science in Mechanical Engineering are as follows:

1. Completion of the Common Curriculum. During the upperclass years this will typically mean earning credit for five humanities or social science courses.
2. Completion of the field requirements, which consist of eleven required courses (beyond ENGRD 202 already mentioned), and five elective courses (24 credits).

The eleven required courses are:

- M&AE 212, Mechanical Properties and Processing of Engineering Materials
- M&AE 221, Thermodynamics
- M&AE 225, Mechanical Design and Synthesis
- T&AM 203, Dynamics
- ELE E 210, Introduction to Circuits for Electrical and Computer Engineers
- M&AE 323, Introductory Fluid Mechanics
- M&AE 324, Heat Transfer
- M&AE 325, Mechanical Design and Analysis
- M&AE 326, System Dynamics
- M&AE 427, Fluids/Heat Transfer Laboratory
- M&AE 428, Engineering Design

Electives
Students should use the flexibility provided by the field approved electives, approved
Field Approved Electives

The upper-level program includes five field approved electives. Using these five courses, the student must satisfy the following requirements.

At least three of the courses must be upper-level (300+) M&AE courses. Of these three, two must satisfy a concentration chosen by the student.

Typically these are two courses chosen from an appropriate subset of the school’s upper-class offering.

However, students may petition for approval of two related courses to form a custom concentration.

The standard concentrations are:

- Fluids/Aerospace Engineering, M&AE 305, 306, 423, 506, 507
- Thermo-Fluids M&AE 423, 449, 506
- Materials Processing M&AE 412, 514
- Mechanical Systems M&AE 412, 417, 467, 478, 479, 565

Of the three upper-level M&AE courses, one must be an approved design elective. The design offerings may change from year to year.

Typically this list includes M&AE 401, 412, 467, 479 and 486.

Note that the design elective must be taken during the senior year. Note that a single course may satisfy both the design and concentration requirements, in which case the third course could be any upper level M&AE course.

One of the courses must be an approved upper-level mathematics course taken after MATH 294. The course must include some material on statistics. Currently, the approved courses are T&AM 310 and OR&IE 270.

One of the field approved electives can be viewed as a technical elective and may be any course at an appropriate level, chosen from engineering, mathematics, or science (physics, chemistry, or biological sciences). Appropriate level is interpreted as being at a level beyond the required courses of the college curriculum. Note that courses in economics, business, and organizations are not accepted. Advisers may approve such courses as approved electives.

Approved Electives

To maximize flexibility (i.e., the option for study abroad, Coop, internships, pre-med, and flexibility during the upper-class years), the Sibley School faculty recommends that students delay use of approved electives until after term three. The faculty encourages students to consider the following as possible approved electives:

- any engineering distribution course
- courses stressing oral or written communications
- courses stressing the history of technology
- rigorous courses in the physical sciences (physics, biology, chemistry)
- courses in informational science (mathematics, computer science)
- courses in methodologies (modeling, problem solving, synthesis, design)
- courses in technology (equipment, machinery, instruments, devices, processes)
- courses in business enterprise operations (economics, financial, legal, etc.)
- courses in organizational behavior
courses in cognitive sciences.

Recommendation on humanities/social sciences electives

Students are encouraged to build a program that includes studies in:

- history of technology
- societal impacts of technology
- history
- foreign languages
- ethics
- communications
- political science
- aesthetics
- economics
- architecture

An additional graduation requirement of the field program is proof of elementary competence in technical drawing. The demonstration of competence is expected before completion of M&AE 325, Mechanical Design and Analysis. This proof may be given in a number of ways, including satisfactory completion of:

- a technical drawing course in high school or in a community college,
- ENGRG 102, Drawing and Engineering Design,
- another technical drawing course at Cornell, or
- a departmental examination.

The computer applications requirement of the Common Curriculum may be satisfied by several courses, including M&AE 479.

The writing requirement of the Common Curriculum is satisfied by M&AE 427.

Introduction to Circuits for Electrical and Computer Engineers (ELE E 210) may be replaced or supplemented by Electronic Circuits (PHYS 360).

A limited set of third-year courses is offered each summer under the auspices of the Engineering Cooperative Program.

More detailed materials describing the Mechanical Engineering Program can be obtained from the Sibley School of Mechanical and Aerospace Engineering, Upson Hall.

Preparation in Aerospace Engineering

Although there is no separate undergraduate program in aerospace engineering, students may prepare for a career in this area by

- majoring in mechanical engineering and
taking courses from the aerospace engineering concentration such as M&AE 305, 306, 506, and 507.

Students may prepare for the graduate program in aerospace engineering by

majoring in mechanical engineering, in other appropriate engineering specialties such as electrical engineering or engineering physics, or in the physical sciences. Other subjects recommended as preparation for graduate study include thermodynamics, fluid mechanics, applied mathematics, chemistry, and physics.

Master of Engineering (Aerospace) Degree Program

The M.Eng. (Aerospace) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.

The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include aerodynamics, acoustics and noise, turbulent flows, rarefied and non-equilibrium flows, combustion, dynamics and control, CFD, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AE Master of Engineering Committee during the first week of class; any subsequent changes must also be approved by the committee. An individual student’s curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 28 credits must have letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have an aerospace engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in aerospace engineering. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AE graduate field office (104 Upson Hall) for additional degree requirements.

Master of Engineering (Mechanical) Degree Program

The M.Eng. (Mechanical) degree program provides a one-year course of study for those who wish to develop a high level of competence in engineering science, current technology, and engineering design.
The program is designed to be flexible so that candidates may concentrate on any of a variety of specialty areas. These include biomechanical engineering, combustion, propulsion and power systems, fluid mechanics, heat transfer, materials and manufacturing engineering, mechanical systems and design, CFD, CAE, CAD, CAM, etc.

A coordinated program of courses for the entire year is agreed upon by the student and the faculty adviser. This proposed program, together with a statement of purpose, is submitted for approval to the M&AEE Master of Engineering Committee during the first week of class; any subsequent changes must also be approved by the committee. An individual student's curriculum includes a 4- to 8-credit design course, a major concentration consisting of a minimum of 12 credits, and sufficient technical electives to meet the total degree requirement of 30 credits (of which at least 8 credits must be letter grades).

The design projects may arise from individual faculty and student interests or from collaboration with industry. All projects must have a mechanical engineering design focus and have the close supervision of a faculty member.

The courses that constitute the major concentration must be graduate-level courses in mechanical and aerospace engineering or a closely related field such as theoretical and applied mechanics. In general, all courses must be beyond the level of those required in an undergraduate engineering program; credit may be granted for an upper-level undergraduate course if the student has done little or no previous work in that subject area, but such courses must have the special approval of the M&AEE Master of Engineering Committee.

The technical electives may be courses of appropriate level in mathematics, physics, chemistry, or engineering; a maximum of 6 credits may be taken in areas other than these if the courses are part of a well-defined program leading to specific professional objectives. It is expected that all students will use technical electives to develop proficiency in mathematics beyond the minimum required of Cornell engineering undergraduates if they have not already done so before entering the program. Courses in advanced engineering mathematics or statistics are particularly recommended.

Students should check with the M&AEE graduate field office (104 Upson Hall) for additional degree requirements.

Students enrolled in the M.Eng. (Mechanical) degree program may take courses that also satisfy the requirements of the manufacturing, energy, or electronic packaging option programs leading to special dean's certificates in those areas.

NUCLEAR SCIENCE AND ENGINEERING

Faculty members in the graduate Field of Nuclear Science and Engineering who are most directly concerned with the curriculum include K. B. Cady, D. A. Hammer, R. W. Kay, V. O. Kostroun, and K. Unlu

Undergraduate Study

Although there is no special undergraduate field program in nuclear science and engineering, students who intend to enter graduate programs in this area are encouraged to begin specialization at the undergraduate level. This may be done by choice of electives within regular field programs (such as those in engineering physics, materials science and engineering, computer science, and civil, chemical, electrical, or mechanical engineering) or within the College Program.

Master of Engineering (Nuclear) Degree Program

The two-term curriculum leading to the M.Eng. (Nuclear) degree is intended primarily for individuals who want a terminal professional degree, but it may also serve as preparation for doctoral study in nuclear science and engineering. The course of study covers the basic principles of nuclear reactor systems with a major emphasis on reactor safety and radiation protection and control. The special facilities of the Ward Center for Nuclear Sciences are described in the Announcement of the Graduate School.

The interdisciplinary nature of nuclear engineering allows students to enter from a variety of undergraduate specializations. The recommended background is (1) an accredited baccalaureate degree in engineering, physics, or applied science; (2) physics, including atomic and nuclear physics; (3) mathematics, including advanced calculus; and (4) thermodynamics. Students should see that they fulfill these requirements before beginning the program. In some cases, deficiencies in preparatory work may be made up by informal study during the preceding summer. General admission and degree requirements are described in the college's introductory section.

The following courses, or equivalents, are included in the 30-credit program:

**Fall term**
- NS&E 509, Nuclear Physics for Applications
- A&E 612, Nuclear Reactor Theory
- A&E 633, Nuclear Engineering

**Technical elective**

**Spring term**
- NS&E 551, Nuclear Measurements in Research
- NS&E 545, Energy Seminar
- Technical elective
- Engineering design project
- Mathematics or physics elective

Engineering electives should be in a subject area relevant to nuclear engineering, such as energy conversion, radiation protection and control, feedback control systems, magnetohydrodynamics, controlled thermonuclear fusion, and environmental engineering. The list below gives typical electives.

- A&E 661, Microcharacterization (spring, 3 credits)
- ELE E 581, Introduction to Plasma Physics (fall, 4 credits)
- ELE E 582, Basic Plasma Physics (spring, 4 credits)
- ELE E 471/M&AEE 478, Feedback Control Systems (fall, 4 credits)
- ELE E 472, Digital Control Systems (spring, 4 credits)
- M&S 459, Physics of Modern Materials Analysis (spring, 3 credits)
- M&AEE 403, Analytical Techniques for Materials Science (spring, 4 credits)
- M&AEE 652, Advanced Heat Transfer (fall, 4 credits)
- MS&E 484, Introduction to Controlled Fusion: Principles and Technology (spring, 3 credits)
- MS&E 521, Radiation Effects in Materials (fall, 1–3 credits)

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

Bachelor of Science Curriculum in Operations Research and Engineering

The program is designed to provide a broad and basic education in the techniques and modeling concepts needed to analyze and design complex systems and to provide an introduction to the technical and professional areas with which operations researchers and industrial engineers are concerned. Exceptional students interested in pursuing graduate studies are encouraged to speak with their faculty advisers concerning an accelerated program of study.

A student who intends to enter the field program in Operations Research and Engineering should plan to take Basic Engineering Probability and Statistics (ENGRD 270) after completing MATH 192. Early consultation with a faculty member of the school or with the associate director for undergraduate studies can be helpful in making appropriate choices. The required courses for the OR&IE field program and the typical terms in which they are taken are as follows:

**Term 2, 3 or 4 Credits**

Behavioral science (organizational behavior) 3
Course in humanities and social sciences 3

†The behavioral science requirement can be satisfied by any one of several courses, including the Johnson Graduate School of Management (JGSM) course, NCC 554 (offered only in the fall), which is recommended for those contemplating the pursuit of a graduate business degree, and ILROB 170, 171, and 320.

The basic senior-year program, from which individualized programs are developed, consists of the following courses:

Minimum credits

| OR&E 581, Simulation Modeling | 2 |
| OR&E 582, Simulation Analysis | 2 |
| Three upperclass OR&E electives as described below | 9 |
| Two field-approved electives (at least 3 credits must be outside OR&E) | 6 |
| Two courses in humanities and social sciences | 6 |
| Two approved electives | 6 |
| Available OR&E electives are as follows: Manufacturing and distribution systems: OR&E 411, 416, 451, 480, 481, 524, 525, and 562 and JGSM MBA 641 Optimization methods: OR&E 431, 432, 434, 435 and 436 Applied probability and statistics: OR&E 462, 476 (2 credits), 561, 563, 575 (2 credits), 576 (2 credits) and 577 | |

Scholastic requirements for the field are a passing grade in every course; a grade of C- or better in each of ENGRD 211 and 270, OR&E 310, 320, 321, 350, 360, and 361; an overall average of at least 2.0 for each term the student is enrolled in the school; an average of 2.0 or better for OR&E field courses; and satisfactory progress toward the completion of the degree requirements. The student’s performance is reviewed at the conclusion of each term.

Operations Research and Engineering Honors Program

Eligibility

The Bachelor of Science degree with honors will be granted to students who, in addition to having completed the requirements for a bachelor degree, have satisfactorily completed the honors program in Operations Research and Engineering and have been recommended for the degree by the honors committee of the department. An honors program student must enter with and maintain a cumulative GPA of 3.50.

Content

An OR&E honors program shall consist of at least nine credits beyond the minimum required for graduation in OR&E; so that no part of the honors program can also be used to satisfy graduation requirements. The nine credits shall be from one or more of the following with at least four hours in the first category:

1. Advanced courses in OR&E at the 500-level or above.
2. A significant research experience or honors project under the direct supervision of an OR&E faculty member using OR&E 499: OR&E Project. A significant written report must be submitted as part of this component.
3. A significant teaching experience under the direct supervision of a faculty member in OR&E using OR&E 490: Teaching in OR&E, or ENGRG 470: Undergraduate Engineering Teaching.

Timing

All interested students must complete a written application no later than the end of the third week of the first semester of their senior year, but are encouraged to make arrangements with a faculty member during the first semester of their junior year. A student must be in the program for at least two semesters before graduation.

Procedures

Each application to the OR&E honors program must have a faculty adviser to supervise the honors program. The honors adviser need not be the student's faculty adviser. The application to the program shall be a letter from the student describing the specific proposed honors program and including the explicit approval of the honors adviser. Each program must be approved by the associate director, and any changes to the student's program must also be approved by the associate director of undergraduate studies.

Engineering Minor Programs

The School of Operations Research and Industrial Engineering currently offers three engineering minor programs: engineering statistics, industrial systems and information technology, and operations research and management science. (A student may not receive credit for more than one minor offered by the School of Operations Research and Industrial Engineering.) Descriptions and requirements for each program follow:

Minor in Engineering Statistics

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the engineering statistics minor: ABEN, A&EE, CEE, CHEM, COMS, ELE E, ECOL, M&AE, MS&E.

This minor requires the student to develop expertise in engineering statistics. The goal of the program is to provide the student with a firm understanding of statistical principles and engineering applications, and the ability to apply this knowledge in real-world situations. The requirements for the engineering statistics minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs office, 202 Rhodes Hall.

Requirements

To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Required Courses:
   - ENGRD 270: Basic Engineering Probability & Statistics
   - OR&E 360 or ELE E 310: Basic Engineering Probability & Statistics II or Introduction to Probability & Random Signals

II. Four courses (11 credits minimum) taken from the following list:
   - OR&E 361 or ELE E 411: Introductory Engineering Stochastic Processes I or Random Signals in Communications/Signal Processing
   - OR&E 476: Applied Linear Statistical Models
   - OR&E 576: Regression
   - OR&E 563: Applied Time Series Analysis
   - OR&E 565: Applied Financial Engineering
   - OR&E 575: Experimental Design
   - OR&E 577: Quality Control
   - OR&E 581: Simulation Modeling
   - OR&E 582: Simulation Analysis
   - MATH 472 or BTRY 409: Basic Probability or Theory of Statistics
   - BTRY 602: Statistical Methods II
   - BTRY 603 or ILRST 411: Statistical Methods III or Statistical Analysis of Qualitative Data
   - ILRST 310: Statistical Sampling
   - ILRST 314: Graphical Methods for Data Analysis
   - ILRST 410: Techniques of Multivariate Analysis

*Other course options approved by petition in advance. The student should be aware that some of these courses require others as prerequisites. All these courses are cross-listed under the Department of Statistical Science.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Industrial Systems and Information Technology

Eligibility

Engineering undergraduates affiliated with the following fields are eligible to participate in the industrial systems and information technology minor: ABEN, A&EE, CEE, CHEM, COMS, ELE E, ECOL, M&AE, MS&E.

The aim of this minor is to provide an in-depth education in the issues involved in the design and analysis of industrial systems, and the tools from information technology that have become an integral part of the manufacturing process. Students will become familiar with the problems, perspectives and methods of modern industrial engineering and be prepared to work with industrial engineers in designing and managing manufacturing and service operations. That is, rather than providing a comprehensive view of the range of methodological foundations of operations research, this minor is designed to give the student a focused education in the application area most closely associated with these techniques.
The requirements for the industrial systems and information technology minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs office, 200 Rhodes Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. At least 3 of the following:
- ENGRD 270 Basic Engineering Probability and Statistics
- OR&IE 320 Optimization I
- OR&IE 310 Industrial Systems Analysis
- OR&IE 480 Information Technology for Operations Research and Industrial Technology

II. The remaining courses/credit hours from the following:
- OR&IE 350 Financial and Managerial Accounting
- OR&IE 416 Design of Manufacturing Systems
- OR&IE 451 Economic Analysis of Engineering Systems
- OR&IE 525 Production Planning and Scheduling Theory and Practice
- OR&IE 552 Revenue Management
- OR&IE 577 Quality Control
- OR&IE 581 Simulation Modeling

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 2.0 or better for all courses in the minor.

Minor in Operations Research and Management Science

Eligibility
Engineering undergraduates affiliated with the following fields are eligible to participate in the operations research and management science minor: ABEN, A&EP, CEE, CHEM, COM S, ELE E, GEOL, M&AE, MK&E.

The field of operations research and management science (OR/MS) aims to provide rational bases for decision making by seeking to understand and model complex situations and to use this understanding to predict system behavior and improve system performance. This minor gives the student the opportunity to obtain a wide exposure to the core methodological tools for OR/MS, including mathematical programming, stochastic and statistical models, and simulation. The intent of this minor is that the student should obtain a broad knowledge of these fundamentals, rather than train the student in a particular application domain.

The way the student can adjust their educational goals of their program.

The requirements for the operations research and management science minor are outlined below. For further details consult the Operations Research and Industrial Engineering Undergraduate Programs office, 200 Rhodes Hall.

Requirements
To complete the minor, the student must take at least six (6) courses (minimum of 18 credits), chosen as follows:

I. Choose 3 courses from the following list:
- ENGRD 270 Basic Engineering Probability and Statistics
- OR&IE 320 Optimization I
- OR&IE 321 Optimization II
- OR&IE 360 Engineering Probability and Statistics II
- OR&IE 361 Introduction Engineering Stochastic Processes I
- OR&IE 581 Simulation Modeling
- OR&IE 582 Simulation Analysis

II. These courses are to be supplemented with additional OR&IE courses at the 300 level or higher, so that entire program includes at least 6 courses and at least 18 credits. For example, taking the remaining 3 options on this list would suffice.

Academic Standards: a letter grade of C- or better for each course in the minor and a cumulative GPA of 0.2 or better for all courses in the minor.

Master of Engineering (OR&IE) Degree Program

This two-semester professional degree program stresses applications of operations research and industrial engineering. The centerpiece of the program is a team-based project on a real problem. The course work centers on an additional study of analytical techniques, with particular emphasis on engineering applications, especially in the design or improvement of systems in manufacturing, information, finance and nonprofit organizations.

General admission and degree requirements are described in the introductory "Degree Programs" section. The M.Eng. (OR&IE) program is intended for three groups of students: graduates of the undergraduate field program in OR&E who wish to expand their practical knowledge of the field; Cornell undergraduates in other math-based fields who want to broaden their exposure to OR&E; and qualified non-Cornellians with strong backgrounds from other programs in the US and abroad.

To ensure completion of the program in two semesters, the entering student should have completed courses in probability and statistics and in computer science, as well as four semesters of mathematics, through differential equations, linear algebra and multivariate calculus.

Program requirements include a core of OR&IE courses plus technical electives chosen from a broad array of offerings. The choice of a particular elective sequence plus a specific project course results in completion of one of several options within the program. These include the manufacturing option, the financial engineering option, the systems engineering option, and the seminar in manufacturing. These options are offered jointly with various other Cornell departments and schools and provide the opportunity to interact on projects and in class with specialists in other engineering fields and in business. Many students select the applied operations research option, offered only by OR&IE, which has project teams made up entirely of OR&IE M.Eng. students and which offers the broadest choice of elective courses. Students interested in an option other than the applied operations research option should obtain further information from the following: manufacturing option, Center for Manufacturing Enterprise, 103 Frank H. T. Rhodes Hall, 607-255-7757; financial option, 201 Frank H. T. Rhodes Hall, semester in manufacturing option, 304 Sage Hall, 607-255-4691; systems engineering option, 218 Upson Hall, 607-255-0710.

I. For matriculants with preparation comparable to that provided by the undergraduate field program in Operations Research and Engineering:

Fall term
- OR&IE 516, Case Studies 1
- OR&IE 893, Applied OR&IE Colloquium 1
- M.Eng. Project 1
- Technical electives 12

Spring term
- OR&IE 894, Applied OR&IE Colloquium 1
- M.Eng. Project 1
- Technical electives 9

II. For matriculants from other fields who minimally fulfill the prerequisite requirements (students who have the equivalent of OR&E 520, 523, and 560 will take other OR&IE electives in their place):

Fall term
- OR&IE 560, Engineering Probability and Statistics II 4
- OR&IE 520, Optimization I 4
- OR&IE 522, Topics in Linear Optimization 1
- OR&IE 516, Case Studies 1
- OR&IE 590, Design and Analysis of Simulated Systems 4
- OR&IE 893, Applied OR&IE Colloquium 1
- M. Eng. Project 1

Spring term
- OR&IE 523, Introduction to Stochastic Processes I 4
- OR&IE 894, Applied OR&IE Colloquium 1
- M.Eng. Project 1
- Technical electives 6

For both of the above pro forma schedules, at least 12 credit hours of the specified electives must be chosen from the list of courses offered by the School of Operations Research and Industrial Engineering.

A minimum of 30 credit hours are required to complete this program. Additional program requirements exist and are described in the Master of Engineering Handbook, which is available in Room 201, Frank H. T. Rhodes Hall and on the World Wide Web at www.orie.cornell.edu.

The project requirement can be filled in a variety of ways. Common elements in all project experiences include working as part of a group of three to five students on an engineering design problem, meeting with a faculty member on a regular basis, and oral and written presentation of the results obtained. Most projects address problems that
THEORETICAL AND APPLIED MECHANICS

Undergraduate Study

The Department of Theoretical and Applied Mechanics is responsible for courses in engineering mechanics and engineering mathematics, some of which are part of the Common Curriculum.

College Program in Engineering Science

A student may enroll in the College Program in Engineering Science, which is sponsored by the Department of Theoretical and Applied Mechanics. The College Program is described in the section on undergraduate study in the College of Engineering.

Master of Engineering (Engineering Mechanics) Degree Program

Composite materials designed to meet specific requirements of weight, strength, and rigidity are used increasingly in the manufacture of everyday structures and components. The Master of Engineering (Engineering Mechanics) degree program focuses on the mechanical behavior of advanced composite materials and structures and prepares students to play a role in the development of this new technology. Students from diverse engineering backgrounds, such as mechanics, structures, and materials, as well as aerospace and biomedical engineering, can normally complete the requirements for the professional Master of Engineering degree in one year.

The degree program requires satisfactory completion of 30 credits of course work, including 12 credits of courses that involve analysis, computation, design, or laboratory experience. Of these 12 credits, at least 6 must be earned in T&AM. Up to 10 credits will be awarded for an individual project involving composites. The balance of the required credits may be earned in elective courses chosen from those in the course listing below or others approved by the student's adviser.

The Department of Theoretical and Applied Mechanics has several laboratories equipped for the fabrication and mechanical testing of composite materials and structures. Extensive computing resources are available for numerical computations, design, or other numerical- or simulation-research activities related to composites. The Materials Science Center, the Center for Theory and Simulation in Science and Engineering, and the Computer-Aided Design Instructional Facility provide additional state-of-the-art laboratories and computer resources.

ENGINEERING COMMON COURSES

Course offerings in this category, offered by the Engineering Communications Program, develop writing and oral presentation skills relevant to engineers.

ENGRC 301 Writing in Engineering

TBA. 1 credit. Prerequisite: permission of instructor. Can be used to satisfy requirements in expressive arts as a free or approved elective. This course can only be taken in conjunction with a "writing-intensive" engineering class. Some "writing-intensive" engineering classes may require students to enroll in this supplementary course. Instructors from the Engineering Communications Program work with engineering faculty members to prepare students for writing assignments. Intended to strengthen understanding of the course content while enhancing communications skills. May be taken more than once, with different engineering courses.

ENGRC 333 Topics in Engineering Communications

TBA. 3 credits. Topics vary as the need and interest arise. Sample topics are: introductory technical communications, graphic presentation of engineering material, desktop publishing, information technologies, advanced problems in engineering communications, technology and the law. Fulfills the college technical writing requirement.

ENGRC 334 Independent Study in Engineering Communications

TBA. Variable credits (1–3). Students work closely with a Communications Program instructor to pursue an aspect of professional communications not available
through regular course work. Projects may involve writing technical documentation, creating user manuals, analyzing and producing technical reports and proposals, or reading and writing about problems in engineering practice. Interested students should contact the Engineering Communications Program.

ENGR 335 Communications For Engineers Managers (formerly ENGR 435)
Fall, spring, summer TBA. 3 credits. Limited to 20 students per section. Prerequisite: two First-Year Writing Seminars.

This interactive workshop focuses on communications in organizational contexts common to engineering graduates. ENGR 335 helps students to produce effective business and technical communication—written, oral, and visual. Topics include internal and external communications, balancing visual and verbal elements in documents and presentations; teamwork and leadership; running and attending meetings; management strategies; communicating to colleagues, superiors, subordinates, and clients. Case studies and other readings generate lively discussion about strategies for successful writing and management—strategies that students apply in collaborative and individual assignments. Through brief written exercises, oral presentations, and a larger team project, students learn how to develop information, organize and support ideas, and address a variety of audiences. Fulfills the college technical writing requirement. Note: because space is limited, seniors are given priority.

ENGR 350 Engineering Communications
Fall, spring, summer TBA. 3 credits. Prerequisite: two First-Year Writing Seminars. Limited to 20 students per section.

Engineering graduates spend much of their time conveying technical information to a variety of audiences. They write a range of documents, give oral presentations, and use visuals to enhance their written and oral presentations. Important tasks can seem daunting and burdensome; ENGR 350 aims to make them manageable and interesting. This course helps students develop effective processes for drafting, editing, and revising, provides strategies for communicating specialized information in different contexts, uses material from the engineering workplace, and addresses organizational and ethical issues. Students learn to communicate effectively through diverse assignments and a longer term project (for example, a research paper, feasibility study, or users’ manual). The course material generates lively class discussion, and the class size ensures ongoing attention to each student’s work. Fulfills the college technical writing requirement.

Engineering Distribution Courses
Courses in this category are sophomore-level courses cross-listed with a department. These courses are intended to introduce students to more advanced concepts of engineering and may require pre- or co-requisites.

ENGRD 201 Introduction to the Physics and Chemistry of the Earth (also GEOL 201)
Fall. 3 credits. Prerequisites: PHYS 112 or 207. L. M. Cathles.

ENGRD 202 Mechanics of Solids (also T&AM 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.

This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheet. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations, data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, simulation, and the interpretation of programs. ENGRD/COM S 212 covers a wide range of topics in computer science and programming using advanced functional and object-oriented programming languages. ENGRD/COM S 211 focuses on strengthening programming skills in a more conventional programming language (Java), while still introducing important topics in computing. Either course is a suitable prerequisite for further study in the field. Appropriate transfers between ENGRD/COM S 211 and 212 (in either direction) are encouraged during the first few weeks of the semester.

ENGRD 219 Mass and Energy Balances (also CHEME 219)
Fall. 3 credits. Co-requisite: physical chemistry or permission of instructor. K. H. Lee.

Engineering problems involving material and energy balances. Batch and continuous reactive systems in the steady and unsteady states. Introduction to phase equilibria for multiphase systems.

ENGRD 221 Thermodynamics (also M&AE 221)
Fall, spring, may be offered in summer. 3 credits. Prerequisites: MATH 192 and PHYS 112.

The definitions, concepts, and laws of thermodynamics. Applications to ideal and real gases, vapor and gas power systems, refrigeration and heat pump systems. Thermodynamics relations for simple, compressible substances. Gaseous reactions. Examples and problems will be related to contemporary aspects of power generation and broader environmental issues.

ENGRD 222 Introduction to Scientific Computation (also COM S 222)
Spring. 3 credits. Prerequisites: COM S 100 and (MATH 222 or 294).

An introduction to elementary numerical analysis and scientific computation. Topics include interpolation, quadrature, linear and nonlinear equations, least-squares fitting, and ordinary differential equations. The MATLAB computing environment is used. Vectorization, efficiency, reliability, and stability are stressed. Special lectures on parallel computation.

ENGRD 231 Introduction to Digital Systems
Fall, spring. 3 credits. Prerequisite: COM S 100.

An introduction to basic principles, design techniques, and methodology for communication, computer, and information systems, which process digital data streams. Includes Boolean algebra, integrated circuit components, switching circuits, and systems which provide computation, data, voice, and video service.

ENGRD 241 Engineering Computation (also CEE 241)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 294. Co-requisite: MATH 294. W. Philpot.

This course introduces the discipline of numerical methods while developing programming and graphics proficiency with MATLAB and spreadsheet. Numerical analysis topics considered are accuracy, precision, Taylor-series approximations,
truncation and round-off errors, condition numbers, operation counts, convergence, and stability. Included are numerical methods for solving engineering problems that entail roots of functions, simultaneous linear equations, regression, interpolation, numerical differentiation and integration, and ordinary differential equations. The context and solution of partial differential equations is also introduced. Applications are drawn from different areas of engineering.

ENGRD 250 Engineering Applications in Biological Systems (also ABEN 250)
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year. B. A. Ahner. Case studies of engineering problems in agricultural, biological and environmental systems, including bioremediation, crop production, environmental controls, energy, biomedicine, and food engineering. Emphasis is on the application of mathematics, physics, and the engineering sciences to energy and mass balances in biological systems.

ENGRD 261 Introduction to Mechanical Properties of Materials (also M&E 261)
Fall. 3 credits. S. P. Baker. This course examines the relationship of elastic deformation, plastic deformation, and fracture properties to structure and defects on a microscopic scale in metals, ceramics, polymers, and composite materials. Design and processing of materials to achieve high modulus, damping capacity, strength, fracture resistance, creep resistance, or fatigue resistance. Flaw-tolerant design methods using fracture mechanics.

ENGRD 264 Computer-Instrumentation Design (also A&EE 264)
Fall, spring. 3 credits. Prerequisites: COM S 100. 1 lab, 1 rec. This course covers the use of a small computer in an engineering or scientific research laboratory. Various experiments are performed using an IBM-AT style computer (80486). The experiments and devices to be investigated include: input and output ports, analog to digital converters (ADC), digital to analog converters (DAC), thermistors, optical sensors, digital temperature control, non-linear least squares curve fitting of experimental data, thermal diffusion, and viscosity of fluids. A second goal of this course is to develop effective written communication skills in the context of science and engineering. A number of rhetorical principles will be presented that can produce clarity in communication without oversimplifying scientific issues. Students will prepare progress reports, technical reports, and formal articles based on the experiments.

ENGRD 270 Basic Engineering Probability and Statistics (also ORAIE 277)
Fall, spring, summer. 3 credits. Pre- or co-requisite: MATH 293. This course should guide students a working knowledge of basic probability and statistics and their applications to engineering problems. Computer analysis of data and simulation are included. Topics include random variables, probability distributions, expectation, estimation, testing, experimental design, quality control, and regression.

Courses of General Interest

Courses in this category are of general interest and do not necessarily cover technical, historical, and social issues relevant to the engineering profession. These courses may also include seminar or tutorial type courses.

ENGRG 323 Engineering Economics and Management (also CHEME 323)
Spring, usually offered in summer for Engineering Co-op Program. 3 credits. D. P. Loucks. Introduction to engineering and business economics and management. Intended to give students a working knowledge of money management and how to make economic comparisons of alternative engineering designs or projects. The impact of inflation, taxation, depreciation, financial planning, economic optimization, project scheduling, and legal and regulatory issues are introduced and applied to economic investment and project-management problems.

ENGRG 360 Ethical Issues in Engineering (also S&T 360)
Spring. 3 credits. A humanities elective for engineering students. Open to sophomores. A discussion of ethical issues encountered in engineering practice, such as the rights of engineers in corporations, responsibility for actions, whistleblowing, conflicts of interest, and decision making based on cost-benefit analysis. Codes of ethics and ethical theory will be used to sort out conflicts the engineer may feel toward public safety, professional standards, employers, colleagues, and family. Students will present a case study to the class.

ENGRG 461 Entrepreneurship For Engineers (also A&EE 461)
Fall. 3 credits. Enrollment open to upper class engineers; others with permission of instructor. See M&E 461 for course description.

ENGRG 470 Undergraduate Engineering Teaching
Fall. 3 credits. Engineering juniors and seniors can now earn graduation credit while helping freshmen learn mathematics, physics, chemistry, or engineering design. This course introduces apprentice teachers to cooperative learning, pedagogical theory, interpersonal/diversity issues, and practical tools for educational innovation. This course is an approved elective and can be applied toward the Honors Degree in Electrical Engineering. A 3.0 GPA is strongly recommended.

ENGRG 501 Bioengineering Seminar
Fall, spring. 1 credit. Primarily for juniors, seniors, and graduate students. K. H. Lee. Broad survey of all aspects of bioengineering, including biomedical, bioprocess, biological, and bioenvironmental engineering and aspects of biotechnology. Sessions may be technical presentations or discussions. Session topics may occasionally be held outside of scheduled times.

ENGRG 605 Fundamentals of Biomedical Engineering I (also CHEM 605)
Fall. 1–4 credits (1 credit per section). Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&E 465. S-U grades optional for students not majoring or minorin in biomedical engineering. Coordinator: M. L. Shuler. A series of four-week modules on specialized topics.

605.1 Cellular Dynamics and Cancer

605.2 Physiological Systems
605.3 Biomaterials
The main objective of the biomaterials module is to provide students with an effective background in a wide range of biomaterials that include polymers, metals/alloys, and ceramics and that are currently used in human body repair. After student’s completion of this module, they should have the basic and some in-depth knowledge of what biomaterials are made of, how biomaterials contribute to the saving of human lives, the criteria of materials for biomedical use, biocompatibility, failure modes of biomaterials, and the current R&D activities in biomaterials, challenges that biomaterials are facing and future direction of R&D in biomaterials.

605.4 Biomedical Engineering Project

ENGRG 606 Fundamentals of Biomedical Engineering II (also CHEM 606)
Spring. 1–4 credits. Prerequisites: Graduating senior standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEM 481, or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering. Coordinator: M. L. Shuler. A series of 1 and 2-credit modules on specialized topics.

606.1 Artificial Organs and Tissue Engineering
1 credit. Prerequisite: ENGRG 605, Section 03 (Biomaterials). Lec. T R 1:25–2:40. Jan. 25-Feb. 22. W. L. Olbricht and staff. An introduction to the uses of cells, biological molecules, and synthetic materials as the basis for building artificial organs and encouraging tissue regeneration. The section will discuss the physiological and engineering issues underlying the use of synthetic, extracorporeal systems (e.g., membrane-based dialysis devices), composite implantable materials (e.g., drug-delivery systems and nerve regeneration guides), and hybrid cell/polymer implantable systems (e.g., engineered tissues).

606.2 Biomedical Instrumentation and Diagnosis
1 credit. Lec. T R 1:25–2:40. Feb. 24-March 30. Preregistration with the instructor before December 22, 1999 is required. C. D. Montemagno. Perspective on the use of advanced instrumentation for the diagnosis and treatment of disease and the investigation of fundamental biological processes. The basic theory and application of different microscopic and spectroscopic methods, imaging tomographic and micro-electromechanical devices to biological systems will be explored. A two-day trip to Cornell University Medical Center to learn techniques of functional MRI is required.

606.3 Biomechanics of Musculoskeletal Systems
2 credits. Lec. T R 1:25–4:40. April 4-May 4. D. L. Bartel, C. E. Farnum. Integrated lecture/laboratory experience. The anatomy and function of the canine hindlimb will be explored in dissection laboratories and through demonstration of a non-invasive technique, computed tomography. Methods of approximating functional joint loads will be discussed, and physical testing will be demonstrated. A computer model of the stiffe (knee) joint will be created by combining knowledge of the anatomy and the mechanical environment.

Introduction to Engineering Courses
Courses in this category are freshman-level courses intended to introduce students to various aspects of engineering. They have no prerequisites and are always cross-listed with a department.

ENGR 110 The Laser and Its Applications in Science, Technology, and Medicine (also A&EE 110)
Fall, spring. 3 credits. The principles of laser action, types of laser systems, electronics, and applications of lasers in science, technology, and medicine are discussed. In the laboratory students build and operate a nitrogen laser and a tunable dye laser. Demonstration experiments with several types of lasers illustrate phenomena such as holography, laser processing of materials, and Raman spectroscopy.

ENGR 111 Materials by Design (also MS&E 111)
Fall. 3 credits. E. P. Giannelis. Explores the relationship between atomic structure and macroscopic properties of such diverse materials as metals, ceramics, polymers, and semiconductors. Hands-on project involves dissecting and analyzing various consumer products such as disposable camera or portable cassette player. Emphasis is placed on materials identification and their selection to perform an engineering function.

ENGR 112 Introduction to Chemical Engineering (also CHEM 112)
Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen. Design and analysis of processes involving chemical change—strategies for design, such as creative thinking, conceptual blockbusting, and redefinition of the design goal, in the context of contemporary chemical engineering. Methods for analyzing designs, such as mathematical modeling, empirical analysis by graphics, and dynamic scaling through dimensional analysis, to assess-product quality, economics, safety, and environmental issues.

ENGR 113 Introduction to Environmental Systems (also CEE 113)
Fall. 3 credits. M. L. Weber-Shirk. We will explore the environmental engineering systems that make New York City possible. We will discuss the engineering required to provide clean water and to remove the garbage from NYC sidewalks. We will evaluate NYC’s current strategies and future options as their watersheds become more populated and their landfill is closed. See www.cee.cornell.edu/cee113/ for more information.

ENGR 114 An Introduction to Electrical Engineering Design
Spring. 3 credits. An introduction to electrical engineering and electronic circuit design. Students work in small groups on a series of electric circuit projects leading to the team design of a working fiber optic system. The laboratories and lectures introduce the concepts and principles of electronic circuits and focus upon circuits useful in the design project. Laboratory fee required.

ENGR 115 Engineering Applications of Operations Research (also OR&E 115)
Fall, spring. 3 credits. Enrollment not open to OR&E upper-class majors. An introduction to the problems and methods of Operations Research and Industrial Engineering focusing on problem areas (including inventory, network design, and resource allocation), the situations in which these problems can be found, and several standard solution techniques. In the computer laboratory, students will encounter problem simulations and use some standard software packages.

ENGR 116 Modern Structures (also CEE 116)
Fall. 3 credits. A. R. Ingraffea. An introduction to the basic principles of structural engineering and to structural forms. Emphasis is placed on how various types of structures carry loads. Concepts are illustrated by a series of case studies of major structures such as bridges, skyscrapers, long-span structures and shell structures. The philosophy of engineering design and lessons learned from structural failures and earthquakes are discussed. A semester project involves the design and construction of a small balsa-wood bridge.

ENGR 117 Introduction to Mechanical Engineering (also M&AE 117)
Fall or spring. 3 credits. Two lectures and one lab per week. An introduction to the wide range of topics of current interest in mechanical engineering.

ENGR 118 Design Integration: A Portable CD Player (also MS&E 118 and T&M 118)
Spring. 3 credits. This course examines the roles of various engineering disciplines on the design of a portable compact disc (CD) player. Students are introduced to elements of mechanical, electrical, materials, environmental, manufacturing, and computer engineering as related to the CD player. Laboratory sessions and demonstrations are used to illustrate the principles of design.

ENGR 120 Introduction to Biomedical Engineering (also CHEM 120)
Fall. 3 credits. Not offered fall 1999; next offered fall 2000. W. M. Saltzman. Introduction to the fundamental science and engineering that spawned the biotechnology revolution—technologies of cell cultures, DNA, and antibodies—and the relationship between biomedical science, bioengineering, and the growing biomedical product industry. Case studies of the development of biotechnological processes, from discovery to clinical use, will include processes for vaccines, antibiotics, cancer chemotherapy, protein pharmaceuticals, and organ transplantation.
ENGRI 125 Global Environment (also GEOI 125)
Wisely environmental management requires an understanding of natural chemical interactions. Examines natural chemical cycles among atmosphere, biosphere, hydrosphere, and the solid Earth; the impact of man’s activity on them, including the greenhouse effect, ozone hole, acid rain, and water pollution. Laboratory sessions include environmental chemical analysis and computer simulation.

ENGRI 126 Introduction to Telecommunications
Fall. 3 credits.
This course introduces the technologies that underlie wired and wireless telecommunication systems. The course begins with an introduction to telephony and the public switched telephone network. Modems and cellular telephony are then introduced, along with ISDN and BISDN. The course concludes with an introduction to ATM and TCP/IP. The course will include both lectures and laboratory demonstrations. The students will have the opportunity to design communications systems, and to determine their performance through simulations.

ENGRI 127 Introduction to Entrepreneurship and Engineering Enterprise (also MSEE 127)
Spring. 3 credits. Enrollment open to engineering students; others with permission of instructor.
This course provides a solid introduction to the entrepreneurial process to students in engineering. The main objective is to identify and to begin to develop skills in the engineering work that occurs in high-growth, high-tech ventures. Basic engineering management issues, including the entrepreneurial perspective, opportunity recognition and evaluation, and gathering and managing resources will be covered. Technical topics such as the engineering design process, product realization, and technology forecasting will be discussed. Guest lecturers will provide material for analysis and class discussion.

AGRICULTURAL AND BIOLOGICAL ENGINEERING
For complete course descriptions, see the Agricultural and Biological Engineering listing in the College of Agriculture and Life Sciences section or visit the department web site <http://www.cals.cornell.edu/dept/aben/>.

ABEN 104 Introduction to Programming in Java and Fortran
Spring. 4 credits. Each lab limited to 22 students. S-U grades optional. Fee, $15.

ABEN 151 Introduction to Computing
Fall. 4 credits. Prerequisite: MATH 191 or equivalent (co-registration permissible). Each lab and recitation section limited to 22 students.

ABEN 200 Life after Graduation
Spring. 1 credit. S-U grades optional.

ABEN 250 Engineering Applications in Biological Systems (also ENGRD 250)
Fall. 3 credits. Prerequisite: enrollment in an engineering curriculum. Recommended for the sophomore year.
For description, see ENGRD 250.

ABEN 300 Career Development
Spring. 1 credit. Prerequisites: ABEN 200 or permission of instructor. S-U grades optional.

ABEN 301 Energy Systems
Spring. 3 credits. Prerequisite: college physics.

ABEN 350 Biological and Environmental Transport Processes
Fall. 3 credits. Prerequisites: MATH 294 and fluid mechanics (co-registration permissible).

ABEN 356 Properties of Biological Materials
Spring. 3 credits. Prerequisites: one semester of math and physics. S-U grades optional.

ABEN 367 Introduction to Biological Engineering
Spring. 3 credits. Prerequisites: one year each calculus and introductory biology; minimum one term each college chemistry and physics. S-U grades optional. Not open to freshmen.

ABEN 371 Hydrology and the Environment (also SCAS 371 and GEOL 204)
Spring. 3 credits. Prerequisite: one course in calculus.

ABEN 385 Mechanics in the Earth and Environmental Sciences
Spring. 4 credits. S-U grades optional.

ABEN 411 Biomass Processing: Modelling and Analysis
Spring. 3 credits. Prerequisites: ABEN 250, ABEN 350 (or any course in heat and mass transport); BIOMI 351, 352 or BIOMIC 290.

ABEN 425 Science and Technology of Environmental Management
Fall. 3 credits. Open to seniors and graduate students only. Letter grades only.

ABEN 435 Principles of Aquaculture
Spring. 3 credits. Prerequisite: minimum junior standing.

ABEN 449 Computational Tools for Engineers
Spring. 3 credits. Prerequisite: completion of the undergraduate engineering math sequence or permission of instructor. S-U grades optional.

ABEN 450 Bioinstrumentation
Fall. 4 credits. Prerequisites: linear differential equations, physics or electrical science, computer programming and use of spreadsheets.

ABEN 453 Computer-Aided Engineering: Applications to Biomedical and Food Processes
Spring. 3 credits. Prerequisite: computer programming (ABEN 151 or COMP S 100) and heat and mass transfer (ABEN 350 or equivalent).

ABEN 454 Physiological Engineering
Fall. 3 credits. Corequisite: fluid mechanics.

ABEN 456 Biomechanics of Plants
Fall. 3 credits. Prerequisites: upper division undergraduate or graduate status, completion of introductory sequence in biology and one year of calculus, or permission of instructor. S-U grades optional.

ABEN 471 Geohydrology (also CEE 431 and GEOL 445)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. For description, see CEE 431.

ABEN 473 Watershed Engineering
Fall. 3 credits. Prerequisite: fluid mechanics or hydrology.

ABEN 474 Drainage and Irrigation Design
Spring. 3 credits. Prerequisites: fluid mechanics or hydrology.
ABEN 475 Environmental Systems Analysis
Fall. 3 credits. Prerequisites: computer programming and one year of calculus.

ABEN 476 Solid Waste Engineering
Spring. 3 credits. Prerequisites: one semester of physics and chemistry.

ABEN 477 Treatment and Disposal of Agricultural Wastes
Fall. 3 credits. Prerequisites: one environmental science course and at least junior-level standing, or permission of instructor. Not offered 1999–2000.

ABEN 478 Ecological Engineering
Spring. 3 credits. Prerequisite: junior-level environmental quality engineering course or equivalent.

ABEN 481 Design of Wood Structures
Spring. 3 credits. Prerequisite: ENGRD 250 and 350, or equivalent.

ABEN 482 Biothermal Engineering
Spring. 3 credits. Prerequisites: ABEN 250 and 350, or equivalent.

ABEN 483 Hydroengineering (also CEE 462)
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently).

ABEN 484 Special Topics in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. S-U grades optional.

ABEN 486 Senior Design in Agricultural and Geodetic Engineering
Fall. 3 credits. Prerequisite: senior standing in ABEN engineering program or permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 487 Individual Study in Agricultural and Biological Engineering
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor and adequate ability and training for the work proposed. Normally reserved for seniors in upper two-fifths of their class. S-U grades optional. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 488 Undergraduate Teaching
Fall, spring. 1–4 credits. Prerequisite: written permission of instructor. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 489 Undergraduate Research
Fall, spring. 1–3 credits. Prerequisites: written permission of instructor, adequate training for work proposed. Normally reserved for seniors in upper two-fifths of their class. Completed independent study form (available in 140 Roberts Hall) is required to register.

ABEN 551/552 Agricultural and Biological Engineering Design Project
Fall, 551; spring, 552. 3–6 credits. Prerequisite: admission to the M.Eng. (Agricultural and Biological) degree program.

ABEN 651 Bioremediation: Engineering Organisms to Clean Up the Environment
Spring. 3 credits. Prerequisites: BIOM 200 or BIOM 398 or BIOM 331 or permission of instructor.

ABEN 652 Instrumentation: Sensors and Transducers
Spring. 3 credits. Prerequisites: linear differential equations, introductory chemistry and introductory physics, or permission of instructor.

ABEN 653 Thermodynamics and Its Applications
Spring. 3 credits. Prerequisite: MATH 293 or equivalent.

ABEN 654 Analysis of the Flow of Water and Chemicals in Soils
Fall. 3 credits. Prerequisites: four calculus courses and fluid mechanics.

ABEN 657 Drainage
Spring. 4 credits. Prerequisites: ABEN 471 and two calculus courses. S-U grades optional. Offered alternate years.

ABEN 658 Nonpoint Source Models
Spring. 3 credits. Prerequisites: computer programming and calculus.

ABEN 659 Biological Engineering Analysis
Spring. 4 credits. Prerequisite: T&AM 310 or permission of instructor.

ABEN 662 Pavement Engineering (also CEE 643)
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering.

ABEN 692 Advanced Topics in Agricultural and Biological Engineering
Fall, spring. 1–6 credits. S-U grades only.

ABEN 700 General Seminar
Fall. 1 credit. S-U grades only.

ABEN 705 Orientation to Graduate Study
Fall. 1 credit. S-U grades only. Limited to newly joining graduate students.

ABEN 771 Soil and Water Engineering Seminar
Fall, spring. 1–3 credits. Prerequisite: graduate status or permission of instructor. S-U grades optional.

ABEN 781 Structures and Related Topics Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

ABEN 785 Biological Engineering Seminar
Spring. 1 credit. Prerequisite: graduate status or permission of instructor. S-U grades only.

ABEN 800 Master’s-level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S-U grades only.

ABEN 890 Graduate-level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: permission of advisor. S-U grades only. Variable credit for Ph.D. research before the "A" exam is passed.

ABEN 901 Doctoral-level Thesis Research
Fall, spring. 1–15 credits. Prerequisite: passing of Admission Candidacy Exam and permission of advisor. S-U grades only.

APPLIED AND ENGINEERING PHYSICS

A&EP 110 The Laser and Its Applications in Science, Technology, and Medicine (also ENGRD 110)
Fall, spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGRD 110.

A&EP 121 Fission, Fusion, and Radiation (also ENGRD 121 and NS&E 121)
Spring. 3 credits. S-U grades optional. Offered alternate years. Intended for students outside the College of Engineering. K. B. Cady. This is a course in the Introduction to Engineering series. For description, see ENGRD 121.

A&EP 217 Electricity and Magnetism (also PHYS 217)
Fall, spring. 4 credits. Prerequisites: approval of student’s advisor and permission of the instructor; coregistration in PHYS 216 or knowledge of special relativity at the level of PHYS 116; MATH 192 or equivalent and coregistration in MATH 293 or equivalent. Staff. Recommended for prospective engineering physics majors. A placement quiz may be given early in the semester, permitting those students who find the material too abstract or analytical to transfer into PHYS 213 without difficulty.

A&EP 264 Computer-Instrumentation Design (also ENGRD 264)
Fall, spring. 3 credits. Prerequisites: COM 100. 1 lec, 1 lab. For description, see ENGRD 264.

A&EP 321 Mathematical Physics I
Fall, summer. 4 credits. Prerequisite: MATH 294. Intended for upper-level undergraduates in the physical sciences. Review of vector analysis, complex variable theory, Cauchy-Riemann conditions, complex Taylor and Laurent series, Cauchy integral formula and residue techniques, conformal mapping, Fourier Series; Fourier and Laplace transforms; ordinary differential equations;
A&EP 322 Mathematical Physics II

A&EP 330 Modern Experimental Optics (see also PHYS 330)
Fall. 4 credits. Enrollment limited. Prerequisites: PHYS 214 or equivalent. E. Bodenschatz. A practical laboratory course in basic and modern optics. The various projects cover a wide range of topics from geometrical optics to classical wave properties such as interference, diffraction, and polarization. Each experimental setup is equipped with standard, off-the-shelf optics and opto-mechanical components to provide the students with hands-on experience in practical laboratory techniques currently employed in physics, chemistry, biology and engineering. The students will also be introduced to digital imaging and image processing techniques.

A&EP 333 Mechanics of Particles and Solid Bodies
Fall, summer. 4 credits. Prerequisites: PHYS 112 or 110 and coregistration in A&EP 321 or equivalent or permission of instructor. Newton’s mechanics; constants of the motion; many-body systems; linear oscillations; variational calculus; Lagrangian and Hamiltonian formalism for generalized coordinates; non-inertial reference systems; central-force motion; motion of rigid bodies; small vibrations in multi-mass systems; nonlinear oscillations; basic introduction to relativistic mechanics. Emphasis on mathematical treatments, physical concepts, and applications. (On the level of Classical Dynamics, by Marion and Thorton.)

A&EP 355 Intermediate Electromagnetism
Fall, summer. 4 credits. Prerequisites: PHYS 214 or 217 and coregistration in A&EP 321 or equivalent, or permission of instructor. Topics: vector calculus, electrostatics, analytic and numerical solutions to Laplace’s equation in various geometries, electric and magnetic multipoles, electric and magnetic materials, energy in fields, quasistatics and magnetic circuit design. Emphasis is on developing proficiency with analytical and numerical solution techniques in order to solve real-world design problems.

A&EP 356 Intermediate Electrodynamics
Spring. 4 credits. Prerequisite: A&EP 355 and coregistration in A&EP 322 or equivalent, or permission of instructor. Topics: electromagnetic waves, waveguides, transmission lines, dispersive media, radiation, special relativity, interference phenomena. Emphasis on physical concepts and developing ability to design, analyze, and simulate microwave circuits and antenna arrays.

A&EP 361 Introductory Quantum Mechanics
Spring. 4 credits. Prerequisites: A&EP 333 or PHYS 318; coregistration in A&EP 322 or equivalent and in A&EP 356 or PHYS 326. A first course in the systematic theory of quantum phenomena. Topics include wave mechanics, the Dirac formalism, angular momentum, the hydrogen atom, and perturbation theory.

A&EP 363 Electronic Circuits (also PHYS 360)
Fall. Spring. 4 credits. Prerequisites: PHYS 208 or 213 or permission of the instructor. No previous experience with electronics assumed; however, the course moves quickly through some introductory topics such as basic DC circuits. Fall term usually less than 2 labs. Fall: E. Kirkland; spring: J. Alexander. Analyze, design, build and experimentally test circuits used in scientific and engineering instrumentation (with discrete components and integrated circuits). Analog circuits: resistors, capacitors, operational amplifiers (linear amplifiers with feedback, oscillators, comparators), filters, diodes and transistors. Digital circuits: combinational (gates) and sequential (flip-flops, counters, shift registers) logic. Computer interfacing introduced and used to investigate digital to analog (DAC) and analog to digital conversion (ADC) and signal averaging.

A&EP 403 Introduction to Nuclear Science and Engineering (also ELE E 405, M&AE 458 and NS&E 403)
Fall. 3 credits. Prerequisite: PHYS 214 and MATH 294. For description see NS&E 403.

A&EP 423 Statistical Thermodynamics
Fall. 4 credits. Prerequisite: introductory three-semester physics sequence plus one year of junior-level mathematics. Quantum statistical basis for equilibrium thermodynamics, canonical, canonical and grand canonical ensembles, and partition functions. Classical and quantum ideal gases, paramagnetic and multiple-state systems. Maxwell-Boltzmann, Fermi-Dirac, and Bose-Einstein statistics and applications. Introduction to systems of interacting particles. At the level of Thermal Physics, by Kittel and Kroemer, and Statistical Physics, by Rossler.

A&EP 434 Continuum Physics

A&EP 438 Computational Engineering Physics
Spring. 3 credits. Prerequisites: COM S 100, A&EP 321, 333, 355, 361, or equivalent, or permission of instructor; coregistration in 361 strongly recommended. Numerical computation (derivatives, integrals, differential equations, matrices, boundary-value problems, relaxation, Monte Carlo methods, etc.) will be introduced and applied to engineering physics problems that cannot be solved analytically (three-body problem, electrostatic fields, quantum energy levels, etc.). Computer programming required (in C or optionally C++, FORTRAN, or Pascal). Some prior exposure to programming assumed but no previous experience with C assumed.

A&EP 440 Quantum and Nonlinear Optics

A&EP 450 Introductory Solid State Physics (also PHYS 454)
Fall. 4 credits. Prerequisite: A&EP 361 or equivalent, core-enrollment in A&EP 423 or equivalent. An introduction to the physics of crystalline solids. Crystal structures, electronic states; lattice vibrations; metals, insulators and semiconductors. Computer simulations of the dynamics of electrons and ions in solids. Optical properties, magnetism, and superconductivity are covered as time allows. The majority of the course will address the foundations of the subject, but time is devoted to modern and/or technologically important topics such as quantum size effects. At the level of Introduction to Solid State Physics by Kittel, or Solid State Physics by Ashcroft and Mermin.

A&EP 470 Biophysical Methods (also BION 470)
Spring. 3 credits. Prerequisites: solid knowledge of basic physics and mathematics through the sophomore level; some knowledge of cellular biology helpful but not required. Letter grades only. An overview of the diversity of modern biophysical experimental techniques used in the study of biophysical systems at the cellular and molecular level. Topics covered will include methods that examine both structure and function of biological systems, with emphasis on the applications of these methods to biological membranes. The course format will include assigned literature reviews by the students on specific biophysics topics and individual student presentations on these topics. The course is intended for students of the engineering, physics, chemistry, and biological disciplines who seek an introduction to modern biophysical experimental methods.
A&EP 484 Introduction to Controlled Fusion: Principles and Technology (also ELE E 484, M&AE 459 and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 215, and 214, or equivalent background in electricity and magnetism and mechanics, and permission of instructor. Intended for seniors and graduate students. Offered once a year. For description, see NS&E 484.

A&EP 490 Independent Study in Engineering Physics
Fall, spring. Credit to be arranged. Laboratory or theoretical work in any branch of engineering physics under the direction of an instructor. The study can take a number of forms; for example, design of laboratory apparatus, performance of laboratory measurements, computer simulation or software developments, theoretical design and analysis. Details to be arranged with respective faculty member.

Spring. 3 credits. Prerequisites: A&EP 356, 361, 423, 450 (or equivalent). Directed at students who have had an introductory course in solid state physics at the level of Kittel. This course will concentrate on the application of the quantum mechanical theory of solid state physics to semiconductor materials, solid state electronic devices, solid state detectors and generators of electromagnetic radiation, superconducting devices and materials, the nonlinear optical properties of solids, ferromagnetic materials, nanoscale devices and mesoscopic quantum mechanical effects. The course will stress the basic, fundamental physics underlying the applications rather than the applications themselves. At the level of Introduction to Applied Solid State Physics by Dalven.

A&EP 606 Introduction to Plasma Physics (also ELE E 581)
Fall. 4 credits. Prerequisites: ELE E 303 or equivalent. For description, see ELE E 581.

A&EP 607 Basic Plasma Physics (also ELE E 582)
Spring. 4 credits. Prerequisites: ELE E 581 and A&EP 606. For description, see ELE E 582.

A&EP 623 Nuclear Reactor Engineering (also NS&E 633)
Fall. 4 credits. Prerequisite: introductory course in nuclear engineering. Offered on demand. K. B. Cady.

A&EP 661 Microcharacterization
Fall. 3 credits. Prerequisites: introductory three-semester physics sequence or an introductory course in modern physics. At the senior and graduate level. The basic physical principles underlying the many modern microanalytical techniques available for characterizing materials from volumes less than a cubic micron. Discussion centers on the physics of the interaction process by which the characterization is performed, the methodology used in performing the characterization, the advantages and limitations of each technique, and the instrumentation involved in each characterization method.

A&EP 662 Micro/Nano-fabrication and Processing
Spring. 3 credits. An introduction to the fundamentals of micro and nano-fabricating and patterning thin-film materials and surfaces, with emphasis on electronic materials, with emphasis on electronic and optical materials, micromechanics, and other applications. Vacuum and plasma thin-film deposition processes. Photon, electron, X-ray, and ion-beam lithography. Techniques for pattern replication by plasma and ion processes. Emphasis is on understanding the physics and materials science that define and limit the various processes. At the level of Brodie and Muray.

A&EP 751 M ENG Project
Fall, spring. 6-12 credits to be arranged. Required for candidates for the M.Eng. (Engineering Physics) degree. Independent study under the direction of a member of the university faculty. Students participate in an independent research project through work on a special problem related to their field of interest. A formal and complete research report is required.

A&EP 753 Special Topics Seminar in Applied Physics
Fall. 1 credit. Prerequisite: undergraduate physics. Required for candidates for the M.Eng. (Engineering Physics) degree and recommended for seniors in engineering physics. Special topics in applied science, with focus on areas of applied physics and engineering that are of current interest. Subjects chosen are researched in the library and presented in a seminar format by the students. Effort is made to integrate the subjects within selected subject areas such as atomic, biological, computational, optical, plasma, and solid-state physics, or microfabrication technology, as suggested by the students and coordinated by the instructor.

CHEMICAL ENGINEERING

CHEM 112 Introduction to Chemical Engineering (also ENGR 112)
Fall, spring. 3 credits. Limited to freshmen. T. M. Duncan, C. Cohen. This is a course in the Introduction to Engineering series. For description, see ENGR 112.

CHEM 120 Introduction to Biomedical Engineering (also ENGR 120)
Fall. 3 credits. Not offered fall 1999; next offered fall 2000. W. M. Saltzman. This is a course in the Introduction to Engineering series. For description, see ENGR 120.

CHEM 219 Mass and Energy Balances (also ENGR 219)
Fall. 3 credits. Corequisite: physical or organic chemistry or permission of instructor. K. H. Lee. For description, see ENGR 219.

CHEM 301 Nonresident Lectures
Spring. 1 credit. P. Clancy. Lecturers from industry and from selected departments of the university provide information to assist students in their postgraduate plans.

CHEM 313 Chemical Engineering Thermodynamics
Fall. 4 credits. Corequisite: physical chemistry. A. B. Anton. A survey of the first and second laws and their consequences for chemical systems. Thermodynamic properties of pure liquids, solids, and mixtures; phase and chemical reaction equilibrium; heat effects in batch and flow processes; power cycles and refrigeration.

CHEM 323 Fluid Mechanics
Fall. 3 credits. Prerequisites: CHEM 219 and engineering mathematics sequence. P. H. Steen. Fundamentals of fluid mechanics. Macroscopic and microscopic balances. Applications to problems involving viscous flow.

CHEM 324 Heat and Mass Transfer

CHEM 332 Analysis of Separation Processes
Spring. 4 credits. Prerequisites: CHEM 313 and 323. F. J. Clancy. Analysis of separation processes involving phase equilibria and mass transfer. Phase equilibria; binary and multicomponent distillation; liquid-liquid extraction; gas absorption, absorption, membrane separations.

CHEM 390 Reaction Kinetics and Reactor Design
Spring. 3 credits. Prerequisites: CHEM 313 and 323. D. L. Koch. A study of chemical reaction kinetics and principles of reactor design for chemical processes.

CHEM 391 Physical Chemistry II (also CHEM 391)
For description, see CHEM 391.

CHEM 432 Chemical Engineering Laboratory
Fall. 4 credits. Prerequisites: CHEM 323, 332, 333 and 390. K. E. Ackley and staff. Laboratory experiments in fluid dynamics, heat and mass transfer, kinetics, other operations. Correlation and interpretation of data. Technical report writing.

CHEM 462 Chemical Process Design
Spring. 4 credits. Prerequisite: CHEM 432. K. E. Ackley and staff. A consideration of process and economic alternatives in selected chemical processes; design and assessment.

CHEM 472 Feedback Control Systems
Fall. 3 credits. Prerequisites: CHEM 324 and 390, or permission of instructor. A. B. Anton. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root-locus and frequency response methods. (Lectures shared with M&AE 478 and ELE E 471.)
CHEME 480 Chemical Processing of Electronic Materials
Spring. 3 credits. A. B. Anton.
Introduction to chemical processing of semiconductor materials for the manufacture of microelectronic devices, with specific emphasis on thermodynamics, transport phenomena, and kinetics. Topics include semiconductor properties and behavior, microelectronic device operation, thermochemistry of deposition and etching reactions, vacuum transport, plasmas, PVD, oxidation, diffusion, CVD, and statistical process control.

[CHEME 481 Biomedical Engineering]
Spring. 3 credits. Prerequisite: CHEME 324 or equivalent or permission of instructor. Not offered 1999-2000; next offered 2000-2001. W. M. Saltzman.
Special topics in biomedical engineering, including cell separations, blood flow, design of artificial devices, biomaterials, image analysis, biological transport phenomena, pharmacokinetics and drug delivery, biomedical transducers (ECG and pacemakers), and analysis of physiological processes such as adhesion, mobility, secretion, and growth.

CHEME 490 Undergraduate Projects in Chemical Engineering
Fall, spring. Variable credit. Research or studies on special problems in chemical engineering.

CHEME 491 Undergraduate Teaching in Chemical Engineering
Fall, spring. 1 credit. T. M. Duncan and M. Ackley.
Methods of instruction in chemical engineering acquired through discussions with faculty and by assisting with the instruction of freshmen and sophomores.

CHEME 492 Research Principles and Practices
Spring. 1 credit. T. M. Duncan.
Introduces research procedures, including documenting and reporting research (writing and speaking), experimental design, data analysis, visual display of quantitative information, serendipity (capitalizing on accidents), inadvertent self-deception (recognizing and avoiding). Also includes social aspects of research, such as professional ethics, applying to graduate school, and graduate student life.

CHEME 520 Chemical, Polymer, Biomedical, and Electronic Materials Processing
Spring. 1-5 credits (1 credit per section).
520.1 An Overview of Chemical Processing
Introduction to chemical engineering design and analysis—mathematical modeling, graphical methods and dynamic scaling. Open to non-chemical engineers only.

520.2 Introduction to Biomedical Engineering
Meets concurrently with CHEME 481.

520.3 Introduction to Electronic Materials Processing
Meets concurrently with CHEME 480.

520.4 Introduction to Polymer Processing
1 credit. Feb. 25-Mar. 27. C. Cohen.
Overview and simple quantitative analyses of several plastic processes with an emphasis on the role of rheology in polymer processing.

520.5 Chemical Engineering Processing Units and Equipment
A hands-on survey of standard chemical processing equipment-structure and operation-with emphasis on trouble-shooting techniques.

CHEME 562 Managing Chemical Process Design
Fall. 1 or 2 credits. Prerequisite: CHEME 462. K. E. Ackley.
Guidance and evaluation of chemical process designs developed by teams of chemical engineers.

[CHEME 564 Design of Chemical Reactors]
Design, scale-up, and optimization of chemical reactors with allowance for heat and mass transfer and nonideal flow patterns. Homework problems feature analysis of published data for gas-solid, gas-liquid, and three-phase reaction systems.

CHEME 565 Design Project
Fall, spring. 3 or 6 credits. Required for students in the M.Eng. (Chemical) program.
Design study and economic evaluation of a chemical processing facility, alternative methods of manufacture, raw-material preparation, food processing, waste disposal, or some other aspect of chemical processing.

CHEME 572 Managing Business Development
Fall. 3 credits. A. M. Center.
A case study approach to introduce the typical fundamental factors driving a business venture, to examine how to develop implementation strategies for the venture and to learn the project management skills necessary to successfully implement the venture.

CHEME 590 Special Projects in Chemical Engineering
Fall, spring. Variable credit. Limited to graduate students.
Non-thesis research for studies on special problems in chemical engineering.

CHEME 605 Fundamentals in Biomedical Engineering I (also ENGRG 605)
Fall. 1-4 credits (1 credit per section).
Prerequisites: graduate standing in Engineering or Science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEME 481 or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.

For description, see ENGRG 605.

CHEME 606 Fundamentals in Biomedical Engineering II (also ENGRG 606)
Spring. 1-4 credits. Prerequisites: graduate standing in engineering or science; PHYS 213 and MATH 294 or equivalent. Undergraduates must have permission of instructor and have completed ABEN 454, CHEME 481 or M&AE 465. S-U grades optional for students not majoring or minoring in biomedical engineering.

For description, see ENGRG 606.

CHEME 640 Polymeric Materials
Fall. 3 credits. F. Rodriguez.
Chemistry and physics of the formation and characterization of polymers. Principles of fabrication.

CHEME 643 Introduction to Bioprocess Engineering
Fall. 3 credits. Prerequisite: CHEME 390 or permission of instructor. No prior background in the biological sciences required. M. L. Shuler.
A discussion of principles involved in using microorganisms, tissue cultures, and enzymes for processing. Application to food, fermentation, and pharmaceutical industries and to biological waste treatment.

CHEME 656 Separations Using Membranes or Porous Solids
Spring. 3 credits. Prerequisites: CHEME 324 and 332. P. Harriott.
Diffusion of small molecules in gases, liquids, and solids. Membrane separation processes including gas separation, pervaporation, reverse osmosis, and ultrafiltration. Purification of gases and liquids by adsorption, ion exchange, and chromatography.

CHEME 661 Air Pollution Control
Spring. 3 credits. F. Harriott.

CHEME 675 Synthetic Polymer Chemistry (also M&AE 671 and CHEM 671)
Fall. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor.
For description, see CHEM 671.

CHEME 711 Advanced Chemical Engineering Thermodynamics
Fall. 3 credits. Prerequisite: CHEME 313 or equivalent. P. Clancy.

CHEME 713 Chemical Kinetics and Dynamics
Spring. 3 credits. Prerequisite: CHEME 390 or equivalent. F. Escobedo.

CHEME 731 Advanced Fluid Mechanics and Heat Transfer
Fall. 3 credits. Prerequisites: CHEME 324 and 324 or equivalent. D. L. Koch.
Derivation of the equations of motion for Newtonian fluids. Low Reynolds number fluid dynamics, lubrication theory, inviscid fluid dynamics. Boundary layer theory. Convective and conductive heat transfer.
CHEM 732 Diffusion and Mass Transfer
Spring. 2 credits. Prerequisite: CHEM 731 or equivalent. P. H. Steen.
Conservation equations in multicomponent systems, irreversible thermodynamics, dispersion, and Brownian diffusion. Mass transfer for convective diffusion in liquids. Application to a variety of problems such as coagulation of aerosols, diffusion through films and membranes, liquid-liquid extraction, chemical vapor deposition, polymer rheology and diffusion, and reaction-diffusion systems.

CHEM 741 Selected Topics in Biological Engineering
Fall. 1 credit (may be repeated for credit). Prerequisite: CHEM 643 or permission of instructor. M. L. Shuler and W. M. Salzman.
Discussion of current topics and research in biochemical engineering for graduate students.

CHEM 745 Physical Polymer Science I
Fall. 3 credits. Co-requisite: CHEM 711 or equivalent. Offered alternate years. C. Cohen.

CHEM 751 Mathematical Methods of Chemical Engineering Analysis
Fall. 4 credits. A. B. Anton.
Application of advanced mathematical techniques to chemical engineering analysis. Mathematical modeling, scaling, regular and singular perturbations, multiple scales, asymptotic analysis, linear and nonlinear ordinary and partial differential equations, statistics, data analysis and curve fitting.

CHEM 753 Analysis of Nonlinear Systems: Stability, Bifurcation, and Continuation
Fall. 3 credits. Prerequisite: CHEM 751 or equivalent. Offered alternate years. P. H. Steen.

CHEM 790 Seminar
Fall, spring. 1 credit each term. General chemical engineering seminar required of all graduate students in the Field of Chemical Engineering.

CHEM 792 Principles and Practices of Graduate Research
Fall, spring. 1 credit. T. M. Duncan and staff.
A colloquium/discussion group series for first-year graduate students. Topics include the culture and responsibilities of graduate research and the professional community; the mechanics of conducting research (experimental design, data analysis, serendipity in research, avoiding self-deception), documenting research (lab notebooks, computer files), and reporting research (writing a technical paper and oral presentations).

CHEM 890 Thesis Research
Fall, spring. Variable credit. Thesis research for the M.S. degree in chemical engineering.

CHEM 990 Thesis Research
Fall, spring. Variable credit. Thesis research for the Ph.D. degree in chemical engineering.

CIVIL AND ENVIRONMENTAL ENGINEERING
Courses in the School of Civil and Environmental Engineering are offered in three broad mission areas: Civil Infrastructure, Environmental and Systems Engineering and Information Technology. Within each mission area there are several areas of specialization. The following are the course numbers and titles listed by specialization within each mission area. Some courses are listed in two or more mission areas because the course content is relevant to multiple areas. The School also offers a number of general courses that are not unique to one mission area. Full course descriptions follow in the subsequent section and are listed in numerical order.

General
CEE 113 Introduction to Environmental Systems (also ENGR 113) (F,3cr.)
CEE 116 Modern Structures (also ENGR 116) (F,3cr.)
CEE 241 Engineering Computation (also ENGRD 241) (F,S,3cr.)
CEE 304 Uncertainty Analysis in Engineering (F,3cr.)
CEE 308 Introduction to CAD (F,S,1cr.)
CEE 309 Special Topics in Civil and Environmental Engineering (F,S,3cr.)
CEE 323 Engineering Economics and Management (also ENGRG 323) (S,3cr.)
CEE 400 Senior Honors Thesis (F,3cr.)
CEE 401 Undergraduate Engineering Teaching in CEE (F,S,3cr.)

Civil Infrastructure
See also: CEE 116, CEE 241, CEE 304, CEE 308, CEE 503 and CEE 595
GeoEngineering
CEE 341 Introduction to Geotechnical Engineering (S,3cr.)
CEE 501/502 Design Project in Geotech/Structures (F,S,3cr.)
CEE 602 Civil Infrastructure Seminar (F,3cr.)
CEE 640 Foundation Engineering (F,3cr.)
CEE 641 Retaining Structures and Slopes (S,3cr.)
CEE 643 Pavement Engineering (F,S,3cr.)
CEE 644 Environmental Applications of Geotechnical Engineering (S,3cr.)
CEE 649 Special Topics in Geotechnical Engineering (F,S,3cr.)
CEE 740 Engineering Behavior of Soils (F,3cr.)
CEE 741 Rock Engineering (S,3cr.)
CEE 744 Advanced Foundation Engineering (S,2cr.)
CEE 745 Soil Dynamics (S,3cr.)
CEE 746 Embankment Dam Engineering (S,2cr.)
CEE 749 Research in Geotechnical Engineering (F,S,3cr.)
CEE 840 Thesis—Geotechnical Engineering (F,S,3cr.)

Structural Engineering
CEE 116 Modern Structures (F,3cr.)
CEE 371 Structural Behavior (S,4cr.)
CEE 372 Structural Analysis (F,S,4cr.)
CEE 473 Design of Concrete Structures (S,4cr.)
CEE 474 Design of Steel Structures (S,4cr.)
CEE 476 Civil Engineering Materials (F,4cr.)
CEE 501/502 Design Project in Geotech/Structures (F,S,3cr.)
CEE 602 Civil Infrastructure Seminar (F,S,1cr.)
CEE 671 Random Vibration (F,3cr.)
CEE 672 Fundamentals of Structural Mechanics (F,3cr.)
CEE 673 Advanced Structural Analysis (F,3cr.)
CEE 675 Concrete Materials and Construction (S,3cr.)
CEE 677 Stochastic Mechanics (F,3cr.)
CEE 770 Engineering Fracture Mechanics (F,3cr.)
CEE 772 Finite Element Analysis for Mechanical, Structural and Aerospace Applications (S,3cr.)
CEE 774 Advanced Structural Concrete (F,3cr.)
CEE 775 Structural Concrete Systems (S,3cr.)
CEE 776 Advanced Design of Metal Structures (F,3cr.)
CEE 777 Advanced Behavior of Metal Structures (S,3cr.)
CEE 779 Structural Dynamics and Earthquake Engineering (S,3cr.)
CEE 783 Civil and Environmental Engineering Materials Project (F,S,3cr.)
CEE 785 Research in Structural Engineering (F,S,3cr.)
CEE 786 Special Topics in Structural Engineering (F,S,3cr.)
CEE 880 Thesis—Structural Engineering (F,S,3cr.)

Environment
See also CEE 113, CEE 241, and CEE 304
Environmental Engineering
CEE 351 Environmental Quality Engineering (S,3cr.)
CEE 352 Water Supply Engineering (F,3cr.)
CEE 451 Microbiology for Environmental Engineering (F,3cr.)
CEE 453 Laboratory Research in Environmental Engineering (S,3cr.)
CEE 501/502 Design Project in Environmental Engineering (F,S,3cr.)
CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
CEE 653 Water Chemistry for Environmental Engineering (F,3cr.)
CEE 654 Aquatic Chemistry (S,3cr.)
CEE 655 Transport, Mixing and Transformation in the Environment (F,3cr.)
CEE 658 Sludge Treatment, Utilization, and Disposal (S,3cr.)
CEE 659 Environmental Quality Engineering Seminar (S,1cr.)

CEE 700 Research in Environmental Engineering (F,S,3cr.)
CEE 755 Physical/Chemical Processes (F,3cr.)
CEE 756 Biological Processes (S,3cr.)
CEE 757 Physical/Chemical Processes Laboratory I (F,2cr.)
CEE 758 Biological Processes Laboratory II (S,2cr.)
CEE 759 Special Topics in Environmental Engineering (F,3cr.)
CEE 850 Thesis—Environmental Engineering (F,S,3cr.)

Environmental Systems
See Systems Engineering and Information Technology mission areas for a listing of courses in Environmental and Public Systems.

Environmental Fluid Mechanics and Hydrology
CEE 331 Fluid Mechanics (F,S,4cr.)
CEE 332 Hydraulic Engineering (S,3cr.)
CEE 431 Geohydrology (also GEOL 445 and ABEN 471) (F,3cr.)
CEE 432 Hydrology (S,3cr.)
CEE 435 Coastal Engineering (S,3cr.)
CEE 501 Design Project in Fluid Mechanics and Hydrology (F,3cr.)
CEE 601 Water Resources and Environmental Engineering Seminar (F,1cr.)
CEE 630 Advanced Fluid Mechanics (F,3cr.)
CEE 631 Flow and Contaminant Transport Modeling in Ground Water (S,3cr.)
CEE 632 Hydrology (S,3cr.)
CEE 633 Flow in Porous Media and Ground Water (F,3cr.)
CEE 634 Boundary Layer Meteorology (S,3cr.)
CEE 635 Small and Finite Amplitude Water Waves (S,3cr.)
CEE 636 Environmental Fluid Mechanics (S,3cr.)
CEE 638 Hydraulics Seminar (S,1cr.)
CEE 639 Special Topics in Hydraulics (F,S,3cr.)
CEE 655 Transport, Mixing and Transformation in the Environment (F,3cr.)
CEE 732 Computational Hydraulics (F,3cr.)
CEE 735 Research in Hydraulics (F,S,3cr.)
CEE 830 Thesis—Fluid Mechanics and Hydrology (F,S,3cr.)

Systems Engineering and Information Technology
See also CEE 113, CEE 241, and CEE 304

Engineering Management
CEE 590 Project Management (F,S,4cr.)
CEE 591 Engineering Management Project (F,3cr.)
CEE 592 Engineering Management Project (S,3cr.)
CEE 593 Engineering Management Methods I: Data, Information, and Modeling (F,3cr.)
CEE 594 Engineering Management Methods II: Managing Uncertain Systems (S,3cr.)
CEE 595 Construction Planning and Operations (F,3cr.)
CEE 596 Current Topics in Construction Management (S,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 692 Special Topics in Engineering Management (F,S,3cr.)
CEE 694 Research in Engineering Management (F,S,3cr.)

Environmental and Public Systems
CEE 325 Engineering Economics and Management (F,S,3cr.)
CEE 423 Environmental Quality Systems Analysis (S,3cr.)
CEE 528 Public Political Economy (also ECON 569) (S,4cr.)
CEE 529 Water and Environmental Resources Problems and Policies (F,3cr.)
CEE 597 Risk Analysis and Management (S,3cr.)
CEE 620 Water Resources Systems I (F,3cr.)
CEE 621 Water Resources Systems II: Stochastic Hydrology (S,3cr.)
CEE 623 Environmental Systems Engineering (F,S,3cr.)
CEE 628 Environmental and Water Resources Systems Analysis Seminar (F,S,1cr.)
CEE 722 Environmental and Water Resources Systems Analysis Research (F,S,3cr.)
CEE 729 Special Topics in Environmental and Water Resources Systems Analysis (F,S,3cr.)
CEE 820 Thesis—Environmental and Water Resources Systems (F,S,3cr.)

Remote Sensing
CEE 411 Remote Sensing: Environmental Applications (also SCAS 411) (S,3cr.)
CEE 610 Remote Sensing Fundamentals (F,3cr.)
CEE 615 Digital Image Processing (S,3cr.)
CEE 617 Project—Remote Sensing (F,S,3cr.)
CEE 618 Special Topics—Remote Sensing (F,S,3cr.)
CEE 710 Research—Remote Sensing (F,S,3cr.)
CEE 810 Thesis—Remote Sensing (F,S,3cr.)

Systems Engineering
CEE 504 Applied Systems Engineering (also M&E 591, ELE E 595, OR&IE 512) (F,3cr.)
CEE 509 Heuristic Methods of Optimization (also COM S 574) (S,3cr.)
CEE 603 Systems Engineering and Information Technology Seminar (F,1cr.)

Transportation
CEE 361 Introduction to Transportation Engineering (S,3cr.)
CEE 462 Highway Engineering (also ABEN 491) (F,3cr.)
CEE 463 Transportation and Information Technology (F,3cr.)
CEE 464 Transportation Systems Design (S,3cr.)
CEE 561 Urban Transportation Planning and Modeling (F,3cr.)
CEE 663 Transportation Network Analysis (S,3cr.)
CEE 762 Transportation Research (F,S,3cr.)
CEE 764 Special Topics in Transportation (F,S,3cr.)
CEE 860 Thesis—Transportation Engineering (F,S,3cr.)

CEE 113 Introduction to Environmental Systems (also ENGRG 113)
Fall. 3 credits. Not open (without instructor’s permission) to upper-division engineering students. M. Weber-Shirk.
This is a course in the Introduction to Engineering series. For description, see ENGRG 113.

CEE 116 Modern Structures (also ENGRG 116)
Fall. 3 credits. A. R. Ingraffea.
This is a course in the Introduction to Engineering series. For description, see ENGRG 116.

CEE 241 Engineering Computation (also ENGRD 241)
Fall, spring. 3 credits. Prerequisites: COM S 100 and MATH 293. Corequisites: MATH 294. W. Phlipot.
For description, see ENGRD 241.

CEE 304 Uncertainty Analysis in Engineering
Fall. 4 credits. CEE Engineering Co-op students may substitute summer ENGRD 270. Prerequisite: first-year calculus. J. R. Stedinger.
Introduction to probability theory and statistical techniques, with examples from civil, environmental, agricultural, and related disciplines. Course covers data presentation, commonly used probability distributions describing natural phenomena and material properties, parameter estimation, confidence intervals, hypothesis testing, simple linear regression, and nonparametric statistics. Examples include structural reliability, windspeed/flood distributions, and models of vehicle arrivals.

CEE 309 Special Topics in Civil and Environmental Engineering
Fall, spring. 1-6 credits. Staff.
Supervised study by individuals or groups of upper-division students on an undergraduate research project or on specialized topics not covered in regular courses.

CEE 323 Engineering Economics and Management (also ENGRG 323)
Spring; usually offered in summer for Engineering Co-op Program. 3 credits. Primarily for juniors and seniors. D. P. Loucks.
For description, see ENGRG 323.

CEE 331 Fluid Mechanics
Fall; usually offered in summer for Engineering Co-op Program. 4 credits.
Prerequisite: ENGRD 202 (may be taken concurrently). P. L. F. Liu.
Hydrostatics, the basic equations of fluid flow, potential flow and dynamic pressure forces, viscous flow and shear forces, steady pipe flow, turbulence, dimensional analysis, open-channel flow. Elements of design in water supply systems, canals, and other hydraulic schemes.

[CEE 332 Hydraulic Engineering]
Application of fluid-mechanical principles to problems of engineering practice and design: hydraulic machinery, water-distribution systems, open-channel design, river engineering, groundwater flow, and pollutant dispersal. Lectures supplemented by laboratory work and a design project.

[CEE 341 Introduction to Geotechnical Engineering]
Spring. 4 credits. Prerequisite: ENGRD 202. H. E. Stewart.

[CEE 351 Environmental Quality Engineering]
Spring. 3 credits. J. J. Bisogni.
Introduction to engineering aspects of environmental quality control. Quality parameters, criteria, and standards for water and wastewater. Elementary analysis pertaining to the modeling of pollutant reactions in natural systems, and introduction to design of unit processes for water and wastewater treatment.

[CEE 352 Water Supply Engineering]
Fall. 3 credits. Prerequisites: CEE 351 and permission for concurrent enrollment in CEE 451 or BIOMI 290. R. I. Dick.

[CEE 361 Introduction to Transportation Engineering]
Spring: usually offered in summer for Engineering Co-op Program. 3 credits. A. H. Meyburg.
Introduction to technological, economic, and social aspects of transportation. Emphasis on design and functioning of transportation systems and their components. Supply-demand interactions; system planning, design, and management; traffic flow and control interection and network analysis. Institutional and energy issues; environmental impacts.

[CEE 371 Structural Behavior]
Spring. 4 credits. Prerequisite: ENGRD 202. A. R. Ingraffea.
Fundamental concepts of structural engineering behavior, analysis, and design. Loads, structural materials, structural form, statically determinate analysis, approximate analysis of indeterminate systems. Use of interactive graphical analysis programs. Fundamentals of behavior of steel and concrete members. Introduction to limit states design.

[CEE 372 Structural Analysis]
Fall: usually offered in summer for Engineering Co-op Program. 4 credits. Prerequisite: CEE 371. S. Billington.

[CEE 400 Senior Honors Thesis]
Fall, spring. 1-6 credits. Staff.
Available to students admitted to the CEE Honors Program. Supervised research, study, and/or project work resulting in a written report or honors thesis.

[CEE 401 Undergraduate Engineering Teaching in CEE]
Fall. 3 credits. Prerequisite: permission of instructor. Staff.
Methods of instruction developed through discussions with faculty and by assisting with the instruction of undergraduates under the supervision of faculty.

[CEE 411 Remote Sensing: Resource Inventory Methods (also SCAS 411)]
Spring. 3 credits. Prerequisite: permission of instructor. S. C. DeGloria.
For description, see SCAS 411.

[CEE 423 Environmental Quality Systems Analysis]
Spring. 3 credits. Prerequisites: MATH 294 and systems (CEE 323). Intended for undergraduates who have not taken OR&IE 320 or ABEN 475. Most lectures concurrent with CEE 623. Not offered 1999-2000. C. A. Shoemaker.
Applications of optimization, simulation methods, and uncertainty analysis to the design and operation of facilities for managing the quality of surface and ground water. See CEE 623 for a description of environmental applications. CEE 423 students do additional work on optimization fundamentals and do not do the main CEE 623 design project.

[CEE 431 Geohydrology (also GEOL 445 and ABEN 471)]
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles.
Intermediate-level study of aquifer geology, groundwater flow, and related design factors. Includes description and properties of natural aquifers, ground water hydraulics, soil water, and solute transport.

[CEE 432 Hydrology]
Spring. 3 credits. Prerequisite: CEE 331.
Introduction to hydrology as a description of the water cycle and the role of water in the natural environment, and other issues for environmental engineers. See description for CEE 632.1

[CEE 435 Coastal Engineering]
Spring. 4 credits. Prerequisite: CEE 331. P. L.-F. Liu.
Introduction to water wave phenomena, including wave generation, shoaling, refraction, diffraction, and breaking. Applications of wave theories to engineering design problems such as forces on coastal structures and beach erosion in coastal zones. Lectures supplemented by four laboratory assignments and a design project.

[CEE 451 Microbiology for Environmental Engineering]
Fall. 3 credits. Prerequisite: two semesters of college chemistry. J. M. Gossett.
An introduction to fundamental aspects of microbiology, organic chemistry, and biochemistry pertinent to environmental engineering. Topics include nomenclature and principal reactions of organic compounds, characteristics of bacteria, fungi, algae, protozoa and viruses relevant to water and wastewater; pathogen, disease, and immunity; environmental influences on microorganisms; bioremediation; enzymes and metabolism; microbial genetics, and microbial ecology. This is an introductory course; consequently, it is inappropriate for those who have taken BIOMI 290 or equivalent.

[CEE 453 Laboratory Research in Environmental Engineering]
Spring. 3 credits. Prerequisites: CEE 351 or permission of instructor. M. L. Weber-Shirk.
Laboratory investigations of reactor flow characteristics, acid rain/lake chemistry, contaminated soil-site assessment, risk assessment, and remediation; pollutant dispersion/transport in rivers, drinking water filtration for pathogen removal, oxygen sag in rivers, and biodegradation in landfills. Design of laboratory experiments, development of laboratory methods, and use of experimental data are emphasized. See www.cce.comell.edu/ceed5/ for more information.

[CEE 462 Highway Engineering (also ABEN 491)]
Fall. 3 credits. Prerequisites: junior standing in engineering, fluid mechanics, and soil mechanics (may be taken concurrently). L. H. Irwin.
For description, see ABEN 491.

[CEE 463 Transportation and Information Technology]
Fall. 3 credits. L. K. Nozik.
Improvements in the utilization of existing facilities has become an important objective in transportation planning. This course examines the role of computer and telecommunications technologies to achieve these improvements. Specific attention is focused on the development of analytical tools to evaluate the benefits of inclusion of these technologies in transportation systems.

[CEE 464 Transportation Systems Design]
Spring. 3 credits. Prerequisite: CEE 361. Staff.
Advanced techniques for physical and operational design of transportation systems, including analytical modeling techniques underlying design criteria: Evaluation of alternative designs. Management and operating policies, including investment strategies. Facility location decisions, networks, and passenger and freight terminals.

[CEE 473 Design of Concrete Structures]
Spring. 4 credits. Corequisites: CEE 372 or permission of instructor. S. Billington.
Behavior and design of reinforced concrete and structures. Discussion of how forces are transferred through elements of building system. Semester project requiring the design of a reinforced concrete structure.
CEE 474 Design of Steel Structures
Spring. 4 credits. Prerequisite: CEE 372 or permission of instructor. T. Pekoz. Behavior and design of steel members, connections, and structures. Discussion of structural systems for buildings and bridges.

CEE 475 Civil Engineering Materials
Fall. 4 credits. Prerequisites: ENGRD 202, ENGRD 261, PHYS 214 and CEE 371 (CEE 371 may be taken concurrently). P. Petrina. Mechanical properties of concrete, metals, masonry, plastic, wood, and other structural materials. Stress-strain behavior and failure criteria. Nondestructive and destructive testing techniques for the evaluation of structures and the quality control of materials. Laboratory experiments.

CEE 501 Civil and Environmental Engineering Design Project I
Fall. 3 credits. Required for students in the M.Eng. (Civil) program. Staff. Design of major civil engineering project. Planning and preliminary design in fall term; final design in January intersession (CEE 502).

CEE 501 Design Project In Environmental Fluid Mechanics and Hydology
Fall, spring. 3 credits. Required for students in the M.Eng. (Civil) program. Staff. Design of major fluid mechanics/hydology project.

Design Project in Environmental Engineering
Fall. 3 credits. Required for students in the M.Eng. (Civil) program. R. I. Dick. Design of a major environmental engineering project.

Design Project in Environmental Systems
Fall. 3 credits. Required for students in the M.Eng. (Civil) program. D. P. Loucks. Design of a major environmental systems project.

CEE 502 Civil and Environmental Engineering Design Project II

CEE 504 Applied Systems Engineering (also M&E 591, ELE E 595, OR&IE 512)
Fall. 3 credits. Permission of instructor. Staff. For description, see M&E 591.

CEE 509 Heuristic Methods for Optimization (also COM S 574)
Spring. 3 or 4 credits. Prerequisites: CEE/ENGRD 241 or COM/S/ENGRD 211 or 212 or 222 or graduate standing, or permission of instructor. This course will describe a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, and combinatorial optimization. It will be aimed at developing and gaining a sound understanding of the main optimization and model fitting methods. Applications will be discussed in a range of areas including some of the following: artificial intelligence, scheduling, economics, water quality protection, telecommunications, circuit design, engineering mechanics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation will be discussed in comparison to other optimization algorithms.

CEE 520 Public Political Economy (also ECON 539)
Spring. 4 credits. R. E. Schulter. For description, see ECON 539.

CEE 529 Water and Environmental Resources Problems and Policies
Fall. 3 credits. Prerequisite: permission of instructor. D. J. Allen and L. B. Dworsky. Evaluation, appraisal, and prospects for problems involving water and environmental resources. Organization and public policies in the federal system.

CEE 561 Urban Transportation Planning and Modeling
Fall. 3 credits. Prerequisites: CEE 361, statistics and probability, or permission of instructor. Designed primarily for graduate engineering and non-engineering students but open to qualified upperclass students. Prerequisite: permission of instructor. D. J. Allee and L. B. Dworsky. This course is intended to expose interested students to modern transportation planning practice and to the analytical tools necessary to engage in this field. Fieldwork will include surveys of passenger transportation in the urban context. The course describes the legislative, political, and economic contexts of urban transportation planning. It presents the travel demand estimation process and the associated models and approaches. Finally, it evaluates the forecasting results and assesses energy and environmental impacts.

CEE 590 Project Management
Fall, spring. 4 credits. Prerequisite: permission of instructor. M. A. Turnquist and P. J. Wayno. An introduction to the work and skills of management, especially for the management of projects. Planning, organizing, communicating, scheduling, controlling, and correcting will be covered in combination of lectures, readings, outside assignments, and in-class role-playing exercises.

CEE 591 Engineering Management Project
Fall. 3 credits. Prerequisite: permission of instructor. Staff. An intensive evaluation of the management aspects of a major engineering project or system. Most students will work on a large group project in the area of project management, but students may also work singly or in small groups on an engineering management topic of special interest to them.

CEE 592 Engineering Management Project
Spring. 3 credits. Prerequisite: permission of instructor. Staff. A continuation of CEE 591.

CEE 593 Engineering Management Methods I: Data, Information, and Modeling
Fall. 3 credits. Prerequisites: OR&IE 270 or CEE 304 or equivalent. D. P. Loucks. Methods for managing data and transforming data into information. Modeling as a means to synthesize information into knowledge that can form the basis for decisions and actions. Application of statistical methods and optimization to managerial problems in project scheduling, quality control, forecasting, and resource allocation.

CEE 594 Engineering Management Methods II: Managing Uncertain Systems
Spring. 3 credits. Prerequisite: CEE 593 or permission of instructor. L. K. Nozick. Modeling and managing systems in which uncertainty is a major determinant of system behavior. Systems which are subject to breakdown, deterioration and queuing. Simulation as a tool for analyzing uncertain systems. Projects and case studies to illustrate application of the methods.

CEE 595 Construction Planning and Operations
Fall. 3 credits. Staff. A course on the fundamentals of construction planning, organization of the worksite, construction planning, scheduling, and cost estimating, bidding, temporary structures, applications of computer methods, and the relationships among owners, designers, contractors, suppliers, and developers.

CEE 596 Current Topics in Construction Management
Spring. 3 credits. Prerequisite: CEE 595 or equivalent. Staff. This course will focus on recent trends in the professional management of construction projects and organizations. It will draw from literature, practicing construction managers, software producers, and research. The course seeks to identify and evaluate trends and prepare students for management positions in engineering design and construction.

CEE 597 Risk Analysis and Management
Spring. 3 credits. Prerequisite: CEE 304 or OR&IE 270 or equivalent. J. R. Stedinger. Course develops a working knowledge of risk terminology and reliability engineering, analytic tools and models used to analyze environmental and technological risks, and social and psychological risk issues. Discussions address life risks in the U.S., transportation risks, industrial accidents, waste incineration, air pollution modeling, public health, regulatory policy, risk communication, and risk management.

CEE 601 Water Resources and Environmental Engineering Seminar
Fall. 1 credit. Presentation of topics of current interest.

CEE 602 Civil Infrastructure Seminar
Fall, spring. 1 credit. Presentation of topics of current interest.

CEE 603 Systems Engineering and Information Technology Seminar
Fall. 1 credit. Presentation of topics of current interest.

CEE 610 Remote Sensing Fundamentals (also SCAS 660)
Fall. 3 credits. Prerequisite: permission of instructor. W. D. Phelps. An introduction to equipment and methods used in obtaining information about earth resources and the environment from aircraft or satellite. Coverage includes sensors, sensor and ground-data acquisition, data analysis and interpretation; and project design.
CEE 615 Digital Image Processing  
Spring. 3 credits. Prerequisites: facility with algebra and trigonometry (e.g., MATH 105) and statistics (e.g., CEE 304 or ARME 310), or permission of instructor.  
W. D. Philpot.  
An introduction to digital image-processing concepts and techniques, with emphasis on remote-sensing applications. Topics include image acquisition, enhancement procedures, spatial and spectral feature extraction, and classification. Assignments will require the use of image-processing software and graphics.

CEE 617 Project—Remote Sensing  
On demand. 1–6 credits. W. D. Philpot.  
Students may elect to undertake a project in remote sensing. The work is supervised by a professor in this subject area.

CEE 618 Special Topics—Remote Sensing  
On demand. 1–6 credits. W. D. Philpot.  
Supervised study in small groups on one or more special topics not covered in the regular courses. Special topics may be of a theoretical or applied nature.

CEE 620 Water-Resources Systems I  
Fall. 3 credits. Prerequisite: CEE 323 or equivalent. D. P. Loucks.  
Development and application of deterministic and stochastic optimization and simulation models for water-resources planning and management. River-basin modeling, including reservoir design and operation, irrigation planning and operation, hydropower-capacity development, flow augmentation, flood control and protection, and water-quality prediction and control.

CEE 621 Water-Resources Systems II: Stochastic Hydrology  
Spring. 3 credits. Prerequisites: CEE 304 and CEE 320 or permission of instructor. J. R. Stedinger.  
Course examines statistical, time series, and stochastic optimization methods used to address water resources planning and management problems involving uncertainty and hydrologic inputs. Statistical issues include maximum likelihood, and moments estimators; censored datasets and historical information; probability plotting, Bayesian inference, regionalization methods; ARMA models; multivariate stochastic streamflow models, stochastic simulation; and stochastic reservoir-operation optimization models.

CEE 628 Environmental and Water Resources Systems Analysis Seminar  
Spring. 1 credit. Prerequisite: permission of instructor. C. A. Shoemaker.  
Graduate students and faculty members give informal lectures on various topics related to ongoing research in environmental or water resources systems planning and analysis.

CEE 630 Advanced Fluid Mechanics  
Fall. 3 credits. Prerequisite: CEE 351. Not offered 1999–2000. Staff.  
Introduction to tensor analysis, conservation of mass, momentum, and energy. Rigorous treatment includes study of exact solutions of Navier-Stokes equations. Asymptotic approximations at low and high Reynolds numbers, similarity and modeling, laminar diffusion of momentum, mass and heat.

CEE 631 Flow and Contaminant Transport Modeling in Groundwater  
Spring. 3 credits. Prerequisites: MATH 294 or equivalent, ENGRD 241 or experience in numerical methods and programming, and elementary fluid mechanics. P. L.-F. Liu.  

CEE 632 Hydrology  

CEE 633 Flow in Porous Media and Groundwater  
Fall. 3 credits. Prerequisite: CEE 351. W. H. Brutsaert.  
Fluid mechanics and equations of single-phase and multiphase flow; methods of solution. Applications involve aquifer hydraulics, pumping wells, rainfall, infiltration, groundwater recharge, land subsidence, seawater intrusion, miscible displacement; transient seepage in unsaturated materials.

CEE 634 Boundary Layer Meteorology  
Fall. 3 credits. Prerequisite: CEE 351 or permission of instructor. Not offered 1999–2000. W. H. Brutsaert.  
Physical processes in the lower atmospheric environment: turbulent transport in the atmospheric boundary layer, surface-air interaction, disturbed boundary layers, radiation. Applications include sensible and latent heat transfer from lakes, plant canopy flow and evapotranspiration, turbulent diffusion from chimneys and cooling towers, and related design issues.

CEE 635 Small and Finite Amplitude Water Waves  
Review of linear and nonlinear theories of ocean waves. Discussions on the applicability of different wave theories to engineering problems.

CEE 636 Environmental Fluid Mechanics  
Spring. 3 credits. Prerequisite: CEE 655 or permission of instructor. Not offered 1999–2000. E. A. Cowen.  

CEE 638 Hydraulics Seminar  
Spring. 1 credit. Open to undergraduates and graduates and required of graduate students majoring in hydraulics or hydraulic engineering. P. L.-F. Liu.  
Topics of current interest in fluid mechanics, hydraulic engineering, and hydrology.

CEE 639 Special Topics in Hydraulics  
On demand. 1–6 credits. Staff.  
Special topics in fluid mechanics, hydraulic engineering, or hydrology.

CEE 640 Foundation Engineering  
Fall. 3 credits. Prerequisite: CEE 341. F. H. Kulhawy.  

CEE 641 Retaining Structures and Slopes  
Spring. 3 credits. Prerequisite: CEE 341. Staff.  

CEE 643 Pavement Engineering (also ABEN 692)  
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering. L. H. Irwin.  
For description, see ABEN 692.

CEE 644 Environmental Applications of Geotechnical Engineering  
Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O'Rourke.  
Principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.
CEE 649 Special Topics in Geotechnical Engineering
On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 653 Water Chemistry for Environmental Engineering
Fall. 3 credits. Prerequisite: one semester of college chemistry or permission of instructor. L. W. Lion.
Principles of chemistry applicable to the understanding, design, and control of water and wastewater treatment processes and to reactions in receiving waters. Topics include chemical thermodynamics, reaction kinetics, acid-base equilibria, mineral precipitation/dissolution, and electrochemistry. The focus of the course is on the mathematical description of chemical reactions relevant to engineered processes and natural systems, and the numerical or graphical solution of these problems.

CEE 654 Aquatic Chemistry
Concepts of chemical equilibria applied to natural aquatic systems. Topics include acid-base reactions, buffer systems, mineral precipitation, coordination and redox reactions, pH–pOH diagrams, adsorption phenomena, humic acid chemistry, and chemical-equilibria computational techniques. In-depth coverage of topics covered in CEE 653.

CEE 655 Transport, Mixing and Transformation in the Environment
Fall. 3 credits. Prerequisite: CEE 331. E. A. Cowen.
Application of fluid mechanics to problems of transport, mixing, and transformation in the environment. Introduction to advective, diffusive, and dispersive processes in the environment. Boundary interactions: air-water and sediment-water processes. Introduction to chemical and biochemical transformation processes. Applications to transport, mixing, and transformation in rivers, lakes, and coastal waters.

CEE 658 Sludge Treatment, Utilization, and Disposal
Spring. 3 credits. Prerequisite: CEE 352 or permission of instructor. R. I. Dick.
Analysis of the quantity and quality of residues produced from municipal and industrial water-supply and pollution-control facilities and other residue-producing processes. Alternatives for reclaiming or disposing of hazardous and nonhazardous residues. Performance of treatment processes for altering sludge properties prior to reuse or ultimate ultimate disposal, considerations in selecting and integrating of management processes.

CEE 659 Environmental Quality Engineering Seminar
Spring. 1 credit. Prerequisite: enrollment as graduate student in environmental engineering. Staff.
Presentation and discussion of current research and design projects in environmental engineering.

CEE 663 Transportation Network Analysis
Spring. 3 credits. Prerequisites: CEE 463 or CEE 464, or permission of instructor. M. A. Turkue.
Topics in flow prediction and estimation for transportation networks, including equilibrium assignment, stochastic network loading, trip table estimation, dynamic vehicle allocation and routing/scheduling models.

CEE 671 Random Vibration
Fall. 3 credits. Prerequisites: M&amp;AE 326, CEE 779, and OR&amp;IE 260; or equivalent and permission of the instructor. Not offered 1999–2000. M. D. Grigoriu.

CEE 672 Fundamentals of Structural Mechanics
Fall. 3 credits. M. D. Grigoriu.
Theory of elasticity, energy principles, plate flexure, failure theories for structural design, beams on elastic foundation, finite-difference method, plate theory, introduction to finite-element method.

CEE 673 Advanced Structural Analysis
Fall. 3 credits. Prerequisites: CEE 372 and computer programming. J. F. Abel.
Matrix analysis of structures, computer programming of displacement (stiffness) method, use of interactive graphical analysis programs, solution methods, errors and accuracy, special analysis procedures, virtual work in matrix analysis, and introduction to nonlinear analysis and finite-element methods.

CEE 675 Concrete Materials and Construction
Spring. 3 credits. Prerequisite: CEE 376 or equivalent. Offered alternate years. Not offered 1999–2000. K. C. Hover.
Materials science, structural engineering, and construction technology involved in the materials aspects of the use of concrete. Cement chemistry and physics, mix design, admixtures, engineering properties, testing of fresh and hardened concrete, and the effects of construction techniques on material behavior.

CEE 677 Stochastic Mechanics

CEE 692 Special Topics in Engineering Management
On demand. 1–6 credits. Staff.
Individually supervised study of one or more specialized topics not covered in regular courses.

CEE 694 Research in Engineering Management
On demand. 1–6 credits. Staff.
The student may select an area of investigation in engineering management. Results should be submitted to the instructor in charge of the form of a research report.

CEE 710 Research—Remote Sensing
On demand. 1–6 credits. W. D. Philpot.
For students who want to study one particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design procedures.

CEE 722 Environmental and Water Resources Systems Analysis Research
On demand. 1–6 credits. Prerequisite: permission of instructor. Preparation must be suitable to the investigation to be undertaken. Staff.
Investigations of particular environmental or water systems problems.

CEE 729 Special Topics in Environmental or Water Resources Systems Analysis
On demand. 1–6 credits. Staff.
Supervised study, by individuals or small groups, of one or more specialized topics not covered in regular courses.

CEE 732 Computational Hydraulics
Fall. 3 credits. Prerequisite: elementary fluid mechanics or permission of instructor. Offered alternate years. Not offered 1999–2000. Staff.

CEE 735 Research in Hydraulics
On demand. 1–6 credits. Staff.
The student may select an area of investigation in fluid mechanics, hydraulic engineering, or hydrology. The work may be either experimental or theoretical in nature. Results should be submitted to the instructor in charge of the form of a research report.

CEE 740 Engineering Behavior of Soils
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart.

CEE 741 Rock Engineering
Spring. 3 credits. Prerequisite: CEE 341 or permission of instructor. Recommended: introductory geology. Not offered 1999–2000. F. H. Kilpawy.

CEE 744 Advanced Foundation Engineering
A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.
[CEE 745] Soil Dynamics
Spring. 3 credits. Prerequisite: permission of instructor. Not offered 1999–2000.
Study of soil behavior under dynamic loading conditions. Foundation design for vibratory loadings. Introductory earthquake engineering including field and laboratory techniques for determining dynamic soil properties and liquefaction potential. Design of embankments and retaining structures under dynamic loading conditions.

[CEE 746] Embankment Dam Engineering

[CEE 749] Research in Geotechnical Engineering
On demand. 1–6 credits. Staff. For the student who wishes to pursue a particular geotechnical topic in considerable depth.

[CEE 750] Research in Environmental Engineering
On demand. 1–6 credits. Staff. For the student who wishes to study a particular area in depth. The work may take the form of laboratory investigation, field study, theoretical analysis, or development of design and analysis procedures.

[CEE 755] Physical/Chemical Processes
Fall. 3 credits. Prerequisite: previous or concurrent enrollment in CEE 653 or permission of instructor. J. J. Bisogni. Theoretical and engineering aspects of chemical and physical phenomena and processes applicable to the removal of impurities from water, wastewater, and industrial wastes and to their transformation in the environment. Analysis and design of treatment processes and systems.

[CEE 756] Biological Processes Laboratory I
Fall. 2 credits. Prerequisite: concurrent enrollment in CEE 655 and CEE 755. J. J. Bisogni. Laboratory studies of aquatic chemistry and physical/chemical processes of environmental engineering. Topics include gravimetric analyses; acids/bases; alkalinity; gas chromatography; UV-visible and atomic absorption spectrophotometry; adsorption; filtration; ion exchange, gas transfer, sedimentation, characterization of reactor mixing regimes, and coagulation.

[CEE 758] Biological Processes Laboratory II
Spring. 2 credits. Prerequisite: concurrent enrollment in CEE 756. J. M. Gossett. Laboratory studies of microbiological phenomena and environmental engineering processes. Topics include microscopy, biochemical and chemical oxygen demand, biological treatability studies, enumeration of bacteria.

[CEE 759] Special Topics in Environmental Engineering
On demand. 1–6 credits. Staff. Supervised study in special topics not covered in formal courses.

[CEE 762] Transportation Research
On demand. 1–6 credits. Staff. In-depth investigation of a particular transportation planning or engineering problem mutually agreed upon between the student and one or more faculty members.

[CEE 764] Special Topics in Transportation
On demand. 1–6 credits. Staff. Advanced subject matter not covered in depth in other regular courses.

[CEE 770] Engineering Fracture Mechanics

[CEE 771] Finite Element Analysis (also M&AE 660 and T&AM 666)
Spring. 3 credits. Prerequisites: T&AM 653 or equivalent. Staff. For description, see M&AE 680.

[CEE 773] Structural Reliability
Fall. 3 credits. Prerequisite: permission of instructor. Offered alternate years. M. D. Grigoriu. Review of probability theory, practical measures for structural reliability, second-moment reliability indices, probability models for strength and loads, probability-based design codes, reliability of structural systems, imperfect-performance-sensitive structures, fatigue, stochastic finite-element techniques, elementary concepts of probabilistic fracture mechanics.

[CEE 774] Advanced Structural Concrete
Fall. 3 credits. Prerequisite: undergraduate course in concrete structures. S. Billington. Behavior of structural concrete focusing on how behavior is modeled and transferred into design tools. Discussion of approaches to structural concrete design and specific design tools. Topics include design codes, anisotropies, material properties, prestressing, serviceability, ductility enhancement and plasticity methods including strut and tie modeling.

[CEE 775] Structural Concrete Systems
Spring. 3 credits. Prerequisites: CEE 774 or equivalent. S. Billington. Behavior and design of structural concrete building and bridge systems. Modeling techniques for the material scale, the structural component scale and the structural system scale including frame analysis, finite element analysis and strut & tie modeling. Topics include slab, wall and frame systems, box girder bridge systems, and precast concrete.

[CEE 776] Advanced Design of Metal Structures
Fall. 3 credits. Prerequisite: CEE 374 or equivalent. T. Pekoz. Preliminary design of structural systems. Behavior and design of members and connections. Behavior and computer-aided design of building frames.

[CEE 777] Advanced Behavior of Metal Structures

[CEE 778] Structural Dynamics and Earthquake Engineering
Spring. 3 credits. Prerequisites: M. D. Grigoriu. Modal analysis, numerical methods, and frequency-domain analysis. Introduction to earthquake-resistant design.

[CEE 783] Civil and Environmental Engineering Materials Project
On demand. 1–3 credits. Staff. Individual projects or reading and study assignments involving engineering materials.

[CEE 785] Research in Structural Engineering
On demand. 1–6 credits. Staff. Pursuit of a branch of structural engineering beyond what is covered in regular courses. Theoretical or experimental investigation of suitable problems.

[CEE 786] Special Topics in Structural Engineering
On demand. 1–6 credits. Staff. Individually supervised study or independent design or research in specialized topics not covered in regular courses. Occasional offering of such special courses as Shell Theory and Design, and Advanced Topics in Finite Element Analysis.

Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. W. D. Philpot. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.
CEE 630 Thesis—Fluid Mechanics and Hydrology  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 640 Thesis—Geotechnical Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 650 Thesis—Environmental Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 660 Thesis—Transportation Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 680 Thesis—Structural Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 341 Introduction to Geotechnical Engineering  

CEE 640 Foundation Engineering  

CEE 641 Retaining Structures and Slopes  
Spring. 3 credits. Prerequisite: CEE 341. Staff. Earth pressure theories. Design of rigid, flexible, braced, tied-back, slurry, and reinforced soil structures. Stability of excavation, cut, and natural slopes. Design problems stressing application of coursework material under field conditions of engineering practice.

CEE 642 Pavement Engineering (also ABEN 692)  
Spring. 4 credits. Limited to engineering seniors and graduate students. Prerequisite: one introductory course in soil mechanics or highway engineering. L. H. Irwin. For description, see ABEN 692.

CEE 644 Environmental Applications of Geotechnical Engineering  
Spring. 3 credits. Prerequisite: CEE 341 or equivalent. T. D. O’Rourke. Principles of hydrogeology, contaminant migration, and remediation technologies related to geotechnical and environmental engineering. Emphasis on environmental site assessment, site feasibility studies, selection of remediation procedures, and engineered landfills. Design problems are based on real projects and involve visits from practicing engineers.

CEE 649 Special Topics in Geotechnical Engineering  
On demand. 1–6 credits. Staff. Supervised study of special topics not covered in the formal courses.

CEE 740 Engineering Behavior of Soils  
Fall. 3 credits. Prerequisite: CEE 341. H. E. Stewart. Detailed study of the physicochemical nature of soil. Stress states due to geostatic loading and stress-history effects. In-depth evaluation of stress-strain-strength, compressibility, and hydraulic conductivity of natural soils. Field-testing methods for determining properties based on laboratory testing.

CEE 741 Rock Engineering  

CEE 744 Advanced Foundation Engineering  
Spring. 2 credits. Prerequisite: CEE 640. Not offered 1999–2000. F. H. Kulhawy. A continuation of CEE 640, with detailed emphasis on special topics in soil-structure interaction. Typical topics include lateral and pullout loading of deep foundations, pile group behavior, foundations for offshore structures, foundations for special structures.

CEE 745 Soil Dynamics  

CEE 746 Embankment Dam Engineering  

CEE 749 Research in Geotechnical Engineering  
On demand. 1–6 credits. Staff. For the student who wants to pursue a particular geotechnical topic in considerable depth.

CEE 840 Thesis—Geotechnical Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 830 Thesis—Fluid Mechanics and Hydrology  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 841 Thesis—Geotechnical Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 860 Thesis—Transportation Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

CEE 880 Thesis—Structural Engineering  
Fall, spring. 1–12 credits. Students must register for credit with the professor at the start of each term. Staff. A thesis research topic is selected by the student with the advice of the faculty member in charge and is pursued either independently or in conjunction with others working on the same topic.

COM S 099 Fundamental Programming Concepts  
Fall, summer. 2 credits. No prerequisites. S-U grades only. Credit cannot be applied toward the Engineering degree. This course is designed for students who intend to take COM S 100 and who need a programing experience. The subject of the course is programming, not a particular programming language. The programming language used is Java. Students with previous programming experience should not take this course.

COM S 100 Introduction to Computer Programming  
Fall, spring, summer. 4 credits. An introduction to elementary computer programming concepts. Emphasis is on techniques of problem analysis and the development of algorithms and programs. The subject of the course is programming, not a particular programming language. The principal programming language is Java. COM S 100 also includes a brief introduction to MATLAB. The course does not presume previous programming experience. Programming assignments are tested and run on interactive, stand-alone microcomputers. During the fall semester, two versions of COM S 100 are available as described below.

COM S 100a Introduction to Computer Programming  
Standard version of COM S 100. No college-level mathematics is assumed. Register for COM S 100.
COM S 100b Introduction to Computer Programming
Fall. Prerequisite: MATH 111, 191, or equivalent.
Alternative version of COM S 100, emphasizing examples and applications involving continuous mathematics, including trigonometry and calculus. Register for COM S 100. COM S 100b is not always available at all COM S 100 lecture hours.

COM S 101 Introduction to Cognitive Science (also COGST 101, LING 170, and PSYCH 102)
Fall. 3 credits.
For description, see COGST 101.

COM S 111 Introduction to C
Fall, spring. 1 credit. Weeks 5-8.
Prerequisite: COM S 100 or equivalent programming experience. Credit is granted for both COM S 113 and 213 only if 113 is taken first. S-U grades only.
A brief introduction to the C programming language and standard libraries. Unix accounts will be made available for students wishing to use that system for projects, but familiarity with Unix is not required. (Projects may be done using any modern implementation of C). COM S 213 (C++ Programming) includes much of the material covered in 113. Students planning to take COM S 213 normally do not need to take 113.

COM S 114 Unix Tools
Fall, spring. 1 credit. Weeks 1-4.
Prerequisite: COM S 100 or equivalent programming experience. S-U grades only.
An introduction to Unix, including shell commands, emacs, text editors, file system, and software tools like grep, find, make, awk, and perl. Knowledge of some programming language like Java, C, C++, Pascal, or Fortran is expected, but projects will not assume expertise in any particular language.

COM S 130 Creating Web Documents
Fall. 3 credits.
Interactive on-line media such as the World Wide Web are revolutionizing the way we communicate. This course introduces students with little or no computer background to tools and techniques for creating interactive documents. Topics covered will include HTML authoring, scripting languages, interaction techniques, data mining, and incorporating sound, video, and images in documents.

COM S 201 Cognitive Science in Context Laboratory: Explorations of Cognitive Science in Ecological Setting (also COGST 201 and PSYCH 201)
Fall or spring. 4 credits. Limited to 24 students.
Prerequisite: Introduction to Cognitive Science (PSYCH 102/COGST 101/COM S 101) or written permission of the instructor. Discussion and demos. M W 10:10, lab. M or W 12:45-4:25, plus additional hours to be arranged.
B. Halpern and staff.
For description, see COGST 201.

COM S 202 Transition to Java
Fall, spring. Weeks 1-4. 1 credit.
Prerequisites: COM S 100, COM S 212/ENGRD 212 recommended.
A brisk introduction to the Java programming language. Students are expected to be familiar with recursion and abstract data types as taught in COM S 212.

COM S 211 Computers and Programming (also ENGRD 211)
Fall, spring, summer. 3 credits.
Intermediate programming in a high-level language and introduction to computer science. Topics include program structure and organization, algorithms, program development, proofs of program correctness, recursion, data structures and types (lists, stacks, queues, trees), object-oriented and functional programming, and analysis of algorithms. Java is the principal programming language.

COM S 212 Structure and Interpretation of Computer Programs (also ENGRD 212)
Fall, spring. 4 credits.
A challenging introduction to programming languages and computer science that emphasizes alternative modes of algorithmic expression. Topics include recursive and higher-order procedures, performance analysis of algorithms, proofs of program correctness, probabilistic algorithms, symbolic hierarchical data, abstract data types, polymorphic functions, object-oriented programming, infinite data types, modules (classes), program simulation, and the interpretation of programs.

COM S/ENGRD 212 covers a wide range of topics in computer science and programming using advanced functional and object-oriented programming languages. ENGRD/COM S 211 focuses on strengthening programming skills in a more controlling programming language (Java), while still introducing important topics in computing. Either course is a suitable prerequisite for further study in the field. Appropriate transfers between ENGRD/COM S 211 and 212 (in either direction) are encouraged during the first few weeks of instruction.

COM S 213 C++ Programming
Fall, spring. 2 credits.
Prerequisite: COM S/ENGRD 211 or 212 or equivalent programming experience. Students who plan to take COM S 211 and 213 must take 113 first.
An intermediate-level introduction to the C++ programming language and the C/C++ standard libraries. Topics include basic statements, declarations, and types; stream I/O; user-defined classes and types; derived classes, inheritance, and object-oriented programming; exceptions and templates. Recommended for students who plan to take advanced courses in computer science that require familiarity with C++ or C. Students planning to take COM S 213 normally do not need to take COM S 113; 213 includes most of the material taught in 113.

COM S 222 Introduction to Scientific Computation (also ENGRD 222)
Spring, summer. 3 credits.
Prerequisites: COM S/ENGRD 211 or equivalent programming experience. This course is not open to COM S majors. Credit will not be granted for both COM S 409 and 410. Data structures and algorithms with emphasis on those useful for computational science. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced topics. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

COM S 280 Discrete Structures
Fall, spring. 4 credits. Pre- or corequisite: COM S/ENGRD 211 or 212 or permission of instructor.
Covers mathematical aspects of programming and computing. Topics will be chosen from the following: mathematical induction; logical proof; propositional and predicate calculus; combinatorics and discrete mathematics covering manipulation of sums, recurrence relations, and generating-function techniques; basic number theory; sets, functions, and relations; partially ordered sets; graphs; algebraic structures.

COM S 314 Introduction to Digital Systems and Computer Organization
Fall, spring. 4 credits.
Prerequisite: COM S/ENGRD 211 or 212 or equivalent.
Introduction to computer organization. Topics include representation of information, machine and assembly languages, processor organization, input/output devices, memory hierarchies, combinatorial and sequential circuits, data path and control unit design, and RISC pipelining. The course features several major projects, including a full RISC processor design.

COM S 381 Introduction to Theory of Computing
Fall, spring. 4 credits.
Prerequisite: COM S 280 or permission of instructor.
Credit will not be granted for both COM S 381 and COM S 481. Corrective transfers between COM S 381 and COM S 481 (in either direction) are encouraged during the first few weeks of instruction. An introduction to the modern theory of computing: automata theory, formal languages, and effective computability.

COM S 400 The Science of Programming
Spring. 4 credits.
Prerequisite: COM S 280 or equivalent. Not offered every year; next offering TBA. Not offered 1999-2000. The practical development of correct programs based on the conscious application of principles that are derived from a mathematical notion of program correctness. Besides dealing with conventional sequential programs, the course covers implementations of abstract data types and contains an introduction to problems with concurrency. Issues in programming-language design that arise from program correctness are discussed. Programs are written but not run on a computer.

COM S 409 Data Structures and Algorithms for Computational Science
Spring. 4 credits.
Prerequisite: COM S 211 or 212 or equivalent programming experience. This course is intended for students outside of the Department of Computer Science whose work involves a significant amount of computing. Topics include basic data structures as well as more advanced topics. Emphasis is placed on the use of abstract data types and on how best to select appropriate data structures.

COM S 410 Data Structures
Fall, spring. 4 credits.
Prerequisite: COM S 280 or permission of instructor.
Practical and important data structures and their implementations, with an emphasis on the use of analysis to determine the most efficient algorithm in a given situation. Detailed study of searching and sorting methods.

COM S 411 Programming Languages and Logics
Fall. 4 credits. Prerequisite: COM S 410 or permission of instructor. Not offered Fall 1999; semester to be announced. The major concepts of programming languages, with emphasis on synthesis and interpretation. Language-based programming methodologies, including object-oriented, functional, and logic programming. Design and criticism of programming languages. Type theory and typed lambda-calculus. Exercises in several unusual programming languages.

COM S 412 Introduction to Compilers and Translators
Spring. 3 credits. Prerequisites: COM S 314, 410, and 361 or 481. Corequisite: COM S 413. Overview of the internal structure of modern compilers, with emphasis on implementation techniques. Topics covered include lexical scanning, simple parsing techniques, symbol-table manipulation, type-checking routines, code generation, and simple optimizations. The course entails a compiler implementation project.

COM S 413 Practicum in Compilers and Translators
Spring. 2 credits. Prerequisites: COM S 314, 410, and 361 or 481. Corequisite: COM S 413. A compiler implementation project related to COMS 412.

COM S 414 Systems Programming and Operating Systems
Fall, Summer. 3 credits. Prerequisite: COM S 314 or permission of instructor. An introduction to the logical design of systems programs, with emphasis on multiprogrammed operating systems. Topics include process synchronization, deadlock, memory management, input-output methods, information sharing, protection and security, and file systems. The impact of network and distributed computing environments on operating systems is also discussed.

COM S 415 Practicum in Operating Systems
Fall. 2 credits. Prerequisite: COM S 410. Corequisite: COM S 414. The practical aspects of operating systems are studied through the design and implementation of an operating system kernel that supports multiprogramming, virtual memory, and various input-output devices. All the programming for the project is in a high-level language.

COM S 417 Computer Graphics and Visualization (also ARCH 374)
Spring. 3 credits. Prerequisite: COM S/ ENGRD 211 or 212. An introduction to the principles of interactive computer graphics and scientific visualization. Topics include surface modeling, animation, perspective transformations, hidden-line and hidden-surface algorithms, lighting models, image synthesis, and application to scientific data analysis.

COM S 418 Practicum in Computer Graphics (also ARCH 375)

COM S 421 Numerical Analysis
Fall. 4 credits. Prerequisites: MATH 294 or equivalent, one additional mathematics course numbered 300 or above, and knowledge of programming. Modern algorithms for systems of linear equations, systems of nonlinear equations, numerical optimization, and numerical solution of differential equations. Some discussion of methods suitable for parallel computation.

COM S 432 Introduction to Database Systems
Fall. 3 credits. Prerequisites: (COM S/ ENGRD 312) and COM S 410. Recommended: COM S 213 and strong programming skills in C, C++ or Java. Introduction to modern relational database systems. Concepts covered include storage structures, query languages, query processing and optimization, transaction processing and database design theory. The course primarily covers the internals of database systems, and includes many large programming assignments.

COM S 433 Practicum in Database Systems
Fall. 2 credits. Corequisite: COM S 432. Students will implement a simple relational database system with coding assignments ranging from disk management to high-level query processing. This provides a thorough understanding of database system internals.

COM S 444 Distributed Systems and Algorithms
Fall. 4 credits. Pre- or co-requisite: COM S 414 or permission of instructor. Not offered every year. Not offered 1999–2000. The fundamentals of distributed systems and algorithms. Topics include the problems, methodologies and paradigms necessary for understanding and designing distributed applications, with an emphasis on fault-tolerant computing. Theoretical concepts will be complemented with practical examples of their application in current distributed systems.

COM S 472 Foundations of Artificial Intelligence
Fall. 3 credits. Prerequisites: (COM S/ ENGRD 211 or 212) and COM S 280 or equivalent. A challenging introduction to the major subareas and current research directions in artificial intelligence. Topics include knowledge representation, heuristic search, problem solving, natural-language processing, game-playing, logic and deduction, planning, and machine learning.

COM S 473 Practicum in Artificial Intelligence
Fall. 2 credits. Prerequisite: (COM S/ ENGRD 211 or 212) and COM S 280 or equivalent. Corequisite: COM S 472. Project portion of COM S 472. Topics include knowledge representation systems, search procedures, game-playing, automated reasoning, concept learning, reinforcement learning, neural nets, genetic algorithms, planning, and truth maintenance.

COM S 481 Introduction to Theory of Computing
Fall. 4 credits. Prerequisite: COM S 280 or permission of instructor. Credit will not be granted for both COM S 381 and 481. Corrective transfers between COM S 481 and 381 (in either direction) are encouraged during the first few weeks of instruction. A faster-moving and deeper version of COM S 381.

COM S 482 Introduction to Analysis of Algorithms
Spring, Summer. 4 credits. Prerequisites: COM S 410 and either 381 or 481, or permission of instructor. Techniques used in the creation and analysis of algorithms. Combinatorial algorithms, computational complexity, NP-completeness, and intractable problems.

COM S 486 Applied Logic (also MATH 486)
Fall or Spring. 4 credits. Prerequisites: MATH 222 or 294, COM S 280 or equivalent (such as MATH 332, 432, 434, 481), and some additional course in mathematics or theoretical computer science. Propositional and predicate logic, compactness and completeness by tableau, normal deduction, and resolution. Equational logic. Herbrand Universes and unification. Rewrite rules and equational logic, Knuth-Bendix method and the congruence-closure algorithm and lambda-calculus reduction strategies. Topics in Prolog, LISP, ML, or Nuprl. Applications to expert systems and program verification.

COM S 490 Independent Reading and Research
Fall, Spring. 1–4 credits. Independent reading and research for undergraduates.

COM S 501 Software Engineering: Technology and Techniques
Fall. 4 credits. Prerequisite: COM S 410 and knowledge of the C programming language. An introduction to the problems of building large, reliable software systems and the methods, languages, and tools used in modern software development. Topics include software life-cycle models, software analysis and design, verification and validation, reliability, engineering ethics and professionalism. Programming topics include modularity, data abstraction, object-oriented programming, and effective use of C++. General techniques will be complemented with programming experience using industrial-strength languages and tools.

COM S 513 System Security
Spring. 4 credits. Prerequisites: COM S 414 or 519 and familiarity with JAVA programming language. This course discusses security and survivability for computers and communications networks. The course will include discussions of policy issues (e.g. the national debates on cryptography policy) as well as the discussions of the technical alternatives for implementing the properties that comprise "trustworthiness" in a computing system. Mechanisms for authoriza-
COM S 514 Intermediate Computer Systems
Fall or spring. 4 credits. Prerequisites: COM S 414 or permission of instructor. This course focuses on practical issues in designing and implementing distributed software. Topics vary depending upon instructor. Recent offerings have covered object-oriented software methodologies and tools, distributed computing, fault-tolerant systems, and network operating systems or databases. Students undertake a substantial software project. Many students obtain additional project credit by co-registering in COM S 490, 515, or 790.

COM S 515 Practicum in Systems
Fall or spring. 1-2 credits. Co-requisite: COM S 514. The practical aspects of modern software systems are studied through the design and implementation of a significant system. Students may work alone or in teams. The project varies from year to year at the discretion of the instructor. Some students take COM S 490 or 790 instead of COM S 515.

COM S 519 Engineering Computer Networks
Fall. 4 credits. Prerequisites: COM S 314 and 410, or permission of instructor. Introduction to telephone, IP, and ATM networks. Techniques for system design and protocol layers. Detailed introduction to networking protocols in the areas of multiple access, switching, scheduling, routing, naming and address resolution, flow control, and traffic management. Overview of important protocols in the Internet and telephone networks. Protocol implementation techniques. The course is project-oriented and requires familiarity with C programming.

COM S 522 Computational Tools and Methods for Finance
Spring. 4 credits. Prerequisites: programming experience (e.g., C, FORTRAN, or MATLAB), some knowledge of numerical methods, especially numerical linear algebra. This course provides a hands-on introduction to computational methods and tools used in finance. We study both the underlying methods and efficient implementation. The MATLAB Financial Toolbox, along with additional MATLAB tools, will be used extensively. The underlying numerical techniques discussed include nonlinear least-squares procedures (regression), basic linear algebra, linear and nonlinear optimization, finite-difference methods for PDEs, quadrature programming (and linear complementarity problems), specialized tree (and lattice) evaluation methods.

COM S 574 Heuristic Methods for Optimization (also CEE 509)
Spring. 3 or 4 credits. Prerequisites: COM S/ENGRD 211 or 212 or 222 or CEE/ ENGRD 241, or permission of instructor. This course will describe a variety of heuristic search methods including simulated annealing, tabu search, genetic algorithms, randomized evolution strategy, random walk, and direct search algorithms. Algorithms will be used to find values of discrete and/or continuous variables arising in optimization and model fitting. Applications will be discussed in a range of areas including some of the following: artificial intelligence, scheduling, computer networks, computer security, telecommunications, circuit design, engineering mechanics. The advantages and disadvantages of heuristic search methods for both serial and parallel computation will be discussed in comparison to other optimization algorithms.

COM S 601 System Concept
Fall. 3 credits. Prerequisites open to students enrolled in the COM S Ph.D. program. This course teaches broadly applicable principles of computing system design and analysis. For example, the principle of locality of reference used in caching, virtual memory, and network service hints. Such broadly applicable abstractions will be discussed along with their implementations in a variety of settings. Case studies from the systems literature will be employed throughout.

COM S 611 Advanced Programming Languages
Fall. 4 credits. Graduate standing or permission of instructor. A study of programming paradigms: functional, imperative, concurrent and logic programming. Models of programming languages, including the lambda calculus. Type systems, polymorphism, modules, and other object-oriented constructs. Program transformations, programming logic, and applications to programming methodology.

COM S 612 Compiler Design for High-Performance Architectures

COM S 613 Concurrent Programming
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. Not offered every year; semester to be announced. Advanced techniques in, and models of, concurrent systems. Synchronization of concurrent processes; parallel programming languages; deadlock; verification.

COM S 614 Advanced Systems
Spring. 4 credits. Prerequisite: COM S 414 or permission of instructor. An advanced course in systems, emphasizing contemporary research in distributed systems. Topics may include communication protocols, consistency in distributed systems, fault-tolerance, knowledge and knowledge-based protocols, performance, scheduling, concurrency control, and authentication and security issues.

COM S 616 Principles of Distributed Computing—Message-Passing
Fall. 4 credits. Prerequisite: mathematical maturity and some basic knowledge of distributed systems. Offered in odd-numbered years. This course focuses on research in message-passing distributed computing. It covers the fundamental problems and presents some of the latest results and open questions in message-passing systems. Problems will be viewed from a theoretical standpoint with an emphasis on precise specifications, proofs of correctness, upper and lower bounds on various complexity measures and impossibility results.

COM S 619 Principles of Distributed Computing—Shared Memory
Fall. 4 credits. Prerequisite: mathematical maturity and some basic knowledge of distributed systems. Offered in even-numbered years. Not offered fall 1999. This course focuses on research in shared-memory distributed computing. It covers fundamental problems and paradigms of shared-memory systems. Topics include linearity and correctness models of consistency, non-blocking and wait-free computation, universal constructions of wait-free objects, the atomic snapshot problem, the k-set consensus problem, bounded concurrent timestamps, etc.

COM S 621 Matrix Computations
Fall. 4 credits. Prerequisites: MATH 411 and 431 or permission of instructor. Stable and efficient algorithms for linear equations, least squares, and eigenvalue problems. Direct and iterative methods are considered. The MATLAB system is used extensively.

COM S 622 Numerical Optimization and Nonlinear Algebraic Equations
Spring. 4 credits. Prerequisite: COM S 621. Offered in odd-numbered years. Not offered spring 2000. Modern algorithms for the numerical solution of multidimensional optimization problems and simultaneous nonlinear algebraic equations. Emphasis is on efficient, stable, and reliable numerical techniques with strong global convergence properties: quasi-Newton methods, modified Newton algorithms, and trust-region procedures. Special topics may include large-scale optimization, quadratic programming, and numerical approximation.

COM S 624 Numerical Solution of Differential Equations
Spring. 4 credits. Prerequisite: previous exposure to numerical analysis (e.g., COM S 421 or 621) and differential equations and knowledge of MATLAB. Offered in even-numbered years. Finite difference methods for the solution of ordinary and partial differential equations. A fast-moving course that begins with a three-week survey of numerical methods for ODEs, then moves on to Fourier analysis and methods for PDEs, especially parabolic and hyperbolic equations. Other topics covered include numerical stability, finite element methods, Hamiltonian problems, and computational issues such as mesh generation and sparse matrix computation for PDEs.
issues of syntax and semantics in knowledge representation, constraint satisfaction methods and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 674 Natural Language Understanding
Spring. 3 credits. Prerequisites: COM S 472 or permission of instructor. Not offered every year.
This course presents an introduction to natural language processing, the primary concern of which is the study of human language use from a computational perspective. The course will cover syntactic analysis, semantic interpretation, and discourse processing, via symbolic and statistical approaches. Possible topics include information extraction, natural language generation, memory models, ambiguity resolution, finite-state methods, mildly context-sensitive formalisms, deductive approaches to interpretation, machine translation, and machine learning of natural language.

COM S 676 Reasoning about Knowledge
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered every even-numbered year. Not offered fall 1999. Knowledge plays a crucial role in distributed systems, game theory, and artificial intelligence. Material examines formalizing reasoning about knowledge and the extent to which knowledge is applicable to those areas. Issues: common knowledge, knowledge-based programs, applying knowledge to analyzing distributed systems, attainable states of knowledge, and modeling resourcebounded reasoning, and connections to game theory.

COM S 677 Reasoning about Uncertainty
Fall. 4 credits. Prerequisites: mathematical maturity and an acquaintance with propositional logic. Offered odd-numbered years. Examines formalizing reasoning about and representing uncertainty, using formal logical approaches as a basis. Topics: logics of probability, combining knowledge and uncertainty, and search procedures, and critically constrained problems and their relation to phase-transition phenomena. In addition, connections between artificial intelligence and other fields, such as statistical physics, operations research, and cognitive science are explored.

COM S 682 Theory of Computing
Spring. 4 credits. Prerequisites: (COM S 581 or 481) and (COM S 482 or 681) or permission of instructor. Not offered every year; semester to be announced. Advanced treatment of theory of computation, computational-complexity theory, and other topics in computing theory.

COM S 686 Logics of Programs
Spring. 4 credits. Prerequisites: COM S 481, 682, and (MATH 481 or MATH/COM S 486). Topics in logics of programs and program verification. Possible topics include: Floyd/ Hoare logic, modal logic, dynamic logic, temporal logic, process logic, automata on infinite objects and their relation to program logics, the Rabin tree theorem, the modal mu-calculus, games and alternating automata, applications to type inference, set constraints, Kleene algebra.

COM S 709 Computer Science Colloquium
Fall, spring. 1 credit. S-U grades only. For staff, visitors, and graduate students interested in computer science and research. A weekly meeting for the discussion and study of important topics in the field.

COM S 711 Seminar in Systems and Methodology
Fall, spring. 4 credits. Prerequisites: a graduate course employing formal reasoning such as COM S 611, 613, 671, a logic course, or permission of instructor. Not offered every year; semester to be announced. Discussion of contemporary issues in the design and analysis of computing systems. Emphasis on the proper use of rigor, models, and formalism.

COM S 713 Seminar in Programming Refinement Logics
Fall, spring. 4 credits. Prerequisites: permission of instructor. Topics in programming logics, possibly including type theory, constructive logic, decision procedures, heuristic methods, extraction of code from proofs, and the design of proof-development and problem-solving systems.

COM S 717 Topics in Parallel Architectures
Fall. 4 credits. Prerequisites: COM S 612 or permission of instructor. Not offered every year; semester to be announced. Covers topics in parallel computers. Material includes: architectures of parallel computers, parallelizing compilers, operating systems for parallel computers, and languages (functional and logic-programming languages) designed for parallel computation.

COM S 719 Seminar in Programming Languages
Fall, spring. 4 credits. Prerequisites: COM S 611 or permission of instructor. S-U grades only.

COM S 721 Seminar in Software Engineering
Fall, spring. 4 credits. Prerequisites: permission of instructor. S-U grades only.

COM S 722 Seminar in Numerical Methods
Fall, spring. 4 credits. Prerequisites: COM S 621 or 622 or permission of instructor. Not offered every year; semester to be announced. Topics are chosen at instructor's discretion.

COM S 729 Seminar in Numerical Analysis
Fall, spring. 1-4 credits (to be arranged). Prerequisite: permission of instructor. S-U grades only.
COM S 754 Systems Research Seminar  
Fall, spring. 1 credit.

COM S 772 Seminar in Artificial Intelligence  
Fall, spring. 4 credits. Prerequisites: permission of instructor.

COM S 773/774 Proseminar in Cognitive Studies I & II (also COGST, PHIL, LING, and PSY 773/774)  
Fall, 773; spring, 774. 4 credits. For description, see COGST 775/774.

COM S 775 Seminar in Natural Language Understanding  
Fall, spring. 2 credits. Informal weekly seminar in which current topics in natural language understanding and computational linguistics are discussed.

COM S 789 Seminar in Theory of Algorithms and Computing  
Fall, spring. 4 credits. Prerequisite: permission of instructor. S-U grades only.

COM S 790 Special Investigations in Computer Science  
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only.

COM S 890 Special Investigations in Computer Science  
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Master of Science degree research.

COM C 990 Special Investigations in Computer Science  
Fall, spring. Prerequisite: permission of a computer science adviser. S-U grades only. Doctoral research.

ELECTRICAL ENGINEERING

ELE E 210 Introduction to Circuits for Electrical and Computer Engineers (also ENGRD 210)  
Fall, spring. 3 credits. Co-requisites: MATH 293 and PHYS 213.

A first course in electrical circuits, establishing the fundamental properties of circuits with application to high-speed computers and modern electronics. Topics include node and mesh analysis applied to CMOS circuit design, transient response and its impact on computer speed, sinusoids, resonance, complex impedance, and operational amplifiers.

ELE E 215 Introductory Integrated Circuits Laboratory  
Fall, spring. 1 credit. Pre or co-requisite: ENGRD 210.

Laboratory course to develop skills with modern instrumentation, and to explore the design and operation of electrical circuits used in computers, amplifiers, and signal processing.

ELE E 232 Digital Systems Design Laboratory  
Fall, spring. 1 credit. Pre- or co-requisite: ENGRD 231.

An introduction to digital systems design using computer-aided design (CAD) tools. Students complete a sequence of 8 experiments covering combinational logic, sequential circuits, counters, data transfer and microcontroller design. Hands-on experience is provided by designing, implementing and testing an 8-bit microcontroller using a field programmable gate array (FPGA).

ELE E 250 Technology in Society (also ENGRG 250, HIST 250 and S&T 250)  
Fall. 3 credits. A humanities elective for engineering students.

For description, see ENGRG 250.

ELE E 291-292 Sophomore Electrical Engineering Project  
291, fall; 292, spring. 1-8 credits. Limited to sophomores in Engineering.

Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit request for Independent Project form to the Electrical Engineering Undergraduate Office.

ELE E 298 Inventing an Information Society (also ENGRG 298 and S&T 292)  
Spring. 3 credits. Approved for humanities distribution.

For description, see ENGRG 298.

ELE E 301 Signals and Systems I  
Fall. 4 credits. Prerequisite: a grade of at least C in ENGRD 210 and C in MATH 293 and 294.

Continuous-time signals and linear time-invariant systems, continuous-time convolution and impulse response, Fourier series and transforms of continuous-time signals, the Sampling Theorem, amplitude modulation and time- and frequency-division multiplexing, bilateral Laplace transforms and applications, discrete-time convolution and z-transforms with applications to discrete-time linear time-invariant systems.

ELE E 302 Signals and Systems II: Discrete-Time Systems and Signal Processing  
Spring. 4 credits. Prerequisite: ELE E 301.

Review of discrete-time convolution and bilateral z-transforms with discrete-time linear time-invariant systems applications. Unilateral z-transforms and difference equations. Discrete-time Fourier transforms. Sampling and reconstruction of continuous-time signals. DFTs and FFTs and attendant computational issues. Introduction to digital filter design techniques with special emphasis on: linear-phase FIR filters; FIR filter design using windowing, frequency sampling, and least squares; and IIR filter design using impulse invariance and bilinear transformation.

ELE E 303 Electromagnetic Fields and Waves  
Fall. 4 credits. Prerequisites: grades of C or better in PHYS 213, 214 and MATH 294.

Maxwell’s equations in differential form; wave equation; plane electromagnetic waves; phase and group velocities; Poynting's theorem; complex dielectric constant; wave reflection and transmission; guided waves on transmission lines; transient pulse propagation; elementary dipole antenna; analysis of wireless communication links.

ELE E 304 Fundamentals of Quantum and Solid-State Electronics  
Spring. 4 credits. Prerequisites: PHYS 214 and MATH 294.

Introductory quantum mechanics and solid-state physics necessary for modern solid-state electronic devices. Topics include the formalism and methods of quantum mechanics, the hydrogen atom, the structure of simple solids, energy bands, Permi-Dirac statistics, and the basic physics of semiconductors. Applications include quantum wells and the p-n junction.

ELE E 310 Introduction to Probability and Random Signals  
Spring. 4 credits. Prerequisite: MATH 294. This course may be used in place of ENGRD 270 to help satisfy the engineering distribution requirement.

Introduction to the theory of probability as a basis for modeling random phenomena and signals, calculating the response of systems, and making estimates, inferences, and decisions in the presence of chance and uncertainty. Applications will be given in such areas as communications, and device modeling, probability, characteristic functions; nonlinear transformations of data; expectation, correlation, and the central limit theorem.

ELE E 311 Electrical Engineering Honors Seminar  
Spring. 2 credits variable. Students registered for this course are required to attend all of the colloquia lectures.

Summary papers are required. Honors students who take the seminar for letter grade are required to write two summary papers for two credits. Non-honors students, who must take the seminar pass/fail, are required to write one summary paper for one credit. Each summary paper reviews a topic presented during the term.

ELE E 314 Computer Organization  
Spring. 4 credits. Prerequisites: ENGRD 231 and ELE E 232.

Basic computer organization. Topics include performance metrics, data formats, instruction sets, addressing modes, computer arithmetic, microcoded and pipelined datapath design, memory hierarchies including caches and virtual memory, I/O devices, bus-based I/O systems. Students will learn assembly language programming and design a simple pipelined processor.

ELE E 315 Electronic Circuit Design  
Fall, spring. 4 credits. Prerequisites ELE E 210 and ELE E 215.

Design of electronic circuits for computers, signal processing, communication, microelectronics, optoelectronics, measurements and control.

ELE E 328 Dynamic Systems in Communication and Control  
Spring. 3 credits. Prerequisite: ELE E 301.

Task-driven introduction to discrete-time dynamic system analysis and design, with emphasis on digital communication and control systems. Format is to introduce a particular design task, abstract it to a linear algebra problem, solve it numerically using MATLAB, and study solution in terms of original application. Applications of interest: dial-up modem telephone channel degradation identification, terrestrial microwave radio channel multipath equalization for wireless communication, satellite-tracking antenna azimuth control, and effect of re-transmit protocols on distribution of steady-state communication network flows.
ELE E 391-392 Junior Electrical Engineering Project
Fall, 391; spring, 392. 1-8 credits. Limited to juniors in Engineering. Individual study, analysis, and, usually, experimental tests in connection with a special engineering problem chosen by the student after consultation with the faculty member directing the project. An engineering report on the project is required. Students must make individual arrangements with a faculty sponsor prior to registration and submit a request for Independent Project form to the Electrical Engineering Undergraduate Office.

ELE E 403 Introduction to Nuclear Science and Engineering (also A&EP 403, M&AE 458 and NS&E 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 251 or 310.
For description, see NS&E 403.

ELE E 407 Quantum and Solid State Electronics II
Fall. 4 credits. Prerequisite: some previous knowledge of quantum mechanics.
Angular momentum; effective potential; spin states; atom-phonon interaction; oscillator strengths; LCAO; lattice waves; thermal properties of solids; thermal energy; metals; electron and phonon contributions to specific heat; metallic conductivity; thermal conduction in metals, electron and lattice E vs k curves; effective mass; E(k) surface and m* from cyclotron resonance; k- p expansion; plasma dispersion relation; EM waves in a metal; plasmons, polaritons (TO phonons + EM wave); LST relation; surface and interface plasmons, optical properties of solids, excitons (Mott-Wannier and Frenkel); polarizability; Landau theory of ferroelectric transition; piezoelectricity. Elements of superconductivity: Josephson junction and the SQUID device. Schottky and Frenkel defects; Schottky barrier; heterostructures and solid-state lasing, resonant tunnel diode; optical detectors. Conduction in amorphous media.

ELE E 411 Random Signals in Communications and Signal Processing
Fall. 3 credits. Prerequisite: ELE E 301 and 310 or equivalent.
Introduction to models for random signals in discrete and continuous time; Markov chains, Poisson process, queuing processes, power spectral densities, Gaussian random process. Response of linear systems to random signals. Elements of estimation and inference as they arise in communications and digital signal processing systems.

ELE E 413-414 Hybrid Electric Vehicle
Fall, 413; spring, 414.
The Cornell Hybrid Electric Vehicle (CUHEV) Project focuses on the design, development, testing and competition of a Hybrid Electric Vehicle through a team structure. Students work in teams that include powertrain, business, fairing, ergonomics, control, alternate power unit and suspension. Students are required to design an entire vehicle and to plan and execute its manufacture. The vehicle is competed in a national competition, usually in late May each year. There are two to three design reviews, weekly presentations and team leader meetings in addition to any meetings the teams require to complete the project. There is a team selection process so students interested in the project should contact team leaders or a faculty advisor prior to registering for the course.

ELE E 415 Global Positioning System Theory and Design (also M&AE 415)
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of the instructor.
A laboratory course using the Global Positioning System as a model for examining space-based engineering systems. The course consists of lectures, laboratories, and a design project. The laboratory is based on a GPS engine development system and covers the navigation solution, receiver design and function, and differential GPS.

ELE E 423 Computer Methods in Digital Signal Processing
Spring. 4 credits. Corequisite: ELE E 328 or permission of instructor. Satisfies undergraduate computer-applications requirement.

ELE E 425 Digital Signal Processing
Fall. 4 credits. Prerequisites: ELE E 301, ELE E 302 and ELE E 310.
An advanced course in digital signal processing. Topics include correlation, practical DSP, quantization, A/D and D/A conversion, delta-sigma modulation; quantization effects in digital filters and structural implications; multi-rate DSP including sampling rate conversion and filter bank theory; wiener filtering, spectral estimation; and an introduction to two-dimensional sampling and Fourier techniques.

ELE E 426 Applications of Signal Processing
Spring. 3 or 4 credits. Prerequisite: ELE E 325.
Applications of signal processing, including signal analysis, filtering, and signal synthesis. The course is laboratory oriented, emphasizing individual student projects. Design is done with signal-processing hardware and by computer simulation. Topics include filter design, spectral analysis, speech coding, speech processing, digital recording, adaptive noise cancellation, and digital signal synthesis.

ELE E 430 Lasers and Optical Electronics
Fall. 4 credits with lab, may be taken for 3 credits without lab. Prerequisite: ELE E 303 or equivalent.
An introduction to the operation and application of lasers. Material covered includes diffraction-limited optics, Gaussian beams, optical resonators, interaction of radiation with matter, physics of laser operation, laser design. Applications of coherent radiation to nonlinear optics, communication, and research will be discussed.

ELE E 432 MicroElectro Mechanical Systems (MEMS)
Spring. 3 credits. Prerequisite: ELE E 315 or permission of instructor.
Introductory course to MEMS: microsensors, microactuators, and microrobots. Fundamentals of MEMS including materials, microstructures, devices and simple microelectromechanical systems, scaling electronic and mechanical systems to the micrometer/nanometer scale, material issues, and the integration of mechatronics structures and systems with simple electronics. This is an interdisciplinary course drawing content from mechanics, materials, structures, electronic systems, and the disciplines of physics and chemistry.

ELE E 433 Microwave Integrated Circuits
Fall. 4 credits; may be taken for 3 credits without laboratory. Prerequisites: ELE E 303 and ELE E 306.
An introduction to the design and testing of high-speed circuits (frequencies above 1 GHz). Topics include: computer-aided design, automated microwave measurement techniques, optoelectronic applications, and GaAs monolithic microwave integrated circuits. Six two-week labs cover the basics of designing, fabricating, and testing microwave integrated circuits.

ELE E 438 VLSI Digital System Design
Spring. 4 credits. Prerequisites: ENGRD 231, ELE E 232 and ELE E 315.
Course covers CMOS VLSI design as seen by a system designer. Emphasis on design methodologies for digital VLSI systems. Topics include MOS transistors, design rules for MOS integrated circuits, implementation of common digital components, clocking disciplines for VLSI, tools for computer-aided design, system design for performance, and novel architectures for VLSI systems.

ELE E 445 Computer Networks and Telecommunications
Fall. 4 credits. Prerequisites: ELE E 308 (or COM S 314) and a course in probability.
Design, analysis, and implementation of local area networks, wide area networks, and telecommunications systems; circuit switching, packet switching; wide area networks, asynchronous transfer mode systems.

ELE E 450 Electric Power Systems
Spring. 3 credits.
The objective is to acquaint the student with modern electric power system operation and control. Aspects of the restructuring of the industry and its implications for planning and operation objectives and methods will be explored. Topics include unit commitment, economic dispatch, optimal power flow, control of generation, system security and reliability, state-estimation, analysis of system dynamics and system protection.

ELE E 453 Integrated Circuit Design
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 315 or equivalent. ELE E 457 recommended as a corequisite. May not be offered 1999-2000.
transport and band diagrams. The device
fundamentals on semiconductor carrier
movement and measurement on pn-junction diodes,
Schottky diodes, photodiodes, bipolar transistors (BJT) and MOSFET. A heavy
emphasis will be put on the MOSFET physics
for advanced VLSI technology. Six labs cover
detailed IV and CV measurements and
modeling of devices in the wafer level and
in standard packages.

[ELE E 462 Artificial Intelligence and
Expert Systems for
Telecommunication Networks
Spring. 3 credits. Prerequisite: ELE E 310
or some familiarity with random variables.
In the last two or three years a surprising
number of connections between AI and
telecommunications have been identified.
Significant discoveries in the area of wireless
electronics (e.g. a variety of network control
algorithms) have been found to be straightfor­
ward restatements of old results from the field
of Artificial Intelligence. (We may hope that
the reverse is the case, as well.) It also is
becoming clear that, to provide an acceptable
level of performance, the next generation of
wireless multimedia systems will need some
degree of predictive "cognitive" capacity. This
senior/introductory graduate course focuses
on the expert system side of AI. It has been
designed to provide a foundation in the
development and analysis of expert systems
with an emphasis on telecommunications
engineering applications. The students will
develop a background in the theory of expert
systems, and then be given an opportunity to
apply their knowledge in an area of their
choice. Areas of discussion will include:
rule-based expert systems, probabilistic systems,
Bayesian networks, and the propagation of evidence.)

ELE E 467 Telecommunication Systems I
Fall. 4 credits. Prerequisites: ELE E 301
and ELE E 310. Suggested co-requisite:
ELE E 411.
An introduction to analog and digital
modulation and demodulation techniques.
Topics include: analog signal representation
and filtering; analog amplitude modulation
(AM) and frequency modulation (FM);
digital pulse amplitude modulation (PAM);
transmission via carrier modulation; am­pli­
tude-shift keying (ASK), phase-shift keying
(PSK), quadrature amplitude modulation
(QAM), fundamentals of random processes,
white Gaussian noise; effect of noise on
analog modulation techniques; error probabil­
ities for digital transmission through additive
white Gaussian noise (AWGN) channels.

ELE E 468 Telecommunication
Systems II
Spring. 4 credits. Prerequisite: ELE E 467
or permission of instructor. Suggested
prerequisite: ELE E 411.
Fundamentals of digital communications.
Topics include: digital source coding,
 Huffman coding, sampling, quantization,
alternate source coding; optimum receivers for
digital transmission through additive white
Gaussian noise (AWGN) channels, matched
filters; channel capacity and error control
coding; digital transmission through
bandlimited AWGN channels, inter-symbol
interference (ISI), equalization techniques;
phase-locked loops (PLL); trellis-coded
modulation (TDM); spread-spectrum
communication systems.

ELE E 471 Feedback Control Systems
(also M&A E 478)
Fall. 4 credits. Prerequisite: ELE E 301 or
M&A E 326 or permission of instructor.
For description, see M&A E 478.

ELE E 475 Computer Architecture
Fall. 4 credits. Prerequisites: ELE E 314
or COM S 314.
Topics include instruction set principles,
advanced pipelining, data and control
hazards, multi-cycle instructions, dynamic
scheduling, branch prediction, instruction­
level parallelism, high-performance memory
hierarchies. Students will learn the issues and
trends involved in the design of computer
systems. Labs involve the design of a
processor at the RTL level.

ELE E 476 Digital Systems Design Using
Microcontrollers
Spring. 4 credits. Prerequisite: ELE E 314
or COM S 314 (ELE E 475 strongly
recommended).
Design of real-time digital systems using
microprocessor-based embedded controllers.
Students working in pairs will design, debug,
and construct several small systems that
illustrate and employ the techniques of digital
system design acquired in previous courses.
The content focuses on the laboratory work,
the lectures and used primarily for the
introduction of examples, description of
specific modules to be designed; and,
instruction in the hardware and high-level
design tools to be employed.

ELE E 482 Plasma Processing of
Electronic Materials (also
M & A E 482)
Spring. 3 credits. Prerequisite: PHYS 213
and 214 or their equivalents offered on
demand.
Fundamental principles that govern partially
ionized, chemically reactive plasma discharges
and their applications to processing electronic
materials. Topics include simple models of
low pressure, partially ionized plasmas;
collision phenomena, diffusive processes,
plasma chemistry and surface processes.
Examples and their applications to electronic
materials processing will be discussed in detail.

ELE E 484 Introduction to Controlled
Fusion: Principles and Technology
(also AEEP 484, M&A E 490 and
NSA E 484)
Spring. 3 credits. Prerequisites: PHYS
112, 213, and 214, or equivalent back­
ground in electricity and magnetism
and mechanics, with permission of instructor.
Intended for seniors and graduate
students. Offered on demand.
For description, see NSA E 484.

ELE E 486 Electromagnetic Waves and
Communication
Spring. 3 credits. Prerequisite: ELE E 303.
This course is designed for students who
wish to obtain a greater understanding of the
fundamentals of guided waves, high data rate
electronics and wireless communication.
Topics to be covered will include: vector
and scalar potentials; transmission lines;
waveguides, fiber optics, antenna arrays,
propagation in different environments
including interference and diffraction.

ELE E 487 Introduction to Antennas and
Radar
Fall. 3 credits. Prerequisites: ELE E 301
and ELE E 486 (or a grade of B or better in
ELE E 303).
Fundamentals of antenna theory, including
gain and effective area, noise and far fields,
phased arrays, aperture antennas and aperture
synthesis. Fundamentals of radar, including
detection, tracking, Doppler shifts, sampling,
range and frequency aliasing. Synthetic
aperture radars and remote sensing from
aircraft and satellites; over-the-horizon (OTH)
radios and ionospheric propagation effects;
radar astronomy techniques.

ELE E 488 RF Circuits and Systems
Spring. 3 credits. Prerequisites: ELE E
315 or equivalent. 2 design credits. Lab
credit.
Basic RF circuits and applications. Receivers,
transmitters, modulators, filters, detectors,
transmission lines, oscillators, frequency
synthesizers, low-noise amplifiers. Applications
include communication systems, radio
and television broadcasting, radar, radio
and radar astronomy. Course consists of
laboratory and computer-aided circuit
analysis. Five laboratory sessions.

ELE E 490 Practicum in Systems
Engineering
Spring. 3 credits. 1 credit of Engineering
Design. Offered only if sufficient
interdisciplinary interest is available.
Concepts involved with bringing an engi­
nered product to market. The course
employs techniques from Systems Engineering
with a knowledge of the Internet, computer
networks, microprocessor systems, and
semiconductor devices, to create a prototype
engineered product with a web-based home
monitoring device. Included will be system
design concepts including product cycle,
product specification, including UL safety
issues and new product testing, RIP and
product test. We also develop the full details of
a business plan through product launch
and support. A final team project prototype
is required as are weekly presentations during
the semester. Teams must contain students
from ELE E, M&A E, and COM S.
Each student presents at least one weekly lecture
on an assigned topic.

ELE E 491–492 Senior Electrical
Engineering Project
Fall, 491; spring, 492. 1–8 credits. Limited
to seniors in Engineering.
Individual study, analysis, and, usually,
experimental tests in connection with a special
engineering problem chosen by the
student after consultation with the faculty
member directing the project. An engineering
report on the project is required. Students
must make arrangements with a faculty sponsor prior to registration for this
course and submit a request for an indepen­
dent project form to the Electrical Engineering
undergraduate office.

ELE E 495 Introduction to Point
and Space Groups (also M & S E 495)
Fall. 4 credits. Suggested co-requisites:
R. G. Liboff. Topics include definition of groups;
classes, subgroups, character tables, bases,
irreducible representations, great orthogonal­
ity theorem, symmetry group, Cayley's theorem,
Young diagrams, Schmidt-Irving
subgroups, the factor group, space groups,
translation and crystallographic point groups,
the star of k and the group of k, and
application to solid state and semiconducting
materials.
Hausdorff-based motion estimation, motion-based tracking, and various techniques for motion segmentation. An emphasis will be placed on recent research results.

ELE E 554 Advanced Analog VLSI Circuit Design
Spring. 4 credits. Prerequisite: ELE E 453 or permission of instructor.
Overview of devices available to analog integrated circuit designers in modern CMOS processes: capacitors, MOSFETs, floating-gate MOSFETs, and BJTs. Basic building blocks for analog VLSI circuits: differential pairs, current mirrors, operational transconductance amplifiers, multi-tee circuits, and translinear circuits. Layout of analog and mixed signal integrated circuits. Integrated continuous-time and discrete-time signal processing circuits. Digital-to-analog and analog-to-digital conversion techniques. Students will work in small teams to design a small-scale analog functional module.

ELE E 558 Compound Semiconductor Electronics
Spring. 4 credits with lab. Prerequisites: ELE E 457 or equivalent.
Electronic properties of advanced semiconductor structures using compound semiconductor materials and heterojunctions. Fundamentals of carrier transport and scattering. Properties of direct bandgap semiconductor materials and quantum wells. Advanced semiconductor devices including metal-semiconductor transistors (FETs), modulation-doped FETs, and heterojunction bipolar transistors (HBTs). High-frequency operation of compound semiconductor devices. Six two-week labs, which include low-temperature carrier transport, optical absorption and emission, and electrical characterization of compound semiconductor devices.

ELE E 561 Error-Control Codes
Spring. 4 credits. Prerequisite: ELE E 301 or ELE E 521 or equivalent. A strong familiarity with linear algebra is assumed. An introduction to the theory of algebraic error-control codes. Topics include: Hamming codes, group codes, the standard array, minimum-distance decoding, cyclic codes, and the dual of a linear block code. Hamming and Singleton bounds for error-correcting codes. The construction and decoding of Bose-Chaudhuri-Hocking (BCH) and Reed-Solomon (RS) codes. Computer methods for the study of the structure and algorithms for error-control are used.

ELE E 562 Fundamental Information Theory
Fall. 4 credits. Prerequisite: ELE E 310 or equivalent. Fundamental results of information theory with application to storage, compression, and transmission of data. Entropy and other information measures. Block and variable-length codes. Channel capacity and rate-distortion functions, coding theorems and converses for classical and multiterminal configurations. Gaussian sources and channels.

ELE E 563 Communication Networks
Spring. 4 credits. Prerequisite: ELE E 411 or permission of instructor. Classical line-switched communication networks: point-to-point models for offered traffic; blocking and queueing analyses. Stability, throughput, and delay of distributed algorithms for packet-switched transmission of data over local-area and wide-area nets. Flow control and capacity assignment algorithms, ATM networks.

ELE E 565 Statistical Signal Processing
Fall. 4 credits. Prerequisite: ELE E 411. This course introduces basic theory and techniques in parameter estimation and statistical signal processing. For estimating deterministic parameters, we consider minimum variance unbiased estimation, Cramer-Rao lower bound, linear models, best linear unbiased estimators, maximum likelihood (ML) estimation, least squares methods, recursive estimation, and methods of moments. For estimating random parameters, we discuss minimum mean square error (MMSE) estimation, and maximum a posteriori (MAP) estimation, Wold decomposition and spectral factorization, Wiener and Kalman filters. Finally, as applications of basic estimation theory, we examine channel and signal estimation techniques for digital communications. Applications in array signal processing and frequency estimation are discussed throughout the course.

ELE E 566 Wireless Networks
Spring. 4 credits. Prerequisites: ELE E 445 and ELE E 411.
An introductory course in mobile and wireless networks. The course covers fundamental techniques in the design and operation of the first and the second generation wireless networks: cellular systems, medium access techniques, control of a mobile session and a mobile call, signaling in mobile networks, mobility management techniques, common air interfaces (AMPS, IS-136, IS-95, GSM), wireless data (CDPD, Mobitex), Internet mobility, Personal Communication Services (PCS), etc.

ELE E 567 Topics in Digital Communications
Spring. Offered as 2 or 4 credits. Prerequisites: ELE E 562.
Fundamental topics in modern digital communication. Analytical and computational tools required to understand modern data conversion, transmission, and storage systems. Possible topics include: PCM, DPCM, PAM, PSK, FSK, matched filtering, equalization, line codes, trellis codes, Viterbi decoding; application to Rayleigh and magnetic recording. Vector quantization and universal data compression including LZ, LZW, and arithmetic coding, applied to files, speech, images, and video.

ELE E 568 Mobile Communication Systems
Spring. 4 credits. Prerequisites: ELE E 411 and ELE E 467; corequisite: ELE E 468.
Theory and analysis of mobile communication systems, with an emphasis on understanding the unique characteristics of these systems. Topics include: cellular planning, mobile radio propagation and path loss, characterization of multipath and fading channels, modulation and equalization techniques for mobile radio systems, source coding techniques, multiple access alternatives, CDMA system design, and capacity calculations.

ELE E 571 Asynchronous VLSI Design
Fall. 3 credits. Prerequisite: ELE E 314 or COM S 314.
An introductory course in asynchronous design. The course is targeted at the graduate and advanced undergraduate level. The course will be about the design of clockless digital circuits whose correct operation is relatively independent of delays in gates and wires. Emphasis will be placed on the synthesis of circuits by program transformations. Topics include: circuits as concurrent programs, delay-insensitive design techniques, synthesis of circuits from programs, timing analysis and performance optimization, pipelining, and case studies of complex asynchronous designs.

ELE E 572 Parallel Computer Architecture
Spring. 3 credits. Prerequisites: ELE E 314 and ELE E 475, or equivalent. Principles and tradeoffs in the design of parallel architectures. Emphasis on latency, bandwidth, and synchronization in parallel machines. Case studies illustrate the history and techniques of shared-memory, message-passing, dataflow, and data-parallel machines. Additional topics include memory consistency models, cache coherence protocols, and interconnection network topologies. Architectural studies presented through lecture and some research papers.

ELE E 577 Feedforward Neural Networks
Fall. 4 credits. Prerequisite: ELE E 310.
Feedforward neural networks (multilayer perceptrons) are computing systems formed out of many highly interconnected nonlinear memoryless elements that are arranged in a parallel architecture that is loosely modeled on that of the brain. Our focus is on the roles as pattern classifiers, signal processors, estimators, and forecasters and on their role in communication systems. We explore neural networks through mathematical analyses and extensive simulation studies using MATLAB.

ELE E 581 Introduction to Plasma Physics (also A&EP 607)
Spring. 4 credits. Prerequisites: ELE E 303 or equivalent. First-year graduate-level course; open to exceptional seniors with permission of instructor. Plasma state; motion of charged particles in fields, drift-orbit theory; collective scattering, cyclotron and diamagnetic diffusion; elementary transport theory; two-fluid and hydrodynamic equations; plasma oscillations and waves, CMA diagram; hydromagnetic stability; elementary applications to space physics, plasma technology, and controlled fusion.

ELE E 582 Basic Plasma Physics (also A&EP 607)
Spring. 4 credits. Prerequisites: ELE E 301 and ELE E 504 or equivalent. 3 lectures.
Maxwell's equations, electromagnetic potentials, integral representations of the electromagnetic field, Green's functions. Special theory of relativity, Lienard-Wiechert potentials, radiation from accelerated charges, Cerenkov radiation. Electrodynamics of dispersive dielectric and magnetic media. At the level of Classical Electrodynamics, by Jackson.
investigated. The human surface ECG forms the signal source in much of the course. Pattern classification and non-linear dynamical system analysis will be emphasized. For major team design projects are required in lieu of examinations.

ELE E 595-599 Advanced Topics in Electrical Engineering
Fall, spring. 1–4 credits.
Seminar, reading course, or other special arrangement agreed on by the students and faculty members concerned.

ELE E 592 Applied Systems Engineering (also CEE 504, M&E 591, OR/AIE 512)
Fall. 3 credits. Permission of instructor. Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations and the system life cycle.

ELE E 602 Graduate Seminar in Telecommunications and Information Processing
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a list of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 604 Graduate Seminar in RF, Antenna, and Space Science Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a list of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 606 Graduate Seminar in Semiconductors and Microelectromechanical Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a list of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.

ELE E 608 Graduate Seminar in Computer and Digital Systems
Spring. 2 credits. Can count as one M.Eng. course for Electrical Engineering. This seminar will discuss material at the level of current engineering publications. Faculty sponsors will prepare a list of appropriate subject areas and suggest certain papers for discussion. Students will be required to lead discussions on one or two topics as required and will be graded on individual presentations, discussion participation, as well as written reports and talk summaries. Topics vary each term.
GEOL 106 Vertebrate Fossil Preparation
Spring. 1 credit. Prerequisites: one introductory geology course or concurrent enrollment; class size is limited.

GEOL 107 How the Earth Works
Fall. 1 credit.

GEOL 109 Dinosaurs
Fall. 1 credit.

GEOL 111 To Know the Earth and Build a Habitable Planet
Fall. 3 credits.

GEOL 122 Earthquakes! (also ENGR 122)
Fall. 3 credits. This is a course in the Introduction to Engineering series. For course description, see ENGR 122.

GEOL 125 Global Environment (also ENGR 125)
Fall. 3 credits. Not offered 1999-2000. W. M. White, L. A. Derr. This is a course in the Introduction to Engineering series. For course description, see ENGR 125.

GEOL 200 Art, Archaeology, and Analysis (also ARKEO 285, ART 372, ARTH 200, ENGR 185, and PHYS 200)
Spring. 3 credits. 3 lectures. R. Kay. This is a course in the Introduction to Engineering series. For description, see ENGR 185.

GEOL 201 Introduction to the Physics and Chemistry of the Earth (also ENGRD 201)
Fall. 3 credits. Prerequisites: MATH 191 and PHYS 112. For course description, see ENGR 201.

GEOL 204 Ocean Sciences Laboratory
Spring. 3 credits.

GEOL 210 Introduction to Field Methods in Geological Sciences
Fall. 3 credits. Prerequisite: GEOL 101 or 201, or permission of instructor. Weekly field sessions. A weekend field trip.

GEOL 212 Caribbean Field Trip (January)
Spring. 2 credits. Enrollment limited to 15. Prerequisite: permission of instructor. Travel and subsistence expenses to be announced. L. D. Brown.

GEOL 213 Marine and Coastal Geology
Summer. 2 credits. Prerequisites: an introductory course in geology or permission of instructor.

Junior, Senior, and Graduate Courses
Of the following, the core courses GEOL 256, 355, 356, 375, and 388 may be taken by B.S. candidates who have successfully completed GEOL 201 or the equivalent and by B.A. candidates who have completed GEOL 101 or the equivalent, or who can demonstrate to the instructor that they have adequate preparation in mathematics, physics, chemistry, biology, or engineering.

GEOL 302 Evolution of the Earth System (also SES 332 and SCAS 302)
Spring. 4 credits. Prerequisites: MATH 112 or 192 and CHEM 207 or equivalent.

For course description, see the Science of Earth Systems section in "Interdisciplinary Centers, Programs, and Studies," in the front part of the catalog.

GEOL 315 Geomorphology
Fall. 4 credits. Prerequisite: one of the following: a 3-credit GEOL or SES course, or SCAS 260, or permission of instructor.

GEOL 321 Introduction to Biogeochemistry (also SES 321, NTRES 321)
Fall. 4 credits. Prerequisites: MATH 192 and CHEM 207, or equivalent.

GEOL 326 Structural Geology
Spring. 4 credits. Prerequisite: MATH 192 and GEOL 101 or 201, or permission of instructor.

GEOL 355 Mineralogy
Fall. 4 credits. Prerequisite: GEOL 101 or 201 and CHEM 207 or permission of instructor.

GEOL 356 Petrology and Geochemistry
Spring. 4 credits. Prerequisite: GEOL 355.

GEOL 375 Sedimentology and Stratigraphy
Fall. 4 credits. Prerequisite: GEOL 101, 102, or 201.

GEOL 388 Geophysics and Geotectonics
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent.

GEOL 411 Satellite Remote Sensing in Geosciences
Fall. 3 credits. Not offered 1999-2000.

GEOL 417 Field Mapping in Argentina
Summer. 3 credits. Prerequisites: GEOL 210 and GEOL 326.

GEOL 423 Petroleum Geology

GEOL 434 Reflection Seismology
Spring. 4 credits. Prerequisites: MATH 192 and PHYS 208, 213, or equivalent.

GEOL 437 Geophysical Field Methods
Fall. 3 credits. Prerequisites: PHYS 213 and MATH 192 or equivalents, or permission of instructor.

GEOL 445 Geohydrology (also ABEN 471 and CEE 431)
Fall. 3 credits. Prerequisites: MATH 294 and ENGRD 202. L. Cathles. For description, see CEE 431.

GEOL 452 X-ray Diffraction Techniques
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1999-2000.

GEOL 453 Advanced Petrology
Fall. 3 credits. Prerequisite: GEOL 356. Offered alternate years. Not offered 1999-2000.

GEOL 454 Advanced Mineralogy
Spring. 3 credits. Prerequisite: GEOL 355 or permission of instructor. Offered alternate years. Not offered 1999-2000.

GEOL 455 Geochemistry
Fall. 4 credits. Prerequisites: CHEM 207 and MATH 102, or equivalent. Recommended: GEOL 356. Offered alternate years.

GEOL 458 Volcanology

GEOL 462 Marine Ecological Processes (also BIOES 462)
Spring. 3 credits. Limited to 75 students. Prerequisite: BIOES 261. Offered alternate years. C. D. Harvell, C. H. Greene. For description, see BIOES 462.

GEOL 475 Special Topics in Oceanography
Spring, summer. 2-5 credits. Prerequisites: GEOL 104 or BIO ES 154 and permission of instructor.

GEOL 476 Sedimentary Basins:
Tectonics and Mechanics
Fall. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Not offered 1999-2000.

GEOL 478 Advanced Stratigraphy
Fall. 3 credits. Prerequisite: GEOL 375 or permission of instructor. Offered alternate years.

GEOL 479 Paleobiology (also BIO ES 479)
Fall. 3 credits. Prerequisites: one year of introductory biology for majors and either BIOES 274, 373, GEOL 375, or permission of instructor. Offered alternate years.

GEOL 481 Senior Survey of Earth Systems
Fall. 3 credits. Limited to seniors majoring in geological sciences.

GEOL 491-492 Undergraduate Research
Fall, spring. 1-4 credits.

GEOL 500 Design Project in Geohydrology
Fall. Spring. 3-12 credits. An alternative to an industrial project for M.Eng. students choosing the geohydrology option. May continue over two or more semesters.

GEOL 502 Case Histories in Groundwater Analysis
Spring. 4 credits.

GEOL 624 Advanced Structural Geology II
Spring. 3 credits. Prerequisites: GEOL 326 and permission of instructor. Offered alternate years.

GEOL 628 Geology of Orogenic Belts
Spring. 3 credits. Prerequisite: permission of instructor.

GEOL 634 Advanced Geophysics I: Fractals and Chaos in Geology and Geophysics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years.

GEOL 636 Advanced Geophysics II: Quantitative Geodynamics
Spring. 3 credits. Prerequisite: GEOL 388 or permission of instructor. Offered alternate years.

GEOL 651 Analysis of Biogeochemical Systems
Spring. 3 credits. Prerequisite: MATH 293 or permission of instructor. Offered alternate years.
GEOL 656 Isotope Geochemistry
Spring. 3 credits. Open to undergraduates. Prerequisites: GEOL 455 or permission of instructor. Offered alternate years.

GEOL 681 Geotectonics
Fall. 3 credits. Prerequisites: permission of instructor.

GEOL 695 Computer Methods in Geological Sciences
Fall, spring. 1-3 credits.

GEOL 700-709 Seminars and Special Work
Fall, spring. 1-3 credits. Prerequisite: permission of instructor. Advanced work on original investigations in geological sciences. Topics change from term to term. Contact appropriate professor for more information.

GEOL 722 Advanced Topics in Structural Geology

GEOL 731 Plate Tectonics and Geology

GEOL 733 Fractals and Chaos—Independent Studies

GEOL 751 Petrology and Geochemistry

GEOL 753 Advanced Topics in Mineral Physics

GEOL 755 Advanced Topics in Petrology and Tectonics

GEOL 757 Current Research in Petrology

GEOL 762 Advanced Topics in Petroleum Exploration
Fall.

GEOL 771 Advanced Topics in Sedimentology and Stratigraphy

GEOL 773 Paleobiology

GEOL 775 Advanced Topics in Oceanography
Spring.

GEOL 780 Earthquake Record Reading
Fall.

GEOL 781 Geophysics, Exploration Seismology

GEOL 783 Advanced Topics in Geophysics

GEOL 789 Lithospheric Seismology (COCORP Seminar)

GEOL 793 Andes-Himalaya Seminar

GEOL 795 Low-Temperature Geochemistry

GEOL 796 Geochemistry of the Solid Earth

GEOL 797 Fluid-Rock Interactions

GEOL 799 Soil, Water, and Geology Seminar

MATERIALS SCIENCE AND ENGINEERING

Undergraduate Courses

MS&E 111 Materials by Design (also ENGR 111)
Fall. 3 credits. E. P. Giannelis. This is a course in the Introduction to Engineering series. For description, see ENGR 111.

MS&E 118 Design Integration: A Portable CD Player (also ENGR 118 and TAM 118)
Spring. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGR 118.

MS&E 124 Designing Materials for the Computer
Spring. 3 credits. Lectures. C. K. Ober. This is a course in the Introduction to Engineering series. For description, see ENGR 124.

MS&E 222 Materials Chemistry
Spring. 3 credits. E. P. Giannelis. This course is designed to show how materials chemistry has enabled modern technology. Topics will include conducting polymers, organic LEDs, self-assembling materials, contact lithography, nanophase and nanocrystalline materials, catalysis, smart gels, dendrimers, buckytubes, aerogels, chemistry of surfaces, molecular magnets, biosynthesized materials, light harvesting polymers, and inorganic polymers.

MS&E 261 Introduction to Mechanical Properties of Materials (also ENGRD 261)
Fall. 3 credits. S. P. Baker. For description, see ENGRD 261.

MS&E 265 Biological Materials and Their Synthesis
Fall. 3 credits. D. T. Grubb. From contact lenses and false teeth to arterial implants and hip joints, a tremendous range of synthetic materials are used in contact with the body to replace or supplement natural biological materials. The course will consider a number of biological systems and describe the properties and structure of the natural materials. Requirements for candidate replacement materials will be discussed, with historical and current solutions. These involve material properties such as strength and corrosion resistance as well as toxicity and biocompatibility. Design constraints, including methods of production, economics, regulatory approval, and legal liabilities, will also be considered.

MS&E 277 The Substance of Civilization—Materials through the Ages
Spring. 3 credits. 2 lecs, 1 lab. S. L. Sass. Materials have enabled revolutionary advances in how we live, work, fight, travel, and play; hence the naming of eras after them—Stone, Bronze, and Iron Ages. This course explores the role of materials in the development of the modern Western industrial civilization by putting technology into a historical context and examining the advances made possible by innovations with materials, starting with the Stone Age. Interconnections between critical developments are identified and explored.

Lectures, demonstrations, and hands-on laboratory experiments, will elucidate the origin of the unique properties of materials such as polymers, ceramics, metals and glass. This course is designed to fulfill the science requirement in the College of Arts and Sciences.

MS&E 331 Structure of Materials (also MS&E 531)

MS&E 332 Electrical and Magnetic Properties of Materials (also MS&E 532)

MS&E 333 Research Involvement I
Fall. 3 credits. Prerequisite: approval of course coordinator. Staff. Supervised independent research project in association with faculty member and faculty research group of the department. Students design experiments, set up the necessary equipment, and evaluate the results. Creativity and synthesis are emphasized.

MS&E 334 Research Involvement II
Spring. 3 credits. Prerequisite: approval of department. Staff. See MS&E 333 for description. May be a continuation of MS&E 333 or a one-term affiliation with a research group.

MS&E 335 Thermodynamics of Condensed Systems (also MS&E 535)
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson. The three laws of thermodynamics are introduced as a basis for understanding phase equilibria, heterogeneous reactions, solutions, electrochemical processes, surfaces, and defects. Statistical mechanics is introduced and applied to the calculation of entropy and specific heat of ideal gases and solids. Examples of design and control of processes.

MS&E 336 Kinetics, Diffusion, and Phase Transformations (also MS&E 536)
Spring. 4 credits. Prerequisite: MS&E 335 or permission of instructor. R. Dieckmann. Introduction to electrochemistry, atomic motion, and diffusion. Applications and design involving nucleation and growth of new phases in vapors, liquids, and solids, solidification, crystal growth, corrosion, recrystallization, gas-metal reactions, and thermomechanical processing to produce desired microstructures and properties. One-
third of course involves examples of design and control of processes.

**MS&E 345 Mechanical Properties and Processing of Engineering Materials**  
(also M&A 212)  
Spring. 4 credits. Prerequisite: ENGR 202  
For description, see M&A 212.

**MS&E 435 Senior Thesis I & II**  
Fall and spring. 2-semester course. 8 credits. Staff  
Open to advanced undergraduates in lieu of the senior materials laboratory. Proposals for these courses must be approved by the supervising faculty member prior to beginning the senior year. Approved thesis topics will normally involve original experimental research in direct collaboration with an ongoing research program. Periodic oral and written presentations and a final written thesis are required. This course is required for graduation with honors.

**MS&E 441 Microprocessing of Materials**  
(also MS&E 541)  
Fall. 3 credits. D. G. Ast  
Materials and processing steps involved in the production of integrated circuits and other micro-devices. Science, engineering, and design of processes to produce a specific device, such as a DRAM or CMOS inverter. Emphasis is on silicon, with extensions to gallium arsenide. All fabrication steps are considered, from single crystal growth and wafer preparation, to characterization, testing and yield calculations. Major topics are thermal oxidation of silicon, chemical vapor deposition of thin films, diffusion, ion implantation, and the principles of lithography using UV, electrons and X-rays, and wet/dry etching.

**MS&E 443-444 Senior Materials Laboratory**  
Fall, spring. 444. 3 credits each term. D. T. Grubb  
Practical laboratory covering the analysis and characterization of materials and processing. Emphasis on design of experiments for evaluation of materials’ properties and performance as related to processing history and microstructure. Projects available in areas such as glass and ceramsic, and polymers.

**MS&E 445 Mechanical Properties of Materials**  
Spring. 3 credits. Prerequisites: MS&E 331 and 336, or permission of instructor. A. L. Ruoff  
Stress, strain, and the basics of concepts in deformation and fracture for metals, polymers, and ceramics. Analysis of important mechanical properties such as plastic flow, creep, fatigue, fracture toughness, and rupture. Application of these principles to the design of improved materials and engineering structures.

**MS&E 447/448 Materials Design Concepts I & II**  
Fall, spring. 448. 2 credits each term. C. K. Ober, D. G. Ast  
Develops design in the field of materials science using Dieter’s Engineering Design, Ashby’s Materials Selection in Engineering Design, and other sources. Innovation, patent searching, and ASTM standards. Speakers from industry and other institutions lecture on case studies of design problems. Students give short oral and written presentations. Proposal for design-study project in the fall semester. Completion of extensive design-study project in the spring semester. Study includes prior art literature, materials selection, and some modeling, as well as discussion of broader economic, regulatory, environmental, and liability concerns that may arise.

**MS&E 449 Introduction to Ceramics**  
Fall. 3 credits. Prerequisite: MS&E 331 or permission of instructor. Not offered 1999–2000.  
Ceramic processes and products, crystal structures, structure of glasses, point defects (point-defect chemistry and relation to nonstoichiometry), line defects, grain boundaries, diffusion in ionic materials (emphasis on the relationships between diffusion and point-defect structure), phase diagrams, phase transformations, kinetics of solid-state reactions (reactions with and between solids: heterogeneous reactions, reactions between different solids, point-defect relaxation, internal reactions), grain growth and sintering. Physico-chemical aspects are emphasized.

**MS&E 452 Properties of Solid Polymers**  
(also MS&E 552)  
Fall. 3 credits. Prerequisite: ENGRD 261. Corequisite: MS&E 355/535 or permission of instructor. U. B. Wiesner  

**MS&E 454 Processing of Glass, Ceramic, and Glass-Ceramic Materials**  
Spring. 3 credits. Recommended prerequisite: MS&E 449. Offered alternate years. R. Deckmann  
Conventional and unconventional techniques for processing glass, glass-ceramic, and ceramic materials. Case studies illustrate the design, engineering, and scientific aspects of such processes. Vapor processes for high-purity optical fibers, hot-processing of ceramic turbine blades, photosensitive materials, and powder processing and sintering of ceramics will be discussed. This course is team taught with scientists from the research and development laboratory of Corning Inc.

**MS&E 455 Introduction to Composite Materials**  
(also M&A 455 and T&M 455)  
Spring. 4 credits. For description, see T&M 455.

**MS&E 459 Physics of Modern Materials Analysis**  
Spring. 3 credits. M. O. Thompson  
The interaction of ions, electrons, and photons with solids, and the characteristics of the emergent radiation in relation to the structure and composition of materials. Aspects of atomic physics that are relevant to understanding techniques of modern materials analysis. Principles of analysis such as Auger electron spectroscopy, ion scattering, and secondary ion-mass spectroscopy. Design of experiments for near-surface analysis.

**MS&E 463 Principles of Electronic Packaging**  
Spring. 3 credits. Staff  
Design, materials, and manufacturing needs for packaging technology, from chip to board. Principles involved in key areas of materials science, and other engineering disciplines. Packaging materials will be discussed include metals, ceramics, and polymers.

**MS&E 482 Plasma Processing of Electronic Materials (also ELE E 482)**  
Spring. 3 credits. Prerequisite: PHYS 213 and 214 or their equivalents offered on demand.  
For description, see ELE E 482.

**MS&E 489 Undergraduate Teaching Involvement**  
Fall and spring. Variable credit. MS&E faculty  
This course will give credit to students who help in the laboratory portions of ENGR 111 or 124, ENGR 261 or MS&E 277. The number of credits earned will be determined by the teaching load and will typically be 1 to 3 credits.

**MS&E 490 Independent Study**  
Fall and spring. Variable credit. Individual faculty.  
This course is meant for students who have already taken MS&E 333 and MS&E 334. Research Involvement, and who want to do an intense research project.

**MS&E 495 Introduction to Point and Space Groups (also ELE E 495)**  
Fall. 4 credits. Homework only. S-U grades only. R. L. Liboff  
For description, see ELE E 495.

**Graduate-Level Professional Courses**

**MS&E 503 Magnetic Materials**  
Fall. 3 credits. Prerequisites: PHYS 213 and 214, or equivalent. Offered alternate years. Not offered 1999–2000. Y. Suzuki  
This course covers the fundamentals of magnetic phenomena and specific magnetic materials and their use in modern applications. Magnetization phenomena, the origin of magnetism in a material, magnetic domains, magnetic anisotropy will be included in the fundamentals. Specific magnetic materials and their applications include: ferromagnetism in thin films and fine particles, amorphous magnetic materials; magnetic recording, magnetic circuits.

**MS&E 505 Organic Optoelectronics**  
Fall. 3 credits. G. G. Malliaras  
Overview of relevant materials from small aromatic molecules to conjugated polymers. Focuses on optoelectronic properties including photophysics (absorption, emission, photogeneration, recombination), charge transport (doping, hopping, disorder, charge injection) and elements of nonlinear optics. Optoelectronics applications (such as electrophotography, light emitting diodes, lasers, photovoltaic cells, thin film transistors) will also be discussed.

**MS&E 516 Thin-Film Materials Science**  
Fall. 3 credits. Offered alternate years. D. G. Ast  
This course is a fundamental approach to thin-film science that will cover deposition of films, growth of epitaxial layers, formation of multilayered structures such as superlattices and quantum wells, and interfusion and
reaction in thin films. The course will begin with the structure and thermodynamics of surfaces and ultrathin films. The conditions for epitaxial growth, such as used in semiconductor heterostructures, will be contrasted with those for amorphous or polycrystalline films. The role of thermal processing for reactive thin films involving the formation of surface oxides, metallic silicides, and alumina films will be presented.

**MS&E 522 Mechanical Properties of Thin Films**
Spring. 3 credits. Offered alternate years. S. P. Baker.

**MS&E 531 Structure of Materials (also MS&E 331)**
Fall. 4 credits. S. L. Sass.
For description, see MS&E 331.

**MS&E 532 Electrical and Magnetic Properties of Materials (also MS&E 332)**
Spring. 3 credits. Prerequisite: MS&E 331/332 or permission of instructor. Y. Suzuki.
For description, see MS&E 332.

**MS&E 535 Thermodynamics of Condensed Systems (also MS&E 335)**
Fall. 4 credits. Prerequisites: PHYS 214 and MATH 294. M. O. Thompson.
For description, see MS&E 335.

**MS&E 536 Kinetics, Diffusion, and Phase Transformations (also MS&E 336)**
Spring. 3 credits. Prerequisites: MS&E 535/335 or permission of instructor. R. Dieckmann.
For description, see MS&E 336.

**MS&E 541 Microprocessing of Materials (also MS&E 441)**
Fall. 5 credits. D. G. Ast.
For description, see MS&E 441.

**MS&E 552 Properties of Solid Polymers (also MS&E 452)**
Fall. 3 credits. Prerequisite: ENGRD 261. Corequisite: MS&E 335/335 or permission of instructor. U. B. Wiesner.
For description, see MS&E 452.

**MS&E 553-554 Special Project**
Fall, spring. 5 credits. 6 credits each term.
Master of Engineering research project.

**Graduate Core Courses**

**MS&E 601 Thermodynamics of Materials**
Fall. 3 credits. Prerequisite: previous course in thermodynamics at level of MS&E 355. J. M. Blakely.

**MS&E 602 Elasticity, Plastic Flow, and Fractures**
Spring. 3 credits. S. P. Baker.
Micromechanical modeling of mechanical behavior. A materials-science approach to modeling combines concepts from continuum mechanics, thermodynamics, kinetics and atomic structure. Topics include: elastic properties of crystals, deformation mechanisms from ambient temperature to very high temperatures over a wide range of strain rates, fracture in Brittle materials, fracture in ductile materials, fracture at elevated temperatures, crack tip phenomena, and composite materials.

**MS&E 603 Analytical Techniques for Materials Science**
Spring. 4 credits. Lab. M. O. Thompson.
Survey of atomic and structural analysis techniques as applied to surface and bulk materials. Physical processes involved in the interaction of ions, electrons, and photons with solids; characteristics of the emergent radiation in relation to the structure and composition. Techniques covered include Auger electron spectroscopy, ion scattering, nuclear activation, secondary ion mass spectroscopy, UV, and X-ray photoelectron spectroscopies, X-ray diffraction and related techniques, etc. Selection and design of experiments for near-surface analysis.

**MS&E 604 Diffusion and Phase Transformation: Kinetics in Condensed Matter**
Spring. 3 credits. D. T. Grubb.
Phenomenology and microscopic aspects of diffusion in fluids, both simple and polymeric, and in metallic and ionic solids. Phase stability and transformation, nucleation and growth, spinodal decomposition and displaceable transformations. Phase coarsening processes, recrystallization and grain growth. Diffusion-controlled growth, interfacial reactions, moving-boundary problems. Grain-boundary migration controlled kinetics. At the level of Diffusion in the Condensed State, by Kirkaldy and Young.

**MS&E 655 Composite Materials (also MS&E 655 and T&M 655)**
Spring. 4 credits.
For description, see T&M 655.
Related Course in Another Department
Introductory Solid-State Physics (PHYS 454).

**Further Graduate Courses**

**MS&E 610 Principles of Diffraction (also A&EP 711)**
Spring. 4 credits. Offered alternate years. B. Batterman.
For description, see A&EP 711.

**MS&E 612 Solid-State Reactions**
Fall. 3 credits. Offered alternate years.
R. Dieckmann.
Point defects (thermal disorder, component-activity-dependent disorder, influence of dopants, different reaction kinetics covered, Coulomb interaction between point defects), dislocations, grain boundaries transport in solids (definition and different types of diffusion coefficients, reference frames, mechanisms of electrical conduction, elementary diffusion mechanisms, atomic theory of transport, correlation effects, phenomenological theory of transport including some aspects of thermodynamics of irreversible processes, Fick's law), point-defect relaxation (migration controlled, phase-boundary reaction controlled), interdiffusion, solid-state reactions involving compound formation (oxidation of metals, reactions between solids), demixing of materials in potential gradients, selected solid-state processes (internal reactions, etc.).

**MS&E 614 Transmission Electron Microscopy**
Spring. 3 credits. Prerequisite: MS&E 331 or equivalent level of knowledge of crystalllography and diffraction. S. L. Sass.
This course covers the theory and practice of obtaining and interpreting TEM data from crystalline materials. Topics include specimen preparation, adjustment and calibration of the TEM, and image formation. Special emphasis is placed on electron diffraction (formation and analysis of spot patterns, Kikuchi patterns and convergent beam patterns), and obtaining useful images of crystal defects. Practical requirements for high-resolution imaging of crystal lattices and interfaces are also covered. Associated theoretical topics include kinematical and dynamical diffraction theories, including Bloch waves and anomalous absorption, the contrast transfer function theory of phase contrast, and image modeling and image analysis for quantitative interpretation of data. Current texts are Loretto Electron Beam Analysis of Materials, 2nd ed., and Riemen Transmission Electron Microscopy, Physics of Image Formation.

**MS&E 617 Solid State Electrochemistry**
Fall. 3 credits. Prerequisite: MS&E 612 or permission of instructor. Offered alternate years. Not offered 1999–2000.
R. Dieckmann.
Disorder in solids; thermodynamic quantities or quasi-free electrons and electron defects in semiconductors; mobility, diffusion and partial conductivity of ions and electrons; solid ionic conductors, solid electrolytes and solid solution electrodes; galvanic cells with solid electrolytes for thermodynamic investigations; technical applications of solid electrolytes. At the level of Electrochemistry of Solids by H. Ricken.

**MS&E 619 Superhard Materials**
Fall. 3 credits. Prerequisite: permission of instructor. Not offered 1999–2000.
A. L. Ruoff.
The superhard materials include diamond, cubic boron nitride (possibly the new C4N3) and boron carbide, B,C. The origin of their extreme hardness is examined. The thermodynamics of their stability and the kinetics of their crystal growth will be described. Commercial methods of synthesis of large crystals, powders, thin films and polycrystalline alloys will be examined. Their chemical, optical and mechanical properties will be studied. Moreover, there is substantial potential for radiation-hard semi-conducting devices and the status of this area will be covered. At the level of Field, The Properties of Natural and Synthetic Diamonds, plus recent papers.
MS&E 524/624 Synthesis of Polymeric Materials
Spring. 4 credits. Offered alternate years. Prerequisite: MS&E 452 or permission of instructor.
Preparation of synthetic polymers by step- and chain-growth polymerization: condensation; free radical, anionic, cationic, and other mechanisms; ring opening and coordination routes. Statistical and kinetic aspects of homopolymer and copolymer formation. Stereoregularity of polymers and spectroscopic methods for polymer analysis. Molecular aspects of polymer design for properties such as conductivity, elasticity, thermal stability, and engineering properties. Special topics will include liquid crystalline polymers, photoresponsive materials, and supermolecular chemistry. At the level of Principles of Polymerization, by Odian.

MS&E 626 Advanced Inorganic Chemistry III: Solid-State Chemistry (also CHEM 607)
Spring. 4 credits. Prerequisite: CHEM 605 or permission of instructor. F. DiSalvo.
For description, see CHEM 607.

MS&E 671 Synthetic Polymer Chemistry (also CHEM 675 and CHEM 671)
Spring. 4 credits. Prerequisites: CHEM 359–360 or equivalent or permission of instructor.
For description, see CHEM 671.

MS&E 703 Surfaces and Interfaces in Materials
Spring. 3 credits. Offered alternate years. J. M. Blakely.
This course deals with special topics in the field of surface and interface science. Some knowledge of basic statistical thermodynamics, crystallography, elementary quantum mechanics and theory of rate processes will be assumed. The following are the main topics: statistical thermodynamics of interfaces, morphological stability, atomic structure, energetics and structure determination, electronic structure of interfaces, charge and potential distributions, surface states, adsorption and segregation, atomic transport and growth processes at surfaces, oxidation and other surface reactions.

Specialty Courses

MS&E 779 Special Studies in Materials Science
Fall. Spring. Variable credit. Offered on demand. Staff. Supervised studies of special topics in materials science.

MS&E 798 Materials Science and Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. Staff. Lectures by visiting scientists, Cornell staff members, and graduate students on subjects of interest in materials sciences, especially in connection with new research.

MS&E 799 Materials Science Research Seminars
Fall, spring. 2 credits each term. For graduate students involved in research projects. Staff. Short presentations on research in progress by students and staff.

MS&E 800/801 Research in Materials Science
Fall, spring. 801. Credit to be arranged. Staff. Independent research in materials science under the guidance of a member of the staff.

MECHANICAL AND AEROSPACE ENGINEERING

General and Required Courses

M&A 101 Naval Ship Systems
For description, see NAV S 202.

M&A 102 Drawing and Engineering Design (also ENGRG 102)
Fall, spring. 1 credit. Half-term course offered twice each semester. Enrollment limited to thirty-two students each half term. Recommended for students without previous mechanical drawing experience. S-U grades optional. For description, see ENGRG 102.

M&A 117 Introduction to Mechanical Engineering (also ENGRG 117)
Fall or spring, to be determined. 3 credits. This is a course in the Introduction to Engineering series. For description, see ENGRG 117.

M&A 127 Introduction to Entrepreneurship and Engineering Enterprise (also ENGRG 127)
Spring. 3 credits. Enrollment open to engineering students, others with permission of instructor. This is a course in the Introduction to Engineering series which provides a solid introduction to the entrepreneurial process to students in engineering. For description, see ENGRG 127.

M&A 212 Mechanical Properties and Processing of Engineering Materials (also MS&E 345)
Spring. 4 credits. Prerequisite: ENGRG 202. Introduction to the broad range of mechanical behavior of materials and their processing; atomic bonding and crystalline structures; point and line defects; plastic deformation of crystals and polycrystals; hardening behavior and basic elements of plasticity; equilibrium microstructural development and time-dependent phase transformations; bulk deformation processes; the ideal work and strain analysis methods; failure of materials; materials selection.

M&A 221 Thermodynamics (also ENGRG 221)
Fall, spring, may be offered summer. 3 credits. Prerequisites: MATH 192 and PHYS 112. For description, see ENGRG 221.

M&A 225 Mechanical Design and Synthesis
Spring. 3 credits. Prerequisite: ENGRG 202. Lab fee. A hands-on laboratory, the use of machine tools, mechanical dissection, and a number of design projects provide direct experience of creative design synthesis.

M&A 322 Introductory Fluid Mechanics
Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRG 202 and 203 and coregistration in 221, or permission of instructor.
Physical properties of fluids, hydrostatics, conservation laws using volume analysis and using differential analysis, Bernoulli's equation, potential flows, simple viscous flows (solved with Navier-Stokes equations), dimensional analysis, pipe flows, boundary layers, introduction to compressible flow.

M&A 324 Heat Transfer
Spring. May also be offered in Engineering Cooperative Program. 3 credits. Prerequisite: M&A 323 or permission of instructor.
Topics include conduction of heat in steady and unsteady situations; surfaces with fins and systems with heat sources; forced and natural convection of heat arising from flow around bodies and through ducts; heat exchangers; emission and absorption of radiation; and radiative transfer between surfaces.

M&A 325 Mechanical Design and Analysis
Fall. Usually offered in Engineering Cooperative Program also. 4 credits. Prerequisites: ENGRG 202, ENGRG 203, M&A 212 and M&A 225. Lab fee. Application of the principles of mechanics and materials to problems of analysis and design of mechanical component and systems.

M&A 328 System Dynamics
Spring. May be offered in Engineering Cooperative Program. 4 credits. Prerequisite: MATH 294, ENGRG 203. Junior standing required.
Dynamic behavior of mechanical systems: modeling, analysis techniques, and applications; vibrations of single- and multi-degree-of-freedom systems; feedback control systems, stability analysis, Computer simulation and experimental studies of vibration and control systems.

M&A 427 Fluids/Heat Transfer Laboratory
Fall. 3 credits. Prerequisites: M&A 323, 324. Fulfills the technical writing requirement. Laboratory exercises in methods, techniques, and instrumentation used in fluid mechanics and the thermal sciences. Measurements of temperature, heat transfer, viscosity, drag, fluid flow rate, effects of turbulence, air foil stall, two-phase flows and engine performance. Biweekly written assignments.

M&A 428 Seminar on Engineering Design
Fall. 2 credits. Prerequisite: completion of six semesters in mechanical engineering or equivalent. S-U grades only.
This course is offered to illustrate the design process in action. It consists of seminars by industrial and academic practitioners of design. Case studies are presented in weekly invited lectures from a wide range of disciplines, including thermo-fluid processes, manufacturing, energy, mechanical design, aerospace, and biological sciences. The invited lectures are supplemented by one or more design 'projects' in the semester, such as a competition to design an all-balsa indoor hand or catapult-launched glider for maximum duration.
M&E 591 Applied Systems Engineering (also CEE 504, ELE E 595, OR&IE 512)
Fall. 3 credits. Permission of instructor. Fundamental ideas of systems engineering, and their application to design and development of various types of engineered systems. Defining system requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations and the system life cycle.

Mechanical Systems, Design, Materials Processing, and Precision Engineering

M&E 386 Automotive Engineering
Spring. 3 credits. Prerequisite: M&E 325 or permission of instructor. Selected topics in the analysis and design of vehicle components and vehicle systems. Emphasis on automobiles, trucks, and related vehicles. Power plant, drive line, brakes, aerodynamics, suspension, and structure. Other types of vehicles may be considered.

M&E 412 Smash and Crash: Mechanics of Large Deformations
Fall. 4 credits. Prerequisites: M&E 212, T&M 202. Fullfills field design requirement. Severe loading is a defining feature of both materials processing and crash worthiness. Materials intentionally are stressed beyond their elastic limits, resulting in deformations that are not reversible. In materials processing, the desire is to change the shape to manufacture components; in crash worthiness, it is to absorb the vehicle's energy. In this course the fundamentals of plasticity are covered: yielding, flow laws, work hardening. Various solution methods, including bound theorems, are presented. The fundamentals are applied to localization, primary and secondary forming operations, and plastic buckling. Laboratory experiments deal with these topics and conclude with the individual design, construction, and testing of a crush cage.

M&E 415 Global Position System Theory and Design (also ELE E 415)
Fall. 4 credits. Prerequisites: ELE E 301 and ELE E 303 or permission of instructor. For description, see ELE E 415.

M&E 417 Introduction to Robotics: Dynamics, Control, Design
Spring. 3 credits. Introductory course in the analysis and control of mechanical manipulators. Topics include spatial descriptions and transformations, manipulator kinematics and inverse kinematics, differential relationships and static forces, manipulator dynamics, trajectory generation, sensors and actuators, trajectory control, and compliant motion control. Several experiments with a five axis manipulator arm as well as simulation and design using MATLAB and multibody codes will be used.

M&E 455 Introduction to Composite Materials (also M&E 455 and T&M 455)
Spring. 4 credits. For description, see T&M 455.

M&E 461 Entrepreneurship for Engineers (also ENGRG 461)
Fall. 3 credits. Enrollment open to upper class engineers, others with permission of instructor. This course will examine issues and skills necessary to identify, evaluate, and start new business ventures. Topics include competition, strategy, writing a business plan, intellectual property, technology forecasting, product design and development, sources of capital, and manufacturing. Cases and guest lecturers will provide material for analysis and class discussion.

M&E 467 Advanced Mechanical Analysis and Design
Fall. 3 or 4 credits. Evening examinations. Prerequisite: M&E 325 and M&E 362 or permission of instructor. Further application of the principles of mechanics and materials to problems of analysis and design of mechanical components and systems. Diverse examples from aerospace, automotive, and biomechanical fields, with emphasis on current machinery applications. Students have access to general-purpose software tools (such as MATLAB) as well as specialized computational codes (such as ANSYS) for analysis of stress and deformation.

M&E 469 Stress Analysis for Mechanical and Aerospace Design
Fall. 3 credits. Prerequisites: T&M 202 and M&E 325 or permission of instructor. Evening examinations. Not offered 1999-2000. Study of advanced topics in the analysis of stress and deformation of elastic bodies, with applications to analysis and design of mechanical and aerospace systems and components. Review of mechanics fundamentals and their application to classical problems. Introduction to modern computational methods (finite element method) for analysis of stress and deformation.

M&E 478 Feedback Control Systems (also ELE E 471)
Fall. 4 credits. Prerequisites: ELE E 301, or M&E 326, or permission of instructor. Analysis techniques, performance specifications, and analog-feedback-compensation methods for single-input, single-output, linear, time-invariant systems. Laplace transforms and transfer functions are the major mathematical tools. Design techniques include root-locus and frequency response methods. Includes laboratory that examines modeling and control of representative dynamic processes. (Lectures shared with CHEME 472.)

M&E 479 Modeling and Simulation of Mechanical and Aerospace Systems (also M&E 579)
Spring. 3 or 4 credits. Prerequisite: senior engineering standing or permission of instructor. Evening examinations. Term project. This fulfills M&E design elective if taken for 4 credits. Representation of discrete and distributed dynamic systems by state-variable models. Time- and frequency-domain simulation via general-purpose languages (such as MATLAB) and special-purpose simulation software (such as Simulink). Introduction to finite element modeling of distributed systems via educational and commercial software (such as MacTran and ANSYS). Selected mechanical and aerospace applications.

M&E 486 Automotive Engineering Design
Spring. 4 credits. Prerequisite: senior standing. Fulfills field design requirement. For description, see M&E 386.

M&E 514 Design for Manufacture and Assembly
Spring. 3 or 4 credits. (4 credit option includes a lab or a design option for M&E seniors). Prerequisites: ENGRG 102 and M&E 212 or 412 a introductory probability and statistics, or permission of instructor. Nominal DFMA (Design for Manufacture & Assembly) and variational DFMA are covered in two parallel streams. The nominal stream is based on readings in a popular text that surveys the characteristics of manufacturing and assembly processes that influence the design of parts and products. The second stream, covered through lectures and diverse reading, addresses dimensional variability and its control through manufacturing processes, geometric tolerances, dimensional metrology, and aspects of statistical quality and process control.

M&E 565 Biomechanical Systems—Analysis and Design
Fall. 3 or 4 credits. Prerequisites: T&M/ENGRD 203 and senior standing, graduate standing, or permission of instructor. Selected topics from the study of the human body as a mechanical system. Emphasis on the modeling, analysis, and design of biomechanical systems frequently encountered in orthopaedic engineering and rehabilitation engineering.

M&E 571 Applied Dynamics
Fall. 3 credits. Prerequisites: graduate standing, seniors with T&M/ENGRD 203, M&E 326 or permission of instructor. 2 lectures. Introduction to multibody dynamics; dynamics of rigid bodies; Newton-Euler methods, Lagrangian dynamics, principle of virtual power (Kane-Jourdain methods); applications to robotics, space dynamics of satellites, electro mechanical systems.

M&E 579 Modeling and Simulation of Mechanical and Aerospace Systems
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Evening examinations. Term project. For description, see M&E 479.

M&E 612 Materials Processing: Theory and Applications

M&AE 613 Computational Methods in Materials Processing
Spring. 4 credits. Prerequisite: M&AE 612 or permission of instructor. Not offered 1999-2000.

M&AE 615 Experiments in Materials Processing
Fall. 4 credits. Prerequisite: M&AE 680 (finite elements) or permission of instructor.
This course will focus on experiments and simulations related to the mechanical properties of materials and materials processing. A general introduction to sensors and instrumentation for engineering measurements will also be included. Testing for mechanical properties/model parameter characterization and simple boundary value problems. Linear elasticity, inelastic deformation, fatigue, and fracture, including rate and temperature effects. Process simulation experiments including forging, extrusion, rolling, and ironing may also be conducted. In addition, an emphasis will be placed on the experiment/simulation interface. Students will perform analyses including finite element modeling to correlate and predict materials behaviors observed in the experiments. These analyses include linear elasticity behavior, state variable plasticity modeling and fracture mechanics.

M&AE 655 Composite Materials (also M&AE 655 and T&AM 655)
Spring. 4 credits.
For description, see T&AM 655.

M&AE 664 Mechanics of Bone
Spring. 3 credits. Prerequisites: graduate standing or permission of instructor.
This course will focus on current methods and results in skeletal research, focusing on bone. Topics include skeletal anatomy and physiology, experimental and analytical methods for determination of skeletal behavior, mechanical behavior of bone tissue, and skeletal functional adaptation to mechanics.

M&AE 670 Finite Element Analysis for Mechanical and Aerospace Design
Spring. 4 credits. Prerequisite: graduate standing, or permission of instructor.
Introduction to the finite-element method for static and dynamic analysis of mechanical and aerospace structures (and related nonstructural applications such as heat conduction). Primary emphasis on underlying mechanics and numerical methods. Secondary consideration of inherent capabilities and limitations of large-scale, general-purpose structural mechanics programs (such as ANSYS). Introduction to computational aspects through study of small, special-purpose programs and application of available general-purpose programs.

M&AE 676 Model-Based Estimation
Fall. 3 credits. Prerequisites: linear algebra, differential equations, and MATLAB programming. Open to M.S./Ph.D.; others by permission of the instructor.
This course covers a variety of ways in which models and experimental data can be used to estimate model quantities that are not directly measured. The two main estimation methods that are presented are a) least-squares estimation for general problems and b) Kalman filtering for dynamic systems problems. Techniques for linear models are taught as are techniques for nonlinear models. Both theory and application are presented, but the emphasis is on the latter. The course includes a final programming project.

M&AE 677 Advanced Topics in Systems and Control
Spring. 4 credits. Prerequisite: M&AE 478 (ELE E 471), ELE E 521, graduate standing, or permission of instructor.
Modern topics in model based control pertaining to multi-input, multi-output systems. Emphasis on design techniques which result in closed loop systems that are insensitive to modeling errors. Topics include H-infinity and H-2 optimization, explicit models of uncertainty, gain scheduling, and the analysis of uncertain systems. Real-time control laboratory will include applications such as flight control and control of flexible space structures.

M&AE 680 Finite Element Analysis (also CEE 772 and T&AM 686)
Spring. 3 credits. Prerequisites: T&AM 655 or equivalent.
Conceptual, theoretical, and practical bases for finite element analysis in engineering, with emphasis on structural, mechanical, fluid, and thermal problems. Focuses on the FEM as a method for numerically solving partial differential equations. Topics include: strong and weak problem forms; weighted-residual and variational formulations; formulation of elliptic, parabolic, hyperbolic, and eigenvalue problems, convergence and error estimation; and isoparametric elements. Applications selected from such topics as nonlinear analysis, materials processing, and fracture mechanics.

Energy, Fluids, and Aerospace Engineering

M&AE 305 Introduction to Aeronautics
Fall. 3 credits. Prerequisite: T&AM/ENGRD 203; limited to upperclass engineers, others with permission of instructor.
Introduction to aeronautical design of aircraft. Principles of incompressible and compressible aerodynamics, boundary layers, and wing theory. Description and performance of reciprocating and jet propulsion engines; propeller theory. Design analyses focus on transonic passenger airplanes and small supersonic jets.

M&AE 306 Spacecraft Engineering
Spring. 3 credits. Upperclass engineering students.
Introduction to spacecraft design from launch, through orbital operation, to reentry. Topics covered include space missions, space environment, orbital mechanics, rocket theory, and reentry. Emphasis on satellites orbiting the Earth. Several guest lectures on current problems and trends in spacecraft operation and development.

M&AE 400 Components and Systems: Engineering in a Social Context (also S&T 400)
Spring. 3 credits. Prerequisites: upperclass standing, two years of college physics. Serves as a required elective but not as a field elective in mechanical engineering. Offered alternate years.
This course addresses, at a technical level, broader questions than are normally posed in the traditional engineering or physics curriculum. Through the study of individual cases such as the Strategic Defense Initiative (SDI), supersonic transport, and the automobile and its effect on the environment, we investigate interactions between the scientific, technical, political, economic, and social forces that are involved in the development of engineering systems.

M&AE 401 Components and Systems: Engineering in a Social Context
Spring. 4 credits. Prerequisites: senior standing, two years of college physics. Serves as a required elective but not as a field elective in mechanical engineering. Offered alternate years.
For description, see M&AE 400.

M&AE 423 Intermediate Fluid Dynamics
Spring. 3 credits. Prerequisite: M&AE 323.
This course builds on the foundation of M&AE 323. Emphasis will be both on the calculation of real flows (both engineering and environmental) and fundamental principles. Topics covered will include some exact solutions to the Navier-Stokes equations, boundary layers, wakes and jets, separation, convection, stratified and rotating flows, fluid instabilities, turbulence and chaos.

M&AE 449 Combustion Engines
Spring. 3 credits. Prerequisites: ENGRD 221 and M&AE 323.
Introduction to combustion engines, with emphasis on the application of thermodynamic and fluid-dynamic principles affecting their performance. Chemical equilibrium and kinetics, chemical cycle analyses, deviations from ideal processes, engine breathing, combustion knock, formation and control of undesirable exhaust emissions.

M&AE 458 Introduction to Nuclear Science and Engineering (also A&EP 403, ELE E 403 and NS&E 403)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294.
For description, see NS&E 403.

M&AE 459 Introduction to Controlled Fusion: Principles and Technology (also A&EP 484, ELE E 484 and NS&E 484)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for senior and graduate students. Offered on demand.
For description, see NS&E 484.
M&A E 506 Aerospace Propulsion Systems
Spring. 3 credits. Prerequisite: M&A E 323 or permission of instructor. Offered alternate years.

[M&A E 507 Dynamics of Flight Vehicles]
Spring. 3 credits. Prerequisites: M&A E 505 and M&A E 325 or permission of instructor. Offered alternate years. Not offered 1999–2000.

M&A E 543 Combustion Processes
Fall. 3 credits. Prerequisite: graduate standing or permission of instructor. An introduction to combustion and flame processes, with emphasis on fundamental fluid dynamics, heat and mass transport, and reaction-kinetic processes that govern combustion rates. Thermodynamics, kinetics, vessel explosions, laminar and turbulent premixed and diffusion flames, droplet combustion, and combustion of solids.

M&A E 601 Foundations of Fluid Dynamics and Aerodynamics
Fall. 4 credits. Prerequisite: graduate standing or permission of instructor. Foundations of fluid mechanics from an advanced viewpoint, including formulation of continuum fluid dynamics, surface phenomena and boundary conditions at interfaces; fundamental kinematic descriptions of fluid flow; tensor analysis; derivation of the Navier-Stokes equations and energy equation for compressible fluids; sound waves, viscous flows, boundary layers, and potential flows.

[M&A E 602 Fluid Dynamics at High Reynolds Numbers]
Navier-Stokes and Euler equations, integral formulas for fluid forces and moments on immersed bodies in compressible and incompressible viscous flows. Vorticity dynamics in compressible flows, Kelvin's theorems. Froude's theorem, Helmholtz decomposition of vector fields. Singularities, vortex filaments, vortex sheets, Biot-Savart relations. Irrotational motion: representations in terms of velocity or vector potentials. Topology of flows; general results in potential theory.

[M&A E 603 Compressible Gas Dynamics]
Fall. 4 credits. Graduate standing or permission of instructor. Not offered 1999–2000.
Fundamentals of compressible gas dynamics are described using thermodynamics and fluid properties, as well as isentropic flow theory; normal shock waves and Rankine-Hugoniot relations; duct flows including effects of area, friction, and heat interaction; oblique shock waves and Prandtl-Meyer expansion fans; applications include high-speed aerodynamics, combustor design, and jets used for materials processing.

M&A E 608 Physics of Fluids
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Behavior of a gas considered at the microscopic level. Introductory quantum kinetic theory: velocity distribution, collisions, Boltzmann equation. Quantum theory: postulates of quantum mechanics, internal structure, rigid rotator, harmonic oscillator, one-electron atom. Statistical mechanics: partition functions, relations to thermodynamics, calculations of thermodynamic properties. Chemical rate processes.

[M&A E 636 Elements of Computational Aerodynamics]
Spring. 4 credits. Prerequisites: graduate standing and a graduate-level course in fluid mechanics. Not offered 1999–2000.
Topics relevant to numerical solution of problems in aerodynamics and fluid mechanics. Analysis and application of computational techniques appropriate for solution of inviscid or high Reynolds number fluid flow problems. Course has common lectures with M&A E 736, but is more applications oriented and uses commercial software for all computational exercises.

M&A E 649 Seminar on Combustion
Fall. 2 or 4 credits. Prerequisite: M&A E 543 or permission of instructor. S. B. Pope.
Discussion of contemporary problems in combustion research, with emphasis on applications of modern experimental and analytical techniques. Typical problems include formation and removal of pollutants in combustion systems, combustion of alternative fuels, coal combustion and combustion in turbulent flow. Topic for Fall 1999: turbulent premixed combustion.

M&A E 651 Advanced Heat Transfer
Spring. 4 credits. Prerequisite: graduate standing or permission of instructor. Advanced treatments of convective, radiative, and convective heat transfer. Basic equations reasoned in detail. Integral and differential formulations. Exact and approximate solutions. Forced convection. Natural convection. Laminar and turbulent flows. Effects of viscous dissipation and mass transfer.

[M&A E 654 Radiation Heat Transfer]
2–4 credits. Prerequisite: graduate standing or permission of instructor. Not offered 1999–2000.

M&A E 732 Analysis of Turbulent Flows
Spring. 4 credits. Prerequisite: M&A E 601 or permission of instructor. Offered alternate years.

M&A E 733 Stability of Fluid Flow

M&A E 734 Turbulence and Turbulent Flow
Fall. 4 credits. Prerequisite: M&A E 601, graduate standing, or permission of instructor. Topics include the dynamics of buoyancy and shear-driven turbulence, boundary-free and bounded shear flows, second-order modeling, the statistical description of turbulence, turbulent transport, and spectral dynamics.

[M&A E 736 Theory of Computational Aerodynamics]
Spring. 4 credits. Prerequisites: graduate standing, advanced course in continuum mechanics or fluid mechanics, and some FORTRAN programming experience. Not offered 1999–2000.
Numerical methods to solve inviscid and high-Reynolds-number fluid-dynamics problems, including finite-difference, finite-volume, and surface-singularity methods. Accuracy, convergence, and stability; treatment of boundary conditions and grid generation. Focus on hyperbolic (unsteady flow with shock waves) and mixed hyperbolic-elliptic (steady transonic flow) problems. Assignments require programming a digital computer.

M&A E 737 Computational Fluid Mechanics and Heat Transfer
Fall. 4 credits. Prerequisites: graduate standing; an advanced course in continuum mechanics, heat transfer, or fluid mechanics, and some FORTRAN, C, or C++ programming experience. Numerical methods are developed for the elliptic and parabolic partial differential equations that arise in fluid flow and heat transfer when convection and diffusion are present. Finite-difference, finite-volume, and some spectral methods are considered, together with issues of accuracy, stability, convergence, and conservation. Current methods are reviewed. Emphasis is on steady
and unsteady essentially incompressible flows. Assigned problems are solved on a digital computer.

**Special Offerings**

M&amp;AE 490 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to undergraduate students.
Prerequisite: permission of instructor. Intended for individual students or a small group of students who want to pursue a particular analytical or experimental investigation outside of regular courses or for informal instruction supplementing that given in regular courses.

M&amp;AE 491 Design Projects in Mechanical and Aerospace Engineering
Fall, spring. Credits to be arranged. Prerequisite or corequisite: M&amp;AE 428. Fulfills field design requirement. Intended for individual students or small groups of students who want to pursue particular design projects outside of regular courses.

M&amp;AE 545 Energy Seminar (also ELE E 587 and NS&amp;E 545)
Fall. 1 credit.
For description, see ELE E 587.

M&amp;AE 592 Seminar and Design Project in Aerospace Engineering
Fall, spring. 2 credits each term. Prerequisite: graduate standing or permission of instructor. Intended for students in M.Eng. (Aerospace) program. Introduces topics of current research interest in aerospace engineering by Aerospace faculty and invited speakers. Individual design projects supervised by separate faculty members after introductory sessions.

M&amp;AE 594 Manufacturing Seminar (also OR&amp;IE 893-894)
Fall, spring. 1 credit.
For description, see OR&amp;IE 893-894.

M&amp;AE 690 Special Investigations in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Limited to graduate students.

M&amp;AE 695 Special Topics in Mechanical and Aerospace Engineering
Fall, spring. Credit to be arranged. Graduate standing and permission of instructor. Special lectures by faculty members on topics of current research.

M&amp;AE 791 Mechanical and Aerospace Research Conference
Fall, spring. 1 credit each term. S-U grades only. For graduate students involved in research projects. Presentations on research in progress by faculty and students.

M&amp;AE 799 Mechanical and Aerospace Engineering Colloquium
Fall, spring. 1 credit each term. Credit limited to graduate students. All students and staff invited to attend. Lectures by visiting scientists and Cornell faculty and staff members on research topics of current interest in mechanical and aerospace science, especially in connection with new research.

M&amp;AE 890 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for M.S. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

M&amp;AE 894 Research in Mechanical and Aerospace Engineering
Credit to be arranged. Prerequisite: candidacy for Ph.D. degree in mechanical or aerospace engineering or approval of director. Independent research in an area of mechanical and aerospace engineering under the guidance of a member of the faculty.

**NUCLEAR SCIENCE AND ENGINEERING**

NS&amp;E 121 Fission, Fusion, and Radiation (also A&amp;EP 121 and ENGR 121)
Spring. 3 credits. S-U grades optional for students outside the College of Engineering. K. B. Cadby.
This is a course in the Introduction to Engineering series. For description, see ENGR 121.

NS&amp;E 403 Introduction to Nuclear Science and Engineering (also A&amp;EP 403, ELE E 484, and M&amp;AE 458)
Fall. 3 credits. Prerequisites: PHYS 214 and MATH 294. This course is designed for juniors or seniors from any engineering field who want to prepare for graduate-level nuclear science and engineering courses at Cornell or elsewhere. It can also serve as a basic course for those who do not intend to continue in the field. K. B. Cadby.
Introduction to the fundamentals of nuclear reactors. Topics include an overview of the field of nuclear engineering, nuclear structure, radioactivity, and reactions; interaction of radiation with matter; and neutron moderation, neutron diffusion, the steady-state chain reaction, and reactor kinetics. At the level of Introduction to Nuclear Engineering, by Lamarch.

NS&amp;E 484 Introduction to Controlled Fusion: Principles and Technology (also A&amp;EP 484, ELE E 484, and M&amp;AE 459)
Spring. 3 credits. Prerequisites: PHYS 112, 213, and 214, or equivalent background in electricity and magnetism and mechanics; and permission of instructor. Intended for seniors and graduate students. Offered on demand. D. A. Hammer.
Introduction to the physical principles and various engineering aspects underlying power generation by controlled fusion. Topics include: (1) fuels and conditions required for fusion power, and basic fusion-reactor concepts; (2) fundamental aspects of plasma physics relevant to fusion plasmas, and basic engineering problems for a fusion reactor; and (3) an engineering analysis of proposed magnetic and/or inertial confinement fusion-reactor designs.

NS&amp;E 509 Nuclear Physics for Applications
Fall. 3 credits. Prerequisites: sophomore physics and math, or permission of instructor; some upper-division physics is desirable. Primarily for graduate students, especially those with a major or minor in Nuclear Science and Engineering; also open to qualified undergraduates. V.O. Kostroun.
A first course in nuclear physics. Systematic presentation of nuclear phenomena and processes that underlie applications ranging from nuclear power (fission and fusion), to nuclear astrophysics, to nuclear analytical methods for research in nonnuclear fields. Radioactivity, nuclear reactions, and interaction of radiation with matter. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vance or Nuclear and Radiochemistry, by Friedlander, et al.

NS&amp;E 521 Radiation Effects in Materials
Fall. 3 credits. Prerequisite: introductory course in nuclear science and materials science. K. Unli.
Radiation effects in fission and fusion reactors. Displacement of atoms by neutrons, electrons and ions, radiation induced defects, diffusion of point defects in the crystalline lattice, void swelling, and other radiation induced changes in mechanical properties of alloys. Radiation effects in fission and fusion reactor materials. Nuclear reactor fuels. At the level of Fundamental Aspects of Nuclear Reactor Fuel Elements, by D. R. Olander.

NS&amp;E 545 Energy Seminar (also ELE E 587 and M&amp;AE 545)
Fall. 1 credit. D. A. Hammer.
For description, see ELE E 587.

NS&amp;E 551 Nuclear Measurements in Research
Spring. 3 credits. Prerequisite: PHYS 214 or 218, or permission of instructor; some upper-division physics desirable. Primarily for graduate students in archaeology, geology, chemistry, biology, materials science, and other fields in which nuclear methods are used. Open to qualified undergraduates. K. Unli.
Lectures on interaction of radiation with matter, radiation protection, and nuclear instrumentation. Experiments on radiation detection and measurement; electronic instrumentation, including computerized systems; activation analysis, and emerging applications such as prompt gamma analysis and neutron radiography. The TRIGA reactor is used. Emphasis is on methods used in non-nuclear fields. At the level of Radiochemistry and Nuclear Methods of Analysis, by Ehmann and Vance.

NS&amp;E 590 Independent Study
Fall, spring. 1-4 credits. Grade option letter or S-U.
Independent study or project under guidance of a faculty member.

NS&amp;E 591 Project
Fall, spring. 1-6 credits.
Master of Engineering or other project under guidance of a faculty member.

NS&amp;E 612 Nuclear Reactor Theory
Fall. 4 credits. Prerequisites: a year of advanced calculus and some nuclear physics. K. B. Cadby.
Physical theory of fission reactors; fission and neutron interactions with matter; theory of neutron diffusion; slowing down and
thermalization; calculations of criticality and neutron-flux distribution in nuclear reactors; reactor kinetics. At the level of Nuclear Reactor Theory, by Lamarsh.

NS&E 633 Nuclear Reactor Engineering (also A&E 633)
Fall. 4 credits. K. B. Cady. For description, see A&E 633.

OPERATIONS RESEARCH AND INDUSTRIAL ENGINEERING

OR&IE 115 Engineering Applications of Operations Research (also ENGR 115)
Fall, spring. 3 credits. Enrollment not open to OR&IE upper-class majors. This is a course in the Introduction to Engineering series. For description see ENGR 115.

OR&IE 270 Basic Engineering Probability and Statistics (also ENGRD 270)
Fall, spring, summer. 3 credits. Pre-or co-requisite: MATH 293. For description see ENGRD 270.

OR&IE 310 Industrial Systems Analysis
Spring. 4 credits. Prerequisite: ENGRD 270, or permission of instructor. Design of production facilities, including engineering economy, materials handling process design, and facility layout. Operations analysis, including process scheduling, process evaluation, procedural analysis, project management, methods analysis and design, work measurement, inventory control, job evaluation, and quality engineering and control.

OR&IE 320 Optimization I
Fall. 4 credits. Prerequisite: MATH 221 or 294j.
Formulation of linear programming problems and solutions by the simplex method. Related topics such as sensitivity analysis, duality, and network programming. Applications include such models as resource allocation and production planning. Introduction to interior-point methods for linear programming.

OR&IE 321 Optimization II
Spring. 4 credits. Prerequisite: OR&IE 320 or equivalent.
A variety of optimization methods stressing extensions of linear programming and its applications but also including topics drawn from integer, dynamic, and nonlinear programming. Formulation and modeling are stressed as well as numerical applications.

OR&IE 350 Financial and Managerial Accounting
Fall. 4 credits. Principles of accounting, financial reports, financial-transactions analysis; financial-statement analysis, budgeting, job-order and process-cost systems, standard costing and variance analysis, economic analysis of short-term decisions.

OR&IE 360 Engineering Probability and Statistics II
Fall. 4 credits. Prerequisite: ENGRD 270 or equivalent. This second course in probability and statistics provides a rigorous foundation in theory combined with the methods for modeling, analyzing, and controlling randomness in engineering problems. Probabilistic ideas are used to construct models for engineering problems, and statistical methods are used to test and estimate parameters for these models. Specific topics include random variables, probability distributions, density functions, expectation and variance, multidimensional random variables, and important distributions including normal, Poisson, exponential, hypothesis testing, confidence intervals, and point estimation using maximum likelihood and the method of moments.

OR&IE 361 Introductory Engineering Stochastic Processes I
Spring. 4 credits. Prerequisite: OR&IE 360 or equivalent. Basic concepts and techniques of random processes are used to construct models for a variety of problems of practical interest. Topics include the Poisson process, Markov chains, renewal theory, models for queuing and reliability.

OR&IE 414 Using Simulation Models for Engineering Design
Spring. 4 credits. Prerequisite: an undergraduate course in probability and statistics through regression analysis, computer programming skills with a working knowledge of or willingness to learn Java, C++, or C. Corequisites: graduate or senior level course in discrete event simulation. Not offered 1999-2000.
This course examines ways for engineers to exercise simulation models efficiently to gain information. The lectures will survey general techniques that are useful in most engineering and manufacturing disciplines; some specialized techniques will also be presented such as Infintesimal Perturbation Analysis (also A&EP 633).

OR&IE 416 Design of Manufacturing Systems
Fall. 4 credits. Senior OR&IE students only. Others by permission of instructor only.
Project course in which students, working in teams, design a manufacturing logistics system and conduct capacity, material flow, and cost analysis of their design. Meetings between project teams and faculty advisers are substituted for some lectures. Analytical methods for controlling inventories, planning production, and evaluating system performance will be presented in lectures. Lab fee $15.

OR&IE 431 Discrete Models
Fall. 4 credits. Prerequisites: OR&IE 320 and COM S 211, or permission of instructor. Not offered 1999-2000.
Basic concepts of graphs, networks, and discrete optimization. Fundamental models and applications, and algorithmic techniques for their analysis. Specific optimization models studied include flows in networks, the traveling salesman problem, and network design.

OR&IE 432 Nonlinear Optimization
Introduction to the practical and theoretical aspects of nonlinear optimization. Attention given to the computational efficiency of algorithms and the application of nonlinear techniques to linear programming; e.g., interior-point methods. Methods of numerical linear algebra introduced as needed.

OR&IE 434 Optimization Modeling
Fall. 3 credits. Prerequisites: a grade of at least B- in OR&IE 321/521.
The emphasis is on modeling complicated decision problems as linear programs, integer programs, or highly-structured non-linear programs. Besides modeling, students are required to assimilate articles from the professional literature and to master relevant software.

OR&IE 435 Introduction to Game Theory
Spring. 3 credits.
A broad survey of the mathematical theory of games, including such topics as two-person matrix and bimatrix games; cooperative and noncooperative n-person games; games in extensive, normal, and characteristic function form. Economic market games. Applications to weighted voting and cost allocation.

OR&IE 436 A Mathematical Examination of Fair Representation
Spring. 3 credits. Prerequisites: MATH 222 or 294 or permission of instructor. Not offered 1999-2000.
In this course we will study the mathematical aspects of the political problem of fair apportionment. The most recognizable form (in the U.S.) of apportionment is the determination of the number of seats in the U.S. House of Representatives awarded to each state. The constitution indicates that the apportionment should reflect the relative populations, but it does not prescribe a specific method. At first blush it appears that there is a straightforward approach that must lead to a fair, or fairest apportionment, for any fixed house size and known populations. However, indivisibility of seats leads us to interesting mathematical questions and a long, rich and fractious political history involving many famous figures. The basic ideas extend beyond apportionment of legislatures (in both federal systems and proportional representation systems) to other realms where indivisible resources are to be allocated among competing constituencies.

OR&IE 451 Economic Analysis of Engineering Systems
Spring. 4 credits. Prerequisites: OR&IE 320 and OR&IE 350.
Financial planning, including cash-flow analysis and inventory flow models. Engineering economic analysis, including discounted cash flows and taxation effects. Application of optimization techniques, as in equipment replacement or capacity expansion models. Issues in designing manufacturing systems. Student group project.

OR&IE 452 Introductory Engineering Stochastic Processes II
Fall. 4 credits. Prerequisite: OR&IE 361 or equivalent.
Stationary processes, martingales, random walks, and gambler’s ruin problems, processes with stationary independent increments, Brownian motion and other cases, branching processes, renewal and Markov-renewal processes, reliability theory. Markov decision processes, optimal stopping, statistical inference from stochastic models, and stochastic comparison methods for probability models. Applications to population growth, spread of epidemics, and other models.
Effective project teams, mathematical tools for their application to design and development, and fundamental ideas of systems engineering will be discussed with the Associate Director.

This course involves working as a TA in an experiential learning format. The focus is on making the general concepts concrete. The course takes the perspective of an analyst who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, and integrates a computer application into the solution. This perspective introduces OR&E and other students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the internet. The course will use lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete.

Delivering OR Solutions with Information Technology

Fall, Spring; weeks 1-7. 2 credits. Prerequisites: OR&E 310 or OR&E 350.

Information technology is the means by which computer science, operations research, and industrial engineering are brought to serve the operational and strategic needs of enterprises. The course takes the perspective of an analyst who accesses existing computer data to analyze a problem or opportunity, uses computer tools to manage the data, and integrates a computer application into the solution. This perspective introduces OR&E and other students to the ways in which information technology is currently being used throughout enterprises and how these uses are changing with the explosive growth of the internet. The course will use lectures (including guest lectures by practitioners), cases, and laboratory exercises intended to make the general concepts concrete.

Teaching in OR&E

Fall, Spring. Credit to be arranged.

Prerequisite: permission of instructor. This course involves working as a TA in an OR&E course. The course instructor will assign credits (the guideline is 1 credit per 4 hours/week of work with a limit of 3 credits).

OR&E Project

Fall, Spring. Credit to be arranged.

Prerequisite: permission of instructor. Project-type work, under faculty supervision, on a real problem existing in some firm or institution. Opportunities in the course may be discussed with the Associate Director.

Applied Systems Engineering (also CEE 504, ELE E 595, M&E 591)

Fall. 3 credits. Permission of instructor. Fundamental ideas of systems engineering and their application to design and development of various types of engineering systems. Defining systems requirements, creating effective project teams, mathematical tools for system analysis and control, testing and evaluation, economic considerations and system life cycle.

Design of Manufacturing Systems

Fall. 4 credits. Prerequisite: permission of instructor. Limited to graduate students in Engineering and the Business School. For description, see OR&E 416. Lab fee $15.

Case Studies

Fall. 1 credit. Limited to M.Eng. students in OR&E. Students are presented with an unstructured problem that resembles a real-world situation. They work in project groups to formulate mathematical models, perform computer analyses of the data and models, and present oral and written reports.

Supply Chain Management

Spring; weeks 1-8. 2 credits. Prerequisites: one of OR&E 310, OR&E 416, OR&E 525 or OR&E 562.

A supply chain is the scope of activities that convert raw materials (i.e., wheat) to finished products delivered to the end consumer (i.e., a box of cereal at the local P&C), usually spanning several corporations. Supply chain management focuses on the flow of products, information and money through the supply chain. Methodologies, tools and approaches. Emphasis on business processes, system dynamics, control, design, re-engineering. Relationship between the supply chain and the company's strategic position relative to its clients and its competition. Dimensions of inter-corporate relationships with partners, including decision-making, incentives, and risk.

Operations Research I: Optimization I

For description, see OR&E 320.

Optimization II

For description, see OR&E 321.

Operations Research I: Topics In Linear Optimization

Fall. 1 credit. Prerequisite: OR&E 420. Students who have already taken OR&E 321 or 521 may not enroll. Limited to M.Eng. students in OR&E.

An extension of OR&E 520 that deals with applications and methodologies of dynamic programming, integer programming, and large-scale linear programming.

Operations Research II: Introduction to Stochastic Processes I

For description, see OR&E 361.

Design of Manufacturing Systems II

Spring; weeks 8-14. 2 credits. Prerequisites: OR&E 562, OR&E 416; or by permission of instructor.

This project course focuses on the design and analysis of a global corporation's operations. Working in teams, students will examine issues pertaining to a prototype company on the following topics: information system design, marketing, strategy, location of facilities, organization design, manufacturing capacity, planning logistics, production planning, scheduling, inventory control and financial analysis between project teams and faculty will be substituted for some lectures or laboratories. Analytical methods appropriate for conducting analysis will be discussed in lectures.

Production Planning and Scheduling Theory and Practice

Selected Topics in Applied Operations Research

Spring. Credit to be arranged. Prerequisite: permission of instructor. Current topics dealing with applications of operations research.

Economic Analysis of Engineering Systems

Spring; weeks 8-14. 2 credits. Prerequisites: thorough knowledge of OR&E 360, familiarity and appreciation of time series and regression methods, and graduate standing. OR&E 320/321 helpful but not required. Others by permission of instructor.

Revenue Management

Spring; weeks 8-14. 2 credits. Prerequisites: thorough knowledge of OR&E 360, familiarity and appreciation of time series and regression methods, and graduate standing. OR&E 320/321 helpful but not required. Others by permission of instructor.

Engineering Probability and Statistics II

For description, see OR&E 360.

Queuing Theory and Its Applications

Spring. 3 credits. Prerequisite: OR&E 361 or permission of instructor. Not offered 1999-2000.

Basic queueing models; delay and loss systems; finite source, finite capacity, balancing, reneging, systems in series and in parallel; FCFS versus LCFS; busy period problems; overbooking, optimization with emphasis on stochastic models of demand; benefit measurement; computational and technological issues; examples from the airline and other industries.

Engineering Probability and Statistics II

For description, see OR&E 360.

Inventory Management

Fall. 5 credits. Prerequisite: OR&E 321, OR&E 361, or permission of instructor. The first portion of this course is devoted to the analysis of some deterministic and probabilistic models for the control of single and multiple items at one of many locations. The second portion of this course is presented in an experiential learning format. The focus is on analyzing and designing an integrated production and distribution system for a global company. Applications are stressed throughout.

Applied Time-Series Analysis

Fall. 5 credits. Prerequisites: OR&E 361 and OR&E 470, or permission of instructor.
The first part of this course treats regression models to model seasonal and non-seasonal data. After that, Box-Jenkins models, which are versatile, widely used, and applicable to non-stationary and seasonal time series, are covered in detail. The various stages of model identification, estimation, diagnostic checking, and forecasting are treated. Analysis of real data is carried out. Assignments require computer work with a time-series package.

**OR&IE 564 Introductory Engineering Stochastic Processes II**
Fall. 4 credits. Prerequisite: OR&IE 361 or equivalent. Lectures concurrent with OR&IE 462. For description, see OR&IE 462.

**OR&IE 565 Applied Financial Engineering**
Spring. 4 credits. Limited to M.Eng. students.
This course has two components: a sequence of lectures and a project. The course will be co-listed with the Johnson School and will be co-taught by one faculty member from each school. The lectures will be given by the faculty for the course and by invited speakers from the financial industry. The project will satisfy the M.Eng. project requirement.

**OR&IE 575 Experimental Design**
Randomization, blocking, sample size determination, factorial designs, 2^p full and fractional factorials, response surfaces, Latin squares, split plots, Taguchi designs. Engineering applications. Computing in MINITAB or SAS.

**OR&IE 576 Regression**
Spring, weeks 8-14 (alternates with 575). 2 credits. Prerequisite: OR&IE 476. Nonlinear regression, advanced diagnostics for multiple linear regression, collinearity, ridge regression, logistic regression, nonparametric estimation including spline and kernel methods, regression with correlated errors. Computing in MINITAB or SAS.

**OR&IE 577 Quality Control**

**OR&IE 581 Simulation Modeling**
Fall; weeks 1-7. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently.
Models and digital computer programs to simulate the behavior of complex stochastic systems in time. Modeling time and randomness, simulation languages, generation of stochastic inputs (scalers and processes).

**OR&IE 582 Simulation Analysis**
Fall; weeks 8-14. 2 credits. Prerequisites: programming experience and OR&IE 360 or permission of instructor. OR&IE 360 may be taken concurrently. Probabilistic and statistical methods for design of computer simulation experiments and analysis of their outputs. Initialization issues, analysis of simulation outputs, variance reduction methods, optimization through simulation.

**OR&IE 599 Project**
Fall, spring. 5 credits. For M.Eng. students. Identification, analysis, design, and evaluation of feasible solutions to some applied problem in the OR&IE field. A formal report and oral defense of the approach and solution are required.

**OR&IE 625 Scheduling Theory**
Spring. 3 credits. Not offered 1999-2000. Scheduling and sequencing problems, including single-machine problems, parallel-machine scheduling. The emphasis is on the design and analysis of polynomial time optimization and approximation algorithms and on related complexity issues.

**OR&IE 630 Mathematical Programming I**
Fall. 4 credits. Prerequisites: advanced calculus and elementary linear algebra. A rigorous treatment of the theory and computational techniques of linear programming and its extensions, including formulation, duality theory, algorithms; sensitivity analysis, network flow problems and algorithms; convex sets, systems of linear equations and inequalities, Farkas' Lemma; exploiting special structure in the simplex method, and computational implementation.

**OR&IE 632 Nonlinear Programming**
Fall. 3 credits. Prerequisite: OR&IE 630. Not offered 1999-2000. Necessary and sufficient conditions for unconstrained and constrained optimization. Topics include the duality theory, computational methods for unconstrained problems (e.g., quasi-Newton algorithms), linearly constrained problems (e.g., active set methods), and nonlinearly constrained problems (e.g., successive quadratic programming, penalty and barrier methods).

**OR&IE 633 Graph Theory and Network Flows**

**OR&IE 635 Interior-Point Methods for Mathematical Programming**
Spring. 3 credits. Prerequisites: MATH 411 and OR&IE 630, or permission of instructor. Interior-point methods for linear, quadratic, and semidefinite programming and, more generally, for convex programming. Discussion of the basic ingredients—barrier functions, central paths, and potential functions—that go into the construction of polynomial-time algorithms and various ways of combining them. Emphasis on recent mathematical theory and the most modern viewpoints.

**OR&IE 636 Integer Programming**
Fall. 3 credits. Prerequisite: OR&IE 650. Discrete optimization. Linear programming in which the variables must assume integral values. Theory, algorithms, and applications. Cutting-plane and enumerative methods, with additional topics drawn from recent research in this area.

**OR&IE 637 Semidefinite Programming**
Spring; weeks 8-14. 2 credits. Prerequisite: OR&IE 635. Linear optimization over the cone of positive semidefinite symmetric matrices; applications to control theory, eigenvalue optimization, and strong relaxations of combinatorial optimization problems; duality; computational methods, particularly interior-point algorithms.

**OR&IE 650 Applied Stochastic Processes**
Fall. 4 credits. Prerequisite: a one-semester calculus-based probability course. An introduction to stochastic processes that presents the basic theory together with a variety of applications. Topics include Markov processes, renewal theory, random walks, branching processes, Brownian motion, stationary processes, martingales, and point processes.

**OR&IE 651 Probability**
Spring. 4 credits. Prerequisite: real analysis at the level of MATH 413 and a previous one-semester course in calculus-based probability. Sample spaces, events, sigma fields, probability measures, set induction, independence, random variables, expectation, review of important distributions and transformation techniques, convergence concepts, laws of large numbers and asymptotic normality, conditioning.

**OR&IE 662 Advanced Stochastic Processes**
Spring. 3 credits. Prerequisite: OR&IE 651 or equivalent. Not offered 1999-2000. Brownian motion, martingales, Markov processes, and topics selected from: diffusion, stationary processes, point processes, weak convergence for stochastic processes and applications to diffusion approximations, Levy processes, regenerative phenomena, random walks, and stochastic integrals.

**OR&IE 670 Statistical Principles**
Fall. 4 credits. Co-requisite: OR&IE 650 or equivalent. Review of distribution theory of special interest in statistics: normal, chi-square, binomial, Poisson, t, and F; introduction to statistical decision theory; sufficient statistics; theory of minimum variance unbiased estimators; estimation; maximum likelihood and Bayes estimation; basic principles of hypothesis testing, including Neyman-Pearson Lemma and likelihood ratio principle, confidence interval construction, introduction to linear models.
THEORETICAL AND APPLIED MECHANICS

Basics in Engineering Mathematics and Mechanics

T&AM 118 Design Integration: A Portable CD Player (also ENGR 118 and MS&E 118)
Spring. 3 credits.
This is a course in the Introduction to Engineering series. For description, see ENGR 118.
T&AM 202 Mechanics of Solids (also ENGRD 202)
Fall, spring. 3 credits. Prerequisite: PHYS 112, coregistration in MATH 293 or permission of instructor.
For description, see ENGRD 202.
T&AM 203 Dynamics (also ENGRD 203)
Fall, spring. 3 credits. Prerequisite: T&AM 202, coregistration in MATH 294, or permission of instructor.
For description, see ENGRD 203.

Engineering Mathematics

T&AM 191 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 191.
T&AM 192 Calculus for Engineers (also MATH 192)
Fall, spring, or summer. 4 credits. Prerequisite: MATH/T&AM 191/193.
For description, see MATH 192.
T&AM 193 Calculus for Engineers (also MATH 193)
Fall. 4 credits. Prerequisite: 3 years of high school mathematics, including trigonometry.
For description, see MATH 193.
T&AM 293 Engineering Mathematics (also MATH 293)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 192 plus a knowledge of computer programming equivalent to that taught in COM S 100.
For description, see MATH 293.
T&AM 294 Engineering Mathematics (also MATH 294)
Fall, spring. 4 credits. Prerequisite: MATH/T&AM 293.
For description, see MATH 294.
T&AM 310 Advanced Engineering Analysis I
Fall, spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent. Initial value, boundary value, and eigenvalue problems in linear ordinary differential equations. Special functions, linear partial differential equations. Introduction to probability and statistics. Use of computers to solve problems.
T&AM 311 Advanced Engineering Analysis II
Spring. 3 credits. Prerequisite: MATH/T&AM 294 or equivalent (T&AM 311 can be taken without T&AM 310). Introduction to complex variable theory, Cauchy's Integral theorem, Laurent series, Classification of singularities, Method of Residues. Applications include conformal mapping (Laplace equation), Laplace transform, Fourier transform, Fourier series, transfer function, stability and solution of linear systems. Examples are drawn from fluid mechanics, heat transfer, electromagnetics, and elasticity.

T&AM 610 Methods of Applied Mathematics I
Fall. 3 credits. Intended for beginning graduate students in engineering and science. An intensive course, requiring more time than is normally available to undergraduates (see T&AM 310-311) but open to exceptional undergraduates with permission of instructor.
Emphasis is on applications. Linear algebra, calculus of several variables, vector analysis, series, ordinary differential equations, complex variables.
T&AM 611 Methods of Applied Mathematics II
Spring. 3 credits. Prerequisite: T&AM 610 or equivalent.
Emphasis is on applications. Partial differential equations, transform techniques, tensor analysis, calculus of variations.
T&AM 612 Methods of Applied Mathematics III
Fall. 3 credits. Prerequisite: T&AM 610 and 611 or equivalent.
T&AM 613 Methods of Applied Mathematics IV
Spring. 4 credits.
Prerequisite: T&AM 610 and 611 or equivalent.
Topics include asymptotic behavior of solutions of linear and nonlinear ODE (e.g., the WKB boundary layer and multiple-scale methods), asymptotic expansion of integrals (method of steepest descent, stationary phase and Laplace methods). Regular and singular perturbation methods for PDE (e.g., method of composite expansions). Other topics (depending on instructor) may include normal forms, center manifolds, Liapunov-Schmidt reductions, Stokes phenomenon. The course may also include computer exercises at the option of the instructor.

Continuum Mechanics

T&AM 455 Introduction to Composite Materials (also M&A 455 and MS&E 455)
Spring. 4 credits.
Introduction to composite materials; varieties and properties of fiber reinforcements and matrix materials, micromechanics of stiffness and stress transfer in discontinuous fiber/matrix arrays, orthotropic elasticity as applied to parallel fibers in a matrix and lamina; theory of stiffness (tension, bending, torsion) and failure of laminates and composite plates including computer software for design, manufacturing methods and applications for composites. There is a group component design and manufacturing paper required, and a group laboratory on laminated component fabrication.
T&AM 591 Master of Engineering Design Project I  
Fall. 3-6 credits.  
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 592 Master of Engineering Design Project II  
Spring. 5-15 credits.  
M. Eng. (Mechanics) project related to the mechanics of advanced composites and structures.

T&AM 655 Composite Materials (also M&E 655 and MS&E 655)  
Spring. 4 credits.  
Taught jointly with T&AM 455 using same lecture material, but also includes more advanced material and homeworks through additional lectures. Additional material includes: solution of stress transfer around arrays of fiber breaks including viscoelastic effects, statistical theories of composite strength and failure, stress distributions around holes and cuts in composite laminates, compressive strength of composites. Laboratory on effects of holes and notches in composites.

T&AM 663 Solid Mechanics I  
Fall. 4 credits.  
Rigorous introduction to solid mechanics emphasizing linear elasticity: tensors, deformations, rotations and strains; balance principles; stress, small-strain theory; linear elasticity, anisotropic and isotropic; basic theorems of elastostatics; boundary-value problems, e.g., plates, St. Venant's solutions.

T&AM 664 Solid Mechanics II  
Spring. 4 credits. Prerequisites: MATH 610 and T&AM 663, or equivalent.  
Preparation for advanced courses in solid mechanics. Singular solutions in linear elasticity; plane stress, plane strain, anti-plane elasticity, anisotropic and isotropic; basic theorems of elastostatics; boundary-value problems, e.g., plates, St. Venant's solutions.

T&AM 666 Finite Element Analysis (also M&E 680 and T&AM 666)  
Spring. 3 credits. Prerequisites: T&AM 663 or 664.  
For description, see M&E 680.

T&AM 751 Continuum Mechanics and Thermodynamics  
Fall. 3 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.  
Kinemetics; conservation laws; the entropy inequality, constitutive relations; frame indifference, material symmetry; finite elasticity, rate-dependent materials, and materials with internal state variables.

T&AM 752 Nonlinear Elasticity  
Spring. 3 credits. Prerequisites: T&AM 610, 611, and 751 or equivalents.  
Offered alternate years.  
Review of governing equations. Linearization and stability; constitutive inequalities; exact solution of special problems; nonlinear string and rod theories; phase transformations and crystal defects.

T&AM 753 Fracture  
Fall. 3 credits. Prerequisites: T&AM 610 or 611; and 663 and 664 or equivalents.  
Offered alternate years.  

T&AM 757 Inelasticity  
Spring. 3 credits.  
Offered alternate years.  
Plasticity: dislocation theory, early experimental observations; general principles; limit analysis; solution of boundary-value problems, plastic waves, one- and three-dimensional. Visco-elasticity: general principles, solution of boundary-value problems.

T&AM 759 Boundary Element Methods  
Fall. 4 credits. Prerequisites: T&AM 610 and 611; and 663 and 664 or equivalents.  
Offered alternate years.  
Introduction to boundary element methods. Solutions for potential theory, linear elasticity, diffusion, material and/or geometric nonlinearities. Modern developments: hypersingular integrals, the boundary contour methods, sensitivity analysis.

Dynamics and Space Mechanics

T&AM 570 Intermediate Dynamics  
Fall. 3 credits.  

T&AM 578 Nonlinear Dynamics and Chaos  
Spring. 3 credits. Prerequisite: Mathematics/T&AM 293 or equivalent.  
Introduction to nonlinear dynamics, with applications to physics, engineering, biology and chemistry. Emphasizes analytical methods, concrete examples, and geometric thinking. Topics: one-dimensional systems. Bifurcations. Phase plane. Nonlinear oscillators. Lorenz equations, chaos, strange attractors, fractals, iterated mappings, period doubling, renormalization.

T&AM 671 Advanced Dynamics  
Spring. 3 credits. Prerequisite: T&AM 570 or equivalent.  
Offered alternate years.  
Review of Lagrangian mechanics, Kane's equations; Hamilton's principle, the principle of least action, and related topics from the calculus of variations; Hamilton's canonical equations; approximate methods for two-degrees-of-freedom systems (Lie transforms); canonical transformations and Hamilton-Jacobi theory; KAM theory; Melnikov's method.

T&AM 672 Celestial Mechanics (also ASTRO 579)  
Fall. 3 credits.  
Offered alternate years.  
Description of orbits; 2-body, 3-body, and n-body problems; Hill curves, libration points and their stability, capture problems. Osculating orbital elements, perturbation equations; effects of gravitational potentials, atmospheric drag, and solar radiation forces on satellite orbits; secular perturbations, resonances, mechanics of planetary rings.

T&AM 673 Mechanics of the Solar System (also ASTRO 571)  
Spring. 3 credits. Prerequisite: an advanced undergraduate course in dynamics.  
Offered alternate years.  

T&AM 675 Nonlinear Vibrations  
Fall. 3 credits. Prerequisite: T&AM 578 or equivalent.  
Offered alternate years.  
Quantitative analysis of weakly nonlinear systems in free and forced vibrations, perturbation methods, averaging method. Applications to problems in mechanics, physics, and biology. Additional topics may include Hopf bifurcation, Invariant manifolds, coupled oscillators, vibrations in continuous media, normal forms, and exploitation of symmetry.

T&AM 776 Applied Dynamical Systems (also MATH 717)  
For description, see MATH 717.

Special Courses, Projects, and Thesis Research

T&AM 491-492 Project in Engineering Science  
Fall, 491; spring, 492. 1-4 credits, as arranged.  
Projects for undergraduates under the guidance of a faculty member.

T&AM 796-800 Topics in Theoretical and Applied Mechanics  
Fall, spring. 1-3 credits, as arranged.  
Special lectures or seminars on subjects of current interest. Topics are announced when the course is offered.

T&AM 890 Master's Degree Research in Theoretical and Applied Mechanics  
Fall, spring. 1-15 credits, as arranged.  
S-U grades optional.  
Thesis or independent research at the M.S. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

T&AM 990 Doctoral Research in Theoretical and Applied Mechanics  
Fall, spring. 1-15 credits, as arranged.  
S-U grades optional.  
Thesis or independent research at the Ph.D. level on a subject of theoretical and applied mechanics. Research is under the guidance of a faculty member.

Graduate School

Graduate study at Cornell is pursued through the Graduate School, which administers the many graduate fields of study, or through the various graduate professional schools and colleges.

Graduate School

The graduate program at Cornell permits an unusual degree of accommodation to the needs and interests of the individual student. Degree requirements are kept to a minimum. There are no specific course or credit requirements for the advanced general degrees of Master of Arts, Master of Science, and Doctor of Philosophy, but only such general requirements that best accomplish the aim of graduate study: a period of study in residence, the mastery of one subject, adequate knowledge of allied subjects, oral examinations to establish competency for presentation of a dissertation or thesis, and a satisfactory dissertation or thesis. Certain advanced professional degree programs have specific course or credit requirements that are determined by the faculty of the professional school or college in which the degrees are offered.

A close working relationship between the student and faculty members is essential to the graduate program at Cornell. Under the Special Committee system the student is guided by, and works with, at least two or three faculty members chosen by the student to represent his or her major and minor subjects. The major subject representative is the chair of the Special Committee who usually has the primary responsibility for directing the student's thesis or dissertation research.

Requirements for Admission

To be admitted to the Graduate School, an applicant should:

1) hold a baccalaureate degree or its equivalent, granted by a faculty or university of recognized standing;
2) have adequate preparation for graduate study in the chosen field of instruction;
3) have fluent command of the English language;
4) present evidence of promise in advanced study and research; and
5) take the Graduate Record Examinations General Test for those fields that require the GREs.

Before admission can be final, all applicants whose native language is not English must provide proof of competency in the English language. Acceptable proof could be

1) a minimum Test of English as a Foreign Language (TOEFL) score of 550 on the paper-based test or 213 on the computer-based test (higher for some fields);
2) studied for two or more years in, or received a degree from, a college or university in a country where both the language of instruction and the native language is English.

Information on times and places for the TOEFL examination and Graduate Record Examinations and application forms may be obtained from the Educational Testing Service, Princeton, New Jersey 08541, U.S.A.

Applications for fall admission for most fields in the Graduate School should be received by early January. Many fields, however, have different deadlines. Consult the Graduate School's application booklet for the closing date for each field.

Inquiries regarding admission should be addressed to the Graduate School Admissions Office, Cornell University, Caldwell Hall, Ithaca, New York 14853-2602.

Inquiries regarding facilities for advanced study and research in a given field, special requirements for such study and research, and opportunities for fellowships and teaching and research assistantships should be addressed to the particular graduate field of interest.

More detailed information is contained in the application for admission to the Graduate School and in the Graduate School Catalog. Both may be viewed on the World Wide Web at <http://www.gradschool.cornell.edu/>. An interactive application is available on the Web and application forms may be downloaded and printed from the Web. Both the application and the Catalog may be received through the mail by contacting either the individual graduate field office or the Graduate School, Caldwell Hall, Cornell University, Ithaca, New York 14853-2602. (The application is mailed world-wide; the Catalog is mailed to addresses with the U.S.)

Note: Programs leading to the degrees of Doctor of Law (J.D.), Master of Laws (LL.M.), Doctor of Medicine (M.D.), Doctor of Veterinary Medicine (D.V.M.), and Master of Business Administration (M.B.A.) are not administered by the Graduate School.

Information on those programs can be obtained from the Law School, the Medical College (New York City), the College of Veterinary Medicine, and the Johnson Graduate School of Management respectively.
SCHOOL OF HOTEL ADMINISTRATION

ADMINISTRATION
David A. Dittman, dean
A. Neil Geller, associate dean for academic affairs
Judith Brownell, Richard J. and Monene P. Bradley director for graduate studies
Timothy Hinkin, director of undergraduate studies
Donald C. Bishop, associate dean of students and enrollment management
David W. Butler, associate dean for executive education
Robert N. D'Entremont, director of external relations
Margaret Haley Ferguson, director of financial relations
Philippus Miller III, director of alumni affairs
Preston Clark, director of instructional support and visiting lecturer
Cheryl S. Farrell, director of admissions and student services
Yariela Kerr-Donovan, director of minority programs and lecturer
Katherine S. Margolis, director of academic information resources and training
Shari Avery, director of information technologies
Philipps Miller III, director of alumni affairs
Preston Clark, director of instructional support and visiting lecturer
Millie Reed, director of career services
Glenn Witham, director of publications
Fred Conner, senior editor of the Cornell Hotel and Restaurant Administration Quarterly
Mark Adams, director of communications

FACILITIES

Statler Hall. Statler Hall is a unique building designed expressly to meet the needs of the faculty and students of the School of Hotel Administration. The building serves both practical and theoretical instruction, houses classrooms, lecture rooms, laboratories, a library, a computer center, a beverage-management center, an auditorium, and the Statler Hotel and J. Willard Marriott Executive Education Center. Statler Hall and the Statler Hotel were designed expressly for the school's academic and executive-education programs, providing students with training and work experience in facilities similar to those in which they will work after graduation.

Requirements for Graduation

Regularly enrolled undergraduate students in the School of Hotel Administration are candidates for the degree of Bachelor of Science. The requirements for that degree are:

1) completion of eight terms in residence for those who entered as freshmen; terms of residence for transfer students are determined by the amount of transfer credit awarded;

2) completion, with a minimum cumulative grade-point average of 2.0 (including a grade-point average of 2.0 in a full-time schedule of courses in the final semester), of 120 required and elective credits, as set forth in the table on the following page;

3) qualification in one language other than English. This requirement may be met by any one of the following: 1) three years of high school study of one foreign language; 2) score of 550 on Cornell Placement Test; 3) pass language 121 and 122 (8 credits) or the equivalent, and attain a minimum grade of at least C- in each (C or above for transfer credit from other institutions); or 4) pass 123 or the equivalent;

4) completion of two units of practice credit prior to the last two terms of residence, as defined on the following page;

5) completion of the university requirement in physical education.

Suggested course programs appear on the following pages. The core courses account for 72 of the 120 credits needed for graduation, the hotel electives account for 12 credits, and 18 credits are allotted for distributive electives. The remaining 18 credits may be earned in courses chosen from the offerings of any college of the university, provided that the customary requirements for admission to such courses are met.

Students in the School of Hotel Administration who plan to attend summer school at Cornell or any other four-year college or university, with the expectation that the credit earned will be counted toward the Cornell degree in hotel administration, must obtain the approval of the school in advance. Without advance approval, such credit may not count toward the degree.

Credit earned in military science, aerospace studies, or naval-science courses may be counted in the 18-credit group of free electives. No credit toward the degree is allowed for "0-level" courses, such as Educ 005.

Transfer Credit Policy

Transfer students are required to complete all degree requirements with at least seventy-five (75) credits at Cornell University, of which a minimum of sixty (60) must be in courses offered by the Hotel School, and nine (9) must be in distributive electives taken outside the Hotel School. Thus, a maximum of forty-
five (45) hours in transfer credit may be allowed from other accredited colleges or universities, as follows:

<table>
<thead>
<tr>
<th>Core</th>
<th>18</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hotel Electives</td>
<td>0</td>
</tr>
<tr>
<td>Distributive Electives</td>
<td>9</td>
</tr>
<tr>
<td>Free Electives</td>
<td>18</td>
</tr>
<tr>
<td>Total</td>
<td>45</td>
</tr>
</tbody>
</table>

In the core, transfer credit may be allowed against basic courses only (for example, HA 121, HA 136, Economics). Oters generally are waived, and an upper-level course in the area substituted. For instance, if HA 243 were waived, another marketing course would be required in its place. The communication courses (HA 165 and HA 365) are tailored specifically to the School of Hotel Administration, and, thus, communication courses taken elsewhere generally are not accepted against core courses.

Hotel elective courses may not transfer.

Distributive electives ensure that Hotel students are exposed to other courses at Cornell, and, thus, only nine (9) credits may transfer. The remaining nine (9) must be taken at Cornell but may be distributed in any combination of humanities, social sciences, or natural sciences provided at least three (3) credits are taken at Cornell or transferred from elsewhere in each area. A maximum of six credits, but no more than four per semester, of distributive electives may be taken on an S/U basis. For more information on the distribution requirement, see the handout available in the student services office, room 178 Statler Hall.

Eighteen (18) credits in free electives may transfer.

**Concentration**

While completing the hotel elective courses, undergraduates in the school may select a concentration.

When students select a field of concentration, they should consult the coordinator of instruction in that area during the sophomore year to plan the sequence of courses that will best fit their program.

Upon completion, the concentration will be noted on the transcript, provided a cumulative g.p.a. of 3.0 in the concentration was attained.

**Foreign Languages**

Mastery of a foreign language is particularly desirable for students who are planning careers in the hospitality industry and, hence, the second language requirement for graduation. Further information on foreign language courses at Cornell, and placement in language courses, may be found in this book in the College of Arts and Sciences program description under the Modern Languages, Literature, and Linguistics section and also under the section Advanced Placement for Freshmen.

**Independent Study**

Students may conduct independent study projects in any academic area of the school under the direction of a resident faculty member. Credit is arranged on an individual basis. To ensure that independent study project, students must obtain written permission from the school before the add deadline. See H Adm 499 or 699 for more details.

**Practice-Credit Requirement**

As part of degree requirements, undergraduates enrolled in the School of Hotel Administration must fulfill the practice-credit requirement and submit verification thereof prior to registering for the last two semesters. Further details are set forth in the **Practice Credit Handbook for Undergraduates in the School of Hotel Administration**, available in the school's Career Services Office, room 255 Statler Hall.

**Management-Intern Program**

Hotel School juniors and seniors have a unique opportunity to gain invaluable knowledge and experience in the hospitality industry through the management intern program. Students receive 12 free elective credits and 1 practice credit. While on the internship, tuition is reduced and students receive a salary from the sponsoring organization. Positions are available in U.S. and internationally. Sponsors include, but are not limited to, hotels, restaurants, casinos, corporate offices, consulting firms, and clubs. Application should be made one semester in advance. Information meetings are held at the beginning of each semester and are open to all students. See H Adm 493 and 494 for more details. More information about the management intern program also is available in the Career Services Office, 255 Statler Hall.

**Study Abroad**

All students planning to study abroad apply through Cornell Abroad; please see the Cornell Abroad program description in the introductory section of Course of Study.

Programs providing an opportunity to study in a foreign country and develop an awareness of the international component of the hospitality industry can contribute to each student's total educational experience. Students in recent years have studied in Italy, Spain, France, England, and many other countries. Information on the study-abroad programs operating during the summer and academic year is available at the Cornell Abroad Office (in Uris Hall).

Students should discuss their plans with the school's director of student services so that all petition and credit-evaluation procedures are followed.

**Part-Time Study**

Generally, part-time study is not allowed. Exceptions may be made for employee degree candidates, students who have medical reasons for a reduced schedule, or other extenuating circumstances. In no event shall a student be allowed to enroll on a part-time basis during the last term of study. Further details on part-time study may be found in the school's student handbook (available in room 174 Statler Hall).

**Grading System**

Letter grades ranging from A+ to F are given to indicate academic performance in each course. These letter grades are assigned a numerical value for each term average as follows: A is equivalent to 4.0; B to 3.0; C to 2.0; D to 1.0; F to 0. For good standing, the student must maintain a minimum average of 2.0. A maximum of 4 credits each term may be taken on a "satisfactory-unsatisfactory" (S-U) basis. Students should be aware that a satisfactory grade equals "C-" or above and an unsatisfactory grade equals "D+" or lower.

Students whose term averages are at least 3.3 and who took at least 12 credits of letter grades with no unsatisfactory or incomplete grades are honored by being placed on the Dean's List.

**Typical Course Sequences**

The following arrangements of courses tend to be more fixed in the freshman and sophomore years, with a greater degree of flexibility characterizing the upperclass years.

**Freshman Year**

Typically, a freshman schedule will consist of 15 to 16 credits each term, to include the following:

<table>
<thead>
<tr>
<th>Required courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>H Adm 105, Introduction to Lodging</td>
<td>3</td>
</tr>
<tr>
<td>H Adm 115, Organizational Behavior and Interpersonal Skills</td>

Course Schedule Information

For up-to-date information about course scheduling, and to obtain a course supplement, contact the hotel school student services office in room 178 Statler Hall, telephone 255-3076.

MANAGEMENT OPERATION COURSES

H ADM 100  Principles of Management
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. R. Chase. An introductory survey course in management with an orientation to the hospitality industry. The course is organized around the traditional management functions of planning, organizing, commanding, coordinating and controlling.

H ADM 102  Distinguished Management Lectures
Fall. 1 credit. Elective. D. Dittman. A series of lectures given by non-resident speakers prominent in the hotel and restaurant industries or allied fields. Topics include career ladders, company profiles, and business-policy formulation.

H ADM 104  Elements of Business for Non-Business Majors
Spring. 1 credit. Limited to non-hotel students. P. Rainford. Provides hands-on skills and knowledge about how to start or run a small business for students whose professional careers may require them to operate their own business. The course will be especially appropriate for students interested in professional careers such as architecture, design, writing, art, engineering, law, and other service businesses. Utilizes a computer-based management simulation game and will require students to work in management teams of six to start and operate a hotel. Each management team's hotel will be in competition with other hotels in the simulation. The course is introductory level and no previous business experience or computer knowledge is required. Students will be required to attend all sessions and complete a paper that will be due a week after the conclusion of the course.

H ADM 105  Introduction to Lodging
Fall and spring. 3 credits. Limited to hotel school students. The course is designed to introduce students with comprehensive, fundamental understanding of how hotels are managed from the perspective of the hotel industry. Through practical hands-on exercises, students will be exposed to operational line level positions in the rooms division including housekeeping, reservations, front desk, PBX, and bellstand. Lectures will begin with an overview of the lodging industry and will focus on the managerial aspects of the rooms division. Topics include revenue management, forecasting, budgeting, measuring performance, transient versus group displacement, pricing and inventory management, service quality, ethics, and technology. Students will apply what they have learned in class while operating their own virtual 250-room hotel using a CHESS computer simulation. Guest lecturers will provide students with insight on various career opportunities in the operations or rooms-related areas.

H ADM 303  Club Management
Fall and spring. Fall, second 7 weeks only; spring, first 7 weeks only. 2 credits. Prerequisite for hotel students: H Adm 105, or equivalent. Elective. R. James. The study of private membership clubs and club administration. The application of current management principles in a not-for-profit environment is discussed and club management is compared to other areas of the hospitality industry. Topics include: management; legal, financial, and legislative issues; human relations and resource consideration; marketing, pricing policies, and quality standards. The deadline to drop is the mid-point of the course.

H ADM 304  Rooms Division Strategic Management
Fall. 2 credits. Second seven weeks of the semester. Limited to juniors, seniors and graduate students. Elective. R. Chase. Designed for students to study and explore the strategies used by hotel companies competing within multiple market areas. The course will build upon the student's awareness of operations, marketing, law and finance. The course content parallels presentations made to many hotel companies and their senior management staffs. Assignments will involve readings about service marketing; participation, analysis and communication with the Cornell Hotel Administration Strategic Exercise will compose a term project. Ownership meetings and emphasis on renewal or extension of management contracts with the strategic exercise will be a focus of the course.

H ADM 306  Franchising in the Hospitality Industry
Fall. 3 credits. Not open to freshmen. Elective. M. Noden. This course looks at relationships between franchisor and franchisee, advantages and disadvantages of franchising, structure and services offered by franchisors. Case studies of leading lodging and restaurant companies currently offering franchises will be discussed. Guest speakers from the franchising industry.
H ADM 401 Strategic Management
Fall and spring. 3 credits. Limited to 45 juniors and seniors per lecture. Prerequisites: H Adm 105, 115, 211, and 321, or equivalents. T. Cullen, C. Enz. This is a top management, "big picture" course. It is not limited to a single functional area such as marketing, human resources, finance, food and beverage, design, or so forth. The problems and issues of strategy require a total enterprise perspective and the skill of judging how all the relevant factors affect the business organization. Introduces a number of models, methods, and techniques that can be used to identify strategic issues, generate future-oriented action plans to address those issues, and implement change. An important goal is to emphasize the need to review a firm's strengths and weaknesses as the basis for formulating the firm's strategy for exploiting environmental opportunities and coping with environmental threats. Because of the group nature of the course, drop deadlines are September 3 in the fall and January 29 in the spring.

H ADM 402 Hospitality Management Seminar
Fall or spring. Limited to 30 seniors and graduate students by permission. Students will be expected to register for H Adm 102. Elective. D. Dittman. A weekly meeting with the H Adm 102 speaker of the week. The subject matter varies from week to week, depending on the speaker's area of expertise. The class is relatively unstructured, and students are expected to participate in discussions.

H ADM 403 Resort Management
Fall. Students may enroll in first seven weeks, second seven weeks, or both. 2 credits. Limited to seniors and graduate students, others by permission of instructor. Mandatory attendance in all class periods. Elective. M. Noden. First Seven Weeks: A lecture course in the development, operations and management of the resort property. Focuses on various types, seasons, and economic levels are considered. Emphasis is on the financing and environmental considerations of the resort development cycle. Regulatory issues are examined, and relationships with governmental bodies are explored. Special consideration is given to the promotion of business, the provision of facilities, services and guest entertainment. Contract and non-contract relationships with the travel industry are reviewed.

Second Seven Weeks: A lecture course in the development, financing and management of secondary-residential hotel condominiums. Contemporary state statutory requirements, S.E.C. regulations and prospectus rules are reviewed for the application in the managerial portfolio. Federal land use controls are examined and explained. Individual financing of units, and management contracts are fully reviewed, and students will be exposed to typical management contract requirements and protocols. Rental pooling, and its effects upon management and owners will be fully explored. Applications of the condominium concept, including such by-products as time sharing, will be examined from a managerial perspective.

H ADM 404 Entrepreneurship and Small Business Management
Fall and spring. 3 credits. Limited to 20 juniors, seniors, and graduate students. Prerequisite: H Adm 321 or equivalent. Elective. Faculty. Focuses on the entrepreneur and the decisions made in planning, financing, developing, and operating small business ventures. Case studies and guest speakers will be used. There will be one major term project, which will require student teams to serve as consultants to real businesses that have asked for help from the Small Business Administration. Because of the group project nature of the course, the absolute drop deadline for all students is the last day of the first week of classes.

H ADM 405 Quality Planning in the Hospitality Industry
Spring. 3 credits. Limited to 25 seniors and graduate students. Prerequisites: all required hotel undergraduate courses at the 100, 200, and 300 levels. Elective. T. Hinkin. Focuses on the analysis of work processes and examines organizations from three perspectives: the customer, the employee, and management. Provides students with a systematic approach to identifying, prioritizing, and improving key job functions and work processes utilizing the tools of quality management. Readings, case analysis.

H ADM 407 Seminar in Hotel Operations
Spring. 3 credits. Limited to 30 seniors. Estimated cost of field trip, $200. Elective. R. McCarthy. Seminar course applies management theory to actual hotel operations via semester-long interactions and visits with the department heads and general manager of a medium-to-large-size hotel. Field trip includes attendance at executive committee meeting, presentations by various department heads, and half-day "shadow assignments."

H ADM 408 Introduction to Casino Operations
Fall. 2 credits. Limited to 45 juniors, seniors and graduate students. Estimated cost of field trip, $150. Elective. R. McCarthy. Introduction to the multi-billion dollar gaming industry, including a historical overview of gaming and expanding legal, social, and economic issues within the industry. Reviews various games played in casinos, current trends, and the most popular casino destinations in the world. Special attention is devoted to the growth of casinos in cruise ships, Indian reservations, and on river boats in the U.S.

H ADM 409 Airline Management
Spring. 3 credits. Prerequisites: H Adm 115 and 211. Elective. Offered every other year—1999, 2001, etc. Not offered spring 2000. M. Noden. Focuses on deregulation and international airline industries and explores both pre- and post-regulatory climates. Emphasis is on dynamic organizational change in response to fluctuating economic and legal conditions. Topics include airline organization, comparative corporate strategies, marketing and distribution networks, operations and service management, union relations, finance, government regulation, and air transport. Case studies and guest lecturers will be used. Also, using the computer-driven simulation exercise called AIRLINE, student teams will operate a small regional carrier.

H ADM 603 Managing Across Cultural Boundaries
Fall and spring. 3 credits. Limited to 15 seniors and graduate students. Prerequisites: H Adm 123, 165, 321, 401 or graduate student status. Elective. T. Cullen. Contributions to the development of knowledge and skills needed to manage effectively in other cultures. Objectives are to develop awareness of the pervasive and hidden influence of culture on behavior, particularly with respect to management and management practices; to develop familiarity with the types of situations and issues that often confront managers working in foreign countries, and to develop an appreciation of the impact on personal behavior of living and working in another culture. Readings, case studies.

H ADM 701 Competitive Strategies for the Hospitality Industry
Fall. 3 credits. Professional master's requirement. T. Cullen. An integration and application of management concepts, theories, and practices to business situations. Students analyze current problems, formulate strategies, and implement policies.

H ADM 702 Human Behavior In Organizations
Fall. 3 credits. Professional master's requirement. T. Hinkin. Focuses on manager and member behavior in organizations. Ideas and models about persons, interpersonal relationships, small groups, and organizations will provide the basis for understanding the dynamics of effective organizational behavior. Learning will occur primarily through readings, case discussions, and self-reflective teamwork.

H ADM 801 Seminar In Hospitality and Service Inquiry
Fall. 3 credits. Elective. C. Lundberg. This seminar introduces academic graduate students to the major alternative ways of conceptualizing and designing research, and acquiring, interpreting, and disseminating findings. The implications and consequences of one's choices and tradeoffs among the alternative philosophical, ideological, and pragmatic perspectives and approaches to inquiry will be emphasized.

HUMAN RESOURCES MANAGEMENT COURSES
H ADM 115 Organizational Behavior and Interpersonal Skills
Fall and spring. 3 credits. Required. F. Berger, T. Simons. Focuses on managing people in the workplace. Students develop theoretic lenses for understanding people and organizations and practical tools for accomplishing personal and organizational goals. Topics include individual differences, conflict management, problem-solving, power and influence, motivation, leadership, coaching and counseling, and group process. Self-assessments, experiential exercises, reading, discussions, papers, and group activities.
H ADM 210 The Management of Human Resources
Fall and spring. 3 credits. Limited to 100 non-hotel school students, no freshmen.
Elective. Faculty. 
Examines the role of human resources management, starting with an introduction to the personnel function and an analysis of the social, legal, international, and competitive factors. Examines recruitment, selection, training, motivation, development, compensation, performance appraisal, and labor relations. Class discussion and case analysis are emphasized.

H ADM 211 Human Resources Management
Fall and spring. 3 credits. Limited to 60 hotel school students per lecture, no freshmen or graduate students. Prerequisite: H Adm 105 and 115 (co-registration in 115 allowed). Required. B. Chung, B. Tracey.
Provides students with an overview of the human resources management (HRM) field and shows them the link between specific HRM activities and substantive issues/situations they will face as future hospitality managers. Integrates information and knowledge acquired in previous courses. Students will understand the relationship between compensation and benefit activities and job design, motivation, and reward structures. Upon completion, students will a) understand the interrelationship of HRM activities, as well as the relationship between HRM and other functional areas within hospitality organizations; and b) understand how to effectively attract, retain, and motivate hospitality employees.

H ADM 312 Training in the Hospitality Industry
Fall. 3 credits. Limited to 24 students. Prerequisite: H Adm 211. Elective. M. Lankau.
Training is one of the primary tools used for coping with the continuously changing environment. It also is one of the fundamental responsibilities of all hospitality managers. Students will learn the major theoretical and practical issues associated with program design, development, implementation, and evaluation. Semester-long project with one or more hospitality organizations.

H ADM 411 Negotiations in the Hospitality Industry
Spring. 3 credits. Limited to 30 juniors, seniors, and graduate students, with preference given to hotel school seniors and second-year graduate students. Prerequisites: H Adm 115, 702, or equivalents. Elective. T. Simons.
Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will become participant observers in their own lives by studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers/associates and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell employees. The absolute deadline for adding or dropping the course is 12:00 noon on the first day of class.

H ADM 412 Managing Organizational Change
Spring. 3 credits. Prerequisite: H Adm 211 or equivalent. Elective. C. Lynchberg.
Facilitating and managing change in organizations. Topics include change processes, organizational diagnosis, action planning, and consultancy. Individual and team projects.

H ADM 415 Managerial Leadership in the 1990s
Students become participant observers in their own lives by studying the field of applied behavioral science. Students will be able to use what they learn about human beings and how they function best in groups and organizations on a day-to-day basis to develop quality relationships between themselves and the people they support and depend upon (boss, staff, internal peers/associates and customers). Because of the popularity of this class, priority will be given in the following order: seniors, juniors, non-employee extramural students, sophomores, freshmen, and Cornell employees. The absolute deadline for adding or dropping the course is 12:00 noon on the first day of class.

H ADM 416 Special Studies in the Management of Human Resources: Service Cultures
Spring. 2 credits. Limited to juniors, seniors, and graduate students. Prerequisite: H Adm 211 or equivalent. Elective. Faculty.
First Seven Weeks—Service Cultures. This course will assist students in understanding the creation and maintenance of effective service-driven operations. Emphasis will be placed on the diagnosis and design of human resource initiatives aimed at creating effective service culture structures and improving organizational performance. Topics covered include the management of change, monitoring and measuring the corporate culture for service, and the linkage of human resource practices to service vision, organizational design, and strategic objectives. Students will develop and conduct a business. The seminar format is intended to encourage class discussion, case analysis, and field experience.

Second Seven Weeks—Service Organization Design. Since the earliest organizations, questions of how to best organize activities and resources have challenged managers. Traditional structures, e.g., those organized by functions, products, territories, seem to work less effectively as time goes on. The contemporary management challenge is to design and use more responsive, and flexible organization structures—especially in the service sector. It is important to understand the effects of different organizational designs and systems on behavior and efficiency. This course will therefore carefully explore the components, processes, and issues associated with known and probable design options. We will operate as a seminar with several application classes.

H ADM 418 Innovation and Dynamic Management
Spring. 3 credits. Limited to juniors and seniors. Elective. C. Enz.
Investigates the ways in which businesses and managers can build profitable organizations through a process of rethinking, re-evaluating, and discarding existing practices. Knowing self through reflection, knowing how organizations function, and knowing how to change them to enable others and build a community are the focus of this course. Students will examine the process of innovation and the psychology of followers. The class will serve as a model of a learning organization as students develop their skill set as change agents and organizational leaders.

H ADM 611 Negotiations in the Hospitality Industry
Spring. 2 credits. Second seven weeks of the semester. Limited to 30 graduate students. Prerequisite: H Adm 702 or equivalent. Elective. T. Simons.
Negotiation skills are crucial to business success. This course provides hands-on experience in negotiation in the hospitality field. Writing, role-playing exercises, and discussions are used to develop students' negotiation skills. Students will improve their comfort level with negotiating as well as develop their own personal style. Students will also learn how to adjust their negotiating style to respond appropriately to different personalities and negotiation tactics.

H ADM 614 Leadership and Small Group Processes
Fall. 3 credits. Limited to 30 hotel school seniors and graduate students. Elective. Faculty.
Theoretical and practical applications of organizational behavior will be explored through lectures, case studies, and management games and exercises. Students will participate in experiential labs aimed at enhancing their effectiveness as members or leaders of groups. Topics include leadership, decision making, motivation, power, and organizational change.

H ADM 711 Human Resources Management
Spring. 3 credits. Professional master's requirement. B. Tracey.
Focuses on the development of human resources management skills and exploration of the clientele and responsibilities of leadership. Uses managerial perspective with emphasis on the organization's activities; on recruitment, selection, and retention systems. Individual decision-making and integration abilities will be assessed. Case studies, exercises, and simulations.

FINANCIAL MANAGEMENT COURSES

H ADM 120 Survey of Financial Management
Spring. 2 credits. Limited to non-hotel school students. Elective. Faculty.
A survey of basic principles of financial management, investment management, and financial analysis. Designed for the student who desires a general understanding of financial decision making.

H ADM 121 Financial Accounting
Fall and spring. 3 credits. Limited to hotel school students. Required. D. Ferguson.
The basic principles of accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner's equity.
An in-depth introduction to the principles of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner’s equity.

H ADM 125 Finance
Fall and spring. 3 credits. Limited to non-hotel school students. Elective. L. Hensley

An introductory course covering institutional, analytical, and ethical aspects of security analysis and investment portfolio management including valuation models and practical strategies for stocks, bonds, and mutual fund selection and trading. Computer-assisted analysis, including students’ participation in an investment game, is discussed and applied in a realistic manner.

H ADM 323 Hospitality Real-Estate Finance
Spring. 3 credits. Limited to juniors and seniors. Prerequisite: H ADM 321, or equivalents. Elective. J. deRoos.

Focuses on real estate financing for hospitality-oriented projects. Topics include methods of measuring rates of return; feasibility and appraisal processes; equity and debt financing vehicles to include joint ventures; limited partnerships, construction mortgages, participating, convertible, and seller-financed mortgages; forms of operating agreements to include management contracts, leases, and franchises; workout strategies for distressed properties; trends in international hotel franchising; and ethical issues of real estate development. Presentations by hospitality industry real estate practitioners.

H ADM 324 International Financial Management
Fall and spring. 3 credits. Prerequisites: H ADM 121, 171, or equivalents. Required. L. Canina.

A graduate course includes the H ADM 323 Hospitality Real-Estate Finance course. Topics include international aspects of financial accounting, involving transaction analysis, flow of accounting data to the financial statements, and careful consideration of accounting for revenues, expenses, assets, liabilities, and owner’s equity.

H ADM 325 Corporate Finance
Fall. 3 credits. Limited to 30 students. Prerequisite: H ADM 321.

In-depth analysis of corporate financial management, including financing alternatives and capital structure decisions, capital budgeting decisions, risk analysis, and working capital management. Although applicable to all businesses, special emphasis is placed on the hospitality industry. Emphasizes analytical methods through case studies and an in-depth semester project.

H ADM 326 Corporate Finance
Spring. 3 credits. Prerequisite: H ADM 321, 722, or equivalents. Elective. S. Carvell.

This course is about how financial managers must make capital investment decisions in order to maximize shareholder wealth. This requires an in-depth understanding of both the investing and financing decision-making process. To understand the former, students learn about the corporate capital budgeting process and acquire specific skills enabling them to evaluate capital projects; e.g., net present value, discounted cash flow and risk analysis. For the latter, students learn how equity and debt securities are priced in a dynamic capital market and how the firm's capital cost and capital structure are linked with shareholder wealth maximization. Cases are used to illustrate theory, and industry guest speakers conduct occasional seminars.

H ADM 624 Analysis and Interpretation of Financial Statements
Spring. 3 credits. Limited to seniors and graduate students. Elective. G. Potter.

Covers the financial accounting issues that are reported in the operating reports of corporate enterprises. Emphasis is on the components of financial statements, how and why they are reported, and their impact on the overall financial position of the firm and its acceptance in capital markets. Emphasis is
on outsiders' views of the company and their decision making through interpretation of the statements.

**H ADM 721 Financial Economics**
Fall. 3 credits. Professional master's requirement. L. Canina. Integrates corporate finance with the framework of value maximization and the competitive analysis of product and factor markets in the hospitality industry. Topics include short-term asset management, strategic valuation, capital budgeting analysis, capital structure decisions, leasing, and international financial management.

**H ADM 722 Hospitality Financial Management**
Spring. 3 credits. Professional master's requirement. G. Potter. Covers both managerial accounting and financial management as they are practiced in the hospitality industry. Topics include hospitality accounting systems and internal control, financial statement analysis and interpretation, operational analysis, cost behavior, budgeting and forecasting, pricing, and feasibility analysis.

**FOOD AND BEVERAGE MANAGEMENT COURSES**

**H ADM 136 Introduction to Food Service Operations**
Fall and spring. 4 credits. Limited to hotel school students. Required. G. Norkus, A. Susskind. An introduction to the principles of food and beverage management, beginning with an overview of the food service industry at large. Attention is focused on major industry segments, business practices, and trends. Detailed consideration is given to the components of the food service system: marketing, menu planning, logistical support, production, service, controls, and quality assurance. Product and systems differentiation in various industry segments are emphasized.

**H ADM 230 Introduction to Culinary Arts**
Fall and spring. 2 credits. Limited to non-hotel school students. Priority given to seniors and graduate students. S-U grades only. Attendance at first class is mandatory. Absolute drop deadline for fall is September 7; spring drop deadline is January 28. Elective. D. D'Aprix, S. Gould. Studies of food groups, their respective methods of preparation, cooking, presentation, and holding. Designed for non-hotel students who are interested in learning the professional approach to food preparation and service with hands-on practice. Food product identification, preparation and service methods, and professional language of food and cooking.

**H ADM 236 Culinary Theory and Practice**
Fall and spring. 4 credits. Prerequisite: H Adm 136. Attendance at first class is mandatory. Required. T. O'Connor, R. White, faculty. Designed to introduce the student to food and beverage operations through three major components: fundamental food composition and properties, food products and preparation, and food safety and sanitation. Students will prepare recipes, menus, and production schedules and will develop the ability to recognize properly prepared foods by preparing, tasting, and evaluating foods. They also will develop an awareness of potential production problems and how to troubleshoot them.

**H ADM 330 Seminar in Chain-Restaurant Operations**
Fall. 3 credits. Prerequisite: H Adm 136 and 236, or permission of instructor. Elective. Faculty. Chain-affiliated restaurants account for an ever-increasing market share of all food service dollars. The growth of multi-unit chain operations brings out unique challenges, opportunities, and strategic orientations for restaurant management. This course will identify these present issues, the historical factors that have led to them, and the pending economic and organizational questions facing the chain restaurant segment. Case study analyses, company research, and a term project.

**H ADM 331 Creating Distributor Partnerships**
Spring. 3 credits. Limited to 20 juniors, seniors, and graduate students; others by permission of instructor. Elective. E. Merberg, G. Norkus. Provides an overview of the food service distribution industry: past, present, and future. Specific disciplines of food service distribution include marketing and sales, operations, routing, credit management practices, and financial management of the distribution center. Focus also on the newly emerging role of the "distributor consultant." Concept of developing business partnerships between food service operators and food service distributors is stressed.

**H ADM 332 Reviewing the Restaurant: The Consumer's View of the Dining Experience**
Spring. 3 credits. Field trip $200. Limited to 20 students. Prerequisites: H Adm 165 and 335, or permission of the instructor. Elective. G. Pezzotti. Trains the student to perform a comprehensive analysis of the restaurant dining experience. The role of the restaurant critic/reviewer will be discussed in depth. The student will examine and enhance his or her critical writing skills, as the course will require each student to complete approximately ten restaurant reviews.

**H ADM 333 Current Issues in Food Safety and Sanitation**
Spring. Variable to 3 credits. Three-credit registration limited to 12 students. Elective. Faculty. A study of current issues in food safety and sanitation procedures and regulations that affect managerial decisions in food service and hospitality operations. Topics include risk assessment and hazard analysis, legal responsibilities related to food, food handlers, equipment and facilities; food-borne illness and other public-health concerns; and certification and training. Preparation for NFIP/NRA certification and the Food Protection (ETS) certification exam (optional) is offered.

**H ADM 334 Wine and Food Pairing Principles and Promotion**
Fall. 2 credits. Limited to 20 seniors and graduate students. Prerequisite: H Adm 450 or permission of instructor. Elective. G. Pezzotti. Focuses on the pairing and marketing of wine and food. Students develop an understanding of regional and varietal wine styles; how foods' flavors can change a wine's flavor, and the promotion of wines and food. Topics include wine and food pairing principles, cuisines and their flavor components, food trends in restaurants and in the home, special event planning, and wine list development. Students design and present wine and food pairings to industry guests.

**H ADM 335 Restaurant Management**
Fall and spring. 4 credits. Limited to 30 hotel school students per lab, others by permission of instructor. Prerequisites: H Adm 136 and 236. Approximate cost of utensils and manual, $75. Once enrolled, students may not drop the course without permission of instructor. Required. D. D'Aprix, B. Halloran, B. Lang, M. McCarthy, J. Ridley. A restaurant-management course in which each student participates as a manager of a full-service restaurant operation. Topics related to the general management of restaurants and industry trends, including defining a service philosophy, improving profit margins, securing adequate supplies, identifying target markets, and planning for organization growth. The laboratory is based on a hands-on managerial component, from which students become familiar with the various requirements for success of each of the line positions in a restaurant.

**H ADM 338 Seminar in Culture and Cuisine**
Fall. 3 credits. Limited to 20 students. Prerequisites: H Adm 165 and 236, or permission of instructor. Elective. A. Spies. Explores various cuisines in terms of history, lifestyle, and foods peculiar to a culture. Through readings, research, and meal preparation, students explore various cuisines in depth. The goal of the course is to develop an awareness of several international cuisines, enabling students to make comparisons among the foodways of different cultures. Students prepare research reports and oral presentations, and design menus and orchestrate their preparation.

**H ADM 339 Wine: A Cultural and Historical Perspective**
Fall and spring. 2 credits. Limited to 200 students. Elective. A. Nash. Designed to provide students with a cultural and historical perspective on wine and its place in society. Topics include history, people, culture, production of wine in specific wine-producing regions of the world, wine and health issues, wine and food pairing, cooking with wine, and retail wine buying strategies. Regions covered will change each semester so students may take the course more than once.

**H ADM 430 Introduction to Wines**
Fall and spring. 2 credits. Wine glass kit and course fee, $25.00. Limited to hotel school seniors, juniors, and graduate students, and seniors and graduate students in all other colleges. Hotel students encouraged to enroll in the fall. All students, except those in the hotel school, must be 21 years old by the first day of university classes (August 26, 1999 and January 24, 2000). S-U grades only. Elective. S. Mutkoski, A. Nash.
An introduction to the major wine-producing regions of the world and what the consumer needs to know to purchase wines, spirits, and beers at retail outlets and in a restaurant setting. Topics include flavor components in wine, pairing wine and food, responsible drinking, selecting quality and value wines, and wine etiquette. Samples from a variety of countries, regions, and vineyards are evaluated.

(Preregistered students who do not attend the first class and fail to notify the course secretary in 274 Statler of their absence before the first class are automatically dropped from the course. The student must then follow the normal drop procedure in his or her school. Because of the high demand for this course and because a product is consumed, the absolute drop deadline for all students is September 10 in the fall and February 4, 2000 in the spring.)
H ADM 731 Graduate Food and Beverage Management  
Spring. 3 credits. Professional master’s requirement. T. Kelly. 
Focuses on the technical, managerial, and human resource skills needed to be successful in food service management. Topics include market analysis, concept development, menu planning, operations management, marketing, and current and future issues affecting the food service industry.

MARKETING AND TOURISM

H ADM 243 Marketing Management for the Hospitality Industry  
Fall and spring. 3 credits. Limited to 80 hotel school students per lecture, not open to freshmen. Required. J. Sigaus. 
Provides an overview of the discipline of marketing as it applies to the hospitality industry. Topics include understanding how a marketing strategy is devised, especially the interrelationship of company objectives, internal resources, the external operating environment, and how the special nature of service affects the development of marketing strategies in the hospitality industry.

H ADM 243 Marketing Research  
Fall and spring. 3 credits. Limited to 32 students. Prerequisites: H Adm 243 or equivalent and an introductory course in statistics/methods, or permission of instructor. Elective. J. Austin. 
Introduces students to the basic techniques and practices used to collect, analyze and disseminate data for decision making in hospitality marketing. The goal is to help future managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

H ADM 344 Tourism I  
Fall. 3 credits. Not open to freshmen. Elective. M. Noden. 
An introductory course in the study of tourism. The origins and evolution of contemporary tourism are examined. Students are familiarized with the various supply components of the tourism industrial base and their integration on an international scale. The effects of mass-volume tourist demand on destination development are explored through the use of selected limited case studies. Guest lectures highlight the economic operations and effects of tourism in both the public and private sectors.

H ADM 445 Services Marketing  
Fall. 3 credits. Limited to 40 undergraduate students. Prerequisite: a previous marketing course or permission of instructor. Elective. J. Austin. 
An in-depth study of the promotional tool of personal selling, with an emphasis on identifying and meeting the needs of the customer. Course material encourages the use of intuition, judgment, logic, problem-solving methodology and other tools as part of an overall sales mix. Class sessions involve lectures, role playing, videos, presentations, and guest lectures.

H ADM 444 Tourism II  
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Prerequisites: H Adm 243, 244, or equivalents, or written permission of instructor. Elective. M. Noden. 
An advanced course in the study of tourism. Emphasis is placed on the development of the tourism industrial base and development and financing of superstructure and infrastructure. Econometric model development for demand predictions is examined and analyzed. Students are expected to engage in a wide range of discussions and analysis of the effects of tourism on various environments in social and economic terms. Case studies, occasional guest lectures.

H ADM 448 Marketing Communications  
Spring. 3 credits. Limited to seniors. Prerequisite: a previous marketing course. Elective. C. Dev. 
Provides students with a managerial understanding of the effective use of a variety of marketing communication media, including advertising, sales promotion, public relations, etc. Hospitality industry emphasized.

H ADM 747 Channels of Distribution in Tourism  
Spring. 3 credits. Prerequisite: H Adm 243. Elective. M. Noden. 
Examines the major elements of the structure, arrangement, management, and control of the channels of distribution in the tourism industries. Topics include emerging trends in electronic distribution, organizational structures of distributive consortia, and their effectiveness in service distribution. Significant readings, guest lectures.

H ADM 641 Marketing Decision Models for Service Firms  
Fall. 3 credits. Limited to 20 seniors and graduate students. Prerequisite: a principles of marketing or marketing management course and an introductory course in quantitative methods for management. Elective. Not offered fall 1999. Faculty. 
Develops understanding of international marketing with emphasis on hospitality-industry applications. Focuses on the similarities and differences that exist between domestic and international marketing and the conduct of international marketing in various segments of the world.

H ADM 642 Strategic Marketing  
Fall. 3 credits. Limited to graduate students. Prerequisite: a previous marketing course and permission of instructor. Elective. C. Dev. 
Offers theoretical and practical approaches to addressing strategic marketing challenges in hospitality and service firms. Strategic marketing concepts and principles will be learned through lectures, discussion, case studies, and development of a strategic marketing report.

H ADM 643 Marketing Research  
Spring. 3 credits. Limited to 20 graduate students. Prerequisites: introductory principles of marketing or marketing management and an introductory course in quantitative methods for management. Elective. J. Austin. 
Introduces students to the basic techniques and practices used to collect and analyze data for decision making in hospitality marketing. The goal is to help future managers develop a level of research competency that will enable them to interact intelligently with marketing research providers when requesting information, assessing proposed research projects, as well as evaluating and using information from completed research.

</thead>
<tbody>
<tr>
<td>H ADM 255</td>
<td>Hotel Development and Planning</td>
<td>Spring. 3 credits. Limited to sophomores, juniors, and seniors. Required. R. Penner. An introduction and management overview of the problems and opportunities inherent in the development and planning of hospitality facilities. Topics include the project development sequence; conceptual and space planning; architectural design criteria, construction management; and the interpretation of architectural design and consultant drawings. Emphasis is on setting appropriate facilities requirements, understanding industry practice, and implementing properties decisions within a balanced design, operations, and financial framework.</td>
</tr>
<tr>
<td>H ADM 350</td>
<td>Real Estate Management</td>
<td>Fall. 3 credits. Elective. J. deKoos. Designed to provide students with the management of residential and commercial real estate. Overview of real estate economics, the relevant law, and different aspects of property management including lease and management contracts, accounting and finance, staffing, and building operations. Case studies and a term project focus on the dynamics of operating real estate assets.</td>
</tr>
<tr>
<td>H ADM 351</td>
<td>Hospitality Facilities Design</td>
<td>Fall. 4 credits. Prerequisite: H Adm 255 or 751 or permission of instructor. Elective. R. Penner. A lecture-studio course dealing with property development, planning, and design by focusing on the interpretation and analysis of hotel plans. Students learn basic graphic techniques and apply them to planning problems for hospitality facilities. Final project.</td>
</tr>
<tr>
<td>H ADM 352</td>
<td>Hotel Planning and Interior Design</td>
<td>Spring. 3 credits. Field trip, $200; drawing supplies, $75. Limited to 12 students. Prerequisite: H Adm 351. Elective. R. Penner. A project course concerned with hotel planning, interior design, and renovation. Students establish the operator's criteria for the renovation of hotel guestrooms and public areas, prepare budgets, and develop preliminary conceptual designs leading to a substantial graphic presentation. Drawing ability is essential.</td>
</tr>
<tr>
<td>H ADM 353</td>
<td>Food Service Facilities Design</td>
<td>Spring. 3 credits. Limited to 18 students. Prerequisites: H Adm 351 and 335 (co-registration is allowed) or food service experience is recommended. Elective. M. Redin. An introduction to the basic concepts of food service facilities design and planning. Students will determine space allocations for kitchens and their support areas, develop basic production work flow in the preparation and service areas; and select equipment utilizing standards for production capability, quality of construction, and ease of maintenance. Students will use studio time for planning, designing, and writing specifications for a medium-size restaurant kitchen.</td>
</tr>
<tr>
<td>H ADM 354</td>
<td>Computer-Aided Design</td>
<td>Fall and spring. 2 credits. Limited to 18 students per lecture. Prerequisite: H Adm 351 or equivalent studio experience. Attendance at first class is mandatory. Elective. S. Curtis. The operation of microcomputer-based computer-aided design (CAD) systems. Using AutoCAD on the IBM PC, the course presents an organized and logical sequence of commands, node settings, drawing aids, and other characteristics of CAD. Students will learn the program in the school's computer center and will develop a complete graphic presentation. Emphasis is on the use and operation of CAD systems in a commercial document production environment.</td>
</tr>
<tr>
<td>H ADM 355</td>
<td>Hospitality Facilities Operations</td>
<td>Fall. 3 credits. Prerequisite: H Adm 255. Required. M. Redlin, D. Stipanuk. An overview of the operation of hospitality facilities, including operating costs for various types of facilities, types and characteristics of major building systems, and the responsibilities of the engineering-maintenance departments. The renovation needs of hospitality facilities are examined and key managerial aspects of renovations considered.</td>
</tr>
<tr>
<td>H ADM 356</td>
<td>Hospitality Risk Management</td>
<td>Spring. 3 credits. Limited to 30 hotel school juniors, seniors and graduate students. Elective. D. Stipanuk. Risk management within the hospitality environment as applied to issues of control and risk financing. Issues in fire protection, customer and workplace safety, OSHA requirements, and customer and corporate security are analyzed. Basic elements of insurance and crisis management are discussed.</td>
</tr>
<tr>
<td>H ADM 357</td>
<td>Insurance and Risk Management</td>
<td>Fall and spring. 3 credits. Limited to 75 students per lecture. Prerequisite: an introductory accounting or business course. Elective. A. Klausner. A comprehensive look at risk management within a general business or institutional environment. Reviews insurance and non-insurance solutions to controlling loss, the general legal environment within which risk management processes work, and the integration of crisis management into the overall corporate risk management plan.</td>
</tr>
<tr>
<td>H ADM 450</td>
<td>Principles of Real Estate</td>
<td>Fall. 3 credits. Limited to juniors and seniors. Elective. J. Corgel. Approaches real estate from four perspectives: legal, economic, financial, and business. Understanding these perspectives will enable students to make better investment and financing decisions, to use real estate resources wisely, to understand public-policy issues, and to be prepared for additional courses in real estate investment, finance, and development.</td>
</tr>
<tr>
<td>H ADM 454</td>
<td>Advanced Computer Aided Design</td>
<td>Spring. 3 credits. Limited to 18 students. Required. S. Curtis. Computer-aided design has grown beyond its traditional use as a tool to draw contract documents. This course will give students an understanding of the more advanced capabilities of AutoCAD, including raster image support, OLE, 3D surface and solid modeling and photorealistic rendering. The availability and capabilities of &quot;third party&quot; plug-ins to AutoCAD will also be explored. There will be weekly projects as well as a final project.</td>
</tr>
<tr>
<td>H ADM 455</td>
<td>Special Topics in Properties Management-Sustainable Development and Ecotourism</td>
<td>Fall. 3 credits. Optional field trip, $425 plus travel costs. Limited to juniors, seniors and graduate students. Elective. D. Stipanuk. A multi-disciplinary investigation of issues surrounding ecotourism and sustainable development. Topics include the concept of sustainable development as applied to the tourism industry, environmental issues affecting the sustainability of tourism</td>
</tr>
</tbody>
</table>
H ADM 456 Hospitality Facilities Management
Spring. 3 credits. Prerequisite: H Adm 355, 751, or permission of the instructor. Elective. D. Stipanuk.
A managerial approach to hospitality facilities addressing issues of owning and operating, cost management, facilities services and delivery systems management, governmental regulatory compliance, and emerging issues. Emphasis on environmental issues such as indoor air quality, waste management, and energy conservation. Extensive use of the World Wide Web.

H ADM 457 Advanced Development and Construction
Fall. 3 credits. Overnight field trip, $175. Limited to juniors with permission, seniors and graduate students. Elective D. Stipanuk.
Focuses on the management structure and systems, laws, regulations, and industry practices that most influence the successful development of commercial and residential real estate, including lodging and eating facilities. Topics include scheduling, budgeting, marketing, and professionals, and analysis of alternative materials and methods. Guest speakers, case studies, and group project.

H ADM 458 Hospitality Real Estate
Spring. 3 credits. Prerequisite: H Adm 323, 450, or permission of instructor. Elective. J. Corgel.
Expands the student's understanding of the role of real estate in individual hospitality businesses and corporations. Designed for those who plan careers in the hospitality industry. Specific objectives are to develop an appreciation of the hospitality business as a factor in the production of income for hospitality businesses; to develop an appreciation of real estate as an asset that can be managed, sold, and otherwise used to increase the wealth of hospitality corporation shareholders; and to develop an appreciation of real estate as a factor in the hospitality industry. Material presented includes the role of the development team, financing, and non-residential real estate are analyzed; however, special emphasis is placed on the analysis of hospitality properties.

H ADM 751 Properties Development and Planning
Spring. 3 credits. Professional master's requirement. Faculty.
Provides an overview of project development, hotel planning, and the construction process, including the role of the development team, feasibility, functional planning and design, interpretation of architectural and engineering criteria, planning, construction management, and scheduling. Student teams will prepare the program documentation for a new hotel or other facilities development project in conjunction with other professional master's core courses.

COMMUNICATION COURSES

H ADM 165 Managerial Communication I
Fall and spring. 3 credits. Each lecture limited to 16 students. Note: Students required to take this course generally may not delay it. If extenuating circumstances exist, student must petition to drop the course by the end of the first week of classes. This course must be taken within the first two semesters, including any ITD semesters. Required. S. Jones, faculty.
An introduction to the role and importance of effective communication in managerial work, especially in the hospitality industry. Development of abilities in analytical thinking and clear written expression. The process of planning, preparing, and executing professional communications with an emphasis on written documents. Students write a series of business documents and give several oral presentations.

H ADM 452 Communication and the Multicultural Organization
Fall. 3 credits. Elective. Faculty.
Influence of culture, perception, and gender on communication in multicultural organiza-
tions, including international and domestic businesses with diverse work forces. Focus is on human interaction at work. Special emphasis on hospitality industry. Topics include values and beliefs, how race and gender affect language use, cultural differences in nonverbal communication, ethnocentrism and stereotyping, intercultural sensitivity and adjustment, cultural variables, persuasion, and ethics of communication in international business.

H ADM 463 Persuasive Communication In Organizations
Spring. 3 credits. Limited to 18 students. Prerequisites: H Adm 105 and 365 for hotel school undergraduates, or permission of instructor. Elective. Faculty: Prepares students to communicate effectively in a variety of persuasive speaking contexts. Principles of persuasion will be thoroughly examined as they apply to managerial communication tasks. Emphasis on persuasive speaking, also relationship between written and oral communication. Studies the principles of persuasion, analyzes case studies in the hospitality industry, and applies persuasive strategies in simulated workplace settings.

H ADM 661 Organizational Communication For Managers
Spring. 3 credits. Elective. Faculty. Focuses on the complex interactions that occur when people communicate in organizations. Structured around the communication tasks managers must accomplish to be effective on the job. Business cases. Emphasis on design of effective communication strategies. Applications and experiential exercises help students perfect their ability to work, make oral presentations, and interact effectively with others in managerial contexts.

H ADM 671 Communication Mini-Courses
Fall. Variable credits. Limited to MMH students. Elective: D. Jameson, faculty. Note: These are two separate seven-week courses. Students may enroll in Lecture 1 or Lecture 2 or both. Lecture 1—Business Writing (first 7.5 weeks); Lecture 2—Presentational Speaking (second 7.5 weeks). These mini-courses assist students enrolled in the Master of Management in Hospitality Program in developing their communication skills, improving their communication assignments in other core courses, and meeting the program’s required writing and speaking.

OPERATIONS MANAGEMENT, INFORMATION TECHNOLOGY COURSES

H ADM 170 Keyboarding for Windows
Spring. 2 credits. Limited to 30 students. Elective. B. David. An introduction to the computer and a beginning course in alphabetic and numeric keyboarding. Students learn word-processing skills during the second half of the course.

H ADM 174 Microcomputing
Fall and spring. 3 credits. Limited to hotel school freshmen and transfers. Limited to 30 students per lecture. Required. R. Alvarez, P. Clark, M. McCarthy, R. Moore, M. Talbent.

This course is designed to aid students in building functional computer literacy. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and listing processing. This portion of the class is taught in the Binenkorf computer lab, where students work with Microsoft Office and the Internet. In addition, students learn introductory statistical concepts, including descriptive statistics, correlation, and regression analysis. Course material is presented through a combination of lectures and labs.

H ADM 274 Microcomputing
Spring. 3 credits. Limited to 30 non-hotel students per lecture. B. David. An introduction to microcomputing to develop functional computer fluency. Students will develop their skills in five generic areas: text, graphics, spreadsheet, presentation, and file processing. The course is entirely lab-oriented and students work in both Mac/OS and Windows. Software used is Word, Excel, Powerpoint, Filemaker. Students will use the Internet.

H ADM 371 Hospitality Quantitative Analysis
Fall and spring. 3 credits. Required. G. Thompson. Introduces statistical and operations research methods appropriate for the hospitality industry. The overriding goal is to provide students with the skills and understanding necessary for decision making using quantitative data. Students will use computer spreadsheet software extensively for the “number crunching” analysis.

H ADM 474 Corporate Information Systems Management
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. R. Alvarez. Explores ten key issues in information technology management through use of case studies of companies who have relevant experience with the issues. A basic understanding of information technology, organization behavior, and general management is advised.

H ADM 475 Information Technology in the Hospitality Industry
Spring. 3 credits. Limited to 30 students in each section. Prerequisites: all other required core courses, except for students concentrating in information technology. Required. R. Moore. A three-tiered course, with each tier lasting five weeks. Tier I covers information technology management issues. Prior to taking Tier II, students will be required to pass a proficiency test of microcomputer skills taught in H ADM 174. Students will update their skills and learn more advanced features, with emphasis on database and model building skills. In Tier III, students select one of a series of modules, such as hotel systems, food service systems, management of information technology systems, or electronic commerce.

H ADM 674 Service Operations Management
Fall and spring. 3 credits. Limited to 25 graduate students. Prerequisite: H Adm 175, 371, 771 or equivalent. Elective. G. Thompson. The objective of this course is to improve the understanding of the operations function of service organizations. Focuses on the role and nature of service operations, the relationship of operations to other business functions, and develops skills and provides techniques for the effective management of service operations. Topics include service design, bottleneck and layout analysis, capacity management, work force management, and quality management. Intended for graduate students interested in services management.

H ADM 675 Yield Management
Fall and spring. 3 credits. Limited to 30 students. Prerequisites: H Adm 175, 771, or equivalent. Elective. S. Kimes. Students learn how to effectively apply the principles of yield management. Focuses on the integration of yield management techniques with information technology, internal management issues, and external marketing concerns. Topics include yield management techniques, forecasting, overbooking, group decisions, and management and marketing issues.

H ADM 676 Restaurant Revenue Management
Fall. 3 credits. First seven weeks. Letter grade only. Limited to 30 graduate students, or by permission of the instructor. Prerequisite: H Adm 771 and 741. Elective. S. Kimes. Revenue management is a method for profitably managing capacity. The objective of this course is to help students learn how to apply the principles of revenue management to restaurants. The course focuses on methods of managing duration and price with the intent of maximizing revenue per available seat-hour. Topics to be covered include forecasting, overbooking, reservation systems, information technology, process design, pricing, and management and marketing issues.

H ADM 771 Graduate Quantitative Methods
Fall. 3 credits. Professional master’s requirement. S. Kimes. Covers statistical and operations research techniques which can be applied to the hospitality industry. Topics include descriptive statistics, probability, sampling, correlation and regression, forecasting and yield management.

H ADM 772 Information Technology for Hospitality Managers
Fall. 3 credits. Professional master’s requirement. R. Moore. Familiarizes students with issues surrounding the use of information technology in supporting hospitality operations from a guest services perspective, decision making from the viewpoint of management.

LAW COURSES

H ADM 385 Business Law I
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students outside the hotel school, and hotel students by permission of the instructor. Elective. P. Wagner. Designed to enable students to acquire a basic understanding of law and legal relationships in a business context. Variety of topics aid in making decisions as an executive with managerial responsibilities.
H ADM 387 Business and Hospitality Law
Fall and spring. 3 credits. Limited to juniors, seniors, and graduate students. Required. D. Sherwyn. An integrated, chronological presentation of contract, agency, and tort concepts as they apply to the legal aspects of hospitality management. Appropriate federal, state, and local cases, statutes, and other materials are examined. The overall objective is to recognize, analyze, and evaluate legal issues for the purpose of making and articulating appropriate decisions.

H ADM 481 Employment Discrimination Law for Managers
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Elective. D. Sherwyn. Provides students with an understanding of anti-discrimination statutes and a framework for establishing the proper policies and procedures for complying with the law, avoiding liability, and maintaining positive employment relations.

H ADM 487 Real Estate Law
Fall and spring. 3 credits. Recommended: completion of H Adm 387 preferred. Elective. K. Klinger. Familiarizes students with the nature and the nature of competition in various industries. They apply to managers of enterprises as a corporation on traditional notions of personal liability; and to the legal aspects of hospitality industry managers and executives within the hospitality industry. The view will be futuristic and primarily from that of a multi-national company. The view will be supplemented with international, national, and local case law, as well as other legal materials. The focus will be on the areas of business and real estate law as they apply to managers of enterprises as a corporation on traditional notions of personal liability; and to the legal aspects of hospitality industry managers and executives within the hospitality industry. The view will be futuristic and primarily from that of a multi-national company. The view will be supplemented with international, national, and local case law, as well as other legal materials. The focus will be on the areas of business and real estate law.

H ADM 681 The Interplay of Law and Ethics in Service Industry Management
Spring. 3 credits. Limited to 50 hotel graduate students, seniors and other graduate students by permission of instructor. Prerequisite: completion of all required professional master's first-year courses, or permission of instructor. Elective. Y. Kerr-Donovan. Involves students in ethical aspects of hospitality industry managers and executives within the areas of commerce, consumerism, administrative law and practice, regulation of anti-competitive marketing activities, and federal securities regulation. The impact of the corporation on traditional notions of personal social responsibility will be stressed.

H ADM 490 Housing and Feeding the Homeless
Spring. Variable to 4 credits. Limited to juniors and seniors. Elective. T. O'Connor. Explores the public and private sector partnership in addressing the crisis of homelessness. Through lectures, readings, discussions, research, volunteerism, and field placement practicum, students will explore the economic, social, and political issues of our country's concern with housing and feeding homeless people. Students will study the history of homelessness and the strategies to prevent and alleviate the problem. The components of successful housing programs and food assistance programs will be analyzed. Students taking the course for four credit hours will, in small groups, work with agencies providing services to homeless persons. They will analyze the agency's mission, identify a specific managerial challenge, and formulate an approach and solution to that challenge. This fieldwork will require approximately eight days during the semester. Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency approximately three hours per week during the semester. Students taking the course for three credit hours will research and write a term paper about some aspect of homelessness and volunteer with a service agency approximately three hours per week during the semester.

H ADM 491 Hotel Ezra Cornell
Fall and spring. Variable credit (maximum, 4). Prerequisite: written permission. Elective. Y. Kerr-Donovan. Elected board members of Hotel Ezra Cornell receive credit for academic coursework, and the development, organization, and management of the April "Hotel-for-a-Weekend." Students who are considering a board position may pre-enroll for the course and should speak with the instructor for additional information about board positions and required coursework. Elections will take place in April after Hotel Ezra Cornell Weekend, at which time the HA 491 course enrollment will be finalized. Further information is available in the Student Services Office, 178B Statler Hall.

H ADM 493 Management Intern Program I—Operations
Fall and spring. 6 credits. Limited to hotel school juniors and seniors with approval of the MIP faculty committee. Prerequisites: Students are expected to have completed H Adm 105, 115, 211, 221, 222, 136, 236, 243, 255, 165, and 174. In addition, completion of the following courses is strongly recommended: H Adm 301, 321, 335, 355, and 365. Additional course work might be required for applicants considering specialized internships. A detailed plan for the completion of all remaining academic requirements must be approved prior to acceptance into the course. Must be taken in conjunction with H Adm 494. 5.0 grades only, based on performance evaluations. Elective. R. Chase.

H ADM 494 Management Intern Program II—Academic
Fall and spring. 6 credits. Must be taken in conjunction with H Adm 493. Letter grades only, based on submission of goals and objective statement, four management reports, journals, debriefings, and oral presentation. Elective. R. Chase.

H ADM 495 Development and Management of Wellness in Business Organizations
Spring. 3 credits. Limited to juniors, seniors, and graduate students. Field trip, $25-50. Elective. M. Tabacchi. Designed to encourage future managers to evaluate the work environment and to enhance opportunities for diverse worker productivity which should increase the corporation's competitive edge.

H ADM 499 Undergraduate Independent Study
Fall and spring. Variable, to 4 credits. Elective. Faculty. Students are afforded an opportunity to pursue independent study projects under the direction of a resident faculty member. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Student Services Office. Independent study work must be performed in the term for which it is approved, and the usual add/drop policy applies. Retroactive credit for work commenced after an academic term has ended is not allowed.

H ADM 690 Honors Monograph
Year-long course. 4 credits. Limited to professional master's students who: 1) either have a minimum GPA of 3.7 or are in the top 10 percent of the students in the year group in their first-year professional master's courses; 2) have given evidence of being a good writer by meeting all components of the written communication benchmark; and 3) obtained the approval of a brief topical proposal from the potential advisor. Elective. Faculty. A special integrative course for students who write well and desire to explore in depth a topic of mutual interest to them and a faculty adviser of their choice. The approval of a second reader is required for completion of the course. Special recognition of students who complete the course will be made at graduation. Applications available in the Graduate Office, Room 172 Statler.

H ADM 692 Industry Challenges and Trends
Spring. 3 credits. Limited to 15 seniors and graduate students. Elective. J. Clark. A seminar approach will be used to discuss readings and case studies selected to illustrate current challenges and future trends such as globalization, consolidation, etc., in the hospitality industry. The view will be from the perspective of a multi-unit corporation. An in-depth analysis of a few specific companies will be included using case studies and guest lecturers when appropriate. Student teams will research new topics and make presentations and final reports.

H ADM 699 Graduate Independent Research
Fall and spring. Credit to be arranged. Elective. Faculty. Student must have in mind a project and obtain agreement from an individual faculty member to oversee and forward the study. Permission in writing is required prior to course enrollment. Obtain permission form from the Hotel School Graduate Office, Room 172 Statler.
H ADM 791 Creating and Managing for Service Excellence
Fall. 3 credits. Professional master's requirement. I. Renaghan.
Covers the complex management practices and concepts necessary to deliver consistent value in the hospitality industry (determining customer expectations; integrating marketing into operations; managing customer satisfaction; and measuring and controlling costs). Cases, lectures, discussion and industry experts will be used, with emphasis on translating the strategic understanding of value into management practice.

H ADM 793 Industry Mentorship Program
Spring. No credits. S-U grades only. Professional master's requirement. M. Redlin.
Interaction with a senior hospitality industry executive. Objectives are to give the student an overview of the operating dynamics of a segment of the industry, to provide a realistic awareness of day-to-day life working as an executive in the industry, and to develop an awareness of the skills, level of integration, and other factors required for success.

H ADM 794 Management Development
Year-long course. No credits. S-U grades only. Professional master's requirement. D. Jameson.
Students must register for the first three semesters, and they will get a grade at the end of each semester. Second semester students must keep the times listed above open for team project meetings. All students in the Master of Management in Hospitality Program must enroll for HA 794. This requirement includes participation in the MMH Assessment Center, program benchmarking, and other activities related to students' communication development and assessment.

H ADM 880 M.S. Thesis Research
Fall and spring. Credit to be arranged.

H ADM 990 Ph.D. Thesis Research
Fall and spring. Credit to be arranged.

FACULTY ROSTER
Alvarez, Roy, M.Ed., Auburn U. Lecturer
Arbel, Avner, Ph.D., New York U. Prof.
Austin, Jon R., Ph.D., U. of Wisconsin-Madison. Asst. Prof.
Berger, Florence, Ph.D., Cornell U. Prof.
Brownell, Judith, Ph.D., Syracuse U. Prof., and Richard J. and Monene Bradley Director of Graduate Studies
Bryson, Susan, M.A., U. of Chicago. Lecturer
Canina, Linda, Ph.D., New York U. Asst. Prof.
Carvell, Steven A., Ph.D., SUNY Binghamton. Assoc. Prof.
Chase, Robert M., B.B.A., Cornell U. Prof.
Chung, Beth G., Ph.D., U. of Maryland. Asst. Prof.
Clark, John J., Jr., Ph.D., Cornell U. Prof.
Corgel, John B., Ph.D., U. of Georgia. Prof.
Cullen, Thomas, Ph.D., Cornell U. Assoc. Prof.
Curtis, Steven, B.L.A., Syracuse U. Lecturer
Dahl, Nicholas, M.A., Oregon State U. Lecturer
David, Betty B., Lecturer
deRoos, Jan A., Ph.D., Cornell U. Asst. Prof.
Dev, Chekitan S., Ph.D., Virginia Polytechnic. Assoc. Prof.
Dittman, David A., Ph.D., Ohio State U. Dean and E. M. Statler, Professor.
Enz, Cathy A., Ph.D., Ohio State U. Prof. and Lewis G. Schaeneman, Jr. Professor of Innovation and Dynamic Management
Ferguson, Dennis H., Ph.D., Cornell U. Assoc. Prof.
Geller, A. Neal, Ph.D., Syracuse U. Prof. and Associate Dean for Academic Affairs
Gould, Shelly, B.S., Cornell U. Teaching Support Specialist
Hinkin, Timothy, Ph.D., U. of Florida. Assoc. Prof. and Director of Undergraduate Studies
Jones, Scott L., M.A., Purdue U. Lecturer
Kelly, Thomas J., M.S., Cornell U. Assoc. Prof.
Kern-Donovan, Variela, M.M.H., Cornell U. Lecturer
Kim, H. Young, Ph.D., Oklahoma State U. Lecturer
Kines, Sheryl E., Ph.D., U. of Texas. Assoc. Prof.
Lang, Barbara, B.S., Cornell U. Lecturer
Lankau, Melenie, Ph.D., U. of Miami. Asst. Prof.
Lundberg, Craig C., Ph.D., Cornell U. Blanchard Professor of Human-Resources Management
Lynn, Wm. Michael, Ph.D., Ohio State U. Assoc. Prof.
McCarty, Reneta, B.S., Cornell U. Lecturer
Mukoski, Stephen A., Ph.D., Cornell U. Banfi Vintners Professor of Wine Education and Management
Nash, Abby, B.A., Cornell U. Lecturer
Nobel, Tom, Ph.D., U. of Minnesota. Assoc. Prof.
Noden, Malcolm A., Senior Lecturer
Norkus, Gregory X., M.S., Cornell U. Senior Lecturer
O'Connor, Therese A., M.S., Elmira College. Senior Lecturer
Penna, Richard H., M.S., Cornell U. Prof.
Pezzotti, Giuseppe G. B., B.S., Cornell U. Senior Lecturer
Rainsford, Peter, Ph.D., Cornell U. Assoc. Prof. and J. Thomas Clark Prof. of Entrepreneurship and Personal Enterprise
Redlin, Michael H., Ph.D., Cornell U. Prof.
Renaghan, Leo M., Ph.D., Pennsylvania State U. Assoc. Prof.
Ridley, Jane S., B.A., SUNY at Binghamton. Teaching Support Specialist
Roberts, Elizabeth, Ph.D., Purdue U. Asst. Prof.
Sherwyn, David, J.D., Cornell U. Asst. Prof.
Sigauw, Judy, D.B.A., Louisiana Technical U. Assoc. Prof.
Simons, Tony L., Ph.D., Northwestern U. Asst. Prof.
Snow, Craig, Ph.D., Purdue U. Senior Lecturer
Spies, Rupert, Studienassessor, Senior Lecturer
Steinacher, Richard, Ph.D., Florida State U. Senior Lecturer
Stevens, Betsy, Ph.D., Wayne State U. Asst. Prof.
Susskind, Alex, Ph.D., Michigan State U. Asst. Prof.
Tabacchi, Mary H., Ph.D., Purdue U. Assoc. Prof.
Thompson, Gary M., Ph.D., Florida State U. Assoc. Prof.
Tracey, J. Bruce, Ph.D., SUNY Albany. Asst. Prof.
White, Robert, A.O.S., Culinary Institute of America. Teaching Support Specialist

Visiting and Other Teaching Staff
Blanchard, Kenneth, Ph.D., Cornell U. Visiting Assoc. Prof.
James, Robert, M.B.A., Pace U. Visiting Lecturer
Merberg, Elliot, B.S., New York U. Visiting Lecturer
Sciarabba, Andrew, B.B.A., St. John Fisher College. Adjunct Assoc. Prof.
Shankar, Gowri, Ph.D., Syracuse U. Visiting Assoc. Prof.
Yesawich, Peter C., Ph.D., Cornell U. Visiting Assoc. Prof.
ADMINISTRATION
Patsy M. Brannon, dean
D. Merrill Ewert; director of Cornell Cooperative Extension
Jennifer Germer, associate dean
Charles McClintock, associate dean
S. Kay Obendorf, associate dean
Brenda Bricker, director, undergraduate affairs
Darryl Scott, director, admissions
Duncan Bell, college registrar

FACILITIES
The College of Human Ecology anticipates and responds to human needs in the areas of nutrition and health, economic and social well-being, environmental design and technology, as well as human development through education, basic and applied research, and the extension of knowledge. The college is distinctively characterized by the quality of its research in the natural and social sciences and the design arts, a global perspective in academic programs, a preventive approach to contemporary societal problems, multidisciplinary departments and programs, development of leadership in students and citizens, and a commitment to diverse populations. Faculty and students examine individuals in relation to their family, neighborhood, workplace, and community, seeking a balance between theory and practice that will improve the quality of everyday life.

The college is housed in Martha Van Rensselaer Hall. The Division of Nutritional Sciences, an intercollege division supported jointly by the College of Human Ecology and the College of Agriculture and Life Sciences, has space in Savage and Kinzelberg Halls and in Martha Van Rensselaer Hall.

The buildings include administrative and faculty offices, classrooms, auditoriums, galleries and lecture halls; wet chemistry and biochemistry laboratories for nutrition, food science, and textile science; experimental food laboratories; design studios and computer-aided design laboratories; woodworking shops; experimental observation rooms with one-way vision screens and sound-recording equipment; human factors and infant research facilities; educational television studios; and an audio/visual classroom for distance learning. Also included are learning resource centers for career planning, field and international study, a historical costume collection, a human metabolic research unit, a research animal facility, cold rooms, a constant temperature and humidity laboratory, and an early childhood research and care program.

Specialized equipment for teaching and research includes biochemical and chemical instruments for spectroscopy, chromatography, radioisotope analysis, electrophoresis, microscopy, and ultracentrifugation; physical testing equipment; and cameras, videotape, and sound recording equipment.

UNDERGRADUATE AFFAIRS
Brenda Bricker, director
Duncan Bell, college registrar

Persons interested in undergraduate study in human ecology should contact the admissions office, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate study office, 170 Martha Van Rensselaer Hall. Those interested in graduate study should contact the graduate study office, 170 Martha Van Rensselaer Hall.

Department faculty are listed at the beginning of the course descriptions for each department.

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can help prospective students understand college programs and requirements, as well as College and University resources and services. They provide a broad range of career services and personal support for all matriculated undergraduates. The college registrar (145 MVR) assists undergraduates with questions on academic credit and graduation requirements.

The Students
The College of Human Ecology undergraduate enrollment is 1,569 with 55 percent in the upper division. Roughly 360 students graduate each year; last year 255 freshmen and 188 transfer students matriculated. Nearly one hundred faculty members serve as advisers to undergraduates.

The college's undergraduate admissions committee selects applicants who are academically well prepared and appear most likely to profit from the college's various curricula. Admission is selective. Approximately 73 percent of the student body comes from New York State, with the remainder coming from other parts of the United States and abroad. In 1998 27 percent were identified as members of minority groups. Approximately 209 graduate students have members of the college's faculty chairing their special committees. The college awarded 59 master's degrees and 29 doctorates last year.

ACADEMIC PROGRAMS

Majors
Selection of a major begins with identifying a career goal. In their freshman and sophomore years, students can explore the world of work to relate their personal interests and capabilities to their career goals. As a result, they sometimes decide to change their major. The director of career services and other college counselors in the Office of Admission, Student, and Career Services (172 Martha Van Rensselaer Hall) and resources in the Career Development Center (159 MVR) can help students through their career exploration process.

Each department offers a major, and within most departmental majors there are specific options. The college also offers two interdepartmental majors. Selecting a major means choosing one option in one department. A student may satisfy the requirements of more than one major. (The college urges students who satisfy more than one major or option to make note of this in the credentials they file in the university's Career Center and to seek recommendations from faculty associated with the options completed.) Majors include the following options:

Design and Environmental Analysis (DEA)
Interior design, facility planning and management, human factors and ergonomics

Human Biology, Health and Society (HBHS)
A major sponsored by Division of Nutritional Sciences, HBHS combines the biological sciences with courses that explore human health issues from the perspectives of both the biological and behavioral science. More information about this program can be found in a separate section of the catalog that describes the division's programs.

Human Development (HD): Does not have separate options. Courses focus on cognitive, social, and personality development; phases of development; family studies and life course. The department administers an honors program for selected students.

Nutritional Sciences (NS): This division supervises this major and HBHS (above). (With careful planning, students may also meet the minimum academic requirements of The American Dietetic Association.) The division administers an honors program for selected students.

Policy Analysis and Management (PAM): The department offers a major in policy analysis and management.

Textiles and Apparel (TXA): Apparel design, apparel-textile management, fiber science.

Interdepartmental Major in Biology and Society (ID-BS)

Individual Curriculum: It is possible to develop an individual program of study if none of the above programs fit particular educational and career objectives.
Changing Majors
Because any student's interests and goals may change as new options emerge, the college provides ways for students to change their majors. It is important for a student to discuss a possible change of major with her or his faculty adviser or counselor. If the student decides to make a change, a completed change-of-major form (available from the Office of the Admission, Student, and Career Services, 172 Martha Van Rensselaer Hall) or from the Office of the Registrar (145 MVR) will officially record the change so that a new adviser can be assigned to the student.

Students of Mature Status
The college recognizes that students who interrupted their formal education and are returning to school have needs different from those of younger undergraduates. To facilitate the education of mature students, defined as those twenty-four years old or older at first matriculation, the college has adopted certain procedures specifically for that group.

Counselors in the Office of Admission, Student, and Career Services (172 MVR) can provide information of interest to mature students.

Mature students are permitted to enroll for as few as 6 credits without petitioning for permission and also are permitted to extend their residency beyond the normal eight terms.

Special Students
Students eligible for special status are those visiting from other institutions and interested in particular programs in the college; those with a bachelor's degree preparing for graduate study or jobs and careers in human ecology-related fields; or those who have interrupted their education and are considering completing degree programs. Students accepted in the non-degree status of special student may enroll for a maximum of two semesters. During the second semester of attendance, a special student must either apply for admission as a transfer student or plan to terminate studies in the college at the end of the semester.

Special students are expected to take a minimum of 12 credits each semester and to take one-half to two-thirds of their work in the state divisions of the university. Work taken while a person is classified as a special student may be counted toward the requirements of the bachelor's degree. Those interested in becoming special students should make appointments to discuss admission procedures in the Office of Admission (170 MVR).

Empire State Students
Occasionally a student who is completing requirements for a degree through the Empire State College Program is interested in taking a human ecology course. This can be done by registering through the Division of Summer Session, Extramural Study, and Related Programs, B20 Day Hall. All rules of the extramural division apply, and registrations will be accepted only on a space-available basis and with the written approval of the course instructor.

At the time of registration, Empire State College students provide the extramural division with a completed copy of Empire State College's notification of cross-registration form number, SA-22, F-031, to verify enrollment in Empire State College. Such students will be charged 25 percent of the standard extramural tuition per credit.

DESIGN AND ENVIRONMENTAL ANALYSIS
The Department of Design and Environmental Analysis (DEA) is concerned with planning, designing, and managing interior environments to satisfy human needs. Most people spend over 90 percent of their lives inside buildings. Those settings have substantial and far-reaching effects on the quality of our lives. The processes for creating and maintaining the built environment face enormous challenges, including frequent social and organizational changes, technological advances, new building methods, and finite resources. The DEA program in DEA is dedicated to preparing professionals who can meet these challenges.

Diverse faculty backgrounds and teaching approaches help students to develop multidisciplinary problem-solving and creative abilities, aesthetic judgment, and analytical thinking. Excellent laboratory, shop, studio, and computer facilities permit exploration of innovative concepts for the design and management of interior environments.

The relationship between people and their physical surroundings is explored through a combination of academic courses, field experience, and applied research. Examples of student class projects and faculty work are frequently on display in the department's gallery. The DEA Resource Center includes books, journals, newsletters, and material samples for student use.

Options
The department offers undergraduate education in three professional areas: interior design, facility planning and management, and human factors and ergonomics. The interior design option is accredited by the Foundation for Interior Design Education Research (FIDER). The Facility Planning and Management Program at Cornell is an "IFMA Recognized Program." This means that it meets the standards for recognition of programs established by the International Facility Management Association.

To take full advantage of the course sequences and electives, it is important to select an option as early as possible. This is particularly true for interior design option. Transfer students in the interior design option may need one or two extra semesters to complete the program.

Option I: Interior Design
The interior design option prepares students for professional careers in the planning and design of interior spaces and associated products. The program emphasizes a problem-solving approach based on knowledge of buildings and their associated systems, furnishings and interior products, human-environment relations, and design principles. Some students combine this program with another option.

Careers are available in interior design and space planning, interior architecture, facility planning, interior product design, and housing. This program also serves as an excellent preparation for graduate study in interior design, facility management, architecture, and product design.

Option II: Facility Planning and Management
This option is designed to prepare students for professional careers in facility management. The program focuses on the planning, design, and management of facilities for large, complex organizations such as corporations, healthcare institutions, research and development laboratories, and universities. Facility planning and management is a basic management function that coordinates and integrates information and expertise from areas such as planning and design, real estate and business administration with human factors, ergonomics, environmental psychology, telecommunications, and building operations for the purpose of developing and managing facilities that support individual and organizational effectiveness.

Excellent career opportunities exist in the facility management divisions of private companies, institutions, the health-care industry, and with private consulting firms offering facility management services. The program is also a good preparation for graduate study in business, planning, or one of the design disciplines and for advanced study in facility planning and management.

Option III: Human Factors and Ergonomics
Human factors and ergonomics focuses on the interaction between people and their physical surroundings. This option seeks to expand understanding of how the environment affects human perception, cognition, motivation, performance, health, safety, and social behavior. This knowledge is then used to help architects, planners, interior designers, and product designers and facility managers to plan, design, and manage safe and effective environments. The effect of human capabilities or characteristics such as family structure, life-style, social class and stage in life cycle on environmental needs and requirements is also a focus of the program. Career opportunities are available in design firms and in urban planning and other public agencies as well as in the facility planning and product design division of private companies.

Human factors and ergonomics is good preparation for graduate study leading to a Ph.D. degree in the social sciences and a career in academic or other research-oriented settings in either the public or private sector. It can also serve as the basis for graduate study in an environmental planning or design discipline such as architecture, facility planning and management, interior design, landscape architecture, or city and regional planning. Electives in the social sciences and in research methods and statistics are encouraged.

Academic Advising
All DEA majors are matched with a faculty adviser during their first semester by the director of undergraduate studies, Paul Eshelman, in E304 Martha Van Rensselaer Hall.

Consultation with faculty advisers about future goals, departmental requirements, sequences of courses, and electives inside or outside the college helps students develop their programs.
Students majoring in interior design, especially, must begin early to plan and collect materials for a portfolio of their work, which is necessary for many positions and for application to graduate schools. Faculty advisers can make recommendations on what to include. Students are free to change advisers. Although advisers must sign the schedule card during course enrollment each term, it is the student's responsibility to keep track of his or her courses and to make sure that they meet graduation requirements for their major and college.

Ownership and Exhibition of Student Work

All design work done in studios as part of an academic program is the property of the department until it has been released by the instructor. The department is not responsible for loss or theft of student work.

HUMAN BIOLOGY, HEALTH, AND SOCIETY

The Human Biology, Health, and Society (HBHS) Program permits you to combine your interests in the biological sciences while exploring human health issues from the perspectives of both the biological and behavioral sciences. HBHS majors select the issues they want to explore in depth from Human Ecology courses that address health and the role of human well-being. Examples of issues you can explore include: biology and behavior, metabolism, genetics, and health; biology, growth, and development; and food and health policy and health promotion. Most students in this program will proceed to programs of advanced study to pursue careers related to health. This new major is offered by faculty in the Division of Nutritional Sciences. More information about this program can be found in a separate section of the catalog that describes the division's programs.

HUMAN DEVELOPMENT

Human Development majors explore the psychological, social, cultural, and biological development of people from conception to old age, focusing on the processes and mechanisms of growth and change over the life course. A wide range of issues are included in the study of human development, including biological, cognitive, and emotional development; the role of family, neighborhood, workplace, and culture in development; and the influence that developing humans have on their environment. The Human Development major provides an excellent foundation for many careers, such as medicine (particularly family medicine, pediatrics, and psychiatry), clinical psychology and other mental health fields, law, business (especially human resources), child and family advocacy, and education (from preschool to high school teaching to school administration). The major prepares students for academic careers as professors in human development, psychology, or sociology departments. Learning about human development also helps students understand more clearly their own development and the development of those around them.

The faculty of the Department of Human Development comes from several disciplines, including developmental and clinical psychology, sociology, and history. The diversity of faculty expertise results in a wide-ranging view of human development. The research of the faculty is extensive. It includes basic research on issues such as the neurobiology of personality, the role of childhood attachments in the development of adult romantic relationships, the acquisition of infants, and the effects of environmental toxins on children's cognitive development. It also includes applied research useful for the creation of public policy, such as studies of the causes and consequences of child maltreatment and stories of the effectiveness of reading programs for Headstart preschoolers, apprenticeship programs for high school students, and support programs for older adults moving into retirement communities.

Curriculum

Human Development is the most flexible major in the College of Human Ecology. While all students learn the fundamentals of human development, each student can focus on one or more areas of particular interest. The flexibility of the major also allows students ample opportunity to meet the requirements for admission to many professional schools, including medical, dental, law, and business schools.

Requirements specified by the College of Human Ecology make up part of each student's curriculum, and include classes in the social and natural sciences, humanities, writing, and communication. In addition, there are requirements for the Human Development major. Students in this major can choose up to 14 elective courses from the broad range of offerings across the Cornell campus.

Special Opportunities

Beyond formal coursework, students have many other opportunities that involve ongoing individual work with Cornell faculty or other professionals. Academic credit can be earned through all of them. These opportunities include

Field Placements. Human Development majors can arrange internships with Urban Semester in New York City, Cornell-in-Washington, and Cornell Abroad programs and in local agencies. These have included hospitals, psychiatric hospitals, juvenile detention centers, retirement homes, and the department's on-campus Early Childhood Program. Students have also participated in projects with the Tompkins County Office of Aging, the Tompkins County Youth Bureau, and the Law Guardian's Office of Tompkins County.

Faculty Research. Many students work as research assistants on faculty projects. Students use research techniques ranging from laboratory procedures to family observations to large surveys. They assist in study design, data collection, and data analysis. Participation in faculty research provides the type of experience that many graduate and professional school applicants want. Recent projects have included the study of parent-infant interactions, the transition of high school students to the world of work, and the study of recent trends in the composition of American families.

Independent Research. Under faculty supervision, some advanced students complete an honors thesis in an area of personal interest by designing a study and collecting and analyzing data. Recent thesis topics have included marital quality in Asian and intercultural couples, development in families that adopt school-age children, and connections between speed of visual processing in infants and later scores on intelligence tests.

Undergraduate Teaching Assistant. Advanced students can serve as undergraduates teaching assistants. This requires close work with the professor teaching the course as well as with students taking the course.

Teaching Certification. A cooperative program with SUNY Cortland allows students interested in elementary education to graduate with a Cornell bachelor of science degree and then apply for New York State teaching certification, which is honored in most other states.

NUTRITIONAL SCIENCES

A major of Nutritional Sciences (NS) focuses on the complex interrelationships of food patterns, nutritional status, and health. This field draws upon chemistry, biology, and the social sciences to understand questions such as: How are nutrients used by the body? What factors influence food choice? What nutrients and dietary patterns are recommended to promote growth, maintain health, or reduce the risk of chronic disease? Students in this program may also fulfill the courses required for professional membership in the American Dietetic Association, which will enable them to be employed as nutrition counselors, clinical nutritionists, sports nutritionists, or administrators of food and nutrition services. Students also may prepare for medical school and other types of advanced degree programs through this major. The requirements for this program are outlined in the section of this catalog that describes the division's programs.

POLICY ANALYSIS AND MANAGEMENT

The Policy Analysis and Management (PAM) major produces graduates skilled in policy analysis, program planning, and evaluation and possessing management skills applicable in the public, nonprofit, and private sectors. In addition, the Policy Analysis and Management graduate will have concentrated knowledge in one of three areas: family/social welfare, health, and consumer policy. Graduates are well-qualified for a wide variety of public, nonprofit, and private sector employment emphasizing either program analysis and evaluation or management. The major also attracts large numbers of pre-law students, pre-MBA students, and students intending to pursue graduate education in public affairs and policy analysis programs. The potential exists to pursue a five-year program resulting in a BS and a Master of Health Administration.
The PAM major combines theoretical underpinnings from economics, sociology, psychology, and government to critique and analyze our society's values, laws, policies, and programs. It also gives students the knowledge to build management skills for use in public, nonprofit, and for-profit settings. Ideas of social justice, equity, and efficiency will be studied concurrently with strategic planning, human resources, supervision, and organizational development. Research methods, statistics, and planning and evaluation concepts will be learned and used to direct and aid in program planning, policy analysis, program evaluation, and management.

In addition to learning basic policy analysis and management skills, the student will be expected to apply these skills to a particular concentration—social welfare/family, health, or consumer policy. Social welfare/family policy and management includes a panorama of governmental and private sector income maintenance, social, and human service delivery programs and policies that range from child adoption and child neglect and abuse policies and antipoverty programs to policies and programs that impinge on or regulate marriage, divorce, and fertility. Health programs and policies include such politically sensitive programs and issues as health care access, Medicare, Medicaid, long-term care, health maintenance organizations, public health issues, and substance abuse policies. Consumer programs and policies include the regulation and laws governing advertising, product safety, food and drug safety, nutrient policies, the regulation of credit, insurance, telecommunications, mortgage, housing issues, and public utility markets and also deal with issues such as the invasion of privacy, internet security, and children's TV. A specific focus in the consumer concentration is the role of marketing and its relationship to consumer well-being and consumer behavior.

In addition to college requirements, all PAM majors are expected to take core courses: Introduction to Management, Introduction to Policy Analysis, Research Methods, Multivariate Statistics, Intermediate Microeconomics, and Public Finance. Students will also be expected to develop a concentration of three courses in either social welfare/family, health, or consumer policy. These concentrations may emphasize either policy analysis or management skills. Finally, PAM majors will have the opportunity to participate in departmentally approved experiential learning. Please check with the undergraduate advising coordinator, Professor Allan Mathios, for further details.

**TEXTILES AND APPAREL**

The Department of Textiles and Apparel (TXA) focuses on the use of textiles and fibrous materials for apparel, durable and nondurable household goods, composites, geotechnical, and biomedical applications. Programs in the department, in keeping with the mission of the College, emphasize the use of materials to meet human needs. The curriculum includes the application of design principles, physical and materials science, economics and marketing, government policy/regulation, management of products and their delivery, and technological developments.

Practical problem-solving skills are developed in the department's laboratories and studios. Academic course work is further enhanced by field and international experiences. Gallery space provides the setting to display design work. In addition, the Cornell University Costume Collection, housed in the department, provides a valuable resource; items from the collection are made available to students for classroom and special-study use.

**Academic Advising**

All TXA majors are matched with a faculty adviser by the director of undergraduate studies, Anna Racine (316 Martha Van Rensselaer Hall). Students are strongly urged to discuss their goals, course selection and sequence, electives, and career plans with their faculty adviser. Students in apparel design must begin work with their advisers early to develop a professional portfolio of their work and to identify courses that they will need to complete prior to graduation. Students in apparel policy design must begin work with their advisers early to develop a professional portfolio of their work. Students are free to change their courses and to make sure that the program meets graduation requirements for their major and college.

**Ownership and Exhibition of Student Work**

All apparel design work done as part of the academic program is the property of the department until it has been released by the instructor. Certain exceptional work may be retained by the department for academic purposes. The department is not responsible for the loss or theft of student work.

**Course Fees**

No grade will be given in a course unless the course fee has been paid by the last week of classes.

**Options**

Students may select options in apparel design, apparel-textile management, or fiber science. The curriculum is based on manipulation of form, color, and the physical characteristics and structures of fabric to solve functional and aesthetic apparel problems, the application of economic and marketing principles to consumer and industry problems in the textile-apparel sector; and the study of chemical, physical, and engineering properties of fibrous structures and polymers. Depending on previous coursework, transfer students may need one or two extra semesters to fulfill the requirements of the major.

**Option I: Apparel Design**

The study of apparel design includes both functional and aesthetic considerations in the design of body coverings. The program emphasizes a problem-solving approach that enables the student to bring a background in apparel, textiles, and human factors to the design process.

**Option II: Apparel-Textile Management**

Apparel and textile management combines the fields of apparel and textiles with those of economics, business management, and organizational policy. Students combine theory with case studies to find solutions to everyday problems. Course work is drawn from many interrelated disciplines, including textiles, apparel, economics, business management, and communication, as well as practical field experiences. This provides students with the experience of working with professionals from a wide variety of disciplines. Students often combine this option with either Option I (Apparel Design) or III (Fiber Science).

**Option III: Fiber Science**

Applications for textile structures include advanced engineering composites, protective clothing for industrial and military environments, and biomedical materials, as well as the more traditional applications found in apparel and home furnishings. The fiber science option provides a strong base in mathematics and the physical sciences combined with supporting courses in engineering, consumer economics, and the social sciences.

**Career Opportunities**

Graduates of programs in the Department of Textiles and Apparel have found challenging employment within the textile and apparel sector, in independent and government-sponsored research, and in community organizations. Recent graduates are working in the fields of design, management, new product development, engineering, communications, and marketing. In addition, the program prepares students for graduate or professional study in chemical engineering, consumer economics, textiles, or business and management.

**INTERDEPARTMENTAL MAJOR IN BIOLOGY AND SOCIETY**

Biology and society is a multidisciplinary program for students with special interests in such problems as genetic engineering, environmental quality, food and population, the right to medical care, and the relation between biology, society, and ethics and/or public policy, as well as for students who plan postgraduate study in management, health, medicine, law, or other related fields.

Because the biology and society major is multidisciplinary, students must attain a basic understanding of each of the several disciplines it comprises, by including introductory courses in the fields of biochemistry, chemistry, mathematics, genetics, environmental science, textile marketing, apparel design, textiles, or business and management.

**Course work in the College of Human Ecology**

Ecology must be taken in two of the following areas: biodiversity, environmental quality, food and population, human development and the environment, health, or social policy and human services. The other basic requirements of the college must also be met. Programs incorporating those required courses are designed in consultation with a faculty adviser to accommodate each student's individual goals and interests. For further information on the major, including courses of related interest, specific course requirements,
and application procedures, see the Human Ecology Student Guide, available in the Office of Admission, Student, and Career Services, 172 Martha Van Rensselaer Hall. Academic advising is coordinated by the director of undergraduate studies, Nancy Breen, 288 Martha Van Rensselaer Hall.

INDIVIDUAL CURRICULUM

A student who has educational and professional objectives that cannot be met satisfactorily within the framework of existing majors in the College of Human Ecology may petition to develop an individual curriculum. To be approved, the curriculum must be within the focus of the college and be interdisciplinary in design, include at least 40 credits in human ecology courses, and not exceed the normal number of credits allowed in the endowed divisions. A student develops an individual curriculum in consultation with faculty advisers from at least two subject-matter fields and the program coordinator, Patti Papapietro, Office of Admission, Student and Career Services (172 MVR).

Such a program of study should encompass a substantial part of the student’s undergraduate education and must include at least three semesters. For this reason, a request to follow an individual curriculum should be made as early as possible and must be made before the second semester of the junior year.

If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in formally developing a program of study. Although the coordinator must approve the course enrollment schedule during course enrollment each term, it is a student’s responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her adviser and the program coordinator before the program change.

SPECIAL OPPORTUNITIES

Several programs allow students to receive academic credit for fieldwork and internship experience, study abroad, study in absentia, and academic credit for fieldwork and internship. If an individual curriculum seems advisable, the individual curriculum coordinator will provide direction in formally developing a program of study. Although the coordinator must approve the course enrollment schedule during course enrollment each term, it is a student’s responsibility to follow the curriculum as planned or to have any necessary revision approved in writing by his or her adviser and the program coordinator before the program change.

Field Study, Internships, and Research Opportunities

Field study, internships, and research opportunities allow students to receive academic credit for work that extends and complements their course of study. Through structured experiences facilitated by faculty members, students learn to test, deepen, and apply what they’ve learned in the classroom.

Students strengthen their ability to integrate theory and practice and learn to reflect critically on their experience while broadening their understanding and professional life and enhancing their understanding of diversity and complex societal issues. In existing courses and through individual and group projects, students develop an intellectual framework for understanding and solving problems in a variety of challenging settings. Placement opportunities are available in business and management, health, law, medicine, environmental analysis, education, nutrition, government, laboratories, textiles and apparel, design, social service and community settings. Students are encouraged to plan early for these opportunities.

To learn more, students should consult with their faculty adviser, professor, or director of undergraduate studies. They can also visit the Career Development Center in N-159 MVR and explore established opportunities listed on the Web site, such as internships, and meet with a career counselor to develop their own unique placements. New initiatives are encouraged. For further information, contact Kris Deluca-Beach, director of career services, 155 MVR.

Cornell in New York City

The Urban Semester Program in Multicultural Dynamics in Urban Affairs

Cornell in New York City provides students with many study options that focus on multicultural dynamics in urban affairs. Experiential learning practices inform all courses of study. The options available include internships, individual and group community service projects, research, independent study, collaborative learning, and mentorships. Students must enroll concurrently in the three courses, HE 470, HE 490, and HE 490. Students learn through reflection and action. Program options are possible throughout the academic year, during winter break, and in the summer.

Courses of study enable students to seek out the relationship between theory and practice, apply theory to practice, acquire professional practice skills, and learn about the impact of diversity on New York City. By applying ethnographic research techniques and methods, students learn to think conceptually, reflect on their actions, and be agents of change.

Several majors in the college require internships or encourage field study. Check with the director of undergraduate study of each major for more information. The Career Development Center in N-159 MVR and counselors in the Office of Admission, Student, and Career Services (172 MVR) can help you find internships and provide more information on department opportunities and enrolling in Cornell in New York City.

Multicultural Practice

Fall and spring semesters: HE 470

Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their internship experiences, focusing on multicultural issues, professional practice, and organizational culture.

Multicultural Issues in Urban Affairs

Fall and spring semesters: HE 480

This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine issues of diversity such as race, ethnicity, culture, gender, sexual orientation in relationship to (1) professional life in different sectors of the economy, (2) the development of neighborhoods and communities, and (3) the basis of just and democratic society. Readings focus on inner-city children and youth under a variety of multicultural-influenced conditions and contexts. Costs include travel to and from sites by public transportation at about $3.00-6.00 each week.

Communities in Multicultural Practice

Fall and spring semesters: HE 490

This course provides students with an understanding of community building processes and enables them to interact with children, youth, and their families in school settings. For a full day once each week, students work in inner-city schools with teachers, staff, and children, providing community service. Student learning is focused on how to increase children’s learning capacities and expand their horizons by teaching them to envision success. Students focus on the assets that inner-city children bring to their school environment and learn how to mentor them. They help teach skills, knowledge, values, behaviors, and perspectives that school children must develop in order to enter the working world. Costs include public transportation costs to and from the various sites, about $3.00-6.00 each week.

The Winter Intersession in Community Service and Mutual Learning: The South Bronx-Banana Kelly/Cornell University Project in Community Building

Winter intersession: HE 402

Over the course of two intensive weeks, students participate in an ongoing community service project in the South Bronx with children of the Banana Kelly community. In carrying out community service, students
participate with the director of the Cornell in New York City Program. In the 1995 intersession, six students mentored 12 children in an after-school program by documenting their community with photography and stories. In the 1998 intersession seven students mentored 15 ninth graders from Banana Kelly High School. A photography exhibit was produced and circulated. In 1998, Cornell students and children produced three-dimensional models of their imagined community in future years and a book of essays and photographs.

Fieldwork in Diversity and Professional Practice

Summer session: HE 406

Over the course of an eight-week summer session, students will participate in a literacy project in Williamsburg, Brooklyn.

Gerontology Concentration

Gerontology Certificate Program

This program develops students' understanding and competence in dealing with the processes and issues of aging. Study in gerontology provides practical experience and preparation for professional work. Students draw on resources of several departments and colleges at Cornell and Ithaca College to shape a curriculum suited to their professional goals and interests. Contact Donna Dempster-McClain, Gerontology Coordinator, Bronfenbrenner Center, G21 Martha Van Rensselaer Hall.

Double-Registration Programs

Johnson Graduate School of Management

A limited number of highly qualified students from the Cornell undergraduate divisions, including human ecology, may be accepted by the Johnson Graduate School of Management after their junior year. Students need the approval of the admissions office and the registrar in the College of Human Ecology. Accepted students may be sophomores or higher and enrolled in New York State colleges or universities. Human ecology students apply to the program through the student's major department. The New York State Assembly also sponsors a summer internship. Further information about internship programs may be obtained through the Office of Admission, Student, and Career Services, 172 Martha Van Rensselaer Hall.

Cornell-in-Washington

For information on Cornell-in-Washington, see the section, Interdisciplinary Centers, Programs, and Studies, in the front of the catalog.

Ithaca College

Full-time undergraduate students at Cornell may petition to enroll in courses at Ithaca College. Students pay regular tuition to Cornell and only special fees to Ithaca College, if any are charged. Students are allowed to register for one course a term and may take no more than 12 credits in four years. Exceptions will be granted to Cornell students enrolled in methods and practice-teaching courses at Ithaca College.

Cornell students are eligible to register only in Ithaca College courses that are relevant to their program and that do not duplicate Cornell courses. Acceptance of Cornell students into Ithaca College courses is on a space-available basis. Participation in this program is not guaranteed, and Ithaca College has the right to accept or reject students for any reason it deems appropriate. The program is available only during the fall and spring semesters.

For further information students should contact the college registrar, 145 Martha Van Rensselaer Hall.

PLANNING A PROGRAM OF STUDY

Academic Advising

Students who choose to major in a particular department are assigned to a faculty adviser by that department's director of undergraduate studies. The director of undergraduate studies can help match a student's needs with the special interests of a faculty member. Students may change advisers as their own interests change and should see the director of undergraduate studies to discuss such a change. Faculty advisers, and counselors in the Office of Admission, Student, and Career Services (172 Martha Van Rensselaer Hall), are available to discuss course requirements and sequences, and electives inside or outside the college, as well as future goals and career opportunities. Although advisers must provide the adviser key number during course enrollment each term, it is the student's responsibility to make sure that her or his program meets graduation requirements for the major and the college. Directors of undergraduate studies in each department are available to answer questions about the advising system and the undergraduate major. Students who are exploring alternative majors should work closely with college counselors who are available for planning and referral to department resource faculty.

Completing Graduation Requirements

A summary of record is kept for each student in the Office of the Registrar. At the beginning of fall term each continuing student receives a copy showing which major and degree requirements have already been met. It is important to check this summary and to bring any questions to the attention of the faculty advisor and the staff members in the Office of Admission, Student, and Career Services. A student may complete the requirements of more than one major.

Electives

Students have individual objectives in choosing courses beyond the minimum requirements of the major. The university is diverse; the departments, centers, and special programs numerous; the fields of study almost unlimited. Counselors and faculty advisers are available to discuss postgraduate opportunities, special interest areas, and filter out duplicates. Students should consult the index for information on where different subjects are taught in the university. Some subjects are taught in more than one division of the university.
REQUIREMENTS FOR THE DEGREE OF BACHELOR OF SCIENCE

General

Students applying as undergraduates who do not have the required academic unit in biology, chemistry, or physics are required to show evidence of having met this deficiency before matriculation in the college. Freshmen and sophomores are required to enroll in at least one human ecology course per semester.

To graduate, students need to

1) meet college credit and distribution requirements,
2) complete requirements for a major,
3) achieve a cumulative average of 1.7 (C–) or better,
4) complete two terms of physical education.

College Requirements

These are the general areas of study and specific courses and credits required of every student in the college. The major you choose may require specific courses listed below or may leave you free to choose among certain courses listed there.

Category I General Distribution

B. Social Sciences (6)

C. Humanities (3) Language credit cannot be used in this area (See: IV).

D. Written Communications (6) Must be Freshman Writing Seminars. At least one seminar must be in the humanities.

E. Quantitative and Analytical

1. Math competency equivalent to EDUC 115 (precalculus)
   a. AP of 3 or higher on AB test
   b. AP of 2 on BC test
   c. Math assessment test score equivalent to EDUC 115

2. Statistics, advanced math, logic (3)

F. Additional credits (12)

Category II Requirements in HUMEC—the major (number of credits vary by major)

HUMEC Credits Outside the Major

May not include any HE 00 courses, HE 100, HE 101 or any 403 course. A maximum of three credits of special studies (400, 401, and 402), or of any internship credit may be used. A maximum of five credits of either HE 470 or HE 480, PAM 392 or HE 490 can be used.

Category III Other courses to complete 120 credits overall, exclusive of physical education.

E elective credits can be earned in Human Ecology or elsewhere. Students who earn more than 21 credits in endowed courses during fall or spring terms will be billed for the excess credits at the endowed rate of tuition. Billable endowed credit includes endowed courses taken in Category II.

Category IV Physical Education

Students who have successfully fulfilled these requirements should have completed at least two terms of physical education in their freshman year.

Related Policies

College course requirement. Freshmen and sophomores are required to enroll in at least one course in the College of Human Ecology each semester. Students who fail to comply with this requirement will be reviewed by the Committee on Academic Status for appropriate action.

Category IV.D. Students who score 4 or 5 on the College Board AP English Exam are awarded 3 credits in English. Students who score 5 on the College Board AP Exam are exempt from one Freshman writing seminar in addition to the 3 English credits awarded.

Category III. There is no limit to the number of credits that may be taken in the state divisions of Cornell, and therefore students may choose to take additional state credits and graduate with more than 120 credits.

Credits in the endowed divisions in this section may not exceed 21. Any course taken in an endowed division for which a grade of F or U is received will be counted as part of the 21 endowed credits allowed.

Elective credits earned in Cornell’s endowed divisions during summer session, in absence credits, and transfer credits are not counted in the limited 21 endowed credits permitted because they were paid for at endowed tuition rates.

Not more than 21 credits in Categories II and III may be taken in the endowed divisions of the university except under both of the following conditions:

1) The students must have senior status (must be in the final two semesters prior to graduation);

2) Payment must be made for each credit taken in excess of the 21 allowed, whether or not the courses are passed. For the fee per credit charge, students should call the Office of the Bursar.

Category I.D. Transfer students should have taken at least 6 credits in English composition or in courses requiring substantial writing and offering instruction in writing equivalent to that offered in the freshman writing seminar program at Cornell. Students who have not fulfilled this requirement before transferring must fulfill it after matriculating.

Category III. Transferred credits for courses applied toward electives do not reduce the 21 Cornell endowed credits that students are allowed. Courses with a passing grade below C– will not transfer to meet human ecology degree requirements.

Category IV. Transfer students who have had the equivalent of two semesters of college (and therefore enter as sophomores) are not required to take physical education at Cornell, regardless of whether they took physical education at their first college. Exemption or postponement for medical reasons must be cleared by Gannett Health Center. For further information about exemption from, or postponement of, physical education, students should consult the Office of Physical Education in Teagle Hall.

Exemptions from Requirements

Students who want an exemption from a specific graduation or major requirement may petition, and approval may be given under certain circumstances. Full information about the petition process is given in the Human Ecology Student Guide. Petition forms are available in the Office of Admission, Student, and Career Services, 172 Martha Van Rensselaer Hall or in Room 145, the Office of the Registrar.

PROCEDURES

Course Enrollment and Registration

Students are expected to make course requests for their next semester during a specified time in the current semester. Those dates are advertised publicly and available on the University Registrar’s web site. CoursEnroll takes place electronically, using software available through Just the Facts. During this time, each student must meet with his or her faculty adviser to discuss academic plans and to obtain the advising code required for finalizing course requests.

Incoming students will receive tentative schedules upon their arrival to campus, and will meet with faculty advisers during the orientation period. All students may adjust their schedules and grading options during the first three weeks of each semester.

Permission of Instructor

Certain courses may be taken only with the permission of the instructor as indicated in Cornell University: Courses of Study. Undergraduates must obtain permission of the instructor for any graduate course. Students must request the instructor’s permission during the CoursEnroll period by placing their name on a list maintained by the departmental advising assistant.

Students interested in taking a course in the Department of Art in the College of Architecture, Art, and Planning are required to register with the departmental secretary (100 Olive

Foreign Language Study and Placement

Students who studied a foreign language before coming to Cornell and who want to continue must take either the College Entrance Examination Board (CEEB) achievement test in that language or a departmental language placement test. The latter is given during orientation week in September and again in December, January, and May.

Students in human ecology who plan to work with non-English-speaking people in this country or abroad often find it necessary to be proficient in another language. Students who wish to study abroad may find that many study-abroad programs in non-English-speaking countries require the equivalent of two years of college-level language study. For more detailed information, see the section “Advanced Placement of Freshmen.”

Placement

To call the Office of the Bursar.

The fee per credit charge, students should call the Office of the Bursar.
Tjadan Hall) before enrolling in the course. Seniors who want to take an elective course in the Johnson Graduate School of Management are required to obtain permission of the instructor on a course authorization form that the student then files with that school’s registrar in Sage Hall.

Special Studies Courses
Each department in the College of Human Ecology (DFA, HD, DNS, PAM, and TXA) offers special studies courses that provide opportunities for students to do independent work not available in regular courses. One of those courses, designated 300, Special Studies for Undergraduates, is intended primarily for students who have transferred from another institution and need to make up certain course work.

The other special studies courses are 400, Directed Readings; 401, Empirical Research; and 402, Supervised Fieldwork. Those courses are normally taken by upperclass students, and work is supervised on an individual basis by a faculty member in the department in which the course is offered. It is important for students to use the appropriate course number (300, 400, 401, or 402) for a special project.

A student who wants to take special studies courses talks with the faculty member under whose supervision the study would be done and then prepares a work plan. If the faculty member agrees to supervise the study, the student completes a multicopy special studies form, a multicopy description of the study to be pursued. The student obtains the signatures of the instructor and the department chair as well as the student’s department adviser before submitting it to the Human Ecology Registrar’s Office. The student also must complete a course enrollment form in the Office of the Registrar (145 MVR). Special studies forms and instructions are available in the departmental offices.

To register for a special studies course, a student obtains a special studies form from the departmental office where they plan to take the course. The student discusses the proposed course with the faculty member under whose supervision the study would be done and then prepares a plan of work. If the faculty member agrees to supervise the study, the student completes a special studies form and obtains signatures from the instructor, department chair, and faculty adviser before submitting the form to the Office of the College Registrar (145 MVR). The student must also submit a course registration form (add/drop form) to the Office of the College Registrar. Special studies forms are available in 145 MVR or in departmental offices. Add/drop forms are only available in 145 MVR.

Semester credits for special studies courses are determined by the number of contact hours the student has with the supervising faculty member (or a person designated by the faculty member). Special studies courses can be taken as directed readings (400), empirical research (401), and supervised fieldwork (402). Refer to the Human Ecology section of Courses of Study for descriptions of the courses. To receive credit, a student must have the equivalent of three hours of contact time per week with the faculty member or designated person for 15 weeks (a total of 45 contact hours). For additional credit, multiply the number of credits to be earned by 45 to determine the number of contact hours needed for the course.

A student can only use 12 credits of 400, 401, or 402 courses towards graduation and only 5 of these 12 credits can be used to satisfy the 9-credit-outside-the-major requirement. In addition, a student can only take one 403 course towards graduation requirements.

To register in a special studies course taught in a department outside the college, follow the procedures established by that department.

Course Loads
The normal course load in the college ranges from 12 to 18 credits. During the course enrollment period no student may enroll for more than 15 credits or five courses, whichever is greater.

Credits beyond 15 may be added during the first three weeks of the semester without special permission.

Students should avoid planning excessive work loads; the time required to keep abreast of courses tends to increase as the semester progresses. Classes cannot be dropped after the seventh week of classes without petitioning and by substantiating extenuating circumstances. Permission to drop late is rarely granted. Do avoid the need to drop courses by taking on a reasonable workload and using the drop period to make changes in your program.

Except for those with mature student status, students must carry at least 12 credits (exclusive of physical education). In special cases, a student may petition to carry between 8 and 12 credits. Forms for petitioning and advice on how to proceed are available from the Office of Admission, Student, and Career Services, 172 MVR.

Except for mature students, it is seldom possible to have tuition prorated if a student carries fewer than 12 credits during a semester. (See the college registrar or counselors for more information.)

Students of mature status may carry 6 to 11 credits without proration and may have their tuition prorated. However, before the beginning of each term, mature students planning to take a light course load should submit a petition to the Registrar’s Office.

Overenrolled Courses
Enrollment in many human ecology courses is limited. When a course is over enrolled, students are generally assigned on the basis of seniority or by criteria defined for each course as listed in Cornell University: Courses of Study. Students’ professional goals may be considered. Those students not admitted to a course may be placed on a waiting list.

Late University Registration
A student clearing his or her financial obligations after the deadline date on the bursar’s bill is considered late. Late registrants are assessed a finance charge on the bursar’s bill starting from the date the bill is due.

All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, the Bursar’s Office will change a late fee.

Students who fail to register by the third week of the term will be withdrawn from the university. Students who wish to return, must reapply through the admissions committee.

Course Enrollment Changes
Deadlines
- During the first three weeks of the term, courses may be added or dropped, or the grade option can be changed.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor (instructor’s signature on the add/drop form).
- From the fourth week of the term, instructors have the right to consider students’ requests for course changes on an individual basis or to announce at the beginning of the term a specific date beyond which students will not longer approve course changes.
- From the eighth week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student’s control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- A student submitting a petition after the seventh week requesting permission to drop a course must attach a statement from his or her faculty adviser to that course enrollment procedures under such circumstances.

Important: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade option and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under Course Enrollment Changes.

At the beginning of the fall semester, each continuing student receives a copy of his or her summary of record from the Human Ecology Registrar’s Office. This summary shows completed degree requirements. Students are responsible for assuring that their academic program meets degree requirements. Students may direct questions about their academic programs to their faculty adviser or to a counselor in the Office of Admission, Student, and Career Services. They resolve any questions about degree requirements with the appropriate staff person in the Human Ecology Registrar’s Office.

Late University Registration
A student clearing his or her financial obligations after the deadline date on the bursar’s bill is considered late. Late registrants are assessed a finance charge on the bursar’s bill starting from the date the bill is due.

All students must be registered according to university policy before the end of the third week of classes. If for any reason a student registers after that time, the Bursar’s Office will change a late fee.

Students who fail to register by the third week of the term will be withdrawn from the university. Students who wish to return, must reapply through the admissions committee.

Course Enrollment Changes

Deadlines
- During the first three weeks of the term, courses may be added or dropped, or the grade option can be changed.
- From the fourth through the seventh week of the term, course changes may be made with the permission of the instructor (instructor’s signature on the add/drop form).
- From the fourth week of the term, instructors have the right to consider students’ requests for course changes on an individual basis or to announce at the beginning of the term a specific date between the fourth and seventh weeks beyond which students will no longer approve course changes.
- From the eighth week of the term, no course change may be made without petitioning for approval. Petitions are usually granted only in circumstances beyond a student’s control (for example, illness). A student petitioning for medical reasons should provide substantiating medical evidence with the petition.
- A student submitting a petition after the seventh week requesting permission to drop a course must attach a statement from his or her faculty adviser to that course enrollment procedures under such circumstances.

Important: Students can review their course schedule via computer using Just the Facts. Students are responsible for checking their course schedule for accuracy of course numbers, credit hours, grade option and other data. Students must correct errors immediately. Procedures for correcting enrollment errors as well as making changes for other reasons are described below under Course Enrollment Changes.
petition indicating whether or not the advisor supports the request.

- After the seventh week of the term, any student granted permission to drop a course after petitioning will automatically receive a grade of W (Withdrawn), and the course will remain on the official transcript.

Deadlines for Half-Term Courses

Students may drop half-term courses within the first three-and-one-half weeks of the course. Students may add a course after the first week of classes only with the permission of the instructor. After the first three-and-one-half weeks, students must petition to drop the course. (See Petition Process, General Petition Form for information on the procedure.)

Procedures

It is to the student's advantage to make any necessary course enrollment changes as early in the term as possible. Adding new classes early makes it easier for the student to keep up with class work. Dropping an unneeded class early makes room in the class for other students who may need it for their academic programs.

Ideally, students evaluate their course work load carefully at the beginning of the term. If, in the first week or two, the instructors do not discuss the amount of material to be covered and the extent of student assignments, students need to ask about course requirements.

Some procedures required for class enrollment are also required for class enrollment changes. For example, the instructor's permission must be obtained for a course requiring it, and the same forms for special studies courses must be completed. Aside from the procedures listed below for course enrollment changes, all course change forms for nutritional science majors must be signed by the faculty department advisor.

Waiting List: The Human Ecology Registrar's Office maintains waiting lists for students who want to enroll in courses that have been filled. Waiting lists are maintained on a first-come, first-served basis without regard to seniority or other factors. To keep their names active on a waiting list, students need to ask about course requirements.

Limited enrollment classes: Students who do not attend the first two class sessions of courses with limited enrollment may be dropped from the list. Students can avoid being dropped from a class by notifying the instructor that unavoidable circumstances have prevented their attendance. There is no charge for course changes. To make course changes during the first three weeks, a student takes the following five steps:

1) Obtains a course-change form from the Human Ecology Registrar's Office, 145 MVR.

2) Completes the form and takes it to the appropriate office for signature: for
human ecology courses, the forms should be taken to the Human Ecology Registrar's Office; for courses outside the college, the forms should be taken to the appropriate departmental office of the other college.

3) Makes sure that his or her name is added to the list of enrolled students for a course being added, or removed from the class list for a course being dropped. Asks the person recording the change to sign the form.

4) Submits all signed forms to the Human Ecology Registrar's Office, including the forms for out-of-college courses. Changes are not completed until the signed forms are filed in that office. If a student does not drop a course by the fourth week of classes, the student is in danger of receiving an F in the course.

5) Receives carbon copies of each course change form at the time it is submitted. It is important for students to keep these copies to verify later that the forms were filed.

To make course changes during the fourth through seventh weeks of the term, a student takes the following steps:

1) Completes the five steps listed above for changes made during the first three weeks.

2) Obtains the instructors' signatures on the course change form for human ecology courses.

To make course changes after the seventh week of the term, a student must file a general petition form. (See the section below, Petition Process, General Petition Form.) Petition forms are expected to attend classes and to do assigned work until the petition has been formally approved or denied.

In absentia Study

Under certain conditions, credit toward a Cornell degree may be given for in absentia study, that is, study done at an accredited institution away from Cornell after the student matriculates in the College of Human Ecology. To be eligible for in absentia study, a student must be in good academic standing and must receive permission in advance from the college registrar. Students not in good standing at the time of the petition will not receive transcript credit until they have been returned to good standing by the Committee on Academic Status. In some cases, students may petition for in absentia credit after the work has been completed, but there is no guarantee that such credit will be awarded without advance approval.

In absentia petition forms are available in the Human Ecology Registrar's Office, 145 MVR. The student completes the form, has it signed by his or her faculty advisor, attaches catalog descriptions for the courses that will be taken, then submits the form to the Human Ecology Registrar's Office, 145 MVR.

Students receive notice of the petition decision by means of a letter from the college registrar. A student may take up to 15 credits in absentia as long as the courses do not duplicate courses already taken and the in absentia courses are applicable to the requirements of the college. On rare occasions student's petition for more than 15 credits in absentia may be allowed: (1) the work taken represents a special educational opportunity not available at Cornell, (2) it relates to the student's particular professional goals, and (3) those goals are consistent with the focus of the college. The in absentia petition form is used to request more than 15 credits in absentia.

The college registrar requests approval from the appropriate department if a student wants to apply in absentia credit to requirements for his or her major. If in absentia credit is sought for a modern foreign language in which the student has done work, approval by the Department of Modern Languages and Linguistics (College of Arts and Sciences) must be obtained. The department will recommend the number of credits the student should receive and may require the student to take a placement test after returning to Cornell.

The student is responsible for having the registrar of the institution where in absentia study is taken send transcripts of grades to the Human Ecology Registrar's Office. Only then will credit be officially assessed and applied to the Cornell degree. Credit for in absentia study will be granted only for those courses with grades of C- or better (or other selective or nro courses and names) for in absentia study appear on the Cornell University transcript.

A student who holds a Regents' or Children of Deceased or Disabled Veterans Scholarship may claim that scholarship for study in absentia if the study is done in a college in New York State and if it is for a maximum of 15 credits acceptable to the College of Human Ecology.

The rules regarding study in absentia apply to transfer students with the additional stipulation that at least 60 credits must be taken at Cornell. At least 40 of the 60 credits must be in the College of Human Ecology at Cornell unless the student has transferred equivalent human ecology credit. (No more than 20 credits of equivalent credit may be applied to the 40 credits required in human ecology course work.)

Leaves of Absence

A student may request a leave of absence before the beginning of the semester or during the first seven weeks of the semester for which a leave is sought. A leave may be extended for a second semester by requesting an extension in writing from the Office of Admission, Student, and Career Services. The counselor can supply the necessary forms for the student to complete and file with the Human Ecology Registrar's Office, 145 MVR.

Requests for a leave of absence received after the first seven weeks of the semester, or requests for a leave of absence from students who have already had two semesters' leave of absence, will be referred for action to the Committee on Academic Status. The committee may grant or deny such requests, attaching conditions as it deems necessary. Leaves of absence after the first seven weeks are generally granted only when there are compelling reasons why a student is unable to complete the semester, such as extended illness.
A student who requests a leave of absence after the first seven weeks is advised to attend classes until action is taken on the petition. A student whose petition for a leave of absence is denied may choose to withdraw or to complete the semester.

The academic records of all students who are granted a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warming or severe warming or in good academic standing.

Withdrawal

A withdrawal is a termination of student status at the university. Students may voluntarily withdraw at any time by notifying a counselor in the Office of Admission, Student, and Career Services and filing a written notice of withdrawal in the Human Ecology Registrar's Office. A student considering such an action is urged to discuss plans with a counselor in the Office of Admission, Student, and Career Services, 172 MVR.

In some instances a student may be given a withdrawal by the college registrar. A student who leaves the college without an approved leave of absence or does not return after the leave has expired will be given a withdrawal after the seventh week of the term in which he or she fails to register.

A student who has withdrawn from the college or who has been given a withdrawal by the college registrar and who wishes to return at a later date must reapply through the Office of Admissions for consideration along with all other applicants for admission. If the student was in academic difficulty at the time of the withdrawal, the request for readmission will be referred to the Committee on Academic Status for consideration, and that committee may stipulate criteria under which the student may be readmitted to the college.

Petition Process

The petition process permits students to request exceptions to existing regulations. Petitions are considered individually, weighing the unique situation of the petitioning student with the intent of college and university regulations.

Students can avoid the necessity to petition by carefully observing the deadlines that affect their academic program. See the Course Enrollment Changes section above for some of the important deadlines. If unsure about a deadline, check with a counselor in the Office of Admission, Student, and Career Services, 172 MVR.

Withdrawal

Although many kinds of requests can be petitioned in the college, options other than petitioning may be preferable in some cases. To explore whether a petition is appropriate, the student may discuss the situation with a college counselor or the college registrar in the Human Ecology Registrar's Office.

Students may appeal petitions denied by the college registrar to the Committee on Academic Status. Students who appeal a denied petition must attach a statement from the student's faculty adviser before CAS will consider the appeal.

GRADES

See the “Grading Guidelines” section for information on the official university grading policies.

S-U Grades

Some courses in the college and in other academic units at Cornell are offered on an S-U basis; that fact is indicated in the Cornell University Courses of Study. University regulations concerning the S-U system require that a grade of S be given for work equivalent to a C- or better, for work below that level, a U must be given. No grade point assignment is given to S, and S or U grades are not included in the computation of semester or cumulative averages. A course in which a student receives an S is, however, counted for credit. No credit is received for a U. Both the S and U grades appear on a student's record. A student who is attempting to qualify for the Dean’s List must take at least 12 credits for the usual A-F grades. See the Human Ecology Pocket Book of Useful Information for specific details about the Dean’s List.

A student may take no more than 12 credits on an S-U basis during his or her college career; however, more than six S-U course may be taken in one semester. S-U courses may be taken only as electives or in the 9 credits required in the college outside the major unless the requirements for a specific major indicate otherwise. Freshmen enrolled in English 137 and 138 (offered for S-U grades only) are permitted to apply those courses to the freshman writing seminar requirement. If a required course is only offered S-U, it will not count toward the 12-credit or 4-course limit.

To take a course for an S-U grade, a student must check the course description to make sure that the course is offered on the S-U basis; then either sign up for S-U credit during course enrollment, or file an add/drop/change seminar form. If a required course is only offered S-U, it will not count toward the 12-credit or 4-course limit.

A grade of Incomplete may remain on a student's official transcript with an asterisk and the unique situation of the petitioning student is considered. A student who requests a leave of absence are subject to review, and the Committee on Academic Status may request grades and other information from faculty members to determine whether the student should return under warming or severe warming or in good academic standing.

ACADEMIC HONORS

The college encourages high academic achievement and recognizes outstanding students in several ways.

Dean's List. Excellence in academic achievement is recognized each semester by placing on the Dean’s List the names of students who have completed satisfactorily at least 12 credits with letter grades other than S or U and who have a semester grade point average of 3.5 or above. No student who has received an F or U in an academic course will be eligible.

Kappa Omicron Nu seeks to promote academic achievement and leadership toward the well-being of individual students. It is a chapter of a national honor society in the New York State College of Human Ecology, it stimulates and encourages scholarly inquiry and action on significant problems of living— at home, in the community, and throughout the world.

Students are eligible for membership if they have attained junior status and have a cumulative average of not less than B. Transfer students are eligible after completing one year in this institution with a B average. Current members of Kappa Omicron Nu elect new members. Not more than 10 percent of the junior class may be elected to membership and not more than 20 percent of the senior class may be elected. Graduate students nominated by faculty members may be elected.
Bachelor of Science with Honors recognizes outstanding scholastic achievement in an academic field. Programs leading to a degree with honors are offered to selected students by the Department of Human Development and the Division of Nutritional Sciences. Information about admission to the programs and their requirements may be obtained from the appropriate department or division. Students in other departments who wish to qualify for honors should contact Janet Brown-Aist, N118A Martha Van Rensselaer Hall, their sophomore year or the first semester of their junior year.

Bachelor of Science with Distinction recognizes outstanding scholastic achievement. Distinction is awarded to students in the top 10 percent of the graduating class based on the last 60 credits earned at Cornell. The graduating class includes students who will complete requirements for Bachelor of Science degrees in January or May of the same academic year.

Names of seniors who meet these requirements are presented to the faculty of the college for approval.

The primary objectives of the honor society, Phi Kappa Phi, are to promote the pursuit of excellence in higher education and to recognize outstanding achievement by students, faculty, and others through election to membership. Phi Kappa Phi is unique in that it recognizes scholarship in all academic disciplines.

To be eligible for membership students must rank in the top ten percent of the senior class, or in the top five percent of the junior class. Provisions also exist for the election of faculty members and graduate students whose work merits recognition.

INTERDEPARTMENTAL COURSES

**HE 100 Critical Reading and Thinking**

Fall, spring, or summer. 2 credits. Enrollment limited. Priority is given to freshmen and sophomores; juniors and seniors are admitted with permission of the instructor. Letter or S-U grades. The objective of this course is to enable students to increase critical reading and thinking abilities. Theory and research associated with a wide range of reading, thinking, and learning skills are examined. Emphasis is placed on developing and applying analytical and evaluative skills. Laboratory instruction is individualized and provides the opportunity to focus intensively on increasing comprehension, reading rate, and vocabulary.

**HE 101 College Achievement Seminar**

6-week summer session. 2 credits. Enrollment limited to and required of Prefreshman Summer Program students. Letter or S-U grades. The objective of this course is to improve the study and learning skills of incoming freshmen. Emphasis is placed on acquisition of skills necessary to achieve academic success. Topics include time management, note-taking, mapping, textbook comprehension, exam preparation, and exam strategies. The application of theory to the demands of Cornell course work is stressed. In addition, students are introduced to library and computing resources through hands-on projects.

**THE URBAN SEMESTER PROGRAM IN NEW YORK CITY**

Sam Beck, Ph.D., director

The Urban Semester Program is a set of courses spanning the entire year. During either fall or spring semester students enroll in three courses focusing on the opportunities and barriers that a multicultural society presents and their articulation with professional, community, or public policy settings (15-credit residential program). Students intern three to four days each week and are encouraged to live in the Olin Hall dormitory of the Cornell University Medical College.

The two-week winter intersection course (2 credits) enables students to do community service through a reflective practice curriculum. In the eight-week summer semester (3 credits), students carry out a literacy project with pre-k and kindergarten children. Students who live in New York and contribute to their own communities are encouraged to participate in any of the program offerings. Most students work with the program staff to locate internships. For further information, contact the Urban Semester Program at (212) 746-2273 or the Career Development Center, N-155 Martha Van Rensselaer Hall.

New York City offers a wide variety of internship settings. Many bilingual and bicultural internship settings are available in Chinese, Spanish, Creole, Russian, Yiddish, and other languages. Examples of internships follow:

- **Health and medicine—** New York Hospital/Cornell Medical Center, Chinatown Health Clinic, New York City Department of Public Health, Bellevue Hospital, Queens Medical Center for Women and Children, Community Health Project
- **Private and public law—** NOW Legal Defense and Education Fund, Neighborhood Defender Service of Harlem, Legal Aid, Puerto Rican Legal Defense and Education Fund, NAACP Legal Defense and Education Fund, Gay and Lesbian Anti-Violence Project, Jane Kessler, P.C.
- **Government and community agencies—** Women's Action Alliance, The Center for Puerto Rican Studies, New York City Commission on the Status of Women, New York City Council offices, Cornell University Cooperative Extension, New York City Department of Consumer Affairs
- **Private not-for-profit organizations—** Grant Street Settlement House, Neighborhood Housing Services, Abyssinian Baptist Church Development Corporation, University Settlement Society of New York, Urban Development Corporation, Greater Chinatown Community Association, Lesbian and Gay Community Services Center
- **Private and public schools—** United Federation of Teachers, Central Park East, River East, Manhattan Center for Math and Science, PS 41, City and Country, Churchville School, Little Red School House, St. Ann's School

**HE 470 Multicultural Practice**

Fall and spring semesters. Students immerse themselves in internship activities three days each week. During small group seminars, students reflect on their experiences in their internships with a focus on multicultural issues, professional practice, and organizational culture.

**HE 480 Multicultural Issues in Urban Affairs**

Fall and spring semesters. This course is a study of multicultural issues in urban affairs as students enhance their academic foundations in career development. Students examine issues of diversity (e.g., race, ethnicity, religion, class, gender, sexual orientation) in relationship to (1) professional life in different sectors of the economy; (2) the development of neighborhoods and communities; and (3) the basis of a just and democratic society. Readings will reflect the focus on inner-city children and youth effected by many multicultural influences. Costs include travel and from sites by public transportation at about $3.00-6.00 each week.

**HE 490 Communities in Multicultural Practice**

Fall and spring semesters: HE 490. This course provides students with an understanding of community building processes and enables them to interact with children, youth, and their families in school settings. For a full day once each week, students work in inner-city schools with teachers, staff, and children, providing community service. Student learning is focused on how to increase children's learning capacities and expand their horizons by teaching them to envision success. Students focus on the assets that inner-city children bring to their school environment and learn how to mentor them. They help teach skills, knowledge, values, behaviors, and perspectives that school children must develop in order to enter the working world. Costs include public transportation costs to and from the various sites, about $3.00-6.00 each week.
**DESIGN AND ENVIRONMENTAL ANALYSIS COURSES**

F. Becker, chair; P. Eshelman, director of undergraduate studies; J. Laquatra, director of graduate studies; R. Ash, S. Danko, J. Elliott, G. Evans, K. Gibson, R. Gilmore, A. Hedge, J. Jennings, L. Maxwell, W. Sims

**Note:** A minimal charge for photocopied course handouts may be required.

**NOTE:** Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

**DEA 101 Design Studio I**
Fall. 3 credits. Each section limited to 18 students. Permission of instructor required for non-DEA majors. Priority given to interior design majors. Option I majors must take DEA 101 in fall of their first year. Approximate cost of materials, $60. M W 1:25–4:25; or T R 10:10–1:10. J. Elliott.

A studio course introducing the fundamental vocabulary and principles of two- and three-dimensional design. Students experiment with the development of form through problem-solving approaches.

**DEA 102 Design Studio II**
Spring. 3 credits. Limited to Option I DEA majors only. J. Elliott.

A studio course in three-dimensional design with an interior design emphasis. Problems in spatial organization are explored through drawings and models.

**DEA 111 Making a Difference: By Design**

Students in any academic area examine how design affects their daily life and future profession. Course focuses on issues of leadership, creative problem-solving, and risk-taking through case study examination of leaders in business, education, medicine, human development, science, etc. who have made a difference using design as a tool for positive social change. Utilizing a micro to macro framework, students explore the impact of design from the person to the planet. Additional topics: nurturing innovation, visual literacy, design criticism, design and culture, semiotics, proactive/reflective decision-making, and ecological issues.

**DEA 115 Design Graphics**
Spring. 3 credits. Option I DEA majors only. Prerequisite: DEA 101; must take DEA 102 and DEA 115 concurrently. Minimum cost of materials, $100; technology fee $10. Permission of instructor only. M W F 9:00–10:00. K. Gibson.

A studio drawing course for interior designers. Discussion groups on drawing techniques are held to develop a visual understanding and vocabulary. Students are introduced to the functions of line, shape, and value. Perspective, spatial, and conceptual drawing are emphasized.

**DEA 150 Introduction to Human-Environment Relations**

Introduction to the influence of physical environment on human behavior. Topics include environmental influences on crowding, community, crime, and friendship; environmental needs associated with characteristics such as stages in life cycle, life styles, social class, family structures, and handicaps; person-environment fit for lighting, acoustics, indoor air quality and ventilation, and thermal comfort; introduction to human factors and systems analysis; effects of environment on perception-cognition; user-responsive design; participatory design programming; and post occupancy evaluation.

**DEA 201 Design Studio III**
Fall. 4 credits. Limited to Option I DEA students. Prerequisites: DEA 101, 102, and 115 (minimum grades of B-). Recommended corequisites: DEA 111 and 150.

Coregistration in DEA 203 is required. Minimum cost of materials, $150; lab fee, $40; optional field trip, approximately $100. M W F 12:20–4:25. C. Sherwyn.

Beginning interior design studio. Focus is on development of basic proficiency in interior design skills. The course is structured around a series of elementary interior and interior-product design problems of 3 to 5 weeks in length.

**DEA 202 Design Studio IV**
Spring. 4 credits. Each section limited to Option I DEA students. Prerequisites: DEA 201 and 203. Prerequisites or corequisites: DEA 204. Minimum cost of materials, $120; dazio machine fee, $8; field trip fee. T R 12:20–4:25. Sherwyn.

Second interior design studio. Emphasis of the course is on continued development of basic proficiency in design skills through exposure to a selected set of interior design problems of limited complexity. Each problem of the studio is structured to emphasize different aspects of the design process.

**DEA 203 Digital Communications**
Fall. 2 credits. Priority given to DEA majors. Lab fee $10. M 7:30–9:55. J. Elliott.

Communication techniques for architectural and interior designers. Students study the various forms of communication used throughout the design process, from programming and conceptualization through construction documentation, and the most effective utilization of those forms. Both verbal and visual presentation methods are stressed.

**DEA 204 Introduction to Building Technology**

Introduction to building technology for interior designers and facility managers. Emphasis is placed on developing basic understanding of buildings and building systems and their implications for interior design and facility management. Covers basic building types; structural systems; construction materials and processes; HVAC systems; plumbing, electrical, lighting, fire, and security systems; and telephone, computer, and other communication systems.

**DEA 243 Inside Out: The American Everyday Interior (also WOMNS 243, AM ST 243)**

A study of late nineteenth- and twentieth-century everyday interiors in socio-cultural contexts, with an emphasis on design dissemination, consumer patterns, and gender issues. Topics include women's walls, power in parlor, photographs a mirror, the love of the colonial.

**DEA 250 The Environment and Social Behavior**
Fall. 3 credits. Limited to 16. Priority order: DEA seniors, juniors, sophomores, freshmen. Prerequisite: DEA 150 or permission of instructor. Field trip fee $65. T R 2:55–4:10. G. Evans.

A combination seminar-and-lecture course for students interested in the social sciences, design, or facility management. Through projects and readings the influence of environmental form on social behaviors such as aggression, cooperation, communication, community, and crime is explored. Also covered are the influences of stage in life cycle, family structure, and social class on environmental needs and purposes. Implications for the planning, design, and management of complex environments such as offices, hospitals, schools, and housing are emphasized.

**DEA 251 History and Theory of the Interior**

An historic study of interior architecture and design with an emphasis on the concepts of design theory. Overarching themes encompass several time periods from the classical to the twentieth century and isolate cultural patterns, spatial ideas, dialectics, design elements and theorists. Reading, discussion, analytical exercises, essays, examinations. Field trip.

**DEA 300 Special Studies for Undergraduates**
Fall or spring. Credit to be arranged. Department faculty members.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multipage description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the head of the department, is filed at course registration or during the change-of-registration period.

**DEA 301 Design Studio V**
Fall. 4 credits. Prerequisites: DEA 111, 150, 201, 202, 203, and 204.

Corequisite: DEA 303 and 459. Minimum cost of materials, $150; shop fee, $10; optional field trip, approximately $100; dazio machine fee, $8. T R 12:20–4:25. P. Eshelman.

Intermediate-level interior design studio. The course is organized around a series of interior and interior-product design problems of intermediate-level complexity, 3 to 5 weeks in duration. Focus is on development of design skills and on understanding of a selected set of generic problem types.
An introduction to human-factor considerations in lighting, acoustics, noise control, indoor air quality, and the thermal environment. The ambient environment is viewed as a support system that should promote human efficiency, productivity, health, and safety. Emphasis is placed on the implications for planning, design, and management of settings and facilities. Course includes a field project.

DEA 374 Elements of Business for Non-Business Majors (also Hotel Administration 104)

Spring. 1 credit. Limited to 36. Weekend course.

Focus will be to provide hands-on skills and knowledge about how to start or run a small business. Especially appropriate for students interested in professional careers such as architecture, design, writing, art, engineering, law, and other service businesses. Course structure will use a computer-based management simulation game and will require students to work in management teams of six to start and operate a hotel. Introductory-level course. No previous business experience or computer knowledge required. Students are required to attend all sessions and complete a paper, which will be due a week after conclusion of the course.

DEA 400-401-402-403 Special Studies for Undergraduates

Fall or spring. Credits to be arranged. S-U grade options. Department faculty.

For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of DEA not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multiplicity description of the study they want to undertake on a form available from the department office. This form must be signed by the instructor directing the study and the department head and filed at course registration or within the change-of-registration period after registration in 145 MVR, College Registrar's Office, along with an add/drop slip. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department head is necessary. Students, in consultation with their advisers and the instructor, should register for one of the following subdivisions of independent study.

DEA 400 Directed Readings

For study that predominantly involves library research and independent reading.

DEA 401 Empirical Research

For study that predominantly involves data collection and analysis, or laboratory or studio projects.

DEA 402 Supervised Fieldwork

For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

DEA 403 Teaching Apprenticeship

For study that includes teaching methods in the field and assisting faculty with instruction. Students must have demonstrated a high level of performance in the class to be taught and in the overall academic program.

DEA 407 Design Studio VII

Fall. 5 credits. Prerequisites: DEA 302, DEA 303, DEA 304, and DEA 305.

Advanced interior design studio organized around a series of interior design problems, 3 to 5 weeks in duration. Focus is on development of design skills and on competence in solving a selected set of generic interior design problem types.
DEA 454 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459 or permission of instructor. Letter grades only. Minimum cost of materials, $100. T R 1:25–4:25. W. Sims.
For advanced undergraduates interested in facility planning and management. Purpose is to provide basic tools, techniques, and concepts useful in planning, designing, and managing facilities for large, complex organizations. Covers strategic and tactical planning for facilities, organizing to deliver facility management services, project management, space forecasting, space allocation policies, programming, relocation analysis, site selection, building assessment, space planning and design, furniture specifications, and moves. Sociopsychological, organizational, financial, architectural, and legal factors are considered.

DEA 455 Research Methods in Human-Environment Relations
Fall. 3 credits. Prerequisites: DEA majors only or permission of instructor, and a statistics course. M W F 1:25–2:15. W. Sims.
The course develops the student's understanding and competence in the use of research and analytical tools to study the relationship between the physical environment and human behavior. Emphasis is placed on selection of appropriate methods for specific problems and the policy implications derived from research. Topics include research design, unobtrusive and obtrusive data-collecting tools, the processing of qualitative and quantitative data, and effective communication of empirical research findings.

DEA 459 Programming Methods in Design
Fall. 3 credits. L. Maxwell.
Introduction to environmental programming. Emphasis on formulation of building requirements from user characteristics and limitations. Diverse methods for determining characteristics that will enable a particular environmental setting to support desired behaviors of users and operators. Methods include systems analysis, soft system, behavior circuit, behavior setting, and user characteristic approaches. Selection of appropriate methods to suit problems and creation of new methods or techniques are emphasized.

DEA 470 Applied Ergonomic Methods
Spring. 3 credits. Prerequisite: DEA 325. T R 10:10–11:25. A. Hedge.
This course covers ergonomics methods and techniques and their application to the design of modern work environments. Emphasis is placed on understanding key concepts. Coverage includes conceptual frameworks for ergonomic analysis, systems methods and processes, a repertoire of ergonomics methods and techniques for the analysis of work activities and work systems. This course is the undergraduate section of DEA 670, which will share the same lectures but will meet for an additional hour. DEA 670 will have additional readings and projects.

DEA 499 Senior Honors Thesis
Fall or spring. Variable credit. Prerequisite: permission of thesis advisor and DEA director of undergraduate studies. Letter grades only.
This is an opportunity for DEA majors to undertake original research and scholarly work leading to the preparation of a thesis. Students work closely with their thesis advisor on a topic of interest.

DEA 600 Special Problems for Graduate Students
Fall or spring. Credit to be arranged. S-U grades only. Each student is required to attend DEA 443 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 325 for more detail.

DEA 651 Human Factors: Ergonomics-Anthropometrics
Fall. 4 credits. Recommended: DEA 150 and a 3-credit statistics course. T R 8:40–9:55. A. Hedge.
A course intended for graduate students who want a more thorough grounding in human factors than is provided by DEA 350. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. For detailed description, see DEA 350.

DEA 652 Human Factors: The Ambient Environment
A course intended for graduate students who want a more thorough grounding in human factors considerations than is provided by DEA 350. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. For detailed description, see DEA 350.

DEA 653 Planning and Managing the Workplace
Intended for graduate students who want a more thorough grounding in the planning, design, and management of facilities for complex organizations than is provided by DEA 453. Each student is required to attend DEA 453 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 453 for more detail.

DEA 654 Facility Planning and Management Studio
Spring. 4 credits. Prerequisite: DEA 459/650 or permission of instructor. Letter grades only. Minimum cost of materials, $100. For graduate students in facility planning and management. T R 1:25–4:25. W. Sims.
For description, see DEA 454.

DEA 656 Research Methods in Human-Environment Relations
Fall. 4 credits. Prerequisite: DEA majors only or permission of instructor, and a statistics course. M W F 1:25–2:15. G. Evans.
Intended for graduate students who want a more thorough understanding of the use of research to study the relationship between physical environment and human behavior than is provided by DEA 455. Each student is required to attend DEA 455 lectures, meet with the instructor and other graduate students for an additional class each week, and do additional readings and projects. See DEA 455 for more detail.

DEA 659 Seminar on Facility Planning and Management
Fall. 1 credit. For graduate students interested in careers in facility planning and management. S-U grades only. M 3:35–4:25. F. Becker, W. Sims.
Series of seminars led by Cornell faculty members and other professionals directly involved in facility planning and management. Topics include strategic and tactical facility planning, space standards, project management, computer and facility management, facility maintenance and operations, energy conservation and building systems.
HUMAN DEVELOPMENT COURSES

J. Eckenrode, chair; M. Cochran, director of graduate studies; J. Haugaard, director of research methods; J. Dons, J. Garbarino, K. Greene, A. Hedge.

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

HD 115 Human Development
Fall or summer. 3 credits. S-U grades optional. M W 1:25-2:15. J. Garbarino. This course provides an overview of topics that are relevant to the study of human development in adulthood. It attempts to integrate theories, research, and methodological approaches from several areas of psychology, including developmental, cognitive, social, and clinical. Topics include memory development, language, thinking, and problem solving in the second half of the semester. The course is designed to serve as a foundation for more advanced study in cognitive development, and also as an overview for students whose primary interests lie in other areas.

HD 235 Childrearing and the Law
Fall. 3 credits. S-U grades optional. HD 115 and an introductory statistics course. W 2:30-5:00. Not offered 1999-2000. J. Nance. This course examines psychological data and theories that shed light on the practical issues that arise when a child enters the legal arena. It attempts to integrate theories, research, and methodology from several areas of psychology, including developmental, cognitive, social, and clinical. The course also attempts to examine the degree to which basic research can (and should) be used to solve applied issues. The topic of children and the law provides an opportunity to meet all these requirements. Rapid changes involving child witnesses in our legal system have forced social scientists to bring their work into the courtroom. At the same time, this brings this fraying into the legal system has changed the course of research and thinking about certain aspects of child development and cognition. It has encouraged researchers to tackle new issues and to develop innovative experimental paradigms. Selected topics to be covered include: memory development, suggestibility, theory of mind, childhood amnesia, expectancy formation, symbolic representation, and repression. Several actual cases involving child witnesses will be presented to illustrate the application of scientific data to the courtroom. Because of the heavy use of case materials, video and textual coverage of actual trials, it is expected that students will devote more than the usual number of hours to this course.

HD 241 History of Childhood in the United States (also History 271, American Studies 241)
Fall. Limited to 50 students. 3 credits. J. Ross-Bernstein. This course analyzes the social aspects of child and adolescence and childhood changes as well as changing scientific ideas about children. Students have an opportunity to reflect on and write about their own childhood and adolescence. This course is designed to give students a humanities perspective on approaches to childhood.

HD 242 Participation with Groups of Young Children
Fall or spring. 4 credits. Limited to 20 students (limit depends on availability of placements and of supervision). J. Eckenrode. This course is designed to integrate developmental theories with supervised experience in child care centers, day care centers, head start programs, and in other areas.

HD 251 Social Gerontology: Aging and the Life Course
Spring. 3 credits. Limited to 60 students. Strongly recommended: HD 150 or equivalent to be determined by instructor. S-U grades optional. T R 10:10-12:05. J. Ross-Bernstein. This course is designed to integrate developmental theories with supervised experience in child care centers, day care centers, head start programs, and in other areas.
an introduction to various careers in the field of gerontology.

We will examine the complex interplay between gender and age as well as the social construction of the life course. Students explore the relationship between social change and individual life histories, and observe the significance of two key institutions—work and family—in shaping basic life choices and their consequences throughout the life course. Implications of key life trajectories and transitions for individual lives and for social policy will also be discussed.

**[HD 258 History of Women in the Professions, 1800 to the Present](also Women's Studies 236 and History 238, American Studies 258)**

The historical evolution of the female professions in America (midwifery, nursing, teaching, librarianship, home economics, and social work) as well as women's struggles to gain access to medicine, law, and the sciences. Lectures, reading, and discussion aim to identify the cultural patterns that fostered the conception of gender-specific work, and the particular historical circumstances that created these different work opportunities. The evolution of "professionalism" and the consequences of professionalism for women, family structures, and American society are also discussed.

**[HD 260 Introduction to Personality (also Psychology 275)](Fall. 3 credits. Recommended: introductory course is psychology or human development. T R 10:10-11:25. D. Bern.)

An introduction to personality psychology, with an emphasis on personality development and contemporary research. Covers the major theories of personality, influences on personality development (including genetic, biological, experiential and environmental factors), and methods for assessing personality.

**[HD 261 The Development of Social Behavior](Spring. 3 credits. Strongly recommended. HD 115 or Psychology 128. Offered alternate years. T R 1:25-2:40. C. Raver.)

Issues in the development of social behavior are viewed from the perspective of theory and research. Likely topics include bases of social behavior in infancy and early childhood, the role of parents, siblings and peers, the development of prosocial and aggressive behavior, the development and functioning of attitude and value systems, and the function and limits of experimental research in the study of social development.

**[HD 266 Emotional Functions of the Brain](Fall. 3 credits. Prerequisite: a biology course. Letter grades only. M 10:10-12:35. R. Dwork.)

Much of our social behavior, and what we refer to as personality, is related to phylogenetically-old emotional systems, systems that help us to adapt to critical stimuli in the environment. These systems are structured and organized within the brain, but they are also capable of being modified by our everyday experiences. After an overview of the gross anatomy of the primate brain is presented, the focus of the course concerns networks of brain regions that are organized around the integration of processes related to emotion and motivation. First, general features of the brain in relation to emotional evaluation, motivation processes are discussed, and then the brain organization related to several specific types of emotional systems are explored. Neurobiological modulation of emotional processes by neurotransmitters and other substances in the brain are detailed as well. The latter helps to lay the groundwork for understanding the nature of individual differences in much of our social and emotional behavior.

**[HD 281 Foundations of Clinical Practice (also Psychology 281)](Fall. 3 credits. Enrollment limited to 60 students. Letter grades only. W 1:30-4:30. C. Maxwell Miller.)

This course provides an introduction to the theoretical and practical aspects of some of the basic elements of counseling. Students will develop an understanding of the most current research on important aspects of counseling and will be introduced to the basic theoretical foundations underlying different approaches. Students will be expected to acquire and demonstrate basic clinical skills. Through role-play, observation of videos, and class demonstrations, students will learn such skills as attending and active listening; they will also develop a capacity to recognize internal conflicts and cognitive distortions as well as the similarities between intra-psychic and interpersonal processes. Other topics include issues of transference and counter-transference, the multi-axial dimensions of the DSM IV, defensive strategies as they appear in the DSM IV, and ethical considerations and practices. While this course gives an introduction to the applied aspects of psychology, it does not prepare students to provide treatment of any sort.

**[HD 284 Introduction to Sexual Minorities (also Women's Studies 265)](Fall. 3 credits. Prerequisite: one social science course. S-U grades optional. M 6:30-9:00 p.m. R. Savin-Williams.)

This course introduces students to theories, empirical scholarship, public policies, and current controversies with lesbian, gay, bisexual, transgender, sexual questioning, and other sexual minority populations. The major focus is on gay, lesbian, and bisexual development, lifestyles, and communities with additional emphasis on ethnic, racial, gender, and class issues. Videos supplement the readings and lectures.

**[HD 300 Special Studies for Undergraduates](Fall or spring. Credit to be arranged. Permission required.)

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multipage description of the study they want to undertake on a form available at the Student Registrar's Office. The form, signed by both the instructor directing the study and the coordinator of undergraduate education, is filed at course registration or during the change-of-registration period.

This course will explore several problematic behaviors of adolescence, including depression, drug abuse, eating disorders, and delinquency. Various psychological, sociological, and biological explanations for the behaviors will be presented. Appropriate research will be reviewed, treatment and prevention strategies discussed. An optional discussion section will be available to students who would like an opportunity to discuss readings and lectures in greater depth.

**[HD 334 The Growth of the Mind](Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD 635, a supplemental graduate seminar. Prerequisites: a course in human experimental psychology, statistics, or HD 115 or equivalent; or permission of the instructor. S-U grades optional. Offered alternate years. Not offered 1999-2000. B. Lust.)

In this course the fundamental issues of cognition are introduced. What is the nature of human intelligence? of logical and scientific reasoning? How are knowledge and understanding acquired and represented in the human mind? What is the nature of mental representation? What are the cognitive characteristics of the mind at birth? What is the relation of the acquisition of knowledge and understanding to the mental representation? What are the relations between language and thought? In the study of these issues, how can epistemology and experimental psychology be related through the experimental method?

Basic debates within the study of cognition are introduced and discussed throughout. For example, the roles of innateness and learning, the distinction between competence and performance, and the relation between induction and deduction in the acquisition of knowledge. Those biological, linguistic, and sociocultural issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism. The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.

**[HD 344 Infant Behavior and Development](Fall. 3 credits. Prerequisites: HD 115, a biology course, and a statistics course. Not open to freshmen. M W F 1:25-2:15. S. Robertson.)

Behavior and development from conception through the first two years after birth will be examined in traditional areas (e.g., perception, cognition, socioemotional, language, motor). The fundamental interrelatedness of these aspects of development will be strongly emphasized, as well as their relation to the biology of fetal and infant development. Topics with implications for general theories of development will be emphasized (e.g., developmental psychology be related through the experimental method).

Basic debates within the study of cognition are introduced and discussed throughout. For example, the roles of innateness and learning, the distinction between competence and performance, and the relation between induction and deduction in the acquisition of knowledge. Those biological, linguistic, and sociocultural issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism. The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.

Those biological, linguistic, and sociocultural issues are set in a context of basic epistemological issues involving the tension between rationalism and empiricism. The course will analyze Piaget's comprehensive theory of cognitive development and experimental results. Current research in cognitive development will be contrasted.
HD 346 The Role and Meaning of Play
Fall. 2 credits. Limited to 30 juniors and seniors. Prerequisite: HD 115. M 7:30–9:25 p.m. J. Ross-Bernstein.
The aim of this course is to examine the play of children aged three through seven. Through seminar discussions, workshops, films, and individualized research the student will explore the meaning and validity of play in the lives of young children, the different ways that children play and the value of each, and the effect of the environment in enhancing and supporting play.

[HD 347 Human Growth and Development: Biological and Behavioral Interactions (also Biology and Society 347 and Nutritional Sciences 347)]
Spring. 3 credits. Prerequisites: Biological Sciences 101 or 109 or equivalent, and HD 115 or Psychology 101. Limited to 150 students. M W F 1:25. Offered alternate years. Not offered 1999–2000. S. Robertson and J. Haas.
This course is concerned with the interrelationships of physical and psychological growth and development in humans during infancy. Intrinsically and extrinsically causes of variations in growth, including various forms of stimulation, are considered. In addition, the consequences of early growth and its variations for current and subsequent behavioral, psychological, and physical development are considered. The interaction between physical and behavioral or psychological factors is emphasized throughout the course.

HD 348 Advanced Participation with Children
An advanced, supervised field-based course, designed to help students deepen and consolidate their understanding of children. Students are expected to define their own goals and assess progress with supervising teachers and mentors, to keep a journal; and to plan, carry out, and evaluate weekly activities for children within their placement. Conference groups and readings focus on contexts of development and on ways to support child growth and interpersonal learning. Each student is expected to do a presentation and paper on a self-selected topic within the scope of the class. Participation is in settings that serve typical and/or special needs children from three to eight years of age and provide education, care, or special-purpose interventions for them.

HD 353 Risk and Opportunity Factors in Childhood and Adolescence
This course explores the meaning of risk and opportunity in the lives of children and youth.

HD 359 American Families in Historical Perspective (also Women's Studies 357, History 359, American Studies 359)
Spring. 3 credits. Prerequisite: HD 150 or one 200-level social science or history course. S-U grades optional. Human ecology students must register for HD 359. Not offered 1999–2000. J. Brumberg.
This course provides an introduction to and overview of problems and issues in the historical literature on American families and the family life cycle. Reading and lectures demonstrate the pattern of American family experience in the past, focusing on class, ethnicity, sex, and region as important variables. Analysis of the private world of the family deals with the biological constitution of sexuality, sex roles, generational relationships, stages of life, and life events. Students are required to do a major research paper on the history of their family, covering at least two generations, and demonstrating their ability to integrate life-course development theory, data drawn from the social sciences, and historical circumstances.

HD 362 Human Bonding
Fall. 3 credits. Recommended: introductory course in psychology or human development. S-U grades optional. T R 1:25–2:40. C. Hazan.
The science of interpersonal relationships. Examines the basic nature of human affectional bonds, including their functions and dynamics. Covers such topics as interpersonal attraction and mate selection, intimacy and commitment, love and sex, jealousy and loneliness, the neurobiology of affiliation and attachment, and the role of relationships in physical and psychological health.

HD 363 The Psychological Development of Women
Fall. 3 credits. Limited to 60 students. Strongly recommended: HD 115, 150, and a 200-level course. Letter grades only. T R 11:40–12:55. C. Raver.
Historically, psychologists have effectively charted the pathways of boys’ normative development yet sometimes neglected to pursue a full understanding of girls’ development. To address this gap, this seminar will pursue a number of theoretical perspectives that focus on the social development of girls and women. Theory and research on girls’ gender identity, peer relationships, romantic relationships, and parenting will be covered, with an eye toward understanding their meaning within different historical and sociocultural frameworks. Relations between psyche, body, and culture will be considered, using the works of such authors as Freud, Horney, Miller, Chodorow, and Gilligan. Students will rigorously evaluate these theoretical perspectives in light of recent empirical research on women’s psychological development.

HD 366 Psychobiology of Temperament and Personality
This course is for students who have an interest in the neurobiology of behavior, in general, and in temperament and personality, in particular. The course material is presented within an evolutionary biology perspective, where the development of neurobehavioral systems as a means of adapting to critical stimuli is explored as the basis of emotional traits in humans. The nature of temperament, social affiliation, and personality is explored from psychometric, social, genetic, and biological points of view. There is a focus on the general role of monoamines (dopamine, norepinephrine, and serotonin) and opiates in determining individual differences in temperament and personality. Implications for several forms of personality disorders and psychopathology are also discussed. Finally, the manner in which environmental influences across the life span may be coded in the brain and influence the development of personality is explored.

HD 370 Psychopathology (also Psychology 325)
A research-based survey of the cognitive, emotional, and biological aspects of psychopathology across the life span. The major mental illnesses will be covered, including schizophrenia, anxiety disorders, affective disorders, and personality disorders as well as psychopathological disorders of childhood. Emphasis will be placed on the development of psychopathology, current theories and models of etiology, and intervention strategies. This course is intended to be a rigorous introduction to the scientific study of psychopathology and psychopathological development, minimal attention to psychotherapy.

HD 397 Experimental Child Psychology
Fall. 4 credits. Limited to 16 students. M W 10:10–12:00. L. Lec.
A study of experimental methodology in research with children. Includes lectures, discussions, and practicum experiences covering general experimental design, statistics, and styles and strategies of working with children.

HD 400-401-402-403 Special Studies for Undergraduates
Fall or spring. Credits to be arranged. Enrollment limited to juniors and seniors with a minimum 3.0 G.P.A. Permission required. Prerequisites: either HD 115, 150, and two intermediate level HD courses, or four courses in psychology or sociology. S-U grades optional.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of HD not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multipage description of what they want to undertake, on a form available from the department office in NG14. This form must
be signed by the instructor directing the study and the student’s faculty adviser and submitted to NGS MVR Office. The Office of Undergraduate Education. After clearance that all prerequisites are met, the student picks up the form in NG14 to file at course registration or within the change-of-registration period after registration in the College Registrar’s Office, 145 MVR along with an add/drop slip. To ensure review before the close of the period, early submission of the special study form to the Office of Undergraduate Education for students, in consultation with their supervisor, should register for one of the following subdivisions of independent study (guidelines for each are available in NG14 Martha Van Rensselaer Hall).

HD 400 Directed Readings
Prerequisites: in addition to the general prerequisite courses, a statistics or methods course and at least one course directly linked to the area of study. Permission required.
For study that predominantly involves library research and independent study.

HD 401 Empirical Research
Prerequisites: in addition to the general prerequisite courses, a statistics or methods course and at least one course directly linked to the area of study. Permission required.
For study that predominantly involves data collection and analysis, or laboratory or studio projects.

HD 402 Supervised Fieldwork
Prerequisites: in addition to the general prerequisite courses, an observation or participation course. Permission required.
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

HD 403 Teaching Apprenticeship
Prerequisites: in addition to the general prerequisite courses, students must have taken the course or equivalent and received a grade of B+ or higher.
Permission required.
For study that includes assisting faculty with instruction.

HD 417 Female Adolescence in Historical Perspective (also Women’s Studies 438, History 458, American Studies 417)
Fall 3 credits. Prerequisites: HD 216, 241 or, 258 or 300-level history or women’s studies course. Juniors and seniors only. M 7:30-10:00 p.m. J. Bruemmer.
A reading, writing, and discussion course that will attempt to answer a basic historical question that has consequences for both contemporary developmental theory and social policy: how has female adolescence in the United States changed in the past 200 years? The focus will be on the ways in which gender, class, ethnicity, and popular culture shape adolescent experience.
Although the required readings are primarily historical in nature, students are encouraged to think about the interaction of biology, psychology, and culture. Students are required to do a primary source research paper.

HD 436 Language Development (also CGCST 436, PSYCH 436 and LING 436)
Spring. 4 credits. Open to undergraduate and graduate students. Graduate students should also enroll in HD/LING 700, a supplemental graduate seminar. Prerequisites: at least one course in developmental psychology, cognitive psychology, cognitive development, or linguistics. S-U grades optional. T R 2:55-4:10. B. Lust.
This course surveys basic issues, methods, and research in the general area of language acquisition. Major theoretical positions in the field are considered in the light of experimental studies in first-language acquisition of phonology, syntax, and semantics from infancy on. The focus of the course is on the relationships between language and thought are discussed, as are the fundamental linguistic issues of universal grammar and the biological foundations for language acquisition. The acquisition of communication systems in nonhuman species such as chimpanzees is addressed, but major emphasis is on the child.

HD 438 Thinking and Reasoning
Fall 3 credits. Prerequisite: HD 115 or Psychology 101. T R 1:25-2:40. B. Koslowski.
The course will examine problem solving and transfer, pre-causal thinking, logical thinking, practical syllogisms, causal reasoning, scientific reasoning, theories of evidence, expert vs. novice differences, and non-rational reasoning. Two general issues will run throughout the course: the extent to which children and adults approximate the sorts of reasoning that are described by various types of models, and the extent to which various models accurately describe the kinds of thinking that is required by the types of problems and issues that arise and must be dealt with in the real world.

HD 439 Cognitive Development: Infancy through Adolescence
Spring. 3 credits. Prerequisites: HD 115 or Psychology 101. Letter grades only. T R 1:25-2:40. B. Lipska.
The course will be an overview of current and classic issues and research in cognitive development. Central topics of both “hard cognition” (e.g., information processing and neuropsychological functioning) and “soft cognition” (e.g., problem solving, concepts and categories) will be covered. Selected topics will be linked to methodological issues and to important social issues such as cross-cultural cognitive development and putative racial and social class differences.

HD 440 Internship in Educational Settings for Children
Opportunity to integrate theory with practice at an advanced level and to further develop understanding of children ages two to ten and their families. Interns will function as participants in various settings and participate in curriculum planning, evaluation, staff meetings, home visits, parent conferences, and parent meetings. Supervision by head teacher and instructors expected to define own goals and to assess their progress, to do assigned and self-directed readings, and to keep a critical incident journal.

HD 451 Nontraditional Families and Troubled Families
Spring. 3 credits. Limited to 30 students. Prerequisites: HD 115 and 150. Letter grades only. T R 8:40-9:55. Offered alternate years. J. Haugaard.
This is an advanced course designed to explore the functioning of families. The first part of the course examines family system theory and how it relates to our understanding of all families. Four types of families are then examined: two nontraditional families (e.g., adoptive families) and two troubled families (e.g., families with a chronically ill child).

HD 456 Families and Social Policy
An examination of the intended and unintended effects of family policies and social policies, using case studies in areas such as social welfare, day care, and employment. The policy implications of changes in the structure and composition of families are also considered.

HD 457 Health and Social Behavior (also SOC 467)
Fall. 3 credits. Prerequisites: a course in statistics and one of the following: HD 150, Sociology 131, Sociology 151, or Rural Sociology 101. Letter grades only. T R 10:10-11:15. Offered alternate years.
E. Wethington.
This course critically examines theories and empirical research on the relationships among social group membership, social status, and physical and mental health. The lectures focus on social stress, social support, and family structure, all of which are associated with variations in physical health, mental health, and health maintenance behaviors. Students are expected to read widely from current literature in psychology, health psychology, public health, and epidemiology.

HD 464 Sexual Minorities and Human Development (also WOMNS 467)
The first half of the course covers topics selected by students regarding theoretical, research, and applied issues on sexual minorities. In the second half of the course, students present their field experience or research topic to the class as a teaching experience. The success of the course depends on students feeling personally engaged and committed to the course content, their selected field experience, and their chosen research topic. Because of the multidisciplinary nature of the course, it is hoped that students from a variety of backgrounds in academic disciplines, gender, sexual orientation, ethnicity, race, class, and religious affiliation will feel comfortable in the course.

HD 467 Psycho-social Issues in Asian American Identity (also AAS 467)
Spring. 3 credits. Prerequisites: HD 115 or Psychology 101 preferred. Letter grades only. M 6:30-9:00 p.m. L. Lee.
The course will review theories of identity and self and their usefulness in understanding identity formation for various ethnic groups within the Asian American population. It will
examine the impact of various societal forces, e.g., racism, stereotypes, etc. as well as life experiences, e.g., immigration, family values, etc. in shaping or contributing to the formation of identity or identities of Asian Americans.

**HD 468 Stress in Childhood and Adolescence**
Fall. 3 credits. Recommended: HD 115, HD 150 or a statistics course. Letter grades only. TBA, Not offered 1999-2000. J. Eckenrode.
This is an advanced seminar that will review research related to the nature and consequences of stressful experiences in childhood and adolescence, particularly those arising in the family. Topics covered represent common stressors in the lives of children (e.g., divorce of parents), which have potentially damaging consequences for development (e.g., child abuse). Topics in which faculty at Cornell have conducted significant research (e.g., children's memory for stressful events) are also covered. In addition to considering the negative impact of stress on development, we will also consider individual differences in stress reactivity, including the concepts of coping and resilience. These topics lead naturally into discussions of practice and policy.

**HD 471 Child Development and Psychopathology**
This class will explore the development and process of mental, emotional, and behavioral disorders in children such as mental retardation, autism, and attention deficit disorders. Topics will include (1) the classification of mental disorders, (2) biological, psychological, and sociological theories regarding the development and maintenance of mental disorders, (3) prevalence and etiology of childhood mental disorders, and (4) therapeutic and prevention strategies. If there is sufficient enrollment, an optional discussion section will be available to those students who would like an opportunity to discuss readings and lecture material in greater depth.

**HD 482 Child Development and Social Policy**
Fall. 3 credits. Enrollment limited to 25 juniors and seniors or by permission of instructor. Prerequisites: HD 115, HD 150, and a course in statistics. HD 260 OR 261 strongly recommended. Letter grades only. Offered alternate years. Not offered 1999-2000. T R 12:20-1:45. C. Raver.
Course work and seminar discussion emphasize the integration of basic research in young children's social and emotional development with intervention- and prevention-oriented research. The course also examines theoretical models of the relations between risk and resilience in childhood development, family functioning, community and culture. Policies in the domains of parenting, early childhood education, family and community violence, poverty, and child care are analyzed. Broad questions regarding the identification of social problems and the design of solutions are considered within cultural and historical contexts.

**HD 483 American Child Care in Global Perspective**
In this course we examine American child care policies and programs, broadly defined, in the context of policies and programs in Africa, Asia, Europe, and Latin America. Comparison and analysis are guided by several complementary conceptual frameworks. Particular attention is given to relativism and universalism as applied to developmental and educational principles and concepts. Students specialize in the child care policies and programs of another country, work in teams to analyze a contemporary policy issue, and apply course content to an issue of their choice in a final paper.

**HD 498 Senior Honors Seminar**
Fall. 1 credit. Required for, and limited to, seniors in the HD honors program. S-U grades only. TBA. S. Cornelius.
This seminar is devoted to discussion and presentation of honors theses being completed by the senior students.

**HD 499 Senior Honors Thesis**
Fall or spring. Credit to be arranged. Prerequisite: permission of thesis adviser and coordinator of honors program. S-U grades optional. Department faculty.

**HD 106, 206, 306, 406 Topics in Human Development**
2-4 credits. S-U grades optional. These topics vary each time the course is offered. Descriptions are available at the time of course registration. These courses do not fulfill any requirements for the major, they must be taken as electives.

**Topics Courses**
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being covered, and may vary by semester. Permission of instructor may be required. This series of courses provides an opportunity for undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other format.

**HD 215, 315, 415 Topics in Adolescent and Adult Development**

**HD 235, 335, 435 Topics in Cognitive Development**

**HD 245, 345, 445 Topics in Early Childhood Development and Education**

**HD 255, 355, 455 Topics in Family Studies and the Life Course**

**HD 265, 365, 465 Topics in Social and Personality Development**

**HD 275, 375, 475 Topics in Developmental Psychopathology**

**HD 285, 385, 485 Topics in the Ecology of Human Development**

**The Graduate Program**
HD graduate courses are only open to undergraduates with instructor's permission.

**General Courses**

**HD 610 Processes in Human Development: Theoretical Models and Research Designs**
Spring. 3 credits. Open to graduate students and juniors and seniors in HD and related fields with instructor's permission. Prerequisite: a minimum of one course in statistics. Letter grades only. W 2:00-4:25. U. Bronfenbrenner.
The purpose of the seminar is to acquaint students with selected scientific paradigms being employed at the frontiers of developmental science for investigating the conditions and processes that shape human development over the life course. Particular attention will be given to research models that draw on disciplines (such as evolutionary biology, human genetics, developmental psychology, sociology, anthropology, history, economics). The principal seminar activities consist of faculty and student development of research questions, critical analysis of these questions in the light of diverse theoretical perspectives, and their corresponding research designs. In this process, the human being is treated as an integrated organism.

**HD 617 Adolescence**
Critical examination of seminal theoretical and empirical writings on adolescent development. Empirical research on specific questions chosen by students is considered in the light of these approaches.

**HD 631 Cognitive Development**
Fall. 3 credits. Letter grades only. Offered alternate years. Not offered 1999-2000. Staff.
Faculty members involved in the course will present their area of specialization in cognitive development. These areas will include perception, attention, memory, language, thinking and reasoning, learning, creativity, and intelligence.

**HD 640 Infancy**
Fall. 3 credits. TBA. S. Robertson.
Development in infancy will be examined through a critical review of key research and theory in selected aspects of neurobehavior, perception, cognition, language, emotion, and social relationships. Theoretical issues to be considered include the role of experiences in early development, sensitive periods, continuity and discontinuity in development, and the functional significance of early behavior. Some of the conditions that put infants at risk for poor development will also be considered, such as premature birth, perinatal medical complications, and exposure to environmental toxins. The course will combine perspectives from developmental psychology and psychobiology.

**HD 650 Contemporary Family Theory and Research**
Fall. 3 credits. E. Wethington.
Sociological and social psychological theories and research on the family are examined with reference to the relationship between the family and society. Topics change from year to year, but focus on the processes of socialization and social control, the reproduction of gender and social class across
generations, changes in family "values" across
time, the rise of divorce and single mother-
hood, family diversity, and the genesis of
deviance and psychological disorder.

HD 660 Social Development
Spring. 3 credits. C. C. Raver.
This course is designed to provide both broad
and in-depth training in the areas of social
development and emotional development during infancy
and childhood. It will cover most of
the major topic areas and theoretical orientations.
Consideration will be given to basic influences
on socioemotional development—biological,
social, and cultural. Coverage will include
normative development as well as the origins
and nature of individual differences. We will
explore such fundamental issues and
questions as: What are emotions? What role
do they play in the development and
organization of personality? What are the
effects of early social relationships on
emotional regulation? When and how does
the self-system emerge? Emphasis will be on
the processes—both internal and external—
that help determine the course and outcome
of development.

[HD 670] Experimental Psychopathology
Spring. 3 credits. Prerequisite: an
undergraduate course in abnormal
psychology or psychopathology; a course
in multivariate statistics; and substantive
course work in neurobiology or related
TBA. Staff.
Overview of current theories and empirical
research on functional and organically based
psychological disorders. Topic areas to be
covered include autism, schizophrenia,
anxiety disorders, affective disorders, and
personality disorders. Focus is on the
developmental and etiology of psychopathol-
gy.

Topical Seminars
Seminars offered irregularly, with changing
topics and instructors. Content, hours, credit,
and instructors to be announced. Seminars
offer concentrated study of specific theoretical
and research issues.

HD 618 Seminar in Adolescence and
Adult Development
Topics include peer relations, parent-teen
relationships, self-esteem, youth and history,
work, and moral development.

HD 633 Seminar on Language
Development
Topics include acquisition of meaning in
infancy, precursors of language in early
infancy, and atypical language development.

HD 635 Seminar in Cognitive
Development
Topics include early attention, perception,
memory, and communication. Assessment
and intervention in relation to these processes
will be considered when possible.

HD 645 Seminar on Infanty
Focuses on selected topics in the develop-
mental psychology and psychobiology of
infancy (including fetal development). Special
topics vary and depend in part on student
interests.

HD 646 Seminar in Early-Childhood
Development and Education
Topics include analysis of models and
settings, design of assessment techniques,
program evaluation, and early childhood in a
cross-cultural context.

HD 655 Seminar in Family Studies and
the Life Course
Topics include the sociology of marital status,
the single-parent family, work-family linkages,
women and work, and families and social
change.

HD 665 Seminar in Personality and
Social Development
Focuses on selected issues related to
personality and social development. The
issues selected vary each year according to
current importance in the field and student
interests.

HD 675 Seminar in Developmental
Psychopathology
Topics include learning disabilities, therapeu-
tic interventions in atypical development, child
abuse and maltreatment, family factors in the
etiology of functional disorders, and cognitive
characteristics of atypical groups.

HD 685 Seminar in Human Development
and Family Studies
Topics include development of self-concept,
sex-role identity, observational methods, and
interviews in developmental research.

HD 690 Seminar on Ecology of Human
Development
Topics include the institutional setting as a
determinant of behavior, the poor family, and
the identification and measurement of ecological
variables.

Individualized Special Instruction
HD 700-800 Special Studies for
Graduate Students
Fall or spring. Credits and hours to be
arranged. Credits 1–15 (3 hours work per
week per credit). S-U grades at discretion of
instructor. Independent advanced work by graduate
students recommended by their Special
Committee chair with permission of the
instructor.

HD 700 Directed Readings
For study that predominantly involves library
research and independent study.

HD 701 Empirical Research
For study that predominantly involves
research and analysis of research data.

HD 702 Practicum
For study that predominantly involves field
experience in community settings.

HD 703 Teaching Assistantship
For students assisting faculty with instruction.
Does not apply to work for which students
receive financial compensation.

HD 704 Research Assistantship
For students assisting faculty with research.
Does not apply to work for which students
receive financial compensation.

HD 705 Extension Assistantship
For students assisting faculty with extension
activities. Does not apply to work for which students
receive financial compensation.

HD 706 Supervised Teaching
4 credits.
For advanced students who assume major
responsibility for teaching a course. Supervi-
sion by a faculty member is required.

HD 806 Teaching Practicum
4 credits. For advanced graduate students
to independently develop and teach an
undergraduate topic course under the
supervision of a faculty member.

HD 899 Master's Thesis and Research
Fall or spring. Credit to be arranged.
Credits 1–15 (3 hours work per week per
credit). S-U grades only. Prerequisite:
permission of thesis adviser.

HD 999 Doctoral Thesis and Research
Fall or spring. Credit to be arranged.
Credits 1–15 (3 hours work per week per
credit). S-U grades only. Prerequisite:
permission of thesis adviser.

POLICY ANALYSIS AND MANAGEMENT

R. Burkhauser, chair; D. Kenkel, Consumer
Economics and Housing, director of graduate
studies; J. Greene, Human Service Studies,
director of graduate studies; A. Mathios,

NOTE: Class meeting times are accurate at
the time of publication. If changes are
necessary, the department will provide
new information as soon as possible.

PAM 180 Human Services in
Contemporary Society (formerly
HSS 101)
Fall. 3 credits. Recommended for
freshmen and first-year transfer students.
A lecture and discussion course designed as
an introduction to the community base of
services. Current and historical human
services are examined. Emphasis is placed on
social services, education, health, and criminal
justice. Barriers to service delivery are
discussed, such as racism, sexism, classism,
social preference, physical disability, and
age. Contemporary issues that impact on
service delivery will also be discussed with
attention to the relationship between direct
service and public policy.

PAM 200 Intermediate Microeconomics
(formerly CEH 210)
Fall or spring. 4 credits. Prerequisite:
Econ 101 or equivalent. Fall: preference
to sophomores and juniors. Spring:
preference to juniors and seniors.
R. Brooks, W. Rosen.
A section is mandatory. Theory of demand
and consumer behavior including classical and
indifference curve analyses; theories of
production and cost; models for the following
markets—competitive, monopoly, monopolis-
tic competition, oligopoly, and inputs and
general equilibrium; welfare economics, public goods,
risk.
**PAM 201 Determinants of Behavior** *(formerly HSS 246)*

Fall. 3 credits. Prerequisites: introductory sociology and introductory psychology. J. Mueller.

This course provides an interdisciplinary knowledge base for human service professionals. We examine human behavior in the environment from ecological, ethological, historical, cultural, and social system perspectives. Applications are made to professional practice at the micro level (counseling with individuals and families or other small groups) and at the macro level (social planning and policy formulation for vulnerable groups in our society).

**PAM 204 Applied Public Finance** *(formerly CEH 204)*

Fall or spring. 3 credits. Prerequisites: PAM 200. S-U grades optional. E. Peters, D. Kenkel.

The public sector now spends nearly $2 out of every $5 generated as income in the U.S. economy. A thorough knowledge and understanding of this important sector is an essential part of training in policy analysis and management. This course will provide an overview of the public sector of the U.S. economy, the major categories of public expenditures, and the main methods used to finance these expenditures. The principles of tax analysis and cost-benefit analysis will be presented with a focus on the role of public policy in improving economic efficiency, promoting the goals of equity and social justice improving equity by altering the distribution of wealth and income.

**PAM 205 Research Methods** *(formerly HSS 292)*

Fall or spring. 3 credits. Sections TBA. W. Rosen, W. Trochim.

Students will learn the logic and methods of social science research, as well as how to create researchable questions out of their issues of interest. Readings, written assignments, and in-class exercises focus on stating hypotheses, designing studies and samples to test hypotheses, measuring variables, and simple statistical analysis. PAM majors should take this course no later than their junior year.

**PAM 206 Race, Power, and Privilege in the United States** *(formerly HSS 280)*

For description, see AS&R &RC 280.

**PAM 220 Introduction to Management: Principles and Differences Among Sectors** *(also HSS 220)*

Fall or spring. 3 credits. D. Tobias, S. Walston.

This course is a basic introduction to major management and related concepts of planning, organizing, controlling, leadership, and special topics within five major management contexts including individual/personal, groups/families, firms, not-for-profit organizations, and governments/communities.

**PAM 223 Consumer Markets I** *(formerly CEH 233)*

Fall. 4 credits. R. J. Avery.

A study of the structure and functions of consumer retail markets with emphasis on the role and activities of the major players in these markets—firms, consumers, and governments. The nature and consequences of various types of market failures are studied from each of these perspectives. Case studies and outside lectures are used.

**PAM 230 Introduction to Policy Analysis** *(formerly CEH 230)*

Fall or spring. 3 credits. R. Avery, J. Gerner.

Policy analysis is an interdisciplinary field that uses theories, concepts, and methods from disciplines such as economics, sociology, and political science to address substantive issues in the public sector. Students will be introduced to the functions of and interactions between the major institutions (public and private) at the national, state, and local level involved in the policy making process. The course will focus on public policy analysis in the consumer, health, and family/social welfare areas and will also include an introduction to the technical skills required to undertake policy analysis.

**PAM 240 Critical Perspectives** *(also HSS 240)*

Fall or spring. 4 credits. D. Barr, J. Greene and J. Allen.

This course examines the implications and importance of perspective when examining public policy. It considers the sources of differing perspectives, including demographic characteristics, gender, age, and intellectual tradition. We also consider how these differing perspectives affect what is considered to be empirical evidence, what assumptions are made, and what outcomes are considered to be important. We will explore these ideas using several specific public policy proposals.

**PAM 270 Housing and Society** *(formerly CEH 247)*

Spring. 3 credits. S-U grades optional. P. Chi.

A survey of contemporary American housing issues as they relate to the individual, the family, and the community. The course focuses on the current problems of the individual housing consumer, the resulting implications for housing the American population and governmental actions to alleviate housing problems.

**PAM 300 Special Studies for Undergraduates** *(formerly CEH and HSS 300)*

Fall or spring. Credit to be arranged. Special arrangement for course work to establish equivalency for training in a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. This form, signed by both the instructor directing the study and the head of the department, should be filed at course registration during the change-of-registration period.

**PAM 301 Economic Organization of the Household** *(formerly CEH 325)*

Fall. 3 credits. Prerequisite: Econ 101 or equivalent. S-U grades optional. W. K. Bryant.

Economic models are used to help explain a wide variety of family and individual behavior. Topics include the demand for consumer goods and services, consumption and saving, time allocation, household production, income and labor supply, household production and leisure, human capital investment, fertility, marriage and divorce. Within each topic, uses of the material by public- and private-sector decision makers are discussed.

**PAM 303 Ecology and Epidemiology of Health** *(formerly HSS 330)*

Spring. 3 credits. S-U grades optional. Limited to 50 students. E. Rodriguez.

Ecological and epidemiological approaches to the problems which restrict human health within the physical, social, and mental environment. The course introduces the ecological and epidemiological perspectives and surveys the epidemiology of specific diseases such as AIDS, hepatitis, Legionnaires' disease, plague, cancer, herpes, and chlamydia. Application of epidemiology to health care will be discussed.

**PAM 305 Introduction to Multivariate Analysis** *(formerly CEH 307)*

Fall or spring. 3 credits. Prerequisites: ARME 210 or ILKST 210 or equivalent.

The course introduces students to basic econometric principles and the use of statistical procedures in empirical studies of economic models. Assumptions, properties, and problems encountered in the use of multiple regression procedures are discussed. Students are required to specify, estimate, and report the results of an empirical model. Factor analysis and analysis of variance will be covered as well. Section meets once a week.

**PAM 310 Evaluation of Public Policies** *(formerly CEH 485)*

Fall. 3 credits. Prerequisites: PAM 200, 330 or permission of instructor. Not offered 1999-2000. B. Rosen.

This is an advanced course in economic policy analysis that builds on the material covered in PAM 330, Intermediate to Policy Analysis. The course will use a series of policy examples to demonstrate the economic approach. Special topics in cost-benefit analysis and policy evaluation techniques will be developed when necessary for the example under study. Examples of topics that may be addressed include excise taxation, economic evaluation of health care innovations, environmental policies, traffic regulations, consumer policies, and welfare reform.

**PAM 323 Consumer Markets II** *(formerly CEH 333)*

Spring. 4 credits. R. J. Avery.

This course focuses on external and internal forces that drive consumer demand. Material in this course will cover core processes whereby consumers interpret market-provided information and the social forces impacting consumer purchase decisions. Particular emphasis will be placed on communication institutions in the market (advertising, the news, and other mass media) and the control of these institutions through government regulation. A select group of consumer policy issues will be covered, such as consumer evaluation of products and quality, food additives, consumer privacy, and socially responsible advertising.

**PAM 326 Personal Financial Management** *(formerly CEH 315)*

Fall. 3 credits. Preference given to human ecology students; limit 200; not open to freshmen. S. R. Heck.

The study of personal financial management at various income levels and during different stages of the family life span. Course topics include financial management frameworks and decision-making processes, ethical and financial principles, returns to human resources, income and wealth analysis, the role of consumer and mortgage credit,
financial insolvency and counseling, expenditure and purchase analyses, the use of budgets and record keeping in achieving family economic goals, economic risks and available protection, retirement and estate planning, and alternative forms of savings and investments.

PAM 330 Intermediate Policy Analysis (formerly CEH 250)
Spring. 3 credits. Prerequisite: PAM 200 or permission of instructor. N. Kutty.
Introduction to the tools and techniques of policy analysis. Topics covered include microeconomic concepts such as consumer and producer surplus, deadweight loss; rationale for public policy; benefit-cost analysis; impact assessments; experimental, quasi-experimental, and non-experimental designs; and the social ecology of policy analysis.

PAM 340 The Economics of Consumer Policy (formerly CEH 330)
Fall. 4 credits. Prerequisites: PAM 200 or permission of instructor. S. Tennyson.
This course will familiarize students with the basic approaches to consumer policy and the economic analysis of consumer policy issues. The course is structured around the major forms of government intervention in consumer markets, and examines a wide variety of economic and social regulations from the economic perspective. Students are required to write a term paper analyzing a consumer policy issue of their choosing.

PAM 341 Economics of Consumer Law and Protection (formerly CEH 365)
Economic analysis of the roles played both by the courts and by federal and state regulatory legislation in altering consumer markets, consumer behavior, and consumer welfare. Topics include economic analyses of contract law, products liability, accident law and antitrust law, as well as the activities of such agencies as the Federal Trade Commission, the Food and Drug Administration, and the Consumer Product Safety Commission.

PAM 346 Economics of Social Security (also CSH 346)
Spring. 3 credits. Prerequisite: PAM 200. S-U grades optional. R. Burkhauer.
This course provides students with an economic perspective on social security policies. The readings illustrate the use of economic analysis to predict the behavioral effects and income distributional consequences of policy. The course primarily focuses on the Old-Age, Survivors and Disability Insurance Program. But other programs such as the Supplemental Security Income, Food Stamps, etc., will be discussed as well policies that attempt to end discrimination against the elderly or those with disabilities.

PAM 350 Contemporary Issues in Women's Health (formerly HSS 335)
Fall. 3-4 credits. Offered alternative years. A. Parrot.
This course will deal with the history of women in medicine and historical and cultural treatment of women's health problems. Health care research and the exclusion of women from research trials and protocols will also be addressed. Reproductive issues, alternative approaches to treatment, medical problems, ethical issues, cancers, factors that contribute to post-traumatic stress disorders, health promotion behaviors, political issues, and routine medical recommendations will also be discussed in depth. Students may take the course for a fourth credit, which will require attending a discussion section every other week and observations of seven facilities that provide a variety of women's health care (i.e., birthing center, mammogram, and ultrasound center, wellness center, hospital labor and delivery unit, LaMaZe class, women's self defense class, etc.) on the alternate weeks.

PAM 370 Wealth and Income (formerly CEH 355)
Fall. 3 credits. Open to sophomores, juniors, and seniors; graduate students may elect to audit and write a research paper for 1 to 2 credits under PAM 600. Prerequisites: Econ 101-102 or equivalent. S-U grades optional. Not offered 1999-2000. E. Peters.
The wealth and income positions of American households are defined and described. Various statistics are employed to present conflicting pictures of the distribution of income using the same underlying data. Several models of determinants of income are presented and redistributive policies are discussed in the context of the economics of the political and philosophical positions for and against such policies.

PAM 371 Economics of Family Policy—Adults (formerly CEH 320)
Fall. 4 credits. Limited to 40 students. Junior or senior standing; non-PAM majors by permission of instructor. Not offered 1999-2000. Staff.
This course examines the economics of family policy issues that have a particular impact on adult family members. Emphasis in this course is on the economic behavior surrounding the policy and the incentives set up by the policy. Policies considered include marriage and divorce, family leave policy, policies assisting single parents, and policies affecting caregiving.

PAM 372 Economics of Family Policy—Children (formerly CEH 321)
Spring. 4 credits. Limited to 40 students. Junior or senior standing; non-PAM majors by permission of instructor. J. Gerner.
This course examines the economics of family policy issues that particularly affect children. This course focuses on a) the economic behavior that generates the policies and b) the economic incentives and behavior that result from the policies. Topics include child welfare, education, day care provision, child support, and adoption.

PAM 373 The Economics of Welfare Policy (formerly CEH 356)
Using the tools of economics, this course examines welfare policy. Included is an examination of the populations affected, the behavior various policies are likely to engender, and how much income redistribution occurs as a result of welfare policies. Various proposals for welfare reform are also evaluated.

PAM 374 Urban Economics and Policy (formerly CEH 348)
Spring. 4 credits. Prerequisite: PAM 200 or equivalent. S-U grades optional. N. Kutty.
This course explores the economics of cities and urban problems and studies the growth of cities, location choices of firms and households, and the factors which determine land rents. The urban policy issues explored include—housing, urban poverty, zoning, and urban congestion.

PAM 375 Housing and Long-term Care for the Elderly (formerly CEH 444)
Fall. 3 credits. S-U grades optional. P. Chi.
Through a wide range of service experiences, this service-based seminar will allow students to explore the different ways community agencies enable older adults to remain independent within diversified residential settings as private or community housing. The seminar will meet two times every other week. Students are also required to give 4-6 hours of service a week, 4 during the weeks the seminar meets and 6 during the other weeks.

PAM 376 Housing, Neighborhood and Community (formerly CEH 445)
Spring. 3 credits. Prerequisite: PAM 270 or permission of instructor. S-U grades optional. Not offered 1999-2000. P. Chi.
The course examines the interrelationships of housing conditions, neighborhood transitions, and community development. Both theoretical and empirical perspectives on residential patterns, neighborhood change, and community power will be examined. Special attention is given to government policies that deal with fair housing, residential segregation, neighborhood revitalization, and community development.

PAM 380 Human Sexuality (formerly HSS 315)
Spring. 3 credits. Limited to 500 students. Prerequisite: an introductory course in human development and family studies, psychology, or sociology (or equivalent social science course). Recommended: one course in biology. A. Parrot.
The aim of this course is to provide students with an understanding of the interactions and interrelationships of human behavior that influence sexual development and behavior. The course will focus on the evolution of sexual norms, cross-cultural customs, legislation within changing sociopolitical systems, and delivery of services related to sexual issues, needs, and/or problems. Future trends in sexuality will be addressed. Biological and developmental components of human sexuality will also be addressed. An underlying issue is the influence of our social and cultural system on the development of sexual needs, standards, and values. Research and theory of human sexuality will be explored through human and organizational behavior, biology, history, communication arts, education, research theory, law, sociology, and psychology.
[PAM 381 Health-care Services and the Consumer (formerly HSS 325)]
Fall. 3 credits. Prerequisite: an introductory course in human services or health or biology. S-U grades optional. Offered alternate years. Not offered 1999–2000.
A. Parrot.
This course is an introduction to health care services and will present developments in the health field that affect the availability and kinds of health services. Emphasis is placed on the interrelationships of practitioners, institutions, and agencies. The part each can play in preventing, diagnosis, and treatment of disease and disability is also explored. Topics will include historical and current trends, quality health care, consumer issues, cultural concerns, ethical issues, politics and policies, and the contemporary problems of health care.

PAM 383 Social Welfare as a Social Institution (formerly HSS 370)
Fall. 3 credits. J. Allen.
A philosophical and historical introduction to social welfare services. The course reviews the historical, social, and political contexts within which social welfare programs and the profession of social work have evolved. It discusses the political and ideological processes through which public policy is formed and the way policies are translated into social welfare programs. Basic issues in welfare are discussed through current program designs, public concerns, and the interrelationships and support of services in the community.

PAM 392 New York State Government Affairs (also HSS 392)
Spring semester only. 12 credits. Letter grade only. Available to juniors and seniors. Sophomores considered.

PAM 220 or a course in political science strongly recommended. C. McClintock. Students participate in the New York State Assembly Intern Program which includes coursework on legislative, intergovernmental and political party dynamics, that has been approved as upper division baccalaureate credit by the New York State Regents National Program on Internship and Experiential Instruction. Students also participate in a three day a week supervised New York State Assembly internship requiring research on proposed legislation, committee and public hearings and other issues that link policy analysis and implementation. Course and internship performance recommendations are reviewed and finalized by the faculty coordinator of the PAM Experiential Learning Honors Program and recorded as Cornell credit.

PAM 400-401-402 Special Studies for Undergraduate (formerly CEH and HSS 400-401-402)
Fall and spring. Credits to be arranged.
S-U grades optional. Staff.
For advanced independent study by an individual student or for study on an experimental basis with a group of students in a field of CEH, HSS, or PAM not otherwise provided through course work in the department or elsewhere at the university. Students prepare a multi-copy description of the study they want to undertake, on a form available from the department field office. This form must be signed by the instructor directing the study and the department chair and filed at course registration or within the change-of-registration period after registration with an add/drop slip in 145 MVR, College Registrar’s Office. To ensure review before the close of the course registration or change-of-registration period, early submission of the special studies form to the department chair is necessary. Students, in consultation with their faculty supervisor, should register for one of the following subdivisions of independent study.

PAM 400 Directed Readings (formerly CEH and HSS 400)
For study that predominantly involves library research and independent reading.

PAM 401 Empirical Research (formerly CEH and HSS 401)
For study that predominantly involves data collection and analysis.

PAM 402 Supervised Fieldwork (formerly CEH and HSS 402)
For study that involves both responsible participation in a community setting and reflection on that experience through discussion, reading, and writing. Academic credit is awarded for this integration of theory and practice.

PAM 403 Teaching Apprenticeship (formerly HSS 403)
Prerequisite: students must have taken the course (or equivalent) in which they will be assisting and have demonstrated a high level of performance. For study that includes assisting faculty with instruction.

PAM 404 Senior Seminar: Self-Evaluation of Professional Practice (formerly HSS 473)
Spring. 3 credits. Prerequisite: limited to students with field experience or ongoing field experience. Faculty. The process of change at the individual, family, and community level is a major theme of the senior seminar. The second theme, which is integrated throughout the course, concerns ethical principles and values that should inform professional practice. We will also discuss value dilemmas attendant on interventions to promote change at both the micro and macro levels of practice.

PAM 424 Families in Business (formerly CEH 424)
Fall. 3 credits. Prerequisite: Econ 101 and a course in statistics. Enrollment limited to 80. S. Tennyson.
The objective of this course is to provide students with a broad understanding of risk management problems and solutions, a greater appreciation of the importance of risk and risk regulation in our society, and increased comprehension of the complexities of making decisions about risk. Topics covered include alternative ways to define and measure risk, the importance of risk-tradeoffs, and models of decision making under risk. With this background, alternative approaches to risk management are discussed, including insurance, non-insurance financing alternatives, and loss control. The impact on risk management of the legal liability system and government programs, laws and policies are also considered.

PAM 435 The U.S. Health Care System (formerly CEH 435)
Fall. 3 credits. Prerequisites: a health care course and intro biology or permission of instructor. A. Parrot.
This course will help pre medical students, health administration students, as well as health economics students understand the relationship between alternative medicine and western allopathic medicine. The course will educate students about health and wellness, treatments for specific health conditions, differing philosophies of health care, financing health services, and cross cultural approaches to health and wellness.

PAM 450 Economics of Health Behavior and Policy (formerly CEH 430)
Spring. 3 credits. S-U grades optional.
Prerequisites: PAM 200 or equivalent or permission of instructor. Not offered 1999–2000.
R. Heck.
This course provides an introduction to the health care delivery systems in the United States, and covers the inter-relatedness of health services, the financing of health care, and the key stakeholders in health care delivery including regulators, providers, health plans, employers and consumers. The course describes the history and organization of health care, behavioral models of utilization, issues of health care reform, and current trends. The course provides an overview of the key elements of the field including ambulatory care services, health services, hospitals and clinicians, insurers, the role of public health organizations, and the politics of health care in the U.S.
This course uses the tools of economics to provide a better understanding of health behavior and policy. One focus is on policies that promote public health, including education programs and cigarette and alcohol taxation. Policies that influence consumer choices about health care and health insurance are also considered. A common theme is that to understand the effects of health policy it is necessary to analyze the incentives faced by consumers and the incentives of their employers, insurers, and health care providers. Analyses of specific health policies help develop this theme.

[PAM 470] MD 485 Psycho-Economic Perspectives on Human Intelligence and Achievement: Did the Bell Curve Get It Right? (formerly PAM 475)
Spring. 3 credits. Prerequisites: basic statistics: any of the following (ARME 210, ARME 411, BTRY 215, ERLST 210, PAM 305, ECON 319, ECON 520); basic economics: ECON 310 or permission of either instructor. Open to juniors and seniors, limited to 100. Not offered 1999-2000. S. Ceci, E. Peters.
The course brings together the analytical tools and key models of economics and psychology to investigate issues raised by Herrnstein and Murray's book The Bell Curve. The objective of the course is to bring research into the classroom by enabling students to understand and use (in the lab) the methods available for defining and assessing intelligence and its relationship to success in life and social issues.

PAM 471 The Politics of Power and Empowerment in Community Development (formerly HSS 417)
Spring. 3 credits. Limited to 20 students. D. Barr.
The course will take a theoretical world view of power and the historically colonial relationship between the American ruling class and other people. The three dimensions of power will be framed by the systems theory orientation. The relationships between social class, race, sex, and power will be studied. In addition, the class will explore the nature of empowerment and new theories of power and empowerment.

PAM 473 Social Policy (formerly HSS 475)
Spring. 3 credits. Prerequisite: PAM 383 or Government 111 or Sociology 141. S-U grades optional. J. Allen.
An examination of the policy-making process and the significance of national policies as they affect the distribution of social services. Frameworks for analyzing social policy are used to evaluate existing social programs and service-delivery systems. Implications for change in policies at the national, state, and local levels are discussed.

PAM 480 Professional Internship in Human Service Studies (formerly HSS 414)
Fall or spring. 4–7 credits. Limited to juniors and seniors majoring in human service studies. Prerequisite: PAM 100. Instructor required. Staff.
Students intern for a minimum of 10 hours a week in a human service organization and attend a weekly seminar or office hours with a focus on integrating classroom and field-based learning. The course is structured as an opportunity for students to learn experimentally and, at the same time, provide meaningful services to human service organizations. Interns are expected to take active roles in structuring, monitoring, and assessing their learning under the guidance of a faculty instructor.

PAM 481-482 Social Work Methods and Practice I and II (formerly HSS 471-472)
Introduction to concepts and methods used in a generalist model of social work practice. Examination of the values and ethics of professional practice. Students acquire knowledge and skills appropriate for working with individuals, groups, families, organizations, and communities. Class content is integrated with supervised fieldwork. Placements are made in social agencies in Tompkins and surrounding counties. Students are expected to arrange and to pay for their own transportation.

PAM 481 Social Work Methods and Practice I (formerly HSS 471)
Fall. 9 credits. Limited to 25 social work students. Lab fee: $63. Prerequisites: introductory psychology, introductory sociology, one introductory course in human development, grades of C+ or better in PAM 201 and 383. Staff.

PAM 482 Social Work Methods and Practice II (formerly HSS 472)
Spring. 9 credits. Limited to 25 social work students. Prerequisites: grades of B- or better in PAM 481 and satisfactory performance in fieldwork. Staff.

Topics Courses
Fall or spring. 2–4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission, one course in the sequence, is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as part of a series, they may be taken independently. Hours to be arranged. Department faculty.
This series of courses provides an opportunity for advanced undergraduates to explore an issue, a theme, or research in the areas of departmental concentration. Topics vary each term. Course counts toward the concentration requirements. Hours to be arranged by students. Prerequisites: grade of B- or better in PAM 481 and satisfactory performance in fieldwork. Staff.

PAM 483 Human Service Environments— Topic course (formerly HSS 490)

PAM 484 Human Service Programs— Topic course (formerly HSS 491)

PAM 485 Performance Management and Measurement in Nonprofit Organizations— Topic course (formerly HSS 492)

PAM 486 Child Welfare I (formerly HSS 490)
Fall. 3 credits. O. Heath-Crump.
This course is an introduction to the field of child welfare with its many contemporary, traditional, and sometimes controversial issues. Included is an overview of current child welfare practice and policy as it affects such problem areas as drugs and alcohol, children and homelessness, and children and violence. This seminar will present a broad perspective on these subjects along with a systems theory orientation.

PAM 487 Child Welfare II (formerly HSS 490)
Spring. 3 credits. O. Heath-Crump.
This course is a sequel of Child Welfare I, which exposes students to the numerous problems plaguing children of the child welfare system. Students will have the opportunity to take a closer look at how the system works, how it is not working to improve the lives of children, and what might be done about it. The purpose of the course is to prepare students to be change agents regarding the child welfare system and to not accept the status quo. The course will also focus on the major policy issues that are occurring for the future of children contending with the system.

PAM 499 Honors Program (formerly CEH, HSS 499 and HSS 499)
Fall or spring. This course is a combination of CEH 499 and HSS 499. For CEH and PA majors. The honors program provides students with the opportunity to undertake basic or applied research which will be preparation of a thesis representing original work of publishable quality. The program is intended for students who desire the opportunity to extend their interests and efforts beyond the current course offerings in the department. Furthermore, the program is designed to offer the student the opportunity to work closely with a professor on a topic of interest. CEH and PA majors doing an honors program may take PAM 499 for up to 15 credits. See Professor Alan Mathios for more details. For HSS majors the honors program allows them to pursue independent literature or field investigation. The HSS Honors Program is open to HSS majors who have been admitted as juniors to the College of Human Ecology Honors Program. HSS majors may take up to 6 credits of PAM 499 and should spread the credit over two semesters in their senior year.

PAM 520 Policy and Management Issues on Foreign Investment in China (formerly CEH 520)
Spring. 3 credits. P. Chi.
This course will help students understand the general investment environment in China and learn how social, cultural, political and economic factors affect decisions on market entry strategies, marketing mix strategies and other management strategies for foreign-invested enterprises (FIEs) in China. This course will not only examine the growth of FIEs since the 1980s, but also discuss the policy initiatives and institutional barriers for direct foreign investment in China. Both multiplier and linkage effects of foreign investment on China's economy will also be evaluated. Further, the management issues on formation, performance, profitability, and dissolution of FIEs will be systematically examined.

PAM 600 Special Problems for Graduate Students (formerly CEH and HSS 600)
Fall and spring. Credits to be arranged. S-U grades optional. Staff.
Independent advanced work by graduate students recommended by their chair and approved by the department chair and the instructor.
PAM 601 Research Workshop in Consumer Economics and Housing (formerly CEH 601)
Fall and spring. 1 credit. S-U grades only. Not offered Fall 1999. Staff.
Research workshop designed to provide a forum for graduate students in consumer economics and housing to present their research.

PAM 603 Teaching Experience (formerly HSS 603)
Fall and spring. 1–3 credits. S-U only.
For students assigning faculty with instruction. The aspects of teaching and the degree of involvement vary depending on the needs of the course and the experience of the student. Does not apply to work for which students receive financial compensation.

PAM 604 Economics of Consumer Demand (formerly CEH 613)
Fall. 3 credits. Prerequisite: PAM 200, Economics 311 or 313, or concurrent enrollment in one of the three, and two semesters of calculus. S-U grades optional.
W. K. Bryant.
A graduate level introduction to theory and empirical research on household demand, consumption, and saving. Emphasis is on the use of the theory in empirical research. Topics include neo-classical theory of demand, utility, complete demand systems, conditional demand, demographic scaling and translating, consumption and savings. Becker and Lancaster models of demand will be introduced.

PAM 605 Economics of Household Behavior (formerly CEH 624)
Spring. 3 credits. Prerequisite: PAM 604 or Economics 609–610 or consent of instructor. S-U grades optional. E. Peters.
This course examines household decision making in both single agent and multiple agent (e.g., marriage or other family) frameworks. The first half of the course focuses on 1) fertility, 2) household production, and 3) time allocation models of behavior—decisions that are usually modeled in a single-agent framework. The second half of the course looks at 1) marriage markets, 2) family formation and dissolution, 3) bargaining models of resource allocation within the household, and 4) intergenerational transfers across households. These kinds of behaviors are more fruitfully studied using multiple-agent models such as contract theory, game theory, and household bargaining. Empirical applications of the theoretical models are presented for both developed and developing countries. Implications for family policies such as child care subsidies, divorce laws, family planning, government subsidies to education, and social security are also discussed. Much of the material covered by this course could also be found in economic demography and economics of the family.

PAM 606 Demographic Techniques (formerly CEH 610)
Fall. 3 credits. S-U grades optional. W. Brown.
This course provides an introduction to the methods, measures, and data used in the analysis of human populations. Topics include demographic rates, life-table analysis, cohort vs. period analysis, sources and quality of demographic data, population estimation and projection, and stable population models.

PAM 610 Introduction to Program Evaluation (formerly HSS 689)
Fall. 1 credit. J. Greene.
This course provides a conceptual introduction to the practice and policy of social program evaluation. It is designed particularly but not exclusively for students planning a major or minor in HSS program evaluation and planning. The course emphasizes two major dimensions of evaluation: 1) its practical, real-world political dimension and 2) its theoretical, methodological dimension. At the intersection of these two dimensions lie issues of evaluation's purpose and role, which are also addressed in the course.

PAM 611 Program Evaluation and Planning—Topic course (formerly HSS 611)

PAM 612 Measurement for Program Evaluation and Research (formerly HSS 690)
Fall. 4 credits. Priority given to HSS students. Limit 35. E. Rodriguez.
The course reviews measurement theory and its application to the evaluation of social and human service programs. Topics include validity, reliability, scaling methods; basic principles of instrument design; and varied methods of data collection with an emphasis on structured questionnaires and interviews. Student work is focused around an applied course project. Attention is also given to ethical and managerial issues that arise in applied measurement settings.

PAM 613 Program Evaluation and Research Design (formerly HSS 691)
Spring. 3 credits. W. Trochim.
This course reviews research design and its application to evaluation of human service programs. Major topics include experimental, quasi-experimental, and nonexperimental research designs; basic sampling and measurement theory, and the theory of validity in research. Attention is given to issues that arise in the application of research designs, and the evaluation of programs, including problems of randomization, causal inference, replication, and utilization of results. The general linear model in the statistical analysis of outcome evaluation is presented through case examples and computer simulation. Students will encounter examples of outcome evaluation outcomes from a wide range of disciplines including health, mental health, social welfare, criminal justice, social policy, and education.

PAM 614–615 Program Evaluation in Theory and Practice (formerly HSS 692–693)
614, fall; 615, spring. 4 credits each semester. Prerequisites for PAM 614: 612 and 613 or 617, or permission of instructor. Prerequisite for PAM 615: 614. Students must register for both semesters. Not offered 1999–2000. Staff.
This course is a practicum in which the class designs and evaluates an applied course of a human service program. Students are involved in all phases of the evaluation from design to the production and dissemination of a final report. Emphasis is on research methods in the social sciences. Application of knowledge developed in prerequisite courses is stressed (for example, planning and managing an evaluation, ethics, methods of data collection, data processing, and strategies for analysis and feedback of results).

PAM 616 Strategies for Policy and Program Evaluation (formerly HSS 695)
Fall. 3 credits. Prerequisites: PAM 612 and 613 or 617 or equivalent. J. Greene.
This course examines a wide range of approaches to the evaluation of policies and programs in the human services. The approaches are examined with respect to their purposes, key audiences, and methodologies, as well as their philosophical, political, and value frameworks. Analysis of commonalities and differences across evaluation approaches are used to judge the appropriateness of a given strategy for a particular context.

PAM 617 Qualitative Methods for Program Evaluation (formerly HSS 696)
Spring. 3 credits. Prerequisites: PAM 612 and 613 or equivalent. J. Greene.
This course presents a qualitative approach to applied research and the evaluation of human service programs. Topics include the epistemological assumptions underlying this approach, questions of entry into setting, methods for data collection and data analysis, reporting, confidentiality of participants, and the ethics of qualitative inquiry. The course aims to help students understand how, when, and why a qualitative approach to social inquiry can be used appropriately, effectively, and defensively.

PAM 618 Seminar in Program Evaluation and Evaluative Research (formerly HSS 697)
Fall and spring. 1 credit. W. A. 20–110. J. Greene, E. Rodriguez, and W. Trochim.
This ongoing seminar is topically organized according to student and faculty projects. Focus is on professional issues in evaluation practice, including consulting, ethics and standards, preparation of conference and publication materials, and various methodological issues.

PAM 620 Human Service Administration—Topic Course (formerly HSS 610)

PAM 623 Consumer Decision Making (formerly CEH 639)
Individual and family decision making with respect to their market purchases will be investigated from a multidisciplinary perspective. Topics to be covered in the course include cognitive theories of information processing, theories of group interaction in decision making, and the effect of advertising, imperfect information, and uncertainty on consumer product evaluation and purchase behavior. Special attention will be given to consumer decision making in various market segments, e.g., low-income consumers, children, and the elderly. Specific attention will be paid to how consumers in these segments process marketer-provided information and their related consumption decisions.

PAM 630 Seminar in Program Planning and Development (formerly HSS 669)
Fall. Variable credit. Staff.
Topics include microlevel program planning, third-sector organizations, and interpersonal influences on program planning, policy formation, program implementation, and mainstreaming. Two or more human services are examined.
POLICY ANALYSIS AND MANAGEMENT 281

PAM 631 Ethics, Public Policy, and American Society (formerly HSS 650)
Fall. 3 credits. J. Ziegler.
This course will explore current issues of ethics and public policy against a background of theories and historical beliefs. Questions of how public officials and managers of public and non-profit agencies and private enterprises act will be examined. How do standards of ethical behavior in these professions get established? How are public policy issues with ethical implications resolved? Readings will draw from political philosophy, contemporary social science, and imaginative writing. This class is a seminar and class participation is essential. Open to seniors and graduate students.

PAM 650 Applications in Health Management Practice, Entrepreneurship and Consulting (formerly HSS 612)
Spring. 3 credits. J. Walston.
Seminar and practice, offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practice offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

PAM 651 Seminar in Mental Health Services (formerly HSS 613)
Using lectures, case examples, and class discussions, we will look from both administrative and clinical perspectives at the organization and delivery of mental health services to persons who are mentally ill, mentally impaired, developmentally disabled, or developmentally disabled. We will examine model programs for long-term community care and services designed to meet the special needs of ethnic/racial minorities, women, and persons who are mentally impaired. State/federal partnerships will be discussed in terms of their impact on fiscal and human resources for both public and for-profit agencies.

PAM 652 Health Care Services: Consumer and Ethical Perspectives (formerly HSS 625)
Fall. 3-4 credits. Limited to 30 students; undergraduates with permission of instructor. 4-credit option, may be used as Biology and Society Senior Seminar option. A. Parrot.
The course will focus on consumer and ethical issues faced by the health care field today. Broad topics to be discussed include ethical standards and guidelines, health care costs and accessibility of services, government role in health care, consumer rights, and role of the patient. We will examine model programs for long-term community care and services designed to meet the special needs of ethnic/racial minorities, women, and persons who are mentally impaired. State/federal partnerships will be discussed in terms of their impact on fiscal and human resources for both public and for-profit agencies.

PAM 653 Social Policy and Program Planning in Human Services (formerly HSS 660)
Spring. 3 credits. S-U grades optional. Staff.
An examination of the policy process with an emphasis on the ways in which this process determines the allocation and distribution of social services in the fields of health, education, income security, employment, criminal justice, and housing. The relationship of these policies to the political economy, to intergovernmental relations, and to social change at the local, state, and national levels will be analyzed. The role of evaluation in policy planning and implementation will be underscored. Current issues in policy, such as the role of the private and voluntary sectors, interest group politics, barriers and constraints to the development of effective policies, and the respective roles of consumers, clients, and human service professionals in the policy process will also be addressed.

PAM 640 Information and Regulation (formerly CEH 635)
Spring. 3 credits. Prerequisite: PAM 604 or PAM 606 or permission of instructor. J. Hair.
A survey of the problems and policies accompanying informational failures and other market failures with regard to consumer well-being. Governmental regulation of products, producers, consumers, and prices are examined. Antitrust activity, disclosure requirements, advertising restrictions, and regulatory performance are examined in terms of their ability to serve the public and special interests. Economic analysis, rather than institutional structure, is emphasized.

PAM 655 Seminar in Mental Health Services (formerly HSS 613)
Using lectures, case examples, and class discussions, we will look from both administrative and clinical perspectives at the organization and delivery of mental health services to persons who are mentally ill, mentally impaired, developmentally disabled, or developmentally disabled. We will examine model programs for long-term community care and services designed to meet the special needs of ethnic/racial minorities, women, and persons who are mentally impaired. State/federal partnerships will be discussed in terms of their impact on fiscal and human resources for both public and for-profit agencies.

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care (formerly HSS 631)
Spring. 3 credits. Prerequisite: PAM 657. R. Battistella.
The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Pressures on traditional indemnity insurance and solo fee-for-service medicine are examined in the context of the transition from managed to managed delivery systems. The course is divided into two parts: Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part 2 centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive local markets. Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. The consumer health care behavior literature is reviewed in the light of marketing strategies and utilization control objectives. Many of the managerial topics are highlighted with field trips and visiting speakers.

PAM 657 Health Care Organization (formerly HSS 634)
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of the instructor. R. Battistella.
The course will provide an introduction at the undergraduate level to the organization of health professions in the United States, the interrelations of health services and the major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different service delivery systems fail or succeed along the continuum of care. The course will also describe and analyze organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Institutions by the public and private sectors in the delivery and reimbursement of health care will also be presented.

This course introduces principles of the law that are specifically applicable to health-service delivery. Topics considered include the liability of hospitals and their staff and personnel for injuries to patients; medical records and information; consent to medical and surgical procedures; responsibility for patients' personal property; collection of bills; medical staff privileges; and confidential communications.

PAM 655 Comparative Health Care Systems (formerly HSS 630)
Spring. 3 credits. Open to graduate students and a limited number of seniors with permission of instructor. Not offered 1999-2000. P. J. Ford.
An overview of health services is given within the larger context of the social and economic development policies of several industrialized democracies and developing countries. Sociocultural, economic, and epidemiologic factors are stressed as keys to the formulation of realistic strategies. Resource allocations for health services are assessed against the backdrop of changing rates of economic growth.

PAM 656 Managed Health Delivery Systems: Primary-Ambulatory Care (formerly HSS 631)
Spring. 3 credits. Prerequisite: PAM 657. R. Battistella.
The concept of primary care is used to enhance understanding of the direction and purpose of ongoing changes in health services organization and financing. Pressures on traditional indemnity insurance and solo fee-for-service medicine are examined in the context of the transition from managed to managed delivery systems. The course is divided into two parts: Part 1 examines the development of health maintenance organizations and related forms of managed care against the backdrop of larger public policy concerns. Part 2 centers on administrative-financial topics associated with the design, marketing, and operation of managed delivery systems in highly competitive local markets. Considerable attention is given to the relationship between physicians and management with respect to such subjects as medical practice styles, productivity, quality assurance, and outcome measurement. The consumer health care behavior literature is reviewed in the light of marketing strategies and utilization control objectives. Many of the managerial topics are highlighted with field trips and visiting speakers.

PAM 657 Health Care Organization (formerly HSS 634)
Fall. 3 credits. Limited to 30 students. Priority given to Sloan students or permission of the instructor. R. Battistella.
The course will provide an introduction at the graduate level to the organization of health professions in the United States, the interrelations of health services and the major sources and methods of paying for care. The course will describe how health services are structured in the United States and how these different service delivery systems fail or succeed along the continuum of care. The course will also describe and analyze organization, delivery, and financing issues from a variety of perspectives using specific performance criteria (e.g., equity, quality, efficiency). Institutions by the public and private sectors in the delivery and reimbursement of health care will also be presented.
PAM 658 Field Studies in Health Administration and Planning (formerly HSS 635)
Fall or spring. 1-4 credits. TBA. Staff. Students interested in developing administrative and program research skills are given an opportunity to evaluate an ongoing phase of health care agency activity in the light of sound administrative practice and principles of good medical care. In planning and carrying out the research, students work closely with a skilled practicing administrator and with members of the faculty.

PAM 659 Epidemiology, Clinical Medicine, and Management Interface Issues (formerly HSS 637)
Spring. 3 credits. E. Rodriguez. From an empirical and analytical framework this course explores the relationships between epidemiology, clinical medicine, and management. The course will review the epidemiology, policy issues, and treatment of selected diagnoses accounting for a significant percentage of unit cost of health care services. In addition, students will have an opportunity to explore issues of resource allocation and continuous quality improvement. The format for the class is lecture, discussion, and case analysis.

PAM 660 Quality in Health Care Organizations (formerly HSS 638)
Fall. 3 credits. A. Kalbennell and S. Walston. The quality of health services—the extent to which the appropriate and most effective care is properly administered in the least costly manner—is of paramount importance to patients. It is also a central concern of the providers and managers of health services and those who pay for care. It is a cornerstone of health care reform. Through readings, lecture, discussion, and group work, this course will acquaint the student with the basic elements of managing quality in health care organizations including: defining quality from many points, which will be reinforced by examples of health and human services organizations. Class lectures, readings, guest speakers, problems, case studies, and research for term paper/projects will all be used to demonstrate important points, which will be reinforced by examples and applications. The course emphasizes the internal financial management skills and knowledge and skill necessary for financial success in complex health organizations.

PAM 663 Health Care Financial Management II: Payment Systems (formerly HSS 642)
Spring. 3 credits. Prerequisite: PAM 662. Not offered this year. Staff. The purpose of this course is to develop an understanding of the theories on which health care payment and reimbursement systems are based and the techniques by which they operate.

PAM 664 Information Resources Management in Health Organizations (formerly HSS 645)
Spring. 3 credits. Recommended: strong basic computer skills. S-U grades optional. D. Burchfield. Students are expected to have basic computer skills upon entry into the course. This course is a graduate course in Health Services Administration. Students will be exposed to the challenges and problems inherent in the use of health management information systems (HMISs). The course focuses on the use of HMISs to solve problems and address concerns in today's health care service delivery industry. Students will learn how HMIS can enhance the ability to appraise multi-clinical and non-clinical services of care.

PAM 665 Managing Health and Human Service Organizations I (formerly HSS 648)
Fall and spring. 3 credits. Staff. This is the first segment of an 8-credit sequence addressing the management and leadership of health and human services organizations. Different perspectives are examined, from that of the first-line supervision to the CEO level. This course begins with a study of management—communications, motivation, change management, leadership, human resources, organizational design issues, and labor relations. It then looks at the development of technical skills in the areas of problem solving, decision making, productivity measurement, resource allocation and performance measurement. The course is taught with an applied focus and utilizes a case study approach.

PAM 666 Strategic Management and Organizational Design of Health Care Systems (formerly HSS 649)
Spring. 3 credits. Prerequisite: PAM 665. S. Walston. This is the second segment of an 8-credit sequence in the management and leadership of health and human services organizations. This course concentrates on strategy issues, marketing, organizational culture issues, development of mission, the management of professionals, and studies the importance of roles, structure, and inter- and intra-institutional relationships within these organizations. The course is taught via a case study approach.

PAM 667 Health and Welfare Policy (formerly HSS 685)
Fall. 3 credits. R. Battistella. Health and welfare issues are seen as reflecting alternate solutions to the broader institutional problems of allocation (economic), control (politics), and normative behavior (morality). A basic tenet is that health and welfare policy is deeply rooted in social values and the availability of economic resources. Health policy is interpreted from a multidisciplinary perspective in which change emanates from structural dynamics accompanying socioeconomic development such as the evaluation of the economy from the entrepreneur to the managerial to the post-industrial stages, together with shifts in social and political ideology—libertarianism, welfare statism, and secular humanism.

PAM 668 Long-Term Care and the Aged: Alternative Health and Social Service Delivery Systems (formerly HSS 688)
Fall or spring. 3 credits. Prerequisite: PAM 657. R. Battistella. Alternatives for the organization and delivery of long-term care services are examined within the context of public-financing constraints. Progressive long-term care is viewed as a continuum of medical and social services positioned to optimize independent living. Relevant experience from other highly developed countries is presented. Visiting speakers from the public and private sectors are featured. Field trips provide additional insights into the many challenges and opportunities of long-term care policy and management.

PAM 674 Housing Economics (formerly CEH 648)
Spring. 3 credits. Prerequisite: Econometrics 511 or 513. Instructor's permission required. N. Kutty. A survey of economic theory and empirical research related to housing markets. The course studies the demand and supply sides of the housing market as applications of microeconomic theory. Related to housing demand include tenure choice (decision to own or rent), household formation, mobility, and alternative models of housing demand. Topics on the supply side include household characteristics, maintenance, and rehabilitation. Housing policy issues such as tax policy, housing for the elderly, fair housing, rent control, and zoning also will be addressed.

PAM 680 Leadership in the Human Services (formerly HSS 655)
Fall. 3 credits. Open to seniors with instructor's permission. S-U grades optional. J. Mueller. Students in this seminar will study human service organizations in the context of their changing economic, political, ecological, and technological environments, and in terms of the leadership behaviors of administrators who are making successful adaptive responses to these changes. The introduction of new organizational forms and strategies for nurturing innovation and for affecting cultural change within the work environment will be discussed from the perspective of leadership roles at various organizational levels. Readings include both new theoretical literature and practical how-to-do-it guides for administrators. The seminar format provides an opportunity for simulations so that students can give and receive feedback on their leadership skills.
ties are available in public and private human academic and professional goals. Opportunities are determined by availability and students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

PAM 718 Advanced Seminar in Program Evaluation (formerly HSS 790)
Fall, spring, 1-3 credits. S-U grades optional. Prerequisite: permission of instructor. Staff. This advanced course is intended for students with at least three courses in evaluation (PAM 612 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, addressing current issues of importance in the field.

PAM 799 MPS Problem Solving Project (formerly HSS 799)
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge of independent advanced work. S-U grades optional.

PAM 899 Master's Thesis and Research (formerly CEH and HSS 899)
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

PAM 999 Doctoral Thesis and Research (formerly CEH and HSS 999)
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

Topical Seminars and Practice—PAM 618 and 630 (formerly HSS 697 and 669)
Seminars and practice offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practice offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

Topics Courses—PAM 611, 620, and 650 (formerly HSS 611, 610 and 612)
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. Hours to be arranged.

This series of courses provides an opportunity for graduate students to explore an issue, theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other formats.

TEXTILES AND APPAREL COURSES

PAM 704-705 Internship in Human Service Studies (formerly HSS 704-705)
Fall, spring, or summer. 1-15 credits. S-U grades optional. Internship placement in human services is determined by availability and students' academic and professional goals. Opportunities are available in public and private human service organizations at the national, state, and local levels in positions consistent with students' needs and desires. The duration of an internship is negotiated between the student and the agency, while course credit and residence units are arranged between the student and the Special Committee.

PAM 718 Advanced Seminar in Program Evaluation (formerly HSS 790)
Fall, spring, 1-3 credits. S-U grades optional. Prerequisite: permission of instructor. Staff. This advanced course is intended for students with at least three courses in evaluation (PAM 612 series or equivalent) and statistics through multiple regression. The seminar focuses on analysis and appraisal of current literature on program evaluation and evaluative research. The seminar is topical, addressing current issues of importance in the field.

PAM 799 MPS Problem Solving Project (formerly HSS 799)
Fall or spring. Credits to be arranged. For students recommended by their chair and approved by the instructor in charge of independent advanced work. S-U grades optional.

PAM 899 Master's Thesis and Research (formerly CEH and HSS 899)
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

PAM 999 Doctoral Thesis and Research (formerly CEH and HSS 999)
Fall and spring. Credit to be arranged. Prerequisite: permission of the chair of the graduate committee and the instructor. S-U grades optional.

Topical Seminars and Practice—PAM 618 and 630 (formerly HSS 697 and 669)
Seminars and practice offered periodically and reflecting faculty and student interest, with changing topics and instructors. Content, time, credits, and instructors to be announced. Seminars and practice offer concentrated study in a specific human service area or in the education, planning, or evaluation processes within human services.

Topics Courses—PAM 611, 620, and 650 (formerly HSS 611, 610 and 612)
Fall or spring. 2-4 credits. Prerequisites and enrollment limits vary with topic being considered in any particular term. Permission of instructor required. Hours to be arranged.

This series of courses provides an opportunity for graduate students to explore an issue, theme, or research in the areas of departmental concentration. Topics vary each time the course is offered. Descriptions are available at the time of course registration. Although the courses are usually taught as seminars, a subject may occasionally lend itself to lecture, practicum, or other formats.

TEXTILES AND APPAREL COURSES

A. Lemley, chair, A. Netravali, director of graduate studies; A. Racine, director of undergraduate studies; S. Ashdown, C. C. Chu, C. Coffman, C. Jirousek, S. Loker, S. K. Obendorf, A. Racine, P. Schwartz

NOTE: Class meeting times are accurate at the time of publication. If changes are necessary, the department will provide new information as soon as possible.

TXA 114 Introduction to Computer-Aided Design
Fall and summer. 3 credits. Fall, T or R 1:25-4:25. It is important for students on wait lists to attend the first class. Limit 18 per lab section. Priority given to all TXA and other freshmen and sophomore students. Not open to those who have taken or are currently enrolled in DEA 648. S-U grades optional. A. Racine.

A studio course that explores the creative potential of microcomputers. The AutoCAD software program is used as a design tool for generating a wide variety of visual images. Basic Photoshop software commands are introduced to enhance AutoCAD drawings. Students develop creative designs based on historical, cultural, and museum sources for portfolios and display. Supplies cost about $60.00; lab fee $15.00.

TXA 125 Art, Design, and Visual Thinking
Fall. 3 credits. S-U grades optional. Lees M W F 10:10-1:10. C. Jirousek.

An introduction to the visual arts and design that explores aesthetic and cross-cultural dimensions of visual experience. Augmented by slide presentations, artifacts, video, and an internet-based electronic textbook, lectures emphasize the varieties of visual expression seen in works of art and design. Social, cultural, and historic interpretations of visual expression are discussed.

TXA 135 Fibers, Fabrics, and Finishes

An introduction to fibers, fibrous materials, and dyes and finishes. Special emphasis is given to the use of fibrous materials in apparel, residential and contract interiors, and industrial applications. Topics covered include fiber properties, fabric structure, coloration of fibrous materials, dimensional stability, flammability, product specifications, and performance standards.

TXA 145 Introduction to Apparel Design
Spring. 4 credits. Limited to 30 students with 15 students per lab section. Priority given to all TXA, other freshmen and sophomore students, and students transferring into TXA, not open to seniors outside of TXA. Letter grades only. Apparel design majors should take course during the first year. Minimum cost of materials, $125; lab fee, $10. Loc L 1:25-4:25 and lab F 10:10-12:05 or loc R 1:25-4:25 and lab F 12:20-2:15. A. Racine.

Intensive study of principles and processes of flat-pattern design with emphasis on creative expression in children's apparel. Students develop a thorough understanding of the principles and techniques needed to produce apparel.

TXA 217 Drawing the Clothed Figure
Spring. 3 credits. Enrollment limited to 18 students. Prerequisite: a basic drawing course. Priority given to apparel students. Letter grades only. Minimum cost of supplies $125.00. Lab fee: $30. T R 10:10-1:10. Staff.

The goal of this course is to improve a student's capacity to communicate apparel design ideas visually by drawing clothing on the human body. Emphasis will be on development of techniques used to express the human body, materials, and clothing designs quickly and clearly in working sketches and to present clothing designs in finished renderings.

TXA 237 Structural Fabric Design
Fall. 3 credits. S-U grades optional. Prerequisite: TXA 125 and TXA 145; one drawing course recommended. Minimum cost of materials, $125; lab fee, $10. T R 10:10-1:10. S. Ashdown.

This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. Through exercises, the principles and processes of draping, advanced flat pattern making, and fitting are studied. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 264 Draping
Fall. 4 credits. Limited to 20 students. Prerequisite: TXA 125 and TXA 145; one drawing course recommended. Minimum cost of materials, $125; lab fee, $10. T R 10:10-1:10. S. Ashdown.

This studio course examines the process of creating a three-dimensional garment from the two-dimensional fabric. Through exercises, the principles and processes of draping, advanced flat pattern making, and fitting are studied. Assigned problems require the students to make judgments regarding the design process, the nature of materials, body structure, function, and fashion.

TXA 269 Style, Fashion, and the Apparel Industry

Illustrated lectures will focus on changes in the U.S. apparel industry and fashion from the nineteenth century to the present day due to social forces, technological developments, and shifting demographics. The Cornell Costume Collection will be used for discussion. Students will write a term paper on issues relating to the fashion industry.

TXA 300 Special Studies for Undergraduates
Fall or spring. Credit to be arranged. Staff.

Special arrangement for course work to establish equivalency for courses not transferred from a previous major or institution. Students prepare a multiplicity description of the study they want to undertake on a form available from the College Registrar's Office. The form, signed by both the instructor directing the study and the department chair, is filed at course registration or during the change-of-registration period.
presented with a variety of complex studio problems. This class uses computer-aided apparel design and team work.

**TXA 375 Color and Surface Design of Textiles**

Fall. 4 credits. Recommended: TXA 114 and TXA 115. Minimum cost of other materials, $100; lab fee, $75. Limited to 18 students. T R 1:25–4:25. C. Jirousek. Studio experience in the surface design of textiles combines techniques in color theory. Textile projects will utilize techniques such as block printing, shibori, batik, silk painting, silk screen, and stitchery to produce a portfolio of textile designs. Studio work will be augmented by lectures on pattern and color theory illustrated by slides and textile examples.

**TXA 400-401-402-403 Special Independent Studies for Undergraduates**
